Dillinger and his gang pulled several bank robberies and also plundered the police arsenals at Auburn, Indiana, and Peru, Indiana, stealing several machine guns, rifles, and revolvers, a quantity of ammunition, and several bulletproof vests. On December 14, John Hamilton, a Dillinger gang member, shot and killed a police detective in Chicago. A month later, the Dillinger gang killed a police officer during the robbery of the First National Bank of East Chicago, Indiana. Then they made their way to Florida and, subsequently, to Tucson, Arizona. There on January 23, 1934, a fire broke out in the hotel where Clark and Makley were hiding under assumed names. Firemen recognized the men from their photographs, and local police

arrested them, as well as Dillinger and Harry Pierpont. They also seized three Thompson submachine guns, two Winchester rifles mounted as machine guns, five bulletproof vests, and more than \$25,000 in cash, part of it from the East Chicago robbery.

Dillinger was sequestered at the county jail in Crown Point, Indiana, to await trial for the murder of the East Chicago police officer. Authorities boasted that the jail was "escape proof," but on March 3, 1934, Dillinger cowed the guards with what he claimed later was a wooden gun he had whittled. He forced them to open the door to his cell, then grabbed two machine guns, locked up the guards and several trustees, and fled in the sheriff's car, hightailing it to nearby Illinois. The stunt earned headlines around the world and put Dillinger as a top priority on FBI director J. Edgar Hoover's hit list.

By stealing the sheriff's car and driving it across a state line, Dillinger had violated the National Motor Vehicle Theft Act, which made it a Federal offense to transport a stolen motor vehicle across a state line. A Federal complaint was sworn charging Dillinger with the theft and interstate transportation of the sheriff's car, which actively involved the FBI in the nationwide search for Dillinger.

Meanwhile, Pierpont, Makley, and Clark were returned to Ohio, convicted of the murder of the Lima sheriff, with Pierpont and Makley being sentenced to death, and Clark to life imprisonment. But in an escape attempt, Makley was killed and Pierpont was wounded. A month later, Pierpont had recovered sufficiently to be executed.

Hoover protégé Melvin Purvis was put in charge of capturing Dillinger, and in late April, "Nervous" Purvis received a tip-off that the bandit was holed up at Little Bohemia, a lakeside resort in Wisconsin. Purvis and his team blundered onto the resort grounds and blazed away indiscriminately at what proved to be innocent customers leaving a restaurant.

While an agent was telephoning about the debacle, the operator broke in to tell him there was trouble at another cottage about two miles away. FBI Special Agent W. Carter Baum, another FBI agent, and a constable went there and found a parked car which the constable recognized as belonging to a local resident. They pulled up and identified themselves. Inside the other car, "Baby Face" Nelson, a member of Dillinger's gang, was holding three local residents at gunpoint. He turned, leveled a revolver at the lawmen's car, and ordered them to step out. But without waiting for them to comply, Nelson opened fire. Baum was killed, and the constable and the other agent were severely wounded. Nelson jumped into the Ford they had been using and fled.

For the second time in three weeks, Dillinger had made the Feds look like fools. Hoover appointed a trusted Washington inspector, Sam Cowley, to take thirty handpicked men and form a special Dillinger squad in Chicago, though Purvis remained Agent in Charge. Dillinger was rated Public Enemy Number One and was featured on Wanted posters all over the United States. Eliminating him had become a public relations imperative, despite the lack of proof that he personally had ever killed anyone.

Late in the afternoon of Saturday, July 21, 1934, the madam of a brothel in Gary, Indiana, contacted one of the police officers with information. This woman called herself Anna Sage; however, her real name was Ana Cumpanas, and she had entered the United States from her native Rumania in 1914. Because of the nature of her profession, she was considered an undesirable alien by the Immigration and Naturalization Service, and deportation proceedings had started. Anna was willing to sell the FBI some information about Dillinger for a cash reward, plus the FBI's help in preventing her deportation.

At a meeting with Anna, Cowley and Purvis were cautious. They promised her the reward if her information led to Dillinger's capture, but said all they could do was call her cooperation to the attention of the Department of Labor, which at that time handled deportation matters. Satisfied, Anna told the agents that a girl friend of hers, Polly Hamilton, had visited her establishment with Dillinger. Anna had recognized Dillinger from a newspaper photograph.

Anna told the agents that she, Polly Hamilton, and Dillinger probably would be going to the movies the following evening at either the Biograph or the Marbro Theaters. She said that she would notify them when the theater was chosen. She also said that she would wear a red dress so that they could identify her.

On Sunday, July 22, Anna Sage called to confirm the plans, but she still did not know which theater they would attend. Therefore, agents and policemen were sent to both theaters. At 8:30 p.m., Anna Sage, John Dillinger, and Polly Hamilton strolled into the Biograph Theater to see Clark Gable in *Manhattan Melodrama*. Purvis phoned Cowley, who shifted the other men from the Marbro to the Biograph.

Cowley also phoned Hoover for instructions, who cautioned them to wait outside rather than risk a shooting match inside the crowded theater. Each man was instructed not to unnecessarily endanger himself and was told that if Dillinger offered any resistance, it would be each man for himself.

At 10:30 p.m., Dillinger, with his two female companions on either side, walked out of the theater and turned to his left. As they walked past the doorway in which Purvis was standing, Purvis lit a cigar as a signal for the other men to close in. Dillinger quickly realized what was happening and acted by instinct. He grabbed a pistol from his right trouser pocket as he ran toward the alley. Five shots were fired from the guns of three FBI agents. Three of the shots hit Dillinger and he fell face down on the pavement. At 10:50 p.m. on July 22, 1934, John Dillinger was pronounced dead in a little room in the Alexian Brothers Hospital.

The agents who fired at Dillinger were Charles B. Winstead, Clarence O. Hurt, and Herman E. Hollis. Each man was commended by J. Edgar Hoover for fearlessness and courageous action. None of them ever said who actually killed Dillinger. The events of that sultry July night in Chicago marked the beginning of the end of the Gangster Era. Eventually, 27 persons were convicted in Federal courts on charges of harboring and aiding and abetting John Dillinger and his cronies during their reign of terror. "Baby Face" Nelson was fatally wounded on November 27, 1934, in a gun battle with FBI agents in which Special Agents Cowley and Hollis also were killed.

Dillinger was buried in Crown Point Cemetery in Indianapolis, Indiana. It has long been rumored that his supposedly generously endowed member was kept in storage at the Smithsonian. In his 1970 book *The Dillinger Dossier*, Jay Robert Nash, citing flaws in the autopsy evidence and detailed testimony, even offers the thesis that Dillinger did not die in Chicago at all, but rather an underworld fall guy sent to take his place.

In 1945, former bootleggers turned filmmakers, the King Brothers, Frank and Maurice, produced a low budget, largely non-factual biography of Dillinger called *Dillinger*, which starred Lawrence Tierney and was scripted by famous front Philip Yordan. It surprised the film industry by turning a tidy profit. A third of the film consisted of stock footage lifted from other classic gangster films, from Howard Hawks' *Scarface* to Fritz Lang's *You Only Live Once*. The film's non-stop action set a pattern for future gangster epics from the 1960s onward, but was unique for its time.

Writer-director John Milius made his film debut with another biography of Dillinger called simply *Dillinger* (1973) and starring Warren Oates, though it too owes little to the actual facts of Dillinger's life. Dillinger's noted demise also inspired Lewis Teague's film *The Lady in Red* (1979; also known as *Guns, Sin and Bathtub Gin*), scripted by John Sayles with Robert Conrad playing the famed bank robber. Other treatments of Dillinger on film include *Young Dillinger* (1965), *Dillinger and Capone* (1995), and a documentary, *Appointment with Death: The Last Days of John Dillinger* (1971).

Dillinger's legacy continued to be enshrined in song and story. Hoover put a plaster cast of the gangster's face on display at FBI headquarters and for years Hoover's reception room contained a .38 automatic that was purported to be Dillinger's gun, even though the particular make of Colt did not leave the factory until December 1934, five months after the Dillinger shooting. Dillinger had been inflated from a simple bank robber into a legend, and remains one to this day.

## DiMaggio, Joe (1914-1999)

Joe DiMaggio is one of the few athletes who truly transcend their sport. His Hall of Fame career, leading the Yankees to nine World Series in 13 years, bridged two great eras of baseball—the post-war days of Babe Ruth and the post-integration days of Jackie Robinson. But he will always be best known as “Joltin’ Joe,” whose record-breaking 56 game hitting streak in 1941 captivated the country. DiMaggio's fame only grew after retirement, with his brief, but highly publicized marriage to movie star Marilyn Monroe, and frequent public appearances. The cool, classy ballplayer was immortalized in music and literature, as an enduring symbol of decency and order during a confusing era. In the words of the *New York Times* on the day of his retirement, DiMaggio had “something that no baseball averages can measure.”

He was born Joseph Paul DiMaggio in San Francisco in 1914, one of nine children; his parents were part of a wave of Sicilian immigrants to emigrate to the United States at the turn of the twentieth century. The shy, unsociable DiMaggio was expected to get an education, but his only true interest was baseball, so he dropped out of school at age 16 . . . a decision he would later regret. The story of DiMaggio's discovery has become baseball legend; a member of the San Francisco Seals organization spotted the thin 17 year old peaking through a hole in the outfield fence, hoping to find his brother Vince, a Seals player. The Seals offered the talented sand-lot player an

opportunity to play, and he stayed for four years, becoming a hero in the Italian community in San Francisco. The year 1933 proved to be a harbinger of things to come; DiMaggio chalked up a minor league record with his 61 game hitting streak.

At the end of the 1935 season, the New York Yankees signed DiMaggio, hoping he would lead the team into the post-Ruth era. Despite the pressures of following Ruth, DiMaggio had a fabulous rookie season in 1936, hitting .323 with 29 home runs, 125 RBIs, and a league leading 15 triples. Writers across the country marvelled at his exceptional clutch hitting, skilled base running, and graceful defensive play. The shy, conservative DiMaggio, a sharp contrast from the wild gregarious Ruth, became an instant celebrity. He led the Yankees to four straight World Series titles from 1936 to 1939 and constantly appeared among the leaders in batting, home runs, and RBIs. He became the most popular player in baseball, although he angered fans in 1938, sitting out the beginning of the season due to a contract dispute, a theme prevalent throughout his career. Despite the new celebrity status, DiMaggio continued to live a very normal life, returning to San Francisco to live with his family during the winter. At the end of the 1939 season, DiMaggio married Dorothy Arnold, and two years later, they had a son, Joe Jr.

All of the fanfare could not prepare DiMaggio for the 1941 season. DiMaggio collected a hit in every game from May 15th to July 14th, an astonishing stretch of 56 games. Never before did an individual sports record receive so much public attention; radio stations across the country regularly interrupted broadcasts to give updates on “the streak.” It seemed to come at a perfect time for a nation on the brink of war. Songwriter Alan Courtney wrote “Joe, Joe, DiMaggio, we want you on our side,” as if his hitting streak could protect America from the turmoil overseas. DiMaggio himself joined the Air Force at the end of the 1942 season, while in the prime of his baseball career. Like many ballplayers, he saw no combat, spending the majority of his service time entertaining the troops in exhibition games. But the distance from his family was frustrating, and in 1944 Dorothy DiMaggio filed for divorce.

When DiMaggio returned to baseball in 1946, his finest years were clearly in the past. He did, however, add to his fame by constantly playing through injury. In 1949, he made a remarkable comeback from a leg injury and “took his place in that select circle of athletes, like Babe Ruth and Jack Dempsey, who are not only adored but beloved,” according to *Life Magazine*. DiMaggio continued to show flashes of his former brilliance, but lost consistency and fought with Yankee manager Casey Stengel. At the end of the 1951 season, DiMaggio retired having amassed a .325 lifetime average and 361 career home runs in 13 seasons. That same year, he was immortalized in the Ernest Hemingway classic *The Old Man and the Sea*, the tale of an tired, aging fisherman, stuck at seas for days, and turning to “the Great DiMaggio” for solace.

Unlike many former players, DiMaggio had little trouble adjusting to life without baseball. He spent his first year of retirement working as a broadcaster for the Yankees, and went on to work in public relations with a variety of companies and charitable foundations. DiMaggio reentered the public consciousness in 1952 when he met a young Marilyn Monroe. The relationship between these two very different celebrities—the quiet, conservative former ballplayer and the beautiful but troubled movie star—was instant front page news. They married on January 14, 1954, but constantly fought over DiMaggio's traditional views of marriage and views of the Hollywood life, and divorced just nine months later. DiMaggio remained a close, dependable friend to Monroe, right until her death in 1962. He

### Joe DiMaggio

made all the funeral arrangements, excluding the Hollywood crowd in the hope it would restore some dignity to her tragically short life.

In 1967, DiMaggio was introduced to a new generation of Americans by Paul Simon and Art Garfunkel's "Mrs. Robinson," a sad lament to lost innocence from the film *The Graduate*. Simon and Garfunkel asked "Where have you gone, Joe DiMaggio?," looking for a hero to guide them through troubled times. More than 25 years after the magical summer of 1941, Joltin' Joe became a symbol of fundamental good to a confused generation. His image continued to grow through the 1970s and 1980s, through his charitable work and public appearances. DiMaggio died on March 8, 1999, after a bout with cancer.

## Dime Novels

A popular form of literary entertainment in the late nineteenth and early twentieth centuries, dime novels were works of sensational fiction published in paper-covered booklets, issued at regular intervals, and priced at five to ten cents. Profitable mainstays of the

American publishing industry for many years, dime novels gradually waned as pulp magazine consumption increased, and by 1915, motion pictures had replaced dime novels as inexpensive forms of entertainment. Since that time, dime novels have become significant resources for examining the development of American popular culture in that they exemplify early printing methods, serve as rudimentary forms of genre fiction, and reflect aspects of the social history of the United States.

Published in four basic formats between 1860 and 1915, dime novels usually possessed pictorial covers with black-and-white or colored illustrations, ranged in size from four by six inches to eight by 12 inches, and varied in length from 32 to 250 pages. Initially produced for an adult market, early versions detailed life on the American frontier. Later publications, however, featured detective mysteries, adventure stories, and science fiction tales and were primarily read by juveniles.

The idea of producing cheap paper-covered novels in a continuous series was conceived by Irwin P. Beadle. In 1860, Beadle, along with his older brother, Erastus, and Robert Adams, established the publishing firm of Beadle & Adams in New York City and launched *Malaeska, the Indian Wife of the White Hunter* by Mrs. Ann S. Stephens, as the first entry in a series entitled *Beadle's Dime Novels*. Achieving success with the publication of this story and others, Beadle & Adams were for a time the principal publishers of dime novels until competitors George P. Munro, his brother Norman L. Munro, Frank Tousey, and Street & Smith began to publish dime novels as well.

Dime novel authors had strict guidelines to follow—stories had to be exciting, entertaining, and moral. Each of the major publishers employed regulars who wrote for a particular series. In some instances, authors published stories for several firms. Prolific contributors to *Beadle's Dime Novels* (1860-1874) included Mrs. Ann S. Stephens, Mrs. Metta Victor, Edward S. Ellis, Edward L. Wheeler, Philip S. Warne, and Ned Buntline. George P. Munro's *Old Sleuth Library* (1885-1905) highlighted the detective adventures of Old Sleuth, a pseudonym for Harlan Page Halsey, and other authors. His brother, Norman, published works by W. I. James in the *Old Cap Collier Library* (1883-1899), another dime-novel detective series. Frank Tousey's small group of authors wrote under so many pseudonyms that the amount of contributors to the *Wide Awake Library* (1878-1898) appeared greater than it actually was. Street & Smith, as the last major publishing firm to produce dime novels, featured authors Horatio Alger, Jr., Ned Buntline, Gilbert Patten, and Colonel Prentiss Ingraham, among others, in several series between 1883 and 1899. When dime-novel production ceased, most of the once prolific authors faded into obscurity.

Often, characters appearing in dime-novel series were better known than their authors were. Ned Buntline's famous western hero, Buffalo Bill, based on United States scout and performer William Frederick Cody, appeared in numerous publications by Beadle & Adams, Street & Smith, and Frank Tousey. Amateur detective Nick Carter proved to be so popular after his first appearance in *The Old Detective's Pupil* (1886), that Street & Smith featured his adventures in three different series between 1891 and 1915, *The Nick Carter Library*, *The New Nick Carter Weekly*, and *Nick Carter Stories*. Similarly, the exploits of Deadwood Dick, Kit Carson, Jr., Jesse James, Old Sleuth, Young Wild West, Frank Reade, Jr., Tiger Dick, and Frank Merriwell appeared in more than one dime novel.

Covering a wide variety of subjects, dime novels promoted traditional American values of patriotism, rugged individualism, and moral behavior. Many of the early dime novel stories focused on

historical events such as the Revolutionary War, the War of 1812, and conflicts with Native Americans. Others were set in gold mining camps or towns within the expanding western frontier, and featured gunfighters, villains, and damsels in distress. Reflecting the urbanization of cities, the industrial revolution, and increased transportation modes, subsequent dime novel subjects included circuses, railroad workers, firefighters, sports, science fiction, fantasy, sea or polar explorations, and mysteries with detectives from every walk of life. Moving beyond the borders of America, a few detail adventures in distant places.

In the 1990s, few original dime novels exist outside of libraries and personal collections. Moreover, owing largely to their sheer numbers and past popular appeal, dime novels are seldom considered by literary scholars to be good examples of American literature. Their value as historical artifacts, however, is considerable.

## Dime Stores/Woolworth's

Dime Stores, or five-and-dimes, maintained a central place in American life from before 1900 until after World War II. Woolworth's was the original and dominant dime-store chain. In the first half of the twentieth century, the main street of virtually every town and city in the United States featured a Woolworth's; it was the first place many people went to look for basic merchandise of all sorts. Woolworth's offered its customers a wide assortment of very affordable household items and the working class appreciated finding basic things at basic prices. The dime store's lunch counter was a common meeting place, its toys made it a favorite destination of children, and its endless locations meant it served as the neighborhood store for many. Although part of Woolworth's appeal was in its ubiquitous presence, local stores were also encouraged to remain local institutions. They varied widely from region to region and from city to town. Each filled a particular role and developed its own character.

In 1919, when F. W. Woolworth died, his chain of five-and-dimes consisted of 1,081 stores in the United States and Canada. At that time, department stores were all regional; Woolworth's was one of a very few nationwide chains. Department stores were also notably more lavish and expensive than dime stores. Millions of working people depended on Woolworth's and other five-and-dimes for many basic needs. As the nation's largest food-service retailer by the 1940s, Woolworth's maintained nearly a thousand inexpensive lunch counters across the United States before the first McDonald's opened.

Before Woolworth, shopping meant bartering. Merchandise was kept behind counters or on inaccessible shelves and customers had to ask clerks to show them an item. Fixed pricing had begun appearing in

An F. W. Woolworth Co. five and dime store.

a few places, notably Michigan, in the 1870s, but was sporadic and unorganized. Other merchants had set up five-cent counters from time to time for limited runs, but no one had worked hard to make it consistently profitable, and certainly no one had devoted an entire variety store to the same fixed price. Frank Woolworth was not a natural salesman or bargainer, but he held a strong Yankee work ethic and recognized and exploited a good idea. He assiduously sharpened his bargaining skills until he became known for them. They helped him negotiate endless deals with wholesalers which allowed Woolworth's to make a profit on items under 10¢.

He had opened his first "5¢ store" in Utica, New York, on February 22, 1879, with \$350 loaned him by his former employer. That first store barely turned a profit, but it spawned twenty more over the next ten years, twelve of which were partnerships and five of which failed within a few months. His fourth store, opened in Scranton, Pennsylvania, on November 6, 1880, was the first "5-&-10¢ store." Frank Woolworth never stopped opening or buying new stores: he ran twelve in 1890, fifty-four in 1900, two hundred thirty-eight in 1910, and three hundred nineteen by the December 1911 merger that created F. W. Woolworth & Co. Combined with his brother Charles's fifteen stores, his cousin Seymour Knox's ninety-eight, Fred Kirby's ninety-six, Earle Charlton's thirty-five, and William Moore's two, Woolworth became the first retail company to

operate stores in all forty-eight states. As he planned for the merger that created F. W. Woolworth & Co., Frank Woolworth also oversaw the construction of the Woolworth Building in Manhattan. The tallest building in the world at the time of its completion in 1913, Woolworth insisted that it surpass the Metropolitan Life Building, which company had refused him a policy when he was laying the foundation for his empire.

Frank Woolworth said that he aimed "to open a store in every civilized town throughout the world." He expanded into England in 1909, then Germany, Canada, South Africa, and elsewhere. Woolworth's critics complained that Woolworth's was creating a monopoly and Congressman John J. Cochran championed legislation that would have taxed Woolworth's into collapse. Many people were dismayed by "the chain store menace" of Woolworth's in the 1930s, just as many recoiled when Wal-Mart built stores in their communities in the 1980s and 1990s. In 1935 Representative Cochran led a congressional investigation into the "super-lobby" of chain store interests. Woolworth's and drug-store chain A&P were the primary targets. Fortunately for the chains, a 1939 bill that would have broken them up died in committee. Woolworth's did indeed try to drive out or buy out much of its competition. The company knew that many of the towns and districts where they opened could not support more than one dime store.

Woolworth's remained literally a dime store for over fifty years, until 1932, when the top price was raised to 20¢. In 1935 the limited price policy ended as the company expanded into higher-priced merchandise such as furniture and appliances. Despite fixed, low prices, Woolworth paid better wages than most of his competitors. He introduced minimum wages for all positions, paid vacations, and Christmas bonuses. These things were far from standard early in the twentieth century. Woolworth's was also a major employer of women, although by the 1950s many were protesting their lack of promotion in the company.

Woolworth's lunch counters will be long remembered as the site of civil-rights sit-ins in 1960. The first one began at the Woolworth's in Greenville, North Carolina, on February 1, 1960. Soon protesters throughout the South were occupying lunch counters and calling for a nationwide boycott against Woolworth's. The company's earnings dropped 8.9 percent in March. Many cities integrated their restaurants after a few weeks, but Greenville endured sit-ins and demonstrations until July 25.

Woolworth's perfectly filled a key place in American culture in the first half of the twentieth century, but as the culture changed after World War II, Woolworth's importance waned. As other chains emulated Woolworth's low-cost approach, it became little more than another department store. The 2,850 Woolworth's stores of the early 1960s sold enormous quantities of merchandise, but held onto a very thin profit margin.

In the postwar era, Woolworth's seemed stale and staid; its workforce aged with its clientele as it failed to change with the times. A succession of company-trained presidents found it impossible to halt the gradual decline. The last 400 Woolworth's in North America were closed in 1997 and 1998. Woolworth's survives in the United States as Venator, a corporation consisting primarily of Footlocker athletic shoe stores. In Great Britain and Australia Woolworth's remains a major variety and, in Australia, grocery chain.

Yet the legacy of the dime store thrives in the myriad discount department stores throughout the world, in the many "dollar stores" now occupying the neighborhood malls that have taken the place of downtown shopping districts, and in the merchandise purchasing, display, and pricing policies that have become standards of modern commerce.

—Paul Gaffney

## Diners

Restaurants commonly referred to as "diners" have held a special place in American popular culture since the 1930s. Once sleek, futuristic icons of post-war optimism, they now capture our

attention as objects of nostalgia. As the precursor to fast-food restaurants, diners were one of the unique building types spawned by the burgeoning automobile society. Their very appearance—with streamlined, movement-implying shapes and bright neon lights—captured the spirit of the new mobile culture.

The diner evolved from horse-drawn night lunch wagons of the late nineteenth century. These convenient wagons served walk-up customers in downtown areas after restaurants had closed for the evening. The next generation of wagons featured indoor seating; by the turn of the century, many lunch wagons had become stationary. The early diners' forte was the quick, inexpensive meal—atmosphere was not important. The clientele consisted of night workers and late revelers. Sandwiches, hamburgers, pies, hot dogs, and breakfast fare were standard items. By the 1890s, Thomas H. Buckley was mass-producing lunch wagons and had placed them in at least 275 cities across the country. Early diners were also converted from railroad or trolley cars.

The diner that has become the object of popular affection dates to the 1930s and 1940s. The machine-influenced, Art Deco or Moderne design style that emphasized smooth curves, simplicity, and shiny surfaces was inherent in much product design of the time, but in the diner it was integrated into a total environment. Diners from the Golden Age were long and low in shape, with streamlined effects and clean surfaces, evoking a feeling of both futurism and movement. Formica, stainless steel, and Naugahyde were the most popular interior materials. Diners contained booths, but the highlight of the interior was a long, shiny counter. Meals were simple and inexpensive. The imagery of speed and progress fit perfectly with the rapidly developing mobile society, in which the automobile was reshaping the landscape and creating opportunities for new building.

In the 1950s, as more families began to eat outside the home, and the diner became more "respectable," diners expanded in size and menu. The 1960s marked a turning point for the diner, as the fast-food restaurant industry proliferated. Fast-food represented standardization, as opposed to the uniqueness of diners. You knew beforehand what was on the McDonald's menu, while every diner had a specialty and a different atmosphere. In response, many diners tried to emphasize their individuality by expanding their menus and adopting more conservative imagery. Apart from their smaller size and the word "diner," many of these diners became difficult to distinguish from standard restaurants. Booth and table service came to predominate over the traditional counter. Colonial and Mediterranean architectural styles often replaced the Art Deco model familiar from past decades.

Beginning in the 1970s, diners began to make a comeback as nostalgic reminders of a more innocent time. They also became legitimate subjects of study by architectural and popular culture scholars. In 1978 the Cooper-Hewitt branch of the Smithsonian held an exhibit on architectural packaging which looked at four popular American building types: fast-food restaurants, diners, gasoline stations, and museum-village restorations. An article by Richard Oliver and Nancy Ferguson, the curators of the exhibit, appeared in *Architectural Record* for February 1978 and also as a reprint catalog. Also, Barry Levinson's 1982 movie *Diner* helped introduce the phenomenon to a new audience. In the late 1990s, diners were still being manufactured and patronized. Many older models have been restored. Diners are the subject of books and museum exhibitions. The Henry Ford Museum in Dearborn, Michigan, now includes a 1946 diner as part of its collection of twentieth-century cultural artifacts, in an exhibition entitled, "The Automobile in American Life." Diners have thus been recognized as unique cultural inventions which, like

An example of the diner, 1952.

the gas station and fast-food restaurant, were byproducts of the automobile revolution of the twentieth century.

—Dale Allen Gyure

## Dionne Quintuplets (1934—)

Yvonne, Annette, Cécile, Émilie, and Marie Dionne are the first monozygotic—all from one fertilized ovum—quintuplets known to have survived to adulthood. They were nearly sextuplets, but the sixth fetus miscarried in the third month of pregnancy. Born to Oliva and Elzire Dionne, French-Canadian peasants, in their seven-room farmhouse near Callander, Ontario, the premature babies weighed a total of 13 pounds, 6 ounces. They owe their survival to the quick and intelligent care of the local general practitioner, Dr. Allan Roy Dafoe, who collected virtually every incubator in the province and kept the

tiny girls alive through his excellent scientific care. Nevertheless, the significance of the Dionne Quintuplets rests not in their place in medical history, but as examples of exploitation and publicity. Their birth and survival created a worldwide sensation, and their father collected a fortune by serving as their "manager," selling the right to photograph them, to have them appear in motion pictures, and to secure their "endorsement" of various products. They were made wards of the Canadian government in 1935, and for their first ten years were raised in a special nursery built for them out of public funds. After a protracted lawsuit, their parents recovered custody in 1944.

The birth of multiple children in the United States never garnered as much interest as that of the Dionne quintuplets. However, the subsequent birth of the Thompson sextuplets and the McCaughey septuplets in 1997 brought to light racial tensions in the United States. Unlike the worldwide attention given to the Dionne family, the birth of the first African-American sextuplets on May 8, 1997 came with little fanfare. Living in a two-bedroom apartment, the Thompson family struggled to make ends meet with the money Linden Thompson could make from his two jobs. Only after the much-publicized birth of the white McCaughey septuplets, seven months later that year, did corporations extend the same free products and aid to the Thompson sextuplets as well. Although not the riches given to the Dionne family, the lifetime of free diapers, college scholarships, and use of a mini-van relieved some of the stresses on the newly enlarged families.

## The Dirty Dozen

Directed by Robert Aldrich, *The Dirty Dozen* tells the story of Major Reisman (Lee Marvin) and the twelve hardened convicts he selects to join him on a suicide mission behind German lines in 1944. *The Dirty Dozen* remains an interesting and popular film, as it is meticulously crafted, deftly edited, and features several future stars at the beginning of their careers (including Donald Sutherland, Charles Bronson, and Telly Savalas). Although released in 1967 at the height of the anti-Vietnam war movement, *The Dirty Dozen* was nevertheless a success, becoming one of the biggest box-office hits in MGM's history. War protesters readily accepted the film's depiction of officers as indiscriminate killers, while more militaristic moviegoers approved of the film's brutal combat scenes.

## Disability

The presence of disability in popular culture has taken many forms; indeed, people with disabilities (PWDs) have appeared frequently across the pop-culture spectrum: movies, television, print media, dance, theater, music, and sports. Disability representations have never been in short supply, though many produced by the mainstream cultural industries remain questionable at best, hurtful and divisive at worst.

Images of disability have perhaps found their most frequent expression in movies, with the vast majority created from the perspective of able-bodied filmmakers and intended primarily for able-bodied audiences. The earliest silent movies, each only a few minutes long, tended to portray PWDs as comic figures given to pursuing others or being pursued themselves, as in *The Legless Runner* (1907), *The Invalid's Adventure* (1907), and *Don't Pull My Leg* (1908). As the medium matured, moviemakers borrowed heavily from such nineteenth-century literary fare as *Moby Dick*, *A Christmas Carol*, *Notre Dame de Paris* (*The Hunchback of Notre Dame*), *Treasure Island*, and *The Two Orphans*, to create more intricate narratives that

portrayed disabled people either as innocent victims or incarnations of evil. The films in this tradition included *Orphans of the Storm* (1921), *The Hunchback of Notre Dame* (1923, but many versions made since), *The Sea Beast* (1926), and numerous adaptations of *A Christmas Carol*. The 1930s saw a continuing interest in such stereotypical extremes—most notably in *Moby Dick* (1930), Charlie Chaplin's *City Lights* (1931), Todd Browning's famous gallery of grotesques, *Freaks* (1932), and a 1939 remake of *Hunchback*. Such images began fading during the World War II era in favor of relatively realistic and sensitive portraits of disabled veterans. *Pride of the Marines* (1945) and *Bright Victory* (1951) both dealt with blinded ex-servicemen; real-life veteran Harold Russell, whose service legacy was to lose his hands (replaced by metal hooks), played himself in *The Best Years of Our Lives* (1946), and Fred Zinnemann's *The Men* (1951), Marlon Brando's first film, dealt with paraplegics. These images, in turn, began giving way to famously larger-than-life civilians who "triumphed" over their disabilities: opera singer Marjorie Lawrence and Franklin D. Roosevelt, both polio victims, in *Interrupted Melody* (1955) and *Sunrise at Campobello* (1960) respectively, Helen Keller, deaf, dumb, and blind, in *The Miracle Worker* (1962). Stanley Kubrick's *Dr. Strangelove* (1964), however, mocked these latter types with its title character, and signaled their temporary demise.

With alarming regularity, Hollywood has continued churning out regressive disability movies such as *Hook* (1991), *The Fugitive* (1993), *Speed* (1994), and *Forrest Gump* (1994), reflecting the age-old practice of linking evil or innocence with disability, but an increasing number of films since the 1960s have offered positive images. Hollywood has often reserved the most resonant and poignant portrayals for disabled Vietnam veterans, as in *Coming Home* (1978), *Cutter's Way* (1981), and *Born on the Fourth of July* (1989). Other memorable, if not entirely progressive, films since the 1960s include *The Other Side of the Mountain* (1975), *The Elephant Man* (1980), *Children of a Lesser God* (1986), *Rain Man* (1988), and *Scent of a Woman* (1992), which range over a variety of afflictions and film styles.

Despite its relatively short history, the television industry has also demonstrated an interest in portraying the disabled experience, with a number of series presenting disabled characters in continuing roles. *Gunslinger's* mobility-impaired sidekick Chester Goode, played by Dennis Weaver for nine seasons (1955-1964) during the program's 20-year run, competes with Raymond Burr's wheelchair-dependent police detective on *Ironside* (1967-1975), as television's most popular disabled character, while James Franciscus played a blind insurance investigator on *Longstreet* (1971-1972). Taking a different approach, nuclear-powered prostheses and implants turned disabled figures Steve Austin (Lee Majors) and Jaime Sommers (Lindsay Wagner) into the title characters of *The Six Million Dollar Man* (1974-1978) and *The Bionic Woman* (1976-1978), respectively. Later, LeVar Burton played the blind chief engineer Lt. Geordi LaForge in *Star Trek: The Next Generation* (1987-1994) and a string of follow-up movies.

Most of these films and TV programs featured able-bodied actors playing the disabled characters, a situation that some disability activists have likened to the now discontinued practice of white actors masquerading in blackface as African Americans or Shakespeare's Othello. Actors with actual disabilities have been employed only sporadically in the film and television industries, but their influence continues to rise. Some old-line actors, such as Sarah Bernhardt, Harold Lloyd, Herbert Marshall, and Lionel Barrymore, tended to mask their disabilities before the cameras (Barrymore's performance

in the 1946 film *It's a Wonderful Life* is a notable exception), but for more recent actors, their disabilities became part of the characters they played. Harold Russell, whose hands were blown off in a demolition exercise, won two Oscars for his work in *The Best Years of Our Lives*, and Marlee Matlin, a hearing-impaired performer, won an Oscar for her role in *Children of a Lesser God* (1986) and went on to play bank-robber-turned-mayor Laurie Bey in the final years of the acclaimed TV series *Picket Fences*. Chris Burke, a developmentally disabled actor, co-starred as Corky Thatcher on the popular drama *Life Goes On* during its 1989-1993 run, and wheelchair-user Nancy Becker Kennedy played a sharp-tongued secretary on *The Louie Show* in 1996. Mitch Longley, a wheelchair-using heartthrob who once modeled shirts for Ralph Lauren, appeared as Byron Pierce on the soap opera *Another World* during the 1991/92 season and, beginning in 1997, played the double role of Dr. Matt Harmon and Eric Mancusi on the long-running soap opera, *General Hospital*, and its spin-off, *Port Charles*.

Longley is only one of several PWDs who have also made inroads into the modeling field. One of the most famous, wheelchair-user Ellen Stohl, posed nude for the July 1987 issue of *Playboy*, making her that magazine's first disabled centerfold, while runway models now have PWDs among their ranks, including Kitty Lunn and Kim Barreda. A number of American corporations, such as McDonald's and K-Mart, have begun using disabled performers in their commercials. A prime example is The Home Depot, which has featured disabled employees Henry Gibson and Dan Brady in its ads.

Since the latter decades of the twentieth century, PWDs have taken a more direct role in the creation of a pop-culture presence. Ron Kovic, a disabled Vietnam veteran who wrote the searing autobiography, *Born on the Fourth of July*, in 1976, also co-wrote the screenplay, in which he was played by Tom Cruise, for the like-titled movie in 1989. Three years later, Neil Jimenez wrote and co-directed *The Waterdance*, a film modeled largely on his own experiences as a newly disabled person. Billy Golfus, who suffered brain damage during a 1984 vehicular accident, eventually secured funding through the Independent Television Service to produce *When Billy Broke His Head . . . and Other Tales of Wonder* in 1995. This documentary film told not only his story but also the "tales" of other PWDs and their struggles for civil rights. Disabled journalist and poet Mark O'Brien collaborated with Jessica Yu on *Breathing Lessons: The Life and Work of Mark O'Brien* (1996), an Oscar-winning film for best short-subject documentary and a recipient of a special National Educational Media Network award. In 1992, Greg Smith founded *On a Roll*, a nationally syndicated radio talk show dedicated to disability issues, while John Hockenberry, a two-time Peabody Award-winning TV network correspondent, shared his perspectives about life as a disabled person in a 1995 memoir, *Moving Violations*, and in his one-man show, *Spokesman*, produced off-Broadway in 1996. Christopher Reeve, whose spinal cord was severed in a 1995 horseback-riding accident, directed a one-hour AIDS drama in 1997 titled *In the Gloaming*, and served as an executive producer for the 1998 TV remake of Hitchcock's *Rear Window*, in which he played the James Stewart role of a wheelchair-bound man who witnesses a murder across the courtyard of his apartment building.

Many other PWDs have contributed to the performing arts. Among the more notable are three singers who happen to be blind: Ray Charles and Stevie Wonder, who have enjoyed long careers as popular musicians; and Andrea Bocelli, who crossed over from opera to become something of a pop sensation. The National Theater of the Deaf, a mixed troupe of hearing and deaf actors founded in 1965, has

performed across the country and on national TV. Mary Verdi-Fletcher, a wheelchair-user born with spina bifida, founded the Cleveland Ballet Dancing Wheels, a group of dancers with differing degrees of mobility that has given hundreds of performances on several continents.

PWDs have had their greatest successes in the literary field, with memoirs and poetry volumes. Nancy Mairs' *Waist-High in the World* (1996) and Kenny Fries' anthology *Staring Back* (1997) are prominent among the countless examples. The influence of the disability press has also grown appreciably, with *New Mobility*, *The Ragged Edge* (formerly *The Disability Rag*), and *Mouth* playing crucial roles.

In the world of sports, the Paralympic Games typically attracts thousands of amateur athletes and delegates from more than a hundred countries and are by far the most famous of competitions for PWDs. Among professional athletes, Monty Stratton pitched professional baseball for a few seasons in the 1940s despite having lost a leg in a 1938 hunting accident. He went on to supervise *The Stratton Story* (1949), a movie based on his life, which starred James Stewart. Despite a congenitally deformed hand, Jim Abbott enjoyed several seasons as a Major League pitcher and threw a no-hitter for the New York Yankees in 1993. In the National Football League, New Orleans Saints place kicker Tom Dempsey, born without a right hand and only half a right foot, used that foot to kick a 63-yard field goal against the Detroit Lions in 1970, a NFL record that stood unmatched for 28 years. Casey Martin, a professional golfer with a rare and painful birth defect in his right leg, made headlines in early 1998 by suing the PGA Tour and winning the right to ride in a cart while participating in the pro golf tour.

Of all pop-culture arenas, comic-strip art is decidedly the most problematic as regards the treatment of disability. Berke Breathed's syndicated cartoon strip *Bloom County* and its wheelchair-using Vietnam vet, Cutter John, are among the high points, but the field has generally been dominated by cartoonists such as Charles Addams and Gahan Wilson, long known for their "sick-humor" takes on such topics as blindness, deformity, and dismemberment. Their work arguably paved the way for John Callahan's repellent *Hustler* cartoon images and Gary Larson's skewed view of disabling conditions in his near-legendary strip, *The Far Side*.

Despite the excesses of comic-strip art and certain other media, however, the pop-culture representation of disability is constantly advancing. As more and more PWDs get involved in the creation of popular culture, the images can only improve.

## Disaster Movies

In disaster movies, natural disasters, accidents, and terrorist actions provide the setting for daring escapes and incredible heroism. The films rely heavily on special effects to recreate on screen the violent consequences of earthquakes, plane crashes, and meteorite storms; the category also includes monster-disaster movies in which an enraged, oversized creature destroys buildings and other large objects. It is an important part of disaster movies that in them heroic acts are performed by unlikely heroes—by people with psychological wounds, with limited experience of the things they are asked to do, and in situations where the odds against success seem impossibly high. Because these films are about averting and surviving disaster, it may be significant that disaster movies began to be produced in large numbers in the years after the horrors of World War II. If the twentieth century has seen great advances in technology, disaster movies reflect a fear that technology alone will not save us. Although their plots are

often unrealistic and the acting and special effects unconvincing, they offer the message that, through self-belief and the right moral choices, people just like us have the ability to save themselves.

Disasters featured in disaster movies can be divided into three main types: natural disasters, disasters caused by technology failing or being accidentally damaged, and disasters caused by terrorism or by the recklessness of an individual or agency. The most successful disaster movies are usually the simplest, but popular disaster-based films can contain elements of one, two, or even all of these scenarios. The actual type of disaster involved is only one of many reasons for a particular film's popularity. Among other things, audiences want to know how the characters will escape with their lives, they watch for the special effects, and also for sentimental reasons; popular disaster movies almost always include a love affair developing alongside the disaster plot. When the type of disaster is significant, it is often because it reflects current or local concerns. In the 1990s, for example, perhaps cashing in on pre-millennium fears, a rash of films such as *Independence Day* (1996) and *Deep Impact* (1998) appeared, with plot lines based around threats to life on earth posed by attacks from extraterrestrials or from asteroids. Similarly, in the 1980s films such as *Testament* (1983) and *The Day After* (1983) appeared in response to the threat posed by the nuclear arms race. Because most disaster movies are made in Hollywood and Japan, it is probably no

Passengers struggle for survival during a scene from the disaster film *The Poseidon Adventure*.

coincidence that a large number of them feature earthquakes, tidal waves, and volcanic eruptions.

The history of disaster movies is a relatively short one. Although disasters have featured in movies from the beginning of the twentieth century, films in which the disaster is the reason for making and watching the film did not become common until the 1950s when alien invasion and monster movies were popular. Before then, disasters of various kinds had appeared in adventure films and films about war, but true disaster movies were rare. One precursor to modern monster-disaster movies such as *Jurassic Park* (1993) is Cooper and Schoedsack's *King Kong* (1933), but the film is really an exotic adventure thriller with only a small element of disaster movie action. Such extravagant special effects as were needed to make the famous scene on the Empire State Building are remarkable for their time, but it was not until the 1950s that such effects could be achieved with much regularity.

In the 1950s, advances were made in film technology that allowed filmmakers to make better use of special effects techniques pioneered in the 1930s. Many of the resulting films were a combination of science fiction and horror, but disaster was often at their heart, as titles such as *When Worlds Collide* (1951) and *War of the Worlds* (1954) suggest. It has been suggested that the new threat of nuclear destruction meant that filmmakers and audiences became concerned with global, rather than local, conflicts and many of the monster-based disaster movies of the 1950s involve mutant creatures terrorizing and destroying cities. New film techniques such as "3-D," made possible by improvements in color film, made monster movies still more thrilling as giant creatures appeared to step off the screen and into the audience. Perhaps because of the Japan's own experience of nuclear destruction the Japanese film industry has been prolific in the field of atomic monsters, its most famous being Inoshiro Honda's *Godzilla, King of Monsters* (1954).

In the 1960s, science fiction disaster movies and nuclear accident films remained popular in Japan, where Honda's *Godzilla* and other monster series continued until late in the decade. Although extra footage of well-known American actors was added to Honda's films for American distribution, disaster movies in the United States generally did less well in this period. American disaster movies in the 1950s had mostly upheld Hollywood's conservative values and, in the 1960s, the genre perhaps seemed less suitable for exploring the new moral climate than, for example, the westerns of Sam Peckinpah or the thoughtful science fiction of Stanley Kubrick's *2001: A Space Odyssey*. It was not until 1970, with the release of *Airport*, that disaster movies became popular again.

The Golden Age for American disaster movies was the 1970s. As Hollywood re-embraced the idea of making popular, big budget features, the disaster movie became an important format for demonstrating spectacular special effects and for drawing in audiences to watch destruction on a large scale. Exactly what appeals to audiences in watching planes crash, ships sink, trains collide, and tall buildings burn will probably never be known for sure, but films like *The Poseidon Adventure* (1972), *The Towering Inferno* (1974), and the *Airport* series gave Hollywood some of its most lucrative successes. Unlike the futuristic films of the 1950s, disaster movies in the 1970s often dealt with familiar events and situations, ones that already caused anxiety for many people. For example, the number of miles Americans travelled by air doubled between 1965 and 1970, and air travel is one of the most common themes for disaster movies of the 1970s. Similarly, at a time when many new highrise blocks were being built and planned, Paul Newman and Steve McQueen braved

flames and smoke to rescue people from a party on the top floor of "the tallest building in the world" in John Guillermin's *The Towering Inferno*.

While the special effects in films like *The Towering Inferno* are impressive for their time, as with many disaster movies the biggest challenge its makers faced was to prevent the record-breaking skyscraper—the "Tower of Glass"—from looking like a model. In the 1990s the situation has been helped by improvements in digital technology and, in particular since the late 1980s, the ability to mix live action with what are known as Computer Generated Images (CGI). CGI has become widely used in the production of many kinds of films, but it is used most spectacularly in disaster movies which, in the 1990s, have become much more realistic in terms of sound and vision. The turning point in the relationship between conventional filmmaking and CGI was James Cameron's deep-sea disaster movie *The Abyss* (1989). The plot of Cameron's film peripherally involves a research team working on the edge of a deep ocean trench, whose seabed living quarters seem certain to be dragged down into the abyss. The discovery of friendly aliens living at the bottom of the trench allows the opportunity for some impressive effects, such as a suspended column of seawater known as a "pseudopod," exploring the corridors of the deep-sea craft. Cameron used CGI and improved digital sound technology to excellent effect in his 1997 disaster film *Titanic*, creating convincing footage of the great ship's final hours. Director Steven Spielberg used similar techniques to bring dinosaurs back to life in *Jurassic Park* (1993) and the more overtly disaster-based *The Lost World* (1997).

Disaster movies have a tendency to take themselves too seriously and if improvements in special effects mean that comical visual effects are rarer in the 1990s, disaster movie plots have improved very little. Emotions are still crudely acted and contrived situations—such as the appearance of a dinosaur in San Diego in Spielberg's *The Lost World*—still challenge audiences to believe. Because of these weaknesses and responding to the popularity of disaster movies in the 1970s, parodies of disaster movies have also proved popular. In particular, the *Airport* series of films, the last of which appeared in 1979, was parodied in 1980 by *Airplane!*, a film advertised with the tag-line "What's slower than a speeding bullet, and able to hit tall buildings in a single bound?" The film spoofs the typical disaster movie plot when a pilot who is afraid of flying becomes the only person capable of flying the plane, while the score by Elmer Bernstein parodies the melodramatic music that accompanies all popular disaster movies.

While disaster movies have tended to be made as fictional entertainment, other categories of disaster movie have taken a more serious approach. There are films based on the Exxon Valdez oil spill and the Mount St. Helens volcanic eruptions, while others, such as the many Titanic disaster films, add a fictional or semi-fictional dramatic element to the real-life story. Still others, such as the British-made semi-documentary *Threads* (1985), mix documentary reporting with dramatization to make a serious point, in this case about the threat of nuclear war and its long-term effects. Whatever the reason for their appeal, in the 1990s disaster movies continue to be produced in large numbers and with great commercial success. Hard-core disaster movie fans will argue that they watch for the scenes of destruction and to revel in the special effects, but the importance of even a basic human story unfolding alongside the disaster suggests that their popularity has as much to do with sentiment as with spectacle.

—Chris Routledge

## Disc Jockeys

Since the early days of radio broadcasting, the disc jockey or DJ has been an essential part of radio, not just playing records but serving as an intermediary between the listening audience and the stars of popular music. Disc jockeys enjoyed the most influence on their listeners in the 1950s and 1960s, when they introduced new music to Americans and made rock and roll the dominant force in youth culture.

In the first two decades of radio in the United States, the person who introduced records and made station announcements was usually a technician who worked the broadcast equipment. It was a policy of the large radio networks to avoid recorded sound as much as possible and rely on live programming. Thus there was little call for disc jockeys in the 1920s and 1930s. The radio networks were forced to drop their opposition to canned music as their studio musicians were called up to join the armed forces in the 1940s. Thus began the rise of the radio announcer who played recordings on the air, the so-called disc jockey.

The most popular was Martin Block, whose “Make Believe Ballroom” invited listeners to a pretend concert and entertained them with humor and records. His program was networked in the 1940s and reached a national audience. The monopoly of the three national radio networks—NBC, CBS and ABC—was broken in the 1950s and this allowed many small independent stations to go on the air. Lacking the programming resources of the great networks, the independent stations relied on recorded music. The man spinning the records also made commercial announcements and read the news. At this time an estimated 75 percent of all programming on American radio came from records, providing many job opportunities for young men with ambitions in the music industry. Many important entertainers, record producers, and entrepreneurs of the 1950s got their start on local radio

Famed disc jockey Wolfman Jack.

stations playing records, including Bill Haley, Norman Petty, and Sam Phillips.

African Americans in southern cities and urban ghettos in the Northeast were an important new market for independent radio and many urban stations began to realign their programs to suit a predominantly African American audience. Ownership of black radio remained in the hands of whites, but gradually black disc jockeys were allowed to broadcast. It was this group that began to play rhythm and blues records and create a new kind of radio personality who was to inaugurate the era of rock and roll.

Most radio announcers maintained a dignified demeanor and spoke in clear, correct English, but some African American disc jockeys broke all the rules of on-air behavior and invented outrageous alter egos for themselves. Their antics were rapidly copied by their white counterparts, who also stole the most commercial songs from their playlists and introduced them to the great white teenaged audience.

It is significant that the term “rock and roll” was coined by a white disc jockey from Cleveland, who played rhythm and blues records and created an entertaining on-air personality for himself. Alert to telephone requests and the sales of records in local stores, Alan Freed responded quickly to the growing appeal of R&B and turned his show into a showcase for the music. In 1951 he started to call it rock and roll. Such was the success of his “Moondog’s Rock and Roll Party” that he moved to New York in 1954 and a much larger audience. The program climbed to the top of the ratings chart as rock music became more and more popular. Freed was America’s most influential disc jockey, a conduit through which the “race” music of the 1940s became the rock and roll music of the 1950s.

The disc jockey of the late 1950s and early 1960s was an extremely important figure in the business of popular music. Radio play constituted the main form of promoting a record and many stations allowed the disc jockey to choose what records were to be broadcast. He decided which up-and-coming bands would get the radio play essential to selling records and moving up to bigger audiences and better paying shows. Disc jockeys found that repeated play of a record could make it a hit and the mythology of rock and roll is full of stories of unknown performers becoming stars overnight because of a radio personality who “broke” the record to his listening audience. Disc jockeys did a lot more than play records—they managed bands, promoted tours and public appearances, acted as master of ceremonies in rock shows, and became friends and advisors to the stars. Their name would share equal billing on the billboard of a typical rock and roll performance of the 1950s and early 1960s, as announcer and promoter. They became active intermediaries between rock and roll musicians and their audiences. Several of them, such as Alan Freed and “Murray the K” Kaufman, became stars of popular culture in their own right. Murray the K of station WINS of New York played an important part in introducing American youth to the Beatles during their first tour of the United States in 1964. Kaufman certainly promoted the Beatles but his position on the Beatles’ bandwagon also helped his own career and his station.

The great power enjoyed by disc jockeys in the marketing of recordings encouraged corruption. The practice of “payola” (a contraction of “pay” and “Victrola”) in which the disc jockey was bribed with money or a share of the publishing rights of the song was widely used to get airplay. The smaller record companies commonly paid disc jockeys and juke box operators to use their recordings. This practice came under scrutiny of the U.S. House of Representatives at the end of the 1950s and the ensuing Payola scandal ended the careers of several influential disc jockeys, including that of Alan Freed. The

payola scandal was only one of the factors reducing the power of disc jockeys in the 1960s. The move to the Top 40 format—in which the playlist was based on the Billboard charts—narrowed down the choice of records to be played, and the gradual consolidation of the radio industry—with one business organization controlling several stations—often took the decision about what records were to be played out of the hands of the on-air staff.

The great technological watershed of the late 1960s and 1970s was the migration from AM to FM broadcast bands, which brought a significant increase in sound quality and encouraged stations to use high fidelity long playing records rather than the 45 rpm singles that had been the staple of commercial radio for two decades. The typical disc jockey of the FM album-oriented station was much quieter and unobtrusive compared with the radio personalities of the 1950s and 1960s. The person playing the records was expected to have more knowledge of the music and indulge in less histrionics. Women were now finding it easier to get jobs in radio stations as the archetype of the disc jockey was recast.

Although disc jockeys were still instrumental in finding new music and introducing new performers, their power in popular music was in constant decline in the 1970s and 1980s. Commercial radio relied less on the individual in front of the microphone and more on the programming director and market analyst to choose the records to be played. The flamboyant radio personality survived only on the morning show; the rest of the days broadcast was handled by anonymous interchangeable voices. Disc jockeys did find opportunities to set themselves up as independent businessmen who played parties and clubs. The creation of rap and hip-hop came out of the activities of disc jockeys in the New York area, who kept the records playing while “toasters” or master of ceremonies spoke over and in between the music. The introduction of music television in the 1980s raised expectations that the presenter would wield some influence but the “vee jay” proved as disposable and ephemeral as his or her counterpart on the radio. The continuing pattern of consolidation in the American radio industry in the 1990s ensured that the disc jockey would be the person playing the records not the unique performer influencing musical trends and making the stars of popular culture.

## Disco

Derived from the French discotheque, disco refers not only to a musical style but to a unique brand of dance-club decor, a sexy-synthetic manner of dress, a style of dance, and an attitude toward

sexual promiscuity and night life, all of which came together during the 1970s as “disco,” one of the most glitzy and celebrated fads in American popular cultural history. Between 1975 and 1979, the established sensibilities of rock and pop, which emphasized sincerity, emotion, and rebellion, gave way to the enchantment of dance floor rhythms, which colonized popular imagination as an alluring dream-scape of pleasure and sexual utopia. In disco, the boundary between commercial fabrication and real experience became blurred. Disco ushered in a new post-1960s concept of hedonistic weekends, holidays, and exciting after-hours activity that was open to anyone with a reasonable income, a basic sense of rhythm and a good body. However, for all its fashionable accouterments, what lay at the essential heart of the disco craze was the music. Characterized by an insistently repetitive base and a hypnotic beat, overlaid with teasing, sexy vocals, it captivated and mesmerized its adherents.

Though psychedelic dance bars had experimented with combinations of dance, music, and lighting since the 1960s (“oil wheels” and “sound-to-light” systems), it was during the 1970s that the technological, musical, and fashion elements that define the culture of the dance club were refined and popularized. In the early 1970s discos began expanding their equipment to include a wider array of musical and visual props. The “mirror ball,” which could fragment a white spotlight into a million rotating dots, became the symbol of the new disco, along with synchronized lights that were matched to the bass track of a record. Later, with the appearance of the smoke machine and dry ice, came the “pin spot” light, which could stab through a cloud of smoke to cast an illuminated shaft across a darkened room. Throughout the 1970s, commercial dance clubs sprang up across the country, ranging from fashionable and exclusive big city venues like New York’s Studio 54, to more modest hotel discos and revamped bars and clubs. The larger venues included advanced lighting and music systems controlled by a disc jockey, or DJ, who lorded over the collective euphoria from an elevated booth, cajoling the crowd to “get down and boogie.” Disco fashions highlighted the tight fit, high heels, platforms, and the funky “gentleman’s” three-piece suits, and displayed an unabashed preference for polyester.

Pop music had always been danceable and flamboyant, but what set disco apart was that it was not only music *for* dancing, but also music *about* dancing. The disco beat was the anthem of the dancers, the disco floor a wonderland of sexual promise where anything might happen, providing the perfect environment to indulge the pursuit of one’s fantasy. Unlike the “be-ins,” the pot parties, and other escapades favored by hippies, disco promised an experience of the exotic that could be easily slotted into a well ordered working week and coordinated with a regular pattern of one night stands. Film titles such as *Thank God It’s Friday* and *Saturday Night Fever* reflected the compartmentalized nature of this package-tour utopia. Though disco’s dreamland of sexual fulfillment is often remembered as the longing of the heterosexual male libido, the real origins of disco’s sexual imagery lie in the gay club scene of New York and San Francisco, where its camp atmosphere of sexual reverie was first born. This fact was largely obscured from disco’s audiences at the time. With hindsight, it is astonishing that middle-class, heterosexual listeners were oblivious to the homo-erotic suggestions that permeate the songs of such widely accepted groups as The Village People—songs such as “Macho Man,” “In the Navy,” and “YMCA.” As it matured, disco sanitized and commercialized itself and, at its peak, it was targeted at an age group too young to be admitted to a real dance club, let alone have any clue as to what separated gay from straight dance culture.

Disco’s real ground zero, however, was not the concert hall or even the dance floor, but the AM radio dial. Mainstream radio started playing disco music in the mid-1970s, and by December 1978, 200 disco-only formats aired across the country. Six months later, the number had increased by a further 50. In 1974 and 1975 respectively, George McCrae’s “Rock Your Baby” and Van McCoy’s “The Hustle” introduced the sounds of disco to AM radio, though it was a few years before artists such as Kool & The Gang, Gloria Gaynor, Donna Summer, the Bee Gees, KC and The Sunshine Band, Sister Sledge, Diana Ross, and the Village People rode the wave of disco enthusiasm. By the time disco dominated the airwaves in 1979, even Rod Stewart and the Rolling Stones were among those who had hopped onto the bandwagon.

No group stands out as more emblematic of the period than the Bee Gees, who began the 1970s as a British-Australian pop phenomenon with moderate sales, and made a sensational breakthrough on the soundtrack of *Saturday Night Fever*. The film, which made a star of John Travolta, focused on a working-class youth who escapes the mundane reality of life by becoming a demi-god of the local disco scene. The soundtrack was originally released as a double LP in 1977, becoming the industry’s biggest selling soundtrack album and producing ten singles hits from its 17 tracks, of which “How Deep Is Your Love,” “Stayin’ Alive,” and “Night Fever” dominated the pop charts in 1977 and 1978. The famous image of Travolta, wearing a white polyester suit, his pelvis thrust forward and his finger raised skyward against a background of disco lights, came to define the decade, an emblem of disco’s garish eroticism. The Bee Gees, whose thumping, squealing ballads of sexual enterprise saturated the film, typified disco music for the remainder of the decade. Ironically, both Travolta and the Bee Gees later fell victim to the fickleness of fads and fashion, and became easy objects of ridicule for some years to come.

By the end of 1979, disco’s celebration of the fanciful and the fake was beginning to wear thin. After a stream of “one-hit wonders,” disco seemed to be more the product of producers and promoters than of the artists themselves. One of the problems was that disco music seemed to lack talented performing musicians: electronically manipulated sounds replaced the bass, drums and guitar that had typified rock, and in live performances disco stars came to rely increasingly on recorded tracks and off-stage musical support. The Village People, largely a stage act, kept back-up singers entirely out of view of the audience. More than this, disco proved notoriously adaptable to a variety of commercial marketing devices. A record called *Hooked on Classics*, whose cover featured a Mozart-like character mimicking Travolta’s famous pose from *Saturday Night Fever*, mixed well-known classical music hits to a disco beat. Novelty songs like “disco duck” climbed the AM charts, and even the theme from the film *2001: A Space Odyssey*, was re-recorded as a disco hit.

Perhaps the most interesting thing about disco was its strange demise and long disgrace. Its commercialism, its ersatz sexuality and its reliance on radio to reach an average music consumer—rather than record sales to reach a “fan” market of countercultural listeners—seemed to violate everything rock stood for, and provoked a powerful backlash from fans of “real” rock. Hostility came to a head in 1979 when a “Disco Demolition Derby” was organized by radio DJ Steve Dahl at a baseball game at Detroit’s Tiger Stadium. Anti-disco fans burned more than 100,000 albums, hoisted “disco sucks” banners, and rioted, forcing the cancellation of the game. The precise nature of this backlash remains unclear: Dahl’s event, which has since been compared to fascist book burnings, may have been homophobic, sexist or racist, or it may have expressed a widespread disappointment

with the increasing commercialism of a supposedly rebellious musical form. It was most likely a combination of these factors, but, whatever the case, not since John Lennon's fateful remark about the Beatles being more famous than Christ had there been such a widespread consumer revolt against the music industry. The reaction against disco's commercialism, cheap sentiment, and *faux* sexuality fueled the emergence of other more "authentic" expressions of youth culture, punk and heavy metal. By 1981 the disco boom was bust.

## Disney (Walt Disney Company)

When it was founded in 1923, Walt Disney Productions consisted of a small cracker-box studio in Hollywood housing a small group

Mickey and Minnie Mouse in Disneyland.

of creative artists headed by a young visionary who had recently arrived from the Midwest to produce cartoons for the movies. Beyond that, there was little more than a paper menagerie of barnyard animals and a mouse nicknamed "Mickey" who emerged at night to seek crumbs left behind by the artists. Five years later, that mouse had made the jump to the silver screen starring in *Plane Crazy* (1928) with the assistance of artist Ub Iwerks who supplied the artwork and Walt Disney, himself who came up with the trademark squeaky voice. The company was on its way.

At the end of the twentieth century, The Walt Disney Co. was considered by many to be the most influential company in the world surpassing even its founder's vision as it has established footholds not only in motion pictures but in such diverse industries as television, electronic media, book publishing, hotels, transportation, tourism, amusement parks, real estate, sports, and communications. In an industry where "vertical integration" had become increasingly important, Disney and its chief rival Time Warner have their corporate fingers in more pies than any other entertainment entities. Yet, the mouse continued to lead the way.

Perhaps, the most recognizable logo in the history of the world, Mickey Mouse has left his footprints on every country and culture in the world but the road to success has not been entirely without its share of ups and downs. Walt Disney was born in Chicago in 1901, the son of a ne'er-do-well father who drifted from one job to another. He learned to work hard early in life and had very little escape from the drudgery of his life except for the drawings he would create when no one was looking. This early experience instilled two traits in Disney that would follow him for all of his life. One was that he learned the value of hard work and became a compulsive "workaholic." The other was a firm belief that the public thirsted for escapism and "happy endings."

In 1919, Disney went to work for the Kansas City Film Ad Company where he put his drawing talents to use working on short animated commercials for local merchants. He also met another young artist named Ub Iwerks. Together the two learned the fundamentals of animation and decided to strike out on their own producing a series of ads and comic shorts called Newman's Laugh-O-Grams for the local Newman's Theater. In 1922, Disney took the Newman's concept further by creating pure entertainment oriented theatrical cartoons satirizing popular fairy tales. Unfortunately, he had the habit of spending more money on the production and technical aspects of each film than they brought in. The result was that, artistically, the films were quite polished for their time with full background detail and a full spectrum of wash tones that served to establish the basic Disney style. Financially, however, the company was forced to go out of business because its production costs were simply too high.

In 1923, Disney moved to Hollywood with his brother Roy and formed the Disney Brothers studio to produce short subjects which combined both live action and animation. The impetus for the move was based on an experimental short subject based on *Alice in Wonderland* which was a reversal of rival animator Max Fleischer's *Out of the Inkwell* series which featured a cartoon clown having adventures against a live background. Disney's version featured a live Alice character juxtaposed with cartoon backgrounds and animated characters. The series, which was dubbed *Alice in Cartoonland* was picked up by a Los Angeles distributor named M.J. Winkler. Yet, with the formation of the company, both Disney brothers realized that animation was not a one or two man job. Additionally, Walt realized that he was not the animator that his friend Ub Iwerks was so he hired a small staff including Iwerks and an up and coming animator named

Hugh Harmon. Some of the titles in the “Alice Series” included *Alice’s Wild West Show* (1924), *Alice’s Egg Plant* (1925), and *Alice Chops the Suey* (1925). These shorts were innovative in that they integrated the real and animated action, showing a live girl jumping out of an animated ink well or blowing animated smoke rings or being splattered with cartoon eggs. Yet, at the speed that the small studio was required to turn them out (approximately one every two weeks), they couldn’t experiment with too many ideas and the novelty began to wear off.

Disney quickly introduced a new character and series—“Oswald the Lucky Rabbit.” These cartoons reflected a higher quality of animation and experimented with a variety of visual effects, particularly the manipulation of light and shadow, not seen in the Alice series. In addition, the use of an animated central character as opposed to a live figure made a certain reality defying flexibility possible. In one adventure, Oswald attempts to kiss a medieval maiden’s hand and arm and keeps pulling more and more arm out of her sleeve until he has a seemingly endless expanse of arm to kiss. In another cartoon, his car expands and contracts to fit a variety of continuously changing road conditions.

Like the cartoons themselves, the planning sessions for them were equally flexible. Instead of formal scripts, the stories were conceived at what amounted to corporate bull sessions consisting of Disney and four other animators. Ideas were tossed into the ring until a basic plot evolved. Disney would then divide the elements into four sequences with each animator responsible for his own area of the cartoon’s action. Each animator could then freely improvise within his own area subject to Disney’s approval.

The Oswald series was so fresh and innovative that it made Disney’s company a modest success. Yet, when he approached his current distributor Charles Mintz who had taken over the Winkler Company for larger production budgets, Mintz refused and took both Oswald and all of the key animators who participated in the project away from Disney. Only Iwerks remained. The experience made the Disney brothers determined to own all of their own films and copyrights in the future.

In 1928, Disney and Iwerks fashioned another animal character to replace Oswald. However, Mickey Mouse who made his debut in *Plane Crazy* followed by *Galloping Gaucho* was not an immediate success. Although the animation and story ideas were good, the character itself looked like Oswald with shorter ears and a longer nose. There was nothing intrinsically interesting about the character to separate it from the multitudes of other animals cavorting on the screen. It took the invention of sound in 1928 to make Mickey Mouse a superstar. While the first live action sound films such as *The Jazz Singer* (1928) put the sound in somewhat gratuitously counting on the technology to thrill the audience, Disney created an integrated film in which sound and images worked together. When *Steamboat Willie* was released at the end of the year, audiences were captivated by the idea that a character plainly drawn with pen and ink could actually sing and dance in rhythm. The secret was that Disney began with song and music first and then drew the characters and backgrounds to reflect the sounds.

Disney built on the success of *Steamboat Willie* by working with his musical director Carl Stallings to create animated cartoons based on specific musical pieces. The first of these was *Skeleton Dance* (1928), a non-character cartoon that demonstrated animation’s ability to evoke mood and atmosphere. Suddenly cartoons were no longer the poor relative of live action feature films but works of art in themselves. In the years that followed, Disney created the *Silly Symphonies*

series of music-based animation and introduced new characters including Pluto (1930), Minnie Mouse (1933), and Donald Duck (1934). In 1932, he switched to the new medium of Technicolor for *Flowers and Trees* and won the Academy Award for “Best Short Subject.” After that, the young company maintained an exclusive agreement with Technicolor for all of their animated productions.

But, cartoon shorts could only evolve so far. Disney became determined to create a feature length animated film. Although conventional Hollywood wisdom dictated that an animated cartoon could not hold audience interest beyond seven minutes, Disney envisioned a fairly simple structure, which would allow one sequence to flow into another and in which musical numbers would evolve from and add to character development, as a viable formula for such a film. In *Snow White and the Seven Dwarfs* (1938), he created seven distinctly individual personalities in addition to his main characters, a feat which never before had been accomplished in animation. To accomplish such distinction, Disney crafted the characters, particularly Snow White, in such a degree of detail that they could convey human emotions in a believable manner. Audiences reacted to *Snow White* as if the characters were real, showing a variety of emotions ranging from horror at the sight of the queen’s transformation into a witch to happiness as Snow White frolics with the dwarves and charms the woodland animals.

Following *Snow White* came a steady flow of animated features, each one expanding the techniques of animation. By the beginning of the 1940s, the company geared up to produce a steady stream of animated features and literally become an animation factory employing hundreds of artists and technical personnel even though the studio had not gained “major” status as a full production/distribution entity on a par with Warner Brothers or Columbia. *Pinocchio* and *Fantasia* appeared in 1940, blazing a trail for such other notable productions as *Dumbo* (1941), *Bambi* (1942), *Cinderella* (1950), *Sleeping Beauty* (1959), and *101 Dalmations* (1961). Interspersed with these animated features were documentary and live action productions, including *The Living Desert* (1953), *20,000 Leagues Under the Sea* (1954), and *Mary Poppins* (1964). During the early 1950s, Disney founded his own distribution company, Buena Vista, to release these films thus freeing him from his reliance on RKO and other larger companies to determine the venues for his products.

But Disney did not confine himself to one medium. In 1954, he made the jump to the new medium of television with a weekly series called *Disneyland* which would be followed by an afternoon children’s series the *Mickey Mouse Club*. In 1955, he fulfilled his personal vision by creating an escapist world in Anaheim, California, in which reality dare not intrude. The Disneyland theme park featured a nostalgic Main Street USA and four thematically constructed “lands”: Adventureland, Fantasyland, Frontierland, and Tomorrowland. Each of these lands reflected motifs first delineated in Disney films or television programs. It was a “first” for the entertainment industry in that for the first time, viewers could actually enter the world of their favorite Disney films and interact with fictional characters. The company also led the way in creating spin-off products from the films and theme parks with lines of toys, clothing, records, and similar merchandise. By the end of the 1950s, Walt Disney was America’s undisputed king of family entertainment.

After its founder’s death in 1966, the company coasted along for a number of years turning out acceptable products and fulfilling several of Disney’s unrealized dreams, notably an updated East Coast version of Disneyland, Walt Disney World in Orlando, Florida, in 1971, and the futuristic Epcot Center several years later. Under the

management of Disney's successor E. Cardon Walker, the company was faced by a defection of a number of its leading animators led by Don Bluth, who felt that the company's standards had deteriorated after Walt's death. Yet, after venturing out on their own, they quickly discovered that while they could duplicate the legendary Disney animation, they could not capture the elusive Disney touch which transformed drawings into real characters capable of expressing human emotions within innovative storylines.

Walker's successor Ron Miller, faced with declining film revenues created a new division called Touchstone in 1984 to turn out more adult products than the Disney image would allow. This prompted Roy Disney, still a major shareholder in the company to resign from the board of directors, initiating a management struggle for control of the company which by the mid-1980s was producing only four films a year and was reliant on the theme parks for the bulk of its revenue (nearly 83 percent in 1983 alone).

Miller resigned under pressure in September 1984 just as Touchstone's first release, *Splash*, boosted the film division's earnings to record highs, and became the highest grossing film in Disney history while making a star of Tom Hanks. His successor, Michael Eisner, lured from Paramount Pictures, appeared cut from the Disney mold. He followed up on the success of *Splash* with two more non-traditional features *Down and Out in Beverly Hills* (1985) and *Three Men and a Baby* (1987). These would be followed by the worldwide mega-hit *Pretty Woman* (1990), a story of a romance between a prostitute and a millionaire which took the old Cinderella story in a modern direction that Walt probably would not have approved of. With chairman Jeffrey Katzenberg, Eisner effected a renaissance of the animated feature at a time when conventional wisdom had declared it moribund. Beginning with the critically acclaimed *The Black Cauldron* in 1985, Eisner started a new golden age of animation which surpassed the box-office successes of the 1930s and 1940s. Yet, the formula was very much the same: realistic characters that tugged at the viewers emotions, superb animation, and memorable music. Such films as *The Little Mermaid* (1989), *Beauty and the Beast* (1991), *Aladdin* (1992), and *The Lion King* (1994) generated grosses in the hundreds of millions prompting many of Hollywood's major studios to jump into animation in order to compete. *Beauty and the Beast* became the first animated feature to be nominated for an Academy Award.

By the mid-1990s, production at Disney had risen from the four films per year of a decade earlier to more than 20 per annum. Eisner's strategy of producing tightly budgeted films pairing "low cost name talent" such as Richard Dryfuss and Bette Midler who were in temporary career lulls with widely appealing stories paid major dividends. Films such as the aforementioned *Pretty Woman*, *Sister Act*, *Stakeout*, and *Honey I Shrunk the Kids* achieved grosses that greatly exceeded their small (by Hollywood standards) production budgets. The success of these features prompted the studio to open a third production entity, Hollywood Pictures, in 1990.

Disney had at last acquired major studio status by the 1990s. It's distribution company Buena Vista was regularly in the top one or two in film grosses and it was out-producing all of the studios in Hollywood in sheer number of films. With its ownership of a cable TV channel, a successful video distribution empire, and the ability to distribute its product worldwide via satellite, Disney became one of the earliest studios to realize the financial value of a large library. In 1996, the company purchased the ABC television network for \$19 billion, giving it a national outlet for its product as well as an all encompassing venue for plugging its upcoming films. While the

network has not regained the top spot it held in the 1970s, it nonetheless presents some of the more innovative new shows on television and is a leader in sports and news programming.

Eisner also took major steps to revitalize the theme park side of the ledger by creating EuroDisney outside of Paris in 1992, a wild animal theme park in Florida in 1997 and by starting a project to expand the original Disneyland in Anaheim, California. The ancillary markets for Disney product were expanded as well. The company refurbished the El Capitan Theater in Hollywood as a showcase for its new releases and added promotional stage acts as well as a place to buy the company's products in the lobby.

On the opposite coast, Disney refurbished a Broadway theater and began to turn its film hits, including *Beauty and the Beast* and *The Lion King*, into musical plays with new numbers and scenes added to make them successful on the stage. Similarly, several of the animated productions were turned into ice extravaganzas which toured the country blending the traditional stories and songs with fancy skating numbers arranged specifically for the frozen medium.

Yet, the ultimate spin-off of a motion picture concept occurred in the early 1990s when Eisner bought an Anaheim NHL hockey franchise and named it after a moderately successful live action feature *The Mighty Ducks*. The company purchased the Anaheim Angels baseball team and the highly popular cable TV station Entertainment and Sports Network (ESPN). After these purchases, Disney had only two rivals in the sports arena: Rupert Murdoch with his Fox Sports Cable Channel on the Fox Network; and the ownership of the Los Angeles Dodgers, the Angels' chief rival for the L.A. sports dollar.

By the end of the twentieth century, The Walt Disney Company had grown from the small Hollywood studio of 1923 to a recreational empire. With holdings so expansive, the nostalgic Disney vision has been applied beyond mere entertainment. The company's theme-oriented steamship line (floating Disneylands), Disney Stores, innovative theme parks, music, video and television endeavors, have allowed the company unprecedented power to shape the perceptions of consumers, offering people the chance to see, experience, and purchase Disney-styled versions of Americana.

## Ditka, Mike (1939—)

Football player-turned-football coach “Iron” Mike Ditka is described in his Football Hall of Fame enshrinee data as a “fast, rugged, outstanding blocker [and a] great competitor.” In 1960, he was a consensus All-American at the University of Pittsburgh, and became the Chicago Bears’ number one draft pick the following year. From 1961 through 1972, Ditka was a hard-nosed tight end for the Bears, Philadelphia Eagles, and Dallas Cowboys. He was the NFL rookie of the year in 1961, starred on the Bears’ 1963 NFL title squad, and scored the final touchdown for the Cowboys in Super Bowl VI. During his career, he caught 427 passes for 5,812 yards and 43 touchdowns. He made all-NFL four times, played in five straight Pro Bowls, was named to the NFL 75th Anniversary Team, and in 1988 became the first tight end to enter the Hall of Fame.

Despite Ditka’s eminence as a player, he is best known today as an NFL head coach. He worked as an assistant under Tom Landry in Dallas from 1973 through 1981, and was hired to lead the Bears in 1982. While Ditka has willingly parodied his in-your-face, bullying, drill-instructor coaching style on television shows and particularly in TV commercials, he is all business when it comes to winning football games. During eleven seasons coaching the Bears, he led the team to six NFC Central crowns, three trips to the NFC Championship game, and a 46-10 whipping of the New England Patriots in Super Bowl XX. After retiring from the Bears in 1992 and working as an NBC sports broadcaster, he was lured back onto the field in 1997 as coach of the New Orleans Saints.

## Divine (1945-1988)

The obese transvestite character-actor Divine personified self-consciously campy underground films and ushered in a new threshold of bad taste in cinema. Starring mainly in the films of offbeat director John Waters, Divine cultivated an outrageous drag queen image, with gaudy makeup, a blonde mane the texture of cotton candy, and tight dresses on his more-than-300-pound frame. In the majority of his films, he played female characters and dressed in women’s garb during his short-lived career as a singer. Though Divine was poised to break through into mainstream film and television at the end of his

Divine (right) with Grace Jones.

life, most of his appearances were in films with shocking subject matter. He will likely remain famous for his role as the Filthiest Person Alive” in the 1972 Waters film *Pink Flamingos*, especially due to the notorious scene at the end in which he consumes freshly excreted poodle dung.”

Divine was born Harris Glenn Milstead on October 19, 1945, and raised in an upper-middle-class home in a suburb of Baltimore, Maryland, the city that provided the backdrop for the bulk of his films. His parents ran a successful nursery and regularly attended a local Baptist church. As a teen, Divine was active in school plays, and began associating with Waters, who lived nearby. They were both outcasts, and Divine noted in Waters’ book *Shock Value* that he required a daily police escort to and from school to avoid constant beatings by other students. After high school, Divine graduated from beauty school and became known as an excellent stylist. His parents even bought him his own salon, but he became bored with it. He later opened a fashion boutique in Provincetown, Massachusetts. Meanwhile, he also began acting in Waters’ independent movies. His first role was in *Roman Candles* (1966), a home movie of Waters’ friends stealing and then modeling dresses. It was at this time that Waters recognized the actor’s potential and renamed his friend “Divine.”

After that unceremonious induction into film, Divine starred in *Eat Your Makeup* (1968), in which he played the part of Jacqueline

Kennedy in the movie's central scene re-enacting President John Kennedy's assassination. Subsequently, Waters made another film of questionable taste that is rarely noted in official sources, *The Diane Linkletter Story*, named after Art Linkletter's daughter, who committed suicide allegedly after taking large amounts of hallucinogenic drugs. In 1969, Waters and his troupe, known as the Dreamlanders, made *Mondo Trasho*, which established Divine's bizarre look. In *Not Simply Divine*, Bernard Jay quoted Divine as saying that his new image was based on Waters' concept of a blend of "the wicked stepmother in *Cinderella*, the evil queen of *Snow White*, and the bad witch in *The Wizard of Oz*," combined with a touch of Jayne Mansfield. Continuing down a slippery slope of poor taste, *Mondo Trasho* was followed by *Multiple Maniacs* in 1970, which professed that Divine was the actual killer in what were later dubbed the Manson Family murders. It also featured Divine being raped by a 15-foot-tall lobster.

After *Multiple Maniacs*, Divine and Waters garnered a good deal of attention from underground publications. Their next collaboration, though, dwarfed their previous efforts. *Pink Flamingos* was the tale of a battle for the title of "Filthiest Person Alive," and featured a couple who kidnap women, impregnates them, and sells the babies to lesbians on the black market in order to raise money for their elementary school heroin ring. They want to take the distinction away from Divine, an incestuous, trailer-dwelling matriarch who firmly maintains her disgusting reputation with the dog excrement scene. *Pink Flamingos* generated a flurry of attention and became one of the premier cult films of all time.

Divine had acted in stage plays in San Francisco in the early 1970s, and after *Pink Flamingos*, began appearing off-Broadway in productions such as *Women Behind Bars* (1976) and *The Neon Woman* (1978). He also launched a disco singing career. In fact, he often attended the legendary Studio 54 disco in full drag and mingled with other icons of the day. Divine made a number of other films with Waters throughout the years, including *Female Trouble* (1975), *Polyester* (1981), and *Lust in the Dust* (1985), as well as a few on his own. Though Divine made his mark as the garish caricature of himself that people usually saw, he grew weary of dressing in drag and yearned to be accepted as a talented character actor. Finally, in 1988 he was noticed for his dual role in Waters' *Hairspray* as both proud stage mother Edna Turnblad and bigoted television executive Arvin Hodgepile. After that, he was slated to appear on the popular television program *Married . . . With Children*, and was eager to line up other work as well. Just as he seemed on the verge of making an entrance into the mainstream, however, Divine died of a heart attack in a hotel room in Los Angeles on March 7, 1988. Almost a decade after his death, *Pink Flamingos* stirred a new wave of publicity with its 25 year anniversary release, padded with new footage and commentary by Waters.

## Divorce

Marriage, the legally sanctioned and structured pairing of heterosexual couples, has long been an established practice in human civilization all over the world. Divorce, the dissolution of a marriage agreement, is as old as marriage itself. Since the 1960s, rapidly rising divorce rates have placed the ending of marriage among the most common rituals of modern society. In the late 1990s, almost half of all marriages ended in divorce, and the prevalence of divorce has changed not only the nature of marriage, but the definition of family as well.

Early cultures often permitted divorce with relative ease. Roman law allowed couples to divorce simply by mutual consent, while Jewish Talmudic law granted divorce on a variety of grounds, including adultery and desertion. Greek, Germanic, and Frankish law also recognized couples' right to divorce, as did Islam and the Orthodox Church. The Roman Catholic Church became one of the first institutions to outlaw divorce, claiming marriage as a sacrament of the church. Dissolution of marriage could only be granted by the church under special circumstances, such as an annulment if one's spouse was a close relative, or a "judicial separation," where husband and wife were permitted to live apart without remarrying. Repercussions of the attitudes of the Catholic church about divorce were felt into future centuries and in lands as far apart as Ireland, Latin America, and parts of the American South.

The Protestant Reformation brought with it new perspectives on marriage. While Catholics had viewed it as a sacred sacrament, taken for life, Protestants saw marriage as a contract, changeable if it no longer met the needs of the contracted parties. Likewise, while Catholics had primarily defined the purpose of marriage as procreation, Protestants included in it such functions as companionship, support, and sexual pleasure, inspiring radical Protestants, such as poet John Milton, to argue that divorce should be allowed for simple incompatibility.

In the United States, from colonial times to the present, divorce was widely permitted but frowned upon socially. By the time of the Civil War, divorces were granted in most parts of the country on grounds of cruelty, abandonment, drunkenness, nonsupport, or verbal threats or insults. As legal divorces became easier to obtain, the divorce rate began to climb steadily. By the early 1900s the United States was granting the most divorces of any Western country, six times as many as France, in second place. The number had risen dramatically, from 7,380 divorces nationwide in 1860 to 83,045 in 1910.

In the 1950s, divorce dropped somewhat with that decade's glorification of the nuclear family. Women who worked as homemakers, supported by their husbands, found themselves unprepared to support themselves and their children should they divorce. In contrast, the 1960s and 1970s saw more women graduating from college with career aspirations and the skills to achieve them. The divorce rate shot up, as these women no longer felt forced to remain in unhappy marriages.

Though more and more marriages ended in divorce each decade, divorce was still largely stigmatized by society and pathologized by experts who defined divorced people as neurotic and sought cures for their ills. This perception finally began to change in the 1970s when feminism and the sexual revolution combined to give divorce a positive new image of liberation and independence. In the 1980s, rates dipped once again as the threat of AIDS encouraged monogamy. In addition, married baby boomers of the 1980s began to find

financial reasons to stay together, since two incomes were needed to support their lifestyles. These factors, coupled with the 1980s political conservatism and backlash against feminism, caused more couples to seek counseling to save their marriages. The divorce lull did not last, however. Rates continue to climb as, approaching the twenty-first century, generation Xers, many the children of divorce themselves, attempt to determine the boundaries of commitment. Divorce is such a commonplace that while many couples still use lawyers to work out their disputes, others now go to mediators and many more execute their own divorces quite amicably. Along with divorcing couples, there are now numerous cases of children divorcing their parents and vice versa.

Until fairly recently, wives were considered little more than the property of their husbands, and the treatment of women in the divorce process has reflected this attitude. Though many women have been unhappy in the marital roles assigned them, women have always had more to lose financially from divorce. Less valued in the marketplace than men, women often lose further ground by removing themselves from the work force while working as mothers and homemakers. When a woman divorces, the standard of living for her and her children falls an average of 73 percent, often placing them below poverty level. Men, by contrast, released from familial obligations, are free to put more energy into their existing jobs. After divorce, a man's average standard of living rises 42 percent. The devaluing of women's role in the home has also contributed to unfair distribution of assets after divorce. Except in "community property" states, where any property acquired by either partner during the marriage is divided equally, a woman may receive little or none of the family resources, which may be in the husband's name.

Beginning with the so-called "tender years" legislation of the nineteenth century, custody of young children has traditionally been awarded to the mother in divorce settlements. Courts may also choose to award child support and alimony, or spousal support payments, which also traditionally were paid by the husband as the primary earner. In recent years, courts have begun to change assumptions about gender roles, sometimes awarding custody and even spousal support to the husband if he is judged to be the better parent or the wife has greater earning power. "No-fault" divorce, a concept developed in the 1980s, has further eroded the system of spousal support by removing the factor of blame and responsibility for the end of the marriage. While many applaud these changes, they often have resulted in even worse conditions for women following divorce.

Another product of the rising divorce rate has been the prenuptial agreement, wherein couples plan for the possibility of divorce before they are married and agree upon future division of property. Originated by the lawyers of wealthy people who felt they had lost an unfair amount in a divorce, the "pre-nup" is now as much a part of an upper-class wedding as the wedding cake.

Social attitudes toward men and women surrounding divorce have tended to be quite different, especially prior to the 1970s. Divorced men have often been viewed as roguish or even slightly dangerous, not undesirable qualities in a male. Also, the addition of another available man to the social pool is generally looked upon as a good thing. Divorced women, on the other hand, have been seen traditionally as promiscuous, and the addition of an unattached woman to society is usually viewed as threatening to other women.

Images of divorce in the media have contributed to these perceptions. Entertainers have always lived by their own rules, and even in decades when divorce was most stigmatized in ordinary society, the public avidly followed the marital adventures of the

movie stars. Even in the repressive 1950s, actors such as Elizabeth Taylor and Mickey Rooney set records for numbers of marriages that are still impressive today. Fascinated fans reacted with outrage when divorcee Taylor broke up the "idyllic" marriage of Eddie Fisher and Debbie Reynolds. In the mid-1970s they formed strong opinions about the so-called "palimony" suit following the breakup of long-term unmarried lovers Lee Marvin and Michelle Triola when Triola insisted that she was entitled to spousal support after their six-year relationship ended.

Films tended to both reflect and mold social attitudes. In 1934, Fred Astaire and Ginger Rogers danced their way through lighthearted marital misunderstandings in *The Gay Divorcee*. In the early 1960s, anti-divorce attitudes won out in *The Parent Trap*, when twin daughters (played by Hayley Mills) of a divorced couple managed to reunite their parents, whose breakup was clearly ill-advised. The 1980s backlash was represented nowhere better than in the Oscar winner for best picture *Kramer vs. Kramer*, in which Dustin Hoffman and Meryl Streep played divorcing parents. Both were motivated by their own selfishness, but in the end it was the husband who was redeemed by learning the joys of familyhood and was rewarded with custody of the couple's son.

By the 1990s, divorce was so common that it had lost much of its social stigma and much of its value as scandal. Fans still followed the love lives of the stars, but it took an exceptionally short marriage or brutal breakup to arouse much public interest. Celebrity-watchers felt vindicated when superstar Julia Roberts walked away from unlikely spouse Lyle Lovett after only a few months, and they cheered for beloved icon Carol Channing when she left her forty-one-year marriage at age seventy-seven, citing lack of sex as one of the reasons. Film portrayals tended to show divorce as a positive solution to a bad situation. The 1989 film *The War of the Roses* was a disturbing comedy about violent breakup where neither partner was presented in a positive light, while *The First Wives Club* (1996) was a sort of revenge comedy where the mistreated wives took action against their boorish ex-husbands.

In past centuries, marriage was a pragmatic agreement and the family an economic unit, whether industrial or agricultural. Members each had a unique function and derived stability and protection from their place in the unit, which was most often an extended family comprising elders, adults, and children. Marriage and the creation of a family was part of survival. As American society evolved, the nuclear family replaced the extended family as the major social unit, and its function has more and more become that of emotional support and physical caretaking rather than working together. As partners enter marriage, they have higher expectations of happiness and satisfaction. Some sociologists cite these rising expectations as the reason for rising rates of divorce, while others contend that since marriage and family are no longer a necessity of physical survival, it is natural that couples tend to drift apart.

As divorce becomes more prevalent, the image of the family continues to change. Though political and religious conservatives have tried to restore a more traditional concept of the nuclear family, they have not been able to stop these changes. While many bemoan the ill-effects of divorce on children, most modern studies show that children do not benefit from growing up in a traditional nuclear family where the parents are unhappy together. The definition of family is now broadening to include not only nuclear families, but also unmarried heterosexuals and gays living together, single-parent families, stepfamilies, foster and adoptive families, childlessness, nonmonogamous relationships, and multiple-adult households. Family

is not only biological, but also chosen, a complex network of economic support and affection that is no longer easily catalogued. Even Madison Avenue has begun to understand and speak to these changes, as companies such as Hallmark Greeting Cards and John Hancock Insurance develop advertising campaigns directed at the families of divorce and other nontraditional units. A Rite-Aid Drug ad, first screened in 1998, shows two girls helping their mother get ready for her first (postdivorce) date, while a 1991 MCI Communications ad shows a workaholic father sadly explaining how his personal toll-free number helps him keep in touch with the son who now lives with his mother far away. These images show how the reality of divorce has been incorporated into American culture, and, indeed, culture worldwide.

## Dixieland

Dixieland jazz is a style that blends New Orleans jazz and classic jazz—also called "Chicago jazz"—of the 1920s. The music is generally thought of as a collective improvisation during the choruses, with individual solos that include riffing by the horns, and a two- to four-bar call and response tag game between the drummer and the full group at the closing of the song. While almost any song can be played in the dixieland style, the music is most often associated with about forty songs, including "That's a Plenty" and "Tin Roof Blues." Most dixieland bands are comprised of a trumpet or cornet, a harmonizing trombone, a clarinet, and a piano, string bass, or tuba. Occasionally a guitar or banjo is also included. The style has enjoyed many revivals throughout the years and "dixieland" has become a blanket term for the earliest blending of New Orleans and Chicago jazz between 1917 and 1923, as well as the many revivals of the style.

Despite the wide use of the term, some confine the definition of dixieland jazz to New Orleans music played by white New Orleans performers or in their style. Others limit the definition to the earliest white players in Chicago. Some of the most important albums of the dixieland style include Louis Armstrong's 1927 *Hot Fives and Sevens*, Vol. 3, Eddie Condon's 1939 *Dixieland All-Stars*, Kid Ory's Creole Jazz Band's 1955 *Legendary Kid*, and Pete Fountain's 1965 *Standing Room Only*.

Despite the controversy surrounding how the term should be used, many musicians have been labeled and identified as playing dixieland music. The white Chicago musicians usually included as dixieland musicians are Jimmy McPartland, Bud Freeman, and Frank Teschemacher. These musicians first heard the white New Orleans bands of the 1920s associated with Nick LaRocca in the Original Dixieland Jass (later Jazz) Band which began recording in 1917, and with Paul Mares in the New Orleans Rhythm Kings (originally the Friar's Society Orchestra), which recorded between 1922 and 1923. This "white" style had a great influence on the development of jazz and was not too far removed from the style of the great black pioneers. White New Orleans bands and their dixieland followers drew less on ragtime and ethnic African sources than did the black pioneers. They also drew quite heavily on European sources. One of the most inspirational musicians of the dixieland sound of the 1920s was Louis Armstrong, who noted opera as a strong influence on his style.

The popularization of jazz beyond the New Orleans area and the development of dixieland can be traced to the U.S. Navy's 1917 closure of the Storyville base near New Orleans' red light district. The closure put many musicians out of work. Seeking work, musicians relocated to Chicago, Illinois. Joe "King" Oliver was the hottest cornetist in New Orleans in 1917 and by 1918 he had moved to Chicago. Jelly Roll Morton, jazz's first noted composer and innovative pianist, had moved to Chicago at the turn of the century. Many of New Orleans' best musicians followed and played for a time in Chicago. Others moved elsewhere: from 1919-1924 Kid Ory worked in Los Angeles and Sidney Bechet, the fine clarinetist and soprano saxophonist, played in London. As the musicians moved, the music they played changed and dixieland became a discernable style.

The carefree style of dixieland music soon lost favor to swing, especially after the stock market crash in 1929, but it did not disappear. From 1945 through 1960 dixieland actually became one of the more popular forms of jazz. The revival of dixieland in the 1940s can be traced to Lu Watters' Yerba Buena Jazz Band out of San Francisco. Much of the music was based on King Oliver's Creole Jazz Band, but Watters' developed his own style, sometimes called San Francisco Jazz. Eddie Condon was also influential in the revival of dixieland; he featured a dixieland band on his weekly half-hour radio broadcast *Town Hall Concerts* from 1944 to 1945 and led a band at his Chicago nightclub for a few decades. And though there were many styles of jazz at the time, Louis Armstrong disbanded his big band in 1947 and led his All-Stars as a dixieland style sextet for the rest of his career. Despite the overwhelming popularity of rock 'n' roll after the 1950s, Armstrong proved dixieland's lasting appeal in 1964 with the success of his "Hello Dolly."

The success of the dixieland style in the mid-1940s ignited the release of a flurry of hasty and uninspired imitations of the music. By the 1950s dixieland was often associated with the embarrassingly garish groups who played amateurishly and donned straw hats and wore vintage clothing. Nevertheless, serious and competent musicians still played dixieland music. In 1974 the first Sacramento Dixieland Jubilee was held, the success of which inspired other such

events. By the end of the twentieth century, jazz festivals that feature dixieland along with other styles could be found throughout the year and many record labels such as Stomp Off, GHB, and Jazzology continued to release dixieland music. Many of the greatest players and innovators of dixieland are dead, but younger musicians like Winston Marsalis and Jim Cullum continue to incorporate the dixieland style into their music.

## Do the Right Thing

As many film scholars have noted, the Hollywood film industry's construction of race has been problematic, reflecting the racial divisions of the wider culture. While whites have been considered as representing the "norm," people of color have been rendered invisible, stereotyped, and denigrated in every decade and in every genre. A major shift occurred in the 1980s, when an unprecedented number of studio-backed films written and directed by African-American filmmakers were released. This movement was led by Spike Lee, whose arthouse success, *She's Gotta Have It*, opened doors previously closed to black filmmakers. Able to control the images presented, Lee and the African-American directors who followed brought to the screen issues and concerns so often ignored by Hollywood. One such film, *Do the Right Thing*, written and directed by Lee and released in 1989, is a postmodern masterpiece and a controversial film about issues of race, gender, class, and politics.

The film is set in the predominantly African-American neighborhood of Bedford Stuyvesant, located in Brooklyn, New York. It covers twenty-four hours of the hottest day of the year, which is communicated well by the award winning cinematography of Ernest Dickerson, with its use of highly saturated reds and orange. Featuring an ensemble cast—Ossie Davis, Ruby Dee, Giancarlo Esposito, Rosie Perez, Danny Aiello, John Turturro, Bill Nunn, Robin Harris, Roger Guenveur Smith, and Lee himself—the film presents a tense atmosphere of varied characters with differing political outlooks. Full of numerous confrontations, the main conflict concerns the decor of

the local pizzeria, Sal's, owned by an Italian American. Buggin Out, who wants the "wall of fame" to display pictures of African Americans rather than Italian Americans, tries to organize the community in a boycott. Incensed, he enters the pizzeria with Radio Raheem, who carries with him a portable stereo blaring the anthem "Fight the Power" by hip hop artists Public Enemy. Radio Raheem engages in a physical dispute with Sal and, in the midst of the struggle, is killed by a policeman's stranglehold. A riot ensues and Sal's Pizzeria is burned to the ground.

As noted above, the film created a controversy in both critical and popular circles. What is the right thing? Does the film advocate violence? Some panned the film because it did not make use of well-rounded, complex characters, did not support productive collective action, and presented less-than-positive images of women. Yet the film brought forth a dialogue about one of the most ingrained aspects of American culture—racism. It presents the issue as complex and multi-faceted, while at the same time questioning the ideologies represented by the numerous characters.

## Dobie Gillis

*The Many Loves of Dobie Gillis* is a classic sitcom of the late 1950s. If on the surface the show seems unassuming and standard early sitcom fare, just below the surface is a show that breaks new ground in television. Two significant aspects set it apart from the other shows of that era and make it watchable and influential well into the 1990s. First is the show's focus on teenagers. Second is the addition of a new type of character in the form of Maynard G. Krebs, the outsider.

Dobie Gillis is a teenager in small-town America; the plot revolves around Dobie's life and thoughts. In the course of the show Dobie graduates from high school, briefly joins the army, and returns to the same town to attend college. The show was adapted from Max Shulman's short stories of the 1930s and was updated for the teenagers of the 1950s. It premiered in September of 1959 and ran until 1963. The main characters were Dobie Gillis (Dwayne Hickman), the forever-girl-chasing and money-short lead; his best friend and side-kick Maynard (Bob Denver) the cool jazz beatnik; Dobie's hard-working father Herbert T. Gillis (Frank Faylen); and Zelda Gilroy (Sheila James), who was determined to marry Dobie one day.

Before Dobie there had been teenagers in television shows but always in secondary roles and usually within the confines of a very structured family—e.g., *The Adventures of Ozzie and Harriet* and *Father Knows Best*. While there were occasional episodes dealing with teenage issues, they were usually reserved for comic relief or family homilies. *Dobie Gillis* offered an entirely different way of viewing the subject. Although most of the stories deal with the basic trials and tribulations of teenage life—getting a date, getting money, and getting out of work—they are taken seriously; each show starts and ends with Dobie speaking to us from a pose near a replica of the

A publicity shot for *The Many Loves of Dobie Gillis*.

Rodin sculpture known as “The Thinker.” In this way, we are told that the problems of money, girls, and work are important to the youth.

Dobie’s world includes several recurring characters who provide the basic themes for the show. His father runs the Gillis Grocery Store and cannot understand his son (he continually tries to instill in him the need for hard work), while his mother (Florida Friebus) attempts to mediate between father and son. In the beginning of the series Tuesday Weld plays Thalia Meninger, Dobie’s dream girl whom he hesitates to pursue because he does not have money. As one might expect, there are several rivals who do have money—Milton Armitage (Warren Beatty), followed by Chatsworth Osborne Jr. (Stephen Franken). It is their presence that generates many of the show’s conflicts.

As the series unfolds a more striking character also takes form, that of Maynard. Maynard is the classical beatnik: he has the goatee, the ripped sweatshirt, the love of jazz, and the “like” vocabulary. He seems out of place in this little town, and that is the point. Maynard (played by Bob Denver, later of *Gilligan’s Island*) is Dobie’s “good buddy” and he is loyal to him to the end. While Dobie dreams of money so that he can get the girls, Maynard has no need for either. His mannerisms and clothes make him stand out from everyone, and his simple ways and shuddering at the thought of work seem to hold him apart from the suburban dream. Maynard sets a standard for every other outsider with a message in shows to come.

Despite the concentration on themes of money and dating, or perhaps because of it, the show occasionally slides into uncharted areas. Dobie tends to think and speak about life in terms of big questions or, more accurately, he tends to make whatever he is thinking about seem big. Dobie, like many teenagers, is in search of many things, including an understanding of himself and the world in which he lives.

The impact of this show extends far beyond the 1950s. Shows that centered on teens and tried to gather the baby-boomer-market would be a staple from the 1960s on. The outsider beatnik character could easily metamorphose into the hippie of the 1960s or even to “The Fonz” of *Happy Days*. Dobie has since resurfaced in two sequels; a 30-minute pilot for a revival of the show in 1977 named *What Ever happened to Dobie Gillis?*, and a reunion movie in 1988 called *Bring Me the Head of Dobie Gillis*.

## Doby, Larry (1923—)

African-American baseball player Larry Doby was an unlikely Civil Rights pioneer. Unlike Major League Baseball’s first Black player, Jackie Robinson, Doby was “shy, quiet, and unassuming”; he’d grown up in integrated Patterson, New Jersey, attended predominantly white Long Island University and lived a life far more sheltered from the stings and arrows of racial prejudice than the vast majority of African Americans. Yet it was Doby, even more than Jackie Robinson, whose courage and determination helped transform Major League Baseball into a national pastime for people of all races. In 1947, Doby became the first African-American player in the American League; he was also the first player to jump straight from the Negro Leagues to the majors. He later integrated Japanese baseball in 1962 and went on to become the sport’s second Black manager and one of its first African-American executives. However it was in his role as the second Black player in baseball that Doby had his most significant impact on professional athletics. His Major League debut demonstrated to the American public that Jackie Robinson’s entrance into white baseball was not a publicity stunt and that Black players were destined to become permanent fixtures in Major League Baseball.

When integration-minded Cleveland Indians owner Bill Veeck sought to sign a Black player in 1947, the Newark Eagle’s Doby appeared to be the obvious choice. The twenty-two year old Doby, a former high school football and basketball star, led the Negro National League with a batting average of .458 and thirteen home

Larry Doby

runs. He was the top Black prospect who had not already signed a contract with the Brooklyn Dodgers (After Jackie Robinson's successful debut, the Dodgers had acquired several other talented African Americans for their minor league clubs). Veeck, unlike the Dodgers' general manager Branch Rickey, was determined to integrate his organization from the top down. On July 5, 1947, he purchased Doby's contract from the Eagles for \$10,000. Three hours later, he sent the surprised young athlete onto the field as a pinch hitter against the Chicago White Sox. This courageous decision, coming without warning, drew 20,000 letters of protest from irate fans.

Doby's sudden entrance into the majors relieved much of the pressure on the Dodgers' Robinson. Both men faced extraordinary pressures that first season, including open hostility from teammates and opposition players, and they formed a close relationship that endured through their lifetimes. Upon Doby signing, Robinson stated, "I no longer have the feeling that if I don't make good, it will kill the chances of other Negro players." Doby's debut opened the way for three more Blacks to enter the majors within a month and made it clear that baseball was on a permanent course toward integration. His presence on the Indians also contributed to the more general cause of Civil Rights for African Americans when Washington's exclusive

Hotel Statler, formerly whites-only, permitted Doby to room with his team.

After a rough first season in which he batted only .156 in a limited thirty at-bats, Doby found his stride and became one of the game's marquee figures. In 1948, he batted an impressive .301 with 14 homeruns and 65 runs batted in. He led the Indians to a victory over the Boston Braves in the World Series, becoming the first African American to play on a World Series Champion team. He later led the American league in home runs in 1952 and again in 1954. When he retired after thirteen seasons with the Indians, White Sox, and Detroit Tigers, he had a formidable career batting average of .283 and 253 lifetime homeruns. For these achievements, he was elected to Baseball's Hall of Fame in 1998.

Long after Major League baseball had fully integrated, Doby continued to be a pioneer among Black athletes. In 1962, he became one of the first Blacks to play professional baseball in Japan. He returned to the United States and served in several administrative jobs with the Montreal Expos, Indians, and White Sox. He became the Indians' manager in 1978—after Frank Robinson, the second African American ever to manager a Major League club. He later returned to executive duties as a special assistant to Dr. Gene Budig, the President of the America League. Throughout the 1960s and 1970s—when Blacks were welcome on the baseball field and in the stands but not in the front office—Doby continued to push for expanded opportunities for African Americans.

After Jackie Robinson's death, the "Silk City Slugger" became a living symbol of the early Civil Rights movement. He is indisputably the most popular player in the history of the Cleveland Indians and, along with later Black stars Willie Mays and Hank Aaron, continues to be one of baseball's chief attractions at special events and Old Timers' games.

—Jacob M. Appel

## Doc Martens

More than just functional footwear, Doc Martens shoes and boots have become a staple among decades of style-conscious subcultures and eventually emerged as a fashion phenomenon. Once synonymous with angry British youth, Doc Martens, like their sturdy leather uppers, have mellowed with age. Bavarian physician Claus Maerten designed the clunky, cushiony, thick-soled boot out of old tires in 1945 after a skiing accident necessitated more comfortable footwear. Union-plagued customers became converts until the 1960s,

when fascist skinheads appropriated the boots. Rock stars soon followed the trend, and after punk rockers in the 1970s began painting on their own designs, the company came out with wildly colored and patterned models. The brand was a must-have for the young and hip throughout the 1980s, from hip-hop to grunge fans. By the late 1990s, women accounted for seventy percent of the fast-growing market, picking up the pairs at upscale department stores.

## Doc Savage

During the 16-year run of *Doc Savage Magazine*, Clark Savage, Jr. (better known as Doc) was one of the most exciting and popular pulp magazine characters. The appeal of Doc Savage is succinctly stated in the promotional blurb that appears on the back of the Bantam paperback editions that reprint his pulp adventures: "To his fans he is the greatest adventure hero of all time, whose fantastic exploits are unequalled for hair-raising thrills, breathtaking escapes, and bloodcurdling excitement." Doc is a transitional hero who unites the intellect

Ron Ely stands beside a painting of the pulp fiction character Doc Savage, who he played on screen in 1975.

of Sherlock Holmes and the physical prowess of Tarzan with the best gadgets imagined by the new genre of science fiction. In bringing together all of these elements, Doc Savage served as a model for the superheroes that followed.

Doc Savage was the creation of Street and Smith business manager Henry Ralston and editor John Nanovic, who hoped to duplicate the success of the company's first single-character pulp magazine, *The Shadow*. While Ralston and Nanovic created the concept, the characters, and even many of the colorful details, it was a young writer named Lester Dent who brought Doc Savage to life. The house byline used was Kenneth Robeson, and there were six different authors who contributed Doc Savage stories under that byline. Lester Dent, however, wrote the vast majority of the Doc tales and edited, or at least approved, the work of the writers who ghosted for him. It was also Lester Dent, following his "master plot" outline and hammering out his pithy prose, who established the distinctive style of the Doc Savage adventures.

Doc Savage appeared in 181 fantastic pulp magazine adventures from 1933 to 1949. In October of 1964, Bantam Books began paperback reprints of every one of the pulp stories, plus one previously unpublished Doc manuscript by Lester Dent (*The Red Spider*). In 1991 Bantam began publishing original Doc Savage material. *Escape from Loki* was written by long-time Doc aficionado Philip Jose Farmer. Doc Savage fan and scholar Will Murray wrote seven books based on Lester Dent story fragments and outlines. There was a Doc Savage radio show in the 1930s, a Doc Savage movie in the 1970s, another radio show in the 1980s, and Doc Savage comic books from at least six different publishers, but the true Doc Savage adventures are the 182 stories written for the pulps.

Doc Savage is a hero of mythic proportions. Clark Savage, Jr., was born one stormy night aboard a tiny schooner anchored off Andros island in the infamous Bermuda Triangle. Doc dwells far above ordinary humans on the eighty-sixth floor of the Empire State Building. Both his strength and intellect are herculean. At the age of 14 months he began his strenuous and life-long training. Even after Doc reaches adulthood and begins traveling the globe to right wrongs and help the oppressed, he adheres faithfully to a two-hour routine of intensive exercises for his muscles, senses, and mind. Though he excels in virtually every endeavor, Doc displays his most prodigious talent in the practice of medicine. By the time he was 30, Doc Savage was the world's most brilliant surgeon. In fact, he "rehabilitates" criminals using an intricate brain surgery procedure only he has the skill to perform.

When Doc first appears in 1933 he is six feet tall and weighs 200 pounds. In later tales Doc is usually described as somewhat larger—around six feet eight inches and weighing 270 pounds. Yet, his build has such symmetry and proportion that he does not look big unless he is standing next to someone. Beneath his sun-bronzed skin, his muscles are "like cables" or "bundles of piano wire." When he flexes those great muscles he often rips his shirt and coat. His hair is combed straight back and resembles a metal skullcap. Doc's most riveting characteristic is the gently swirling flakes of gold in his eyes. Thanks to the dynamic covers painted by James Bama for the Bantam reprints, a virtual costume was established for Doc. On most paperback covers Doc wore boots, aviator pants, and a very precisely ripped shirt.

The first Doc Savage story, *The Man of Bronze*, establishes that the men who compose Doc's amazing crew are "the five greatest brains to ever assemble in one group." They include: "Long Tom," the frail-looking wizard of electricity who is a wildcat in a fight;

“Renny,” a grim-faced giant of a man who likes to smash his huge fists through solid panel doors and is the greatest engineering expert of his time; the tall, gaunt, bespectacled Johnny, with his bulging forehead and big words, who is one of the world’s foremost experts on geology and archaeology; “Ham,” who is a dapper clothes horse and possibly the greatest lawyer Harvard has ever produced; and the most remarkable of Doc’s companions “Monk,” a short, barrel-chested man whose knuckles nearly drag the ground. Although he looks like a red-haired ape pretending to be a man, he is one of the world’s top chemists. Monk, however, would much rather work with his fists than with test tubes. The frontispiece of the Bantam paperbacks gives this characterization of the men who joined Doc Savage in his work: “Together with their leader, they would go anywhere, fight anyone, dare everything—seeking excitement and perilous adventure.”

Although Doc Savage is a relatively minor fictional character, he has influenced some major popular culture icons. Superman is the most obvious “descendent” of Doc. In fact, in the stories themselves and in the advertisements for the magazine, Doc was often referred to as a “superman.” In addition to sharing the first name Clark, both heroes have a Fortress of Solitude somewhere in the arctic. Both also have female cousins that look like them, have their powers, and want to horn in on their adventures. Doc was known as the Man of Bronze, and Superman is known as the Man of Steel. Doc’s connection to Batman is less obvious, but more fundamental. Both heroes are “self-made supermen” who, beginning in childhood, devoted themselves to intense training. Both have considerable scientific know-how, as evidenced by Doc’s utility vest and Batman’s very similar utility belt. It is even possible that the batmobile is patterned after Doc’s bulletproof and gadget-filled sedan.

## Doctor Who

*Doctor Who* is the world’s longest continually produced science fiction serial. It aired on the British BBC network from 1963 until 1989, and was revived briefly as a television movie in 1996. In the United States, *Doctor Who* first began broadcasts on independent channels in 1972, and was still broadcasting on some local PBS affiliates in the late 1990s. It has, like *Star Trek*, engendered movies, radio dramas, lucrative novel series, non-fiction, comic books, and an extensive home video market.

*Doctor Who* revolves around the adventures of the mysterious time-traveling title character, simply known throughout as The Doctor. The Doctor, as first seen in the 1963 pilot episode, broadcast in the midst of the BBC’s coverage of the Kennedy Assassination, is outwardly human. William Hartnell, the actor to first portray the Doctor (1963-1966), presented audiences with a cranky old man who

had a gross lack of basic human kindness. Initially, the Doctor was accompanied on his travels through time and space by his granddaughter and her human school teachers. In the serial’s second episode, he seemed to encourage his companion to kill an incapacitated caveman. Later, his selfish, obsessive desire to learn placed him and his companions in danger when they met the alien Daleks. The character began to soften his edges as he was exposed to the ideals and attitudes of his human companions. His scientific curiosity and towering ego remain, but his ego became tempered with an increasing respect for his companions and the races that he encountered.

When Hartnell became too ill to continue the role, the producers came up with the ingenious idea of having the character “regenerate” into a new body with a new personality. Since 1966, the Doctor has been played by seven more actors: Patrick Troughton (1966-1970), Jon Pertwee (1970-1974), Tom Baker (1974-1981), Peter Davison (1981-1983), Colin Baker (1983-1986), Sylvester McCoy (1986-1989), and Paul McGann (1996). Richard Hurndall also played the role of the First Doctor in place of the late William Hartnell in the 1983 anniversary serial “The Five Doctors.” This change in the lead actor (and usually in the rest of the cast and the production teams) allowed the show to adapt to and change with the times. Hartnell’s serials began originally as a children’s program, but by the late 1970s Tom Baker’s serials were also targeted towards the science fiction aficionado. Low ratings and lack of support from the BBC (it went on an 18 month hiatus in the middle of Colin Baker’s tenure) soon saw the serial descending into self-parody. Towards the end it began to recover some of its ground, but in 1989 it was taken off the air, though never officially canceled. The 1996 television movie was co-produced by the BBC and the FOX Network in the United States at a sum of \$5 million (an unusual amount for such a production), but it did not achieve great ratings. There are constant rumors among fans of another revival; meanwhile the serial continues in original novels published first by Virgin Books and later by BBC Books.

Two theatrical movies were made in the 1960s, based on the scripts of two of the television serials, *Doctor Who and the Daleks* (1965) and *Daleks—Invasion Earth, 2150 A.D.* (1966), starring Peter Cushing as the Doctor. In the television serial, it was the popularity of the Daleks, created by writer Terry Nation and a BBC special effects wizard, that propelled the Doctor to instant stardom in the United Kingdom. It was not until the first Tom Baker serials began broadcasting in the United States, however, that the show earned anything more than an American cult audience. The Doctor has since earned cameos in episodes of *The Simpsons*, and cancellation of the serial usually results in a PBS station being inundated with masses of fan mail.

Like *Star Trek*, the fans of *Doctor Who* run major conventions every year which are attended in the thousands by fans sporting scarves and cricket jackets. Instantly recognizable at these conventions is the Doctor’s unique TARDIS—an acronym for Time and Relative Dimension in Space. On the outside it resembles a battered London police call box. Inside, however, it is, in reality, a large ship, its cavernous interior seemingly endless. The Doctor and his fans also have a strong presence on the Internet, where hints of new television projects compete for attention with spoilers of the novel plots.

Icons of the show include the pepperpot shaped Daleks, and the silver enshrouded Cybermen. Also earning a place in history was the show’s electronic theme music, which evolved over the years but still retained an eerie hint of the otherworldly. On the whole, the show was a hodge-podge of what is good and bad about long-running serial television: devoted audiences, a long history, and very bad continuity.

The video market ensures that the show is introduced to new audiences and that it has a life beyond its original television run.

## Doctor Zhivago

This only novel by the famed Russian poet Boris Pasternak received the 1958 Nobel Prize for literature. The story traces the experiences of a Moscow doctor, Yuri Zhivago, during the Russian Revolution of 1917 and the ensuing civil war from 1918 to 1921. Zhivago's independence, religious convictions, and conflict with the Soviet regime were considered too controversial for publication by the editors of the leading Soviet literary journal, *Novy Mir*, to which Pasternak had submitted his work, despite the fact that the Soviet Union was experiencing greater openness following the death of dictator Joseph Stalin in 1953. Pasternak had the manuscript smuggled out of the Soviet Union in late 1956, and it was first published in Italy in November 1957. The book was translated into more than twenty languages in the next two years and became an international best-seller. A 1965 film adaptation of the book, directed by David Lean, received five Academy Award nominations.

## Doctorow, E. L. (1931—)

As Matthew Henry noted in *Critique*, "E.L. Doctorow has made a career out of historical fiction, and he is renowned for both examining and rewriting the American past . . . because for Doctorow there is no fact or fiction, only narrative." In his attempt to examine the cultural myths of America and their impact on society, E.L. Doctorow created some of the most noted works of postmodern historical fiction of the late twentieth century through his unique ability to weave documented historical facts and figures with invented ones. As Henry noted, this brand of historical fiction allowed Doctorow to present different histories, not only those accepted by consensus. Doctorow's approach to history and his style of writing mark him as one of the significant contributors to the postmodern literary movement.

Edgar Laurence Doctorow was born in 1931 in New York City, the setting of many of his novels. Doctorow began his writing career

**E. L. Doctorow**

within a decade after graduating from Kenyon College in 1952. His first three novels were experiments with different fiction genres. The first novel, *Welcome to Hard Times*, was a western and focused on the common theme of man's relationship to evil. *Big as Life*, Doctorow's second novel, was a science fiction work about two giants materializing in New York City. Yet, it was not until Doctorow experimented with the historical form in his third novel, *The Book of Daniel*, that he achieved commercial and critical success. It was here, in Doctorow's account of Julius and Ethel Rosenberg and their children, where he first experimented with what would later be called postmodern historical fiction—historical facts blended with contemporary fiction styles and elements.

Doctorow's postmodern historical fiction approached the writing of history as a reconstitution of history. Unlike the many historical fiction writers before him, he did not attempt to present history as fact. As he did with the Rosenbergs in *The Book of Daniel*, Doctorow's interweaving of historical facts and figures with fictional ones was best done in his fourth novel, *Ragtime*. This novel intertwined the lives of many famous historical figures, such as Harry Houdini, Henry Ford, and Emma Goldman, with three fictional families—an upper class white family, a poor immigrant family, and a ragtime black musician's family. By mixing history with fiction, Doctorow confused and, to a degree, falsified history as he investigated the myths and realities of the American dream in *Ragtime*, a theme that reappears in his next novel, *Loon Lake*.

It is Doctorow's approach to history and writing style that make his novels postmodern. Just as Toni Morrison did in her novel *Jazz*, Doctorow used the combination of the repetition and improvisation in

music to create a relentless narrative prose style in *Ragtime*, a style that would continue in his following novels. What at first may look like out of control prose became finely crafted prose that worked on multiple levels of meaning and interpretation, what Andrew Delbanco called more associative than sequential and what Michelle Tokarczyk called “accessible experimentation.” Doctorow experimented with syntactical structures as well as point of view and voice, so there were many instances in his novels where it was difficult to ascertain who was saying what to whom, where the narrative did not instantly reveal itself. This postmodern language play added to the historical reconstructions, sometimes labeled allegorical romances, of twentieth-century American life as it occurred in Doctorow’s novels.

In addition to writing novels, in the 1990s Doctorow has used his position in American society to take on many social issues. Citing what he called a “gangsterdom of the spirit,” Doctorow believed American life near the end of the twentieth century was suffering from a loss of cohesion and morality. Some of his social projects of the 1990s include the saving of Walden Woods in Massachusetts, developing a cable television channel dedicated to books, peacefully settling the American conflict with Iraq, and analyzing the presidencies of Ronald Reagan and Bill Clinton.

## Docudrama

Docudrama is a film genre which is found primarily, but not exclusively, on television. *Brian’s Song* (1970)—the story of the tragic death of football player Brian Piccolo—was the first notable U.S. example. The success of *Brian’s Song* proved to the television networks that the made-for-television, reality-based telefilm could be both a critical and popular success. However, the docudrama has been

a controversial form in North America because of its apparently cavalier mixture of truth and fiction, drama and documentary—a case of blurred boundaries which unsettles some viewers and critics. The genre has had at least a dozen names and several uncomplimentary epithets applied to it: drama-documentary, dramatized documentary, dramadoc, faction, infotainment, reconstruction, historical drama, biographical drama, historical romance, thesis drama, problem play, and “based-on-fact.”

For many of those who do not like the form, the television docudrama is a cheap replacement for the more distinguished Hollywood social-issue picture. But docudramas have been extremely popular with audiences (and hence advertisers), and cheaper to make than theatrical feature films. Because the majority of them are based on some well-known recent event, they require much less in the way of promotion since the audience already knows at least part of the story. The turnaround time (the time between a public event and the film based on it) for such films has become incredibly brief; the most infamous example was the filming of the story about the violent deaths of several FBI agents and members of a religious cult in Waco, Texas, while those tragic events were still unfolding (*In the Line of Duty: Ambush in Waco*, 1993).

Until very recently, the docudrama has generally been considered a hybrid form, caught somewhere between documentary and drama, often doing justice to neither. Film and television critics have tried to define its conventions with mixed success since the seventies. Andrew Goodwin and Paul Kerr, authors of the *BFI Drama-Documentary Dossier*, even claim that it is impossible to define the genre, arguing that such failure is a result of “the break up of consensual views of social reality” in a postmodern world. For these critics and others the mixture of fact and fiction leads to the creation of a “hyperreality” where audiences can no longer make the distinction between truth and fiction—with the result that history, as told by the media, tends to become reality itself. Steven Spielberg’s *Schindler’s List* (1993) is often cited as a prime example since the only information that many people around the world have about the Holocaust comes from the film, known for its fictionalizing of “the truth.”

Critic Derek Paget has argued that the docudrama has been around long enough to be considered a genre in itself with well established conventions. He traces the U.S. history of the form from early documentary-like television anthology programs like *Armstrong Circle Theatre* or *Kraft Television Theatre*, through a second phase of made-for-TV movies like *Brian’s Song* or *Roots* (1977), and finally to a more controversial type of “trauma drama” which has been largely influenced by tabloid television with stories based upon well-known scandals such as the Amy Fischer “Long Island Lolita” attempted murder, *Amy Fisher: My Story* (1992) and *The Amy Fisher Story* (1993), or the O.J. Simpson murder trial, *The O.J. Simpson Story* and *The Trial of O.J. Simpson* (both 1995).

Critical quibbling aside, the docudrama is one of the most popular and lucrative genres in North America, perhaps because it blurs the boundaries between reality and fiction and in the process draws attention to the media’s manipulation of “fact.” One need only think of the battles fought in the United States over docudramas like Oliver Stone’s *JFK* (1991) or *Nixon* (1995) to see the heat which docudrama has generated. The docudrama has become a culturally important form which is the site of political battles over the nature of “truth,” “reality,” and the tabloidization of everyday life.

## Do-It-Yourself Improvement

The term "do-it-yourself" applies in its broadest sense to a range of tasks, usually domestic projects of repair or improvement, completed by individuals who are amateurs in the field. Instead of hiring professional contractors, many homeowners enjoy the challenge of learning new skills, adapting individual styles, and incorporating materials and techniques from local sources to beautify and improve their homes. The high degree of personal satisfaction, not to mention cost-of-labor savings, provide substantial incentives to many do-it-yourselfers. Many view the work they do on their homes as a

hobby, and do-it-yourselfers can now learn and master home improvement methods and techniques from an enormous variety of books, television shows, and multimedia computer programs.

Though people had relied on manual skills before industrialization, personal skills and expertise gave way to organized labor and specialized craftsmanship by the early nineteenth century when early industrialization and the infusion of power-driven machinery created a revolution in manufacture. Items which had been hand-crafted and individually created could now be produced by machine automation. The novelty of mass production generated a craze in the purchase of prefabricated goods. By the 1950s in America, mass production had spread to home building, as evidenced by the first neighborhood tract homes.

People have turned to hand-crafting in times of hardship such as the Great Depression and World War II when there were shortages of building materials and sundry items. Shortages fostered the development of independent home improvement solutions ranging from construction using found materials to the brewing of homemade beer. Propaganda during war time also encouraged individual thrift and problem-solving as important contributions to the war effort. In addition, following the Allied victory, many people returned home with new skills gained through military service and focussed on rebuilding their homes and families. Do-it-yourself home building kits were available in America as early as the late 1940s.

But during the prosperity of the 1950s, home improvement was enjoyed as a family hobby and social activity among neighbors. By the 1960s, young homeowners began home-crafting and personalized home improvement less as a hobby and more as a statement of individuality. While rebelling against what was generally called "the establishment," young people saw opportunities in home industry which provided an avenue of freedom from commercial and industrial ventures. Homemade items from clothing to bread to wall-hangings and interior decorations enjoyed popularity throughout the 1960s and 1970s.

Interest in homemade items waned in the 1980s as Americans returned to more conservative politics, but the spirit of being able to "do-it-yourself" continued not only among first-time home-buyers, who were principally interested in savings (not to mention putting a personal "stamp" on their new homes), but also among the wealthy who continued the trend in home improvement as a personal hobby. Many chose to develop home improvement projects themselves not because politics or economics dictated that they do so, but out of the personal satisfaction derived from individual achievement. A week-end painting project, for example, provided the opportunity to enhance one's self-esteem as well as reduce stress. People who do-it-themselves tend to see themselves as competent, capable, and goal-oriented.

In this light many women increased their involvement in home improvement activities throughout the 1990s, taking on plumbing, minor carpentry, and mechanical repair jobs which were previously considered to be a man's job. In this way women have been able to express their self-confidence and ability in ways which had previously been discouraged.

By the end of the twentieth century, do-it-yourself projects were supported by a growing network of home improvement stores. With vast inventories and knowledgeable salespeople providing instruction, stores like the Home Depot, HomeBase, and Lowe's Improvement Warehouse helped people finish their own projects.

—Ethan Hay

## Domino, Fats (1928—)

The music of Fats Domino embodies the spirit of early rock and roll. His work reveals the links between rock and roll, rhythm and blues, and the black Southern singers of the early twentieth century. His music was recorded by most of the rock artists of the 1950s, who recognized his significant contribution to establishing the rock and roll sound, and he is acknowledged as a pioneer in leading the way across the racial barriers of the music industry. With more than 65 million record sales, Domino was second only to Elvis Presley in popularity during the 1950s, and is credited with bringing mass attention to the New Orleans sound, inspiring many other Southern black singers to record for white audiences.

Domino's New Orleans style of piano playing is a combination of traditional jazz, Latin rhythms, blues, Cajun, and boogie woogie that reflects that city's rich heritage of cultural amalgamation. From the mid-1940s through the early 1950s he was an established rhythm and blues recording artist who had successfully toured the nation, but his pounding playing style made him well suited to crossover into the emerging rock format. Domino's greatest popularity arrived in 1955 with the release of "Ain't That a Shame," which became an early rock hit, and although his career began to fade somewhat in the 1960s, he continued to tour and record into the 1990s.

The man considered the most famous New Orleans-born musician since Louis Armstrong was born Antoine Domino, one of a large family, on February 26, 1928. He developed an early interest in music, began playing the piano at age nine, and was performing publicly at local honky-tonks a year later. He quit school at 14 and took a job at a bedspring factory so that his nights would be free to play the area bars and clubs. A large young man, at this time he acquired the nickname "Fats" from bandleader Bill Diamond. The entertainer was spotted in 1949 by trumpeter Dave Bartholomew and Lew Chudd of Imperial Records, who soon signed him to a recording contract. His first hit song, "The Fat Man," sold more than a million

**Fats Domino**

copies. Domino formed an especially close professional relationship with Bartholomew, and the pair co-wrote, arranged, and produced most of the singer's material for the next two decades. Among his hits of this period are "Goin' Home," "Goin' to the River," and "Every Night about This Time."

Domino's rollicking piano playing allowed him to cross onto the pop charts in the mid-1950s, the time when young white audiences were discovering rock and roll. However, white artists were also covering his initial pop records—Teresa Brewer recorded "Bo Weevil" and Pat Boone's mild version of "Ain't That a Shame" sold even more copies than Domino's own—but he broke into the pop Top Ten himself with the release of "I'm in Love Again." Fats Domino became a national sensation and was one of the first black recording stars to prove that he could appeal to white listeners. He proceeded to enjoy a string of major hits from 1955 to 1960, of which the most instantly recognizable are "Blueberry Hill," "Blue Monday," "I'm Walkin'," "My Blue Heaven," "Whole Lotta Loving," and "Walkin' to New Orleans."

The second half of Fats Domino's career lacked the continuous commercial success of the first half. Although he continued to tour and did occasionally produce some notable recordings, more magnetic (and frenetic) performers such as Little Richard, Chuck Berry, and Jerry Lee Lewis eclipsed his gentle, laid-back stage persona. In the 1970s, he released a New Orleans-style version of the Beatles' "Lady Madonna" that gained some attention, and in 1993 he returned to the recording studio for the first time in nearly 25 years to produce his *Christmas Is a Special Day* set. The results received much critical acclaim. In his later years Domino was much honored for his

achievements: in 1986 he was in the inaugural group of artists inducted into the Rock and Roll Hall of Fame, and in 1998 President Clinton awarded him the National Medal of Arts. By the late 1990s, though entering his seventies, Fats Domino was still touring in between enjoying life in his palatial New Orleans home.

## Donahue, Phil (1935—)

Talk show host Phil Donahue is credited with pioneering the daytime television talk show format. His programs introduced viewers to sensitive and intelligent discussions of topics and issues that had never before been seen on the small screen. From the debut of *The Phil Donahue Show* in 1969, which originated out of Dayton, Ohio, Donahue challenged, informed, and entertained daytime audiences and helped establish the talk show as one of television's most prolific

and profitable formats. Beginning in the 1970s, his promotion of feminism, and the frequent airing of women's health issues on his program identified him as the embodiment of the "sensitive man." As daytime TV shows became raunchier in the 1990s, Donahue came to be viewed as the patriarch of the genre. While he did present programs with outrageous content—senior citizen strippers, for example—he continued to offer sober conversations about politics and social concerns and a mix of celebrity interviews. Phil Donahue's decision to treat the female television viewer as an intelligent, active, and aware participant in society challenged those programmers wedded to the conviction that women would only watch soap operas and cookery demonstrations.

For a man who later symbolized the modern era's willingness to talk openly about the most personal issues, Donahue's beginnings were very traditional. He was born Phillip John Donahue, the son of a furniture salesman in Cleveland, Ohio, on December 21, 1935. He was an altar boy and, after graduating high school, studied for a B.A. in theology at the University of Notre Dame. After completing his degree, he found work as a radio announcer in Cleveland and, later, Dayton. (One of his first professional positions involved delivering the five a.m. hog report.) His first talk show was a Dayton radio program titled *Conversation Piece*, which aired from 1963 to 1967. He later accepted a position with Dayton's WLWD television station

Phil Donahue (right) and guests on *The Phil Donahue Show*.

to host a local call-in talk show but, unable to attract top guests, he and his producers focused each episode on relevant issues of the day.

*The Phil Donahue Show* premiered in November 1967 with an appearance by celebrated atheist Madalyn Murray O'Hair, who was considered by some the most hated woman in America for her anti-religion stance. That first week also included film of a woman giving birth and a discussion on the appropriateness of anatomically correct male dolls. Donahue's likable personality and his ease in addressing often uncomfortable issues tempered the daring subject matter. A further innovation was his solicitation of questions and comments from the studio audience, previously regarded as little more than background for hosts and their guests. Donahue's charm, coupled with his bold choice of topics, attracted national attention when he moved his show, renamed simply *Donahue*, to Chicago in 1974. The program was soon syndicated nationwide and boasted millions of viewers, of whom 85 percent were women.

In a career that spanned more than 6000 hours of programming, there was no subject that Phil Donahue was unwilling to confront and present to mainstream America. Some complained that his choices were often inappropriate or too outlandish. TV host Merv Griffin expressed the opinion of many when he complained that Donahue and his imitators were most interested in controversy and titillation. Griffin stated, "What they have to resort to in subject matter is sometimes a pain in the neck. You know, the sex lives of Lithuanian doctors and dentists is not all that interesting." Donahue did, indeed, parade bizarre guests at times and was not above risking offense to capture high ratings. He interviewed nudists, drag queens, neo-Nazis, and strippers of all sorts. The episode that caused the most controversy and hysteria was titled "Transvestite Fashion Show" and featured Donahue wearing a dress.

However, complaints that daytime talk shows peddled only salacious material ignored Donahue's many episodes that focused on serious issues such as race relations, class differences, and feminist causes. In 1982, he presented the first national program devoted to the AIDS crisis, and a high point of his series was a 1988 discussion of the disease in children, led by the HIV-positive boy Ryan White. Over the years the series also welcomed politicians and advocates from across the political spectrum to express their views. In the late 1980s, Donahue initiated a series of "space bridge" shows with Russian TV host Vladimir Pozner, designed to promote understanding between the peoples of the United States and the Soviet Union. The host's own stand on abortion rights, the Equal Rights Amendment, and other feminist causes, identified him as one of TV's outstanding liberal voices.

Donahue's success continued into the 1980s and 1990s. In 1980, the divorced father of five married actress Marlo Thomas, best known for TV's *That Girl*. The couple had met several years earlier when Thomas was a guest on Donahue's program. The series relocated to New York in 1985, but the following year saw the first real challenge to Donahue's ratings dominance with the arrival of Oprah Winfrey. The pair battled for the position of TV's top daytime talk show host for a decade until Donahue announced his retirement in 1996. The final episode of his show was a national event.

After his departure, daytime TV sank into a mire of freak shows, fights, and shocking behavior. The intelligence, curiosity, and humane probing that characterized Donahue's approach were sadly absent in an era filled with hosts such as Geraldo Rivera, Jenny Jones, and Jerry Springer. Where Donahue had sought to inform and entertain, others set out to demean, to provoke and to shock—an unworthy tribute to Phil Donahue's ability to present often controversial subjects to the mass American audience which had once appeared

to mark the nation's growing willingness to confront previously taboo topics.

## Donovan (1946—)

The rise and fall of British singer Donovan's career and popularity paralleled that of the 1960s counterculture. In the dreamy world of the late 1960s, the exotic and popular performer personified the earthly flower child. Appearing simultaneously wide-eyed and cynical, a little silly yet nobody's fool, and an intensely commercial hippie, he seemed to embrace antithetical categories in popular

Donovan (right) with his musical director, David John Mills.

culture. For five years between 1965 and 1970, he lived so close to the cutting edge of each new trend that it almost seemed as if he had initiated them. Then, with shocking rapidity, he became irrelevant, discarded—like the counterculture—by critics and audiences alike as passé and/or uncool. Yet, for a singer so identified with that specific time and world view, his best songs never lost either their catchiness or their ability to charm.

Donovan Leitch was born in an old section of Glasgow, Scotland, but his family moved to the outskirts of London in 1955. He learned the rudiments of music at folk enclaves in St. Albans, north of London and in the coastal artists' colony of St. Ives in Cornwall. At age 18 he began recording demo discs which were heard by talent scouts from the British rock television show *Ready Steady Go*, and he began appearing regularly on the program in 1965. Initially, Donovan's music was entirely acoustic and, while noting his English accent and more romantic attitude, critics labeled him "Britain's answer to Bob Dylan." In 1965, thousands of youngsters learned to play the guitar using the chords to his first hit, "Catch the Wind." Follow-up singles included the folksy "Colours," Buffy St. Marie's "Universal Soldier" (a standard of the anti-war movement), and a jazzy drug-tour of "Sunny Goodge Street," with one of the first explicit references to hashish in rock music. Donovan made his American debut at the Newport Folk Festival in 1965, the same year the crowd booed Bob Dylan for performing with electric accompaniment.

By 1966, the 20-year-old Donovan had shed his anti-bomb rhetoric and completely reinvented himself as a psychedelic troubadour of "flower power," the epitome of 1960s mysticism. With Mickie Most, his new producer at Epic Records (with whom he worked until 1969), Donovan kept the folk-like refrains of his songs, but added quirky pop instrumentation (sitar, flutes, cellos, and harps). His work in this period often exhibited wonderful musical inventiveness and a fine ear for a lyrical phrase, although he occasionally crossed the line into pomposity and pretension. His biggest hit, "Sunshine Superman," reached number one in July 1966 in both Britain and the United States, and remains one of the most engaging and innovative singles of the 1960s. The album of the same name also included drug favorites, "The Trip," and the ominous "Season of the Witch." Later that year, Donovan released "Mellow Yellow" (which reached the number two spot with lines whispered by Paul McCartney). Baby boomers everywhere debated whether the lyrics advocated smoking banana peels, although Donovan later claimed the song concerned an electric dildo. His subtle drug references endeared him to the hippie movement, though some complained that his songs were mawkish, the lyrics overloaded with images of trees, sunny days, and laughing children.

Donovan seemed omnipresent in the late 1960s, hanging out with the Byrds, the Rolling Stones, and Dylan, and parodied in Peter, Paul and Mary's "I Dig Rock 'n' Roll Music." The hits kept coming, including the druggie "Epistle to Dippy," and "Young Girl Blues," with its perfectly captured sense of rock ennui set off by the shocking-for-the-times sexual imagery. He was a "must" to headline the Monterey Pop Festival in 1967, but his visa was revoked due to a drug charge. He then traveled to India at the same time as the Beatles to study with the Maharishi Mahesh Yogi. Shortly thereafter, he publicly renounced drug use and requested that his followers substitute meditation for getting stoned. Donovan now appeared on stage in

flowing robes with love beads; one album cover depicted him, scepter in hand, in a ceremonial barge at England's romantic Bodiam Castle, a leaf-strewn lake in the foreground.

Nowhere was Donovan's versatility better displayed than in the hit singles he penned in rapid succession in 1968. His acoustic skill was featured in the sweet hymn to childhood, "Jennifer Juniper"; in "Wear Your Love Like Heaven," the soft, layered harmonies consisted of little more than the names of exotic colors, and the song later gained wide circulation as the ubiquitous advertising jingle for Love cosmetics. At the other end of the popular music spectrum, the drug/fairy tale imagery of the Top Ten hit "Hurdy Gurdy Man," featured Donovan's distinctive, tremulous intonation against layers of Jimmy Page's wailing guitars. Three-quarters of the future Led Zeppelin group played on the single, and they later used the same contrast between acoustic and electric sound to great effect.

Donovan's work continually displayed an original bent and a desire to move beyond traditional popular forms while retaining commercial appeal. "There is a Mountain," a hypnotic calypso-based song with lyrics inspired by Japanese haiku, reached the top fifteen in 1967, and he also borrowed successfully from West Indian traditions in "Rikki-Tikki-Tavi" (1970). In 1969, the unique, albeit bizarre story-song "Atlantis" was the last of his efforts to make the top ten. He also experimented with jazz-based sound, most noticeably in "Goo Goo Barabajagal (Love is Hot)," a searing collaboration with the Jeff Beck Group that marked the end of his string of popular hits.

Ironically, just as the singer-songwriter movement seemed to peak in the early 1970s, Donovan completely fell from commercial grace. A critical backlash intensified after he released a double album of children's songs, and the underrated album *Open Road* in 1970 failed to stem the decline. After his sparsely attended 1971 American tour, he became involved with movies, and wrote scores for, among others, Franco Zeffirelli's *Brother Sun, Sister Moon* (1973). His early 1970s albums met with mixed critical acclaim and declining sales. Among these was *7-Tease* (1974), a conceptual album about a young hippie and his search for inner peace, which also toured as a stage revue with some collaboration from David Bowie. By 1980 Donovan had ceased to be a concert attraction and lacked any major record company affiliation. He recorded only sporadically in the next decade.

After several inactive years, the musician enjoyed a minor renaissance in the 1990s. The spacey British dance band Happy Mondays brought Donovan back into favor by praising his work and touring with him. In 1991, they included an irreverent tribute to Donovan on *Pills 'n' Thrills and Bellyaches*; the hit album precipitated a flood of Donovan reissues. There was considerable interest in *Sutras*, Donovan's "comeback" effort in 1996, but the purely acoustic work, filled with cosmically sincere and occasionally cloying material, found no audience.

Donovan will undoubtedly be forever associated with naive psychedelia. This is unfortunate, because he was a consistently imaginative lyricist who pioneered novel sounds such as Caribbean forms long before such work became fashionable. His popular music career may have fit the typical rock star paradigm, but the best of his work remains uniquely original.

## The Doobie Brothers

The Doobie Brothers, or "Doobies," are a California-based rock band, formed in 1970, whose most popular singles stand among the definitive songs in 1970s rock and roll. Their hits "Listen to the Music," "Long Train Running," "China Grove," and "Takin' It to the Streets" all possess the trademark upbeat, easygoing, Doobie Brothers sound, influenced by R&B and soul. Their two number one hits, "Black Water" (1975) and "What a Fool Believes" (1979) have become soft-rock classics. Not quite as original or as influential as the Eagles, the Allman Brothers, or Steely Dan, the Doobie Brothers must yet be counted among the best of the American light rock and country rock groups of the 1970s. Successful on stage as well as over the airwaves, they continued to tour after the peak of their popularity had passed, and still released occasional albums throughout the 1980s and 1990s.

## Doonesbury

On October 26, 1970, Garry Trudeau's comic strip *Doonesbury* debuted in 28 newspapers around the United States, revolutionizing the language and cultural significance of cartoon art forever with its depth of focus, breadth of satirical targets, and richness of character development. From its roots as a *Yale Daily News* strip satirizing college life, *Doonesbury* expanded the horizons of its content and its popularity until, almost 30 years after its first national appearance, it was a feature in over 1,350 newspapers across the country.

Following on ground broken by Walt Kelly's *Pogo*, Trudeau challenged the definition of the comic page as escape and silliness by bringing sharp satire, social commentary, and adult issues into his strip. His heroes, and their quirky responses to the ups and downs of life in the late twentieth century, have stood the test of time, chronicling the changing priorities and dilemmas of the baby-boom generation from college into middle age. His style of cartooning, with its panels of complex artwork and extensive bubble-free dialogue, has been much imitated.

In the 1970s, the initial *Doonesbury* focus was on the inhabitants of an anonymous eastern college campus and its nearby Walden

commune. Conservative, gung-ho football star B.D. (a tribute to a real Yale athlete, Brian Dowling) and his loopy, girl-crazy roommate Mike Doonesbury formed the initial core of the strip. Soon they were joined by "Megaphone Mark" Slackmeyer, a campus radical, Calvin, a revolutionary Black Panther, and Zonker, a stoned, irreverent hippie. B.D.'s cheerleader girlfriend Boopsie, and her intellectual roommate Nicole have perpetual disagreements about women's liberation, while the clueless college president constantly tries to sidestep controversy. As time passes, Mike learns about economics, racism, and class when he tutors a savvy inner-city black kid, while B.D. takes his raging drive to win from the football field to Vietnam, where he is captured by Phred, a charming Viet Cong terrorist who teaches him something about the history of Vietnam and the absurdities of war. Those still left at school move to a communal house on idyllic Walden Puddle, where they are joined by still more refugees of the turbulent 1970. One such is Joanie Caucus, an older housewife who has left her stifling life and her husband behind to return to college, and becomes the spokesperson for women's liberation while she tries to get into law school.

Across the decades, these core characters, and many others, tracked the trends and current events of their time and place in history, graduating from college, surviving the yuppie years, and experiencing marriage, divorce, and parenthood. Through many thousands of ingeniously created panels, *Doonesbury* has offered complex insights into personal relationships together with incisive social commentary. Joanie Caucus, remarried to Washington, D.C. columnist Rick Redfern, bemoans the difficulty of non-sexist child rearing as her young son, holding the doll she gave him for Christmas as if it were the rifle she would never buy him, aims it straight at her. Radio talk-show host Mark Slackmeyer, still the leftist radical, comes out as gay late in the 1980s, but his boyfriend is a dyed-in-the-wool conservative who gets along with Mark's right wing father better than Mark ever did. The quandaries of everyday modern life ring true, as does Trudeau's ironic, wish-I'd-said-that dialogue.

Interspersed with the "personal" stories of the characters are direct visitations from public figures. A favorite *Doonesbury* scenario is a four-panel strip with the White House in each panel, unchanged except for dialogue. In these, presidents from Nixon to Clinton are effectively skewered by the words Trudeau puts in their mouths. In later years, with a technique possibly inspired by the icons of modern computer jargon, presidents and others have been represented only by meaningful icons—a floating feather for vice-president Dan Quayle, for example, or a buttery waffle for Bill Clinton, proving perhaps that a symbol may be worth a thousand caricatures.

One of the most powerful symbols Trudeau created is that of Mr. Butts, the talking spokes-cigarette for the tobacco lobby. Mr. Butts originally appeared in a troubled Mike Doonesbury's nightmares when Mike, by then an advertising agent, is asked to design a campaign to improve tobacco's image. The cynical Mr. Butts has reappeared frequently thereafter to lampoon the tobacco lobby, becoming a powerful image in the anti-smoking campaign. Indeed, *Doonesbury* has frequently been a catalyst for change as well as presaging events. Senator Bob Dole once called the strip the "best source for what's going on in Washington." In 1971, well before the conservative Reagan years, a forward-looking B.D. called Ronald Reagan his "hero." In 1984, almost 10 years before Congressman Gingrich became Speaker of the House, another character worried

that he would “wake up someday in a country run by Newt Gingrich.” Repressive laws in the wealthy town of Palm Beach, Florida, allowed people of color to be stopped regularly by police, and required domestic servants to register with local authorities. After the bright light of *Doonesbury*’s satire was focused on the town’s policies for a time, the laws were repealed.

Because of its mission to attack difficult issues and mock public figures, *Doonesbury* has always roused controversy. Many newspapers place the strip on their editorial page, considering it inappropriate for the comics, while others regularly pull individual strips when the content is judged too extreme. In the 1990s, when *Doonesbury* came out with a series of strips in support of legalization of marijuana for medical use, the attorney general of California railed against the strip and tried unsuccessfully to have it pulled from papers in the state. It is this hard-hitting political satire that earned Garry Trudeau the Pulitzer Prize for political cartoon commentary in 1975, the first time that honor had ever been conferred on a comic strip.

Trudeau, born into a family of physicians in New York City in 1948, came honestly by his gift for trouble-causing satire—his great-great-grandfather was driven out of New York because of the caricatured sculptures he made of his colleagues. Known for his avoidance of the press, Trudeau, an avid student and researcher of the U.S. political scene, also writes editorials and draws editorial cartoons for the *New York Times*. He has written film scripts, and the book for a Broadway musical of *Doonesbury* in 1983, though many critics did not think the cartoon translated well to the stage. He has also created *Doonesbury* television specials and a musical revue called *Rap Master Ronnie*, spoofing the Reagan years. For decades, he refused to compromise the principles of his creation by allowing merchandising, but he finally succumbed in 1998, when he permitted *Doonesbury* products to be sold, with all proceeds going to the campaign for literacy.

In 1988, when president George Bush said of Trudeau, “He speaks for a bunch of Brie-tasting, Chardonnay-sipping elitists,” he was simply referring to the most negative baby boomer stereotype of the 1980s, the pampered yuppie. But Trudeau’s strip speaks for more than the elite, clearly addressing a far wider audience than liberal Americans of a certain generation. *Doonesbury* fills a need in the American press for progressive readers who appreciate the demystification of complex issues through no-nonsense, direct language and humor. Though, by the late 1990s, many other comics had appeared that attempted to fill this need (even one especially for conservative readers), *Doonesbury* paved the way for these, and for a comics page that explores adult issues through humor. The characters who inhabit the panels of *Doonesbury* are old friends to its readers, and one of Trudeau’s great talents is his ability to make these characters—with the possible exception of faceless politicians—lovable to his readers. They keep reading to enjoy a cynical and satirical take on current events. And they keep reading to see how life is turning out for the old gang.

—Tina Gianoulis

## The Doors

With their mix of music, poetry, theater, and daring, the Doors emerged as America’s most darkly innovative, eerily mesmerizing musical group of the 1960s. Founded concurrently with the English invasion, the college-educated, Los Angeles-based group stood apart from the folk-rock movement of Southern California and the peace and flower power bands of San Francisco. In exploring death, doom, fear, and sex, their music reflected the hedonistic side of the era. Writing for the *Saturday Evening Post* in 1967, Joan Didion called them “the Norman Mailers of the Top 40, missionaries of apocalyptic sex.” The group’s flamboyant lead singer, Jim Morrison, said, “Think of us as erotic politicians.” A seminal rock figure, Morrison’s dark good looks and overt sexuality catapulted him to sex symbol status, akin to that of Elvis Presley.

Morrison’s provocative stage presence, combined with the group’s mournfully textured, blues-rooted music, suggested the musical theater of Kurt Weill and Bertolt Brecht, and the edginess of the avant-garde troupe, The Living Theater. But the complicated, clearly troubled Morrison could not overcome personal demons, which he sated with drugs and alcohol. By late 1968, his frequently “stoned” demeanor became off-putting, his on-stage rants pretentious. His behavior at a Miami concert in March 1969, and his resulting arrest on charges including indecent exposure, represented not only his downfall but also the Doors’ looming disintegration. But if the group’s rise and fall was fast and furious, encompassing just four years, their anarchist influence is undeniable. Their hard-driving music bridged the heavy-metal 1970s; their murky, cerebral lyrics spanned the new wave 1980s, and the alternative 1990s, and Jim Morrison remains the undisputed forerunner of the sexy, leather-clad, on-the-edge rock martyr.

The Doors’ saga began in the summer of 1965 on the beach at Venice, California, where singer-musician Ray Manzarek ran into his former UCLA classmate, Jim Morrison. After listening to Morrison sing the haunting lyrics to a song he had written called “Moonlight Drive,” Manzarek proposed they start a band, and “make a million dollars.” Manzarek then approached two other musicians who were studying with him at a Maharishi meditation center. Thus, with Manzarek on piano and organ, songwriter Robbie Krieger on guitar, John Densmore on drums, and Morrison before the microphone, the group was in place. It was Morrison who came up with their moniker, derived from a William Blake passage, which had inspired the title of Aldous Huxley’s book about his mescaline experiences, *The Doors of Perception*. As paraphrased by Morrison: “There are things that are known and things that are unknown, in between [are] the doors.”

Working their way through the Los Angeles club scene, the Doors initially performed blues and rock ‘n’ roll standards, in addition to material written by Morrison. They were playing the London Fog on the Sunset Strip, making five dollars apiece on weeknights, ten dollars apiece weekends, when they were spotted by a female talent booker who was especially struck by the star quality of the lead singer. Hired to work the Strip’s popular Whiskey a Go Go, the Doors became the club’s unofficial house band, second-billed to groups including the Turtles, Them, and Love. During sets, the group was an anomaly; the four members appeared disparate, as if each were on a plane all his own, but their sound had a synchronicity. And there was no denying the allure of the group’s pretty-boy singer.

**The Doors: (from left) John Densmore, Robbie Krieger, Ray Manzarek, and Jim Morrison.**

In his earliest performances, Morrison was so introverted that he performed with his back to the audience. Some nights, his baritone was barely audible. However, his confidence grew with the group's reputation and, certainly, his stage presence was unique. He had languid body movements, tended to throttle the microphone, and often emoted with closed eyes as if in a spectral trance. Also, he could be counted on to be unpredictable. Sometimes he dropped to the floor to sob out his lyrics; other times he danced with abandon as if possessed. One night at the Whiskey in late 1966, he delivered an improvised rendition of his oedipal song, "The End." The eleven-and-a-half minute song climaxed with a young man's screaming threat to kill his father and rape his mother, but Morrison used a word other than "rape," bringing the entire club, including the go-go girls in hanging cages, to a stunned silence. That very night the Doors were fired. They would, however, ultimately have left on their own accord, for they already had a contract with Elektra Records.

Released in January 1967, their debut album *The Doors* included "Light My Fire," which, at six minutes and 50 seconds, was considered too long for Top 40 airplay. As the group toured nationally, a shorter version began climbing the AM charts; meanwhile, the full-length version became a favorite of FM. Eschewing the matching costumes that were then in vogue among music groups, the Doors also had no official leader, but in interviews, as well as on the stage, it was

invariably Morrison who took the spotlight. Shrewdly, the photogenic singer-songwriter exploited his rapport with the camera, as well as his appeal to journalists, who found him sensual, mystical, and eminently quotable. For the erudite rock star was also a poet, who read and quoted the nineteenth-century French poets Arthur Rimbaud and Charles Baudelaire, and German philosopher Friedrich Nietzsche. Moreover, when not waxing metaphysical or apocalyptic, Morrison could be surprisingly playful. When asked how he had prepared for stardom, he once quipped, "I stopped getting haircuts."

In his Elektra Records publicity biography, he claimed to have no family; in fact, he was the son of a Navy rear admiral, and from a family of career militarists. As a performer, Morrison assumed various alter egos. For a while, he called himself the "King of Orgasmic Rock," and as the "Lizard King" he donned tight-fitting snakeskin pants. He also claimed to be possessed by the spirit of a dead Indian, the result of a childhood trip across the desert. He and his family had once passed an overturned truck, which had resulted in fatalities, and Morrison claimed that the spirit of one of the dead Indians somehow entered him. He accessorized that persona by donning a concho belt, leather pants, and dancing in a ritualistic style.

But the role he played to the hilt was that of the rebel. When the Doors appeared on *The Ed Sullivan Show* in September 1967, Morrison defied the famed host's request that a particular line, with

possible drug connotations, be deleted from "Light My Fire." Three months later, the singer made headlines when he was arrested on stage in New Haven, Connecticut, on charges including "breach of the peace" and indecent and immoral exhibition. In August 1968 he was again arrested, this time for disorderly conduct on board a flight to Phoenix.

Increasingly, Doors concerts became known for their dangerous atmosphere, as an incorrigible and no-longer-slender Morrison staggered across the stage, taunting the audience, inciting them to riot, screaming at them to "Wake up!" He also clutched at his crotch and tugged threateningly at his pants. The Doors were in a slump when they embarked on a 21-city tour in March 1969 and, following the arrest of the bloated, bearded Morrison in Miami, the rest of the tour was canceled. The group's symbiosis was on the wane when they recorded their blues-oriented collection, *L.A. Woman*. Afterward, it was a burned-out Morrison who headed for Paris to concentrate on his poetry. He was just 27 when he died on July 3, 1971, reportedly of a heart attack suffered while in the bathtub. Because of Morrison's penchant for substance abuse, and the curious handling of his death and burial by several close friends, questions persist over how he actually died. Since his body was found by his common-law wife, who died in 1974 of a heroin overdose, there have long been allegations that drugs were a factor. Whatever the cause, his death was yet another reminder of the perils of the dark side of rock 'n' roll. It was also the third untimely passing of a rock star in less than a year, following those of heavy metal guitarist Jimi Hendrix and rock-blues queen Janis Joplin, both of whom died of overdoses.

Following Morrison's death, the surviving Doors recorded two additional albums. Manzarek also sought to reinvent the group, with Iggy Pop as lead singer, but it was clear that the magic had died with Morrison. It was Morrison's mystique that led to a Doors rediscovery that has enshrined the rock star as a modern-day Dionysus, the Greek god of revelry and wine who was dismembered, and later resurrected. The 1980 rock biography, *No One Here Gets Out Alive*, by rock journalist Jerry Hopkins and Doors associate Danny Sugerman, spurred on the revival, and sent other biographers in search of similarly debauched rock subjects. And the 1980 reissue of the Doors' *Greatest Hits* album, which entered *Billboard's* Top 10 Chart, proved that defunct groups can sell as well as those still active. *Rolling Stone* acknowledged the power of dead celebrity with its September 1981 Morrison cover story, proclaiming "He's hot, he's sexy and he's dead." Hollywood heralded Morrison in 1990 when a decade-long quest to make a feature film was realized by controversial filmmaker Oliver Stone, with the movie *The Doors*, starring Val Kilmer.

In the era of incarnations that dawned in the 1990s, Morrison was depicted as a poet trapped in a self-created rock star image. He is, after all, buried in Pere La Chaise Cemetery, the famous final resting-place in Paris of such notables as Edith Piaf, Oscar Wilde, Honoré de Balzac, and Frédéric Chopin. Moreover, the poetry he self-published in 1970 was republished in the late 1980s and during the 1990s. His writings have also been the subject of scholarly studies, including one in which he is compared to his idol, the French symbolist, Rimbaud.

Yet if the Doors' spotlight remains on Morrison, his musical legacy came from his collaborative work with Manzarek, Krieger, and Densmore. Benchmarks of the 1960s Doors songs—among them "Light My Fire," "Hello, I Love You," "Touch Me," "Love Her Madly," "People Are Strange," and "Riders on the Storm"—have

remained accessible. Staples of the airwaves, they attest to the power of provocative music, and to the seemingly-enduring interest wrought by the potent combination of sex, drugs, and rock 'n' roll.

## Doo-wop Music

"Doo-wop" is a form of close-harmony singing, based in rhythm-and-blues. The style became popular in the 1950s, originating among African-American vocal groups in urban centers. One of the most common rhythm phrases used by 1950s groups in performance and on their recordings, "doo-wop" came to name the musical style. To sing in the doo-wop style, phonetic or nonsense words are used as rhythmic parts in harmonic arrangements. Usually this is done by a trio or quartet of vocalists, over which a soloist sings a melody. The melody is expressed through understandable words, often accented by the nonsense words of the vocal accompaniment. By the end of the 1960s, doo-wop groups were losing popularity. Yet rock 'n' roll musicians would often use doo-wop for their background vocal arrangements, and in this way the style continued to develop beyond the 1950s and to exert its influence on popular music.

## Dorsey, Jimmy (1904-1957)

In the 1920s, Jimmy Dorsey toured with the Paul Whiteman and Red Nichols bands, and was considered an excellent clarinet performer and the leading jazz performer on alto saxophone, influencing such

Tommy (left) and Jimmy Dorsey

jazz greats as Charlie Parker and Lester Young. He and his brother, Tommy, founded the Dorsey Brothers Orchestra 1933, starring Glenn Miller on trombone and Ray McKinley on drums. After Tommy left to form his own orchestra in 1935, Jimmy Dorsey led the band to national stardom in the 1940s, featuring the popular singing duo of Helen O'Connell and Bob Eberly. The song "Green Eyes," as sung by O'Connell, was the band's most requested number. In 1953, the brothers reunited.

## Dorsey, Tommy (1905-1956)

A trombone-player known for his warm, silken tone on ballads as well as upbeat improvisations, Tommy Dorsey, "The Sentimental Gentleman of Swing," led one of the most versatile orchestras of the big band era. With its premier jazz stars, the band could swing with the best, and none equaled its style on slow ballads, as sung by Frank Sinatra and Jo Stafford.

By age 25, Tommy had become a successful free-lance radio and recording star, and in 1933 he and his brother Jimmy formed the Dorsey Brothers Orchestra. Within two years Tommy left to start his own orchestra. His band's best-selling record was the swinging *Boogie-Woogie*, selling over four million copies, but the most requested number was the poignant "I'll Never Smile Again." The brothers reunited in 1953.

## Double Indemnity

*Double Indemnity* (1935) is one of the classic, tough-talking murder stories of the late 1930s. Written by controversial mystery novelist James M. Cain (1892-1977), *Double Indemnity* is based upon a true story about a weak-willed insurance agent, Walter Huff, who falls for sultry blond, Phyllis Nirdlinger. Nirdlinger's inconvenient husband has to be eliminated so that his wife and her lover can collect on his life insurance, a policy which doubles in value if the holder dies by accident.

Like *The Postman Always Rings Twice*, upon which it is modeled, l'amour fou, or sexually charged obsessive love, is at the heart of this psychologically realistic novel. Cain, along with, for example, Raymond Chandler and Dashiell Hammett have been called, perhaps unjustly in Cain's case, members of the hard-boiled school of detective novelists. Edmund Wilson has referred to them as "the poets of the tabloid murder" because of their interest in the low life aspects of American culture, and the often sordid stories of murder, eroticism, and adultery that fascinated them.

Unlike Chandler, with whom he has been compared (and who wrote the screenplay for the film version of *Double Indemnity*), Cain's writing is deeply pessimistic and far less romantic. His characters are terribly flawed yet very human in their failings, and the eroticism of many of his novels made them controversial in their day. Cain's interests and lean writing style also made him stand apart from much of the popular writing of his time. His gritty, downbeat, stories, like *The Postman Always Rings Twice*, *Mildred Pierce*, and *Double Indemnity* had a pictorial quality which made them attractive for adaptation to the movies. All, however, underwent considerable sanitation before the more censorship-plagued Hollywood studios could make them into films.

In the case of *Double Indemnity*, the novel ends with Huff and Phyllis on a freighter going nowhere in particular, unable to return to the United States because of their murderous pasts, and contemplating suicide by jumping off the boat into shark infested waters. As Phyllis says, "There's nothing ahead of us, is there Walter." And Walter replies, "No, nothing." This existential gloom did not survive in the film version where Walter, after narrating his sordid tale of adultery and betrayal, lies dying from a gunshot wound inflicted by, perhaps, Phyllis, who he has murdered a few hours before.

Billy Wilder turned the novel into a convention-setting film noir in 1944, starring Fred MacMurray, Barbara Stanwyck, and Edward G.

Barbara Stanwyck and Fred MacMurray in a scene from *Double Indemnity*.

Robinson. Told in a confessional flashback by the dying insurance agent, Wilder's more cynical, but less gloomy version, helped establish flashback—first person narration as a convention in film noir. The unconventional casting of Fred MacMurray, who was noted for his roles in comedy, helped the audience identify with the amoral, but ruthless Huff, who is now called Walter Neff.

In the film version, the first person narration helps to draw the audience into a morally complex position where they viscerally experience the amoral world in which Neff and Phyllis operate—we see the events unfold through his eyes. To put the spectator on edge, Wilder sets the rigid and righteous Barton Keyes (Edward G. Robinson), an insurance investigator and Neff's boss and friend, up against the Neff character, giving the audience a choice between identifying with a slippery, ruthless, and greasily charming insurance salesman or his cold and obsessive nemesis. As in Alfred Hitchcock films, the audience becomes ethically involved with the criminals hoping that they will elude the ever present, relentless Keyes. With its raw, more naturalist flavor, and serious, unsentimental prose the novel makes identification with the characters more difficult. Thus in the film

when Neff sets out to kill Phyllis, the audience is uncomfortably aware that they have identified with a hero who is a callous and brutal loner.

—Jeannette Sloniowski

## Douglas, Lloyd C. (1878-1951)

With the publication of *The Robe* in 1942, Lloyd C. Douglas became the most influential religious novelist in the world. Following in the tradition of Lew Wallace's *Ben Hur* (1880), Douglas' novels satisfied a reading public's demands for rollicking adventure and historical romance, combined with piety. *The Robe* purports to tell what happened to the Roman soldier who acquired Jesus' garment at the Crucifixion. After many adventures, this soldier meets St. Peter and accepts Christianity, later to die a happy martyr's death. Douglas, who retired from the Congregational ministry to write, never pretended his novels were refined works of literature. He graciously suffered the attacks of reviewers, who found him loquacious and sentimental. Yet he proved incapable of writing a book that did not become a best seller; the public loved his vintage narratives of decent characters who worked through problems to happy resolutions. In 1953, Henry Koster directed a major Hollywood film adaptation of *The Robe* which is still highly regarded. Douglas' continuing though diluted influence may be seen in books by Fulton Oursler, Taylor Caldwell, and Frank G. Slaughter.

## Douglas, Melvyn (1901-1981)

Although he acted in motion pictures from the early 1930s to the late 1970s, Melvyn Douglas was never especially fond of most of the more than three score and ten movies in which he starred. He much preferred the theater and returned to the stage whenever he got the chance. A versatile actor, he excelled in both dramatic and comedy roles. He appeared in horror films, mysteries, and melodramas, but is best remembered for playing opposite Greta Garbo in the comedy *Ninotchka* (1939). Later in his screen career, when he'd ceased doing dapper leading man roles and was showing up in character parts, Douglas earned two supporting actor Oscars. A dedicated liberal, he was active in politics and his wife, Helen Gahagan Douglas, ran against Richard Nixon for the United States Senate but was defeated.

Born Melvyn Hesselberg in Macon, Georgia, he grew up in the Midwest. He served in the Army during World War I, but never went overseas—"The closest I personally came to death was in the kitchen, narrowly avoiding a meat cleaver thrown at me by a furious

cook," he remembered in *See You at the Movies*. After the war, he joined his family—his father was a modestly successful concert pianist—in Chicago. Douglas hadn't yet picked a career and had "no idea what to do with my life." By the early 1920s he'd decided on the theater and was touring the Midwest. After several years of this, with an assortment of companies, he reached Broadway in 1928 in *A Free Soul*. He played the gangster, a role that made Clark Gable a star when he appeared later in the movie version.

Melvyn Douglas's work in the 1930 Broadway comedy *Tonight or Never* changed his life in two important ways. It was in the play that he first met Helen Gahagan, his costar, and fell in love with her. And when the play was filmed, Douglas repeated his role in Hollywood. He went on to make several films in the early 1930s, including *The Vampire Bat* (1933), *The Old Dark House* (1932), and *As You Desire Me* (1932), in which he first starred opposite Garbo. Unimpressed with the movie business, the actor left Hollywood for a time to return to the New York stage. "I had gotten disgusted with being photographed at close range," he later explained, "with a microphone down my throat."

He soon was lured back to Hollywood and began working again in a wide variety of films. He played such reformed rogues as the Lone Wolf and Arsene Lupin and a range of sleuths in mystery movies such as *Fast Company* (1938), *Tell No Tales* (1939), and *There's That Woman Again* (1939). He also began to shine in a successful string of screwball comedies. He worked opposite Irene Dunne in *Theodora Goes Wild* (1936), with Marlene Dietrich in *Angel* (1937), and with Myrna Loy in *Third Finger Left Hand* (1940). In 1939 he made Garbo laugh in Ernst Lubitsch's *Ninotchka*.

Douglas said that he didn't become politically active until "just before Roosevelt's reelection in 1936." His wife was a singer as well as an actress and he'd accompanied her on a tour that took her to Germany. Once they saw Hitler's campaign against the Jews firsthand, Helen Douglas cancelled her tour and they returned home. Melvyn Douglas joined the Hollywood Anti-Nazi League, worked for the rights of migrant workers, campaigned for the Democratic candidate for governor, and in June of 1938 he organized the Motion Picture Democratic Committee, the earliest group of movie people to campaign for a specific political party. Never a Communist, Douglas found himself attacked by the local members of the party when he called Russia as big a totalitarian threat as Germany and Italy. And for his criticisms of Nazi Germany he was labeled a "premature anti-Fascist." When Helen Gahagan Douglas ran against fledgling politician Richard Nixon for the U.S. Senate in 1950, some of Nixon's campaigners introduced a strong note of anti-Semitism. And in speaking of his opponent, the future President of the United States would often refer to her as Mrs. Hesselberg. One of Nixon's more extreme supporters, the racist Gerald L. K. Smith, told his followers that they must "not send to the Senate the wife of a Jew."

During World War II Douglas enlisted in the Army and was eventually stationed in the China-Burma-India war area. He returned to the movies after the war—notably in *Mr. Blandings Builds His Dream House* (1948) with Cary Grant and Myrna Loy. But after 1951, he concentrated on the stage again, winning a Tony for his performance in Gore Vidal's political drama, *The Best Man*. Older, and letting his age show, Douglas reentered motion pictures once again in the early 1960s. He made over a dozen films in his last years, including *Hud* (1963) for which he won his first Oscar, and *Being There* (1979) for which he won his second.

## Douglas, Mike (1925—)

Daytime television talk show host Mike Douglas personified mainstream popular entertainment during the 21-year run of *The Mike Douglas Show* from 1961 to 1982. The show, which initially originated from Cleveland, Ohio, and later moved to Philadelphia, Pennsylvania, was a 90-minute syndicated program that dominated the ratings during the important weekday afternoon/early evening time slots. Douglas served as an affable Midwestern everyman who welcomed guests from show business, politics, and current events. Unlike many daytime shows of the 1990s, which focused primarily on confrontations between outrageous and often vulgar guests, *The Mike Douglas Show* offered viewers a mixture of thoughtful conversation and wholesome entertainment. Douglas once described his personality and appeal to the mass audience by stating, "I'd have to say I'm square and I'm happy that I am." His charming "Mr. Nice Guy" image made him the quintessential TV host and encouraged such personalities as Marlon Brando, John Lennon, Barbra Streisand, Rose Kennedy, and Princess Grace of Monaco to choose his program for their rare talk show appearances.

Born Michael Dowd on August 11, 1925, in Chicago, Illinois, Mike Douglas served in the Navy during World War II and first attracted attention with an impromptu singing performance while visiting the famous Hollywood Canteen. His rendition of "When Irish Eyes Are Smiling" so impressed nightclub manager Earl Carroll that the young sailor was given a standing offer of a job as a singer as soon as he was free to take it. However, upon leaving the service in 1945, Dowd turned down Carroll's offer and a Hollywood film contract to join Kay Kayser's big band as a featured male singer. For five years Douglas, whose professional name was bestowed upon him during a performance by Kayser, sang on both the radio and television versions of *Kay Kayser's Kollege of Musical Knowledge*. Among his most popular songs with Kayser and his own spin-off group Michael Douglas & The Campus Kids were "Ole Buttermilk Sky" (1946) and "The Old Lamplighter" (1947). Upon Kayser's retirement in 1950, Douglas began a solo singing career. His most noteworthy performance of this period occurred when he provided the singing voice for Prince Charming in Walt Disney's animated fairytale classic *Cinderella* (1950).

Douglas moved into television in the early 1950s and appeared on numerous programs originating from Chicago. In 1961, he arrived in Cleveland to launch his own talk show. Westinghouse, which syndicated the Douglas show, owned KYW-TV in Cleveland and believed it would be most cost-effective to originate the program from those facilities. Later, an FCC ruling on a legal technicality forced Westinghouse and NBC to swap their stations in Cleveland and Philadelphia. In 1965, Douglas and his successful program relocated to Philadelphia's Independence Mall. Each episode of *The Mike Douglas Show* began with Douglas singing an opening number (most often "On a Wonderful Day Like Today") and then commenting on his personal life with his wife Genevieve and their three daughters.

He then welcomed various guests and participated in comedy-variety segments.

One of the most noteworthy elements of the *Douglas Show* was the inclusion of a celebrity guest co-host each week. Performers such as Rosemary Clooney, Jim Nabors, Fred Astaire, Gene Kelly, and Gloria Swanson would join Mike in this role for five days. Perhaps Douglas's most unconventional co-hosts were John Lennon and Yoko Ono, who appeared for a week in February 1972. The couple introduced Douglas and his Middle American audience to such counterculture figures as Jerry Rubin, Black Panther Bobby Seale, and several segments of performance art. Highlights of the unusual week included Lennon playing with his rock idol Chuck Berry and Douglas joining the couple in an unrehearsed segment where they phoned strangers to say they loved them.

Mike Douglas symbolized family entertainment during the turbulent 1960s and 1970s. He was extremely popular and prominent on the American scene. Beyond his own afternoon program, he often substituted for Johnny Carson on *The Tonight Show*. Douglas even produced a hit record, "The Men in My Little Girl's Life," a song about fatherhood that reached number three on the *Billboard* charts. He was even seen on the big screen when he made a cameo appearance as a southern governor in the Burt Reynolds film *Gator* (1976). After *The Mike Douglas Show* ceased production in 1982, the host moved to the fledgling CNN cable network to briefly host an interview show. Douglas remained out of the spotlight until 1996 when he made a special guest appearance during the premiere week of *The Rosie O'Donnell Show*. Rosie O'Donnell credited Douglas as the inspiration for the positive, entertainment-based, and family-friendly show she hoped to create. Her great success in the late 1990s proved the daytime talk show format pioneered by Mike Douglas still resonated with many Americans.

—Charles Coletta

## Downs, Hugh (1921—)

Throughout his more than sixty years in broadcasting, Hugh Downs has been the embodiment of reassurance and congeniality. Learning his craft as a radio announcer in the late 1930s and 1940s, Downs became the master host of television. After serving as announcer on *Caesar's Hour* and *The Tonight Show*, Downs simultaneously hosted an early morning series, *Today*, and a daily game show, *Concentration*. Always curious about health and science, Downs oversaw the first successful series on aging, *Over Easy*, for PBS. When the magazine series, *20/20*, was floundering, ABC lured the affable Downs out of semi-retirement to anchor the show in 1978. He reported on many of his special interests, including sailing, psychology, and astronomy, for *20/20*, helping to make it the network's signature primetime newsmagazine for over two decades. Because of his decency and trustworthiness, Downs is one of the most familiar and reassuring figures in the history of television, clocking more

hours on the air than any other network personality according to *The Guinness Book of World Records*.

—Ron Simon

## Doyle, Arthur Conan (1859-1930)

So great is the influence of Sherlock Holmes, that only the truest of the great detective's fans know that his creator, Arthur Conan Doyle, thought far less of Holmes than he did of his other creative efforts. For Doyle was not a stock-in-trade mystery writer, a genre that was still finding its legs. He certainly had not "invented" the genre of detective fiction, a privilege that belonged to Edgar Allan Poe and his own creation, master detective August Dupin. Although Doyle claimed that Holmes had been modeled on his medical school teacher, Dr. Joseph Bell, the writings of Edgar Allan Poe, as well as Emile Gaboriau, Charles Dickens, Eugene Vidocq, and Wilkie Collins, were what provided Doyle with the basic elements for building his mythic detective.

Arthur Conan Doyle was born on May 22, 1859 in Edinburgh, the eldest son of Charles Altimont Doyle and his wife, Mary Foley. Doyle's father, a builder and designer in the Edinburgh Public Works

Arthur Conan Doyle

Office, was from a staunchly Catholic family. In 1869, Doyle was enrolled in Hodder Preparatory, a Jesuit school in Lancashire. Two years later he attended the Jesuit college, Stonyhurst School, also in Lancashire. Upon graduating, he traveled to Austria, where he spent a year studying German in Feldkirch School before entering Edinburgh University in 1876 to study medicine. Despite his Jesuit education, Doyle's year in Austria proved a major turning point, as a crisis of faith led him to abandon his Catholic upbringing for a studied agnosticism. This change in religious perspective, based on his own faith in scientific reasoning, prepared Doyle for the rigors of medical school.

Interestingly, it was Doyle's avowed agnosticism and unwavering commitment to honest dealing that led to his becoming a writer. After he informed his father's well-to-do family of his religious disillusionment, all social and financial help was withdrawn. Barely able to support himself, Doyle turned in his third year in medical school to writing fiction for extra cash, using as material his own adventures serving while in school as a ship's doctor on a whaling vessel to the Antarctic and later on an African freighter. Between the few stories he published, which paid just enough to keep him and his family afloat, Doyle racked up a good number of rejections before achieving steady work as a writer.

In 1882, Doyle established a private practice in Southsea, Portsmouth. Three years later, he married Louise Hawkins, whose own small family income offered him greater freedom to write more. His first novel, *The Firm of Girdlestone*, written in 1886, was soundly rejected by the British publishing industry and did not see publication until 1890. His next work was his first Sherlock Holmes story, the novella *A Study in Scarlet*, which after several initial rejections, was published in the 1887 issue of *Beeton's Christmas Annual*. Despite Doyle's faith in the quality and originality of the story's hero, *A Study in Scarlet* gained little notice among readers. His next novel, however, *Micah Clarke* (1889), caused a great stir after its publication—following the usual round of rejections by British publishers—by Andrew Lang, as chief editor at Longmans Publishing Company. *Micah Clarke*, a story about the dangers of fanaticism, was Doyle's first work of historical fiction and an immediate success, propelling the author into literary stardom in England.

Meanwhile, despite the poor showing Holmes had made in his creator's home country, Doyle's detective fared quite well in the United States, where a request for another story about the master detective was made to Doyle while he was deep in his next historical novel, *The White Company* (1890). As soon as Doyle had completed *The White Company*, which was to be his personal favorite, he dashed off *The Sign of Four* (1890) which was, once again, well received in America. Fortunately for Doyle, Holmes' stock, despite his poor initial showing, was beginning to rise in England by leaps and bounds. In July 1891, Doyle wrote his first of six Sherlock Holmes tales for *The Strand*, making Doyle England's most popular serialized fiction writer. Doyle continued to write Sherlock Holmes stories over the next two years until he decided to have Holmes killed by his arch-nemesis, Dr. Moriarty, in December 1893, with the story "The Final Problem."

Doyle's decision was a momentous one. Holmes' death was met with howls of outrage and large-scale subscription cancellations of the magazine. The pressure on Doyle was enormous to continue the series, but he was adamant about letting Holmes rest in peace. As it was, the production of a Holmes story for serial publication proved to be an enormous strain on Doyle's creative powers, draining precious energy that he thought better spent on his now little known historical

novels, such as *Rodney Stone* (1896) and *Uncle Bernac* (1897). In the early 1900s, Doyle added to his output two works of historical nonfiction, *The Great Boer War* (1900) and *The War in South Africa* (1902), which sought not only to document the Boer War but to defend the British role in it.

In 1901, Doyle published *The Hound of the Baskervilles*, in which Holmes was reintroduced to solve one of his older cases. By 1903, Doyle had accepted an American offer of \$5,000 per story for a series of new tales about the great detective, regardless of how many Doyle wrote or how often. Doyle continued to write stories of Holmes and his companion Watson over the next 20 years, although they tended to appear in short bursts, when they appeared at all. After Holmes' resurrection, Doyle's early passion for historical fiction sought an outlet in other genres, such as the scientific romance, resulting in the writing of *The Lost World* (1912), *The Poison Belt* (1913), and *The Land of Mist* (1926). Concurrent with these began a spate of Spiritualist works that included *The New Revelation* (1918), *The Vital Message* (1919), *The Wanderings of a Spiritualist* (1921), *The Coming of the Fairies* (1922), and the two-volume *History of Spiritualism* (1926).

Many consider Doyle's turn to spiritualism at the end of his life one of the strangest events to occur in the life of a man whose greatest creation was a detective who drew his conclusions from a hard and cold reality that disavowed all things supernatural. Few, however, recognize the important nuances in Doyle's thoughts about spiritualism, as well as the nuances within the spiritualist movement itself, which sought to treat spirits as a scientific reality, a view that Doyle favored. Doyle, after all, was an agnostic, not an atheist, and there is little doubt that notwithstanding his medical training and belief in scientific method, he remained unable to reconcile the loss of his childhood Catholic faith with his belief in a greater good that directed human conduct and morals. Indeed, Holmes' own work as a detective of "setting the world to rights" suggests a moral imperative that is explained more by Doyle's faith—in goodness, in man, and perhaps even in God—than his reason.

—Bennett Lovett-Graff

## Dr. J

See Erving, Julius "Dr. J"

## Dr. Jekyll and Mr. Hyde

The phrase "Dr. Jekyll and Mr. Hyde" is a popular metaphor to express the dual nature of human beings, who are capable of such

great goodness and almost unbelievable evil. It is derived from the respectable Victorian doctor with a demonic alter ego who first appeared in the eponymous novella (1886) by Scottish writer Robert Louis Stevenson (1850-94). The tragedy of the scientist who finds the formula to isolate his evil side but fails to control it has been frequently transferred to the screen. The story was first filmed in 1908, and versions range from Robert Mamoulian's 1931 film, with Academy Award-winner Fredric March in the title role, to Stephen Frears' irregular *Mary Reilly* (1995). However, the presence of Jekyll and Hyde can be detected in many other films, novels, and comics of the last one hundred years only remotely inspired by Stevenson. Stories dealing with scientists involved in fatal accidents, tormented serial killers, and even secret superheroes are ultimately indebted to Stevenson's Gothic masterpiece.

## Dr. Kildare

In 1938 Metro Goldwyn Mayer (MGM) acquired the rights to author Max Brand's creation, *Dr. Kildare*, and began a series of popular films about a young intern in a metropolitan hospital, and his struggle to learn his profession and earn the respect of a crusty senior doctor in his specialty, internal medicine. In 1961 the same characters, with different actors, made a nationwide success of the television adaptation of *Dr. Kildare*, becoming the forerunner of the many medical dramas, like *ER* and *Chicago Hope*, that lit up the small screen in the 1990s.

In the cinema version, Lew Ayres starred in the title role and Lionel Barrymore played the senior doctor, a sharp-tongued old curmudgeon with a heart of gold, which he tried to conceal. The first in the series, *Young Dr. Kildare* (1938), presented a cast of regular characters that included Nat Pendleton as the ambulance driver and featured Laraine Day, who stayed in the troupe for five pictures. MGM released three Kildare pictures in 1940 alone, including *Dr. Kildare Goes Home*, *Dr. Kildare's Crisis*, and *Dr. Kildare's Strange*

*Case. Dr. Kildare's Wedding Day*, Laraine Day's last in the series, was one of the most popular and was marked by one of Red Skelton's early screen appearances. Lew Ayres, who had chosen to be a conscientious objector and refuse certain military duties, left the cast in 1941. Van Johnson and Keye Luke vied to become Dr. Gillespie's assistant in two films, *Dr. Gillespie's Criminal Case* and *Dr. Gillespie's New Assistant*.

Finding the right stars to play Kildare and Gillespie on television was a challenge. The first pilot shot for the series had Lew Ayres return to his role as a more mature Kildare, but executive producer Norman Felton said "The result was a clinical sort of film, too much like a documentary." They decided on a second pilot and quickly signed Raymond Massey, a Canadian actor famous for his portrayal of Lincoln, as Dr. Gillespie. More than 35 actors read for the Kildare part, and William Shatner was the leading contender for the role until he canceled out to accept the Captain's chair in a new science fiction series called *Star Trek*. One of the remaining actors was a nervous newcomer named Richard Chamberlain, who had done a few minor television roles and was then collecting \$38 a week at the unemployment office. Despite his lack of experience, the producer thought he had just the right physical appearance and decided to let him take the lead in the pilot film.

The show was an overnight success, and Chamberlain found himself the object of mobs of squealing women wherever he went. His boyish blond looks attracted 4,500 fan letters a week. The character of Dr. Kildare, however, a medical crusader and straight-arrow idealist, did not entirely appeal to Chamberlain. He told an interviewer in the *Saturday Evening Post* that Kildare is "nobler than humans prefer other humans to be. If I were to mold Kildare, I would make him more subject to faults and weaknesses—like the rest of us. I might even have him pinch a nurse or two." It was an attitude Dr. Gillespie would not have endorsed.

Despite the development of the show into a world-wide hit, with more than 80 million admirers around the globe, the series ended in 1966 after a five year run. Toward the end, the ratings declined somewhat as the show strayed from the key relationship between Kildare and Gillespie and focused more on the medical problems of its guest star patients. During the final season, some of the episodes were serialized in a 30 minute format rather than continuing in the hour-long version that had been so effective. Following the show's demise, Chamberlain, rather than being forced to return to the unemployment line as he feared, went on to become the "king of the miniseries" in the 1970s and 1980s, starring in such blockbusters as *Shogun*, *The Thornbirds*, and *Centennial*.

In 1972 MGM tried to revive the series in a new format called *Young Dr. Kildare*, starring Mark Jenkins as Kildare and Gary Merrill as Gillespie, but the series had a brief run, followed by a short after-life in syndication. Many have commented on the coincidence that two of the most successful medical shows ever to air on television arrived in the year 1961, with *Ben Casey* premiering four days after *Dr. Kildare*.

## Dr. Seuss (1904-1991)

Author, illustrator, editor, and publisher, Dr. Seuss revolutionized materials directed at young readers by introducing humorous, rhymed, and colorful books using limited vocabularies and simple, appealing illustrations. Uniquely inventive in the annals of twentieth-century children's books, Seuss openly acknowledged that helping to kill off the predictable "Dick and Jane" primers of the 1950s was one of his proudest accomplishments. The bizarre creatures of his stories, which contained subtle moral messages that could be read on different levels, often acted with what their author termed "logical insanity." For example, if an animal had two heads, he must also have two toothbrushes.

Twice-married but childless, Seuss had not started out to be a children's book innovator. He was born Theodor Seuss Geisel in Springfield, Massachusetts, the son of a German immigrant who ran a brewery until the arrival of Prohibition. He later commented that his father was on track to become company president until circumstances forced him to switch his careers and become commissioner of parks. This helped instill an early cynicism in the future Dr. Seuss, while his frequent trips to the zoo thereafter helped to stimulate his fertile imagination.

Theodor "Dr. Seuss" Geisel

His mother, Henrietta Seuss Geisel, unwittingly lent him her maiden name, which he first used when writing a humorous scientific piece. While reading for a B.A. in English from Dartmouth, Seuss contributed to the school humor magazine, *Jack O'Lantern*, then studied literature for one year at Oxford. Returning to the United States in 1927, Seuss sold cartoons to the *Saturday Evening Post*, *Judge*, and *Vanity Fair*. He always considered himself to be an artist first and an author second. This belief received some confirmation in many of his books for which he initially drew sketches, afterwards devising dialogue to accompany them. When he later wrote books without illustrating them himself, Seuss used the pseudonym Theo LeSieg (Geisel spelled backwards.)

Seuss composed advertising illustrations for Standard Oil of New Jersey for 15 years after a company executive saw his cartoon of a knight trying to kill dragons with the insecticide Flit. This led to one of the 1930s most famous ad slogans, "Quick, Henry, the Flit." In 1932, Seuss wrote an ABC book for children but could not find a publisher. In 1936, while crossing the Atlantic by ship, he composed *And to Think That I Saw It On Mulberry Street* in rhyme inspired by the rhythm of the vessel's engines. About a boy whose imagination transformed a horse and wagon into various beasts, the book became his first published monograph, bought by Vanguard Press after some 20 other publishing houses had turned it down.

Vanguard also published his next book, *The 500 Hats of Bartholomew Cubbins*, in 1938. Seuss then moved on to Random House, where he remained for the rest of his life, founding its Beginner Books division in 1958. The year 1939 witnessed both *The King's Stilts* and Seuss's only novel, *The Seven Lady Godivas*, a commercial failure and one of only two books he wrote for adults. From 1940 to 1942, he worked as a political cartoonist for the anti-isolationist *PM* newspaper, revealing both his political concerns and his preference for drawing. The perennial favorite *Horton Hatches the Egg* appeared in 1940. Critics variously regard this first Horton book as a parable about the virtue of intervening in crises, about protecting unborn life, about perseverance and integrity, or as just an amusing story.

During a stint in the army Seuss worked with Warner Brothers cartoonist Chuck Jones (who later brought *How the Grinch Stole Christmas* to television) on training films. He also collaborated on documentaries in the Army Signal Corps with film director Frank Capra, from whom he learned the importance of plot development, and one could argue that the triumph of physically weak protagonists and the essential goodness that Seuss saw in most people reflect a Capraesque sensibility. Seuss garnered three Academy Awards in his lifetime: for two documentaries, *Hitler Lives* (1946) and *Design for Death* (1947, about the Japanese people), and for his animated cartoon *Gerald McBoing-Boing* (1951).

His postwar book production continued with *McElligot's Pool* (1947), *Thidwick the Big-Hearted Moose* (1948), *Bartholomew and the Oobleck* (1949), *If I Ran the Zoo* (1950), *Scrambled Eggs Super!* (1953), *Horton Hears a Who* (1954), *On Beyond Zebra* (1955), *If I Ran the Circus* (1956), and *How the Grinch Stole Christmas* (1957). But the debut of *The Cat in the Hat* in 1957 was the event that established Seuss's reputation. Produced as a supplementary first-grade reader with a controlled vocabulary of 223 words, it was the tale of a mischief-maker who teaches children to misbehave while their mother is away. Its success allowed Seuss to establish Beginner Books.

According to E. J. Kahn, Jr., writing in a December 1960 issue of *The New Yorker*, Geisel was a perfectionist. He often labored more than a year on a book and threw away 99 percent of his material before

he was satisfied, afterwards haunting the production department to ensure that it got his material right. Geisel later observed that his favorite book was *The Lorax* (1971), which came almost effortlessly to him, allegedly taking only 45 minutes to compose. This environmentally conscious allegory about trees so loved that they are all cut down and become extinct, was also the only one of his books that anyone ever tried to ban. That effort occurred in 1989 in the northern California logging town of Laytonville. Other direct message books such as *Yertle the Turtle and Other Stories* (1958), about a deceitful leader, and *The Sneetches and Other Stories* (1961), about a hateful competition between two kinds of creatures, had received uniformly welcome responses.

The characters in the Dr. Seuss books often encounter fearful situations, but wit and good luck see them through. Even the baddies are not irredeemably evil. The Grinch, for example, who starts out with a heart two sizes too small, ends up with one three sizes bigger than before. Seuss's trademarks are nonsense, humor, mischief, galloping rhymes, and tongue twisters. Some of his words are his own inventions; others, such as "burp," had never before been used in children's books. His illustrations—gangling cartoon-style figures, generally depicted in simple primary colors—are of ordinary characters with which children readily identify. All of his people look very much alike, which perhaps is part of the message. The lead characters are also invariably male, if they can be identified by gender at all. The novelist Alison Lurie asserted in the *New York Review of Books* in 1990 that there was an inherent sexism in his characters' roles. One book with a female protagonist, however, *Daisy-Head Mayzie* (1995), was published posthumously. Seuss's focus on the issues of aging, tolerance, laziness, individuality, and persistence were usually subtly intertwined in his stories.

In a career that spanned six decades, Dr. Seuss published 48 books, including his second for adults, this time the successful *You're Only Old Once: A Book for Obsolete Children* (1986). They sold 100 million copies in 18 languages. According to *Publishers' Weekly* in 1996, of the top 10 bestselling children's books of all time, Seuss wrote three: *The Cat in the Hat*, *Green Eggs and Ham* (1960, written in response to a challenge from publisher Bennett Cerf to write a book using 50 words or less), and *One Fish Two Fish Red Fish Blue Fish* (1960). Many others of his works were not far behind in popularity.

The last of Seuss's books to be published in his lifetime, *Oh, the Places You'll Go!* (1990), addressed the highs and lows of human experience—facing fear, loneliness, and confusion—and fittingly appealed to both adults and children. With its presence on the *New York Times* adult best-seller list for two years (1990-92), its author could say: "I no longer write for children, I write for people!" Older readers could appreciate the satire, younger readers the charm. In the end, Seuss's hegemony was challenged by lushly illustrated and more pragmatic books with more direct messages, but his books have retained their popularity.

—Frederick J. Augustyn, Jr.

### ***Dr. Strangelove or: How I Learned to Stop Worrying and Love the Bomb***

Produced and directed by Stanley Kubrick, this dark satire on Cold War relations paints a searing portrait of a world accidentally plunged into nuclear warfare. Intermingling sex, love, and war in unexpected ways (for example, its characters' names often suggest "strange loves" of various types), *Dr. Strangelove* (1964) is a rich, provocative film that stands up well to repeat viewings.

*Dr. Strangelove* tells the story of an insane Air Force general named Jack D. Ripper who orders a bomber wing to drop a nuclear bomb on the Soviet Union. Ripper, who favors rainwater as a drink mixer, believes the Soviets are poisoning "our precious bodily fluids," an allusion to an actual Cold War belief that the fluoridation

of America's water supply was a Communist plot. As the bomber unit headed by Major T. J. "King" Kong relentlessly approaches its primary target—a missile complex called Lapuda, a reference to a place in Jonathan Swift's satiric 1726 novel *Gulliver's Travels*—Soviet Ambassador de Sadesky confronts the president of the United States in the latter's "War Room" and tells him that a nuclear strike will detonate a Doomsday Device that will annihilate all living things on the surface of the planet. The wheelchair-using Dr. Strangelove, a presidential advisor on international political affairs and weapons development, explains the ramifications of the Doomsday Device while attempting to keep his bionic arm under control; during tense moments, the prosthesis has a tendency to choke its owner or give Nazi salutes. While making plans with others in the War Room for living underground in the post-Armageddon world, Strangelove unexpectedly rises out of his wheelchair and takes a few steps. "Mein Führer, I can walk!" he exclaims to the president, but his excitement is short-lived; Major Kong's bomber wing completes its grim mission at that moment, and a series of thermonuclear bomb blasts accompanied by the strains of the schmaltzy Vera Lynn tune "We'll Meet Again" concludes the film.

Kubrick began developing *Dr. Strangelove* in 1961 after reading *Red Alert* (also known as *Two Hours to Doom*), a 1958 Cold War novel written by ex-Royal Air Force officer Peter George. Kubrick

purchased the novel's screen rights and began working with George on the script with the hope of maintaining the book's solemn tone. His plans changed, though, as the screenplay took shape. As Kubrick told *New York Times* reporter Eugene Archer, "I was fascinated by the book—*Red Alert*, a serious suspense novel about what happens when one of the great powers pushes the wrong button. The film keeps the same suspense frame. But the more I worked on it, the more I was intrigued by the comic aspects—the facade of conventional reality being pierced." Shortly before filming started in early 1963, Kubrick brought in Terry Southern, a writer known for his sardonic humor, to play up the script's sense of absurdity.

Kubrick assembled an eclectic group of actors for his film, including Sterling Hayden as General Ripper, Slim Pickens as Major Kong, Keenan Wynn as Colonel "Bat" Guano, George C. Scott as General Buck Turgidson, Peter Bull as Ambassador de Sadesky, and James Earl Jones as Lieutenant Lothar Zogg. Heading the cast was Peter Sellers, a highly versatile actor at the peak of his powers. Sellers played three roles: British Col. Lionel Mandrake; American president Merkin Muffley; and Dr. Strangelove, a German presidential advisor—Kubrick wanted him to play a fourth character, Major Kong, but eventually assigned the role to Slim Pickens after Sellers begged off. Kubrick, who shot the movie in Great Britain mainly to accommodate Sellers, allowed the actor to improvise much of the Strangelove character, including the dramatic rise from the wheelchair. Sellers greatly appreciated the artistic license given him. "I especially enjoyed doing the mad scientist in *Dr. Strangelove* because Stanley Kubrick likes free improvisation that can be so stimulating," he told *New York Times* writer Howard Thompson. "Given a free hand, you can build, construct into the characterization. It's all any actor could ask for." His improvisation, in turn, helped Kubrick develop a strong finish for the film (he had originally filmed a monumental pie fight in the War Room but abandoned it, believing its slapstick tone would conflict with the rest of film).

Though its power has diminished somewhat during the post-Cold War era, *Dr. Strangelove* and its nightmarish visions of a world gone mad remains an important milestone in screen satire.

## Dracula

Cursed to an endless life, Count Dracula is eternally resurrected in film and fiction, as well as in the vampire myth. Bela Lugosi's Dracula has become an indelible figure haunting the popular imagination since the release of *Dracula* in 1931. The definitive vampire,

Bela Lugosi as "Dracula."

Lugosi's well-groomed Count has spawned a diverse group of vampires, including *Sesame Street*'s Count, Grandpa Munster, Blackula, Duckula, and Count Chockula. The only vampire most people know by name, Dracula has sold innumerable books, plays, movies, costumes, toys, consumer products, and even tours of Romania.

Tod Browning's 1931 film *Dracula* is probably the most famous version of Bram Stoker's 1897 novel. Often criticized for its over resemblance to the drawing-room melodrama from which it was derived, the film has nevertheless had a tremendous and lasting impact on both film and popular culture. The film follows the journey of Renfield, a British businessman, who is visiting Count Dracula in Transylvania in order to sell the Count some London property. Slowly, Renfield realizes that he is a prisoner and that the Count is a vampire. Once in London, the Count must battle Professor Van Helsing, a doctor who specializes in ferreting out and eradicating the undead. Van Helsing and Count Dracula fight over the soul of the innocent Mina, and finally Van Helsing kills the Count by plunging a wooden stake through the vampire's heart.

*Dracula* was so successful that, almost single-handedly, it rescued Universal Studios from folding, giving the studio its first profit in two years. More importantly, it established talking horror movies as a popular and profitable genre. Lugosi's quintessential Dracula set the stage for the filmic and fictional vampires that

followed. Certainly Lugosi's sartorial elegance has become a trademark of Count Dracula—as George Hamilton complains in *Love at First Bite* (1979), “How would you like to spend 400 years dressed like a head waiter?” From the 1950s forward, Lugosi's image graced a staggering number of incongruous consumer goods, including swizzle sticks, jewelry, card games, decals, transfers, tattoos, cleaning products, Halloween costumes, albums, pencil sharpeners, greeting cards, plastic and wax figurines, clothing, puzzles, wind-up toys, candy, comic books, and bath products. By the 1960s, *Dracula* had become such a marketable image that he could be co-opted to sell just about anything.

The late 1950s and 1960s saw a resurgence of interest in monster culture centered around television showings of classic horror movies by hosts including Vampira and Ghoulardi, the proliferation of magazines like *Famous Monsters of Filmland*, and the development of popular television series like *The Munsters* and *The Addams Family*, which parodied the American nuclear family. Lugosi's disdainful Count (barely even interested in his female victims) was recreated by Christopher Lee in five films, beginning with *Horror of Dracula* (1958); by Jack Palance in a prime-time version of *Dracula* (1973); and by Louis Jordan in a BBC miniseries, *Count Dracula* (1978). While the kitsch market bearing Dracula's image continues to spread seemingly unabated, like vampirism itself, a new vampire has emerged who bears a resemblance to Lugosi's elegant, aristocratic Dracula, and yet who is markedly sympathetic as well as erotic. Beginning with Anne Rice's *Interview with the Vampire*, published in 1976, novels and movies told from the vampire's point of view have become increasingly popular, as have vampire stories and films created by and for women (e.g., the films *Lust for a Vampire* and *The Hunger*, and the novels *The Vampire Tapestry* (1983) and *A Taste of Blood Wine* (1992).

The repeated adaptation of a text can serve as a guide to changes in popular understandings of psychological and social issues. Vampirism has been read as a metaphor for gender and racial “otherness”; for the simultaneous desire and fear of female sexuality, male sexuality, and/or homosexuality; for contagion of all sorts; and for the relationship between the “new” worlds of Western Europe and North America and the “old” world of Eastern Europe. *Dracula* itself has been variously interpreted as a parable of the oppression and resistance of marginalized groups, the power and alienation resulting from technological reproduction, the repression of sexuality and desire, the effects of industrial capitalism on the working class, and the complex interdependencies of colonialism. Of course, on one level, *Dracula's* popularity lies in its face-value: the fear of (and possible desire for belief in) the notion that the dead are not really dead. Like much horror and monster culture, *Dracula* deals in the (linked) questions of sex and death. And like most horror films, *Dracula* tells the story of a contest between good and evil, between the normal and the abnormal or pathological.

*Dracula* also follows generic conventions by installing normalcy at the end of its story, reinstating and reaffirming the good and the true after an anxious yet enjoyable period of peril. And yet, *Dracula* plays with the boundary between good and evil, between the normal and the pathological, in a way that goes a long way in explaining the story's popularity. *Dracula* blurs and transgresses the distinctions between living and dead, East and West, male and female, heterosexual and homosexual, aristocratic and professional, healthy and diseased, and British and foreign before finally reinstating those terms as pairs of fixed opposites with the (apparent) death of the Count. It is Dracula's ability to appear normal, after all, to pass in the

nighttime streets of London, which make him both so dangerous and fascinating. Dracula does not look like a monster—in fact, he looks like an upscale version of his victims. It is, in the end, Dracula's very adaptability, his ability to confuse epistemological and social categories, which ensures his everlasting capacity to both frighten and entertain us.

—Austin Booth

## The Draft

From America's founding through the twentieth century, the draft has been a familiar way to ensure the country's safety in terms of the numbers of soldiers it can mobilize to fight in wars. In the twentieth century, the draft has been used—in one way or another—during all of our major wars, from World War I to the Vietnam War. Naturally, then, draft-dodging has also played a part in American war history. From the famous to the infamous, numerous Americans—for one reason or another—have used whatever means they could to change their lot in the military during times of war or to avoid participation in war altogether.

The draft existed before American independence. In the colonies, young and middle aged (white) men were declared by law to constitute the militia of the colony, and such men were subject to compulsory militia training. After the adoption of the federal Constitution, Congress left militia matters largely to the judgment of the states.

In response to the Civil War, a federal draft law was passed in 1863 (and modified in 1864). The Civil War draft was not particularly effective: The draft law brought 46,000 draftees and 118,000 substitutes into the Union Army, which was eight percent of the federal army's total strength.

Congress passed a draft law in May, 1917 which lasted during America's participation in World War I. A majority of American troops who went to France during this war were draftees. The draft was administered by a decentralized civilian agency, the Selective Service System, whose power was largely exercised by local draft boards (the Civil War draft had been administered by the military).

In 1940, Congress again passed a draft law. Except for a draft-free period in 1947 and 1948, this law was renewed at four-year intervals until 1971, when it was renewed for two years. The draft then expired in 1973 when Congress failed to renew it. A Selective Service System, similar to that of World War I, supervised the draft.

During both world wars, the government eventually chose to rely solely on the draft for its military manpower needs, and volunteering for the military was forbidden. After World War II, however, the bans were lifted but by 1953 (the last year of the Korean War), still over half of enlisted men were draftees. After Korea, the military

increasingly came to rely on volunteers (some of them motivated by the desire to avoid the draft), and the proportion of draftees in the armed forces was further reduced. There was an upsurge in the use of draftees during the Vietnam period, but the majority of enlisted men remained volunteers.

Some young men were able to find various techniques of dodging the draft. Draft-dodging was a widespread practice whenever the United States had a draft. Draft-dodging means deliberately modifying one's behavior—legally or illegally—for the purpose of avoiding the draft. Draft-dodging is different from draft resistance, which involves the open defiance of the draft law.

One popular method of draft-dodging was to volunteer for military service before the draft caught up with you. To enter military service voluntarily had certain advantages over the draft. A volunteer had some control over which branch of the service he entered, whereas draftees tended to end up in the Army rather than the Navy or Air Force. A volunteer could choose a branch of the armed services, or a specialty, where there was less of a danger of doing infantry combat duty. For those who volunteered for the National Guard, one's tour of duty would be done in the United States. A Vietnam-era study of those who had volunteered for the armed forces found that 40 percent of the respondents indicated that the draft led them to enlist. The number of draft-dodgers in the Vietnam-era National Guard and reserves was even higher—70.7 percent, according to a 1964 Defense Department survey.

Another method of dodging the draft was simply ignoring the law. According to one estimate, 160,000 men on the side of the Union failed to appear when summoned by their draft boards during the Civil War. During the World War I draft, between 2,400,000 and 3,600,000 men failed to register for the draft as required. The federal government held "slacker raids" during World War I in which federal authorities (civil and military), with help from vigilantes, would stop and detain draft-age men and find out if they were properly registered. In other periods, the draft laws were enforced by more conventional law enforcement techniques.

Married men were more likely to get deferments, a fact which did not escape draft-dodgers. The draft law of 1940 seems to have prompted some marriages: While in 1939 there was a total of 1,404,000 marriages, there were over 5,000,000 marriages in 1940 in the 18 to 29-year-old group alone. The Selective Service was aware that some men were using marriage and fatherhood to avoid their military responsibilities, and tightened the regulations in response. By the Vietnam-era, marriage and having children were not particularly effective ways of dodging the draft.

Fleeing abroad was another method of avoiding the draft. Mexico was a destination for some draft-dodgers during World War I, while Canada was a destination during the Civil War and the Vietnam War—Sweden was also a popular destination for some Vietnam-era draft-dodgers.

Under the old militia laws in the various states, a man who had enough money could avoid militia duty by paying someone to go in his place. This method of hiring substitutes was included in the federal draft law in the Civil War. Until June 1864, those who could not afford substitutes could avoid the draft by paying a commutation fee of \$300.00. Many local and state governments gave financial assistance so that draftees could hire substitutes.

After World War II, attending a post-secondary school could also be a method of draft-dodging. If a college student satisfied the Selective Service that he had a good academic record, he could stave off the draft at least until graduation (in 1967, Congress made

deferments available to all undergraduates, regardless of their academic standing).

Draft-dodgers (and draft resisters) have sometimes benefitted from Presidential amnesties, including Franklin Roosevelt's limited amnesty for World War I offenders in 1933, Harry Truman's limited amnesty for World War II offenders in 1947, and Jimmy Carter's complete amnesty for non-violent Vietnam-era offenders in 1977.

Eminent draft-dodgers include future President Grover Cleveland, who hired a substitute so as to avoid the Civil War draft, future President William Clinton, who made use of student exemptions and the ROTC program to avoid the Vietnam War, and future Vice-President Dan Quayle, who joined the Indiana National Guard.

## Drag

"Drag" was originally a theatrical term used to describe the women's clothing a man wore on stage. It came into use in the 1870s at the same time that cross-dressing, or dressing as the opposite sex, became popular in vaudeville variety shows. Men would dress in "drag" and women would "wear breeches," each one poking fun at the foibles and anxieties of the opposite sex. By the 1940s, drag had come to describe professional female impersonators and had begun to take on meanings associated with male homosexuality. Gay men who wore women's clothes off-stage started to be characterized as men in "drag" by mid-century.

Since the 1950s, the term "drag" has come to describe a form of cross-dressing for both men and women that intends to expose itself as false. In other words, men and women in drag broadcast the fact that they are *dressed up* as one sex or the other. Unlike some cross-dressers, they are not interested in wearing costumes that disguise who they "really" are underneath. Instead, they make costumes that are clearly costumes, putting on clothes that are stereotypically men's or women's, like floor length evening gowns, high heels, bow ties, or three-piece suits. Men and women in drag work to exaggerate masculine and feminine gestures, facial expressions, tones of voice,

A man in “drag” applies lipstick before a photo shoot in Philadelphia, 1995.

and scenarios in order to simultaneously enhance their performance and underline the fact that they are performing. Drag is most commonly associated with “drag queens,” or male performers who dress up as women. But, it can still describe women dressed as men, or even women dressed as women or men dressed as men as long as their outfits are designed to produce the sense that the gender they are performing is self-consciously acted out.

Gay male nightclubs often host “drag shows” as part of their nightly or weekly ritual, especially in urban areas with large gay populations like San Francisco or New York. These variety shows usually feature a line-up of drag queens who “lip-sync” to popular songs by female artists—moving their lips and performing along with previously recorded music. These numbers are often outrageously dramatic, extremely sentimental, or bitingly satirical. Each one is treated as an opportunity to experiment with the meanings of gender on stage. Sometimes performers make fun of mainstream gender relations, while at other times they take the insights of the songs they sing very seriously. Drag shows are usually emceed by a drag performer, who often presents a comedy routine on topics ranging

from gay sex to contemporary politics. Some clubs only hire professional performers, while others are strictly amateur.

There are many fewer drag kings than drag queens and they are far less visible. However, some lesbian clubs do sponsor drag shows that provide a forum for drag king performances. These shows often feature women dressed up in female drag as well as male drag. In other words, women dress in “campy” or exaggerated female clothes that draw attention to the ways that they must perform their femininity as they interact with other women who are dressed as men and who are drawing attention to their self-conscious decision to dress as their chosen gender.

Ultimately, drag performers explain, drag exposes the ways that everyone “performs” their gender, even when they are “wearing” the socially appropriate role. If gender can be successfully understood through sex-role behavior that is outrageous and clearly fake, then logically it follows that those traits and characteristics that we uncritically associate with one sex or the other are being put on or taken off by everyone. Rather than naturally coming out of biological sex, sex-role behavior is learned, performed, and always unreal.

Drag has become more mainstream in the last decade, both within the gay community and in American culture more generally. RuPaul was a crossover sensation in the early 1990s, and was, according to *People* magazine “the first drag queen ever to land on the pop charts.” Her album, *Supermodel of the World*, brought her into the limelight in 1993 and her perfectly accessorized seven foot frame has kept her in the public eye. Like other drag performers, RuPaul often openly reflects on the meanings of drag. “Drag queens,” she once explained, “are like the shamans of our society, reminding people of what’s funny and what’s a stereotype.”

*Wigstock*, an annual day-long drag show held on Labor Day in New York City, is another example of the mainstreaming of drag. It has attracted thousands of spectators and hundreds of local and national performers throughout the mid to late 1990s. A number of movies have also caught the national eye. The popularity of the Australian film *The Adventures of Priscilla, Queen of the Desert* in the United States as well as the success of *To Wong Foo, Thanks for Everything, Julie Newmar* attest to the American cultural interest in drag and particularly drag queens in the 1990s. Both of them feature a group of drag queens travelling across their respective countries and ultimately finding themselves stranded in backward small towns. *To Wong Foo*, especially, captures the bland moral most commonly associated with drag queens in popular culture. By first experiencing discrimination and then “educating” the provincial residents with whom they come into contact, the three drag queens represent American cultural fantasies about victimized people. Confronting and overcoming their oppression by drawing on the drag queen “spirit,” the queens of *To Wong Foo* tell Americans what they already think they know: that a good attitude on the part of oppressed people is the best way to overcome injustice.

While mainstream movies make these simple connections, drag queens and kings themselves discuss the disruptive potential of drag. Rather than reinforcing American’s comfort with oppression and their resolve not to take responsibility for victimization, drag underlines American cultural anxieties about difference and forces men and women to think critically about how cultural ideas structure their identities and their sense of possibility.

## Drag Racing

Drag racing, an acceleration contest from a standing start between two vehicles covering a measured distance, is probably as old as the automobile itself. As a legal and commercially organized sport, however, it began on Sunday, June 19, 1950. On that day at an airstrip near Santa Ana, California, C. J. Hart, originally of Findlay, Ohio, hosted with two partners the Santa Ana Drags. A year before that, in Goleta, California, a drag race was held on a closed-off section of road with approval of the police, but it was only a one-time event. The surge of returning veterans at the end of World War II, many of whom could afford an automobile and had a sense of adventure as well as a desire to test the performance of their machines, gave rise to street racing or “hot rodding.” It was street racing, illegal and dangerous, which led to the need for safely organized events. Today drag meets take place all across the United States with some contests attracting upwards of 50,000 spectators.

Although drag racing has become more professional and commercialized than in the beginning, many hobbyists still have the opportunity to participate. There are a multiplicity of race classes, each held to certain rules regarding the weight of the vehicle, engine size and modification, and body configuration. In any major drag-race event there will be dozens of class winners. Drag meets in the United States are sanctioned by the National Hot Rod Association (NHRA), the American Hot Rod Association (AHRA), or the International Hot Rod Association (IHRA). These associations establish and enforce contest and safety rules. The NHRA, founded in 1951 by Wally Parks, remains the most influential drag-racing entity. The first NHRA national championship meet was held in Great Bend, Kansas, in 1951.

The measured course for most races is a quarter-mile, although some competitions are limited to one-eighth of a mile. The track is a straight strip made of asphalt or concrete. Race events usually begin with each class conducting trials; the 16 drivers with the lowest times are allowed starting positions in the official competition. After the 16 compete, eight winners advance to the semi-finals until the two remaining victors drag for the championship. The format and rituals of the race are generally the same for all race classes. In the “burnout box” behind the starting line, drivers will spin their rear tires to generate heat for better traction. Then on signal by the Christmas tree, the electronic starting pole, they will advance to the staging area and then to the starting line. The race will begin when three amber lights, mounted in a vertical row for each driving lane, flash in quick succession from top to bottom, followed by the green light. Should a racer start too soon, a red light at the very bottom of the Christmas tree will turn on, meaning automatic disqualification for the driver at fault. Most races, which last from five to ten seconds, are won and lost at the starting line for either “red lighting” or for not “attacking the green,” respectively.

Broadly, the main professional categories of racers are pro stock, top fuel, and funny cars. The pro stockers consist of production cars in which the engine is made by the same manufacturer as the body with the wheel base remaining unaltered. Otherwise, many performance modifications are allowed, including rebuilt engines, hood scoops, and header exhaust systems. While pro stockers must run only on gasoline, top fuel dragsters burn nitro, an explosive mixture of nitromethane and alcohol, commonly known as rocket fuel. The V-shaped racers—known as dragsters, rails, stilettos, or slingshots—are

Shirley Muldowney during a typical race.

25 feet long, 3 feet wide, and 3 feet high, and can clock speeds in excess of 300 miles per hour. Funny cars, sometimes called floppers, also run on nitro, but they have a body made of one piece of lightweight fiberglass or carbon fiber, not metal, and it is mounted over top of the driver and hooked to the chassis, or frame, of the vehicle. Both top fuelers and funny cars must use parachutes to aid in braking at the end of the race.

Three legendary top-fuel competitors are Don “Big Daddy” Garlits of Tampa, Florida; Don “The Snake” Prudhomme of Southern California; and Shirley Muldowney of Mount Clemens, Michigan. In 1964 Garlits was the first to break the barrier of 200 miles-per-hour. Later, Prudhomme would clock a speed of 300 miles-per-hour. During the 1980s Muldowney won the top-fueler championship three times. Both Prudhomme and Muldowney had started out racing funny cars. Muldowney’s life story was dramatized in the Hollywood movie *Heart Like a Wheel* (1983), starring Bonnie Bedalia. In 1984 Garlits opened his Museum of Drag Racing and International Drag Racing Hall of Fame in Ocala, Florida.

The culture of drag racing has been represented in various media, from a plethora of specialized magazines—including *Hot Rod Magazine*—and novels such as Henry Gregor Felsen’s *Street Rod* (1953), to recording group Tommy Dugan and the Hot Rodders. In the early 1960s, Charlie Ryan recorded several songs on car racing,

including the popular “Hot Rod Lincoln.” During the 1960s and 1970s, the California rock band the Beach Boys further glamorized hot rodding with the hits “Little Deuce Coup,” “409,” “Shut Down,” and “Fun, Fun, Fun.” Mattel, one of the first toy manufacturers to recognize the appeal of drag racing to young people, introduced Hot Wheels, a line of miniature die-cast cars, which included replicas of funny cars raced by Don “The Snake” Prudhomme and Tom “Mongoose” McEwen. In 1992, the NHRA established the Junior Drag Racing League, where drivers between the ages of eight and 17 could race half-sized copies of top fuelers, funny cars, and pro stockers.

## Dragnet

Within two years of its 1952 small-screen debut, the eight-year long (1949-1957) radio series *Dragnet* had become television's number-one rated program. Created by actor Jack Webb, the series broke new ground from the outset, offering radio listeners rare authenticity of experience as they "accompanied" the police in following a case from beginning to final sentencing. Each episode unfolded at a measured pace, as detectives Friday and Smith followed clues, interviewed witnesses both friendly and hostile, and checked with various branches of law enforcement for information. Documentary realism was a key element of the show's appeal, with Jack Webb's own deadpan delivery and opening gambit, "This is the city. Los Angeles, California," making the mundane routine seem hip and cool.

The idea for *Dragnet* came to Webb after he had played a police lab technician in Anthony Mann's *He Walked by Night* (1948). He shared a belief with that film's technical adviser, Sgt. Marty Wynn of the LAPD, that pure investigative procedure was dramatic enough without introducing the traditional melodrama of the fictional hard-boiled private eye. In early 1949, Webb secured the cooperation of the LAPD and Chief William H. Parker. As long as Webb didn't compromise confidentiality, or portray the police in any "unflattering entanglements," Parker granted him access to all actual case files. Early in 1949, thus armed, Webb approached NBC with his radio pilot for *Dragnet*.

Webb's radio style was to underplay. He stood way back from the microphones and potted everything up high so that all of the ambient sounds could be heard. He told *Time* magazine that "underplaying is still acting . . . . We try to make it as real as a guy pouring a cup of coffee." And the series was realistic. When Webb and his partner walked up the steps to headquarters, listeners heard the exact number of steps it took. With his tremendous success on radio, Webb took *Dragnet* to television.

On television, *Dragnet* was extraordinarily conservative. Webb put the hard-boiled edge of nonconformist heroes like Sam Spade and Philip Marlowe into the conformist mouth of a downtown cop: "My name's Friday. I carry a badge." The character of Friday had no tolerance or sympathy for anyone outside the system. Los Angeles lawbreakers had to be punished, and Friday's investigations were carried out with a terse, no-nonsense approach. "Just the facts, ma'am," he often said to witnesses who digressed from the point. He had no interest in witnesses as personalities, nor did he have any interests in life outside of police work. His whole duty was to "serve and protect." By contrast, his partner Frank Smith, played by former child star Ben Alexander, was much more human, and often fretted over his health or his wife, Fay. Friday's diligence, however, fit well within a 1950s Cold War context of conformity. During a time in which Americans feared the spread of Communism and atomic weaponry, Friday was a figure of dependability and stability. During *Dragnet*'s seven-year run, so pervasive was his image that, despite the rise in the national crime rate, the public came to believe that crime had diminished and that their city streets were safer than ever before.

The conservative tenor adopted by Webb can be detected in several episodes that border on a hysterical and paranoid vision. In

"The Big Producer," a bunch of "dirty" joke books and nude photographs make their way into a high school, but Friday and Smith can't bring themselves to label the materials pornography. Instead, a series of ellipses between the two convey their fear over this "filth." In "The Big Seventeen," the duo cracks down on drugs, "H" for heroin, in the schools, but they are too late to save a 17-year old boy from overdosing. The endings of this, and several other episodes, were downbeat, and in a 1950s context, the hysteria and paranoia worked. When *Dragnet* was revived for the "Go-Go" years, 1967-1970, the hysterical mood was far too judgmental for later audiences.

Stylistically, *Dragnet* generated a unique syntax on the American landscape in its use of abbreviations and numerical codes. MO (modus operandi), DMV (Department of Motor Vehicles), and APB (All Points Bulletin) became part of everyday speech, along with 212 (robbery), 459 (burglary), and 311 (lewd conduct). Walter Schumann's four-note theme musical theme, "Dum-de-dum-dum," was a motif evoking justice and retribution, but also a mood of agitation. The motif was taken up in popular culture as a metonym for trouble. In "Better Living Through TV," an episode of *The Honeymooners*, for example, Norton hums Schumann's *Dragnet* motif when Alice catches wind of another one of Ralph's "hare-brained schemes." And in the 1980s, a series of Tums ads that attacked antacid modified Schumann's theme to "Tum-te-tum-tum."

The series was immensely popular. Parodies of it abounded in the 1950s. *Mad Magazine* attacked its conformity and shilling for Chesterfield cigarettes. Radio comedians such as Stan Freberg and Bob and Ray had fun with its narrative excesses while, in a classic Chuck Jones cartoon, *Rocket Squad* (1954), featuring Daffy Duck and Porky Pig in the Friday and Smith parts, the two intrepid heroes become the villains. Moreover, the look of *Dragnet*, its reliance on shot/reverse shots and eyeline matches to connote judgment—a witness says something; Friday shakes his head and looks at an offscreen Smith; Smith shakes his head and looks in return at the offscreen Friday—became an industry standard in shooting such scenes with effective economy of style.

No doubt the success of *Dragnet*, and its chief ratings rival, *I Love Lucy*, in the early 1950s helped shape the direction of television's cop shows and sitcoms for years to come. The series also contributed to the positive portrayal of law enforcement that prevailed until the shocking images of Rodney King's beating in the early 1990s shook enlightened Americans' faith in the police. When loyal cop supporter Jack Webb died of a heart attack on December 23, 1982, the LAPD flew its flags at half-staff.

## Dragon Lady

In movies and comic strips, the Dragon Lady epitomized a mythic female legend; the seductive, “exotic,” yet deadly Asian black widow. Although there is no evidence that a real Dragon Lady ever existed, her character was treated as real and was embodied by Anna May Wong in the 1931 Fu Manchu thriller, *Daughter of the Dragon*. The Dragon Lady persona gained additional popularity in Milton Caniff’s 1930s comic strip *Terry and the Pirates*. In this comic, the Dragon Lady “captivates men with her beauty then tramples them like insects when they cross her.” During World War II, the Dragon Lady persona became associated with an English-speaking radio announcer for Radio Tokyo, whose voice was broadcast to American soldiers. The American media dubbed her Tokyo Rose, and portrayed her as an Asian Mata Hari. Rose turned out to be a naive Japanese American girl named Iva Ikuko Toguri.

## Dream Team

The United States’ vaunted Dream Team—unquestionably the greatest collection of basketball talent ever assembled—rolled to a gold medal in the 1992 Olympic Games in Barcelona, Spain. Comprised of eleven National Basketball Association members and one collegian, the Dream Team’s very existence was made possible by a 1989 agreement with the International Amateur Basketball Federation to allow professionals to participate in the Olympic Games. While the American team was greatest beneficiary of the rule change, its international organization, USA Basketball, had voted against the inclusion of NBA players. As David Wallechinsky noted, concerns were expressed that financial support for women’s and junior basketball programs would diminish and that one-sided games would markedly reduce the television audience.

The American team, averaging 117 ¼ points per game, swept to eight consecutive wins in Barcelona, while holding its opponents to 73 ½ points a game; the actual margin of victory could have been even greater had not various ailments afflicted several of the U.S. players, while others held back through fear of injury. The American roster nevertheless was star-studded. The Dream Team boasted the presence of Michael Jordan, Larry Bird, Magic Johnson, Charles Barkley, Karl Malone, Patrick Ewing, David Robinson, Scottie Pippen, Clyde Drexler, and John Stockton, all to be inducted into the Hall of Fame later. Also on the team were NBA star Christopher Mullin and Duke University’s Christian Laettner, while the coaches included Detroit’s Chuck Daly, Atlanta’s Lenny Wilkens, Portland’s P. J. Carlesimo, and Duke’s Mike Krzyzewski.

With the United States having lost the 1972 and 1988 Olympic Games, as well as a series of subsequent international events, Chicago Bull Michael Jordan, who had recently led his team to its second consecutive NBA championship, asserted, “We’ve got to regain our

**Dream Team member Magic Johnson (center) watches as Michael Jordan (right) and David Robinson (left) go for a rebound.**

sense of pride, our dignity. Some way—even if it’s just basketball. We can at least show the world that *we can take control of something*.” But it was the possibility of a financial windfall that undoubtedly led the NBA to support the sending of its greatest players to Barcelona, with Commissioner David Stern envisioning the possibility of a transoceanic league. NBA teams had recently added Lithuania’s Sarunas Marciulionis, Croatia’s Drazen Petrovic, Germany’s Detlef Schrempf, and Yugoslavia’s Vlade Divac to their rosters, and looked expectantly to the likes of Toni Kukoc, Arvidas Sabonis, and Dino Radja.

With its opponents already thoroughly intimidated before the first jump ball, the Dream Team, whose members received the public adulation generally reserved for pop stars, had to contend with the fact that the competition often seemed thrilled just to occupy the same basketball court. While the U.S. team was crushing defending champions Argentina 128-87 at the Tournament of the Americas, Jordan dunked the ball, resulting in wild cheering from the Argentine bench. Center Hernan Montenegro declared, “I played with great happiness against the monsters.” Guard Marcelo Milanesio stated, “When we met at the center of the court, I was very excited that it was Magic Johnson shaking my hand.” After a 136-57 shellacking, Cuban coach Miguel Gomez philosophized, “One finger cannot cover the sun.” American observers, such as Princeton coach Pete Carril, also waxing eloquent about the American players, said, “This is not a great team. This is the greatest team ever.”

During the Barcelona Olympics, the Americans, despite playing under international rules—two 20 minute halves, a shorter three-point

line, and zone defenses—scored better than 100 points each time out. The two closest games involved Croatia, featuring Petrovic and Kukoc, but the margins of victory were each better than 30 points. In their meeting, Chicago's Pippen shut down Kukoc, who had been offered more money by Bulls' general manager Jerry Krause than Jordan's teammate had been. The greatest notoriety involved Barkley's elbowing of an Angolan player in the midst of an opening-game rout (116-48). Jordan remarked, "Charles is Charles. He's not crazy. He just likes to push his behavior to the edge." Angolan coach Victorino Cunha dismissed the concerns: "We know Charles Barkley. No problem. He does this ten times a year in the NBA."

Following the Dream Team's gold medal win over Croatia, 117-85, Mullin mused about "everybody willing to throw egos, individual statistics and all that other stuff out the window to prepare to be the best team ever. Nope, it won't happen again." Johnson, speaking rhetorically, asked reporters, "When will there be another Olympic team as good as this one? Well, you guys won't be around, and neither will we." While Barkley led the team in scoring with an 18.0 point average, Jordan contributed 14.9 points per game and provided a tournament-high 37 steals. The most perceptive analyst of the Dream Team, *Sports Illustrated's* Jack McCallum, insisted that "on the most star-studded team in history, Jordan was, simply, the star stud. When Magic was on the floor finishing the fast break, Jordan was his finisher. When Jordan was called upon to run the offense, he did so with control and a few dazzling no-look passes. When Daly gave the ball to Scottie Pippen, Jordan acted as a decoy. When the [team] needed a defensive stopper, Jordan got the call. And when the team need a scoring jolt, Jordan went out early and kick-started the offense." The Dream Team was, indeed, as Coach Daly described it, "a majestic team."

## Dreiser, Theodore (1871-1945)

A journalist turned novelist, Dreiser was at the forefront of the battle for social fact and sexual candor in the early twentieth-century

novel, treating popular sentimental and realist subjects with a refreshing lack of moralizing. Dreiser produced a number of dense, uneven, and controversial novels about the attempts of men and women to adapt themselves to the new urban, secular order of industrial capitalism. *An American Tragedy* (1925), Dreiser's great public success, is one of the first serious psychological studies of an American murderer.

Dreiser escaped a very poor and deeply religious upbringing through a successful career in journalism in the 1890s, writing his first novel, *Sister Carrie*, in 1900. Though the book had been recommended by rising author Frank Norris, publisher Doubleday's management was unhappy with what it considered the immorality of the story and published it without publicity. This, coupled with reviews uneasy with both its moral tone and scrappy prose, saw the book achieve initial sales of a mere nine hundred. This fiasco and Dreiser's failing marriage brought on a nervous breakdown, and he returned to journalism, not publishing another novel for a decade. His second novel, *Jennie Gerhardt*, (1911), began an increasingly fruitful fictional output (though his sexual frankness and social criticism continued to hamper his success) during the next fourteen years, including *The Financier* (1912), *The Titan* (1914), *The Genius* (1915), and most favorably, *An American Tragedy*. This last was based on a number of real-life murder cases and told the story of Clyde Griffiths: his youth, the murder of his pregnant girlfriend, and the court case that followed. The novel became a play and was filmed twice: in 1931 by Joseph von Sternberg and in 1951 under the title *A Place in the Sun*. Dreiser's output reduced once more as he involved himself with various left-wing causes.

Dreiser grew out of the newspaper and magazine revolution of the 1880s and 1890s, and though his novels reflect many of the themes of the sentimental tradition (marked by the love of the rags-to-riches story), he handles them in a way inflected by issues that came to the fore in the best journalism of his day (crime, disease, prostitution, vagrancy, and the violence and double-dealing behind huge wealth). Dreiser's subject matter also appears journalistic in its use of personal experience (*Sister Carrie* was based on one of his sisters) and real-life stories (*The Financier* is the first of a trilogy of novels based on Chicago financier Charles T. Yerkes, and *An American Tragedy* was based, centrally, on the murder trial of Chester Gillette). Dreiser's books, though berated for their style—their circumlocution, inversion, uncertain vocabulary, and overburdened syntax—are marked by a singular level of excited detail and documented fact. This reliance on facts and details reflects a contemporary scientific methodology pursued eagerly by Dreiser (he read widely on the subjects of biology, psychology, and sociology). Although Balzac, Zola, Tolstoy, and Hardy were all important literary models for him, literary allusions appear much less prevalent than scientific ones: his interest in every minute detail of biological and sociological influences on his characters pushes the literary into the background.

The characterization of his central figures is Dreiser's main achievement. His interest in what drives Carrie Meeber or Clyde Griffiths makes the figures around them appear little more than phenomena affecting them, while these major characters themselves become little more than the drives and desires brought on by economic, genetic, and psychological circumstances. These desires were not necessarily beautiful, imaginative, or morally right, and it was this, coupled with Dreiser's unflinching candor, that made his books so

controversial. Dreiser simply ignored genteel aspirations and probity, as he drew characters, logically and objectively, whose aspirations were powerful enough for a poor girl to become a kept woman, for a boy to kill a pregnant lover. Such desires destroy everything in their paths and do not bring happiness, certainly not the familial stability and financial security of the middle classes.

Dreiser was not the first novelist of his generation to write of the squalor, poverty, and violence of the city; both Stephen Crane and Frank Norris had done that before him, but he was singular in his personal experience of poverty. This is undoubtedly a major reason he was able to capture in such detail the desire to escape poverty and the desire to possess wealth in a society that was in a period of transformation. The tide of migration from country to city; the impersonal nature of the urban setting of factories, tenements, and department stores; the contrast of poverty and wealth; the new culture of conspicuous consumption were all at the center of Dreiser's work. Where many of the new journalistic, realist writers around him attempted to represent want, its nature and effects, Dreiser investigated wanting, one of the central mechanisms of the twentieth century. His attempts to delineate desire are what made him interesting and influential to many writers from F. Scott Fitzgerald to Saul Bellow. It is in showing a less intellectualized, aspirational, amorality deep within the American way of life that makes Dreiser the most radical, the most realistic, writer of his generation.

## The Drifters

When Clyde McPhatter formed The Drifters in 1953, a new musical voice emerged. Combining doo-wop with gospel stylings, rhythm and blues changed. Songs like "Money Honey" (1953) and "White Christmas" (1954), second only to Bing Crosby's version, increased their popularity. McPhatter left the group in 1954, and a series of lead singers fronted the group until the arrival of Ben E. King in 1959, who changed the Drifters' image and sound. The baion, a Latino rhythm, and the addition of strings made songs like "There Goes My Baby" (1959) a success. From 1953 to 1966, The Drifters proved a driving force for Atlantic Records from which many rising musicians gained inspiration. The Drifters, who were inducted into the Rock 'n' Roll Hall of Fame in 1990, provided the music for a southeastern coastal dance, "the shag."

## Drive-In Theater

As early as 1928, Richard Hollingshead, Jr., owner of an auto products business, was experimenting with screening films outdoors. In the driveway of his New Jersey home he mounted a Kodak projector atop his car and played the image on a nearby screen. In time, Hollingshead refined and expanded his idea, registering his patent for a drive-in theater in 1933. In doing so, he not only re-created an American pastime, but he also contributed to American popular culture for some time to come.

Drive-in theaters, also known as "ozoners," "open-air operators," "fresh-air exhibitors," "outdoorers," "ramp houses," "under-the-stars emporiums," "rampitoriums," and "auto havens," were just that . . . places where people drove their cars to watch movies on a huge outdoor screen. This was a seemingly preposterous idea—one would drive to a gate, pay an admission fee, park their car on a ramp to face the movie screen, and watch the movie from the car, along with hundreds of other people. But the drive-in caught on because it tapped into America's love for both automobiles and movies; going to the drive-in became a wildly popular pastime from its inauguration in the 1930s through the 1950s.

The first drive-in opened on June 6, 1933, just outside of Camden, New Jersey. The feature film was *Wife Beware*, a 1932 release starring Adolph Menjou. This movie was indicative of those commonly shown at drive-ins: the films were always second rate (B movies like *The Blob* or *Beach Blanket Bingo*) or second run. People, however, did not object. Throughout the drive-in's history its films were always incidental to the other forms of attractions it offered its patrons.

Around 1935, Richard Hollingshead sold most of his interest in the drive-in, believing that the poor sound and visuals, the great expense of construction, the limited choice of films, and other factors (like reliance on good weather) were enough to keep investors and customers alike from embracing this new form of entertainment. But people did not mind that viewing movies outdoors was not qualitatively as "good" as their experiences watching movies at indoor theaters. Just a few years after the first New Jersey drive-in opened, there were others in Galveston, Texas, Los Angeles, Cape Cod, Miami, Boston, Cleveland, and Detroit. By 1942 there were 95 drive-ins in over 27 states; Ohio had the most at 11, and the average lot held 400 cars.

Drive-ins peaked in 1958, numbering 4,063. They proved to be popular attractions for many reasons. After World War II, industries turned back to the manufacture of domestic products and America enjoyed a burgeoning "car culture." In addition, the post-War "baby boom" meant that there were more families with more children who needed cheap forms of entertainment. Packing the family into a car and taking them to the drive-in was one way to avoid paying a babysitter, and was also a way that a family could enjoy a collective activity "outdoors." Indeed, in the 1940s and 1950s many owners capitalized on this idea of the drive-in being a place of family entertainment and offered features to attract more customers. Drive-ins had playgrounds, baby bottle warmers, fireworks, laundry services, and concession stands that sold hamburgers, sodas, popcorn, candy, hotdogs, and other refreshments.

A typical drive-in theater.

Although owners emphasized family activities, by the 1940s and 1950s teenagers had taken over rows at the drive-in to engage in more private endeavors. Known as “passion pits,” drive-ins became places where kids went to have sex, since they could not go to their parents’ houses but did have access to automobiles. Therefore, families parked their cars in the front rows, dating teens sat in the middle rows, and teens having sex occupied the dark back rows. Sneaking into drive-ins was another popular teenage activity, with kids hiding in the trunk until the car was parked well away from the entrance booth. Teenagers from the 1960s on also used drive-ins as places to drink alcohol and smoke marijuana.

In the late 1940s, drive-ins became more popular than indoor theaters. One improvement that led to this was the development of a viable in-car speaker through which to hear a movie’s sound. Before the implementation of individualized speakers, drive-in owners used “directional sound,” three central speakers that projected the movie’s soundtrack over the entire drive-in. The sound was not only distorted, but also was nearly impossible for the cars in the back rows to hear. In addition, it was so loud that owners received complaints from neighbors who were usually unhappy about a drive-in’s presence to begin with. The first in-car speakers were put into production by RCA in 1946. In the 1950s people began experimenting with transmitting movie sound over radio waves; this was not feasible until

1982, when 20-30 percent of drive-ins asked viewers to tune in their radios. By 1985, 70 percent of drive-ins were using this sound transmission technique.

The drive-in business started to stagnate in the 1960s and began its decline in the 1970s. Land prices were increasing and drive-ins took up a lot of space that could be made more profitable with other ventures. By this time the original drive-ins were also in need of capital improvements in which many owners chose not to invest. In addition, theaters continued to get only B movies or second or third run pictures, and the industry charged higher rental fees and required longer runs, making it extremely difficult to compete with the multiplex indoor cinemas.

In the 1980s, the drive-ins lost most of their key audiences—by 1983 there were only 2,935 screens. Families could stay home and watch movies on cable television or on their video cassette recorders. When teenagers found other places to have sex, the drive-in was no longer a necessary locale for this activity. Due to gasoline shortages, many people opted for compact cars, which were not comfortable to sit in during double or triple movie features. By the 1990s there were few drive-ins left; those that remained were reminders of an American era that revered cars and freedom, with a little low-budget entertainment thrown in.

## Drug War

The Drug War has attempted to diminish the flow of drugs into the country, the manufacture of drugs within American borders and the desire to use drugs with supply and demand tactics. On the supply side, legislators have created severe penalties for possession and sale, and toughened border patrols. To reduce the demand for drugs, community programs, television campaigns and crime-watch programs educate citizens on the dangers of drug use and abuse. The Drug War helped create drug-free school zones and increased penalties for drug crimes that involved weapons.

Although the intensity of the drug war escalated in the mid-1980s, legislators first enacted drug laws in 1914 with the Harrison Narcotics Act which taxed narcotics and required licensure for those who dispensed drugs. The Marijuana Tax Act of 1937 categorized marijuana as a narcotic for taxation and legislation purposes. Mandatory prison terms for drug use and sale were first introduced in the 1956 Narcotics Control Act.

Prior to the 1914 Harrison Narcotics Act, highly addictive opiates were the primary ingredient in the widely used elixirs. The users were mostly middle-class women and their addictions were not seen as a societal problem. The Civil War, however, brought the subject of addictions to the forefront. When physicians treated soldiers with morphine, they developed an addiction referred to as "soldier's disease."

When drug abuse was confined to non-threatening social classes, public knowledge and debate were minimal. In 1900, society pitied drug addicts. They were considered unfortunate citizens with medical problems. By 1920, the drug user became known as a drug fiend, an immoral outcast who spread his addictive disease to everyone he touched. Anti-drug campaigns blamed Chinese immigrant laborers who were railroad workers in California for bringing opiates into the country and encouraging Americans to smoke opium. In the South, anti-drug campaigns said blacks developed super-human strength after sniffing cocaine. The Mexicans were blamed for marijuana's popularity.

Legislation and anti-drug campaigns helped contain drug use until it became mainstream in the 1960s. In 1971, President Richard Nixon declare the first a "war on drugs" when he coordinated drug policies and legislation, and provided federal funds for education and prevention. He consolidated federal agencies into the Drug Enforcement Agency.

Cocaine use rose in the 1970s and 1980s. With the media sensationalism of such events as the death of Boston Celtic Len Bias and the arrest and conviction of Manuel Noriega, the drug war grew rapidly. Despite the lack of proof that a national drug use epidemic existed, Americans bought the media portrayal of the "crack baby" and inner city drug busts. In reality, the "crack baby" was the result of poverty and malnutrition and crack the result of prohibition. The

television reports of inner-city warfare and drug busts pinpointed young black men as the primary perpetrators.

By the mid-1980s, Congress and most state legislators enacted mandatory prison sentences based on the weight or quantity of a drug. The majority of federal and state drug offenders incarcerated in the 1990s were low-level sellers and dealers. High level traffickers and other dealers with information to share would trade information for lenient sentences. The prison industry grew faster than any other American industry in the 1990s and Americans incarcerated more of its own citizens than any other nation in the world.

The Drug Abuse Act of 1986 and 1988 set draconian penalties for drug possession and sale, including life in prison to property forfeiture. Other measures designed to curtail drug use and sale include denying convicted ex-drug offenders social programs such as government-backed college loans and grants, and welfare assistance. The Omnibus Crime Act of 1984 allowed police to confiscate property without due process. Authorities only needed an accusation or suspicion to enter such private domains as homes and cars, and conduct warrantless searches and seizures. Many critics argue that this practice violates basic personal liberties.

In the 1990, critics of the Drug War stated that American drug policies failed to put a dent in the drug trade. The U.S. government spent billions of dollars each year to improve border interdiction, increase the number of drug arrests and convictions, and build more prisons to house drug offenders.

The Drug War is also known for such issues as medical marijuana availability, legalization and decriminalization. Critics of the drug war argue that prohibition increases crime, deepens social and class conflict and defies basic democratic ideals. It increases health problems by denying treatment to and incarcerating addicts. It tears families apart by incarcerating small-time users and sellers for long prison sentences. It promotes poverty by denying welfare and educational assistance to ex-offenders and their dependents, and increases recidivism. Critics relate issues such as AIDS, IV drug use, street-level dealers, and gang-warfare to drug prohibition, not drug use.

## Du Bois, W. E. B (1868-1963)

William Edward Burghardt Du Bois is remembered as one of twentieth-century America's foremost black leaders, intellectuals, and spokesmen. Multi-talented, in a long life he wrote as a sociologist, historian, poet, short story writer, novelist, autobiographer, and editor—and in all of these roles he was a crusading champion of racial justice. Though his ideological outlook changed many times during

W. E. B. Du Bois

his life, through phases of Darwinism, elitism, socialism, Pan-Africanism, voluntary self-segregation, and ultimately official communism, Du Bois consistently reiterated the view that the major problem of the twentieth century was “the problem of the color-line.” As historian Eric Sundquist has noted, Du Bois was born in Great Barrington, Massachusetts, 1868, the same year as the Fourteenth Amendment to the Constitution was adopted, and spent his life attempting to make the principles, promises, and protections of this landmark political article a reality for black Americans.

Despite the complex mixture of a racial background he summarized as “a flood of Negro blood, a strain of French, a bit of Dutch, but thank God! no ’Anglo-Saxon,’” the young Du Bois soon learned that his black ancestry assumed the greatest significance in the minds of his white school companions, the fact of his darker skin placing a “vast veil” between their social worlds. An exceptional student, Du Bois won a scholarship to enter Fisk University in 1885. The Nashville black college gave him the experience of extreme Southern racism and a new racial identity fostered by exposure to the region’s strong sense of African American culture and community. Moved by the religious faith and “sorrow songs” he came across during his stay in Tennessee, Du Bois later used these distinctive cultural expressions to recover, highlight, and discuss the meaning of the black historical experience in *The Souls of Black Folk*—which in turn inspired an

increased popular interest in black vernacular art forms. Graduating from Fisk in 1888, Du Bois took a second undergraduate degree at Harvard in 1890. In 1895 he became the first African American to gain a doctoral degree from Harvard, and publishing his thesis in 1896, *The Suppression of the African Slave Trade to the United States, 1638-1870*, Du Bois launched successful academic and publishing careers.

Accepting an invitation from the University of Pennsylvania to conduct a study examining the condition of the black population in Philadelphia, Du Bois published *The Philadelphia Negro: A Social Study* in 1899—this seminal critical survey cemented his academic reputation, and was cited as an influential model by sociologist Gunnar Myrdal some 45 years later. Between 1897 and 1910, Du Bois taught history and economics at Atlanta University. Here he had one of his most productive spells as a writer, and began to advance a political program that insisted on higher education as the foundation for black racial progress. This emphasis upon the ideals of the academy, together with his political activity in first, the Niagara Movement, then later as one of the founders of the National Association for the Advancement of Colored People (NAACP), placed Du Bois in opposition to the more vocationally oriented and seemingly accommodationist approach of Booker T. Washington. Editing and directing the publication of a multi-volume study of African Americans under segregation known as the Atlanta University Studies series, and a journal *The Horizon* from 1907-1910, Du Bois was gaining prominence as the self-appointed spokesman of what he called the black community’s “Talented Tenth”—“developing the Best of this race that they may guide the Mass away from the contamination and death of the Worst, in their own and other races.” Du Bois enhanced this position as race leader in his role as the editor of *The Crisis* from 1910 to 1934, the official organ of the NAACP that grew to have over 100,000 subscribers by the end of World War I. In this magazine, Du Bois featured the indignities and atrocities of racism in the United States, including regular reports and investigations into lynching, yet his appeal remained for the most part limited to the privileged literate Northern black middle classes and their white supporters.

As a scholar, propagandist, and organizer of the Pan-Africanist movement, Du Bois sought the means of uniting and making sense of the apparent disparate experiences of diaspora blacks. Unlike another of his African American political rivals of the 1920s, Marcus Garvey, Du Bois did not advocate a return to Africa as the route to black American political liberation. Instead, for Du Bois, Africa was more a source of common identity for blacks, and in the continent’s battle against European colonial domination, he found parallels with African Americans struggling for civil rights. Following his decision to leave the NAACP and resign his post at *The Crisis*, Du Bois no longer commanded a popular audience. In this period, however, he returned to Atlanta as Professor of Sociology and produced some of his most significant work, writing a history of *Black Reconstruction* (1935), *Dusk of Dawn* (1940), an autobiography, and founding *Phylon: The Atlanta University Review of Race and Culture* (1940). Although he briefly returned for a second period with the NAACP during World War II, Du Bois’ politics of self-segregation and a Marxist interpretation of history soon put him at odds again with the organization’s leadership and he was dismissed at the age of 80 in 1948. Du Bois’ life ended in intellectual exile from the United States, joining the Communist Party in 1961 and moving to Ghana where he died in 1963, the day before Martin Luther King Jr. led the long planned Civil Rights March on Washington.

Perhaps *The Souls of Black Folk* is Du Bois' most valuable literary legacy. Its recovery of the neglected black voices from the days of slavery, potent idea of "double-consciousness," and critique of modernity, continues to influence generations of black novelists (including Jean Toomer, Richard Wright, Ralph Ellison, and Alice Walker), historians, and scholars of culture and civilization in equal numbers.

## Duck Soup

Though it failed at the box office upon its release, The Marx Brothers' 1933 feature *Duck Soup* is widely regarded as the comedy team's masterwork. By turns madcap, scathingly satirical, and genially surreal, the film chronicles the war fever that engulfs the mythical nation of Freedonia when Groucho becomes its dictator. Harpo and Chico play bumbling spies, with Zeppo relegated to the romantic subplot. Some critics found an anti-war subtext in the proceedings, but the brothers always denied any political agenda. Classic scenes abound, including the famous "mirror routine" and a rousing musical finale. Woody Allen paid homage to *Duck Soup*'s enduring comedic power by including scenes from it in the climax of his own classic *Hannah and Her Sisters* in 1986.

## The Dukes of Hazzard

The *Dukes of Hazzard* television show, airing on CBS from 1979 to 1985, blended down-home charm, handsome men, beautiful women, rip-roaring car chases, and the simple message of good triumphing over evil; this successful combination made the program a ratings success and a longstanding campy cult favorite. The Dukes were country cousins Bo, Luke, and Daisy Duke, who lived in backwoods Hazzard County on their Uncle Jesse's farm. The formula storyline

usually involved the Dukes versus the town's gluttonous bigwig, Boss Hogg, and his lackey, Sheriff Rosco P. Coltrane. Episodes were liberally punctuated with raucous car chases in their orange 1969 Dodge Charger, the "General Lee," and Daisy's trademark short shorts inspired a 1993 hit rap song, "Dazzezy Dukes," which led to the term's use as a synonym for such apparel. The cast reunited for a television movie on CBS in 1997.

## Duncan, Isadora (1877-1927)

The great American icon of dance, Isadora Duncan, who rose to prominence early in the twentieth century and met a tragic death at age 50, was ahead of her time in both her artistic ideals, her modes of physical expression, and her controversial private life. Greatly admired by many, she also became an object of scorn and derision, mocked for her uninhibited approach to her work and pilloried for her scandalous love affairs and "bohemian" associations and lifestyle. Ironically, Isadora Duncan's art has always been more highly valued abroad than in her native land, but her cultural influence in America was considerable. The development of the modern dance form as exemplified by Martha Graham and her contemporaries and successors owed much to Duncan's unshakable belief in the power and force of female self-expression.

Angela Isadora Duncan was born in San Francisco, the daughter of poor but liberal, art-loving parents, who gave relatively free rein to their children. Isadora and her siblings became involved with movement and dance early on, and taught the waltz and the mazurka to their friends. Meanwhile, Isadora attended sessions in gymnastics, a vigorous and increasingly fashionable form of exercise, free of the constraints of corsets or heavy clothing. The contrast with the rigidly formal balletic style that she and her family saw on the stages of local theaters was marked, and held more appeal for her. Isadora was still in her teens when she and her sister Elisabeth were listed in the San Francisco directory as teachers of dance, an occupation in which their brothers soon joined them. The Duncans loved to perform, and soon Isadora was part of a small family variety show touring California.

It did not take Duncan long to combine her love of expressive movement with the relative freedom offered to the female body by gymnastics. Delsarte's movement vocabulary, which sought exact expressions of emotions and inner states through physical actions, was much in fashion during the 1880s, and Duncan's later dances showed this influence in her use of a trained body, able to single out and intensify a whole-body expression. Another influence from her early years could be traced to the 1893 World Exhibition in Chicago. There, the Art Nouveau displays made a strong impression on her

**Isadora Duncan**

imagination, and her dances later reflected the organic lines and swirls that characterized Art Nouveau design.

After two years with a touring company and many excursions into acting, singing, and dancing, Isadora Duncan became bored with a theatrical environment which did not allow for the expression of her individuality. She began to develop her own style and work on a dance repertoire, and on March 14, 1899 she gave a solo performance in New York in which she danced to poetry. Her bare arms and legs caused some ladies to leave the auditorium, but those that remained were entranced by the classical purity of her art. Duncan had found her way out of the “low art” of club and theater dance to a new, high form of dancing, whose form was influenced by Greek statues, classical music, and poetry, and whose physical disciplines had their roots in calisthenics. Her favorite poet, Walt Whitman, inspired her to use her body as the instrument of a new poetry.

Later the same year, declaring the dedication of her life to Art and Beauty, Isadora Duncan embarked on travelling the world, taking her art to the sophisticated centers of 1920s bohemia: London, Paris, Berlin, and Moscow. She caused a sensation wherever she went and became an inspiration to poets, musicians, and painters, taking a succession of lovers from among their ranks. Among her most famous

liaisons was that with the famed English stage designer of the time, Gordon Craig, and she married the Russian poet Essenin.

In performance, Duncan was a euphoric dancer of sensual dreams. A free-thinking woman and an artistic visionary, she focused on the concerns of her time and translated them into movement, deserting the relatively static displays of the period for generous, sensitive dances in which she brought the accompanying music to three-dimensional life. To music that ranged from Schubert through Wagner to Chopin, she would fill the stage, her voluptuous body dressed in a Greek-style tunic, or veils, expressing her feelings and emotions through movement, able to communicate her presence to the audience. The influence of this style, while considerable, was concealed within the images of free, gracious, sensuous, and powerful dancing that mesmerized her audience through its simplicity—the Duncan approach could not be studied through preserved step patterns, finished dances, or her writings.

Parallel with her position as an exponent of a new form of dance, Duncan became an early symbol of personal women’s liberation, and of general political freedom. In her writings she attacked the constraints imposed on women, and exercised none in the conduct of her permissive sexual life. She even danced while pregnant. Although Duncan advocated the equality of both men and women in a new morality, she did not perceive her own work as erotic: her freedom was the freedom of the naked Greeks. Her audiences appreciated her in different ways, some for her purity of expression, others undoubtedly with prurient interest as they waited (successfully) for her breasts to fall out of her loose costume. It was not only gender politics that excited her: she saw Communism as a way forward, and offered her services to the Russian republic.

After a wandering life filled with ideas, achievements, personal tragedies such as the death of her children, many men, and few places to call home, Duncan died in a horrible yet appropriately flamboyant way. Her trademark flowing silk scarf became entangled in the wheels of a Bugatti sports car, causing a fatal broken spine.

The schools Duncan founded did not do very well, and few of her adopted daughters took on the mantle of teaching the next generation. Ballet masters dismissed her dances of free expression for their lack of technique, and saw Duncan herself as a mere amateur. Her writings were revived in the back-to-nature days of the 1970s, but had very little sustained influence on the further development of modern dance, but her powerful, free, and beautiful image has stayed with dancers all over the world. Isadora is cemented as one of the great feminine myths of the twentieth century, and was played by Vanessa Redgrave in Karel Reisz’s 1969 film, *The Loves of Isadora* (aka *Isadora*).

## Dungeons and Dragons

Dungeons and Dragons, more commonly and affectionately known by its players as D&D, is the first and most famous of the

fantasy role playing games (RPGs). *Dungeons and Dragons* is based on traditional fantasy literature such as J.R.R. Tolkien's *Lord of the Rings* trilogy. In the game, players cast themselves as imaginary characters and go on imaginary adventures in a fantasy world of their own design. Gaining popularity in the 1980s, D&D perhaps symbolized the existential angst of a youth worried about inheriting a world that was not their own.

In D&D, the Dungeon Master (DM) creates an imaginary world full of monsters, dangers, and magic. Character-players then journey through the DM's world fighting battles, stealing treasures, or outwitting monsters. The game is played verbally with conflicts settled by a role of dice.

The players create characters for themselves based on a variety of traits; strength, intelligence, and endurance are three key qualities. The level of each trait that a character acquires is determined by the roll of a dice before the game starts. Players can choose a variety of roles for their characters such as thief, assassin, fighter, and cleric, among others. Players can also choose the race for each character; choices include humans, elves, and dwarfs. The game can be played with varying degrees of complexity, depending on the experience of the players and the Dungeon Master.

D&D was originally created by Gary Gygax and Dave Arneson. They simplified the game, moving from the action of regiments to the actions of individual fighters to create D&D. The first two print runs of the game sold out. TSR, Inc. produced the *Dungeons and Dragons* series starting in 1974. When D&D became very popular, especially among the college crowd, a whole industry arose. TSR published supplementary guides, including books of monsters and demigods based on world myths and legends. *Dragon Magazine* and other magazines devoted to gaming campaigns hit the newsstands. TSR also published book lines like *Forgotten Realms* and *Dragonlance* that had their origins in the games. Other fantasy authors incorporated D&D motifs into novels as well.

In addition to being popular, D&D was also very controversial. Campaigns can take hours, days, and sometimes even weeks to finish. Tales arose of promising college students flunking out of school because they spent all their time playing D&D. Other accusations against the game were even harsher. Many people accused it of instilling violence in the minds of the players; others said it produced suicidal tendencies, especially when a player over-identified with a character that had been killed during a game. Organizations and religious groups accused the game of being Satanic since it sometimes dealt with demons and conjuring devils. The campaign against *Dungeons and Dragons* eventually spawned a group known as BADD, (Bothered About *Dungeons and Dragons*). The group was founded by a woman who claimed that her child killed himself because of the game. The game took another publicity hit when the television movie *Mazes and Monsters* came out. The movie was based on an account of how D&D players took their role playing too seriously and started acting out the campaigns in the tunnels and sewers of their college.

Proponents of the games fought back, arguing that a game alone could not be the main cause of any psychological problems certain players were exhibiting. Advocates emphasized the notion that the game helped stimulate imagination and problem solving skills. Others claimed it helped vent violent feelings through imaginary play instead of acting such feelings out.

The debates about D&D generated negative publicity for the games and many concerned parents did not want their children playing. TSR continued its own positive publicity, and they began to

tone down some of their manuals and game-based fiction, especially the parts that dealt with demons and conjuring. Eventually, new technologies helped D&D and other role playing games recover some popularity. One player made an interactive on-line computer version of the game called a M.U.D., a Multi-User Dungeon. MUDs became the place where computer aficionados went to play.

The greatest blow against TSR and *Dungeons and Dragons* came in the 1990s, not from concerned parents but from bad business. TSR had its book contracts through Random House, which distributed the books through chain book stores. When the chain book stores stopped carrying the books, they tore off the covers and dumped them. Instead of a check from Random House, TSR received a huge bill they were not prepared to pay. In 1997, Wizards of the Coast, the producers of *Magic: The Gathering Cards*, another type of game playing, bought them out. Wizards of the Coast revived many TSR projects, including *Dragon Magazine* and D&D, in an attempt to keep the game alive. In the year following the buyout, the gaming industry started to swing back to RPGs and away from card games. Indeed, the future of RPGs continues to look promising.

## Dunkin' Donuts

Associated with the working man's coffee break, Dunkin' Donuts catered to Americans' desire for a strong cup of coffee and a sweet treat long before Starbucks' coffee shops first started selling fancy pastries and gourmet coffee. Started in 1950, Dunkin' Donuts was ranked by *Entrepreneur* and *Franchise Times* magazines as one of the top franchises of 1998, when it was operating over 3,700 stores in 21 countries worldwide. In addition to coffee and doughnuts, the retail chain, with its ubiquitous pink and orange signs, sells muffins, bagels, and other bakery products. The world's largest chain of coffee and doughnut shops in the 1990s, founder William Rosenberg developed the chain from a string of canteen trucks after World War II. He bequeathed the business to his son Robert, who had managed doughnut shops during summer breaks from Harvard Business School. In 1989, Allied Domecq PLC, a British-based food and beverage conglomerate, whose portfolio of American quick service restaurants also includes Baskin-Robbins ice cream stores and Togo's sandwich shops, acquired Dunkin' Donuts. Dunkin' Donuts is Allied Domecq's flagship American operation, accounting for 70 percent of its total United States sales of \$2.5 billion in 1998.

## Dunne, Finley Peter

See Mr. Dooley

## Dunne, Irene (1898-1990)

Dubbed "The First Lady of Hollywood" in her day, her persona always charming, sweet, resourceful, and dignified, Irene Dunne evokes nostalgia for an era of romantic escape from harsh reality. Kentucky-born Dunne carved a successful career in musical comedy before entering films in 1930 (she starred as Magnolia in *Show Boat*, 1936), and was in the first rank of sympathetic screen heroines throughout the 1930s. She suffered gracefully through several sentimental, sometimes tragic, love stories, famously including *Back Street* (1932), *Magnificent Obsession* (1935), and *Love Affair* (1939), but also revealed an exceptional aptitude for comedy in such films as *Theodora Goes Wild* (1936) and *The Awful Truth* (1937). She received her fifth Oscar nomination for *I Remember Mama* (1947) which, together with *Life with Father* (1948), marked her last big successes. Dunne retired from the screen to devote herself to civic, philanthropic, and Republican political causes. Also a prolific radio and television performer, in 1985 she was honored at the Kennedy Center for her achievement in the performing arts.

See Buckwheat Zydeco

## Durán, Roberto (1951—)

Roberto "Manos de Piedra" (Stone Hands) Durán is one of the few boxers in history to win world boxing titles in four different weight divisions—lightweight, welterweight, junior middleweight, and middleweight. Born in the poverty-stricken barrio of Chorillo, Panama, on June 16, 1951, Durán only received a third-grade education, after which he became a "street kid," making his living selling newspapers, shining shoes, committing petty theft, and doing whatever else he could to earn some money for his mother and eight siblings. Clearly one of the most talented boxers to enter the ring, Durán is also

well known for his contributions to the poor and his loyalty to family and friends.

Durán eventually followed an older brother into boxing and turned professional at the age of 16. A wealthy ex-athlete, Carlos Eleta, befriended Durán and arranged for his training with one of the best tacticians in American boxing, Ray Arcel, who taught Durán to become ambidextrous in the ring. Arcel also hired Freddie Brown, a trainer for 12 world champions, to work with Durán.

All of the attention paid off in 1972, when Durán won his first title as a lightweight against Ken Buchanan. Durán defended his title 11 times and won 70 of his first 71 fights. He reigned as a national hero in Panama, where he fed the poor, gave to numerous charitable causes, and was more than generous to his family. He made sure, in addition, to employ residents from his old barrio on his estate and in his various enterprises. In 1975, the most famous (or infamous) promoter in the fight game took on Durán—Don King. Durán's appetite for food forced him to move up in the weight divisions, as did the larger prizes that were offered through the assistance of King. One of the highlights of his career was his victory over one of the greatest boxers of all time, Sugar Ray Leonard in 1980 for the WBC (World Boxing Confederation) welterweight championship.

After this pinnacle of success, Durán gorged himself and could not control his weight before the Leonard rematch; he trained in a rubber corset and took diuretics before the weigh in, but soon stuffed himself with steaks and, by the time of the match, was too bloated and exhausted from the desperate training to put up a credible fight. Durán walked out of the ring in the eighth round, exclaiming a now infamous phrase: "No más . . . no peleo más" (No more . . . I won't fight anymore). Durán explained to the press that he had stomach cramps, but his reputation was sullied in the world sports press and among late-night television hosts, who satirized his surrender mercilessly. Durán, nevertheless, had earned \$3 million for the fight, but had lost Brown and Arcel from his team. In Panama, he was shunned and all of his acts of charity and goodwill were quickly forgotten.

In 1983, Durán made a comeback by winning the junior middleweight title from Davey Moore at Madison Square Garden, but soon lost a round of bouts. He came back once again to win the WBC middleweight title in 1989, after 22 years in the ring. Durán continued to fight into his forties, and became known as "the old man of boxing."

## Durbin, Deanna (1921—)

Deanna Durbin's overnight rise to fame as an adolescent movie star began with *Three Smart Girls* (1936) and *One Hundred Men and a Girl* (1937). Her box office success was widely credited with saving Universal Studios from bankruptcy. Fans and critics alike were taken by her mature soprano voice and her wholesome, yet feisty, characters. Born Edna Mae Durbin in Winnipeg, Canada, she was dubbed "America's Kid Sister" and in 1939 was awarded a miniature Oscar. Although praised for her successful transition to adult roles in the 1940s, her popularity declined. In 1948, she permanently traded her

## Durocher, Leo (1905-1991)

Leo Durocher, states one baseball publication, “was squarely at the center of some of the most exciting and controversial events in the

history of the game.” Durocher’s colorful and eventful baseball career spanned nearly 50 years as a major league player, manager, coach, and television commentator. But it was his tenure as a manager in New York City from 1941 to 1955 that made him a national sports celebrity and placed him at the heart of so many significant baseball events. Baseball writer Roger Kahn fondly remembered that era “when the Yankees, Giants, and Dodgers ruled the world.” On the field, Durocher managed both the Brooklyn Dodgers and the New York Giants; was directly involved in the controversy surrounding the game’s first black player, Jackie Robinson; and was a participant in what many sports writers consider the greatest game in baseball history—the 1951 final playoff between the Giants and the Dodgers.

Born in the industrial slums of West Springfield, Massachusetts, the young Durocher worked in factories and hustled pool to make money. He was suspended from high school for slapping a teacher and never returned. He began playing baseball on a railroad company team and made it to the major leagues in 1925. His playing career was mediocre at best, and his hitting was weak, but his flashy and acrobatic fielding was enough to make him an All-Star in 1936, 1938, and 1940. Durocher played for two of the most celebrated teams of the early twentieth century: in 1928 he spent his first full season in the major leagues with the legendary New York Yankees, led by Babe Ruth; and in 1934, he captained the St. Louis Cardinals, a team better

Former Giants manager Leo Durocher with his son.

known as the “Gas House Gang.” Those boisterous Cardinals were a hell-raising group that played hard on and off the field. Durocher and the Cardinals won the 1934 World Series.

In 1939, Durocher became player-manager for the Brooklyn Dodgers. He helped the Dodgers to a National League pennant in 1941 and, in what was perhaps his finest moment in baseball, stymied a 1947 rebellion by some Dodgers players protesting the presence of Jackie Robinson on the team. During spring training, Durocher discovered that several Dodgers were circulating a petition vowing they would never play on the same team as Robinson. Durocher called the team together and told them that Robinson was a great player and would help them to victory. He declared that, “He’s only the first, boys, only the first! There are many more colored ballplayers coming right behind him and they’re hungry, boys. They’re scratching and diving. Unless you wake up, these colored ballplayers are going to run you right out of the park. I don’t want to see your petition, I don’t want to hear anything else. This meeting is over.”

But he never had the opportunity to manage Jackie Robinson. A controversial figure, Durocher was suspended by the baseball commissioner for the entire 1947 season on the vague charge of moral turpitude. He had been under suspicion for being too friendly with New York gamblers and other shady characters, such as mobster Bugsy Siegel; and he had married movie actress Laraine Day in Mexico before her California divorce was final. Already a twice-divorced Catholic, Durocher had made enemies of powerful Roman Catholic Church officials and politicians in Brooklyn. Thus, public pressure, and the threat of keeping Catholic youth organizations from the ballpark, forced Durocher’s year-long sabbatical.

When he returned in 1948, the Dodgers faltered and he was fired early in the season. To the amazement of New York fans, however, he was immediately hired as manager of the cross-town rival, the New York Giants. He was also managing the Giants at the time of the legendary 1951 playoff game with the Brooklyn Dodgers on 12 August 1951. The Giants, trailing the first-place Dodgers by 13½

games, tied their rivals by season’s end and forced a three-game playoff. In game three, the Dodgers were leading 4-1 in the final inning when Bobby Thomson hit a dramatic home run to win the pennant for the Durocher-led Giants. Durocher took the team to two World Series, winning the 1954 contest, but despite these successes, the Giants finished a weak third in 1955 and Durocher was fired at the end of the season.

After working as a television commentator and coaching for several years with the Los Angeles Dodgers, Durocher returned to manage the Chicago Cubs in 1966. The Cubs had been one of the worst teams in baseball for nearly three decades, but Durocher helped turn them into winners. In 1969, his Cubs held a 9 ½-game lead in early August, but they folded in the last two months of the season and lost the National League pennant to the New York Mets. Durocher was criticized for not resting his players during the humid days of summer. He left the Cubs in 1972 and managed one more season with the Houston Astros before retiring.

Leo Durocher remains among the all-time leaders in games managed (3,740) and games won (2,010). In addition, he is the only baseball player cited in Bartlett’s Quotations. His quote, “Nice Guys Finish Last,” is also the title of his autobiography, which he wrote after leaving baseball. That renowned quotation was attributed to Durocher in 1947 and referred to his opinion of then Giants manager Mel Ott, whose team had been underachieving during the season. “Leo the Lip,” as the irascible Durocher was called, maintained that Ott and most of the Giants players were nice guys, but they would never be winners because nice guys finish last.

## Duvall, Robert (1931—)

Veteran American actor Robert Duvall has been an integral part of a large portion of Hollywood cinema throughout his lengthy career, thanks to his ability to metamorphose fully into each character he plays. He is also a skilled director, producer, screenwriter, singer, and songwriter. One of his most memorable roles is as Colonel Kilgore in the 1979 Francis Ford Coppola film *Apocalypse Now*, in which he uttered the classic line, “I love the smell of napalm in the morning.”

Duvall also won an Academy Award for best actor for his part as a country singer in 1983's *Tender Mercies*, for which he wrote and performed some of the songs. In 1997 Duvall won critical plaudits for *The Apostle*, a pet project that was a long time coming. He wrote, directed, starred in, and funded the picture about a flawed southern minister.

## Dyer, Wayne (1940—)

Charismatic and camera-friendly, Wayne Dyer became well-known after the phenomenally successful publication of his first best-selling book, *Your Erroneous Zones* in 1976. From that time, he became a constant proponent of such typically "New Age" concepts as "living in the moment" and making "choices that bring us to a higher awareness," as he told a reporter for the *St. Petersburg Times* in 1994. Since *Your Erroneous Zones*, Dyer has used books, tapes, and the broadcast media to his advantage, securing his position as a

Wayne Dyer

late-twentieth-century cultural icon, and a leading light in the areas of motivation and self-awareness.

Wayne W. Dyer was born in Detroit, Michigan, and began his professional career in Detroit as a high-school guidance counselor in 1965. In 1971, after earning a doctorate of education, he was appointed a professor of counselor education at St. John's University in Jamaica, New York, and began contributing articles to professional journals and co-authoring books on counseling with his colleague John Vriend. These established his credentials in academia, while, at the same time, he ran a lucrative private clinical psychology practice. His lectures at St. John's taught exercises in motivational speaking, and his upbeat, positive message was very well-received; students began bringing their friends to Dyer's lectures, and he amassed a small following.

News of these lectures intrigued a literary agent, who approached Dyer about the possibility of writing a book based on their ideas. He agreed, and wrote *Your Erroneous Zones*, sales of which were initially abysmal. Undaunted, its author bought up all the copies and, quitting both his teaching position and his practice, set out on the road with the books to make publishing and self-marketing history. In four months, Dyer covered all of the contiguous United States, making personal appearances at bookstores and giving radio and television interviews. By the end of his journey, he had been a guest on nationally televised talk shows and was interviewed by the likes of Phil Donahue, Johnny Carson, and Merv Griffin.

Wayne Dyer's status as a celebrity allowed him to publish more books on the same theme, and to generate an audience for his informal lecture tours. These tours cemented his following, and became the basis for the many acclaimed, high-selling audiotope sets that he recorded. His message offered something for everyone, since it was not specific to either any religion, or any particular portion of society. This was in contrast to self-help heroes such as Dale Carnegie and Stephen Covey, whose philosophies were somewhat hemmed in by their affiliations and concerns with the business and corporate worlds. Dyer even resisted the New Age tag, warning his audience in one of his tapes that the New Age phenomenon and its proponents were often superficial and could be dangerously misleading.

While his books all offered variations on the same theme, that theme became steadily more convoluted and esoteric as his career continued, accruing a certain degree of mysticism to accompany his pop psychology. In *Real Magic* (1993), for example, he discusses the potential for spiritual experience, while *Your Sacred Self* (1996) further expounds on the benefits of attaining a higher consciousness. Having remarried in 1979, he and his wife were raising a family of eight children throughout the 1980s, and his books largely recounted experiences and anecdotes culled from his family life. In 1998 he published *Wisdom of the Ages*, a collection of essays that reflected on the essence of certain literary quotations.

Dyer often said that his own life was his own best example, and much of his appeal can be attributed to his life experience, which he used consistently as an entry point into his discussions and writings. Many of his pre-teen years were spent in an orphanage, and although he grew up to be successful, he was also profoundly unhappy until he decided to take responsibility for his own life in the mid-1970s. The fact that his ideas were based on the psychological mechanisms that worked so well for him gave him his credibility among the consumers of self-development media.

Although the book sales and attendance numbers at Dyer's lectures were a testament to his following, and his continued appearance on talk shows throughout the 1980s kept him in the wider public

eye, he had his share of critics. Interviewing him in a 1983 issue of *Life* magazine, Campbell Geeslin suggests that Dyer's message is "a gospel in praise of the superficial" and that "Dyer is selling simplistic solutions to life's inevitable difficulties." Wayne Dyer, who was his own best advertisement in the late 1970s, turned out to be his own saboteur in the early 1990s. While remaining a hugely successful author, his increasingly mystical approach to his subject matter made him less desirable as a guest on the talk-show circuit and, while still visible, his voice and message no longer saturate the airwaves.

## *Dykes to Watch Out For*

In the mid-1980s lesbian cartoonist Alison Bechdel began to create the family of lesbians who comprise her popular comic strip, *Dykes to Watch Out For*. By the mid-1990s, the strip—the first continuing lesbian cartoon—had been syndicated in over 50 lesbian, gay, and alternative periodicals and had been published in more than seven collections. *Dykes to Watch Out For* had become an institution.

The strip is a little like a soap opera, with a developing storyline, and a lot like a peek behind the scenes of any lesbian community. The cast of characters is a group of lesbian friends in a nameless mid-size city in the United States. Just as in any real group of friends, pairings change and priorities evolve, influenced by events both internal and external. Much of the action takes place at Madwimmin Books, a feminist bookstore owned by Jezanna, a no-nonsense lesbian entrepreneur. Among the staff at Madwimmin are Mo, a lovable curmudgeon filled with leftist angst, and Lois, a butch rake with a girl in every port. Their friends include Toni and Clarice, an accountant and lawyer with a baby boy—however uncomfortably, they are upwardly mobile and nuclear-family-bound. Lois lives in a group house with Ginger, an academic, and Sparrow is a pagan spiritualist who works at a battered women's shelter.

These women, and the friends who ebb and flow around them, form a diverse community. Through them, Bechdel pokes gentle fun at the foibles of lesbians, be they politically earnest, promiscuous, or pretentious. She also allows them to change as they experience the events of the real world, mirroring the real changes that occur both among lesbians and in the larger community. Just as traditional media reflects the effects of phenomena on the larger culture, *Dykes to Watch Out For* reflects lesbian culture. Presidential elections, the O.J. Simpson trial, prozac, sado-masochism, transsexuality—all appear in the panels of the comic strip, analyzed and digested by Bechdel's family of lesbians.

Bechdel calls her strip "half op-ed column and half endless Victorian novel." While her primary alter-ego is clearly Mo, the

anguished leftist, Bechdel does not take herself or her characters too seriously. She occasionally has her characters break the "fourth wall" and address her readers directly, or interact with each other as if they are quite different characters performing in the strip. One of the strip's calendars shows a large panel of the "green room" where characters display heretofore unseen personality traits as they wait for their "entrance" onto the strip. In another strip, characters of color, a Jewish character, and a disabled character bewail their token status in the storyline.

It is a tribute to Bechdel's skill as an artist and a writer that she can bring her characters enough life to argue with her from the page. Her drawings are clean yet complex, filled with subtle references and in-jokes for her audience, and the dialogue is lively and incisive. In fact, Bechdel's work and the success of *Dykes To Watch Out For* drew the attention of the mainstream press when Universal Press Syndicate approached her with an offer that could have placed her in the daily "funny papers." Though their interest was exciting to Bechdel, it only took a moment's thought to realize that whittling down her work to fit the narrow niche of the mainstream would have changed her work beyond recognition. The title would have to go, "dykes" being far too controversial, and out of six main characters only two would have been allowed to be lesbians. Unwilling to give up her vision of a strip that reflected the realities of lesbian life, Bechdel refused the offer and remained in the alternative press, where her uncensored style was welcome.

Her strips, collections, and calendars have always been eagerly awaited by her fans. In fact, the main dilemma for Bechdel's readers seems to be expressed by an urgent letter she received from a fan. "DO YOU HAVE ANY IDEA," the reader wrote, "WHAT IT'S LIKE TO HAVE A CRUSH ON A CARTOON CHARACTER?!?!?"

—Tina Gianoulis

## *Dylan, Bob (1941—)*

The most influential musician to emerge out of the social unrest of the early 1960s, Bob Dylan dramatically expanded the aesthetic and political boundaries of popular song. Recognized almost immediately as the voice of his generation, Dylan began his brilliant career by performing blues, folk ballads, and his own topical compositions, many of which addressed issues of racial injustice and protested against the threat of nuclear war. By 1965 he transformed himself into a rock star, the first of many metamorphoses he would undergo over the next three decades. Mercurial, iconoclastic, and enigmatic, Dylan variously presented himself as a poet, gospel singer, bluesman, country musician, and minstrel, recording more than thirty albums that would make him one of the major popular artists of the twentieth century.

"Dylan has invented himself. He's made himself up from scratch," wrote playwright Sam Shepard. The point, Shepard suggested, "isn't to figure [Dylan] out but to take him in," to use him "as

**Bob Dylan**

a means to adventure.” Dylan began his extraordinary odyssey as Robert Zimmerman, the son of Jewish merchants from Hibbing, Minnesota, where he enjoyed a comfortable middle-class life. Although he was bar mitzvahed, Dylan listened to prophets who were unfamiliar to his parents. Little Richard, Elvis Presley, and Hank Williams inspired the young guitar player, while the rebels James Dean and Marlon Brando shaped the attitude he carried to the University of Minnesota in 1959.

His days as a student were numbered. Having received an assortment of Huddie “Leadbelly” Leadbetter’s recordings for graduation gifts, Dylan was more interested in music than his studies and promptly matriculated to Dinkytown, a hip section of Minneapolis renowned for its folk scene. It was here that he obtained a copy of Woody Guthrie’s autobiography, *Bound for Glory* (1943), a book that inspired him to learn the Dust Bowl balladeer’s compositions and to perform them in local coffeehouses. By 1960, this nineteen-year-old changed his name and adopted Guthrie’s nomadic ways, embarking on a cross-country trip that ended in New York City early in 1961.

Dylan immersed himself in the bohemian culture of Greenwich Village, where leftists old and new were participating in the folk music revival. Pete Seeger, Ramblin’ Jack Elliot, Ralph Rinzler, and scores of other young people enamored with folk music attended jam sessions in Washington Square Park and gathered regularly to pay

homage to Guthrie, the movement’s patron saint. Hospitalized with Huntington’s chorea, Guthrie made weekend visits to the East Orange, New Jersey, home of Bob and Sidsell Gleason, where Dylan temporarily resided. The two men established a warm relationship. Disease had nearly destroyed Guthrie’s creative and communicative abilities, but he managed to express his enthusiasm for his admirer. When Dylan debuted at Gerde’s Folk City in April, 1961, he donned one of his mentor’s old suits for the occasion.

A self-described “Woody Guthrie juke box,” Dylan recalled that he was “completely taken over by his spirit,” a claim to which his self-titled album (1962), attests. Released soon after he was signed to Columbia Records by John Hammond, this collection of folk standards and two originals established Dylan’s credentials as an authentic traditional artist, and as a nasal-voiced, road-weary traveler who had hoboed for most of his young life. The album included the poignant “Song to Woody,” a ballad written to the tune of Guthrie’s “1913 Massacre” that musically, stylistically, and lyrically declared Dylan’s intent to carry his hero’s mantle. Cover versions of songs by bluesmen Blind Lemon Jefferson and Bukka White placed Dylan firmly in the folk tradition as did a 1961 press interview, during which he claimed to have played with Jefferson and the Texas songster Mance Lipscomb.

Bored with the predictability and sheltered nature of his middle-class life, Dylan fabricated a past full of hard traveling and hard living. If, like his fellow baby boomers, his life was smothered by relative affluence and haunted by the specter of nuclear war, his ersatz travels were filled with adventure and possibility. But if Dylan responded to his generation’s ennui and malaise, he also began to absorb and shape its politics. “Whether he liked it or not, Dylan *sang for us*,” wrote the former president of Students for a Democratic Society, Todd Gitlin. “We followed his career as if he were singing our song; we got in the habit of asking where he was taking us next.”

*The Freewheelin’ Bob Dylan* (1963) was born out of his emerging political consciousness. Perhaps the most stinging indictment of the United States government ever released by the commercial recording industry, “Masters of War” condemned the men who produce weapons of mass destruction and warned them that even the most benevolent God would not absolve their transgressions. The politics of *Freewheelin’* did not stop here. “Oxford Town” mocked segregation at the University of Mississippi; “A Hard Rain’s A-Gonna Fall” imagined a stark and terrifying post-nuclear landscape; and “Blowin’ in the Wind,” which became a hit for Peter, Paul and Mary, was a simple, though poetic, call for racial harmony. After becoming the star of the 1963 Newport Folk Festival, Dylan actively supported a number of political causes, performing at a voter registration rally in Mississippi and at the March on Washington that summer. Meanwhile, the title track for his third album, *The Times They Are A-Changin’* (1964), furnished the anthem for a generation dedicated to transforming the social order.

*Another Side of Bob Dylan* (1964) suggested, however, that the artist was moving in new directions. Bitter love songs such as “It Ain’t Me Babe” replaced the moralism of *Freewheelin’* and *Times*, while “Chimes of Freedom” cloaked its social concerns beneath a virtuosic lyricism. Both the album and Dylan’s promotion of it at the 1964 Newport Festival were poorly received by members of the folk press, many of whom opined that their hero’s preoccupation with aesthetics forsook his political commitment. Their accusations were not unfounded. Unwilling to be shackled with the duties of generational spokesman, Dylan publicly renounced his involvement with the New

Left and, after shedding his denim shirt for black leather and sunglasses, repackaged himself as a poet and rock star.

By the end of 1965, perhaps the most important year in Dylan's career, the transformation was complete. Following the release of *Bringing It All Back Home* that March, Dylan embarked on a tour of England where he was met by transfixed crowds, screaming girls, and adoring musicians. D.A. Pennebaker's documentary film *Don't Look Back* (1967) chronicles the tour, presenting an increasingly arrogant artist who sounded more like an existentialist than a proponent of civil rights. In his interactions with the press, an irreverent Dylan attacked those who tried to categorize and explain his art. In fact, his most recent material seemed to question the ability of language to convey a sense of reality. Rather than writing topical songs, he assailed the social order by intimating that it was unreal, absurd, a mere construction of language. *Home*'s "Mr. Tambourine Man" (which the Byrds successfully covered in 1965) suggested that drugs may have been helping Dylan alter his own private reality, but the apocalyptic images encountered by the bizarre characters who traveled *Highway 61 Revisited* (1965)—Napoleon in rags, Einstein disguised as Robin Hood, and Mr. Jones—insinuated that an unjust present could only be transcended by the act of artistic creation itself.

To be sure, Dylan's complex, poetic lyrics altered the face of pop music and legitimated the genre as an art form. When Bruce Springsteen inducted Dylan into the Rock and Roll Hall of Fame in 1988, he recalled that when he first heard "Like a Rolling Stone," it "sounded like somebody'd kicked open the door to your mind." The six-minute single redefined the limits of popular song, declaring, Springsteen later recalled, that "everything"—aesthetics, politics, power, and perhaps reality itself—"was up for grabs."

Those who followed Dylan's career closely should not have been surprised when he turned his back on the folk revival at Newport in 1965. The breaking off of his romantic relationship with Joan Baez, his work on a collection of poems entitled *Tarantula* (eventually published in 1971), his arcane lyrics, and his interest in the musical arrangements of the Beatles, whom he had met on his British tour, all pointed to his intention to leave the movement. Nevertheless, his followers were shocked when Dylan appeared with an electric guitar. Among the stalwarts who suggested that rock-and-roll musicians had sold out to commercial interests, Seeger was rumored to have been so outraged that he tried to cut the power supply. The audience nearly booed Dylan from the stage. Although shaken, Dylan remained resolute about his artistic decision. After meeting The Band (then the Hawks) in the summer of 1965, he took his electric show on a tour of England, during which he continued to incur the wrath of folk purists. This reaction—as well as the stunning music that Dylan and The Band produced—is documented on *Live 1966* (released in 1998). Recorded at Manchester's Free Trade Hall, this concert included a riveting acoustic set which ultimately yielded to a full-blown rock show, where Dylan's voice and the masterful playing of his musicians soared above the audience's cries of betrayal.

Exhausted from the tour, Dylan returned to the United States, where, after sustaining serious injury in a motorcycle accident, he repaired to his home in Woodstock, New York. The silence of his convalescence ended in the summer of 1967, when he and the Band initiated a five-month jam session, most of which was released as the critically acclaimed *Basement Tapes* (1975). The search for personal redemption ("I Shall Be Released"), a sense of disillusionment and abandonment ("Tears of Rage"), and a persistent existential angst ("Too Much of Nothing"), remained prominent themes, but if the Dylan of 1966 was trying to inter the musical past, the *Basement*

Dylan exhumed it. Dock Boggs, Clarence Ashley, and Jefferson, traditional musicians whom Dylan encountered on the Folkways *Anthology of American Folk Music*, seemed to have a palpable presence on these recordings.

*The Basement Tapes* provide a segue between the modernism of *Blonde on Blonde* (1966) and *John Wesley Harding* (1968), the first album to appear after the accident. Replete with Biblical allusions, *Harding* was a largely acoustic collection of parables and allegories, one of which, "All Along the Watchtower," became a standard in Jimi Hendrix's repertoire. But if the children of Woodstock continued to embrace one of upstate New York's most famous residents, the artist himself seemed to be far removed from the Summer of Love. In the same year that flower children frolicked in the rain and mud, Dylan traveled south to record *Nashville Skyline* (1969), a collection of country-tinged love songs that included a duet with Johnny Cash. The man who began his career with protest songs ended the turbulent 1960s by embracing the form that such artists as Merle Haggard used to condemn the anti-war movement.

The albums that carried Dylan into the 1970s showed little of the genius that characterized his earlier work. The soundtrack to *Pat Garrett and Billy the Kid* (1973), a film in which Dylan played a bit part, was notable for the inclusion of "Knockin' on Heaven's Door," a song later covered by Eric Clapton and Guns 'n' Roses. *Before the Flood* (1974), a live album recorded with The Band, suggested that Dylan was perhaps undergoing a creative renaissance, an assessment that *Blood on the Tracks* (1975) confirmed. Here again were songs of love, but crisp acoustic guitar, wailing harmonica, and a voice filled with doubt and disappointment convey the pain, anguish, and longing of "Tangled Up in Blue" and "Shelter from the Storm" with remarkable weight and precision.

*Desire* (1976) indicated a renewed interest in politics. "Hurricane," the lengthy centerpiece, was the angriest song Dylan had recorded since "Masters of War." Co-written with Jacques Levy, this fierce narrative impugned the American justice system by considering the murder trial of former professional boxer Rubin "Hurricane" Carter. Contending that Carter's trial had been conducted unfairly, Dylan publicized the jailed athlete's case by marshaling the forces of his Rolling Thunder Revue, a melange of some seventy artists—Baez, Shepard, Elliot, and Allen Ginsberg among them—that toured the States under Dylan's direction. Dylan, who performed most of the shows with his face covered in white pancake make up, designated appearances in Madison Square Garden and the Astrodome as benefits for Carter. Although the Revue's efforts may have played a part in convincing a New Jersey court to throw out Carter's first conviction, the boxer was found guilty a second time. *Hard Rain* (1976) provides a sampling of the dramatic ways that Dylan rearranged his music during the tour.

After the unremarkable *Street-Legal* (1978), Dylan chose a path previously untrodden: the artist who spent much of the early 1970s exploring his Jewish roots suddenly became a born again Christian. Fans and critics had little tolerance for the musician's choice, particularly when he proselytized at concerts and refused to play his better-known songs. The dogmatic lyrics may have made audiences uneasy, but the music on *Slow Train Coming* (1979), *Saved* (1980), and *Shot of Love* (1981) was triumphant and exhilarating. Backed by powerful gospel arrangements, Dylan sings with a passion that convinces the congregation that he had finally found his direction home. "Gotta Serve Somebody," the single from *Train*, earned Dylan his first Grammy Award.

*Infidels* (1983) explored both political and spiritual issues, but perhaps because it eschewed the religious fanaticism of his previous efforts, it received warm praise from critics. Indeed, when such songs as “Jokerman,” “License to Kill,” and “I and I,” are heard alongside “Blind Willie McTell” and “Foot of Pride,” both of which were released on *The Bootleg Series, Volumes 1-3* (1991), these sessions rate among the most innovative of Dylan’s career.

If Dylan’s commitment to Christianity had not faded on *Infidels*, it was clear he had change a of heart when, on *Empire Burlesque* (1985), he proclaimed that he “never could learn to drink that blood and call it wine.” That same year he released *Biograph*, a retrospective of his career that included much previously unreleased material and initiated the “boxed-set” format to the recording industry. With his popularity again peaking, he participated in efforts to alleviate famine in Ethiopia, joining the chorus of U.S.A. for Africa to record “We Are the World” and issuing a ragged performance at the Live Aid Concert in Philadelphia. Political commentary extended into the 1990s. When he accepted a Grammy for lifetime achievement during 1991 Gulf War, he performed “Masters of War.”

Although Dylan released lackluster studio albums in the mid-1980s, he launched separate but noteworthy tours with Tom Petty and the Heartbreakers and the Grateful Dead. Perhaps his most interesting work from this period came as a member of the Traveling Wilburys, a group comprised of Petty, George Harrison, Roy Orbison, and Jeff Lynne. Released in 1988, the first of the Wilburys two albums included the foot-tapping singles “Handle Me with Care” and “End of the Line.” Dylan capped the 1980s with the critically acclaimed *Oh Mercy* (1989), which included the socially conscious “Political World” as well as “What Was It You Wanted,” a song that recalled the bitterness of such earlier compositions as “Don’t Think Twice, It’s All Right.”

His fourth decade of recording brought accolades and continued success. In October 1992, a panoply of artists including Harrison, Cash, Petty, Lou Reed, and Neil Young assembled at Madison Square Garden to celebrate the thirtieth anniversary of Dylan’s first album. When the honoree opened his own set with “Song for Woody,” he indicated that his career had come full circle. To be sure, his next two albums returned to his roots: *Good As I Been to You* (1992) and *World Gone Wrong* (1993) were both collections of traditional folk songs. Because these releases contained no new material, critics opined that Dylan’s creative powers were again on the wane. Their diagnosis was premature. In 1997, this man who once issued a resonant challenge to the American political system was recognized as one of the nation’s most important artists when he was feted at the Kennedy Center Honors. Soon thereafter he experienced a life-threatening illness and responded with the Grammy-winning *Time Out of Mind* (1997). Here the aging Dylan tried to come to terms with the emptiness of love and the limits of his own humanity. “The shadows are falling and I’ve been here all day,” he sings in “Not Dark Yet.” “It’s too hot to sleep and time is running away.” The hobo’s travels had not yet ended, but he was now worried about “Tryin’ to get to heaven before they closed the door.”

Dylan’s career had not yet ended, but the photograph that appeared on the inside cover of the *Time Out of Mind* compact disc box proclaimed a sense of closure. Shot from the shoulders up, a corpse-like Dylan stares into the camera, the soft focus connoting an elusiveness, his pale, worn face suggesting a weariness, his eyes glistening with the sadness of experience yet not devoid of hope, his riverboat minstrel costume, complete with string tie, underscoring the timelessness so powerfully communicated by the soulful and battered

vocal performance rendered on the album. As a new generation embraced him, as his son, Jacob, began his own recording career with the Wallflowers, Dylan had, like the hard-traveling minstrel he emulated, become the progenitor of the cultural and musical traditions he so carefully studied. His remarkable body of work and enigmatic persona had, in effect, delivered him out of time, had elevated him to the status of national myth. Nearly forty years after his first record, Dylan continued to provide audiences with a “means to adventure.”

## Dynasty

Produced by Aaron Spelling for the ABC television network, *Dynasty* was introduced to American television as a three-hour movie, and lasted nine seasons in the form of a weekly one-hour drama serial, from 1981-89. Perfect for the decade, which, despite the conservatism and family values of the Reagan years, was characterized by increasing mass consumption, materialism, and the “me generation,” *Dynasty* celebrated glamour, wealth, and capitalism. Inspired by the monumentally popular CBS program *Dallas*, *Dynasty*, along with *Dallas* and *Falcon Crest* (also on CBS) helped to define a new genre—the prime-time soap opera—while reaching unprecedented heights of melodramatic, over-the-top, escapist absurdity. Like their daytime counterparts such as *General Hospital*, the prime-time soaps presented serialized narratives, with each episode ending on a “cliffhanger,” or storyline left unresolved at the highest point of tension, to be taken up in the next installment. The technique ensured a captive audience, and *Dynasty* came to be one of the most popular shows of the decade, dominating television screens not only in the United States, but also in more than 70 other countries.

The show centered on the lives of the dynastic Carrington family, headed by the patriarch Blake Carrington (John Forsythe), a Denver oil tycoon. To the traditional story formula of the daytime soaps was added a potent brew of adultery, murder, and deceit, as well as complicated plotlines centered in corporate greed, rivalries, takeovers, and mergers consonant with the patina of outrageous wealth that

Members of the cast of *Dynasty*: (from left) John Forsythe, Linda Evans, Rock Hudson, and Ali MacGraw.

was evident everywhere. Women were integral to *Dynasty*, no more so than the character of Alexis, who became a byword for female power and high-octane glamour. Ruthless, vengeful and cunning, she was played by Joan Collins and the role made her a major star and a household name in America and many other countries.

Much of *Dynasty*'s action involved the rivalry between Alexis, as Blake's ex-wife, and Krystle (Linda Evans), his current spouse, as they battled for dominance, both figuratively and literally, in numerous "cat fights." One of the most interesting aspects of their characters lay in presenting them as glamorous and sexy, albeit that they were over 40—a rare departure for American television which, like the movies, has tended to regard such attributes as belonging to the younger generation (of whom *Dynasty* had its fair share of both sexes). Audiences found the character of Alexis so deliciously conniving that she became the center of the weekly spectacle.

Because of their highly stylized representations of domesticity and personal problems, often characterized by excess, soap operas have been much denigrated by the high-minded. However, *Dynasty* was enjoyed by huge numbers of educated and intellectual viewers and, as many scholars have pointed out, it is the soap opera that has brought to American television those inflammatory issues so often ignored by more seriously intentioned programs. Towards the end of its run, it featured the first significant African American character in a prime-time soap, Dominique Deveraux, played by Diahann Carroll. Though the program did not directly confront issues of racism, Deveraux's presence raised the subject of interracial relationships, while in Steven Carrington (played by Al Corley and later, Jack Coleman), it introduced one of popular television's first regular homosexual characters.

## EDITOR'S NOTE

---

Thirty some years ago Ray Browne and several of his colleagues provided a forum for the academic study of popular culture by forming first the *Journal of Popular Culture* and later the Popular Culture Association and the Center for the Study of Popular Culture at Bowling Green State University. Twenty some years ago Thomas Inge thought the field of popular culture studies well enough established to put together the first edition of his *Handbook of Popular Culture*. In the years since, scholars and educators from many disciplines have published enough books, gathered enough conferences, and gained enough institutional clout to make popular culture studies one of the richest fields of academic study at the close of the twentieth century. Thirty, twenty, in some places even ten years ago, to study popular culture was to be something of a pariah; today, the study of popular culture is accepted and even respected in departments of history, literature, communications, sociology, film studies, etc. throughout the United States and throughout the world, and not only in universities, but in increasing numbers of high schools. Thomas Inge wrote in the introduction to the second edition of his *Handbook*: “The serious and systematic study of popular culture may be the most significant and potentially useful of the trends in academic research and teaching in the last half of this century in the United States.”<sup>2</sup> It is to this thriving field of study that we hope to contribute with the *St. James Encyclopedia of Popular Culture*.

The *St. James Encyclopedia of Popular Culture* includes over 2,700 essays on all elements of popular culture in the United States in the twentieth century. But what is “popular culture?” Academics have offered a number of answers over the years. Historians Norman F. Cantor and Michael S. Werthman suggested that “popular culture may be seen as all those things man does and all those artifacts he creates for their own sake, all that diverts his mind and body from the sad business of life.”<sup>1</sup> Michael Bell argues that:

At its simplest popular culture is the culture of mass appeal. A creation is popular when it is created to respond to the experiences and values of the majority, when it is produced in such a way that the majority have easy access to it, and when it can be understood and interpreted by that majority without the aid of special knowledge or experience.<sup>3</sup>

While tremendously useful, both of these definitions tend to exclude more than they embrace. Was the hot dog created for its own sake, as a diversion? Probably not, but we’ve included an essay on it in this collection. Were the works of Sigmund Freud in any way shaped for the majority? No, but Freud’s ideas—borrowed, twisted, and reinterpreted—have shaped novels, films, and common speech in ways too diffuse to ignore. Thus we have included an essay on Freud’s impact on popular culture. Our desire to bring together the greatest number of cultural phenomena impacting American culture in this century has led us to prefer Ray Browne’s rather broader early definition of popular culture as “all the experiences in life shared by people in common, generally though not necessarily disseminated by the mass media.”<sup>4</sup>

### *Coverage*

In order to amass a list of those cultural phenomena that were widely disseminated and experienced by people in relatively unmediated form we asked a number of scholars, teachers, librarians, and archivists to serve as advisors. Each of our 20 advisors provided us with a list of over 200 topics from their field of specialty that they considered important enough to merit an essay; several of our advisors provided us with lists much longer than that. Their collective lists numbered nearly 4,000 potential essay topics, and we winnowed this list down to the number that is now gathered in this collection. We sought balance (but not equal coverage) between the major areas of popular culture: film; music; print culture; social life; sports; television and radio; and art and performance (which includes theatre, dance, stand-up comedy, and other live performance). For those interested, the breakdown of coverage is as follows: social life, 23 percent (a category which covers everything from foodways to fashion, holidays to hairstyles); music, 16 percent; print culture, 16 percent; film, 15 percent; television and radio, 14 percent; sports, 10 percent; and art and performance, 6 percent. A variety of considerations led us to skew the coverage of the book in favor of the second half of the century. The massive popularity of television and recorded music, the mass-marketing of popular fiction, and the national attention given to professional sports are historical factors contributing to the emphasis on post-World War II culture, but we have also considered the needs of high school and undergraduate users in distributing entries in this way.

### *The Entries*

The entries in this volume vary in length from brief (75 to 150-word) introductions to the topic to in-depth 3,000-word explorations. No matter the length, we have asked our contributors to do two things in each entry: to describe the topic and to analyze its

significance in and relevance to American popular culture. While we hope that users will find the basic factual information they need concerning the topic in an entry, it was even more important to us that each user gain some perspective on the cultural context in which the topic has importance. Thus the entry on MTV, for example, chronicles the channel's rise to world popularity, but also analyzes the relationship between MTV, youth culture, and consumerism. The entry on John Ford, while tracing the outlines of the film director's long career, assesses the impact Ford's films have had on the film Western and on Americans' very perceptions of the West. Given the brevity of the entries, we chose to emphasize analysis of a topic's contribution to popular culture over a full presentation of biographical/historical information. The entry on World War I, for example, offers an analysis of how the war was understood in popular film, print culture, and propaganda rather than a blow-by-blow description of the actual military conflict.

Entries are accompanied by a list of further readings. These readings are meant to provide the user with readily accessible sources that provide more information on the specific topic. As befits a multimedia age, these "further readings" come not just from books and magazines, but also from albums, liner notes, films, videos, and web sites. Users of the Internet know well the perils of trusting the information found on the World Wide Web; there are as yet few filters to help browsers sift the useful from the absurd. We cited web sites when they provided information that was unavailable in any other known form and when our reasonable efforts to determine the veracity of the information led us to believe that the information provided was valid and useful. We have occasionally provided links to "official" web sites of performers or organizations, for the same reason that we provide citations to autobiographies. All web links cited were accurate as of the date indicated in the citation.

### *Organization and Indexing*

Entries are arranged alphabetically by the name under which the topic is best known. For topics which might reasonably be sought out under differing names, we have provided in-text cross references. For example, a user seeking an entry on Huddie Ledbetter will be referred to the entry on Leadbelly, and a user seeking an entry on Larry Flynt will be referred to the entry on *Hustler* magazine. Far more powerful than the cross references, however, are the indexes provided in the fifth volume of the collection. The general index is by far the most powerful, for it leads the user searching for information on Humphrey Bogart, for example, to the entries on Lauren Bacall, *Casablanca*, *The Maltese Falcon*, *The African Queen*, and several other entries that contain substantive information about Bogie. Equally powerful is the subject index, a list of categories under which we listed all pertinent entries. Consulting the subject index listing for Sex Symbols, for example, will lead the user to entries on Marilyn Monroe, the Varga Girl, *Playboy* magazine, David Cassidy, Mae West, and a long entry on the Sex Symbol, among others. Finally, a time index, organized by decades, provides a list of the entries that concern each decade of the twentieth century. Those entries that concern nineteenth-century topics are indexed by the first decade of the twentieth century.

We encourage readers to use the indexes to discover the fascinating intertwinings that have made the development of popular culture in the twentieth century such a vital field of study. Using the indexes, it is possible to uncover the story of how the American humor that was first made popular on the vaudeville stage evolved into first the radio comedies that entertained so many Americans during the Depression and War years and later the sitcoms that have kept Americans glued to their television screens for the last 50 years. That story is here, in the entries on Vaudeville, the Sitcom, *Amos 'n' Andy*, and the many other programs and comedians that have defined this tradition. A teacher who wishes students to uncover the similarities between sitcoms of the 1950s, 1960s, 1970s, 1980s, and 1990s might well ask the students to use this collection to begin their research into such comedies. Similarly, a teacher who asks students to explore the cross-pollination between musical genres will find that the indexes reveal the mixing of "race music," rhythm and blues, gospel, soul, and rock 'n' roll. It is hoped that this collection will be of particular use to those instructors of high school and undergraduate courses who challenge their students to discover the real cultural complexity of the music, films, magazines, and television shows that they take for granted. This collection should also be of use to those more advanced scholars who are beginning new research into an area of popular culture or who are looking for some context in which to place their existing research.

### *Acknowledgments*

The *St. James Encyclopedia of Popular Culture* represents the work of hundreds of people, and we owe our thanks to all of them. We have had the privilege of working with 20 advisors whose experience, knowledge, and wisdom have truly helped shape the contents of this collection. Each of our advisors helped us to discover hidden corners of popular culture that we would not have considered on our own, and the breadth of coverage in this collection is a tribute to their collective knowledge. Several of our advisors deserve special thanks: Paul Buhle, George Carney, B. Lee Cooper, Jerome Klinkowitz, and Ron Simon all showed an extraordinary level of commitment and helpfulness.

It has been a pleasure to work with the nearly 450 contributors to this collection; we've appreciated their expertise, their professionalism, and their good humor. Several of our contributors deserve special mention for the quality of their contributions to this collection: Jacob Appel, Tim Berg, Pat Broeske, Richard Digby-Junger, Jeffrey Escoffier, Bryan Garman, Tina Gianoulis, Milton Goldin, Ian Gordon, Ron Goulart, Justin Gustainis, Preston Jones, Robyn Karney, Deborah Mix, Leonard Moore, Edward Moran, Victoria Price, Bob Schnakenberg, Steven Schneider, Charles Shindo, Robert Sickels, Wendy Woloson, and Brad Wright. Our team of copyeditors helped us bring a uniformity of presentation to the writings of this mass of contributors, and spotted and corrected innumerable small errors. Heidi Hagen, Robyn Karney, Edward Moran, and Tim Seul deserve special thanks for the quality and quantity of their work; we truly couldn't have done it without them. The contributors and copyeditors provided us with the material to build this collection, but it has been the editors' responsibility to ensure its accuracy and reliability. We welcome any corrections and comments; please write to: The Editors, *St. James Encyclopedia of Popular Culture*, St. James Press, 27500 Drake Road, Farmington Hills, MI 48331-3535.

Gathering the photos for this collection was an enormous task, and we were helped immeasurably by the knowledgeable and efficient staff at several photo agencies. We'd like to thank Marcia Schiff at AP/Wide World Photos; Eric Young at Archive Photos; and Kevin Rettig at Corbis Images. Lisa Hartjens of ImageFinders, Inc. also helped us acquire a number of photos.

We would like to thank Shelly Andrews, Anne Boyd, Melissa Doig, Tina Gianoulis, Heidi Hagen, Robyn Karney, Edward Moran, Victoria Price, Rebecca Saulsbury, Tim Seul, and Mark Swartz for their careful copyediting of the entries.

At the St. James Press, we'd like to thank Mike Tyrkus for his good humor and efficiency in helping us see this project to completion; Peter Gareffa for his usual wise and benevolent leadership; Janice Jorgensen for helping us shape this project at the beginning; the permissions department for smiling as we piled the photos on; and the staff at the St. James Press for their careful proofreading and for all their work in turning so many computer files into the volumes you see today.

Finally, we'd like to thank Lee Van Wormer for his sage management advice and our children, Conrad and Louisa, for their warm morning cuddles and for the delightful artwork that adorns our office walls.

—Tom Pendergast and Sara Pendergast,

# INTRODUCTION

---

## *The Art of Everyday Life*

Sometimes, when I'm wandering in an art museum looking at the relics of an ancient civilization, I find myself wondering how a future society would represent a defunct American culture. What objects would be chosen—or would survive—to be placed on display? Would I agree with a curator's choices? Were I to choose the items that some future American Museum of Art should exhibit to represent twentieth-century American culture, here are some I would name: an Elvis Presley record; a Currier & Ives print; a movie still from *Casablanca*. To put it a different way, my priority would *not* be to exhibit fragments of an urban cathedral, a painted landscape, or a formal costume. I wouldn't deny such objects could be important artifacts of American culture, or that they belong in a gallery. But in my avowedly biased opinion, the most vivid documents of American life—the documents that embody its possibilities and limits—are typically found in its popular culture.

Popular culture, of course, is not an American invention, and it has a vibrant life in many contemporary societies. But in few, if any, of those societies has it been as central to a notion of national character at home as well as abroad. For better or worse, it is through icons like McDonald's (the quintessential American cuisine), the Western (a uniquely American narrative genre), and Oprah Winfrey (a classic late-twentieth century embodiment of the American Dream) that this society is known—and is likely to be remembered.

It has sometimes been remarked that unlike nations whose identities are rooted in geography, religion, language, blood, or history, the United States was founded on a democratic ideal—a notion of life, liberty, and the pursuit of happiness elaborated in the Declaration of Independence. That ideal has been notoriously difficult to realize, and one need only take a cursory look at many aspects of American life—its justice system, electoral politics, residential patterns, labor force, et. al.—to see how far short it has fallen.

American popular culture is a special case. To be sure, it evinces plenty of the defects apparent in other areas of our national life, among them blatant racism and crass commercialism. If nothing else, such flaws can be taken as evidence of just how truly representative it is. There is nevertheless an openness and vitality about pop culture—its appeal across demographic lines; its interplay of individual voices and shared communal experience; the relatively low access barriers for people otherwise marginalized in U.S. society—that give it real legitimacy as the art of democracy. Like it or hate it, few dispute its centrality.

This sense of openness and inclusion—as well as the affection and scorn it generated—has been apparent from the very beginning. In the prologue of the 1787 play *The Contrast* (whose title referred to the disparity between sturdy republican ideals and effete monarchical dissipation), American playwright Royall Tyler invoked a cultural sensibility where “proud titles of ‘My Lord! Your Grace/To the humble ‘Mr.’ and plain ‘Sir’ give place.” Tyler, a Harvard graduate, Revolutionary War officer, and Chief Justice of the Vermont Supreme Court, was in some sense an unlikely prophet of popular culture. But the sensibility he voiced—notably in his beloved character Jonathon, a prototype for characters from Davy Crockett to John Wayne—proved durable for centuries to come.

For much of early American history, however, artists and critics continued to define aesthetic success on European terms, typically invoking elite ideals of order, balance, and civilization. It was largely taken for granted that the most talented practitioners of fine arts, such as painters Benjamin West and John Singleton Copley, would have to go abroad to train, produce, and exhibit their most important work. To the extent that newer cultural forms—like the novel, whose very name suggests its place in late eighteenth- and early nineteenth-century western civilization—were noted at all, it was usually in disparaging terms. This was especially true of novels written and read by women, such as Susanna Rowson's widely read *Charlotte Temple* (1791). Sermons against novels were common; Harvard devoted its principal commencement address in 1803 to the dangers of fiction.

The industrialization of the United States has long been considered a watershed development in many realms of American life, and popular culture is no exception. Indeed, its importance is suggested in the very definition of popular culture coined by cultural historian Lawrence Levine: “the folklore of industrial society.” Industrialization allowed the mass-reproduction and dissemination of formerly local traditions, stories, and art forms across the continent, greatly intensifying the spread—and development—of culture by, for, and of the people. At a time when North America remained geographically and politically fragmented, magazines, sheet music, dime novels, lithographs, and other print media stitched it together.

This culture had a characteristic pattern. Alexis de Tocqueville devoted 11 chapters of his classic 1835-40 masterpiece *Democracy in America* to the art, literature, and language of the United States, arguing that they reflected a democratic ethos that required new standards of evaluation. “The inhabitants of the United States have, at present, properly speaking, no literature,” he wrote. This judgment, he made clear, arose from a definition of literature that came from aristocratic societies like his own. In its stead, he explained, Americans sought books “which may be easily procured, quickly read, and which require no learned researches to be understood. They ask for beauties self-proffered and easily enjoyed; above all they must have what is unexpected and new.” As in so many other ways, this description of American literature, which paralleled what Tocqueville saw in other arts, proved not only vivid but prophetic.

The paradox of American democracy, of course, is that the freedom Euro-Americans endlessly celebrated co-existed with—some might say depended on—the enslavement of African Americans. It is therefore one of the great ironies of popular culture that the contributions of black culture (a term here meant to encompass African, American, and amalgamations between the two) proved so decisive. In another sense, however, it seems entirely appropriate that popular culture, which has always skewed its orientation toward the lower end of a demographic spectrum, would draw on the most marginalized groups in American society. It is, in any event, difficult to imagine that U.S. popular culture would have had anywhere near the vitality and influence it has without slave stories, song, and dance. To cite merely one example: every American musical idiom from country music to rap has drawn on, if not actually *rested* upon, African-American cultural foundations, whether in its use of the banjo (originally an African instrument) or its emphasis on the beat (drumming was an important form of slave communication). This heritage has often been overlooked, disparaged, and even satirized. The most notable example of such racism was the minstrel show, a wildly popular nineteenth century form of theater in which white actors blackened their faces with burnt cork and mocked slave life. Yet even the most savage parodies could not help but reveal an engagement with, and even a secret admiration for, the cultural world the African Americans made in conditions of severe adversity, whether on plantations, tenant farms, or in ghettos.

Meanwhile, the accelerating pace of technological innovation began having a dramatic impact on the form as well as the content of popular culture. The first major landmark was the development of photography in the mid-nineteenth century. At first a mechanically complex and thus inaccessible medium, it quickly captured American imaginations, particularly by capturing the drama and horror of the Civil War. The subsequent proliferation of family portraits, postcards, and pictures in metropolitan newspapers began a process of orienting popular culture around visual imagery that continues unabated to this day.

In the closing decades of the nineteenth century, sound recording, radio transmission, and motion pictures were all developed in rapid succession. But it would not be until well after 1900 that their potential as popular cultural media would be fully exploited and recognizable in a modern sense (radio, for example, was originally developed and valued for its nautical and military applications). Still, even if it was not entirely clear how, many people at the time believed these new media would have a tremendous impact on American life, and they were embraced with unusual ardor by those Americans, particularly immigrants, who were able to appreciate the pleasures and possibilities afforded by movies, records, and radio.

Many of the patterns established during the advent of these media repeated themselves as new ones evolved. The Internet, for example, was also first developed for its military applications, and for all the rapidity of its development in the 1990s, it remains unclear just how its use will be structured. Though the World Wide Web has shown tremendous promise as a commercial enterprise, it still lacks the kind of programming—like *Amos 'n' Andy* in radio, or *I Love Lucy* in television—that transformed both into truly mass media of art and entertainment. Television, for its part, has long been the medium of a rising middle class of immigrants and their children, in terms of the figures who have exploited its possibilities (from RCA executive David Sarnoff to stars like Jackie Gleason); the new genres it created (from the miniseries to the situation-comedy); and the audiences (from urban Jews to suburban Irish Catholics) who adopted them with enthusiasm.

For much of this century, the mass appeal of popular culture has been viewed as a problem. “What is the jass [*sic*] music, and therefore the jass band?” asked an irritated New Orleans writer in 1918. “As well as ask why the dime novel or the grease-dripping doughnut. All are manifestations of a low stream in man’s taste that has not come out in civilization’s wash.” However one may feel about this contemptuous dismissal of jazz, now viewed as one of the great achievements of American civilization, this writer was clearly correct to suggest the demographic, technological, and cultural links between the “lower” sorts of people in American life, the media they used, and forms of expression that were often presumed guilty until proven innocent.

Indeed, because education and research have traditionally been considered the province of the “higher” sorts of people in American life, popular culture was not considered a subject that should even be discussed, much less studied. Nevertheless, there have always been those willing to continue what might be termed the “Tocquevillian” tradition of treating popular culture with intellectual

seriousness and respect (if not always approval). In his 1924 book *The Seven Lively Arts* and in much of his journalism, critic Gilbert Seldes found in silent movies, cartoons, and pop music themes and motifs fully worthy of sustained exploration. Amid the worldwide crisis of the 1930s and 1940s, folklorist Constance Rourke limned the origins of an indigenous popular culture in books like *American Humor* (1931) and *The Roots of American Culture* (1942). And with the rise of the Cold War underlining the differences between democratic and totalitarian societies, sociologists David Riesman and Reuel Denny evaluated the social currents animating popular culture in Denny's *The Astonished Muse* (1957), for which Riesman, who showed a particular interest in popular music, wrote the introduction.

European scholars were also pivotal in shaping the field. Johan Huizinga's *Homo Ludens* (1938), Roland Barthes's *Mythologies* (1957), and Antonio Gramsci's prison letters (written in the 1920s and 1930s but not published until the 1970s) have proved among the most influential works in defining the boundaries, strategies, and meanings of popular culture. While none of these works focused on American popular culture specifically, their focus on the jetsam and flotsam of daily life since the medieval period proved enormously suggestive in an American context.

It has only been at the end of the twentieth century, however, that the study of popular culture has come into its own in its own right. To a great extent, this development is a legacy of the 1960s. The end of a formal system of racial segregation; the impact of affirmative action and government-funded financial aid; and the end of single-sex education at many long-established universities dramatically transformed the composition of student bodies and faculties. These developments in turn, began having an impact on the nature and parameters of academic study. While one should not exaggerate the impact of these developments—either in terms of their numbers or their effect on an academy that in some ways has simply replaced older forms of insularity and complacency with new ones—it nevertheless seems fair to say that a bona fide democratization of higher education occurred in the last third of the twentieth century, paving the way for the creation of a formal scholarly infrastructure for popular culture.

Once again, it was foreign scholars who were pivotal in the elaboration of this infrastructure. The work of Raymond Williams, Stuart Hall, and others at Britain's Centre for Contemporary Cultural Studies in the 1950s and 1960s drew on Marxist and psychoanalytic ideas to explain, and in many cases justify, the importance of popular culture. Though not always specifically concerned with popular culture, a panoply of French theorists—particularly Jacques Derrida, Louis Althusser, and Michel Foucault—also proved highly influential. At its best, this scholarship illuminated unexamined assumptions and highly revealing (and in many cases, damning) patterns in the most seemingly ordinary documents. At its worst, it lapsed into an arcane jargon that belied the directness of popular culture and suggested an elitist disdain toward the audiences it presumably sought to understand.

Like their European counterparts, American scholars of popular culture have come from a variety of disciplines. Many were trained in literature, among them Henry Nash Smith, whose *Virgin Land* (1950) pioneered the study of the Western, and Leslie Fiedler, who applied critical talents first developed to study classic American literature to popular fiction like *Gone with the Wind*. But much important work in the field has also been done by historians, particularly social historians who began their careers by focusing on labor history but became increasingly interested in the ways American workers spent their free time. Following the tradition of the great British historian E. P. Thompson, scholars such as Herbert Gutman and Lawrence Levine have uncovered and described the art and leisure practices of African Americans in particular with flair and insight. Feminist scholars of a variety of stripes (and sexual orientations) have supplied a great deal of the intellectual energy in the study of popular culture, among them Ann Douglas, Carroll Smith-Rosenberg, and Jane Tompkins. Indeed, the strongly interdisciplinary flavor of popular culture scholarship—along with the rise of institutions like the Popular Press and the Popular Culture Association, both based at Bowling Green University—suggests the way the field has been at the forefront of an ongoing process of redrawing disciplinary boundaries in the humanities.

By the 1980s, the stream of scholarship on popular culture had become a flood. In the 1990s, the field became less of a quixotic enterprise than a growing presence in the educational curriculum as a whole. Courses devoted to the subject, whether housed in communications programs or in traditional academic departments, have become increasingly common in colleges and universities—and, perhaps more importantly, have become integrated into the fabric of basic surveys of history, literature, and other fields. Political scientists, librarians, and curators have begun to consider it part of their domain.

For most of us, though, popular culture is not something we have to self-consciously seek out or think about. Indeed, its very omnipresence makes it easy to take for granted as transparent (and permanent). That's why trips to museums—or encyclopedias like this one—are so useful and important. In pausing to think about the art of everyday life, we can begin to see just how unusual, and valuable, it really is.

—Jim Cullen

## Eames, Charles (1907-1978), and Ray (1916-1988)

---

The husband and wife team of Charles and Ray Eames created a multitude of artistic works in various fields from the 1940s to the 1970s. Charles Eames was trained as an architect; Ray (Kaiser) was an artist. After their marriage in 1941, they formed an unparalleled design team. Together the Eames' designed stage and film sets, furniture, exhibitions, interiors, houses, multimedia presentations, short films, graphic designs, industrial products, and books. Their greatest impact may have come from their work in two particular areas—architecture and furniture. The Eames' two Case Study Houses (1945-1950) with Eero Saarinen, Incorporated, prefabricated elements into a simple rectangular box; the houses became internationally famous as premier examples of domestic modernism. The Eames' furniture work evolved out of a series of experiments with molded plywood done for the Navy during World War II. "Eames Chairs" were widely praised in the 1940s and 1950s for their curving plywood forms, light weight, simplicity, and inexpensive price; they were also widely imitated.

—Dale Allen Gyure

## Earth Day

---

Inspired by anti-war "teach-ins" and the activist culture of the late 1960s, United States Senator Gaylord Nelson of Wisconsin organized the first Earth Day on April 22, 1970, to raise awareness of environmental issues and elevate the state of the environment into mainstream political discourse. Rachel Carson's book, *Silent Spring* (1962), examined why there were increasing levels of smog in the nation's cities, and focused attention on environmental disasters such as the Santa Barbara oil spill (1969) and the fire on Cleveland's Cuyahoga River due to oil and chemical pollution (1969), and gave rise to local groups of concerned citizens and activists. Enlightening photographs of the Earth taken by astronauts underscored the fact that we inhabit a finite system, small in comparison with the vastness of the solar system, and changed the way people visualized the planet. On that first Earth Day, an estimated 20 million people participated in peaceful demonstrations, lectures, and celebrations all across the country—10,000 grade schools and high schools, 2,000 colleges, and

1,000 communities were involved. Extensive media coverage of the events succeeded in alerting people to the deteriorating condition of the environment and increased the influence of environmental groups on government and industry. For many, Earth Day 1970 radically altered the image of nature and how society should treat it, and marked the beginning of the modern environmental movement.

The dramatic rise in citizen awareness after Earth Day made pollution a major news story. Programs on pollution appeared on television, newspapers hired environmental reporters, advertisements stressed the ecological qualities of products, and books and magazines addressed the protection of nature. Within months of the original Earth Day, the Environmental Protection Agency was created. The Clean Air Act, the Clean Water Act, and several other important environmental laws were passed in the early 1970s. Politicians spoke out on ecological issues in their campaigns and speeches. Companies that violated pollution laws were taken to court, and membership in many environmental groups doubled and tripled. The construction of nuclear power plants in the United States halted in 1978. Many experienced activists, trained in the anti-war, civil rights, and women's movements, used civil disobedience to combat polluters. Subsequent Earth Days continued to put pressure on government and industry to act responsibly toward the environment.

Along with some environmental organizations, Earth Day lost steam during the pro-environmental Carter administration, as people perceived that ecological problems were being addressed. Some conservation efforts also prompted an angry backlash by conservative groups. During the 1980s, the Reagan and Bush administrations systematically dismantled many environmental laws. When Reagan named the imprudent and insensitive James Watt to the position of Secretary of the Interior, however, environmental organizations became rejuvenated and their membership rolls increased. In 1989, the editors of *Time* magazine abandoned their tradition of featuring a man or woman of the year in favor of featuring "The Endangered Planet." In reaction to such environmental concerns as global warming and the depletion of the ozone layer, and such eco-disasters as Bhopal, Chernobyl, and the Exxon Valdez oil spill, organizers of Earth Day intensified their efforts on the twentieth anniversary in 1990.

In 1990, Earth Day turned global. On April 22, Earth Day united more people concerned about a single cause than any other event in the history of the world—139 nations participated. The *New York Times* reported that 200 million people took part in the largest grassroots demonstration in history. More than one million people gathered in Central Park to hear speakers and entertainers, and more than 200,000 people assembled in front of the United States Capitol to listen to music and speeches.

The environmental movement is one of the most successful and enduring reform movements of the twentieth century. A majority of Americans now believe that the poor quality of the environment is one of our most serious national problems. Millions of families take for granted the policy of reduce, reuse, and recycle. While all environmental accomplishments since 1970 cannot be directly attributed to Earth Day, it has succeeded in transforming a fairly specialized interest into a pervasive, popular one, and has made ecological consciousness part of the American value system.

—Ken Kempcke

## Earth Shoes

---

When the Earth Shoe was brought to America in 1970, its advertising campaign promised to bring wearers closer to nature. With "negative" heels that sat lower than the front, Earth Shoes claimed to offer wearers a more natural posture, closer to aboriginal human locomotion. The shoes were a startling multi-million dollar success for two reasons. First, the back-to-nature promise of Earth Shoes resonated with members of the burgeoning environmental movement. Second, the boxy appearance of the shoe was viewed as an antifashion statement; as such, it was a social statement favoring simplicity over image, substance over style. In time the square, broad shape of the Earth Shoe was emulated in a wide range of other shoes; for a few years its look became a hallmark style of the 1970s.

## Eastwood, Clint (1930—)

---

In the course of a career that, by the late 1990s, had spanned almost half-a-century, Clint Eastwood rose from obscure bit-part movie actor to America's number one box-office star, became a producer for his own highly successful company, Malpaso, and established himself as a film director of some accomplishment. He is often compared with Gary Cooper—both men have been frequently

Clint Eastwood

and accurately identified as long, lean, and laconic—but Eastwood's dark good looks and granite-like persona, often self-mocking under a cloak of grim impassivity, are very different from the earlier icon whose career ended as Eastwood's began.

Eastwood's own iconic associations are, most famously, the cheroot-chewing Man With No Name, poncho-clad, unkempt, and unshaven as he goes about his bloody business; he is also Harry Callahan, dark avenger of the San Francisco police force, clean-cut and neatly suited as he goes about even bloodier business. His true significance in the history of Hollywood filmmaking, however, attaches to the fact that, as both director and actor, he breathed new life into a dying American art form, the Western. Finally, with *Unforgiven* (1992), Clint Eastwood subverted the myth of this historic canon, inverting his own practiced characterization to transmit a moral message for a modern age. His now reluctant avenging gunslinger was Harry Callahan or, more appropriately, Josey Wales, grown weary of violence—a capitulation that, perhaps, paved the way for Frank Horrigan protecting the American president (*In the Line of Fire*, 1993) or, further expanding his range, Robert Kincaid surrendering to a woman's love (*The Bridges of Madison County*, 1995).

Born in San Francisco on May 31, 1930, Clinton Eastwood Jr. passed an itinerant, Depression-hit childhood with schooling to match. After high school, he earned his keep variously logging wood, stoking furnaces, and pumping gas before joining the army for four years, where he coached athletics and swimming. Subsequently, he briefly attended Los Angeles City College, where he met his first wife, Maggie Johnson (the mother of his actress daughter, Alison). In 1955, on the strength of his looks and physique, Eastwood was signed

to a \$75-a-week contract—dropped after eighteen months—by Universal Studios, one of a standard, low-paid intake of good-looking men whose screen potential studios neglected to nurture. For four years he passed unnoticed in a string of parts, ranging from tiny to small, in ten or so largely forgotten films beginning with *Revenge of the Creature* (1955), ending with *Lafayette Escadrille* (1958) and taking in along the way the Rock Hudson vehicle *Never Say Goodbye* (1956) and his first (and some say worst) excursion into cowboy territory, *Ambush at Cimarron Pass* (1958).

During this time, Eastwood supplemented his income with odd jobs until he was cast in a new TV Western series of uncertain future. In the event, *Rawhide* ran for eight seasons from 1959-1966 and Rowdy Yates, played by Eastwood, became a familiar figure to followers of the series. More importantly, he was noticed by the Italian director Sergio Leone, offered a part in Italy, and found himself launched as The Man With No Name in *A Fistful of Dollars/Per un Pugno di Dollari* (1964). The film emerged from a genre newly popular in Italy during the 1960s that mined the ore of American cowboy films in a peculiarly bloody way and came to be known as spaghetti Westerns. *A Fistful of Dollars*, given a facelift by the presence of an American actor-hero and Leone's particular facility with celluloid violence, was astonishingly successful and two sequels—*For a Few Dollars More/Per Qualche Dollari in piu* and *The Good, The Bad and the Ugly/Il Buono il Brutto il Cattivo*—both starring Eastwood, followed in 1966 and 1967, bringing Leone a fortune and an invitation to Hollywood and catapulting Clint Eastwood to international stardom.

The first two of the Leone trilogy were released in America in 1967; the third followed a year later. The silent, detached, gun-comfortable bounty hunter of the films returned to America, set up his Malpaso production company and, in a lucrative deal with United Artists, relaunched himself on home soil with *Hang 'em High* (1968), an unashamed attempt to emulate the noisy gore of his Italian vehicles, in which the newly-minted star, saved from a lynching and appointed as a deputy sheriff, grimly sets out to take revenge on nine men. The film was slick, violent, and not particularly good but, coinciding as it did with the popularity of the spaghetti Westerns, it established Eastwood with the cinema-going public and, indeed, with hindsight, one detects the first seeds of the avenging angel—or devil—which would come to mark his more serious and ambitious mid-period Westerns.

When the box-office top ten list was issued in 1968, the cowboy star was in at number five, having begun his association with director Don Siegel in *Coogan's Bluff* (1968). This "urban Western" let Eastwood loose in Manhattan as an Arizona sheriff whose methods clash with those of Lee J. Cobb's city detective. It was an explosive crime melodrama with Eastwood seen, for the first time, in modern clothes and minus his hat. Attempts to broaden his range in 1969 took him to World War II in *Where Eagles Dare* and back to the Gold Rush days in the musical *Paint Your Wagon*. The first was a soldiering potboiler, the second a visually attractive failure, but neither dented his popular image. He retained his number five position and, by 1970, after the crude war film *Kelly's Heroes* and *Two Mules for Sister Sara*, in which he reverted to cowboy hat and five o'clock shadow to play a taciturn mercenary protecting a supposed nun (Shirley MacLaine) from rapists, he rose to number two.

Nineteen seventy-one was a key year in Eastwood's career. Displaying the business acumen and Midas touch that would in time make many millions of dollars for Malpaso, he rejoined director Don Siegel for *Dirty Harry*, bringing to the disillusioned Harry Callahan

the same implacable qualities that had been displayed in his cowboy roles. The film is uncompromisingly brutal and raised questions in certain quarters as to its morality, perceived by some as favoring the vigilante methods of the ultra-conservative Right. A closer look confirms that it is, rather, a protest against messy loopholes in law enforcement. The moral message or otherwise aside, however, the film was monumentally successful, catering to audiences' taste for psychopathic serial killers and tough anti-heroes, and was followed by four increasingly formulaic and cynical sequels over the next 16 years.

More importantly for the long term, 1971 brought Eastwood's directing debut, *Play Misty for Me*. As he would continue to do in all but a couple of his self-directed films, he cast himself in the lead, here as a radio disc jockey who becomes the obsessive object of a murderously psychotic fan's infatuation. The film demonstrated that he had learned much from Siegel—it was taut, tense, entertaining, and very beautifully photographed in Carmel and Monterey. From 1971 to 1998, Clint Eastwood made 31 feature films, directing 18 of them and producing several. While bent, successfully, on proving he was not just a pretty face and a fine figure of a man, he veered alarmingly between the ambitious, the worthwhile, and the purely commercial. In the last category his intelligent judgment sometimes faltered, badly with the nonsensical tedium of *The Eiger Sanction* (1975); and although his screen presence only grew more charismatic with age—the body startlingly well-preserved, the seamed face topped by graying hair increasingly handsome—he made a number of films that were essentially worthless retreads of familiar ground (e.g. *The Gauntlet*, 1977, *City Heat*, 1994, *The Rookie*, 1990, and *A Perfect World*, 1993, in all of which he played cops of one sort or another).

At the same time, he experimented, not always successfully, with material that, in the context of his recognized oeuvre, was distinctly off the wall as in *Every Which Way but Loose* (1978), in which he crossed the country accompanied by an orangutan won in a bet. There was, however, a wistful sweetness about the small-scale *Honkytonk Man* (1982), in which he directed himself as an aging alcoholic country singer and allowed himself to play guitar and sing to touching effect.

During the 1980s, Eastwood the actor retained his superstar status, undamaged by the tabloid headline-making scandal of his affair with actress Sondra Locke, for whom he left his wife of 27 years. Indeed, he seemed to rise above gossip and escape mockery, despite court cases—Locke sued him, he sued the *National Enquirer*—and a liaison with actress Frances Fisher that produced a child, only for him to leave and marry Dina Ruiz in 1986, becoming a father for the fourth time. Eastwood the director, meanwhile, his best work yet to come, was held in increasing esteem by his peers, who acknowledged his unshowy professionalism. As early as 1980 the Museum of Modern Art in New York held a retrospective of his films; in 1985 he was given a retrospective at the elite Cinematheque Francaise in Paris and made a Chevalier des Arts et Lettres by the French government. From 1986-1988 he served as the elected mayor of his beloved Carmel, where Malpaso is based. Also during the decade, he made *Pale Rider* (1985) which, with *High Plains Drifter* (1972) and *The Outlaw Josey Wales* (1976), form a trio of classic Westerns, spare in execution against an epic landscape, in all of which the actor played the mysterious loner pitting himself against dark forces and giving no quarter.

Long a jazz aficionado (he played jazz piano in *In the Line of Fire*), in 1988 Eastwood made, as director only, *Bird*, a biopic of Charlie Parker (played by Forest Whitaker). Somewhat restrained and

over-long—a recurring weakness of his more ambitious films—it was nevertheless lovingly crafted and raised his status as a serious director. He had his failures, too: the public did not respond to *White Hunter*, *Black Heart* (1990), an interesting faction about the making of *The African Queen*, while he was unable to find the key to capturing on film John Berendt's enthralling Savannah odyssey, *Midnight in the Garden of Good and Evil* (1997).

As the first century of the Hollywood film approached its end, Clint Eastwood had, however, earned universal respect and admiration for his achievements. The holder of four Academy Awards (including Best picture and Director) for *Unforgiven*, and presenting himself in public with gravitas and impeccably groomed dignity, he had become the elder statesman of the industry's creative arm, a position that was, as David Thomson put it, "rendered fitting by his majesty."

## Easy Rider

With *Easy Rider*, writers and co-stars Peter Fonda and Dennis Hopper captured in a popular medium many of the ideals of the youthful "counterculture" circa 1969. *Easy Rider* presented both the hedonism of drug use and the sober idealism of the hippy commune. The film also used a hip coterie of cutting-edge rock groups to articulate its indictment of conformist American culture. However, *Easy Rider's* continuing cultural resonance and filmic influence also owes much to its evocation of more traditional myths of American identity.

Dennis Hopper came to prominence for his precocious performance in an earlier film about youthful rebellion, *Rebel without a Cause* (1955). After appearing again with James Dean in *Giant* (1956), Hopper became a proto-hippy drop-out from the Hollywood system, smoking pot and eating peyote in preference to making mainstream movies. In 1967, Hopper acted with his friend Peter Fonda, scion of Hollywood icon Henry, in *The Trip*. Director Roger Corman refused to spend time or money on pivotal scenes concerning LSD "trips," so Hopper and Fonda shot the scene themselves at their own expense, garnering valuable experience and ideas for their future masterpiece. *The Trip* was co-written by Jack Nicholson, who in the same period scripted another avant-garde psychedelic film, *Head* (featuring the

previously strait-laced Monkees), and starred in *Hells' Angels on Wheels*, an excruciating attempt at combining two types of cultural rebels—bikers and drug-taking hipsters—in one film. Fonda and Hopper worked on two more motorcycle movies—the high-grossing *Wild Angels* and *The Glory Stompers* respectively—before reuniting as co-writers (with Terry Southern, author of *Candy*) and co-stars (with Nicholson) for what Hopper called "another bike film. But a different one."

*Easy Rider* was "different" because, unlike *Hells' Angels on Wheels*, it successfully infused the "bike film" genre with the psychedelic surrealism of *The Trip* to produce a movie which could viably claim to reflect the ethics and aesthetics of contemporary youth culture. The film begins with two bikers, Wyatt/Captain America (Fonda) and Billy (Hopper), receiving payment for their role as middlemen in a cocaine deal, before setting off for Mardi Gras in New Orleans. The narrative thereafter is deliberately loose, but essentially focuses on the bikers' heroic will to freedom from the moral strictures of American society, which Wyatt and Billy periodically encounter from assorted, prejudiced provincials. When Billy complains that "All we represent to them, man, is somebody needs a haircut," alcoholic ACLU lawyer George Hanson (Nicholson), who joins the bikers' odyssey in Texas, explains that: "What you represent to them is freedom. . . . It's real hard to be free when you're bought and sold in the marketplace. . . . They're not free. . . . Then they're gonna get real busy killin' and maimin' to prove to you that they are." *Easy Rider's* clarion call to "freedom" was also expressed by the titles of soundtrack songs such as "Born to Be Wild" (Steppenwolf) and "Wasn't Born to Follow" (The Byrds). This utilization of rock 'n' roll, the most popular mode of expression for youth culture in the late 1960s, was inspired. In *Village Voice*, Robert Christgau enthused: "*Easy Rider* is a double rarity . . . not only does it use rock successfully, it also treats the youth drop-out thing successfully. You can't have one without the other."

However, like its literary, beat generation antecedent, Jack Kerouac's *On the Road*, *Easy Rider* also tapped into older American notions of liberty and individualism. That the heroes' names echo Wyatt Earp and Billy the Kid is no accident. Billy and Wyatt move from the urbanized, un-Wild West to the Deep South reclaiming rural America (lovingly filmed by director of photography Laszlo Kovacs) as a frontier. Early in *Easy Rider*, Wyatt and Billy stop at a ranch, and an elaborate comparison is constructed between the rancher's horses and the bikers' machines. *Easy Rider* evinces some unease as to whether being perpetually on the road, astride a product of modern technology, is the most satisfactory form of "freedom." Wyatt lauds the rancher: "It's not every man who can live off the land. Do your own thing in your own time." Here, the free man is no less than Thomas Jefferson's ideal, the yeoman farmer. The hippy commune which Wyatt and Billy later visit is a countercultural reconstruction of this agrarian ideal: disillusioned young urbanites ("All cities are the same" says one) going back to the garden, even if this Eden is the desert landscape of the Southwest. As Frederick Tuten observed in 1969, "the commune scene is at the center of the film's nostalgic values." *Easy Rider's* "nostalgia for a still beautiful America" (Tuten), and for a pre-urban, pre-capitalist American hero, is apparent in the doom-laden climax of the movie. While Billy rejoices "We're rich. . . . You go for the big money and you're free," his brooding compadre insists "We blew it." For Wyatt, the tainted cash gained from the cocaine deal has not facilitated liberty. Finally, even Wyatt and Billy have been "bought and sold in the marketplace," just like

Peter Fonda in a scene from the film *Easy Rider*.

the stereotypical Southern rednecks who murder the outlaws in the movie's final scene.

As well as projecting Jack Nicholson from art-house obscurity to Hollywood stardom, *Easy Rider* was extremely influential in establishing the road movie as the modern paradigm of the frontier freedom fable. *Vanishing Point* (1971) replaced *Easy Rider*'s pot fumes with amphetamine-fuelled paranoia appropriate to the decline of the hippy dream, while *Badlands* (1973) and *Natural Born Killers* (1994) both combined *Easy Rider*'s legacy with that of another neo-Western counterculture allegory, *Bonnie and Clyde*. *Thelma and Louise* (1991) went some way to revising the insidious sexism of *Easy Rider* and the genre in general, but in attempting to reveal "the vanishing face of America" (director Ridley Scott), this "feminist road movie" retained the convention of the hero(in)es' gloriously tragic demise.

## Ebbets Field

From 1913 to 1957 Ebbets Field was the home to major league baseball's Brooklyn Dodgers. The venue was considered by many to be the heart and soul of Brooklyn, New York, but it is arguable that at no other point in sports history has there been an environment in which the players, the fans, and the ballpark were so intertwined. Ebbets Field, in all its baseball glory, gave Americans much to celebrate about the game that so closely mirrored the aspirations of their society. Ebbets Field stood as a symbol for the unique character of Brooklyn—a city not only with a baseball team, but one with an independent identity, different to the other boroughs of New York. The ballpark provided a setting in which everyone in the ethnically and racially diverse community of Brooklyn could come together on an equal footing. The electric environment of the Dodgers and their home ground helped maintain that interracial unity for the better part of the first half of the twentieth century. At Ebbets Field, the Dodgers and their fans pulled together in a common cause: the establishment of a baseball tradition in Brooklyn that would best reflect the identity of the people and the culture of the borough.

Charlie Ebbets, the owner of the Dodgers from 1898 to 1925, moved the team to the new venue, which he named after himself, after their old ballpark, Washington Park, became too crowded. Ebbets

**Ebbets Field during the 1956 World Series.**

Field opened on April 9, 1913, with a seating capacity of 25,000. In later years the stadium came to hold over 30,000 people. Renovations transformed the park over the years from a pitcher's to a hitter's stadium. The park was small, but it was acceptable to Brooklyn because it was very comfortable. When Dodger fans went to the stadium to see a game, the experience was made additionally interesting by the many different types of characters who were rooting for the team. The "Dodger Sym-phony," for example, was made up of five fanatical fans who danced and played in the stands and on top of the dugout. Before each game, fans lined up along the railing to shake the hands and acquire autographs of the players. The players and fans had a personal relationship that was unique to major league baseball. The Dodger fans loved their team because the Dodger players symbolized the working class ethos prevalent in Brooklyn society at the time; the fans could identify with the players and respect their efforts.

There were several milestones reached at Ebbets Field that affected major league baseball and American popular culture. The first ever televised major league baseball game was played at Ebbets Field on August 26, 1939 when Brooklyn met the Cincinnati Reds in

the first game of a Saturday afternoon doubleheader. Televised by NBC, the contest paved the way for the regular TV transmission of sport programs in later decades. The second milestone witnessed at this ballpark was more significant. On April 15, 1947, Jackie Robinson became the first African-American to play in a major league game, thus breaking the color barrier that baseball had been forced to adopt back in the 1880s. The Dodgers became the first integrated team in major league baseball, thanks to their innovative president and general manager, Branch Rickey. Soon, the sport would truly become interracial, with many African American players admitted to the major leagues. It was appropriate that Ebbets Field, a park that was already known for its ethnic and racial diversity among the fans, should have pioneered integration on the field.

Winning was as important to Dodger fans as it was to fans of other teams, but Dodger fans also supported their team through many losing seasons. Still, the Dodgers did win nine National League pennants and secured the World Series title, for the only time in their history, in 1955. The people of Brooklyn did much celebrating after that championship, acknowledging their team's star quality as they

had always done, but this time giving them a victory parade. But their joy was short-lived. After the 1957 season, the Dodgers left Brooklyn and Ebbets Field for Los Angeles, where greater profits could be made. It was not an issue of attendance, for the Dodgers had always drawn well, but one that revolved around new financial opportunities on the West Coast. When the Dodgers left, the heart of Brooklyn departed with them and things were never the same again for the borough. Sadly, Ebbets Field, which had signified the ideal of what an American ballpark should be—a place of true community on the field and off—was demolished in 1960.

## Ebony

In 1945, John H. Johnson conceived of a new magazine showing positive photographs of African Americans. The result was *Ebony*, the most successful African American publication in history, with a one-time circulation of more than two million and a pass-around readership of nine million. Building on the success of *Ebony*, Johnson went on to make privately-held Johnson Publishing Co. one of the five largest Black-owned businesses in the United States. With its sister magazines, including *Jet*, a Johnson publication reached one out of every two African-American adults by the end of the twentieth century, a saturation rate few other publishers could match. Johnson was one of the richest men in the United States and perhaps the most influential African American to ever live even though readers have not always been able to relate to the image of Blacks as presented in *Ebony*.

The first African American magazines, like Black newspapers, were born during the period of agitation against slavery that led in part to the Civil War. Titles such as the *Mirror of Liberty* and *National Reformer* were linked to abolitionism, but the French language *L'Album Litteraire*, *Journal des Jeunes Gens*, and *Les Canelles* and the American *Anglo-African Magazine* treated literature and other political issues as well. New Black magazines began appearing after the war and emancipation. Some of the more successful post-bellum titles that spoke to the conditions of their readers were *Southern Workman*, *African Methodist Episcopal Church Review*, *Colored American Magazine*, and *Voice of the Negro*. In the early twentieth century, the NAACP's *Crisis* briefly attracted more than one hundred thousand readers. It was joined by the *Messenger*, *Journal of Negro History*, *Opportunity*, *Journal of Negro Education*, *Phylon*, and

*Ebony* founder John H. Johnson with his daughter, 1992.

others. But none of these publications could boast of sustained mass circulation. They were read and supported by relatively small numbers of the better educated, upper-class Blacks. The vast majority of literate middle and lower-class Blacks read nationally-circulated newspapers like the *Negro World*, *Chicago Defender*, and *Pittsburgh Courier* before World War II.

John Harold Johnson was born into poverty in rural Arkansas City, Arkansas, on January 19, 1918. His father was killed in a sawmill accident when he was eight years old and his mother remarried in 1927. The curriculum for black students in the segregated Mississippi River town of Arkansas City stopped at the eighth grade, so Johnson and his family became part of the early twentieth-century Black diaspora to the North and migrated to Chicago in 1933, in part because of the World's Fair there. Johnson became an honor student at DuSable High School. At a convocation, he delivered a speech heard by Harry H. Pace, president of the Supreme Liberty Life Insurance Company, a company that sold to Blacks who would not have been otherwise able to get life insurance.

Pace had encouraged a number of talented young Blacks, including singer and actor Paul Robeson, and gave Johnson a part-time job at his insurance company so Johnson could attend the University of Chicago. Johnson's interests were in the business world however, and he dropped out of college to marry and work full time for Pace's insurance company. Among Johnson's duties was to collect news and information about African Americans and prepare a weekly digest for Pace, loosely based on the format of the popular *Reader's Digest*. Johnson reasoned that such a Black digest could be marketed, and sought a \$500 bank loan in late 1942. The only

collateral that he could offer was some new furniture that he had helped his mother buy. She considered his offer, but refused to give an answer until she had prayed on the matter. Without an answer a week later, Johnson offered to pray with her, as his 1989 autobiography relates. A few days later, check in hand, *Negro Digest* was born and reached \$50,000 in sales within a year.

With the end of World War II in 1945, Johnson predicted that returning Black veterans would need a new magazine to help them cope with the racism back home. He was particularly concerned by how the White mainstream press portrayed African Americans. No notice was given of Black births, education, marriages, achievements, or even deaths in daily newspapers. Only when a Black committed a crime were names and photographs published. "We believed in 1945 that Black Americans needed positive images to fulfill their potential," Johnson wrote. "We believed then—and we believe now—that you have to change images before you can change acts and institutions." Johnson also recognized that the great Black and White magazines of words, *Time*, *Reader's Digest*, *Saturday Evening Post*, and his own *Negro Digest*, had reached their peak and were giving way to what he called the "blitzkrieg of the photograph." *Life*, a weekly magazine founded by Henry Luce in 1936, and *Look*, which first appeared in 1937, featured full page pictures by the leading photographers of the day and developed massive circulations. Johnson believed that the photographic magazines of the 1940s, including his monthly *Ebony*, accomplished what television did in the following decades, "opened new windows in the mind and brought us face to face with the multicolored possibilities of man and woman."

The first issue of *Ebony* appeared on November 1, 1945, sold for 25 cents, and featured a black-and-white photograph of seven boys, six White and one Black, from a New York City settlement house on its front cover. Inside were articles on novelist Richard Wright, a Black businessman who went from "slave to banker," and the first appearance of a regular feature, a photo-editorial, on post-war unemployment. The magazine was not an instant success. Johnson was eager to imitate the success of *Life*, which devoted a significant portion of each weekly issue to the activities of rich, famous, and glamorous people. Johnson sought to emphasize the more glamorous aspects of African-American life, in contrast to the negative tone of *Negro Digest*, so he concentrated on Black accomplishments in the worlds of entertainment and business. His elitist perspective did not always represent the aspirations of middle and lower-class Blacks, who bought the magazine for escapism rather than inspiration. Black press historian Walter C. Daniel observed that the early *Ebony* advanced a two-society portrait of American life, one Black and another White. "*Ebony* extracted a journalism model and economic clout from one and used these to propel the accomplishments and aspirations of the other without the encumbrances of philanthropy that had obligated almost every previous black institution," Daniel wrote. Still, *Life* and *Look* had much the same rose colored perspective as *Ebony*, and did not begin to promote actively more serious photojournalism, at least on their covers, until the 1950s and 1960s.

Before the first issue, Johnson had announced that he would not accept any advertising until *Ebony* had achieved a circulation of 100,000 copies. The first issue sold 50,000 copies but Johnson had to wait until May 1946 before accepting his first ad. He wanted to publish full page four-color ads like *Life* and *Look*, but most Black companies could not afford the cost. Johnson wrote to the chief executives of large corporations trying to convince them to consider Black as well as White publications for their advertising. He struck pay dirt with Eugene F. MacDonald, the CEO of the Chicago-based

Zenith Corporation. MacDonald was a former arctic explorer and personal friend of Matthew Henson, a Black man who was one of the first to step on the North Pole. Zenith was not the first White owned company to advertise in Black publication. Wrigley's gum and Bayer Aspirin had advertised in the *Negro World* in the 1920s. But a long term contract with Zenith opened doors to other White corporations and insured *Ebony's* continued profitability as its circulation grew. Over its history, *Ebony* meant prestige to its advertisers even as the magazine was criticized for an excess of alcoholic beverage ads and the use of lighter hued Black models.

Along with profiles of celebrities and businessmen, *Ebony* provided reliable news on the battle against segregation and the rise of the Civil Rights movement during the 1950s and 1960s. Johnson's pictorial editorials praised student activism and condemned so-called Uncle Tom faculty and administrators in traditional African-American colleges and universities. *Ebony* presented news and analysis on the rise of nationalism among former African colonies, including biographical sketches of diplomatic and government officials in the new nations and the representatives they sent to the United States and United Nations. A 1953 photograph of Harry Belafonte with actors Janet Leigh and Tony Curtis was the first time a Black person was seen with two Whites on the cover of a U.S. magazine. Rev. Dr. Martin Luther King, Jr., published an article on a visit to India in *Ebony* and contributed a regular question and answer column, "Advice for Living By." *Ebony* photographer Moneta Sleet, Jr., became the first Black male to be awarded a Pulitzer Prize in 1969.

Johnson openly endorsed political candidates in *Ebony*, beginning with Harry Truman in 1948, in contrast to the more politically obtuse *Life*. He encouraged Blacks to think of politics in economic rather than racial terms, but remained a Democrat through the years, supporting Adlai Stevenson over Dwight Eisenhower, who had justified the Army's Jim Crowism during World War II. Johnson supported John F. Kennedy in 1960, and an *Ebony* writer predicted that Kennedy would support liberal race legislation in Congress, a promise fulfilled by Lyndon Johnson in 1964 and 1965. Johnson has met with every subsequent president, including his home state governor, Bill Clinton.

*Ebony's* bicentennial issue in 1976 presented "200 Years of Black Trials and Triumphs," an overview of African American history. On the occasion of its 35th anniversary in 1980, *Ebony* claimed a total readership of over six million readers. *Ebony* celebrated its 50th anniversary in 1995 with Johnson's daughter, Linda Johnson Rice, as president and chief operating officer. The issue featured "50 Who Have Changed America," a list of prominent Blacks including Rosa Parks, Michael Jordan, Colin L. Powell, and Oprah Winfrey. Johnson, written about and honored more than any living Black journalist, began the issue by observing "institutions, corporations, magazines, principalities have lived and died since Nov. 1, 1945, and *Ebony* is still here, and still No. 1" and repeated his favorite saying, "the only failure is failing to try." *Ebony* remains his living legacy to that end.

## EC Comics

EC Comics was arguably the most innovative and controversial company in the history of mainstream comic-book publishing. Although EC thrived for only half-a-decade in the early 1950s, it accounted for a body of comic-book work that shook up the industry and has continued to influence popular culture artists ever since. EC's publications featured some of the cleverest writing and most accomplished artwork ever to appear in comic books, and attracted a fanatically enthusiastic following; but they also provoked harsh criticism from those who charged that they degraded the morals of the nation's youth. Whatever might be said of EC's comic books, they certainly left few readers disinterested.

EC began in 1946 as a company called Educational Comics. Its founder, Max C. Gaines, was one of the original entrepreneurs responsible for the development of comic-book magazines. In 1947 his son William M. Gaines inherited the company and soon thereafter embarked upon a new editorial direction for the line. Keeping the imprint EC, the younger Gaines changed the company's full name to Entertaining Comics in 1950 and launched a series of new titles promoted as EC's "New Trend" comic-books. These titles eventually included three horror comics called *Tales from the Crypt*, *The Vault of Horror*, and *The Haunt of Fear*; the crime titles *Crime Suspense Stories* and *Shock Suspense Stories*; the science-fiction series *Weird Fantasy* and *Weird Science*; the war comics *Two-Fisted Tales* and *Frontline Combat*, and a humor comic called *Mad*.

The New Trend titles were different from anything that had come before them. All featured quality artwork—some of the most innovative and accomplished ever seen in the medium, and writing that, while often crude, was still far more sophisticated than the norm for comic books. William Gaines and his chief collaborator, Al Feldstein, wrote most of the stories for the horror, crime, and science-fiction titles, and they obviously enjoyed their work. As Feldstein later explained, "We always wrote to our level." They aimed the stories at adolescents and young adults, although their audience doubtless included many children as well. The stories commonly incorporated such "adult" themes as murder, revenge, lust, psychosis, political intrigue, and scathing satire.

An alternative, irreverent, and even confrontational perspective on American Cold War culture informed the stories in EC comics, which criticized, satirized, and subverted prevailing values, conventions, and institutions. At a time when the mass entertainment industry in general remained captive to conservative financial and

political concerns, such social criticism was seldom to be found in popular media offerings, and EC comic books rank collectively as perhaps the most subversive work produced for profit by an entertainment enterprise during the McCarthy era.

The war comics, published concurrently with the Korean War, qualified as the first truly anti-war comic books ever produced. Harvey Kurtzman wrote and drew many of these, bringing to them both his penchant for historical accuracy and his gift for irony. In Kurtzman's hands, historical stories, ranging from Julius Caesar to the Battle of Little Big Horn to the atomic bombing of Hiroshima, became parables on the dangers inherent in military authority and the utter futility and horror of war—weighty material for comic-books.

In their science-fiction and crime titles, Gaines and Feldstein often attacked such social ills as racism and bigotry, and even dared to point the finger at McCarthyism. *Shock Suspense Stories* in particular was a vehicle for realistic and damning portrayals of the violence and injustice inflicted upon African Americans, Jews, and Latinos. No other comic book even began to approach this kind of social commentary, and few contemporary movies or television series did so either.

Under the editorial direction of Harvey Kurtzman, *Mad* became the first and best satirical comic book ever published. Besides mocking many of the conventions, institutions, and icons held dear by mainstream America, *Mad* also took aim at its own competition with devastating parodies of such inviting targets as *Superman*, *Batman*, and *Archie*. This irreverence branded EC as a maverick within the comic-book industry, a distinction that Gaines welcomed.

EC became best known, however, for its horror comic books. Titles such as *Tales from the Crypt* offered readers some of the most grotesque and grisly images available in mass culture. To say that violence and murder were commonplace in these comics, hardly begins to do justice to stories wherein people were chopped to pieces, ground into pulp, deep-fried, and even eaten. One infamous story, called "Foul Play," ended with a baseball team murdering a rival player, disemboweling his corpse, and playing a baseball game with his body parts. There was usually a tongue-in-cheek quality about these atrocities, as evidenced by the ghoulish narrators who introduced and concluded each tale with gallows humor and bad puns. Husbands murdered wives, wives murdered husbands, parents abused their children, and children rose up to murder their parents. Stories like these sold over half-a-million copies per issue and found a revealingly large audience within a society dominated elsewhere by images of affluence and vapid suburban conformity. They also made EC the most controversial publisher in the business and the one most vulnerable to the charges of the industry's critics. It was, therefore perhaps unsurprising that EC was unable to survive the crisis that engulfed the comic-book industry in 1954-55.

In 1954, Gaines testified before the U.S. Senate Subcommittee that was investigating the alleged influence of crime and horror comic books on juvenile delinquency. At one point he found himself in an absurd (and often recounted) debate with Senator Estes Kefauver over the artistic merits of an EC horror comic with an image of a severed head on the cover. When Gaines' competitors formed the Comics Magazine Association of America and adopted the self-censoring Comics Code, he initially refused to join the organization. He subsequently capitulated, but nervous distributors nevertheless refused to handle the EC publications, code-approved or not. In 1955 Gaines canceled the entire EC line except for *Mad*, which then enjoyed a long run of success in a black-and-white magazine format.

Long after its demise as a comic-book publisher, EC's influence remained evident. Successive generations of comic-book creators

drew inspiration from the imaginative ideas of EC's writers and artists. Hard Rock acts such as Alice Cooper and Rob Zombie incorporated EC's grotesque world view into their own musical tributes to American junk culture, while horror novelist Stephen King has cited EC as a profound early influence on his imagination; he paid tribute to their horror titles in his 1982 movie *Creepshow*. Many of EC's crime and horror stories have been adapted into the successful live-action anthology series *Tales from the Crypt* on the HBO and Fox networks, and the original comic books themselves continue to be reprinted and sold in comic-book stores in the 1990s. As an exemplar of mass entertainment of the most inspired, gutsy, and irreverent sort, EC's place in comic-book immortality is assured.

## Eckstine, Billy (1914-1993)

Although he was best known after 1948 as a singer of popular ballads, Pittsburgh-born Billy Eckstine was a standout jazz singer from 1939-43 with Earl Hines' Band and best known for his bluesy recording of "Jelly, Jelly." He also led a jazz orchestra in the mid-forties that was many years ahead of its time. During the transitional bebop era, Eckstine assembled such cutting-edge jazz stars as trumpeters Dizzy Gillespie and Miles Davis, saxophonists Charlie Parker and Dexter Gordon, and Art Blakey on drums. He also gave a start to Sarah Vaughan, one of the most innovative of jazz singers. Unfortunately, the Eckstine Band was so poorly recorded that no evidence remains of its extraordinary music.

## Eco-Terrorism

In the latter decades of the twentieth century, terrorist activity expanded into an ever-present threat in the United States of America and elsewhere, penetrating the fabric of national consciousness much as the specter of Communism had done during the Cold War years. Generally perpetrated by political and religio-political fanatics, terrorism has, however, developed a new and significant strain, perceived to have noble aims but intended, nonetheless, to wreak

domestic havoc. The Federal Bureau of Investigation defines terrorism as "the unlawful use of force or violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof, in furtherance of political or social objectives." The term "eco-terrorism" (or ecoterrorism) refers to two different kinds of terrorism: (1) terrorism intended to hinder activities considered harmful to the environment, and (2) terrorism intended to damage the environment of an enemy.

In February 1991, when Iraqi troops retreated from Kuwait during the Gulf War, they set more than 600 wells in the Greater Burgan oilfield on fire, a deed that has been referred to as "the world's worst act of eco-terrorism." Most popular cultural references to eco-terrorism, however, refer not to this second form of terrorism but to the first, which intends to preserve the environment, not harm it. Used in this manner, eco-terrorism is a highly contested term. Ron Arnold, a leader of the anti-environmental "Wise Use" movement, argues for a broad definition of eco-terrorism that includes almost every crime committed on behalf of the environment, even acts of civil disobedience. Many environmentalists, however, passionately disagree with this usage, preferring to distinguish between "eco-sabotage" (an assault on inanimate objects) and terrorism (an assault on living things). The environmentalist David Brower, for instance, has argued that the real terrorists are those who pollute and despoil the earth, not those who seek to protect it.

This distinction between violence toward property and violence toward living things reflects the influence of "deep ecology," a philosophy upon which much radical environmental action has been based. In 1973, the Norwegian Arne Naess distinguished between what he called "shallow ecology" (or human-centered environmentalism) and "deep ecology" (or earth-centered environmentalism). A central component of deep ecology, according to Naess, is the idea of "Self-realization," in which the "Self" is understood to include not just the individual consciousness, but all of human and non-human nature. Some environmentalists, therefore, argue that eco-sabotage cannot be labeled terrorism, because from this perspective it is actually an act of self-defense.

The roots of eco-sabotage or eco-terrorism can be traced back to the early nineteenth century, when bands of English craftsmen known as Luddites destroyed the textile machinery that was rendering their skills increasingly redundant. Generally masked and operating at night, the Luddites claimed to be led by Ned Ludd, an apparently mythical figure whom many modern eco-saboteurs have taken as their namesake. Henry David Thoreau, though by no means an eco-terrorist, has also been cited as a forerunner of the radical environmental movement. In *A Week on the Concord and Merrimack Rivers* (1849), Thoreau mourned the inability of shad to bypass the Billerica Dam in the Concord River. "I for one am with thee," Thoreau wrote of the fish, "and who knows what may avail a crow-bar against that Billerica Dam?"

Modern eco-terrorism came into being after the first Earth Day, held in 1970, when a handful of environmentalists in the United States began using force to achieve their political goals. In Arizona, the "Arizona Phantom" tore up railroad tracks and disabled equipment in an attempt to stop construction of a coal mine in the desert highlands. A group of college-age boys calling themselves the "Eco-Raiders" burned billboards, disabled bulldozers, and vandalized development projects in and around Tucson, causing over half a million dollars of damage. In Illinois, a man going by the name of "The Fox" plugged drainage pipes, capped factory smokestacks, and

dumped industrial waste from a U.S. Steel plant into the office of the company's chief executive. In Michigan, the "Billboard Bandits" cut down roadside signs with chainsaws, and in Minnesota, a group of farmers calling themselves the "Bolt Weevils" disabled 14 electrical towers that were part of a high-voltage power line being built across the prairie.

These early eco-radicals may have been encouraged by the founding in 1971 of the environmental group Greenpeace, which advocated non-violent direct action against high-profile targets. They may also have been influenced by the publication of several books, including *The Anarchist Cookbook* (1971), by William Powell; *Ecotage!* (1972), edited by Sam Love and David Obst; and *The Monkey Wrench Gang* (1976), by Edward Abbey, a novel about four "ecoteurs" who roam the Southwestern United States blowing up bridges and vandalizing bulldozers in the name of environmental protection.

*The Monkey Wrench Gang* not only gave the activity of eco-sabotage its popular moniker ("monkeywrenching"), it also inspired the formation of the environmental group most closely associated with eco-terrorism in the popular imagination—Earth First! Founded in 1980 by Dave Foreman and other disenchanting activists, Earth First! took as its motto the phrase "No Compromise in Defense of Mother Earth," and its journal served as a clearinghouse for monkeywrenching tactics, though the group never officially advocated the practice. In 1985, however, Foreman edited the first of several editions of *Ecodefense: A Field Guide to Monkeywrenching*, which contained instructions for such actions as how to spike trees, close roads, and burn machinery. By 1990, monkeywrenching was estimated to be costing business and industry from \$20 to \$25 million a year, had spawned federal legislation against tree-spiking, and had caught the attention of the FBI, Scotland Yard, and other intelligence organizations.

Whether incidents of eco-terrorism are increasing or decreasing in frequency is unclear, due in part to the elastic nature of the term itself. Opponents of eco-terrorism point to incidents such as the October 1998 burning of a Vail, Colorado, ski resort as evidence that eco-terrorism is on the rise. The arson, which caused some \$12 million in damage, was attributed to the Earth Liberation Front, a radical environmental group, working to prevent the expansion of the ski resort into one of the last known habitats of the lynx. Author David Helvarg, however, contends that radical environmentalists have become less likely to resort to monkeywrenching tactics and more likely to employ civil disobedience to achieve their goals. Similarly, he claims that environmentalists are more likely to be victims of violence than to act violently. In 1998, for instance, David Chain, an Earth First! protestor, was killed by a tree felled by a Pacific Lumber logger in Humboldt County, California.

Whatever the future of eco-terrorism, its appearance in such films as Terry Gilliam's *12 Monkeys*, novels such as Tom Clancy's *Rainbow Six*, and such computer games as Eidos Interactive's *Final Fantasy VII*, suggests that this highly contested term has quite clearly hit a nerve.

## Eddy, Duane (1938—)

Known for his "twangy" guitar sound, Duane Eddy was a leading rock and roll instrumentalist, with fifteen Top 40 hits between 1958 and 1963. Born in upstate New York, Eddy moved to Arizona at the age of thirteen. He was an early experimenter with natural sources of echo and reverberation, which resulted in the "twangy" sound that quickly became his trademark. Eddy recorded on the Jamie label through 1961, and moved to the more prestigious RCA Victor label for his last few records in 1962 and 1963.

His popularity and good looks led to a few supporting roles in motion pictures such as *Because They're Young* (for which he also performed the main theme song), along with a custom line of Duane Eddy signature guitars. There was an excessive similarity inherent in the various songs Eddy recorded, and only two ever reached the major success of the Top Ten. Those were "Rebel Rouser" in 1958 and "Forty Miles of Bad Road" in 1959.

## Eddy, Mary Baker (1821-1910)

Mary Baker Eddy is regarded as one of the most influential women in American history. In 1992 the Women's National Book Association recognized her *Science and Health* as one of the 75 books by women "whose words have changed the world." In 1995 she was elected into the National Women's Hall of Fame as the only American woman to have founded a religion recognized worldwide.

Eddy was born the sixth child of a Puritan family outside of Concord, New Hampshire on July 16, 1821. As a child she was extremely frail and suffered from persistent illnesses. In 1843, Eddy married her first husband, Major George Washington Glover, who died of yellow fever six months after their marriage, leaving her penniless and 5 months pregnant. Once born, her son was taken from her and given to a couple who had just lost twins. In 1853, Eddy married her second husband Daniel Patterson, a Baptist dentist. Since her health was persistently in decline, she began to investigate many "mind over matter" theories that were popular at the time. She even went so far as to consult a psychic healer in 1862.

**Mary Baker Eddy**

Eddy's struggle with illness lasted until her epiphany experience on February 4, 1866. Eddy was bedridden after having sustained critical spine injuries from a fall on an icy sidewalk. She came across a story in the Bible about a palsied, bedridden man who is forgiven by Christ and made to walk. She then formed her theory that the power to heal sin is the same power that heals the body. Indeed, she believed and got out of bed. Patterson left her that year, and, seven years later, Eddy divorced him.

After her transforming spiritual realization, she preached her discovery of Christian Science. She had found the answer to her quest for health, and she wrote her first book on the subject, *Science and Health with a Key to the Scriptures* (1875). And, in 1877, Eddy was married for a final time to Asa Gilbert Eddy.

Christian Science is based on her beliefs that anything associated with the physical world is an illusion (including pain), and that mind, life, and spirit are all that exist and are all part of God. Healing for her meant recognizing the error of believing in the flesh. Eddy's philosophy, however, cannot be considered a mind over matter philosophy because, in Christian Science, the concept of matter does not exist.

Eddy's writings and beliefs quickly helped her become the leader of thousands of people in the Christian Science movement. By the year 1900, only 34 years after her revelation and only 25 from the publication of her first book, over 900 churches participated in the Christian Science movement. Eddy obtained a nearly god-like status in her churches by her death in 1910.

The Christian Science Church, from its "Mother Church" headquarters in Boston, Massachusetts, has been a major media influence. *Science and Health*, reissued in 1994, immediately became

an annual best seller among religious books. Eddy also wrote 20 other books and pamphlets, including other theology books and a book of her poetry and letters. In 1883, Eddy published the first issue of *The Christian Science Journal*. In 1899 she established both the *Christian Science Sentinel* and *Christian Science Quarterly*. She had a strong influence as editor of these periodicals. And, finally, in 1908 she requested that a daily newspaper be started called the *Christian Science Monitor*. Both the *Christian Science Journal* and the *Christian Science Monitor* are still in print and continue to be very well respected.

In 1989, the *Christian Science Monitor* launched The Monitor Channel, a cable network that failed and collapsed in 1992. At the same time, the church also started a radio network and a public affairs magazine that both fell through. Although Christian Science has remained politically powerful throughout the second half of the twentieth century, estimated membership totals have shown a drop, from 270,000 members before World War II to 170,000 in the 1990s. Branch churches have declined from 3,000 in 37 countries to fewer than 2,400 in the 1990s.

A major criticism of Christian Science is that its members are often unwilling to seek medical help for themselves or their critically ill children. In the last half of the twentieth century, Christian Scientists have even succeeded in most states to establish the right to deny their children medical treatment. Part of the decline of the church population is due to an increasing trust of traditional medicine.

The followers of Christian Science revere Mary Baker Eddy. Outside of the religion she is heralded as having made major feminist accomplishments. In *Science and Health*, she pushed for the equality of the sexes, female suffrage, and the right of women to hold and dispose of property. She also pushed for an understanding of both the motherhood and the fatherhood of God. Eddy's ideas, although spawned and proliferated in her time, have outlived her.

## Eddy, Nelson (1901-1967)

With his captivating good looks, military uniform, and baritone voice, Nelson Eddy was the epitome of the Hollywood musical hero in the 1930s and 1940s. He and Jeanette MacDonald became known as “America’s Singing Sweethearts” because of their eight MGM film collaborations.

Born in Providence, Rhode Island, on June 29, 1901, Eddy grew up in a musical household. He sang major roles at New York’s Metropolitan Opera before becoming known as a radio singer and eventually as a film star. Although he sang with such esteemed leading ladies as Eleanor Powell and Rise Stevens, it was with Jeanette MacDonald that he was most often associated. The films of the so-called “Beauty and the Baritone” included *Naughty Marietta* (1935), *Rose Marie* (1936), *Maytime* (1937), *The Girl of the Golden West* (1938), *The New Moon* (1940), *Bitter Sweet* (1940), and *I Married an Angel* (1942). Other Eddy films include *The Chocolate Soldier* (1941) and *Phantom of the Opera* (1943). In addition to his film appearances, Eddy made numerous recordings and sang frequently in concert and on the night club circuit. He died in Miami, Florida, on March 6, 1967.

## *The Edge of Night*

*The Edge of Night*, one of the top ten longest running soap operas in daytime television history, debuted on April 2, 1956 on CBS, along with *As the World Turns*. The two shows were the first soaps to air for a full half-hour on a major television network, and the enthusiastic audience response marked a new trend in the orientation of popular television. *The Edge of Night*’s original time slot, 4:30 p.m., inspired the show’s title, but the title reflected the content, which was at times graphically violent. While some television critics, including the redoubtable *TV Guide*, have argued that *The Edge of Night* was technically a serialized melodrama rather than a soap opera, over its almost three-decade run the show turned to themes most commonly associated with soap opera drama: sex, romance, and family turmoil.

Set in Monticello, a turbulent midwestern town, *The Edge of Night* revolved around the criminal investigations of Mike Karr and his sometimes unorthodox detective work and courtroom tactics. After the first couple of seasons, Karr married his devoted assistant, Sara Lane, though the writers had her run over by a bus on the February 17, 1961 episode. Lane was the first major soap character to

be killed off, and the high realism of the accident—the show was broadcast live until 1975—sent the audience into shock. Thousands of letters and phone calls deluged the network and prompted a televised announcement by Teal Ames and John Larkin, the actors who played Sara and Mike, explaining that Ames was fine in real life and had left the show to pursue other opportunities.

Over the years Mike Karr was played by three different actors—John Larkin from 1956 to 1961; Laurence Hugo from 1962-1971; and Forrest Compton from 1971-1984. Exemplifying a paradox that television audiences have simply come to accept, the three replacements were neither announced nor explained, but did nothing to disturb the sense of realism so central to *The Edge of Night*’s success. By the 1970s, however, the show’s writers perhaps did push the limits of believability in the popular Adam-Nicole love story. Nicole (Maeve McGuire; later Jayne Bentzen and Lisa Sloan) had been killed off in a drowning during the explosion of a yacht, only to rejoin the show two years later when it was discovered that in fact she had survived the drowning, joined a gang in France, and suffered a long bout of amnesia before returning to Monticello.

After the show’s sponsor, Procter and Gamble, requested a time change in the 1970s, *The Edge of Night* experienced a ratings slump from which it never recovered. The show moved to ABC on December 1, 1975, the first daytime serial to change networks, but was canceled on December 28, 1984. A few years later it enjoyed a short-lived cult revival in syndication on the USA cable network. Among the sophisticated luminaries who had early on enjoyed some of its 7,420 episodes were Cole Porter, P. G. Wodehouse, Tallulah Bankhead, and Eleanor Roosevelt.

## Edison, Thomas Alva (1847-1931)

Thomas Alva Edison, inventor of the phonograph in 1878 and the incandescent light bulb in 1879, is considered to be one of America’s most creative minds. He is the only American to have patented an invention every year for 63 consecutive years, beginning in 1868 with his invention of an electrical vote recorder. Altogether, Edison held 1,093 patents including those for a stock ticker, a component of mimeograph systems, and a telephone transmitter that led to commercial telephone and radio broadcasting. Using a mobile studio and a photographic device he designed, Edison also created the first apparatus for projecting motion pictures. The invention, along with George Eastman’s refinement of film, set the stage for the creation of the motion picture industry. It is appropriate that the creator of so many products, a man whose impact on America proved revolutionary, should have provided a symbol to represent originality and intelligence, the shining light bulb, used in logos to represent a “bright idea.”

## The Edsel

Announced with great fanfare in 1957 after almost a decade of planning, the Ford Motor Company's Edsel model car became one of the great flops in automotive history. The car was forecasted to sell over 200,000 units in its first year, but sold less than 85,000 during its three year run. Despite massive advertising—including pre-empting *The Ed Sullivan Show* with *The Edsel Show* featuring Bing Crosby and Frank Sinatra—the Edsel was the wrong car at the wrong time. The auto industry, after years of massive sales, hit a post-Sputnik slump and the new car, with its strange oval grille, was doomed. Named after Henry Ford's son Edsel, the name is now synonymous with failure. As such, Edsel is often used as a punchline and visual gag. The car can be seen in films such as *Pee Wee's Big Adventure*,

and in *Airplane II*, where the engine from a 1959 Edsel is used to jumpstart a space shuttle.

## Edwards, James (1916?-1970)

With his thoughtful intelligent manner and splendid good looks, African American actor James Edwards came to epitomize the "new Negro" in post-World War II Hollywood film. His moderately successful motion picture acting career spanned four decades, from the late 1940s to his final appearance in 1970. His contribution to film history, however, is not attributed to a sterling performance in a wildly successful classic. Edward's legacy is that he was a ground-breaker, and his work helped to forge change during a significant period in American social history.

The 1958 Edsel Citation

Younger film devotees may find it difficult to appreciate the impact that black film stars such as Edwards and his contemporaries Sidney Poitier and Harry Belafonte had on the psyche of postwar Blacks and Whites, and on the state of race relations in the United States. Edward's portrayal as a victim of bigotry in *Home of the Brave* (1949) was widely hailed as the first feature film to deal honestly with race issues in America. It was an early example of the cycle of "message pictures" that appeared during the volatile period of bus boycotts, school desegregation, and protest against systematic discrimination.

Historically, African Americans had appeared in motion pictures as soon as the first murky images appeared in nickelodeons during the early days of the twentieth century. By the late 1910s, as filmmakers fine-tuned the possibilities of storytelling on film, Black people (along with recent immigrants, women, and Native Americans) found themselves viscerally lampooned with the most egregious of film stereotypes. During the Golden Age of Hollywood (1929-1939) a number of Black film "types" appeared: Black film characters were relegated to a few roles as maid, butler or, most notably, comic-relief—the dim-witted, bug-eyed, darkie servant who was the butt of everyone's jokes. War and organized protest helped to forge change and by the postwar period, though the stereotypes had hardly disappeared and the number of roles for Black performers was small, Hollywood pictures could now feature Blacks as lawyers, teachers, soldiers, and otherwise contributing members of society.

Like Poitier, James Edwards began his acting career in theater. He was born in Muncie, Indiana, and attended Indiana and Northwestern University, earning a B.S. in 1938 for dramatics. As a lieutenant in the Army he was wounded in battle. Surgeons had to rebuild his face and he endured a long, painful convalescent period. It was suggested that he take lessons in elocution. Recovered, he pursued an acting career and appeared in the controversial 1945 stage production of *How Deep are the Roots* (in which he portrayed the love interest of a very white, Barbara Bel Geddes). His first film appearance appears to have been a bit part as a boxer in the 1949 film noir classic, *The Set-Up*.

The year was 1948 and President Harry Truman signed an order that would begin the long and painful process of desegregating the nation's armed forces. Far away from Washington, D.C., and working in total secrecy, young filmmaker Stanley Kramer worked on a film that intended to exploit the ramifications of Truman's order. Featuring James Edwards in the title role, the film *Home of the Brave* was released May 1949, less than a year after the president's missive. Based loosely on the stage play (which had anti-semitism as a theme), *Home of the Brave* told the story of a young Black soldier on duty in the Pacific who succumbs emotionally and physically to the torment of racial prejudice.

To contemporary viewers the film may appear contrived and corny, replete with staid dialogue and sometimes tacky sets. With its strong theme and frank language, however, it was praised by both the white press and black press—which noted with encouragement that Hollywood was finally putting the old film stereotypes of Blacks to rest. It also won recognition for Edwards in the form of an Oscar nomination for Best Supporting performance. He became a Black movie idol and his exploits were covered in the black fanzines of the time.

Issues of race were depicted in varying degrees in several of Edward's films. In 1951 he appeared in *Bright Victory*, portraying a blinded Black soldier whose white (and also blind) friend rejects him

when he learns Edwards is black. In his role as Corporal Thompson in the Sam Fuller Korean War cult classic *The Steel Helmet* (1950), a Communist officer chides Edwards for risking his life for a country that requires him to sit in the back of bus. His other roles as a soldier include *Battle Hymn* (1957), *Men in War* (1957), *Blood and Steel* (1959), and the star-studded Lewis Milestone production of *Pork Chop Hill* (1959).

Bright, personable, and well-spoken, Edwards was a welcome alternative to the Black film stereotypes of the past. In effect, however, one stereotype replaced another. The bug-eyed comics of the 1930s were replaced in the 1960s by the "Good Negro"—intelligent, articulate, and most importantly, non-threatening.

But in some ways, Edwards was no Hollywood Negro poster-boy. He was an out-spoken critic of discrimination and he is said to have refused to testify during the infamous House Un-American Affairs Committee hearings of the 1950s. A 1953 article by Edwards appearing in the December issue of *Our World* magazine was titled "Hollywood: So What?" Unlike Poitier, who was seen at the time as, perhaps, a bit more accommodating, Edwards apparently spoke his mind.

Edward's other film roles include *Member of the Wedding* (1952), *The Joe Louis Story* (1953), *Seven Angry Men* (1955), *The Phenix City Story* (1955), *Battle Hymn* (1957), *The Killing* (1956), *Anna Lucasta* (1959), *Night of the Quarter Moon* (1959), *The Manchurian Candidate* (1962), *The Sandpiper* (1965), and his final appearance as a personal aid to General George Patton in the academy award winning 1970 production of *Patton*. Edwards was not to enjoy the success of *Patton*. He died in 1970 of a heart attack, leaving behind a wife and daughter. Curiously, obituaries list his age at the time of his death as anywhere from 42 to 58.

If not for the influence of cable movie channels and video collections, many of Edwards' films would have by now been relegated to the land of long-forgotten "B" movies. His legacy to film history, therefore, is not a classic film but his efforts and work as a Hollywood actor to help forge change in attitudes about race during a time in the social history of America when change was sorely needed.

## Edwards, Ralph (1913—)

Television producer Ralph Edwards is best known for creating the game show *Truth or Consequences*. Edwards began his career in the entertainment industry as a radio announcer while attending the University of California, Berkeley. After graduating, Edwards moved to New York and became a nationally syndicated radio personality. In 1940 Edwards produced, wrote, and emceed the radio version of *Truth or Consequences*, which aired for 38 consecutive years on radio and television. Edwards introduced the “live on film” technique by having *Truth or Consequences* filmed before a live studio audience when it debuted on television in 1950; the show was hosted for 18 years by Bob Barker, who went on to become television’s most durable game show host with *The Price Is Right*. Edwards produced dozens of television game shows, including *This Is Your Life*, *Knockout*, *Place the Face*, and *It Could Be You*. In 1981 Edwards teamed up with producer Stu Billett to create a show that introduced a new form of the reality genre to television; they called their show *The People’s Court*.

## Eight-Track Tape

In the 1960s, the eight-track tape player was an ambitious attempt to employ magnetic prerecorded tape in a convenient format for use in home and automobile stereos. The eight-track was significant evidence that Americans now demanded music while they travelled and that the automobile had become a place to experience entertainment. By the early 1980s, however, the eight-track became a symbol of obsolescence in audio technology and an artifact of 1960s and 1970s nostalgia.

In the 1960s, several manufacturers developed tape cartridges as a format for recorded sound. The Lear Company, a manufacturer of executive jet airplanes, produced a continuous-loop cartridge with four sets of paired stereo tracks—thus the name eight-track. In 1964, representatives from Lear approached Ford Motor Company with a plan to introduce this format into automobiles. People wanted to select their own music to listen while travelling, and the eight-track tape was convenient for the driver because it could be inserted into the player with one hand.

Ford equipped millions of automobiles with eight-track players and millions more were manufactured for use in home radio/phonographs. Although the eight-track format became a major format for pre-recorded popular music in the 1960s and 1970s, it was not an entirely satisfactory product for the user who could not record on it and found it difficult to access selections. By the end of the 1970s, the eight-track tape had been overtaken by the compact cassette and dropped by audio manufacturers and record companies.

In the 1910s, Albert Einstein proposed a series of theories that led to new ways of thinking about space, time, and gravitation. For the

**Albert Einstein**

first time, the scientific world raced far beyond the theories of the seventeenth century English scientist Sir Isaac Newton, who began his study of gravity by observing an apple fall from a tree. Einstein's famous energy-mass equation, which asserts that a particle of matter can be transformed into an astounding quantity of energy, led to the construction of atomic and hydrogen bombs with unimaginable capacities for destruction. In his own time he was widely recognized as one of the most innovative geniuses in human history. Today, in the realm of popular culture, his name is synonymous with genius, and many a young prodigy has been called an "Einstein."

He was born in Ulm, Germany, on March 14, 1879, and grew up in Munich, where he was educated in public schools that he found to be boring, as well as highly regimented and intimidating. He showed such little ability as a student that his mother recommended that he study music, and he became an accomplished violinist, playing throughout his life for relaxation, not for public performance. Under the influence of two uncles, the boy Einstein began to develop a curiosity about science and mathematics, and at age 12 he announced that he would concentrate his mind on solving the riddle of the "huge world."

At age 15, with poor grades in languages, history, and geography, he left his German school without a diploma and moved with his family to Milan. He resumed his education at the famous Federal Polytechnic Academy in Zürich, where he completed four years of physics and mathematics. After graduating in the spring of 1900, Einstein began a two month tenure as a mathematics teacher before being employed as an examiner in the Swiss patent office in Bern. He

continued his research and writing and in 1905 published a thesis entitled *A New Determination of Molecular Dimensions* that won him a Ph.D. from the University of Zürich. Four more important papers were published that year in the prestigious German journal *Annalen der Physik*, forever changing man's view of the universe.

Now accepted by his colleagues as one of Europe's leading physicists and much sought-after as a consultant, Einstein left the patent office and returned to teaching in universities in Switzerland and Germany. In 1914 he moved to Berlin, where he worked at the Prussian Academy of Sciences, doing his research on the general theory of relativity and lecturing occasionally at the University of Berlin. He published his findings in 1916 in an article entitled (in translation): "The Foundation of the General Theory of Relativity." He postulated that gravitation was not a force, as Newton had thought, but a curved field in a space-time continuum. This could be proved, he wrote, by measuring the deflection of starlight during a period of total eclipse. In 1919 British scientists photographed a solar eclipse from Principe Island in the Gulf of Guinea, and their calculations verified Einstein's predictions. Einstein was amazed at the world-wide acclamation he received, but he resented the constant interruptions his new fame brought. In 1921 he was awarded the Nobel Prize for Physics.

During the 1920s Einstein worked toward finding a mathematical relationship between electromagnetism and gravitation, thus relating the universal properties of matter and energy into a single equation or formula. This quest for a unified field theory, which occupied the rest of his life, proved futile. The rapidly developing quantum theory showed that the movement of a single particle could not be predicted because of the uncertainty in measuring both its speed and its position at the same time. The first version of the unified field theory was published in 1929, but the tentative, preliminary nature of the work was apparent to the scientific community.

In the 1930s, Einstein spent as much time championing the cause of peace as he did discussing science. He established the Einstein War Resisters International Fund to bring massive public pressure on the World Disarmament Conference, scheduled to meet in Geneva in 1932. After the failure of the conference, which he termed "farical," Einstein visited Geneva to focus world attention on the failure and on the necessity of reducing the world's firepower.

When Adolf Hitler became chancellor of Germany in 1933, Einstein warned the world that Nazi Germany was preparing for war, then renounced his German citizenship and moved to America. He accepted a full time position at the newly formed Institute for Advanced Study at Princeton, New Jersey. Nazi storm troopers ransacked his summer home near Berlin in reprisal.

His life at Princeton remained the same for the next 20 years. He lived in a simple frame house, daily walking a mile or so to the Institute, where he worked on his unified field theory and talked with colleagues. In a 1994 movie entitled *I.Q.*, Walter Matthau played the role of Einstein enjoying his intellectual life at Princeton. Einstein rarely traveled, preferring to relax with his violin and sail on a local lake. He took no part in the work at Los Alamos, New Mexico, where the nuclear fission bombs were being made. When he died in his sleep on April 18, 1955, his wife found an incomplete statement, written to honor Israeli Independence Day, on his desk. It included this statement: "What I seek to accomplish is simply to serve with my feeble capacity truth and justice at the risk of pleasing no one."

—Benjamin Griffith

## Eisner, Will (1917—)

With a career as a writer and artist that spans virtually the entire history of the medium, Will Eisner is one of the most innovative and influential creators of comic books and graphic novels. From his earliest work on the newspaper supplement, *The Spirit*, Eisner strove to understand and develop his chosen art form. His career has been driven by his canny business sense and by a belief that sequential art (as he prefers to call comic books and graphic novels) is a valid medium of artistic expression that deserves wider acceptance and respect.

As a teenager, Eisner’s artistic talent simply represented a way out of the grim reality of Bronx tenement life during the Depression. After a brief stint studying at the Art Students League and working in a magazine advertising department, Eisner began writing and drawing comics for *Wow, What a Magazine!* in 1936. Samuel “Jerry” Iger was editing *Wow*, and when the magazine folded after four issues, Eisner and Iger formed their own studio to package comic book material for Fiction House, Fox Comics, and other publishers. At first, the prolific Eisner produced most of the work under different pen names. As the Eisner-Iger Shop flourished, however, the young Eisner began supervising a staff of artists that included Bob Kane and Jack Kirby.

In 1939 Eisner was approached by a features syndicate about producing a comic book supplement for newspapers. He jumped at the chance to reach a more mature audience through newspaper distribution. Because the syndicate had approached him—they were not likely to find anyone else capable of producing a complete comic book every week—Eisner was able to retain ownership and creative control of the feature. He sold his interest in the Eisner-Iger Shop to Iger and took four of the staff with him to form Will Eisner Productions.

The newspaper supplement that debuted in 1940 was simply called *The Comic Book Section*, but it became better known by the title of the lead feature, *The Spirit*. The syndicate saw the supplement as a way to benefit from the growing national market for comic books that was sparked by the appearance of *Superman* in 1938 and *The Batman* in 1939, and they envisioned the *Spirit* as a superhero very much in the mold of these two characters. Will Eisner was more interested in telling good stories, and his only concessions to the superhero concept were a simple domino mask and a pair of gloves.

When Eisner was drafted in 1942, his assistants, primarily Lou Fine, took over for the duration of the war. Fine was true to the style Eisner had set for the book, and it was a subtle change compared to what happened when Eisner returned from the Army. Many early stories from *The Spirit* were whimsical and fantasy-oriented, but when Eisner returned from the war his stories had greater realism and concern for the human condition—in his work that usually means the condition of humans crowded together by big city life. As Catherine Yronwode puts it in *The Art of Will Eisner*, “New York, or more

properly, Brooklyn and The Bronx, was, in Eisner’s metaphoric world, transformed into a stage upon which the most wide-sweeping and the most intimate dramas of human life were enacted.”

Eisner had used his art to escape from the tenements of New York, but eventually he used his art to explore the personal and universal meanings of those youthful experiences—it just took a while. Eisner stopped producing *The Spirit* in 1952 and devoted his time to his new venture, American Visuals Corporation, which was a successful producer of educational and corporate comics for the next 25 years. Then, in 1976, inspired by the decidedly non-adolescent material that he discovered in the underground comix of the late 1960s and early 1970s, he began creating a major comic book work that he hoped would find an adult audience. When his 192 page work, *A Contract With God*, appeared in 1978 it was not the first use of the graphic novel format (although Eisner did coin the phrase), but it was ground breaking in that it deviated from the usual adventure material to present more realistic and intimate human dramas. At 60, Eisner began blazing a new trail in the medium and followed his first graphic novel with innovative and deeply-felt works such as *A Life Force* (1983), *To The Heart of the Storm* (1991), and *Family Matter* (1998).

Eisner soon became the internationally acclaimed master of the comics medium. The major artistic awards of the American comic book industry, the Eisners, were named in his honor. He was asked to teach comics courses at the School of Visual Arts. Eisner reworked his lecture material and published two books, *Comics and Sequential Art* (1985) and *Graphic Storytelling* (1995), that have helped advance both artistic and critical understanding of the medium.

It was Eisner’s experimentation with layout and composition in *The Spirit* stories that clearly established the comic book as a medium distinct from its comic strip origins. It was his championing of new forms and mature content in the graphic novel that helped establish comics as an art form. And, much of the visual language of the form was invented, or at least perfected, by Will Eisner. In the afterword to Eisner’s *New York the Big City*, acclaimed comic book writer Alan Moore provides an eloquent statement of Will Eisner’s importance to the medium: “He is the single person most responsible for giving comics its brains.”

## El Teatro Campesino

The United States’ annexation of Mexico’s northern territories in 1858 marked the beginning of the Mexican-American theater arts tradition. Mexican-American (California Chicano, Texas Tejano, and New Mexico Hispano inclusive) theater evolved as an amalgamation of Mexican street theater arts such as the *carpa* (traveling tent theater) and the *zarzuela* (Spanish comedic opera) with a European, Bertolt Brechtian brand of sociopolitical drama. Until the 1960s civil rights

movements, however, Mexican-American theatrical arts had not received mainstream recognition. In 1965, two Chicano activists—the young, fiery new actor/director, Luis Valdez, and the powerful farmworkers’ organizer César Chávez—teamed up during California’s “Great Delano Strike” and founded El Teatro Campesino Cultural (The Workers’ Cultural Center). Valdez drew on first-hand experience as an actor/director working in San Francisco’s Mime Troupe and a broad knowledge of Mexican drama, history, and myth to train striking farmworkers to perform and write politically savvy, bilingual performances. Valdez writes in his book, *Actos: El Teatro Campesino*, of El Teatro Campesino’s mission: “Chicano theater must be revolutionary in technique as well as in content. It must be popular, subject to no other critics except the pueblo itself; but it must also educate the pueblo toward an appreciation of social change, on and off the stage.”

El Teatro Campesino’s performances became well-known among those involved in the “Brown Power Movement” of the 1960s. For example, one of El Teatro’s first productions, titled *Las dos caras del patroncito* (*The Two-Faced Boss*), fully embodied El Teatro’s ideal of developing a socially aware dramatic art form combining Aztec and European traditions. The loosely improvised, bilingually acted piece—composed of ten to 15 minute actos, or skits—not only candidly addresses a farmworker’s plight at the hands of a money-grubbing boss, but does so with a tinge of humor; the influence of satirically playful Italian *comedia dell’arte* allows the piece to both incite action and offer the audience the possibility of laughing at “The Boss,” who dons a yellow pig-face mask and hides behind a rent-a-goop bodyguard.

In the late 1960s and early 1970s El Teatro performed a series of plays that utilized the *mito*, or culturally anchored act, to explore the plight of the Chicano/a dwelling increasingly in inner-city barrios (“neighborhoods”). For example, in *Las Vendidas* (*The Sell-Outs*), the audience not only meets a Chicana Republican, Miss Jiménez, a gangbanger pachuco, and a revolucionario, but also gets a big taste of Aztec mythology and Mexican culture. *Las Vendidas* won the prestigious Obie Award in 1967. In 1971 Valdez and a professionalized El Teatro troupe moved to San Juan Bautista, where a range of performances continued to infuse the mythical dimension of Chicano/a identity—figures such as Huitzilpochtil (the Sun God), Quetzalcoatl, and the Virgin de Guadalupe would appear symbolically—to explore the everyday struggles of survival, from border crossing tragedies to romances and family breakups.

El Teatro’s professionalization and broadened scope quickly led to recognition by mainstream critics. In the mid-1970s the famed British artistic director and drama critic Peter Brooks traveled to San Juan Bautista to work with El Teatro. The result: *The Conference of the Birds*, whose nation-wide success opened doors outside the Americas. El Teatro’s follow-up production, *La Carpa de los Rasquachis* (*The Tent of the Underdogs*), toured eight European countries. And in 1979 El Teatro’s *Zoot Suit*—a music-infused drama that retells the story of the 1942 Zoot Suit riots in Los Angeles of 1942 from a Chicano, Aztec-mythic point of view—was the first Chicano play to open on New York’s Broadway. While *Zoot Suit* only had a short run, flopping at the box office, it received glowing critical reviews from drama critics.

Now in its thirtieth year as a professional theater-arts organization, El Teatro is recognized as a major contributor to dramatic arts. While El Teatro continues with performances in the Old Mission at San Juan Bautista—at Christmas they regularly perform their Chicano re-visioned miracle plays such as the *La Virgen Del Tepeyac* and

*La Pastorela*—the members continue to experiment with new forms and techniques. El Teatro has moved into television, and Valdez has directed several films. Finally, it is largely due to El Teatro’s struggle to clear a space in the dramatic arts terrain that opportunity has opened up for many contemporary Chicano/a playwrights—Cherie Moraga, Ricardo Bracho, and Octavio Solis, to name a few—to express a more complicated (queer sexuality and gender inclusive) vision of what it means to be Latino/a in the United States.

## El Vez (1960—)

Unlike most Elvis impersonators, Robert Lopez has created his own successful and unique character from the King’s legacy. Looking back on his uneventful life growing up in Chula Vista, California, Lopez recalls that his uncles would wear “continental slacks and slight pompadours in that Elvis style.” With this in mind, maybe it is not so surprising that the shy boy from Chula Vista would one day transform himself into the nationally acclaimed Virgin-de-Guadalupe, jumpsuit-wearing, sombrero-sporting, pencil-line-mustachioed Chicano musician/performance artist El Vez.

In 1988, while showcasing an Elvis-inspired kitsch/folk art exhibition at La Luz de Jesús Gallery on Melrose in Los Angeles, a 29 year-old Lopez received his true calling—to combine his talents as a musician (he used to play for the Southern California punk band The Zeroes) with his taste for Mexican kitsch and re-invent himself as El Vez. Just in time for Weep Week (the annual celebration of Elvis Presley’s birthday), Lopez traveled to Memphis, Tennessee, where he secured himself a spot at Graceland’s hot spot for Elvis impersonators, Bob’s Bad Vapors. Lopez’s over-the-top costume, super-gelled hair coif, “Mexican Elvis” identifying sign, and Mexican corrido (ballad) cut-n’-mixed into Elvis tunes were a huge success. With the help of newspaper wire services, Lopez became an overnight, nationally recognized celebrity. Certain of his destiny, El Vez—along with his Memphis Mariachis and the hip-gyrating Lovely Elvettes (Gladysita, Lisa María, Precillita, and Qué Linda Thompson)—went on tour all over the United States and Europe and has received critical recognition and applause from the *New York Times* and *Rolling Stone*. He has appeared on such television shows as *The Late Night Show*, *Oprah*, and *CNN* (*Cable News Network*). El Vez has a dozen CDs out, with titles such as *El Vez is Alive, Not Hispanic, G.I. Ay, Ay Blues*, and the album *A Merry Mex-Mus*, in which reindeer called Poncho and Pedro join Santa’s team.

El Vez is certainly not only a novelty Elvis act. Along with Mexican mariachi tunes, Lopez uses a range of popular music sounds from the likes of Elvis, David Bowie, T. Rex, Queen, and The Beatles, to address issues such as California’s anti-immigration act and California governor Pete Wilson’s racism. The lyrics, for example, in his song “Chicanisma” (a version of Elvis’ “Little Sister”) are critical of the male-dominated Chicano community’s oppression of women, while his revision of “Mystery Train” (called “Misery

Train”) tells the story of Pancho Villa and Los Zapatistas destroying “los capitalistas.” “Viva Las Vegas” is a crash course in pre-conquistador Mexican civilization, mixing musical styles and speeches to discuss the plight of the Mexican immigrant worker. In his album *Graciasland*—a rockabilly/country version of Paul Simon’s *Graceland*—he identifies the Southwestern United States as the spiritual homeland, Aztlan, for Chicanos. As a reporter for the *New York Times* wrote in December 1995, “He may look and dress like a young Elvis Presley (though Elvis never had El Vez’s pencil-thin mustache), but El Vez is his own creation.”

## Electric Appliances

By the turn of the twentieth century, it was common knowledge that the American home did not function efficiently. With increasing interest in efficiency, homemaking became more scientific. Instead of assigning more domestic servants to the task, home economists and other observers began analyzing the processes of the home and how they could be carried out more effectively. This sensibility provided the crucial entrée for technological innovation to find its way into the American home.

Household technology, especially in the form of electric appliances, radically altered the American home in the twentieth century. These innovations, of course, relied on the inventions of Thomas Edison and others who would perfect the generation and transferral of

An electric iron.

electric energy for home use in the early 1900s. Many American homes would remain without electricity through World War II, but the American ideal of the electrified home had clearly been put in place.

To say that one single electric appliance altered American life more than another is difficult, but a good case could be made for the electric refrigerator, which, as it took form in the 1920s, revolutionized food storage capabilities in a fashion that dramatically altered American life. Improving upon the “ice box,” which was limited by the melting of a block of hand-delivered ice, electricity enabled the use of pumps relying on centrifugal pressure to push cooling fluids throughout an insulated box. Improved for safety reasons and efficiency, the refrigerator soon became the mainstay of any home. The refrigerator allowed homemakers to keep perishable items in the home, ending the necessary habit of frequent trips to the market. Moreover, this appliance allowed for the creation of the frozen food market. In 1941, 52 percent of American families owned refrigerators; ten years later, this proportion had risen to 80 percent and by 1980 refrigeration was almost universal.

Shifts in home technology after World War II were based most around labor-saving devices. Increased electrification, especially spurred by New Deal policies, offered the power source, and a new ideal of the American housewife offered suitable rationale. During these years, the growing middle class raised the national ideal of a standard of living to include the trappings of affluence that included electric kitchen appliances, washing machines, and televisions. In the late twentieth century, the cultural imperative for each American to own his or her own home was extended to shape expectations for the contents of the typical home. The re-formed cultural ideals identified the home as a self-sufficient support mechanism. The modern middle-class home became a facilitator that should ease the pressures of everyday life through the application of modern technology. Whereas domestic servants had aided many homemakers previously, the modern American housewife relied predominantly on the assistance of electric appliances.

The crystallizing moment of Americans’ idealization of their new home is known as “the kitchen debate.” In this astonishing 1959 Cold War conversation, Vice-President Richard Nixon and Soviet Premier Nikita Khrushchev discussed ideology and domestic technology in a “model American home” constructed in Moscow. Nixon drew attention to the washing machines and said, “In America, these are designed to make things easier for our women.” Khrushchev countered Nixon’s boast of comfortable American housewives with pride in the productivity of Soviet female laborers. In summing up the capitalist ideal, Nixon responded, “What we want is to make easier the life of our housewives.”

No gadget sums up this desire to ease pressures better than the microwave. Perfected in 1946 but reaching widespread acceptance only in the 1980s, these ovens cook by heating water and chemical molecules in food with short-wave radio energy, similar to that used in radar and television. In addition to rapid heating without creating a heated environment, microwaves altered American patterns of life by making it much easier to defrost food items. In a recent survey by the appliance manufacturer Maytag, consumers chose the ubiquitous microwave as the most indispensable item in the kitchen.

Electric appliances changed the American home and gender roles after 1945. They continue to be a source of innovation and gadgetry as engineers try to solve the problems of the American home.

## Electric Guitar

This instrument has dominated the production of popular music since its invention in the 1940s. Although primarily identified with both the sound and the image of rock 'n' roll, the electric guitar has made its mark on all genres of popular music, from country to world beat. Combined with an amplifier, and armed with a large inventory of special effects, the electric guitar is an extremely versatile instrument that can produce an infinite variety of sounds. Its ease of playing and low cost have made it an important consumer good of the twentieth century. It has given the baby boom generation the means to make their own music and emulate the great guitar heroes of their times.

Musicians began to consider electric amplification of the acoustic guitar during the 1930s when guitar players sat in the rhythm sections of the big bands and struggled to be heard. The Western Electric system of amplification was readily available and was soon employed to power the signal coming from the first primitive guitar pickups. The first electric guitars were hollow bodied acoustic models with pickups attached, but in the 1940s guitars were made with solid bodies to better suit electric amplification. Leo Fender was the first to mass produce solid bodied electric guitars and his Telecaster (1951)

Wes Montgomery playing an electric guitar.

and Stratocaster (1954) models remained in production in the 1990s. Fender established the basic layout of the electronics and the shape of his Stratocaster has been the most copied by other manufacturers of electric guitars.

The increased volume of the electric guitar was soon heard in popular music. Les Paul used a model of his own design to make successful records in both the country and popular fields in the 1940s and 1950s, but it took rock 'n' roll to showcase the power of the instrument and the great number of new sounds it could make. The electric guitar figured large in the two well springs of this new popular music: rhythm and blues from the black urban centers and rockabilly from the country. Blues musicians like Muddy Waters electrified a traditional music and brought it into the urban context, using the harder sounds of the electric guitar to make the blues more urgent and menacing. Country players had been the first to adopt the electric guitar perhaps because their audiences were used to the metallic sounds of the steel guitar which was extremely popular in the 1940s and 1950s. The high, ringing tones of the Fender guitar became the trademark of a new type of country music which was both more traditional than the popular records made in Nashville and more modern in its stark metallic tone. The Bakersfield sound of players like Merle Haggard and Buck Owens was created not far from the Fender factory in California and soon spread across the country.

The first rock guitarists—players like Scotty Moore, Chuck Berry and Buddy Holly—were inspired by both sides of the racial divide in popular music and the successful hybrid they produced came to be called rock 'n' roll. Buddy Holly was the most influential exponent of the rock guitar not only because of his playing, which used basic chords in an energetic and exciting way, but also because he popularized the all guitar lineup of the rock 'n' roll band: lead, bass (and later rhythm) guitars playing through the same amplification system in front of the drums. Holly's music was widely disseminated on records and the simplicity of his playing made it easy to copy; thousands of teenagers learned how to play rock guitar by listening to his recordings and many of them went on to form their own bands.

Leo Fender had designed his solid bodied guitars with ease of manufacture in mind and quickly moved into mass production. The unprecedented appeal of rock 'n' roll created an enormous demand for electric guitars and by the 1960s the production of instruments had become a highly profitable and crowded industry. Most of the manufacturers of acoustic guitars, such as Gibson and Gretsch, had moved into electric models and a host of new companies entered the field: including Mosrite and Peavey. There were also many new manufacturers of amplifiers and the effects boxes which added reverberation and echo to the sound of the guitar.

But rock 'n' roll music never relied on the sound of the electric guitar alone—the amplifier created the sound and the signal it received could be altered by the electronic circuits of the effect boxes. Thus the clear, high "Fender sound" heard on surf guitarist Dick Dales' records is not just the sound of his Fender Stratocaster but also of the Fender Showman or Bassman amplifier and the 6G-15 Reverb unit plugged in between guitar and amplifier. Musicians began to experiment with this technological system in their continual attempts to find new sounds. Pete Townshend of The Who was the great innovator in using all parts of the system to generate new sounds, his rapid turning on and off of the power switch on his guitar made a memorable ending to several of The Who's songs.

The man playing an electric guitar became a universally recognized image of rock 'n' roll and the instrument itself became a symbol of empowerment for a generation of teenagers who yearned for the

abilities and successes of their guitar playing heroes. The myths of rock 'n' roll leaned heavily on the rags to riches tradition in the United States whereby ambitious immigrants could, with "luck and pluck," rise to the top of their profession and achieve the affluence and security of the American dream. The stories of the stars of rock 'n' roll followed this tradition and placed totemic importance on the tools of the trade: the electric guitar. Chuck Berry's "Johnny Be Goode," one of the great anthems of rock 'n' roll, tells the story of a young boy who leaves home, with only a guitar on his back, to seek out fame and fortune. This story resonated in thousands of other songs, most of which cast the hero as a guitar player.

The mass adulation of a few leading guitar players in the 1960s was a measure of the size of audience for the music and the market for the instruments. It also marked a return to an older tradition in the popular culture of the guitar, when the solitary bluesman was the center of attention. Several English musicians, including Jeff Beck and Eric Clapton, had spearheaded a blues revival in the early 1960s. This invigorated both blues and pop music and also created a new wave of guitar heroes who reflected some of the characteristics of the blues musicians who inspired them: outlaws and outcasts who travelled from place to place living on their wits and enjoying the rewards of their virtuosity on the guitar. The bluesman was a special person, either gifted or damned by the Gods, whose freedom and powers (especially over women) were highly valued in the popular culture of the 1960s. Jimi Hendrix was the greatest of all the guitar heroes; his unequalled virtuosity on the instrument was only matched by the excesses of his lifestyle which were also embodied in his songs.

The steady advance of the technology of electric guitars was centered on two main goals: increasing the volume and finding ever more electronic effects. In the 1960s amplifiers were made larger and more efficient and the separate amplifier unit and speaker boxes replaced the old amplifiers which had electronics and speakers in the same box. The banks of Marshall 4X12 speaker units became the backdrop for the typical rock 'n' roll performance. More complicated devices were used to manipulate electronic feedback and create new sounds. Guitar players could surround themselves with effects boxes, such as "fuzz" and "wah wah," that were operated by foot switches. The sound of psychedelic music of the 1960s was essentially the sound of controlled feedback from the electric guitar.

The increasing popularity of other methods of manipulating electronic sounds in the 1970s, such as the Moog synthesizer and electric organ, threatened to end the dominance of the electric guitar in popular music. But there were several sub genres of rock 'n' roll that were still completely dominated by its sound: heavy metal which made a cult of loudness and made futuristic guitars the center of theatrical stage shows; and punk which returned to the basic guitar sound of early rock 'n' roll. Punk musicians made a virtue out of amateurism in their rejection of the commercialization of pop music and the elevation of guitar virtuosos. They encouraged everybody to pick up a guitar and advised the aspiring musician that only a few chords needed to be mastered before forming a band. On the other hand, advocates of heavy metal wanted to be transported to an imaginary world of outlandish stage shows, outrageous costumes and unusual guitar shapes. Both groups of musicians used exactly the same equipment, but to different ends.

Although each decade after the 1960s produced an "alternative" music to rock 'n' roll, the electric guitar's ubiquitous presence in popular music was not challenged. Disco (1970s) and rap (1980s) still relied on the supple rhythm lines of the electric bass. The guitar based rock band continued to dominate both professional and amateur

music in the 1990s, ensuring that the instrument will prosper into the twenty-first century.

## Electric Trains

Even as transportation improvements accelerated through the twentieth century, the railroad still best symbolized the ability of mechanized invention to conquer distance; electric trains continue to epitomize this cultural belief in such technological progress. From children's playthings, they have evolved into accurately scaled and finely detailed models. Several gauges provide size options for modeling railroads, from the tiny N-scale and the highly popular HO at 1/87 scale, up to O-gauge and Standard gauge. In Europe, Märklin in 1901 manufactured the first model trains run by small electric motors. In 1910 the Ives Corporation of Bridgeport, Connecticut, introduced electric trains to this country; they remained their leading manufacturer up to the First World War. As the hobby caught on, other manufacturers began producing electric trains, including Marx, Varney, Mantua, American Flyer, and Lionel. Collecting and operating model trains is a pastime now enjoyed by people around the world.

## Elizondo, Hector (1936—)

A physically compact character actor with a brilliantly economical technique to match, Hector Elizondo delighted audiences and gained fame with his polished performance as the hotel manager in *Pretty Woman* (1990), one of several films he made for Garry Marshall. This New York-born actor of Hispanic parentage, who trained at the Actors Studio, proved exceptionally versatile, playing a

wide range of supporting roles, utilizing different accents and dialects, and capturing the essence of a character, whether in drama or comedy, by an expert flick of expression. His multitude of television appearances include Sandy Stern in *Burden of Proof* (1992) and the put-upon hospital chief Dr. Philip Watters, authoritative, weary, and not always wise, in *Chicago Hope* from 1994. He came to television and film with an impeccable Broadway provenance, beginning his career in *Mister Roberts* (1961) for distinguished director Edwin Sherin.

## Elkins, Aaron (1935—)

Aaron Elkins is the creator of two mystery series. The Gideon Oliver novels feature a forensic anthropologist frequently compelled to work not with ancient bones, but with modern murders. *Fellowship of Fear* (1982) initiated the series, followed by *The Dark Place* (1983), an unusually poetic mood-piece, and *Murder in the Queen's Arms* (1985). *Old Bones* (1987) received the 1988 Edgar Award for Best Mystery Novel. Subsequent Gideon Oliver novels include *Curses!* (1989), *Icy Clutches* (1990), *Make No Bones* (1991), *Dead Men's Hearts* (1994), and *Twenty Blue Devils* (1997). The Chris Norgren novels, whose hero is a museum curator, include *A Deceptive Clarity* (1987), *A Glancing Light* (1991), and *Old Scores* (1993). He has also co-written golf mysteries with Charlotte Elkins: *A Wicked Slice* (1989), *Rotten Lies* (1995), and *Nasty Breaks* (1997). Elkins' forté lies in combining intriguing characters and plots with exotic settings, as far ranging as England, Germany, Mexico, Alaska, Egypt, Tahiti, and the Pacific Northwest.

## Ellington, Duke (1899-1974)

Heralded by many as the greatest composer in jazz history, pianist and bandleader Duke Ellington composed and arranged most of the music played by his famous orchestra. His 1932 recording of "It Don't Mean a Thing (If It Ain't Got That Swing)" gave a name to the Swing Era, when jazz music and jitterbug dancing swept the nation in the late 1930s and early 1940s.

Born Edward Kennedy Ellington into a modestly prosperous family in Washington, D.C., he began studying piano at age seven. His graceful demeanor earned him the aristocratic nickname, Duke. Continuing to study piano formally, as well as learning from the city's ragtime pianists, Ellington formed his own band at age 19, and soon was earning enough playing for parties and dances to marry Edna Thompson. The band's drummer was his friend, Sonny Greer, who would anchor the Duke's rhythm section for the next 33 years.

Duke Ellington

After moving to New York City in 1923, Ellington began assembling jazz musicians whose unique sounds enhanced his own arrangements. With his new ensemble, he launched Duke Ellington and the Washingtonians. The band first worked for the legendary singer Ada Smith (better known later in European clubs as Bricktop). In 1924 Ellington wrote his first score for a revue, *Chocolate Kiddies*, which ran for two years in Germany, but was never produced on Broadway.

The band's big break came in 1927, when it began a five-year engagement at Harlem's Cotton Club, the site of frequent national broadcasts. Soon the Ellington name was widely known for Duke's signature style of improvisational and ensemble jazz. His earliest arrangements included what he at first called the "jungle style," which achieved unusual effects and rhythms through the use of plunger mutes on the trumpets and trombones. Major sidemen who joined the Duke Ellington Band in the Cotton Club era included Barney Bigard on clarinet, Johnny Hodges on alto and soprano sax, and Cootie Williams on the trumpet. The ensemble's first great recorded hit was "Mood Indigo" of 1930, which featured the band's inimitable tonal colors, made possible by the special sounds and styles of each individual musician. In 1933, a tour of England and the Continent brought the band worldwide fame.

With very little change in personnel over the beginning years, the orchestra was able to play with unheard-of ensemble precision. Such melodic recordings as "Solitude," "Sophisticated Lady," and "In a Sentimental Mood," won Ellington and his band a wide audience. But it was the uniquely orchestrated ensemble jazz in such pieces as "Daybreak Express," "Harlem Speaks," and "Rockin' in

Rhythm,” that impressed fellow jazzmen such as Billy Strayhorn, who joined the band as assistant arranger in 1939. It was Strayhorn’s composition “Take the A Train,” which became the orchestra’s theme song.

In 1943 the band began a series of annual concerts in Carnegie Hall that would continue until 1950. The first concert included Ellington’s earliest attempt at a nearly hour-length jazz composition, *Black, Brown, and Beige*, which he envisioned as a “musical history of the Negro.” It was his most ambitious work to date, one which musicologist and composer Gunther Schuller believes has “not been surpassed” in “scope and stature.” In subsequent Carnegie Hall concerts Ellington played such lengthy compositions as *Deep South Suite*, *Blutopia*, and *New World A-Comin’*. *Harlem*, another suite, was the centerpiece of an Ellington concert at the Metropolitan Opera House in 1951.

Although the Ellington ensemble continued to be ranked as one of the top two or three jazz orchestras during the 1950s, their difficult repertoire, coupled with frequent personnel changes, led to spotty performances that were often disappointing to their fans. However, after giving a smash-hit performance at the Newport Jazz Festival in 1956, followed by a 1957 CBS-TV special on Ellington entitled *A Drum Is a Woman*, the band’s fortunes were revived, and the Duke began a period of prolific composing. He and Strayhorn wrote a suite based on Shakespearean characters, *Such Sweet Thunder*, performed at New York’s Town Hall in 1957. In 1958, his first European tour in eight years proved a stunning success—one that he repeated the following year. In 1959 Ellington wrote his first score for a film, Alfred Hitchcock’s *Anatomy of a Murder*, which was recorded by Ellington’s band.

Up until his death of lung cancer in May of 1974, Ellington continued to write important music, much of it devoted to other cultures and to religious themes. For more than a half century, Duke had led one of America’s most popular and successful bands. As George T. Simon wrote, “No other bandleader ever did this nearly so long so well as Duke Ellington. No other bandleader created as much and contributed as much to American music.” A chorus of jazz critics agrees that Duke may be the greatest single talent in the history of jazz.

## Ellis, Bret Easton (1964—)

Born and raised in Los Angeles, writer Bret Easton Ellis belongs with novelists Jay McInerney and Tama Janowitz to New York’s literary “brat pack,” writers who achieved early success with their portraits of lonely types isolated in sparkling 1980s New York. Ellis has published four books: the novels *Less Than Zero* (1985), *The Rules of Attraction* (1987), and *American Psycho* (1991), and the

short story collection *The Informers* (1994). A rumored fourth novel on the world of fashion’s top models remained unpublished in the late 1990s.

Published when Ellis was twenty-one years old, *Less Than Zero* narrates the sorry lives of a group of Los Angeles young people. No longer teenagers, these people epitomize what would later be known as “Generation X” in Douglas Coupland’s popular phrase. The lives of the main character, Clay, and those of his well-to-do friends revolve around sex and drugs, in which they try to find the essence of a world that eludes them. Similar empty people populate the short stories of *The Informers*. Outstanding among them is the satirical “The End of the Summer,” in which the Californians of *Less Than Zero* appear as happy vampires.

An ebb in Ellis’s popularity came in 1987 when both the film adaptation of *Less Than Zero* and his novel about a triangular relationship, *The Rules of Attraction*, failed. But in 1991 he became a social phenomenon thanks to the publication of his outstanding *American Psycho*, the first-person narration of the exploits of serial killer Pat Bateman, a Manhattan yuppie. The extreme graphic violence and nihilism of the novel became controversial even before its publication. Following complaints by people working on the manuscript, Simon & Schuster withdrew the book from publication, losing a \$300,000 advance. The excerpts published by *Time* and *Sky* contributed to the controversy. The book was finally published as a Vintage paperback, becoming a best-selling novel in the United States and abroad. Its publication was greeted with a barrage of criticism, especially from feminists, and lukewarm reviews that missed much of the book’s originality to focus only on its nastier passages. Ellis himself confessed in an interview with Leslie White in 1994 that the controversy felt “like a joke, a huge postmodernist irony—the book was so badly misread.”

David Skal complains in *The Monster Show* that “although the whole incident [involving Ellis’s novel] was endlessly discussed in terms of taste, misogyny, and political correctness, a subtext of class snobbery predominated.” Skal argues that what really irritated feminists and moral guardians alike is the fact that Bateman is upper-class and that Ellis’s book is literature unlike the books by, for instance, Stephen King. This is possibly correct, yet *American Psycho*’s status as a literary text is still ambiguous. The book has sold remarkably well in many countries, creating a cult reflected in the many Internet websites devoted to its discussion, but critics and academics show an equivocal attitude toward it. Arguably, the book is commendable if only because it questions in depth the meaning of the word literature, together with the meaning of other relevant words such as homophobia, racism, misogyny, and classism.

*American Psycho* is essentially a radical indictment of the American culture of the Reagan era, a very bleak portrait of a time and place obsessed by money. Bateman’s insanity is, nonetheless, close to the existentialism of characters such as the anonymous protagonist of Albert Camus’s novel *The Outsider* (1946). In his lucidity Bateman is also a brother of the infamous Hannibal Lecter of the film *Silence of the Lambs* (also 1991) and of Mickey Knox in Oliver Stone’s *Natural Born Killers* (1994). Bateman’s diary narrates his frivolous life and that of the yuppie crowd that surrounds him. Bateman engages in a series of increasingly grisly murders of homosexuals, women, and male business colleagues which he describes with a stark, functional prose. This is hard to read because of its realism, but it may not be, after all, the true essence of the book. Perhaps a more remarkable peculiarity of Bateman’s style is that his descriptions of characters and places abound with information about designer objects seemingly

taken straight from catalogues. The violent passages that were published in isolation missed much of the irony of the book: characters mistake each other all the time because they all wear the same expensive clothes, Bateman's appraisals of pop idols such as Whitney Houston makes them appear trivial and boring, and restaurant surrealistic scenes are enriched by funny dialogue with plenty of non sequiturs showing the abysmal depth of the yuppies' ignorance.

It is undeniably true that many of the scenes in the book may offend the sensibilities of the average reader. But the fact that Bateman is addicted to Valium and Halcion suggests that, perhaps—hopefully, for some readers—the bloodbaths are just a product of his imagination, which is why nobody suspects him. Of course, this point is irrelevant to the question of what Ellis's intention was when writing such a remarkable book. Yet it is hard to see why so few reviewers have seen Ellis's fierce attack against yuppieism. *American Psycho* shows no mercy at all with a society that allows people like Bateman a room at the top. The reading is, nonetheless, complicated by Ellis's risky choice of Bateman as both his mouthpiece and his target. The deep morality of the book is thus purposely blurred in a literary game of mirrors, but readers should not make the mistake of identifying character and author. Ellis does challenge the reader to face Bateman's cruelty for the sake of reaping the reward of the final message of the book: "Surface, surface, surface was all that anyone found meaning in . . . this was civilization as I saw it, colossal and jagged," Bateman says at the end of the novel. So does Ellis. After reading *American Psycho*, the reader can only sympathize with this view of life at the end of the twentieth century.

## Ellis, Perry (1940-1986)

Virginia-born Ellis took his talents from fashion merchandising to fashion design in 1975. In 1978, he founded Perry Ellis Sportswear, a name that immediately recognized his fashion niche. Strong color, luxury fabrics, and a rich-suburban nonchalance were chief characteristics: women prized his cashmere and silk hand-knitted sweaters and throws. He offered a young outlook on old-money styles. He also designed menswear and home fashions. A ruggedly handsome man and a famously affable figure in American fashion, he fell gravely ill in the mid-1980s, but denied that the cause was AIDS, then a scourge of New York design talent. Ironically, despite his denials, Ellis's struggle with disease and his early death was a point-of-conscience and conversion for the fashion industry which began aggressively to

raise funds for AIDS research. Since his death, Perry Ellis continues as a popular licensing name.

## Ellison, Harlan (1934—)

Diminutive author Harlan Ellison has been called "one of the great living American short story writers." He has been called a lot worse by the many enemies with whom he has sparred in print, online, and in countless combative convention appearances. Ellison, whose major works include "I Have No Mouth and I Must Scream" and "Jeffty Is Five," began writing professionally at age 15, when his first story appeared in *The Cleveland News*. Since then he has been a prolific, at times logorrheic, presence on the American literary scene, penning essays, reviews, and teleplays in addition to his speculative fiction. A self-proclaimed humanist, Ellison writes dark fantasies that challenge the technological optimism prevalent in the science fiction genre. His idiosyncratic style has put off many mainstream science fiction readers, but few living scribes have been nominated for as many different honors (including, at last count, an Emmy, a Grammy, and a Humanitas Prize) as this complex, controversial figure.

*See Invisible Man*

## Elway, John (1960—)

With nicknames ranging from "The General" to "The Comeback Kid," National Football League quarterback John Elway of the Denver Broncos can add one more name to the list: "Super Bowl Champion." During his 16-year career in the NFL Elway earned a reputation as a fearless competitor, leading the Denver Broncos to five Super Bowls—three of which the Broncos lost. However, in his final two Super Bowl appearances (1998 and 1999), Elway led his team to victories over the Green Bay Packers and Atlanta Falcons, respectively, thus securing a place for the Broncos in the upper echelon of NFL history and a place for himself in the NFL Hall of Fame. Although he often chose to run with the ball, sacrificing his body for an extra yard or two, Elway gained a reputation as a finesse quarterback. In addition to holding the record for most wins by an NFL quarterback, Elway also holds the record for most come-from-behind victories (45), and finished the 1999 season just behind Dan

**John Elway**

Marino of the Miami Dolphins in total career passing yardage. Elway earned the NFL's Most Valuable Player award for the 1987 season, and played in 8 NFL Pro Bowls. Elway retired from the NFL in 1999.

## E-mail

The most important new medium of mass communication of the past 40 years was not in any way connected with television, moving pictures, or the recording industry; it initially emerged, instead, as a project of the U.S. Defense Department. In the 1960s, the department's Advanced Research Projects Agency, in coordination with several research institutions, came up with a system for connecting or "networking" distantly located computers using independent, dedicated telephone lines. Researchers using the system experimented with sending simple text messages to one another over the network. Soon, the trickle of research-oriented messages and data became a tidal wave of information exchange of all kinds. The new medium of

"electronic mail" eventually changed the way we interact with our friends, co-workers, and families. It also brought our everyday reality much closer to Marshall McLuhan's pipedream of a genuine worldwide community rooted in technology.

The practice of sending electronic messages from one person to another actually predated computer networking. A few years before the ARPANET, users of "time-sharing"-style computer consoles developed a simple system of sending memos to a central "mailbox" located on a mainframe computer used by a variety of users at different times. Each user had a file of their own to which the messages were directed and were able to pick up their messages during the time when they were using the computer. The practice was important to the future development of electronic messaging, but had little or no utilitarian value at the time; it was a mere toy. The ARPANET engineers later picked up on the idea and decided to see if they could send small messages and memos from one computer to another. It worked; they then began to send messages over the span of the nationwide ARPANET itself. To paraphrase one beneficiary of the ARPA's research, it was a small step for a few computer geeks, a giant leap for the global village.

The system was not only useful for the researchers but also proved to be a pleasant pastime—so pleasant, in fact, that ARPA director Stephen Lukasik worried that it could jeopardize the entire enterprise. In Katie Hafner and Matthew Lyon's history of the Internet, *Where Wizards Stay Up Late*, Lukasik said he told the researchers that if "you're going to do something that looks like it's forty thousand miles away from defense, please leave our name off of it." It was clear early on that e-mail was useful for much more than just the military and technological research for which the ARPA was founded in 1957.

By the mid-1970s, engineers discovered that messages could be sent through the ARPANET by those without official authorization to use it. The message-sending capability of this network was obviously universal, and through the demonstrated use of satellite technology, global. Anyone could tap into the network to send messages of any sort to virtually anyone else, anywhere else in the world. The message of this medium was limitless interactivity, not mere broadcasting. The ARPANET eventually gave way to a new, more enveloping network known as the Internet and the uses of e-mail quickly mushroomed.

The possibilities of the Internet were soon tested. In the early 1970s, individuals wrote anti-war messages and mass-mailed them; one electronically advocated Nixon's impeachment. Other mass-mailings became routinized around a variety of subject-headings that were of interest only to certain groups: this later became that part of the Internet known as Usenet. On Usenet, e-mail messages were sent to a central server and mass posted to a kind of electronic message board where all could read and even reply to the message. If one was interested in gardening and wanted to talk about it with other gardeners around the world, one could use software and server space to organize a group. Other forms of mass-e-mailings included discussion lists; in these, one needed to subscribe privately to the list and messages were routed directly to one's private mailbox rather than to a public message board.

E-mail also entertained in more traditional ways. Many used the Internet's e-mail capabilities early on to play fantasy role-playing games like *Dungeons and Dragons*. More serious uses of e-mail soon came to the attention of the U.S. Postal Service, and even President Jimmy Carter—who used a primitive e-mail system during his 1976 campaign—proposed ways of integrating the new technology into a postal system that originally delivered messages on the backs of ponies.

During the 1980s and 1990s, the culture that first blossomed in the 1970s began to flourish among a worldwide community of computer users. Hundreds of thousands of people now understood what it meant to be “flamed” (told off in a vicious manner). Multitudes decoded the meanings of the symbols called “emoticons” that attempted to convey facial expression through text. ;-) meant a wink and a smile: the messenger was “just fooling” and used the emoticon to make sure his plain text words were not misunderstood.

As the medium matured, private companies like Compuserve and America Online built private networks for individuals to dial in to send and receive electronic messages. New electronic communities formed in this way and were soon burdened with such “real world” issues as free speech, crime, and sexism. Many women complained of electronic abuse by the predominantly male on-line community. Predators sent electronic messages to children in attempts to commit crimes against them. Some of the private networks regulated speech in “public” forms of electronic communication and this met with scorn from the on-line community. Others used e-mail as an advertising medium, mass-mailing ads to hundreds of thousands of Internet users. This practice, known as “Spam,” is held in almost universal disrepute, but is as unavoidable as smog in Los Angeles.

E-mail became ubiquitous by the late 1990s and the lines blurred between public, corporate, and private networks. By the late 1990s, many large corporations standardized their e-mail systems on Internet protocols so that interoffice mail shattered the physical boundaries of the “office” itself. Using e-mail, one could now effortlessly “telecommute” to work, rather than physically move from home to a separate workplace. With the boundarylessness of Internet-based e-mail, users could play at their work, and work at their play. The discovery of e-mail literally changed the ways that we live, work, and communicate with one another.

## Emmy Awards

The movies have their Oscars. Broadway has its Tonys. Off-Broadway has its Obies. And television has its Emmys. Ever since January 1949, when the Academy of Television Arts & Sciences first presented them at the Hollywood Athletic Club, the Emmy Awards have remained the most highly visible and coveted honor earned for

**Best Actor and Best Actress in a Drama Series Emmy Award winners Andre Braugher and Christine Lahti with their statuettes, 1998.**

achievement in television. The trophy’s name was derived from “Immy,” a word routinely employed to signify the image orthicon camera tube, which was in use during the early years of television. The statuette—a gold-plated winged lady hoisting a globe—was designed by television engineer Louis McManus, using his wife as a model. McManus himself was honored during that first ceremony with a special award “for his original design of the Emmy.”

Over the years, the Emmy Awards have expanded and evolved. In 1949, six trophies were handed out; today, scores of Emmys are won each year for both national and local programs. The initial master of ceremonies for the awards was Walter O’Keefe, a long-forgotten radio quiz show emcee and celebrity interviewer. Across the decades since, the ceremony has been hosted by a gallery of star names, including Fred Astaire, Frank Sinatra, Bill Cosby and Johnny Carson; while among the many great acting legends who have won the award are Helen Hayes, John Gielgud, Julie Harris, Laurence Olivier, Dustin Hoffman, Bette Davis, Anthony Hopkins, Hume Cronyn, Jessica Tandy and Ingrid Bergman. The first Emmy recipient was Shirley Dinsdale and her puppet, Judy Splinters, categorized as “Most Outstanding Television Personality.”

The Emmy categories, particularly during the early years, were frequently, and somewhat arbitrarily, re-named. Actor William Frawley, for example, was nominated for five successive years for his role as Fred Mertz in *I Love Lucy*. His first nomination, in 1953, was as “Best Series Supporting Actor”; the following four were re-designated annually as “Best Supporting Actor in a Regular Series,” “Best Actor in a Supporting Role,” “Best Supporting Performance By an Actor,” and “Best Continuing Supporting Performance By an Actor in a Dramatic or Comedy Series.” The procedure for securing nominations and naming winners also changed, while the number and variety of categories expanded. By the end of the 1990s, the most popular and high-profile awards—as with the Oscars—remained those for best performers and best programs, but established Emmy

Award categories had come to include directing, writing, casting, and hairstyling, and to acknowledge technological expertise with awards for technical direction, electronic camerawork, film editing, and videotape editing.

The Emmys have been fraught with controversy and internal conflict, characterized by in-fighting between the New York and Hollywood chapters of the Academy of Television Arts & Sciences, and disputes between other Academy factions, followed by lawsuits, rule changes and separations of power and responsibility. Some of the most publicized Emmy squabbles have involved boycotts. Upon learning that their awards would not be handed out during the televised broadcast, TV directors and writers banded together and threatened to boycott the 1974-75 show. In the previous decade, the news branches of CBS and ABC snubbed the 1963-64 Emmys. At the time, CBS News President Fred Friendly alleged that voting practices were “unrealistic, unprofessional and unfair,” and CBS News again refused to participate in 1964-65 and 1965-66. The 1979-80 affair was also boycotted—on that occasion by performers wishing to coerce the TV networks to resolve a seven-week-old strike by the Screen Actors Guild and the American Federation of Television and Radio Artists.

Another cause for concern is the situation whereby certain actors have amassed more trophies than can fit on their mantels for playing the same character year after year, while other equally fine performers have remained unrewarded. Susan Lucci, for example, nominated for umpteen Emmys for her performance as Erica Kane in the soap opera *All My Children*, and Angela Lansbury, similarly singled out for playing Jessica Fletcher in *Murder, She Wrote*, by the late 1990s had never won. Their failures to collect a single statuette became a national joke. Nonetheless, echoing the annual hype that surrounds the Oscars, critics and viewers continue to speculate as to the nominees and the winners, and gather before their television sets for the star-studded prime-time ceremony. And the winners, setting aside any behind-the-scenes tension, beam proudly for the cameras as, gratefully, they accept their gold-plated Emmys.

—Rob Edelman

## Empire State Building

Constructed in 1930-31, the Empire State Building was the tallest building in the world for forty years, until the construction of New York’s World Trade Center in 1971 and, despite being overtaken in terms of its height, both in the United States and abroad, has remained America’s most internationally famous architectural icon. It is both a shining example of the aesthetic and functional possibilities of the skyscraper form, and a potent symbol of the Manhattan metropolis it inhabits. The Empire State has played a prominent role in several Hollywood movies and has been the subject of countless

The Empire State Building, New York City.

essays and artworks, while an infinite number of products have been marketed, capitalizing on its familiar image.

The building demonstrated the extent to which corporate capitalism came to represent America to the rest of the world. It was the fruit of a speculative real estate venture by the Empire State Company, an organization whose major investors were John J. Raskob of General Motors and Coleman and Pierre du Pont. The former New York governor and presidential candidate Alfred E. Smith served as the company’s president and front man. The project began with the purchase of land, formerly owned by the Astor family, on Fifth Avenue between 33rd and 34th Streets in midtown Manhattan. From the start, there was no “anchor tenant” or big company to occupy and associate with the building, unlike the nearby Chrysler Building or the famous downtown Woolworth Building. In 1929, just two months after the first public announcement of the Empire State venture, “Black Friday” struck on Wall Street, but the developers gambled on an economic turnaround and proceeded with their plans.

On May 1, 1931, at a ceremony attended by President Herbert Hoover and New York Governor Franklin Delano Roosevelt, the Empire State Building was officially opened. Construction had taken only 12 months—a remarkable rate of progress, during which the building’s steel skeleton was erected in a mere 23 weeks. (During one period in 1930, workers put up 14 floors in ten days!) For promotional purposes, the developers had specifically set out to build the tallest building in the world. They achieved their goal. Reaching a height of 1,250 feet, the Empire State was almost 200 feet taller than its rival, the glitteringly flamboyant Chrysler Building, by comparison with

which its design style, by the architectural firm of Shreve, Lamb and Harmon, was relatively sedate. The building's form was determined by its height and the setbacks required by the 1916 New York Zoning Laws. There was no elaborate decoration on the limestone exterior to attract the eye; instead, the building relied on its graceful form, enlivened by the conscientious use of setbacks, to provide an aesthetic effect. At the top, on the 102nd floor, was an open-air observation deck beneath a huge mooring mast intended by the developers to serve as an enticement for zeppelin landings. (No zeppelin ever docked, though).

The first years, however, were lean. The building was only half-full when it opened, and with only a twenty-five percent occupancy rate during the 1930s, was often dubbed the "Empty State Building." At times it seemed that only the income from the popular 86th and 102nd floor observation decks were keeping the premises alive. Nonetheless, almost immediately after opening, the Empire State Building became a cultural icon. In its first year of operation, over one million sightseers visited the observation decks, and Hollywood soon spotted its movie potential. The building's association with the movies famously began with *King Kong* in 1933, and surfaced as an integral plot strand many times since, including in *An Affair to Remember* (1957) and *Sleepless in Seattle* (1993). The building is a ubiquitous icon of the city's tourist trade, and millions of replicas of varying sizes have been sold to visitors and native New Yorkers alike.

There is no obvious explanation as to why the Empire State Building has continued to attract successive generations of visitors and admirers. People remain fascinated by the sheer (and ever increasing) size of skyscrapers, but impressive edifices such as Chicago's Sears Tower or New York's World Trade Center, have failed to capture the public affection in which the Empire State is held. The Empire State has not been the world's tallest building in decades; neither is it universally considered to be the most beautiful or the most interesting of the world's skyscrapers. Nevertheless, its special place in the hearts of Americans has not been superseded. During the Depression, the building was a stalwart symbol of optimism. As Alfred E. Smith said at the dedication ceremony, the Empire State Building is "the greatest monument to ingenuity, to skill, to brain power, to muscle power" And he might have added, to triumph in the face of adversity. After World War II, it was the emblem of America's triumphant emergence as the world's preeminent economic and cultural power; from the 1950s onwards, the building's elegant beauty put to shame (with certain honorable exception such as Mies van der Rohe's Seagram building) the forest of impersonal glass boxes that came to alter the face of Manhattan. With its many historic and romantic resonances, The Empire State Building represents much more than just a pioneering triumph of scale.

—Dale Allen Gyure

## Environmentalism

American environmental concern traces back to Jeffersonian ideas of a unique American connection to land and the romantic ethos of the nineteenth century. Open land, sometimes viewed as "wilderness," defined the New World for many European settlers. Thomas Jefferson argued that this open land could be transferred into an American strength if development were directed toward an agrarian republic. While much of the nation would pursue land-use similar to the landscape of Jefferson's ideal, some urban Americans remained intrigued by Jefferson's idea of a unique American connection to the natural environment. This can be seen in the adoption of European forms such as parks and gardens and in the intellectual tradition of romanticism and transcendentalism. By the end of the 1800s, wealthy urbanites pursued "wild" adventures in sites such as the Adirondacks, initiated organizations to conserve animal species or limit pollution, and, finally, set aside areas of nature from development. While the first national parks, Yellowstone and Yosemite, proved to be watershed events in environmental history, they were not initially set aside to protect wilderness areas.

Much nineteenth century environmentalism occurred without a strict organization or philosophy, and the first national parks are a primary example of this. Some scholars have chosen to view nineteenth century environmentalism as a product of Gilded-Age decadence and not an emerging new consciousness toward natural resource use. For instance, Yellowstone, established as the first national park in 1872, developed closely with railroad interests who hoped it would attract tourists to the American West. Its oddities—geysers, waterfalls—proved more important to observers than its unspoiled wilderness. They also made its utility for settlement questionable, which allowed its sponsors to dub the area "worthless for development." Such a designation made lawmakers more willing to sponsor setting it aside for altruistic reasons.

The progressive period energized many Americans to identify social ills and use the government to correct them. The impulse to discontinue waste of resources and the pollution, physical and spiritual, of American communities rapidly became an expression for Americans' unique connection to the land. The leadership of President Theodore Roosevelt and his Chief of Forestry Gifford Pinchot galvanized the upper-class interest with national policies. These policies deviated in two directions, preservation and conservation. Roosevelt greatly admired the national parks as places where "bits of the old wilderness scenery and the old wilderness life are to be kept unspoiled for the benefit of our children's children." With his spiritual support, preservationists linked securing natural areas apart from development to icons of Americanness, including Jeffersonian

ideals and romanticism. Finally, though, preservationists argued that a society that could exhibit such restraint as to cordon off entire sections of itself had ascended to the level of great civilizations in world history. While Roosevelt is thought to have had preservationist convictions, his main advisor on land management, Pinchot, argued otherwise for the good of the nation.

Conservationists, such as Pinchot, sought to qualify the preservationist impulse with a dose of utilitarian reality. The mark of an ascendant society, they argued, was the awareness of limits and the use of the government to manage resources in danger. Forest resources would be primary to Pinchot's concern. The first practicing American forester, Pinchot urged Americans to manage forests differently than had Europe. Under Pinchot's advice, President Theodore Roosevelt moved the few National Forests created in 1891 out of the jurisdiction of the Department of Agriculture and into an independent Forest Service. During his administration, Roosevelt added 150 million acres of National Forests. The U.S. Forest Service became one of the most publicly-recognized government agencies of the Roosevelt era under Pinchot's direction. A mailing list of over 100,000, frequent public appearances, and penning articles for popular magazines combined with Pinchot's personal connections to help make forests a national cause celebre. This public standing, created through forest conservation, further inflamed the approaching alteration that would define the early environmental movement.

While the difference between preservation and conservation may not have been clear to Americans at the beginning of the twentieth century, popular culture and the writing of muckraking journalists clearly reflected a time of changing sensibilities. After the San Francisco fire, the nation confronted its feelings in order to define national policy. San Francisco, in search of a dependable supply of water, requested that the Hetch Hetchy Valley, located within the boundaries of Yosemite National Park, be flooded in order to create a reservoir to protect against future fires. Preservationists, rallied by popular magazine articles by naturalist John Muir, boisterously refused to compromise the authenticity of a National Park's natural environment. Reviving romantic notions and even transcendental philosophies, Muir used this pulpit to urge "Thousands of tired, nerve-shaken, over-civilized people are beginning to find out that going to the mountains is going home; that wildness is a necessity; and that mountain parks and reservations are useful not only as fountains of timber and irrigating rivers, but as fountains of life." He called those wishing to develop the site "temple destroyers." In reaction, Pinchot defined the conservationist mantra by claiming that such a reservoir represented the "greatest good for the greatest number" of people, and therefore should be the nation's priority. The dam and reservoir would be approved in 1913, but the battle had fueled the emergence of the modern environmental movement.

Environmentalism continued to emerge as a portion of twentieth-century culture throughout the period before World War II. Most importantly, the New Deal brought the connection of scientific understanding to the popular appeal of not abusing natural resources. Particularly as New Deal agencies strove to win public approval for their back-to-work programs, popular periodicals were deluged with scientifically-based articles discussing land-use practices being carried out by New Deal agencies. This development incorporated the emergence of ecology, also taking place in the 1930s, with federal policies to manage watersheds, maintain forests, teach agriculture,

and hold fast the flying soils of the Southern Plains. Press coverage of the "dust bowl" of the 1930s, for instance, presented a natural disaster caused by drought and bad luck. Through government-made documentary films such as *The Plow that Broke the Plains*, the New Deal infused a bit of ecological background to explain desertification and agricultural practices that can be used to combat it. In the process of a natural disaster, the American public learned a great deal about its role within the natural environment.

This lesson became more pronounced as Americans increased their lifestyle standards and their expectations for safety. Historians point to a clear correlation between the 1950s growth in the middle class and the popularity of environmentalism. Samuel P. Hays wrote that this era "displayed demands from the grass-roots, demands that are well charted by the innumerable citizen organizations. . . ." that grew out of such public interest. Within growing suburbanization, middle-class Americans expected health and home safety. While there was as yet little regulative authority available, grass-roots environmentalists demanded their government to intercede and insure community safety. The groundswell of interest mobilized with the counter-culture movements of the 1960s, and activists seized a national stage to link scientific data with environmental concern.

The initial interest of the public in the 1940s and 1950s was garnered through an event similar to Hetch Hetchy. The Bureau of Reclamation, an agency developed by applying Pinchot's idea of conservation to waterways of the American West, set out to construct the Echo Park Dam along the Utah-Colorado border, and within a little used National Monument, named Dinosaur—even though most of its fossils and bones had been stolen. As Congress neared a vote on the issue in 1950, 78 national and 236 state conservation organizations expressed their belief that National Parks and Monuments were sacred areas. David Brower, executive director of the Sierra Club and Howard Zahniser of the Wilderness Society used the opportunity to create a model for environmental lobbyists to follow. Direct-mail pamphlets asked: "What is Your Stake in Dinosaur?" and "Will You DAM the Scenic Wildlands of Our National Park System?" Additionally, a color motion picture and a book of lush photos, each depicting the Echo Park Valley's natural splendor, were widely viewed by the public. Such images and sentiments forced Americans to react. With mail to Congress late in 1954 running at eighty to one against the dam, the bill's vote was suspended and the project eventually abandoned. The issues had been packaged by environmentalists to connect concerns with romantic images of the American past. The American public reacted as never before.

Zahniser identified this moment as the best to press for the environmental movement's greatest goal: a national system of wilderness lands. Based on the idealistic notion of pristine wilderness, such a system had been called for beginning with Aldo Leopold in the 1910s. With increased recreation in parks and public lands, argued Zahniser, it had become even more crucial that some of the land be set aside completely. His bill, introduced to Congress in the 1950s, precluded land development and offered recreational opportunities only for a few rather than for the great mass of travelers. Such an ideal goal required great salesmanship, and Zahniser was perfect for the job. As the political climate shifted in the early 1960s, lawmakers became more interested in wilderness. Finally, in 1964, President Lyndon Johnson signed the Wilderness Act into law. The United States had taken one of the most idealistic plunges in the history of

environmentalism: nearly ten million acres were immediately set aside as “an area where the earth and its community of life are untrammled by man, where man himself is a visitor who does not remain.” Additional lands were preserved in similar fashion by the end of the decade.

While the concept of wilderness forced the general American public to begin to understand ecosystems and the webs of reliance operating within natural systems, the application of scientific understanding to environmentalism occurred most often in other realms. Pollution composed the most frequent complaint, but its nuisance derived more from physical discomfort than a scientific correlation with human health. Rachel Carson, a government biologist turned nature writer, presented the American public with its lesson in science in 1962 with the publication of *Silent Spring*. The bestseller told the story of pollution (particularly that from the popular pesticide DDT) and its effect on ecological webs of life linked water runoff to fish health and then to depletion of the Bald Eagle population. Readers were left to infer the effects of such chemicals on humans. Flexing their increased environmental awareness, the American public scurried to support Carson’s parade through television talk shows. The Kennedy administration appointed a commission to study Carson’s findings and a year later banned DDT from use in the United States. Carson became identified with “mother nature” and a maternal impulse to manage the natural environment through federal regulation.

Over the next decade, a deluge of environmental legislation responded to the public’s demand for action. The public outcry was so severe that even a conservative such as Richard Nixon could be deemed “the environmental President” as he signed the National Environmental Protection Act in 1969, creating the Environmental Protection Agency (EPA). The public entrusted the EPA as its environmental regulator to enforce ensuing legislation monitoring air and water purity, limiting noise and other kinds of pollution, and monitoring species in order to discern which required federal protection. The public soon realized just how great the stakes were. During the 1970s, oil spills, river fires, nuclear accidents, and petroleum shortages made it appear as if nature were in open rebellion. Rapidly, this decade instructed Americans, already possessing a growing environmental sensibility, that humans—just as Carson had instructed—needed to live within limits. A watershed shift in human consciousness could be witnessed in the popular culture as green philosophies infiltrated companies wishing to create products that appealed to the public’s environmental priority. Recycling, day-light savings time, car-pooling, and environmental impact statements became part of everyday life after the 1970s.

The culture expressing this environmental priority has taken many forms since the 1970s. Earth Day 1970 introduced a tradition that has evolved into an annual reminder of humans’ tenuous existence. As many as twenty million Americans participated in the first celebration. Some celebrants protested polluting companies, others planted trees, and still others cleaned up trash. Particularly for school-age children, a single day has evolved into continuous awareness. Ideas such as highway trash cleanup and recycling have become part of everyday American society. Many parents find children acting as environmental regulators within a household. Mixing science with action, environmentalism proved to be excellent fodder for American educators. More importantly, though, the philosophy of fairness and living within limits merged with cultural forms to become mainstays

in entertainment for young people, including feature films such as *Lion King* and *Fern Gully*, environmental music, and even clothing styles. The audience of children and youths quickly became an outlet for ideals for which many adults longed but from which society limited their access. In essence, after 1980 many American parents expressed their own convictions by supporting the environmental idealism of youth culture.

Earth Day 1990 continued such traditions, but also marked an important change in environmentalism’s scope. Worldwide, 14 nations and more than 40 million humans marked some kind of celebration on Earth Day 1990. While a global perspective seemed inherent in the web of life put forward by Carson and others, it would take global issues such as the Chernobyl nuclear accident in 1986 and shared problems such as greenhouse gasses and global warming to bind the world into a common perspective, fueled to action by the Western environmental consciousness. Most importantly, the United Nations presented a tool for facilitating such efforts. With its first meeting on the environment in 1972, the global organization created its Environmental Program. This organization would sponsor the historic Rio Conference on the Environment in 1992 and that on global warming in 1997. In response to such activities, the U.S. federal government declared the environment a genuine diplomatic risk in global affairs by creating a State Department Undersecretary for the Environment in 1996. What began as an intellectual philosophy had so impacted the human worldview that it would now influence global relations.

By the late 1990s, polls revealed that nearly 70 percent of Americans referred to themselves as “environmentalists.” But of those who called themselves environmentalists most did not hold deep philosophical commitments. More often, they expressed themselves in reaction to mass mailings put out by any of the hundreds of environmental special interest groups developed by the 1990s. Starting from associations of conservation hunters, including the Audubon Society founded in the 1870s, organizations such as the Sierra Club, Wilderness Society, and the American Wildlife Federation have evolved with the environmental movement. Additionally, the global emphasis spawned Greenpeace, the world’s largest environmental organization. Financial support from membership dues broadens the cultural impact of environmental philosophies while also allowing many Americans to define themselves as supporters while possessing little of the movement’s primary convictions.

The twentieth century has witnessed the development of a consciousness that transcends the preservation of special places and the regulation of damaging pollutants. From romantic beginnings, Americans have been moved to ask serious questions about their very basic idea of progress. For many Americans, increased environmental awareness has moved them to alter their actions and priorities. American culture, though, has become more “green” for every observer.

## Equal Rights Amendment

While the history of slavery is well known in the United States, the fact that married women were legally subservient until the nineteenth century is less well known. The doctrine of *coverture*, practiced throughout the United States, meant that married women were covered by their husbands and had no separate legal existence. In practice, this resulted in the inheritance of women being assigned to their husbands, the guardianship of minor children being decided by the father, earnings of wives and minor children being claimed by the father, and lack of protection from abusive husbands. Many states allowed husbands to beat their wives to correct them as long as the means of punishment was no thicker than his thumb. This is where the rule of thumb derived. The Seneca Falls Convention in 1848 had paved the way for the rights of women, but it was not until 1920 that women had won the right to vote with the 19th Amendment. Once the vote was assured, women's groups launched a campaign to provide for equal rights amendments at both the state and national levels.

The push for equal rights was led by the National Women's Party (NWP) who succeeded in 1925 in convincing Congress to hold the first congressional hearings on the Equal Rights Amendment (ERA). The amendment stated that "men and women shall have equal rights throughout the United States and every place subject to its jurisdiction." The National Association for Women's Suffrage of America (NAWSA), headed by Carrie Chapman Catt, also worked for the passage of the Equal Rights Amendment. Alice Paul, a veteran of the English campaign for women's rights, joined Catt in her struggle and accepted the presidency of the NWP. She introduced the first version of the Equal Rights Amendment to Congress, arguing that the purpose of the amendment was to allow women to be all that they could be. Opponents to the ERA could be found both in and out of the women's movement. From within, Florence Kelly led the fight against it, believing that it would take away existing protections for which women had fought.

In 1940, the Republican party endorsed the Equal Rights Amendment, and the Democrats followed in 1944. In 1946, an attempt to steer the amendment through the Senate failed. By 1950 the intent of the amendment had been weakened by a rider that exempted all laws designed to protect women. Then in 1953, the amendment was sent to congressional committees where it remained for the next two decades.

When the "second wave" of the women's movement was launched in 1963 with the publication of Betty Friedan's *The Feminine Mystique*, new attention was focused on the Equal Rights Amendment. In 1923, support for the ERA had been considered radical, but in the 1970s support came from mainstream America as well as from more liberal elements. Advocates included The League of Women Voters, the Business and Professional Women, the Young Women's Christian Association (YWCA), the American Association

of University Women (AAUW), Common Cause, and United Auto Workers (UAW).

Representative Martha Griffith reintroduced the Equal Rights Amendment in 1970, with a slight rephrasing: "Equality of rights under the law shall not be denied or abridged by the United States or by any state on account of sex." In 1972, the new version of the Equal Rights Amendment passed both houses of Congress with large majorities. The stiffest battle was still ahead, however, as supporters of the amendment set out to garner the necessary approval of three-fourths of the 50 states. It was not to be. Thirty-five states ratified, but the sophisticated organization of the opposition prevented passage in the three additional states needed for ratification.

Opponents to the Equal Rights Amendment pointed out that the 14th and Fifth Amendments to the United States Constitution contained guarantees of equality and that existing laws, such as the Civil Rights Act of 1964 and the Equal Pay Act provided practical protections of rights. They painted horrifying portraits of women in combat, co-ed restrooms, and working mothers who neglected their families. To no avail, supporters countered with arguments that laws were more transitory than amendments and that women had an equal responsibility to protect their countries. They pointed out that women already worked outside the home, and that traditional families were still the norm.

Most amendments are given seven years from the date of congressional approval to win ratification by the necessary 38 states. The Equal Rights Amendment was given an unprecedented three-year extension. But in 1983, the extension expired, and the Equal Rights Amendment was never made a part of the United States Constitution. Supporters of the amendment continue to offer it up for approval at both the national and state levels, but the urgency for its passage has dissipated. As a whole, women no longer feel as threatened by the lack of an ERA because they have enjoyed the successes of a society more open to women's rights and have reaped the benefits of Title VII of the Civil Rights Act of 1964, which banned discrimination based on sex. In a landmark case in 1972, the Supreme Court held in *Reed v. Reed* that legal classifications could not arbitrarily be based on sex. Subsequent cases have upheld women's right to serve on juries, to practice law and medicine, to work in bars, to be protected from pregnancy discrimination, and to take control of their reproductive lives. Ruth Bader Ginsburg, appointed to the Supreme Court by President Bill Clinton in 1993, successfully argued as a practicing lawyer that the Equal Protection Clause of the 14th Amendment should protect individuals from sexual discrimination. Even though the Equal Rights Amendment was never added to the United States Constitution, protection for those rights has now become part of the fabric of American law and society. While women continue to be discriminated against in practice, they are legally protected from intentional discrimination. It could be argued that the defeat of the ERA paved the way for the success of the goals of the amendment.

## ER

The Emmy-Award-winning television drama *ER* premiered in the fall of 1994. It became the most richly compensated show in television history in 1998 when NBC agreed to pay the show's production company, Warner Brothers, 13 million dollars per episode for three seasons. Best-selling author and film producer Michael Crichton (*Jurassic Park*, *Disclosure*) created the hour-long drama, which centers on a staff of young medical professionals who work in

the emergency room of an inner city hospital in Chicago. The show's collection of talented actors, writers, and producers garnered *ER* an average of 30 million viewers per episode. The show's blockbuster ratings and critical acclaim accelerated the 1990s trend toward cross-pollination between the television and film industries. Many members of the cast branched into film work while honoring contracts with the show. Crichton shared duties as executive producer with famous Hollywood producer and director Steven Spielberg and veteran television producers John Wells, Lydia Woodward, and Carol Flint.

The NBC-Warner Brothers financial agreement concerning *ER* signaled a shift in television economics. In the decade leading up to the deal, increased competition brought about by cable and satellite technology found traditional networks straining to maintain their dwindling audiences. Suddenly, exceptionally popular programs like *ER* enjoyed increased bargaining power. As a result, a two-tiered system took shape in which one or a handful of shows would carry a network—not necessarily by generating direct profits (although advertisers did pay \$500,000 per 30 second spot during *ER* broadcasts),

*ER* cast members: (from left) NBC President Warren Littlefield, Laura Innes, series executive producer John Wells, Anthony Edwards, Julianna Margulies, George Clooney, Noah Wylie, Kellie Martin, and Gloria Reuben celebrate the show's 100th episode.

but by luring viewers to the network, thus generating interest on the part of advertisers to invest in less-popular shows.

Frenzied pacing and frankness in depicting emergency medical procedures characterized the show. Its immediate popularity also afforded *ER* directors considerable room for artistic experimentation. In attempting to reproduce an edgy documentary style, for instance, “Ambush,” the opening episode of the fourth season, was broadcast live and shot on video rather than on traditional film stock. The daring episode (which some called a publicity stunt) received mixed reviews. Ultimately, producers shifted the focus of the drama away from its hyperactive emergency scenes, toward the soap-opera-like personal lives of the characters.

Web sites centered on the show’s doctors and nurses proliferated on the Internet. Viewers enjoyed the medical heroics performed by the characters, but also sympathized with the tragic humanity of their flaws and their weekly attempts to hold together their neglected personal lives. Series favorites include Dr. Mark Greene (Anthony Edwards), a senior attending physician whose career cost him his marriage; Dr. Doug Ross (George Clooney, whose 1999 departure from the show was one of the most-watched episodes), a handsome, philandering pediatrician; Dr. Peter Benton (Eriq La Salle), an intense and egotistical surgeon; Dr. John Carter (Noah Wyle), a well-intentioned but naive son of one of Chicago’s wealthiest families; Carol Hathaway (Julianna Margulies), a compassionate, earthy nurse who struggles to determine her own self-worth; Jeanie Boulet (Gloria Reuben), an HIV-positive physician’s assistant; Dr. Kerry Weaver (Laura Innes), an abrasive attending physician and administrator; and Dr. Elizabeth Corday (Alex Kingston), a winsome and intelligent visiting surgeon from England perplexed by the seriousness of her American colleagues. In addition to these favorites, series regulars have included various characters who lasted a season or two.

—Adrienne Russell

## Erdrich, Louise (1954—)

Of mixed Chippewa and German-American ancestry, Louise Erdrich addresses the concerns of modern Native Americans in a way that appeals equally, if somewhat differently, to Native American and mainstream readers alike. “Indianness” matters in her work, but Erdrich is far more interested in affirming important aspects of Native American experience—attitudes toward sexuality and nature, women’s power, and communal ethics and aesthetics in particular—than in accusing Euro-American culture (and readers) of past wrongs. Her Faulknerian preoccupation with place has led her to create a sprawling, loosely connected multi-novel saga that deals mainly, but not exclusively, with Native American life in the latter half of the twentieth century. Her fiction (she also writes poetry and essays) weaves together realism and fantasy, sensuality and lyricism, short story and novel, oral and written traditions, comic sensibility and tragic awareness. The popular and critical success of her National Book Award-winning first novel, *Love Medicine* (1984), and the physical attractiveness that led *People Magazine* to include her in its list of “most beautiful” people have helped make her one of the most recognizable and influential Native American writers of her generation.

## Erector Sets

Sets of metal girders, nuts, bolts, gears, and electric motors that could be used to build numerous structures and vehicles, Erector sets were a popular construction toy for decades and spawned other lines of construction sets, including Legos.

A. C. Gilbert, founder of the Mysto Magic Company in 1909, which sold magic trick equipment, introduced the Erector set in 1913. Inspired by the girders he saw being installed along the New Haven railroad, he was influenced by similar toy construction sets already on the market, including the English Meccano, which was made up of strips of metal, bolts, and nuts that could be put together to build various small models. Gilbert’s Erector set, however, could use gears and electric motors, a feature which made Erector a leader among construction toys.

The success of the Erector set was due to its versatility and response to new technological developments. Gilbert originally created pieces and designs for his sets which could be put together to create square girders that allowed for the construction of impressive buildings and bridges in imitation of the engineering feats of the burgeoning skyscraper architecture. In the 1920s, Erector sets could build models of trucks, Ferris wheels, and zeppelins. In the 1940s, Gilbert introduced the Parachute Jump. Gilbert and his company produced his toys until his death in 1961. In 1965 Gabriel Industries purchased the A.C. Gilbert company, but by the end of the twentieth century, Meccano S. A., who had purchased the Erector trademark around 1990, produced Meccano sets labeled with the Erector name. But the nostalgia surrounding the original Erector sets made them collectors items.

## Ertegun, Ahmet (1923—)

Ahmet Ertegun is the foremost music entrepreneur of the rock 'n' roll age. He and partner Herb Abramson founded Atlantic Records in 1947 on a loan of \$10,000. Under Ertegun's guidance, Atlantic Records was a key force in the introduction of rhythm and blues (R&B) and rock 'n' roll into the American mainstream. Atlantic has since become one of the top labels in the world. Ertegun's impact extends well beyond Atlantic Records. His astute guidance helped

shape the career of dozens of other top music executives, among them mega-mogul David Geffen. Ertegun is also a founding member of the Rock 'n' Roll Hall of Fame and served as its chairman. He was inducted into the hall in 1987 and the museum's main exhibition hall bears his name. Interestingly, Ertegun was also instrumental in bringing soccer to the United States—he was president of the highly successful New York Cosmos team during the 1970s. Clearly an ingenious mind, Ertegun has also won many prestigious humanitarian awards for his tireless efforts on a number of civil rights and civil liberties fronts.

Ertegun's unique ear for talent and his penetrating insight into the music industry were developed early. A child of the Turkish Ambassador, Ertegun and his older brother Nesuhi spent many of their formative years in Washington D.C. where they became ravenous jazz and blues fans. Their teenage record collection is reported to have numbered in the thousands and long before they were of legal age, the brothers had seen many of the great jazzmen of the era, including Louis Armstrong and Duke Ellington.

While studying philosophy at St. John's College, Ertegun became increasingly frustrated in his search for the recordings of many of the jazz and blues performers he had seen live. In response, he decided to start Atlantic Records in order to record many of these unrecognized talents. Atlantic, however, was never intended to be an archival label. Ertegun envisioned Atlantic as a vehicle for mainstreaming blues and jazz. In order to realize this goal, Ertegun concentrated on finding and recording musicians that did not easily fit the dominant black music styles of the day.

Ertegun's reputation in the industry was built upon his great "ears" for talent. His intimacy with the black musical idiom and his willingness to scour clubs and juke joints in any neighborhood and any region of the country set him apart from other talent scouts of the day. His successes in the field of A&R stand still as the yardstick by which others are measured. Among the more influential artists Ertegun brought to Atlantic during the early years were Ray Charles, Big Joe Turner, Ruth Brown, The Drifters, The Clovers, and The Coasters. Jazz masters John Coltrane and Professor Longhair also recorded for Atlantic during this era. Once artists were contracted with Atlantic, Ertegun continued to work closely with them in the studio. On occasion he also wrote songs for his artists. Under the pseudonym "Nugetre" (Ertegun spelled backwards), he penned several hits, including "Don't Play that Song," "Chains of Love," "Sweet Sixteen," and "Mess Around."

More important, though, was Ertegun's ability to coax from a variety of musicians a sound that found widespread appeal among white audiences. The Atlantic sound evolved into a "danceable" compromise that borrowed from both country blues and big band jazz. It laid critical groundwork for the development of R&B (a genre label coined by Nesuhi Ertegun) and ultimately rock 'n' roll. By successfully bringing R&B to the mainstream market, Atlantic established itself as one of the first and most successful of the emergent "independent" record labels. Along with Chess and Sun Records, Atlantic eroded the corporate oligopoly of the recording industry (e.g., Columbia, RCA, and Decca).

In the early 1960s, when many independent labels faltered, Atlantic's successes mounted. Ertegun's musical instincts kept Atlantic from buying too heavily into the faddish teenybopper rock of that early period. Instead, the label concentrated on popularizing the emergent soul sound. Atlantic signed during this era soul legends Otis Redding, Wilson Pickett, Sam and Dave, and perhaps most importantly Aretha Franklin. In the later 1960s, Ertegun's insight into the nature of the British Invasion prompted him to lead scouting missions to England where Atlantic tapped into London's blues revivalism. Atlantic's discoveries during this era include megastars Cream and Led Zeppelin. Ertegun was also instrumental in bringing art-rock to American shores, signing or helping sign Genesis, Yes, and King Crimson. From the West Coast scene, Atlantic signed Buffalo Springfield, Crosby Stills and Nash, and Neil Young among others.

Although he sold the label in 1967 to Warner-Seven Arts, Ertegun stayed on as chairman of the Atlantic group and guided the

label to greater glories in the 1970s. Atlantic's climb toward preeminence among rock labels was largely a product of Ertegun's personality and professional reputation. By the early 1970s, Ertegun had come to be regarded as one of the most knowledgeable, charismatic, and trustworthy industry executive. His abiding love of the music itself, his street savvy, and his legendary hedonism won him respect and admiration from musicians everywhere. In addition, his long-term friendship with Mick Jagger helped Atlantic steal the Rolling Stones from their long-time affiliation with Decca records, a deal which sealed Atlantic's standing as the preeminent rock label of the era. In 1997, Ertegun was still CEO at Atlantic, was still a vital personality on the New York nightclub circuit, and the label he founded 50 years earlier was the top market share holder.

## Erving, Julius "Dr. J" (1950—)

Julius Erving led a revolution in the style and substance of the game of basketball beginning in 1971, when he joined the Virginia Squires of the American Basketball Association (ABA), following his junior year at the University of Massachusetts—it was playing college basketball that he earned his famous nickname, Dr. J. As a collegiate player with the Minutemen, Erving was one of only six players in NCAA history to average more than 20 points and 20 rebounds per game. During a professional career that spanned two leagues and 16 years, Erving redefined the role of a forward in not only the professional game, but in basketball as a whole. His athletic talents evoked an artistic flare that the professional game had never seen before. Erving also became an ambassador for the sport and a driving force in the revitalization of the game as a profitable spectator event.

During his five years in the ABA with the Squires (1971-1973) and the New York Nets (1973-1976), Erving was voted the league's Most Valuable Player (MVP) three times (1974, 1975, 1976), and led the Nets to the ABA Championship in 1974 and 1976. He was credited by many with single handedly keeping the financially strapped ABA afloat. Because the league had no national television exposure, many teams struggled at the box office. Arenas throughout the ABA, however, were consistently sold out for games in which the Nets and the flamboyant Erving participated. In his five ABA seasons, Erving averaged 28.7 points and 12.1 rebounds per game, led the league in scoring in 1973, 1974, and 1976, and was a four-time first team ABA All-Pro.

Following the 1975-76 season, four ABA teams merged with the larger and more financially stable National Basketball Association (NBA). This merger, which had been the initial hope and dream of the

Julius Erving, “Dr. J.,” in mid-air, gets ready to shoot.

original founders of the ABA, was due in large part to the popular and charismatic play of Julius Erving and a handful of other star ABA players.

After the NBA/ABA merger, Erving joined the Philadelphia 76ers, with whom he played for the next eleven years. During his NBA career, Erving was a five-time first team NBA All-Pro (1978, 1980, 1981, 1982, and 1983), and was voted the league’s Most Valuable Player in 1981. In 1983, the 76ers, led by Erving and teammate Moses Malone, won the NBA Championship, the third championship of Dr. J.’s illustrious career. In addition to the 1983 title, the 76ers appeared in the Championship Series three other times during Erving’s tenure with the club (1977, 1980, and 1982). As an NBA player, Dr. J averaged 22.0 points and 6.7 rebounds per game. Over the course of his career, Erving would leave his mark throughout the combined NBA/ABA record books, ranking in the top ten in career scoring (third), field goals made (third), field goals attempted (fifth), and most steals (first). At the time of his retirement in 1987, Dr. J was one of only three players to have scored over 30,000 points (30,026) as a professional player.

Julius Erving was chiefly recognized as a player who helped to establish the individual artistic creativity that has come to permeate professional basketball since the 1980s. Erving was the first player to win a league wide slam-dunk contest in 1976 while in the ABA, a feat he repeated several years later during his NBA career. He also possessed magnetic charm and an unquestionable dignity, which attracted the admiration of basketball fans and the general public in a manner few other players have enjoyed. The equally talented and charismatic Michael Jordan is known to have stated that he would

never have conceived of his basketball style without having seen Dr. J play during the prime of his professional career.

Since his retirement as a player, Erving continues to be a worldwide ambassador for the game, both through his personal business dealings and his regular appearances on NBA television broadcasts as a commentator. In 1993, Erving was inducted into the Basketball Hall of Fame in Springfield, Massachusetts.

## Escher, M. C. (1898-1972)

With his fantastically precise, yet hallucinatory and illusionary imagery, graphic artist M.C. Escher became a favorite of students and those who indulged in chemically altered states in the 1960s. Escher was best known for his tessellation, or repeating geometric patterns, and he also liked to draw scenes that incorporated several different spatial perspectives. In the course of time, his work became some of the most recognizable in the art world. Today, decks of playing cards and T-shirts decorated with his distinctive black and white patterns are usually found in museum gift stores next to the Van Gogh items—somewhat ironic in that, during his lifetime, Escher was dismissed by the traditional arts establishment as “too cerebral.”

Escher died in 1972, not long after the heady counterculture of the 1960s had elevated his art to iconic status. “The hippies of San Francisco continue to print my work illegally. I received some of the grisly results through a friendly customer over there,” he wrote in his journal on April 20, 1969. He was born Maurits Cornelis Escher in the Dutch city of Leeuwarden in 1898. As a youth he studied architecture, but then switched to graphic art. From 1923 to 1935 he lived in southern Italy, where he sketched traditional landscapes and architectural sites, from which he made woodcuts or lithographs. Some of this work, however, foreshadowed his later creativity; the pattern he painstakingly reproduced in *St. Peter’s, Rome* (1928), for example, served as a precursor to his penchant for infinitely repeated abstractions, while his fascination with the hallucinatory is presaged in the 1935 woodcut *Dream*, in which an enormous insect visits the body of a recumbent bishop.

In the mid-1930s, the artist spent time in Spain, and his visits to Granada’s Alhambra and the famed La Mezquita (mosque) of Cordoba gave him fresh inspiration. Both of these impressive architectural legacies from Spain’s Moorish past housed a treasure of decorative art in abstract patterns, since Islamic art prohibited any representational

imagery. At this point Escher began to think more about spatial relationships and the depiction of the infinite. His work soon took another direction when he began to fill space entirely with a repeating image.

In other works he would create a fantastical scene that had no counterpart in reality. The 1938 woodcut *Day and Night* depicts checkerboard farm fields, which morph into birds; the black birds are flying to the left into daylight, while the white flock heads toward darkness. Escher also somehow managed to mirror the opposite but concurrent hours into the landscape below them. Another famous work from this era, the 1942 lithograph *Verbum*, represents his fascination with the “closed cycle” in its images of reptiles that become fish who then become birds. Amphibians always remained a particular favorite for the artist: in the 1943 lithograph *Reptiles*, his subjects crawl off a piece of paper in a circular trajectory, during which they become three-dimensional; one exhales a little smoke before it returns to two dimensions.

These, and other creations, wrote Robert Hughes in *Time*, “are scientific demonstrations of how to visualize the impossible.” Yet far from being a capricious fantasist, Escher was deeply interested in the hard sciences. The artist regularly corresponded with mathematicians, and had little contact or respect for other artists, especially those working in modernism. “I consider 60 percent of the artists nuts and fakes,” he once said of those whose work hung in Amsterdam’s famed Stedelijk Museum. He handled much of the business of art himself, selling his images directly to college professors who had requested them for use in mathematical textbooks. He also sold inexpensive prints of his works in college bookstores, which helped give him a certain cachet among the brainy. One of the most enthusiastic of American collectors during his lifetime was the engineer grandson of Teddy Roosevelt, Cornelius Van Schaak Roosevelt, but, for the most part, Escher was largely ignored by the art world. In the 1960s, among the very few periodicals that ran articles on him were *Life*, *Scientific American*, and *Rolling Stone*, whose issue No. 52 also ran an article speculating about the possible breakup of the Beatles.

A 1968 retrospective of Escher’s work in The Hague, Holland’s seat of government, gave his popularity something of an international boost, and an Escher Foundation was established in 1968 to market and promote his prints. Rock album covers began using his imagery, which further popularized it, and items with his signature double helixes or reptilian nightmares began appearing in the hippie mail-order bible, *The Whole Earth Catalog*. In 1971 the staid art-book publisher Abrams issued a well-received tome, *The World of M. C. Escher*. Shortly after his death in 1972, Washington D.C.’s National Gallery hosted an exhibition of Escher graphics. “Once the focus of a small, rather cultish, mostly non-art-world audience . . . Escher has in recent years become the focus of a vast rather cultish, mostly non-art-world audience,” wrote Peter Schjeldahl in the *New York Times* that same year. The art critic, noting that Escher’s fan base seemed confined to “scientists and stoned kids,” observed dryly that the “psychedelic young” had seized upon Escher imagery in part because of his “terrific virtuosity” and “gamut of fanciful imagery,” not to mention accessibility. “Renditions of easily grasped intellectual and sentimental conceits, laced with the bizarre, they yield their essences, it might be said, with alacrity,” Schjeldahl declared. “They play intricate tricks in a direct, even blatant way, thus teasing the viewer and flattering him at once.”

## ESPN

The Entertainment and Sports Programming Network (ESPN) has become the dominant sports network on cable television. ESPN started when cable television was available to less than 10 percent of the population. ESPN’s irreverent style, brilliant advertising, and excellent programming and business decisions have catapulted it into over 70 million homes in the United States, as well as broadcasting in over 150 countries around the world.

When ESPN first began showing sports programming 24 hours a day in 1979, most industry experts concluded it had little chance of survival. With a limited budget and no connections to major sports programming, ESPN was forced to run such oddities as Australian Rules football, college lacrosse matches, and other rarely watched sporting events. Unable to raise the money to carry football, baseball, or any of the other major sports, ESPN concentrated its efforts on its news programming. Resources were poured into *Sportscenter*, the flagship news show for the network. In addition, network executives turned college basketball games and the National Football League draft into television events.

As ESPN gained in popularity, more and more sports fans began to subscribe to cable simply to get access to its excellent news coverage. By 1983, demand for ESPN became so great that the network was the first basic cable network to demand an operating fee from cable franchisers. As cable television continued to expand exponentially throughout the United States, ESPN became an integral part of any basic cable package.

In 1987, the network made two moves that would prove to be its most brilliant. The first move was the acquisition of the rights to televise National Football League games on Sunday nights, which immediately put ESPN in the same category as the major broadcast networks for sports coverage. The addition of football dramatically increased the network’s visibility in the sports marketplace, and drew millions of new viewers to their other shows.

The second move was the hiring of John Walsh, who would transform *Sportscenter* into the must-see sports show on television. Walsh brought his background as managing editor of the weekly news magazine *U.S. News and World Report* to *Sportscenter*, transforming it into a news broadcast about sports, rather than a sports broadcast. Walsh created a network that no longer simply showed highlights but also covered the news like any other major nightly news show. ESPN

ABC-TV president Robert Iger (left) and NHL commissioner Gary Bettman at a press conference announcing the NHL's expanded distribution deal with ABC and ESPN through the 1999-2000 season.

added investigative news coverage with *Outside the Lines*, a show that was to examine such controversial issues as racism and gambling in sports. A regular interview show, *Up Close*, was also created and it featured the greatest names in sports on a daily basis. Walsh created a news organization that covered sports at a level of detail never before seen on television.

Walsh endeavored to give ESPN its own personality, one that was humorous, intelligent, and absolutely in love with all types of sports. He hired anchors for *Sportscenter* that epitomized this personality, including the dominant personalities of Dan Patrick and Keith Olbermann. Patrick and Olbermann became the must-see anchors on ESPN, throwing out catch phrases, humor, and information at a rapid-fire pace. Olbermann and Patrick's 11 p.m. edition of *Sportscenter* soon became known as the "Big Show" among sports fans, and the devotion the two received reached almost obsessive levels.

By the late 1980s, ESPN had become THE network for the serious sports fans and players alike. Professional athletes made it clear that making the highlight reel on *Sportscenter* was important to

them. Fans held up signs at games addressed to the *Sportscenter* anchors using the catch phrase of the week. The focus on *Sportscenter* became so strong that the anchors could literally create a trend overnight. During one news broadcast, anchors Olbermann and Craig Killborn shouted the word "salsa!" every time someone scored a basket in college basketball. The very next night, college basketball fans throughout the country were seen holding up "Salsa!" signs whenever the home team made a basket. ESPN had clearly become a dominant cultural phenomenon.

In the 1990s, ESPN's influence grew even further. ESPN radio debuted in 1992, and ESPN2, a second all-sports network, began broadcasting in 1993. The expansion continued, and by 1995 ESPN Sportzone became a presence on the internet, the all-news network ESPNNews began in 1996, and *ESPN: The Magazine* emerged as a major competitor to the industry giant *Sports Illustrated* in 1998. In addition, the network began selling licensed ESPN sportswear and other products. ESPN programming now reaches over 70 million households in the United States, one of only three cable channels to

have achieved that mark, and ESPN2 is close to reaching it as well. The demand for ESPN programming is so high that the network now commands the highest operating fees and advertising rates on cable. Through saturation and careful marketing, ESPN has become virtually synonymous with sports in the United States.

Before ESPN began broadcasting, most sports coverage was limited to eight minutes on local news channels. Although the major broadcast networks would occasionally run half-hour sports news shows on the weekends, the shows were generally little more than compilations of highlight films. ESPN provided the serious sports fan with a wide variety of news and sports coverage that was unmatched on the airwaves. Fans tuned in to *Sportscenter* to see a full hour of highlights and analysis focused exclusively on sports, a level of detail never before available outside of the sports sections of major newspapers.

Although the level of coverage clearly made ESPN popular, volume is no substitute for quality. If *Sportscenter* had simply been another bland collection of highlight reels, the network would not be the success it is today. Clearly, a large part of the network's success is its ability to tap into the mind of the sports fan. ESPN designed its programming to appeal to the serious fan. *Sportscenter* runs several times during the day, from 5 a.m. to midnight, each show covering the latest news from the sporting world. In addition, the personnel have a clear love for the sports they cover, and this is made apparent to the viewer. Anchors constantly rattle off detailed histories, statistics, and biographies, demonstrating their level of knowledge. ESPN also has succeeded in attracting a broad audience to its programming. Although viewers are predominantly male, their coverage of women's sports, including basketball, soccer, and gymnastics, has drawn more and more women into the ranks of ESPN viewers.

Finally, the anchors are not afraid to inject humor into their coverage. Rather than resorting to the slapstick "blooper" reels so commonly seen on local network television, ESPN anchors interject far more cerebral humor into their coverage. This humor, including a willingness to make fun of themselves, created a bond between the anchors and the viewer. The inside jokes and catch phrases created by the anchors became a language of its own, known only to the serious sports fans of the world.

While there are many things that ESPN did to become successful, one must also recognize that the network came along at just the right time. The 1980s was a decade in which sports franchises around the country experienced a resurgence in popularity. The decade saw the emergence of some of the greatest sports figures of all time, including Michael Jordan, Wayne Gretzky, Joe Montana, and Barry Bonds. Fans were flocking to sporting events in greater numbers than ever before, and ESPN was a clear beneficiary of it. In a symbiotic way, the resurgent popularity of sports drew more fans to ESPN and, in turn, the network created fans for other sports. ESPN's regular coverage of college and professional basketball, professional hockey, and professional soccer was at least partially responsible for the phenomenal growth in attendance for all four sports.

ESPN remains the dominant force in the sports news industry. Other cable networks have attempted to clone its success, but none of them have achieved anything close to their ratings. As the sports industry continues to grow, ESPN will continue to capitalize on that growth.

## Esquire

From its Depression-era origins as a men's fashion magazine with high literary aspirations, through a brief period when it threatened to devolve into a semi-girlie pulp magazine, *Esquire* emerged by the 1960s as one of America's brash and most sophisticated monthlies, with hard-hitting articles by the nation's leading writers and journalists on the hot-button cultural and political issues of the decade. At the same time, the periodical served as a Baedeker of sorts to a new generation of leisure-driven, style-conscious, sexually sophisticated men who were abandoning the austerity of the 1930s, the wartime privations of the 1940s, and the conformity of the 1950s for the more carefree, swinging lifestyle of the 1960s.

*Esquire* magazine was founded in 1933 by Arnold Gingrich and David Smart, who conceived of the publication as a magazine for the "new leisure," one that would be distributed largely through men's clothing stores, a plan that was quickly reversed when newsstands quickly and unexpectedly sold out their limited allotment of 5000 out of the 105,000 initial press run. From the beginning the magazine was known for its literary excellence—it published such authors as Erskine Caldwell, John Dos Passos, F. Scott Fitzgerald, Dashiell Hammett, and Ernest Hemingway—and for its lack of bigotry—it featured cartoons by E. Simms Campbell, the only black artist whose work appeared regularly in a mainstream national magazine, and fiction by Langston Hughes. Perhaps most notable, though, was the magazine's virtual reinvention of American masculinity. In place of the hard-working man of character who plodded through the pages of most American magazines, *Esquire* promoted men who were interested in leisure, were avid consumers, and had a keen interest in sex. Such representations of manhood were soon to become commonplace in American culture, but they first appeared regularly in *Esquire*.

Despite a cover price of fifty cents, double that of most magazines, circulation soared to 675,000 within a decade, emboldening its entrepreneurial founders to launch several other lifestyle magazines, including *Coronet*, *Verve*, and *Ken*. Another circulation-boosting factor was a series of controversial incidents in the early 1940s over the issue of censorship. *Esquire* first became the target of a boycott led by Roman Catholic leaders when *Ken* published some articles the church had found unpalatable. In another well-publicized case, *Esquire's* practice during World War II of printing double-page pinups as a morale-booster for its military readership prompted the U.S. Post Office to deny the publication its second-class mailing privileges, a decision that was eventually reversed by the U.S. Supreme Court.

Arnold Gingrich withdrew from the publishing partnership soon after World War II, and Smart appointed Frederic A. Birmingham to assume the editorship. Under Birmingham's direction, the publication veered away from its original stylish and literary format in favor of more Western and detective stories, as in other popular pulp magazines of the time. "The design was garish, confused," wrote Carol Polsgrove in her 1995 book *It Wasn't Pretty Folks, But Didn't*

*We Have Fun: Esquire in the Sixties.* “Circulation stayed high—around 800,000 in the early fifties—but blue-chip advertisers, wary of Esquire’s naughty wartime reputation, stayed away,” she wrote.

In 1950, *Esquire* moved from Chicago to New York, with Gingrich returning as publisher just a few months before Dave Smart’s death. Gingrich took on the task of trying to restore polish to the magazine, which over the next few years was forced to weather challenges from television and from other upscale periodicals like Hugh Hefner’s *Playboy*. With his first priority the reestablishment of *Esquire*’s literary reputation, Gingrich asked authors like Paul Gallico, Aldous Huxley, and George Jean Nathan to come on board as regular contributors. By this time, L. Rust Hills had come on board as literary editor and took responsibility for organizing the magazine’s annual literary symposia on college campuses. In 1956, Harold Hayes, who had worked for *Picture Week* and *Pageant* magazines, was hired by Gingrich, who wrote in his memoir, *Nothing but People*, “I took him in like the morning paper, knowing that in a Southern liberal who was also a Marine reserve officer I had an extremely rare bird.” Gingrich began to withdraw in favor of a younger generation of editors. Ralph Ginzburg and Clay Felker became editors in 1957, and the young Robert Benton took over as art editor, solidifying a team that, despite an acrimonious working style and the sudden firing of Ginzburg soon afterwards, would remold the magazine to appeal to younger demographics and that would turn *Esquire* into the power magazine it would become in the 1960s.

By 1960, *Esquire* was already earning a reputation for publishing serious, even philosophical, articles that could appeal to a more educated audience, such as the correspondence between Elia Kazan and Archibald MacLeish during the production of MacLeish’s drama, *J.B.* This editorial policy prompted Carol Polsgrove to declare that the *Esquire* editors were trying to “make thought entertaining. In an age where a whole generation of young men had gone to college on the GI Bill, why not put out a magazine for an audience that cared about rock and roll and the spiritual position of modern man, an audience that had heard of French playwrights and existentialists, an educated audience weary of television and eager to taste the delights of the mind, the cultivations of spirit and sense—and have fun doing it, too?”

Hayes was vowing to publish a magazine that would help America, particularly its men, resolve “a period of self-doubt and anxiety of great magnitude.” His prescription was an *Esquire* with “humor, irreverence, fashion, fine writing, controversy, topicality and surprise.” Diane Arbus was commissioned to do a photo spread of offbeat New York scenes and characters for a special July, 1960, issue on the city that included articles by James Baldwin, Gay Talese, and John Cheever. Among the many notable writers and journalists who would contribute to Hayes’s mission over the next several years were Saul Bellow, Richard Rovere, Gloria Steinem, Malcolm Muggeridge, Dwight Macdonald, John Updike, Gore Vidal, and Norman Mailer. The latter had been assigned to cover the Democratic National Convention in 1960 that nominated the youthful John F. Kennedy for President, though Mailer vehemently quit the enterprise when he objected to *Esquire*’s editors changing a word in his title from “Supermarket” to “Supermart.” Mailer was persuaded to return to the fold, however, and he was signed up to write a monthly column beginning in 1962, which quickly attracted critical attention for its audacity and imagination; Mailer later wrote a report on the Republican convention of 1964 that had nominated Barry Goldwater for president. It was also in 1962 that *Esquire* began bestowing its annual Dubious Achievements Awards, a semi-humorous feature concocted largely by a new member of the editorial staff, David

Newman. By this time, Hayes had assumed the role of editor-in-chief and brought in John Berendt as editor. It was also during the early 1960s that *Esquire* gained widespread reputation for publishing both serious and satirical articles on fashion, making the magazine the *de facto* arbiter of sartorial style for sophisticated and would-be sophisticated American men.

In the fall of 1963, when a fledgling writer named Tom Wolfe began to publish his onomatopoeic “new journalism” pieces in *Esquire*, the magazine’s circulation had risen to 900,000 and it was being regarded as one of America’s most influential publications. It devoted many pages over the next few years to some of the controversial social issues that were cleaving the American body politic, such as the militant black-power movement and the Vietnam war. Michael Herr went to Southeast Asia as a war correspondent for the magazine, and Tom Hedley contributed in-depth reports about unrest on American college campuses. Another young writer, Gary Wills, got his career underway under contract for *Esquire*, covering strife in the nation’s black ghettos and the assassination of Rev. Dr. Martin Luther King, Jr. in 1968. Publication of contentious articles by the feuding William F. Buckley, Jr. and Gore Vidal in the summer of 1969 led to libel suits that were eventually settled in Buckley’s favor. The following year, the magazine published John Sack’s interviews with Lt. William L. Calley, Jr. about atrocities allegedly committed by American soldiers in Mylai, Vietnam. About that time, Gordon Lish, the new fiction editor, helped establish the career of writer Raymond Carver by publishing his short stories in *Esquire*, often over the objections of Hayes.

During most of the 1960s, the provocative and offbeat covers by George Lois were credited with helping stimulate newsstand impulse sales and by 1972, the magazine’s circulation had peaked at 1.25 million. Newsstand sales soon began to decline, however, perhaps in part because the issues that had fueled *Esquire* during the turbulent 1960s were running out of steam. Many of the prominent writers who had brought the periodical to the pinnacle of literary and journalistic prominence, like Wolfe, Talese, and Vidal, could no longer be relied upon as regular contributors, and Mailer had again become estranged. In the fall of 1972, with the retirement of Gingrich, Hayes became editor and assistant publisher and Don Erickson was appointed executive editor. Hayes left *Esquire* in April of 1973 due to “irreconcilable differences” with management. Soon afterwards, George Lois ended his connection with the publication. Within the next three years, the magazine suffered sharp declines in readership and advertising lineage. In 1977, *Esquire* was sold to Associated Newspapers, a British concern that had a partnership agreement with Clay Felker. In 1979, the magazine was sold to Sweden’s Bonnier Newspaper Group and a firm owned by Phillip Moffitt and Christopher Whittle, with Moffitt becoming editor. In 1987, *Esquire* was purchased by the Hearst Corporation, which continues as its publisher. Data posted on the magazine’s website in early 1999 claimed a circulation of 672,073, of which 588,007 were subscription and 84,066 newsstand. The median age of its reader, says Hearst, is 42.6 years. David Granger, editor-in-chief, was quoted as saying “*Esquire* is special because it’s a magazine for men. Not a fashion magazine for men, not a health magazine for men, not a money magazine for men. It is not any of these things; it is all of them. It is, and has been for sixty-five years, a magazine about the interests, the curiosity, the passions, of men.”

—Edward Moran

## est

---

Werner Erhard's est (Erhard Seminar Training and Latin for "it is"), established in 1971 in San Francisco, has come to epitomize the "me decade," a time when people began to focus on self-improvement and the articulation of identity. One of the more successful motivational therapy groups to spring from the "human-potential movement," est used strict training within a group format to build self-awareness and offer individual fulfillment, while training people to get "It." Est is an example of what psychologists call a Large Group Awareness Training program, in which dozens of people are given intense instruction aimed at helping them discover what is hindering them from achieving their full potential. Although est no longer exists in its original form, its offshoot, the Landmark Forum (launched in 1984), continues to attract people who have a growing need to see themselves in a new way, while capitalizing on the past success and popularity of est's teachings.

Like most people, Jack Rosenberg was interested in human development and potential. Confused about his own identity, Rosenberg, a used car salesman, walked away from his family and his life in 1960, in search of answers. Changing his name to Werner Erhard (taken from theoretical physicist Werner Heisenberg, and Ludwig Erhard, the West German Minister of Economics), he went to California to dabble in various human potential disciplines and Eastern religions. He became very interested in L. Ron Hubbard and the Church of Scientology's practices, concluding that "the course was brilliant," and progressing through five Scientology levels. That exposure catalyzed the birth of his own teachings, which caused some controversy with the Church as to their origins, though Erhard insisted the two were different: "Ron Hubbard seems to have no difficulty in codifying the truth and in urging people to believe in it . . . in presenting my own ideas . . . I hold them as pointers to the truth, not as the truth itself." Scientologists continue to accuse Erhard of having stolen his main ideas from Hubbard, while Erhard claimed the Church was behind attempts to discredit him, even hiring hitmen to kill him. An avid reader, Erhard used a mixture of ideas culled from

existential philosophy, motivational psychology, Zen Buddhism, Alan Watts, and Sigmund Freud, among others, to build est. His own proverbial "enlightenment" occurred while driving across the Golden Gate bridge in San Francisco, where he says he was "transformed" into a state he described as "knowing everything and knowing nothing." The result was est.

The militant sessions (trainees were not allowed to speak to each other or take bathroom breaks) took place rigorously over two consecutive weekends. People were egged on by confrontational trainers who told them flatly "your life doesn't work" and to "wipe that stupid smile off your face, you a-hole." But the goal was "to get rid of old baggage" and to learn a "more profound sense of responsibility, a sense of potency," said Erhard in a 1988 interview. "My theory is that a person's vitality will generally equal their commitments, and if you'd like to have more vitality, make bigger commitments." Besides personal fulfillment, another benefit touted by the seminars was strengthening relationships. Although est helped many couples, Erhard couldn't do the same for his own two failed marriages.

Part of the controversy surrounding est (besides whether or not it should be classified as a cult) is its offering of quick-fix solutions in a psychologically manipulative setting, and its overly aggressive approach, which often continued after people finished their sessions, in the guise of persistent phone calls haranguing them to sign up for "follow-up" seminars, and forcing them to become recruiters. Erhard and est have had their share of lawsuits related to the seminars, but many who went through the program (an estimated 750,000 over the last 20 years, with centers in 139 cities throughout the world) maintain their loyalty. However, the organization, its lingo, and zealous followers were often satirized as self-obsessed cultists, who sported glazed, exuberant demeanors that made people uncomfortable. Characteristic of other similar movements, est attracted its share of celebrities who became public advocates of the program, such as actress Valerie Harper, singer John Denver, and artist Yoko Ono, which helped to bring the organization and its beliefs more into the public eye. Est and its buzz words started to become more a part of popular culture when advertisements capitalized on its popularity; for example, an ad campaign for MasterCard used "master the possibilities," one of Erhard's famous aphorisms.

Erhard saw himself as a strict but passionate coach for people receptive to exploring life's possibilities through self-awareness and "transformation." Est "transformed" Erhard's life, making him a rich executive/guru who reigned over his self-help empire. But after it began to crumble in the 1990s, he vanished amidst reports of tax fraud (which proved false) and allegations of incest (which were later recanted), lurid details that continue to keep him alive in popular imagination.

## ***E.T. The Extra-Terrestrial***

Released in 1981, Steven Spielberg's *E.T. The Extra-Terrestrial* touched the emotions and the collective imagination of moviegoers of all ages, breaking all previous box-office records to become the most profitable film of its time until it was ousted by Spielberg's own *Jurassic Park* 12 years later. Exciting, moving, thought-provoking and funny, as well as inventive and skillful, the film's importance, however, transcends that of box-office success or entertainment value.

Made and released early in the Reagan years, *E.T.* exemplified a shift in America's cultural values after the 1960s and 1970s, during which the Vietnam War, the Watergate scandals, and the Iran hostage crisis had convulsed the nation. The emergence, too, of the new youth culture that had accompanied these turbulent decades, had manifested itself in a new cinema that began with *Easy Rider* in 1969. With the onset of the 1980s, Americans were seeking reconciliation and a reassertion of family values. The perceived message of the times, albeit clothed in political conservatism, was one of hope, love, and nostalgia for a gentler past, which was faithfully reflected in the majority of Hollywood movies.

Thus it was that Spielberg's film proved timely to its age, reflecting the spirit and values that were being so eagerly sought by a troubled nation, and thereby appealing to adults and children alike. The expertise and imagination with which it was made, however, gave it lasting properties well beyond the 1980s and has made it a favorite film of audiences throughout the world. Indeed, it might be seen as serving the same purpose and exerting the same degree of magic as the perennially beloved *Wizard of Oz* (1939), although it is a product of the technological age in both its vision and its realization.

Considered at the time to be Steven Spielberg's masterpiece, and undoubtedly his most personal film, this story set in middle-class suburbia grew out of the director's own lonely childhood in Scottsdale, Arizona, the son of a father who left the family home. He has said, "I use my childhood in all my pictures, and all the time. I go back there to find ideas and stories. My childhood was the most fruitful part of my entire life. All those horrible, traumatic years I spent as a kid became what I do for a living today, or what I draw from creatively today." *E.T.* was the culmination of several ideas that had germinated, been explored, and even filmed, over a number of years. One of Spielberg's major contributions to late-twentieth-century culture is the concept of the benign alien. Virtually all previous science fiction films grew out of fears of invasion, war, and the threat of nuclear annihilation that loomed large during the Cold War years. It was posited that aliens with the technology to reach Earth would also have the technology to unleash incredible destruction; and these fears were reflected in stories of invasion, aggression, colonization, and extermination. In Spielberg's mind, however, "Comics and TV always portrayed aliens as malevolent [but] I never believed that. If they had the technology to get here, they could only be benign."

His first creative expression of this concept resulted in one of the most profoundly searching and brilliantly executed films of the century, *Close Encounters of the Third Kind* (1977), at the end of

Henry Thomas and E.T. in a scene from the film *E.T. The Extra-Terrestrial*.

which an alien creature steps off the ship—allowing Spielberg the opportunity to create and show an alien, even though the scene lasted only a half minute or so. Then, in 1979, after dreaming up an idea he called “Night Skies,” a tale about 11 aliens terrorizing a farm family, he put the project into development at Columbia and turned it over to writer/director John Sayles to flesh out the script. Sayles made a number of changes that included the introduction of a friendly alien who befriends an autistic child, and ended his script with the kindly alien being stranded on Earth. This last scene became the first scene of *E.T.*, though Sayles never pursued screen credit, considering his script “more of a jumping-off point than something that was raided for material.”

In 1980, while filming *Raiders of the Lost Ark* on location in Tunisia, Spielberg was turning over the idea of following *Raiders* with a simpler, more personal project. Looking for someone as a sounding board for his idea of an interplanetary love story, he turned to Harrison Ford’s girlfriend, screenwriter Melissa Mathison, who had accompanied Ford to Tunisia. Mathison subsequently said the story was already half-created in Spielberg’s mind, but she spent weeks pitching ideas back and forth with him for both the story and for the creature’s visual image. Among other things, they decided that the creature’s neck should elongate like a turtle’s, so that the audience would instantly know that they were not watching an actor in costume, while Spielberg knew that he wanted the creature’s communication to rest in emotion rather than intellect.

Back in the United States, while Spielberg edited *Raiders*, Mathison began writing the screenplay in earnest. An earlier version depicted E.T. as an interplanetary botanist stranded on Earth, at first more empathetic with plants than animals, and discussing with artichokes and tomatoes whether he should make contact with the humans. He finally does so by rolling an orange toward the boy Elliott’s feet. In the hours spent by Spielberg and Mathison discussing changes, the orange became a baseball. Spielberg went to Columbia, which had already spent \$1 million in development of “Night Skies” and offered them *E.T.* instead, but the studio, perceiving the idea as a children’s picture with only limited commercial potential, said no. Universal was interested, but Columbia, because of their investment in “Night Skies,” retained the rights to the property and refused to co-produce with Universal. They finally relinquished the rights in exchange for five percent of the net profits, and earned a fortune. (Spielberg, meanwhile, also convinced MGM to produce “Night Skies” which, after extensive rewrites to distance its subject matter from *E.T.*, became director Tobe Hooper’s *Poltergeist*, 1982).

The storyline of *E.T. The Extra-Terrestrial* is simple enough: One night, in the woods behind a hillside development of split-level homes, a spacecraft lands, disgorging a group of strange little creatures who shuffle off into the night until the appearance of humans—menacing from their point of view—forces them to re-enter their craft and take off, with one of their number left behind. The terrified creature hides out in a back yard, and is found by Elliott, the youngest boy of the family and a child at once sensitive, bold, and canny. They form a close friendship, communicating largely through instinctive understanding (*E.T.* has telepathic powers), which ends when Elliott becomes sadly aware that the creature wants to go home. Within this plot, Spielberg unfolds an empathetic tale of love and sympathy, pitted against fear and suspicion. The characterizations, including those of Elliott’s mother (Dee Wallace), his siblings (Drew Barrymore, Robert MacNaughton), and an initially menacing authority figure played by Peter Coyote, are richly three-dimensional. But the high ground is shared between Henry Thomas’ enchanting,

fatherless Elliott, and the bizarre little alien, an Oscar-winning triumph of imagination, created and made by artist Carlo Rambaldi in accordance with Spielberg’s humane vision.

More than one creature was built: there was a mechanically controlled version for scenes requiring large body movements, one with electronic controls for subtler articulation, and another to contain an actor (one of three used for the purpose) for the few scenes where E.T. has to lurch across the floor. Commentators have drawn parallels between E.T. and Christ, pointing to, among other aspects, the creature’s arrival, his healing touch, his persecution by civil authorities, and his ascension into the heavens. Spielberg gave E.T. an appearance “only a mother could love,” then wisely made him as afraid of Earthlings as they are of him, disarming Americans in particular, conditioned by years of Cold War sci-fi films to fear extra-terrestrials. Interestingly, unlike the main character in *Close Encounters*, Elliott does not heed E.T.’s request, “Come,” but chooses to stay behind with his family, perhaps reflecting Spielberg’s own maturity and sense of responsibility. At the end, to lessen the pain of E.T.’s departure, Coyote’s character, Keys, is subtly transformed from the antagonist to a possible new father, linked in two-shots with Elliott’s mother as they watch the spaceship fly off.

The logistics, statistics, and tales both apocryphal and accurate surrounding the genesis and the making of *E.T.* have been frequently recounted in books and articles, but its importance lies in the finished product and the response it evoked, and continues to evoke, in all who see it. There is not a dry eye in the house at the film’s climax, but the message is one of hope, within which is a serious subtext (shared by *Close Encounters*) that aims to defuse our nameless and parochial fears of “otherness.” The film embodies its director’s excursion into the wishes, dreams, and fantasies of his own past; but, significantly, that excursion brought audiences a return to innocence, love, and faith within a realistic contemporary social context.

With rare exceptions, the film, originally unveiled at the Cannes Film Festival, collected only superlatives from reviewers, and grossed millions for Spielberg personally, as well as for Universal studios. When the Academy Awards came around, *E.T.* lost out to *Gandhi*, but by the end of the twentieth century had become established as an acknowledged classic of the cinema.

## Etiquette Columns

Targeted primarily at women, etiquette columns have appeared in American newspapers and magazines since the mid-nineteenth century to guide readers through the tangled thickets of social convention and polite behavior. In part, these columns began as responses to the cultural anxieties of a newly emerging middle class,

but they also derived from related American mythologies of moral perfection and self-improvement. And despite contemporary society's avowed indifference to propriety, these concerns clearly persist, as evidenced by the enthusiastic readership of Judith Martin's etiquette column "Miss Manners."

*Godey's Lady's Book* was among the first periodicals to dispense etiquette advice to American women. In the years before the Civil War, when literacy rates had reached 50 percent, *Godey's* enjoyed a circulation of 150,000. Editor Mrs. Sarah Josepha Hale was determined to avoid subjecting her subscribers to the day's political unpleasantness, so she frequently turned to contributor Mrs. James Parton, known to readers as Fanny Fern, for sharp and amusing columns on "Rules for Ladies."

Following the Civil War, publishers and editors were so concerned about the moral decay presumed to be an inevitable result of bad manners that etiquette columns began to appear further afield. *Appleton's Journal*, the *Atlantic*, the *Galaxy*, and the *Round Table* all tendered advice on appropriate behavior, though social education continued to be the special purview of women's magazines. Readers who had questions on both fine and general points of etiquette began directing their inquiries directly to the magazines. Among the first to address these questions in a regular column was the *Ladies Home Journal*, whose editor Edward Bok created "Side-Talks with Girls," written by "Ruth Ashmore" (actually Isabel A. Mallon), but it was not until 1896 that newspapers began to include subjects of special interest to female readers. That year "Dorothy Dix" (Mrs. Elizabeth M. Gilmer) started her etiquette column in the *New Orleans Picayune* and, soon after, etiquette columns appeared in newspapers throughout the country.

The nineteenth century's true expert on etiquette, however, was undoubtedly Mary Elizabeth Wilson Sherwood. Mrs. Sherwood first offered etiquette advice in a series of features for *Harper's Bazaar*, at the time noted for presenting European fashions to American women. Readers immediately took Mrs. Sherwood's advice as exact and authoritative. She greatly embellished her writing with florid details so that readers could visualize the fork or finger bowl she was describing, but it wasn't only this attention to detail that made her such a popular columnist. Unlike her predecessor Henry Tomes, whose etiquette columns from *Harper's* were eventually collected in an edition called the *Bazaar Book of Decorum*, Sherwood was convinced that American women were not crude by nature. They desperately wanted wise advice on manners and deportment, she argued, but existing articles and books were either inaccessible or wrought with error. Mrs. Sherwood thus set out to do more than codify the rules of good behavior; in *Manners and Social Usages* (1884), she sought to whet the nation's appetite for gracious living.

Although etiquette was to change dramatically in the new century, the first decade of the 1900s was seemingly obsessed with the subject. Over 70 books and at least twice as many magazine articles appeared between 1900 and 1910. Of these books, Marion Harland's *Everyday Etiquette* (1905) had the widest appeal. Miss Harland (the *nom de plume* of Mrs. Albert Payson Terhune, wife of a prominent clergyman) also wrote for many magazines. Another popular etiquette columnist at the time was Gabrielle Rozière, whose articles in the *Delineator* centered on the "E. T. Quette" family. Columns in *Current Literature*, *Munsey's*, *The Independent*, and *Century Magazine* all decried the decline of manners, especially the manners of women.

Of the early twentieth-century columnists, the best known were Florence Howe Hall, her sister Maude Howe, and their mother Julia

Ward Howe, better remembered for her "Battle Hymn of the Republic." Like their fellow writers, the Howes avoided the term "society," which had, by the turn of the century, become equated with showy extravagance and vulgarity. In a similar fashion, the members of society likewise avoided "etiquette"—reasoning that those who required such advice did not really belong in society. But none of the hundreds of etiquette books and thousands of advice columns had the cultural impact of Emily Post's *Etiquette: The Blue Book of Social Usage* (1922). Almost immediately, Post became synonymous with etiquette. No one, it seemed, was embarrassed to have "Emily Post" on their shelves, and her book went immediately to the top of the nonfiction bestseller list.

As Post saw it, etiquette was nothing less than "the science of living," and her systematic approach to the subject promised firm guidance to everyone afloat in a sea of social uncertainty. Yet perhaps most important was the way Mrs. Post dramatized etiquette. She introduced characters such as the Oldnames, Mr. Richan Vulgar, and Mrs. Cravin Praise to personify elegance, rudeness, or gaucherie so that readers understood these were not abstractions but very real qualities (or shortcomings) embodied in real people. If earlier writers had used this technique, no one had deployed so extensive a cast. Post's *Etiquette* thus enjoyed popularity for two reasons. Certainly it was the manual of taste and decorum, but it also allowed average readers to glimpse through a keyhole into the world of footmen and debutante balls that they were unlikely to experience directly. Post's success might also be traced to the burgeoning advertising industry. Her book was heavily advertised and easily played into an advertising strategy as common then as now: exploiting the insecurities of the socially inexperienced.

Like Mrs. Sherwood before her, Mrs. Post was a socialite, and, until she came to write her own book, she had always considered etiquette advice to be an act of sabotage, an easy way for parvenus and social climbers to worm their way into society. She steadfastly maintained this view until she was approached by the editor of *Vanity Fair*, Frank Crowninshield, and Richard Duffy of Funk and Wagnalls to write an etiquette book. She refused until they sent her a copy of a new etiquette manual to review, which she found condescending and useless. Only then did Mrs. Post agree that a new book was badly needed.

With her impeccable background, Emily Post was an obvious choice for the job. Born in 1872 to a wealthy architect, Brice Price, and his wife, she debuted in 1892 and shortly thereafter married Edwin Post, an affluent financier. The couple eventually divorced amid some indiscretions committed by Post's husband. After her divorce Mrs. Post, who had been drawn to intellectual and artistic pursuits since childhood, turned to writing and enjoyed success as a novelist and feature writer before turning to etiquette. After the enormous popularity of *Etiquette*, she published many revisions of the book and in 1932 began a syndicated etiquette column that eventually appeared in 200 newspapers.

In its first 20 years, *Etiquette* sold 666,000 copies, and after its 50th anniversary "Emily Post" had been through 12 editions, 99 printings, and sold 12 million copies. For a time, it was used as a textbook in poise and good manners for high-school classes throughout the country, and by the late 1990s, Mrs. Post's great-granddaughter-in-law, Peggy Post, was writing the latest editions of the book. "Emily Post," which is now a registered trademark, remains the authoritative voice on all matters of good taste and polite behavior.

## Evangelism

From frontier camp meetings of the early 1800s, to the urban revivals of the late 1800s and early 1900s, to late twentieth century

Christian television networks, evangelism has been a prominent feature of American Protestantism. The process of evangelism focuses primarily on encouraging others to accept Christianity, usually through a personal conversion experience; but in the United States, evangelism has also been closely related to revivalism, the process of encouraging existing believers to renew their commitment to particular forms of Christian practice and belief.

Evangelism emerged as an important feature of American religious culture for several reasons. The American policy of religious voluntarism, which rendered religious affiliation a matter of personal choice rather than civic obligation, precluded even large denominations from taking their membership for granted. Evangelical efforts to acquire new members and to retain existing ones became an important church function, particularly within the Protestant churches and among interdenominational movements such as fundamentalism and Pentecostalism. In addition, secular influences have had pronounced effects on American society as it has gone through the processes of modernization and urbanization. The weakening role of religion in many aspects of American life has in turn motivated religious leaders and institutions to increase their involvement in evangelistic endeavors. Finally, the evangelical Protestant denominations, which defined

An evangelist, the Rev. Jerry Falwell.

the nation's religious establishment during most of the nineteenth and early twentieth centuries, placed a strong doctrinal emphasis on evangelism and the conversion experience.

In promoting evangelism, different groups and individuals have developed diverse approaches to spreading their message. The most conspicuous form of evangelism early in the nineteenth century was the camp meeting, where believers would gather for several days of sermons, prayer, and religious testimony. Although the camp meetings were primarily a phenomenon of the frontier, many of their features persisted in the efforts of the itinerant evangelists who staged so-called tent meeting revivals in small towns and rural communities throughout the nineteenth century and well into the twentieth. As the United States became increasingly urbanized during this period, however, so did evangelistic activity; and by the early 1900s the most prominent evangelists worked primarily in urban settings. The urban revivals that they staged retained the focus on charismatic leadership and personal conversion, including the climactic "altar call" during which participants declared their faith; but the urban revivals reached audiences numbering in the millions, and produced converts by the thousands. The urban evangelists also incorporated a greater degree of showmanship, perhaps best exemplified by the garrulous, dramatic style of Billy Sunday during the 1910s.

Changing social conditions led to a decline in professional evangelism after World War I, particularly in urban settings. After World War II, however, a new generation of evangelists appeared on the American religious scene. These new crusaders became highly influential during the religious resurgence of the 1950s, although more so within the conservative wing of American Protestantism than among the mainstream churchgoers targeted by earlier revivalists. The leading figure in this new evangelical movement was Billy Graham, a conservative Baptist minister who spread his message through a wide variety of mass media, including radio, television, the cinema, and mass market publications. Graham's early use of television to promote evangelistic activities proved to be particularly important. By the 1970s, television had become a primary medium of mass evangelism in the United States—a position that was strengthened in the following decade as cable television enabled various Christian broadcasting networks to reach audiences dispersed throughout the country. As televangelism expanded, it also became increasingly associated with conservative perspectives in both religion and politics, and it generated considerable controversy during the 1970s and 1980s after a number of its major proponents lent their support to conservative political causes.

The shift in focus of mass evangelism during the twentieth century, from a broad connection to the Protestant mainstream to a narrower association primarily with religious conservatives, has had significant implications for its relationship to American cultural generally. The leading televangelists especially have become less exclusively concerned with the individual conversion experience, and increasingly concerned with general trends within American popular culture. In this sense, evangelism has evolved from a primarily religious phenomenon to one that has had significant impacts on politics and public policy in the United States.

## The Everly Brothers

One of the greatest singing brother duos of all time, the Everly Brothers' close harmonies became one of the most identifiable sounds of the early rock 'n' roll era of the late 1950s and early 1960s. Hits such as "Bye Bye Love," "Wake Up Little Susie," and "Love Hurts" are long ingrained in the memories of Americans who grew up listening to the Everly Brothers. While they were heavily influenced by other singing brother duos like the Delmore Brothers and the

The Everly Brothers: Phil (left) and Don

Louvin Brothers, the Everly Brothers went on to influence such groups as the Beatles and Simon & Garfunkel (who covered “Wake Up Little Susie” on their *Bridge Over Troubled Water* album). After their pop stardom declined, they followed the same path as Jerry Lee Lewis and other early rock ’n’ rollers, becoming country music artists.

Phil (born January 19, 1939) and Don (born February 1, 1937) were raised in a musical family, singing with their guitarist father Ike and other family members on radio broadcasts in the early 1950s. Raised in Brownie, Kentucky, these brothers were heavily influenced by such country legends as the Louvin Brothers (and the Louvin’s inspiration, the Delmore Brothers), as well as a number of other singing brother duo acts. After a very brief and unsuccessful stint at Columbia Records, the two did not hit their commercial stride until they joined Cadence records, which released the number two *Billboard* hit and rock ’n’ roll classic, “Bye Bye Love.” The two had a number of hits for Cadence including “Wake Up Little Susie,” “Bird Dog,” “(’Til I Kissed You,” “All I Have to Do is Dream,” and “When Will I Be Loved.”

In 1960, the two joined Warner Brothers Records, hitting their commercial peak with songs such as “Cathy’s Clown,” helping to establish Warner Brothers as a major player in the music business in the process. In a similar way that their idols, the Louvin Brothers, succumbed to the pressures of success, Don Everly turned to drinking and drugs (in much the same way that Ira Louvin did), nearly dying of an overdose in 1962. Soon after their signing to Warner Brothers, the Everly Brothers hit a number of career setbacks, including the both of them being drafted into the Army and, a career killer for numerous early rock ’n’ rollers, the British Invasion led by the Beatles.

After their last Top Ten hit, the aptly titled 1962 song “That’s Old Fashioned,” the group’s career floundered as the two released a series of albums that were nothing less than careless contract fillers. In 1968, the Everly Brothers revived themselves, artistically at least, with *Roots*, a country-rock album that—along with the Byrd’s *Sweetheart of the Rodeo*—became a major influence on the country-rock movement that inspired such groups as Poco and the Flying Burrito Brothers, as well as pioneering artists like Gram Parsons. Sibling rivalry and record industry-induced pressure led to the duo’s dramatic demise at a 1973 concert in which Phil smashed his guitar and stormed off stage. After a decade of poorly received solo albums, the two resumed singing together in 1983, primarily performing on the oldies circuit.

## Everson, Cory (1959—)

Best-known of all the Ms. Olympia winners, bodybuilder Cory Everson grew up in Deerfield, Illinois, where she was an outstanding athlete throughout high school and college. Everson, whose maiden name was Knauer, attended the University of Wisconsin and won the Big Ten Championship in the pentathlon for four consecutive years. While attending the university, Cory met Jeff Everson, a competitive

Cory Everson

weightlifter and bodybuilder who worked there as a strength coach. Following her marriage to Everson and her graduation from college, Cory began to train seriously as a bodybuilder. Blessed with outstanding genetics for bodybuilding, she made rapid progress, especially after she and Jeff moved to Los Angeles. She won the Ms. Olympia competition in 1984, the first time she entered, and won every year until 1989, when she retired. Everson soon became part of the fitness show phenomenon on cable television with her *Bodyshaping* program. She also had roles in such films as *Double Impact* (1991), *Natural Born Killers* (1994), and *Tarzan, the Epic Adventures* (1996). In the late 1990s she authored several fitness and health books, including *Cory Everson’s Lifebalance* (1998).

## Evert, Chris (1954—)

One of the greatest female tennis players of all time, Chris Evert ruled the sport for more than ten years (1974-1985) and established herself as a cultural icon in America and around the world. Born December 21, 1954 in Ft. Lauderdale, Florida, Christine Marie Evert started playing tennis at the ripe age of six. With her father (teaching

pro Jimmy Evert) as coach, Evert showed promise early on, rising to number two in the United States in the 12-and-under age group. By the time she was 15, she had established herself as the country's top amateur player by defeating such stars as Billie Jean King, Virginia Wade, and the world's number one player at the time, Margaret Smith Court. At 16, she made it all the way to the semifinals of the U.S. Open. In 1972, Evert was a winner at both the Virginia Slims Championship and the United States Clay-Court Championship. In December of that same year, on her 18th birthday, Chris Evert turned professional.

In 1974, still only 19 years old, Evert won singles titles at Wimbledon, the French Open, and the Italian Open, lost in the finals at the Australian Open, and was a semifinalist at the U.S. Open. Already a popular player, the poise and intense concentration exhibited by Evert that year made her a favorite of sportswriters and spectators alike. Her engagement to budding American tennis hero Jimmy Connors (who was then 21) in late 1973 also contributed to Evert's rising fame. Dubbed the "King and Queen of tennis" by columnists, the couple called off the marriage in 1975. Four years later, Evert wed British Davis Cup player John Lloyd; the union lasted until 1987.

Evert won her first U.S. Open singles title in 1975, defeating Yvonne Goolagong in the finals at Forest Hills. She would keep her crown for the next three years, and finished her career a six-time U.S. Open champion. But her best surface was clay, and the French Open was where she had the most success. Evert made it to the finals at Roland Garros nine times, losing only twice; her seven French Open singles titles remain a record. Evert's career highlights also include

Chris Evert

two Australian Open titles (1982 and 1984) and three Wimbledon titles (1974, 1976, and 1981). This last is all the more impressive considering Evert's reluctance to come up to net, a necessity on Wimbledon's grass surface according to conventional wisdom. Nor did her preference for staying at the baseline prevent Evert from winning three Grand Slam doubles titles. All told, Evert won at least one Grand Slam title per year for 13 straight years (1974-86), a statistic that testifies to her legendary consistency.

Evert's combination of charm and intensity helped attract large audiences and significant prize money to women's tennis. Nicknamed "The Ice Maiden" and "The Ball Machine" by her peers, Evert was extremely disciplined and almost never lost her composure on court. In this respect, she stood in stark contrast to other American tennis stars of the time, in particular Connors and John McEnroe. In 1976, Evert became the first female player to reach \$5 million in career earnings. At risk of turning fans off by winning almost *too* easily, her rivalry with Martina Navratilova took on increasing importance. After 16 years, and dozens of hard-fought battles, Evert's career record against Navratilova ended at 37 wins and 43 losses. It should be noted, however, that the majority of these matches were not played on clay.

One year after a disappointing early exit in the 1988 Olympics, Evert retired from competitive tennis ranked number four in the world—her lowest ranking since turning pro 17 years earlier. Among Evert's immense list of on-court accomplishments, the following stand out: for 133 consecutive weeks (starting in 1975) she held the number one ranking in singles; she won 125 consecutive matches on clay—no one has won more matches consecutively on *any* surface; she took home a total of 157 singles titles, second only to Navratilova; and her career winning percentage of .900 (1309 victories against a mere 146 losses) ranks first in the history of the game. In 1995, Evert earned a rare unanimous selection to the International Tennis Hall of Fame.

It would be nearly impossible to overestimate Evert's popularity during her playing career. In 1985, the Women's Sports Foundation voted her Greatest Woman Athlete of the Last 25 Years. In November 1989, she became the first female athlete to host television's *Saturday Night Live*. In 1991, a poll conducted by American Sports Data, Inc. found her to be the most widely-known athlete in the nation. What accounted for her high degree of fame? One of the first players to rely on a two-handed backhand, Evert's unprecedented success with this stroke encouraged a generation of novices to copy her. Her grace and professionalism on and off the court led to her unofficial canonization as a role model for young people of both sexes. Her high-profile romances with male sports stars (in 1988 she married ex-Olympic skier Andy Mill, with whom she has three children) kept her in the gossip columns as well as the sports pages. But it was Evert's 17-year-long reign at or near the top of women's tennis that finally ensured her celebrity status. Although not blessed with prodigious athletic ability, Evert's honed-to-perfection strokes, along with a fierce will to win and an uncanny ability to exploit opponents' weaknesses, gave her an air of dominance that eventually became a source of national pride. Since her retirement, Evert has worked as a color commentator for network-television broadcasts of major tennis tournaments. She is also host of the annual Chris Evert Celebrity Tennis Classic in Boca Raton, a charity event that raises money to help drug-exposed, abused, and neglected children.

## Existentialism

Existentialism is a term that incorporates both a specific philosophical history and its subsequent literary reception and popular use. Philosophically, "existentialism" loosely describes a reaction against abstract rationalist philosophical thought, and is mainly found in the work of Søren Kierkegaard, Friedrich Nietzsche, Martin Heidegger, Karl Jaspers, Jean-Paul Sartre, and Gabrielle Marcel (who in fact coined the term). Each of these thinkers argued in various ways for the irreducibility of the subjective, personal dimension of human life against the objective or formal considerations of "being" or "existence" found in other philosophical traditions. Existentialism generally holds that "Man" is a conscious subject, rather than a thing to be predicted or manipulated; he exists as a conscious being, and not in accordance with any pre-determined characteristics.

Given this, existentialist thought is largely concerned with the realms of ethics, politics, personal freedom, and will. Always central is the role of the individual in constituting these arenas. Difficulties arise for "existential man" in the clash between the preexisting material or social world and that same individual's will or real ability to constitute meaning or social relations on his or her own terms. One potential outcome of this conflict is pessimism, an attitude common among existential writers. Generally however it produces anxiety, a vague sense of unease regarding the structure of one's life, which in the absence of any external threat is considered to be a manifestation of one's own responsibility for this structure.

This emphasis on the individual and his or her problematic relation to the social whole becomes thematic in the existentialist literature of Albert Camus, Fyodor Dostoevsky, and Franz Kafka, and likewise in the drama of Samuel Beckett, Eugene Ionesco, the early Harold Pinter, and Sartre. Contemporary expressions of existentialism can be found in the novels of Milan Kundera (e.g., *The Unbearable Lightness of Being*), some films by Woody Allen (e.g., *Crimes and Misdemeanors*), and Peter Shaffer's play *Equus*. Although such an expansive list of figures emphasizes the wide influence of existentialism in cultural life, it also reveals its nebulous character. In common parlance, the term existentialism has been overused, becoming a mere catch-all for unconventional thought. The often spoken of "existential dilemmas" of the modern individual extend from the difficulties of adolescence to the mid-life crisis. Latent in these notions are the same concerns regarding freedom and choice that are central to philosophical existentialism. These issues have only become more dramatic in the wake of the post-WWII popularization of existential thought marked by the incorporation of existential tenets into the youth culture of the 1960s. From the "hippie" culture of that period to the Generation X of the 1990s, emphasis has been placed on questioning the predominantly middle-class social paradigm and its role in constituting the lives of an increasingly vocal and "self-actualized" youth. Existentialism can even be found underwriting popular "self-help" books and other works which attempt to give

expression to the individual need to organize one's life according to a self-derived logic. In the face of decline of existential philosophy in academic circles, this dissemination into popular culture has assured its wide-ranging significance.

## The Exorcist

The first major blockbuster in the history of horror cinema, William Friedkin's *The Exorcist* (1973) has exerted a powerful influence on the subsequent development of the genre and on public

Linda Blair (close-up) in the film adaptation of Peter Blatty's *The Exorcist*.

reception of it. Never before had a horror film been the subject of so much prerelease hype, so much gossip about postproduction strife, so much speculation as to why people of all ages would stand in line for hours to watch something reputed to induce fits of vomiting, fainting, even temporary psychosis. The cultural impact of *The Exorcist* can hardly be overestimated: it challenged existing regulations specifying what was acceptable to show on the big screen, stole U.S. newspaper headlines away from the ongoing Watergate scandal (at least for a little while), led to a detectable increase in the number of “real-life” possessions reported, and, in the words of gross-out film expert William Paul, “established disgust as mass entertainment for a large audience.”

In 1949, reports came out in the press of a thirteen-year-old Maryland boy whose body was said to have been taken over by demonic forces. After seeing household objects fly around his room, the boy’s distraught parents called in a Jesuit priest, who conducted a thirty-five-day-long exorcism with the help of numerous assistants. While the priests recited their holy incantations, the boy spit, cackled, urinated, writhed in his bed, and manifested bloody scratch marks on his body that spelled out words such as “Hell,” “Christ,” and the far more mysterious “Go to St. Louis.” Fortunately for everyone involved, the alleged demon departed shortly after Easter. Novelist William Peter Blatty, inspired by this tale, made the possessee a girl (supposedly to protect the boy’s anonymity, though his readiness to disclose information in later media interviews suggests this was unnecessary), sensationalized many of the details, added heavy doses of philosophical-theological speculation on the nature of evil, and came out with *The Exorcist* in 1971. An instant sensation, Blatty’s novel would remain on the *Publishers Weekly* bestseller list for almost an entire year.

Even before its publication, Blatty signed a deal with Warner Brothers for the rights to make a film version of the novel. Warner agreed to Blatty’s choice of director, William Friedkin, on the strength of his not-yet-released action movie, *The French Connection*, for which he won an Academy Award in 1971. After numerous and painstaking rewrites of the original script, Blatty finally came up with a screenplay of *The Exorcist* that managed to meet Friedkin’s exacting demands for more mystery, more drama, and, above all, more direct confrontation between (good) priest and (evil) demon than were in the novel. For his own part—and with Warner’s considerable financial backing—Friedkin employed a range of sophisticated cinematic techniques, along with state-of-the-art special-effects technology, to give the film’s supernatural occurrences and gory physical details a degree of realism never before achieved.

The plot of *The Exorcist* is deceptively simple and has its roots in storytelling conventions well established in American cinema. After a lengthy prologue that is nearly incomprehensible to anyone who has not read the book, the first half of the film methodically develops the essential character relationships and establishes the crisis situation. Regan MacNeil (Linda Blair) is the adorable, almost-pubescent daughter of divorcee and well-known film star Chris MacNeil (Ellen Burstyn). After Regan prophesies the death of her mother’s acquaintance and urinates (standing up, no less) in front of a roomful of shocked dinner guests, Chris starts to wonder what has “gotten into” her daughter. More odd behavior, and a wildly shaking bed, lands Regan in the hospital, where she is subjected to a battery of extremely

invasive procedures best described as “medical pornography.” A brain lesion is suspected, but the tests turn up nothing. When Regan, supposedly under hypnosis, responds to the smug questions of a hospital psychologist by grabbing his scrotum and rendering him immobile, it is recommended that Chris seek the Church’s help. She does, pleading with doubt-ridden Jesuit priest Damien Karras (Jason Miller, Pulitzer Prize-winning playwright of *That Championship Season*) to perform an exorcism. The second half of the film culminates in an intense one-to-one fight to the finish between Karras and Regan’s demonic possessor, after the more experienced exorcist on the scene, Father Merrin (Bergmanian actor Max von Sydow) dies in the struggle. Karras finally saves Regan by accepting the demon into his own body, only to throw himself (or at least allow himself to be thrown) out of a window to his death.

Although the Catholic Church originally supported Friedkin’s efforts in the hopes that he would present Catholicism in a positive light, they ended up retracting that support after viewing the infamous scene in which Regan-demon violently masturbates with a crucifix in front of her powerless mother. For many audience members, the highly sexualized profanities spewing out of twelve-year-old Regan’s mouth (the voice of the demon, Mercedes McCambridge, had to sue for credit) were as offensive as the green bile she vomited on Karras’s face. In an era of student protest, experimental drug use, and general questioning of authority, *The Exorcist* allowed viewers to take pleasure in the terrible punishments inflicted on the rebellious (“possessed”) Regan. But by making Regan-demon so fascinating to watch, so filled with nasty surprises, *The Exorcist* also allowed viewers to take pleasure in that rebelliousness.

*The Exorcist* did not merely give rise to a slew of imitations and variants on the possession theme, it made the child with special powers a dominant motif in modern horror cinema. Two mediocre sequels—*The Exorcist II: The Heretic* (1977) and *The Exorcist III* (1990)—followed, the second one written and directed by Blatty; neither involved Friedkin at all. Richard Donner’s highly polished *The Omen* (1976) added an apocalyptic edge to the demonic infiltration theme. Linda Blair, who attained cult-figure status with her role as Regan, reprised it in a Leslie Nielsen spoof entitled *Repossessed* (1990).

## Fabares, Shelley (1944—)

---

In 1958, when Shelley Fabares was cast as Mary Stone in television's *The Donna Reed Show* at the age of 14, she was already an acting veteran. Born in Santa Monica, California, this niece of actress Nanette Fabray had been working in movies and on television since childhood, but it was as Mary Stone that she established her image as the ideal teenager: pretty, perky, smart, and sweet. After four years of the show's five-year run, its producer (and Donna Reed's husband) Tony Owen persuaded Fabares to record "Johnny Angel" and she lip-synched the tune on an episode in January 1962. By March, the single had climbed to number one on Billboard's Hot 100 chart, and eventually sold over three million copies. Shelley Fabares grew up on *The Donna Reed Show* and, as Mary, went away to college. In real life, she moved to the movies, donning a bikini to co-star with Fabian in *Ride the Wild Surf* (1964), and played leading lady to Elvis Presley in *Girl Happy* (1965), *Spinout* (1966), and *Clambake* (1967)—the only actress to do so three times—but her big-screen career never fulfilled the promise of her teenage years. Fabares continued to appear in a number of TV roles through the 1980s and 1990s, most notably as one of the central characters on the popular ABC comedy *Coach*.

## Fabian (1943—)

---

Perhaps the quintessential teen idol of the 1950s, Fabian was only fourteen when he was plucked from obscurity and thrust into the idol-making machinery by Philadelphia record producer-promoter Bob Marcucci. Though he had failed his high school chorus classes, the darkly handsome Fabian Forte hit the national charts with the off-key single, "I'm a Man." The hits "Turn Me Loose" and "Tiger" followed. Critics savaged him; *Time* labeled him a "tuneless tiger." But to teenage girls lamenting Elvis Presley's tenure in the U.S. Army, Fabian filled a void. Aware that he was being marketed like "a thing," Fabian left music in the early 1960s to pursue a Hollywood career. But after proving an affable co-star in popular movies such as *High Time* and *North to Alaska*, his career stalled. His career was

**Fabian**

revived in the 1980s by "golden oldies" tours, which continued into the 1990s.

## Fabio (1961—)

---

The boom in romance novels in the mid-1980s propelled cover model Fabio to the heights of superstardom. With his broad, bare chest and long (dyed) blond hair, Fabio became an international sex symbol. Although his subsequent film and television career was limited to cameos playing himself, in the 1990s he parlayed his fame

into a job as a spokesperson for I Can't Believe It's Not Butter and made it onto MTV with a spot in Jill Sobule's music video for "I Kissed a Girl." As his career as a model has faded, Fabio has returned to romance novels, this time as an author.

## Facelifts

"Facelift" is a term that encompasses a variety of surgical procedures intended to restore sagging facial skin to youthful smoothness. Conventionally, incisions are made around the frontal hairline and ears allowing the facial skin to be detached by inches and "buffed" underneath, then "lifted" in an upward pull, trimmed, and sutured. The aftermath includes bleeding, swelling, bruising, and sometimes regret and depression at electing to undergo this surgery. The facelift represents the consumer potential of post-World War II society to purchase beauty and success in addition to material goods. The decades since the 1950s have seen the term facelift generalized to include specific surgical facial enhancements, from eye-lid and jaw-line lifts, to nose reshapings and lip implants. Hi-tech tools of the 1980s and 1990s have produced specialty procedures, including laser hair removal and collagen and body-fat injections.

By the 1990s, the facelift was but a core element within a North American growth industry of medical procedures, out-patient clinics, and cosmetic products, all of which can be subsumed under the wider term "beauty culture." Beauty culture is nurtured by the print media, particularly glamour and lifestyle magazine genres (for example, *Vogue* and *Cosmopolitan*), sold in drugstores and convenience stores across the continent. Such mass-marketed magazines create and promote the illusionist images and ideology of beauty culture, often using teen models in advertisements and fashion spreads to emulate the sleek look of worldly women. Commonly, these magazines also feature culturally correct articles on the pros and cons of cosmetic surgery and related procedures. Drug and department stores, as well as specialty "anti-aging" shops, carry out the magazines' pervasive double-coded system of "dos" and "don'ts," selling treatment products, creams, and lotions whose packaging adopts the familiar language ("lift," "firming") of the surgical facelift and of advertising rhetoric.

Beauty culture underlies the American entertainment industry, with pop stars such as Michael Jackson and Cher reinventing themselves as plastic icons, as if they were born into their altered bodies. Over the course of their numerous surgeries, Jackson and Cher have become self-parodies; respectively, specimens of racial bleaching and frozen glamour. Cher was the central player in a television infomercial endorsing so-called revolutionary face-care products, the hypocrisy being that Cher's appearance is not the result of these potions.

The surgical lifts, implants, and failed body alterations of popular culture figures have been fodder for tabloid television and

newspapers, circulating a mixed message of celebrity surveillance and social warning. They reveal both the lure and baggage of the American star system in movies, pop music, and television. Pamela Anderson's Barbi-doll iconography has only shifted laterally between beach babe (*Baywatch*), centerfold (*Playboy*), movie vixen (*Barb Wire*), and sex object (x-rated "honeymoon" video with Tommy Lee). The processes of retaining a seemingly ageless public face have been taken up by figures in American political culture as well as by middle-class women, men, and even teens who can afford the procedures. When she was the First Lady of the United States, Nancy Reagan's perpetual startled expression in media images gave the impression of either too many facelifts or overdetermined surgery. The presumed power of looking white and Western is being adopted by women of China who, despite poor wages, pursue for themselves and their daughters the eyelid surgery that gives them the "fold" that Asiatics genetically lack. Skin bleaching among Chinese women is another signal that the West, especially American popular culture, sets global standards of beauty and achievement.

In 1982, filmmaker Michael Rubbo's documentary, *Daisy: The Story of a Facelift* addressed the processes and implications of the facelift in twentieth century culture. What he finds in his middle-aged title subject, Daisy, is a nostalgic desire to redress personal and emotional insecurity by making herself romantically fit, through a facelift, for a phantom suitor. The facelift scene in Rubbo's documentary is performed on a man who, like Daisy, also seeks an improved image for his personal security. Both Daisy and this man adopt the same path, cracking the gender assumption that only women are the subjects and consumers of the facelift. What we as privileged viewers observe through Rubbo's camera in the surgical theatre is a drama that resembles the gruesome imagery associated with the horror film. Rubbo's research prompted him to conclude that in North American the face is our most "mobile body part" . . . "a moving image" in the desire for uniform, look-alike faces rather than unique physical character.

At the end of the twentieth century, when both visible and hidden piercings and tattoos are commonplace, it should not be surprising that even female genitalia must pass the test of the voyeur's gaze, as North American middle-class and "trophy" women apparently are flocking to cosmetic surgical clinics to undergo the labial "trim." This replication of the high production photographic look established by *Playboy* in the 1960s implies that the public and private body in contemporary culture is a series of discrete components that can be standardized in the industrial manner of auto-parts manufacturing.

—Joan Nicks

## Factor, Max (1872-1938)

Best known for the cosmetic line that bears his name, Max Factor also pioneered screen makeup for motion pictures. When films were in their infancy, stage makeup was generally used on the actors but it did not photograph well. Factor created a makeup more suitable to film lighting. He also popularized the use of human hair in wigs. He later won a special Oscar in 1928 for his panchromatic makeup. He

made what would become his most famous product, Pancake Make-up, when the advent of Technicolor film required a another new type of makeup. His line of skin-toned foundations disguised facial imperfections and was soon marketed for home use to mainstream America. Max Factor cosmetics remained one of the most popular brands of stage and street makeup into the 1990s.

—Jill A. Gregg

Basten, Fred E. *Max Factor's Hollywood: Glamour, Movies, Make-up*. California, General Publishing Group, 1995.

## Fadiman, Clifton (1904-1999)

Clifton Fadiman is a man of letters whose effectiveness as a broadcast personality helped him spread the gospel of the rewards of book reading to a wide public. A book reviewer for *The New Yorker* and other distinguished periodicals, Fadiman found fame in the late 1930s and most of the 1940s as the host of the radio quiz program, *Information, Please!* Taking advantage of his radio popularity, Fadiman appeared in magazines as an essayist and critic, and between hard covers as an anthology editor and introduction writer. Through his introductions and prefaces to the world's great books, he became one of the first and most distinguished of that unique breed of twentieth-century scribes: the "popularizer." The advent of television kept Fadiman in the public eye, and he continued to be an unpretentious but fervent advocate for the joys of reading and the pleasures of the civilized life.

Clifton (Paul) Fadiman ("Kip" to his friends) was born May 15, 1904 in Brooklyn, New York. Before he had graduated Phi Beta Kappa from Columbia University in 1925, he had already managed a bookstore, devised the standard translation of Nietzsche's *Ecce Homo*, and begun selling articles to national periodicals, including book reviews for the *Nation*. In 1927, Fadiman began a fruitful association with Simon and Schuster when he was hired as a reader and assistant editor. Within two years, he had been promoted to general editor, a position he held until the mid-1930s. While still with Simon and Schuster, Fadiman wrote book reviews for *Harper's Bazaar* and *Stage*; in 1933, he began a ten-year stint as the *New Yorker's* book editor. Urbane yet unpretentious, Fadiman claimed that, "I look for clarity above all in what I read." These qualities—plus his penchant for the "atrocious" pun—made him the perfect person to peddle erudition to the masses when, in 1938, he was hired to moderate a distinguished but good-humored panel—Franklin P. Adams, John Kieran, and Oscar Levant—on the NBC radio program, *Information, Please!* Aided considerably by Levant's iconoclastic wit, the show, in which listeners competed for sets of the *Encyclopedia Britannica* by submitting questions with which they hoped to "stump the experts," became both a critical and popular success, running for the next ten years.

During this period, Fadiman expanded his activities to include writing introductions for such classics as *War and Peace* and *Moby Dick*. He left the *New Yorker* to join the editorial board of the Book-of-the-Month Club, but he continued to promote the classics through the writing and editing of various introductions and anthologies, and the creation of a *Lifetime Reading Plan*. *Information, Please!* faded in

the late 1940s, and the 1950s found Fadiman writing a series of essays in *Holiday* magazine under the title, "Party of One." He also had no trouble making the transition from radio to television, where he contributed his witty presence to such quiz shows as *What's in a Word?* and *The Name's the Same*, although probably closer to his heart was the radio show he co-hosted concurrently on NBC with Columbia Professor Jacques Barzun, *Conversation*.

In his writings, Fadiman came across as learned but genial, and far from snobbish (although he was not above quoting a remark of Dvorak without translating it into English). His inclusion of science fiction stories in his anthologies, *Fantasia Mathematica* and *Mathematical Magpie*, probably helped create the atmosphere in which that once-despised genre began acquiring literary respectability. To the general public, Fadiman so personified the world of great books that when one man was asked to name his favorite work of literature, he responded: "Clifton Fadiman's introduction to *War and Peace*."

—Preston Neal Jones

## Fail-Safe

Released in 1964, Director Sidney Lumet's taut nuclear thriller is based on the 1962 Eugene Burdick and John Wheeler novel of the same title. Examining the changing face of war in the nuclear age, *Fail-Safe* depicts the possible consequences of the military's ever increasing reliance on computers. This is where *Fail-Safe* differs from its famous cousin of the genre, *Dr. Strangelove*, where a lone military madman plots an atomic attack upon the Soviet Union. In *Fail-Safe* nuclear apocalypse is at hand as an electronic error directs a squadron of U.S. long-range bombers to drop their nuclear payloads on Moscow. Through the exchange of sharp dialogue, the concepts of limited war in the nuclear age, the decreased time of humans to analyze potential nuclear strikes, and the survival of a nation's culture after the bomb are effectively challenged.

—Dr. Lori C. Walters

## Fairbanks, Douglas, Jr. (1909—)

Although his famous father did not want him in the business, the son of swashbuckling actor Douglas Fairbanks, Sr. started acting at an

Douglas Fairbanks, Jr. (far left), in a scene from the film *Gunga Din*.

early age and eventually went on to become the first second-generation movie star. When he was barely a teenager, the studios sought to trade in on the Fairbanks name by casting Douglas Jr. in swashbuckling films, but ultimately he managed to carve his own niche as a debonair actor in supporting and leading roles. Although often overshadowed by other actors of the same type, he was always enjoyable to watch. When his career began to fade, Douglas Fairbanks, Jr. gracefully turned to producing and writing, although he occasionally returned to acting.

Born to one of the world's first movie stars, Douglas Fairbanks, Sr., and his first wife, Beth, initially the younger Fairbanks was not really interested in a career in acting. He eventually became drawn to it as a way, he hoped, of becoming closer to his distant father. Jesse Lasky of Paramount Pictures, eager to attract the loyal Fairbanks fans, cast Douglas Jr. in *Stephen Steps Out* (1923), when he was only thirteen. The film was a failure, but Fairbanks continued to try to make a name for himself. He was able to get a contract with Paramount, although his career did not go anywhere.

At seventeen, he co-starred in the silent version of *Stella Dallas* (1926), receiving critical acclaim but no notable follow-up work. Fairbanks continued to be cast in small parts, but was forced into work

as a title writer to make ends meet. Although he also did some stagework in Los Angeles, his career remained stagnant until he met and married a young starlet, Joan Crawford. The couple became the darlings of the Hollywood gossip columns and fan magazines.

The positive press he received because of his marriage led to some good parts, usually as villains. Metro-Goldwyn-Mayer (MGM) cashed in on fan interest in the couple by co-starring Fairbanks and Crawford in the motion picture, *Our Modern Maidens* (1929). However, it wasn't until Fairbanks appeared in two strong supporting roles in *Dawn Patrol* (1930) and the hit gangster film, *Little Caesar* (1931) starring Edward G. Robinson, that his talent was finally noticed. By this time his marriage was ending, but his career was progressing.

Warner Brothers Studios gave Fairbanks a contract which allowed the actor more control over his career; most of the roles that followed, however, were forgettable. He appeared with Katharine Hepburn in *Morning Glory* (1933), a film for which she won an Academy Award, but which did little for Fairbanks' career. In 1937 Fairbanks played the memorable villain in *The Prisoner of Zenda*. He then appeared in what is arguably his most famous role in the 1939 hit, *Gunga Din*, co-starring Cary Grant. In that same year he married his second wife, Mary Hartford. However, World War II was looming on

the horizon and Fairbanks willingly put his career on hold to join the U.S. Navy. He became a Lt. Commander and was among the most decorated of all the Hollywood stars who served in the armed forces.

After the war, Fairbanks was knighted by the British Empire. Unfortunately, by the late 1940s, his career as an actor was in sharp decline. Although he appeared in the successful *Sinbad the Sailor* (1949), he had fallen out of the public eye during the time spent in the service, and his career had suffered. After appearing in *Mr. Drake's Duck* in 1951, he virtually retired from the screen, not appearing in another feature film for twenty years.

Fairbanks then began producing films, mostly for television. Occasionally, he also appeared in stage productions, including *The Pleasure of His Company* (1973) in London. The seventy-year-old actor had somewhat of a career resurgence when he appeared in the supernatural film, *Ghost Story* (1981) co-starring Fred Astaire. He also appeared with some regularity on popular television programs of the 1970s and early 1980s. Interest in his life and career was similarly revived by two very well received autobiographies, which appeared in 1988 and 1993. Mary died in 1988, and in 1991 he married Vera Shelton.

Although Douglas Fairbanks, Jr. may still be best remembered as the son of his famous father, he nonetheless managed to prove himself a worthy successor to the Fairbanks name. As a charming and debonair actor who created his own legacy as an actor, producer and writer, Fairbanks epitomized the elegance and manners of a bygone era of motion picture history.

## Fairbanks, Douglas, Sr. (1883-1939)

The silent-screen star who would become famous for his tireless energy and all-American attitude was born Douglas Ulman in Denver, Colorado, in 1883. Commentator Vachel Lindsay described Douglas Fairbanks, Sr.'s on-screen persona in terms of two key concepts: architecture-in-motion and sculpture-in-motion. In the 1910s and 1920s, the star's acrobatic stealth and extroverted performance style appeared to mirror the flickering electricity and seemingly endless possibilities of the newly emerging form of moving pictures. Always known for his insistence on maintaining a good deal of control over his films, Fairbanks was one of the founders of United Artists with Mary Pickford, Charlie Chaplin, and D. W. Griffith.

After leaving his mother and stepfather behind in Colorado when he was a teenager and surviving a brief stay at Harvard, Fairbanks tried his hand on the New York stage and soon made it to Broadway. In 1907, he married Anna Beth Sully and attempted to transform himself into her father's protege, first working as an executive in the family's soap company and then as a broker on Wall Street. The couple had a son, actor Douglas Fairbanks, Jr., in 1909. After a handful of years trying to conform to his wife's wishes for

Brandon Hurst (left) turned to Douglas Fairbanks, Sr., in a scene from the film *The Thief of Bagdad*.

him, Fairbanks returned to Broadway, achieving a successful comeback in *He Comes up Smiling* (1913).

Informed by his prejudice against the nascent industry of films, the star begrudgingly signed a contract with Triangle-Fine Arts in 1915 and made his debut in *The Lamb*, playing a wealthy, idle, relatively effeminate fellow who is disenchanted with life on Wall Street but decides to build himself up for the woman he loves. Fairbanks would develop this theme throughout his films of the teens, both with director Allan Dwan in films such as *The Half Breed* (1916) and *Manhattan Madness* (1916), and with director John Emerson and screenwriter Anita Loos in *His Picture in the Papers* (1916) and *The Americano* (1916).

His screen stories reinforced the philosophies he espoused in fan magazines and advice manuals (such as *Laugh and Live* in 1917 and *Making Life Worthwhile* in 1918), which followed Theodore Roosevelt's emphasis on clean living and hardy individualism. Fairbanks became a role model for young boys everywhere, evangelically touting, "To be successful you must be happy . . . to be happy you must be enthusiastic; to be enthusiastic you must keep mind and body active." His intense love of activity was probably easier to read about

in articles or watch on screen than to confront personally. Foreign dignitaries and royal guests were obligated to accompany the star to his private gymnasium on the studio lot and endure a “basic training” which left many of them crawling to the steam room.

In 1917, Fairbanks signed on as his own producer with Artcraft films, a subsidiary of Famous Players-Lasky. There, he continued his tradition of gymnastic stunts and masculine transformation in films such as *Wild and Woolly* (1917), *Reaching for the Moon* (1917), and *A Modern Musketeer* (1918). He then made a move which gave him full reign over his films when he cofounded United Artists in 1919. He starred in *The Mollycoddle* (1920) and *The Nut* (1921), among others, while beginning to make the transition to the swashbuckler, a genre for which he became famous. These costume dramas, such as *The Mark of Zorro* (1920), *The Three Musketeers* (1921), and *The Thief of Bagdad* (1924), offered him a formula by which he could continue his traditions of physically demanding stunts and chases but tailor them for his maturing persona.

Fairbanks has been congratulated for being a star auteur, one of Hollywood’s first actors to exercise control over the development and production of his films. He participated in the scripting of many of his early films under the pseudonym Elton Thomas. By the middle 1920s, he demonstrated a keen understanding of the importance of publicity, going so far as to finance a New York City screening of *The Thief of Bagdad* in which he reportedly had the female ushers dress in harem costumes, serve Arabian coffee in the lobby, and waft perfumes from inside the auditorium.

Fairbanks married “America’s Sweetheart” Mary Pickford in 1920, and, together, they reigned over Hollywood in their palatial Pickfair estate for more than a decade. His interest in overseas travel and international celebrity associations meant that the couple made a number of renowned world tours throughout the 1920s. Later, Pickford preferred to remain settled in California, and her husband would embark on these trips with comrades and often stay in Europe for months or years at a time.

Fairbanks was relatively successful in talkies (making his sound debut with Pickford in *The Taming of the Shrew* in 1929), and he was named the president of the Academy of Motion Pictures, Arts, and Sciences in 1927. But, because of his international interests, he came to be viewed as something of an expatriate by 1930. The star lost public favor to an even greater extent when he was named co-respondent with British noblewoman Lady Sylvia Ashley in a divorce suit filed by Lord Ashley in 1933. An ex-chorus girl, Lady Ashley had been married three times by the time she was romantically linked with Fairbanks. The crumbling marriage of two of Hollywood’s most famous stars played out turbulently in America’s national press, with tabloid newspapers intercepting their private telegrams and publishing them as headlines. Pickford and Fairbanks divorced in 1936, after which he quickly married Lady Ashley and relocated to his house in Santa Monica, California. Though many of his friends said Fairbanks was content in his third marriage, it also was reported that the star spent many an afternoon sitting by the pool at Pickfair repeatedly mumbling his apologies to Pickford.

Once middle age required him to curtail his acrobatic characters, Fairbanks starred in a couple of travelogue-inspired films, *Around the World in 80 Minutes* (1931) and *Mr. Robinson Crusoe* (1932). His final film, *The Private Life of Don Juan* (1934), was directed by Alexander Korda and parodied the romantic image of hero Don Juan as he came to terms with his age and receding popularity, a commentary on the fleeting nature of fame notably coinciding with its star’s own downward spiral.

Fairbanks died of a heart attack at the age of fifty-six. The prevailing consensus at the time was that Fairbanks had pushed his body so hard for so many years that his muscles literally turned in on him and caused his organs to degenerate.

## Fallout Shelters

Part of American culture since 1949, fallout shelters were inspired by fear of nuclear attack; and their subsequent waxing and waning popularity has been directly related to U.S.-Soviet relations. A fallout shelter, sometimes known as a bomb shelter, is a structure designed to allow those inside it to survive a nuclear blast and its likely aftermath of fire, radiation, and societal disruption. Although some large shelters were built by the U.S. government during the Cold War, most were smaller, designed to protect the family whose backyard they occupied. A prototypical fallout shelter was made of concrete and steel, and sunk in the earth for added protection, although those who could not afford such a construction project sometimes set aside a corner of their basement or dug a makeshift shelter under the crawlspace of a house. A shelter would usually be stocked with canned food, bottled water, medical supplies, a radio, a Geiger counter, and a chemical toilet, among other necessities.

The initial interest in fallout shelters within the United States can be traced to 1949, the year that President Harry Truman informed the nation that the Soviets had exploded an atomic bomb. This ended the American monopoly on nuclear weapons and introduced the world to the possibility of nuclear war between the two superpowers. Aside from the attack on Pearl Harbor, the United States had never, in all its wars, suffered such an attack from the air; but the nuclear age, with its long-range bombers and intercontinental ballistic missiles, made that threat very real.

Truman responded to the heightened public anxiety by creating the Federal Civil Defense Administration in 1951. Although scientists disagreed as to the effectiveness of shelters in the event of a

nuclear war, Truman and his advisors knew that public belief that shelters worked would be a boon to morale in an otherwise nervous age. In fact, Truman was walking a tightrope in dealing with American public opinion about the Soviet menace. On the one hand, he was convinced that massive defense spending was essential if the United States were to stop Communist expansion throughout Europe. But postwar America was tired of high taxes and huge military budgets, and would only support these if the danger to the nation's security was both obvious and grave. On the other hand, Truman did not want fear of nuclear war to lead the public to outbreaks of panic, pacifism, or "Better red than dead" fatalism. Thus, fallout shelters were portrayed as realistic protection if worst should come to worst.

After President Truman left office in 1952, Americans' interest in shelters blew hot or cold in keeping with the temperature changes of the Cold War. There was relatively little interest in shelters during much of the Eisenhower administration until 1957—the year that saw both the launch of the first orbiting satellite (the Soviet *Sputnik*) and the release of the Gaither Report in the United States. The latter was the work of a blue-ribbon panel selected by Eisenhower to assess the relative nuclear capability and civil defense preparedness of the United States and the Soviet Union. The report concluded that the Soviets would soon surpass America in all categories of nuclear weaponry and that civil defense preparations in the USSR were already far ahead of American efforts. The supposedly secret document, which leaked to the press a week after being presented to President Eisenhower, led to an upsurge in public concern about fallout shelters, even though Eisenhower himself believed that true national security lay in U.S. superiority in offensive nuclear weapons.

The heyday of the fallout shelter occurred during the administration of John F. Kennedy, which saw both a rise in international tensions and Kennedy's advocacy of shelters as part of the American response. During the Berlin Crisis of 1961, precipitated by Soviet Premier Nikita Khrushchev's aggressive moves toward West Berlin, Kennedy gave a nationally televised speech explaining the gravity of the situation. He also endorsed the construction of fallout shelters, saying, "In the event of an attack, the lives of those families which are not hit in a nuclear blast and fire can still be saved if they can be warned to take shelter and if that shelter is available." If further inducement for building shelters was needed, it was provided fifteen months later by the Cuban Missile Crisis, in which the world came closer to nuclear war than it ever had before.

The popular culture of the late 1950s and early 1960s also contributed to public concern about nuclear war and hence increased interest in fallout shelters. The best-selling novel *Fail-Safe* (also made into a popular film) features a technical glitch that results in the nuclear destruction of both Moscow and New York. Other novels portrayed the aftermath of a nuclear exchange. Some, like Pat Frank's *Alas, Babylon*, were guardedly optimistic. Others, such as Nevil Shute's *On the Beach* and Walter Miller's *A Canticle for Liebowitz*, presented bleak and pessimistic visions.

Civil defense programs, sponsored by both federal and state governments, were designed to increase both Americans' optimism and their chances for survival in the event of nuclear attack. In addition to encouraging the building of shelters, the Federal Office of Civil and Defense Mobilization advised communities to conduct air-raid drills. The importance of such drills was emphasized by government-produced instructional films that were shown on television, as "short subjects" in movie theatres, and in schools. Some of these films manifest a degree of naive optimism about nuclear war that today seems absurd, such as a short animated film in which a

character named "Bert the Turtle" (a talking amphibian in a civil defense helmet) tells children that a nuclear blast can be survived by those who learn to "Duck and Cover" (crouch down and cover one's face and head).

Although concern about "The Bomb" was gradually replaced in American consciousness by the Vietnam War, interest in fallout shelters was revived in the 1980s. Consistent with its vigorously anti-Communist foreign policy, the Reagan administration devoted considerable rhetoric and resources to civil defense. This effort included the development of evacuation plans for people living near probable nuclear targets as well as a new shelter program designed to protect the rest of the population. However, the program languished during Reagan's second term as U.S. relations with the Soviet Union dramatically improved.

In the 1990s and beyond, the limited interest in fallout shelters (as evidenced by the dozen or so World Wide Web sites devoted to them) was apparently restricted to hard-core "survivalists," who wished to be prepared for anything, even the end of the world.

## Family Circle

One of the most widely circulated magazines in the United States, *Family Circle*, like its sister magazines—*Ladies Home Journal*, *McCall's*, *Good Housekeeping*, *Better Homes and Garden*, and *Woman's Day*—, has not only disseminated and popularized expert knowledge about children, but has also been a major contributor to the nation's parent-education curriculum, a vehicle for the transfer of culture, and an exporter of American culture. It has been a medium through which information and ideas about children, adolescents, parenting, and the family have been transmitted to parents, especially, but not exclusively, to mothers, for over half a century. It has served, especially during the post-World War II era, as a guide and manual for families trying to make a comfortable home for themselves and their children with the limited resources at their disposal. Its readers were early proven to be good users of price-off coupons. Through most of its history it has been distributed in a way that has made it accessible to a very wide segment of the population, perhaps to a population that did not have easy access to other such media. When it first appeared, it was not available by subscription and was confined to chain grocery stores—whenever bought groceries in a supermarket all but inevitably saw it at the checkout counter.

In large measure *Family Circle*, like *Woman's Day*, has been overlooked by scholars and not received the attention they deserve,

perhaps because they were started and continued for many years as magazines found only in grocery stores. Yet, their circulation has been greater than virtually all other similar magazines. While each has been described as belonging to the seven sisters—*Ladies Home Journal*, *McCall's*, *Good Housekeeping*, *Better Homes and Garden* (at times not included in this grouping), and *Cosmopolitan*—it may be more appropriate to view them as stepsisters. *Family Circle*, like *Woman's Day*, may justly be described as a store-distributed magazine, but neither is insignificant. There is no doubt that distributing magazines at the supermarket checkout stand was successful. In the 1930s and 1940s that spot was the exclusive domain of *Family Circle* and *Woman's Day*. They were joined there by *TV Guide* and *Reader's Digest* in the 1950s. By the early 1950s, according to *Business Week*, they were “hard on the heels of the big women’s service magazines.” Subsequently, others wanted their place there too.

*Family Circle* began to assume its present form when the United States was in the midst of its new consumer culture, rearing the children who would express themselves as young adults in the late 1960s and early 1970s, and when the American household was, as historian William E. Leuchtenburg observed in *A Troubled Feast: American Society Since 1945*, adopting “a style of consumption that was more sophisticated, more worldly [and] more diversified” than ever before. As Landon Y. Jones recorded in *Great Expectations: America and the Baby Boom Generation*, it was the era during which the United States became a “vast maternity ward.” By the end of the 1950s, 40 million new babies had arrived, and the number of children between ages five and 13 was increasing by a million a year. *Family Circle* provided the parents of those new babies with information on how to feed, bathe, educate, entertain, and how not to spoil them. Indeed, from its very beginning, *Family Circle* offered parents advice about children’s development and behavior. Its first issue (September 1932) included both Dr. Julius D. Smith’s “Judging the Health of Your Baby,” information about baby’s health, and what Dr. Arnold Gesell said they could expect from a child at six months.

The ways in which Americans lived changed significantly between the end of World War II and the beginning of the 1960s. The places and the social-economic context in which American children were reared were radically transformed. Those who gave birth to the baby boom were mostly born in the 1920s and experienced the Great Depression and World War II. Those to whom they gave birth had no such experiences, and many were brought up in what some believed would be an increasingly affluent society presided over by the organization man. A new culture was being made. Parents who were reared in either an urban neighborhood or a small town now lived and reared their children in a new kind of living place and dwelling, the developer’s house in the suburb. *Family Circle* served as an inexpensive and handy directory and manual for families who were adjusting to and embracing the new way of life the affluent society seemed to be promising. According to *Business Week*, magazines such as *Family Circle* told “the housewife how to cook economically, how to bring up her children, how to clothe them and herself, and how to take care of her house. To the budget-minded, this makes good sense.” It was a “good formula for many new and young housewives who want[ed] help at their new job.”

*Family Circle*’s appearance in September 1932 was, as Roland E. Wolseley reported in *The Changing Magazine*, the beginning of “the big boom in store-distributed magazines.” Of the many store-distributed magazines founded since the 1930s—perhaps as many as a hundred—*Family Circle*, like *Woman's Day*, is one of the two that have survived and prospered. In *Magazines in the Twentieth Century*,

Theodore Peterson reported that “when the old *Life* was undergoing one of its periodic readjustments, its managing editor, Harry Evans, joined with Charles E. Merrill, a financier with an interest in grocery chains, to start a magazine that would be distributed free but that would carry advertising.” At the time, Merrill was a member of Merrill, Lynch, Pierce, Fenner, & Smith which controlled Safeway Stores. Evans reasoned that since radio programs were broadcast to listeners without charge, it should be possible to secure advertisers for a magazine for which the reader did not pay. His hope that *Family Circle* would reach a circulation of 3 million (almost ten times greater than the initial circulation) was soon realized. By the end of 1933, its circulation was nearly a million (964,690); it was slightly over a million (1,068,106) a few weeks later (February 9, 1934).

*Family Circle*’s initial circulation of 350,000 was distributed through Piggly Wiggly, Sanitary, and Reeves grocery stores in Richmond, Baltimore, and Manhattan. The first issue of the 24 page gravure-printed tabloid weekly contained recipes and items on beauty, fashions, food, humor, movies, and radio, and was mostly written by Evans. It survived the years of the Great Depression, and was clearly prospering in the 1940s. It lost its giveaway status on September 3, 1946, became a monthly, and sold for five cents. It then assumed its present format and began its use of color. In the post-war era, it grew with the baby boom. In 1949, when the Kroger stores joined the other chains in selling it, its distribution was national. By 1952 it was available in 8,500 grocery stores and was able to guarantee its advertisers a circulation of 3.5 million. In 1958 when it took over *Everywoman's*, it announced a 5 million circulation rate base and was then able to claim that *Everywoman's Family Circle* would be available in nearly 12,000 chain stores (nearly all of which were self-service stores) in over 1,800 counties where 93 percent of all retail sales in the United States occurred. By the end of the 1950s, its circulation was 5.1 million. By the end of the 1970s, its circulation was over 8 million. At the end of the 1980s, its audience was over 21 million. It then claimed it was the “World’s largest women’s magazine,” a claim made on the Australian as well as the American edition.

*Family Circle* used celebrities as either authors or on its covers to increase its appeal and to satisfy the interests of readers. Covers of early issues featured Bing Crosby, Joan Crawford, and Douglas Fairbanks, Jr. Other early covers featured figures such as Mussolini, Stalin, Eleanor Roosevelt (December 29, 1933), and Amelia Earhart (December 8, 1933). During the Presidency of Franklin D. Roosevelt, Eleanor Roosevelt contributed articles to *Family Circle* as well as to its arch rival *Woman's Day*. In the April 1955 issue, Quentin Reynolds wrote about the problems of adolescence in an article called “Help Over the Teen-Age Hurdle.” The next month Art Linkletter explained “Why People Are Funny,” and in September, Herman Hickman explained that “Football Is a Ladies’ Game.” When *Everywoman's* told its readers in 1958 that the next issue would be *Everywoman's Family Circle*, it also promised that in the first issue of the merged magazines *Ivy Baker Priest*, Treasurer of the United States, would switch to her role as a “successful mother” and ask: “Are we neglecting our children enough?”

The use of celebrities has endured and has earned *Family Circle* free advertising. The *New York Times* reported in February 1976 that Susan Ford, daughter of President Ford, was in Palm Beach “working as a model . . . for *Family Circle* magazine.” It reported in 1981 that Nancy Reagan told *Family Circle* that she “had just gotten out of the tub” and Ronald Reagan was in the shower when “President Jimmy Carter went on national television to concede the election.”

Charges that *Family Circle's* content is primarily about economical cooking, styling hair, or that it is primarily a woman's magazine can be made only by those who have not bothered to turn the covers of the magazine. In *Magazines in the United States*, Wood reported that *Family Circle* was "a full magazine, carrying romantic fiction with housewife appeal, feature articles on such subjects of family interest as sports, law, divorce, teen-age problems, gardening, and travel." Its largest department was "All Around the House" which included material on food and its preparation, household equipment, decoration, home building, and home furnishings. In "Your Children and You," one found articles on child care, parent-child relationships, and how to organize successful parties for children. A typical issue contained sections by contributors headed "The Personal Touch," notices of new movies under "The Reel Dope," "Beauty and Health" departments, and a "Buyer's Guide" that told where and how the products mentioned in the magazine could be acquired. As was announced in its first issue, it was designed as a magazine with something for all members of the family. While a very large portion of its editorial content, probably a majority of it, was devoted to food, needlework, and other activities traditionally identified as women's activities, it did not ignore fathers and activities traditionally identified as men's activities.

*Family Circle* also included material directed to children and teenagers. For example, when the first monthly issue appeared in September 1946, it included "Teen Scene" by Betsy Bourne, a feature addressed not to parents but to teenagers themselves. It was similar to the feature *Woman's Day* introduced in 1939, Susan Bennett Holmes' "School Bus." Although most of it was addressed to females, some sections were addressed to males. Bourne, however, addressed only a portion of the nation's teenagers. There was no mention or acknowledgment of race. That may be explained by the period during which she was working, a period that ended with the *Brown* decision (1954). She further tacitly accepted that the families of the teenagers she addressed were all very much alike. There certainly was no significant acknowledgment of the great variety of familial forms and styles that prevailed throughout the nation. The topic that received most attention—Social Skills—told teenagers, especially girls, how they could manipulate and manage others—their parents and their peers—and how they could manage to get their own way. Girls were given instructions on how to catch boys and what to give and not to give boys.

Teenagers, especially the females, who followed Bourne's advice were being prepared to be good middle class wives. They would understand their husbands, be considerate, know how to dress, how to groom themselves, how to give parties, and how to participate in volunteer work. While they were being told how to manage, manipulate, and get their own way, they were not being told how to be independent or to pursue their own careers. Boys were given instructions on how to please girls. Presumably, that would transfer to pleasing their wives.

*Family Circle* has served as a successful exporter of American culture. In 1965 its Canadian circulation was 350,000. A British version appeared on September 23, 1964. By early 1966 it was the most successful monthly for housewives in Britain. Its initial circulation of 700,000, distributed through 9,000 markets, increased to 850,000 distributed by 13,000 stores by the beginning of 1966. On March 24, 1966, 5,000 self-service stores in Germany began distribution of a German edition, *Ich und meine Familie* with a circulation of 500,000 guaranteed through 1967. Most of its editorial content was to be provided by the Germans, but a significant portion of the material

on health and infant care was scheduled to come from *Family Circle*. An Australian edition appeared in Australian supermarkets in May 1973. *Family Circle* and Vanchen Associated of Hong Kong entered into a licensing agreement in 1984 to make it available in Hong Kong and Taiwan. The first issue was written in Chinese, but the recipe headings were in English.

## *The Family Circus*

Bil Keane's daily single-frame comic strip began chronicling the mild misadventures of a white, middle-class suburban family on February 19, 1960 and is currently distributed to over 1,300 newspapers, making it the most popular panel in the world. Comics historian Ron Goulart has called *The Family Circus* "one of the gentlest and most heartwarming panels in comics history," and it is precisely this wryly humorous perspective which has made Keane's creation one of the clearest, most significant examples of the deep-seated American belief in the nuclear family as the moral center of domestic life. If a "circus" can be accurately described as a form of entertainment which displays human beings in control of both wild beasts and their own fears, then the ring which surrounds each panel of Bil Keane's strip is apt indeed, for *The Family Circus* takes everything that might be threatening or frightening about children or parenting and tames it with the whipcrack of a grin, the safety net of a smile.

Keane has reported that the idea for a comic strip poking fun at the foibles of family life occurred to him as early as 1952 while he was still involved in producing *Chanel Chuckles*, a daily comic which encouraged readers to laugh at the new medium of television and at their own compulsive interest in it. Keane began keeping notes on 3x5 cards of the funny turns of phrase and humorous misunderstandings of his own children until, as he later said, he had "enough material for

maybe 50 years.” When *The Family Circus* debuted in 1960 (as *The Family Circle*), the Keane family’s ink-drawn counterparts consisted of a Daddy in horn-rimmed glasses, a pert and neatly dressed Mommy, and three children—seven-year-old Billy, five-year-old ponytailed Dolly, and three-year-old Jeffy. Another baby arrived two years later and PJ has since been permanently fixed at a toddling 18-months. Barfy the Dog and Kitty cat are the pets of the family, and all are occasionally visited by a stereotypical crew of in-laws, neighbors, and schoolchums—with the principal focus remaining exclusively on the central family of parents and children. The perpetual preadolescence of the brood enables Keane to ignore the more disturbing issues of parenting which arise with puberty, and a typical *Family Circus* panel is a simple illustration of a child’s malapropism, mild misunderstanding of the adult world, or parental eye-rolling. Any variation from this formula is usually confined to the more experimental (and larger) format offered by the Sunday panel, and here Keane makes regular, innovative use of an overhead perspective tracing one child’s path through the neighborhood and of a version of the strip “as drawn by” little Bobby—usually as a Father’s Day “present” to the hardworking Bil.

Keane has helped define the unique tenor of his strip by noting that “There’s a general tendency among people who want to be funny to exaggerate. I do just the opposite. I tone down every idea I get.” While the resulting moderation can easily lull a reader into taking the strip for granted, the comic industry and the American public have been generous in their persistent recognition of Keane’s consistently popular, understated art. The National Cartoonists Society has awarded Keane its highest honor, the Reuben, as Outstanding Cartoonist of the Year (1982), and *The Family Circus* characters themselves have appeared in three television specials, over 40 book collections, and uncounted calendars, figurines, advertisements, greeting cards, and Christmas ornaments.

While an occasional reference to contemporary matters helps keep the panel meaningful to its wide audience (e.g., a caption of Dolly advising Jeffy that “Conscience is e-mail your head gets from Heaven”), the strip retains its focus upon the timeless center “ring” of the family—the mild pleasures, sighing frustrations, and deep love which makes the “circus” a place we want to visit whenever it comes to town or is delivered to our doorstep.

## *Family Matters*

The longest running black sitcom in history, *Family Matters* debuted in 1989 and aired on prime-time television for a total of nine

Jaleel White as Steve Urkel and Michelle Thomas as Myra Monkhouse in *Family Matters*.

years. Created by William Bickley and Michael Warren, the show featured a multi-generational, working-class black family living under the same roof. Originally a spin-off from *Perfect Strangers*, in which actress JoMarie Payton-France played an elevator operator, the series placed her character of Harriette Winslow in her own home with her husband, a Chicago police officer (Reginald Vel Johnson), and three children (Kellie Shanygne Williams, Darius McCrary, and Jaimee Foxworth). Other family members were Carl’s mother, Estelle Winslow (played by Rosetta LeNoire) and an adult sister (Telma Hopkins).

Much as Henry Winkler’s “Fonzie” unexpectedly stole the *Happy Days* thunder from his co-stars in the 1970s, *Family Matters* also witnessed the breakout performance of an actor named Jaleel White during its first season. Written into the script as the world’s worst blind date—arranged for Laura by her father—12-year-old “Urkel” was a neighborhood goofball who fell instantly in love with the Winslows’ daughter.

For his audition, White borrowed a pair of oversized work glasses from his dentist father, hiked his pants up to “flood” length, and proceeded to wheeze and snort his way into a character who would soon become television’s most famous nerd. Urkel was an instant hit. In fact, White’s performance was so stellar that producers

quickly snatched him up as a regular cast member. Bickley claimed that he knew Urkel would be big after overhearing some teenagers imitating him in a shopping mall. As one reviewer put it, kids took to the character like quarters to arcade games. Before long there were Urkel t-shirts, jigsaw puzzles, and even a talking doll that recited favorite Urkel phrases such as, “No sweat, my pet.”

In the midst of an otherwise unremarkable series, it was Urkel who drew both the bulk of criticism and praise for the program. Denounced as “cartoonish” by many he was, in many ways, a stereotypical buffoon. Even more insulting to many critics, was the show’s clichéd portrayal of the Winslow family’s matriarch. Whereas her husband was often bumbling and unsure, Harriette Winslow was the sassy decision-maker; the domineering “powerhouse of reality” in the home. It could also be argued, however, that Urkel challenged racial stereotypes. Depicted as the son of a neurosurgeon, he was a studious bookworm with genius-like abilities in math and science; traits that made him a rare representation of black youth for prime-time television.

Nestled between *Full House* and *Perfect Strangers* on ABC’s Friday night “TGIF” lineup, *Family Matters* was a black-cast series that found mainstream success among white, American audiences. Although it never won critical praise or Emmy awards, viewers were warmed by the show, which was a consistent favorite in its time slot. Unlike some of the more politicized black series of its era, such as *The Cosby Show* and *A Different World*, *Family Matters* did not emerge from a black sensibility. In fact, the white producing team of Bickley and Warren (who later created *On Our Own*, another black comedy for ABC) made a conscious effort to fashion a “universal” family, unmarked by racial difference. As actor Reginald Vel Johnson once noted, *Family Matters* was never nominated for any NAACP (National Association for the Advancement of Colored People) Image Awards. Despite its all-black cast, it was perhaps seen as being “too white . . . to be considered a black show.”

Even after its retirement from prime-time, *Family Matters* continued to be a hit on cable. After a brief and unsuccessful run on the lily-white CBS, the series migrated to the Turner Broadcasting System (TBS) cable network, where it ranked number nine among cable programs for children in 1997.

## Family Reunions

The idea of gathering together all of one’s family members at a central place and at a given time emerged as a popular American pastime in the 1960s, although family reunions had been held in the United States since the 1880s. Throughout the 1970s, 1980s, and 1990s, however, reunions grew in both popularity and scale as the baby boomer generation aged. To many people, reunions represent an

opportunity to return to the “old days” when families resided in the same locale and knew each other very well. While many Americans attend family reunions for purely nostalgic reasons, others are motivated by the urge to get in touch with the family’s “roots.”

During the 1980s, the advent of computers and the Internet began an ongoing interest in amateur genealogy. The many Americans who trace their heritage are often the primary organizers of a family reunion. They wish to share their findings with family members as well as gather new information through personal contact. Furthermore, the Internet has made it easier to advertise reunions as well as to find and correspond with distant relatives.

Some reunions attract a gathering in the hundreds, often held at or near convenient popular resort areas, though smaller reunions remain common. Reunions are usually held in June, July, or August to correspond with family vacations and, since many are often held outdoors at state parks or campgrounds, to coincide with good weather. Making an occasion of mealtimes is an essential ingredient of the American family reunion, typically with each family contributing dishes to the large buffets that are held. The get-togethers might last anywhere between one and three days, with the participants enjoying pastimes that range from games and sports to sightseeing outings, but for many the most enjoyable pastime of all is sitting around talking. Recalling memories of youth, and passing those memories on to the next generation, are important goals of a family reunion. Many adults want their children to get to know their cousins or other extended family members, who influenced their own lives.

Because of their large scale, by the 1990s reunions had come to involve much careful planning and organization. Near the close of a reunion, families often hold a meeting to elect officers to organize the next get-together and perhaps set a date and place where it will be held. A family historian is usually entrusted with the task of recording the events of the reunion, as well as keeping the family history and genealogy up to date. Some families even appoint a fundraising committee to organize events that will pay the costs of getting everybody together and accommodating them. Despite the hard work and responsibilities that go into the arranging of a successful gathering, families enjoy being a part of the communal group that makes up a large reunion.

To commemorate the occasion, organizers often provide a variety of souvenirs for family members to purchase. T-shirts printed with the family name, and the date and place of the reunion are common, while other popular items might include caps, bumper stickers, tote bags, pencils, complete genealogies and family recipe books. Family members also take an abundant number of photographs and home videos to preserve the memory of the gathering.

By the 1990s it was estimated that over 200,000 American families attend a family reunion every year. In an age of smaller nuclear families and changing definitions of a family in general, reunions offer an opportunity for many people to feel a sense of belonging in a larger, extended family unit. Many families are forced to live far distant from their relatives because of work or other circumstances, and reunions give them an opportunity to keep in touch. Whatever a family’s interests, or those of the individuals within it, reunions offer something for everyone to enjoy within the enhanced sense of close community that they create.

## Family Ties

President Reagan once named NBC's *Family Ties* his favorite show, despite the fact that the show was originally intended as a parody of Reagan-style values. The premise of the Emmy-winning series, which ran from 1982 to 1989, was the generation gap between the Keaton parents, who came of age in the 1960s and whose hippie leanings were evident from the opening sequence, and their children, who were products of the materialistic 1980s. The eldest child, Alex (Michael J. Fox, who became a star because of the series), wore suits, read the *Wall Street Journal*, and worshipped Richard Nixon and William F. Buckley. Middle child Mallory was rather dim and obsessed with shopping. The youngest, Jennifer, was a precocious sitcom kid. As viewers became more interested in the kids, the generation gap theme was dropped.

## Fan Magazines

Although many fields of endeavor such as sports, auto racing, radio, and music have all spawned "interest magazines" that provide inside information for devotees of a particular subject or pursuit, it is to the motion picture industry that America owes the long-established concept of the fan magazine. Conceived to promote, popularize, and trade off the fledgling art of film in early Hollywood, the publication of fan magazines dates back to 1911 when *Motion Picture Story* magazine and *Photoplay* first appeared. These magazines provided readers with an illusion of intimacy with the stars, and fed into their fantasies of the opulent lifestyles and sometimes scandal-ridden private lives of the famous. At the same time, they purported to reveal the mechanics of the star making process, allowing the average reader—an outsider looking in—to claim spurious knowledge and form a personal judgment as to a player's screen image, talent, off-screen personality and character, and to hold opinions about the best career moves for their favorites.

Initially, fan magazines relied on a formula that packaged a gallery of movie star portraits and illustrated stories of popular motion

pictures, together with a few specialized features such as reader inquiries. Each issue was rounded off with short fictional pieces. However, as early as 1912, the magazines began to print interviews with stars, articles on various phases of film production, and even motion picture scenarios. The magazines were targeted to appeal primarily to female readers who, in the belief of most film industry executives, formed the large majority of the filmgoing public. By the same token, most of the magazine contributors were also women, and included such notables as Adela Rogers St. John, Hazel Simpson Naylor, Ruth Hall, and Adele Whitely Fletcher, who all wrote for several different publications under a variety of pen names. Other contributors came from the ranks of press representatives for both actors and film studios. Occasionally, a magazine would publish an article purportedly written by a star, or print an interview in which the actor or actress supposedly solicited readers' opinions on career moves, etc. Though these pieces were normally the result of collaboration between the editorial staff and the subject's press agent, there would be an accompanying photograph, or a set of handwritten responses to questions, supposedly supplied by the star, in order to lend authenticity to the enterprise. These editorial ploys gave the impression that the magazines were essentially uncritical mouthpieces, fawning on an industry that fed them tidbits so as to heighten the public's interest in films.

While this was not without some truth, fan magazines were, for the most part, published independently of the studios, although this did not always guarantee objectivity. The publications were dependent on the studios to organize interviews with actors and to keep them supplied with publicity releases and information about the stars and the films. Nonetheless, the magazines could be critical at times, particularly from 1915 when they began publishing film reviews. It was not uncommon to see both *Photoplay* and *Motion Picture Story* giving the "thumbs down" to pictures that they didn't think their readers would enjoy, although the sort of harsh criticism or expose that became a feature of the tabloids in the late decades of the twentieth century were generally avoided. Articles that dealt with the private lives of screen personalities tended to overlook any sordid doings and placed their emphasis on family values, domestic pursuits, and the aesthetics of the Hollywood home and hearth. From the 1930s onwards, it was commonplace to see major photographic features showing the famous names hard at work gardening, cooking, washing the car, or playing with the baby.

This was in extreme contrast to Hollywood coverage in the national press. The circulation of tabloid newspapers thrived through titillating their readers with detailed reportage of the numerous scandals that erupted in the early decades. A notorious example of this was the murder trial of Roscoe "Fatty" Arbuckle during the 1920s. The magazine *Screenland* (published from 1921 to 1927) took Hollywood's side against the sensationalism of the Arbuckle case by publishing a piece in defense of the comedian (later found innocent), but other fan publications, notably *Photoplay*, took a decidedly neutral stance on Hollywood scandal. Such incidents as the murder of director William Desmond Taylor, of which Mabel Normand was briefly suspected, Rudolph Valentino's divorce, and Wallace Reid's drug-related death, while prompting the implementation of the motion picture production code in the early 1930s, were pretty much neglected in the fan magazines, or treated in vague general terms within an article presenting a star and his family bravely overcoming

adversity. That this approach worked as well as it did demonstrates the devotion of film fans to the romanticized image of their screen idols as peddled by the fan magazines. Most readers were well up on the current scandals, and when the fan magazines alluded to a star's "brave fight" or "lingering illness," they were knowledgeable enough to translate the terms into "drug addiction," or to know that "young foolishness," or "hot-headed wildness" meant sexual indiscretions of one kind or another.

Most film historians view the fan magazines of the silent era as having more scholarly validity than those after the advent of sound. Such publications as *Filmplay Journal*, *Motion Picture Classic*, *Motion Picture*, and *Movie Weekly*, gave readers well-written film reviews and factual, biographical information that could not be found anywhere else. They have come to provide modern scholars with fascinating sociological insights into the phenomenon of filmgoing in the first two decades of American motion picture history.

After the advent of sound, the fan magazines became less serious and more concerned with sensationalism and sex. The magazines played a major role in creating the lasting impression of Hollywood as the center of glamour during the 1930s. To a country mired in the economic consequences of the Great Depression, fan magazines presented an image of the American dream as attainable to the average person. They treated as gospel such myths as Lana Turner being discovered by a producer while eating a sundae at Schwab's Drug Store or Hollywood talent scouts combing the country for "unknowns" to be turned into stars. The myth-makers were preaching the messages of the Dream Factory to a nation only too willing to believe them. In the make-believe world that formed the setting of the majority of popular movies, crime was punished, courage was rewarded, and lovers lived happily ever after.

Fan magazines presented all movie actresses as icons of perfect beauty. At one end of the scale they were pictures of fresh prettiness (Fay Wray, Deanna Durbin); at the other, stylish and glamorous sophisticates (Garbo, Dietrich, or Myrna Loy). Their handsome male counterparts were either debonair (Cary Grant, Errol Flynn) or the epitome of masculine strength (Gary Cooper, Clark Gable). Everything about the stars was larger than life—their homes, their lifestyles, their passions, even their sins. In short, they had everything except the ability to visit with their fans. Hence, such magazines as *Modern Screen*, *Movie Action Magazine*, *Movie Classic*, *Movie Mirror*, *Silver Screen*, and *Motion Picture Classic* came into being to reveal the inside scoop on their lives to the fans. Articles such as "Jean Harlow—From Extra to Star"; "Shirley Temple's Letter to Santa"; "Motherhood: What it Means to Helen Twelvetrees"; and "The Bennetts Answer Hollywood Gossip" allowed the readers momentarily to forget their drab existence during the Depression and live vicariously through the pages of the magazines.

Conversely, the magazines also let the public know that these glamorous stars did not really have it all; indeed, they envied the simple pleasure enjoyed by their fans. Shirley Temple, they reported, wished she could visit a department store Santa; Deanna Durbin longed to eat fudge like an ordinary teenager, but couldn't lest she put on weight; Myrna Loy wanted the freedom to walk into a department store without being recognized. The conspiracy between editors and publicists that created this communication between the stars and their fans was a significant factor in keeping movie theaters filled with customers.

During the 1940s and 1950s, the pattern remained pretty much the same. The leading magazines during this period were *Photoplay*, *Modern Screen*, *Silver Screen*, *Movie Fan*, *Movie Stars Parade*, *Screen Album*, *Screen Stars*, and *Movie Story*. However, with the arrival of post-World War II affluence, the public grew less impressed with the wealth of the stars and more appreciative of pin-up poses of both sexes, and stories that revealed the less savory antics of stars such as Elizabeth Taylor, Errol Flynn, and Frank Sinatra. It was the beginning of the end of fan magazines as they had been known and loved for almost half a century. With the onset of the 1960s, they came increasingly to resemble the tabloids, trumpeting banner headlines such as "Liz will adopt a Negro Baby" (*Movie Mirror*, April, 1967), and containing little real news.

It was in the 1960s, too, that a number of specialty magazines began to appear. *Screen Legends* and *Film and TV Careers* devoted each issue to only one or two personalities, and included filmographies and interviews; *Famous Monsters of Filmland* dealt only with horror films and monsters; and *Serial Quarterly* concentrated on "cliffhangers" and Saturday matinee serials. As the traditional fan magazines fell away, eventually to disappear and leave the market to these specialist publications and to the scandal-mongering tabloids, a new style of movie magazine was created in the 1980s that has continued to fill the void. In the 1990s, film fans were buying magazines such as *Entertainment Weekly*, *Movieline* and, most notably, *Premier*, which blend interviews, filmographies, and production pieces with serious analysis of film trends and lifestyle fashion. They largely avoid sensationalism, but are not above criticism. They have become the new reading habit for the fans of an industry that is almost unrecognizable in terms of the old studio-based Hollywood, and the great gossip magazines, highly prized by collectors, have taken their place in Hollywood legend.

—Steve Hanson

## *Fantasia*

A seminal film in the development of animated features, and a cultural cornerstone in leading children to classical music, Walt

The “Night on Bald Mountain” sequence from the film *Fantasia*.

Disney’s *Fantasia* (1940) has entranced six generations of viewers in America and Europe. Named as one of the American Film Institute’s Top 100 Movies of All Time in 1998, it has served as the inspiration for, among others, Bruno Bozetto’s *Allegro Non Troppo* and Osamu Tezuka’s *Legend of the Forest*. Although influential, it remains unique, one of the most masterful combinations of sound and images ever committed to celluloid.

Only the third full-length feature to be made by Walt Disney, at its inception it was one of the Hollywood film industry’s most significant experiments since Warner Bros. introduced sound with *The Jazz Singer* 13 years earlier. The finished film, introduced by Deems Taylor, with the Philadelphia Orchestra under Leopold Stokowski providing the music, had grown out of a chance meeting between Stokowski and Disney. The famous conductor had expressed an interest in working with Disney; the master of animation was looking to restore Mickey Mouse to his former level of popularity. It was felt that a visual realization of composer Paul Dukas’s “The Sorcerer’s Apprentice” might do the trick.

Stokowski and Disney were both world-class showmen and in love with technological gimmickry. Stokowski was one of the earliest experimenters in stereophonic sound and suggested that the film’s sound re-create that of a concert hall. This was done by recording the orchestra on three separate channels (right, left, and surround).

However, recording the sound to the conductor’s satisfaction wound up costing more than it would have been possible to recoup on a short subject. Disney then committed to making what he initially called a “Concert Feature,” a collection of shorts that would make up a concert. According to Stokowski, he wondered why Disney planned to stop at a short subject; why not a full-length film with several other musical works to suggest “the mood, the coloring, the design, the speed, the character of motion of what is seen on the screen,” as he later expressed it. In short, a fantasia, which means a free development on a given theme.

It was decided to open the film with Stokowski’s own orchestral transcription of Bach’s “Toccatina and Fugue in D Minor,” complemented by visual detailing suggestive of falling asleep at the orchestra. Recalled Disney, “All I can see is violin tips and bow tips—like when you’re half asleep at a concert,” not, apparently, an uncommon occurrence for the easily bored studio executive. In preparing for *Fantasia*, Disney subscribed to a box at the Hollywood Bowl where, he told a colleague, he invariably fell asleep, lulled by the music and the warmth of the polo coat he liked to wear. There is also a story that he ridiculed an animator on the film, calling him homosexual for taking a music appreciation class in preparation for the project. However, when the film opened, Disney told the reporter from the *New York World Telegram*, “I never liked this stuff. Honest, I just

couldn't listen to it. But I can listen to it now. It seems to mean a little more to me. Maybe it can give other people the same thing."

The final film, a glorious marriage of sound and image, is not without flaws. Oskar Fischinger, an avant-garde painter who had worked with director Fritz Lang on the special effects for *Die Frau im Mond* (aka *The Woman in the Moon*) in Germany in 1929, helped design *Fantasia's* opening sequence. However, the literal-minded Disney, who denied him credit and had his designs altered, considered his vision too abstract. There were musical compromises, too.

Bach, best experienced with the original instrumentation, was given a bombastic transcription for full orchestra, and Igor Stravinsky's "Rite of Spring" was seriously distorted under Stokowsky's baton. (Disney offered the composer \$5,000 for his work, pointing out that since Stravinsky's work was copyrighted in Russia, and as the United States had not signed the Berne copyright agreement, he could simply pirate the music). Beethoven's "Pastoral Symphony" was truncated, a problem exacerbated later when a piccaninny centaur was excised from the film on subsequent reissues as being in poor taste. The female centaurs in that sequence were originally bare-breasted, but the Hays office insisted that discreet garlands be hung around their necks.

Other aspects of the film have remained a continual source of delight. The design for the excerpts from Tchaikovsky's "Nutcracker Suite," an enchanted forest peopled by mushroom Chinamen and Cossacks as dancing flowers, is a visual and aural feast; "The Sorcerer's Apprentice" starring, as intended, Mickey Mouse, is wonderfully inventive and amusing; "The Dance of the Hours" (from Ponchielli's opera *La Gioconda*) is a memorably comic sequence, with balletic ostriches and dancing hippopotami lampooning cultural pretensions.

Mussorgsky's "Night on Bald Mountain," with its gargoyles, demons, and other frightening creatures of the night, remains the high spot of the film, accompanying a visual battle between the forces of good and evil. The spirits of the night rise from the local graveyard and travel to Bald Mountain for a celebration of Evil, a ritualistic bow to Tchernobog, the Black God. The flames transform into dancers, then animals, and then lizards, at the whim of the great Black God, who revels in the passionate exhibition. However, as morning approaches and church bells are rung, the Black God recoils in horror and is driven back until he is vanquished. The music segues into Schubert's "Ave Maria," scored for solo voice by the composer, but here given a choral treatment (with new lyrics by Rachel Field) which blasts the preceding crescendo of magnificent malevolence out of existence.

Bela Lugosi was hired to perform the part of Tchernobog, a figure of ultimate evil. He was photographed miming the actions of the character—the legendary horror star's expressions on the character's face are unmistakable—and his image was then altered and incorporated by Vladimir Tytla, one of Disney's greatest master animators. (Tytla left Disney after the famous studio strike of 1941, brought on by Disney's refusal to allow a union, and went on to direct Little Lulu cartoons, among other things). Disney had been rotoscoping live action figures as guides to animation as far back as *Snow White* (1938) (despite Ralph Bakshi's claim of rotoscoping as an important innovation in the 1970s), and for *Fantasia* members of the Ballet Russe, notably Roman Jasinsky, Tatiana Riabouchinska, and Irina Baranova, modeled for the elephants, hippos, and ostriches (respectively) in the "Dance of the Hours" sequence.

The finale after "Night on Bald Mountain" is an anti-climactic version of Schubert's "Ave Maria," which was innovatively filmed as one long continuous take that required five days to shoot. The first time it was attempted, someone had placed the wrong lens on the camera, thus exposing the background on each side of the artwork. A second attempt was made mere days before the film's opening and was briefly disrupted by an earthquake on the third day of filming, fortunately with no ill effect.

Disney had wanted to shoot the film in widescreen and offer it on a reserved-seat basis before giving it a general release; however, his bankers objected and the only innovation Disney was able to offer was "Fantasound," an early stereo process that was available in only a few theaters.

By the time *Fantasia* opened, Disney had spent a fortune building his dream studio, but World War II shut down his foreign market and a significant portion of his revenues. The banks closed off his line of credit in 1940, and he was forced to offer stock to the public for the first time. *Fantasia* fared badly on its initial release, trimmed to 88 minutes, pleasing neither the audience (who wanted and expected more films like *Snow White*) nor the critics (who decried the misuse of classical music). However, Disney and *Fantasia* both survived, with the latter achieving classic status and more than recouping its costs (about \$2,250,000). Until the film became available on video, it remained one of the classic Disney perennials, screened as a staple of children's vacation time.

One of Disney's ideas for the project was to periodically re-release it with the order and selection of musical programs altered. Such tunes as Debussy's "Clair de Lune," Weber's "Invitation to the Waltz," "Humoresque," Sibelius' "Swan of Tuonela," Wagner's "Ride of the Valkyries," and Prokofiev's "Peter and the Wolf" were considered for insertion into future releases. However, only "Peter and the Wolf" reached the animation stage in Disney's lifetime, narrated by Sterling Holloway in *Make Mine Music* (1938), though the "Clair de Lune" material formed the basis for Bobby Worth and Ray Gilbert's "Blue Bayou" in the same film.

*Fantasia* stands acknowledged as one of cinema's undisputed works of art, visually, musically and technically.

## *The Fantastic Four*

*The Fantastic Four* is a comic book published by Marvel Comics since 1961. Created by Stan Lee and Jack Kirby, the Fantastic Four

are a family of superheroes—Mr. Fantastic, the Invisible Girl (renamed the Invisible Woman in 1985), the Human Torch, and the Thing. The series departed significantly from previous superhero comic books by casting characters as distinct individuals plagued by human failings like self-doubt, jealousy, and even occasional antipathy toward the society that they have sworn to protect. With his monstrous orange rock-skinned appearance, the Thing especially was prone to alienation and periods of self-loathing. And he quickly emerged as the favorite among fans of the comic.

*The Fantastic Four* was the first of the Marvel comic books to predict the anti-conformist themes soon to become prevalent in the youth culture of the 1960s and subsequent decades. Along with *The Incredible Hulk* and *The Amazing Spider-Man*, *The Fantastic Four* formed the core of Marvel's 1960s comic-book publishing boom. It remained one of the company's most popular titles in the 1990s.

## *Fantasy Island*

Producer Aaron Spelling once said that of all the characters he created, the one he most identified with was *Fantasy Island*'s Mr. Roarke, because he made dreams come true. Following *The Love Boat* on Saturday nights on ABC from 1978 to 1984, *Fantasy Island* offered viewers a chance to imagine romantic escapes and gave B-list celebrities such as Bill Bixby, Joseph Campanella, Adrienne Barbeau, Karen Valentine, and Victoria Principal another opportunity to appear on the small screen. Unlike the comedic *Love Boat*, however, *Fantasy Island* was a romantic drama, complete with suspense and ironic twists. Each episode carried the implicit warning to be careful what you wish for.

The premise of *Fantasy Island* was simple: each of the three weekly visitors to the tropical Fantasy Island paid \$10,000 to make a lifelong dream come true. Awaiting the visitors was their host, Mr. Roarke (Ricardo Montalban), a suave, mysterious man in a white suit, and his similarly white-suited midget attaché, Tattoo (Herve Villechaize). Mr. Roarke managed the visitor's fantasies, directing his retinue to smile as the seaplane landed to Tattoo's now infamous call of "The Plane! The Plane!" From show to show the visitors' fantasies varied: one visitor was an ugly duckling who longed to be a sex symbol, another was a frustrated salesman looking for the business coup of a lifetime, yet another was a henpecked family man looking for a little respect. The visitors had one thing in common: they all imagined a life more glamorous or exciting than the one they left behind.

Roarke provided the magic that made fantasies come true, but he also proved a wise advisor to those guests who realized that their fantasies often led them where they did not want to go. When a

Ricardo Montalban and Hervé Villechaize in a scene from *Fantasy Island*.

pregnant woman certain to die during childbirth asks to see the life of her as yet unborn child, for example, she is horrified at the way the child's life turns out. As the guests' fantasies went awry, and they always went awry, Roarke was there to help his guests realize that some fantasies are best left fantasies. As the seasons went on, the show delved more into the supernatural. Roarke was suddenly able to bring about events from the future and the past, cast spells and mix up magic potions, and even do battle with the devil, played in a recurring role by a sinister Roddy McDowall. Was Roarke God? An angel? Or just a figure who let viewers indulge their taste for tropical fantasy while reassuring them that they were better off in the lives they had?

*Fantasy Island* was very much a product of its times, for it attempted to indulge the popular appetite for wealth and glamour that brought shows like *Dallas* and *Dynasty* such success. At the same time, the show addressed the age-old fears of those who worried that greed could only bring trouble. ABC brought back a revamped and "edgier" *Fantasy Island* in the fall of 1998, featuring Malcolm McDowell as Roarke, wearing a black suit this time, and accompanied by a few disgruntled assistants. Though the show had the basic same premise, it was far more interested in exploring the horror of a fantasy realized that was its predecessor. The revival was short-lived, leaving the air after just one season.

## *The Far Side*

Debuting in 1980, *The Far Side*, a single-panel comic strip written and drawn by Gary Larson, was different from anything previously seen on a comics page. Its offbeat and obscure humor drew epithets such as “tasteless,” “sick,” or “demented,” but the cartoon became immensely popular during its fifteen-year tenure, appearing in more than 1,900 daily and Sunday newspapers and being translated into seventeen languages. More than twenty *Far Side* collections and anthologies reached the bestseller lists and were available in bookstores long after Larson stopped producing the cartoon in 1995. *The Far Side* made its way to greeting cards, T-shirts, and calendars—including the especially popular desk calendars of 365 daily *Far Side* cartoons, which are produced and sold each holiday season.

Unlike other comics, *The Far Side* did not feature the same characters in each installment, although it did repeat types of characters. Farm animals, especially cows, chickens, and ducks, made frequent appearances. Among other animals featured were snakes and squids. Larson's love of biology showed itself in numerous insect jokes. (An entomologist even named a species of chewing lice after Larson for his contributions to biology. The insect was named *strigiphilus garylaroni*. Larson considered it a great honor.) The people who appeared in *The Far Side* usually were similar in appearance: most of the children had big heads and glasses; the women had big hair and glasses; the men had long noses and often wore glasses. In fact, most of Larson's characters fit the stereotypical image of the nerd. Neanderthal men and aliens appeared as well.

The jokes found in *The Far Side* ranged from puns to the silly to the intellectual to the morbid. A cartoon about a sticky widget (a strange device covered in honey) could be followed by a joke referencing Mary and Louis Leakey and their discovery of Lucy. (That particular cartoon showed the Leakeys uncovering a cave painting of Lucy from the *Peanuts* cartoon strip.) On the morbid side, Larson often had animals or people meet their end in untimely and ironic ways. One panel showed a mother bear using the skulls of two young hunters to entertain her cubs. She had her hand inside each skull and mimicked the boys' last words about entering the cave. In fact, the panels that drew the most complaints usually depicted some cruelty done to an animal, usually by another animal. For example, one cartoon with the caption “Tethercat” showed a cat tied to a pole by its neck while two dogs batted it around. And as often as he got complaints, Larson got letters asking for him to explain the joke.

Larson also created an animated television special: *Gary Larson's Tales from the Far Side* (1994). Larson won the Reuben Award for

Best Cartoonist in 1991 and 1994. *The Far Side* was awarded the Max & Moritz Prize for best international comic strip/panel in 1993 and best syndicated panel in 1985 and 1987.

After Larson's retirement from the comics page, other single-panel comics that took up his style included *Off the Mark* and *Speed Bump*. Larson went on to other projects such as a book titled *There's a Hair in My Dirt: A Worm's Story* in 1998.

## *Fargo*

In order to gain a piece of his father-in-law's fortune, a financially desperate husband (William H. Macy) hires two hitmen (Steve Buscemi and Peter Stormare) to fake a kidnapping of his wife in Joel and Ethan Coen's 1996 noir-comedy film, *Fargo*. Frances McDormand won a 1996 best actress Oscar for her portrayal of the pregnant police chief who cracks the botched-kidnapping, multiple-homicide case. More than murders, people-pulverizing woodchippers, and snowstorms, *Fargo* brought allegedly genuine midwestern mannerisms and dialect to urban America, and an Academy award for best original screenplay to the native-Minnesotan Coen brothers.

## Farm Aid

Farm Aid is an advocacy group that, since the mid-1980s, has called attention to the plight of the American family farm through a series of high-profile live concerts that feature many of the music industry's leading performers. Led by its president, country-music star Willie Nelson, and based in Cambridge, Massachusetts, Farm Aid was created in response to a comment by Bob Dylan at the 1985 Live Aid for Africa Concert: “Wouldn't it be great if we did something like this for our own farmers right here in America?” At the time, poor markets and high operating costs were driving an estimated 500 family farmers out of business every week. Nelson, Neil Young, and John Mellencamp responded immediately, and six weeks later the first Farm Aid concert, in Champaign, Illinois, attracted some 80,000 fans and raised over \$7 million for the cause. Farm Aid II (1986) took place in Austin, Texas, and Farm Aid III (1987) in Lincoln, Nebraska. Participating artists have included performers as diverse as Bob Dylan, Lyle Lovett, Steppenwolf,

Willie Nelson performs at Farm Aid V in 1992.

Hootie and the Blowfish, Wilco, Loretta Lynn, the Beach Boys, Steve Earle, Elton John, Stevie Ray Vaughn, Johnny Cash, the Grateful Dead, Ringo Starr, Martina McBride, and Phish. Over the years, Farm Aid has raised \$14 million and evolved into a two-part organization, one that produces the fund-raising concerts and another that administers support programs for family farmers and lobbies for political change. Farm Aid has also provided a forum for some exciting musical collaborations, such as Bob Dylan's work with Tom Petty and the Heartbreakers, which led to a substantial tour.

Farm Aid began to affect U.S. farm policy in 1987 when Nelson, Mellencamp, and a group of family farmers were called to testify before Congress, which later passed the Agricultural Credit Act. This act mandated that the Farmer's Home Administration could not foreclose on a family farmer unless the organization would make more money through foreclosure than it would by investing in the farm to make it profitable. Farm Aid saw this as a significant step forward.

In 1989, Nelson took Farm Aid on the road with 16 of his own shows, asserting that "The fight to save family farms isn't just about farmers. It's about making sure that there is a safe and healthy food supply for all of us. It's about jobs, from Main Street to Wall Street. It's about a better America." In 1991, Farm Aid focused on dairy farmers who had experienced a sharp drop in prices and teamed with

ice-cream maker Ben & Jerry's. In 1993, Farm Aid raised money to aid farmers affected by the Mississippi River floods which destroyed 8 million acres of crops and damaged 20 million more. In 1994, Willie Nelson, on behalf of Farm Aid, successfully urged President Bill Clinton to pardon Nebraska farmer Ernest Krikava, who had been imprisoned for illegally selling hogs during a bankruptcy proceeding to feed his desperate and starving family. Farm Aid has also continued to emphasize the environmental responsibility of family farmers who, according to the organization, are more conscientious about land, water, and food purity.

Farm Aid's mega-concerts during the 1990s were produced in Indianapolis (1990), Dallas (1992), Ames, Iowa (1993), New Orleans (1994), Louisville (1995), and Columbia, South Carolina (1996). Even though the 1997 Farm Aid concert in Dallas was unsuccessful due to poor ticket sales, it rebounded with its 1998 concert in Chicago. According to its own literature, since 1985, Farm Aid has "granted over \$14 million to 100 farm organizations, churches, and service agencies in 44 states. Nearly half of those grants are used for direct services such as food, emergency aid, legal assistance, and hotlines." Other funds are "distributed as 'Program Grants' to promote outreach, education, and the development of long-term solutions."

## Farr, Jamie (1936—)

Jamie Farr is best known as Maxwell Q. Klinger, the soldier who wore women’s clothing in an attempt to get an insanity discharge in the Korean War sitcom *M\*A\*S\*H* (1972-1983). Late in the show’s run, Klinger stopped wearing dresses and took over as his unit’s company clerk after “Radar” O’Reilly (Gary Burghoff) left the show in 1979. Klinger married a Korean woman, Soon-Lee (Rosalind Chao), in the show’s final episode, and their life in America was chronicled in the spinoff *After M\*A\*S\*H* (1983-1984). Farr’s film work includes *Blackboard Jungle* (1955—credited as Jameel Farah), *With Six You Get Eggroll* (1968), and *The Cannonball Run* (1981).

## Fast Food

Even more than hotdogs and apple pie, the hamburgers and french fries found at ubiquitous fast food restaurants represent America’s quintessential food and, in many ways, America’s quintessential culture.

The rise of the fast food restaurant would not have been possible without concomitant changes in American culture. Beginning in the 1920s, thanks in large part to developments in technology and industry, the American lifestyle began to change. Formerly distinctive regional and ethnic cultures were now meeting up with each other, blurring differences in identity. More people were moving off the farm and into the city in search of lucrative and exciting careers. In addition, the widespread use of inventions like the telephone and the increasing acceptance of mass media meant that there was a larger degree of cultural interaction.

The development of an affordable automobile and the simultaneous governmental support of new road systems physically reinforced this cultural melding, enabling car owners, especially, to go to places they had never been before. This sparked a boom in the tourist industry: travelers who once went by rail, boat, or horse, were now moving faster by car, and began to value things such as speed and convenience as part of their trips. Not only did they need affordable and reliable places to stay, but they also needed similarly reliable places to eat.

While local diners and eateries offered good, wholesome home-cooked meals, they were often located far away from main thoroughfares, making them inconvenient for the interstate traveler. Travelers, however, were not the only ones eating on the run; private dining, once a formal ritual among family members and close friends, was

A Taco Bell fast food restaurant.

becoming a thing of the past, and eating in public was becoming much more acceptable for everyone. The increased pace of life, especially in urban areas, meant that people no longer ate as a group around the table, but favored sandwiches and other foods that could be eaten quickly and on the go. Food carts had been familiar urban sites since the late 1800s, eventually evolving into more permanent “short order” joints and diners. Cafeterias like Horn and Hardart in Philadelphia featured Automat systems in the early 1900s that allowed people to extract foods such as pies, sandwiches, and entrees from vending machines for a penny or nickel. Food was becoming merely a fuel, like gasoline, for the human working machines.

The need for fast, reliable, affordable, and convenient food, along with an increasing acceptance among Americans of a more homogenous culture, led to the rise of the fast food industry, and in particular, of the hamburger’s and french fries it served. Purveyors of fast food sprang up in both urban areas and along the nation’s highways. During the 1920s, the hamburger experienced a complete change of identity that attested to Americans’ collective willingness to accept the new culture of food service. At the beginning of the decade the humble meat patty, served between layers of bun and often garnished with onions, ketchup, and mustard, was considered a lowly, working-class food held largely in disrepute. At this time, most hamburger stands were located close to factories and in working-class neighborhoods. By the end of the decade, however, the hamburger had come into its own, gaining widespread popularity and being considered a staple food, as evidenced by the overwhelming success of the “hamburger stand.” The cartoon Popeye even featured a character, Wimpy, who gorged himself on nothing but hamburgers.

The most successful of these stands quickly multiplied, taking advantage of the growing popularity of this new “fast” food and applied industrial principles of standardization to its development. White Castle, founded in Wichita, Kansas, in 1921 by Billy Ingram and Walt Anderson, is considered the first fast food restaurant. Anderson had originally been a fry cook who perfected one version of the hamburger—square with small holes for better cooking, topped with fried onions and placed on a bun of soft white bread. Ingram recognized the potential of this relatively simple food, devised a limited menu around it, and standardized its production so that the White Castle hamburger could be found in many different cities, but would be uniform. While White Castle was never the largest of the fast food chains, it was the first and most influential, beginning the franchise system that inspired many imitations, including White Tower, White Clock, Royal Castle, and White Palace.

The methods and success of White Castle outlets had many implications for business and culture. They sold their five-cent burgers “by the sack,” and encouraged carry-out for those customers on the go. They also developed standard floor plans and architectural designs that could be easily duplicated wherever a new White Castle was to be erected. They standardized the operations of the cooks so that even human workers behaved like machine mechanisms. All of these things were implemented in order to produce a uniform product and to divest the hamburger of its formerly negative reputation as a working-class foodstuff made of dubious ingredients. In order to implement these ideas, White Castle even adopted a system of vertical integration: the company produced the white porcelain and steel panels used for its buildings, owned the bakeries that made its buns, and even started a company to make the disposable paper hats and aprons worn by its employees.

White Castle hamburgers were so tasty, affordable, and increasingly ubiquitous that there was a marked increase in beef production in addition to the mass consumption of hamburgers. As historian David Hogan has remarked, “White Castle advanced food production and distribution to the volume demanded by the expanding population, and it gave an American democracy an accessible, egalitarian, and standardized style of eating. It also supplied America with a distinctive ethnic symbol: people the world over now readily identify fast-food hamburgers as the food of Americans.” By the end of the decade, White Castle had brought their burgers and cultural ethos to Omaha, Kansas City, St. Louis, Minneapolis, Indianapolis, Louisville, Cincinnati, Chicago, and finally to the east coast in 1929, inspiring successful imitators wherever they went, and making “White Castle” almost a generic name for hamburgers by the end of the 1920s.

The hamburger fulfilled economic as well as cultural needs. During the Depression, affordable food like that found at the local hamburger stand was a godsend, especially to those who were unemployed; White Castle’s hamburgers, for example, cost just five cents each until 1946, when the price doubled due to beef shortages caused by World War II. At the end of 1930, the company had sold over 21 million hamburgers; at the end of 1937, this number had increased to over 40 million.

Even though the first drive-in restaurant, Royce Hailey’s Pig Stand in Dallas, Texas, was opened in 1921, it was not until nearly three decades later that the drive-in restaurant enjoyed a degree of success. Drive-ins, another fast food institution, celebrated the cultural importance of the automobile, allowing the car itself to be a dining room of sorts, from which people could order their food and eat it in the open air without having to unbuckle their seatbelts. “Car hops,”

as they were also called, became familiar congregation centers for teenagers as well.

At the same time, various businessmen, impressed by the enduring success of hamburger stands, especially White Castle, capitalized on these cultural shifts by developing sophisticated franchise operations to run new fast food companies. The franchise was a distinct business strategy that standardized not only the specific product sold, but the very institution that sold it. This form of organization exploited economies of scale and therefore was highly successful; as one entrepreneur remarked, there was “more money to be made selling hamburger stands than hamburgers.”

Franchises were not unique to the 1950s; they had been around since the early decades of the twentieth century, patronized by a public increasingly used to and insistent upon the supposed reliability and trustworthiness of branded goods. White Castle was one of the first successful franchises, but was quickly followed by A & W Rootbeer in 1925, and Howard Johnson’s, which began operations in 1935. But it took the ideals of postwar culture to wholly support the fast-food franchises and make many of them into companies worth billions of dollars. The idea of the franchise operation itself was attractive, melding otherwise conflicting postwar desires: after the War, the big business economy was a reiteration of American power; that this economy was made up of small businesses simultaneously expressed traditional American values.

McDonald’s, the most successful fast food franchise, was started in 1955 by Ray A. Kroc (1902-1984), a Chicago milk shake machine salesman. While Kroc did not invent the hamburger, nor the concept of the hamburger stand, nor even the franchise system, he combined these elements in such an astute way as to make both his name and his company synonymous with fast food. When Kroc sold some of his milk shake equipment to Richard and Maurice McDonald of San Bernardino, California, for their popular hamburger stand, he was so impressed with their operation that he joined them in partnership in 1955. The first McDonald’s outlet opened in Des Plaines, Illinois, that same year. By 1960, Kroc had opened 228 of these “golden arches” drive-ins, selling fifteen-cent hamburgers, ten-cent french fries, and twenty-cent milkshakes; in 1961 Kroc bought out the McDonald brothers, name and all. Original McDonald’s architecture was red and white tile with a golden arch abutting each end of the building. Criticized as too gaudy, McDonald’s moved to a more modest brown brick design with a shingled mansard roof in the mid 1960s, but kept the golden arches, now attached to form an “M,” as their widely recognized logo.

Kroc’s success lay in his approach not specifically to cooking individual food items, but in conceiving of his franchise operation in its entirety. His outlets were food factories—everything was systematized to ensure sameness, even the smiles on the clerks’ faces. Kroc did not promise the best burger in the world, but the same burger throughout the world; indeed, the public came to accept this dictum, preferring predictability over quality. Every McDonald’s had the same menu and the same general layout (with minor variations to acknowledge regional differences). The workers, all dressed alike, used the same techniques and equipment to prepare the food in the same way. In addition, Kroc established these as “family” restaurants that were clean, well-lit, and free from pay phones and pin ball machines that would encourage loitering.

McDonald’s periodically introduced new products in response to perceived consumer demand and competition from other chains. The Filet-O-Fish entered the menu in 1962 in an attempt to attract

Catholic customers on Fridays. The “Chevy of Hamburgers,” the Big Mac, appeared in 1967 to directly compete with Burger King’s The Whopper. In 1971 McDonald’s introduced the Egg McMuffin, and developed an entire breakfast line from it. Chicken McNuggets were added in 1981.

The 1960s through the 1990s was considered the “golden age” of fast food, and saw the explosion of various fast food chains and the subsequent creation of “the strip” in almost every town—the piece of road or highway flanked by franchise after franchise—which became a trademark feature of the suburban landscape. Fast food restaurants along the strip sold not only hamburgers, but also hotdogs, fish, pizza, ice cream, chicken, and roast beef sandwiches. Their brightly colored, neon signs advertised such various businesses as A & W, Arby’s, Big Boy, Blimpie, Burger Chef, Burger King, Carrol’s, Church’s Chicken, Dairy Queen, Domino’s Pizza, Hardee’s, House of Pizza, Howard Johnson’s, Jack in the Box, Kentucky Fried Chicken, Long John Silver’s, Pizza Hut, Ralley’s, Red Barn, Roy Roger’s, Royal Castle, Sandy’s, Shakey’s Pizza, Taco Bell, Taco Time, Taco Tito’s, Tastee Freez, Wendy’s, White Castle, White Tower, and many others.

McDonald’s experienced its stiffest competition in the 1960s from Burger Chef, which was eventually sold to General Foods and absorbed by Hardee’s in the early 1970s. Burger King was a more enduring rival. It began in 1954 as a “walk-up” called InstaBurger King, and offered no interior seating. Dave Edgerton and Jim McLamore, its Miami founders, shortened the name to Burger King in 1957. While the business featured hamburgers, similar to McDonald’s and White Castle, it set itself apart by offering the “flame-broiled” Whopper—a much larger hamburger (one quarter of a pound compared to the 1.6 ounce McDonald’s hamburger)—and instituted an advertising campaign that promised people could “Have It Your Way,” by letting customers choose their own toppings.

Kentucky Fried Chicken, also a viable competitor to McDonald’s, took a different approach by offering stereotypical southern food—buckets of fried chicken, coleslaw, mashed potatoes, and biscuits and gravy. Founded by “Colonel” Harlan Sanders (1890-1980) in 1954, the franchise that made chicken “Finger Lickin’ Good” consisted of over 300 outlets by 1963 and was enjoying revenues of over \$500,000; by 1966 KFC had a gross income of \$15 million.

There were other fast food franchises that bear mentioning. Arby’s first appeared in 1964 in Boardman, Ohio, and was the brainchild of Forrest and Leroy Raffel, who tried to attract a more discriminating clientele by offering roast beef sandwiches, using an old west decor, and featuring more expensive menu items. Dairy Queen, started in 1944 by partners Harry Axene and John McCullough of Davenport, Iowa, sold hotdogs and ice cream, and had 2,500 outlets by 1948. Domino’s, with delivery-only pizza service, was founded by Tom Monaghan, who opened his first shop in 1960 and turned to franchising in 1967. At the end of 1986, Domino’s sold over 189 million pizzas, accruing sales of \$2 billion. Hardee’s, largely an imitation of Burger King, began in Greenville, North Carolina in 1961, and its outlets numbered over 900 by 1975. Howard Johnson’s, named for its founder and known for its bright orange rooftops and homemade ice cream, started out as a set of franchised roadside restaurants in 1935. By 1967 “HoJo’s” boasted over 800 restaurants, but was a victim of the “burger wars” in the 1980s, eventually going out of business.

Expanding into “ethnic food,” Taco Bell originated in 1962 in San Bernardino, California. Even though it came from the idea of Glen Bell, a telephone repairman, John Martin better merchandised the company beginning in 1983, and was responsible for much of its

success. Among other things, Martin omitted all ethnic symbols to counteract the negative associations people made with Mexican restaurants; he even changed the logo from a sleeping Mexican with a sombrero to a pastel-colored bell. Wendy’s, specializing in bigger, better, and more expensive hamburgers, introduced the first drive-thru windows at their restaurants, which were so popular that Burger King and McDonald’s had to follow suit. Founded in 1972 by R. Dave Thomas in Columbus, Ohio, it had 9 outlets and sales of \$1.8 million at the end of that same year.

McDonald’s, Burger King, Taco Bell, Wendy’s, and Kentucky Fried Chicken remained the most successful fast food chains at the end of the twentieth century, edging out most of their competitors during the “burger wars” of the late 1970s and 1980s, a time when large companies bought up fast food franchises and either made them more successful or put them out of business. There were other factors that also led to many franchise downfalls. Beginning in the 1970s, these operations were faced with increasing criticism about everything from employees’ working conditions and the nutritional value of the food they served, to the impact the “fast food” mentality was having on the public at large.

Franchise success was almost wholly based on the principles of standardization and a machine ethic. This included the laborers working within, who were treated as parts of the machine meant to run as efficiently as possible. Training was based on the idea that basic skills substituted for high turn-over rates—the guarantee that the food could still be made the same even from unskilled hands. The short order cook of the early diners, who was considered an artisan of sorts, was replaced by teenager working for minimum wage and no benefits.

Nutritionists targeted the composition of the meals themselves, identifying them as laden with too much fat, cholesterol, and sugar, and not enough vegetables. They worried that people eating a steady diet of fast food would go without basic nutrients, and also become too accustomed to unhealthy meals. Historian David Hogan underscored this point by remarking that “Americans consumed 50 percent more chicken and beef in 1976 than they had in 1960, mainly because the fast-food chains usually served only those two meats.”

Critics coined the pejorative phrase “fast food culture” as a metaphor for the quick-service industries and excessive standardization seen in late-twentieth-century culture and consumption. This homogenization, they believed, not only affected American culture, erasing once vibrant ethnic and regional traditions, but also was beginning to influence the entire world—a cultural imperialism enacted on an international level.

The major franchises tried to combat these critiques to greater and lesser success. They hired older workers in an attempt to seem beneficent, giving job opportunities to those past retirement age while never addressing the real issue of wages. To counter the protests of nutritionists, they introduced salad bars and “lean” burgers, which were largely ignored by fast food customers. They tried to soften their image in a number of ways, chiefly by marketing themselves as family restaurants.

They also targeted children, creating loyal future consumers as well. Most chains had mascots. McDonald’s had Ronald McDonald, a clown who debuted in 1963. (Ronald was so successful that a study conducted in 1973 found that 96 percent of American children recognized him, second only to Santa Claus). Ronald’s friends who lived in “McDonaldland” with him included Grimace, the Hamburglar,

Mayor McCheese, Captain Crook, and the Professor. McDonald's also built brightly-colored playgrounds at their restaurants beginning in the 1980s. Burger King's mascot was the Magic Burger King. Kentucky Fried Chicken used the colorful Colonel himself as a spokesman long after he had sold the rights to his company. Most fast food franchises also introduced specially packaged children's meals that contained prizes; many were even sites for children's birthday parties. In addition, these franchises openly founded or contributed to charitable organizations. McDonald's established Ronald McDonald houses which provided lodging to parents whose children were getting treatment in nearby hospitals. Both Burger King and Wendy's supported programs for needy children, and Colonel Sanders was an outspoken supporter of the March of Dimes.

By the final decades of the twentieth century, Americans had fully embraced their "fast food culture." In 1994 alone, fast food restaurants in the United States sold over 5 billion hamburgers, making it a favorite meal and an important commodity. In 1996, seven percent of the population ate at the 11,400 McDonald's each day; males from their mid-teens to their early 30s comprised 75 percent of this business. By this time, fast food had become a cultural phenomenon that reached beyond America's borders. In 1996 McDonald's owned over 7,000 restaurants in other countries, including: 1,482 in Japan; 430 in France; 63 in China; two each in Bulgaria and Andorra; and one in Croatia. These outlets acknowledged some cultural differences—in Germany they sold beer, in France they sold wine, and in Saudi Arabia they had separate sections for men and women and closed four times a day for prayers. But for the most part the fast food fare was the same, homogenizing culture on an international level. The overwhelming success of the fast food culture invasion, and of McDonald's in particular, was realized when that chain opened its first store in India in 1996, and sold no hamburgers at all.

—Wendy Woloson

## Fatal Attraction

Released in 1987 by Paramount Pictures, *Fatal Attraction* was one of the biggest box-office attractions of the year. More than just a popular success, the film, directed by Adrian Lyne, was a cultural phenomenon, inspiring discussion across the nation. The film is the story of an extramarital affair between Dan Gallagher, played by Michael Douglas, a married attorney and father of one, and Alex Forrest, a single, successful professional played by Glenn Close. After a brief, and seemingly uninvolved two night fling, Gallagher is stalked and terrorized by the obsessed Alex. The film sparked a new genre—that of the female psychopath—that included such films as *The Hand That Rocks the Cradle* (1992), *Single White Female* (1992), and *Basic Instinct* (1992). Though dangerous women have existed long before *Fatal Attraction*, the murderous female characters in these films were more violent, sexualized, and devious. Many critics view *Fatal Attraction* as characteristic of the 1980s and 1990s backlash against the feminist movement. The character of Alex, with her gender-neutral name, financial independence, and ability to express and act on her desire, though a far cry from the traditional Hollywood depiction of women as passive sexual objects, presented female power as destructive and deadly.

## Father Divine (18??-1965)

Despite certain ambiguities of character, the self-appointed Father Divine was undoubtedly both charismatic and clever and prospered in one of the few leadership roles open to black males in early twentieth-century America. Divine's theology blended various Christian traditions with a belief in positive thinking in ways that foreshadowed a number of contemporary New Age spiritual trends; and his career demonstrated how a promise of religious salvation, political progress and the philanthropic provision of basic social services can attract a large following in times of racial and economic turmoil. From obscure and humble origins Father Divine fashioned himself into a cult leader of god-like pretensions and created a controversial church whose beliefs fascinated America throughout the 1930s and 1940s.

There are a number of competing versions of the history of his early life—sources conflict as to his birthdate, variously noted as between 1874 and 1882—but the most plausible account is that

**Father Divine**

Divine was born George Baker to ex-slave parents in a Maryland African-American ghetto in about 1880. By the early years of the twentieth century he was traveling with a wandering evangelist who styled himself Father Jehovia, while the young Baker called himself the Messenger. After some years of preaching together they parted, and Baker began to refer himself as Major Jealous Devine and to proclaim himself as God. With a small band of followers in tow, he moved to New York where he changed his name yet again to Father Divine.

By 1919 he had obtained a base for his new Universal Peace Mission Movement in Sayville, Long Island, where his preaching initially attracted a mainly black audience. The years following World War I had seen a massive migration of southern African Americans to northern industrial cities, and Divine's message of self-respect and racial equality drew an increasingly large following. The Universal Peace Mission mandated celibacy and modesty and shunned improvidence and debt, but it was its provision of employment, cheap lodgings, and inexpensive food to its adherents during the Great Depression that brought thousands of worshippers, white as well as black, flocking to Sayville. The influx aroused the ire of local residents whose complaints resulted in Father Divine's arrest. He was charged with disturbing the peace, convicted in 1932, and sentenced to a year in jail. The court proceedings brought Divine widespread

notoriety when, two days after sentencing him, the judge suffered a fatal heart attack. From his prison cell, the self-styled "God" proclaimed "I hated to do it"—a remark that, trumpeted by the media, confirmed their leader's claims to divine being among his followers.

Moving the mission's headquarters to Harlem, Divine continued to attract national attention on two fronts: by his lavish lifestyle and rumors of his sexual adventures, and by the progressive social ideas his believers practiced. The Mission's services were scrupulously integrated racially, and the movement led the way in pressing for anti-lynching laws and for public facilities to be open to all races. In a time of economic disaster it rejected relief and welfare and bought hotels, which it termed "heavens," where its members could live modest, mutually supportive lives free of alcohol, tobacco and reliance on credit.

In 1946 Divine was again in the headlines when he married one of his young followers, a white Canadian woman named Edna Rose Hitchings, also known as Sweet Angel. By the 1950s, however, he was in deteriorating health. His public profile dwindled alongside the importance of his movement as other, less outrageous, African-American leaders rose to prominence. Father Divine died in 1965 at his Philadelphia estate, where his wife, known as Mother Divine, was still presiding over the remains of the Universal Peace Mission Movement in the late 1990s.

## *Father Knows Best*

*Father Knows Best*, which began life as a radio series in 1949, evolved into a CBS television sitcom in 1954. An archetypal representation of 1950s ideals of family life, it came to be regarded as an important influence on American family values. Actor Robert Young (the only member of the original radio cast who continued his role on television) starred as Jim Anderson, an agent for the General Insurance Company, who lived with his wife, Margaret, and their three children at 607 South Maple Lane in Springfield, a wholesome Midwestern suburban community. Jane Wyatt co-starred as Margaret Anderson, and their offspring—17-year-old Betty (called "Princess" by her father), 14-year-old Jim Jr. (or Bud), and Kathy, the baby of the family at age nine and fondly known as "Kitten" to her dad, were played by Elinor Donahue, Billy Gray, and Lauren Chapin respectively. The stories revolved around the various exploits of the Anderson family, whose problems were neatly solved in each 30-minute episode by listening to Father (and, by extension, Mother) and doing the right thing.

Although critically acclaimed, the show's initial season on television in the Sunday 10:00 p.m. slot was considered a ratings failure, and CBS canceled it in the spring of 1955. Despite the ratings, the cancellation brought protests from viewers, who demanded not

The cast of *Father Knows Best*.

only the return of the show but an earlier time slot to allow the youngsters to watch it. This audience reaction brought a response from NBC, who picked up the show, aired it earlier, and were rewarded with a hit. Robert Young decided to leave in 1960, but such was the show's popularity that CBS, in a highly unusual move for network television, aired re-runs in prime time for two more years.

The most remarkable episode of *Father Knows Best*, however, was never seen on television. In a move that pointed toward the national importance it had assumed in its healthy depiction of family life, the U.S. Treasury Department commissioned a special episode in 1959 to be distributed to schools and civic organizations throughout the country. Titled "24 Hours in Tyrantland," the story disseminated a masterful piece of Cold War propaganda through the plot device of Jim Anderson being asked to head Springfield's U.S. Savings Bond drive. Delighted at being charged with this worthwhile task, Jim decides to enlist the help of his family in the campaign. Predictably, Margaret is entirely supportive, but the kids, caught up in other concerns, are less than enthusiastic. Upset by their unwillingness to help, Jim strikes a bargain: he gives them each the cost of a U.S. Savings Bond, but decrees their home a Communist state for 24 hours. If, he tells them, they can stand to live in "Tyrantland" for 24 hours, they can keep the money to use however they choose. If they don't make it, they have to use the money to buy a bond and help him in the drive. Throughout the day, "tyrant" Jim works them to the bone and taxes them into poverty, while they repeatedly assert the unfairness of the situation. Jim reacts to their complaints as would a man who has no concept of fairness. The children make it through the 24 hours, but, just when time is up and Betty is about to go out on her Saturday evening date, Jim turns back the clock an hour. The tyrant is all-powerful; he can even reverse time. This is too much for Betty, who breaks down and sees the error of her ways. She is now proud to help sell bonds, and her siblings follow suit.

Over a 20-year period from the 1970s, reruns of *Father Knows Best* have frequently been seen on television, offering a nostalgic reminder to the baby boomers who came of age watching this almost perfect suburban family. Like many a sitcom of its period, it came to acquire the camp appeal of the quaintly outmoded, particularly in its treatment of gender issues. Women knew their place in the Anderson family (and in 1950s America), and in the rare instances when they momentarily lose sight of that place, some revelatory incident gently nudges them into submission, because "Father knows best."

—Joyce Linehan

## Father's Day

The origin of Father's Day represents a grassroots phenomenon that characterizes American reverence for the family. Although deeply rooted in North American social culture, the popularity—and, some might say, the commercial exploitativeness—of Father's Day has crossed national boundaries to become popular in other countries such as Canada and Britain. Americans and Canadians set aside the third Sunday in June as the day when children show their appreciation and gratitude for their fathers, but the earliest Father's Day celebration on record appears to have been held on July 5, 1908, in a church in Fairmont, West Virginia.

Father's Day was first celebrated in local towns and cities scattered across America. The citizens of Vancouver, Washington

claim to have been the first town to officially hold a Father's Day ceremony, beginning in 1912. In 1915, the president of the Uptown Lions Club in Chicago was hailed as the "Originator of Father's Day" when he suggested that the Lions hold a Father's Day celebration on the third Sunday in June of that year. The day was chosen as being closest to President Wilson's birthday.

Perhaps the most famous promoter of this holiday, though, was Sonora Smart Dodd of Spokane, Washington. Her inspiration for a Father's Day celebration came while she was listening to a Mother's Day sermon in 1909. Dodd wished to show appreciation to her own father because he had raised six children after her mother died in 1898. Her own father's birthday was June 5, so she petitioned the Spokane Ministerial Association to set aside that day in June of 1910 as a special day to honor fathers. The Association honored her request, but changed the date of the celebration to June 19. On that day, the city of Spokane became the first city to honor fathers in this way, beating Vancouver's official claim by two years.

The governor of Washington took note of the celebration and declared that the entire state should observe the day as Father's Day. Newspapers around the country carried stories about Spokane's celebration of Father's Day, and the celebration soon received national recognition. In 1916, President Woodrow Wilson joined in a celebration of Father's Day by pressing a button in Washington D.C. which caused a flag to unroll in Spokane. In 1924, President Calvin Coolidge recommended that the third Sunday in June be set aside as "Father's Day" in all states.

In the following years, there were several attempts to pass a resolution in Congress declaring Father's Day an official holiday. In 1957, Senator Margaret Chase Smith attempted to pass such a resolution, arguing that it was the "most grievous insult imaginable" that Father's Day had not been recognized as an official holiday, despite the fact that Mother's Day had been celebrated as a national holiday since 1914. Finally, in 1972, President Nixon signed a law making Father's Day an official national holiday.

This holiday is marked by many interesting traditions. Roses are worn to honor Fathers: red for living fathers and white for those who have died. Many families celebrate the day by preparing the father's favorite meal, while children often buy special gifts for their fathers. The necktie is a perennial favorite, though power tools have become a popular choice in smaller towns, especially in the northern states. In larger cities, where a growing number of employers allow casual dress at work, sports shirts have become a popular gift. Thus, the customs of Father's Day can be seen to have evolved to reflect social change. Over two thousand different Father's Day cards are available each year—less than the variety on offer for Mother's Day and Valentine's Day—but Father's Day cards hold the distinction of having the highest percentage of humor. Approximately 100 million of these cards are sold annually, compared to sales of around 150 million Mother's Day cards, but both are far outstripped by the almost 900 million Valentine's Day cards given each year.

Numerous churches continue the century-long tradition of recognizing fathers. Sermons often honor fathers and deliver encouragement to stronger family relationships. Indeed, for all the commercial and private family aspects of Father's Day, churches in America have remained the backbone of organized Father's Day celebrations, continuing to pay tribute to the work and dedication of fathers in a society that has seen many changes and convulsions in family life during the late twentieth century.

## Faulkner, William (1897-1962)

William Faulkner is widely regarded not only as the greatest American novelist but also as one of the great novelists of world literature. Born September 25, 1897, in New Albany, Mississippi, Faulkner spent most of his life in Oxford, Mississippi, the small town that provided inspiration for his novels. He began his writing career as a poet, but soon turned to prose, although he retained a poetic, flowery style. His first novel, *Soldier's Pa* (1926), was a typical postwar novel of disillusion. *Mosquitoes* (1927), a Huxley-style novel of ideas, concerned a group of artists and intellectuals. Not until *Flags in the Dust* did Faulkner find inspiration in his Southern heritage. He invented the town of Jefferson, Mississippi, modeled after his own Oxford, and peopled it with dozens of characters based on his family

William Faulkner

and townsmen, most of whom reappear in later novels. In the Southern setting Faulkner found the great themes that would occupy him for the remainder of his career: family curses, the burden of guilt that slavery had left upon whites, the romance of the Southern aristocracy and its ghostly influence upon modern social codes, the transmission of a defeated culture through the telling of stories and gossip, the advent of the automobile and its intrusion upon the settled ways of the rural South. In these themes one finds the clash of old and new, past and present, fiction and reality, absolutism and relativity, which Faulkner would develop further in later novels. *Flags* was a long, complex, and fragmented novel, and the editors drastically cut the manuscript and published it as *Sartoris* in 1929. (A partially restored edition was published as *Flags in the Dust* in 1973).

Upset by the changes and convinced that he would never make money from novels, Faulkner began writing for himself rather than for the public. He wrote *The Sound and the Fury* (1929), a book that he thought no one would ever understand. It is indeed one of the most difficult novels ever published, but it is also one of the greatest. Abandoning the rambling, omniscient style of *Sartoris*, Faulkner utilized several modernist techniques: multiple narrators and jumbled chronology that had been used so successfully by Joseph Conrad, and the James Joyce-ian stream-of-consciousness technique that meticulously reports the thoughts of characters without the filter of dialogue or paraphrase. Thus, the simple story of Caddy, a rebellious girl who loses her virginity, becomes very complex: each of the first three sections is told by one of her three brothers, who reveal through their thoughts what Caddy's loss of virginity means to them. The final section is told by an omniscient narrator, but focuses on the family's servant, an aged black woman who knows that Caddy's loss of virginity does not mean anything at all.

It is ironic, but highly significant, that Caddy does not tell her own story. This decentralization of the main character has significant modernist implications: Faulkner implies that there is no objective reality, that all exists in the eyes of the perceiver, that meaning does not inhere in facts and deeds but is assigned to them by the perceiver—hence the objective, meaningless *sound* and the subjective, interpretive *fury*. Thus, concepts like virginity, honor, and sin are not God-given constants; they are social constructs created within a patriarchal society. These modernist ideas reverberated throughout the century. However, *The Sound and the Fury* is no mere novel of ideas. It is a gripping, passionate tale of human love and suffering. Faulkner's genius lies in the artistic union of the universal and the particular: the treatment of cosmic themes through vivid, sympathetic portraits of believable characters.

After *The Sound and the Fury*, Faulkner continued to experiment with narrative techniques and to explore universal themes through the microcosm of the South. *As I Lay Dying* (1930), *Light in August* (1932), *Absalom, Absalom!* (1936), and *Go Down, Moses* (1942) are all considered masterpieces of modernist fiction. Less experimental but also great are *Sanctuary* (1931), *The Unvanquished* (1938), and *The Hamlet* (1940).

Unfortunately, only *Sanctuary*, a stark potboiler about gangsters and prostitutes, sold well, and Faulkner was forced to write for Hollywood in order to make money. His screen credits included *To Have and Have Not* (1944) and *The Big Sleep* (1946). The drunken screenwriter in the film *Barton Fink* (1991) seems to be based on Faulkner during his Hollywood years.

In 1946, when all his novels were out of print, *The Portable Faulkner* was published. This anthology gradually exposed him to a wider audience, and in 1950 Faulkner was awarded the 1949 Nobel

Prize, followed by the Pulitzer Prize in 1954. Faulkner's career in the 1950s was devoted to filling in the history of the mythic town of Jefferson and Yoknapatawpha County. This work is marked by continuing experimentation, but also a decline in emotion, giving way to a hyperbolic rhetoric that makes the some of these novels almost unbearable. These problems may have been related to his life-long battle with alcoholism. Faulkner died on July 6, 1962, leaving scholarships for black students and grants for the advancement of American literature.

Because of his radical experiments, his recondite diction, and his long, convoluted sentences that sometimes last several pages, Faulkner is notoriously difficult, and has never attained widespread readership. Nevertheless, his books sell by the thousands each semester in college bookstores, and students find their efforts rewarded by a powerful intellectual experience. He had a great influence on the French "New Novelists" of the 1950s and Latin American authors of the "Boom" period of the 1960s. As one of the great modernists, Faulkner has influenced almost every writer today, whether they have read him or not. Often noted for his cinematic qualities, many of Faulkner's techniques are now used routinely in movies and television (notably *The Godfather Part Two*). Whether we realize it or not, we are more sophisticated viewers and readers because of Faulkner.

Another more amusing legacy is the annual Faux Faulkner contest. A prize is awarded to the writer of the funniest parody of Faulkner's distinctive style. The contest is sponsored by Jack Daniels Distillery.

## Fauset, Jessie Redmon (1882-1961)

Writer Jessie Redmon Fauset represented the emergence of an authentic African-American voice in American literature. Fauset corresponded with W.E.B. Du Bois while she attended language courses at Cornell University. Impressed by her writing, Du Bois invited Fauset to join the staff of the National Association for the Advancement of Colored People's (NAACP) magazine, *The Crisis*. As literary editor from 1919 to 1926, Fauset encouraged black writers, serving as a mentor to such artists as Langston Hughes, who said she was one of the "midwives" of the Harlem Renaissance. Fauset wrote four novels, *There Is Confusion* (1924), *Plum Bun* (1929), *The Chinaberry Tree* (1931), and *Comedy, American Style* (1933). Racial identity was a major theme of Fauset's work. Her writing stressed her belief that middle class African Americans could overcome prejudice but not self-loathing. Through her characters,

Fauset revealed the complex literary and artistic lives of Harlem Renaissance figures, including herself. Hoping to mitigate racism, she wanted to enlighten white Americans about the realities of African-Americans' experiences. Fauset also developed *The Brownies' Book*, a monthly publication for black children in 1920 and 1921. Fauset's novels were reprinted during the 1960s Civil Rights Movement.

## Fawcett, Farrah (1947—)

Best known for her role in the television series *Charlie's Angels*, which ran on ABC from 1976-1981, Farrah Fawcett became one of the biggest influences on American style during the late 1970s. With a

Farrah Fawcett

plot that revolved around a trio of female private investigators—Fawcett and costars Kate Jackson and Jaclyn Smith—the campy TV show relied heavily on the physical attributes of its leading actresses. As the standout on the series during its first season, the blonde, attractive Fawcett set the trend for millions of women, who copied her trademark feathered hair and bought hair care products marketed under her name. But it wasn't only women who liked Farrah. The most popular poster of the decade, featuring Fawcett's toothy smile, flipped-back, bushy mane, and slim, athletic physique shown off in a wet swimsuit, became a staple on untold numbers of boys' bedroom walls during the era. After becoming a superstar on the top-rated show during the 1976-77 season, Fawcett left to pursue more serious acting roles, but met with little success. She never reclaimed the status that she once held, although she continued to appear regularly on television and in films into the 1990s and retained a cult following by those enamored with 1970s nostalgia.

Mary Farrah Leni Fawcett was born on February 2, 1947, in Corpus Christi, Texas. She attended Catholic school until the sixth grade, after which she went to public school at W. B. Ray High School. She then enrolled at the University of Texas in Austin, where she planned to study microbiology, but later changed her major to art. In college, she began modeling for newspaper advertisements and art classes. When she was voted one of the ten most beautiful women on campus, a publicist contacted her and suggested that she pursue a career in entertainment. At the end of her junior year, Fawcett went to Hollywood, landed an agent, and met actor Lee Majors, who helped jumpstart her acting career. They married in 1973 but divorced in 1982.

During the 1960s, Fawcett guest starred on a number of popular television shows, while maintaining a lucrative career on the side as a model. She appeared in top magazines and on commercials for Noxzema shaving cream, Ultra-Brite toothpaste, and Wella Balsam shampoo. In 1969 she saw her screen debut in the French film *Love Is a Funny Thing*, and in the early 1970s she began to find work in television movies. Her big break came in 1976, when she was cast as one of three attractive female private eyes, who work for a mysterious, wealthy man, in *Charlie's Angels*. Playing the athletic Jill Munroe, Fawcett's character was known for her sense of humor and card skills. Kate Jackson was cast as the intelligent Sabrina Duncan, while Jaclyn Smith provided street smarts as Kelly Garrett.

*Charlie's Angels* became the top-rated show of the 1976-77 season, thanks to its appeal to both men and women. Men enjoyed watching the women clad in scanty costumes as they went undercover as prostitutes or go-go dancers, and they relished the melodramatic situations that found the trio tied up by ne'er-do-wells. However, women also enjoyed the program, finding a feminist slant amid the eroticism because the program broke ground as a prime-time action-adventure program that featured the women in a variety of daring situations. Women viewers appreciated the Angels' courage, quick thinking, and resourcefulness—they were quick draws and could hold their own in a fight—in addition to their stylish sensuality.

Fawcett quickly emerged as the most popular of the three stars. Her wholesome likeness spawned a cottage industry of merchandise, including one of the defining pieces of 1970s popular culture: the famous Farrah Fawcett poster. An estimated six million of these pictures were eventually sold, and Farrah's image also landed on T-shirts, lunch boxes, and more. Salons nationwide turned out scores of women with the curled-back, mussed-up coiffure, and teenage boys everywhere tacked the picture to their bedroom walls. With her career at its peak, Fawcett left *Charlie's Angels* after the first season to pursue more serious drama.

Farrah initially found it hard to break away from her *Charlie's Angels* image and at first her foray into serious acting met with little luck. Finally, in 1981, Fawcett landed a role in the comedy *Cannonball Run*, starring Burt Reynolds, and also that year starred in the made-for-television movie, *Murder in Texas*. Fawcett subsequently found her niche in made-for-TV movies, particularly those based on true stories, and was highly acclaimed for her role in the 1984 television movie, *The Burning Bed*, an emotional tale of domestic abuse. Her acting in *Extremities*, a dramatic film about a woman who is attacked by a rapist in her own house, was also highly praised. Fawcett made news again in 1995 after posing for nude pictures in *Playboy* magazine and a video. Two years later, the media focused positive attention on her acting again for her role in *The Apostle* (1977).

Fawcett began a long-term relationship with actor Ryan O'Neal in the early 1980s and has a son, Redmond O'Neal, with him, but the couple broke up in 1997. Fawcett later began dating producer James Orr, who was convicted of assaulting her in 1998 in a highly publicized scandal, that was played up in the tabloids. Though Fawcett has never been one of Hollywood's top leading actresses, and has enjoyed only a sporadic television career, she made a lasting imprint on the style of the 1970s during her heyday and is still regaled on a number of fan web sites by nostalgia buffs and longstanding fans.

## Fawly Towers

*Fawly Towers* was a British television comedy starring John Cleese as hotel proprietor Basil Fawly. Cleese, one of the original members of *Monty Python's Flying Circus*, returned to television as the writer and star of *Fawly Towers*. Although only twelve episodes were produced (six in 1975, six in 1979), it remains one of the most widely syndicated comedy series in television history, and continues in regular syndication on public television stations throughout the United States to this day. Much as *All in the Family* broke ground by portraying a flawed family, *Fawly Towers* took the premise to its comedic extreme. Fawly and his wife constantly argued, insulted each others' intelligence, and generally made each other miserable. Their pointed barbs and insults marked a new high (or low) in television dialogue. *Fawly Towers* proved critically, if not commercially, successful. The series garnered two British Association of Film and Theatre Actors awards for Best Comedy Series and Cleese received an award from The Royal Television Society for his writing and acting.

## FBI (Federal Bureau of Investigation)

The Federal Bureau of Investigation is housed under the Department of Justice with field offices throughout the country. Its agents are responsible for federal cases as diverse as white collar crime, serial killing, and espionage. Attorney General Charles Bonaparte and President Theodore Roosevelt established the forerunner of the FBI in 1908 with the designation of Special Agents assigned to the Department of Justice. Their desire to create a bureau of agents to strengthen the Federal Government's crime fighting capabilities grew out of the early nineteenth-century Progressive era's desire for reform. The Department of Justice's agents later formed the Bureau of Investigation, the United States Bureau of Investigation, and finally, in 1935, the Federal Bureau of Investigation. The American public calls the agency simply by its initials or as the Bureau.

Known individually as the dashing secret agent saving America from communism or as the mysterious man in black, FBI agents have enjoyed a leading role in American popular culture almost since the Bureau's inception. Radio shows, movies, novels, magazines, and television shows have all featured the FBI agent and his adventures. The American public called both real life and fictional FBI agents "G-men." The FBI's public popularity demonstrates the American public's fascination with crime and punishment as moral drama between good and evil. As scholar Richard Gid Powers notes, "a formula adapts the universal myth to the national experience so that national history might be understood as an instance of the eternal struggle between good and evil." The FBI and its agents became potent forces in this eternal struggle as it played out in American popular culture.

The FBI gained power and popular notoriety during the gangster era of the 1920s and 1930s. This era was characterized by a general sense of lawlessness accompanying the Constitutional Amendment prohibiting the use of alcohol as well as the despair and fear brought about by the 1929 stock market crash and the Great Depression. Organized crime became increasingly visible because of its involvement in the production and distribution of illegal alcohol. Americans felt that they were witnessing illegal activity with increasing frequency and that criminals were lurking on every corner. The famous kidnapping and murder of Charles Lindbergh's infant son and the crimes of the legendary gangster Al Capone captured Americans' imaginations and they demanded revenge. Powers explained that the American public feared that this seeming crime explosion was undermining the country's moral base. These developments led to a desire for a strong national crime fighting presence both in reality and in popular culture. People also sought escape from the troubling times through popular entertainment. Popular culture anointed the FBI as the nation's solution to the problem of the mythical public enemy. Gangsters and their FBI pursuers quickly found their way into movies, detective fiction, magazines, and radio shows. Popular culture helped the FBI agent become a beacon of hope that American values would survive the crime wave and the economic despair of the nation.

No figure has been more closely associated with the popular image of the FBI as national defense against crime than J. Edgar Hoover, the Bureau's most infamous leader. President Calvin Coolidge selected Hoover as the young Bureau's next head in 1924. Hoover quickly gave the Bureau a more professional image and greater strength by firing unqualified agents and establishing formal

training for all agents at the newly created National Academy in Quantico, Virginia. He also oversaw the creation of the FBI's Technical Laboratory and the establishment of a nationally centralized fingerprint database to aid in tracking criminals. Hoover was not only a great leader, he was also a great publicity agent who carefully presided over the growing public popularity of both himself and his organization. In his day, Hoover was a dominant presence that the government, his agents, and the public both feared and admired. Though Hoover and his G-Men set the early standard for the quintessential FBI agent, Hoover's image did not survive his death in 1972 and a subsequent public reevaluation of his methods. He became widely associated with the negative image of government as "Big Brother," spying on the average citizen and maintaining secret files. He also gained much notoriety with his widely rumored penchant for cross-dressing. Hoover's legacy also became entwined with the increasingly negative American popular images of government that began in the late 1950s and 1960s.

The middle decades of the twentieth century witnessed a growing public distrust of government and its official representatives for a number of reasons. The FBI was not immune to this image problem. Some of the government's most notorious actions involved the

witchhunts for suspected communists that dominated the World War I, World War II, and Cold War periods. The FBI assisted Attorney General A. Mitchell Palmer during World War I in the quest to expose American communists and communist sympathizers. The FBI then gained its own power to investigate subversives during World War II. When Senator Joseph McCarthy and the House Un-American Activities Committee went too far in the minds of most Americans, all government officials involved in the hunt for communists were caught in the scandal. The FBI's role in detecting subversion, sabotage, and espionage had at first enhanced its image as protector of the American way of life but ultimately led to a more negative image of the FBI as "Big Brother." During the 1960s, the FBI's image suffered again. Many Americans found the FBI's overall treatment of minorities and those people the Bureau labeled as subversives to be questionable at best. Many citizens felt that the FBI unjustly persecuted anti-establishment groups such as anti-Vietnam War demonstrators, radical students, and minority activists. The FBI was also involved in such controversial 1960s civil rights investigations as the Mississippi murders of three civil rights workers later immortalized in the movie *Mississippi Burning*. The culmination of the growing popular cynicism toward government and authority,

however, is widely regarded as the 1970s Watergate scandal that brought down the Presidency of Richard Nixon.

The FBI also garnered a negative image by figuring prominently in a number of conspiracy theories that captured the American imagination. Perhaps the most famous of these theories have revolved around the 1963 assassination of President John F. Kennedy. Much controversy surrounded the official Warren Commission's report of the events responsible for Kennedy's death and the naming of Lee Harvey Oswald as the sole killer. Oliver Stone offered one of the most famous treatments of these conspiracy theories in his movie *JFK*. Conspiracy theories have also circulated widely on the question of whether UFOs existed and whether the government was responsible for covering up any such knowledge. Many rumors centered on the alleged crash of one such UFO at Roswell, New Mexico. The popularity of the 1990s television show *The X-Files* proved that the popularity of these theories of alien contact continued to thrive into the late twentieth century. The show portrayed two FBI agents assigned to investigate unexplained X-File cases of possible paranormal and extraterrestrial activity as well as government conspiracies to conceal the truth. Lingering questions over FBI involvement in hampering the search for truth in matters such as what really happened to John F. Kennedy and are we alone in the universe continued to hurt the Bureau's credibility.

The latter decades of the twentieth century witnessed a revival of the get-tough-on-crime stance that first made the FBI popular in the 1920s and 1930s. The largely positive response from the American public to this stance was due to an alarming growth of terrorist incidents, the illegal drug trade, and white collar crime. Infamous serial killers such as Ted Bundy and Jeffrey Dahmer also instilled fear into the American public. But crime fighting techniques were developed to combat these threats. The FBI behavioral sciences unit pioneered the technique of profiling violent and serial offenders as DNA technology greatly aided the fight against crime. The television show *America's Most Wanted* as well as the Bureau's Ten Most Wanted lists involved the public in the FBI's manhunts.

Despite the events that recaptured the "tough guy" image of the FBI, other incidents challenged the public's views of the Bureau's policies. The 1992 death of a U. S. Marshall led to a standoff at Ruby Ridge, Idaho, between the FBI and fugitive Randall Weaver during which Weaver's wife was accidentally killed by a sniper's bullet. The Branch Davidians led by David Koresh isolated themselves in their compound near Waco, Texas, leading to another FBI siege in 1993. This siege later ended amid much controversy when some cult members deliberately set fire to their compound rather than surrender. The negative publicity garnered by these events and led to governmental inquiries into the FBI's conduct. They also quickly became made for television movies. While the FBI's role has always centered on the mythical struggle between the forces of good and evil, the FBI's changing image shows that it is often difficult to distinguish between these seemingly diametrically opposite forces.

## Feliciano, José (1945—)

José Feliciano is one of the most passionate balladeers and guitar virtuosos on the popular music scene. Because of his bilingual abilities, Feliciano has achieved popularity throughout the Americas where his English and Spanish language albums have often topped the charts. His 1968 *Feliciano!* is today considered a classic as is his number one hit single "Light My Fire."

Born the second of twelve children on September 10, 1945, in Puerto Rico, Feliciano was raised on the Lower East Side of New York City. Feliciano was born blind from congenital glaucoma, but nevertheless was a musical prodigy who by age six was playing instruments. Today, he is known to perform credibly not only on his

José Feliciano

favorite, the guitar, but also on the bass, banjo, organ, mandolin, harmonica, piano, harpsichord, and several Afro-Caribbean percussion instruments. Because of his exposure to both Latin and American pop musical traditions, Feliciano developed an eclectic taste and style, and has been able to master folk, flamenco, salsa, rock guitar, and vocals. His folk-rock performances got him onto stages at the beginning of his career during his teens, in Greenwich Village cafes. At age 17, Feliciano dropped out of high school to become a professional musician, with his first road show booked at the Retort Coffee House in Detroit in 1963. He soon signed a recording contract with RCA Victor and became a frequent performer at coffee houses and night clubs around the country and in San Juan, Puerto Rico resort hotels.

Feliciano's first album, *The Voice and Guitar of José Feliciano*, appeared and went unnoticed in 1964, and both he and RCA experimented for the next few years in finding an appropriate niche for the eclectic singer and musician. In those years, the greatest success came with Feliciano's Spanish language recordings and his Latin American tours; in 1966, for instance, his concert in Buenos Aires drew an audience of 100,000. Finally in 1968, his album *Feliciano!*, which included the Doors' "Light My Fire," achieved mainstream success. "Light My Fire" became the third most popular single that year and *Feliciano!* reached number two on the album charts. To top this, Feliciano won Grammy awards for Best New Artist of 1968 and Best Contemporary Male Pop Vocal Performance for "Light My Fire."

After 1968, Feliciano has continued as a standard and recognized artist in both American and Latin pop music, but has never again achieved the popularity or success in the United States that he had that stellar year. One tune, however, has made Feliciano a seasonal staple—his bilingual classic "Feliz Navidad (I Wanna Wish You a Merry Christmas)." Feliciano has, however, remained enormously popular internationally, especially in Latin America and Europe. He has earned 40 international gold and platinum records and won Grammy awards for best Latin pop performance in 1983, 1986, 1989, and 1990.

In the mid-1970s, Feliciano left RCA and went on to record with a number of other houses. At times, his relationships with the studios have been rocky because the performer insists on his unique style and on "doing it my way." Feliciano's way has pioneered a place for intercultural musicians and opened up a new space for Hispanics in American pop culture.

## Felix the Cat

The creation of Otto Messmer (1892-1983) and Pat Sullivan (1885-1933), Felix the Cat first appeared as an animated cartoon

character (under another name) in 1919 in *Feline Follies*. Felix had a lively personality, an expressive manner, and solved problems in a creative fashion. For this later facet of Felix's personality his creators took full advantage of the animation medium and metamorphosed body parts into useful tools. The first major funny animal character to star in a series of animated cartoons, Felix appeared in some 150 shorts in the 1920s before the introduction of new sound technology saw his popularity wane. Meantime, however, King Features had commenced a Felix the Cat comic strip in 1923 and his trademark likeness had been licensed to many products.

Not only was Felix the first star of animation, he was also the product of a particular business arrangement that would become commonplace in animation studios. Messmer and Sullivan were the creative force behind the character. Messmer, a talented artist, took creative control of the movies and Sullivan, a lesser artist but a driven entrepreneur, arranged distribution and licensing. Sullivan retained all rights for the character and for many years his was the only name publicly associated with Felix. Messmer remained an employee.

Messmer, the son of German immigrants, was born just across the river from New York in Union City. Before joining Sullivan he worked variously as a scene painter, cartoonist, and as an animator for Henry "Hy" Mayer. Sullivan, of Irish heritage, was born in a tough working class neighborhood of Sydney, Australia. After some limited success as a cartoonist, during which time he shortened his name from O'Sullivan, he departed Australia for London in 1907. By 1909 he was in New York where in 1911 he found work as an assistant to William F. Marriner on his comic strip *Sambo and His Funny Noises*. Felix would later demonstrate some of Sambo's trickster qualities.

When Messmer and Sullivan joined forces in 1916, the worldly Sullivan had established his own animation studio releasing Sammy Johnsin animated shorts based on the Sambo strip, but renamed to avoid litigation. Sullivan's studio, however, was put on hold in 1917 when he was convicted of rape and sentenced to two years in Sing Sing. Messmer went back to work for Mayer before being drafted. The two met up again in 1919 on Messmer's return from the First World War and Sullivan's release from jail. They collaborated on the aforementioned *Feline Follies*, which helped re-establish the Sullivan studio.

The 1920s were Felix's decade. Sullivan shopped his character around film distributors. Historian John Canemaker has estimated that some 30 Felix shorts were released through Famous Players - Lasky from 1919-1921. In 1922, finding himself without a distributor, but with the ownership of an established character, Sullivan struck a deal with distributor Margaret J. Winkler and from 1922 to early 1925 her company distributed 50 Felix animations. In these years Bill Nolan influenced Messmer to soften Felix's features and a rounder Felix became the cartoon norm.

In 1925 Sullivan broke his ties with Winkler and signed a new distribution contract with Educational Films. Winkler turned to a young Walt Disney who had already turned out a Felix clone named Julius in a series distributed by Winkler. Disney's new character, Oswald the Lucky Rabbit, had many similarities to Felix. In 1928 Disney lost control of Oswald to Winkler and had to create a new character: Mickey Mouse.

Meanwhile, Felix had been licensed extensively to doll, toy, and pencil manufacturers, as well as cigarette companies. He was also the subject of popular songs and generated income for Sullivan from sheet music sales. The comic strip, which according to Canemaker was not widely popular, nonetheless appeared from coast to coast in the papers of William Randolph Hearst. Felix was also extremely

popular in the United Kingdom and Sullivan's native Australia. In 1928 Felix was at the height of his fame. So ubiquitous was his fame and appearance that NBC used a Felix doll to test television cameras and transmission. In the strong visual presence of Felix lay the seeds of his downfall.

Disney's debut of Mickey Mouse in the sound film *Steamboat Willie* introduced a new dimension to animated shorts. Felix embodied the perfect characteristics for silent animation. To meet the challenges of sound he had to change, and the change undermined his character. Moreover, whereas Disney carefully pre-planned his animation to fit music and sound effects, the Sullivan studio, when it eventually introduced sound, did so as a post animation process. Inevitably the Disney product was superior.

By 1930 Felix had faded from the screen. Sullivan died in early 1933 from the effects of alcoholism. His heirs and lawyer briefly revived Felix in film in 1936, but the lackluster efforts were short lived. Felix lived on in a weekly and daily comic strips which ran to 1943 and 1967 respectively. He also appeared monthly in a Dell comic book. In 1959 Joe Oriolo revived Felix in a series of cartoons for television. Oriolo resurrected Felix again in another television series in 1982. Retrospectives of early Felix shorts were held at the Whitney Museum of American Art and at the Museum of Modern Art in 1977. In the late 1980s, Felix cropped up in a number of licensed merchandise ventures.

Felix is an icon of twentieth-century American popular culture. That he was created by an Irish-Australian and a German-American and was popular world-wide reminds us of the transnational character of popular culture in the twentieth century.

## Fellini, Federico (1920-1993)

Italian film director Federico Fellini helped bring the cinema to a mature state of expressive quality, introducing an eye-opening kaleidoscope of psychological symbolism and sometimes bawdy imagery to popular audiences and art-house denizens alike. Beginning in film as a screenwriter for famed filmmaker Roberto Rossellini, Fellini came into his own directing a number of masterpieces in the 1950s which expanded upon the natural, visually stark style of Italian Neorealism pioneered by Rossellini. Most notable of these were *La Strada* and *Nights of Cabiria*, both of which boasted emotionally rich performances by Fellini's wife, the gamine-faced Giulietta Massina. However, it was during the 1960s that Fellini reached the height of his international stature with films such as *La Dolce Vita*, *8 1/2*, and *Juliet of the Spirits*, wherein Fellini evinced a circus-like, sometimes surreal, and always highly personal vision of the world that could only be achieved through the cinema. Fellini continued directing films until his death in the early 1990s, consistently creating worlds so unique that the word "Felliniesque" found its way into the popular vocabulary.

## Feminism

Feminism, the ideology that supports uplifting the status and improving the rights of women, has been one of the most influential political ideas of the nineteenth and twentieth centuries. Since its inception, it has been both hailed as a profound liberation of society, and condemned as a philosophy of victimhood, responsible for the breakdown of the nuclear family and the degradation of society in general. There is no doubt, however, that the work of feminist activists and reformers has been responsible for enormous improvements in the position of women in the United States over the past 200 years. Equally indisputably, a glance at the power structure of most of the world's governments and businesses shows that male dominance is still very much a reality. In spite of this, feminism has changed the American social order, from the superficial, such as media portrayals of women, to the deepest underlying assumptions of science and religion.

Throughout Europe and the United States, the eighteenth and nineteenth centuries were a time of sweeping ideological changes. A new humanism was developing, with a focus on the "rights of man." The principles of both the American and French revolutions of the late 1700s and the publication of the Communist Manifesto in 1848 were examples of this new atmosphere of brotherhood and justice. As white males were discovering and outlining their inalienable rights, women were still largely trapped within a patriarchal family system, kept there by economic necessity and rigid social convention. Basically considered the property of husband or father, women were not permitted to vote, own property, operate businesses, attend colleges, or make legal decisions concerning their children or themselves. Politically aware women had already begun the work to change these conditions, such as Abigail Adams and Mercy Otis, who unsuccessfully lobbied the authors of the United States Constitution to include women's rights in their plan for the new country, and Britain's Mary Wollstonecraft, who published the landmark *Vindication of the Rights of Women* in 1792.

By the early 1800s, many progressive men and women began to join the abolitionist movement to work for the end of slavery. One liberation ideology led naturally to another, and a number of abolitionist women drew parallels between the slavery they fought and the plight of women. "The investigation of the rights of the slave has led me to a better understanding of my own," wrote anti-slavery activist Angelina Grimke in 1836. This growing understanding of the condition of women led to the first Women's Rights Convention in Seneca Falls, New York, in 1848. Organized by abolitionists Elizabeth Cady Stanton and Lucretia Mott, the convention drew dozens of women and a number of supportive men as well. Together, convention participants drew up the Declaration of Sentiments, outlining both the rights of women and a set of demands, such as equality in law, education, and wages and the right to vote.

By the 1860s, the fight for women's rights led to a split in the abolition movement. Some anti-slavery activists felt that women

A feminist protest of the Miss America Pageant 1968.

should step back and focus on the fight against slavery, even if that meant prioritizing the rights of black men, while others felt that changes in the status of slaves and changes in the status of women must go hand in hand. Foreshadowing a recurrent issue in the struggle for women's rights, men's role in the women's movement also became controversial. In 1867, as the 15th Amendment to the Constitution was giving the vote to black men, the abolitionist movement divided. The National Women's Suffrage Association, led by Stanton and Susan Brownell Anthony, was an all-women's organization which opposed the 15th Amendment. The American Women's Suffrage Association, led by Lucy Stone and Julia Ward Howe, supported legalization of black male suffrage and included men in its membership.

By the 1890s however, both factions reunited to push for the still-elusive women's suffrage. Women's clubs began to form to foster discussions about politics, culture, and education. In 1896, The National Association of Colored Women formed, uniting the separate black women's clubs. Other important women's organizations were the temperance societies. Often mocked as prim and puritanical, the temperance societies were in reality an attempt to protect women and children from the abuse and poverty that were often a result of male drunkenness. Toward the end of the suffrage battle, the word "feminism" first came into use. The feminists differed from the suffragists

by claiming to work for a broader liberation of the social order than would be achieved simply by attaining the vote.

Gradually, some states began to grant the vote to women in local elections. In 1917, Jeannette Rankin of Montana became the first woman elected to the U.S. Congress, and in 1920, women finally won the vote. Within two years of the ratification of the 19th Amendment to the Constitution, the National Women's Party proposed an Equal Rights Amendment, which was defeated.

Both before and after suffrage was attained, feminist activists continued to work on gaining a measure of control over their lives, bodies, and property. Gradually they chipped away at the laws that put women in the power of men, and women won the right to own property, attend college, and many of the other rights they had demanded at the Seneca Falls convention. Because childbirth and the work of raising children has affected women's lives so deeply, birth control and abortion have always been central issues in any feminist movement. The American Birth Control League, organized by Margaret Sanger in 1921, was one of the earliest attempts to make family planning available to U.S. women.

The "Roaring Twenties" was a decade of new independence for women. Once women were able to vote and obtain birth control, even fashion followed suit, as Coco Chanel and other modern designers discarded the painful, restrictive corsets women had once laced

around themselves. The new fashions emphasized freedom and even androgyny, as women cut off long, time-consuming tresses and sported the free and easy bobs that symbolized the era. With the approach of the depression of the 1930s, the feminist movement subsided into quiescence for several years. Though women were given unprecedented opportunities to work in male dominated industries during World War II, when the war ended, they were unceremoniously sent back home. The 1950s was a paradoxical decade, conventional and conformist on the exterior, and seething underneath with repressed rebellion. In the upper and middle classes, more women than ever before were attending college, where they developed intellectual comradeships and learned to take themselves seriously before being isolated and often ignored raising families in suburban homes. In the working class, women were frequently stuck in repetitive dead-end jobs, which generally paid them around 50 cents for every dollar earned by the men working next to them. Within all these women the knowledge began to slowly awaken that something was not working in their lives.

The dilemma of the middle class woman was articulated powerfully in a pivotal book published in 1963. *The Feminine Mystique* by Betty Friedan marked the official beginning of the "second wave" of U.S. feminism. Describing the stultifying life of women in American suburbs, Friedan captured the deep longing within girls and women for "something more" than their prescribed roles as cheerleaders and helpmates for men and caretakers for children. It was a message women had been waiting to hear, and around the country they began to discuss an innovative concept: women's liberation.

Just as nineteenth century feminism had been a part of a larger social liberation movement, the second wave of feminism was fired by the same energy that fueled the civil rights movement, the anti-war movement, and the gay and lesbian liberation movement. In the same way that the female abolitionists had been inspired by the fight against slavery to fight for their own rights, women in the civil rights and other movements began to feel empowered to challenge their own second-class citizenship, not only in the larger world but even among their male colleagues within the movement.

Following the passage of Title VII of the Civil Rights Act of 1964, prohibiting discrimination based on sex, race, religion, or national origin, government agencies began to document cases of sex discrimination. Even women themselves were appalled to see the evidence of so much blatant discrimination. They began to gather in "consciousness raising" groups to discuss their own experiences. Women's isolation was beginning to break down, and the competition and mistrust that had been fostered among women by patriarchal society, began to be replaced by communication and alliance. Though the National Organization for Women (NOW) was formed by Friedan and others in 1966, it was the solidarity created by the consciousness raising groups that was the heart of the new movement. Though threatened males of every political stripe ridiculed the personal and revelatory nature of the groups, the feminists responded by saying "the personal is political." The phrase became the very basis of women's liberation, meaning that each individual life has political meaning and each personal action requires responsibility.

By the early 1970s, NOW had over 400 chapters around the country, working to change the laws that oppressed women and to raise women's consciousness about their own potential. In 1972, Title IX of the Education Amendments prohibited sex discrimination in all education programs receiving federal funds, an act that promised to revolutionize women's education. In 1973, the landmark *Roe v. Wade* decision in the Supreme Court made legal abortions available to

women throughout the United States, ending decades of dangerous and traumatic illegal abortions and unwanted childbirths.

The ideas and energy of women's liberation spread around the country, touching women from the university towns to the suburbs and from the PTA to the factory floor. Feminists began to create a "woman's culture" where women could gather to discuss and disseminate the new ideas. Women's bookstores, coffeehouses, journals, publishing houses, and community centers were energized by the new spirit of sisterhood. Women's Studies courses were introduced at colleges and universities to focus on women's history and perspectives. Feminist health care workers created women's clinics to prioritize issues of women's health. Women, who had been encouraged to view their bodies as inferior and even slightly disgusting, attended classes where they learned to appreciate and understand their bodies. Feminist psychotherapists developed feminist therapy that included an analysis of women's oppression. Rape crisis centers opened to publicize and fight violence against women. From family to language to religion, no nook or cranny of modern society or history escaped the feminist critique as feminists sought to reinterpret a male-defined world from a women's perspective.

The media also responded to the new movement, at first with ridicule, then with more serious analysis. In 1972, the premier issue of *Ms.*, the first national feminist magazine, appeared on newsstands. Even on television, that most conservative organ of the status quo, independent women began to spring up on sitcoms and dramas of the 1970s. Mary Richards, solid, sensible heroine of *The Mary Tyler Moore Show* (1970-1977) was a single career woman, who had real friendships with her more flighty woman friends, not just double dates or competitions over boyfriends. Maude Findlay, outspoken, bitchy, and unashamedly middle-aged, appeared first on *All in the Family* (then was given her own spinoff *Maude* (1972-1978) as audiences responded enthusiastically to the non-stereotypical portrait of a wife and mother. Though it did not debut until 1982, *Cagney and Lacey* was also part of the wave of feminist television. The show, an innovative police drama, paired tough-talking, hard-drinking single girl Chris Cagney with down-to-earth happily married mama Marybeth Lacey. Neither silly nor superhuman, Cagney and Lacey brought a sympathy and compassion to the police show that drew audiences for six years.

Though the feminist ideal of sisterhood was exhilarating, it was also flawed. Lesbians, who were naturally drawn to a movement that empowered women, had been among the first activists of women's liberation, but straight women immediately sought to disassociate them from the movement. Calling the issue the "lavender menace," many heterosexual feminists were uncomfortable with the idea of lesbianism and feared that inclusion of gay women would discredit the movement. Lesbians fought for recognition of their place within the women's movement, but many were hurt by the movement's denial of them, and remained mistrustful. Some even withdrew from feminism, calling themselves lesbian separatists, and began focusing on lesbian issues only.

Women of color and working-class women also had to fight for their place in the women's liberation movement of the 1970s. Though the intellectual ideology of the movement had been developed in universities among largely white, middle-class academia and suburban housewives, working-class women and women of color often had the largest stake in the feminist cause. Issues of pay and advancement at work, abortion and birth control within the body, and abuse at home were often survival issues for working-class women. Though many

working-class women and women of color were active in the movement, white feminists often had to be compelled to confront their own racism and classism, and many did little to fight the media stereotype of feminism as a white, middle-class movement.

The 1980s saw a sharp backlash to the advances made by women in the 1970s. While most people, even feminism's enemies, professed to believe in "equal pay for equal work," many were threatened by the deeper societal changes suggested by feminist analysis. Using the age-old weapons of ridicule and threat, anti-feminist writers and pundits announced that women had achieved equality and no longer needed to be liberated. (This cheery mythology has continued through the 1990s, even in the face of the fact that in 1998, women still earned only 76 cents for every dollar earned by men.) In the 1980s feminism's critics threatened women by describing a world where women had unprecedented equality in the work place, but were frustrated, unhappy, and unfulfilled in their personal lives. Conservative religious leaders assured women that their place in the home was divinely ordained. Popular feminist novels of the 1970s like Erica Jong's *Fear of Flying* (1973) and Marilyn French's *The Women's Room* (1977) were replaced in the 1980s by grim tales of the price of independence, like Gail Parent's *A Sign of the Eighties* (1987) and Freda Bright's *Singular Women*. In film too, *Kramer vs. Kramer* (1979) won an Oscar for punishing a confused mother who leaves her child with his father so that she can explore her own identity.

The 1990s have left the most virulent phase of the backlash behind, merely using the phrase "post-feminist" to describe the lack of need for a women's liberation movement. Though in a *Time/CNN* poll in 1998, over 50 percent of women, aged 18 to 34, said they had "feminist values," there is little public support for calling oneself a feminist. Young women of the 1990s have developed a feisty culture of "grrl power" that promises to support strength in a new generation of women, but the anti-feminist media has succeeded in turning the word "feminist" into a pejorative for many people.

Feminist activists still proudly claim the title however, and many still work for change in the status of women independently or in local or national groups. Many of the old issues remain: women are still paid less than men for identical or comparable work, and advance less quickly and less far on the job; sexual harassment, domestic violence, and rape continue unabated; childcare remains prohibitively expensive and stigmatized as the choice of selfish mothers. Even causes that were once won, such as abortion rights and welfare rights for single mothers, have returned to be fought for again as conservative forces gain power.

However, though feminism has not totally succeeded in achieving economic and political equality for women, the various feminist movements have dramatically improved women's position in American society. The feminist critique has challenged patriarchal interpretations of history and science and brought the light of public discussion to issues of women's lives once considered matters of personal decision for husbands and fathers. Feminism has embraced the question of children's rights, the politics of the family, and internationalism. Like the abolitionist/suffragists of the nineteenth century, feminists approaching the twenty-first century seek to unite the struggles of the helpless and disenfranchised.

## Fenway Park

Together with Chicago's Wrigley Field and New York's Yankee Stadium, Boston's Fenway Park is one of the archetypal American baseball facilities. Called "a lyric little bandbox" by no less an eminence than John Updike, the park's idiosyncratic design is as legendary among baseball aficionados as is the futility endured by its home team, the Boston Red Sox. Together, team and park have suffered all manner of near-miss and could-have-been finishes since the stadium's triumphal opening in 1912.

The ballpark derived its name from the Fenway Realty Company, the business that owned the plot of marshland on which the ballpark was constructed. The Osborne Engineering Company of Cleveland designed the concrete and steel structure, which was modeled in part on Philadelphia's Shibe Park. The famous wall in left field, known popularly as the "Green Monster," was not part of the original ballpark. Fenway's asymmetrical configuration was largely a function of location, nestled as it was just across the Massachusetts Turnpike from bustling Kenmore Square.

Fenway Park opened on April 20, 1912. The sinking of the Titanic was still front-page news in the *Boston Globe* that morning as the Red Sox prepared to play the New York Highlanders before a crowd of twenty-four thousand. Boston Mayor John F. "Honey Fitz" Fitzgerald threw out the ceremonial first pitch, and the hometown club went on to win 7-6 on an extra-inning single by Tris Speaker. The Highlanders, later rechristened the Yankees, were to remain integral intertwined with the ballpark's history over the ensuing decades.

At first, the new park seemed to be a good-luck charm for the Red Sox. The team won the American League pennant in 1912, as Fenway played host to its first World Series in October. Fred Snodgrass's error in the tenth inning of the deciding game gave the series to the Sox, four games to three, over the New York Giants. But what seemed like an auspicious beginning to the Fenway Era was actually the start of one of the longest championship droughts in baseball history.

Fenway Park took a major step forward in its evolution in 1934, when the original wall in left field was leveled and a thirty-seven-foot-high metal fence was installed. Initially covered with advertising signs, in 1947 the wall was painted green. The Green Monster would go on to become one of the most distinctive features of any American ballpark. Officially listed as 315 feet from home plate (though some aerial photographs have indicated that 300 feet is more likely), the Green Monster continues to bedevil American League left fielders

while providing an all-too-tempting target for right-handed power hitters looking to pull a ball out of the park.

One such power hitter was New York Yankee Bucky Dent, a diminutive shortstop who clouted one of the signature home runs in Fenway Park's history on October 2, 1978. The towering pop fly off Red Sox pitcher Mike Torrez landed on the screen above the Green Monster and helped the Yankees capture the American League East Division championship in a one-game playoff. Dent's blast was just one in a long line of tragic moments for the Red Sox's long-suffering fans, who have watched their beloved team fail time and time again in their quest to capture the franchise's first World Series title since 1918.

The Red Sox returned to the World Series in 1946 and again in 1967 but were turned away in seven games on both occasions. They took the Cincinnati Reds to seven thrilling games in 1975 in one of the greatest championship sets ever played. That series saw Fenway play host to one of the most dramatic games in baseball history, the sixth game in which Boston catcher Carlton Fisk clouted a twelfth-inning, game-winning home run just inside the left field foul pole. True to form, the Red Sox proceeded to lose the decisive game in heartbreaking fashion.

As the twentieth century draws to a close, Fenway Park remains one of Major League Baseball's oldest, smallest, and most revered ballparks. Besides the Green Monster, its distinctive features include one of the last remaining hand-operated scoreboards (the initials of the club's late owner, Thomas A. Yawkey, and his wife, Jean R. Yawkey, are inscribed vertically in Morse code on the face of the scoreboard) in the majors. In typically eccentric Fenway fashion, only the American League scores are recorded.

Despite its aesthetic and historic value, the park faces an uncertain future. Its seating capacity (about thirty-five thousand) is woefully small by modern ballpark standards, and there are few provisions for such revenue-generating gewgaws as luxury boxes and interactive entertainment centers. The club was said to be actively seeking a new home for the next millennium. Red Sox fans could only hope that a new facility retained the charming architectural features and rich sense of place that marked the original.

## Ferrante and Teicher

Piano stylings of pop music themes were in vogue during the post-war "lounge music" or "mood music" style, and Arthur Ferrante (1921—) and Louis Teicher (1924—) were the duo-piano team that capitalized most prolifically on this genre during the 1960s. Imitating the sound of the Romantic-era piano concerto, and at times

including novelty effects such as "prepared" pianos, Ferrante and Teicher recorded lush arrangements of film themes, Broadway tunes, and other melodies backed by full orchestra and chorus. Both pianists pursued their early training at the Juilliard School in New York, but gradually dropped their classical repertoire in favor of pop and light comedy performance elements. After signing with United Artists in 1960, they had their first American chart hits with the million-plus seller theme from *The Apartment* and Ernest Gold's main theme from *Exodus*; in 1969, their arrangement of "Midnight Cowboy" was a Billboard Top 10 single. Their discography numbers over 60 albums and compilations.

## Fetchit, Stepin (1902-1984)

The first black actor to receive featured billing in Hollywood movies, Stepin Fetchit has passed into the culture as an emblem of the shameful racial stereotyping that reflected early twentieth century America's perception of blacks as servile, lazy, feckless, and stupid. However, throughout the gravy years of his career during the 1930s,

Stepin Fetchit

this talented actor entertained movie audiences with his skillfully comic portrayals of slow-talking, dim-witted, shuffling slaves and servants, and earned a large, albeit temporary, fortune.

Born Lincoln Perry in Key West, Florida, on May 30, 1902, he went on the road as an entertainer in medicine shows and vaudeville before arriving in Hollywood in the late 1920s. His stage act with comic Ed Lee was spotted by a talent scout, engaged by Fox studios, and he took his screen name, which turned out ironically appropriate to many of his screen roles, from a racehorse on whom he had placed a winning bet. He was in the 1929 part-talkie version of *Show Boat*, the same year that he played a major role in the first all-black musical, *Hearts of Dixie*. As Gummy, a workshy layabout on a cotton plantation, Fetchit stole the show, but none of the several subsequent musicals in which he was cast gave him a similar opportunity to shine with such prominence.

Fetchit worked steadily throughout the 1930s, rapidly becoming one of the best known, best-loved, and most instantly recognizable of black actors. However, by virtue of his color, he was more often than not confined to cameos and small featured roles. Among the 26 films he made between 1929 and 1935 were three with Shirley Temple, most noticeably in *Stand Up and Cheer* (1934), and five for director John Ford. The Ford films included *Steamboat 'Round the Bend* (1935), one of four popular Will Rogers films in which Fetchit played the star's servant and comic sidekick.

Invariably typecast as the arch-coon, a tall, bald servant wearing a grin and hand-me-down clothes too large and loose for his lanky frame, his servile image eventually alienated him from black audiences and offended civil rights advocates. Walter White of the NAACP declared that Fetchit's flunky roles reinforced the white man's racist image of blacks, while the black press repeatedly criticized his perpetration of unwelcome stereotypes. By the mid-1940s, these protests against his racist caricatures curtailed his career. Moreover, he had dissipated his wealth on the extravagant lifestyle he had adopted—at one time he owned six houses and 12 cars, and employed 16 Chinese servants—and was forced to declare bankruptcy in 1947, the year he starred in *Miracle in Harlem*.

In the early 1950s, after making only a handful of movies, some of them all-black productions, Fetchit disappeared from the screen for 20 years and, in the late 1960s, having suffered his share of personal tragedy with the death of his son by suicide, he converted to the Black Muslim faith. In 1970, he unsuccessfully brought a defamation suit against CBS for using "out of context" clips from his work to demonstrate black caricature in American movies. The 1970s, brought something of a renaissance to the then almost forgotten actor. He returned to the Hollywood screen with roles in *Amazing Grace* (1974) and *Won Ton Ton the Dog Who Saved Hollywood* (1975); in 1976, his earlier perceived slights on his own people forgiven, he received a special Image Award from the Hollywood branch of the NAACP, and in 1978 he entered the Black Filmmakers Hall of Fame.

Stepin Fetchit died in Woodland Hills, California, on November 19, 1984. Over the years, film scholars had come to recognize the wealth of comic talent and the flawless timing that underpinned the characters who defined his screen image. Robert Townsend paid him lasting tribute with his brilliant impersonation of Fetchit in his own independent film, *Hollywood Shuffle* (1987), and, thanks to television reruns of movies, he lives on for later generations as more than just a quaint name.

## *Fibber McGee and Molly*

Out of Fibber McGee's famous closet came a 24-year radio run whose success and innovation were matched by few broadcasters in the 1930s and 1940s. The series helped forge the genre later called "situation comedy"; it also invented the concept of the "spin-off," with not one but two popular supporting characters winning their own series in the 1940s. Through it all, Jim and Marian Jordan continued as Fibber and Molly, their program setting both ratings records and a patriotic example during the war years, its stars perhaps more deserving of the title "beloved" than any other performers of network radio's glory days.

The Jordan's early broadcasting careers were inauspicious at best. The couple were already battle-worn vaudevillians when, on a bet, they performed on a Chicago radio station in 1924. But their obvious talent soon won them their own music and patter series. By the early 1930s, Jim and Marian Jordan had hosted or appeared on numerous local music and banter programs; their work gradually evolved into a series that would finally win them a spot on a national NBC hookup.

For *Smackout*, the Jordans teamed up with Don Quinn, the gifted writer with whom they would collaborate for more than 15 years. In the new series, the couple played multiple roles, among them the proprietors of a depression-era grocery always "smack out" of everything. An existing 1931 recording reveals that Marian perfected her "Teeny" character, the precocious adolescent she would continue to portray when *Smackout* gave way to *Fibber McGee and Molly* in 1935.

After years of work, it was undeniably the "big break" for the Jordans and writer Quinn. From Chicago, *Fibber McGee and Molly* was broadcast nationwide over the NBC network on April 16, 1935 to middling reviews; the premiere show was an uneasy mix of swing music and comedy segments in which Molly was an unadulterated battle-ax who spoke in a thick Irish brogue, and Fibber was a tale-spinning loudmouth who more closely resembled his *Smackout* character Uncle Luke than the character the nation would come to know as Fibber McGee. Yet the series became a moderate success, at least winning time to develop its style and characters. Within a year, Quinn and the Jordans had shaped the characters into the warmer, funnier personas they would inhabit for the rest of their careers.

The scripts were pure corn, with each episode revolving around the thinnest of plots. Fibber remained a big-talking but inept spinner of yarns; Molly was his long-suffering but big-hearted companion. The couple had no obvious source of income; most of their Tuesday night adventures took place in the McGee home at 79 Wistful Vista,

with a company of popular supporting characters parading through the house for brief appearances. Even announcer Harlow Wilcox was made a character, his job being to work in a clever plug for sponsor Johnson's Wax. Many of the supporting characters were played by Bill Thompson, a genuine vocal acrobat who brought life, among others, to "Wally Wimple," a perpetually henpecked husband whose every syllable bespoke his suffering; and the "Old Timer," a talkative curmudgeon whose catchphrase "That ain't the way I hear'd it!" became national slang by 1940.

In the late 1930s, the series weathered a crisis that threatened its very existence. Marian Jordan was forced off the show for health reasons in November, 1937; her hiatus ultimately lasted 18 months. Fans and historians have spent the intervening decades debating the true nature of her absence: press accounts at the time said only Marian had been sent to a "sanitarium" for a "rest," while fans have long whispered she had actually suffered a nervous breakdown. In 1998, radio historian John Dunning, citing an impeccable but anonymous source, revealed that Marian was actually battling alcoholism during her absence. The show limped along without her under the title *Fibber McGee and Company*. Marian—and Molly—returned on April 18, 1939, her reappearance drawing both press attention and a huge ovation from the studio audience.

Then, seemingly out of the blue, the series' popularity simply exploded. Paired with Bob Hope's new NBC series on Tuesday night, *Fibber McGee and Molly* suddenly found itself shooting to the very top of the ratings chart—part of a late-1930s spate of new radio hits that included stars such as Hope, Red Skelton, and Edgar Bergen. One of the Jordans' supporting cast proved so popular during this period that he was given his own show: broadcasting's first "spin-off" was *The Great Gildersleeve* (1941), in which Hal Peary reprised his role of bombastic-but-lovable Throckmorton P. Gildersleeve, who had delighted audiences for several years as Fibber's ever-feuding next-door neighbor.

Fibber's famous closet was opened for the first time on March 5, 1940, in a sound effects extravaganza in which years' worth of piled-up junk came pouring out to the delight of the audience; the oft-repeated gag became one of the best known in broadcast history.

The series was one of the first to go for all-out flag waving upon the outbreak of war on December 7, 1941; two days later, Marian Jordan may have uttered the first broadcast joke of World War Two (Gale Gordon's Mayor LaTrivia tells Molly he's shopping for a globe. "You want a globe with Japan on it?" Molly asks. "Then you better get one quick!"). The series almost weekly featured patriotic themes during the war years; an April, 1943 program in which Fibber buys and then gets sick from black market meat is a perfect example—forceful without being preachy, and very funny. The McGees even took in a boarder at mid-war, opening their home to war-plant worker Alice. By February, 1943, *Fibber McGee* was drawing record ratings—quite a feat considering a significant percentage of the population was off fighting the war!

The series suffered a major hit during this period, when actor Bill Thompson joined the service. The slack, however, was taken up in large part by the appearance of the McGee's feisty maid Beulah: a giggly, vivacious—and African-American—bundle of energy whose catchphrases "Somebody bawl fo' Beulah?" and "Love that man!" became two of the most popular slang phrases of the war. The character's popularity only increased when the audience learned the black female Beulah was actually portrayed by a white man—actor Marlin Hurt, who became so famous in the role that he, too, was given his own series. *Beulah* premiered in 1945; upon Hurt's sudden death

the next year, it became the first radio comedy to feature a black actress in a starring role—perhaps making up somewhat for the unapologetic caricature which had first given the series life.

The McGees' ratings suffered only slightly after the war, but the late 1940s proved more troublesome. Bob Hope never recaptured the overwhelming success of his war-years tours of service camps; the entire NBC Tuesday schedule suffered somewhat as Hope's ratings fell. By 1950, the previously obscure CBS sitcom *Life with Luigi* was besting Hope's ratings. But the biggest threat was television: the new medium's first real sensation—Milton Berle's *Texaco Star Theatre*—was slotted on Tuesday night, directly opposite Hope and the McGees. *Fibber McGee and Molly* performed impressively against long odds, but NBC radio's Tuesday night glory days were clearly over.

By then it barely mattered; the series had long ago crossed the line from popular entertainment to American institution. The Jordans stayed with NBC when many of the chain's top comedians bolted to CBS in the 1948-'49 talent raids; writer Quinn departed in 1950. Longtime sponsor Johnson's Wax dropped the series the same year; later sponsors included Reynolds Aluminum (which used its commercial time to introduce a revolutionary new product—Reynolds Wrap!) and Pet Milk. In 1953, with network radio dying, the Jordans gave up their weekly series and embarked on a nightly 15-minute version of *Fibber McGee and Molly*; this ran four years. The McGees were still on the air performing short segments on NBC's innovative *Monitor* series into 1958 and 1959.

By then the "golden age" of radio was long over; the Jordans' refusal to appear in a television version of their creation virtually guaranteed failure upon its premiere in 1958. Marian Jordan died in 1962; Jim lived another quarter century. They had set a decent, honest example for their audience during the era of depression and war; they had also invented and honed many of the formats and techniques broadcast writers and comedians utilize to this day. The phrase "Fibber's Closet" may be a distant memory, but the McGee's legacy is alive and well.

—Chris Chandler

## *Fiddler on the Roof*

One of the most important musicals of the 1960s, in many ways *Fiddler on the Roof* represents the end of the classic mid-twentieth century American musical theater. The tale of Tevye, a Jewish peasant in turn-of-the-century Russia, and his difficulties with maintaining tradition in the midst of change, has had universal appeal ever

Zero Mostel in *Fiddler on the Roof*.

since its premiere in 1964. The score includes the hit songs “Tradition,” “To Life,” “If I Were a Rich Man,” and “Sunrise, Sunset.”

In the early 1960s, composer Jerry Bock, lyricist Sheldon Harnick, and librettist Joseph Stein decided that they wanted to write a musical together. After looking at numerous potential plot sources, they chose Sholom Aleichem’s short story “Tevye and His Daughters.” The trio persuaded Harold Prince to produce the show, who in turn advised them to engage Jerome Robbins as director-choreographer. With Prince and Robbins—two of Broadway’s most significant creative personalities—involved with the production, its success was virtually secure.

*Fiddler on the Roof* takes place in the Jewish village of Anatevka, Russia, in 1905. Its plot revolves around Tevye, a dairyman, his wife Golde, and their five daughters. Tevye reveals his creed in his opening monologue:

A fiddler on the roof. Sounds crazy, no? But in our little village of Anatevka, you might say every one of us is a fiddler on the roof, trying to scratch out a pleasant, simple tune without breaking his neck. It isn’t easy. You may ask, why do we stay here if it’s so dangerous? We stay because Anatevka is our home. And how do we keep our balance? That I can tell you in a word—tradition!

Tevye’s world is challenged by impending change. Tzeitel, his eldest daughter, marries a poor tailor after Tevye has promised her to a

wealthy widowed butcher. Hodel, his second daughter, marries a revolutionary and follows him to Siberia, while Chava, his third daughter, marries a Christian. At the end of the musical, the Czar’s Cossacks destroy Anatevka as Tevye and his family leave for an unknown future in America. The show’s title—a fiddler on the roof who tries to maintain his balance while playing—suggests the desire for constancy in the face of mutability. The image itself was inspired by Marc Chagall’s painting *The Green Violinist*.

*Fiddler on the Roof* opened on Broadway on September 22, 1964, at the Imperial Theater, where it played for 3,242 performances—the longest run in the history of the American musical theater to that time. Zero Mostel created the role of Tevye. Other original cast members included Maria Karnilova, Beatrice Arthur, Joanna Merlin, Julia Migenes, Bert Convy, and Tanya Everett. The musical garnered numerous Tony Awards, including best musical, score, book, actor (Mostel), featured actress (Karnilova), choreographer (Robbins), and costumes (Patricia Zipprodt). Topol starred in the London production, which ran for over 2,000 performances, as well as in the 1971 film version.

The success of the show was due largely to its superb musical score. The opening number, “Tradition,” is a joyous celebration of life, as is the wedding number “To Life.” The waltzes “Matchmaker” and “Sunrise, Sunset” capture the nostalgia of bygone traditions and the passing of time, while Tevye’s splendidly dramatic monologue, “If I Were a Rich Man,” is one of the great soliloquies of the musical theater. Tevye and Golde’s comic duet “Do You Love Me?” is a frank expression of the love that can develop between two people over a lifetime. This expression of matrimony based on traditional matchmaking is contrasted with the “modern” concept of marriage based on love and choice in “Now I Have Everything” and “Miracle of Miracles.” The music of *Fiddler on the Roof* does not generally fit into the standard mold of Broadway show tunes; traditional folk idioms fill the score and infuse it with a particular yet accessible ethnic character that distinguishes it from other shows of its era. As such, it opened the door for more variations on the traditional American musical theater genre through the end of the century.

*Fiddler on the Roof* is imbedded within its Jewishness without being parochial. The show’s emphasis on family and religious interactions against a backdrop of a disintegrating social order gives it a universality that transcends time, place, and ethnicity. Its popularity through professional, amateur, and school productions remains as strong as ever more than thirty years after its premiere.

## Fidrych, Mark “Bird” (1954—)

The American League’s Rookie of the Year for 1976, pitcher Mark Fidrych briefly captured the imagination of baseball fans with his bizarre on-the-field antics. Dubbed the “Bird” for his lanky, ostrich-like frame, the 6’3” right-hander with the mop of curly blonde hair won 19 games for the Detroit Tigers that season, compiling 24 complete games and a 2.34 earned run average. But it was the way he pitched more than the results that filled ballparks that summer. Fidrych was far more animated than any pitcher before him: he talked to the baseball and shook hands with his infielders after good plays. After one stellar season, however Fidrych blew out his arm and never regained his rookie form. He attempted several abortive comebacks and retired in 1983.

## *Field and Stream*

*Field and Stream* magazine, America’s fishing and hunting bible, was born in a Minnesota duck blind in 1895. With contemporaries such as *Sports Afield* and *Outdoor Life*, it challenged the nineteenth-century stereotype that hunting and fishing were the domain of fur trappers and frontiersmen such as Daniel Boone, Davy Crockett, and Christopher “Kit” Carson, or amusements for the idle rich. Coupled with technological innovations that made shooting and fishing more accurate and easier, the new magazines demonstrated that hunting and fishing were recreational activities that could be enjoyed by all, especially the growing middle class. Through the twentieth century, *Field and Stream* has crusaded for conservation measures, developed a library of wildlife film and video, and commissioned wildlife images by well-known artists and photographers without ever forgetting its basic purpose, to provide the stuff of dreams for generations of hunters and fishermen.

The Civil War marked a new interest among Americans in sporting activities, most notably horse racing, boxing, track and field, and the relatively new sport of baseball, but also in hunting, fishing, and other outdoor activities. *The Sporting News* debuted in St. Louis in 1885, and its quick success encouraged newspaper publishers such as Joseph Pulitzer to add sporting news sections to their daily newspapers. Sports were considered entertainment and a form of escapism from what the late nineteenth century considered a frantic lifestyle, but they also taught an important lesson, especially to the young. Like life, sports had rules, and one needed to learn and obey them to succeed and win. The alternative, disobedience, meant failure, disgrace, and perhaps even death in a society obsessed with social Darwinism.

Magazine publishers were not far behind their newspaper counterparts in filling the new void for sports information. *Sports Afield* was founded in 1887, followed by *Outdoor Life*, which began as a Denver-based bicycling magazine in the early 1890s. John P. Burkhard and Henry W. Wack were talking in their duck blind in September 1895 about the wholesale slaughter of wildlife by so-called sportsmen. The conservation movement was in full swing, inaugurated by the establishment of Yellowstone National Park in 1872 and fanned by advocates such as John Muir and Gifford Pinchot. Burkhard and Wack disapproved of thrill shooting and set out to preach the new gospel of conservation to middle-class hunters and fishermen in their publication, *Western Field and Stream*, which was published in their hometown of St. Paul, Minnesota.

Theodore Roosevelt was the first of many notable conservationists to appear in the publication. Writing in January 1899, the president-to-be noted of the grizzly bear, “He has been hunted for sport, and hunted for his pelt, and hunted for the bounty, and hunted as a dangerous enemy to stock, until, save the very wildest districts, he has learned to be more wary than a deer.” Another article on childhood hunting observed a few years later, “All little boys crave the out-of-doors—when they don’t get enough of it.” The magazine was moved to New York in the first years of the twentieth century and its title modified, but it continued to struggle financially. Reportedly Henry Ford offered Burkhard and Wack \$1,200 worth of stock in his new motor car company in 1905 in exchange for twenty full-page advertisements, but the pair turned him down because they were desperate for cash. Eltinge Warner, a printing salesman and circulation manager, took over the business side of the magazine in 1906 and purchased the publication upon Burkhard’s death in 1908.

Circulation climbed, and *Field and Stream* prospered as conservation measures advocated by the magazine increased animal and fish populations. Warner became involved in the motion picture industry and published other magazines using profits from *Field and Stream*, but his first magazine kept to its original course. “When trout are rising, hope is strong in the angler’s heart, even though he may not have determined in what position or upon what insects the fish are feeding,” a *Field and Stream* article on fly-fishing maintained in 1912. An article on a shark attack in 1933 portended, “terrible things . . . there in the murky water and the misty moonshine.” The magazine also featured the self-deprecating humor of Gene Hill and the off-the-wall antics of Ed Zern.

A boon in men’s magazines during and after World War II expanded the circulation of *Field and Stream*. By 1963, *Sports Afield*, *Outdoor Life*, and *Field and Stream* had a combined circulation of 3.7 million. Warner sold *Field and Stream* to the book-publishing house of Holt, Rinehart, and Winston in 1951, which was subsequently absorbed by CBS magnate William S. Paley and reorganized into the CBS Magazine division in 1971. The magazine peaked in size at about 200 hundred pages per issue during the 1970s, because of the payment method for writers. “We don’t pay by the word any more,” said managing editor Margaret Nichols in 1995. “Long ago, when we paid a nickel a word, some people let their stories drag on and on. Fish would jump, then jump again and again and again.” The circulation plateaued at two million during the 1980s and 1990s, but the venerable *Field and Stream* faced two new challenges. It was sold twice, ending up with Times Mirror Magazines, the publisher of *Outdoor Life*, in 1987. And a host of more health and fitness-conscious men’s outdoor magazines, with titles such as *Outside*, *Backpacker*, and *Bike*,

Burt Lancaster (left) and Kevin Costner in a scene from the film *Field of Dreams*.

stagnated advertising and circulation rates and left more traditional outdoorsmen's publications like *Field and Stream* hunting for a new image.

—Richard Digby-Junger

## *Field of Dreams*

Ostensibly about baseball, the emotional, magical *Field of Dreams* became more than just a movie for many people following its release in 1989 to both critical and popular acclaim. Directed by Phil Alden Robinson and starring Kevin Costner, James Earl Jones, and Ray Liotta, the film made almost sixty-five million dollars at the box office and another forty million in video rentals and purchases.

Based on W. P. Kinsella's book *Shoeless Joe*, *Field of Dreams* is a story of faith, forgiveness, and redemption. Iowa corn farmer Ray Kinsella (Costner) and his family lead a normal, if boring, existence until, during one of his regular inspection walks through the cornfields, Kinsella hears a ghostly voice whispering the phrase ". . . if you build it, he will come." At first Kinsella assumes he is hallucinating, but the voice returns. After seeing a vision of a baseball diamond in the middle of his corn, Kinsella plows up the corn and builds a ballpark, although doing so puts his family and farm in a precarious financial position. Just at the point when Kinsella is convinced he has gone mad, Shoeless Joe Jackson (Liotta), Kinsella's late father's favorite player, walks out of the corn to play baseball on the field.

Although Kinsella believes he has fulfilled his mission to bring Shoeless Joe back to redeem himself, he continues to hear messages from the voice in the corn. The voices eventually lead him to Terence Mann (Jones), an author and activist Kinsella followed in the 1960s. Mann has given up his activism and become a software designer. Kinsella convinces Mann to return to Iowa with him, and on their way, they are told by the voice to find an old country doctor, Moonlight Graham (Burt Lancaster), who played one game in the major leagues but never got to bat. Although the doctor is long dead, he appears as a young man to Kinsella on his way back to Iowa. When Kinsella, Mann, and the teenage Graham return to Iowa, Kinsella meets the ghost of his father as a young minor league baseball player. For the first time, Kinsella is able to understand his father and the deeper meaning behind his father's obsession with baseball and Shoeless Joe Jackson. Not long after this, bankers come to foreclose on the farm. As Kinsella begins to realize the extent of his plight, an enormous line of cars begins to form outside of his home—people wanting to pay to watch Shoeless Joe and his fellow ghosts play baseball on Kinsella's field.

*Field of Dreams* touched a particular chord with baby boomers. Kinsella himself represents the average boomer male, forgetting how important baseball was to him as a child. Mann is clearly symbolic of all of the activists in the 1960s who sold out their principles to make money. The bankers foreclosing on the Kinsella farm represent the faceless corporations that now own baseball teams, focusing entirely on profits rather than a love of the game. The connection between boomer children and baseball is perhaps best explained by Mann, who looks out onto the field of ghost players and proclaims, "The one constant through all the years, Ray, has been baseball. America has rolled by like an army of steamrollers. It's been erased like a blackboard, rebuilt, and erased again. But baseball has marked the time. This field, this game, is a part of our past, Ray. It reminds us of all that was once good, and what could be good again."

*Field of Dreams* started a resurgence of baseball nostalgia, with dozens of books and movies recounting the "good old days" when children collected baseball cards for trading, rather than saving them as an investment. The actual "Field of Dreams" movie site on the Lansing Farm in Dyersville, Iowa, continues to be one of the top ten tourist attractions in the state. People flock from all over the United States to visit the field, trying to make the same connection with the lost innocence of youth that the film so effectively portrayed.

## Field, Sally (1946—)

From perky, surf-loving Gidget in 1965 to gray-haired, frumpy Mrs. Gump in 1994, Academy award-winning actress Sally Field has exhibited a wide range of talent and an enduring likability in a profession that too often ignores women over the age of 40. If her roles have a common theme, it is that women are intelligent, strong, and capable of heroic deeds. Born in Pasadena, California, on November 6, 1946, Field was brought up by her actress mother and

Sally Field

her step-father Jock Mahoney. At 17, while most young women were deciding whether to go to college or to get married, Field won the starring role in the television show *Gidget* (1965-66), a role originally played by Sandra Dee in the hit movie of the same name. *Gidget* epitomized the typical teenager of the early 1960s, and Field was ideal for the role, establishing herself as a television star that gave young women a positive role model: enthusiastic and slightly goofy, but always inherently obedient and moralistic. The role of *Gidget* was followed by the even more endearing role of Sister Bertrille in *The Flying Nun* (1967-70). Ironically, Field was pregnant with her son Peter while flying through the air around the convent. She had married her high school sweetheart Steve Craig in 1968. Field gave birth to a second son, Eli, but the couple divorced in 1975. Field's last series, *The Girl Was Something Extra* (1973-74), told the story of a young newlywed who had extra-sensory perception (ESP).

The breakout performance of Field's early career came with the role of Sybil in 1976. Playing a young woman with multiple-personality disorder, Sally Field sealed her place in American television history and won an Emmy for her efforts. *Sybil* was as different from *Gidget* as it was possible to be. Bound up in her mental illness, *Sybil* took no pains with her appearance and had very few people skills—traits that were the essence of *Gidget*. While she met the challenges of this difficult role with apparent ease, Field paid a price

for playing against type. She was no longer perceived as an attractive leading lady. In 1977 she took on a different type of challenge with the role of young, attractive, fun-loving Carrie who accepts a ride from trucker Burt Reynolds while fleeing her wedding in *Smokey and the Bandit* (1977, 1980, 1983). With their seven-year alliance, the two became constant fodder for tabloids. However, while Field was entering her prime as an actress, Reynolds entered a period of decline, and the romance ended.

In 1979, Sally Field won her first of two Academy awards as Best Actress for her role in *Norma Rae*, the story of an Alabama textile worker who fought for unionization. When Field, as Norma Rae, stood up, holding her placard for union rights, and faced down irate mill owners, no one thought of Gidget. It was a moment that cemented the maturity of Sally Field as an actress and illustrated the gains made by women in American film. Unlike earlier female stars who had become known mostly for romantic and maternal roles, women of the 1970s, 1980s, and 1990s were allowed to become heroes by standing up for what they thought was right. Field's second Academy Award for Best Actress came with 1984's *Places in the Heart*. Playing Edna Spaulding, a Depression-era widow and the mother of two who fought to save her farm with only the help of a black man and a blind man, Field demonstrated that heroes could be more traditional than Norma Rae and still be memorable. Field said in a 1984 interview that Edna was her favorite role because she identified with her fierce love for her children and her strong will to survive. It was when accepting this Academy award that Field won a unique place in the award's history. Accepting the honor as proof that she had surpassed the roles of Gidget and Sister Bertrille, Field effused: "You like me—You really like me!" Rather than being accepted as the words of a woman who had matured from being a little girl struggling to please her absent father to a mature actress accepted by her peers, critics, and comedians had a "field" day with her acceptance speech.

Throughout her career, Sally Field has demonstrated versatility as an actress. In 1984's *Absence of Malice* with Paul Newman, Field played a reporter determined to get her story even at the cost of destroying innocent people. In 1985, Field played the much-younger love interest of veteran actor James Garner. Even though the movie was a romantic comedy, Field managed to strike a blow for women's rights with the role of a single-mother trying to raise her son by boarding horses. In 1989, Field led an all-star cast in *Steel Magnolias*, a fact-based story of six southern women who hang out at a beauty shop, loving and supporting one another and remaining strong even when death claims one of their group.

Continuing to take chances, Sally Field played the stable wife of a forever-youthful Robin Williams in *Mrs. Doubtfire* (1993), the voice of Sassy the cat in the two *Homeward Bound* (1993, 1996) movies, and justice-seeking mothers of an abducted daughter in *Not without My Daughter* (1991) and of a slain daughter in *Eye for an Eye* (1996). She again became involved in an Academy award-winning movie in 1994 when she accepted the role of Mrs. Gump in *Forrest Gump*. Ironically, Field played the mother of Tom Hanks, who had played opposite her six years before in *Punchline*. In 1998, Field continued to hold her own in the world of entertainment. She directed and starred in a segment of Tom Hank's phenomenal *From the Earth to the Moon* (1998) and remains active in improving the image of women in the entertainment industry and in a number of charitable works.

## Fields, W. C. (1879-1946)

One of film comedy's best-loved performers, W. C. Fields has inspired countless impersonators but few imitators. In more than forty films over three decades, the bulbous-nosed actor perfected a unique comic persona marked by a love of whiskey, a hatred of small children and animals, and a love of underhanded chicanery. Among the memorable quotes attributed to Fields are "Anyone who hates dogs and kids can't be all bad" and "A thing worth having is a thing worth cheating for." His famous epitaph, "All things considered, I'd rather be in Philadelphia," paid mocking tribute to his birth city.

Born William Claude Dukenfield, Fields left home at age eleven to escape his abusive father. By age thirteen he was a skilled pool player and juggler, and was soon entertaining customers at amusement parks. By the age of twenty-one, he was one of the leading lights of Vaudeville. He played the Palace in London and starred at the Folies-Bergere in Paris. He appeared in each of the Ziegfeld Follies from 1915 through 1921. Fields's stage act, which featured both

W. C. Fields with Charlie McCarthy.

comedy and juggling, was immortalized in 1915 in his first silent film, *Pool Shark*. He devoted himself to films throughout the 1920s, though his comic persona did not find full flower until the advent of sound in the next decade.

Fields's best silent feature, *It's the Old Army Game* (1927), was later remade as his breakthrough talkie, *It's a Gift* (1934). That film, which cast Fields as a grocery clerk who moves his family west to manage a chain of orange groves, established for all time the incomparable W. C. Fields persona. His nose reddened by excessive drink, speaking sarcastic asides in a comic snarl, forever bedeviled by animals and children, Fields was the cantankerous bastard inside of every moviegoer, the personification of the male id unleashed. This emerging comic identity was also on view in a series of classic shorts he made for Mack Sennett. Most notable among these are *The Dentist* (1932), *The Barber Shop*, and *The Pharmacist* (both 1933).

Fields proved himself more than a mere clown, however. He also found a niche playing character roles in adaptations of the classics. He portrayed Humpty Dumpty in the all-star 1933 film version of *Alice in Wonderland*, then replaced Charles Laughton as Micawber in the 1935 adaptation of *David Copperfield*. Fields was also given serious consideration for the title role in 1939's *The Wizard of Oz*, though that part eventually went to Frank Morgan.

As the 1930s drew to a close, Fields began work on one last stretch of classic films. He teamed up with ventriloquist Edgar Bergen and his dummy Charlie McCarthy for the 1939 circus farce *You Can't Cheat an Honest Man*. *My Little Chickadee* (1940) paired Fields with Mae West, an inspired bit of casting that produced some of their best work. *The Bank Dick*, which Fields wrote using an alias, was perhaps his finest starring vehicle. Fields's last full-length starring feature was 1941's *Never Give a Sucker an Even Break*, an anarchic comedy whose plot outline Fields reportedly sketched out on a cocktail napkin.

Battling poor health, Fields continued acting in bit parts well into the 1940s. His infirmities eventually caught up with him, and he died of pneumonia on Christmas Day, 1946. In the decades after his death, Fields's filmic oeuvre generated a vibrant cult following. His works became a staple of late-night art house film festivals, and he was particularly beloved on college campuses. In 1976, Rod Steiger gamely impersonated the comic legend for a well-received biopic *W. C. Fields and Me*.

## Fierstein, Harvey (1954—)

The gravel-voiced Harvey Fierstein was one of the first openly homosexual American actor/playwrights who lent his name and support to gay rights and AIDS (Acquired Immune Deficiency Syndrome) activism during the 1980s and 1990s. His breakthrough work was the autobiographical 1982 play *Torch Song Trilogy*, dealing with a young man's coming out and his relationship with his mother. Fierstein became familiar to moviegoers for his work as a supporting

actor in such blockbuster hits as *Mrs. Doubtfire* (1993) and *Independence Day* (1996) and he narrated the 1984 Oscar-winning documentary *The Times of Harvey Milk*, about an assassinated gay politician.

## The Fifties

The 1950s were a time of rapid change and lock step conformity, of new forms emerging out of old, and technical innovations proceeding at a breakneck pace. For all the talk of traditional American values, the country was shedding its past as a snake sheds its skin. By the decade's end, so much had changed—internationalism replacing isolationism; rampant consumerism replacing thrift; the extended family network, once the social glue binding the country, superseded by the suburban nuclear family—that the country was scarcely recognizable. Yet, the 1950s continues to be perceived as the ultra-American decade. Nostalgic for a time when America was without question the most powerful nation on earth, and, like the biblical land of milk and honey, overflowing with bounty, America has projected its anxieties back to this supposedly Golden Age. This perception does not bear scrutiny. At the time, it seemed as if overnight a familiar way of life had been replaced by shopping malls and prefabricated suburbs, the atom bomb and television sets—especially television sets.

It is almost impossible to calculate the effect television had in the first decade of its usage. Television intruded into every aspect of American life, leaving almost nothing untouched. Book sales declined; radio listenership slumped precipitously; the film industry, already in shambles, was dealt a staggering blow. By 1951, movie theaters had begun to close throughout the country—134 in Southern California alone—and even cities with only one television station were reporting drops in film attendance of between 20 and 40 percent. So fascinated was the public with this new medium, according to a 1951 study, that when a popular program was on, toilets would flush throughout the city as if on cue, in concert with commercial breaks or the conclusion of a program. Television altered the country's mores and conventions, its collective vision of the nation and the world, and the very nature of electoral politics. Television brought America the wars abroad and the war at home—the Arkansas National Guard blocking court-ordered school desegregation in Little Rock, the French Catastrophe at Dien Bien Phu—and the confluence of these forces, racial tension and American internationalism, would foster the more radical changes of the 1960s.

Nowhere was the effect of television so pervasive as in advertising, and so great was the effect of television advertising on consumer habits, it was almost Pavlovian. "Television was turning out to be a magic machine for selling products," writes David Halberstam, author of an exhaustive survey of the decade, "and the awareness of that was still dawning on Madison Avenue in the late 1950s." Six months after Revlon began sponsoring the popular game show, *The \$64,000 Question*, for instance, the company's revenues had risen 54 percent. The next year sales had risen to \$85.7 million, a \$33 million

increase, a figure close to Revlon's total profits prior to television. Obviously, there were winners and losers in this equation. The companies that could afford national advertising gained market share, and smaller companies lost it. In short, television furthered the subsumption of market capitalism under the hegemony of multinational corporations, a profound blow to the free-market that television so zealously trumpeted.

Television advertising was also used to great effect in politics. The campaign commercial became an integral part of the American electioneering, as did television coverage, replacing the whistle-stop tour as a tool of effective voter-outreach. Television could make or break a candidate: it was Richard Nixon's famous televised "Checkers" speech that saved his 1952 vice-presidential candidacy, and television again that proved his undoing against John F. Kennedy in 1960. In their debate, Nixon, exhausted by his arduous campaign schedule, and with the sweat washing away his makeup, appeared so haggard and pale that acquaintances called afterwards to inquire after his health. Kennedy, on the other hand, having spent the previous week relaxing poolside in Southern California, literally radiated vitality; the choice was apparently between a derelict used car salesman and a bronzed demi-god.

There was a schizoid quality to life in the 1950s, a manic oscillation between paranoia and omnipotence. The disjunct was fueled by the long shadow of the Depression and among certain parties, a blind, unreasoned hatred of Communism. "You and I were trained for a conflict that never came," writes D. J. Waldie in his memoir of life in Lakewood, California, the second, mass-produced suburb built in America (Levittown, New York, was first). "At my grade school, the Sisters of St. Joseph made me hate Communists, then intolerance, and finally everything that could break the charmed pattern of our lives. I am not sure the Sisters of St. Joseph expected this from their daily lessons on the Red threat." One might attribute this hyper-vigilance to a form of collective post-traumatic stress disorder, a reaction to defeating the Nazis, as if prosperity—linked as it was to war production—was contingent on possessing a worthy enemy to defeat.

In fact, this was precisely the case. The American economy had become beholden to Keynesian theory, perpetual war production. As it was, America had already experienced a series of recessions since the end of the war. The more leftist historians of the age would argue that the bellicose nature of our foreign policy—Korea, our material support of France's struggle in Indochina, our numerous covert actions in places like Guatemala and Iran—and our strident anti-Communism was in fact a method of keeping the war machine chugging away full blast. It was the Monroe Doctrine expanded to include the entire world. In addition, our numerous foreign interventions coincided with vested interests, and it was often at the behest of large corporations that foreign policy was molded. One seldom mentioned proof of this thesis is the new zeal with which Americans were taxed—they were spending more, but they were also, many for the first time, paying an income tax, much of which went to supporting our foreign excursions. By the end of the decade, even Eisenhower could not ignore the changes the cold war had wrought, and his farewell address carried a dire warning.

Above all else, red-baiting made for effective campaign politics. Richard Nixon, perhaps America's most opportunistic politician, first saw the value of red-baiting, using the Alger Hiss hearings before the House Un-American Activities Committee (HUAC) as a bully pulpit, pushing anti-Communist legislation through sub-committee when the matter seemed all but dead. Nixon then seized the moral high ground

in his 1950 senatorial race, mercilessly baiting his liberal opponent, Helen Gallagher Douglas, at every opportunity. Senator Joseph McCarthy became the most notorious red-baiter of all, stepping into the role of what David Halberstam called an "accidental demagogue" when he casually mentioned a fictitious list of State Department Communists at a Lincoln Day Celebration in Wheeling, West Virginia. McCarthy's campaign to ferret out Communism lasted four long years, fueled as much by a lust for headlines as by ideological conviction. It ended with his ill-conceived attack on the U.S. Army, leading to his censure by the Senate and political disgrace. The red scare was, as Maryland Senator Millard Tydings said of Joseph McCarthy, "a hoax and a fraud . . . an attempt to inflame the American people with a wave of hysteria and fear on an unbelievable scale." As such, it was a smashing success. Nixon was victorious in his senatorial campaign against Douglas in 1950. Tydings, whose comments exposed him to the full brunt of far right wrath, was not: he lost his seat in 1956.

If America was exporting spear rattling abroad, at home the good life was being rationalized as never before. Technology and the mania for speedy service had crept into almost every facet of commerce from restaurants (McDonald's) to motels (Holiday Inn) to shopping (E.J. Korvetts, and the many discount department stores Korvetts inspired) to farming itself. Family farms disappeared at a staggering rate, replaced by large agribusiness conglomerates, whose indiscriminate use of pesticides and feed additives, along with promotion of the beef industry, changed forever the American diet. Whatever product or service could be performed, could be performed better and more efficiently as part of a chain, or so it was thought. Ray Kroc, the original franchiser of McDonald's, demonstrated this with stunning success. It was part of a democratization of goods and services. What had formally been the province of the upper-middle class—leisure, cars, houses—was now available to the working man, albeit in a watered-down form. Nowhere was this dual relationship—technology and egalitarianism—in commerce more apparent than in the housing industry.

Housing had suffered from the paucity of building supplies during World War II. In 1944 there had been a mere 114,000 new house starts, and with the return of America's soldiers, the housing shortage became a housing crisis. Bill Levitt, himself a veteran of the Seabees, began thinking about applying assembly line techniques to housing before the war, and had bought a plot of farmland on Long Island with his brother for that very purpose. Levitt wanted to bring housing to the working class and emancipate them from the inner city. Following the war, Levitt, with the aid of Federally-insured mortgages, began building a community of 17,000 minimalist Cape Cod houses, a scale of production heretofore unknown. Everything was pre-fabricated and transported to the building site, where specialized crews moved from one lot to the next in assembly-line fashion performing their single task. Construction was finished within a matter of months.

"This is Levittown! All yours for \$58. You're a lucky fellow, Mr. Veteran," proclaimed an ad in the *New York Times*. "Uncle Sam and the world's largest builder have made it possible for you to live in a charming house in a delightful community without having to pay for them with your eye teeth." Veterans stormed Levitt's sales office; in one day alone 1,400 contracts were drawn up. The new owners were pioneers in what became a mass exodus from city to suburb as all across the nation similar projects were initiated. Levitt himself built several other Levittowns along the East Coast. It was a revolutionary change in living for the nuclear family. In 1955, Levitt-type suburbs accounted for 75 percent of the new housing starts. Within thirty years

some 60 million people had moved to the prefabricated suburbs Levitt had helped to create, while fifteen of the twenty-five largest cities had declined in population, a massive migration that would have dramatic consequences in the ensuing years.

The ranks of the suburbanized middle class were swelling, but what was the price of this newfound affluence? The suburbs were clean and safe, but living in them could be enervating, especially to college-educated women who had forsaken careers for domesticity and child-rearing. Nor were men spared the malaise. It was ironic, an irony not lost on many returning veterans, that having risked their lives in war, they had returned to another kind of death, that of the colorless organization man. In 1950 sociologist David Reisman published *The Lonely Crowd*, his psychological exploration of middle class anomie. Shortly thereafter, Sloan Wilson quit his advertising job to write *The Man in the Gray Flannel Suit*, his 1955 novel portraying the emptiness of the suburbs. "Have we become a nation of yes-men?" these books asked. Was solace to be found in blind materialism? Many sensed the danger, but could not resist the allure. "*The Lonely Crowd* was anatomized in 1950," wrote Richard Schickel, "and the fear of drifting into its clutches was lively in us. *White Collar* [C. Wright Mills' truculent attack on conformist culture] was on our brick and board bookshelves, and we saw how the eponymous object seemed to be choking the life out of earlier generations . . . though of course, even as we read about these cautionary figures, many of us were talking to corporate recruiters about entry-level emulation of them."

While the nation fell further under the sway of homogeneity, it was no surprise that a kind of exaggerated rebel would become a popular cultural icon, an omnipresent figure in literature (the Beats), in rock and roll, and the movies. Stars such as James Dean, Marlon Brando, and Montgomery Clift assayed a new type of masculinity; sensitive, brooding, and rebellious, while Elvis Presley, and to a greater degree, Jerry Lee Lewis, comported themselves with a haughty menace. These sneering film and music stars were America's surrogate rebels, acting out in ways most people could ill afford to chance. America's contempt for what it had become was caught in the sneer, an expression that, when employed by Marlon Brando or James Dean or Elvis Presley, contemptuously leveled the organization man and the carrot-on-a-stick world of nine-to-five.

Rock and roll was this rebellious spirit's most potent manifestation. The culmination of years of cross-cultural evolution, teenagers began enthusiastically seeking out "race" music, one of a variety of blues and rhythm and blues (R&B), in the early 1950s, an enthusiasm all the more attractive for the disapprobation with which parents reacted to it. Rock and roll was unabashedly sexual, exuberant, and raucous. To parents everywhere it represented a threat, an insidious menace crawling up from the cellars of the lower classes. In 1951, a Cleveland record store owner reported this new craze to DJ Alan Freed, then playing classical music on a late-night show, and prevailed upon him to change his show to the nascent rock and roll, making Freed one of the first disc jockeys in the country to program bi-racially. Previously, a Memphis DJ, Dewey Phillips, had devised a show, *Red, Hot and Blue*, that had become the rage among Memphis's hip youth. Memphis was thoroughly segregated, but on Phillips show one could hear Ike Turner, Fats Domino, and B. B. King alongside Bill Haley, Hank Williams, Johnny Cash; in short, the two styles from which rock and roll derived played side-by-side.

Elvis Presley, who listened religiously to Phillips show, exemplified this hybrid, blending country-western, blues, and evangelical mania, presented with a sneer ripped straight off the face of James

Dean, whom the young Elvis worshipped. Linking the surliness of Dean with the frenzy of the gospel revivalist was an inspired combination. "This cat came out in a coat and pink shirt and socks and he had this sneer on his face and he stood behind the mike for five minutes, I'll bet, before he made a move," said country singer Bob Luman in recalling an early Elvis show. "Then he hit his guitar a lick and he broke two strings. . . . So there he was, these two strings dangling, and he hadn't done anything yet, and these high school girls were screaming and fainting and running up to the stage and then he started to move his hips real slow like he had a thing for his guitar." This was the threat that parents worried over, why religious groups burned rock and roll records, and why the music was ineluctably attractive to the kids, and the nature of music, and musical celebrity would never be the same.

The change in rock and roll over the course of the decade, from unbridled passion to commercial product, was an early lesson in co-optation. But for the Beat writers, defiance to American values, such as they were, was a central tenet of their thinking, and they were regularly castigated for it. Writing in the November 1959 issue of *Life*, Paul O'Neill called the Beat writers "undisciplined and slovenly amateurs who have deluded themselves into believing their lugubrious absurdities are art simply because they have rejected the form, styles, and attitudes of previous generations." The Beats rejected American consumerism and the plastic world of mortgages and car payments, living, instead, on the periphery. "In their discontent with American values," writes Ted Morgan, William S. Burroughs' biographer, "with cold-war suspicion, with loving the bomb, with a society shaped by corporate power and moral smugness, they had come up with something more vital. . . . In their rejection of the boring, the conventional, and the academic, in their adoption of a venturesome lifestyle, they gave everyone the green light to plumb their own experience." And while they were derided in the 1950s, endlessly examined for moral failings, labeled as naysayers and saddled with the diminutive, Beatnik (after Sputnik), America could not be rid of them. Within a few short years, their progeny, the baby-boomers who read them in high school, were omnipresent.

The most common representation of the 1950s is a sort of glossy coffee table *histoire*, heavy on photographic images and short on historical fact. It is these images of tail fins and spotless kitchens and poodle skirts that endure, as if the other America, the America of violent racist attacks, of Little Rock and Montgomery—the incipient racism and paranoia of the most powerful country on earth—never existed. "One reason that Americans as a people became nostalgic about the 1950s more than twenty-five years later," writes Halberstam, "was not so much that life was better in the 1950s (though in some ways it was), but because at the time it had been portrayed so idyllically on television. It was the television images of the era that remained so remarkably sharp in people's memories, often fresher than memories of real life. Television reflected a world of warm-hearted, sensitive, tolerant Americans, a world devoid of anger and meanness of spirit and, of course, failure." Those aficionados of the decade who dress in vintage clothing, drive 1950s-era cars, and listen to the music, have made of the 1950s a virtual cult of style. Their strivings to elude the present constitutes a nostalgic retreat, a harkening back to a Golden Age through the mute power of artifacts. This beneficent image, the make-believe world represented by such movies and television shows as *Grease*, *Happy Days*, *Sha Na Na*, and *Laverne and Shirley*, constitutes an evasion, a return to a time of clear cut values, which is all the more insidious for being a fiction. As a

decade, the 1950s represents a sort of idealized America, but this image has more to do with the 1970s television show, *Happy Days*, than with any objective reality.

It is perhaps to be expected, then, that, compared to the abundance of memoirs, histories, analyses, and so on published about the 1960s, there is such a paucity of historical material on the 1950s. Ironic, and unsettling, because the America we have inherited, and with which some take umbrage, was shaped in great part by the 1950s. Much of the landscape we take for granted—fast food franchises and foreign policy, corporate hegemony and interstate freeways—was brought into being during that era, as was the generation that went to college, protested the war, took acid, and wrote a memoir. They prefer to remember the 1950s as a bad dream.

—Michael Baers

## Film Noir

The genre known as film noir emerged from economic, political, and moral crises in European and American cultures in the years

leading up to World War II. Its American origins are in the “tough-guy” and “hard-boiled” novels that became popular in the 1920s and 1930s, and which, as Hollywood became more liberal in the 1940s and 1950s, could more easily be adapted for the movies than before. Such novels were also popular in Europe, particularly in France, where they were known as “romans noirs,” and were published under imprints with titles such as “La Série Noire.” When the embargo on American films that existed in France under German occupation was lifted in 1944, many of the films that first arrived were based on hard-boiled novels, and it seems natural for French critics to have begun categorizing these films as “film noir.” The European influence on film noir is not restricted to its name, however. Many of the cinematic techniques, and the overall pessimistic outlook of these movies, can be found in French “poetic realist” films made in the 1930s, and more especially, the work of German Expressionist film makers, many of whom emigrated to the United States to escape the Nazis and went on to work in Hollywood.

German directors such as Fritz Lang and Robert Siodmak, and cinematographers, such as Hungarian-born John Alton, used contrasting light and shade, odd camera angles, and scenes dominated by shadow, to reproduce on screen the bleak vision of hard-boiled writers such as Dashiell Hammett, Cornell Woolrich, and others. Movies in the film noir style can be recognized by their visual dependence on the effect of *chiaroscuro*, the contrast between light and shade. Characters and objects in film noir are often backlit, so that they cast long shadows and their features are obscured, or else the principals are brightly lit from the front so that the background is dark. Faces are pictured half-observed by darkness, or crosshatched by the shadows of prison bars, window frames, or banister rods; the corners of rooms are dark and the interiors of cars provide a gloomy, claustrophobic setting.

Although many of its visual codes are familiar, the overall concept of film noir is notoriously difficult to pin down; although their plots usually center on crime, films included in the corpus cannot easily be identified as belonging to one particular genre. For example, Howard Hawks's *The Big Sleep* (1946), an adaptation of Raymond Chandler's novel of the same name, is a detective thriller, while Charles Laughton's *The Night of the Hunter* (1955) concerns an ex-con's search for the proceeds of a robbery committed by his former cellmate. Billy Wilder's *Sunset Boulevard* (1950) depicts a vain and ageing star of silent movies obsessed with loyalty, her lost beauty and star status; it ends with her murder of the young man who rejects her and is narrated, famously, by the victim, face down in the swimming pool. What these films do have in common, however, is a fascination with psychological instability, sexual obsession, and alienation. Unlike the “Hollywood Gothic” of films such as *Dracula* (1931) or *The Bride of Frankenstein* (1935), what appears as monstrous in film noir derives not from the half-human horrors of the vampire or Frankenstein's monster, but from the all too human characteristics of jealousy, greed, lust, and ruthless self-interest.

Such themes are by no means exclusive to film noir, of course, and film categories must be defined as much by their technical and visual features as by thematic and formal tendencies. If film noir is difficult to define in terms of the plots of the films it includes, the problem is hardly eased by critics' reliance on terms such as “style,” “mood,” and “sensibility” when discussing films of “noir” pedigree. Rather than seeing film noir as a genre, many critics instead view it as a movement, a set of films and filmmakers expressing a common approach to life using similar literary sources, narrative structures, and visual codes.

The difficulties of describing film noir as a genre combine the problem of the sheer variety of different types of stories such films encompass, and the question of what it is exactly that distinguishes them from other films. Many films, for example, use *chiaroscuro* but can be described only as *noir-ish*, while others, such as *Gilda* (1946) are accepted as film noir, but betray their otherwise pessimistic tone with a happy ending of sorts. A further complication is that while genres seem not to be trapped in a particular time or place, film noir is very closely linked with the Hollywood of the 1940s. A significant proportion of films in the film noir mode that have been made since then refer back, in some way, to the immediate post-war period, and many of the reasons for film noir's appearance at that time and place have to do with the particular culture of Hollywood. Financial restrictions on filmmakers during the war have already been mentioned, but other factors, such as the perception of German Expressionist style as "quality," and the need among the smaller studios for new and distinctive film products, are also important. The opportunities film noir gave for directors and cinematographers to "show off" their talents, combined with the gradual relaxation of the Hays Code, which controlled the "moral content" of movies, made Hollywood cinema receptive to the content, mood, and style of film noir in the 1940s.

Because most noir films were "B" movies, or at least made much of their money in the so-called "grind houses"—small theatres playing a rolling program and catering for people on the move from one town to another—budgets for sets, costume, and film stock were limited. This was particularly the case with films made during and just after the war, when money for new sets was restricted to \$5000 per film. The shadowy look of what has become known as film noir could be used to conceal props and sets lacking in detail, or perhaps missing altogether. While much of this could be achieved by lighting effects alone, cinematographers such as John Alton, or Gregg Toland, who worked on Orson Welles's famous early noir film, *Citizen Kane* (1940), enhanced and spread out the darkness in their pictures by underexposing slow film. Faster film stock, which had only recently become available, was, in any case, much more expensive.

Besides economic considerations, the visual style of film noir owes much to the ideas and techniques of émigré directors such as Lang, Siodmak, and Wilder. Lang's German film, *M* (1931), for example, uses shadowy streets, empty, darkened office buildings, and unlit attics to depict the inner turmoil of the child murderer, played by Peter Lorre. If the chaos of the murderer's mind is represented by the cluttered attics in which he hides, so the dank, half-lit cellar in which he is lynched by a mob of "decent" people suggests that humanity at large is troubled by a dark inner life. This view of the human psyche as dark and troubled, brought by directors such as Lang and Siodmak from Nazi Germany, appears too in the "tough" stories written in America during the 1920s and 1930s. Combining such a view of humanity with the American themes of urban alienation, organized crime, and fear of failure, such stories became ideal vehicles for the émigrés and their followers, and it is from this combination that the mood and sensibility of film noir developed.

Robert Siodmak's 1946 film of Ernest Hemingway's short story "The Killers" (1927) is a good example of the interplay between the look of film noir and its exploration of the ambiguities of the human psyche. *The Killers* concerns a man known as "The Swede" (Burt Lancaster) who waits in his small, dark room for his killers to arrive, accepting his fate because "I did something wrong. Once." Hemingway's story takes us only to the moments before the killers arrive,

while the film uncovers what it was he did wrong through a narrative constructed mainly from flashbacks. The images of The Swede's last moments include shots of him, in a darkened room, lying half-dressed on the bed, deep in thought. The impenetrable shadows around him suggest the impenetrability of his thoughts. His enigmatic and ambiguous answer to the man who warns him of his approaching death suggests the possibility of regret for a criminal past, but turns out to refer to his obsession with a woman. Through flashbacks, and the insurance investigator's haphazard reconstruction of events, it emerges that what The Swede has "done wrong" has nothing to do with the fact of his criminal past but with the psychological reasons for it.

This emphasis on The Swede's psychological state is representative of film noir's fascination with psychoanalysis. Frank Krutnik suggests in *In a Lonely Street* (1991) that Freudian psychoanalysis became popular in America during the late 1930s and 1940s and coincided with the adaptation of hard-boiled crime stories such as "The Killers" by Hollywood. Krutnik argues that the shift in crime thrillers towards highlighting the psychological reasons for and consequences of crime can be attributed to this popularization of psychoanalysis. This is evident, he thinks, in the complex narrative structures of many films noirs, including *The Killers*. In these films, "the process of storytelling becomes submerged"; it becomes unclear who is telling the story, whose version is true, and what their motives are for telling it in a particular way. *Citizen Kane*, for example, addresses directly the process of telling and retelling stories, being the story of the rise and fall of a newspaper magnate. In *Citizen Kane*, as in film noir in general, the margins between fantasy, psychosis, and reality become blurred; the film emerges as the story of Kane's psychological flaws, centering on an incident from his childhood. All of these signs of unstable psychological states are enhanced by film noir's adoption of techniques from Expressionist cinema: exaggerated darkness and light/shade contrast, strange camera angles, and plain, unrealistic sets.

While the political conditions of Europe in the 1930s affected the American film industry through the arrival of talented filmmakers, film noir is also a product of the political instability of the period during and after World War II. Critics point to a crisis in American national identity, the problems of war veterans readjusting to civilian life, and the new threats of the atom bomb and the Cold War, as possible cultural reasons for the flourishing of film noir in the period 1941 to 1958. Certainly the aftermath of war meant that large numbers of young men, to some extent institutionalized by life in the forces, and often physically or psychologically damaged, now had to look after themselves and find work in a competitive labor market that included many more women than before. They returned from war anxious that their contribution be acknowledged, yet questioning what they had fought for, given the new threat that was emerging in Eastern Europe and the Far East. On a more personal level, many returned to wives and families who were no longer dependent on them for financial or emotional support, whose lives had continued without them for several years, and who were unable to understand the ordeal they had suffered. All of this contributed to a sense of instability and hostility in the culture at large that is a central feature of film noir.

Like many films of the time, *The Blue Dahlia* (1946) makes direct reference to the concerns and problems associated with returning war veterans. The story revolves around the return of Johnny Morrison (Alan Ladd) from service in the Navy and his discovery of his wife's infidelity. Helen Morrison (Doris Dowling) represents the new moral possibilities for women in the years following the war, abandoning the traditional roles of wife and mother and declaring her

freedom to go where and do what she wants. She goads Johnny into using violence against her, and so unwittingly makes him a suspect for her murder. The exchanges between her and Johnny represent a challenge to old-fashioned versions of masculinity, based on physical strength and power over women and the family. While Johnny's violence is presented in the film as unacceptable and excessive, the idea that he is in some way struggling to come to terms with a changed world presents itself as a way of understanding his actions. The male characters in this film, like The Swede in *The Killers*, and men in film noir in general, command our sympathy because they have all in some way been deprived of their defining masculine roles by forces beyond their control. As is also common in film noir, Johnny finds emotional support in his relationships with other men. Frank Krutnik suggests that the problems Johnny experiences in his conventional family are offset by the stability of the "all-male Navy family" that consists of his friends George and Buzz.

Women in film noir tend to fall into two main categories: those who support the hero as good, wives, or pliant molls, and those who use their sexuality in an explicit way to manipulate men and get what they want. Women in this second group, a key feature of film noir, are known as "femmes fatales," dangerous women who encourage the hero's obsessive sexual interest to the point where he will risk his job, his freedom, or even his life for her. The insecurity of the hero's identity, outlined above in the case of The Swede in *The Killers*, leads him to "over-invest" in a version of her sexuality which he himself has invented; the femme fatale is awarded power over the hero by the (weakened) hero himself. Her inevitable death can be seen as punishment for her "unfair" exploitation of her advantage.

The many examples of cheating wives like Helen Morrison, and more obvious femmes fatales whose overt sexuality plays a part in the hero's misery, is often given as evidence of film noir's inherent misogyny, of a conservative core in what otherwise appears to be a subversive alternative to classical Hollywood cinema. But the femme fatale is usually drawn in at least as much psychological detail as her male counterpart, and the emergence of that unexpected complexity often takes the place of the quest or mystery plot at the center of the hero's attentions. She rejects classical Hollywood cinema's version of passive womanhood and, by whatever means she has at her disposal, actively seeks independence and freedom from men. She is remembered by audiences not for her death, but for her strength in life, her sexual power, and the deadly challenge she represents to the male's attempt to solve the mystery or reach the end of his quest. If film noir is concerned with exploring ambiguities of perspective (through voice-overs and flashbacks), the limits of subjective vision (through the use of shadow, and unnatural camera angles), and the instability of the human psyche, then the femme fatale represents a further interference with clarity of vision. Like the heroes of film noir, the femme fatale is an ambiguous figure, at once the victim of society's restrictions and the defiant answer to them. Her strength, sexual independence, and freedom pose a direct challenge to the masculine gaze of the hero and the male majority of film noir's original audience.

The origins of film noir in the political turmoil of pre-war Europe, and post-war America and Hollywood would seem to limit its scope to the historical period from which it springs. Although film noir was at its most popular during the late 1940s and 1950s, "noir" and "neo-noir" films have appeared right up to the 1990s. Some of these, like *Farewell, My Lovely* (1975), have been remakes of films made in the 1940s; others, such as *Chinatown* (1974), recreate the

look of 1930s Los Angeles. *Taxi Driver* (1976) and *Seven* (1995) bring "noir" sensibilities to their contemporary settings, while *Blade Runner* (1982) adds a futuristic, science-fiction setting that compounds the ambiguities, instabilities, and uncertainties of more conventional film noir. If film noir viewed 1940s America through the bleak sentiments of pre-war Europe, it remains a "dark mirror" in which we look to find out who we are, and what we might become.

## Firearms

The right to carry a gun, whether for purposes of self-protection or hunting animals, is an emotional issue embedded deep in the cultural consciousness of the United States. By the 1990s, after some eight decades of destruction wrought by the use of guns by organized crime, political assassins, and dangerous psychopaths, many Americans were growing disturbed by their gun heritage, but they remained in a hopeless minority when it came to effecting anti-gun legislation.

The American love of firearms probably originated in a combination of frontier actuality and propaganda coup. When English colonists and Native American cultures collided, the usual result was gunfire from the colonists, who won the Pequot and King Philip's wars and secured their toeholds in North America. When Revolutionaries created an icon of independence, it was the Minute Man, usually portrayed with plow in the background and long rifle in hand. According to Samuel Adams and the Concord Battle Monument, it was the Minute Man who defeated the British and won the Revolution. That heroic figure of the liberty-loving, citizen-soldier hovers over all twentieth-century discussions of gun control and the Second Amendment to the U.S. Constitution, whose complete text reads, "A well-regulated Militia, being necessary to the security of a free State,

A Thompson Machine gun and a Colt .45.

the right of the people to keep and bear arms, shall not be infringed.’’ Those individuals and organizations like the NRA (National Rifle Association) who favor individual gun ownership stress the last two phrases of the Second Amendment. Those who support gun control or elimination argue that the complete Amendment provides for police organization, not for an individual right.

In the twentieth century, certain specific weapons have achieved iconic status for Americans. In popular military imagination, there are only two American rifles. The first is the M1, or Garand Semi-Automatic Rifle, which General George S. Patton memorialized in his famous assertion, “In my opinion, the M1 rifle is the greatest battle implement ever devised.” The M1 is the final development of infantry doctrine which stresses target selection, accuracy, and measured fire. (The original design specifications excluded full automatic firing.) For perhaps 25 years (1944-1969), the M1 was a symbol of American might, rooted in GI grit and bravery, and reluctantly deployed in order to save the world. Some of the best movie images of M1s in skilled acting hands can be seen in William Wellman’s *Battleground* (1949) and Samuel Fuller’s *Fixed Bayonets* (1951).

The second legendary American military weapon is the M16 rifle. Imaginatively speaking, the M16, which can be toggled for either semi-automatic or full automatic firing, figures in the moral ambiguities of the late Cold War and post-Cold War periods. Late twentieth-century infantry doctrine takes as fundamental the statistical fact that, under fire, the majority of riflemen in World War II did not fire their weapons, and those who did tended to fire high. The M16, with its automatic-fire option and light recoil, lets a soldier “cover” a target area without particular target selection. Probability, more than aim, determines the results.

One of the most enduring and disturbing images of the M16 resides in a television interview during the 1968 Tet Offensive in Vietnam. The reporter questions a rifleman (Delta Company, 5th

Brigade, 1st Marine Division) who repeatedly jumps into firing position, shoots a burst of automatic fire, and drops down to relative safety. He first tells the reporter, “The hardest thing is not knowing where they are.” After another burst, he says, “The whole thing stinks, really.”

When such confusion, which must be common to the experience of all soldiers in the field, is replayed uncensored on television, the iconography shifts from democratic Dogface to enduring but victimized Grunt, doing the will of (at best) deluded leaders. The M16 shares in this imaginative legacy of the Vietnam War, whereas M16s in the hands of young, drug-busting Colombian soldiers, or crowd-controlling Israeli soldiers are more likely to provoke sympathy for peasants and protesters than concerns for enlisted men.

The counterpart to the M16 is the Soviet AK47, which expresses the same combat doctrine. With its characteristic banana-clip and crude wooden stock and fore-piece, the AK47 has a somewhat sharper emblematic presence than the high-industrial M16, perhaps because it is associated with the uprising of the oppressed. It was the weapon of the victorious North Vietnamese Army, and figures in the artful, controlled imagery from that side of the war. In contemporary Mexico, the contrast between M16 and AK47 is stark. The army is equipped with M16s. When one of their most militant opponents, Sub-commander Marcos of the Zapatista National Liberation Army, appears for photo opportunities, he does so “in full military garb with an AK47 automatic rifle strapped across his chest” according to the *New York Times*.

The M16 carries its ambiguous military significance into equivocal imaginations of civilian life. While there are relatively few images of the M1 deployed on American streets, the M16 figures prominently in urban American drug movies. Police SWAT teams carry the weapons in various configurations, ever more technically advanced. In such modern, nihilistic gangster movies as Michael Mann’s *Heat* (1995),

Val Kilmer's split devotion to family and to casually murderous excitement has him emptying uncounted magazines of .223 ammunition at expendable policemen, his weapon always toggled to full automatic. The camera delights in shattered windshields, while the exquisite audio-track records the counterpoint of firing with the clinking sound of spent cartridges hitting the streets and sidewalks.

Moving from long guns to hand guns, the American pistol that probably holds pride of place in twentieth-century civilian imagination is the ".45 Automatic," Colt's Model 1911, semi-automatic military side-arm whose high-caliber, relatively low-velocity cartridge was meant to knock a man down, wherever it struck him. It had a name-recognition advantage, since the other Colt .45, a six-shooter, is the favorite gun of such Western movies as *High Noon* (1952). A presentation-grade version of the 1911 Semi-Automatic Colt .45 appears in the movie *Titanic* (1997). The counter-image to the .45 automatic is the German Luger, officer issue in the German army. The pistol's narrow barrel and curved trigger-guard give it a sinuous, European quality, in contrast to the bluff (and heavy) American .45. In cinematic imagination, seductively evil men use Lugers in such movies as Clint Eastwood's *Midnight in Garden of Good and Evil* (1997).

The more visually and audibly stimulating weapon associated with mid-twentieth-century urban mayhem is the "Tommy gun," whose movie and comic-strip rat-a-tat-tat! lights up the seemingly countless gangster-vs.-cops movies. A Tommy gun is the .45 caliber, fully automatic Thompson sub-machine gun. The "sub" simply means that it is smaller in size and magazine capacity than a military machine-gun. There is a famous photograph of smiling John Dillinger, with a drum-magazine Tommy gun in one hand, a small Colt automatic pistol in the other. The most eroticized, cinematic realization of the Tommy gun's power is in the slow-motion shooting of Warren Beatty and Faye Dunaway at the end of Arthur Penn's *Bonnie and Clyde* (1969).

Other handguns permeate late-twentieth-century popular culture. The *James Bond* novels and movies briefly popularized the Walther PPK, and Clint Eastwood's *Dirty Harry* series gave us "Go ahead, make my day," but few know the make of gun down which he speaks (it's a Smith & Wesson .44 Magnum). There are Uzis (Israeli micro sub-machine guns) and the MAC-10, but none of these weapons has the imaginative staying power of the M1, M16, AK47, Colt .45, Luger, and Tommy gun.

## Firesign Theatre

With their education, artfulness, attention to detail, and full use of the newly emerging multitrack technologies, the four members of The Firesign Theatre—Peter Bergman (1939—), David Ossman (1936), Phil Proctor (1940—), and Phil Austin (1947)—were the Beatles of recorded comedy. Writing and performing their own material, they created multi-layered surrealist satires out of the very stuff of popular culture: television shows, the Golden Age of Radio, old movies, commercials, literature, music, etc. At a time when the Who was pioneering the rock concept album, Firesign was pioneering the comedy concept album. Their humor reflected the times; complaints about their occasional drug references may be misplaced, since it would be difficult to represent southern California in the 1960s and 1970s without mentioning drugs. But their comedy was much more than an amalgam of cultural references. One 40-minute album might be as tightly structured as a one-act play, achieve real poignancy, and convey new ways of looking at things, new connections; the first cut on their first album, for example, presents a brief aural history of the United States from the Indians' point of view. The group's comedy albums are among the few that can be listened to repeatedly and still be enjoyed, each new listening revealing subtle asides, missed connections, and hidden messages.

Bergman and Proctor first met while studying playwriting at Yale, and Bergman went on to work on a British radio show with Goon Show alumnus Spike Milligan. While in England, Bergman saw the Beatles for the first time, and vowed someday to become part of a four-man comedy team. The foursome came together in 1966 as part of "Radio Free Oz," a free-form late-night FM radio show on KPFK in Los Angeles, hosted by Bergman. Guests included Andy Warhol and Buffalo Springfield, but the show developed a cult following because of the group's improvisations. No one was aware of the size of their following until the group began promoting a Love-In (a word coined by Bergman) in Elysian Park in Los Angeles, and 40,000 hippies showed up. Seeing the commercial potential, CBS record producer Gary Usher signed the group to a record contract. Their first four albums for CBS remain the core of their work, include their best albums, and show the group's evolution: the transition from shorter pieces to album-length fantasies, and the emergence of the Fifth Crazee Guy. The Firesign Theatre's publishing company is called 4 or 5 Crazee Guys Publishing because the group found that, when all were contributing and when each had ultimate veto power (if anyone of them didn't like a line, it was out), a tangible entity emerged that was much more than the sum of its parts: the Fifth Crazee Guy. According to Austin, "It's like, suddenly there is this fifth guy that actually does the writing." And who is the Fifth Crazee Guy? He's Clem riding the bus, he's George Leroy Tirebiter, he's Mr. and Mrs. John Smith from Anytown, USA, he's the audience's laughter, he's an everyman (and everywoman) reflecting our culture and our collective unconscious. To begin to grasp how the Fifth Crazee Guy manifests itself on Firesign albums, imagine someone who had The Goon Show and the Beatles as parents but grew up in America, and then, at some point, was sucked into an alternate universe.

Their first album, *Waiting for the Electrician or Someone Like Him* (1968), contains several short pieces on Side One (including the Indians'-eye view of American history and some drug humor), with all of Side Two taken up by a comic nightmare journey through Turkish security, complete with the now-classic game-show sendup Beat the Reaper. That album sold poorly, but their sophomore effort,

*How Can You Be in Two Places At Once When You're Not Anywhere At All* (1969), benefitted from the emergence of FM radio as a significant force and the willingness of FM deejays to play long cuts. The title piece is a sonic delight that puts you behind the wheel of a motor home with climate control that changes the climate as no car ever has before. And *Side Two* contains the piece that is most likely to convert the uninitiated: *Nick Danger, Third Eye*, a pun-filled satire of noir radio dramas involving a Peter Lorre soundalike and bizarre time-travel convolutions. Their third and fourth albums, considered to be their best, each contain one long cut (interrupted only by the pre-CD need to turn the album over). *Don't Crush That Dwarf, Hand Me the Pliers* (1970), the first of their albums recorded on 16 tracks, mingles the recollections of film producer George Leroy Tirebiter with footage from one of his teen comedies, "High School Madness," to produce a moving nostalgia piece loaded with laughs. But nothing could prepare fans for the total sonic immersion of *I Think We're All Bozos On This Bus* (1971), a sensurround trip to and through the Future Fair—a cross between Disneyland and a World's Fair—complete with clones, computers, and holograms, where our hero, Clem, eventually breaks the president and has a showdown with the computer controlling everything. Repeated listenings reveal hidden subtleties. The fourth time through the listener may realize that, while passengers are warned to pump their shoes before walking across the water, Clem gave up shoes years ago. And the sixth listening might reveal that, when Clem talks about how he's going to just "sink in" to his bus seat and the P.A. says to get "in sync," the words "sink" and "sync" are, in fact, in sync. At the end of the millennium, Firesign was still going strong, producing the album *Give Me Immortality or Give Me Death* (1998), set at Radio Now (a station so cutting-edge that it changes formats every commercial break) on the last hour of the last day of 1999. And individual troupe members continued to lend their vocal talents to everything from *The Tick* TV series (1995) to *A Bug's Life* (1998).

## Fischer, Bobby (1943—)

In 1972, American Robert "Bobby" James Fischer became the world's chess champion after defeating Soviet Boris Spassky. This match, set against the backdrop of Cold War rivalries, marked the pinnacle of Fischer's often turbulent career. In 1975, Fischer was stripped of his title after refusing to defend it. Despite his eccentricities, Fischer's demands initiated improvements in playing conditions and the financial rewards of professional chess. In the western world, Fischer's dramatic rise to international prominence revitalized popular interest in chess.

In 1992, Fischer, still claiming to be the legitimate world champion, ended his self-imposed exile to play a return match against Spassky. Played in war-torn Yugoslavia in violation of United States and United Nations sanctions, this match again made Fischer the center of popular controversy. Fischer defeated Spassky with 10 wins,

5 losses, and 15 draws, and received \$3.65 million as the winner's share of the prize fund. Following the match Fischer returned to seclusion.

## Fisher, Eddie (1928—)

For a brief time, Eddie Fisher was the most popular male vocalist in America, but for a longer period, the affable crooner was the center

Eddie Fisher

of a highly-publicized series of romantic entanglements, involving some of the most famous celebrities of his generation.

One of seven children of a Jewish grocer in South Philadelphia, Edward Fisher had a Depression-era childhood of poverty and frequent moves. He sought a singing career from an early age, and became a regular performer on Philadelphia radio by the age of fifteen. Two years later, the seventeen-year-old Fisher obtained a tryout with the Buddy Morrow band in New York, but he was only employed for a few weeks. Calling himself Sonny Edwards, Fisher haunted the city's nightclubs for months, searching for work. In an audition at the Copacabana, Fisher impressed the owner with his voice, but his immature looks and manner detracted from his talent. Fortunately, the nightclub owner put Fisher in touch with publicist and celebrity manager, Milton Blackstone, who in turn found the youthful entertainer a summer job at Grossinger's resort hotel in the Catskills. There Fisher set about learning as much as possible, not only by honing his own skills, but also by studying the behavior of the famous acts that performed at Grossinger's.

In the fall of 1946 Fisher returned to the Copacabana, where he was given a small job, and the ambitious young singer spent the next three years in a vain effort at becoming a star. Frustrated with his progress, in 1949 Fisher put himself fully under the control of Blackstone, and made one last effort at establishing himself as a singing sensation. Now 21, he was more mature and his stage presence had greatly improved, so Blackstone decided to manufacture a groundswell of popularity for Fisher, and persuaded the famous comedian Eddie Cantor to "discover" Fisher during a performance at Grossinger's.

Blackstone paid for "fans" to sit throughout the hall, and to cheer wildly during Fisher's act. Cantor set up the audience to love Eddie Fisher, and Fisher performed very well. Several reporters, who had been alerted by Milton Blackstone of a breaking show-business story, covered the "discovery" for major newspapers. A star was born in one hour of conniving, where four years of talented and honest effort had achieved nothing.

Cantor then took Eddie Fisher under his wing, giving him a place on his current national tour and television show, and even wrangling invitations for the young singer on other major television programs. Finally, Cantor and Blackstone arranged for Fisher to sign with RCA Victor, one of the biggest recording companies. Throughout the rest of 1949 and all of 1950, Fisher's career grew at a rapid pace. He had several hit records, performed frequently on television and on tour, and was given *Billboard* magazine's award as Most Promising Male Vocalist of 1950.

Early in 1951, Eddie Fisher was drafted into the Army during the Korean War. But Blackstone used his influence to ensure that Fisher would spend his two years in the military crooning with the U.S. Army Band. In fact, given that his recording dates, television appearances, and tours continued without a hitch, Fisher's career probably benefited from his military service. Not until Fisher made a personal request to President Truman did the Army allow him to visit Korea and entertain fighting troops.

Returning to civilian life in early 1953, Fisher found that his handlers had set up a television program for him to host, a twice-weekly show on NBC. Sponsored by the Coca Cola corporation, the show was called *Coke Time*, as Fisher's popularity with teenagers made soft drinks a logical sponsor. The show lasted over three years on radio as well as on television; when it ended, NBC found another show (albeit a less successful one) for him until 1959.

Television was just part of Fisher's hectic performance schedule, which included tours as well as frequent live shows in New York. After excessive singing began to harm his voice, Fisher was taken to celebrity physician Dr. Max Jacobson and given an injection of special vitamins, or so he was told. He felt better immediately, and turned to Dr. Jacobson more and more often in the years to come. The shots were a mixture of substances, but mostly amphetamines or "speed;" Jacobson would eventually lose his license to practice medicine, but not before Eddie Fisher had become a confirmed drug addict.

Fisher's youth, fame, and wealth carried him through the next several years, and his records continued to sell well. Drug use made Fisher easier for his handlers, who booked him into almost continuous performances, to manage. His income and popularity soared. In 1954 Fisher won the *Cash Box* magazine Top Male Vocalist award.

In the same year, Fisher began seeing a young but already established movie star named Debbie Reynolds. His base of operations in New York and hers in Los Angeles limited their interaction, but they became close. The media quickly promoted Fisher and Reynolds as America's sweethearts, but when marriage began to appear imminent Fisher's fans (mostly young and female) turned on him. Record sales declined, and Fisher's managers attempted to block the marriage. Finally in late 1955 Fisher and Reynolds were married at Grossinger's.

Throughout 1956 Fisher experienced a career decline. Coca Cola cancelled his program, his records were not selling well, and rock and roll was erupting into the popular music scene. Almost from the outset, Fisher's marriage was in trouble too. The media once again made much of this celebrity couple, chronicling the supposed ups and downs of the marriage, casting Fisher as the thoughtless villain and Reynolds, whose film career as a sweet young thing was at its height, as the put-upon wife. There was a lot of truth in what the reporters wrote. Fisher was a dope addict, an irresponsible husband and father, and a compulsive gambler. He still made a huge income, but he was virtually spending it all.

After the death of one of Fisher's closest friends, the producer Mike Todd, Fisher's marriage disintegrated completely, and he began dating Todd's widow, actress Elizabeth Taylor. The media responded predictably to this famous romantic triangle, casting Taylor as the evil "other woman." Eddie and Debbie were divorced in February 1959. (Their daughter, Carrie, would go on to become famous as *Star Wars*' Princess Leia and as a bestselling author.) Three months later, Eddie married Liz. Fisher's career had slipped so badly by that point that he has never been able to make an effective comeback.

Fisher had hoped to parlay his singing success into a movie career, and in 1956 he had starred with then-wife Reynolds in *Bundle of Joy*. It was no more successful than his performance opposite Taylor in *Butterfield 8* in 1960; she won the Academy Award for Best Actress, but Fisher was never again invited to act in a major film. A year later on another film set, the epic *Cleopatra*, Taylor switched allegiances once more, this time to co-star Richard Burton. Fisher was the media's innocent, sympathetic character this time, in an orgy of gossip reporting that outdid all earlier efforts.

The next several decades followed a sad pattern for Eddie Fisher—high profile romantic involvements, attempts to get off drugs, failed comebacks, and tax troubles. Even a former celebrity can earn a lot of money in America, but Fisher could never get ahead. His drug habit and erratic behavior kept him from building a strong second career from the wreckage of the first. He was the last of the

old-style crooners, and the least capable of recovering from changes in American popular music.

## Fisher-Price Toys

One of the most famous American toymakers, Fisher-Price has been part of children's play for almost seven decades. While Fisher-Price is still creating low-cost and durable playthings for infants and preschoolers, older Fisher-Price toys are now prized collectibles, coveted by the same owners—now adult toy aficionados—who once clutched them in crib and playpen. From Granny Doodle and Snoopy Snuffer in the 1930s, through the decades with Tick Tock Clock, Pull-a-Tune Xylophone, and Little People, to computer software for toddlers in the 1990s, the Fisher-Price name has long been in the forefront of imaginative and educational play for children.

The company was founded in 1931 in East Aurora, New York, by Herman G. Fisher, Irving Price, and Helen M. Schelle, who began with \$5,000 and the idea of creating an innovative line of toys for very young children. Though they managed to build their factory and began producing toys during the difficult Depression years, few had money to spend on luxuries, and during World War II the factory was refitted to produce goods needed for the war effort. By the 1950s, however, toy production was up and running again, which coincided with the arrival of the Baby Boomer generation during a more prosperous period when more disposable income was available for spending on leisure-time products like toys. With the demand for toys skyrocketing, Fisher-Price was forced to build another plant. For the first time, the company began to make its own metal parts for toys and to make them with an exciting and popular new material—plastic.

By the 1960s, Fisher-Price produced twice as many toys as in the three previous decades combined. Discretionary income of American families would continue to vary, but by the 1960s the idea had been firmly established that “store-bought” toys were necessities for children. Television commercials for toys began to be aimed at children themselves, who became the best lobbyists for toy companies. In 1969 Quaker Foods bought the toy company, and the 1970s saw the opening of new Fisher-Price plants in New York, Texas, Mexico, Belgium, and England.

Much of Fisher-Price's success was due to its focus on and understanding of toys for infants and preschool children. The darkest days for the company came in the 1980s when it attempted to branch out into toys for older children. This new line included make-up kits and battery-powered sports cars, and even a toy video camera that used audiotapes that could be played back through a television. The new products failed miserably. This failure, coupled with large order cancellations caused by Fisher-Price's inability to meet delivery deadlines, gave competing toy manufacturers Mattel and Hasbro a significant advantage. In 1991, Fisher-Price went back to its specialty: producing simple toys beloved by infants and toddlers. The company streamlined its operation and regained its status among

toymakers. In 1993, competing toy giant Mattel acquired Fisher-Price and continues to expand the Fisher-Price niche in the United States and abroad.

As toys have grown more and more sophisticated, Fisher-Price has kept up, producing educational computer games for two and three-year-olds. But the Fisher-Price standbys remain its most popular items. The Bubble Mower, which emits a stream of soap bubbles as it “mows” the floor, the Corn Popper, a clear plastic dome in which colored balls jump energetically as it is pushed, and SnapLock Beads, which teach dexterity, are among the favorites. Perhaps the most popular of all are the Little People, small wooden figures that are little more than colorful heads on wooden pegs that fit into various vehicles and toy houses. Created decades ago, the older Little People are valued by adult toy collectors, while the newer ones, little changed except for racial diversity and wider plastic bodies, are equally in demand in the playroom. These toys are durable in every sense of the word, their appeal is diminished neither by time, nor by the vigorous chewing of a two-year-old.

## Fisk, Carlton (1947—)

Despite the fact that he holds the all-time major league career records for games played and home runs by a catcher, Carlton Fisk will always be remembered for his dramatic, extra-innings, game-winning home run in game six of the 1975 World Series. With the score tied in the bottom of the twelfth inning and his Boston Red Sox trailing the Cincinnati Reds three games to two, he hit a long line drive down the left field line. As the ball started curving foul, Fisk hopped down the first base line and waved his arms towards fair territory willing the ball to stay in play. After the ball bounced off of the foul pole for the series-tying home run, he jumped in the air, arms outstretched in celebration. Although the Sox would lose the series the next day, Fisk's spontaneous and joyous reaction captured the public's imagination, as it seemed to exemplify the purity and innocence of baseball during a time of contentiousness and increasing labor strife in the game. Fisk was traded to the Chicago White Sox in 1980 after eight years with the Red Sox and retired in 1993.

## *A Fistful of Dollars*

The film *A Fistful of Dollars*, released in 1964, was the first of the “spaghetti Westerns” to gain a large audience in the United States. Directed by Sergio Leone, it starred Clint Eastwood, who was then best known to American audiences as a supporting actor on the television Western *Rawhide*. Eastwood’s television character, the fresh-faced, slightly naive Rowdy Yates, was far removed from his first starring film role as the unshaven, cigarillo-smoking, deadly bounty hunter known only as “The Man with No Name.”

The plot was blatantly lifted from Akira Kurasawa’s Japanese classic *Yojimbo*. In both films, a mercenary shows up in a town that is being terrorized by two rival gangs. The stranger cleverly plays each gang off against the other, then ruthlessly wipes out those who are left. This storyline was revived yet again for the 1996 Bruce Willis vehicle *Last Man Standing*. The worldwide success of the film led to Eastwood’s reprising his role in two Leone-directed sequels: *For a Few Dollars More* (1965) and *The Good, the Bad, and the Ugly* (1966).

## *Fitzgerald, Ella (1918-1996)*

The flawless voice and delivery of singer Ella Fitzgerald is woven tightly into the tapestry of American popular music. Her place in the canon of jazz artists was ensured early on in her career, while she reached a wider audience throughout the world with her renditions of those enduring songs that have come to be known as standards. Her name is almost synonymous with the compositions of Irving Berlin, George Gershwin, Rodgers and Hart, and Cole Porter, as well as the music of Duke Ellington. Her interpretation of their music is forever enshrined in her famous “Song Book” series of albums, in which she uniquely included the verses to the songs. Billed as “The First Lady of Song,” she commanded sell-out attendance at her concerts at home and abroad, touring extensively from the

Clint Eastwood in a scene from the film *A Fistful of Dollars*.

**Ella Fitzgerald**

mid-1940s onwards, but her unique integrity to the music and the high standards she set herself never wavered in the face of her immense popularity.

Born in Newport News, Virginia, and raised in Yonkers, New York, Ella Fitzgerald was discovered at the age of 16 while singing in a talent contest at the Apollo Theater in Harlem. She joined the Chick Webb band in 1935 and became the idol of Harlem's Savoy Ballroom. She was featured on most of Webb's recordings, and Decca was committed to pushing her recording career, which began with "Love and Kisses" in 1935. She had her first hit with the humorous and perkily tuneful ditty, "A-Tisket, A-Tasket," in 1938, which propelled her to the top of the charts. In the course of her subsequent recording career, she made over 250 albums and won 13 Grammy Awards.

Ella inherited Webb's band after his death in 1939, and just muddled along until Norman Granz, later her manager (and instigator of her "Song Book" albums), began to feature her in his Jazz at the Philharmonic Concerts. Mingling with great jazz musicians at a time when jazz drew enormous audiences and dominated the popular music scene, gave her the exposure and education that allowed her to move to the front rank of vocalists. Her live recordings demonstrate the musical affection she and her audience shared. *Ella in Berlin*, for example, has her forgetting the words to her version of "Mack the Knife," but she keeps going, making it up as she playfully teases herself. The audience loved it. This moment would probably have been cut out of a studio recording. Ella enjoyed touring and continued to do so for most of her life until ill health prohibited her from doing so. She generally appeared with a trio, but was also frequently found at festivals where she would join groups of varying sizes. Fortunately,

many of these live performances, in which she was in great form, were recorded.

Ella Fitzgerald was blessed with a crystal clear voice and perfect pitch. Indeed, the Memorex Corporation capitalized on her ability to break glass in their famous commercials that asked whether it was Ella or Memorex tape. Her tone was generally bright and cheerful, and some critics caviled that her sense of fun got in the way of her overall art, depriving her of emotional depth. In fact, her technique enabled her to do anything she desired with a song, and she loved what has come to be termed the Great American Songbook (Berlin, Porter et al.). Her clarity of diction was the admiration of her peers, including her male counterpart of perfection, Frank Sinatra, and her live performances were suffused with warmth and a quality of youthful vulnerability that she never lost.

Ella Fitzgerald is often bracketed with Billie Holiday, her contemporary, as among the greatest of jazz vocalists, but although she could, and did, swing and scat with the best of them, her repertoire was not jazz dominated. Holiday is generally defined as the more emotional and sensual of the two, implying her greater depth and sophistication, while Fitzgerald is considered to have greater simplicity and directness. Her dexterity was considered equal to that of the best horn players, and Bing Crosby was not alone in saying she had "the best ear of any singer ever" and called her "the greatest."

Duke Ellington said that Ella's skill (she is commonly referred to simply as Ella) "brings to mind the words of the maestro, Mr. Toscanini, who said concerning singers, 'Either you're a good musician or you're not.' In terms of musicianship, Ella Fitzgerald was beyond category." Mel Tormé marveled that "Anyone who attempts to sing extemporaneously—that is, scat—will tell you that the hardest aspect is to stay in tune. You are wandering all over the scales, the notes coming out of your mouth a millisecond after you think of them. . . . Her notes float out in perfect pitch, effortlessly and, most important of all, swinging." Ella loved Louis Armstrong, and the three albums and many radio checks she made with him can be placed with her best work. The respect and affection these artists had for each other shines through their recordings, and their *Porgy and Bess* album remains essential to any jazz collection.

A favorite guest artist on television programs—Dinah Shore and Bing Crosby featured her often—Ella was in particularly good form on the *Swing into Spring* programs of 1958 and 1959, and in a program produced by Norman Granz on PBS in November 1979, which featured Count Basie and his Orchestra, Roy Eldridge, Zoot Sims, Joe Pass, and many other leading jazz artists. She also made a number of cameo appearances in movies, and was featured more substantially in *Pete Kelly's Blues* (1955) and *St. Louis Blues* (1958).

Ella Fitzgerald came of age in a period that respected elegance and artistry. She continued to hone her craft throughout her long career, and her fans instinctively appreciated her note-perfect musicianship and precise technique that was so admired by the cognoscenti. Her long career saw her singing in numerous and varied settings and winning fans across several generations. She rose from simple origins to become a good will ambassador for America.

In 1947 Ella married bass player Ray Brown and the couple adopted a son, Ray Brown, Jr., before divorcing in 1953. She suffered some eye trouble in the 1970s, but continued to perform happily at concerts and festivals until the late 1980s when she grew debilitated as a consequence of the diabetes from which she had suffered for a number of years. In 1992, she had to have a toe removed as a result of the disease, and gave the final concert of her career in Palm Beach,

Florida, in December of that year. The following year both her legs were amputated, and she died three years later at the age of 78.

## Fitzgerald, F. Scott (1896-1940)

Perhaps because so much of his writing is autobiographical, F. Scott Fitzgerald is as famous for his personal life as he is for his writing. In his career as a writer, Fitzgerald proved to be gifted in a

F. Scott Fitzgerald

number of forms—he excelled as a novelist, a short story writer, and an essayist. But because his personal and professional histories paralleled the times in which he lived and wrote, Fitzgerald will be forever identified with The Jazz Age of the 1920s and the ensuing Great Depression of the 1930s.

F. Scott Fitzgerald was born on September 24, 1896, the namesake and distant cousin of the author of the National Anthem. His father, Edward, who viewed himself as an old Southerner, was from Maryland, while his mother, Mary (Mollie) McQuillan, was the daughter of an Irish immigrant who was a successful St. Paul grocery wholesaler. After Fitzgerald's father failed as a businessman in St. Paul, Minnesota, he relocated the family to upstate New York, where he worked as a salesman for Procter and Gamble. In 1908 Fitzgerald's father was let go and he moved the family back to St. Paul. After two years at the Newman School, a Catholic Prep school in New Jersey, Fitzgerald enrolled at Princeton in the Fall of 1913.

It was during his years at Princeton that Fitzgerald first applied himself to the pursuit of a literary life. He wrote for the Princeton Triangle Club's musicals and also contributed pieces to the *Princeton Tiger* and the *Nassau Literary Magazine*. In addition, he cultivated life-long relationships with fellow students who also went on to achieve literary success, including Edmund Wilson and John Peale Bishop. Unfortunately, Fitzgerald's dedication to the literary life resulted in his neglecting his studies. In 1917, after being placed on academic probation and realizing that he was unlikely to graduate, Fitzgerald dropped out of Princeton and joined the army, in which he was commissioned a second lieutenant in the infantry.

Like so many others who were slated to see action in Europe, Fitzgerald was certain his days were numbered. Accordingly, he quickly turned out a novel entitled *The Romantic Egoist*, which was an autobiographical work chronicling the Princeton years of "Armory Blaine." Although the novel was rejected by Charles Scribner's Sons, it was praised for its originality and invited to be resubmitted after revision. In the summer of 1918 Fitzgerald was assigned to Camp Sheridan, outside of Montgomery, Alabama. While there he met Zelda Sayre, the debutante youngest daughter of an Alabama Supreme Court Judge. Thus began one of the most famous tragic romances in American history. Fitzgerald pursued Zelda with vigor, but was not particularly well liked by her family; who thought he was an ill-suited match for Zelda. He placed high hopes in Scribner's accepting his revised novel, which would, he hoped, make him worthy of Zelda's hand. They rejected it, which ultimately resulted in Zelda breaking off their engagement. Shortly before Fitzgerald was to go overseas, the war ended and he was discharged. In 1919 he left for New York intending to make his fortune in order to persuade Zelda to marry him.

Amazingly, Fitzgerald succeeded. After a brief stint in New York, he returned to St. Paul to dedicate himself to rewriting his novel yet again. The finished product, *This Side of Paradise*, was published on March 26, 1920. The novel was an immediate smash hit, making Fitzgerald suddenly famous as the voice of his generation. A week later he married Zelda in New York and the couple began their life together as young celebrities. In order to support their lavish lifestyle, Fitzgerald wrote short stories for mass-circulation magazines, which he did for the remainder of his life. Most of his stories were published in *The Saturday Evening Post*, which resulted in his becoming known as a "Post Writer." Since he wrote many of them for money, Fitzgerald often felt that his short stories were not artistic achievements on par with his novels. However, literary history has proven

Fitzgerald's estimation of his short stories wrong. Fitzgerald published some 160 magazine stories in his lifetime, an extraordinarily high number by any count. Although many of these are second rate, his finest pieces nevertheless rank at the forefront of American short stories. Among his best are "Bernice Bobs Her Hair," "May Day," "The Diamond as Big as the Ritz," "Winter Dreams," "The Rich Boy," "Babylon Revisited," and "Crazy Sunday."

After spending a summer in Connecticut the Fitzgeralds moved to New York City, where Fitzgerald wrote his second novel, *The Beautiful and the Damned* (1922), which tells the story of the dissipation of Anthony and Gloria Patch. Much of the book's events were inspired by the Fitzgeralds' drunken lifestyle, particularly during their time in Connecticut. The novel was not particularly well received, nor did it make much money. The Fitzgeralds, especially Scott, were quickly gaining a well-deserved reputation as hard drinkers. Although he claimed never to have worked while under the effects of "stimulant"—and judging by the quality of his work it's likely the truth—Fitzgerald's reputation as a carouser hurt his literary standing.

After their first trip to Europe, the Fitzgeralds returned to St. Paul, where in October of 1921 Zelda gave birth to, their only child, a daughter, Frances Scott (Scottie) Fitzgerald. In the mean time, Fitzgerald wrote *The Vegetable*, a play he was sure would result in financial riches. The Fitzgeralds moved to Great Neck, Long Island in order to be closer to Broadway. Unfortunately, the play bombed at its tryout in November of 1923. Fitzgerald was bitterly disappointed. The distractions of New York proved too much for Fitzgerald. He was not making progress on his third novel, and he and Zelda were increasingly fighting, often after heavy drinking. The Fitzgeralds retreated to Europe in an attempt to find peace.

In April of 1925 Fitzgerald published *The Great Gatsby*, the book that was to become his literary legacy. Through the recollections of Nick Carraway, *The Great Gatsby* recounts the history of Jay Gatz and his love for Daisy Buchanan. As Matthew Bruccoli writes in his introduction to *A Life in Letters*, "Fitzgerald's clear, lyrical, colorful, witty style evoked associations with time and place. . . . The chief theme of Fitzgerald's work is aspiration—the idealism he regarded as defining American character. Another major theme was mutability or loss. As a social historian Fitzgerald became identified with 'The Jazz Age': 'It was an age of miracles, it was an age of art, it was an age of excess, and it was an age of satire.'" *Gatsby* is the essential Jazz Age document—the work most commonly considered an accurate reflection of the ultimately irresponsible optimism of the Roaring Twenties boom years. Jay Gatz started off with a traditional American work ethic, but in his pursuit of the American Dream his ethic eventually gave way to the pursuit of money. The inevitable failure of his dreams, which were all along founded on a fallacy, anticipated the demise of the postwar prosperity that characterized the 1920s, which officially came to a close with the stock market crash on October 29, 1929.

Fitzgerald knew *Gatsby* was good, but the reviews were lukewarm and sales were extremely disappointing. In fact, at the time of his death the book had sold less than 23,000 copies. But in the end, Fitzgerald was proved correct; in the years following his death, *The Great Gatsby*, along with the rest of Fitzgerald's work, underwent a remarkable renaissance. Beginning in the 1950s, Fitzgerald's literary reputation skyrocketed. Book after book was reissued and numerable new collections of his stories were released to keep up with demand. In the 1990s, *The Great Gatsby* remained by far the most frequently assigned book in American high schools and colleges.

After being labeled the voice of his generation and experiencing fame and notoriety as someone whose life was representative of the Jazz Age, Fitzgerald, like the nation around him, fell on extremely hard times. In 1930 Zelda experienced her first mental breakdown. Her mental problems lasted the remainder of her life, which she spent in and out of sanitariums. Zelda's medical condition was of great concern to Fitzgerald, who by all accounts never stopped loving her. Unfortunately, his drinking increased concurrently with his need for more money. Scottie was in private schools and Zelda's medical expenses were immense. From the publication of *The Great Gatsby* in 1925, Fitzgerald had been writing almost exclusively short stories in order to counteract cash flow problems. But in the early 1930s his price, which had peaked at \$4,000 per story for his *Post* stories, began to plummet. Fitzgerald's *Post* stories no longer had an audience; the country, deep in economic depression, no longer wanted to read about the Jazz Age. In truth, Fitzgerald's stories are often neither optimistic nor do they always end happily. But Fitzgerald's reputation as Jazz Age figure could not be separated from his fiction. His star fell rapidly.

Fitzgerald's final completed novel was *Tender is the Night*, a tale about the fall of Dick Diver loosely based on Fitzgerald's experiences with Zelda's various breakdowns. The 1934 publication was a critical and financial failure. Although not as well crafted as *Gatsby*, *Tender* has since earned its proper place as an American masterpiece. For the remainder of his life, Fitzgerald scrambled to make a living, writing essays and stories for magazines and spending time in Hollywood as a contract writer. Towards the end of his life he appeared to have finally put things in order. He was sober, in a stable relationship with Hollywood movie columnist Sheila Graham, and in the midst of writing *The Last Tycoon*, which even in incomplete form has the characteristics of his finest work. Just as America appeared to be coming out of the Depression, so too did Fitzgerald seem to be on the brink of making a return to his former glory. But such was not to be. On December 21, 1940, Fitzgerald died of a heart attack in Graham's apartment. He was 44 years old.

Despite his meteoric posthumous rise to the forefront of American letters, the myth of Fitzgerald as an irresponsible writer has persevered. In fact, Fitzgerald was a meticulous craftsman—a dedicated reviser who went through countless drafts of everything he ever wrote. But when we think of Fitzgerald, we think of a raucous prodigy whose Jazz Age excesses became larger than life. Or perhaps we think of the tragic figure of the 1930s whose fall from grace somehow seemed to be the inevitable price he had to pay for his earlier actions. Either way, Fitzgerald's art ultimately supersedes his life. The events of his life will continue to fascinate us as legend, but the grace and beauty of his uniquely American works will forever serve as a testament to the truth of Fitzgerald's opinion of himself: "I am not a great man, but sometimes I think the impersonal and objective quality of my talent, and the sacrifices of it, in pieces, to preserve its essential value has some sort of epic grandeur."

—Robert C. Sickels

## Flack, Roberta (1939—)

One of the most popular female singers of the early 1970s, Roberta Flack was critically praised for her impressively beautiful and classically controlled voice, as well as her performance style: powerful, yet intimate in its delivery. Flack was a musical prodigy, and achieved her mastery of song interpretation early on. After years of study and working as a music teacher, she began recording professionally in 1969. Her biggest success came in 1971 with the song "The First Time Ever I Saw Your Face." By the following year, it was the number one song in America, popularized in part through its inclusion in the soundtrack of Clint Eastwood's *Play Misty for Me*. Over the next two decades Flack's successes were sporadic, but interest in her music surged again in the late 1990s, inspired by the Fugees' popular hip-hop remake of her 1973 song "Killing Me Softly."

## Flag Burning

Though the burning of the American flag does not occur very often, when it does it leads to strong emotions from both supporters and those who oppose the activity. The issue of flag burning reached the Supreme Court in 1989 in the *Texas v. Johnson* case. In this case, Texas resident Gregory Johnson was convicted of flag desecration. Justice William Brennan, writing for the Court, said "to say that the Government has an interest in encouraging proper treatment of the flag, however, is not to say that it may criminally punish a person for burning a flag as a means of political protest," allowing that a person has the right to burn the flag as political protest.

Many groups have led the charge to add a flag desecration amendment to the Constitution. The proposed amendment has passed

the House of Representatives, but by the end of 1998, had not achieved the necessary 67 votes in the Senate before it could be sent to the states for ratification. Those who did not endorse the amendment believed that one should not limit the right to protest, protected under the First Amendment. As Robert Justin Goldstein noted in his 1996 book concerning the issue of burning the flag, "forbidding flag burning as a means of peaceful political protest will surely diminish the flag's symbolic activity to represent political freedom." The issue is sure to spark heated debate for some time to come.

## Flag Clothing

In the United States, flag clothing is highly subjective; it can be either seditious or patriotic, depending upon context. Radical Abbie Hoffman was arrested in the disestablishment year 1968 for wearing a flag shirt; beginning in 1990, designer Ralph Lauren had knitted or applied the flag into sweaters and sportswear almost as a brand logo, and by 1995, so had designer Tommy Hilfiger. Actress Sherilynn Fenn appeared on the July 7, 1990 cover of *New York Magazine* wearing only the Lauren hand-knitted "Betsy" throw. In 1998, Lauren gave the Smithsonian \$13 million to restore the Star Spangled Banner, a less than equal return on the money Lauren had made on the flag. Critics continue to ponder whether flag clothing amounts to desecration or exaltation, whether it's equivalent to flag burning or flag waving.

—Richard Martin

## Flagpole Sitting

One of the more outlandish fads associated with the Roaring Twenties, flagpole sitting, like marathon dancing and bunion derbies, was an endurance feat performed for fame and money during a decade of change and restlessness. Less well known than Bobby Jones, Babe Ruth, Henry Houdini, or Charles Lindbergh, Alvin "Shipwreck" Kelly traveled across America, setting up and sitting on flagpoles through extremes of weather for increasingly longer periods of time. Seated atop a flagpole, he took only liquids for nourishment (hoisted to him by rope and pail), voiding his waste through a tube attached to the pole. In 1927, he perched on a flagpole in Baltimore for 23 days and 7 hours, while thousands stood and gaped, a feat which has become a metaphor for an American obsession with endurance feats and records, crazy thrills, and outlandish exploits.

## Flappers

In the 1920s a new and popular model of modern womanhood dominated the American cultural scene. Although not all American women of the early twentieth century would emulate the flapper model, that model quickly came to represent the youthful exuberance of the post-World War I period. According to F. Scott Fitzgerald, the author whose novels set a tone for the 1920s, the ideal flapper, representing the ideal modern woman, was “lovely, expensive, and about nineteen.” Originally merely a symbol of young and daring female chic, the flapper came to embody the radically modern spirit of the 1920s. Not merely a fashion trend, “flapperhood” came to represent an entire new set of American values.

The term “flapper” originated in England, where it was used simply to describe girls of an awkward age. American authors like Fitzgerald transformed the term into an iconic phrase that glorified the fun-loving youthful spirit of the post-war decade. The flapper ideal,

A flapper girl, c. 1922.

along with the look, became popular, first with chic young moderns, then with a larger body of American women. The flapper was remarkably identifiable. With her bobbed hair, short skirts, and penchant for lipstick, the starlet who had “it,” Clara Bow, embodied the look. Other celebrity women, from the film star Louise Brook to the author Dorothy Parker, cultivated and popularized the devil-may-care attitude and fashion of the flapper. America’s young women rushed to emulate the flapper aesthetic. They flattened their chests with tight bands of cloth in order to look as young and boyish as possible. They shortened the skirts on their increasingly plain frocks, and they bought more cosmetics than American women ever had before.

But flapperhood was more than mere fashion. To an older generation of Americans the flapper symbolized a “revolution in manners and morals.” Flappers did not just look daring, they were daring. In the 1920s growing numbers of young American women began to smoke, drink, and talk slang. And they danced. Not in the old style, but in the new mode inspired by jazz music. The popularity of jazz and dancing hinted at new attitudes toward sexuality. The image of the “giddy flapper, rouged and clipped, careening in a drunken stupor to the lewd strains of a jazz quartet,” gave license to new ideas about female sexuality. As F. Scott Fitzgerald claimed, “none of the Victorian mothers . . . had any idea how casually their daughters were accustomed to being kissed.” Flappers presented themselves as sexual creatures, radically different to the stable maternal women who epitomized the ideal of the previous generation.

And yet the popularity of the flapper did not, as one might suppose, signal the triumph of feminism in the early twentieth century. For the flapper, for all her sexual sophistication and her rejection of her mother’s Victorian values, did not pose any real threat to the gender status quo. Although the flapper presented a positive image for modern women, with her athleticism and her adventurous spirit, the flapper remained a soft creature who demurred to men. Indeed, it was precisely the flapper’s “combination of daring spirit and youthful innocence that made her attractive to men.” The flapper was a highly sexualized creature, but that sexuality retained an innocent, youthful, romantic quality. Ultimately, flappers married and became the mothers of the 1930s.

Although flappers presented a new model of single womanhood that would have positive ramifications because it gave license to women to work and play alongside men, that model had its limits. The transformative cultural promise of the flapper moment would recede just like the fashion for short skirts and short hair. In the long years of the Depression the desire to emulate reckless rich girls faded along with the working girl’s ability to afford even the cheapest imitation of flapper chic. Remnants of the flapper lifestyle, however, remained popular—a youthful taste for music and dancing, smoking and swearing, sex and sexiness. And the market for goods that had emerged to meet the consuming passions of flapper women gained in strength and power. Even after the flapper disappeared from the American scene the feminine ideal that she had popularized lingered—along with a culture of consumption designed to help women pursue that impossibly impermanent idea. For the ideal modern woman of America’s imagination, although no longer officially a “flapper,” was to remain infuriatingly “lovely . . . and about nineteen.”

—Jackie Hatton

## Flash Gordon

The most successful of the *Buck Rogers* imitators, *Flash Gordon* began as a Sunday page early in 1934. It was drawn by Alex Raymond, written by erstwhile pulp magazine editor Don Moore, and syndicated by King Features. The strip commenced with handsome, blond Flash and lovely Dale Arden, destined to be his love interest for the life of the strip, taking off in a rocket ship with brilliant, bearded Dr. Zarkov. Due to a miscalculation, they ended up on the planet Mongo, a considerable stretch of which was ruled over by a ruthless dictator known as Ming the Merciless. A combination of all the terrible qualities of Fu Manchu, Hitler, and the villain of a Victorian melodrama, Ming became Flash's prime antagonist. Flash and his friends underwent a series of picaresque adventures that took them, often while aiding local guerilla activities, to dense jungles thick with monsters, to strange arboreal kingdoms, to realms beneath the sea, and to whatever other stock science fiction locales Moore could borrow from the pulps. While the writing, which appeared in captions below the drawings, was stodgy and noticeably purple, Raymond quickly developed into a first-rate illustrator. Within a year the feature was one of the best-looking and most impressive in the Sunday funnies. In those pages, as one comics historian has noted, readers were able to see their "adolescent dreams of romance and adventure . . . given life."

*Flash Gordon* soon began being reprinted in comic books and Big Little Books and within two years was also in the movies. Universal produced three extremely popular serials based on the strip. Loosely adapted from some of Moore's newspaper continuities, they starred Buster Crabbe, his hair dyed blond, as Flash. Jean Rogers was Dale in the initial two, Frank Shannon portrayed Zarkov in all three and Charles Middleton, a veteran cinema villain, brought just the right degree of camp to the part of Ming. The first of the chapter plays, titled simply *Flash Gordon*, was released in 1936. *Flash Gordon's Trip to Mars* came along in 1938, followed by the more flamboyantly titled *Flash Gordon Conquers the Universe* in 1940. Filled with rocket ships, ray guns, mad-doctor apparatus, and young women in skimpy costumes, the *Flash Gordon* serials aren't noted for their state-of-the-art special effects. Yet they do possess a sort of tacky charm and the performances make up in exuberance for what they lack in dramatic depth.

Such was the popularity of the strip that King decided to add a daily in the spring of 1940. Raymond chose to devote all of his time to the Sunday, while his longtime assistant Austin Briggs, an established magazine illustrator in his own right, drew the weekday version. Never a particular success, it was dropped in 1944. About that time Raymond entered the Marines and Briggs took over the Sunday *Flash Gordon*. Determined to abandon comics eventually and devote himself full-time to illustration, Briggs never signed the page. He quit in 1948 and went on to become one of the highest paid magazine and

advertising artists in the country, as well as a founder of the Famous Artists School.

Mac Raboy, a comic book artist who had drawn such superheroes as Captain Marvel, Jr. and the Green Lama, followed Briggs on the Sunday page, doing a flamboyant and formidable job. In the early 1950s the daily version was revived with Dan Barry, another very good alumnus of comic books, as the artist. Various science fiction writers, including Harry Harrison, wrote the scripts. Barry added the Sunday page to his chores after Raboy's death in 1967; eventually he turned over the drawing to Bob Fujitani. In the late 1990s, *Flash Gordon*, was once again only a Sunday, appearing in a handful of newspapers and written and drawn by Jim Keefe.

## Flashdance Style

The 1983 film *Flashdance* was an instant phenomenon in the United States. It not only created a new fashion style instantaneously embraced by females of all ages, but also introduced the world to actress Jennifer Beals and the wholesome but sexy character she played who welded by day and danced by night. The "look" consisted of worn-in sweatshirts ripped at the neckline that slipped off the shoulder casually, revealing some but hinting at more. Combining comfort with sexuality, the style also embraced an athleticism for women by making workout wear sexy. In the early 1980s, punk music and its fashions were starting to fade, and break dancing was the new fad—and with it, a new style was born: sportswear worn as everyday wear. Moving away from lace and other classic feminine clothing, the *Flashdance* look celebrated a new kind of woman, independent and down-to-earth, athletic and sexy.

## Flatt, Lester (1914-1979)

Born in Sparta, Tennessee, Lester Flatt's friendly, down-home vocal style, solid rhythm guitar, and songwriting were instrumental in

both creating and popularizing bluegrass music. Joining Bill Monroe's Blue Grass Boys in 1945, Flatt's warm lead vocals were an integral part of the original bluegrass sound created in 1946-48, as was "the Lester Flatt G-run," a guitar figure used to punctuate song verses. Together with Earl Scruggs, he departed in 1948 to form the Foggy Mountain Boys, and throughout the 1950s and early 1960s the ensemble was one of the most visible and successful bluegrass acts. Creative differences led to a breakup in 1969, and Flatt formed a new band, the Nashville Grass, to pursue the earlier act's more traditional sound. With both former Foggy Mountain Boys and new musicians backing him up, Flatt remained a popular elder statesman of bluegrass until his death.

## Flea Markets

Markets where hundreds and sometimes thousands of people gather to buy and sell goods, flea markets are literally a material accumulation of American culture in a concentrated area. At a single flea market one can see—and buy—lamps, cookbooks, shoes, tools, clocks, toys, uniforms, salt-and-pepper shakers, cookie jars, ratchet sets, tarpaulins, radios, paintings, porcelain sinks, drinking glasses, bookends, duct tape, and candy dishes. The variety of goods constitutes the very nature of the flea market. New but discounted merchandise is common and runs the gamut from pet supplies, housewares, and tube socks to boxes of laundry detergent, canned goods, and toothpaste. Used items are generally household cast-offs, including baby clothes, furniture, stereo equipment, carpeting, and automobile tires. Flea markets contain objects both of the past and present, revealing obsolete technologies like eight-track players and Atari video games, and out-of-date clothing like bell-bottom pants, wide ties, and polyester shirts. Some people even sell antiques, not higher-end goods like Tiffany lamps and fine china, but more affordable collectibles like vintage pottery and prints. Flea markets may offer fresh produce from local farms, plants, and sometimes pets. Flea market operators often put restrictions on the types of things that are sold and usually prohibit the sale of firearms and other deadly weapons, stolen property, illicit drugs, pornography, and liquor. While most also officially prohibit "gray market" (counterfeit) items, these goods are usually in evidence at every flea market, with vendors selling imitation designer sunglasses, T-shirts, watches, and jewelry. Many medium-sized towns enjoy their own weekly or monthly flea markets.

Also known as swap meets, trade days, and peddlers' fairs, the flea market derives from the Greek *agoras* and other open-air markets of ancient times. It is believed that the term "flea market" comes from the French *Marché aux Puces*, the name of an outdoor bazaar known for the fleas that infested the upholstery of used furniture sold there. A popular pastime for people who frequent them regularly, flea markets allow people of all classes to enjoy a degree of economic power and autonomy—being able to buy or sell what they want at a price they more or less determine—outside of the highly regulated, inflexible, and taxable sphere of retail commerce.

Ubiquitous across the country for more than a century, one of the first American flea markets was the Monday Trade Days in Canton, Texas, which began in 1873 as a place where people would go to buy horses; later, they brought their own goods to sell or trade. Other towns quickly adopted this pattern of trade, but the modern flea market was supposedly the brainchild of Russell Carrell, an east-coast antique show organizer. Working as an auctioneer in Connecticut, Carrell thought to run an antique show like an outdoor auction, only forgoing the tent, which because of fire hazards was too expensive to insure. Carrell's 1956 Hartford open-air antiques market, he claimed, was the first modern incarnation of the flea market, although the true flea market does not consist of professional antique dealers, but rather of people looking to make some extra money on the side.

The different characteristics of flea markets reflect the diversity of the goods they offer and the people who attend them. Some are completely outside, others take place indoors, while still others have both inside and outside areas to sell goods. They usually take place at drive-ins, parking lots, race tracks, and fairgrounds. Paying a flat fee to the flea market's organizer (about ten to twenty dollars per day in the 1990s), vendors come equipped with tables, racks, and shelves on which to display their merchandise, or merely a sheet or blanket to cover the ground. Flea markets usually take place on the weekends, although not always: some convene on Fridays or on particular weekdays. Northern markets sometimes shut down during the winter while southern ones do the same in the hot summer months.

For all of their differences, flea markets and the people who frequent them have some things in common. Flea markets are characterized by the unpredictability in goods offered and the prices asked. Most certainly, every buyer is looking for a bargain—some hope to find valuable antiques and collectibles hidden among the cast-offs, while others look for utilitarian goods that are cheaper than in the retail marketplace. To this end, "haggling" is commonplace at flea markets, with buyer and seller both working to agree on a fair price, but using their own strategies. The seller "talks up" his or her merchandise to make it as appealing as possible, while the buyer points out defects or claims to have only a certain amount of money left in his or her pocket. Other tactics include, conversely, coming early to get first pick of the goods, and staying late, hoping that sellers will be more willing to unload items cheaply rather than taking them home.

—Wendy Woloson

## Fleetwood Mac

Founded as a British blues band in 1967, Fleetwood Mac exploded as an American rock 'n' roll phenomenon in 1975, when a pair of young Californian songwriters joined the group. The bewitching Stevie Nicks and guitar genius Lindsey Buckingham rounded out the band of songwriter/keyboardist Christine McVie, bassist John McVie, and drummer Mick Fleetwood. Their first album together, the eponymous *Fleetwood Mac* (1975), hit number one with three hit

The 26<sup>th</sup> Street Flea Market in the Chelsea neighborhood of New York.

singles; but these merits were far overshadowed by the follow-up album, *Rumours* (1977). Songs of love, anger, heartbreak, and hope launched the band into stardom, but the drama between the grooves mirrored that raging between the members of the band: Christine and John McVie divorced after seven years of marriage, Stevie Nicks and Lindsey Buckingham ended their long-time romance, and Mick Fleetwood split with his wife, Jenny Boyd.

Audiences sang along and sympathized, sending *Rumours* to the top of the charts and winning it the title of best selling album of all time to date. Fleetwood Mac continued to tour and make music together for the next ten years, while four of the five members also began solo careers. Of these Stevie Nicks garnered the greatest success, with her husky voice, mystical lyrics, boots and shawls, touring in support of *BellaDonna*, *The Wild Heart*, and other records, magnifying her identity as a popular culture icon. (New York City holds a Night of 1000 Stevies each year, when thousands of men and women pay tribute to the woman and her style by emulating her dress and gestures.) Lindsey Buckingham self-produced two albums, *Law and Order* and *Go Insane*, during this period as well, and Christine McVie made a self-titled LP.

Continuing tensions and creative dissention caused Buckingham to leave after 1987's *Tango in the Night* album, and Stevie Nicks and Christine McVie followed not long after. As he had in the past, Mick

Fleetwood again scouted out new talent to keep the band going: Bekka Bramlett, Billy Burnette, and Rick Vito toured and recorded with the band's founders, but the *Rumours* line-up re-joined to perform at President Bill Clinton's inauguration in 1993, and continued to flirt with group projects, culminating in a CD, tour, and video, called *The Dance*, in 1998. After several road dates, the band disbanded once again, citing old difficulties, both personal and creative. Nonetheless, Fleetwood Mac not only remains synonymous with the 1970s, but their musical and pop cultural influence endures.

## Fleming, Ian (1908-1964)

Writer Ian Fleming created one of the major male icons of the second half of the twentieth century, the spy James Bond—as Alan Barnes suggests, “the only fictional character of the twentieth century to have acquired the aura of myth.” The series of novels containing Bond not only concocted a new heroic figure, its immense success and popularity (Fleming had sold thirty million books by the time of his death) kick-started indigenous spy writing in America. Bond on film was also hugely successful, adding to the lustre of the spy and increasing the popularity of British music and cinema in 1960s America.

Son of a major and member of the British parliament, and younger brother of author Peter Fleming, Ian Fleming’s English background was privileged and reflected the expected route of one of his class (Eton, Sandhurst, a job in the “City”) rather than the adventurous spirit of his most famous creation. It was Fleming’s periods as a journalist in Moscow at the beginning and end of the 1930s, along with his work in World War II as a high-ranking officer in naval intelligence, that provided much of the background for the novels. Fleming was in his forties when he began his writing career with *Casino Royale* in 1953 followed by ten more Bond novels (the best of which were written in the 1950s) and two collections of short stories. Fleming also wrote a column under the pseudonym Atticus for the London *Sunday Times* in the 1950s and contributed to other magazines. He had one son, named Caspar.

The plots of the Bond stories reflect the heritage of the previous half century of British popular spy and thriller writing. Fleming laid out “the right ingredients” for these works in *Dr. No* (1958): “physical exertion, mystery and a ruthless enemy . . . a good companion,” and a certainty that the “cause was just.” The James Bond character was based on a number of soldiers and agents Fleming knew during the war, but the author, as quoted in Andrew Lycett’s biography, wanted the character to be “unobtrusive”: “Exotic things would happen to and around him, but he would be a neutral figure—an anonymous blunt instrument wielded by a government department.” Bond’s enemies and their conspiracies took their power from an almost mythical badness, and the battles were more parables of good and evil than political thrillers. Yet Fleming covered these parables with a veneer of reality, which, in its intensity, was perhaps his biggest influence on the genre. His prose describes closely many of the most attractive and expensive places in the world, from beautiful islands to expensive restaurants. He also described in detail the possessions of the rich and successful, whether it be the most reliable guns or smoothest cigarettes, the finest car or best mixed cocktail. Comparable to this closely described visible consumption was the depiction of women, built to Playboy specifications, whom Bond seduced, bedded, and discarded with astonishing ease. There was something of the Playboy philosophy to Fleming’s novels, of men as adventurous and potent while still at ease with consumer society.

Fleming’s work did much to change attitudes toward the figure of the spy in American culture. Fleming’s Bond was praised by John F. Kennedy and recommended by Allan Dulles, head of the CIA. Bond made the spy acceptable, shifted the perception from 1950s associations with the Rosenbergs and muddied the moral problems the spy had always held in the American psyche. Bond was a very English figure, of class and with imperial concerns, but he was also an international, professional figure fighting evil. As America moved to the forefront of world politics, its own intelligence service could be

drawn in such a light, an international, professional movement against evil.

The Bond novels reflect a moment in time after World War II, beyond rationing in Britain and beyond the darkest days of the cold war in America when tourism, visible consumption, and sexual freedom came to the fore. It was at this point in the early 1960s that they made it onto the screen. Cubby Broccoli, producer of the majority of the Bond movies, pinpoints the strengths Fleming’s work offered: “a virile and resourceful hero, exotic locations, the ingenious apparatus of espionage and sex on a fairly sophisticated level.” It was these elements that would sell the films as the racism and misogyny (in their most extreme forms) and much of Fleming’s British imperial nostalgia were sloughed off. Bond, as a character, was fleshed out by Sean Connery into a less one-dimensional character with a more attractive and humorous rebelliousness. *Dr. No*, the initial film, came out in 1962, quickly followed by *From Russia with Love* (1963) and *Goldfinger* (1964). These films showed the British industry turning away from the “kitchen sink” dramas of the previous few years to more slick and upbeat movies that were enormous commercial successes in America, increasingly interested in British pop music and culture. *Dr. No* had been made cheaply, but a great deal of American money was pumped into its sequels—money well spent, as the series became successful on an increasingly global scale.

—Kyle Smith

## Fleming, Peggy (1948—)

Peggy Fleming remains the best-known and universally respected American figure skater in history. After an outstanding amateur career capped by her winning the 1968 Olympic Ladies’ Figure Skating gold medal in Grenoble, France, Fleming embarked on a career as a professional skater, signing first with the Ice Follies and then pioneering as a solo act on television specials when the professional skating field was largely limited to ice shows. Corporate endorsements were minute compared to the enormous financial rewards available to most competitors today, but Fleming broke new ground here, too, becoming the spokesperson for over 30 sponsors in her career. In 1981, she became an anchor of ABC Television’s figure skating coverage, usually paired with Dick Button, two-time men’s Olympic champion and skating entrepreneur. With grace and ability, Fleming has maintained a presence in the world of figure skating for over 30 years. Known for her poise, elegance, and professionalism, Peggy Fleming has been the inspiration for three generations of skaters, all hoping to achieve her prominence in the sport.

Peggy Gale Fleming was born July 27, 1948 in San Jose, California, the second of four daughters. The Fleming family was often short on cash, and one summer, the entire family camped out in Oregon while her father worked; the girls never suspected they were

**Peggy Fleming**

homeless because they were enjoying their adventure. A tomboy, Peggy began skating at the age of nine and won her first competition at ten. Her mother Doris is credited by Dick Button as being “. . . forceful, domineering, and the perfect mother for Peggy”; Mrs. Fleming’s role as the quintessential skating mother is well-known. Doris Fleming pushed her daughter to excel, providing an A to Z support system for the young skater: making all her costumes, driving her to practices, grilling her coaches on Peggy’s progress, and generally stage-managing her career. Her father Al, a newspaper pressman, believed his working-class daughter could succeed in the sport of the well-to-do; Peggy’s family moved constantly to support her career. Another skater would not have done well with such an unsettled life style, but Peggy seemed only to improve with such unorthodox training routines.

In 1961 an unprecedented tragedy in the sports world pushed Peggy Fleming to the forefront of skating; a plane carrying the entire United States Figure Skating Team crashed near Brussels, killing all aboard, including Fleming’s coach. She was noticed as an up and coming competitor and in 1964, she had a stunning victory at the National Championships. Still only 15, she was suddenly propelled into the international spotlight when she headed the American team going to the Olympics at Innsbruck, Austria. She placed sixth, performing with a high fever but gaining invaluable experience on the world stage.

After the Olympics, Doris Fleming sought the best coach for her daughter and selected Carlo Fassi, whom she believed would help Peggy with “school figures”—the grueling and precise art of tracing figures in the ice which at that time was the major part of a skater’s

marks. Fassi and Fleming proved to be a perfect match in every respect—a coach of rare ability and artistic refinement, he brought out the best in the young woman who continued to improve and win every title in her progress towards the Olympic gold medal. She became World champion in 1966 in a major upset and retained her National and World titles in 1967. Grenoble was the pinnacle of her amateur career—in a chartreuse costume sewed by her mother, Peggy Fleming won the gold medal (the only one for the United States in those Winter Games). Known for her balletic style that incorporated superior jumps with graceful moves such as her trademark layback spin (the pose made famous by a well-known Olympic photo), Fleming set the sport a new level of achievement that has been approached by only a few skaters since: Dorothy Hamill, Kristi Yamaguchi, and Michele Kwan are the three most often cited.

Her popularity was tremendous, and almost immediately Peggy was approached to make television skating specials which drew high ratings and critical approval—her Sun Valley special won two Emmy awards and *Peggy Fleming in the Soviet Union* (1974) made history as a television first, a cooperative venture between America and Russia. The professional success of Peggy Fleming was important beyond skating; she was arguably the first female sports superstar. In 1994, *Sports Illustrated* named Peggy one of “40 for the Ages”: “40 individuals who have most significantly altered or elevated the world of sports in the last 40 years.”

Her private life has been quietly successful as well; Fleming met Dr. Greg Jenkins, her future husband, when both were pupils of Carlo Fassi. They married in 1970, and Peggy remained active as a skater without significant interruptions to her family life. She is the mother of two sons, Andrew (born 1977) and Todd (born 1988). Although her relationship with her mother was often strained by Doris’ need to control Peggy’s life, she speaks with great affection of both her parents, now deceased. Al Fleming died at 41 of a heart attack shortly after driving across country to see his daughter perform after capturing a World title.

Peggy Fleming made news on the eve of the Michelle Kwan-Tara Lipinski battle for the Olympic gold medal in 1998. Diagnosed with breast cancer, she withdrew from her commentator duties for ABC and had successful surgery followed by chemotherapy. Characteristically, she began to speak out on breast cancer awareness immediately; her self-detection and her candor about her experience have motivated a noticeable increase in women seeking medical attention. Throughout her career, she has worked for numerous charities (March of Dimes, Osteoporosis Foundation, Kidney Foundation) but now her advocacy is more significant due to her successful return to skating and her characteristically modest account of her remarkably rapid recovery. A decidedly low-key ice princess, Fleming has retained her striking good looks and has never suffered any bad publicity, the lot of nearly every skater since Sonja Henie.

## *The Flintstones*

Every prime-time animated television series traces its lineage back to *The Flintstones*, the first show to disprove the notion that cartoons are suited only for children. From 1960 to 1966, the comical adventures of the stone-age Flintstone family unfolded weekly on ABC. Essentially a pre-historic version of *The Honeymooners*, the program revolved around Fred Flintstone, an irascible blowhard (voice of Alan Reed), his pliant pal Barney Rubble (voice of Mel Blanc), and their long-suffering spouses. Cartoon veterans William Hanna and Joseph Barbera produced the cheaply-animated half hour. A live action movie version, starring John Goodman as Fred, was produced in 1994, but was not as popular with audiences as the original cartoon.

## Flipper

The bottlenose dolphin star of two 1960s feature films, a television series from 1964 to 1968, and a 1996 film revival, Flipper educated Americans about the intelligence, loyalty, and compassion toward humans that characterizes the several dolphin species. Flipper rescued people from perilous situations, fought sharks, and warned individuals about impending dangers. Through Flipper, viewers were entertained by an unusual animal friend with a built-in smile, and were made aware of a dolphin's ability to communicate with and respond to people.

Flipper was born of the vision of movie and television underwater stuntman Ricou Browning. While watching *Lassie* on television with his children, Browning was inspired to invent an underwater counterpart to the courageous collie and wrote a story about a boy and a dolphin named Flipper. He offered the property to Ivan Tors, the producer of the successful television series *Sea Hunt* (1957-1961). Tors was fascinated by the idea and agreed to produce a feature film.

Browning acquired a dolphin named Mitzi and began training her for the stunts in the film, which included having a boy ride on her back. The training for this stunt required Browning to get into the water with the dolphin, a technique that was highly unusual for the time—trainers who worked with dolphins generally remained outside the water, but Browning discovered that being in the water with Mitzi seemed to accelerate her learning process.

Flipper saves a puppy in an episode of his television series.

The stunt that required Mitzi to carry a boy on her back was one of those that gave her the most difficulty. Browning finally overcame the problem by employing a variation of the retrieving behavior with the assistance of his son, Ricky. Browning picked up Ricky, commanded Mitzi to fetch, and then threw the boy into the water near the dock where the training session was being conducted. After several attempts, Mitzi grabbed Ricky, he took hold of her fins, and she pulled him back to Browning. The trainer was thrilled that his dolphin had been able to master this routine, considered to be an impossible feat.

Mitzi starred, with Luke Halpin as the boy, in the feature film *Flipper* (1963) and in the sequel, *Flipper's New Adventures* (1964), both filmed in the Bahamas. The commercial success of the movies led to the television series, *Flipper* (1964-1968), which aired on NBC, starring Brian Kelly as Porter Ricks, a ranger in Coral Key Park, Florida; Luke Halpin as his elder son, Sandy; and Tommy Norden as his younger son, Bud. The episodes related the adventures of the boys and their aquatic pet, who rescued them from many dangerous situations.

A dolphin named Suzy was selected as the lead dolphin for the television series, and quickly learned the 35 to 40 behaviors necessary for any script circumstance. However, some behaviors she seemed to exercise on her own. For example, before diving with Suzy, Luke Halpin gulped air from the surface then plunged beneath the water, holding onto the dolphin as she swam toward the bottom. The actor noticed that whenever he needed more air, Suzy returned to the surface. Since she repeated this behavior regularly, Halpin concluded that Suzy's keen hearing and sonar ability probably allowed her to monitor his heart and respiration rates and thus know when the boy needed air. Offscreen, Suzy demonstrated a newly learned trick to

producer Ivan Tors. While visiting the set, Tors walked down to the dock and greeted Suzy, who returned the courtesy by squirting water on his shoes.

For three consecutive years from 1965-1967, “Flipper,” who enthralled, entertained and enlightened millions, was honored with three PATSY Awards (Performing Animal Top Stars of the Year), the animal equivalent of the Academy Award, given by the American Humane Association. The Flipper idea was revived in the 1990s—as part of a general revival of television shows from the 1960s—with the movie *Flipper* (1996) and the television series of the same name (1995). The Flipper legacy lives on in increased interest, awareness, and concern for dolphins.

## Florida Vacations

For much of the twentieth century, Florida’s warm sunshine and long sandy beaches have been associated with an exotic escape from the northern states’ frigid winter weather. Though Florida vacations were once luxurious adventures for the wealthy, mass transportation soon opened the state to all. But it was not Florida’s warm climate or accessibility that made the state one of the most popular vacation spots in the world. Walt Disney would combine the grand and luxurious image of the Florida vacation and create a comparable entertainment palace, the Magic Kingdom. As construction continued, the Walt Disney resort complex, Disneyworld, attracted visitors from all over the world, making the Florida vacation one of the most treasured winter escapes in the world.

While the heyday of vacations to the “Sunshine State” lies in the post World War II era, its foundation is set firmly in the nineteenth century. At a time when few individuals ventured more than one hundred miles south of the Florida-Georgia border, entrepreneur Henry Flagler envisioned Florida as a winter vacation playground for wealthy northern tycoons. To access the southern portion of the state and its warm year round climate, Flagler forged a railway through its dense natural vegetation to open the palatial Ponce de Leon hotel and introduce the wealthy winter weary to St. Augustine’s pristine beaches in 1888. Visitors flocked to the hotel, inspiring Flagler to continue expansion southward with his railway line and accompanying hotels. By 1894, the Royal Poinciana Hotel opened in Lake Worth near Palm Beach, accommodating 1,200 guests. As his railway stretched down the coast, with its terminus in Key West, Henry Flagler succeeded in

making the warmth of Florida a mere thirty-six hour train ride from the frozen north.

Spurred by cleverly designed advertisements in national magazines and northern newspapers featuring bathing beauties basking in sunshine during the dead of winter, vacationing to Florida continued to grow. Immediately following World War I the newly affordable mass-produced automobile opened the state to many average Americans who could not manage the considerable railway fare and rates of the posh established hotels. Funneled into Florida via the “Dixie Highway” network of roads, this new breed of tourist came complete with their own tents and food provisions. In an era before motels, “tin can tourist camps” sprang up around the state to assist in accommodating the budget-conscious travelers. However, the onset of Great Depression stifled the burgeoning middle-class tourist trade.

During World War II, Florida became a center for training military personnel, exposing an incredible number of servicemen to its attractive winter climate. With fond recollections of sunshine many returned to the state with young families in tow following the war’s conclusion. Other concurrent factors assisted in Florida’s ascendance as a tourist mecca in the 1950s and 1960s. First was an incredible period of national economic prosperity providing expendable cash for vacations. Also, the development of the interstate highway system reduced automobile travel time, permitting more relaxation time at the vacation destination. Finally, perhaps most important of all, the rise of affordable air conditioning opening the state to year-round tourism by making the humid summers comfortable.

The Gold Coast, stretching from Vero Beach south to Miami Beach along the Atlantic, became the destination of choice for vacationers. Its semi-tropical climate permitted Americans to visit the tropics without necessity of a passport or knowledge of another language. While southeast Florida may have been their ultimate destination, a multitude of tourist attractions popped up along the major traffic arteries. A few captured the natural beauty of Florida, most notably Silver Springs with its glass bottom boats. Others capitalized on “Florida living” activities such as the water skiing extravaganzas at Cypress Gardens or the underwater mermaids at Weeki Wachee. Gatorland and the famous “gator jumparoo show” became an instant hit with children. The tacky tourist emporiums did not stop once families reached the Gold Coast. In Miami there was Parrot Jungle, Monkey Jungle, the Miami Seaquarium, and perhaps most memorable of all, the Miami Serpentarium. Audiences thrilled to death defying Bill Haast milking venom from cobras and other poisonous snakes. With a drive south to the Keys children could even see the real “Flipper.”

Though tacky tourist attractions proliferated, Florida, and especially Miami Beach, remained the ultimate prestige vacation to an entire generation. The Fontainebleau and Eden Roc were veritable land-locked luxury cruise ships rivaling the Queen Mary. James Bond stayed at the Fontainebleau in *Goldfinger*. Jackie Gleason touted Miami Beach as the fun and sun capitol of the world on the *Honeymooners*. And America watched as Lucy, Ricky, and the Mertzes took off to Miami Beach for a holiday in the sun on the television show *I Love Lucy*.

Florida vacationing reached a transition phase in the 1970s. The rise of the popularity of jet aircraft and decreased airfares led many vacationers to seek out new winter destinations. Bermuda, the Bahamas, or even Hawaii were now within the grasp of many. A series of racially-motivated riots at the decade’s end tarnished the image of South Florida. Miami Beach no longer held the same mystique as it

had during the 1950s and 1960s. But with the decline of fun in the sun vacation in the southern portion of the state, central Florida witnessed the birth of the greatest tourist attraction in Florida's history. The Magic Kingdom, the first phase in the Walt Disney World resort complex, opened its gates in 1971. The entertainment theme park building bonanza that ensued transformed Orlando into one of the most popular vacation destinations in the world and preserved Florida's long vacation heritage.

## The Flying Nun

Julie Andrews, Whoopi Goldberg, and Mary Tyler Moore have all played nuns, but the most notorious TV nun was played by Academy Award-winner Sally Field, much to her chagrin. *The Flying Nun* television series soared on ABC from 1967 to 1970, bringing viewers a concept that still seems ridiculous years later. Sister Bertrille (Field) was a bubbly young ninety-pound novice at the

Sally Field as the flying nun.

ancient Convent San Tanco, which sat on a hilltop in Puerto Rico. Whenever a stiff wind caught the starched cornette worn by her order, Bertrille was lifted into the air, becoming the “flying nun.” The convent’s conservative Mother Superior, Reverend Mother Plaseato (Madeleine Sherwood), wasn’t too impressed, but Sister Bertrille did get along well with wise and humorous Sister Jacqueline (Marge Redmond) and Sister Sixto (Shelley Morrison), a Puerto Rican nun who had trouble with English. And, because even a show about nuns needed to have a little sex appeal, Bertrille was admired from a distance by Carlos Ramirez (Alejandro Rey), a wealthy, handsome playboy, owner of a discotheque in town, and patron of the convent.

Bertrille’s avian ability got her into some hot water, sometimes literally: she was occasionally dunked into the ocean. Once she was almost shot down because she was mistaken for an enemy aircraft; another time a pelican fell in love with her. The novice took it all in sunny stride, but Sally Field was anything but sunny about this role, as she explained in *Playboy* in 1986: “In *Gidget*, I had things to play, scenes with fathers and people; here I had nothing. Just complete silliness—someone got into the convent who shouldn’t have and we’d have to hide him. . . . There were no life problems going on, nothing I could relate to. It made no sense to me. I started refusing press interviews and getting a bad reputation. But I couldn’t go and hype the show, saying, ‘I’m having such a good time’ when I wanted to say, ‘Let me out of here!’ Flying Nun was a one-joke show, and I don’t know why it was successful.”

Field took the role because she was a teenager and believed she’d never work again after *Gidget* made her, or at least her character, the butt of jokes. Comics like Bob Hope had a “field day” making cracks about the series and turning all of the standard nun jokes into flying nun jokes. Besides feeling hurt by the jibes and feeling the ennui of an actor with no challenge, Field had another problem during her holy tenure—she was pregnant with her first child. During filming she had to carry books in front of herself to hide her growing belly.

For Field, there was one good thing that came of the role. Castmate Madeleine Sherwood took her to the Actors Studio, where Field could hone her craft with the likes of Ellen Burstyn, Jack Nicholson, Sally Kellerman, Bruce Dern, and Lee Strasberg. “It changed my life,” she said in *Playboy*. “I found a place where I could go and create.” But before Field left the world of light, gimmicky sitcom fare to begin her career as one of America’s finest actresses, she would complete her wacky TV trilogy with *The Girl with Something Extra*, in which her character has ESP.

Not everyone hated *The Flying Nun* as much as Field; after all, it lasted three years. In a 1996 article in *Psychology Today*, Will Miller wrote, “This show is actually a provocative lesson about personal power . . . this show says, if you’ll stop resisting the environment, if you’ll only attune yourself to nature, to the direction and flow of the world’s winds, you too can fly!” *The Flying Nun* was also commended by religious orders for “humanizing” nuns and their work. The series was based on the book *The Fifteenth Pelican* by Tere Rios.

## Flynn, Errol (1909-1959)

The facts of Errol Flynn's life and work reveal a pathetic tragedy of self-destruction and wasted gifts. His place in popular culture was assured equally by fame and notoriety. A heroic swashbuckler on screen, seducing audiences with his fresh charm, devil-may-care personality, athleticism, and dazzling good looks, he scandalized the public and his peers with his private exploits. A boon to gossip columnists he undoubtedly was, but while they charted his barroom brawls and questionable boudoir escapades (which gave the English language the expression "In like Flynn"), he steadily disintegrated, dying of drink, drugs, and despair at the age of 50.

From an early age, Flynn's nature—adventurous, reckless, unstable—was evident. Born into a comfortable and well-educated

Errol Flynn in a scene from the film *The Sea Hawk*.

family in Hobart, Tasmania, he was expelled more than once from the good schools to which he was sent and became a shipping clerk at the age of 15. He had an affinity with boats and sailing and, still in his mid-teens, went wandering in search of gold. At 21 he bought a boat in which he made a seven month journey to New Guinea where he worked on a tobacco plantation and was a correspondent for an Australian newspaper. Back in Sydney, his looks brought an offer to play Fletcher Christian in a semi-documentary film (*In the Wake of the Bounty*, 1932), and he caught the acting bug. He went to England, joined a provincial repertory company, and played the lead in a B-picture which led to a contract with Warner Brothers.

Flynn arrived in Hollywood in 1935, married actress Lily Damita, and made brief appearances in a couple of low budget movies. Before the year was out, he played *Captain Blood*, surgeon-turned-pirate during the reign of James II, and became a star. This first foray into swashbuckling adventure demonstrated his grace and agility in wielding a sword, notably in a brilliant duel with Basil Rathbone's villain, and the public responded favorably to the combination of Flynn and then relative newcomer Olivia de Havilland. Backed by a stirring score from composer Erich Korngold, Warners' experienced craftsman Michael Curtiz directed with panache.

The studio was quick to grasp that they had found a winning formula and the natural heir to Douglas Fairbanks. De Havilland co-starred with Flynn in another seven films and, more significantly, Curtiz directed him in a further ten, beginning with *The Charge of the Light Brigade* (1936) and ending with *Dive Bomber* (1941). These ten included the actor's first Western, *Dodge City* and the same year—1939—*The Private Lives of Elizabeth and Essex* in which Flynn, bravado substituting for skill and experience, played second fiddle to Bette Davis' awesome *Virgin Queen*. He was never a great actor and his range was limited, but when the beguiling personality matched well with the vehicle, it did not seem to matter. Such was the case with the most memorable of the Curtiz collaborations, *The Adventures of Robin Hood* (1938). Indeed, the film endures as a classic in its own right, distinguished by outstanding Technicolor and Academy Award-winning design, a host of marvelous supporting performances, and what David Thomson aptly calls Flynn's "galvanizing energy" and "cheerful gaiety." It is as Robin Hood, handsome, dashing, brave, and humorous that Flynn is, and should be, best remembered.

Many commentators consider that the actor owed much of his success to the good fortune of being assigned first to Curtiz, then to the more serious-minded Raoul Walsh. They made seven films together, beginning with *They Died With Their Boots On* (1941), in which the star was a sympathetic General Custer, and including what is arguably his best performance, as prizefighter *Gentleman Jim* (1942). *Objective Burma* (1945), however, gave much offense to the British for creating the impression that the Americans single-handedly conquered the Japanese in Burma; and Flynn, although winningly portraying the heroic leader of a crucial and life-endangering mission, already looked weary and older than his years.

In truth, his notoriety had been rising in direct proportion to his stardom. He was tried, and eventually acquitted, for the rape of two teenage girls aboard his yacht in 1942, the year he was divorced from Lily Damita (by whom he had a son); in 1943 he married Nora Eddington (they divorced in 1949 and he married the last of his wives, Patrice Wymore, in 1950); his heavy drinking and smoking was on the increase and he began experimenting with drugs.

From the late 1940s on, Flynn's life and career reflected a downward slide. Weary of swashbuckling and looking for new directions in his work, he left Hollywood for Europe in 1952, played

in several films probably best forgotten, and bankrupted himself in a failed attempt to finance a production of *William Tell*. He sailed around aimlessly in his yacht, and returned to Hollywood in 1956, a ravaged shadow of his former self, to face the final irony of his self-destruction: praise for his performance as a drunken wastrel in *The Sun Also Rises* (1957). He played two more drunks the following year in *Too Much Too Soon* (as John Barrymore) and in Huston's *The Roots of Heaven*, and ended his career, shortly before his death, with the nadir of his achievements, a semi-documentary about Fidel Castro called *Cuban Rebel Girls* which he wrote, co-produced, and narrated.

Movie stars biographer Charles Higham, in *Errol Flynn: The Untold Story*, suggested that the actor had been a Nazi agent for the Gestapo and a bisexual who had affairs with several famous men. Needless to say, the object of these scurrilous accusations was no longer alive to defend himself, and it is kinder and rather more rewarding to remember him for the considerable pleasure he gave at the height of his popular success.

—Robyn Karney

## The Foggy Mountain Boys

Created in 1948 by Lester Flatt and Earl Scruggs, the Foggy Mountain Boys were one of bluegrass music's most popular acts, introducing millions of listeners to the style through their association with well-known movies and television shows in the 1950s. Though the act's full name was Flatt and Scruggs and the Foggy Mountain Boys, they were widely referred to as Flatt & Scruggs, as the two co-leaders were the sole permanent members of the band during its almost 20-year existence.

The Foggy Mountain Boys' first recordings were made shortly after Flatt and Scruggs left Bill Monroe's Blue Grass Boys in 1948, and in the space of little more than a year they created 28 of the most influential and enduring songs in the style, virtually all of which have become standards. With John Ray "Curly" Seckler singing tenor harmony to Flatt's genial lead vocals, and Scruggs providing the lower, baritone harmony part, the band sought to distinguish itself from Monroe's by downplaying the role of his instrument, the mandolin, featuring instead Scruggs' dazzling banjo picking and the work of a succession of fiddlers, including Benny Sims, "Chubby" Wise, "Howdy" Forrester, and Benny Martin. Where Monroe's sacred ("gospel") songs were performed with spare backing featuring the mandolin, Flatt and Scruggs opted to retain the full band's

sound, with the substitution of Scruggs' bluesy, finger-picked lead guitar for his banjo. Working for a succession of radio stations in places like Danville, Virginia; Bristol, Tennessee; Atlanta, Georgia; and Versailles, Kentucky, they quickly built a devoted following that made them an attractive acquisition for the Columbia label, whose roster they joined in 1950, remaining for the duration of the band's career.

While the Foggy Mountain Boys scored their first charting record in 1952, "'Tis Sweet To Be Remembered," their real breakthrough came when the Martha White Mills signed on as their sponsor, a relationship that was to continue for as long as the band existed. The deal gave Flatt and Scruggs an early-morning show on Nashville's WSM, the radio home of the Grand Ole Opry, starting in the spring of 1953, which led to regular weekly appearances on a Martha White-sponsored portion of the Opry, as well as a series of television shows that aired in cities around the South. Together with a busy touring schedule and regular recording sessions and releases, these appearances kept the Foggy Mountain Boys before an increasingly devoted audience, while the security of their Martha White sponsorship allowed them to retain a relatively stable lineup—Paul Warren on fiddle, Burkett "Uncle Josh" Graves on dobro (resonator guitar), Seckler and English "Jake" Tullock on string bass—at a time when other bluegrass acts were suffering the economic effects of the rock'n'roll boom of the late 1950s.

Indeed, Flatt and Scruggs' defied conventional wisdom by achieving their greatest success during a period when many country and bluegrass acts were suffering hard times. On the one hand, their increasingly sophisticated recorded sound—often augmented by drums, additional guitars, and other instruments—found favor on the country charts (they placed six singles in the Top 40 between 1959 and 1962), while on the other, Earl Scruggs' brilliance on the banjo brought the act attention from the growing numbers of urban folk revival enthusiasts, which was carefully tended to by his wife, Louise. The greatest boost to their popularity, however, was their recording of the theme song for television's *Beverly Hillbillies*, which spent three weeks at the top of the country chart and exposed millions of viewers to their music—and to the co-leaders directly, as they made several guest appearances on the show. When they appeared at Carnegie Hall in New York the same December, 1962, week that "The Ballad Of Jed Clampett" reached #1, it was apparent that the Foggy Mountain Boys had reached hitherto unattained heights of popularity for a bluegrass act.

From then on, the band led what amounted to a double life, aiming single records at country radio, LP albums at the folk audience, and making appearances at both folk and country venues, including at the prestigious and increasingly well-attended Newport Folk Festivals in the mid 1960s. Though the strategy worked well from a commercial point of view, many of their fans were dismayed by the resultant changes to their music, which drew increasingly from the folk realm, both older, traditional numbers as well as songs written by newer, urban folk artists such as Bob Dylan. The Foggy Mountain Boys' sound moved increasingly in the direction of folk-rock, with an ever-growing number of studio musicians playing a prominent role in their recordings; the change was further sharpened as Earl Scruggs, encouraged by his teenaged sons, began to develop a greater interest in contemporary popular styles, while Flatt yearned for a return to the more countrified, strictly bluegrass sound of the 1950s and early 1960s editions of the band.

By 1969, despite even greater popularity resulting from the prominent use of their "Foggy Mountain Breakdown" as background music in the movie *Bonnie and Clyde*, both Flatt and Scruggs

were unwilling to maintain their association, and the Foggy Mountain Boys disbanded shortly after Scruggs' appearance with his sons at an anti-Vietnam War demonstration in Washington, D.C. Both of the leaders established their own groups, Flatt forming The Nashville Grass, with a more traditional sound, Scruggs creating the Earl Scruggs Revue with his sons and other young musicians interested in a bluegrass-rock hybrid. The Foggy Mountain Boys passed into history. The band's reputation, tarnished by the end, rebounded as their earlier recordings were reissued, and their influence has proven to be both immense and enduring; most of their recordings from the band's first 15 years of existence have become staples of the bluegrass repertoire, and virtually no bluegrass festival takes place without the performance of a healthy number of the Foggy Mountain Boys' classic songs.

—Jon Weisberger

## Folk Music

Before the twentieth century, a dichotomy prevailed between cultivated music, by educated, formally trained musicians and composers, and folk music, performed by everyone else. Cultivated music was created by and for the upper classes, and was taught and transmitted within a written tradition, while folk music was created by and for the lower classes, and was transmitted orally. Since folk songs were remembered rather than written down, they changed over time—sometimes gradually over centuries, sometimes all at once at the hands of a particularly innovative interpreter. The changes might be accidental, resulting from a lapse of memory, or a deliberate improvement. This communal re-creation is one of the defining characteristics of folk music. The songs and variation belonged to the whole community and were not associated with specific individuals. The names of great classical composers were transmitted in the written tradition along with their compositions, but traditional folk songs are anonymous. Cultivated music had to please the wealthy patron who paid the composer, but a folk song had to appeal to the entire community in order to survive over generations. Thus cultivated music was aristocratic and folk music was communal. Each reflected its audience's values. Cultivated music was often quite complex and required specialized musicians who were hired to perform it, whereas folk songs remained simple, so that anyone could memorize, sing, or play them.

One innovation which compromised the oral nature of folk music was the broadside. Broadside were lyrics printed on large sheets of paper and sold at the marketplace. There was often an instruction to sing the lyrics to the tune of a well-established song.

Folksinger Buffy Sainte-Marie, 1971.

This introduced a degree of literacy to folk music, and many “broadsides” exhibit literary qualities. But the major change that permanently affected folk music was the advent of mass media. Records, movies, radio, and television all gave rise to popular music accessible to everyone from coast to coast. Individuals were able to become rich, or at least make a living, by performing music which appealed to millions of people. This has caused difficulty for musicologists in defining folk music. Popularity itself does not disqualify a song as folk music, but some musicologists claim that it ceases to be folk when it conforms to mainstream styles and tastes. In the latter half of the twentieth century there are very few communities unaffected by mainstream culture (with the exception of isolationist communities like the Amish). One may be immersed in one's own regional or ethnic tradition, but hardly anyone is completely sheltered from mass media. Consequently, individual traditions have shed their particularities and conformed to mainstream tastes. Folk has given way to folk rock and folk pop. The same can be said of blues, bluegrass, and country. These were originally types of folk music which have been popularized into mainstream genres.

American folk music is among the richest and most variegated in the world, owing to the many ethnic groups that make up the American people. The major strains of American folk music are Irish, Scottish, English, and African. Other European traditions, notably

Spanish, have also exerted some influence. The American Indians have a rich musical heritage, but it was never integrated with the European or African traditions. Some instruments of American folk music are the guitar, string bass, mandolin, autoharp, dulcimer, fiddle, and banjo.

The most intriguing genre of the American folk song is the ballad, a song which tells a story. The earliest American ballads came from the British Isles and thrived for centuries in Appalachian areas. Ballads can often be traced to mythic or epic traditions. "Polly Vaughan" (Peter, Paul and Mary) can be traced back to Celtic mythology. (Note: in this discussion, examples of ballads will be followed by popular performers who have recorded the song. More traditional versions of many of these ballads may be explored in Child's *English and Scottish Popular Ballads*.) "Polly Vaughan" tells the story of a hunter who accidentally kills his wife, having mistaken her for a swan. The story has a supernatural element: in some versions Polly is resurrected as a swan; in others her ghost visits the courtroom where her husband is tried. "John Riley" (Joan Baez, the Byrds) tells of a man who, returning from a seven-year expedition, disguises himself from his wife to find out if she has been faithful. John Riley has obvious parallels with the Greek Odysseus. Many ballads derive from the Biblical tradition, as in "Samson and Delilah," also called "If I Had My Way" (Grateful Dead, Peter, Paul and Mary).

Although there are some comic ballads, most ballads are tragic and have a tone of inevitability which exerts a strange power over the listener. Many tell of the hero's ruin and seek to deter the listeners from a similar fate by delivering a moral at the end. "The House of the Rising Sun" (Bob Dylan, Joan Baez, Odetta, the Animals), tells the tragic tale of a woman lured into prostitution and warns the listener "not to do what I have done." The fidelity of women is a common theme, as in "John Riley" mentioned above, and "Gallows Tree," also called "Hangman" (Peter, Paul and Mary, Odetta), which tells of a man at the gallows abandoned by father, mother, and brother, until his true love finally comes to pay his fee (a very different version of this song is recorded by Led Zeppelin as "Gallows Pole"). The infidelity of men is an equally common motif, as in "Come All Ye Fair and Tender Ladies," also known as "Tiny Sparrow" (Peter, Paul and Mary).

Ballads may be inspired by local events, such as battles, uprisings, disasters, trainwrecks, and shipwrecks (including the *Titanic*). A shipwreck is the subject of "Sir Patrick Spens," one of the oldest and most famous of all British ballads, often included in literature anthologies for its deft, concise poetry and symbolism. Train songs are very common. The advent of the train captured the folk imagination for its great economic and cultural impact upon rural America. "John Henry" (Odetta) tells of a railroad laborer who tried to outperform the steam drill using his bare hands to drill the railroad tracks. "Casey Jones" tells of an engineer who died in a trainwreck (the Grateful Dead's "Casey Jones," from the album *Workingman's Dead*, is their own composition, only marginally related to the original). The Badman Ballad was also popular. Often petty criminals and bandits attained legendary status and became tragic or ironic antiheroes in ballads such as "Jesse James" or "Pretty Boy Floyd."

One of the major genres of American folk music is the protest song. Wars have always been a topic of protest songs. "Cruel War" (Peter, Paul and Mary) goes back to the American Revolution. But in this century it was the "union singers," declaiming the atrocious labor conditions of the Industrial Age, that made protest songs notorious. One of the first union singers was a Swedish immigrant named Joe Hill. He was a member of the Industrial Workers of the

World and contributed to their book, *Songs to Fan the Flames of Discontent*. He was executed in 1915, accused of murdering a businessman. (Joan Baez commemorated him in the song "I Dreamed I Saw Joe Hill.")

But the great flowering of protest songs arose from the hardships of the Great Depression. Notable among these are the Dust Bowl ballads of Woody Guthrie. Guthrie added his own lyrics to folk and country songs to tell what he saw and suffered in his travels across America during the Depression. He modified the Badman Ballad to write songs about good men down on their luck. Thus one of his major contributions was the emphasis on new lyrics. Guthrie traveled with folksingers like Ramblin' Jack Elliott, Cisco Houston, and Huddie (Leadbelly) Ledbetter. In 1941 he joined the Almanac Singers, who played topical songs that would inform people of current events which might not be covered honestly in the media. They formed a commune in Greenwich Village and charged 35 cents for daylong performances which demanded audience participation. (Such group participation in folk music is called a hootenanny.) The purpose of these folksingers was to promote group solidarity and rally listeners into supporting workers' rights by joining unions. Though Guthrie and his companions would be hailed as "authentic" folksingers by a later generation, many folk musicologists of the time objected to this popularization of folk music for the sake of political causes. Guthrie himself denied that he was a folksinger. He hated the beautifully sad songs of the "silk-stocking balladeers" of an ancient British tradition which held no hope of social mobility for the lower classes.

Another important folksinger of the period was Pete Seeger, a musicologist and Harvard dropout who, like Guthrie, was bent upon traveling and recording his experiences in song. He traveled to other countries, learned their traditions, and included them in his repertoire. Seeger also joined the Almanac Singers, though he was more famous for his next band, the Weavers. Seeger, Guthrie, and others were affiliated with Communism, like many left-wing activists of the time. In 1953, the Weavers disbanded, effectively silenced by the House Committee on Un-American Activities. In 1954 Guthrie entered the hospital, debilitated by Huntington's Chorea. He ceased to write songs, though he did not die until 1967. Without these major players, folk music subsided in the mid-1950s, forgotten by the mainstream amid the excitement of a thrilling new sound called rock 'n' roll.

But folk music became chic among certain middle-class college students who disdained rock 'n' roll as an inane, fleeting fad. Eventually folk scenes arose in Berkeley and Cambridge, and Albert Grossman opened the Gate of Horn folk club in Chicago. Grossman was also responsible for producing the Newport Folk Festival, which became an annual event. The first festival, in 1959, introduced Joan Baez. But the most exciting folk scene was in Greenwich Village, in coffee houses like the Bitter End and the Gaslight Cafe. (This scene was later satirized in Dylan's "Talking New York," and commemorated more abstrusely in Simon and Garfunkel's "Bleeker Street.") Grossman visited Greenwich Village, and, moved by the devotion of college students buying expensive coffee while watching grubby folksingers, he decided the time was right to cash in on folk. He converted three clean-cut California boys into the Kingston Trio in 1957. They recorded "Tom Dooley" (1958), a traditional ballad about a man sentenced to death, which sold two million copies. Soon a proliferation of polished, cleancut folkies imitated the Kingston Trio: the Folksingers, the Limelitters, the Ramblers Three, the Brothers Four, the Chad Mitchell Trio, the New Christy Minstrels, and Peter, Paul and Mary. But a remarkable new talent distinguishing himself from the crowd was Bob Dylan, who wrote his own material in

addition to covering traditional songs. Dylan was audacious, perhaps even pretentious: his “Song for Woody” compared his own travels to the hardships Guthrie endured during the Depression. However, Dylan soon proved to be a poet worth listening to. When his songs were covered by Peter, Paul and Mary they became hits, and Dylan finally got his deserved recognition. Soon the folk popularizers, and then mainstream acts, were covering his material. But a more significant outgrowth of Dylan’s success was the emergence of folksingers who, rather than simply covering his songs, were inspired by Dylan’s example to write and perform their own songs. Tom Paxton, Tim Hardin, Phil Ochs, Judy Collins, and Gordon Lightfoot were all indebted to the standard of originality, creativity, and intelligence established by Dylan. Peter, Paul and Mary’s reputation hovered between the popularizers and the earnest folkies, until Dylan’s nostalgic poem commemorating their performances at the Gaslight was published on their album *In the Wind* and boosted their credibility. In February 1964, Peter, Paul and Mary were at the height of their popularity, with all three of their albums in the top ten, when the Beatles invaded America and awoke the sleeping giant of rock ‘n’ roll.

It was inevitable that folk and rock would merge. Rock was always an eclectic genre, born of blues and country music, and was always ready to absorb influences. After the Beatles began to dominate the charts, other bands sought some something new to hook fickle teen tastes. In September 1964, the Animals attacked “House of the Rising Sun” with electric guitars and organ. The song was a hit, and suggested to the folkies that they too could cash in on the hybrid.

1965 saw the explosion of folk rock. This year was important for several reasons. In January, Bob Dylan shocked the folkies by “going electric” on the single “Subterranean Homesick Blues.” They hoped the new style was a put-on, a satire of the rock craze, but these hopes were shattered in March by the equally electric album *Bringing It All Back Home*. At the Newport Folk Festival in July Dylan and his electric guitar were booed offstage after three songs, despite the fact that Muddy Waters had played an electric guitar at the 1964 festival. Meanwhile, the Byrds had released *Mr. Tambourine Man* (June 1965), featuring Dylan songs and other folk songs revitalized by their electric twelve-string guitars and harmonies. They followed this up with another fine album in December, *Turn! Turn! Turn!* The Byrds were essentially folk musicians, who shrewdly recognized rock as the new direction in popular music. Simon and Garfunkel were also urban folkies transformed into folk rockers. Their first album, *Wednesday Morning, 3 A.M.*, was, like Dylan’s first album, a mixture of traditional folk songs and authentic-sounding original compositions. In spite of its great musical and lyrical qualities, the album did not sell well. But when their producer added electric guitars and drums to one of these songs, “Sounds of Silence,” and re-released it as a single, it reached the top of the charts. Fortunately, Paul Simon was able to live up to the expectations stirred by the folk rock version. He had been uncomfortable with the “authenticity” demands of the folkies and proved to be an original and intelligent songwriter, free of Dylan’s evasiveness and posturing. Simon created much of folk rock’s finest music throughout the rest of the decade.

Meanwhile, the Beatles also had come under the influence of Dylan. Inspired by his mellow introspection and elusive symbolism, Lennon responded with “You’ve Got To Hide Your Love Away,” and McCartney offered the folksy, wordy “I’ve Just Seen a Face” (*Help!*, August 1965). By December the Beatles were rising to the challenge of the upstart Byrds, and exhibited a more pronounced folk

influence on *Rubber Soul*. It never occurred to the Beatles to explore their own British tradition of folk music. This task was taken up by the Scottish troubadour Donovan Leitch. Donovan combined the ballad tradition of the British Isles with Dylanesque lyrics and was quickly hailed the “Scottish Dylan.”

By 1966 folk rock was seemingly everywhere. Worthy folk rockers included the Lovin’ Spoonful, the Mamas and Papas, Buffalo Springfield, and the Turtles. But the “folk” label was often abused as a marketing device applied to anyone slightly eclectic, from Janis Joplin to the Youngbloods. Even Sonny and Cher were considered folk rock. On the other hand, the Grateful Dead are rarely considered folk, but produced great folk rock on *Workingman’s Dead*, *American Beauty*, and later *Reckoning* by mingling blues, country, jugband, bluegrass, and Appalachian styles. The Dead’s lyricist, Robert Hunter, was a poet whose literary qualities rivaled Paul Simon or Dylan. His terse, ironic tales of the struggles and adventures of simple folks were closer to genuine folk song than many others ever came.

Much of what passed for folk rock was the appropriation of several features with varying relevance to traditional folk song. First of all, anyone holding an acoustic guitar was called a genuine folkie, and the electric twelve-string guitar was also labeled folk, based on the Byrds’ precedent. And then there were the vocal harmonies associated with Peter, Paul and Mary (though these were just as often borrowed from the Beatles or the Everly Brothers). Finally, “sensitive” lyrics, whether political or personal, were a sure sign of folkdom. Dylan’s songwriting was the widest and most enduring influence, though not always for the best: his style of protest—detached, ironic, and accusing—was eventually imitated in every area of popular music, reaching a crescendo of sanctimony in the “Art Rock” of the 1970s. The “other side of Bob Dylan,” his cryptic autobiographies, also exerted an unfortunate influence, as less skilled writers began to bare their soul with diminishing subtlety and sophistication. The 1960s spirit of togetherness, embraced by everyone from Peter, Paul and Mary to Crosby, Stills and Nash, was abandoned in the 1970s as these and so many other groups splintered into solo artists. Retreating from the political chaos of the late 1960s, the singer/songwriters resorted to whiny introspection and self-infatuation. Some of them, such as John Prine and Jim Croce, maintained a sense of humor and irony which made them worthy folksingers. Others, such as Joni Mitchell and Leonard Cohen, relied on their literary prowess to grace their gloom with a little dignity.

Folk rockers of the British Isles tended to avoid the singer/songwriter melody. In the late 1960s and 1970s, Fairport Convention, the Incredible String Band, Jethro Tull, Led Zeppelin, and Irish guitar maestro Rory Gallagher successfully blended folk influences into their eclecticism. These were usually musical influences, without the ideological baggage associated with folk music. The folk spirit of protest, homespun integrity, and anti-corporate independence was eventually seized by a new and very different breed of “simple folks”—the punk rockers.

## Folkways Records

Founded by Moses "Moe" Asch in 1948, Folkways Records evolved into perhaps the most important independent record label in the history of American popular culture. Determined to document the authentic musical traditions of the world, Asch assembled an eclectic catalogue of more than 2,200 titles that featured such artists as Huddie "Leadbelly" Ledbetter, Woody Guthrie, Pete Seeger, Coleman Hawkins, Mary Lou Williams, and John Cage. In addition to assembling an impressive collection of children's and world artists, Folkways played a prominent role in shaping the canon of American folk music, exerted tremendous influence on left-wing culture, and, in part, inspired the folk revival of the 1960s.

Born in 1905 in Warsaw, Poland, in 1914 the nine-year-old Moses Asch emigrated with his family to New York City, where his father, the renowned Yiddish novelist Sholem Asch, sought to forge relationships with other Jewish intellectuals. In 1923, Sholem sent his son to Germany to study electronics, and when Moe returned to New York in 1926, he opened a radio repair shop and pursued a career as a sound engineer. Eager to gain his father's approval, he then sought a more literary occupation. During his sojourn in Germany, he had read John Lomax's *Cowboy Songs* (1910), which sparked his interest in American folklore and convinced him that folk music constituted the literature of the "common" people. In 1939, he established Asch Records to document their voices, recording traditional Yiddish folk songs and cantorial's. Asch's repertoire expanded in 1941 when he released a collection of children's songs performed by Leadbelly, the former Lomax protégé who would become central to the label's success.

The release of Leadbelly's material as well as *The Cavalcade of the American Negro* (1941) underscored Asch's commitment to preserving the cultural heritage of African Americans. These racial politics were indicative of his general leftist sympathies. Reared in a family of socialists, he enthusiastically embraced the Popular Front, a loose affiliation of left-wing and liberal artists and intellectuals who, at the suggestion of the Communist Party International, committed themselves to the defeat of European fascism and the promotion of racial and economic equality. Although Asch was wary of communism, in 1944 he opened his studio, now under the banner of Disc Records, to the leftist American Folksong Movement. Seeger and his Almanac Singers, Cisco Houston, Brownie McGhee, Sonny Terry, and Woody Guthrie gathered to record traditional tunes and politically-inflected songs. Folkways was particularly supportive of Guthrie's

career and, between 1944 and 1945, Asch recorded nearly 140 Guthrie selections and meticulously archived the musician's voluminous notebooks, letters, and drawings.

Disc Records ended in bankruptcy, but when Asch and his assistant, Marian Distler, launched Folkways in 1948, he refused to make efforts to sign commercially successful artists. Marquee performers, he worried, would compromise the label's integrity among academics as well as his attempts to chronicle the lives of "real" folk. As a result, he continued to record music that appealed to small but well-defined audiences: white leftists, jazz aficionados, librarians, and teachers. In its fledgling years, Folkways rereleased Guthrie's *Dust Bowl Ballads* (which RCA originally recorded in 1940), expanded its jazz catalogue, and, under the direction of ethnomusicologist Harold Courlander, promoted the Ethnic Series.

In 1952, Asch hired Harry Smith to assemble the *Anthology of American Folk Music*, a compendium that introduced a new generation, notably Bob Dylan and Bruce Springsteen, to the genre. This seminal album became a cultural touchstone for the many white students who, inspired by the success of the Weavers and the Kingston Trio, sought to celebrate folk musicians and their traditions. Under Asch's auspices, Mike Seeger, Pete's half-brother, reclaimed and recorded Southern traditions, while Ralph Rinzler documented such virtuosos as Clarence Ashley and Arthel "Doc" Watson. A burgeoning interest in folk music opened a new market to Asch, impelling him to rerelease older materials and to issue new recordings by such legends as Sam "Lightnin'" Hopkins and Big Joe Williams.

This renaissance gained momentum when, in the early 1960s, Dylan and Joan Baez began to write and perform topical songs that both reflected and shaped the politics of the Ban the Bomb and Civil Rights Movements. Interested in the New Left's use of the folk idiom, Folkways created the Broadside label to document songs written for the radical underground publication of the same name. Replete with Dylan compositions, the *Broadside Ballads* featured a host of folksingers, including Seeger, Phil Ochs, and Dylan himself, performing under the pseudonym Blind Boy Grunt. Folkways captured other sounds of the decade by employing Guy and Candie Carawan to record the music and speeches of the Civil Rights Movement.

A sizable catalogue, a vault of vintage recordings, and a handful of new projects sustained Folkways through the 1970s, but as the 1980s approached, Asch focused on finding a way to preserve his life's work. Moe Asch died in 1986 and, in 1987 the Smithsonian Institution acquired his collection and reorganized the company under the rubric Smithsonian-Folkways. To fund the venture, the Smithsonian enlisted a coterie of popular musicians to cover material for an album entitled, *A Vision Shared: A Tribute to Leadbelly and Woody Guthrie* (1988). The artists who participated in this effort attest to the enduring legacy that Folkways and its most recognizable legends passed to American popular music. Dylan, Springsteen, Willie Nelson, Little Richard, John Cougar Mellencamp, and Emmylou Harris were among those who identified Leadbelly and Guthrie as their cultural forebears. The Smithsonian agreed to keep each of Asch's original titles in print and has continued to issue previously unreleased materials from his archives.

## Follett, Ken (1949—)

Writer Ken Follett burst upon the American fiction scene in 1978 with his mystery spy story *Eye of the Needle*. A taut thriller, it portrayed a central female character rising to heroism and a humanized villain together with a convincing image of World War II lifestyles, sensibilities, and attitudes. Characterized by fast-paced action and an economic, readable style, the book was greeted with enthusiasm by public and reviewers alike. It became an American Literary Guild selection garnering sales of more than ten million copies. This was to be the start of Follett's continued success in America from the 1970s through the 1990s. With *Eye of the Needle*, he gained the coveted "Edgar" award from the Mystery Writers of America, a prize honoring the father of the American detective story, Edgar Allan Poe. The novel was later adapted for the screen by Stanley Mann, starring Donald Sutherland and Kate Nelligan. With its release in 1981, the film secured Follett's reputation as a top-notch writer in the spy genre.

He followed his first success with four more best-selling thrillers: *Triple* (1979), *The Key to Rebecca* (1980), *The Man from St. Petersburg* (1982), and *Lie Down with Lions* (1986). American television miniseries of both *The Key to Rebecca*, starring Cliff Robertson and David Soul, and *Lie Down with Lions* in 1994, starring Timothy Dalton, enhanced his popular reputation. A further miniseries of *On Wings of Eagles* (1983), a true story of an Iranian rescue mission, cemented his standing and following.

*Pillars of the Earth*, which has since achieved a worldwide cult status, was published in 1989. It was a radical departure from Follett's spy stories. The novel about building a cathedral in the Middle Ages was on the New York Times best-seller list for 18 weeks. This book was followed by *Night Over Water*, *A Dangerous Fortune*, and *A Place Called Freedom*, which again were not in the spy genre, but had elements of suspense and intrigue. In 1997, Follett's thriller *The Third Twin*, a suspense novel about a young woman scientist who stumbles over a genetic engineering experiment, was ranked number two in the world, beaten only by John Grisham's *The Partner*. Miniseries rights for the book were sold to CBS for \$1,400,000, and its broadcast in 1997 was a further indication of Follett's rank in American popular culture. *The Hammer of Eden* (1998) is a contemporary suspense story with all of the elements of fast pace and intriguing characters established in his earlier efforts.

Follett began his career as a fiction writer while working for the *London Evening News*. He produced a series of mysteries and thrillers under various pseudonyms until he felt he had learned enough and written well enough to author under his own name. His early works were, in Follett's words, "intentionally very racy, with lots of sex."

Each of his best works grew out of news stories and historical events. Cinematic in conception, they follow a hunter-hunted pattern that leads to exciting chase scenes and games of wit and brinkmanship. His most successful works have dealt with World War II, perhaps because he requires a wide backdrop and world-shaking events to justify the tumultuous passions he instills in his characters. At its best, Follett's prose is lean and driven. His forte lies in setting up a chain of events in chronological sequences. Follett's ideal is a compromise between the serious and the popular, the "plot, story, excitement, sensation and the world outside the mind" that he

believes serious writers often ignore merged with the graceful, powerful prose and more complex "character development" that mass-market writers fail to take time for.

Born in Cardiff, Wales, on June 5, 1949, Follett was encouraged to read from a very early age, openly acknowledging his debt to the access to free books he had from the local library, and often saying in lectures that it is axiomatic that a writer is also a reader. He attended University College, London, where he received a BA in philosophy in 1970. While at University, he married his first wife, Mary Elson, and had a son and daughter. His second wife, Barbara Follett, became the Member of Parliament for Stevenage in Hertfordshire. Follett has major interests in music, playing bass guitar in a band called Damn Right I Got the Blues; the theater, especially Shakespeare; and his work as president of the Dyslexia Institute.

## Fonda, Henry (1905-1982)

Although cast in a similar mold to his contemporaries Gary Cooper and James Stewart, Henry Fonda was one of the most distinctive American screen actors. Tall, dark, good-looking, and quietly spoken, he exuded decency, sincerity, and understated authority, and spent much of his 46-year career being offered up as a repository of honesty, a quiet American hero and man of the people. He will forever be remembered as the incarnation of the president in *Young Mr. Lincoln* (1939), Steinbeck's Tom Joad in *The Grapes of Wrath* (1940)—both for John Ford, with whom he did much of his finest work—and the subtly persuasive jury member in *Twelve Angry Men* (1957), but his roles ranged wide and his successes were numerous. He was an engagingly absent-minded dupe, turning the tables on Barbara Stanwyck in Preston Sturges's sparkling comedy *The Lady Eve* (1941), the voice of conscience in William Wellman's *The Ox-Bow Incident* (1943), and a memorable Wyatt Earp for Ford in *My Darling Clementine* (1946). He created the role of *Mister Roberts* on Broadway and on-screen, and played presidential candidates in two of the best political films of the 1960s, *Advise and Consent* (1962) and *The Best Man* (1964).

Fonda was born on May 16, 1905 in Grand Island, Nebraska. After high school, he enrolled for a degree in journalism at the University of Minnesota, but dropped out and became an office boy. Asked to play a role in an amateur production with the Omaha Community Players, he found his calling, went on to work in summer stock, and joined the University Players, a new group of students who aspired to the theater. The guiding light was future director Joshua Logan, and the young company included James Stewart and Margaret Sullavan. From there, with his friend Stewart, he made his way to

**Henry Fonda**

New York and the Broadway stage in the early 1930s, and married Margaret Sullivan—the first of his five wives—in 1932. The marriage was over in 1934, the year when, having enjoyed a Broadway success in *The Farmer Takes a Wife*, he signed a contract with film producer Walter Wanger.

Victor Fleming's film version of *The Farmer Takes a Wife* (1935) marked Henry Fonda's screen debut. He repeated his lead role, cast opposite Janet Gaynor, and progressed steadily to popularity and stardom through the rest of the decade. He played a backwoods pioneer in the first outdoor Technicolor adventure movie, *The Trail of the Lonesome Pine* (1936), the film that established his idealistic resolute persona (cartoonist Al Capp later claimed that he had based L'il Abner on Henry Fonda), and in 1937 was invited to star in the first British Technicolor picture, *The Wings of the Morning*. In 1938 he played Frank James in the first Technicolor Western, *Jesse James*, making him Hollywood's first Technicolor star. However, his best work of this early period was in Fritz Lang's social conscience drama, *You Only Live Once* (1938). Set against the background of the Depression, Fonda played a fundamentally decent young man driven to crime by force of circumstance and on the run with his wife (Sylvia Sydney). Other career highlights of the 1930s were William Wyler's Civil War melodrama *Jezebel* (1938), in which he costarred as the exasperated but intractable beau of a willful Bette Davis, and the start of his collaboration with John Ford. *Young Mr. Lincoln*, in which he limned a dreamy, political calm while maintaining a commitment to justice and decency, found him perfectly cast. His frontier pioneer in *Drums Along the Mohawk* (also 1939) followed, and confirmed (after his Frank James) that Fonda, who detested guns and didn't care

much for horses, was nonetheless a sympathetic candidate for the Westerns genre.

He played Frank James again in *The Return of Frank James* (1940), a memorable but sadly underrated Western from Fritz Lang, but it was indubitably Ford who engraved Fonda's image on the Western. In Ford's hands, Fonda was a kind of Sir Galahad of the Prairie: polite, laconic, slow to anger, but a man of his word who means what he says. They made only one more Western together (*Fort Apache*, 1948), but Fonda's mature postwar demeanor served Anthony Mann's *The Tin Star* (1957) and Edward Dmytryk's uneven *Warlock* (1959). Meanwhile, there was Tom Joad.

Although a major star by 1940, Fonda, dissatisfied with his material, wanted out of his contract with 20th Century-Fox and Walter Wanger. However, he desperately wanted to play Joad, and reluctantly signed a seven-year deal with Fox in order to get it. Ford directed *The Grapes of Wrath* from his own screenplay adaptation of the novel. It was a powerful depiction of the plight of the Dust Bowl migrants, in which Fonda's Joad, a decent man just out of jail after killing in self-defense, is dismayed to find his family farm a ruin. Undaunted by adversity, he helps his family make it to California against the odds, only to find the poor are oppressed there, too. Following the death of Casey (John Carradine), an inspirational figure, Joad, in a classic speech lifted directly from Steinbeck's novel, vows to fight injustice wherever it may be. Fonda was Oscar-nominated for his performance but lost, ironically, to his close friend James Stewart's comedy performance in *The Philadelphia Story*.

In 1936, Fonda had married socialite Frances Brokaw. The marriage lasted until 1950 when, following a mental breakdown, she committed suicide. Brokaw, the second Mrs. Fonda, was the mother of future actors Jane and Peter. In the early 1940s, Fonda was able to escape from a couple of years of his contractual obligations to Fox thanks to active service during World War II. His postwar return was *My Darling Clementine*, and after a handful of films, ending with *Fort Apache*, he deserted Hollywood for the Broadway stage, and was off the screen for eight years. During this time, his notable successes included *The Caine Mutiny* *Court Martial* and *Mister Roberts*, the play that brought him back to the screen when John Ford insisted he recreate his stage role for Warner Bros.' 1955 film version. (Warner Bros. had wanted William Holden or Marlon Brando to star). Sadly, the filming was marked by dissension between star and director, and Ford's increasing illness, and the picture was completed by Mervyn Le Roy.

In 1956, the actor starred as Pierre, opposite Audrey Hepburn's Natasha in King Vidor's lumbering, multi-million-dollar version of *War and Peace*. Fonda insisted on wearing spectacles to give the character a suitably distracted, intellectual air but, unfortunately for the film, as *Time* magazine noted, Fonda gave "the impression of being the only man in the huge cast who had read the book." Also in 1956, Fonda's third wife divorced him, citing his affair with Adera Franchetti, who became his fourth wife in 1957. That year, he starred in one of his biggest successes of the decade, Alfred Hitchcock's *The Wrong Man*, playing the victim of a case of mistaken identity, fighting to save himself from a wrongful charge of murder. The 1960s began with a fourth divorce, and brought marriage (in 1965) to his fifth and last wife, Shirlee Mae Adams. During this decade, too, his public profile became somewhat eclipsed by those of his children, notably his daughter Jane, who was a prominent political activist as well as an increasingly successful actress. Both children were publicly outspoken in their criticism of their famous father, and his image as the nicest guy in town was somewhat tarnished.

On the professional front, he continued active. He made a number of television specials, including *Clarence Darrow*, and produced and starred in *The Deputy* from 1959 to 1961; and alternated between the live theater and films, but the Hollywood glory days were over and the good roles were few and far between. There were exceptions, notably in three overtly political films to which the gravitas of his demeanor was perfectly suited, and in which he was uniformly excellent. He was the candidate running for the office of Secretary of State, but dogged by a dark secret, in Otto Preminger's *Advise and Consent* (1962); an Adlai Stevenson-like presidential nominee with high ideals in Franklin Schaffner's adaptation of Gore Vidal's Broadway play, *The Best Man* (1964); and a heroic president staving off a nuclear holocaust by extreme means in Sidney Lumet's *Fail Safe* (1964). He made cameo appearances in such major, all-star productions as *The Longest Day*, *How The West Was Won* (both 1962), *Battle of the Bulge* and *In Harm's Way* (both 1965), and, in a late reprise of his Westerns career, but in a reversal of his "good guy" image, starred as a ruthless gunman in Sergio Leone's epic *Once Upon a Time in the West* (1969).

During the 1970s, with ill health gradually creeping upon him, Henry Fonda's illustrious career gradually wound down, though never quite out. In 1974, he was a presenter at the Tony Awards, was honored by the American Civil Liberties Union, and narrated a history film series for colleges and universities. He also opened on Broadway in the one-man show *Clarence Darrow*, but the show closed after 29 performances when Fonda collapsed in his dressing room from total exhaustion. He was rushed to the hospital and a pacemaker was implanted, but he later revived the play at the Huntington Hartford Theater in Los Angeles, where it was taped and presented on NBC later the same year. In 1977 he made a splash as a crusty old Supreme Court Judge in Robert E. Lee and Jerome Lawrence's *First Monday in October*, which played in Los Angeles, on Broadway, and in Chicago.

In between work, Fonda found time to paint (his watercolors hang in several galleries), do needlework, and experiment with haute cuisine. He was honored by the American Film Institute with a Lifetime Achievement Award in 1978, and by the Kennedy Center for the Performing Arts, and was given an honorary Oscar at the 1981 Academy Awards ceremony "in recognition of his brilliant accomplishments."

Henry Fonda stepped into the Hollywood spotlight once more to costar with Katharine Hepburn in *On Golden Pond* (1981). The film went some way to healing the rift with his daughter Jane, who played his daughter in the film, and, at age 76, he became the oldest recipient of the Best Actor Oscar—the first of his long and distinguished career—for his performance as a retired professor grown curmudgeonly with age and the fear of approaching death. He was, alas, too ill to attend the Oscar ceremony in March 1982, and Jane Fonda, herself a nominee that year, collected the statuette on her father's behalf. Henry Fonda, one of the best loved actors of Hollywood's Golden Age, and of the Broadway theater, died in August of that year.

## Fonda, Jane (1937—)

A popular culture icon alternately revered and reviled by American audiences, Jane Fonda is an actress whose career often has been overshadowed by her very public personal life. The quintessentially mod sixties cinematic sex symbol in *Barbarella*, Fonda soon became one of America's most controversial figures following her highly publicized trip to Vietnam in which she spoke out against the war. Despite public disapproval, Fonda nonetheless became one of Hollywood's most popular actresses, nominated for six Academy Awards and winning two. Off-screen, Fonda has been known as a dedicated political activist, a hugely successful workout guru, and wife to three prominent men—French film director Roger Vadim, politician Tom Hayden, and media mogul Ted Turner.

A member of Hollywood's aristocracy since birth, Jane was born in New York City to the legendary Henry Fonda and his socialite wife, Frances Seymour Brokaw. Jane spent her early years at the Fonda home in the mountains above Santa Monica, California, where Tomboy Jane and her younger brother, Peter, spent an idyllic childhood climbing trees and riding horses. After World War II, Henry returned to Broadway to star in *Mister Roberts*, and the family moved

Jane Fonda

to Connecticut, where the Fondas hoped to raise their children away from the Hollywood limelight. But the marriage quickly disintegrated after Henry fell in love with Susan Blanchard, the twenty-one-year-old stepdaughter of composer Oscar Hammerstein. Shortly thereafter, Frances, who had long suffered from depression, had a series of nervous breakdowns and was committed to a sanatorium, where she committed suicide by slashing her throat. Feeling that his twelve-year-old daughter and ten-year-old son were too young to know the truth, Henry told his children that their mother had died of a heart attack. Both Jane and Peter later learned the truth through the press.

As a teenager, Fonda showed little interest in following in her father's footsteps. Educated at the elite girls' school Emma Willard and later at Vassar, she earned a reputation as a free spirit and rebel whose chief interests were boys and art. But when the opportunity came to costar with her father and Dorothy McGuire at the theatre where the two stars had made their debuts, Fonda accepted and, in 1954, made her own acting debut in the Omaha Playhouse production of *The Country Girl*. Yet, she continued to envision a career as a painter, studying at the Ecole des Beaux Arts in Paris and the Art Students League in New York.

After meeting famed acting teacher Lee Strasberg in 1958, Fonda became interested in acting but was afraid of being compared to her famous father. It wasn't until Strasberg told the twenty-one-year-old Fonda she had talent that she decided to become an actress. Fonda joined the Actors Studio in 1958 and two years later made her film debut opposite Anthony Perkins in *Tall Story*. Fonda soon found regular work on Broadway and in Hollywood, where her beauty and talent won her a growing public following. During the sixties, she starred in such popular films as *Walk on the Wild Side*, *Cat Ballou*, and Neil Simon's *Barefoot in the Park* with Robert Redford.

In 1965, Fonda married French director Roger Vadim, and it was her controversial nudity in Vadim's futuristic film *Barbarella* which catapulted her to international stardom. Her next two films, *They Shoot Horses, Don't They?* and *Klute*, revealed her growing reputation as one of Hollywood's top actresses, earning her two Academy Award nominations. In 1971, Fonda took home the Oscar for best actress for *Klute*.

In 1972, Fonda traveled to North Vietnam. Shocked by the devastation, she agreed to make ten propaganda broadcasts to U.S. servicemen. This earned her the pejorative nickname "Hanoi Jane," and her speeches, calling U.S. soldiers war criminals and urging them to disobey orders, were carried around the world, along with pictures of her on the North Vietnamese guns used to shoot down American planes. Fonda's fame skyrocketed as she became both the darling of the antiwar movement and the sworn enemy of the Establishment, the U.S. military, and countless Vietnam veterans. For the rest of her life, Fonda would be associated with her trip to Vietnam, greeted with praise or literally shunned and spit upon.

Following her divorce from Vadim, Fonda became increasingly politically active after marrying radical politician Tom Hayden in 1972. The Haydens supported countless liberal causes, becoming one of Hollywood's most outspoken political couples. Fonda's reputation as an actress continued to grow. During the late seventies, she appeared in such film classics as *Julia*, *Comes a Horseman*, and *Coming Home*, for which she won her second Oscar.

In 1981, Fonda finally was given the opportunity to act opposite her father on film. *On Golden Pond*, starring Henry, Jane, and the

inimitable Katharine Hepburn, would be Henry's last film and would earn the ailing actor an Academy Award. Jane continued to make movies throughout the eighties, appearing in *Agnes of God*, *The Morning After*, and *Old Gringo*, but much of her time was taken up with a new role, as she once again became an iconic figure in a new movement—the fitness revolution. She produced "The Jane Fonda Workout" series of fitness videos, which became national bestsellers even as the money they earned benefited the liberal political causes she and Hayden espoused.

In 1988, during an interview with Barbara Walters on television's *20/20*, sixteen years after her trip to Vietnam, Fonda publicly apologized for her bad judgment in going to Vietnam and particularly rued the effects her trip had had on Vietnam veterans. She would later meet with Vietnam veterans in a semi-successful effort to heal old wounds.

In 1989, Fonda and Hayden were divorced. After a difficult period of adjustment, Fonda began dating Ted Turner. They married in 1991, and their union is thought to be a happy one. So happy, in fact, that Fonda has retired from acting, preferring to devote her time to her marriage and to the social causes she continues to support. As Jennet Conant wrote in an April 1997 *Vanity Fair* article, Fonda is now "the star turned supporting player, the activist turned philanthropist." After a lifetime in the public eye, the more private Jane Fonda nonetheless remains one of America's most intriguing popular culture icons.

## Fonteyn, Margot (1919-1991)

Prima ballerina of the British Royal Ballet for over forty years, Margot Fonteyn was one of the greatest dramatic dancers of the twentieth century. Fonteyn was the first ballerina trained in a British school and company to achieve international stature. Artistic partnerships were integral to her career; her forty-year collaboration with Frederick Ashton was the longest between a ballerina and choreographer in dance history. As she prepared to retire at age 43 in 1962, her career was revitalized by her partnership with Rudolf Nureyev, who, at age 24, had just defected from the Soviet Union. "It was an artistic love affair conducted in public" said dance critic Clement Crisp. Fonteyn's career was unusually long for a ballet dancer and she continued to perform until her mid-sixties.

## Ford, Glenn (1916—)

One of the most pleasing, consistent, thoughtful, and prolific of screen actors, Glenn Ford (born Gwyllyn Newton in Quebec) was a regular feature of the Hollywood landscape, particularly the sagebrush, given the large number of Westerns in which he starred. Initially a leading man of the second rank, he enjoyed full stardom from 1946 until the late 1950s. He owed his elevation to *Gilda*, Charles Vidor's classic *film noir* in which he tangled angrily and enigmatically with Rita Hayworth in a seedy South American nightclub, and subsequently demonstrated his worth and versatility in a wide range of material. He subsumed his natural likability to play hard men (e.g. *3.10 to Yuma*, 1957) and revealed comedy talent in *Teahouse of the August Moon* (1956), but his most memorable performances were as the revenge-obsessed detective in Fritz Lang's *The Big Heat* (1953) and the teacher dealing with delinquents in *The Blackboard Jungle* (1955). His star waned in the 1960s, owing to poor material, but he proved his durability on TV and made a noteworthy appearance in *Superman* (1978).

## Ford, Harrison (1942—)

Starring in two of the most successful film trilogies of all time, the *Star Wars* and Indiana Jones adventures, actor Harrison Ford became the action hero for a new generation of blockbusters in the 1970s and 1980s. Throughout the 1990s he further consolidated his film star appeal and was voted "The Greatest Movie Star of All Time" by *Empire* magazine in October 1997.

Ford's most notable roles prior to *Star Wars* were appearances in George Lucas's *American Graffiti* (1973) and Francis Ford Coppola's *The Conversation* (1974), establishing him as a competent character actor and, more importantly, making him known to the "Movie Brat" directors who came to dominate commercial cinema in the 1970s and 1980s. The most famous biographical fact about Ford was that he was working as a carpenter to the stars when Lucas called him in to take part in auditions for a new science-fiction project. Breaking all box office records and establishing the trend for special-effects blockbusters, *Star Wars* (1977) was a much bigger film than any of its actors;

Harrison Ford in a scene from the film *Raiders of the Lost Ark*.

but Ford's Han Solo clearly had the edge as an attractive rogue—a cowboy in the first film, a romantic hero in *The Empire Strikes Back* (1980), and a freedom fighter in *Return of the Jedi* (1983).

Apart from a lighthearted cowboy role in *The Frisco Kid* (1979), for a while it seemed that Ford was going to be typecast in war movies, as the Vietnam veteran in *Heroes* (1977), the action man in *Force 10 from Navarone* (1978), the romantic hero in *Hanover Street* (1979), and the sum of his associations as Captain Lucas in Coppola's *Apocalypse Now* (1979). But it was with the release of Steven Spielberg's *Raiders of the Lost Ark* in 1981 that Ford was able to take center screen in an altogether different, but still highly familiar set of adventures. As an archaeologist in the 1930s, the Indiana Jones character was able to combine all of the essential action fantasies of the Lucas-Spielberg team; as typified by the first film, for example, this adventurer could take part in a mythic quest against the Nazis—fantasy and war movie heroics lovingly packaged in Saturday morning serial form. The two sequels, *Indiana Jones and the Temple of Doom* (1984) and *Indiana Jones and the Last Crusade* (1989), clearly established Ford as the family action hero of the decade, an actor who combined elements of Humphrey Bogart, Gary Cooper, and Cary Grant, partly in his looks and his acting style, partly in the types of pastiche films which he chose, and all in contrast to the solely muscle-bound poundings of Sylvester Stallone and Arnold Schwarzenegger.

Ford's performances in Ridley Scott's *Blade Runner* (1982) and Peter Weir's *Witness* (1985) may, in fact, remain his most interesting in this respect. Not overtly commercial films, they nevertheless established Ford as an actor with understated authority, comparisons with 1940s film noir in the former and *High Noon* in the latter, serving to enhance, rather than detract from his contemporary generic appeal. Although possibly Ford's least favorite film, *Blade Runner* nevertheless gained cult and now classic status, and for *Witness* he gained his only Academy Award nomination. Ford probably demonstrated his greatest acting range as a stubborn inventor in Weir's *The Mosquito Coast* (1986), but it is still a performance in a film without simple

generic identity, balanced by his next two films, Mike Nichols's romantic comedy *Working Girl* (1987) and Roman Polanski's Hitchcockian thriller *Frantic* (1988).

Ford's attractiveness lies in the fact that he's something of a reluctant star who can nevertheless bring authority and appeal to the most generic of films. Part of his ongoing success has been due to the deliberation and discrimination with which he has chosen his films, taking care to alternate action with light comedy and drama, and working with the most professional directors available. After two of his most mediocre films, Alan J. Pakula's solid courtroom drama *Presumed Innocent* (1990) and Mike Nichols's sentimental *Regarding Henry* (1991), Ford had the sense to move on to action thrillers, starring as Jack Ryan in the high-tech Tom Clancy adaptations *Patriot Games* (1992) and *Clear and Present Danger* (1994), and as the innocent doctor on the run in *The Fugitive* (1993).

Two of Ford's most ill-received films appeared in 1995 and 1996; in the old-fashioned remake of *Sabrina* he played the Bogart role, and in *The Devil's Own* he courted controversy. Though Ford often noted that he choose films with "strong" stories, some of his films have had controversial political agendas. Both *Patriot Games* and *The Devil's Own* offered a simplistic vision of the IRA situation in Ireland. *Clear and Present Danger*, however, is actually quite radical in its attack on sub-Republican government, while *Air Force One* (1997) offers a more populist political agenda. Directed by Wolfgang Peterson, *Air Force One* is an undeniably professional action film, but with Ford playing a U.S. president who gets to fight back at terrorists, too contemporary, perhaps, to avoid "political" readings. From these films with deliberate political currents, Ford moved on to Ivan Reitman's lightweight "castaway" comedy *Six Days, Seven Nights* (1998), playing the sort of cantankerous figure Cary Grant played in his later years. Another classic comparison for an actor who also happens to be one of the most important stars of the contemporary era.

## Ford, Henry (1863-1947)

As founder of the Ford Motor Company, Henry Ford epitomized the can-do optimism of the industrial age. His homespun, folksy persona charmed Americans and redefined an alternate image of the wealthy industrialist. His Model T automobile, rolled out of his Michigan headquarters in 1908, was the first car to capture the national imagination and the first to sell in mass quantities. Upon doubling his workers' wages in 1914, Ford became an overnight celebrity.

Though he earned his fame as a wealthy industrialist, Ford grew up on a modest family farm. Born July 30, 1863, in Dearborn, Michigan, he spent his early years doing chores and tinkering with watches and steam engines. At age seventeen, he left home to take a job in Detroit for a manufacturer of railroad boxcars. For the next twenty years, he worked at a succession of technical jobs, eventually landing the position of chief engineer at a power company. All the

while, he tinkered in his off-hours with homemade steam and, ultimately, gasoline powered engines and vehicles.

In 1899, at age thirty-eight, Ford quit the power company and, with some partners, founded his first automobile manufacturing enterprise. While this attempt failed, as did a second, his third try, the Ford Motor Company, founded in 1903, grew into one of the largest, wealthiest companies of the century. The introduction of the Model T in 1908 revolutionized the young industry. Ford quite intentionally set out to, in his words, "build a motor car for the great multitude." Ford continually reduced the retail price, bragging "Every time I reduce the charge for our car by one dollar, I get a thousand new buyers." Each price decrease was heralded by national press coverage. The first car aimed at the middle class, the Model T was an immediate best-seller—so much so that building enough cars to meet public demand became a significant challenge.

Ford worked with his team to develop a number of refinements to the production process, culminating, in 1913, with an assembly line, where each worker had one small task to repeatedly perform and remained in place while an automated belt rolled the cars past. These improvements cut production time by 90 percent. Ford's competitors were forced to adopt the same methods, and the assembly line became a standard fixture of manufacturing operations.

Previously, craftsmen had worked on a job from beginning to end, but the division of labor necessary to boost efficiency on an assembly line required the breaking of the production process into a series of repetitive, boring, less-skilled tasks. The implementation of the assembly line increased worker turnover and absenteeism. Soon the Ford Motor Company was spending \$3 million a year training new workers to replace those who had quit. In response, Ford raised the daily wage of his laborers from \$2.35 to \$5.

While the success of the Model T gained Ford some renown as a successful inventor and industrialist, the "five-dollar day," as it became known, heralded his arrival as a national celebrity. All the newspapers of the day reported it, many editorializing for or against.

Becoming a household name, Ford was asked to opine on all manner of popular issues and eagerly did so with a commonsensical folk wisdom that endeared him to many. Ford's populist pronouncements, such as "the right price is the lowest price an article can be steadily sold for and the right wage is the highest wage the purchaser can steadily pay," set him in stark contrast to the monopolistic robber barons of the previous era such as Andrew Carnegie, John D. Rockefeller, and Cornelius Vanderbilt. The left-wing magazine *The Nation* marveled that this "simple mechanic" didn't need "combination or manipulation or oppression or extortion" to dominate his market but instead "distanced his competitors by no other art than that of turning out his product by more perfect or more economical methods than they have been able to devise or execute."

Ford basked in the favorable attention lavished on him, but he was unprepared for the increased scrutiny he received in the public eye. In 1915 the national press ridiculed him when, in an effort to avoid war with Germany, he chartered an ocean liner to take himself and his "delegates" to Europe to mediate and negotiate for peace. In 1918 he was chastened by the personal attacks he and his family endured as a result of his narrowly unsuccessful run for the Senate. In 1919 Ford sued the *Chicago Tribune* when it labeled him "ignorant." In the ensuing trial and surrounding media circus, the *Tribune's* lawyer proceeded to humiliate Ford by exposing his utter lack of historical knowledge.

Ford nonetheless became a folk hero to the public in the 1910s and 1920s. He was a man of little formal education who, through his

### Henry Ford

own wits, became one of the richest men in the country, yet continued to espouse populist values, paying his workers well and lowering the price of his cars nearly every year. A 1923 *Collier's* poll showed him far ahead of Warren G. Harding, Herbert Hoover, and everyone else in a theoretical presidential race. It has since become routine to accept populist political and social wisdom from wealthy titans of industry such as Lee Iacocca and Ross Perot.

Ford, the farmer, tinkerer, inventor, industrialist, and populist social critic, died in 1947. The automobile had long since become an American icon, as had the man himself.

### Ford, John (1894-1973)

Film director John Ford is a profoundly influential figure in American culture far beyond his own prolific, wide-ranging, and often impressive output in a 50-year plus cinema career that began in the silent era with *The Tornado* (Universal, 1917). Despite the variety of subject matter he tackled for the screen, he remains historically, critically, and in the public consciousness, as the architect of the Western, the genre on which he cut his teeth during the silent era. It was, however, not only the numerous popular and acclaimed Westerns he made for which he is important: his romantic, émigré's vision of the Old West and the pioneering spirit has crept into the perception of American history, blending idealized fiction into the harsher truth of fact for generations of Americans and, certainly, for non-Americans in the many countries where his work is regarded as a classic staple of Hollywood cinema at its best.

John Ford is the most decorated director in Hollywood history, and his four Academy Awards as best director in part illustrate his range while, curiously, ignoring his westerns (from which he took a decade-long break from 1927). He won his first Oscar for a return to the political roots of Ireland with *The Informer* (RKO, 1935), a tale of a simple-minded Irishman (Victor McLaglen) who betrays an IRA leader. It was garlanded with Oscars and extravagant critical praise

for its stylization and grim atmosphere. Ford returned to Ireland again for *The Quiet Man* (1952), a Technicolor comedy, vigorous and funny. In between, he was honored by the Academy for *The Grapes of Wrath* (1940), from Steinbeck's novel about a family trekking to California to escape the disaster of the 1930s dust-bowl, and *How Green Was My Valley* (1941), a nostalgic tearjerker set in a Welsh mining community. To these films, add *The Whole Town's Talking* (1935), a comedy melodrama with Edward G. Robinson; the Shirley Temple vehicle *Wee Willie Winkie* (1938), set in colonial India; *Young Mr. Lincoln* (1939), *What Price Glory* (1952), *Mogambo* (1953) and his last feature, *Seven Women* (1966), set in an isolated Chinese mission in the 1930s, and one gets an inkling of the depth and range of Ford's interests and his professional skill.

Ford was born Sean O'Feeney in Portland, Maine, on February 1, 1894, one of the many children of his first-generation Irish immigrant parents. Of his siblings, he was closest to his brother Francis, some 12 years his senior. Always restless, Francis ran away from home to seek his fortune at an early age, changed his name to Ford, and forged a modest acting career in the theater, before moving into the film business with Edison and Biograph. By 1913, he was in Hollywood, writing, directing, and acting in silent action serials at Universal Studios, where, in 1914, his younger brother joined him. Known initially as Jack Ford—the name under which he was credited when he began directing, changed to John in 1923—Ford learned the rudiments of filming as gopher, jack-of-all-trades, and apprentice to Francis, eventually being allowed a hand in acting, writing, and camera work. In 1917, just as Francis Ford's star was fading, Universal's founder and chief Carl Laemmle made John Ford a director, entrusting him with *The Tornado*, a two-reel short. The film was a success, and thus launched the most prolific directing career in film history. In Ford's four and a half years at Universal he made his reputation as a director of westerns, and forged a significant creative relationship with actor Harry Carey, whom he later frequently cited as having been the most important influence on his work outside of his brother Francis. When the fledgling director met Carey, 16 years his senior, the actor had already worked in almost 200 films, and would appear in 25 of Ford's 39 films for Universal. By 1921 Universal had relegated Carey to "B" westerns, but Ford's stock had risen considerably. He had proved himself capable of making films that came in on time, often under budget, and generally turned a profit.

Ford used his increasing reputation to jump ship to Fox, where he made 50 films. The move was well-timed: within a few years after his arrival, Fox rose from a second tier studio to an industry leader, and although Ford, always stubborn, had run-ins with management from time to time, for the most part he enjoyed a freedom few of his counterparts could claim. By 1939 Ford's stock could not have been higher, but he had been absent from his first love, the western, for some ten years. Aware that the genre was not taken seriously by critics but that he certainly was, he determined to use his reputation and influence to bring prestige to westerns. The first fruit of his ambition was *Stagecoach* (1939), a watershed film that marked the first of the director's nine films to be set in his signature landscape of Monument Valley, and the first of his famous collaborations with John Wayne. Contemporary audiences think of the Valley as a cowboy movie cliché, but *Stagecoach* was its first appearance and it owes its resonance and associations to Ford's work. As Jane Tompkins argues, for a western film "not just any space will do. Big sky country is a psychological and spiritual place known by definite physical markers. It is the American West, and not just any part of that but the West of the desert, of mountains and prairies, the West of Arizona,

Utah, Nevada, New Mexico, Texas, Colorado, Montana, Wyoming, the Dakotas, and some parts of California." Ford's repeated use of Monument Valley caused it to become an archetypal mythic landscape, a virtual stand-in for any and all of the above named places. Never identified by name in any of the Ford films in which it is featured, Monument Valley serves to represent locations as diverse from one another as the city of Tombstone, Arizona (*My Darling Clementine*, 1946) and the Texas plains (*Rio Grande*, 1950, *The Searchers*, 1956).

*Stagecoach* is in many ways essentially a "B" western, rife with stereotypes, that follows the structure of what would later be known as a "road movie." However, Ford was fully aware of the stereotypes, the use of which, as Richard Slotkin observes, "allowed him to take advantage of genre-based understandings—clichés of plot, setting, characterization, and motivation—to compose an exceptional work marked by moral complexity, formal elegance, narrative and verbal economy, and evocative imagery." Stereotypes or no, the characters were given rich life by a superb cast led by Wayne, Claire Trevor, and Thomas Mitchell, who won an Oscar. The film also won for its music score, and garnered five additional nominations, including those for picture and director. Exquisitely photographed, critic Frank Nugent has called it "A motion picture that sings the song of camera," while John Baxter, writing in 1968, identifies it as "The basic western, a template for everything that followed."

With the huge critical, popular and financial success of *Stagecoach*, Ford earned the freedom to make just about any western he wanted. By 1941, however, his Hollywood career was on hold while he served as Lieutenant Commander Ford attached to the Navy during World War II. Appointed Chief of the Field Photographic Branch of the Office of Strategic Services, he made two Academy Award-winning documentary propaganda films, *The Battle of Midway* (1942) and *December 7* (1943). After the war Ford returned home and, although he made many other films in between, focused steadily on the eastern, beginning with *My Darling Clementine* (1946), starring Henry Fonda, which marked the beginning of a near ten-year period of filmmaking by Ford that frequently reflected mainstream America's post-war optimism. As Mark Siegel notes, "*Clementine* seems to reflect an America looking back on the recent world war. One image Americans held of their participation in World War II was that . . . America needed not just to revenge itself but to make the world a safe and decent place in which to live. . . . [T]he hopefulness of this movie, which shows Tombstone as an increasingly civilized social center, seems typical of American optimism immediately after World War II." Ford's optimism continued throughout the late 1940s and early 1950s, evidenced by such films as his marvellous Cavalry Trilogy, starring Wayne—*Fort Apache* (1948), *She Wore a Yellow Ribbon* (1949), and *Rio Grande* (1950)—and *Wagon Master* (1950). But that optimism would not last.

According to Peter Stowell, most of Ford's westerns presented America as a "strong, vibrant, frontier culture that must retain its strength through a wilderness frontier hero, while it demonstrates its progress through a series of civilizing factors." Thanks to Ford's influence, most classic Hollywood westerns share these traits, but towards the end of his career Ford's optimism turned to cynicism, and he began lamenting the progress he had once celebrated. In his later films, most notably *The Searchers* (1956)—a bitter revenge western starring John Wayne and considered by many to be the director's masterpiece—*The Man Who Shot Liberty Valance* (1962) and *Cheyenne Autumn* (1964), he began to question the myths that he, more than any other filmmaker, had played such a central role in creating.

As Jon Tuska observes, “memories, instead of being cherished, became bitter; progress became a hollow drum that beat mechanically.” While Ford’s earlier westerns established the tone and morality that typify the classic Hollywood western, these late works, notably *The Man Who Shot Liberty Valance*, paved the way for the moody revisionism that has characterized much of western cinema since.

John Ford died of cancer on August 31, 1973. Shortly before his death he was made the recipient of the first American Film Institute Lifetime Achievement Award. Since that time Ford’s reputation as a filmmaker has continued to grow, and by the end of the twentieth century he was widely considered the most influential director in Hollywood history. His gifts and his influence have been acknowledged over the decades by the finest of his peers throughout world cinema, and Orson Welles spoke for many when, asked which American directors most appealed to him, he replied, “The old masters . . . by which I mean John Ford, John Ford, and John Ford.”

## Ford Motor Company

By 1920, the immense scale Henry Ford’s international fame could be matched only by the size of his financial assets and the magnitude of his ego. Though Henry would not wrest sole control of Ford Motor Company—the automobile manufacturer he founded with twelve investors in 1903—until the 1920s, the wild success of the car maker was attributed entirely to his individual genius. During Ford’s early years, the company was virtually indistinguishable from its founder. “Fordism,” as it came to be known—a system of mass

production which combined the principles of “scientific management” with new manufacturing techniques, such as the assembly line—created more than fantastic profits for his company: it literally revolutionized industry on a global scale within twenty years of its implementation at Ford’s factory in Highland Park, Michigan. Away from the factory, the Model T, produced between 1908 and 1927, defined the mass consumer market of the 1920s, and in the process helped make the automobile an essential component of American culture. After Henry’s resignation in 1945 and series of problems throughout the 1950s, the remarkable success of the Mustang in the 1960s re-established the prominence of Ford Motor Company in the postwar era.

The rapid growth of Ford Motor Company during the first twenty years of this century was due to the astounding sales record of the Model T, or “Tin Lizzie” as it came to be known. Because the cost of early automobiles was prohibitive for most Americans, cars were essentially luxury items and few manufacturers saw the potential for mass appeal of the motorized vehicle. With a debut price of only \$850, significantly less expensive than its competitors, the Model T was within the budget of many potential consumers. Because Ford’s ingenious labor-saving techniques were not yet available—the assembly line, for instance, would later quadruple productive capacities and reduce labor expenses—Ford kept costs for the Model T low by producing only one type of car (other companies tried to build several different models simultaneously) but assembling it with interchangeable body styles. Due to its functional simplicity, the car was often ridiculed for its aesthetic shortcomings, and Ford himself boasted that consumers could purchase the Model T “in any color they want so long as it’s black.”

Despite its competitive price, the Model T did not sell particularly well during its initial release. It was aggressive marketing that turned the Model T into the best selling car in history. Henry Ford had originally won financial backing for Ford Motor Company by racing cars and he turned to racing once again in an effort to sell his new product. This competition, however, was a much-publicized transcontinental race. Though the winning Ford car was later disqualified for irregularities, the Model T gained enormous notoriety for its victory and Ford turned that success into massive sales. Later, Ford would market the Model T by appealing to his own person: purchasers could buy a piece of Henry Ford’s genius as well as a part of America itself.

To a large extent, we can trace the evolution of America’s “car culture” to Ford and the Model T. It was the first car marketed to a large consumer audience, and this alone redefined the role of the automobile industry in the United States. In their famous sociological study *Middletown*, Robert and Helen Lynd conclude that the automobile, by 1925, was already an accepted and indispensable part of American life. It is no exaggeration to suggest that the Model T permanently changed the geography of this country: the popularity of the car made the huge suburban building booms of the 1920s possible, while millions of miles of paved roads were built in response to the demands of new motorists. In addition to the changes brought by the automobile, Ford’s production of tractors and other internal combustion farming equipment had a lasting effect on the rural landscape and the agricultural business. Though Henry himself came from a farming community and had nostalgic sympathies for the family farm, his products made life difficult for many small farmers who could not afford (or make profitable) the new harvesting machines. As much as Henry may have loved the farmer, he hated the inefficiency of small operations and imagined an agriculture of mass scale.

The unveiling of the Ford Motor Company's Mustang, 1964.

By 1911, the popularity of the Model T began to present fresh challenges to Ford and its management team. The young company had already moved its base of operations to Highland Park after reaching productive capacity at its Detroit shop and was rapidly approaching its limit once again. The appetite of consumers was far from sated, but labor shortages and productivity ceilings were arresting further plans for expansion. Over the next five years or so, Henry Ford began to develop the concept of “Fordism,” an industrial regime which would shortly revolutionize factory production on a global scale. In its early years, the philosophy of Fordism rested on two simple strategies: the invention of the assembly line and the increase of wages. Before the introduction of linework at Ford, the bodies of cars remained stationary while teams of workers moved from station to station. By simply putting the unfinished body on rails and attaching it to a drive train, Ford could move the car from point to point while groups of laborers remained at their assigned posts. This new method allowed for greater specialization of tasks among the workers and permitted management to monitor the efficiency of laborers. And though Henry Ford did not “invent” the assembly line, he has been credited with the development and refinement of this manufacturing technique.

One of the earliest and most persistent critiques of the assembly line came from craftsmen who complained that the division of labor reduced the level of skill required for employment. The assembly line created a distinct division of labor, and the standardization of tasks it required led to a more general deskilling of workers. In order to induce workers to accept this new industrial regime, Ford decided to raise wages. Although this contradicted the logic of supply and demand (with the assembly line, fewer workers could produce more), Ford reasoned that workers would only accept more mundane work in return for better compensation. With the introduction of the eight-hour, five-dollar day (more than doubling the average daily pay) in 1914, Ford single-handedly revolutionized wage structures. Thousands of job-seekers flooded employment offices across the Detroit area looking for positions at Ford, and Henry himself later said that the five-dollar day was the best idea he ever had.

Ironically, the concept of higher wages also permitted the company to discriminate in the workplace. Employees of eastern European and middle-eastern descent were given the most dangerous and physically taxing jobs, while African-Americans were not hired until World War I and women were a rarity before World War II. Meant to bring stability to the organization, the five-dollar day was introduced as part of a larger profit-sharing scheme: workers were only eligible after six months at the company and had to pass a battery of “tests” in order to qualify.

To this end, Ford recruited an army of “social workers,” whose ranks included physicians, nurses, and sociologists, to inspect the habits and living arrangements of its employees. To his credit, Henry seemed genuinely concerned with the safety of his employees and built a hospital where they could receive treatment at any time of day. Ford’s paternalistic attitude towards his employees, however, had more questionable results in other areas. The company produced a series of “instructional manuals” through the 1910s and 1920s, encouraging its employees to practice thrifty lifestyles and conform to “American” ways of living. Employees who were unmarried or did not live in “sanitary” homes were consistently denied a share of profits. To assist its many immigrant employees, Ford established an official program of “Americanization” that included English language training, courses on household thrift, and moral instruction.

Not surprisingly, employees of “British” descent often qualified for profit-sharing with little scrutiny; most other immigrants had to pass the course of “Americanization” before they could hope to realize the five-dollar wage.

The glory years of Ford ended during the 1930s, and the next thirty years were a very tumultuous time for the company. In keeping with his philosophy, Ford actually raised wages after the stock market crash of 1929 in an effort to stimulate demand. Unwilling to find other supporters in industry, Ford was compelled to reverse his policy shortly thereafter. Labor unrest and unionization during the 1930s forced Ford to reassess his authoritarian discipline and recognize the power of organized labor. Henry stepped down as President in 1945, and though profits had been maintained during the war, Ford’s arcane organizational structure was limiting profitability, and the ensuing power struggle eventually led to Ford’s public stock offering. The Edsel, Ford’s economy model of the late 1950s, named after Henry’s son, was the most spectacular failure in the history of American automobile production and symbolized the mood in the company and its public reputation. Although Ford kept its position as an industrial giant (it has consistently been the third largest American manufacturer during the postwar era), General Motors established itself as a much larger and more profitable rival.

On the road, Ford maintained its visibility during the 1950s with the Thunderbird. Its eight cylinder engine was one of the most powerful in its time, but its size necessitated a fairly large body. Because it was priced in the range of other luxury cars (the Chevrolet Corvette was the only true sports car made in the United States), the Thunderbird faced stiff competition from sleek foreign models though it always achieved high sales figures. New technology of the early 1960s allowed for more streamlined vehicles, and Ford responded by releasing the Mustang in 1963 (under the direction of a young Lee Iacocca). Smaller and more affordable than the Thunderbird, the Mustang became all things to all people: at once a sports coupe and a touring sedan, it offered a unique combination of practicality and flair. Its remarkable success helped invent the genre of the sports-sedan and reinvigorated Ford’s lagging profits. Although the 1970s and early 1980s were a difficult time for Ford and the other American auto manufacturers—the oil crisis of 1973 and competition from Japanese firms sapped profits, while the well-publicized safety problems of the Pinto did little to enhance the company’s image—Ford re-emerged during the 1980s with the Escort, a functional, economy car designed for the growing legions of suburban Americans. The Escort was the best-selling car in the world for a number of years during that decade and it helped catapult Ford into a period of renewed profitability. With the Escort, Ford returned to its roots, using the principles of functionality and reliability to once again capture a mass consumer audience.

## Ford, Tennessee Ernie (1919-1991)

With his smooth bass voice and warm country charm, Ernest Jennings "Tennessee Ernie" Ford became one of the first country music stars to cross both musical and cultural boundaries to reach a truly national audience during the 1950s. Working as a disk jockey and radio performer in California after World War II, Ford came to the attention of Capitol Records, which signed him in 1949. A string of hits followed, most of them in the "country boogie" style he helped pioneer that married boogie-woogie rhythms with country music themes and instrumentation, including "The Shot Gun Boogie," "Anticipation Blues," and "I'm Hog-Tied Over You." He became a national figure when his recording of "Sixteen Tons" became both a country and pop hit in 1955. He starred in his own television programs between 1955 and 1961 and later recorded a number of highly successful gospel albums.

## Ford, Whitey (1928—)

Edward Charles "Whitey" Ford was the dominating left-handed pitcher for the New York Yankees from 1950-67, a 17-year period that coincided with the team's greatest success. Manager Casey Stengel nicknamed Ford "Slick," with good reason: Ford, born and raised in New York, was a city slicker who often relied on guile—and perhaps a scuffed ball on the mound—and liked to take a drink now and then. "The Chairman of the Board," as he was known, chalked up a career record of 236-106, the highest winning percentage for any twentieth-century pitcher, and came to hold a nearly unsurpassable World Series record for wins, strikeouts, and consecutive scoreless innings. Whitey Ford, Mickey Mantle, and Billy Martin constituted a New York trio in the 1950s that shared a public passion for baseball, drinking, and women. They did much to establish the image of the baseball player as an overgrown boy: silly, crude, and outrageous, but basically harmless.

## Foreman, George (1949—)

Boxer George Foreman is best known not as the fierce young heavyweight fighter of his youth, but as the oldest man ever to claim the heavyweight championship. Foreman has had a boxing career in two distinct eras, the first spanning the glory years of heavyweight boxing in the late 1960s and 1970s, and the second defined by his astonishing comeback in the 1990s. The forty-plus-year-old Foreman's comeback earned him the status of an American icon, and as he boxed and boasted about his ability to eat, he became a symbol of determination for a generation many considered over the hill.

In 1968 Foreman won an Olympic Gold medal in Mexico City. After turning professional he beat Joe Frazier to capture the world heavyweight championship. In one of the most publicized fights in history he lost his championship to Muhammad Ali in Zaire. By 1977 Foreman had retired from boxing and become a preacher. But he returned to the ring a decade later, an object of ridicule because of his weight and age. In 1994—at the age of forty-five—he recaptured the heavyweight crown.

Foreman was born January 10, 1949, and was reared in an impoverished area known as the Fifth Ward of Houston, Texas, by his mother. Foreman dropped out of school in junior high, and earned a

**George Foreman (left) and Michael Moore during their 1994 heavyweight championship fight.**

reputation as a fighter. After quitting school, Foreman joined the Job Corps. He was shipped first to the Fort Vanney Training Center outside Grant Pass, Oregon, then to the Parks Job Corps Center outside Pleasanton, California. After years of being a bully, this is where Foreman began to box. After graduating from the Job Corps, Foreman worked at the Pleasanton Center and continued to train as a fighter. As an amateur Foreman went on to win the gold medal in the tumultuous 1968 Olympics. John Carlos and Tommie Smith, two American sprinters, had been expelled from the Olympic Village for flashing the Black Power salute during their medal ceremony. Foreman waved a small American flag after winning his gold medal match.

After the Olympics, Foreman turned pro and in his first professional fight knocked out Don Waldheim on June 23, 1969, in Madison Square Garden. Foreman advanced through the heavyweight ranks and on January 22, 1973, in Kingston, Jamaica, Foreman knocked out Joe Frazier in the second round to win the heavyweight championship.

After compiling a record of 40-0, Foreman lost his first professional fight and the heavyweight crown to Muhammad Ali on October 30, 1974, in Zaire. His second loss came to Jimmy Young in March of 1977 in San Juan, Puerto Rico. After his loss to Young, Foreman experienced a religious conversion, retired from boxing, and became a street preacher and ordained minister. He eventually became a radio evangelist in Los Angeles and Houston and, finally, established his

own church in Houston. He also established the George Foreman Youth and Community Center.

In an effort to raise money for his youth center—at the age of 37 and 10 years removed from professional boxing—Foreman decided to return to the ring. Foreman’s comeback began in March of 1987 in Sacramento against Steve Zouski. The first loss of Foreman’s comeback came on April 19, 1991, in Atlantic City, when he lost a 12-round decision in a heavyweight championship bout with Evander Holyfield. However, on November 5, 1994, at the age of 45, Foreman recaptured the heavyweight championship with a 10th round knockout of Michael Moore.

Foreman’s return to boxing prominence was accompanied by a rush of media attention, and Foreman proved himself as adept a media celebrity as he was a boxer. With his bald pate, broad smile, and massive physique, Foreman made good copy as he boasted about the numbers of hamburgers he loved to eat. Quipped Foreman to a reporter, “Today the biggest decisions I make aren’t related to the heavyweight title. They are whether I visit McDonalds, Burger King, Wendy’s, or Jack-in-the-Box.” It might have all seemed a joke had he not backed up his words with a powerful punch. In 1999, with a career record of 76-5, Foreman’s fans wondered if he could win his next championship in his fifties.

—Kerry Owens

## *Forrest Gump*

The film *Forrest Gump* represents the ultimate American dream in a land of opportunity. It is a history lesson that takes the viewer from Alabama, where Forrest Gump, an improbable modern hero and *idiot savant*, was born, across America, and back again to the fishing village of Bayou La Batre on the Gulf coast. Governor George Wallace is once again seen standing in the schoolhouse door as he vows “segregation now, segregation forever”; Coach Paul “Bear”

Bryant, the legendary University of Alabama football coach, recognizing how Forrest can run, makes him a Crimson Tide gridiron star. Eventually Forrest comes home again to his sweet home Alabama (represented also in song) and makes a fortune in a shrimping business. He had promised his “best good friend,” Bubba, that he would go into business with him when the two boys returned from the war. But Bubba was killed and didn’t return, so Gump gives half of the million dollars he makes to his friend’s family in the small fishing village of Bayou La Batre.

Based upon the novel by Winston Groom, Eric Roth transformed the book into a screenplay that grossed over \$636 million dollars and also won the Oscar for Best Picture of 1994. The film affirms possibility and hope: no matter how grim things may seem, it is possible, as Gump says, “to put the past behind you and move on.” He shows that a gimpy kid in leg braces can become a football hero, win a Congressional Medal of Honor for bravery in Vietnam, become a Ping Pong champion, crisscross America from sea to shining sea, and marry his childhood sweetheart, who bears him a son to carry on the father’s good name.

Tom Hanks in *Forrest Gump*.

In spite of the film's positive message, life, as portrayed in *Forrest Gump*, is not "just a box of chocolates." It is more than candy-coated sentimentality. The viewer witnesses the assassination attempt on George Wallace, and the assassinations of John F. Kennedy and Robert Kennedy; the struggles over civil rights; and the war in Vietnam. Lieutenant Dan (Gary Sinise) portrays the bitter horror of what it is like to lose both legs and live as a cripple. Jenny (Robin Wright), born in poverty and molested by her father, becomes a stripper and a slut, a drug addict caught up in the counterculture of love-ins and psychedelics, flower power and antiwar demonstrations. Though Jenny becomes pregnant with Forrest's child and eventually marries him, she lives a short, unhappy life that is only a questionable testimony to the overriding power of love. Forrest tells her "I'm not a smart man, but I know what love is"—but it isn't enough to save her life or that of his friend, Bubba, or to prevent Lieutenant Dan from losing his legs. At the beginning of the film, a feather floating in the wind lands at Forrest's feet; he picks it up and places it in his worn copy of *Curious George*, the book his mother used to read to him. At the end of the film, he passes the book on to his son with the feather intact. "What's my destiny?" Forrest once asked his mama. *Forrest Gump* shows that every man and woman, idiot or President of the United States may be blown about by the whims of chance or fate, but that it is still possible to prevail.

In addition to the Oscar for Best Film, *Forrest Gump* earned five more Academy Awards. Tom Hanks was voted Best Actor for his masterful portrayal of Gump, and Robert Zemeckis was awarded the Oscar for Best Director. The film also won awards for Film Editing, Best Adapted Screenplay, and for Visual Effects. It is the masterful visual effects that enabled Forrest to shake the hand of President John F. Kennedy, have Lyndon B. Johnson place a Congressional Medal around his neck, meet Richard Nixon and Ronald Reagan, not to mention John Lennon, Dick Cavett, Bob Hope, Captain Kangaroo, and Chairman Mao. Elvis Presley, the King, even learns to swivel his hips by watching little crippled Forrest dance.

Although some critics are not enchanted with the fantastic Gump, the movie affirms the values that Americans hold dear. Forrest's mother exemplifies the ideals associated with motherhood. Over and over, Forrest repeats: "As my Mama always said," and his words reverberate almost as a refrain throughout the movie. "Don't ever let anybody tell you're they're better than you," she tells her boy, even though he has an IQ of 75. Life, after all, is a box of chocolates. Even if "you never know what you're going to get," *Forrest Gump* gives people hope.

—Sue Walker

Groom, Winston. *Forrest Gump*. Garden City, Doubleday, 1986.

## Forsyth, Frederick (1938—)

Frederick Forsyth shot to fame in America in 1971 as a top thriller writer with the publication of *The Day of the Jackal*, which dealt with the attempt by a hired killer, "the Jackal," to murder French president Charles de Gaulle. In it, Forsyth meticulously and precisely described how things worked, ranging from the construction of a special rifle to the last detail of the "procedure" the Jackal

used to acquire his new passport, a style which was to be the hallmark of his books, a meticulous attention to realistic detail. In researching the book, Forsyth consulted a professional assassin, a passport forger, and an underground armorer. In later best-sellers he improvised car bombs (*The Odessa File*, 1972), gunrunning (*The Dogs of War*, 1974), the innards of oil tankers (*The Devil's Alternative*, 1979), and the assembly of miniature nuclear bombs (*The Fourth Protocol*, 1984). *Icon* (1996), a spine-chilling action thriller which deals with an ex-CIA agent returning to Moscow on the brink of anarchy, has been another in his long list of best-sellers. His popular appeal has been fueled by the blockbuster films made of his books. He has won the Edgar Allan Poe Award from the Mystery Writers of America twice.

Forsyth's books have been criticized for containing recipes for forged passports and explosive bullets. And some actual crimes have seemed to be copycats of crimes described in Forsyth's books. Some examples include: After Yigal Amir was arrested for the assassination of Yitzhak Rabin in 1995, Israeli police searching his apartment found a copy of *The Day of the Jackal* among his Orthodox Jewish literature; John Stonehouse, former British labour minister, faked his death in Florida and began a new life in Australia with a new partner; when geophysicist Karen Reid was shot dead in May 1994, mercury bullets were found near the scene.

Forsyth's interests lay in the relationship of an individual to the organization. In his suspense thrillers, a man of action, a consummate professional, is pitted against an establishment, bureaucracy, or organization. The hero, a maverick who succeeds by cutting through standard procedure, often has difficulty in fitting into society. Forsyth suggests that it is the lone professionals, whether opposed to the organization or part of it, who truly create history, but a history which is only barely represented on the front pages of newspapers. His technique suggests a hidden pattern governing a great event, a pattern not always obvious even to the participants, much less to newspaper readers or devotees of CNN. It is a style very similar to a docudrama which was very popular in the American sixties with such books as Truman Capote's *In Cold Blood* and Norman Mailer's experiments with fact and the novel form.

Forsyth was born in Ashford, Kent, in 1938 and educated at Tonbridge School where he studied French and German. He ended his formal education at the age of seventeen. His background as pilot, journalist, world traveller, and speaker of several languages has served him well in his writing career, where he employs a terse journalistic style using real people, places, and events. From 1958 to 1961 he was a reporter for the *Eastern Daily Press*, first in Norwich and later in King's Lynn, Norfolk. In 1961, he was a Reuters correspondent travelling between Paris, London, and East Berlin, serving as bureau chief in the East German capital because of his knowledge of languages. Next he acted as a BBC radio reporter in London between 1965 and 1967, and as an assistant diplomatic correspondent for BBC television in 1967 and 1968, when he was recalled after his pro-Biafran coverage offended Sir David Hunt, British High Commissioner in Lagos.

Forsyth enjoys fishing in the streams on his leafy country estate in Hertfordshire where he lives with his second wife, Sandy, and two sons, Frederick and Shane. A serious angler who also enjoys the calm of fishing in the Caribbean, Mauritius, and the Andaman Sea, he says the plots of some of his best-sellers gel in his mind during hours of staring into space. He also says that the weirdest and loneliest job in the world is being a writer. An actor has a cast, a pilot has a crew, a doctor a patient, but a writer has only himself. His own life is reflected in the characters depicted in his nine thrillers and anthology of short

stories, *No Comebacks* (1982). The effect he achieves is less that of fiction than a projection into real lives.

—Joan Gajadhar and Jim Sinclair

## Fortune

Despite an inauspicious launch in February 1930, just four months after the Wall Street Crash, *Fortune* magazine became established as the premier business publication in the United States. Symbolic of the success and status of *Fortune*, its annual listing of the top performing companies—the Fortune 500 (est. 1955)—rapidly became, and remains, the highest accolade of American business. Determined to avoid the banality of the trade journal, *Fortune* aimed instead to become “the literature of enterprise.” To this end, the magazine published high quality copy, written by established intellectual figures like Dwight MacDonal, in a high quality, glossy format. *Fortune* humanized the world of commerce by combining its stories and values with those of the broader social and political world, and it presented the face of business through the inventive use of photojournalism. Both approaches were to profoundly influence Time Inc.’s next publication, the more populist *Life* magazine, which in turn was to influence a whole generation of journalists and publishers.

## Fortune Tellers

See Psychics

## 42nd Street

The first of a series of Depression-era musicals released by the Warner Brothers Pictures, *42nd Street* is notable for its role in reviving and redefining a cinematic genre which had begun to fade by 1933. Following the industrywide adaptation of sound films in 1929, Hollywood promptly released a plethora of musicals to excited audiences. Unfortunately, the majority of these products were hastily

conceived and often hindered by the still unresolved technical mysteries of “talking” pictures. Such artistic shortcomings conspired with a saturation of the marketplace, and the public’s enthusiasm for such fare rapidly faded.

The successful release of *42nd Street* in March of 1933 reversed this trend, and convinced the major studios to reexamine the commercial possibilities for screen musicals. By the end of the year, Warner had released two follow-up films, *Goldiggers of 1933* and *Footlight Parade*. Other studios embraced this trend, most notably RKO-Radio that began production of a series of pictures starring Fred Astaire and Ginger Rogers. In general, musicals would remain a significant component of Hollywood’s product well into the World War II era.

The plot of *42nd Street* revolves around the efforts of a Broadway director (Warner Baxter) struggling to revive his failing reputation with the creation of a lavish extravaganza. The majority of the film details the rigors and hardships of backstage life with a clear eye for the steamier side of show business. On the eve of the show’s debut, the leading lady breaks her leg, leaving the director no recourse but to take a chance on a neophyte but determined chorus girl (Ruby Keeler). Following Baxter’s now legendary warning—“You’re going out a youngster, but you’ve got to come back a star!” Keeler takes the stage and delights the audience. Although this should provide Baxter’s triumph, the film ends on a somber note. As the director stands outside of the theater to assess the comments of the exiting crowd, the loudest sentiments are complaints about the position of Baxter’s name on the marquee. To the audience, it was the dancer, not the director who deserved the credit for the show’s success.

While the backstage setting of *42nd Street* would be used in dozens of subsequent musical films, the basic story was not an innovation at the time. Earlier productions, most notably MGM’s *Broadway Melody* (1929), had focused on a similar theme without such lasting impact. What set *42nd Street* apart from its predecessors was a unique collaboration of actors, songwriters, and directors. The film benefitted from a strong cast; Baxter and Keeler shared the screen with Bebe Daniels, Ginger Rodgers, Dick Powell, Allen Jenkins, Una Merkle, and Guy Kibbee. The team of Al Dubin and Harry Warren composed the music. Although the picture was directed by the dependable craftsman Lloyd Bacon, the musical numbers, which were the main focus of the film, were staged and created by Busby Berkeley.

This assemblage of talent formed a reliable unit that continued to produce highly successful musicals throughout most of the 1930s. Although actors came and went over time, Powell and Keeler were often the focus of these films. Joan Blondell soon joined the stock company as a frequent co-star, while Jenkins and Kibbee routinely provided support. Dubin and Warren were prolific songwriters and seldom failed to include at least one tune per film that would become a popular standard. For *42nd Street*, the duo provided “Shuffle off to Buffalo.” In subsequent movies, they debuted soon to be familiar titles such as “We’re in the Money,” “I Only Have Eyes For You,” “Don’t Give Up the Ship,” and “The Lullaby of Broadway.” Although Bacon continued to direct musicals such as *Footlight Parade*, *Wonder Bar* (1934), and *In Caliente* (1935), he was a versatile filmmaker, and the studio often utilized his talents on other projects. At various times, Mervyn LeRoy, Ray Enright, and Frank Borzage directed musicals for Warner.

The dominant figure in the creation of the Warner musicals was Busby Berkeley. Rising to prominence as dance director for Broadway showman Florenz Ziegfeld, Berkeley came to Hollywood in

The chorus line from *42<sup>nd</sup> Street*.

1931 to work for Samuel Goldwyn. In 1933 Warner signed Berkeley to a lucrative seven-year exclusive contract with *42nd Street* as his initial assignment. Berkeley's work is best described as kaleidoscopic. Employing a system of overhead and moving cameras, Berkeley organized his dancers into a dizzying array of geometric patterns. Such activity could occur on stages as diverse as an indoor waterfall or a gigantic typewriter. The dancers might possess props as innocuous as parasols or as surreal as neon-trimmed violins. Berkeley's imagination seemed endless, and with each film, the musical numbers became increasingly outlandish.

The fantasy world of Berkeley's dance numbers provided the perfect counterpart to the back stage grittiness of *42nd Street*. As a tremendously popular film released in the depths of the Great Depression, the movie remains a valuable key to the needs and tastes of the American public at a specific time in history. The story focuses on the hopes of the downtrodden, and through luck and determination, a hero emerges. At the same time, the swirling elegance of the elaborate musical numbers provided a healthy dose of escapism from the worries of the day. However, the topical nature of the film should

not be over exaggerated. Some fifty years later, the story would be revived as a major Broadway play.

## Fosse, Bob (1927-1987)

Director-choreographer Bob Fosse forever changed the way audiences around the world viewed dance on the stage and in the film

**Bob Fosse**

industry in the late twentieth century. Visionary, intense, and unbelievably driven, Fosse was an artist whose work was always provocative, entertaining, and quite unlike anything ever before seen. His dances were sexual, physically demanding of even the most highly trained dancers, full of joyous humor as well as bleak cynicism—works that addressed the full range of human emotions. Through his films he revolutionized the presentation of dance on screen and paved the way for a whole generation of film and video directors, showing dance through the camera lens as no one had done before, foreshadowing the rise of the MTV-era of music video dance.

Robert Louis Fosse was born in Chicago, Illinois, on June 23, 1927. Bob was the youngest of six children and quickly learned to win attention from his family through his dancing. It was not long before he was recognized as a child prodigy. His parents sent him to formal lessons, where he immersed himself in tap dancing. A small boy who suffered from nagging health problems, he nevertheless was so dedicated that by the time he reached high school, he was already dancing professionally in area nightclubs as part of their sleazy vaudeville and burlesque shows. The sexually free atmosphere of these clubs and the strippers with whom Fosse was in constant contact made a strong impression on him. Fascinated with vaudeville's dark humor and teasing sexual tones, he would later develop these themes in his adult work. After high school, Fosse enlisted in the navy in 1945. Shortly after he arrived at boot camp, V-J day was declared, and World War II officially came to an end. Fosse completed his two-year duty and moved to New York City.

For the next seven years, Fosse went through two rocky marriages with dancers Mary Ann Niles and Joan McCracken, all the

while performing in variety shows on stage and on television. He had a few minor Broadway chorus parts, but his big break came with his brief appearance in the 1953 MGM movie musical *Kiss Me Kate*. Fosse caught the immediate attention of two of Broadway's acknowledged masters: George Abbott and Jerome Robbins.

Fosse's first fully choreographed show was 1954's *The Pajama Game*. Directed by Abbott, the show made Fosse an overnight success and showcased his trademark choreographic style: sexually suggestive forward hip-thrusts; the vaudeville humor of hunched shoulders and turned-in feet; the amazing, mime-like articulation of hands. He often dressed his dancers in black and put them in white gloves and derbies, recalling the image of Charlie Chaplin. He incorporated all the tricks of vaudeville that he had learned—pratfalls, slights-of-hand, double takes. Fosse received the first of his many Tony Awards for Best Choreography for *The Pajama Game*.

His next musical, *Damn Yankees*, brought more awards and established his life-long creative collaboration with Gwen Verdon, who had the starring role. With her inspiration, Fosse created a stream of classic dances. By 1960, Fosse was a nationally known and respected choreographer, married to Verdon (by then a beloved Broadway star) and father to their child Nicole. Yet Fosse struggled with many of his producers and directors, who wished him to tone down or remove the "controversial" parts of his dances. Tired of subverting his artistic vision for the sake of "being proper," Fosse realized that he needed to be the director as well as the choreographer in order to have control over his dances.

From the late 1960s to the late 1970s, Fosse created a number of ground-breaking stage musicals and films. These works reflected the desire for sexual freedom that was being expressed across America and were huge successes as a result. Before Fosse, dance was always filmed either in a front-facing or overhead view. In his 1969 film version of *Sweet Charity* (Fosse's 1966 stage version was based on an earlier movie by Italian director Federico Fellini, about a prostitute's search for love; the film was commissioned by Universal Studios after the success of the stage version) and in later works, Fosse introduced unique perspective shots and jump cuts. These film and editing techniques would become standard practice for music video directors decades later.

His 1972 film *Cabaret* was based on Christopher Isherwood's stories of pre-Weimar Germany. Articles on the film appeared in all the major magazines. Photos appeared on the covers of *Time* and *Newsweek*. The film was Fosse's biggest public success and won eight Academy Awards. Fosse's *Pippin* (1972) became the highest earning Broadway show in history, as well as the first Broadway show to advertise on national television. *Pippin* was awarded five Tony Awards for the 1972-73 season, one of them given to Fosse for best direction and choreography. Fosse staged and choreographed a variety show special for NBC starring Liza Minnelli, *Liza with a Z*, which brought Fosse an Emmy Award and made him the first person to ever win top honors in three entertainment mediums—stage, film, and television.

Two stage musicals followed: *Chicago* (1975) and *Dancin'* (1978). During rehearsals for *Chicago*, Fosse suffered a heart attack. He survived and used much of that traumatic experience in 1979 in his semiautobiographical dance film *All That Jazz*. Two other films, *Lenny* (1974) and *Star 80* (1983), were not the popular successes that his other shows had been. *Big Deal*, Fosse's last musical, was also poorly received. During a rehearsal for *Big Deal*, Fosse suffered a massive heart attack and died on the way to the hospital. Fosse's contribution to American entertainment continued after his death via

show revivals and dance classes. His most prominent contribution was through the body of his work recorded on film and video.

## Foster, Jodie (1962—)

Actress Jodie Foster earned a reputation as a precocious, complicated preteen in Martin Scorsese's *Taxi Driver* (1976) and went on to prove herself as a no-nonsense actress/producer/director in the 1990s. When, in 1981, the tabloid spotlight unexpectedly hit her following John Hinckley, Jr.'s attempt to assassinate President Ronald Reagan, she displayed a grace and reserve to the media that reinforced her status as an intelligent woman. Having won two Academy Awards for Best Actress, Foster has established herself as one of Hollywood's most powerful women and one of the few female stars able to guarantee astronomical box-office receipts in the increasingly important global market.

Jodie Foster

In 1962, Alicia Christian Foster was born the youngest of four siblings in Los Angeles, California. She was tightly bonded to her mother, Evelyn "Brandy" Foster, in part because her father had abandoned the family before she was born and in part because her mother actively promoted Foster's acting talents from an early age. Foster made a popular Coppertone commercial when she was three years old and garnered a minor television role on *Mayberry RFD*, a program in which her brother Buddy was also a star.

Her film debut came with Disney's *Napoleon and Samantha* (1972), and she went on to play a number of children's roles on-screen. It was her infamous performance as Iris, a child prostitute who soberly and unaffectedly carried her pain and powerlessness through a New York City world of moral corruption, opposite Robert De Niro in *Taxi Driver*, which won her a National Film Critics Award. This part also affirmed the fact that the capricious, nimble-witted characters she took on at Disney made her incredibly well-suited for more adult material. After *Taxi Driver*, she starred in *Freaky Friday* (1977), a family film in which her character finds herself in the skin of her mother (Barbara Harris) for a day, as she humorously confronts the realities of being an adult housewife.

While actively pursuing her career as a performer, Foster graduated and was valedictorian at the Lycée Français in Los Angeles and went on to earn a cum laude degree in literature at Yale University. It was while she was at Yale that she was stalked by John Hinckley, Jr., whose obsession with *Taxi Driver* motivated him to shoot President Reagan in 1981. Though Foster was trying to carry on the life of a "normal college student," she immediately held a press conference on campus in hopes of containing the publicity and went on to write an article titled "Why Me?" for *Esquire* magazine which explained her experiences as one of Hinckley's targets.

Once out of college, in an attempt to recharge her acting career, Foster lobbied for the role of a working-class rape victim in *The Accused* (1988). She won a difficult competition among a number of up-and-coming female stars, even dropping weight for the part upon request from studio executives, and went on to score her first Academy Award. She battled yet again for the role of FBI agent Clarice Starling in the thriller *The Silence of the Lambs* (1991), convincing director Jonathan Demme that she had a better psychological understanding of the "rising heroine" character than the other top-notch stars he preferred. This performance garnered her a second Best Actress Oscar.

Foster moved into the role of director with two Hollywood feature films, *Little Man Tate* (1991) and *Home for the Holidays* (1995). The former film tells the story of a young child prodigy and his complicated relationship with his struggling, little-educated, waitress mother, played by Foster. At the release of the film, Foster admitted that her interest in it partially stemmed from her own experiences as a child living in a world beyond her years. With *Home for the Holidays*, which was produced through Foster's company, Egg Pictures, the director follows an insecure single mother (Holly Hunter) as she journeys home to her eccentric family for Thanksgiving.

While increasing her power as a producer/director, Jodie Foster continued to turn in remarkable performances in films such as *Nell* (1994), in which she plays a rugged wild child brought painfully into contemporary society, and *Contact* (1997), an adaptation of Carl Sagan's science fiction story about a woman who explores the possibility of life in outer space.

Foster developed a reputation as an anti-establishment pragmatist who remained within the Hollywood system in order to transform its representations of women and bring unconventional character

pieces to the screen. She is also known as a down-to-earth, democratic star who, throughout her twenties, lived in the less-than-glamorous “valley” of Los Angeles and reportedly refused to rely on a personal assistant for mundane tasks such as picking up dry cleaning or going to the post office. Foster fiercely protects her private life, having earned the respect and protection of Hollywood trade reporters and mainstream journalists. She became mother to a boy, Charles Foster, in the summer of 1998, provoking a relatively minor outcry when she refused to name the baby’s father.

In films such as *Silence of the Lambs* and *Contact*, Foster drew on the androgyny and maturity of her childhood characters and solidified a reputation as an actress who rebelled against traditional feminine stereotypes and sought out complex acting opportunities that had been relatively unexplored by female stars. She became notorious for taking disenfranchised, scrappy characters and moving them closer to heroic self-empowerment. In a 1993 discussion of Hollywood, Foster explained, “. . . 95 percent of the people will always try to maintain the status quo. It’s the other five percent that move the art form further. . . . What’s different about [women] is that we identify with the underdog, so we spend a lot of time thinking about who’s left out. When you sit around a table like this with a bunch of guys, they spend a lot of time thinking about who’s on top.” The first three decades of Foster’s career leave little doubt that she stands within “the other 5 percent” and that, despite her immense Hollywood power, she has spent considerable efforts “thinking about who’s left out.”

## Fourth of July Celebrations

As the day designated to commemorate the signing of the Declaration of Independence and the anniversary of America’s birth, the Fourth of July has been celebrated since the Revolutionary War Era. However, after the war was over it was only sporadically celebrated and did not become a regular observance in many parts of the country until after the turn of the nineteenth century.

Although the Continental Congress formally passed the resolution for independence on July 2, 1776, it was not until July 4, 1776 that Congress finally voted to approve the Declaration of Independence, which stated the reasons for the break with England. In fact, on July 3, 1776, John Adams wrote his wife that July 2, 1776 would be “the most memorable epocha in the history of America,” according to historian Daniel Boorstin. Adams then outlined the contours of the

“great anniversary festival” which he thought should include: “. . . solemn acts of devotion to God Al-mighty . . . with pomp and parade, with shows, games, sports, guns, bells, bonfires, and illuminations from one end of this continent to the other. . . .”

While it is a mystery to historians why July 4th was designated to commemorate independence and the signing of the Declaration, this date marked the annual official celebration during the Revolutionary War period. Afterwards, official festivities became sporadic and eventually evolved into incredibly partisan events, which persisted for more than three decades. These often included separate observances held by the different political parties. As a day of political dissension, the celebrations at times erupted into violence. In particular, it was used by both the Federalist and Republican parties to hold what amounted to political rallies, with separate orations, dinners, and processions.

It was not until 1826, after a second successful war against Britain and the commemoration of the 50th anniversary of the new nation, that newspapers across the country called for an end to partisanship. They encouraged plans for orations, military processions, private gatherings, public dinners, and picnics to celebrate American independence. As this day became popular as a community event, its rituals affirmed community ties as well as national identity and became linked to other community events such as ground breakings, building dedications, and rededications of historic sites.

Communitywide celebrations continued in popularity from the early nineteenth century until the Civil War, and included parades, ceremonies, sporting events, and fireworks. During the Civil War, Independence Day celebrations were no longer held in many parts of the country, especially in the South.

In the postwar era, the urban celebrations on the East Coast were often sites for clashes between the upper and middle classes and the working class (especially immigrants) over the style of celebration and the use of public space. A genteel or “respectable” celebration was favored by the middle and upper classes, with an emphasis on picnics, private gatherings, games like croquet and lawn tennis, and retreats into the countryside. The working class, however, typically favored rowdy and carnivalesque festivities such as unruly parades, drunkenness, rough games, and noisy discharges of firecrackers and fireworks.

Significantly, celebratory styles were debated back in the Revolutionary Era in hopes of standardizing festivities throughout the Colonies. Members of the Continental Congress weighed the advantages of the rowdy or carnival style of celebration—with its ability to stimulate crowds and allow the venting of tensions—in contrast to the solemn style—with its ability to unify a diverse populace. Eventually, in the interests of national unity, the solemn or respectable style was favored and became associated with the notion of civil religion. In newspaper accounts of Independence Day thereafter, celebrations in this style were typically emphasized while coverage of regional Fourth of July celebrations and their local variations in the carnival style were often neglected.

Although incompatible with urban order, the rowdy style of celebration regained popularity with immigrants in many urban areas in the early nineteenth century. Rooted in the European carnival customs of the working class, these celebrations included masking, charivaris (noisy demonstrations to humiliate someone publicly), and calithumpian parades (parades of urban maskers whose “rough music” mocked “real music”). Over time, tamed versions of these working-class practices were adopted and modified to accommodate

**Fourth of July fireworks in downtown Detroit, Michigan.**

urban order and to avert class conflicts that had previously erupted over the clash of styles.

In the late nineteenth century, the Safe and Sane Fourth of July Program promoted standardized Fourth of July celebrations across the country, emphasizing the solemn or respectable style of celebration. Aimed at the socialization and “Americanization” of immigrants, the program was developed by progressive reformers to promote safety and to establish social order. A primary goal of this program was to legitimate the respectable style as “American” behavior. This program banned all firecrackers and encouraged noise abatement. Reformers produced and disseminated a standardized format in which a formal program was devoted to promoting the values of social order, solemn patriotism, and moderation. In addition, the program emphasized speeches and orations related to the Declaration of Independence. Progressive reformers also encouraged parades featuring patriotic pageantry with selected folk traditions to model the respectable version of America’s history.

In many small towns and remote areas, the Fourth of July has typically been a communitywide celebration in which distinctive rituals and traditions have reflected the interests of the residents. In Lititz, Pennsylvania, for example, community members prepare for

the Fourth by producing thousands of tallow candles in old-fashioned molds during the winter in a tradition dating back to 1843. The town’s Fourth of July festivities begin with a baby parade in which children dressed in patriotic costumes ride on floats decorated in red, white, and blue. A queen of candles is chosen from the senior high school class to preside over the evening ceremony in which boys of the town light many of the candles in the park and float them on the water. In the town of Bridgeport, California, the Declaration of Independence has traditionally been read at the county courthouse, children ride in a parade on decorated bicycles, and a pie-eating contest is a featured event. The participants include community members as well as Native Americans and cattlemen from neighboring ranches who ride in a parade on decorated horses. Other events include picnics, sporting events, and a barbecue.

For more than 100 years, Biwabik, Minnesota, a town of 1,500, has seen its population grow to more than ten times its size during the Fourth of July. Its traditional celebration includes patriotic and calithumpian parades, fireworks, and games like egg-tossing contests and three-legged races. In some of the western states like Colorado and Texas, Fourth of July celebrations have often revolved around rodeos featuring events like roping and riding contests. In 1959 when

Alaska became the 49th state and in 1960 when Hawaii was added as the 50th state, commemorations of these occasions were held across the country on the Fourth of July.

Although Independence Day has been celebrated since the Revolutionary War Era, it was not made a federal legal holiday until 1941. Most recently its status as a holiday from work has taken precedence over the emphasis on commemorating America's birthday, and in some parts of the country celebrations are no longer held. In addition, a pattern of waxing and waning of interest in holding Independence Day programs is evident in many urban areas. The years in which its popularity has peaked were during periods of patriotic fervor such as the centennial in 1876, the years after both World War I and World War II, the 175th anniversary in 1951, and the Bicentennial in 1976. The turn of the century in the year 2000 is also expected to stimulate a resurgence of interest in Fourth of July celebrations across the country.

## Foxx, Redd (1922-1991)

Born John Elroy Sanford in St. Louis, Missouri in 1922, Redd Foxx became one of America's most beloved comedic figures in the 1970s. Called Redd because of his complexion, he took the last name of baseball star Stan Fox—though by adding his distinctive double “x,” nobody would have known this—, and left home at the age of 16 to join a New York street band. Through the 1940s and 1950s, Foxx worked as a stand-up comedian and became known for his “party records,” recordings of his bawdy stand-up act. The most famous of these was 1955's “Laff of the Party,” but he recorded many more. Over 15 million copies of his records were reportedly sold, although Foxx claimed to have received no royalties.

Redd Foxx is best remembered for his role as junk dealer Fred G. Sanford, the cantankerous but lovable elderly widower of NBC's hit comedy *Sanford & Son* (1972-1977). The show was the second smash hit (after *All in the Family*) for Norman Lear and Bud Yorkin, whose topical comedies of the 1970s addressed issues of bigotry regarding race, gender, and sexuality to a degree that had never been seen on American television before. Fred Sanford was a black counterpart to *All in the Family*'s Archie Bunker. *Sanford & Son* was based on the hit British comedy *Steptoe & Son*, which revolved around a cockney junk dealer. The American version was set in the Watts section of Los Angeles, where Fred and his son Lamont (played by Demond Wilson)

are partners in the business. Fred is content to eke out a living as a junkman, though he is constantly hatching all kinds of get-rich-quick schemes, which make Lamont crazy. Lamont, by contrast, is seeking a better life, and many of the sitcom's conflicts arise out of Lamont's desire to get out of the junk business and Fred's attempts to make him stay. Their arguments frequently end with Fred feigning a heart attack, clutching his chest, and calling to his dead wife, “I'm coming to join you Elizabeth!” With this conflict between family and ambition at the center, the Sanfords interact with other engaging characters, many of them played by older black actors who Redd Foxx had worked with in his early stand-up days. The results were hilarious.

Foxx left *Sanford and Son* at the end of the 1976-77 season amidst reported contract disputes with the producers and an argument with NBC over an appropriate dressing room. He signed with ABC for the *Redd Foxx Comedy Hour*, in which he spotlighted some of his old show business friends, and communicated his version of events in American history in a regular spot called “The History of the Black in America.” The show, however, proved a ratings bomb and lasted only a few months.

After a few years working in Las Vegas clubs and making guest appearances on other people's variety shows, Foxx returned to television in 1980 when NBC tried to revive the earlier hit series as *Sanford*. The cast of characters was new, the writing poor, and that show, too, suffered the fate of his *Comedy Hour*, lasting only a few months. In 1986, *The Redd Foxx Show* attempted to present its star in an entirely new guise as a kindly newsstand operator with a white foster daughter. It was retooled after a couple of episodes when network research showed that Americans liked Foxx better as a grumpy character. The daughter was written out and a nagging ex-wife was written in. The series failed to survive.

In the late 1980s, Foxx was forced to file for bankruptcy. Three divorces and an extravagant lifestyle had forced him into a position where the IRS seized most of his assets, but 1989 brought a change of fortune. He appeared in Eddie Murphy's film *Harlem Nights*, received good notices and went on to a role in a new Murphy-produced series called *The Royal Family*. On October 11, 1991, after filming only seven episodes, Redd Foxx collapsed on the set during rehearsals, provoking laughter from cast and crew who thought he was doing his “Elizabeth, I'm coming to join you!” routine from *Sanford and Son*. He had, however, suffered a fatal heart attack, dying in harness as he no doubt would have wished.

—Joyce Linehan

## Foyt, A. J. (1935—)

A. J. Foyt is one of the premier names in motor sports, having enjoyed an auto racing career that spanned four decades, beginning in the 1950s. No other driver achieved such a unique combination of longevity, dominance, and versatility in motor sports, on which he left a permanent mark wherever he raced. Known as “Supertex” to his many fans, Hoyt gained a reputation for a uniquely tough and aggressive style that brought a new excitement to the sport, and he is probably the most popular driver ever to have run at “The Greatest Spectacle in Racing,” the Indianapolis 500.

Anthony Joseph Foyt, Jr. was born on January 16, 1935 in Houston, Texas, where he became familiar with racing cars from an

### Redd Foxx

early age. His father owned the Burt and Foyt Garage that specialized in the vehicles, and Foyt had already decided to make a career of racing when he was no more than five years old. By his late teens he was driving midget racers on the Midwestern circuit.

In the years that followed, A. J. Foyt firmly established himself in various aspects of the sport: midgets, sprints, stock cars, sports cars, and Indy cars. He emerged from quarter-mile dirt ovals to become arguably the most dominant driver in the history of the Indianapolis 500. At Indianapolis, Foyt qualified for a record 35 consecutive races, and was the first driver to win Indianapolis four times, a feat later matched only by Al Unser and Rick Mears. By the late 1990s, he still held the record for the most Indy Car wins with 67 victories and has thus far remained the only driver in the history of the sport to win seven national Indy car titles.

Foyt was also highly successful in other areas of car racing. He won the 24 Hours at Le Mans in 1967, captured the 24 Hours at Daytona in 1983 and 1985, and was victorious at the 12 Hours of Sebring in 1985. Perhaps one of the most amazing aspects of Foyt's career is that so successful an Indy car driver was also able to achieve

victories in major stock car events. After recording 41 wins in United States Auto Club (USAC) stock car racing, he joined the famous Wood Brothers team and became a significant force on the NASCAR circuit, winning seven NASCAR Winston Cup races, including the 1972 Daytona 500. His astonishing record was enhanced even further when he captured the world closed course speed record for an Oldsmobile in 1987, recording a 257-m.p.h. lap in a Quad-4 powered Aerotech.

In 1993, at the age of 58, A. J. Foyt announced his retirement from race-car driving. However, he retained his connection with the sport as a car owner, including his proprietorship of A. J. Foyt Honda in Houston. He also bought several cattle and horse ranches in Texas, and was appointed to the boards of both Riverway Bank and Service Corporation International. He continued living in Houston with his wife Lucy. Of Foyt's four children, three have followed in their father's footsteps: Jerry pursues a career in stock car racing, Larry races go-carts, and A. J. Foyt IV races junior dragsters.

## Francis, Arlene (1908—)

During her long career as one of television's most versatile hostesses, Arlene Francis was the quintessence of wit and charm.

Beginning her career as an actress on the stage and screen, Francis hosted a precursor to *The Dating Game*, called *Blind Date*, for three years in the early 1950s, while also emceeing the talent shows *By Popular Demand* and later, *Talent Patrol*. At the same time she radiated sophistication and good cheer as a regular panelist on *What's My Line*, the popular game show with which she was associated for 25 years. In 1954 NBC president Sylvester "Pat" Weaver chose Francis as host and editor-in-chief for a new concept in daytime television, *Home*, a serious talk show for women. The three year run of *Home* established Francis' credentials as a pioneer in the talk format. She returned to public affairs television in the early 1980s when she hosted a New York program, *The Prime of Your Life*, a noteworthy series for senior citizens.

## Francis, Connie (1938—)

In the late 1950s and early 1960s, singer Connie Francis reigned as America's top-selling female vocalist and the female counterpart to teen idols such as Frankie Avalon and Fabian. Cute, as opposed to glamorous, the diminutive brunette with the perky demeanor typified the girl next door. Teenage girls wanted to be her best friend; teenage boys dreamed of dating her. The media called her "America's sweetheart."

Born Concetta Rosa Maria Franconero in Newark, New Jersey, Francis was just three years old when her roofing-contractor father presented her with an accordion. A year later she was performing at family events, churches, and hospitals. She was eleven when her father took her to Manhattan to meet the producer of the TV show *Startime*, which featured child performers; she appeared on the program for the next four years. She was later showcased on TV variety shows, including Arthur Godfrey's *Talent Scouts*. It was Godfrey who suggested that she change her name. He also suggested that she put away her accordion to concentrate on singing.

Francis began her recording career cutting demo records for various music publishing companies. Then came a 1957 recording contract with MGM and ten failed singles. It was at her father's suggestion that she did an up-tempo version of the 1923 standard

Connie Francis

"Who's Sorry Now?" for what she anticipated would be her final recording session for the label. To her surprise, the record found favor with Dick Clark, congenial host of the popular *American Bandstand*. Touting the new "girl singer," Clark played her record on a 1958 New Year's Day telecast. Over the next five weeks, the record sold a million copies to become Francis's first gold record. Francis, who became a frequent guest on *Bandstand*, later admitted that were it not for Clark and his support, she would have given up on her musical career.

She instead became a perennial on the charts. Along with outselling all other female artists from 1958 to 1964, she became the first female singer to have consecutive number-one hits with the 1960 songs "Everybody's Somebody's Fool" and "My Heart Has a Mind of Its Own." A household name, her likeness appeared on paper dolls, diaries, and other merchandise aimed at teenage girls. Then came a quartet of MGM films. First and most memorable was *Where the Boys Are* (1960), about college girls looking for love during spring break in Ft. Lauderdale, Florida. Though the film is today best known for its heartflick title song, performed by Francis, its plot and setting were mimicked myriad times in succeeding decades, especially during the 1980s when youth-oriented movies were the rage.

As her fame grew, Francis began recording songs with adult appeal; the Italian-American also recorded albums in numerous foreign languages. As a result, the mature Francis was able to establish herself as a strong nightclub draw. In the late 1960s, during the cultural revolution which saw American audiences clamoring for performers with British accents, Francis took her act overseas.

But there were personal trials, including failed marriages and disagreements with her domineering father-manager. Then came an emotionally shattering rape and beating, which she suffered hours after performing at Long Island's Westbury Music Fair in late 1974. The headline-making experience left Francis psychologically unable to perform. Three years later she suffered another setback, when cosmetic surgery on her nose affected her voice. It was a 1978 television concert show, hosted by longtime friend Dick Clark, that marked Francis's return, but unbeknownst to audiences, the still-fragile Francis had to lip-sync to a prerecorded medley of her hits. Three years later, she suffered yet another crisis, the 1981 gangland-style murder of her younger brother, but she went on to face a live audience later that year. In fact, she bravely played the same venue where she had performed the night of her rape and beating. Explained Francis, "I had to put my fears to sleep."

Sadly, Francis's various fears continued to resurface. The recipient of sixteen gold records suffered nervous breakdowns, involuntary confinements in mental facilities, and was diagnosed as a manic-depressive. In interviews and in her 1984 autobiography, she attributed some of her woes to her relationship with her overprotective father: "Thanks to my father, I [grew up] the typical horribly repressed Italian girl. I was this nice little girl that no man was supposed to touch. . . . Probably the biggest regret of my life is that I allowed him to exercise all that control. It was a form of emotional abuse. . . ."

Still, through the 1990s, Francis has made intermittent comebacks. In performance, the woman who led the way for today's female superstars, including Madonna, Janet Jackson, and Celine Dion, continues to project the engaging demeanor of the girl next door, albeit one who is sadder but wiser.

## Francis the Talking Mule

Francis was the smart, sassy talking mule who led a bumbling but sincere human sidekick into and out of trouble in seven films for Universal Pictures from 1949 to 1956. For all but the last film, the sidekick was played by singer/dancer Donald O'Connor, and the voice of Francis was supplied by character actor Chill Wills. The special effect of talking was achieved by feeding a strong thread from the bridle to the mule's mouth. A gentle off-camera tug on the thread caused the animal to try to dislodge the annoyance by moving its lips. The film series was considered silly by the critics, but moviegoers enjoyed the antics of a mule who not only talked but who was more intelligent than his owner. As the first non-cartoon talking movie animal, Francis paved the way for television's talking horse, *Mister Ed*.

## Frankenstein

On the shores of Lake Geneva in the summer of 1816, nineteen-year-old Mary Wollstonecraft Shelley (1797-1851), her future husband, Percy Shelley, and their charismatic friend Lord Byron engaged in a ghost-story contest. After seeing a vision of what she called "the hideous phantasm of a man," Mary Shelley began writing *Frankenstein, or The Modern Prometheus*, the gothic novel that would bring her lasting fame. Even before Shelley's name was widely known, theatrical versions of her novel—the tale of Victor Frankenstein and his monster—frightened and appalled audiences all over Europe. The popularity of stage adaptations in the nineteenth century foreshadowed the emergence of the Frankenstein monster as an icon of film, television, and other forms of popular culture in the twentieth century, including everything from comic books to Halloween costumes. Indeed, the creature's deformity and pathos have earned it such an indelible position in the popular imagination that the name "Frankenstein" has come to denote not the scientist who bears the name or even the novel which gave it life, but rather the image of a scarred and lumbering monster in angry revolt against its creator and society. On one level, the creature exists simply as a horror-movie staple, like Dracula or the Wolf Man. But it is the monster's value as a

powerful symbol of our fears regarding the dangers of science, technology, and industrialization, as well as the perils of man's hubristic attempts to control nature, that has given Shelley's "hideous progeny" such an enduring and ubiquitous afterlife.

No other medium exploited, influenced, and perpetuated the Frankenstein myth like film. One of the first movies ever made, Thomas A. Edison's sixteen-minute silent film *Frankenstein* (1910), began the transformation of Shelley's literary creation into its numerous cinematic offspring. But it was the 1931 Universal Studio release of director James Whale's *Frankenstein* that exerted the greatest impact on Frankenstein mythmaking. In his career-making performance as the monster, Boris Karloff reduced Shelley's articulate, intelligent, and agile creature to a silent brute that was nevertheless endearing in its child-like innocence. Ironically, Karloff's monster—furnished with a protruding and stitched forehead, eyes devoid of intelligence, and electrodes in his neck—all but replaced Shelley's original creation in the popular imagination. As well as cementing Karloff's creature as a cinematic icon, the film also gave rise to enduring "Frankenstein movie" conventions such as the elaborate creation scene, the mad doctor's laboratory, his demented hunchback assistant, Fritz, his infamous ecstatic cry at the moment of creation ("It's alive!"), and the angry torch-carrying rabble who pushed the monster to its fiery death. For two decades, Universal profited immensely from the Frankenstein series with the much-praised *Bride of Frankenstein* (1935) and several lesser but popular sequels, such as *Frankenstein Meets the Wolf Man* (1943). The film series also yielded several spin-off characters, including Elsa Lanchester's Bride of Frankenstein, whose teased-up hair with white "lightning streaks" made her a comparable, though lesser known, pop icon.

Embodying the postwar optimism and prosperity of the late 1940s, the Frankenstein monster shifted into the comic genre when Universal released *Abbott and Costello Meet Frankenstein* in 1948. This "horror-comedy" approach to the Frankenstein myth, complete with slapstick gags, marked a departure from Whale's more serious pictures of the 1930s. But the title's explicit focus on the Frankenstein monster—and the film's positive reception with audiences and critics—evinced the creature's ongoing mass-market appeal and presaged the onslaught of low budget films such as *I Was a Teenage Frankenstein* (1957) in the following decades.

After Abbot and Costello's satire of "classic" monster movies proved that the more serious Frankenstein formula had grown tired, Frankenstein films suffered a hiatus until the British studio Hammer Films released *The Curse of Frankenstein* in 1957. The movie marked the beginning of a more serious and gory approach to big-screen versions of the Frankenstein story. Peter Cushing, who played Baron Frankenstein in numerous films for the Hammer series, captured the psychological struggle of the "mad" scientist so memorably that his character soon overshadowed the monster in much the same way that Karloff's creature had usurped the fame of his creator in the Whale films.

This focus on the psychology of the mad scientist, however, was short-lived. Capitalizing on the prevailing counter-cultural climate and the renewed popularity of classic horror characters in the 1960s and 1970s, the Frankenstein monster made a comeback as a popular symbol of nonconformity. Exemplary of this new trend, interpretations of Frankenstein in the 1970s subverted and even perverted more traditional representations. In 1974, cult artist Andy Warhol produced *Flesh for Frankenstein* (or *Andy Warhol's Frankenstein*), an ultragory retelling in which Baron Frankenstein and his "zombies" display overtly homoerotic, sensual, and necrophilic behavior. In the same year, Mel Brooks's *Young Frankenstein* cleverly parodied the

A scene from the film *Frankenstein*, with Boris Karloff (standing) and Mae Clarke, 1931.

Frankenstein myth and answered the long-unspoken question about the monster's sexual girth. The cult film *The Rocky Horror Picture Show* (1975) even featured a transvestite named Frank-n-Furter and his creation Rocky Horror.

The Frankenstein monster also infiltrated America's rising TV culture in two very similar shows about eccentric nuclear families. Both *The Munsters* (CBS, 1964-66) and *The Addams Family* (ABC, 1964-66) featured a Frankenstein-like character that was essentially a nostalgic reproduction of Karloff's famous creature. In telling the weekly stories of these suburban families who were, besides their monster-movie appearance, normal in every respect, these shows satirized the quaint, white, middle-class family sitcoms of an earlier decade and capitalized on the comic implications of a "domesticated" Frankenstein's monster. (In *The Addams Family*, for instance, the creature named Lurch served as the terse family butler.) The popularity of such series in TV reruns and feature films suggested that the Frankenstein monster, and its attending creature culture, had become a cuddly household commodity now endlessly recycled for comic effect and commercial gain. It was not until the 1990s, in fact,

that any significant attempt was made to reestablish a more serious approach to this material. Kenneth Branagh's 1994 film *Mary Shelley's Frankenstein* returned to Shelley's original novel and captured much of its gothic terror but also added popular movie formulas such as the creation of the monster's bride.

Despite the endless dilutions, distortions, and recyclings, the force of the Frankenstein myth remains undiminished as contemporary society continues to incorporate technological advances—in fields such as genetic engineering—into everyday life while growing increasingly apprehensive about their potential dangers. Each version of Frankenstein's monster acts not only as a potent reminder of the dark side of man's creative idealism—the dangers of trying to play God—but also as a powerful representation of the collective fears and desires of the particular era in which it was conceived. The Frankenstein legend continues to endure as a deformed mirror held up to human nature, *re-formed* from parts of the dead past—with our imagination providing the electrical spark.

—Kristine Ha

## Franklin, Aretha (1942—)

As the career of singer, songwriter, and pianist Aretha Franklin makes evident, the black church—its ministers, its members, and its music—have had a profound influence on popular music. A fruit of the black Baptist church, Franklin is one of the most important female

artists to translate gospel music—with all its intensity—into soul music. Her talent was nurtured by a who's who of gospel song—Clara Ward, James Cleveland, and Mahalia Jackson—and her father, Reverend C. L. Franklin, was a gospel singer in his own right. For the past thirty years, Franklin has reigned as the “Queen of Soul,” winning more Grammy Awards than any other female vocalist—at least one a year from 1967 through 1974 and then in 1981, 1985, and 1987. From 1960 to 1992, 89 of her songs were in the pop or R&B Top Forty, with twenty of them reaching number one on the R&B chart. Franklin was the first African-American woman to appear on the cover of *Time* magazine (in June, 1968), and in 1987 she became the first woman to be inducted into the Rock and Roll Hall of Fame. By the mid-1980s, Franklin had racked up a total of twenty-four gold records. The state of Michigan has designated her voice as a natural resource.

The eldest of three sisters, Aretha Franklin was born in Memphis, Tennessee, on March 25, 1942. During her childhood, her family moved to Buffalo and then to Detroit, where she grew up. Her father, the celebrated Reverend C. L. Franklin, ministered the 4,500 member New Bethel Baptist Church. Rev. Franklin was one of the first ministers to have a nationally broadcast radio program, and at one time he earned up to \$4000 per sermon. His eldest daughter taught herself to play the piano at the age of eight. Her father's national stature and influence drew such well-known gospel singers as James

Aretha Franklin

Cleveland, Mahalia Jackson, and Clara Ward to their home for improvisational praise sessions. Two of the Clara Ward Singers helped rear Aretha after her mother's separation from the family. Franklin absorbed the rich black musical experience in her father's church and by the age of twelve began touring with him, singing solos.

Her recording career began in 1951 when she and her sisters Carolyn and Erma made a 78, singing behind their father on the Gotham label. In 1956, Franklin recorded the hymn "Where We'll Never Grow Old," profoundly influenced by her mentor, Clara Ward. Following the path of one of her idols, Sam Cooke, who had made a successful transition from gospel to pop, at the age of eighteen Franklin left Detroit for New York, where Major Holley, a bass player for jazz pianist Teddy Wilson, helped look after her while she made the rounds in an attempt to be discovered. John Hammond, the legendary impresario who had encouraged Columbia Records to sign Mahalia Jackson, among other talents, heard Franklin and encouraged the company to sign her. While with Columbia, Franklin released a number of recordings: "Today I Sing the Blues" and "Won't Be Long" were moderately successful R&B hits.

After her contract expired with Columbia, Franklin signed with Atlantic Records in 1967. With the savvy producing skills of Jerry Wexler, Franklin recorded "I Never Loved a Man (The Way I Love You)" with the Muscle Shoals, Alabama, rhythm section, her own piano accompaniment, and the backup vocals of her sisters. The single and the album of the same title achieved gold status, and Aretha had arrived. A string of gold records followed, including "Respect," her first single to top both the R&B and Pop Charts. The album also included such popular hits as "Dr. Feelgood," "Baby, I Love You," "Chain of Fools," and "Since You've Been Gone." Her next hit songs, "Think" and "I Say a Little Prayer," went gold, along with her *Lady Soul* album in 1968. In 1969, "See Saw" and the album *Aretha Now* similarly attained gold status. "Don't Play that Song" in 1970 and her 1971 version of Simon and Garfunkel's "Bridge Over Troubled Water" also were hits. In 1972, she won two Grammys for the albums *Young, Gifted, and Black* and *Amazing Grace*. In 1973, Franklin scored again with "Master of Eyes" and in 1974 with "Ain't Nothin' Like the Real Thing."

The mid- to late 1970s saw a dry spell in Franklin's creative hitmaking. Disco had begun to gain favor, adversely impacting the sale and popularity of soul and R&B. In 1980, Franklin signed with Arista Records, and by 1982 she had made a successful comeback with the album *Jump on It*. In 1985, the *Who's Zooming Who* album, with the hit "Freeway of Love," went gold. But in 1987, Franklin returned to her roots with the album *One Lord, One Faith, One Baptism*, her first gospel collection in fifteen years. A duet with George Michael entitled "I Knew You Were Waiting" became her second number one Pop hit.

Franklin's relentless productivity, diverse repertoire, and sheer volume of recordings make a simplified overview of her style difficult. To be sure, if one were to distill her style, it would boil down to her rhythmic gospel piano style and arrangements that accompany her voice with all its ecstatic tension. Beginning with her recording for Atlantic, Aretha Franklin essentially defined soul music as vital, genuine, sexual, and visceral, reflecting the struggles and triumphs of the human spirit. "It is her fierce, gritty conviction. . . . She flexes her rich, cutting voice like a whip; she lashes her listeners—in her words—"to the bone," for deepness," *Time* magazine observed. All in

all, it has been Franklin's faith and "hard knocks" that enabled her to embrace a song, dramatizing it and making it her own.

The early Columbia sessions were a fallow period in terms of her mature individual stylistic development, persistently marred by the company's attempt to pigeonhole her style into jazz and pop arrangements, not allowing for her freedom of expression. But at Atlantic, the arrangements of Franklin's music were based on her piano accompaniment to her voice. Upon her arrival at the studio to record, arrangers such as Arif Mardin would base everything around her piano and voice renditions, adding the backup vocals of sisters Carolyn and Erma. Atlantic allowed Franklin to exercise a great deal of artistic control, encouraging her creativity and a selection of songs that meant something to her. The first album, *I Never Loved a Man (The Way I Love You)*, paid homage to her musical idols: Sam Cooke in "A Change Is Gonna Come" and "Good Times," and Ray Charles, who had previously merged gospel with pop beginning with the recording of "I've Got a Woman," is represented in a moving and undeniably convincing "Drown in My Own Tears."

Franklin's personal life has been a turbulent one. During her childhood she faced one traumatic experience after another. At the age of six, her mother abandoned the family, leaving Aretha's father to provide the nurturing and support of the children. From a young age, Aretha toured on the gospel highway, where the attendant pitfalls that she encountered on the road were not always in her best interest. She was the mother of two boys by the time she reached seventeen. Her marriage to her manager, Ted White, who had been known to rough her up from time to time, ended in divorce. Her second marriage to actor Glynn Turman also ended in divorce. In 1979, her father was shot by a robber in his home and remained in a coma for several years, never recovering. Through it all, Franklin has ardently guarded her private life and remained the "Queen of Soul."

Franklin has been active for several social causes and an activist for black pride and Civil Rights. Her father was a friend of the late Dr. Martin Luther King, Jr.; Franklin sang at King's funeral. She recorded "Young, Gifted and Black" as an affirmation of positive black consciousness and pride. Her unabashed celebration of sexual liberation with "sock it to me" in "Respect" and "taking care of business is really this man's game" in "Dr. Feelgood" was liberating to many women. Franklin sang for the Democratic National Convention in 1968, for the inauguration of President Jimmy Carter in 1977, and again for the inauguration of President Bill Clinton in 1993. Three television specials—*Aretha* in 1986; *Aretha Franklin: The Queen of Soul* in 1988; and *Duets* in 1993—have featured Franklin's life and music.

Franklin has shared her songs of love, hurt, respect, and black pride, but not much of her personal life. The Queen of Soul may soon talk in the form of an autobiography in collaboration with David Ritz, biographer of B. B. King, Marvin Gaye, Etta James, and Ray Charles. Whether singing gospel or pop, music is a balm and an alter ego for Franklin. "It does get me out of myself. . ." she has said. "I guess you could say I do a lot of traveling with my voice."

—Willie Collins

## Franklin, Bonnie (1944—)

An actress and dancer best known for her portrayal of Ann Romano—TV’s first “Ms.”—on Norman Lear’s sitcom *One Day at a Time*, Bonnie Franklin was born January 6, 1944, in Santa Monica, California. She started tap dancing when she was nine years old, appearing with Donald O’Connor on the *Colgate Comedy Hour*, and began teaching at the age of twelve. Franklin appeared in the original *Munsters* and *Man from U.N.C.L.E.* but became a household name from 1975 to 1984 on Lear’s sitcom. Franklin dabbled in directing (*New Munsters*), TV movies (*Portrait of a Rebel: The Remarkable Mrs. Sanger*), and exercise videos (*I Hate to Exercise—I Love to Tap*). In the 1990s she could be found doing regional theater.

—Karen Lurie

## Frasier

*Frasier*, a popular situation comedy starring Kelsey Grammer as the pompous, insecure psychiatrist Dr. Frasier Crane, first premiered

The cast of *Frasier*: (from left) David Hyde Pierce, Peri Gilpin, Kelsey Grammer, Jane Leeves, John Mahoney, and Moose.

on NBC in September 1993. The character had appeared originally in the long-running and much-loved comedy show *Cheers*, with which *Frasier* shared the same creative team. *Frasier* relocated the doctor from his original *Cheers* setting in a Boston tavern to Seattle, where he became the host of a call-in radio show on fictional local station KACL. *Frasier* immediately won accolades for its sophisticated humor and literate dialogue, and secured a consistent position in the top 15 network shows. In 1998, the show became the first to win five consecutive Emmy awards for Outstanding Comedy Series, ensuring its place in television history.

Grammer’s character was moved to Seattle in order to give the show enough distance with which to create a sense of identity separate from *Cheers*, yet the choice of Seattle also meant that the show reflected (and contributed to) the heightened profile of the Northwest City in the 1990s and a range of popular accounts that hailed Seattle as a desirable and sophisticated place to live. For example, in place of the *Cheers* tavern, one of the main settings of *Frasier* is the upscale Café Nervosa, where Frasier and his snobbish brother, fellow psychiatrist Niles (David Hyde Pierce) sip their cappuccinos and lattes. Much of the show’s best comedy lies in the ensuing conversations between the two brothers, sharp retorts flying as each tries to undermine and outdo the other in everything, from successful careers to suit fabrics.

The brothers are of one mind, however, when dealing with their father, retired ex-cop Martin Crane (John Mahoney). Gruff and blue-collar, Martin was forced to move into Frasier’s expensive, lofty apartment after being injured in the line of duty. With his dog, Eddie, (recipient of much fan mail) and his liking for beer, hot dogs, and *Monday Night Football*, Martin constantly frustrates Frasier’s attempts to create a tasteful, chic ambience for the apartment. Martin’s English live-in homecare provider, Daphne Moon (Jane Leeves), also provides the object of Niles’s frustrated affection and adds another hilarious dimension to the complex domestic dynamics.

Critics have noted the way that the best episodes feel like little 22-minute plays because of the combination of high quality writing and ensemble acting. The episodes often take place within one confined, high-pressure setting, such as Frasier’s apartment or the radio station, where the doctor battles against a constant stream of irritating callers with his slightly jaded producer, Roz (Peri Gilpin).

Off-screen, Kelsey Grammer had some well-publicized battles with substance abuse; he checked himself into the Betty Ford Clinic in the fall of 1996. On-screen, the show continued to move smoothly from strength to strength, and in November 1997 celebrated its one hundredth episode by uprooting from its studio in Hollywood to shoot on location in Seattle. Eschewing its usual stage-bound format, the episode took in the sights of the city and starred the real mayor of Seattle, Norm Rice, who declared it “Frasier Day” in Seattle.

The show’s reward for continued critical and ratings success was in taking over for *Seinfeld* in the coveted NBC prime-time slot in the fall 1998 schedule. This slot had been filled previously by some of the most successful and critically acclaimed series in American television history, including *The Cosby Show*, *Hill Street Blues*, and *L.A. Law*. What made *Frasier*’s rise to the number one comedy slot all the more unusual was that it bucked the trend in situation comedy in the 1990s. Instead of building itself around a celebrity personality (often a stand-up comedian), as in the case of *Seinfeld*, *Roseanne*, or *Ellen*, *Frasier* relied upon the continuing appeal of a well-drawn fictional character.

—James Lyons

## Frawley, William (1887-1966)

William “Bill” Frawley left his mark on American cinema during the 1930s as one of the medium’s first character actors. Appearing in more than 150 films from *Miracle on 34th Street* to *Huckleberry Finn*, the strong-faced Iowan depicted surly, middle-aged men who hid their compassion behind masks of crustiness. He later adapted his trademark role to the small screen where he created two of television’s most memorable supporting roles: Fred Mertz on the *I Love Lucy* show (1951-1957) and “Bub” O’Casey on *My Three Sons* (1960-1964).

Lucille Ball and Desi Arnaz selected Frawley for the role of Fred Mertz after their first choice, Gale Gordon, turned out to be unavailable. CBS executives warned Ball and Arnaz against the choice: Frawley had a reputation for heavy drinking. Yet the veteran actor rose to the occasion and created in Fred Mertz the prototype of the stick-in-the-mud husband and penny-pinching landlord. He even managed to tolerate Vivian Vance, who played his on-screen wife Ethel Mertz, although the two strongly disliked each other. “She’s one of the finest girls to come out of Kansas,” he once observed, “But I often wish she’d go back there.” After the *I Love Lucy* show, Frawley created the role of Michael Francis “Bub” O’Casey, Fred MacMurray’s gruff father-in-law and housekeeper on the sitcom *My Three Sons*. William Demarest replaced him on his retirement in 1964. Fittingly, Frawley’s last television appearance was a cameo on a 1965 episode of Lucille Ball’s *The Lucy Show* entitled “Lucy and the Countess Have a Horse Guest.” On that episode, Lucy Carmichael (Ball) jokes about how familiar Frawley seems to her. As Fred Mertz, whose name is almost synonymous with the old neighborhood landlord, Frawley is equally familiar to us all.

## Frazier, Joe (1944—)

Joe Frazier was a quintessential pressure fighter. He came forward at all costs, throwing his vaunted left hook at opponents until he broke their spirits or bodies or, as was often the case, both. A great heavyweight champion by any standard of measurement, Frazier left his mark in his three-fight series against Muhammad Ali. In 1967, Ali had been stripped of his heavyweight crown and his license to box for

refusing induction into the United States Army during the Vietnam War. In Ali’s absence, an elimination tournament was held to determine his successor to the heavyweight throne. Frazier won the tournament, tearing through the division’s contenders and establishing himself as the best active heavyweight in the world. When Ali’s license to box was reinstated, a superfight was made between Joe Frazier, the undefeated reigning champion, and Muhammad Ali, the undefeated former champ. The fight, which promised to be a thrilling encounter pitting Ali’s speed and athleticism against Frazier’s strength and determination, was billed as the “Fight of the Century.” On March 8, 1971, at New York City’s Madison Square Garden, Ali and Frazier split what was then a record-setting purse of five million dollars, and staged a fight that may have even exceeded its hype.

The fight was of such import that singer, actor, and pop culture icon Frank Sinatra was enlisted as a photographer for *Life* magazine. The bout’s significance owed not merely to the high quality of the match itself, but also to the social and political symbolism attached to its participants. While Ali’s refusal of induction into the armed forces and his outspoken stances on various political and religious issues made him a representative, in the eyes of many, of oppressed people all over the world, Frazier unwittingly came to represent the establishment and the status quo of the white American power structure. Smokin’ Joe, as he was nicknamed for his relentless style, resented the perception of himself as the “white hope.” Frazier was proud of his racial identity and noted on several occasions that, ironically, he was darker complected than Ali. Nevertheless, Ali vilified Frazier as representing white America, and in turn an enraged Frazier handed Ali his first professional loss, a 15 round unanimous decision defeat. Frazier even knocked Ali down in the last round for good measure.

The two boxers fought a rematch three years later, this time with no title on the line (as Frazier had lost his title in a humiliating knockout at the hands of the murderous hitting George Foreman). This time Ali took revenge with a 12 round unanimous decision victory. The third and final meeting rivaled their fist encounter as the most famous heavyweight title fight in history. Dubbed by Ali “The Thrilla in Manila,” this 1975 classic was a contest of wills unlike anything witnessed in the division’s illustrious history. Ali was champion by this time, having knocked out the same George Foreman who so easily beat Frazier. Figuring that Frazier would be old and ineffective this time around (though Ali himself was the elder of the two by two years), Ali took him lightly and did not expect a tough fight. To add insult to injury, Ali took to calling him “The Gorilla.” Frazier’s pride was hurt once again by his antagonist, and he presented Ali with the toughest test of his career—14 grueling rounds, ending only when Frazier’s chief cornerman, the venerable Eddie Futch, refused to let Joe whose eyes were swollen nearly shut, come out for the last round. Cast unwillingly in a role he despised, Joe Frazier nevertheless etched his name into the American consciousness. If Muhammad Ali was the greatest heavyweight champion who ever lived (and even if he was not), then Joe Frazier was his greatest rival. Their names go down in history together, as Frazier himself said, “whether he [Ali] likes it or not.”

## Frazier, Walt “Clyde” (1945—)

Walt Frazier was the epitome of “cool” in a basketball era that worshiped the style that the flamboyant “Clyde” came to symbolize. Frazier was an All-American at Southern Illinois University, and led his team to the 1967 National Invitational Tournament (NIT) Championship, coincidentally in New York’s Madison Square Garden, where he would continue his career as a professional. Frazier was an All-Star guard for the New York Knicks from 1967-1977, and was the undisputed floor leader of two Knick teams that won National Basketball Association (NBA) titles in 1970 and 1973. Combined with his smooth and explosive offensive talents, he was also one of the league’s premier defensive players, always assigned to control the opponents’ primary outside offensive threat. Frazier is most remembered, however, for his resplendent wardrobe, as well as his calm and dignified demeanor that earned him the nickname “Clyde.” Frazier was inducted into the Basketball Hall of Fame in 1987.

## Freak Shows

By the mid-twentieth century the display for profit and entertainment of people known in the United States as “freaks” had for the most part become an anachronism. Parading disabled people before a staring public for amusement has, along with public executions, become socially unacceptable. But as our lingering collective memory of P. T. Barnum suggests, from about 1830 to 1940 in the United States, as well as in Europe, people with congenital disabilities or other physical traits that could be turned into curiosities were displayed on stages, in dime museums, in circuses, and at fairs as a part of a growing culture of popular performance that was driven by the increased commercialism, leisure, and urbanization of modernity. Whereas the term “freak” now connotes a negative departure from the norm, in the nineteenth century “freak” meant a whimsical fancy. This shift in meaning suggests the long history of exhibiting people whose bodies are presented as extraordinary and the enduring interest that they inspire in the popular imagination.

Extraordinary bodies have obsessed humankind since antiquity. The nineteenth century “freak” was known as a “monster” in ancient times and considered to be a prodigy. The birth of such an individual, as with natural events such as comets and earthquakes, was thought to portend grave or disastrous events. Stone-age cave drawings record monstrous births, while prehistoric grave sites evince elaborate ritual sacrifices of such bodies.

As the narrative of the natural world shifted from one of divine determination to secular explanations, early science viewed exceptional bodies as indices to the order of things or proof of God’s abundance, but also as sources upon which to hone medical expertise. Early scientists and philosophers kept cabinets of curiosities full of items like shark’s teeth, shrunken heads, and bottled fetuses that they

regarded with a mixture of awe and curiosity. At the same time, these extraordinary bodies were commercialized at public fairs, like London’s famous Bartholomew Fair, and on streets by monster mongers who charged for viewings and sold pamphlets called monster ballads, which offered morals drawn from the wondrous bodies. Congenitally disabled newborns, called monstrous births, continued to be interpreted as exegeses of the divine and natural orders by figures as respected as Cotton Mather and John Winthrop well into the seventeenth century. Disabled people were often celebrities or kept at court as “Fools” or in the role of pets, as were many dwarfs. For example, a powdered and wigged Matthew Buchinger, who was virtually armless and legless, dazzled eighteenth century Europe with his conjuring, musical performances, calligraphic skills, and marksmanship with the pistol. These monsters filled their viewers with awe and curiosity; they were seen as “marvels” and “wonders,” not as what the twentieth century observer would interpret as abnormal or inappropriate to stare at.

By the 1840s, P. T. Barnum—nineteenth-century America’s Walt Disney—institutionalized the once itinerant practice of showing monsters in halls and on streets when he opened in New York his American Museum, which aspired to middle-class status with temperance tracts, appeals to education, entrepreneurship, and other gestures toward bourgeois respectability. An entertainment industry in freaks and other curiosities flourished in dime museums and later as circus sideshows throughout Victorian America. The secularizing, mobile, rapidly changing social order dominated increasingly by market economics, individualism, and a developing mass culture generated this boom in staring at “curiosities,” which was part of a larger culture of display manifest in museums, circuses, grand expositions, photographs, parades, theater, department store displays, and what Thorstein Veblen called “conspicuous consumption.”

These shows gathered an astonishing array of wonders, from Wild Men of Borneo to Fat Ladies, Living Skeletons, Fiji Princes, Albinos, Bearded Women, Siamese Twins, Tattooed Circassians, Armless and Legless Wonders, Chinese Giants, Cannibals, Midget Triplets, Hermaphrodites, Spotted Boys, and much more. Augmenting these marvels were ancillary performers like ventriloquists, performing geese, mesmerists, beauty contestants, contortionists, sharpshooters, trained goats, frog eaters, sword-swallowers, and tumbling monkeys. From Queen Victoria and Henry James to families and the humblest immigrants, Americans gathered together in this most democratizing institution to gaze raptly at freaks of display. Freaks were the highest paid performers in the industry; many such as Tom Thumb were celebrities, who made their handlers rich. But freaks were more than simply disabled people; they were figures created by the shows’ sensationalized and exaggerated conventions of display. Elaborate costuming, exotic sets, bizarre “true-life” pamphlets, the hyperbolic rant of the pitchmen, photographs for audiences to collect, and scientific testimonials all surrounded these bodies to produce freaks and marvels from people who had unusual bodies that could be appropriated for the shows.

Into the nineteenth century, scientists and doctors participated in the show culture by examining the performers for scientific study and by verifying the freaks’ authenticity, lending prestige to the exhibitions. Alongside its involvement with the entertainment industry, however, science institutionalized its preoccupation with monsters by 1832 with the development of teratology, the scientific study of monsters. Teratology endeavored to harness the ancient power of prodigies by creating pigs with cleft palates and elaborate taxonomies of physical deviation. As science and medicine began to separate

from the shows and become more elite, such developments as statistics, the idea of the average man, the pathologizing of disabilities, and the eventual belief that extraordinary bodies should be standardized for the good of both the individual and society helped turn the wondrous freak into the medical problem.

A complex, interrelated combination of historical and social factors ended the immense popularity and proliferation of the freak show by the mid-twentieth century. The medicalization of disability, the rise of the bourgeoisie, the sentimentalizing of disabled people as pathetic rather than wondrous, and the sinking of freak shows to lowbrow culture, among other developments, snuffed out the form of the freak show that Barnum so masterfully exploited. Its allure lingers nevertheless in such transmuted forms as talk shows, bodybuilding, and wrestling matches, science fiction narratives like *Star Trek*, or even performers such as Michael Jackson.

## Freaks

Perhaps the most unsettling horror film to follow in the wake of *Frankenstein's* enormous financial success in 1931, *Freaks* (1932) tells the story of seemingly childlike carnival “freaks” who wreak unspeakable revenge on two able-bodied swindlers. Adapted from the Tod Robbins short story “Spurs” and directed by Tod Browning, this untidy little film shocked audiences with its use of actual disabled performers: midgets, an armless woman, a “living torso” (a man whose body ended slightly below his ribcage), and many others.

Receiving mostly negative reviews and faring poorly at the box-office, *Freaks* ran afoul of censorship boards across the United States and was banned in Great Britain for three decades. After playing the exploitation-film circuit for years, it received acclaim at the 1962 Venice Film Festival and enjoyed some popularity among counterculture “freaks” during the late 1960s and early 1970s. The Library of Congress honored *Freaks* by adding it to the National Film Registry in 1994.

## Frederick's of Hollywood

Frederick's of Hollywood is an innovative lingerie company established by Frederick N. Mellinger on New York's Fifth Avenue in 1946. A year later he moved his business to the West Coast. Originally a mail-order house, by 1998 it had expanded to include 205 retail outlets and an on-line presence at its web site at [www.fredericks.com](http://www.fredericks.com). For many years, corporate headquarters were located at 6608 Hollywood Boulevard and housed in an art deco building, which was informally known as the Purple Palace for its garish lavender facade.

During World War II, Mellinger was stationed in Europe, where he noticed the French preference for black undergarments at a time when Americans preferred white. Mellinger formulated a theory of female pulchritude centered on proportional perfection. When he returned to the United States, he studied anatomy so as to be better prepared to contend with such phenomena as sagging breasts, midriff bulges, lackluster posteriors, and something that he referred to as “piano legs,” to name a few. Stern and Stern, in *The Encyclopedia of Bad Taste*, proffer the following quote, which addresses the issue of Mellinger's motivation: “I knew there had to be ways to reportion women and give every lovable one of them EQUAL OPPORTUNITY in the eyes of men.” A popular Mellinger slogan—“Came in looking like a Chevy and left looking like a Cadillac”—epitomizes the Frederick's philosophy throughout much of the company's history.

Frederick's-style perfection can be achieved with the assistance of a number of innovative products. For the poorly contoured buttocks, there is the Living End padded girdle. For the woman who requires flexibility in regard to bust size, there is the Light 'N' Lovely Air-Lite Inflatable Bra, whose cups can be expanded to the desired degree with the aid of straws. Or, for those who prefer a brassiere that more nearly approximates tactile perfection, there is the H<sub>2</sub>O Water Bra, which features pads containing a water-and-oil mixture. A salient nipple effect can be achieved with the aid of prosthetic-nipple-pad bra inserts.

The Mellinger concept of femininity, the one that Frederick's has projected throughout much of its history, extolled the symmetrical, the curvaceous, the buxom, and the docile: the image of the sex kitten and the harem girl, adumbrations of which were even evident in

Tod Browning (wearing sweater) and the cast of the film *Freaks*.

some of the company's product names—Sheik's Choice pajamas, for instance. Males made many of the purchases or told their women what to buy. The image of Mellinger as "Mr. Frederick" appeared throughout the catalogue proffering tips on such subjects as male preferences and drooping breasts. The male orientation of the firm was unmistakable.

In an era when many American women are financially independent of their male partners, and rapid progress has been made toward sexual equality, it is not surprising that Frederick's, with the death of Mr. Mellinger in 1991, has considered altering its image. *New York Times* contributor Jennifer Steinhauer related Frederick's CEO Terry Patterson's plans for the company: "Over all . . . Frederick's of Hollywood stores would attempt to whisper seductively to the modern female consumer, instead of simply leering salaciously at her boyfriend. 'I'm dressed, I'm corporate, I'm successful, I can play with the big boys . . . And you don't know I'm a Frederick's woman.' That is where I see the company now."

## Free Agency

Free agency has created a controversial revolution in professional athletics since the 1980s. Free agency is the ability of professional team athletes to change teams when their contracts expire. Players can entertain offers from the teams interested in signing them and choose from the available choices. In theory, players use the principles of a free-market economy to receive salaries commensurate with their abilities. Some pundits believe that free agency has been extremely beneficial to professional sports, allowing the best players to be paid what they are worth. Others argue that the dramatic increases in salaries and the tendency of players to change teams every few years has been detrimental.

For most of the history of professional athletics, players were forced to stay with the team that drafted them through a "reserve clause" in their contracts. The only way an athlete could change

teams was to be traded by the team's management. Athletes' salaries were completely at the discretion of the owners. Professional baseball, football, basketball, and hockey players found themselves completely at the mercy of the team owners and managers. Stories abound of players who were named the Most Valuable Player or won a league scoring title only to find their salaries stagnate or even decrease. The athletes found themselves bound to their teams regardless of their wishes, and they could be traded to other teams without being consulted.

Anger over the reserve system grew in professional sports. In 1969, Curt Flood, a center fielder for the St. Louis Cardinals, was traded to the Philadelphia Phillies, one of the worst teams in the league. Flood had played for the Cardinals for twelve years, earning a reputation as an outstanding center fielder (226 consecutive games without an error) and an excellent hitter (lifetime average of .293). In addition, Flood was deeply involved in the community and well-liked by the people of St. Louis. Flood asked the commissioner of baseball to declare him a free agent so that he could decide for himself where he would end his career. The commissioner refused, and Flood took major league baseball to court. The case eventually wound up in front of the Supreme Court. In 1972, the Supreme Court ruled by a five to three margin against Flood, but the door had been opened. Although Flood would never return to the sport he loved, he had paved the way for the current system of free agency.

In 1976, pitcher Bill Campbell successfully negotiated a free agent contract with the Boston Red Sox. By the start of the 1980s, free agency was a fact of life in baseball. Players' salaries began to increase rapidly, with Nolan Ryan becoming the first player in history to sign a contract worth \$1 million per year. The concept of free agency spread to other team sports throughout the decade. By the early 1990s, all professional team sports had some form of free agency, although some were more restrictive than others.

As more players began changing teams and increasing their salaries, team owners began to argue against the free agent system. They argued that teams based in smaller cities, such as St. Louis or Portland, could not offer comparable salaries to teams based in New York and Los Angeles. This growing gap between small-market and large-market teams was addressed in most sports (with the exception of baseball) through revenue sharing and the implementation of a salary cap on the total amount a team could spend on its players.

Free agency has been a boon to professional athletes, but it also has many detractors. Traditionalists argue that fan support has faded as players move from team to team for financial gain. Many critics believe that the constantly changing rosters alienate fans who can no longer find players to support. To counter that argument, supporters of free agency point out that attendance at sporting events has increased dramatically in the past twenty years. If fans were truly feeling alienated by the roster changes, then attendance should be decreasing.

## Free Speech Movement

The Free Speech Movement started as a dispute over 26 feet of sidewalk and escalated into a pitched battle for control of the University of California at Berkeley. In the process, an entire school, students and faculty alike, was polarized into two camps fundamentally at odds with each other, both ideologically and in terms of rhetoric. The Free Speech Movement represented the adoption of civil rights protest techniques—pickets, sit-ins, and other non-violent methods—in a hitherto untested arena, the university. As it turned out, it was the opening salvo in a long, drawn-out battle, a tumult that would ultimately affect one out of every ten college and university campuses nationwide (a conservative figure), rending the country in two along ideological and generational lines.

Over the summer of 1964, the administration of the UC Berkeley changed its rules on political activism on campus, eliminating a narrow strip of sidewalk at the intersection of Telegraph Avenue and Bancroft Way that had been a main point of egress to the campus, and a traditional location for political activity. To the student activists, the administration's ruling was an attack not only on their individual rights but also on the civil rights movement itself. Concerned student activists met with administrators, and were able to win back their right to set up tables, but the administration refused to budge on matters of fund-raising or political advocacy.

This set the stage for a series of escalating protests, as students tested the power of their as-yet-untried political muscle. Fundraising and advocacy activities resumed at the Bancroft/Telegraph intersection under the auspices of the United Front, an ad-hoc organizing committee, and after a week had passed without incident, new tables were set up at Sather Gate, a hundred yards inside the campus. On September 30, five students were cited for manning them. Five hundred students signed a letter of complicity, crowded Sproul Hall, which they occupied until early morning, and demanded that the administration discipline all of them. Eight students were suspended indefinitely, and the following day Jack Weinberg, a recent graduate and a leader of the campus Congress of Racial Equality (CORE), was arrested as he manned a table. Hundreds of students surrounded the police car containing Weinberg and, for the next 32 hours, the crowd maintained a vigil, with speakers holding forth from atop the car's bonnet.

The more intransigent the administration appeared, the more radicalized the movement became. "Beginning with concern about rights to a small strip of territory," wrote Max Heirich, a sociologist who studied the movement as it was happening, "the students had shifted their focus to freedom of expression and advocacy on the campus as a whole. After the arrest of October 1, they began to talk about the proper purpose of the university." The weeks wore on without resolution and more students were swept up in the conflict, forced to choose a side amidst the growing rancor. Chancellor Edward Strong remained firmly opposed to any concessions, convinced that student opinion was volatile and would peter out of its own accord. There were indeed indications that the protest was losing steam: after the UC Board of Regents ruled against the FSM in a November 20 meeting, a rally and sit-in the following Monday ended in disarray, with the student leadership disheartened and student support flagging. Over the Thanksgiving break, however, disciplinary letters were sent to four FSM leaders, rekindling the fickle flames of student unrest and inflaming the FSM leadership by this show of bad faith. The FSM reacted by submitting an ultimatum to the

administration—if the charges were not dropped, a sit-in would begin on Wednesday, December 2, followed by a general strike.

The administration did not deign to respond, and students set about occupying Sproul Hall. Far from housing an angry mob, the occupied premises had a festive air as the students passed the time square dancing, and conducting teach-ins and religious services. Joan Baez led a folk singalong; Laurel and Hardy films were shown. On Governor Pat Brown's orders, police officers began clearing Sproul Hall early Thursday morning. By daybreak, the exhausted police officers were growing rough with the students—who went limp in classic civil rights fashion—and those en route to their morning classes were treated to the sight of fellow students being manhandled by the California Highway Patrol, and cries of police brutality echoing through Sproul Hall. The next day pickets appeared.

In the end, the administration capitulated. Perhaps it was the threat of a prolonged strike, perhaps the pressure of faculty members, who voted at an Academic Senate to support the students' demands. However, the tenor of the conflict can be summed up in a single event: at an assembly on the Monday following the successful strike, the entire student body watched as Mario Savio, one of the most charismatic of the movement's leaders, strode to the lectern, only to be tackled by Berkeley policeman and quickly hustled offstage. Savio had been forbidden to address the students, and his decision to take the platform appeared to be calculated for maximum impact. The incident had the desired effect, cementing student support for the FSM. In the weeks following the strike, Chancellor Strong was relieved of his duties by the regents, and a chancellor who was sympathetic to FSM goals was appointed. In the elections held the week following the strike, FSM candidates swept into ASUC office. In the space of a semester, the climate of UC Berkeley changed irrevocably from comfortable complacency to overt radicalism. The campus would remain at war for the next five years.

The triumph of the Free Speech Movement against Berkeley's administration encouraged a wave of protests over alleged administrative abuses nationwide. The following year, 14 schools experienced outbreaks of student unrest, and student revolt developed into a worldwide phenomenon, culminating in the massive protests, strikes, and general unrest of 1968. Berkeley itself became the site of bitter, protracted battles that eventually led to fatalities. Max Heirich wrote, of the protests that followed, "With increasing momentum each side seemed to create its own 'self-fulfilling prophecies' of what opponents would do," adding to the rampant paranoia.

Nowhere, then, was the revolt as typical as at Berkeley, where the privileged sons and daughters of the middle class had risen up with such force and determination. Theirs was a political conversion unique in world history—a revolution fomented by abundance. "... We were the first generation in the history of the world that had never gone hungry," wrote David Lance Goines, one of the eight students suspended on October 2, 1964. "Our parents trembled at the memory of the Great Depression, but it meant nothing to us. We didn't have much notion of not getting what we wanted, when we wanted it." True to Goines' appraisal, Berkeley students got what they wanted—indeed, perhaps rather more.

—Michael Baers

## Freed, Alan "Moondog" (1921-1965)

One of the most popular and influential pioneering radio disc jockeys, Alan "Moondog" Freed helped make Cleveland, Ohio, an early hotbed of rock 'n' roll music through the programs that he hosted on radio station WJW there in the 1950s. Moving to WINS Radio in New York, he soon became a nationally-known celebrity as one of the first important supporters of the new youth-oriented music that was sweeping the country during that decade. His theory that white teenagers would listen to and purchase rhythm and blues records by black artists proved insightful. For more than a decade, Freed constantly promoted the emergent music format via stage shows, national radio, television, and in a series of movies. Although he did not coin the phrase "rock 'n' roll," he is credited with popularizing the term which had originally been a euphemism for sexual intercourse on "race" records beginning in the 1920s. Freed's

Alan Freed

talent for promotion soon became his downfall as he and other disc jockeys across the nation were implicated in the payola scandals in 1959. Author John Jackson underscores Freed's contribution to contemporary American music by stating he "proved how essential the disc jockey was to the growth of rock & roll."

Aldon James Freed, who was born on December 21, 1921, and raised in rural Salem, Ohio, had a strong interest in music from childhood. While attending Ohio State University he became fascinated with the activity at WOSU Radio, the university station. He did not become involved with the station during his stay at the university, but, instead, enrolled in a broadcasting school in Youngstown, Ohio. Throughout the 1940s he toiled at a variety of small, local radio stations in Pennsylvania and Ohio where he held numerous positions such as sweeping floors, news and sports announcing, and playing music. The young announcer's fortunes changed dramatically when he took a position with Cleveland's WJW (850 AM) as host of a rhythm and blues program in 1951. He adopted the name "Moondog" from a raucous recording featuring a howling dog titled "Moondog Symphony." Freed's on-air antics soon made him a popular personality with Cleveland's young black community. Six months after the debut of his late night radio broadcast, he and the owner of the area's largest record store entered a partnership to promote a dance called the "Moondog Coronation Ball." On March 21, 1952, more than 10,000 mostly black teens packed the Cleveland Arena to see rhythm and blues performers Paul Williams, Varetta Dillard, and the Dominoes. The arena became so overcrowded with the unexpectedly large mass of people that city officials were forced to stop the show for safety reasons. The Moondog Coronation Ball is considered a significant moment in the development of rock 'n' roll. Bill Randle, one of the nation's most respected deejays in the 1950s, characterizes Freed's 1952 event as the "beginning of the acceptance of black popular music as a force in radio. It was the first big show of its kind where the industry saw it as big business."

By 1954, Freed's relentless promotion of himself as well as the rhythm and blues style cemented his position as the music's chief spokesperson. Increasingly, young white record buyers began to cross the racial barrier that had separated mainstream pop songs from rhythm and blues. Freed was further able to enlarge his growing white audience when he moved his program to the powerful WINS radio station in New York. The disc jockey became a national figure through his syndicated radio program, many television appearances, and his role in the film *Rock Around the Clock* (1956). Playing himself, Freed portrayed a disc jockey encouraging adults to accept the new rock 'n' roll music as sung by Bill Haley and the Comets. The film's great success in the United States and across Europe significantly boosted the exposure of rock music to new audiences.

As the influence of rock 'n' roll spread worldwide, Freed became embroiled in a scandal that would tarnish the remainder of his career. The House Subcommittee on Legislative Oversight, which in 1959 had concluded its investigation of corruption on television quiz shows, began to probe charges that songs heard and heavily promoted on the radio were selected for airplay due to commercial bribery. These secret payments in return for record promotion were known as "payola," a portmanteau word combining "payoff" and "victrola." After years of legal wrangling and a steadily diminishing career, Freed eventually pleaded guilty on December 10, 1962, in the New York Criminal Court to accepting payments and gifts from Superior Record Sales and the Cosant Distributing Corporation "without the knowledge and consent" of his employers. He was sentenced to a six-month suspended jail term and fined \$500. He later noted that payola

practices had not been ended despite all the government's efforts. Freed never regained his earlier prominence and died on January 20, 1965, after a long illness.

Alan Freed has secured a place in American music history as the first important rock 'n' roll disc jockey. His ability to tap into and promote the emerging black musical styles of the 1950s to a white mainstream audience is seen as a vital step in rock's increasing dominance over American culture. Freed's contribution to the music he sold so successfully was honored in 1986 by the Rock 'n' roll Hall of Fame, which selected him as one of the first inductees in the special "non-performer and early influences" category. In 1995, the city of Cleveland hosted the Rock 'n' roll Hall of Fame and Museum's dedication not far from the site of Freed's Moondog Coronation Ball and the radio station where he popularized the phrase "rock 'n' roll."

## Freedom Rides

Throughout the long struggle for civil and political rights, African Americans utilized a number of protest methods. One of the most favored of these were the "Freedom Rides" that captured the country's attention and imagination in the early 1960s, and successfully influenced the cultural consciousness of the nation with regard to matters of racial prejudice. The goal of the freedom rides was simply to end segregation in interstate travel. Although the United States ruled the segregation of interstate facilities unconstitutional, the edict went largely ignored in the Jim Crow South.

In 1949 the Congress of Racial Equality (CORE) and the Fellowship of Reconciliation (FOR) launched a freedom ride throughout the upper South to highlight the discrimination African Americans faced when traveling below the Mason-Dixon Line. However, the efforts of these interracial, nonviolent, and pacifist organizations were unsuccessful, largely because they were unable to attract press attention. Nonetheless, the foundation was laid for a tactic that came to achieve amazing results in the early 1960s.

As the federal government began to illustrate a sincere concern for the rights of African Americans in the aftermath of the 1954 *Brown v. Board of Education* decision, CORE once again launched the idea of "Freedom Rides" to the same purpose as before. For CORE leader James Farmer the concept was simple: (1) have an interracial group take a bus across the South (2) demand service at all terminals, and (3) if arrested, refuse bail and fill up the jails. The entire program was designed to attract media attention to the brutal conditions that black people faced in the Southern states.

CORE's initial "freedom riders" left Washington, D.C. in May 1961, and headed for the South. All was well until they approached Anniston, Alabama, on Mother's Day, when they were greeted by mobs of whites who beat them severely. They encountered further trouble in Birmingham where the local Ku Klux Klan (which had been granted 15 minutes of immunity by the local police force) unleashed their frustrations upon the riders. The protest was postponed when the riders could not find a driver to continue the trip.

A group of freedom riders.

Ironically, however, the brutality was instrumental in awakening the consciousness of Americans to the appalling plight of the freedom riders because the national media gave extensive coverage to the incident and disseminated the images of the badly beaten protesters.

After a cooling-off period the freedom ride continued from Birmingham to Montgomery. Upon arriving in Montgomery the courageous protesters were hit with pipes, baseball bats, billy clubs, and other such objects, and once again the national media was there to give the incident widespread coverage. In the aftermath of the Alabama beatings, young SNCC (Student Non-Violent Coordinating Committee) activists wanted to continue the rides, in spite of the reluctance of CORE and the SCLC (Southern Christian Leadership Conference). They did. In late May SCLC initiated a ride from Montgomery to Jackson, Mississippi, hoping to encounter brutality which would then be broadcast to the world. Contrary to their expectations, however, on their arrival they were peacefully arrested. This response by the Jackson Police Department established a pattern for future "Freedom Rides."

In the summer of 1961 the traditional civil rights organizations created the Freedom Rides Coordinating Committee (FRCC) which sponsored Freedom Rides throughout the country. As a result of the continued protest, the Interstate Commerce Commission (ICC) banned racial segregation and discrimination in interstate travel. Although

many civil rights leaders took credit for the legislation, the victory belonged to CORE, who had initiated the protest, and to the young activists in SNCC who were persistent in their quest for civil rights. The ruling by the ICC dealt a massive blow to Jim Crow.

### The French Connection

*The French Connection*, the 1971 Best Picture Oscar winner, remains the best existential cop film ever made, contains arguably the best chase sequence ever committed to film, and turned Gene Hackman

into a major star. The film is based on the real-life French connection heroin bust by NYPD narcotics division detectives Eddie “Popeye” Egan and Sonny “Cloudy” Grosso. That investigation lasted from the night of October 7, 1961 when off-duty detectives Egan and Grosso noticed Pasquale Fuca talking with some known drug dealers in the Copacabana nightclub to the day four months later when Fuca and five others were arrested for drug trafficking.

Producer Philip D’Antoni owned the rights to Robin Moore’s book about the case, and when William Friedkin agreed to direct the film, a succession of writers was hired. Ernest Tidyman finally wrote a screenplay good enough to get the project green lighted by Twentieth Century-Fox. Friedkin, who began his career making documentaries on topics ranging from law enforcement to pro football for a Chicago television station and then ABC, brought a documentarian’s sensibilities to the project. When he decided to direct the film, he strapped on a .38 pistol and spent nearly a year riding around with Egan and Grosso, visiting drug houses and shaking down bars. Once production began, Friedkin had immediate problems directing his actors. We first see Jimmy “Popeye” Doyle (Hackman) dressed as Santa Claus, and he and his partner, Buddy “Cloudy” Russo (Roy Scheider), sprinting after and catching a fleeing suspect. Friedkin decided to stage the interrogation scene as it usually happens in real life, with the suspect sitting in the squad car and being grilled by the two detectives. Dissatisfied with the dialogue as written, Friedkin wrote some dialogue based on actual interrogations he had seen Egan and Grosso conduct, dialogue which he later referred to as Pinteresque. But thirty-two takes later, Friedkin still didn’t have anything on film that satisfied him. According to Friedkin, he realized later that night what was wrong with the scene: “This is not Harold Pinter. This is a street show. I’ve got to let them improvise that scene.” The scene was reshot in an open courtyard—one take, two cameras—and Friedkin used the best moments captured on film. Many other scenes were likewise improvised, with Hackman and Scheider taking their cues from Egan and Russo: Egan really did dress up as Santa and really did ask suspects if they “picked their feet in Poughkeepsie.”

The film itself is brilliantly photographed and edited, making superb use of visual storytelling. Friedkin has pointed out that, of the film’s twelve reels, six contain no dialogue at all, yet the silence isn’t conspicuous because the acting is so good that viewers can almost hear what the characters are thinking. An excellent example of this is the cat-and-mouse game Popeye plays with Frog One (Fernando Rey) on the New York City subways, an incident that actually happened the way it was shown on film. Another example involves something D’Antoni and Friedkin had agreed to include in the film, even though it never happened in real life and wasn’t in the book or screenplay: a car chase. The sequence starts when Frog Two (Marcel Bozzuffi) tries to shoot Popeye from a rooftop; Popeye runs after him, Frog Two hops on an elevated train, and Popeye commandeers a car to chase him. The ten-minute virtually wordless sequence has pedestrians and other cars in almost every shot, so Friedkin knew he couldn’t undercrank the camera to simulate speed. The feeling of speed was ultimately obtained by having someone actually driving through New York streets at speeds approaching ninety miles per hour. What was to have been a near miss accidentally became the chase sequence’s first collision. Most of this sequence, like 70 percent of the rest of the film, was shot with hand-held cameras, adding to the documentary feel.

Although Hackman wanted to humanize his character, Friedkin kept insisting, “No, this man is a pig. He’s as rotten as the criminals he’s chasing.” This characterization also adds to the realism and is perhaps the most divisive aspect of the film. Popeye is portrayed as

brutal, racist, foulmouthed, lecherous, and continuously violating suspects’ rights—unlike the way cops are usually portrayed on film. Many saw the film as being right-wing because it humanized cops trampling on civil liberties, and many saw it as being left-wing because it showed cops as they really are, so Friedkin thought he’d achieved the correct balance. What he was striving for was a kind of hyperkinetic activity for its own sake, to little or no avail. Friedkin has said that the police really work hard, killing themselves and sometimes other people, “yet basically they’re involved in a line of work that is frustrated, ineffectual.” He believes narcotics is an impossible job, with too many ways to get drugs into the country and too many people wanting them. Friedkin and his actors capture this frustration while telling a gripping tale that proves a police procedure can be fast-paced and riveting if the storytelling and performances are so good that viewers really care what happens to the characters.

## French Fries

America’s love affair with french fries started in 1789 when Thomas Jefferson, fancier of French cuisine and especially of *pommes frites*, introduced the delicacies to his fellow citizens when he returned home after serving as American ambassador to France. Two

French fries, cheeseburger, and a soft drink.

centuries later, french fries, those thin strips of potato cut lengthwise that have been deep-fried until crisp, are internationally associated with hamburgers and fast-food meals. Their popular success benefitted from advances in food processing and the growth of the fast-food trade. They became a fetish of the McDonald's corporation: "The french fry would become almost sacrosanct for me, its preparation a ritual to be followed religiously" wrote Ray Kroc in his book *Grinding It Out: The Making of McDonald's*. Famous for their high quality, McDonald's french fries are essential to the chain's success, with more than 6.8 million pounds prepared every day in 1998. On the eve of the twenty-first century, french fries changed national identity as fast-food ventures in Japan and Southeast Asia promote them as "American fries."

Sigmund Freud

## Freud, Sigmund (1856-1939)

Sigmund Freud is widely known as the founding father of psychoanalysis, and is probably the most famous and influential theorist and practitioner in the field of psychology to date. His works are studied not only by mental health professionals, but by students of philosophy, humanities, art, literature, and culture as well. Probably Freud's most widely known contributions are his theories about the motivating force of the libido, his descriptions of the effect of childhood experiences on the adult psyche, and his theories of dreams, the mind, and the unconscious. His writings have been translated into most modern languages, and are collected in twenty-four volumes in *The Standard Edition of the Complete Works of Sigmund Freud*, but people who have never read a word Freud wrote or even an essay about him are familiar with the Freudian implications of dreams. Many of Freud's concepts have been popularized by their usage in novels, movies, and self-help movements, and Freud himself is a widely recognized icon in Western societies, so much so that the standard film and television stereotype of a psychiatrist or psychologist will have a beard, a cigar, and an Austrian accent.

Freud's theories have always aroused controversy. Many of his contemporaries greeted Freud's ideas with overt hostility and ridicule. Some of this was due to widely prevalent anti-Semitism and some was due to the Victorian sexual standards of his day, which found his graphic discussion of sexuality distasteful. Since the women's liberation movement of the 1970s, feminists have questioned Freud's understanding of women, and blamed his male-identified theories for much of the damage done to women by mental health institutions. Other psychiatrists and psychologists began to challenge what they call the "hero worship" of Freud. Writers like

Richard Webster and Frederick Crews accuse the father of psychotherapy of fraud, saying he stole many of his ideas and often forced patients to conform to his theories.

Freud was born May 6, 1856, in the small town of Freiberg in the Austro-Hungarian Empire. The son of a moderately successful Jewish wool merchant, Freud was raised in Vienna. Though an innovative thinker, Freud was most definitely a product of his time. The mid-nineteenth century was at a crossroads between the Romantic movement and a new orientation toward the scientific. Freud was deeply interested in Romantic subjects like philosophy and the humanities, and felt it necessary to balance this passion with the study of science. His work came from that blending of the intensely humanistic notion of the value of the individual experience and the new growth of medical science, along with influences from the Germanic *Naturphilosophie* and the Jewish philosophers of his own heritage. Though his contributions were in part scientific, the way his theories have shaped the public imagination for decades may have more to do with their mythical power.

Freud studied medicine at Vienna University and later worked at the Salpêtrière hospital in Paris, where Jean-Martin Charcot was director. Charcot's influence on Freud was significant: the famous French professor of neurology was the leading expert on hysteria, the study and treatment of which eventually led Freud to develop the theory and method of psychoanalysis. Hysteria was an ailment presumed to afflict a large number of women at the time. While its symptoms—such as paralysis, seizures, anorexia, and aphasia—had previously been viewed as resulting from a literal irritation of the uterus (the word hysteria derives from the Latin for uterus), Charcot

viewed hysteria as a neurological disorder that was caused by trauma, and could be treated through hypnosis. Charcot's idea that a person's experiences, thoughts, or emotions might cause physiological symptoms had a profound influence on Freud's subsequent work.

In *Studies on Hysteria* (1895), Freud and his colleague, Josef Breuer, proposed the radical thesis that hysteria was in fact caused by sexual traumas—specifically, childhood sexual abuse, and quite often incest—that the patient was re-enacting through her bodily symptoms. Freud's radical insight about the origins of hysteria led to his revolutionary theory of the unconscious mind, which he conceived as a literal place in the brain to which intolerable memories, thoughts, feelings, desires, and conflicts were relegated. Freud's and Breuer's treatment of women diagnosed with hysteria also led to the development of the "talking cure," the cornerstone of the psychoanalytic method. The "talking cure" began with Breuer's treatment of "Anna O." (Bertha Pappenheim), an hysterical patient who was resistant to hypnotic suggestion, but found that "talking out" her memories and experiences had the cathartic effect of "talking away her symptoms."

In 1896, Freud renounced his original theory that hysteria was caused by the patient's real traumatic experiences of childhood sexual abuse, and instead began explaining patient's symptoms in terms of their own incestuous desires and fantasies. This evolved into Freud's well-known theories of infantile sexuality—which include the oral, anal, and phallic drives—and the postulation of a universal "Oedipus complex," named for the Greek tragic hero who killed his father and married his mother. According to this theory, childhood development involves a progression from oral desires (for the mother's breast); through anal drives (the desire for mastery and control of one's bodily products); and culminates in overtly genital sexuality, which for Freud is always phallic.

For boys, the Oedipus stage of development as Freud describes it involves incestuous desires toward the mother, and feelings of rivalry toward—and fear of retaliation from—the father. This retaliation is also understood in terms of male genital sexuality as the threat of castration. According to Freud's theory, the psychological conflicts of desire, guilt, and castration anxiety must be resolved in favor of the boy's gender identification with his father, and sublimation of his incestuous desires toward his mother. Freud postulates that the lack of such resolution is the root of much adult male psychopathology.

In the female version of the Oedipus complex, Freud believed the young girl must first shift away from her primary (originally oral) desire for her mother, toward a more mature oedipal desire for her father. The girl's normal development involves a recognition that because she lacks a penis, she cannot fulfill her sexual desire for her mother, nor identify with her father, but must accept her role as the passive recipient of men's desire. Further, in discovering that she lacks a penis, the girl must contend with the realization that she is "already castrated," mutilated, and inferior. Freud described the inability of some female patients to accept their lack of a penis, to renounce their "phallic" (clitoral) desire, and to accept and embrace the passive feminine role, as "penis envy," which he considered a common female psychopathology.

Freud's theories of female sexual development have engendered decades of debate both within psychoanalysis and beyond. For example, feminists have pointed out that Freud's conceptualization of both normal and pathological female development require the girl's renunciation of some part of herself—either her agency as an active, desiring subject, or her feminine gender identity. Freud has been sharply criticized for his equation of sexual activity with masculinity,

for his arguments that women are biologically, intellectually, and morally inferior to men, and for his insistence that, in female development, "Anatomy is destiny." From Freud's contemporaries Karen Horney and Joan Riviere, to modern feminists such as Nancy Chodorow and Jean Baker Miller, Freud's theories of female psychology have undergone intense scrutiny and revision.

The shift in Freud's focus from real sexual traumas to infantile sexuality and incestuous desires has itself been the subject of controversy. Freud's followers believe that his shift from real incest to oedipal fantasies reflected a more mature and sophisticated understanding of the mind and of personality formation and allowed for the recognition of infantile sexuality and the psychological importance of fantasies, guilt, and repression. On the other hand, many contemporary scholars have argued that Freud's original belief in the reality and psychological significance of child sexual abuse was scientifically valid, while his later reversal was personally, professionally and culturally motivated. According to his critics, Freud's reversal denied the role that actual incestuous abuse had played in the emotional problems of his patients, and contributed to a cultural refusal to acknowledge the realities of widely prevalent sexual abuse and other traumas experienced predominately by women and children in a patriarchal society.

Despite Freud's theoretical shift from exploring real traumas to emphasizing unconscious desires and conflicts, Freud continued to develop and employ the "talking cure" that he and Breuer had used in treating hysterics. This cathartic method evolved into the technique of free association and interpretation that characterizes psychoanalytic practice, and has had a profound influence on nearly all other forms of psychotherapy. While subsequent practitioners have differed from Freud in their use of techniques—such as free association, hypnosis, the analytic couch, and interpretation—the essential practice of encouraging patients to talk about their experiences and express their deepest thoughts, feelings, wishes, and fears has remained a central part of psychotherapy since Freud.

While Freud's psychoanalytic method had a profound influence on psychotherapeutic practice, it is his theories of the mind—and particularly his conceptualization of the unconscious—that have arguably been his most important and influential contributions to contemporary thought. Freud conceived of the mind in spatial terms, viewing the unconscious as the area to which our socially unacceptable desires and fantasies are relegated, and well as the area from which jokes, slips of the tongue, dream imagery, and much of our creative ideas flow. Freud elaborated a schematic of the mind that corresponded with his view of personality development. The *id* consisted of the primary drives and impulses, such as oral and sexual desire and the aggressive instincts. The *superego* was the internalization of familial and social rules, particularly the prohibitions against primitive desires and instincts. And the *ego* was essentially the socialized self, capable of defenses, sublimation, rational thought, and creativity. While these theories have been elaborated and debated within psychoanalytic circles, the rudimentary concepts are familiar to most people in western cultures, and have been largely, if crudely, incorporated into contemporary thinking about the mind and the personality.

In addition to Freud's profound influence on ideas of the mind, the significance of early life events, and the dynamics of personality development, contemporary culture owes many of its assumptions about the symbolism of dreams, jokes, and cultural products to Freud's writings. Freud considered his seminal and perhaps most

famous text, *The Interpretation of Dreams* (1899), to be the key to his work, and pronounced dreams “the royal road to the knowledge of the unconscious.” His understanding of dreams, jokes, and slips of the tongue as laden with unconscious meanings has permeated western thinking. Terms such as “repression,” “projection,” “ego,” and “superego” have become part of everyday parlance; and it is common for inadvertent—yet potentially significant—errors in speech to be referred to as “Freudian slips” (such as the postcard from the erring husband to his unsuspecting wife which reads, “Wish you were her.”) Freud himself applied many of his theories to the study of art and literary texts—including the works of Da Vinci, Goethe, Michelangelo and, of course, Shakespeare—and many culture scholars since Freud have used psychoanalytic ideas about desire, fantasy, language and the unconscious in their interpretations of artist’s works.

The notion of repression of memory has particularly grasped the modern imagination. From Henry James’ *Turn of the Screw* (1898), which was written in Freud’s time, to such modern classics as *The Manchurian Candidate* (published 1959; filmed 1962) and *Psycho* (filmed 1960), audiences have been fascinated with the potential depths of the mind, and the horrors that can be stored there, just out of reach. Even Homer Simpson, *pater familias* of the wacky television cartoon family portrayed on the television series *The Simpsons* (1989—), understands the uses of repression, when he tells his daughter: “The important thing is for your mother to repress what happened, push it deep down inside her, so she’ll never annoy us again.”

One of Freud’s most significant impacts on modern culture has been the popularization of psychotherapy. While once reserved for the rich and introspective, psychotherapy is now widely available to a broad spectrum of people. As the stigma of seeing a “headshrinker” has lessened, therapy has become an increasingly popular way of dealing with life’s troubles. In the United States alone, over 10 million people talk out their problems with psychiatrists, psychologists, and psychiatric social workers. Untold numbers of others see marriage counselors and other, often self-styled, therapists. All of these counselors are direct descendants of Freud’s “talking therapy.”

The idea that people’s adult actions are influenced by their childhood experiences has become a widely held social belief. While this has led, on the one hand, to a certain “democratization” of mental and emotional problems and has inspired social reform movements, some social critics believe it has also led to a failure to take personal responsibility for one’s actions, since everything can be traced back to parental abuse or rejection. From the notorious Menendez brothers, who insisted that constant childhood abuse led them to murder their parents, to Kitty Dukakis, wife of 1988 presidential candidate Michael Dukakis, who wrote an autobiography attributing her adult alcohol and drug abuse to her mother’s rejection, the idea that parental failings cause our adult pain has taken root in society. Freud’s belief that our lives are determined by how we come to terms with our sexuality shows up at the center of serious social analysis as well as cocktail party chat, and in cultural representations from Broadway theater (*Equus*, *Who’s Afraid of Virginia Woolf?*) to soap operas.

Much is known about Freud’s life because of his prolific correspondences with friends, colleagues, students and patients—many of whom were famous figures in their own right—and because of his self-analysis. At the same time, much about Freud has been obscured—both by his own silences and contradictions, and by the deliberate obfuscations of those who have wished to discredit or to

protect him. Freud himself was sharply aware of his place in history and zealously guarded his image, hoping to control the picture of him that would be written down in history. Modern critics accuse Freud of failing to acknowledge the contributions of his mentors. Some even charge him with outright theft of his ideas of the unconscious and his “talking therapy” from such influential teachers as Josef Brauer and Wilhelm Fleiss. Many of Freud’s detractors also point to his practice of bullying patients into agreeing with his pre-conceived theories. They quote Freud himself, who advised his students:

The work [of therapy] keeps coming to a stop and they keep maintaining that this time nothing has occurred to them. We must not believe what they say, we must always assume, and tell them too, that they have kept something back. . . . We must insist on this, we must repeat the pressure and represent ourselves as infallible, till at last we are really told something. . . .

Critics contend that this image of the infallible psychiatrist has been the most damaging influence of psychotherapy. Still others call psychotherapy itself a fraud, especially Freud’s model of psychoanalysis, saying that there is no real evidence that it works.

Freud’s persona itself shows up regularly in the popular media, whether it is the actual character of Freud assisting fellow cocaine addict Sherlock Holmes with cases (as in *The Seven Percent Solution*, 1976) or merely his voice speaking through controversial television heroine Murphy Brown when she intones the famous Freud quote, “Sometimes a cigar is just a cigar.” Freud has been the prototype for many popular culture representations of psychologists, psychiatrists, and psychoanalysts. His face and habits—such as his cocaine use and his cigar smoking—are widely recognized icons even seven decades after his death in 1939. Many have argued that Sigmund Freud was the most influential thinker of the twentieth century. Others have insisted that his theories reflect a decidedly nineteenth-century emphasis on biological determinism, sexuality, and bourgeois patriarchal values. For better or worse, Freud has had a profound impact not only on psychological theory and practice, but on culture and the way we understand it.

## Friday, Nancy (1938—)

There is a cliché in American culture that men are principally interested in sex, while women are mostly concerned with love. In helping to debunk this myth, Nancy Friday has performed an invaluable national service. She is one of the relatively small number of modern writers who has gathered and published evidence that women's fantasies are often as sexually explicit as men's. Her books devoted to relating women's sexual fantasies work effectively on several levels: as psychology, as sociology, and as pornography. In addition, Friday has produced several other important books on subjects of interest to modern women: jealousy, beauty, and the mother-daughter relationship.

Nancy Friday grew up in Charleston, South Carolina, the child of a single mother. She moved to New York City in the early 1960s, where she was simultaneously introduced to the sexual revolution and the women's movement, both of which would influence her life, and writing, profoundly. She worked at *Cosmopolitan* magazine and *The Examiner* before deciding to devote her energies to writing books.

Friday's first book, *My Secret Garden: Women's Sexual Fantasies*, appeared in 1973. It attracted considerable attention, partly because of its sexually explicit language and subject matter, but

Nancy Friday

mostly because these "nasty" words and scenarios were coming from the minds of women. In 1973, the idea that respectable, normal women had such steamy, even "kinky" thoughts was considered something of a revelation. The book was a bestseller, as was its 1975 sequel, *Forbidden Flowers*.

Her third book was something of a departure. *My Mother/My Self*, which appeared in 1977, was an exploration of the mother/adult daughter relationship, including the ways that mothers' implicit messages can influence their daughters long past childhood. The book was a huge success, and interest in the subject was suddenly on the public agenda, spawning workshops, TV programs, and books by a host of authors.

In her next work, Friday returned to familiar territory, but with a twist. *Men in Love* (1980) was a collection of male sexual fantasies. Friday's choice of title was a reflection of her conclusion after reading the anonymously submitted fantasy material. Contrary to widely held belief, Friday said, men's fantasies about women were mostly not violent, hateful, or exploitative; instead, they were passionate, inventive, and, yes, loving.

Friday waded into another subject of intense interest to many women with her 1985 book, *Jealousy*. An immense volume (running over 500 pages), the book combines a discussion of the psychological literature on the subject with interview material and Friday's brutally honest account of how jealousy had played such a major role in her own life. Friday admits that her principal reasons for approaching the project were personal, and much of the book is a description of her own personal struggles with the "green-eyed monster."

With *Women on Top*, Friday returns to the milieu of women's sexual fantasies, but the book's subtitle is her justification for visiting the territory again: *How Real Life Has Changed Women's Sexual Fantasies* (1991). Friday wanted to find out whether the passage of fifteen or so years since her last visit had changed the landscape of women's private sexual longings. Her conclusion: women have ceased to dream of passivity and submission. They now are excited by thoughts of sexual power, aggression, and dominance. The fantasies submitted for consideration this time, she found, were much more likely to portray the woman as taking charge of her partner, her relationship, and her own sexual satisfaction.

The year 1996 saw the publication of *The Power of Beauty*, possibly Friday's most ambitious work yet. As with her earlier books on mother/daughter relationships and jealousy, Friday combines survey research, psychological insights, and her own candid history into a meditation on the ways that physical attractiveness (or the lack thereof) influences, for good or ill, many aspects of modern life—from who you will marry to where you will work, to the degree of success you will enjoy in your job.

Nancy Friday established her own web site in 1997. It allows users to read Friday's thoughts on a variety of subjects, leave their own messages for her, share their sexual fantasies, and read excerpts from several of Friday's books.

## Friday the 13th

Made on a budget of less than \$600,000, with mostly unknown actors, corny dialogue, and a hastily prepared script (completed in under two weeks), the original installment of *Friday the 13th* in 1980 nevertheless went on to gross over \$70 million at box offices around the world and launch a cottage industry of sequels, spoofs, spin-offs, and outright rip-offs. No modern horror film monster, save perhaps for Freddy Krueger, has managed to capture our culture's collective imagination as much as has Jason Voorhees, the speechless, seemingly immortal psychopath with a hatred for promiscuous adolescents. Along with John Carpenter's *Halloween* (1978), *Friday the 13th* is credited with initiating the notorious "stalker cycle" of horror films—an immensely popular, and heavily criticized, subgenre that would continue to draw huge audiences through the mid-1980s.

Jason from *Friday the 13th, Part IV*.

Whereas *Halloween* is best known for the cinematic conventions it helped to establish, *Friday the 13th* has managed to transcend the world of film. The series has come to serve as a point of departure in public debates over the consequences of exposing youths to representations of graphic violence in the name of entertainment.

Sean Cunningham, producer, director, and co-writer of the original *Friday the 13th*, had gained a measure of infamy in film circles for producing Wes Craven's ultra-violent underground hit, *Last House on the Left*, in 1972. (Craven, who would go on to direct *A Nightmare on Elm Street* (1984) and *Scream* (1996), returned the favor by doing some uncredited editing on the first *Friday*.) But this infamy turned out to be a benefit, as Paramount, United Artists, and Warner Brothers—all eager to repeat the commercial success of the independently produced *Halloween*—entered into a bidding war for Cunningham's low-budget vehicle about a psychopath determined to kill off all the counselors at Camp Crystal Lake (otherwise known as "Camp Blood"). Paramount won the war and launched *Friday the 13th* with a \$4 million advertising campaign. The studio's confidence was quickly rewarded, as the film grossed \$31 million in its first six weeks alone, surpassing such major productions as Stanley Kubrick's *The Shining* and James Bridges' *Urban Cowboy*. On the strength of Tom Savini's make-up and special effects wizardry, the progressively gory murders taking place in *Friday the 13th* ensured that whatever the movie lacked in narrative sophistication, it would more than make up for in violent spectacle.

Although it was not the very first stalker film, *Friday the 13th* is widely regarded as the prototype of the subgenre. In sharp contrast to *Halloween*, fans, critics, and theorists alike have emphasized the movie's essential reliance on formula and convention, denying it any claim to cinematic originality. Andrew Tudor, in his influential history of the horror film, writes that "in practice, *Friday the 13th* is no more than a crude template for the creation of formula *Halloween* clones." It is true that the subjective ("point-of-view") camera work, the cat-and-mouse-style killing of vapid, horny teenagers, the prolonged final battle pitting psychopath against virginal, sensible, ultimately victorious "good girl," all come straight out of *Halloween*.

But it is also important to note the ways in which *Friday the 13th* breaks with stalker convention and establishes precedents of its own. Contrary to popular belief, the killer in Part One is not Jason, but Mrs. Voorhees, who blames her son's drowning death in 1958 on the camp counselors who neglected their responsibilities. Twenty years later, she seems not to care that the counselors have changed; nor does she seem to care about the gender of her victims. All this creates difficulties for those who would argue that modern horror film monsters represent nothing more than the sadistic wish-fulfillments of misogynistic male viewers. Furthermore, the surface normality of Mrs. Voorhees—she looks and talks just like a conservative, middle-class mom when she's not slitting people's throats—anticipates the all-too-realistic serial killers populating such films as *The Stepfather* (1987), *White of the Eye* (1988), and *Henry: Portrait of a Serial Killer* (1990).

With the disfigured Jason taking over his mother's murderous attacks in *Friday the 13th, Part 2* (1981), and especially after his decision to don a goalie mask in *Friday the 13th, Part 3: 3D* (1982), the series' transformation was complete. Under the direction of Steve Miner, these films saw the replacement of a human psychopath whose actions are at least somewhat explicable in quasi-Freudian terms with a supernatural agent of evil whose sole intent seems to be the violent eradication of America's adolescents. Jonathan Crane asserts that "Jason, as well-known as any prominent American personality, ranks

among the foremost of all popular signs embodying meaning's demise." It is not only the apparent randomness with which Jason chooses his victims that leads Crane to this conclusion. It is the fact that Jason's single-minded devotion to murder, his virtual indestructibility, and, above all, his inevitable return from the dead all serve as prime sources of pleasure for the mostly teenage audiences who, well into the 1990s, came out in droves to see the further adventures of their "hero."

Besides its record number of sequels (eight and counting), *Friday the 13th* has been the inspiration for parodies such as *Saturday the 14th* (1981), generic rip-offs such as *Campsite Massacre* (1983), a Canadian television show (1987-90), a series of young adult novels, a heavy metal song by Terrorvision, and a successful run of porno movies that began with *Friday the 13th: A Nude Beginning* (1987). In the late 1990s, blockbuster "neo-stalkers" such as *Scream* and *I Know What You Did Last Summer* (1997) scored points with audiences by explicitly foregrounding a number of *Friday's* plot devices. All of which supports the view that *Friday the 13th*, despite being nominated worst picture at the 1981 Razzie Awards, inaugurated the most successful franchise in modern horror cinema.

## Friedman, Kinky (1944—)

Founder and leader of the Texas Jewboys, an iconoclastic country and western band of the 1970s, Richard "Kinky" Friedman has since become better known as a comic novelist.

Born in Chicago (not—as often claimed—in Palestine, Texas) on Halloween, Friedman was the son of a psychology professor and a speech therapist. The family moved to Texas during his childhood, buying a ranch near Medina to create the Echo Hill Ranch summer camp for boys. Interested in both music and chess from an early age, Friedman was chosen when he was seven years old to be one of fifty local chess players to challenge Polish-born U.S. grand master Samuel Reshevsky to simultaneous matches in Houston. While Reshevsky won all fifty matches, Friedman was by far the youngest competitor.

Friedman was a junior counselor at Echo Hill Ranch and then an honors psychology student at the University of Texas (B.A., 1966). He spent the next two years as a Peace Corps volunteer in the Southwest Pacific, ostensibly as an agricultural extension agent. According to Friedman, his greatest achievement in the Peace Corps

was to introduce the Frisbee to Borneo. Upon his return to America he pursued a career in country music; he had already been in a moderately successful rock 'n' roll band in Austin, while an undergraduate. This band, King Arthur and the Carrots, had a local hit with "Schwinn 24," a parody of Beach Boys-type drag racing songs, this one about a boy and his bicycle.

In the early 1970s Friedman formed his own band, the Texas Jewboys. The name is a multilayered pun on Bob Wills and His Texas Playboys, a famed Depression-era country band. Many musicians performed with Friedman, so there is no one correct lineup for the band. A central factor in the band's material, almost all of which was at least co-written by Friedman, is the tension in his background as a Jewish intellectual raised in rural Texas. His songs explore many topics, including feminism, racial relations, the stresses of a musician's life, and nostalgia for the past, but anti-Semitism and clashes with rednecks are frequent concerns. Among his most famous songs are "They Ain't Makin' Jews Like Jesus Anymore" and "Ride 'Em Jewboy." The latter song, in which the Holocaust is compared with a cattle drive, is a beautiful ballad with eerie lyrics, considered to be Friedman's most affecting song.

Some of Friedman's songs are strictly played for laughs, and a few are more traditional country tunes without an overt sermon, but most have some kind of social message embedded in them. His audiences have frequently mistaken Friedman's song persona for his authentic feelings and social agenda, as when the National Organization for Women gave him its Male Chauvinist Pig of the Year award in 1974 for "Get Your Biscuits in the Oven and Your Buns in the Bed," a satirical song about a redneck and his women's-libber girlfriend.

The band was heckled for that and other songs, and some of their bookings were canceled, but this notoriety also led to greater success. In 1973 Friedman obtained a recording contract with Vanguard, releasing *Sold American* later that year. Another album followed in 1974, and in 1976 Friedman achieved his musical high-water mark with an album on the Epic label, *Lasso From El Paso*. (The song was originally titled "Asshole from El Paso," a parody of Merle Haggard's "Okie from Muskogee," but Epic required a title change before issuing the record.) On *Lasso*, Friedman had guest artists like Eric Clapton and Bob Dylan, having met Dylan and gone on his Rolling Thunder Revue tour the year before. Other important songs on his early albums include "Sold American," "Wild Man from Borneo," and "Homo Erectus." More recently, he has released *From One Good American to Another*, and a "greatest hits" compilation entitled *Old Testaments And New Revelations*.

Friedman spent several years living in a Greenwich Village loft in New York City. While there, he was a frequent performer at the Lone Star Cafe, a Texas-themed hangout in Manhattan. His act and a bit of his lifestyle are described in *No Laughing Matter*, by Joseph Heller and Speed Vogel, and *Thin Ice: A Season In Hell With The New York Rangers*, by his close friend Larry Sloman. In the early 1980s Friedman returned to the Echo Hill Ranch, eager to make a radical change in his life after seeing several friends die from drug-related causes. Back in Texas, Friedman began writing comic mystery novels, set in New York, with a fictionalized version of himself as the sleuth. He has published nearly one every year since 1986, with such memorable titles as *A Case of Lone Star* (1987), *Elvis, Jesus, and Coca-Cola* (1993), and *God Bless John Wayne* (1995). The fame resulting from his second career has helped create a renewed demand

### Kinky Friedman

for his recorded music, though he expresses little interest in performing again.

## Friends

Six attractive, barely employed but financially comfortable Manhattanites in their twenties constituted the eponymous core of

*Friends*, the TV sitcom that burst onto NBC for the first time during the 1994-1995 season, and rocketed to instant, “must-see” popularity. Single young viewers, bored with sitcoms about family life, latched enthusiastically onto this group of pals in cute clothes and trendy haircuts, who spend much of their time sitting around in a coffee bar conversing and exchanging banter, and who treat each other like family. *Friends* is an ensemble show that appeared to have been directly modeled after the Fox sitcom *Living Single*, which began its run a year earlier and featured an almost identical premise except that the cast was African American.

Created by Marta Kauffman and David Crane, the group of friends is divided equally between the sexes. The girls are Monica Geller (Courteney Cox), a chef and a neatness freak, her old high school friend and roommate Rachel Green (Jennifer Aniston), and the flighty Phoebe Buffay (Lisa Kudrow). Phoebe is Monica’s college friend and a massage therapist and guitarist who plays at the coffee bar/hangout Central Perk. (her signature song is “Smelly Cat”). Rachel began the series by leaving her daddy’s financial support and her dentist fiancé at the altar to make it on her own. Monica’s slightly older brother Ross (David Schwimmer) is a well-meaning paleontologist whose wife divorced him upon realizing that she’s a lesbian; Ross’ college pal Chandler Bing (Matthew Perry) lives across the hall from Monica and is the smart-ass of the group, while his roommate Joey

Tribbiani (Matt LeBlanc) is a none-too-bright aspiring actor who completes the sextet.

The show's theme song, The Rembrandts' Beatle-esque "I'll Be There For You," is insidiously infectious, a suitable metaphor for the show itself. Each week, this clique of attractive idlers discusses life in general and relationships in particular, with the on-again, off-again romance between Ross and Rachel a recurrent theme, and an almost constant cliffhanger. Ross is wild about Rachel; so much so that, even at the altar about to marry Emily (Helen Baxendale) in 1998, Ross said, "I, Ross, take thee Rachel."

The best known cast member when the show started was Courteney Cox, who had made a few movies and was on *Family Ties* for a season as Michael J. Fox's girlfriend. She no doubt felt immediately at home with Matthew Perry's Chandler, whose comic timing and delivery is heavily reminiscent of Fox. And Lisa Kudrow's Phoebe appears to have borrowed most of her mannerisms from Teri Garr, who was brought on to play Phoebe's long lost mother briefly in 1997.

Cox, Aniston, Perry, LeBlanc, Kudrow, and Schwimmer all became household names as a result of *Friends*. Not only are they a beguiling and talented assembly, but the show has the weight of an incomparable publicity machine behind it, and these six people, together and separately, have appeared on the cover of almost every

entertainment magazine in the United States. All have tried to cultivate movie careers, with Aniston, by the late 1990s, having had the most success with big-screen ventures.

All the episode titles of *Friends* start with "The One with. . ." as in, "The One with the Embryos" and "The One with George Stephanopolous." Many critics might well name the whole series "The One with the Hairdos." No television show has influenced hairstyles as much as *Friends* has done, with variations on "the Rachel" still in evidence four years after the show premiered. The enormous popularity of the series spawned dozens of imitator shows in the 1990s, all of which featured attractive, witty young men and women hanging out together, but *Friends* had outlasted them all by the end of the decade. This can mostly be credited to the high standard of witty, imaginative and well-constructed scripts, which have helped garner critical acclaim and ratings success for a series that, by 1999, had received 14 Emmy nominations.

Notwithstanding its popularity and success, the series does have its share of vehement detractors. Certainly, not much happens on the show and the charm of its stars, along with the witty one-liners, is what carries it. For those who fail to find the *Friends* charming, there isn't much reason to tune in (but the same could be said of *Seinfeld*). Critics have maintained that the show bears no resemblance to reality, from the trouble these gorgeous people have finding love interests (so

(From left) Matt LeBlanc, Courteney Cox, Matthew Perry, Jennifer Aniston, and David Schwimmer.

much so that they seem to be turning to each other), to the one-dimensional nature of the characters, to the fact that no one ever seems to be working, and those who do, don't do it much. The fans answer that there are plenty of workplace comedies out there, but this show is about hanging out with your friends. And that's what the characters do—hang out with their friends.

## Frisbee

The Frisbee, a plastic flying disc, has been a required component of any American child's toy collection for most of the latter half of the twentieth century. It is widely believed that Ivy League students

began flinging and catching pie and cookie tins in the 1920s and 1930s, naming the practice "Frisbee-ing," after a local pie company. Wham-O Toy Company, producers of the Hula Hoop, began mass production of Frisbees in 1957.

An affordable and portable toy with no set rules, the Frisbee enjoyed a boom in sales and public familiarity in the anti-establishment atmosphere of the late 1960s. This new generation of Frisbee fans invented Frisbee Golf, Guts, and Ultimate Frisbee, but it was freestyle frisbee, with its behind-the-back and between-the-legs catches, trick throws, and leaping, Frisbee-catching dogs, that did the most for visibility of the growing sport. By the end of the twentieth century, over 50 colleges featured interscholastic Ultimate Frisbee teams, and Frisbee Golf courses peppered suburbs across the continent. And it was still a mark of pride among American youth to be able to fling a Frisbee straight and far.

## Frizzell, Lefty (1928-1975)

One of country music's greatest vocal stylists, Lefty Frizzell's syllable-stretching, note bending style has influenced singers like Merle Haggard, George Jones, Willie Nelson, George Strait, and Randy Travis. Frizzell's meteoric rise to fame in country music may be unparalleled. Both sides of his first single ("If You've Got the Money I've Got the Time" b/w "I Love You a Thousand Ways") for Columbia Records in 1950 hit number one on the country charts, and at one point in 1951, he had four singles in the top ten. Largely because of his alcoholism and brushes with the law, Frizzell's career suffered ups and downs. From 1953 to 1958, though he continued to tour and record, he had no hits. In 1959 he staged a comeback with "Long Black Veil," followed a couple of years later by the number one hit "Saginaw Michigan." Lefty continued to work until his death from a stroke in 1975.

## *From Here to Eternity*

First as a novel and then as a film, *From Here to Eternity* enjoyed enormous critical and popular success in the early 1950s. The novel, the first published work of James Jones, is a long and powerful fictional treatment of the United States Army climaxing with the December 7, 1941, Japanese attack on U. S. military installations at Pearl Harbor. The bulk of Jones's novel relentlessly exposes the exploitation of enlisted men by a cynical officer class. Its naturalistic descriptions of an inhumanly brutal stockade constitute some of the most harrowing passages in American fiction. Still, the novel is, to a large degree, a kind of elegy for the sustaining camaraderie among enlisted men as well as for the sanctuary that the army offered the economically destitute during the Great Depression. It is then a unique variation on proletarian fiction with officers equated to corrupt capitalists and enlisted men to oppressed workers. Jones's book was awarded the National Book Award for 1952, received overwhelmingly favorable reviews, and became a sensational best-seller (in no small part because of an elaborate publicity campaign by its publisher, Scribner's). The novel's two central characters, Robert E. Lee Prewitt, a boxer and bugler of unusual talent and unyielding principles, and Sergeant Milton Anthony Warden, also a man of integrity but a master manipulator and covert enemy of the officer class as well, are exceptionally well realized.

Largely because of its unrelenting expose of the corrupt officer class in the old peacetime army and the frankness of its treatment of sexuality, *From Here to Eternity* benefitted, in its popular success, from the public's appetite for sensationalism. These two motifs are carefully intertwined in Jones's text. For instance, Warden sets out to seduce Karen Holmes, the allegedly promiscuous wife of his corrupt commanding officer, merely as a political statement but quickly finds himself falling in love with her. Prewitt, after being forced to desert the army following a horrendous experience in the stockade during which he experiences physical torture and sees another soldier die at

the hands of Sergeant "Fatso" Judson, seeks refuge with his prostitute girlfriend, Alma Schmidt, who has taken the professional name of Lorene. The novel contains a comically graphic scene in the brothel where Alma works and in which Prewitt finds relief from the endless harassment which he is receiving at the direct orders of Lieutenant "Dynamite" Holmes. In the scene, Prewitt is accompanied by the only friend that he has in C Company, Private Angelo Maggio, an enormously likeable but recklessly defiant young man from Brooklyn.

Despite (or because of) the novel's sensational elements, producer Harry Cohn of Columbia Pictures eagerly purchased the rights to film it and hired Jones, who had by then become something of a celebrity (partly because of extensive coverage in *Life* magazine) to write the screenplay. Cohn also acquired the services of Fred Zinnemann, the acclaimed director of *High Noon* and other successful films. Jones's screenplay was rejected in favor of a subsequent effort by film writer Daniel Taradash. Because of the novel's emphasis upon memorable characters, Cohn and Zinnemann realized that casting would be a crucial element in the success of their final work. In this, they were to be extremely fortunate. For the crucial role of Prewitt, Cohn initially pushed for actor Aldo Ray, but ultimately yielded to Zinnemann's insistence upon the casting of Montgomery Clift, whose ability to project a threatened sensitivity had been established in such films as George Stevens's *A Place in the Sun* (1951). Burt Lancaster and relative film newcomer Ernest Borgnine were easy choices to portray Sergeant Milt Warden and "Fatso" Judson, but the casting of the two female roles surprised many Hollywood observers. Initially, Joan Crawford was chosen to play Holmes, but she withdrew from the project before filming began and was replaced by Deborah Kerr, unquestionably a fine actress, but one best-known for portraying genteel and sometimes aloof characters. The choice of Donna Reed for the role of Alma was unexpected for comparable reasons. Even though the script overtly made her a dance-hall hostess instead of a prostitute, the character's original identity as conceived by Jones in his novel was more than implied; and Reed was known for such "wholesome" performances as the wife of James Stewart in Frank Capra's *It's a Wonderful Life* (1946). The process of choosing the actor to play Angelo Maggio became the stuff of Hollywood and pop legend. Then at the nadir of his career as a singer, Frank Sinatra, who had read Jones's novel and identified with Maggio, campaigned tirelessly for the part and was somewhat reluctantly given it. This episode would be fictionalized by Mario Puzo in his novel *The Godfather*.

Taradash's screenplay downplayed Jones's depiction of military corruption. For instance, the corrupt Captain "Dynamite" Holmes is exposed and disgraced in the film, when Jones's novel last shows him rising higher in the military command; and the stockade sadism is largely kept offscreen. Still, the finished film, released in 1953, captured much of the novel's emotional power primarily because of Zinnemann's directing and the exceptional performances of his cast. Critics Pauline Kael and Michael Gebert have correctly observed that Clift's inspired interpretation of Prewitt is the real heart of the film and is so intense as to be almost unbearable at times. Lancaster and Kerr are exceptional in playing off each other, and a scene in which, dressed in bathing suits, they kiss while lying on a beach with the waves splashing over them is probably the movie's best-known single image (ironically the scene does not exist in the novel). Sinatra, Reed, and Borgnine are perfect in their secondary roles.

Not surprisingly, the film gathered a number of major awards. Out of thirteen Academy Award nominations, it won eight, including

Deborah Kerr and Burt Lancaster in a scene from the film *From Here to Eternity*.

best picture, Zinnemann as best director, Taradash for writing, and Sinatra and Reed as supporting actor and actress (Clift, Lancaster, and Kerr were also nominated). It also received the best picture award from the New York Film Critics Circle, and Zinnemann was named the year's best director by that organization and by the Directors Guild of America. In 1953, much of the film's power originated in its being filmed in black and white in a technicolor-dominated age. This deliberately anachronistic approach achieved the realistic effect that Zinnemann wanted.

Both as novel and as film, *From Here to Eternity* occupies an important place in American culture. In the conformist and sexually repressive 1950s, its advocacy of oppressed enlisted men and its frank depiction of their sexual hunger seemed daring and even revolutionary. Some of the images from the film (Lancaster and Kerr on the beach, Montgomery Clift playing "Taps" for the dead Frank Sinatra) are indelibly engraved on the consciousness of a generation of moviegoers; and Jones's novel remains perhaps the best fictional treatment of the U.S. Army. Despite its considerable length, it was, in fact, conceived by Jones as the first volume in an "Army trilogy," the last two volumes of which appeared as *The Thin Red Line* (1962) and *Whistle* (published posthumously in 1978).

## Frost, Robert (1874-1963)

The image of Robert Frost nurtured by most Americans is of a white-haired, rustic saint writing poems about the mellow glories of nature and the pastoral idylls of New England rural life. When not shining in this bucolic light, he glows with a patriotic aura as America's Poet Laureate reading his work at the inauguration of John F. Kennedy, presaging through his presence the imminent wonders promised by the young president's election. But this idealistic image of Frost was more the product of marketing by the poet himself than a true reflection of any innate homespun charm. Frost was, indeed, a great poet, but he was also a bitter, egotistical writer who resented the late recognition of his genius. To understand how he came to be both the great poet and bitter man requires foraging in the woods of his life.

Robert Frost was born in San Francisco, California, on March 26, 1874, the son of William Prescott Frost and Isabelle Moodie. Frost's father was a journalist whose drinking habits led to an early death by tuberculosis at age 34 in 1885. After his death, Frost's mother moved the family to Massachusetts, where Frost graduated as one of two valedictorians in 1892 from Lawrence High School. His co-valedictorian was his future wife, Elinor Miriam White. After high school, Frost enrolled at Dartmouth College, while Elinor attended St. Lawrence. Frost left Dartmouth early, unable to contain his bouts of jealousy over Elinor's refusal to leave her studies and marry him. After Elinor graduated in 1895, she took a teaching position at the school Frost's mother had started and shortly afterwards married Frost. Frost at the time worked as a teacher and reporter, publishing

Robert Frost

what little poetry could get past the stodgily Victorian editors who ruled the world of American letters. The Frosts started bearing children shortly after their marriage, increasing the pressure on Frost to make good on his own evolving opinion of himself as a poet worth serious consideration. Financial strains were eased when Frost's grandfather let the entire family reside at Derry Farm in New Hampshire. (The farm was shortly afterwards bequeathed, with a small annuity, to the still growing family.)

By 1907, Frost had six children and still no steady form of income beyond the annuity. On October 23, 1912, Frost left America for England, fed up with the obtuseness of the American poetry establishment. In England, he discovered an entirely new and altogether exciting world of letters. There were the modernist giants—Ezra Pound, T. S. Eliot, Ford Maddox Ford, William Butler Yeats—fashioning with great broad strokes a new poetic reality. Frost published his first book of poetry, *A Boy's Will*, in April 1913, which was favorably reviewed in Ezra Pound's *Poetry* within a month. Many of the poems featured in *A Boy's Will* had been written during Frost's years at Derry Farm, as were the poems in his next two works, *North of Boston* (1914) and *Mountain Interval* (1916). *North of Boston* offered some of Frost's best work, including "After Apple-Picking" and "The Wood-Pile," while *Mountain Interval* featured "The Road Not Taken" and "An Old Man's Winter Night."

Frost returned to the United States after the publication of *North of Boston* to resounding critical praise. He was named Phi Beta Kappa Poet by Tufts University and a few years later at Harvard as well. His election to the National Institute of Arts and Letters and appointment as a professor at Amherst College assured the recognition he had always craved and the income he and his family had to do without for so long. In 1922, he received his first of four Pulitzer Prizes for poetry with his collection *New Hampshire*, which included "Fire and Ice," "Two Witches," and his most famous work, "Stopping by Woods on a Snowy Evening." Five years later *West-Running Brook* appeared, again to high praise, but featuring, as did *New Hampshire*, individual poems with a decidedly political cast. In 1930, he received his second Pulitzer Prize for *Collected Poems of Robert Frost*, while in 1936 a third was awarded for the much more openly political *A Further Range*. Yet despite the obvious compliment implied in winning a third Pulitzer, *A Further Range* drew fire from major literary critics such as Newton Arvin and R.P. Blackmur for Frost's conservative overtones, which ran contrary to the general political feeling during the Great Depression.

In 1942, Frost received his fourth and last Pulitzer Prize for poetry. The collection responsible was *A Witness Tree*, which included "Beech," "The Most of It," "November," and the poem he would read at Kennedy's inauguration 20 years later, "The Gift Outright." Afterwards, Frost was never quite the same as a poet, despite the occasional powerful lyric. *Steeple Bush* (1947), *A Masque of Mercy* (1947), *A Masque of Reason* (1948), and *In the Clearing* (1962) were themselves vitiated by a writer whose creative genius had run its course and whose destiny appeared for the final 20 years of his life to be one of putting out collections of his earlier poetry and racking up all of the remaining accolades except the one he desired most, the Nobel Prize for literature.

Frost's genius emanated in large part from his conscious decision during the modernist era not to follow the lead of his fellow poets and experiment with *vers libre*. Frost's poems were thematically and metrically unified by his belief in the idea—shared by other American modernists like Wallace Stevens—that the chaos of reality is given order by the extension of the perceiver's will. A cross between the

stoic naturalism of Jack London and Frank Norris and the Americanized Nietzscheanism of William James and John Dewey, Frost's poetry illustrates the ways in which the decaying effects of nature are held at bay by the forms into which we mold our understanding of our environment. As a result, Frost integrates the formal rigidities of blank verse and sonnet with a distinctly regional coloration that depends heavily on the use of common speech, standard word order, and metaphors grounded in natural events. Although, like other contemporaries, Frost saw in free verse an opportunity to retreat from the high diction of earlier poetical traditions, the chaotic freedom of its metrical format could not accommodate a personal philosophy that saw the economy and rhythm of poetry as an instrument for taming the uncertainties of lived reality. Thus in a poem like "Nothing Gold Can Stay," it is the simple rhyme scheme that staves off the decay of nature. Or consider his "Once by the Pacific," which attempts to contain the dark irony of the inherent destructiveness of nature in a highly structured metrical format. Even "Stopping by Woods on a Snowy Evening" manages to restrain the suicidal intensity of the narrator's tone, rhythmically counterbalancing his response to the woods "lovely, dark and deep" with the "promises" left "to keep." Frost's dark vision may belie the idyllic sweetness that has grown up around the image of him, but in many ways they represent far more closely the anxieties he sought to capture of the American spirit seeking to understand the limits of freedom and the wisest use of it.

## Frosty the Snowman

Frosty the Snowman has entertained American children during the winter holidays since his creation in 1950. Frosty originated in the song, "Frosty the Snowman," by Steve Nelson and Jack Rollins which then inspired the Golden Book of 1951 adapted by Annie North Bedford and illustrated by Corine Malverne. The song and book tell of a snowman that comes alive and takes the children who created it on sledding and ice-skating adventures. But Frosty melts when he and the children go to the village to see the shop windows. Golden Books kept Frosty popular for later generations with an animated video narrated by Jimmy Durante (1969). For half a century, the song has

been included on Christmas albums by popular performers. The concept was also used in *Jack Frost* (1998), a motion picture starring Michael Keaton as a deceased father who comes back to life in the snowman built by his children.

## Frozen Entrées

Frozen entrées, appetizing or otherwise, came to revolutionize the social culture of America and, in due course, the entire First World. Although the science of quick freezing had its beginnings early in the century, by the 1950s, the development of the process and the successful marketing of frozen food products came both to reflect and advance wider changes in working, family, and social habits. Despite the criticism that has always attached to frozen cuisine by those of more discerning palates, convenience has triumphed over considerations of taste in sufficient quantity to support a massive frozen food industry. By the end of the twentieth century, these "instant meals" had become an accepted constituent of American domestic life.

People who lived in harsh winter conditions with access to ice and snow, had always slow-frozen foods as a means of preserving them. Slow freezing, however, causes irreparable harm to the cellular structure of organic material, making it barely edible when thawed out. Clarence Birdseye was the first to accomplish quick-freezing, inspired by his work as a naturalist and then a fur trader in Montana from 1910 to 1917. When Birdseye noticed that fish caught at temperatures of 50 degrees below zero froze almost immediately, and upon being thawed, were still fresh and tasty, he was inspired to develop his own quick-freezing techniques. He first employed these in 1924, freezing fish, fruits, and vegetables. He had two methods: to chill foods by means of a very cold (-40 to -45 degrees) calcium chlorate solution, or, through the vaporization of ammonia, to chill foods to -25 degrees. The other important component of successful quick-freezing, Birdseye discovered, was to encase the food in protective packaging before freezing it, and thus to protect it from the deleterious effects of direct contact with the cold.

In 1929, the Postum Company (founded by C. W. Post) bought Birdseye's frozen haddock factory and became General Foods. The first line of Birdseye frozen foods, which included peas, spinach, raspberries, cherries, meats, and fish appeared in 1930, but struggled to catch on in the marketplace for several reasons. The public was inclined to view the frozen foods with suspicion, considering that they were inferior in quality and fit only for institutional use, or even that they had been accidentally exposed to cold and then resold as "frozen." In addition, during the 1930s fewer than half of Americans had iceboxes or electric refrigerators, and fewer still had mechanical freezers in which to store frozen food. The first dual-compartment, dual-temperature refrigerator came on the market in 1939, promising greater success for frozen foods, but World War II forced appliance manufacturers to turn their production efforts toward war materials instead.

The end of the war brought a boom in retail manufacturing and sales, and also a new American ethos that began to value convenience over quality. General Foods had offered a few frozen dinners, such as Irish stew, in the 1930s, but the post-war culture saw a great expansion in frozen dinner lines. In 1945 Maxson Food Systems, Inc. introduced “Strato-Plates,” individual frozen meals on trays for both military and civilian airplane passengers. In 1951 Swanson came up with Pot Pies, and followed these with their mass-marketed “TV Dinners” in 1955. A turkey dinner with cornbread dressing, gravy, peas, and sweet potatoes comprised their first offering and sold for about one dollar. Roast beef, fried chicken, Salisbury steak, and ham with raisin sauce quickly followed as additional entrée choices. Other companies eventually joined in the trend, among them Stouffer, Banquet, and On-Core. According to *Consumer Reports*, “By 1959 frozen dinners had become the best-selling of all frozen food items, outstripping the ever-popular meat pot pie.” Americans bought 70 million dinners in 1955, 214 million in 1960, and an incredible two billion in 1994.

The first frozen dinners came in compartmentalized aluminum trays which held meat, vegetables, a starch (usually mashed potatoes), and dessert. The entire meal was baked in an oven anywhere from 45 minutes to two hours. These dinners represented a revolution in food preservation technology and, more significantly, a change in American eating patterns. The frozen dinner meant that American family members no longer had to eat the same thing at the same time; and the American housewife did not have to cook it. Children and husbands could prepare frozen dinners, and they could be eaten in front of the television on “TV trays,” rather than at the dining room table. Further, people were no longer tied to the seasons or regions for their choice of food—quick-freezing meant that they could have any meat, fruit, or vegetable at any time.

Swanson launched the “Hungry Man’s Dinner” in 1972, appealing to those who wanted larger quantities of meat and potatoes. During the 1970s the company also changed its product name from the “TV Dinner”—which had become a generic term in the American vocabulary—to the “Frozen Dinner.” The 1980s saw an influx of new products. Individual dinners were broken up into individual components, with “frozen entrées” overtaking dinners in popularity. In 1986, the four-section aluminum tray had been superseded by plastic serving dishes, which could be placed in the microwave oven for quicker heating. These contained more specialized meals to suit various palates and dietary needs, and by 1990, 651 new entrées came on the market, compared with 55 dinners that same year. Companies introduced ethnic cuisine, pizzas, gourmet meals, side dishes, cakes, and pies. Lean Cuisine, Budget Gourmet, Le Menu, Weight Watchers, and Healthy Choice were among the main market competitors producing these ranges.

For all the apparent variety that frozen entrées offer, people generally agree that the food is mediocre at best. Meats contain fillers and constitute only a small percentage of the total food in the dinner, while vegetables taste bland and too often need the addition of salt. Nonetheless, with the development of domestic technologies, leading to the widespread popularity of freezers and microwave ovens in the home, attitudes to eating have changed. Where once the evening dinner was a requisite social activity that reinforced familial bonds, by the 1990s people were content to eat their own individual meals alone, sacrificing taste and conviviality for standardization and convenience.

## Fu Manchu

First introduced to western reading audiences in 1913 by Sax Rohmer (pseudonym of Arthur Sarsfield Wade, 1883-1959), Fu Manchu quickly became considered the quintessential sinister Chinese villain. Featured in over a dozen books, Fu Manchu used blackmail, kidnapping, and murder in his efforts to achieve world domination. The popularity of Fu Manchu increased when the character with the long face, goatee, and wispy mustache hit the silver screen (1920s), radio airwaves (1920s-30s), comic books (1930s), and television (1950s). Since his creation, Fu Manchu has become a damaging stereotype for Asians, suggesting that they are inscrutable and evil. Fu Manchu has also become the name for a style of beard (goatee and thin mustache), and a popular California rock band that released its first album in 1990.

## The Fugitive

A man wrongly convicted of the murder of his wife escapes the train taking him to death row. He wanders America in search of the real killer, a one-armed man, pursued by the lieutenant who investigated the murder and lost the prisoner. This was the story of the ABC television drama *The Fugitive*. The saga of Dr. Richard Kimble and Lt. Gerard, a mix of *Les Misérables* and a real life case, produced not only the highest rated television series broadcast of the 1960s, but also a hit movie and a sequel in the 1990s.

The series first aired September 17, 1963. Roy Huggins, who had created *Maverick* and would co-create *The Rockford Files*, devised *The Fugitive* based heavily on the Victor Hugo novel *Les Misérables*, with Lt. Gerard based on Inspector Javert, the indefatigable pursuer. But *The Fugitive* was also inspired by the real-life case of Dr. Sam Shepard, who was sentenced to prison for killing his wife after a sensational trial. He always maintained someone else had killed his wife and in fact he was later acquitted after winning a new trial. (The appeal, based on the circuslike atmosphere of the original trial, went to the United States Supreme Court and launched the career of F. Lee Bailey. Shepard died a few years after his release, tarnished

David Janssen, star of the television show *The Fugitive*.

by the case. His son is still trying to have the state of Ohio pardon his father, due to the fact that later DNA testing of blood evidence indicates that Shepard may not have been the murderer.)

Huggins devised the basic plot, explained in the opening narration of each episode. Dr. Richard Kimble, convicted of killing his wife, was riding to prison on a train, shackled to Lt. Gerard. Kimble was still insisting a one-armed man killed his wife. The train crashed, Kimble was thrown clear, and escaped. Dyeing his hair, changing his name, he traveled America, working a series of odd jobs and intruding on guest stars' crises, always eluding Lt. Gerard. David Janssen, with his world-weary manner and voice, played Kimble; Barry Morse showed up several times a season as Gerard. Bill Raisch played the one-armed man. The series trademark was actor William Conrad's dramatic voiceover in the title sequence, explaining the backstory, and announcing "The Fugitive—A QM Production." (QM stood for producer Quinn Martin). The series won an Emmy for best Drama in 1965-66 (its only nomination), and Janssen was nominated several times for best actor (1963-64, 1964-65, and 1966-67).

In 1967, ABC cancelled the series and producers decided to go out with a flourish, wrapping up the story in a two-part episode airing at the very end of *The Fugitive*'s last season. The final episode, airing August 29, 1967, had Kimble corner the one-armed man and Gerard arrive in time to hear the man confess. Conrad read the closing narration, "August 29. The day the running stopped." The episode was the most viewed episode of a regular series until that time and its 72 percent share of the viewing audience stood as a landmark until the "Who Shot JR?" resolution episode of *Dallas*. Ironically, the show's famous ending was said to have worked against it. While ABC ran

daytime repeats of the series the following year (April 1967 to March 1968), the series was never a big hit in syndication.

In the 1990s, with the burgeoning market for revivals of old TV series, *The Fugitive* seemed to be a natural, despite the death of Janssen. It took a while to get off the ground, but the movie finally made it to the screen in August 1993. Dr. Richard Kimble became a top-notch surgeon in Chicago, whose wife is murdered by a one-armed man as part of a plot to cover up a medical company's corruption. Again, Kimble escapes in a spectacular train crash. However, he's hunted by a federal officer this time, U.S. Marshal Sam Gerard, who has no connection with the case (and, famously, when Kimble insists "I didn't kill my wife" responds, "I don't care").

The movie focused on Kimble's efforts to track the one-armed man while Gerard and his oddball team try to track Kimble. Gerard investigates the crime in an effort to find Kimble, but he uncovers more and more evidence that Kimble didn't commit the crime until, like the original Gerard, he is on Kimble's side when he confronts the villain. The presence of Harrison Ford as Kimble, plus the taut script, made the movie a hit, but it was Tommy Lee Jones as Gerard who stole the show, and the Oscar and Golden Globe for Best Supporting Actor. The film's other Oscar nominations were for Best Picture, Sound Effects Editing, Film Editing, Original Score, and Sound.

After much wrangling over whether Ford would be back for the inevitable sequel, it was Jones and his ragtag team who made it to the 1998 sequel, *U.S. Marshals*, in which they sought another fugitive.

## Fuller, Buckminster (1895-1983)

Best known as the inventor of the Geodesic Dome, engineer, architect, inventor, and philosopher Buckminster Fuller epitomized old-fashioned American know-how, and was an apostle of the democratizing possibilities of technology. Convinced his inventions and designs might prove the salvation of the human race, for more than 50 years the diminutive autodidact talked a blue streak, tirelessly lecturing to audiences around the world, all the while churning out a seemingly endless procession of designs and elaborations on earlier designs. Circumnavigating the globe twice in the year of his death, he went to his grave convinced of the efficacy of these beliefs—that one day, his inventions would revolutionize human life.

Born to an illustrious New England family, Richard Buckminster Fuller (nicknamed Bucky as a child, an appellation he would never outgrow) was an awkward child with poor eyesight and mismatched legs requiring the insertion of a lift in one shoe. His physical defects were countered with a precocious intelligence and startling perspicacity, abetted, in fact, by his poor eyesight, which taught him not to trust overly the verity of physical appearances. A late bloomer, Bucky twice was sent down from Harvard, and at nineteen his family apprenticed him to a Canadian cotton mill.

In 1922, Fuller was again out of work when his four-year-old daughter, Alexandra, died, victim to the postwar influenza epidemic. Fuller would later credit this event with sparking his interest in

housing, becoming obsessed with the part drafty houses played in spreading the contagion. As a salesman for his father-in-law's company, selling a new building technique, he rose to vice president before his father-in-law sold his shares and Fuller was let go. Contemplating suicide on the shores of Lake Michigan, a "private vision" spoke to Fuller, saying, "You do not have the right to eliminate yourself. You do not belong to you. You belong to the universe." Like Saul's vision on the road to Damascus, this experience galvanized Fuller into action.

He removed his small family (a second daughter having been born in 1927) to a Chicago tenement, beginning a year of intense introspection. Fuller devoured books at a fantastic rate and emerged from his year of unceasing cerebration the author of an impenetrable thirty-thousand-word essay alternately titled "4-D" or "Timelock," and designer of a mass-produced house, also called 4-D. The former was privately published and sent out to two hundred notables, many of whom professed incomprehension. The latter, whose patent application had been turned down, was presented as a gift to the American Institute of Architects, who imperiously rejected it, saying they could not endorse "pea in a pod" designs.

Fuller was nothing if not resolute. He spent the 1930s refining his Dymaxion house design—interrupted by three years devoted to a revolutionary but flawed vehicle called, fittingly enough, the "Dymaxion car." Frequently, he wrote about technology for *Fortune* magazine and published his own journal, *Shelter*. During World War II, Fuller served under Henry J. Kaiser on the Board of Economic Warfare and used his position to promote the Dymaxion house. In 1944, he submitted a proposal to Kaiser in which he craftily combined the exigencies of economic conversion with the anticipated housing shortage brought on by the legions of returning vets. His solution was to refit aircraft manufacturing to mass-produce his house, using the same light-weight duralumin used to manufacture planes. Kaiser thought enough of the idea to finance its development. The 1946 Wichita house, produced at Beech Aircraft's Wichita facility, was the first successful application of Fuller's precepts, anticipating the mass-produced suburbs of the 1950s. Some 60,000 houses were ordered, but Fuller insisted on further refinements, and in his intransigence, he lost his backers; Fuller Houses, Inc., dissolved into nothingness.

This failure drove him into the world of academia. Always loquacious, the job of lecturer was perfectly suited to Fuller and gave him the opportunity to refine his ideas without the fickle backing of industry. He moved from university to university, and while in residence at the now-famous experimental Black Mountain College, Fuller built his first Geodesic Dome. It was made from vinyl louvers and collapsed within seconds of erection. But in 1949, Fuller received a patent for the Geodesic Dome and founded Geodesics, Inc. He received royalties for each dome built, so for the first time in his life, Fuller was free from economic woes. He could devote more time to what he called "thinking out loud." Traveling incessantly, circling the globe so often he was given to wearing five watches at a time, Fuller would talk to audiences for four or five hours at a stretch.

By the 1960s, he had become a counterculture legend, the messiah of modern technology, and film exists of the diminutive Bucky, with his thick glasses, close-shorn white hair, and conservative, three-piece suits, lecturing to auditoriums full of ecstatic hippies. His commission for the 1967 Montreal Expo, and perhaps his crowning achievement, was a magnificent seventy-six-meter-wide dome encased in transparent plastic tiles; it was photographed endlessly, gracing magazine covers worldwide. One visitor wrote: "Inside the dome the walls start going away from you . . . suddenly you realize the walls are not really there . . . And it was not done according

to the aesthetics of architecture as it had been practiced up to then. It was done simply in terms of doing the most with the least."

For the rest of his life, Fuller refined and expanded upon the implications of this idea. Martin Pawley writes, "Fuller had converted the Bauhaus epigram 'Less is more' into its Dymaxion derivative 'More for less.'" The domes themselves were the first link in this thought-chain; tensegrity, a building application utilizing continuous tension/discontinuous compression, was a further refinement. Tensegrity made building structures of enormous size and tensile strength—for instance, a three-kilometer dome that could enclose a part of Manhattan—a possibility. Fuller published elaborate schemata for these and other ideas verging upon science fiction. He envisioned enormous housing developments, self-sufficient islands set offshore, or kilometer-high pyramids, one of which he imagined as replacing a blighted Harlem. Fuller had logged out a logarithm of human need, and he would follow its varied implications to their logical conclusions. In 1983, he collapsed and died at his wife's bedside; she died thirty-six hours later.

From his "silent year" in Chicago onward, Fuller had worked ceaselessly for the betterment of mankind, seeing in his creations the means to realize a more equitable society. But outside of certain limited applications, (the Geodesic Dome house enjoyed a brief vogue with hippies, although industrial applications have proved more enduring), Fuller's inventions failed to revolutionize modern culture. The philosophical underpinnings of his inventions (altruism, ephemeralization, mass housing) remained unpopular ideas—if intermittently expedient. But Fuller saw his creations as part of the evolutionary process, envisioning that his revolutionary designs would inevitably supplant conventional architecture. One day history may prove him correct.

—Michael Baers

## Fundamentalism

The emergence, growth, and entrenchment of fundamentalism as an active ideological stance in the course of the twentieth century became a major source of social and cultural controversy within the United States. As the twentieth century began, the effects of modernism and secularism on American culture produced a growing sense of alarm among conservative Protestants, who believed that these innovations threatened to undermine the traditional values and moral authority of evangelical Christianity. They responded by reasserting their unyielding commitment to certain fundamental beliefs, such as the divine authorship and literal truth of the Bible, and by working to

ensure the survival of those beliefs in American institutions and public life. By the 1920s, this movement came to be known as fundamentalism, and, since that time, its views have permeated swathes of the social and cultural fabric of America. The fundamentalists' stand against innovations in theology and their strict adherence to Biblical doctrine have repeatedly placed them in conflict with mainstream trends in American popular culture—not only in religion, but in the realms of education, politics, entertainment, and the arts. In resisting such trends, fundamentalists have also engaged in various forms of activism, from public demonstration to political organization, and in the process have made their influence felt throughout American society.

The fundamentalist movement originated within the evangelical Protestant churches, particularly among Baptists and Presbyterians. An emphasis on revivalism and the conversion experience had contributed to the rapid growth of the evangelical churches during the 1800s, and by the end of the century they defined the mainstream of religious life in the United States. As they grew, however, these groups found it increasingly difficult to maintain a denominational consensus on certain theological issues. One major source of controversy was the doctrine of biblical inerrancy, which asserted that the Bible is literally true in every detail. Liberal adherents of the evangelical churches gradually abandoned this doctrine, arguing that the Bible must be reinterpreted within the context of contemporary thought. In their view, for example, the biblical account of creation could not be taken literally because it conflicted with the findings of modern science. Conservatives, on the other hand, rejected modernist revisions of the meaning of scripture, holding to the idea that the Bible contains factual truth, and believing that to say otherwise undermined the certainties of their faith.

Another important controversy developed around the doctrine of dispensational millennialism, which became widely accepted among conservative Protestants late in the 1800s. According to this doctrine, human history comprises a series of distinct eras, or dispensations. During each dispensation, humanity is subjected to a divine test which it ultimately fails, resulting in a catastrophic event such as the banishment from Eden, the Flood of Genesis, or the crucifixion of Christ. Dispensational millennialism asserts that the end of the next-to-last dispensation is approaching, and will be followed by the final dispensation, the "Millennial Age," during which Christ will rule on earth for a thousand years. Although this doctrine was not universally accepted by conservatives, it became a major theme in the thinking of key fundamentalist leaders during the late nineteenth and early twentieth centuries, clearly setting them apart from moderate and liberal Protestants who, by this time, had begun to de-emphasize the supernatural aspects of Christian belief.

As these theological controversies developed, liberals and conservatives within the evangelical Protestant denominations found themselves increasingly at odds with one another. Both sides tried to ensure that their point of view would define their denomination's policies and statements of faith; as a result, bitter disputes developed within several of the larger Protestant groups. Some of the evangelical denominations actually experienced little conflict, because one side or the other dominated their membership so thoroughly. The widespread acceptance of modernist theology by Congregationalists, for example, precluded extensive debate within that group, as did, conversely, the widespread rejection of modernism by the Southern Baptists. But within other groups, such as the Northern Baptists, Northern Presbyterians, and Disciples of Christ, the diversity of beliefs led to serious conflict. In each of these denominations,

however, fundamentalists in the end lacked the numbers needed to ensure that their views would prevail. Realizing that the spread of modernism had made it impossible for them to take control of these groups, the fundamentalist faction within each split off from its parent body to start a new denomination.

The fundamentalists' failure to control most of the large evangelical denominations did not deter them from promoting their views. They established a variety of programs and organizations that focused on advancing the fundamentalist cause outside of the existing structure of Protestant denominations. An early example of these non-denominational efforts was the publication of a series of booklets, entitled *The Fundamentals*, which described and justified various conservative theological positions. Distributed to religious leaders, students, and pastors throughout the English-speaking world, these booklets helped spread the fundamentalist message, and provided the source of the fundamentalist movement's name. Fundamentalists also established dozens of non-denominational Bible institutes and colleges during the early twentieth century, in part to provide clergy for the many independent fundamentalist churches organized during this period. And as the century progressed, fundamentalists became very active in religious broadcasting, which enabled them to disseminate their beliefs to much larger audiences than they could reach within the confines of their own congregations.

While developing its own institutional structure, the fundamentalist movement adopted an increasingly oppositional stance with respect to contemporary culture, and began to develop strategies to reform American society. The first major issue raised by the fundamentalists in this context was the teaching of scientific concepts that contradicted traditional interpretations of the Bible. They focused in particular on the teaching of evolution in public schools and universities, which they sought to ban either by legislation or through the regulations of local school districts. Anti-evolution laws were subsequently enacted in a number of states, primarily in the South where the influence of fundamentalism was greatest. The controversy surrounding these laws became widely publicized during a celebrated case in Tennessee, the so-called Scopes Monkey Trial, in which biology teacher John Scopes was tried in 1925 for violating the state ban on teaching Darwin's theory of evolution. Although this event provided a forum for one of the most eloquent supporters of the fundamentalist position, William Jennings Bryan, it also subjected fundamentalists to widespread criticism and ridicule in the national and international press, perhaps most notably by columnist H. L. Mencken. As a result, the movement lost much of its credibility, and became increasingly alienated from the mainstream of American popular culture.

Following their defeats within the mainstream denominations and in the public debate over the teaching of evolution, fundamentalists entered a period of withdrawal and consolidation. Rather than attempting to reform society at large, they concentrated on building a separate structure of religious institutions consisting of Bible colleges and institutes, non-denominational fundamentalist churches, independent missionary organizations, revival meetings, and the like. They also became increasingly involved in religious broadcasting, first in radio and then television. Televangelism provided an especially effective outlet for the fundamentalists' efforts to expand their base of support. By enabling them to operate outside traditional institutional structures, it gave them a means of addressing new, untapped audiences as well as their existing followers. The broadcast media also suited the preaching style of many of the leading fundamentalist evangelists, who relied heavily on their personal charisma. Through

such efforts, fundamentalism remained an active if unobtrusive force within American culture during the 1950s and 1960s.

A conservative turn in American politics during the 1970s gave fundamentalists a new opportunity to bring their agenda before the public. Through movements such as the Moral Majority and the Christian Coalition, fundamentalists became extensively involved in political action during the 1970s and 1980s, and formed the core of the “new religious right.” Although the religious right supported a range of conservative positions on policy issues, the fundamentalists’ primary goal was again to reform American society by addressing issues of faith and morality. They were especially concerned with trends that appeared either to undermine traditional religious belief or to limit the traditional role of religion in American life. They again confronted the issue of the teaching of evolution in public schools, now cast as a conflict between Darwinian theory and creationism, a defense of the Biblical account of creation presented in scientific terms; and in a number of locales, primarily in the South and West, they succeeded in influencing curricular policies, although not to the point of banning evolution from science classes. Their concern with the public role of religion not only involved them most directly in the effort to restore prayer to the public schools, but also engaged them in the debates over a variety of social issues and public policy that they believed should be guided by religious principles. These issues included gay rights, pornography, immorality in the entertainment industry, and equal rights for women. They continued to face strong opposition from moderates and liberals on these issues, but, nonetheless, their efforts to organize politically substantially enhanced their influence on American culture, particularly during the Reagan administration of the 1980s, when candidates such as Pat Robertson entered the active political arena.

During the 1990s, fundamentalists maintained their commitment to political action, although developments at the national level, such as Pat Robertson’s failed bid for the Republican presidential nomination in 1988, led many to focus on local or grassroots efforts. Control of local school boards became one of the most common objectives of fundamentalists in their attempts to influence public policy. They also adopted a more direct approach to expressing their opposition to trends within the entertainment industry through boycotts of entertainment production companies and their advertisers. Thus, although its prominence in national politics had declined, fundamentalism continued to offer a substantive critique of mainstream American culture. Finally, it has also provided a model for understanding the resurgence of militant religious traditionalism in other regions of the world, within religious cultures as different as Islam, Judaism, and Hinduism. In this sense, the term “fundamentalism” now applies not only to a conservative wing of evangelical Protestantism in the United States, but to a variety of analogous social trends, sometimes accompanied by the violence of “Holy war,” that have developed around the globe.

—Roger W. Stump

## Funicello, Annette (1942—)

During the height of her fame at Walt Disney Pictures, *Mickey Mouse Club* star Annette Funicello received more mail than the studio’s two most popular leading “men”: Mickey Mouse and Zorro. To young people she was, quite simply, the quintessential dream girl. Males liked her because, over the course of the series’ run, from 1955 to 1959, she blossomed into a buxom beauty before their eyes. Females liked her for her sweetness and sincerity, and for her winning smile. She was so beloved that she became known, and was often billed, by her first name alone.

Annette Funicello

Born in Utica, New York, Annette was twelve years old when Walt Disney saw her dancing the lead in *Swan Lake* at a school recital. Annette had dreamed of becoming a ballerina. She instead donned mouse ears to become an original member of Disney's pioneering children's show. Emerging as the series' most popular performer, Annette was increasingly showcased, even starring in her own *Mickey Mouse Club* serial, "Annette." Disney also licensed Annette merchandise, including paper dolls, lunch pails, and jewelry. And in the tradition of "girl detectives" Nancy Drew and Trixie Belden, a fictional Annette starred in a series of books in which she helped solve mysteries.

Meanwhile, fan magazines recounted the seemingly fairy-tale existence of the real-life teen idol. Readers learned of her romance with another teen idol, Paul Anka, which was inspiration for his hit tune "Puppy Love." Fans likewise were treated to details about her customized T-Bird, with its forty coats of purple paint, purple tuck-and-roll upholstery, and purple carpeting. Along with cruising the streets of Burbank, home to the Disney studio, Annette cruised the airwaves. It was her popularity, more than vocal talents, that led to strong record sales for songs including "Tall Paul," "First Name Initial," "How Will I Know My Love?" and "Pineapple Princess." Among the 15 albums she turned out on the Disneyland/Vista label were those bearing the titles *Hawaiianette*, *Italiannette*, and *Danceannette*.

When the *Mickey Mouse Club* ended its run, Annette was the only Mouseketeer to remain under contract to Disney. She appeared in a string of movies for the studio including *The Shaggy Dog* (1959) and *Babes in Toyland* (1961), and then segued to American International Pictures for *Beach Party*. The 1963 sand-and-surf youth picture found her cast opposite Frankie Avalon, whom she had dated in the 1950s. In *Beach Party*, the raven-haired Annette managed to be both voluptuous and wholesome. Honoring the request of her mentor, Walt Disney, she would not wear a navel-baring bikini. Nor would her screen character succumb to her boyfriend's romantic urges. As an unapologetic Annette once related, "My big line was always, 'Not without a ring you don't'. . . [and] I believed what I was saying wholeheartedly." In large part because of the Avalon-Funicello chemistry, *Beach Party* spawned a series of sequels, including *How to Stuff a Wild Bikini* (1965) and *Pajama Party* (1964). Annette also ventured into the fast track with a pair of innocuous car-racing movies opposite Avalon and Fabian, respectively. And she put in a cameo in the 1968 cult picture *Head*, starring the Monkees.

During the 1970s and for much of the 1980s, the twice-married mother of three made only intermittent appearances on TV, including as a pitch woman for products such as Skippy peanut butter. She did not return to the screen until 1987's *Back to the Beach*, in which she and Avalon poked fun at their anachronistic images. Their reunion prompted a wave of nostalgic publicity. In fact, such was Annette's status that her watershed moments have become media milestones. When she was married for the first time, the famed *Peanuts* comic strip depicted Snoopy the dog lamenting, "I can't stand it! This is terrible! How depressing—Annette Funicello has grown up!" A more sobering milestone was Annette's 1992 disclosure that she suffered from multiple sclerosis. An entire generation suddenly felt much older, as well as sadder.

Despite her illness, Annette went on to launch several new business ventures, including a line of collectible teddy bears. She also authored an optimistic, scandal-free autobiography, which became a highly rated TV movie. With hopes of finding an eventual cure for

MS and other neurological disorders, she has also set up the Annette Funicello Research Fund for Neurological Diseases.

## Funk

A rhythmically-driven, bass-heavy form of Black music, funk provided the bridge between 1960s soul music and late-1970s Disco. Emerging in America at the same time as the civil rights movement, funk became implicitly associated with Black pride because of its unapologetic celebration of traits that were often negatively associated with Black people. The key attributes that separated funk from other forms of popular music were expressiveness, unbridled sexual energy and a raw, gritty attitude. After its 1970s commercial heyday, funk continued to influence a variety of genres, most notably hip-hop—with the massive back-catalog of funk records providing a large reservoir of different sounds.

As a musical form, credit for funk's origins is overwhelmingly given to James Brown. As a bandleader, he developed the use of the guitar, horns, and keyboards as purely rhythmic instruments used to support the bass and drum rhythm section. One of the first funk recordings is considered to be James Brown's 1965 single "Papa's Got a Brand New Bag," which provided the syncopated blueprint for many of his later recordings such as "Cold Sweat," "Funky Drummer," and—the quintessential Black pride song—"Say It Loud, I'm Black and I'm Proud." The rhythmic experimentalism of these songs would widely be imitated, and expanded upon, by the likes of Sly & the Family Stone, Parliament-Funkadelic and Curtis Mayfield.

As a genre, funk's lineage can be traced relatively easily. But as a term, "funk's" origins are more unclear, though the following explanations are most likely. Just like jazz and rock 'n' roll, funk was used as a euphemism for sexual activity in many African-American communities throughout much of the twentieth century. Funk was used to connote something that is dirty and sexual, and by the late 1960s it soon became associated with the most earthy, gritty, and raw danceable forms of Black music.

Though it is possible to overemphasize Brown's importance in the development of funk, it is hard to do because many of the players pulled into Brown's orbit and schooled by him went on to become key players in the genre. Most notably, Fred Wesley, Pee Wee Ellis, Maceo Parker, and Bootsy Collins went on to play in Parliament-Funkadelic, Fred Wesley's Horny Horns, Bootsy Collins' Rubber Band, and a slew of lesser-known but no less significant outfits.

Funk was rife with fusion. Jazz musicians immediately gravitated toward funk, with Miles Davis, Herbie Hancock, Lonnie Smith, and Donald Byrd (who formed the popular Blackbyrds in the 1970s)

pioneering Jazz-fusion. Jimmy Castor and Rufus Thomas used funk to score a number of weird, dancable novelty hits, while other acts like War, Graham Central Station, and Mandrill fused rock with funk by adding a heavier beat and more distorted guitars.

Artists like Bootsy Collins, particularly during his tenure in the George Clinton-masterminded operation Parliament-Funkadelic, pushed the envelope of what was acceptable in Black and popular music. And others like Sly & the Family Stone blurred the lines between rock, soul, and funk music on dense, high concept albums like *There's a Riot Goin' On*. Silky-smooth soul stars soon incorporated funk into their music, with musicians like Curtis Mayfield, Stevie Wonder, Al Green, and Marvin Gaye making some of the best music of their careers using strains of funk.

Though the genre was dominated by men, which was typical of any genre of the time, Millie Jackson, Betty Davis, and Jean Knight proved that women could add a female-centered perspective to the music, and still be just as tough and assertive as their male counterparts.

By the late 1970s, the experimental left-of-center nature of funk had been largely smoothed over by the standardized pulsating beat of disco. During the 1980s, when slickness ruled the R & B and pop airwaves, the raw crudeness that characterized funk made it a dirty word again—commercially speaking, at least. At this time, many of the most essential funk recordings had gone out of print, and interest in the genre had waned. But the emergence of hip-hop, with its widespread use of 1960s and 1970s funk samples, rejuvenated interest in classic funk recordings by the late 1980s. Referring to a hip-hop song by Eric B. & Rakim that sampled James Brown, hip-hop group Stetsasonic rapped in their song 1988 song, “Talkin’ All That Jazz”: “Tell the Truth/James Brown was old/Til Eric B. came out with ‘I Got Soul’/Rap brings back old R & B/If we would not/People could have forgot.”

As the result of hip-hop artists sampling old funk records and the extensive reissues of funk albums on compact disc, Bootsy Collins, George Clinton, Maceo Parker, James Brown, and others maintained modestly successful careers throughout the 1990s, touring and releasing records.

## Fusco, Coco (1960—)

Born Juliana Emilia Fusco Miyares in New York City, Coco Fusco is a Cuban-American performance artist, writer, teacher, and cultural critic. After earning a B.A. in Semiotics and Literature and Society from Brown University in 1982 and an M.A. from Stanford University's Modern Thought and Literature program in 1985, Fusco first worked as a curator and writer and then turned primarily to developing sociopolitically infused performance art that would, as she writes in her book *English Is Broken Here*, “make sense out of the clashes between cultures” that shape U.S. Latino/a identities. One of her more controversial *tableaux vivants*, titled “Two Undiscovered Aborigines Visit. . .” was first performed in 1992 to critique the quincennial celebration of Columbus' discovery of America. Fusco and collaborator Guillermo Gómez-Pena posed as “exotic” Caribbean islanders in a museum cage for three days, performing what anthropologists call “traditional tasks.” As a symbolic act expressing five hundred years of resistance to colonial oppression, the piece, as Fusco states in *English Is Broken Here*, performs a “reverse ethnography,” blurring the distinctions between art object and body, reality and fantasy, history and dramatic enactment. In 1993 “Two Undiscovered Aborigines Visit. . .” was invited to several international exhibitions including the 1993 Whitney Biennial, the 1992 Sydney Biennial, and the 1992 Edge Festival in London and Madrid.

Fusco has brought her performance art on tour to Europe, Australia, the United States, New Zealand, South Africa, Canada, and Latin America. She is also actively committed to identifying—through her journalism, teaching, and curatorial work—films and other art media that have been censored within the U.S. and abroad. Coco Fusco's performance art and other critical inquiries into Latino/a culture have complicated the erstwhile notion of an “authentic” Latino identity; her interrogation of identity as formed by senses of nation, race, sexuality, gender, and class has helped to dramatically alter the way ethnic identity is understood today.

## Gable, Clark (1901-1960)

---

An icon of Hollywood's Golden Age, Clark Gable was dubbed "The King," and so he remained, a symbol of commanding virility through dozens of indifferent films, three generations of leading ladies, and the eventual decline—but never the entire death—of his popularity. His own golden age was the 1930s, and his image—tough, confident, and handsome—reached its apogee and has spoken to all generations since in the guise of Rhett Butler, famously and frankly not giving a damn about loving and leaving the ravishing Scarlett O'Hara (Vivien Leigh) in *Gone with the Wind* (1939).

The word macho, not yet in use in the 1930s, might have been coined for Clark Gable. The rough-hewn independence of his screen persona cannot have been unconnected to his own background. Born William Clark Gable in Ohio, the son of an itinerant oil-driller, he left school at fourteen to labor in an Akron factory. It was there that he first saw a play, determined on a life in the theater, and got himself some bit parts with a stock company before his father took him away to drill oil until he was twenty-one. Penniless, he worked at lumberjacking and other odd jobs until he joined a touring theater company run by Josephine Dillon, a veteran actress fourteen years his senior.

Clark Gable

The young Gable was then a gangling youth with jug ears and bad teeth, which Dillon paid to have fixed. She also coached him in acting and, in 1924, became his first wife. (They divorced in 1930.) The couple settled in Hollywood where Gable picked up a few engagements as a movie extra before going on the road again, eventually making it to Broadway and thence to the lead in the Los Angeles production of *The Last Mile*. MGM and Warners both rejected him after screen tests, but he played a villain for Pathe in a William Boyd Western, *The Painted Desert* (1931), and MGM came back with a contract.

In 1931, Gable began his twenty-three-year tenure at MGM with a bit part as a milkman in *The Easiest Way*; by the end of the year he was a star. Not yet sporting his trademark mustache, the actor had a threatening mien well-suited to playing brutes and roughnecks, which he did in several supporting roles before starring as Norma Shearer's gangster lover, slapping her around in *A Free Soul*; costarring in two of seven films—*Laughing Sinners* and *Possessed*—with Joan Crawford, a pairing that made for a potent sexual charge on screen (and off); and essaying a nobler character as Garbo's ill-used swain in *Susan Lenox: Her Fall and Rise*. Also that year, he married wealthy socialite Rhea Langham, seventeen years his senior.

Swiftly established as the archetypal "man's man," tough, rugged, and confident, whose good looks and earthy sex appeal also fed the fantasies of legions of women. Gable's rating rose even higher in 1932 with the studio's incendiary combination of the actor with their newest female star, Jean Harlow, in *Red Dust*. They made three more films together before Harlow's untimely death during the filming of their last, *Saratoga* (1937). However, despite his popularity, MGM's choice of vehicles for their premier male star often appeared decidedly odd. Throughout his career, much of the material foisted upon him was run-of-the-mill, and it seemed as though, rather than capitalizing on his charisma to create films of real quality, the bosses exploited his drawing power to sell the mediocre. Efforts in 1932 to lift him out of the rut of his typecasting were even odder: reunited with Norma Shearer in the film version of Eugene O'Neill's *Strange Interlude* and quaintly, even bizarrely miscast as a clergyman restoring a fallen woman (Marion Davies) to grace in *Polly of the Circus*. But nothing seemed bad enough to tarnish his image or diminish his popularity.

Gable himself, though, was increasingly unhappy and made his dissatisfaction felt. In what he viewed as disciplinary action to contain his money-making asset's recalcitrance, Louis B. Mayer loaned a reluctant Gable to the then Poverty Row studio, Columbia, for a comedy to be directed by Frank Capra. The film was *It Happened One Night* (1934), with Claudette Colbert as a runaway heiress who found herself embroiled with a broke journalist looking for a scoop. The film was a masterpiece of screwball comedy, and Capra took full advantage of Gable's range. With the famous mustache now well in place, he delivered a thoroughly delightful characterization embodying his down-to-earth practicality, good-natured cockiness, recklessness, charm, humor, and tenderness. It was neither the first nor last newspaperman he played, but this one brought Gable his only Academy Award and the first of his two most enduring successes.

Back at MGM, it was much the same mixture as before: Gable met the challenge of Fletcher Christian with an Oscar-nominated performance in *Mutiny on the Bounty* (1935), was perfectly cast in *San Francisco* (1936), survived a disaster as the Irish politician Parnell (1937), and was everybody's ideal *Test Pilot* (1938). But 1939 was the year in which Gable ensured his immortality as Rhett Butler. *Gone with the Wind* swept the board at the Oscars, except for the leading man, who, though nominated, lost out to Britain's Robert Donat. Gable, separated from his second wife since 1935, had become involved Carole Lombard, his costar in *No Man of Her Own*. She proved the great love of his life, and, in the midst of filming *Gone with the Wind*, Gable married her in a partnership that was swiftly recognized as a fairy-tale romance. Three years later the beautiful and gifted Lombard was killed in a plane crash.

A devastated Gable dealt with the shock by joining the United States Air Force, rising to the rank of major, and was off the screen until 1945. His return to MGM in *Adventure*, publicized with the phrase "Gable's Back and [Greer] Garson's Got Him," was not successful and began the slow decline of the star's postwar career. Prematurely aged and drinking heavily, he attempted unsuccessfully to find happiness in a brief fourth marriage to Lady Sylvia Ashley, something of a Lombard look-alike, while his film output steadily decreased, despite teamings with stars such as Lana Turner and Hedy Lamarr. His public still held him in affection, however, and there were a few last successes, notably *The Hucksters* (1947), with Deborah Kerr, and *Mogambo* (1953), a remake of *Red Dust* with Ava Gardner subbing for Jean Harlow, in which Gable was as charismatic as ever.

Gable's MGM contract expired in 1954, and his last years were spent as a freelance in films of little distinction except for a few interesting Westerns (e.g., *The Tall Men*, 1955) in the "veteran cowboy" tradition to which he had proved himself well suited. In 1955 he married his fifth wife, Kay Spreckels, another Lombard type, who was pregnant in 1960 when her husband joined Marilyn Monroe and Montgomery Clift on location in the Nevada desert for John Huston's *The Misfits*. Written by Arthur Miller, this bleak and powerful portrait of lost men roping wild stallions to sell was deeply ironic in that the protagonists were as doomed off-screen as their characters were in the film. The production was fraught with difficulties, and Gable, who insisted on doing his own stunts, was exhausted by the physical demands this made on him. His weighty performance, considered by some his best ever, was his last. He lived neither to receive the critical acclaim that greeted it, nor to see his first and only child, a son, who was born after his death. Gable suffered a fatal heart attack at age fifty-nine, shortly after *The Misfits* finished shooting, and Hollywood mourned the passing of its only king.

## Gambling

From TV programs such as *Wheel of Fortune* to daily point spreads in newspaper sports pages, the gambling spirit is everywhere in American life. Casinos have spread beyond tawdry, out-of-the-way locations such as Las Vegas to Indian reservations and cities across the country. Riverboats, with their poker machines and blackjack tables, ply the nation's great rivers again, as their predecessors did over a century ago. The gambling and casino boom has breached even the citadel of middle-class respectability in the form of hotels such as Las Vegas' Circus Circus and Treasure Island, featuring "family" entertainment within yards of slot machines. Various blamed on de-industrialization, a decline in the American work ethic, and a lapse in moral values, gambling's something-for-nothing mentality has become an important part of the American consciousness. Long a refined diversion for the wealthy and a desperate last chance for the poor, it is perhaps only technology and style that separates twentieth century gambling from its primeval counterparts.

Gambling, the betting or staking of something of value, is as old as humankind itself. Betting on horses began as soon as the animals were domesticated, and gambling's ties to sports date back as far as 1450 B.C.E., when Egyptians competed against each other in jumping, wrestling, and ball game competitions, centuries before the first Greek Olympics. As many as 250,000 spectators watched, and gambled on, chariot races in Rome's Circus Maximus. Gospel writers Matthew and Mark report that Roman guards gambled for Jesus' garments following his crucifixion, "casting lots upon them, what every man should take." Towns challenged towns in medieval archery matches, and gambling was an ever present accompaniment as sports competitions became organized in Europe during the Renaissance and early Modern periods.

In the New World, special days were set aside by the Northwest Coast Indians for "mook-te-lo," or wagering on games. The Iroquois played a betting game called "hubbub" with dice made from peach stones. Participants hit themselves on the chest and thighs, crying "hub hub hub" so loudly that they could be heard a quarter-of-a-mile away according to a contemporary report. The first deck of cards to be manufactured in the Western hemisphere was made by Columbus' crew in 1492. According to the story, the sailors threw their European cards overboard because they believed gambling was bringing them ill fortune during their long voyage. Once ashore in the New World, they regretted their impulsive behavior and made substitute decks from the large leaves of the copas tree. Lotteries, begun in England in 1566, were approved for the new Jamestown settlement in Virginia by King James I in 1612. Proceeds were used to sustain the struggling colony until the king withdrew his permission in 1621.

The Puritans first objected to popular recreations like gambling during the seventeenth century because they violated Sabbatarian principles. In the Puritan's distinctive mixture of capitalism and Calvinism, gambling was a double sin, a violation of the Lord's day of rest and an ungodly diversion from work the other six days of the week. Puritans had little success convincing Europeans to stop betting but they established strict statutes against gambling and other worldly distractions in their early American settlements beginning in 1638. Lotteries were unnecessary appeals to providence, according to Puritan minister Increase Mather, who believed that "God determines the cast of the dice or the shuffle of the cards, and we are not to implicate His providence in frivolity." The Puritans' holy opposition to gambling faded in the New England colonies during the eighteenth

**The Argosy Gaming Boat, Lawrenceburg, Indiana.**

century, and they had never had much influence on mid-Atlantic and southern colonists, but the Puritan association of gaming and wagering with alcoholism, idleness, and ungodliness became a recurrent theme in numerous anti-gambling crusades during the nineteenth and twentieth centuries.

Lotteries were a common recourse for eighteenth-century American colonists in search of funds for wars, schools, charities, or other purposes. George Washington himself bought and sold lottery tickets, and Benjamin Franklin spoke in favor of a lottery to finance the purchase of a cannon battery for Philadelphia in 1748. In 1758, once-Puritan Massachusetts authorized a lottery to fund an expedition against Canada during the French and Indian Wars. Gambling was still considered a vice, however, and during the first days of the American Revolution, various colonial “committees of safety” opposed gambling as a means of galvanizing public morality. General Washington, a frequent gambler at cards, forbade gambling among his soldiers when it distracted them from their military duties, even during the grueling winter at Valley Forge. However, the Continental Congress sponsored a national lottery in 1777, promoting it as a contribution “to the great and glorious American cause,” only to be disappointed by the proceeds because the loosely-knit colonists failed to gamble as freely as their more sophisticated English counterparts.

On the rough-and-tumble borders of the new country, however, gambling was a primary diversion. Thoroughbred horse racing, cockfights, card games, billiards, and fighting over the outcome of such contests were favorite past times of eighteenth-century frontier inhabitants, and gambling, alcoholism, prostitution, and related social vices continued to be associated with the American frontier as it spread westward throughout the nineteenth century. The 1803 Louisiana Purchase opened the western Ohio and Mississippi, and as commerce developed on the waterways, so did gambling. New Orleans evolved as America’s first gambling city as flatboat men,

farmers, and plantation owners played a French card game named “poque.” With a few modifications, draw “poker” became the quintessential American card game. Gambling was outlawed in the rest of the huge Louisiana territory in 1811 in the wake of a popular anti-gambling tract written by Mason Locke Weems (better known for authorship of the myth about George Washington chopping down the cherry tree), but gambling remained a critical component of New Orleans’ economy and politics for another century.

The first American gambling casino was opened in New Orleans around 1822. Owner John Davis provided gourmet food, liquor, roulette wheels, faro tables, poker, and other games, made certain that prostitutes were never far away, and kept his club house open twenty-four hours a day. Dozens of imitators soon made gaming, drink, and women of easy virtue the primary attractions of New Orleans. The city’s status as an international port and its thriving gambling industry created a new profession, the card “sharper.” Professional gamblers and cheats gathered in a waterfront area known as “the swamp,” an area even the police were afraid to frequent, and any gambler lucky enough to win stood a good chance of losing his earnings to thieves outside of the gambling rooms and saloons. The slot machine, invented by Charles Fey in San Francisco in 1895, first became popular with New Orleans gamblers. Reform movements struggled to limit gambling and prostitution to a red light district until military restrictions put the halls and brothels out of business during World War I.

The nineteenth-century relationship between gambling and western expansion was epitomized by the early West’s favorite son, President Andrew Jackson. Jackson was not the first president to gamble openly, but he bet with such an intensity that he created an image that came to stereotype all Westerners. He bet on cards, lotteries, and cockfights, but he preferred horse racing, a sport suited to his western Tennessee roots. Jackson hated losing, and his advice to a nephew summarized not only his personality but the mood of entire nation

during his presidential term: "You must risk to win." New frontier settlements risked everything for success, and those that prospered almost always embraced gambling. Chicago became a city in 1837, the same year it ostensibly outlawed gambling, but gaming "hells" continued to flourish along with drunkenness and prostitution. By 1849, there were as many gambling establishments in Chicago per capita as New York City and more than 1,000 women were said to be employed as prostitutes in 1856. The New England-bred Mayor "Long" John Wentworth ordered the destruction of gambling houses along Chicago's notorious Sands riverfront district in 1857, but the denizens simply moved to more law-abiding sections of the city where open gambling continued until 1904 when Mayor Carter Harrison closed all of the city's horse-racing tracks.

Gambling thrived in the South as well. Horse racing was the most popular sport for betting, and formal racing sessions were organized by the upper class in Williamsburg, Fredericksburg, Annapolis, and Alexandria well before the Revolutionary War. Slaves rode Southern race horses until replaced by white riders after the Civil War, inspiring the black jockey lawn ornaments that persisted into the twentieth century. The development of the telegraph, especially a modification permitting the transmission of more than one message at a time, allowed betting from a distance and made betting on the races a major business in the South. The first sports pages in American newspapers were reports on horse racing until the rise of professional baseball after the Civil War. Baseball, too, attracted gamblers. The Chicago "Black Sox" scandal of 1919, which saw the best team in baseball lose a World Series on purpose, was predated by the Louisville Greys, who threw enough games to go from a comfortable first place in the National League standings to late season also-rans in 1877.

Steamboats and riverfront gambling houses along the lower Mississippi attracted swarms of professional gamblers. A host of companies specialized in manufacturing and selling card cheating devices. One riverboat gambler named George Devol was so proud of his ability to slip a stacked deck into a game that he once used four of them in one poker hand, dealing four aces to each of his four opponents. Devol bragged of his exploits in his 1887 memoir, *Forty Years a Gambler on the Mississippi*. Children looked upon such professional gamblers as heroic figures. "To me as a boy, the gambler was an object of awed admiration," sportswriter Hugh Fullerton recalled of his Southern boyhood in the 1870s. But anxious townfolk viewed the presence of such confidence men as a vestige of an unruly frontier past. Five "sharps" were lynched by vigilantes in Vicksburg, Mississippi, in 1835, less for religious reasons than to preserve civic respectability, and other river cities applied similar, if less stringent preventatives. Still, the riverboat gambler came to symbolize freedom in dime novels and other popular literature, even though most died poor.

California established a reputation for professional gambling as well. In the wake of the state's 1848 gold rush, European traveler Friedrich Wilhelm Christian Gerstaecker observed that "gambling houses are now to California what slave-holding is to the United States." Professional gamblers became so wealthy and influential that they managed to become controlling political forces in the state for short periods of time. In San Francisco, gamblers played all day and all night at games that were refined into a high-volume industry. Rather than cheating and deceit, the city's gambling saloons relied on percentages and odds for their profits, foreshadowing the Las Vegas casinos a century later. Miners did not seem to mind. San Francisco gambling mirrored the entire gold rush mentality that "the fun would

be worth a fortune almost," as one contemporary wrote. Professional gamblers were an implicit, if not sanctioned, part of the casino scene until journalist and businessman James King launched such a vigorous crusade against them that he was murdered in 1856. In revenge, his alleged killer and a professional dealer named Charles Cora were lynched by vigilantes. Nonetheless, gaming continued in San Francisco, on a less ostentatious scale, into the 1910s.

Gambling flourished in other Western mining camps and towns that supplied the prospectors. Virginia City, Comstock, and Deadwood became as well known for faro and gunfights over card games as they did for mineral wealth. Even cattle towns such as Dodge City, Kansas, had forty saloons and gambling houses to cater to the cowboys, buffalo hunters, and railroad workers that visited it in 1875. But prohibition was in the wind. Scandals involving lottery ticket sales, including a massive fraud in the Louisiana lottery in 1894, the rise of baseball and other spectator sports, and a revival of moral concerns against idleness, drunkenness, and debauchery led to laws against lotteries and gambling in most states by 1910. "Puritanism [was] the inflexible doctrine of Los Angeles," one historian noted. By 1908, 289 of the nation's 314 thoroughbred horse race tracks had been closed.

Horse racing was the first gambling industry to be reborn. Colonel Matt J. Winn, president of Churchill Downs, dusted off old pari-mutual machines stored in the back of the track's storehouse, banished illegal bookmakers, and made sure the state of Kentucky got a share of every bet made at his track. Pari-mutual horse wagering was legalized in other states, especially during the cash-strapped Depression years. State racing boards or commissions supervised the tracks, reducing cutthroat competition and providing an aura of respectability for a public concerned about the connection between gambling and crime. Professionals gamblers remained, epitomized by George E. Smith, better known as "Pittsburgh Phil," who made horse betting into a science. Bookmakers prospered as well, off track, aided by advances in communication such as radio. Although state lotteries were not revived until 1964, numbers games were introduced to Harlem by West Indian immigrants in the 1920s and spread to other cities. Manufactured games such as pull tabs and punch boards appeared in rural areas, as did illegal slot machines and other electronic devices. Almost 25 percent of Americans admitted gambling on church-sponsored bingo games and lotteries in a 1938 Gallop poll. New York Mayor Fiorello LaGuardia stated the obvious, "if bingo is unlawful in one place, it cannot be lawful in another." Politicians have tried to resolve this dilemma over the remainder of the twentieth century.

Most casinos and "gambling hells" were shut down during the early 1900s, even in obscure locations such as French Lick, Indiana, and Canton, Ohio. True to the worst fears of the Puritans, gangsters combined liquor and gambling in New York, Cleveland, Chicago, and other cities during the 1920s. Florida temporarily legalized slot machines during the depths of the Depression at about the same time that El Monte and Gardena, California, licensed poker. But it was a dusty little Nevada town located on the old Spanish Trail that reintroduced casinos and gambling to twentieth-century America.

Las Vegas was established as a Mormon mission before the Civil War. Its future was assured when the San Pedro, Los Angeles & Salt Lake railroad laid track in 1904 and three other railroads, including the Union Pacific, soon followed suit. The railroads were the town's primary employer but the providing of ice, refreshments, shelter, and other amenities became almost as important. Although gambling was banned in Nevada in 1909, Las Vegas continued to grow, reaching a

population of 5,165. It remained a railroad town until divorce and gambling laws were relaxed and the federal government began the construction of Hoover Dam in 1930. The first major hotel, the 100-room Apache, opened in 1932 to augment an active red light district patronized by dam workers. So many workers and their families poured into Las Vegas that the *New York Times* claimed the city had "a touch of Mexico's Tijuana" in 1936. Still, Las Vegas continued to be outpaced by its primary competitor, Reno, and boasted only six casinos and sixteen saloons by 1939.

The post-World War II improvement of automobiles and highways, especially to and from Los Angeles, forever changed Las Vegas. Downtown's Fremont Street became "Glitter Gulch" and the vacant Las Vegas Boulevard was renamed the "Strip." Three casinos opened in 1946 including mobster Benjamin "Bugsy" Siegel's Flamingo Hotel. The Horseshoe Club began hosting the World Series of Poker in 1951. Motion pictures such as the 1952 *Las Vegas Story*, starring Jane Russell and Victor Mature, and the 1959 *Oceans Eleven*, which featured the "rat pack," Peter Lawford, Sammy Davis, Jr., Frank Sinatra, Dean Martin, and Joey Bishop, promoted the growing sophistication of Las Vegas. The movies also helped establish gambling as an adult entertainment in a decade noted for juvenile attractions from Elvis Presley (who later became a Las Vegas star) to McDonald's. They also helped erase gambling's disreputable, low-class image. Las Vegas' gambling industry survived and even thrived under scrutiny from investigators led by Senator Estes Kefauver. His Senate Special Committee to Investigate Organized Crime leaned heavily on gambling during the early 1950s, but only a few of the committee's proposals were legislated.

The Golden Nugget was the first Las Vegas property created specifically as a hotel-casino, but every hotel provided gambling. Eventually all would feature big-name entertainment, led by pianist Liberace, who headlined the new Riviera in 1955. The city's reputation as the "last" frontier served not only as a recurring casino and hotel theme, but intensified the gambling experience. Just as thrill seekers had swarmed San Francisco's casinos a century earlier, gamblers escaped their ordinary lives in the fantasy world of Las Vegas, surrounded by flashing lights and jingling coins, visual and auditory "noise" that heightened their sensations of gambling. Sports betting became popular, influenced in part by the banning of Pete Rose from baseball in 1989. The first theme property, the Circus Circus Hotel Casino, opened in 1968, was joined by the Mirage in 1989, the Excalibur in 1990, and Treasure Island in 1993, attracting a new type of visitor, the middle-class family. The introduction of gambling in Atlantic City and other locations induced Las Vegas to reinvent itself once again, providing educational attractions such as dolphin habitats and family entertainment acts like magicians Siegfried and Roy.

Beginning in New Hampshire in 1964, lotteries spread to more than thirty states, usually claiming to devote a large percentage of the profits to state education. Multi-state lotteries offered payouts of over one hundred million dollars. The first legal casino in the United States outside of Las Vegas opened on Atlantic City, New Jersey's Boardwalk in 1978, providing an influx of jobs and money even as the outer city remained impoverished. Deadwood, South Dakota, opened its streets to gambling in 1989. Gaming on Indian Reservations, the so-called "return of the buffalo," was re-legalized by Congress in 1988. Dozens of tribes across the country competed to provide casinos and hotel-casinos almost as glitzy as Las Vegas and used the profits to bolster their dying cultures and communities. River and lake boats, off-track and bingo parlors, dog and horse racing tracks, all vied for

what economists called discretionary funds. In every case, what had been once a sin, like divorce or deficit spending, was re-merchandised into an economic and social virtue. Even the Indian casinos and the state lotteries, however, must continually fight against gambling's shadowed twin, corruption. The same qualities of desperation and greed that guarantee success to gambling enterprises, also impel those who try to "beat the system." "Gambling is the child of avarice, the brother of iniquity, and the father of mischief," wrote George Washington, and, whether the gambling is for fun or for charity, that lineage seems to remain the same.

—Richard Digby-Junger

## Game Shows

It is not surprising that the game show has been one of the most enduring mass media formats. Combining entertainment and competition, celebrities and ordinary people, populism and the promise of instant success, game shows have tapped into elemental parts of the collective American psyche. America's most acute "quiz mania" occurred during the decades from the 1930s until the mid-1950s as a new incarnation of the American dream in which ordinary people, through luck and pluck, could rise from rags to riches overnight.

One of the first quiz programs appeared fairly early in radio's history. To increase its readership, *Time* magazine aired current events quizzes over the radio with *The Pop Question Game*, which lasted from 1923 to 1926. Other early radio contests of the 1920s included *The Brunswick Hour Musical Memory Contest*, *The Radio*

A fun-filled moment during the game show, *Let's Make a Deal*.

*Digest*, *Do You Know*, and *Ask Me Another*. The Depression years also encouraged Americans' interest in game shows and quiz contests. Because listening to the radio was still free in an era of tight budgets and unemployment, people flocked to their sets for diversion. Local movie theaters picked up on the game craze by offering bingo games and bank nights to lure people in with the promise of affordable entertainment and the possibility of winning prize money. People were attracted to quizzes for these practical purposes, but the shows also tapped into more elemental needs and desires like the pursuit of fame. During the Depression people experienced both economic and social hardships, often feeling like they were "lost in the crowd," their individual needs abandoned by governmental and financial institutions. In 1932, workers at the Houston radio station KTRH tried to counteract this malaise by taking a microphone outside and asking passersby their opinions on the Roosevelt/Hoover election and other more random questions. First called *Sidewalk Interviews* and later renamed *Vox Pop*, the show, which offered prize money to its participants, lasted until 1948, and spawned similar interview shows all across the country.

*Professor Quiz*, originating in 1937 in Washington, D.C., was the first genuine money quiz. The show not only awarded money to individual contestants, but also sent money to people who submitted questions used on the air, immediately increasing participation from

the on-air contestants to, potentially, the entire listening audience. In this way, even the early radio quiz shows spurred national interest and involvement, making them games of mass culture and mass appeal. *Professor Quiz*, for example, was so successful that within two years it had inspired over 200 variations, including a very popular version called *Dr. I.Q.* Other shows emphasized mental acuity by asking difficult questions. Of these, *The Answer Man* was one of the most popular, running for 13 years. It combined information and entertainment, becoming a frequent bet settler and voice of authority. The format of another show, *Information Please*, was designed to stump a panel of experts rather than the common man. Indeed, appearing as the weekly guest on the panel was a source of prestige, and often attracted entertainers and politicians to sit with the regular panelists. Created by Dan Golenpaul and launched in 1938, *Information Please* was so popular that in 1939 it had boosted sponsor Canada Dry's sales by 20 percent. In addition, in one of the first quiz show promotional tie-ins, there were items of spin-off merchandise, including *Information Please* home games and the still-active *Information Please Almanac and Yearbook*. This game and others like it (including a version for younger participants called *Quiz Kids*) gave the public new role models beyond sports and film stars, adding credibility and worth to intellectuals and academicians. Quiz language even entered the vernacular: the phrase "the \$64 question," meaning a particularly

tough question, came from *Take It or Leave It*, a popular gambling-based game show.

Like other media programming, quiz shows reflected the interests of the times. The Big Band influence of the late 1930s led to the creation of Kay Kyser's *Kollege of Musical Knowledge*, which ran for 13 seasons, *Melody Puzzle*, *Beat the Band*, and *So You Think You Know Music*, among others. During World War II, "quiz programs and audience-participation shows stressed themes of patriotism and sacrifice, while boosting morale and offering a measure of 'escapist' cheer," in the words of historian Thomas DeLong. These shows often featured members of the armed forces, asked questions about the War itself, encouraged enlisting, raised money for war bonds, and frequently awarded war stamps and bonds as prizes.

After the war, quiz shows once again returned to emphasizing individual pursuits and pleasures, clearly expressing America's post-war preoccupations. Consumption and the possession of goods were seen as a solution to many personal problems and served as psychological and material relief after war-time rationing. Beginning in 1946, manufacturers shifted their production away from military products and back to domestic goods, but these items were still in short supply. Many game shows whetted the consumer appetite by taking place on location in department and grocery stores—traditional sites of merchandise display and mass consumption. Their titles included *Bride and Groom*, *Second Honeymoon*, *Missus Goes a-Shopping*, and *Give and Take*. In 1948 the four major radio networks alone gave away about \$90,000 a week in merchandise spread over 54 programs, totaling \$4.5 million by year's end. *Go For the House* offered the grand prize of a fully furnished \$7,000 house; *Break the Bank* presented the chance at a \$5,000 jackpot; and *Stop the Music*, hosted by Bert Parks, featured, in addition to a wealth of prizes, a jackpot that accrued weekly. This show and others like it, in which the studio called a random person who was listening to the show at home, even sparked an increased purchase of telephones so that people could feel as if they had an equal chance of participating.

Encouraging women's return to the domestic sphere after their war-time factory work, many shows blatantly pandered specifically to perceived female desires. *Ladies Be Seated*, hosted by Johnny Olson, involved women performing pranks for merchandise. Perhaps the most unfortunate example of this genre was *Queen for a Day* (1945-64), which was more an audience-participation show than a quiz show. On this program women told various tales of woe, from dead or out of work husbands to sick relatives and impending house foreclosures. The "winner"—the woman whom the judges deemed to be in the worst straits—received prizes meant to fulfill her special wishes. In 1946 alone over 40 companies supplied \$250,000 worth of products to the show. *Queen for a Day* did not showcase the intellect of the common man, but instead spotlighted and exploited the financial and emotional burdens of the common woman, an early form of mass media therapy and confessional that presaged the daytime television talk shows of the 1980s and 1990s. Another show, *Strike It Rich*, similarly exploited people's misfortunes, but also required them to answer questions to receive cash and prizes. Various sponsors telephoned the "Heart Line," offering donations to these needy people while at the same time receiving on-air promotions. *New York Times* critic Jack Gould said at the time that the show "callously exploits human anxiety to sell the product of a soap manufacturer and does it with a saccharine solicitude that hits the jackpot in bad taste."

Successful radio emcees of the 1940s included John Reed King, Bert Parks, Bud Collyer, Jack Barry, Johnny Olson, Bill Slater, and

Bill Cullen, and many of them were equally successful when the quiz shows went to televised broadcasts. The first televised quiz shows appeared in 1941 with *Uncle Jim's Question Bee* (hosted by Bill Slater) and *Truth or Consequences* (hosted by Ralph Edwards). Indeed, many of these former radio shows easily translated to television, and were often broadcast simultaneously in both mediums. New shows were also developed to take advantage of the visual aspects of television and its burgeoning stable of talent. *Telequizzicals* and *Pantomime Quiz* were both based on charades, and the latter featured guest appearances by actors such as Roddy McDowell, Jimmy Durante, Lucille Ball, Steve Allen, and Danny Thomas. In 1949, *Pantomime Quiz* won television's first Emmy as its most popular show.

However, tremendous popularity often brings a backlash, and, in the late 1940s game shows experienced a wave of negative publicity. People began to feel that the shows emphasized money at the expense of talent and intellect. The 1950 film *The Jackpot*, starring Jimmy Stewart, depicts the problems a man faces after winning prize money, which, far from bringing instant happiness, almost ruins his life. In effect a morality tale, the film points out many of the reservations people had about instantly winning, rather than earning, money and merchandise. In addition, in 1948, the FCC, in an attempt to improve the quality of programming in general, tried to outlaw most quiz shows as a form of a broadcast lottery, which was then illegal. After many legal maneuverings, the courts ruled in 1953 that banning quiz shows from the airwaves would constitute censorship, and thus allowed them to continue. The standard game shows of the late 1940s and early 1950s nevertheless sank in popularity and were replaced with comedy shows. The game shows that did appear on the air were, not surprisingly, influenced by this new trend and included such offerings as *Tag the Gag*, *Stop Me If You've Heard This One*, *Draw Me a Laugh*, *Draw to Win*, *Doodles*, Groucho Marx's *You Bet Your Life*, and *Beat the Clock*. The last, the most popular of the comedy-quiz shows, was born of the prolific game show production team of Mark Goodson and Bill Todman. *Beat the Clock*, combining circus influences and sight gags, required people to successfully perform very difficult stunts in a limited amount of time. Future playwright Neil Simon helped write the show's stunts, while future actor and screen idol James Dean auditioned them in front of test audiences.

The early 1950s also saw the winning combination of Hollywood talent and intellectual prowess in popular panel games which featured celebrities and were hosted by academicians. The number of veterans who had recently completed their studies with the help of the GI Bill meant that there were more educated people who found entertainment both as contestants and audience members for quiz shows. The stars who appeared on these panels also benefited from this arrangement—the work paid well, afforded good publicity for an entertainer, showcased comedic talent, and often helped revitalize the careers of older comedians and actors. *What's My Line*, which began in 1950, was one of the longest running shows on television, becoming a Sunday night fixture on CBS for over 17 years. In this program panels, by asking yes or no questions, were enlisted to guess the unusual occupation of the night's guest. Over the years, panelists included such well-known entertainers as Steve Allen, Fred Allen, Arlene Francis, Errol Flynn, Ronald Reagan, Ernie Kovacs, and Jane Powell. Special guests included actor Frederic March, Mike Todd and his new wife Elizabeth Taylor, Frank Lloyd Wright, Gerald Ford, Jimmy Carter, Milton Berle, and Art Carney. *What's My Line* inspired a slew of more and less successful imitations including *The Name's the Same*, *I've Got a Secret* (with Bess Myerson, Henry Morgan,

Betsy Palmer, and Bill Cullen), and *To Tell the Truth* (with Kitty Carlisle, Peggy Cass, Tom Poston, and Orson Bean). The panel shows amassed devoted followers who tuned in every week to witness the banter of their old friends; these followers were so loyal that they guaranteed the success of the shows even in the face of the quiz show scandals of the mid-and late 1950s.

*The \$64,000 Question* (1955-58) was the first big-money television quiz show and was inspired by *Take It or Leave It*'s "\$64 question." Incorporating a televisual aesthetic that would reappear in shows like *The Price Is Right* and *The Wheel of Fortune*, *The \$64,000 Question* was described by *Newsweek* at the time of its first airing as "vaguely sleazy . . . compounded of beaverboard and sequins, liberally decorated with the name of the sponsor." The show was also referred to as the "Mount Everest" of quizzes because, to reach the peak prize, contestants had to return in subsequent weeks to risk their winnings to date for double the amount, beginning at \$8,000. *The \$64,000 Question* along with *The \$64,000 Challenge* and *Twenty-One* created ongoing televisual dramas that pitted contestants against each other and provided suspense for the viewing audience. In addition, these shows created overnight folk heroes in their winners, who were equal parts intellectual and common man. Many were offered university lectureships, commercial endorsements, and guest appearances on television shows.

Although audiences believed that the player-against-player drama was naturally inspired by the tension of the games themselves, in actuality many of the contestants were coached by show producers. *Twenty-One* was the first show to blatantly use coaching as a method to create more on-air drama and to force larger stakes in order to draw a larger viewership. Out of greed and actual financial need, Herbert Stempel, a homely Jewish ex-soldier working his way through the City College of New York, knowingly participated in the fraud perpetuated by producer Daniel Enright. While Stempel had a photographic memory, Enright continued to coach him about the correct answers to questions to be posed on air. When Enright realized that Stempel was not a popular contestant, he recruited Charles Van Doren, tall, aristocratically handsome, and an Ivy League graduate who wanted the prize money to be financially independent of his family. Although Van Doren was at first reluctant to cheat, the producers convinced him that his repeated appearances on *Twenty-One* would be a good influence on national attitudes about teachers, education, and intellectual life. He relented, lasting 15 telecasts, accumulating \$143,000 (the most single amount ever won on a quiz show), marriage proposals, a regular spot on *The Today Show*, and a teaching position at Columbia.

Stempel, angered at having to "take a dive," began to expose the quiz show rigging to journalists, who in 1957 discovered more jilted contestants and began formal investigations into the fraud at this and many other shows, including *Tic Tac Dough* and *Dotto*. Van Doren, after numerous protestations to the contrary, finally testified before a grand jury in 1959, admitting his collusion in the rigging of *Twenty-One*. The next day, he resigned his position at Columbia and the day after that was fired from *The Today Show*. Eventually he took a position as a columnist for *Leisure* magazine, and found regular employment at the *Encyclopedia Britannica*. Ironically, Van Doren was seen by many as a sympathetic figure, and the media compared him to "Shoeless" Joe Jackson, who fixed the 1919 baseball World Series.

The scandals not only ended the impressive reign of the quiz shows, but also forced larger cultural discussions about the nature of American morality and the role of television "entertainment." To the

media's chagrin, the general public lacked outrage, believing the issue to be irrelevant. Some in the television industry, in fact, claimed that the print media exaggerated the scandal in order to penalize a rival medium; yet these same people took steps to minimize the scandal's fallout, canceling all dubious shows and temporarily banning canned laughter and applause. CBS even went so far as to cancel Edward R. Murrow's six-year-old and respected *Person To Person* interview show because it was "rehearsed."

*The Price Is Right*, which first aired in 1956, weathered the scandal days to become one of the most popular game shows in America. Originally hosted by Bill Cullen, it encouraged the American consumer ethos by not only awarding prizes, but also rewarding people who were good shoppers—people who could come closer than their rivals to guessing the retail prices of goods (anything from a box of detergent to a yacht) without going over, would then win those goods. After a three-year hiatus, *The Price Is Right* returned to the air in 1972 hosted by the avuncular Bob Barker. It featured a glitzy studio and beautiful models who caressed the items "offered up for bid" and were as objectified as the goods themselves. Chosen middle-American audience members were exhorted by the announcer to "Come on down!" to be the next contestant, echoing the populist strains of the early quiz shows.

The quiz shows of the 1960s, in order to distance themselves from the scandals, renamed themselves "game" shows, and stayed away from big money prizes. *Jeopardy*, created by former game show host Merv Griffin in 1964, reversed the normal question and answer format by providing an answer and requiring contestants to supply the question. It was wildly popular especially among college students who regularly skipped class to watch it. Its original host, Art Fleming, was replaced by Alex Trebek in 1984. The 1970s saw a decrease in the number of and enthusiasm for game shows. As Thomas DeLong has written, "It seemed clear that prize money had become less of a riveting attraction to viewers and contestants alike. For the thousands who lined up at a game show studio with the hope of being selected as a contestant, it was less the promise of dollars and merchandise. The lure was television itself." Producer and game show host Chuck Barris, who referred to his shows as "popcorn for the mind," capitalized on this new attitude with the double entendre-filled *The Dating Game*, *The Newlywed Game*, and *The Gong Show*. *Let's Make a Deal* with Monty Hall also lured Americans looking for televised attention—the most outlandishly costumed people were chosen out of the audience by Hall to be the day's contestants. These shows reflected the increasing desire among the populace for fame rather than fortune. The longing to appear on television in front of millions of viewers seemed to take precedence over anything else—even prize money.

Notable shows of the 1970s included *The \$100,000 Pyramid* with Dick Clark, and new versions of old shows like *Super Password*, *The \$1,000,000 Chance of a Lifetime*, *The \$128,000 Question*, and *Tic Tac Dough* (with game show veteran Wink Martindale). *Family Feud* with Richard Dawson, added a twist that seemed particularly suited to the conformist backlash of the late 1970s. Rather than coming up with the *right* answer to a question, *Feud*'s teams of families had to guess which answer most people would give. Among the most outstanding shows beginning in the 1970s was the wholesome *Wheel of Fortune*, combining the children's game of Hangman with a Las Vegas-like spinning wheel to determine prize money. Originally hosted by Chuck Woolery (who later went on to host *Love Connection* and *Scrabble*), *Wheel* gained its greatest popularity in prime time when it was hosted by Pat Sajak and featured the

fashionably bedecked former Miss America Vanna White as the letter turner. Still a favorite in the late 1990s, this show is often televised in conjunction with *Jeopardy* during early prime time hours, and the two together are a study in contrasts: *Wheel* relies partly on luck, celebrates the simple accomplishments of the common man, and encourages a camaraderie where contestants clap in support for one another. *Jeopardy*, in contrast, maintains a more reserved atmosphere. It is strictly an answer-and-question game that hearkens back to the intellectual challenges of *Twenty-One* and *Information Please*, requiring smart players to answer difficult questions before their opponents do.

Game shows have had a difficult time competing with the drama found in the daytime talk shows of the 1980s and 1990s. No longer do producers have to pay or reward people to come on television and tell their stories—people do it for free just for the temporary chance at fame and the spotlight. *The Price Is Right* has remained daytime television's game show mainstay, accompanied mostly by soap operas and talk shows. Prime time hours during these decades have witnessed the entrenchment of *The Wheel of Fortune* and *Jeopardy*, and the resurgence of *Hollywood Squares*, a celebrity-based show, modeled on tic tac toe. In addition, in the late 1990s, shows like *Jeopardy* and *Wheel of Fortune* have developed interactive computer games that allow people to play at home, and The Gameshow Network, which televised both classic game shows and new ones, debuted in 1998, at once reviving the game show format and relegating it to a single marginalized cable network.

## Gammons, Peter (1945—)

During the 1980s and 1990s, respected baseball analyst Peter Gammons has become virtually ubiquitous as a commentator on America's "national pastime," both in print and on television. Gammons writes a regular Sunday newspaper column for the *Boston Globe*, which refers to Gammons as the "Unofficial Commissioner of Baseball," covering issues dealing with both the local Boston Red Sox as well as the sport of baseball as whole. Since 1988, Gammon has served as a studio analyst and regular reporter for the cable television Entertainment and Sports Programming Network during the baseball season, offering a popular report called "Diamond Notes" during the network's *Sportscenter* program.

Gammons grew up in Groton, Massachusetts, as a lifelong Red Sox fan. He attended the University of North Carolina in the late

1960s, and after his graduation in 1969 began a seven-year stint as a sportswriter for the *Boston Globe*. In 1976, Gammons left the *Globe* to work for the prestigious national weekly *Sports Illustrated* until 1978, during which time he covered college basketball, the National Hockey League, and Major League baseball. As a senior writer from 1986 to 1990, he concentrated on Major League baseball. He has worked for the *Globe* again since 1990.

Gammons offers penetrating insights on the state of the game of baseball, including its past and future, instead of simply discussing day-to-day events. He has been highly critical of skyrocketing player salaries and the emphasis of baseball owners on television revenues, as evidenced by his book with Jack Sands, *Coming Apart at the Seams: How Baseball Owners, Players, and Television Executives Have Led Our National Pastime to the Brink of Disaster* (1993). He also has written *Beyond the Sixth Game* (1985), which deals with the issue of free agency in baseball, and he helped former Boston Red Sox pitcher Roger Clemens write his autobiography, *Rocket Man: The Roger Clemens Story* (1987).

Gammons was voted the National Sportswriter of the Year in 1989, 1990, and 1993 by the National Sportscasters and Sportswriters Association. He also received an honorary Pointer Fellowship from Yale University. In a July 1998 chat session on the ESPN SportsZone web site, Gammons offered the following advice for aspiring sportswriters: "Take as many English, Political Science and History classes as you can. Then try to write for as many publications that will take your copy. Doesn't matter if it's a small-town, weekly newspaper or collector's news or *Sports Illustrated*. The more you write, the better you get."

## Gangs

Youthful street gangs have become a seemingly ineradicable fixture of American urban life. Stories abound of well-armed black or Latino teenagers locked in heated battle, often to the death, with their rivals, growing rich off the profits of drug dealing, and swelling the ranks of already overcrowded state prisons. By the end of the twentieth century, as hysteria over the existence of these gangs increased, a sort of historical amnesia appeared to take hold of the press and the general public. It is easy to forget—or so it would seem—that the existence of gangs has been a consistent social phenomenon since the nineteenth century, causing sociologists to

**Crips gang members in Los Angeles.**

lock horns in debating the origins and motivation of the street gang. Common sense, however, dictates that any group, such as deprived inner-city youth, excluded from the general prosperity, will compensate for deprivation by staking a claim to their neighborhood, to the square blocks of ghetto they can control with relative impunity, and will profit from their position by any means at hand.

Prior to the Civil War, gangs of young Irish toughs were common in New York City. (In the field of gang studies, New York virtually monopolized the attention of sociologists, criminologists, psychologists, and others until the mid-twentieth century.) These youths had, by all accounts, provoked and fanned the draft riots that consumed New York in 1863, leaving an estimated 5,000 dead. With colorful names—such as the Pug Uglies (who took their name from their battered pug hats), the Dead Rabbits, and the Swamp Angels—and distinctive costumes, the different gang contingents were easily recognizable to each other and had an unsettling effect on the more genteel folk in the neighborhood. They engaged in street crime and extortion, murder and mayhem for hire, their services itemized in a price list that gang-members often carried with them. Such a list carried by one Piker Ryan priced ear removal at 15 dollars; murder itself commanded a mere 100. As an additional source of revenue, certain gangs leased their services to Tammany Hall politicians, intimidating voters and controlling elections. With the support of the

corrupt Tammany Hall politicians, and payoffs to local police, the street gangs could indulge in all manner of petty larceny, and were much feared in the neighborhoods they controlled. In reading accounts of their activities, the parallel with gang activities in the South Central area of Los Angeles in the late twentieth century is striking, but with two major differences: the early gangs were white (“no dogs and Irish” signs appeared in New York business premises at the time), and they did not carry automatic firearms.

By the turn of the century, politicians were forced to buckle under public pressure and withdraw their patronage from the gangs, and with it, police protection for their illicit activities. By then, the hegemony of Irish gangs throughout the Eastern seaboard was being challenged by successive waves of immigrants from Europe, and Italian and Jewish street gangs mushroomed, impinging on Irish territory and profits. In a perverse example of market demand, the price for strong-arm services fell to a new low. Many gangs began diversifying their activities, adding union-busting (or striker protection) to their racketeering in extortion and protection. It was a volatile situation. “By the latter part of 1913,” wrote the historian Herbert Asbury, “it is likely that there were more gangs in New York than in any other period in the history of the metropolis; the number and the ramification of their alliances were so bewildering that of hundreds there now [1927] exists no more than a trace. . . .”

Less than ten years later, gangs were spoken of in the past tense; an overly optimistic assessment as many gang members, cognizant of street crime's limitations, had simply gone professional, attaching themselves to one or another of the Irish, Jewish, or Italian mobs. In the 1920s, Prohibition provided ample and lucrative opportunities in the bootlegging trade, and with newfound wealth came a patina of respectability. The now fully fledged criminals forsook raffish outfits for smart, if ostentatious, business wear, bought fancy cars, and acquired a certain prestige in their communities; money brought them the temporary illusion that they had transcended their marginal social position.

Inner city neighborhoods are like fragile ecological systems, their balance of power disrupted by new arrivals. In New York waves of Puerto Rican and black immigrants arrived throughout the 1930s, 1940s, and 1950s. They came to seek an escape from rural impoverishment, but found, instead, its urban corollary. Following a by then familiar pattern, neighborhood youths organized under distinctive names, using the local candy store or soda shop as a base from which to enforce their territorial prerogative. They established alliances and bitter rivalries, often but not exclusively along color lines, and made war in the time-honored fashion. Now street fighting was called "rumbling," and it was fought with knives, chains, and homemade zip guns, but seldom with actual firearms. Of course, in this more civilized age, mayhem no longer had the same fiduciary incentive, and street gang crime was petty rather than serious. In short, the newer generations seemed more driven by the emotional need to form bonds and establish a distinctive identity.

The public, however, reacted to the mid-century gangs as if they were some fascinating new phenomenon. Their very existence may have been seen as an affront by the police, but sociologists studied them intently and a regular cottage industry was comprised of professors writing about "alienation and the juvenile delinquent." Hollywood capitalized on the  *Sturm und Drang* of disturbed youth, romanticizing their fashions, their primitive chivalry, and their violence. To all appearances, it was as if the term juvenile delinquent, having been thus coined, made the problem more comprehensible, but it was never clearly understood. Perhaps Hollywood came closest to doing the topic justice. Broadway's hit musical *West Side Story* (subsequently filmed) gave a romantic gloss to the subject of gang warfare by very virtue of the music, dance, and love story at its center, but *The Blackboard Jungle* (1955) caught the tenor of urban alienation, and *Rebel without a Cause*, released the same year, captured the flavor of suburban teendom and the ways in which it aped the anomie of the ghettos. A consequence of these films was to inspire teenagers everywhere to adopt the "delinquent" style of dress—black leather jacket, greased hair, tight jeans—and to unleash a wave of mindless and destructive middle class hooliganism.

By the 1960s, many gangs had assumed a radical agenda, as much a sign of the changing times as the radicalization of the poor. In an inversion of this trend, the Black Panther Party adopted a stylized version of gang-wear, sporting uniform black leather suit-jackets and berets. The Panthers, who could not technically be considered a gang, as well as bona fide gangs, initiated community self-protection (and self-help) programs, while joining the throngs in search of War on Poverty grants and lobbying the Federal government for funding. In his long essay, *Mau-Mauing the Flak-Catchers*, Tom Wolfe caught the methods of intimidation—not so different from the tactics adopted when extorting money from neighborhood businesses—used by gang members to cash in on the Federal largesse. With the collapse of the War on Poverty, economic and territorial imperatives reasserted

themselves and gangs returned to the petty crimes and drug dealing that had long supported them.

Out of the wreckage of the 1960s, new gangs emerged, and with them, a new hysteria. Left to their own devices, gangs in public housing projects, like the infamous Cabrini Green in Chicago, turned to drug dealing, especially after the introduction in the early 1980s of crack cocaine, a cheap, smokable, and virulent form of the drug. Projects and ghetto neighborhoods like South Central Los Angeles became no-go areas, patrolled by the new breed of gangster, or gang-bangers as they called themselves, well-armed, tightly-organized cadres inured to violence and ready to give their lives for their colors. Especially in Los Angeles, the new breed of gangs—the Crips, the Bloods, the Mexican Mafia—introduced a paramilitary discipline to their activities, enforcing the age-old territorial imperative with an impressive array of weaponry. These gangs became one of Los Angeles' most talked-about exports, with Crips and Bloods appearing as far afield as small towns in the Midwest.

The "rumble" was a thing of the past. Now gangs engaged in a sort of automotive warfare, the drive-by shooting, that bore as much resemblance to the rumble as a duel to an air raid. And once again, Hollywood turned the social unrest to its advantage, churning out a string of dystopic (*The Warriors*, 1979) or topical (*Colors*, 1988, *New Jack City*, 1991) gang films, while gangsta rap, a sub-genre of rap that celebrated the gang-banging lifestyle in graphic terms, made billions for record companies. Young white suburbanites did not fail to appreciate the nuances of "the life," and gangster slang and fashion overran white America, much to the distress of suburban parents. As in the 1950s, a cognitive dissonance developed between the fictitious depiction of gangs in music and film, enormously popular amongst white suburban teenagers, and the gangs themselves, who were vilified in the press and subjected to increasingly restrictive police measures. But no one would argue that cost in human life merited the celebration, especially after several high-profile rappers died (most prominently, Tupac Shakur, the son of a Black Panther, who had already survived one murder attempt) as the result of bi-coastal gang feuding; was it art imitating life or life imitating art?

It would appear that few social problems have remained as intractable as the street gang. But are street gangs a genuine danger or simply a bugbear, conveniently trotted out to justify the growth of police departments? This is of some import since, historically, gangs are depicted in the language of crisis. It becomes difficult to separate the phenomenon itself from the overlay of media coverage that concurrently obscures and defines the street gang. But for the atomized middle class public towards whom most media is slanted, gangs remain a disturbing phenomenon. That the media hysteria itself might not have an agenda is seldom discussed. It may be true that over the years the excesses of street gangs have become more alarming (there is no way to put a positive spin on the spate of random assaults and murders that have plagued New York, the result of "wilding," that is, young gangs hunting in packs for their human prey), but those who would vilify poor colored youth, fail to see their relationship to the problem, a relationship as intractable as the problem itself. John Q. Public would do well to read accounts of gang activity in the nineteenth century. He would soon realize that gangs are inextricably related to socio-economic conditions, and not a sign of impending societal collapse—the barbarians clamoring at the gate. The barbarians have always been among us.

## Gangsta Rap

---

Gangsta rap is the most controversial style of the rap music genre. It has achieved global prominence through its vivid sexist, misogynistic, and homophobic lyrics, as well as its violent depiction of urban ghetto life in America. Gangsta rap has also helped bring attention to other styles of rap music.

Although gangsta rap originated in New York in the late 1970s, it has widely become associated with the West Coast, particularly Los Angeles, due to the multi-million sales of rappers such as Ice Cube, Ice T, Dr. Dre, and Snoop Doggy Dogg. Los Angeles might proclaim itself as the home of gangsta rap, but gangsta lyrics and style were part of the hip-hop scene from its origins in the South Bronx in the mid-1970s. The inspiration behind the specific style known as gangsta rap in the late 1990s was Schooly D's *Smoke Some Kill* (1987) and Boogie Down Production's *Criminal Minded* (1987). In particular, the latter's track "9mm Goes Bang" has been seen as a pioneering force in gangsta rap's development. However, it was West Coast based Ice T's *Rhyme Pays* (1987), which ranged from humorous boasts and tales of crime and violence to outright misogyny, together with N.W.A.'s (Niggaz With Attitude) underground album *Straight Outta Compton* (1988) that established gangsta rap firmly within the American music scene. Its keynote track "F\*\*\* Tha Police" was considered so shocking that radio stations and MTV refused to play it. Nonetheless, the album went platinum. N.W.A. and gangsta rap's popularity was compounded with the release of their second album *EFILAZAGGIN* in 1991, which debuted at number two in the *Billboard* chart with neither a single nor a video and became the first rap album to reach number one. Snoop Doggy Dogg then became the first rapper to go straight to number one with his album *Doggystyle* (1993).

Gangsta rap is distinctive for its rich descriptive storytelling laid over heavy funk samples from Parliament-Funkadelic, Sly Stone, James Brown, Rick James, Average White Band, Ohio Players, and George Clinton. Although it originated in New York, gangsta rap has evolved a unique West Coast flavor. Its roots can be traced to early depictions of the hustler lifestyle and low-budget blaxploitation movies of the 1970s, which glorified blacks as criminals, pimps, pushers, prostitutes, and gangsters. And since many of rap's early pioneers were gang members, gangsta rap came from the life experiences of the rappers. Gangsta rappers have become high-profile figures, many of them featured in Hollywood films such as *Boyz 'n' the Hood* (1991), *New Jack City* (1991), and *Menace II Society* (1993), which have brought views of ghetto life to the masses.

The reliance on crime in the lyrics of gangsta rap fuels much of the controversy surrounding the musical style. Too Short, Above the Law, Mr. Scarface, and Big Daddy Kane, for example, all celebrate

pimping. While it has been criticized for glorifying the negativity of the streets, gangsta rap's defenders claim that the rappers are simply reporting what really goes on in their neighborhoods; that drugs, prostitution, violence, and sexual promiscuity are all features of their daily existence. As N.W.A. proclaim, "It's not about a salary, it's all about reality." Nonetheless, this has led to suggestions that rap reinforces negative stereotypes of the black community and lionizes anti-social behavior. What is more, many of gangsta rap's high-profile rappers have acquired public notoriety. Some like Snoop Doggy Dogg have been implicated in gangland murders, while others such as Tupac Shakur and the Notorious B.I.G. have been killed.

Gangsta rap has become popular with those who have no direct experience with the lifestyle it depicts. The sexually explicit lyrics combined with graphic portrayals of gang killings have appealed to many middle-class white male youths. Indeed, some critics have suggested that a directly proportional relationship has developed between gangsta rap's explicitness and the sale of its records. Critics note that the violence and gangsterism has been over-exaggerated as a highly effective marketing ploy by the white-owned record companies. This has been helped by the addition of "parental advisory" stickers to many of their albums. For white middle-class male youths, gangsta rap possibly fulfills the same role as the blaxploitation films, attracting listeners for whom the "ghetto" is the location of adventure, violence, erotic fantasy, an alternative to the conformity and banality of suburbia. This voyeurism helps to explain gangsta rap's large following outside its communities of origin.

## The Gap

---

The Gap casual apparel stores have become a ubiquitous fixture in malls and urban shopping districts around the world. Their high-quality, classic designs have remained wardrobe staples for youthful customers, older shoppers, and their children, bridging that "generation gap" that originally gave rise to its name. Founded in San Francisco in 1969 by Donald and Doris Fisher as a place for youngsters to buy jeans in a variety of sizes, The Gap by the 1990s warranted mentions and appearances in films and television shows, winning a prominent place in the 1994 hit movie *Reality Bites* and spawning a satire on the skit program *Saturday Night Live*. Detractors criticize the store's style as generic, but steadily increasing sales have made it a multibillion dollar company.

## Garbo, Greta (1905-1990)

Swedish actress Greta Garbo accomplished in less than two decades what advocates for women's rights had sought for centuries: she showed the American public that feminine sexuality was compatible with intelligence. During the 1920s, when liberated flappers still attracted scorn from mainstream society, Garbo's depiction of independent yet feminine beauties helped convince millions of American women that sexual initiative was not a man's prerogative. Garbo "was allowed the right to have amorous needs and desires," according to biographer Karen Swenson, and her popularity with both sexes enabled her to challenge "traditional roles with few negative consequences." At the same time, Hollywood's highest paid female star eschewed media attention and created a mystical image around her indifference to public opinion. At the age of thirty-six, Garbo retired to a life of almost hermetic seclusion. Film critic David Thomson saliently observed that "in making the journey away from fame into privacy she established herself forever as a magical figure, a true goddess, remote and austere, but intimate and touching."

Greta Garbo

Hollywood's Viking beauty began life as Greta Lovisa Gustafsson on September 18, 1905. She grew up in an impoverished Stockholm household and went to work as a lather girl in a barber shop at age fourteen. By sixteen, the aspiring actress had garnered admission to Sweden's exclusive Royal Dramatic Theater Academy. She soon impressed Scandinavia's foremost director, Mauritz Stiller, with her perfect instincts and dignified beauty. He gave her the stage name Garbo and cast her as Countess Elizabeth Dohna in the silent screen masterpiece *The Story of Gosta Berling*. A leading role in G. W. Pabst's *Joyless Street* (1925) soon followed. The part, that of a struggling Viennese woman on the verge of prostitution, permitted Garbo to explore sexuality on screen for the first time. The film itself shattered box office records and became an enduring masterpiece of realistic cinema. Garbo's great break occurred when Louis Mayer of Metro-Goldwyn-Mayer recruited Stiller for his Hollywood studios. The established director insisted that his relatively obscure nineteen-year-old starlet accompany him to the United States. Stiller was soon exported back to Stockholm while Garbo became a box office sensation.

The eleven silent movies that Garbo filmed between 1925 and 1929 earned her critical claim as Hollywood's most talented female actress. Starring across from leading man John Gilbert in *Flesh and the Devil* (1927) and *Love* (1927) she awed audiences and shocked censors with her forthright sexuality. Garbo displayed her wide range playing a Spanish opera singer in *The Torrent* (1926), a Russian spy in *The Mysterious Lady* (1928), an English aristocrat in *A Women of Affairs* (1928) and a southern belle in *Wild Orchids* (1929). The star's appearance influenced an entire generation as millions of female fans copied her tastes in clothing and hair styles. Crazes for artificial eye lashes and cloche hats swept the nation. Meanwhile Garbo, whom Claire Booth Luce described as "a deer in the body of a woman living resentfully in the Hollywood zoo," distanced herself from both the public and the Los Angeles social scene.

Garbo may have been one of the leading box office draws of the silent era but few critics expected her to make the transition to talkies. The advent of sound ended the careers of most silent stars and the Swede's deep voice and heavy accent were expected to turn off audiences. Instead, the twenty-five-year-old actress gave her most compelling performance in an adaptation of Eugene O'Neill's play *Anna Christie* (1930). She played a waterfront streetwalker searching for her barge-captain father. Her opening words, at that time the longest sound sequence ever heard in a film, are cinematic legend: "Gimme a whiskey, ginger ale on the side . . . and don't be stingy, baby!" Other hits followed. *Mata Hari* (1932), *Queen Christina* (1935), *Anna Karenina* (1935) and *Camille* (1936) confirmed her reputation as the leading lady of the early sound era. Garbo's greatest role, that of the suicidal Russian dancer Grusinskaya in *Grand Hotel* (1932), ranks among the best female leads ever seen on the large screen. It is here that she declares her haunting wish: "But I want to be alone." After surprising success as the comic lead in *Ninotchka* (1939), Garbo filmed the lackluster *Two-Face Woman* (1941) and then retired from the public eye. She was thirty-six years old.

During the last five decades of Garbo's life, "The Scandinavian Sphinx" established herself as cinema's leading enigma. She travelled extensively but turned down all requests for public appearances. Instead, she entertained such close friends as Winston Churchill and Martha Graham in her posh New York City apartment. As one of the *grande dames* of American cinema, her intimates included William Paley, Anthony Eden, Jean Cocteau, Irwin Shaw, Dag Hammarsjokld, Cole Porter, and Jacqueline Kennedy. She also devoted herself to amassing an internationally renowned art collection which boasted

masterpieces by Renoir and Bonnard. Garbo received an Honorary Academy Award in 1954 for “unforgettable screen performances.” She died in New York City on April 15, 1990.

Greta Garbo entered the American consciousness during the mid-1920s at an historical moment when gender roles were in flux. The young actress came to represent a palatable form of female liberation and brought the icon of the independent woman home to Middle America. As biographer Karen Swenson described the star, “Her intimate posture and kisses suggested a woman—not a vamp—who was secure in her sexuality.” Garbo’s influence endured long after she became film’s most celebrated recluse. Throughout her life, she remained private, elusive, and conspicuously unmarried. “There is no one who would have me. I can’t cook,” she once joked—displaying the combination of independence and feminine intelligence which made her famous.

## Gardner, Ava (1922-1990)

Film actress Ava Gardner was the last, and least typical, of the screen’s Love Goddesses, superseding Rita Hayworth and outliving Marilyn Monroe. As the hard-bitten press agent (Edmond O’Brien) in *The Barefoot Contessa* (1954) says of the Madrid slum gypsy (Gardner) elevated to screen stardom, “Whatever it is, whether you’re born with it, or catch it from a public drinking cup, she’s got it; and the people with the money in their hands put her there.” Joseph L. Manckiewicz’s film was dubbed “a trash masterpiece” by critic Pauline Kael, but trash or not, it perhaps gave the fullest expression to the magic sensuality of its titular star. Tall and lissome, Gardner was frequently likened to a panther and her sinuous grace inspired publicists for *The Barefoot Contessa* to trumpet her as “The World’s Most Exciting Animal.” Dark-haired, smokily glamorous, and husky-voiced, her sex appeal was subtly come-hither, and with her “natural” quality she was a beauty both dazzling and refreshingly uncontrived.

Frank Sinatra and Ava Gardner

To quote from *The Barefoot Contessa* again, “Life, every now and then, behaves as though it has seen too many bad movies.” Spoken by Humphrey Bogart, the words might well have reflected the less happy aspects of Ava Gardner’s life although, by all accounts, she was a warm, generous, witty, and life-loving free spirit. However, she was as famed for her torrid love affairs and her heavily publicized marriages as for her legendary looks. Indeed, fame first came her way not for her work, but for her first marriage to an unlikely husband, the pint-sized Mickey Rooney, in 1942. It lasted 17 months, and her second, to bandleader Artie Shaw in 1945, was even shorter. Most famously, her third and last husband was Frank Sinatra. They married in 1951, separated in 1954, and divorced in 1957, but it was a grand passion and a tempestuous liaison that resonated for years to come in their lives and in the pages of an eager tabloid press.

Popular myth has it that Ava Gardner (her real name) suffered an unhappy childhood as a daughter of dirt-poor tenant farmers in North Carolina. In reality, life was a struggle for her Depression-hit family, but nobody went hungry. In 1940, aged 18, Ava visited her married sister in New York where she intended to become a secretary. Her photographer brother-in-law took pictures of her and sent them to somebody at MGM, resulting in a screen test and a seven-year contract with the studio that boasted “more stars than there are in heaven.” It took six years before Gardner was one of them. She was put through the usual rigors of studio training in how to walk, how to talk, how to pose for publicity pictures (of which, in her case, there would be thousands), but MGM initially failed to realize her potential. She was given small roles in a variety of films and lent to other studios. It was only after she played the sultry temptress opposite Burt

Lancaster in *The Killers* (1946)—on loan to Universal—that stardom beckoned. The path to the top was uneven—leads alternating with supporting roles. She played her first starring role, appropriately as a goddess, in the none-too-successful *One Touch of Venus* (1948), but the public was entranced by her. Whether playing secondary parts or leads in less than distinguished films, she retained top star status until her career ended in 1982, her beauty matured but intact.

Gardner's high public profile, arising from her private life—after parting from Sinatra she lived for a time amidst the Jet Set in Madrid, romancing with playboys and matadors—tended to obscure her professional accomplishments. Cinema historian David Shipman wrote "Ava Gardner has seldom been accused of acting," and many considered that she held the world in thrall with her ravishing looks but had little talent. Time proved this a common misperception. Although her range was limited, her intelligence was unmistakable, and she revealed a touching vulnerability that enhanced characters as diverse as her critically well-received mulatto Julie in *Show Boat* (1951), her gutsy Hemingway woman in *The Snows of Kilimanjaro* (1952), the half-caste Anglo-Indian of Cukor's *Bhowani Junction* (1956), and the small but significant role of the patriotic discarded mistress of a deranged general (Burt Lancaster) in *Seven Days in May* (1964).

Gardner was never more beautiful than as Pandora in the mythical, mystical hokum that was *Pandora and the Flying Dutchman* (1951), ensnaring and redeeming eternally wandering sea captain James Mason; and she was nominated for an Academy Award for her performance as a tough-talking, witty good-time girl, costarring with Clark Gable in *Mogambo* (1953), a remake of his outing with Jean Harlow in *Red Dust* (1932). To her detractors, the biggest surprise was her performance in John Huston's screen version of *The Night of the Iguana* (1964). No longer youthful, but still oozing sexual charisma, she did creditable justice to Tennessee Williams's play, at the center of things as the heavy-drinking hotel keeper lusting after Richard Burton's defrocked priest.

Ava Gardner retired from the screen in 1982 and made a late television debut in 1985 in *Knot's Landing*. She played three more roles on television, notably as the scheming Agrippina in the miniseries *AD*, before settling to a reclusive life in London, England, where she died of pneumonia at the age of 67. Her autobiography, compiled by Alan Burgess and Kenneth Turan from interview tapes, was published posthumously.

## Garfield, John (1913-1952)

The original movie rebel, ruggedly handsome John Garfield rose to fame with his post-Depression portrayals of cynical men who reflected the era's social unrest. As depicted by Garfield, characters no longer were readily identifiable as either good or evil—the rebel

**John Garfield**

characterization which became the calling card of iconoclastic actors including Marlon Brando, Montgomery Clift, James Dean, Steve McQueen, and Al Pacino. Garfield also endures as a strong sexual presence, particularly in his teaming with Lana Turner in the 1946 adaptation of James M. Cain's steamy *The Postman Always Rings Twice*, and, a year later, opposite Joan Crawford in *Humoresque*.

Born Julius Garfinkle on New York's Lower East Side, Garfield was the son of a coat presser and cantor, and a mother who died when he was seven. He spent much of his childhood on the streets, where he ran with Bronx gangs. As a teenager, his life took a turn when he came under the tutelage of noted educator Angelo Patri, who encouraged him to study drama. "Julie," as Garfield was called throughout his life by friends and family, went on to earn a drama scholarship at the Heckscher Foundation Drama Workshop. Through the workshop he met playwright Clifford Odets, who helped to pave his way into the innovative Group Theater.

It was in a Group Theater February 1935 performance of Odet's play *Awake and Sing* that Garfield first caught the attention of reviewers. Yet, he might have remained a stage performer if not for his disappointment over the casting of Odets's *Golden Boy*. Though the central role had been written with Garfield in mind, it instead went to the director's brother-in-law. Garfield, who took a lesser role, was primed for a career change when he was approached by Warner

Brothers. Then known for its movies for and about the working class, the studio signed him to a contract.

Garfield's talents and rebellious persona were apparent with his first film, *Four Daughters*, for which he was nominated best supporting actor of 1938. As Mickey Borden, an orchestrator who comes into the life of a sunny blonde and her musical family, he sardonically surmised, "The fates are against me. They tossed a coin—heads, I'm poor, tails I'm rich. So what did they do? They tossed a coin with two heads." That sense of fatalism would become a Garfield motif. Indeed, he enjoyed his only traditionally heroic role in the 1945 title *Pride of the Marines*, which followed the return home and rehabilitation of real-life marine Al Schmid. Blinded during a bloody night attack on Guadalcanal, Schmid nonetheless machine-gunned some two hundred Japanese soldiers.

An actor who identified with characters who lived on the edge, Garfield also tackled roles because of his admiration for particular artists and themes. He starred in *The Sea Wolf* (1941) because he revered the writings of Jack London. He took a supporting role in the seminal movie *Gentleman's Agreement* (1947) because it examined anti-Semitism. Said Garfield, "That was a part I didn't act. I felt it with all my heart."

Frequently, the men he played were on the run—from themselves as well as from the law. In *They Made Me a Criminal* (1939) he was a prizefighter who headed west following his involvement with a murder; in *Dust Be My Destiny* (1939) he was an escapee from a prison work farm; in *The Breaking Point* (1950) he was a boat captain who smuggled illegal aliens; in his final film, the 1951 *He Ran All the Way*, his character goes into hiding following his involvement in a payroll robbery in which a policeman is killed.

Within the Garfield oeuvre, redemption came at a significant price. *Body and Soul* (1947), about an unscrupulous prizefighter, climaxes when Garfield's character refuses to throw a fight. "What are you gonna do, kill me? Everybody dies," he says, in a defiant but downbeat climax. Renowned for its realistic boxing sequences, the movie earned Garfield a best actor Oscar nomination. In the similarly dark *Force of Evil* (1948), Garfield was a crooked lawyer involved in a numbers syndicate. Both movies, which were produced by Garfield's own company, continue to enjoy cult status, in part because of the involvement of filmmaker Abraham Polonsky, who was later blacklisted.

Because of his own outspoken liberal views, Garfield also came under the scrutiny of the House Un-American Activities Committee during its investigation of the Communist infiltration of Hollywood. During his 1951 testimony, Garfield surprised friends and associates by contradicting his well-known viewpoints. In the aftermath of his testimony, major film offers ended. The actor was estranged from his family when he succumbed to a heart attack at age thirty-eight. Those closest to him claimed that the stress of the investigation contributed to his death.

Because Garfield had an off-screen reputation as a lothario, and because he died in the bed of a female friend, there have long been rumors regarding details of his death. In the 1993 movie *Indecent Proposal*, in which multi-millionaire Robert Redford has a contract drawn up regarding a pending sexual liaison with Demi Moore, the lawyer adds a "John Garfield clause," explaining, "That's if you die in the act." But the sexual lore about Garfield pales alongside his fiercely memorable screen images. With his tousled hair, ubiquitous cigarette, and embittered world-weariness, he is a reminder that life is a survival course.

It could also be said that the original movie rebel helped to make possible a far more legendary career: Garfield originally was sought for the role of Stanley Kowalski in the Broadway play *A Streetcar Named Desire*. He turned it down, believing that the character of Blanche du Bois overshadowed Kowalski. The role went to a twenty-four-year-old unknown named Marlon Brando. In essence, one rebel passed the torch to another.

—Pat H. Broeske

## Garland, Judy (1922-1969)

At the end of the twentieth century, 30 years after her tragically premature death, Judy Garland is still a legend to legions of fans the

Judy Garland

world over, who recognize in her one of the twentieth century's all-time great American talents. As Dorothy in *The Wizard of Oz* (1938), she symbolized the innocence and hope that would both desert her in her own life, which came to represent an unhappy paradigm of the fate that befell so many child stars who were victims of the old Hollywood studio system. As an MGM "triple threat" from 1938 to 1950, she acted, danced, and sang her way through more than two dozen feature films, many of which are now considered classics of the Hollywood musical genre. She possessed a powerful and expressive voice, unique in tone, and full of pain and vulnerability—she once said, "I have a voice that hurts people when they think they want to be hurt." She recorded nearly 100 singles and more than two dozen albums with that voice. Diminutive, but vibrating with nervous energy and charisma, she became a gay icon among show business devotees, much as Maria Callas did among opera buffs. Her life was turbulent and terrible, her legacy a joyous inspiration. She was an underused and brilliant actress as well as one of the greatest-ever popular singers. Above all, she had that indefinable quality that makes a star.

Garland was born Frances Gumm on June 10, 1922 in Grand Rapids, Minnesota, to vaudevillian parents Frank and Ethel Gumm. From the time she was a toddler, "Baby Gumm" performed with her two older sisters in a stage act called "The Gumm Sisters Kiddie Act." Her rendition as a two-year-old of "Jingle Bells," performed on stage at the New Grand Theater (her father's cinema), brought the house down. The act later became the "Garland Sisters," with Judy billed as "the little girl with the great big voice." Her own name was changed when she was 12—comedian George Jessel gave Judy and her sisters the moniker Garland when he introduced them at the 1934 World's Fair in Chicago, and she herself chose Judy, after the title of a Hoagy Carmichael song.

In 1935, at the age of 13, Garland signed a contract with MGM. In November of that year, she did several radio broadcasts, singing "Broadway Melody" and what would later become one of her several signature songs, "Zing! Went the Strings of My Heart." A few days later, her father died of spinal meningitis; Judy's reaction was a day-long crying binge, indicative of the raw emotionalism that would dog her always. Initially, studio chief Louis B. Mayer was unsure how to use Garland. Her vocal quality was so adult, it was feared that audiences would not believe it came from the child, but they put her into a two-reel short called *Every Sunday* (1936) with another youthful newcomer named Deanna Durbin. Durbin was dropped and Garland kept on, but her first feature, *Pigskin Parade* (1936) was made on loan-out to Fox. Then, in 1938, she virtually stole the show from a starry cast in MGM's *Broadway Melody of 1938*, tremulously singing "Dear Mr. Gable/ You Made Me Love You" to a photograph of the macho star.

In 1937 Judy appeared in *Thoroughbreds Don't Cry*. The film was neither here nor there, but marked a significant first pairing with the other multi-talented performing child genius of the age, Mickey Rooney, with whom she would co-star nine times in all. With the young Lana Turner, she appeared with Rooney again in *Love Finds Andy Hardy* (1938), an entry in America's most famous ever "family entertainment" screen series. But the film that elevated her to superstardom was *The Wizard of Oz* (1939), in which the studio cast her with some reluctance when Mayer failed to get his chosen Dorothy, Shirley Temple.

The role of Dorothy, who yearns for a place where "the dreams that you dare to dream really do come true," only to discover after a series of fantastic adventures, that "home is best," unleashed and

defined Garland's extraordinary talent, and revealed the heartbreaking vulnerability that uniquely characterized her persona. Garland's portrayal of Dorothy was the defining role of her life, while "Somewhere Over the Rainbow" pursued her for the rest of her life. It became an anthem of hope in England during World War II, and later, she would sing the last eight bars over the phone to President John F. Kennedy whenever he needed cheering up. No concert audience would have permitted her to leave the stage without performing the number, which she generally used as her finale; it had profound personal significance for her and for the concert fans, who often shed a tear when listening.

The Academy Award-nominated film lost out to *Gone with the Wind*, but 16-year-old Judy Garland, an instant legend, received a special miniature Oscar in recognition of her performance. Meanwhile, off-screen, her personal life was already subject to the patterns that would destroy her. Controlled by an archetypal stage mother on the one hand and the ruthless rules of the studio on the other, she was put on a strict diet to contain a tendency to over-weight. A doctor recommended appetite suppressants. Simultaneously, the pressures of work were taking their toll and soon she was living on pills—diet pills, pills to sleep, pills to keep awake. At 19 she married orchestra leader David Rose, the first of her five husbands. Two years later they were separated and officially divorced in 1945, by which time she had made several in the cycle of juvenile, "lets-put-on-a-show" musicals with Mickey Rooney that remain classics of their kind—exuberant, and bursting with the combined powerhouse of dancing, singing, and acting talent provided by their young stars. The cycle began with *Strike Up the Band* in 1940, and included *Babes on Broadway* (1942) and *Thousands Cheer* (1943) along the way.

In 1944 Judy starred in one of the American cinema's landmark musicals, *Meet Me in St. Louis*, directed by the great colorist of the musical screen, Vincente Minnelli. The film yielded another of Garland's signature tunes with "The Trolley Song" and led to her second marriage. Minnelli became her husband in 1946, and the father of her daughter Liza. The marriage was over by 1949 but, under her husband's direction, Garland made *The Clock* (1945). Co-starring Robert Walker, the small-scale, black-and-white film concerned the meeting of a girl and a soldier under the clock at Grand Central, and their brief idyll and marriage during his 24-hour leave. Charming and poignant, it marked a departure for Garland, who revealed her considerable talents as a straight actress.

While the systematic disintegration of her health and psyche continued, rendering her subject to professional unreliability, the star continued to make millions for MGM. She starred in *The Harvey Girls* and *Ziegfeld Follies* in 1946 and *In the Good Old Summertime* (1949); her guest appearance in *Till the Clouds Roll By* (1946), in which, as Broadway star Marilyn Miller, she memorably rode bareback in a circus, sang "Who (stole my heart away)," and, smudge-nosed and aproned, rendered "Look for the Silver Lining" while up to her ears in a pile of dirty dishes, were among the highlights of a film packed with them. The most enduring musical of the period saw her paired with Fred Astaire in *Easter Parade* (1948), the film in which, dressed in tattered top hats and tails, the pair famously sang "A Couple of Swells."

By 1950, however, Garland's increasing failure to appear on set and her emotional setbacks, which caused monumental difficulties for *Summer Stock* with Gene Kelly, had become intolerable, and MGM fired her. She published a somewhat disingenuous open letter (doubtless concocted by her publicist or some such person) to her fans in *Modern Screen*, saying she had suffered from depression and a

“mild inferiority complex,” and needed a vacation. Garland thanked her fans for their stalwart support and said, “A lot of fanciful stories have depicted me as the victim of stark tragedy, high drama, and all sorts of mysterious Hollywood meanderings. All that is bunk. Basically, I am still Judy Garland, a plain American girl from Grand Rapids, Minnesota, who’s had a lot of good breaks, a few tough breaks, and who loves you with all her heart for your kindness in understanding that I am nothing more, nothing less.”

In 1951, Garland and her third husband, Sid Luft, staged her first big “comeback”—a concert appearance at the Palace Theater on Broadway. The record-breaking show ran for 21 weeks. She continued to appear on the international concert circuit through the 1950s and 1960s—when, that is, her shaky emotional stability allowed her the strength to keep her engagements, but her film career shuddered to an almost total halt, but for perhaps her greatest screen achievement, as Esther Blodgett/Vicki Lester in Warner’s 1954 remake of *A Star is Born* (1954). Co-starring James Mason and directed by George Cukor, the film showcased an amalgam of all the Garland gifts, both musical and dramatic, highlighting her vulnerability, her intensity, her energy and her sense of humor. It is a spectacular performance in a spectacularly good film (musical highlights include “The Man That Got Away” and “Born in a Trunk”) and she was nominated for the Best Actress Oscar. In a decision that remains an eternal blot on the Academy’s integrity, the coveted statuette went to Grace Kelly for *The Country Girl*, rendering Garland a body blow.

She remained an Academy Award nominee only again in 1961, deservedly acknowledged for her heart-rending straight dramatic performance in Stanley Kramer’s *Judgment at Nuremberg*. Another dramatic performance, opposite Burt Lancaster in Kramer’s *A Child Is Waiting* (1963), was even more heart-rending, as was the film itself, set in a home for autistic children. On CBS television, *The Judy Garland Show* during the early 1960s was short-lived, but her Carnegie Hall appearance, in 1962, the recording of which received an unprecedented five Grammy Awards, including Album of the Year, was a now legendary success. At this concert, and those at the Palace and the London Palladium (where she appeared in an emotional shared concert with Liza), the hysterical screaming and crying was comparable only to that found at rock concerts. There was a real chance that “The World’s Greatest Entertainer” would collapse or fail on stage, but audiences were rooting for her; they loved not only Garland’s voice and talent, they loved *her*. Legend has it that once, when she called for requests, one audience member yelled, “Just stand there!”

In 1963, Judy Garland made the last, and least, of her films. Indeed, *I Could Go on Singing*, opposite Dirk Bogarde, was a travesty and a humiliation as the once great star played herself—a dumpy, frowsty, unhappy washed-up singing star attempting to make a comeback amid the ruins of her private life. That, fortunately, is not how she is remembered.

Her marriage to Sid Luft (the father of her children Lorna and Joey) was over in the early 1960s, and their divorce in 1965 followed an exhausting battle over custody of the children. In the wake of Luft, she married an unsuccessful actor named Mark Herron, seven years her junior, but they were separated after only six months. Worn out from long years of concert tours, lawsuits, depression, substance abuse, nervous breakdowns, failed marriages and suicide attempts, Garland went to London in early 1968, married her fifth husband—35-year-old disco manager Mickey Deans—and appeared for a three-week season at *The Talk of the Town*.

She was clearly in a bad way, and drew unsympathetic audiences who were vocal in their hostility. The run was a humiliating fiasco, but she planned yet another comeback at the same venue the following year. Garland once said she’d had so many comebacks that every time she came back from the bathroom it was regarded as a comeback. It was an ironic comment: On June 22, 1969, she never came back from the bathroom of her London hotel suite where Deans found her, dead of a drug overdose. Alas, although millions grieved, few were surprised. Vincent Canby wrote in the *New York Times*, “The greatest shock about her death was that there was no shock.” She was 47 years old and died four million dollars in debt.

While Garland attracted a wide cross-section of the population, both at home and abroad, she held a particular appeal for gay men, and her status as a gay icon remains probably unmatched. She collected a gay following quite early on in her career and by the 1970s the phrase “a friend of Dorothy” was understood as describing someone as gay. She was adored by drag queens, an idolatry that led to a line in the play, (and film) *The Boys in the Band* where one character rhetorically asks, “What’s more boring than a queen doing a Judy Garland imitation?” Even the gay pride rainbow symbol connects to her most famous iconic image. Garland’s frequent suicide attempts became a bizarre element of her legend, and with each new attempt reported in the tabloids, gay fans wore Band-Aids on their wrists in solidarity. Some say Garland’s New York City funeral contributed to the power of the pivotal Stonewall rebellion. With emotions running high in the aftermath of the funeral, gay and lesbian patrons at the Stonewall Inn in Greenwich Village fought gay-bashing police and sparked a series of riots in New York that heralded the beginning of the gay liberation movement.

A powerful, and sad, echo of Judy Garland has lived on in the voice, persona, and tortured personal life of her gifted daughter, Liza Minnelli, while Lorna Luft, too, pursued a show business career and wrote a tell-all book about her mother, *Me and My Shadows: A Family Memoir* (1998). Her great legacy, though, rests in the films and recordings by which she lives on and, as Frank Sinatra so aptly put it after her death, “the rest of us will be forgotten—never Judy.”

## Garner, James (1928—)

Playing wandering gambler Bret Maverick in the television western *Maverick* (1957-60), James Garner established the persona of

the cynical, witty anti-hero, a persona which he would carry with him in the majority of his later roles. Garner enjoyed television success again in *The Rockford Files* (1974-80) as crusty private eye Jim Rockford, a role which earned him an Emmy (1976). In films such as *The Americanization of Emily* (1964), *Support Your Local Sheriff!* (1969), *H.E.A.L.T.H.* (1979), *Victor/Victoria* (1982), and *Barbarians at the Gate* (1993), Garner has proven that his trademark persona has an enduring popularity.

## Garvey, Marcus (1887-1940)

As an activist who promoted Black pride, Marcus Garvey founded one of the largest mass movements of Black Americans. Garvey's United Negro Improvement Association (UNIA) offered

Marcus Garvey

new hope for working-class Blacks in the 1920s. At the same time, Harlem Renaissance artists also encouraged racial pride like Garvey, but within that movement opportunities came to only a limited number of creative African American individuals. Garvey's clarion call for Black nationalism resonated primarily among lower- and working-class blacks and inspired numerous Black mass-appeal leaders and movements. The appeal of Garvey himself faded by the late 1920s, but he remained a complex and controversial figure for his views on Black nationalism and cultural militancy, which energized many Black Americans in the post-World War I era.

Although he would become a pioneering Black nationalist in the United States, Garvey grew up in rather inauspicious surroundings in Jamaica. He was born on Saint Ann's Bay, Jamaica, on August 17, 1887. As a young man, Garvey moved to Kingston, where he worked as a printer and editor. After traveling extensively in the West Indies and Central America and living briefly in England, Garvey became convinced that Black people suffered a sort of universal cultural and economic exploitation wherever they lived outside Africa. Garvey worked to resolve this by preaching cultural unification of Blacks worldwide, stressing the idea of going back to Africa. In 1914, Garvey organized the Universal Negro Improvement Association in Jamaica as the organizational arm of his Black nationalist "Back to Africa" Movement. Soon his oratorical skills drew many supporters. By the time Garvey moved to the United States in 1916, the UNIA had become a budding international movement for downtrodden Blacks seeking help in improving their lives as a collective voice. It was the desperate post-World War I Black population of inner-city New York that provided Garvey with the most recruits and support.

By the early 1920s, Garvey had made Harlem the home base for the UNIA. During numerous rallies, parades, and similar demonstrations, Garvey preached a message of racial pride and cultural unity to millions of Blacks throughout the United States and the world. Garvey's then-radical message appealed especially to Black Americans who, as a result of the "Great Migration" of the early twentieth century (which had moved millions of blacks from the rural South to the urban North), could easily spread Garvey's message through their new urban-based culture. Garvey's fervent nationalism became epitomized in his cry, "Up, Up You Mighty Race! You Can Accomplish What You Will!" By the mid-1920s, the UNIA claimed almost two and a half million members and sympathizers, although in retrospect that number seems inflated.

Yet, by the late 1920s, the mass cultural appeal of Marcus Garvey and the UNIA quickly decreased. In 1925, Garvey received a five-year prison sentence for mail fraud, even though the evidence indicated that his subordinates may have committed the crimes without Garvey's knowledge. In 1927, President Coolidge commuted Garvey's sentence and ordered him deported to Jamaica. Without the dynamic Marcus Garvey as its leader, the UNIA quickly disintegrated into a moribund movement. As the Great Depression swept America in the 1930s, Garvey's once forceful movement slipped into anonymity. Garvey sought to resurrect the movement in London in 1935, but gained little success and died a largely forgotten man in London in 1940.

Though Garvey faded from popularity after his incarceration in 1925, his teachings and ideas became a lasting legacy. His emphasis on racial pride, understanding the African heritage, and Black unity shaped the thinking of Malcolm X (whose father was a Garveyite) and the program of the Black Muslims in the 1930s. Garvey's memory also inspired the Black Power movement of the 1960s. Moreover,

Garvey's stress on self-reliance is still an important theme among many African-American community leaders. Marcus Garvey remains an undisputed icon of Black pride.

## Garvey, Steve (1948—)

Baseball great Steve Garvey was one of the most popular and successful players in Major League Baseball during the 1970s. Garvey was named the National League's Most Valuable Player in 1974 and went on to play in four World Series as first baseman with the Dodgers. He was voted to the All-Star team eight times as a Dodger, and was named the All-Star Game's Most Valuable Player twice, in 1974 and 1978. He and wife Cynthia Garvey, who had a very successful television career, became known as the "Barbie and Ken" of baseball because of their good looks and apparent perfect lifestyle. Marital infidelity plagued both of the Garveys, and the couple eventually divorced. Garvey completed his playing career with the San Diego Padres where he retired in 1987.

## Gas Stations

Gas stations are embedded in our urban and rural landscape, pervasive symbols of the automobile's domination of twentieth-century society. Like the fast-food restaurant, the motel, and the

shopping mall, gas stations are buildings whose very existence was generated by the automobile. The gas station also demonstrates the extent of corporate control over our lives. On a more philosophical note, they represent what one writer has referred to as "a potential point of pause" in our unceasingly mobile culture.

Gas stations have changed over the course of the century from strictly functional to multipurpose. Their evolution allows us to glimpse the development of a consumer society in the twentieth century, fueled by the power of advertising and increasing corporatization. Early motorists purchased their gasoline by the bucket from a dry goods or hardware store. The first gas stations were simple sheds or shacks with a gas pump. By the 1910s, however, they began to take on a unique identity in the landscape. Oil companies created standardized buildings for the distribution of their product. The Texas Company (Texaco), for example, constructed its first station in 1916. Each distinct station provided a means of corporate identity. Since the motorist was in no position to judge the quality of gasoline and therefore distinguish any one brand from another, the oil companies had to instill brand loyalty in their customers. The distribution of gasoline was therefore linked from the beginning to a marketing/advertising system. Corporate logos and slogans were created to help the public identify with the company. Visible gasoline pumps, which allowed the motorist to see the product as it was pumped into the car, led to the practice of dyeing gasoline with colors like red, blue, or purple in an effort to distinguish one brand from another. Companies also began to diversify the range of products and services available to the public. Maintenance and repair services turned the filling station into the all-around car-care station.

The standardization of the 1910s gave way to the eclecticism of the 1920s. Oil companies' drive to make their product identifiable led to the creation of exotic eye-catching buildings designed to look like Greek temples, Chinese pagodas, and Swiss chalets. By the end of the 1920s, a nationwide gasoline distribution system was in place in America that has not changed since. At the same time, a highway-building boom allowed motorists to expand their range of travel. Gas stations arose along the new highways to provide necessary and convenient services. These non-urban stations were dedicated as much to the customer as the car—they offered amenities for the new long-distance traveler unnecessary in urban locales. Stations offered clean rest rooms, free maps, soft drinks, and snacks. As traffic increased and the automobile culture expanded, gas stations attracted other businesses, such as motels and diners, to their location. The desire to make the customer feel comfortable also led these early stations to clothe their employees in military-style uniforms, which added an air of legitimacy to a still relatively novel enterprise. Slogans like Texaco's "You can trust your car to the man who wears the star" also encouraged consumer comfort.

In the 1930s and 1940s, the eclectically styled gas stations of the previous decade diminished as a new, "modern" design aesthetic—reflecting public fascination with images of the future—swept through the industry. Stations emphasized clean surfaces and streamlined curves. "Art Deco" or "Moderne" style gas stations became popular symbols of the new machine age. Oil companies hired famous designers to update and promote their image. In 1934, Norman Bel Geddes provided a new design for the Socony-Vacuum Oil Company (now Mobil), which proved too avant-garde and was never built. In the same year, Walter Dorwin Teague was hired by Texaco for the same purpose. His streamlined box design was an instant success and was used in more than 10,000 stations across the country. Teague

An early Gulf gas station.

created a universally adaptable form and an immediately recognizable symbol for Texaco products. Other companies attempted to duplicate this achievement but were not as successful.

By the 1950s, a “functional” aesthetic began to prevail in the design of gas stations across the country. Historic and modern elements were rejected in favor of a design that emphasized function. Logos became more important as symbols of corporate identity. The impact of television as an advertising medium lessened the need for the gas station to serve as a three-dimensional billboard. For example, the Pure Oil Company sponsored a television quiz show in 1950, in which the company’s slogan “Be Sure with Pure” was constantly repeated. The Texaco Star Theatre, with Milton Berle, was the most successful of these ventures—the show was the most popular television program in America in the 1950s.

The nature of the gas station began to change in the 1960s with the emergence of self-service stations and convenience stores. Self-service actually dated back to the 1930s, but in the interim most states had passed legislation requiring that only station personnel attend the pumps. The link between gas station and grocery store was even older; in the 1910s, many general stores in rural areas also had a gas pump. Also developing during this time period were truck

stops and “highway hubs”—small nodes of consumerism at highway interchanges.

In the late twentieth century, as repair and maintenance services have come increasingly within the purview of specialty shops and automobile dealerships, and gasoline pumps have been added to convenience stores as a secondary service, the traditional filling station is almost extinct, but as long as our society remains dependent on the automobile, the gas station, in whatever form it may take, will be a permanent part of our landscape.

## Gated Communities

Gated communities are residential areas, ranging in size from individual streets and neighborhoods to entire cities, enclosed by walls and gates that are intended to prevent unauthorized entry by nonresidents. In many gated communities further protection against the outside world is provided by private security guards and electronic security systems. Most such communities operate as Common Interest Developments in which residents collectively own the common spaces or shared amenities, and a private homeowners association oversees community affairs. The population of these fortified enclaves tends to be overwhelmingly middle- or upper-class, white, and middle-aged or older. The primary reason they settle in such places, according to surveys, is to escape the crime, traffic, and noise of the cities and ungated suburbs. To many observers, the rising number of gated communities constitutes, in the words of Clinton Administration Labor Secretary Robert Reich, “the succession of the successful” from the civic life of the broader society.

Although gated communities in one form or another have existed in America since the colonial era, up until the late 1960s they were popular only with the ultra-rich and privacy-conscious celebrities. In the 1970s, developers built a few master-planned walled subdivisions aimed primarily at senior citizens and retirees. By the 1980s and 1990s, gated communities designed for ordinary middle-class families were proliferating at a rapid rate, particularly throughout the Sun Belt states. Researchers agree that middle-class fears about rising crime and concerns about the deterioration of municipal services are the most important factors behind the boom in gated developments. In their book *Fortress America*, Edward Blakely and Mary Gail Snyder estimate that by 1997 the United States had approximately 20,000 gated communities with some three million units of housing and 8.4 million residents. Some of the gated developments being built in the 1990s attempt to incorporate all the traditional features of city living behind their walls. An excellent example of this trend is Green Lake, Nevada, a sprawling walled suburb outside Las Vegas that is expected to have 60,000 residents by the year 2005. It is divided by house size and cost into prefabricated “villages,” each with its own meeting hall, recreational center, school, park, and in the more exclusive tracts, an entrance with a manned guardhouse. At the same time, more and more preexisting neighborhoods and suburbs are walling themselves off from surrounding cities by barricading public streets and installing gates and security systems.

In the majority of gated developments that are organized as CIDs, homeowners associations function as a kind of private government. People who buy property in such developments are forced to join the association, pay dues, and agree to abide by its rules. Homeowners associations deliver such traditionally public services as trash collection, policing, snow removal, road maintenance, and street lighting. They also make regulations governing all aspects of life in the community, including rules limiting the hours and frequency of visitors, setting the minimum age of residents, banning the display of flags, prohibiting certain kinds of pets, and specifying what

color paint owners can use on their houses. Fairbanks Ranch, an affluent gated community in Southern California, is patrolled by private security officers who enforce a speed limit set by the homeowners association which fines repeat speeders \$500 and bans them from the community’s streets for a month. A few gated communities have succeeded in incorporating themselves as full-fledged municipalities (in which the elected city government usually defers to the rule-making authority of the homeowners association).

As the proportion of the population living in them has risen, gated communities have gradually become a political force to be reckoned with. In California, private homeowners associations have lobbied state legislatures for the right to deduct homeowner dues from state income taxes. In New Jersey, private homeowner associations in 1990 pushed legislation through the state legislature which entitles their members to rebates on the property taxes they pay to support city services.

Yet even as gated communities were beginning to enjoy the fruits of their new-found power, there were signs in the late 1990s of a growing backlash against what planner Norman Krumholtz has called the “balkanization” of America’s cities. Four communities in suburban Dallas—Addison, Plano, Richardson, and Southlake—decided to prohibit barriers on public roads and even placed moratoriums on the construction of private gated developments. In 1995, both San Diego and Portland began studying policies that would limit the spread of gates within their boundaries. Proposals to erect walls around existing communities and close public streets have been successfully fought in courts and city councils in Los Angeles, Chicago, Atlanta, Sacramento, and elsewhere.

Ultimately, however, whether the number and population of America’s fortified enclaves continues to expand will be determined less by political battles than by the desires and decisions of millions of home buyers in the years to come. As long as fear of crime and the desire for peace and quiet outweigh the lure of public life in the minds of those who can afford to choose where they live, gated communities will continue their inexorable spread across the nation’s landscape.

—Steve Macek

## Gay and Lesbian Marriage

The advent of marriage between same-sex couples marked one of the major cultural and social changes of the twentieth century in the United States. In 1970 gay and lesbian couples requested so many

marriage licenses from the Los Angeles County Clerk, that the Clerk's office requested the California legislature tighten California marriage laws. However, despite this auspicious start, and the continued efforts of gay and lesbian activists and their supporters, it was not until the late 1980s that homosexual marriage was again hotly contested in the courts, the state and national legislatures, by the public at large, the mass media, and within the gay and lesbian community itself.

In 1971, Richard John Baker and James Michael McConnell brought the first case of same-sex marriage to court in Minnesota. Along with arguing their constitutional rights, they cited recent anti-miscegenation laws in support of their plea, all of which the court rejected. The first lesbian case, *Jones v. Hallahan*, was brought in Kentucky in 1973. Again, as would continually happen, the case was lost on the grounds of falling outside the "dictionary" definition of marriage. During the 1970s, a number of other court cases were lost, though there were a few small victories, such as a marriage license granted to a gay couple in Boulder, Colorado, which encouraged numerous gay and lesbian couples to apply successfully for marriage licenses. However, the decision was later overturned by the Attorney General and all licenses were revoked. In 1975 the Arizona legislature passed an emergency bill defining marriage as only being possible between a man and a woman. This bill set up a precedent for other state legislatures.

From the 1970s through the mid-1980s the rise of radical lesbian-feminism, coupled with AIDS concerns, dominated political energy and time within the lesbian and gay communities. Early radical lesbian-feminist theory argued against the institution of marriage in general, and many lesbians questioned the focus on lesbian and gay marriage rights. The graver issue of the AIDS epidemic so dominated people's lives that comparatively lesser issues such as marriage rights became secondary. Yet, ironically, it might be argued that both the lesbian-feminist movement and AIDS activism may have provoked the issue of same-sex marriages to re-surface by encouraging more people to come out. By politicizing increasing numbers of homosexuals, raising public consciousness about lesbian and gay issues, and attempting to eradicate the image of gays—most particularly men—as promiscuous people incapable of long-term relationships, the marriage issue once more came up for discussion. Additionally, the feminist movement's push towards passing the Equal Rights Amendments later had a great effect on an extremely prominent same-sex marriage case in Hawaii in the 1990s, where the state ERA was used as an argument for legalizing such marriages.

In 1986, the American Civil Liberties Union declared that they would seek to eliminate those legal barriers preventing lesbians and gays from marrying. In 1989, the San Francisco Bar Association called for gay and lesbian marriages, and two gay Chicago journalists filed complaints with the Illinois Department of Human Rights, accusing the state of sex discrimination for refusing gay marriages. By the 1990s, many activists were trying to force the passing of pro-marriage bills, while license applications and court cases continued, along with the filing of discrimination complaints with Human Rights Commissions. The issue started gaining momentum in the general public and, in 1989, a *Time* magazine poll reported 69 percent disapproval, 23 percent approval, and eight percent unsure on the issue of legalizing same-sex marriages. Three years later, in a 1992 *Newsweek* survey, the figures had altered to 58 percent against, 35 percent for, and seven percent unsure.

The most well-known court case to act as a catalyst in advancing the cause of same-sex marriage was that of *Baehr v. Lewin*, heard in Hawaii in 1991. Three same-sex couples sued the state of Hawaii for refusing to issue them marriage licenses, claiming that the refusal violated Hawaii's state Equal Rights Amendment (ERA) barring discrimination on the basis of sex. In May 1993, for the first time in U.S. legal history, the Hawaii Supreme Court ruled in favor of lesbian and gay marriage. In a December 1996 trial, Circuit Judge Kevin Chang ruled against the state of Hawaii on almost all counts, declaring that the state could not deny marriage licenses to same-sex couples and ordering the state to pay the plaintiffs' litigation costs. The next day, the judge stayed his decision pending appeal to the Hawaii Supreme Court.

Anti-gay groups and political leaders feared that lesbians and gays would flock to Hawaii to marry. They furiously worked to change the constitutional mandate providing interstate recognition of marriage whereby each state must recognize and honor a marriage license granted in any other state. The biggest blow to the gay and lesbian community came with the passage of the Federal government's Defense of Marriage Act (DOMA) in 1996, which defined marriage for federal purposes as a legal union between one man and one woman, and permitted states to ignore out-of-state gay and lesbian marriages, despite constitutional law that ruled otherwise. Activists planned to challenge DOMA.

By the late 1990s, over 30 states enacted some type of anti-same-sex-marriage legislation, explicitly limiting marriage to one man and one woman. These 1990s laws differed from those passed in the 1970s because they discussed marriages within their own state as well as the interstate recognition of marriages. In the November 1998 elections Hawaii voters passed a ballot saying there should be a constitutional amendment defining marriage as one man and one woman. Although a blow to advocates of gay and lesbian marriage, a committee had yet to draft an amendment on which a vote would be taken. If passed, the amendment would make it more difficult, but not impossible, for a judge to declare same-sex marriage legal.

While conservative and right-wing elements battled against the gay marriage activists, the lesbian and gay communities also debated the issue. Many fought for same-sex marriage rights, believing they deserved the same civil rights as heterosexual couples. Others felt fighting for marriage rights was a middle-class white issue that detracted from broader issues, and that fighting for marriage rights was bowing to a conservatism to be "just like everyone else." Some lesbians and gays felt it was more important to fight for domestic partnership rights for all and abolish the age-old unjust institution of marriage for everyone.

Both within the lesbian and gay communities and the heterosexual constituencies, the heated debate as to what defines marriage continues to rage, and plays into the hands of the Moral Majority. Irrespective, however, to which side of the argument any one individual, state, or religious body adheres, the issue is one of major significance for legal and civil rights in both the national and local political arenas of the United States.

## Gay and Lesbian Press

For fifty years gay and lesbian presses in America have published papers and magazines that give a distinctive voice to their concerns. Their editorial approach and journalistic style—unabashed, irreverent, and confrontational—reflect a commitment to bolstering the strength of the gay community that they serve, and to documenting the homophobic attitudes of society. The dissemination of ideas through the written word of the gay and lesbian presses has been a building block in the development of the gay subculture. The publications act as a powerful resource in the promotion of homosexual rights on a national and international scale, and as a coalescing agent in bringing together gay activists and closeted individuals, those from rural areas and urban gay ghettos. Mirroring the diversity of the gay and lesbian community, its presses are as varied as the interests of its constituency. Some publishers focus upon either gay or lesbian issues, while others maintain a more inclusive gender stance.

The core of the press group is comprised of a small collection of specialist presses, along with a widespread array of local and national newspapers and magazines. Historically, the distribution of gay and lesbian books was generally through privately owned gay and lesbian bookstores, located in urban gay neighborhoods. Initially there was strong opposition by regular booksellers to stocking gay and lesbian titles, but this changed by the 1990s when booksellers, along with other commercial enterprises, had come to recognize the gay and lesbian market as a vast untapped resource. It was predicted that by the year 2000, more than 20,000 gay and lesbian titles would be published.

During the first half of the twentieth century most of the materials published that provided a positive viewpoint on homosexuality were issued through private presses. Often the publications produced were of poor quality, frequently printed by hand, typed, or copied on mimeograph machines. In this discrete endeavor, the print runs were necessarily small, though there were notable exceptions in the literary field, where homosexual concerns were explored under

the guise of metaphorical language and symbolism. The precursor to the modern-day gay and lesbian presses can be observed in two early twentieth-century German periodicals, *Der Eigene* and *Jahrbuch für Sexuelle Zwischenstufen*.

The sexologist Magnus Hirschfeld was the editor of the *Jahrbuch für Sexuelle Zwischenstufen* from 1899 to 1923. Published in Berlin, the journal contained an academic perspective on homosexuality featuring full-length articles, bibliographies of new books, and articles by Eugen Wilhelm. *Der Eigene*, headed by Adolf Brand, was devoted to the field of arts, and later developed into a publication of *Gemeinschaft der Eigenen*, a German homosexual movement. The publication was high in quality, with many black and white, sepia, and color illustrations. *Der Eigene* was published from 1898 to 1930, until the rise of the National Socialist movement in Germany, which culminated in the upswing of Nazi persecution of homosexuals in the mid-1930s, bringing the flourishing gay presses to an abrupt halt.

During the 1920s small and secretive gay presses started to emerge in the United States. The first gay publication to emerge was Henry Gerber's short-lived *Friendship and Freedom* (1924). The magazine was published by the Society for Human Rights, founded by Gerber in Chicago. Two issues were published, produced on a mimeograph machine and running to approximately 100 hundred copies. When police learned of the activities of the Society for Human Rights they seized the remaining copies of *Friendship and Freedom* and arrested the membership of the group, including Gerber, who was dismissed from his postal job as a result of his activities. He also worked on another publication, *Chanticleer*, during the 1930s, of which 50 percent of the contents were devoted to homosexual issues and the remaining proportion to atheistic advocacy. Gerber also published a single-sheet mimeographed newsletter for Contacts pen pal club from 1930 to 1939. The newsletter contained a few short news articles and was distributed among 30 to 70 members of the club. None of these publications were able either to appeal to or demand a large readership due to limited publishing numbers, geographic constraints, and the restrictive attitudes of society. Most existed on the margins of journalism, fearing the intervention of the police or government officials under one pretext or another.

Following World War II there was a revival of the Homophile Movement in the United States, and new gay and lesbian journals began to emerge. The earliest surviving publication, *The Ladder*, dates back to 1947, and was edited by Lisa Ben in Los Angeles. Lisa Ben was the author's pseudonym, an anagram for lesbian, used to conceal her actual identity. Small press runs of *Vice Versa* were printed from 1947 to 1948. Typical of publishing during the era, the periodical was typed on a dozen carbon copies and distributed by hand at several Los Angeles lesbian bars. *Vice Versa* helped to lay the groundwork for the creation of a gay and lesbian press in the United States. Early in 1953 Martin Block, Dale Jennings, and Bill Lambert planned what would become the first openly sold gay and lesbian magazine in the nation. The title, *ONE Magazine*, was derived from the Carlyle quote "A common bond of brotherhood makes all men one." Martin Block edited the first issues of *ONE* in 1953, and Dale Jennings took over for the final part of the year. The format was small, a six by seven-inch pamphlet, with only 500 copies printed, and sold for 20 cents. Distribution and sales occurred primarily at gay and lesbian bars and organized homophile meetings. Most of the issues focused on news, homosexual persecution, and police harassment, but the journal went further than some of its predecessors and included fiction, poetry, and theoretical and political articles. The mission of the editors and staff of *ONE* was to remove homophobic

attitudes from within the homosexual community as well as from society at large, while simultaneously creating and nurturing the community and its culture. From *ONE Magazine* also sprang the membership newsletter, *ONE Confidential*, and the first scholarly treatment of homosexual issues, *ONE Institute Quarterly of Homophile Studies*.

Jim Kepner joined the staff of *ONE Magazine* in 1954. A victim of police harassment in a bar raid, Kepner's writings advocated the need for gay self-respect, education, community-building, and gay identity. While the writings of Kepner and others at *ONE* took a militant stance, *The Mattachine Review*, established by Harold Call in 1955, subscribed to an assimilationist and conformist viewpoint. A squeaky clean image was advocated and promoted by the *Mattachine Review* and by *The Ladder*, a Daughters of Bilitis publication, as the tool for gays and lesbians to gain entree into a society known to repress homosexuals. In spite of the fact that these early gay presses worked collegially well together, *ONE* was frequently chastised by *Mattachine* for its aggressive and confrontational attitudes, while the Daughters of Bilitis were offended by it. The women of the Daughters of Bilitis, *Mattachine*, and *ONE* denied that there were separate women's issues as such during this period. Many insisted they were just like everyone else, with a strong sense of commitment to the gay community. Many women were included as authors in *One Magazine*, with an all-women's issue printed in February of 1954. Topical concerns and coverage of women was also a key facet of *ONE Magazine*.

By the end of the 1950s, monthly homosexual magazines were being discreetly mailed, first class, in plain brown wrappers to avoid interception by postal authorities. The contents mainly contained news articles, editorials, literature, and non-erotic illustrations that were subtly suggestive rather than graphic. Personal ads did not appear due to legal and societal constraints.

The turbulence of the 1960s saw both a changing attitude towards homosexuality and the development of an underground press, which acted as fertile ground for new gay publishers. These unprecedented materials held a hard edge and bite. Obscene language appeared frequently in the articles, and personal ads became a regular feature, in which the authors would express their most intimate desires and fetishes. The Gay Liberation Movement had found its voice by the end of the decade in publications such as *The Advocate*, *The Body Politic* (Toronto), *Come Out, Gay Community News* (Boston), *Gay Sunshine*, and *Gay* (New York).

During the 1970s gay and lesbian presses grew and flourished. More magazines, newspapers, and newsletters began to appear, many with a specialized identity featuring religious, political, or professional interests. Local and regional publications also burgeoned, and as the proliferation of gay and lesbian periodicals increased so did the "in your face" frankness of the content. New homosexual organizations were created on both sides of the gender divide, many of them distributing their own publication. Some of the new periodicals had a short life, while others have continued printing to the present day.

Glossy illustrated magazines focusing on male nudity, erotic illustrations, short stories, and personal and classified advertisement rich in graphic detail became a common feature of the gay press during this period. Magazines such as *Blueboy*, *In Touch*, and *Mandate*, became more readily available on the newsstands or by subscription. Their articles and editorials quickly reached a nationwide audience, creating a norm of taste and attitude within the gay community. Beyond the major urban centers, many smaller cities began producing local gay newspapers. Often distributed at the gay

bars, some became known as "bar rags." Many of these newspapers joined forces to found the Gay and Lesbian Press Association. More importantly, new scholarly journals such as the *Gai Saber* (1997-1978), *Gay Books Bulletin/Cabirion* (1979-1985), and *Journal of Homosexuality* (1974—) provided an academic basis for the pursuit of in-depth gay and lesbian research and university studies.

The gay and lesbian press market has predominantly been segregated by gender. Book sales are ranked on separate male and female bestseller lists, with few bestsellers appearing simultaneously on both. During the 1960s and early 1970s many of the lesbian publications were usurped under the feminist banner. Signs of a developing lesbian press could be observed from Marie Kuda's Lesbian Writers Conferences, which were held annually from 1974 until 1979. The establishment of lesbian-friendly presses made it possible for fiction and non-fiction to be published in book form rather than in small circulation magazines. Support for lesbian writing was due in large part to women's bookstores across the country, which made lesbian books more accessible than ever before. These bookstores have continued to play a significant role in the sale of lesbian materials.

Through the power of the written word gay and lesbian presses have created a common language and a shared frame of reference for a diverse population of gays and lesbians. Bonding together through periodicals and books, the specter of isolation has been removed, and replaced by a sense of "gay identity." The presses have also created a window through which the outside world can look at the many aspects of gay life, and have provided a written record for deeper understanding and further research.

—Michael A. Lutes

## Gay Liberation Movement

The tidal wave of social change that began with the black civil rights movement of the early 1960s carried many other social movements on its crest. These included the anti-Vietnam War protests, women's liberation, and the gay and lesbian liberation movement, and all of these movements owed tremendous debts to each other. Many gay men and lesbians worked in the civil rights, anti-war, and feminist movements and their labor to fight oppression in these movements sparked dissatisfaction with the hidden oppression in their own lives. Many people, even those working politically in other

movements, saw sexual orientation as a personal issue, removed from politics. Even progressive activists, who were sympathetic and respectful of many differences among people, often ridiculed gays as savagely as their conservative counterparts. Feminism, in particular, began to change this perception, with its emphasis on the political meaning in each person's experience. Gays began to view their sexuality as a political issue rather than a shameful personal secret.

Though there had been work historically to improve the status of homosexuals, the beginning of the gay liberation movement is often officially marked on the night of June 28, 1969 at the Stonewall Inn, a gay bar in New York's Greenwich Village. In the pre-gay liberation 1950s and 1960s, even in known gay neighborhoods like the Village, gay bars were shadowed places. Gay people kept their sexuality hidden, and much about homosexuality was illegal, from cross-dressing to same-sex dancing. Gay bars were one of the few places gays could meet in public, and these bars were often run by members of organized crime, who were happy to profit from the illegitimate status of homosexuality. Police frequently raided gay bars, where proprietors sometimes had warning systems so that gay men and lesbians could switch partners quickly when the police entered a bar. Gay bar raids were also often an opportunity for police to brutalize gays, with little fear that their victims would report them and chance being publicly labeled "queer." Those who looked most obviously

gay—the drag queens in dresses and high heels and the lesbians in men's suits—were singled out for harshest treatment. That June night at the Stonewall Inn, the patrons of the bar did not respond in the passive way gays had usually responded to attacks by the police. Tired of being helpless victims, the gays fought back, rioting in the streets of "their" neighborhood, shouting the new rallying cry, "Gay Power!" The riots lasted for three days and received unprecedented media coverage.

Popular mythology says that the riots occurred on the day that singer Judy Garland died from a drug overdose, thought by many to have been intentional. Many gays, especially gay men, identified strongly with Garland's ravaged vulnerability and passionate singing style, and the story goes that when the police arrived to harass a gay community grieving over the loss of an idol, something snapped and anger and pride welled up to take the place of shame. In fact, Garland's death took place almost a week before the riots, on June 22. But there is a truth that underlies all mythology, and the truth is that the Stonewall riots were a watershed that marked a change in gays' and lesbians' perceptions of themselves. The status of homosexuals did not change overnight, but neither could things ever go back to the way they had been before the riots. Almost as if they had been waiting for a catalyzing event, gay liberation organizations began to spring up across the United States and around the world.

There had always been gay men and lesbians, and they had been more or less visible and more or less oppressed, depending on their time in history and their cultural context. In previous centuries, for example, upper-class women had lived together in lesbian relationships called "Boston marriages" which were socially tolerated. It was not uncommon for women in pioneer country to pass as men to attain some of the freedom of movement and financial independence denied to them as women, and frequently these women married and lived with their "wives." Many Native American cultures made a place for both women and men who did not identify with their traditional gender role, or who had same-sex lovers. In the early part of the twentieth century, African-American drag "debutante" balls, were major social events that drew elite society, straight and gay alike. These balls were satirical reproductions of the traditional balls where young women were presented to society, and it is from them that we derive the term "coming out," for gays and lesbians publicly announcing their gayness. The more repressive connotation, that of gays "coming out" of a dark closet, did not arrive until the 1950s, and the less socially lighthearted atmosphere of that decade.

In Europe, World War II meant Nazi aggression and the attempted genocide of European gays. However, the upheaval of war brought openness and opportunity to gays in the United States, whether in the military or on the home front. Military service had always provided a same-sex environment and gays often connected there, and the necessities of war did not permit an anti-gay campaign which would reduce U.S. forces. The defense industry attracted thousands of people to urban centers where gays who had formerly been isolated in small towns around the country could find each other. Once the war was over, society took on the job of repressing those women and gays who had found unusual freedom during wartime. Heterosexual women were sent home to be housewives, and gays and lesbians were the subject of a concerted "witch hunt" by the Truman administration. Hundreds of gays working for the government lost their jobs.

Gay and lesbian organizing itself did not originate with the 1970s gay liberation movement. As early as 1924 Henry Gerber was jailed and fired from his job for founding the gay and lesbian Society for Human Rights in Chicago. In Los Angeles, in 1950, foreshadowing the connection of gay liberation and leftist politics, a group five men, three of them Communist Party members founded the Mattachine Society. The group's goal was "to promote a sense of solidarity and group identity among homosexuals." Mattachine was one of a number of early "homophile" associations which included the lesbian group Daughters of Bilitis, founded in San Francisco in 1955. These groups promoted acceptance of homosexuals; their members wrote, spoke, and even picketed in defense of that cause. Their other function was to provide a safe place for lesbians and gays to meet, apart from the bars. Certainly the idea of social safety for gays was radical enough, but by the 1970s, influenced by the civil rights movement and feminists, gays demanded more.

Following the Stonewall Riots, new gay liberation organizations began forming. Some, like New York's Gay Liberation Front and Radical Fairies had chapters across the country. Others were smaller, local organizations, created by activists in many urban areas and progressive small towns nationwide. The Furies in Washington, DC, the Lesbian Alliance in St. Louis and the Atlanta Lesbian Feminist Alliance (ALFA) were only a few of hundreds of groups that formed and re-formed. Political gays and lesbians began by reclaiming the names that had been used against them. "Gay" itself, once a general term for immorality, had been used by gay men in the 1920s and 1930s as a code word to identify each other. Once the term "gay" had

been reclaimed by homosexuals to describe themselves, radicals began to look for ways to disempower the anti-gay epithets that had been hurled at them. They began to reclaim words such as "dyke" and "faggot" for use among themselves, thus denying the words their negative power, much as African Americans had reclaimed racist slurs for an exclusive usage that reinforced black solidarity.

With few exceptions, homosexuality had previously been treated in American society as either a crime or a disease. Homosexuals who did not regularly end up in jail, often ended up in mental hospitals subjected to various brutal "cures," such as aversion therapy and electroshock therapy. Since any deviation from their prescribed societal role often landed women in mental hospitals, many lesbians suffered this form of oppression. After the Stonewall Rebellion, as it came to be called, gay activists began to work not only for social acceptance, but for legal rights. They demanded the right to live and work, free from discrimination, and they demanded that homosexuality be removed from the American Psychiatric Association's list of mental diseases. In 1973, thanks to the work of lesbian and gay activists, the APA did remove homosexuality from the list.

Gays also began to work on decriminalizing homosexuality, which was illegal in many states. In 1962, Illinois became the first state to repeal its anti-gay laws, and activists kept up the pressure until by 1998, only 19 states still had anti-gay laws on the books. Not content with mere legality, gay rights activists worked for gay rights protections with varying degrees of success. One example: in 1973, the city council in the liberal university town of Boulder, Colorado voted in a gay rights law. Outraged, the conservative citizenry not only repealed the law, but voted to recall every member of city council that voted for it.

With the new movement and the increasing number of new organizations inevitably came differences and conflict. Older gays who had come out without the support of a very public movement resented the often dismissive attitudes of the young "liberated" gays. Younger gays challenged the political conservatism and butch and femme gender roles that had often been practiced by their predecessors. Some gays, many of them white men, were fairly comfortable with their place in society, and felt that changing society's attitudes about homosexuality was all that was needed. Others saw many things about American society that needed to be changed and viewed gay liberation as inevitably connected to other progressive liberation movements. This argument over whether gay rights was a "single issue" fight or part of a larger leftist liberation struggle was to become perhaps the second biggest split in the movement.

Possibly the biggest split was between men and women. Some lesbians, coming to the movement through feminism, questioned their commonalities with gay men, preferring to ally themselves with heterosexual women instead. Insisting that "gay" was a word that defined gay men, many chose to distinguish themselves by using the word "lesbian" or "dyke." The feminist movement began by resisting accusations of lesbians in its ranks, fearful that identification of lesbians with feminism would undermine the legitimacy of women's liberation. However, many of the feminist leaders were lesbians, and, in the increasing atmosphere of gay openness, they demanded recognition. More divisions followed: lesbian feminists threatened not only the heterosexual male establishment, but also heterosexual feminists and non-feminist lesbians. Lesbian feminists themselves split, dividing those who still identified with heterosexual women's issues from the separatists, who tried to have as little as possible to do with men or non-lesbian women. While these splits created discord and discomfort, they also created an energy that propelled dozens of

groups, conferences, newspapers, bookstores, and small presses throughout the country. The new atmosphere of gay liberation was creating a frenzy of dialog on subjects that had once been shrouded in silence.

Though, as with feminism, the gay liberation movement was usually presented by the press as a white and middle-class movement, gay activists came from all classes, races, and ethnic backgrounds. Many of these activists attempted in their agendas to focus on the racism, classism, and sexism within the movement, though their attempts were not always successful. Some gays of color and Jewish gays formed their own groups, seeking solidarity and support. Events such as the 1976 West Coast Conference on Faggots and Class Struggle in Eugene, Oregon, and the Dynamics of Color lesbian conference in San Francisco in 1989 are examples of the many efforts made to address difficult intra-movement conflicts.

Perhaps the most controversial aspect of the gay and lesbian liberation movement was its connection to the counterculture. Movement gays were no longer content to ask for acceptance by society; they demanded that society change to reflect the evolving definitions of gender and gender roles. Radical gays challenged the ideas of nuclear family, of monogamy, of capitalism, and, though not all gays agreed, the movement brought up topics of discussion, and those discussions would forever change the way American culture saw itself.

Lesbians were intent on creating and developing “women’s culture” that included new forms of spirituality, literature, and music, all stemming from and connected to lesbian feminist politics. Lesbian music became a growing art form and women’s recording artists gained popularity on both coasts and in the midwest. In 1975, hundreds of women attended Michigan Women’s Music Festival. The Michigan festival, organized by lesbians, combined concerts and political workshops and was the largest of many regional women’s cultural events.

The notion of free sex, espoused by the counterculture hippies had opened up acceptance of differing sexual lifestyles among the young, as well as legitimizing styles of dress and appearance formerly considered outlandish. Gay men in particular reveled in the new sexual openness. Their celebratory exuberance resulted in the rocketing popularity of the disco phenomenon. As gay identity became more proud and less shameful, the image of the gay bar as a dark hideaway also changed. Gay disco bars, which had flashing lights and loud music with a driving sexual beat became the social centers for gay men, and, to a lesser extent, lesbians. The trendy, exciting bars also attracted straight people, and this moved gay culture into the mainstream in a way that demonstrations could not accomplish. The disco scene was also heavily associated with casual sex and recreational drug use, which in part was responsible for its end.

By 1981, medical authorities were beginning to identify a new virus the called GRID or Gay Related Immune Deficiency. Soon, they had changed the name of the disease to Acquired Immuno-Deficiency Syndrome (AIDS) and re-evaluated its connection to the gay community. Though AIDS is not a gay disease, it is sexually transmitted and the promiscuous lifestyle and drug use common within many gay male communities made them an ideal place for the virus to spread. It did spread, and, as thousands of gay men died, AIDS became a focus for the work of gay rights activists.

By the late 1970s, the revolutionary fervor that had characterized early gay liberation politics, had succumbed to the same backlash that had quieted much of the 1960s activism. Fundamentalist Christians were particularly threatened by any legitimization of gay lifestyles, and the anti-gay agenda became a platform issue for conservative

Republicans. Right-wing Christian activist Anita Bryant launched her anti-gay Save Our Children campaign in 1977, and many gay rights advances were threatened. Though leftist gay activists continued to fight the challenges of the right wing, the excitement of the nationwide movement had been dampened. In 1987, the AIDS Coalition to Unleash Power (ACT-UP) formed to fight for de-stigmatization of the AIDS virus, money for AIDS research, and other AIDS related issues. The arrival of ACT-UP with its 1960s-like aggressive street tactics, politicized the gay male community and many supportive lesbians around the issue of AIDS, and led the way to other “second generation” activist organizations such as the Lesbian Avengers, which originated in New York and expanded to chapters across the country. The first gay and lesbian rights march in Washington, D.C., in 1979, attracted one hundred thousand marchers. By 1993, when the third march on the capitol was held, almost a million people attended.

Of all the contributions that gay activism has made to society, one of the most unexpected is that it has given young gays a very public older generation. As in every other grouping, an older generation supplies mentors and role models—and something to rebel against. Like other children of the baby-boom generation, the 1970s gay activists have been nonplussed to find their own “children” espousing quite different politics and beliefs than the ones that drove them. Where post-Stonewall gays rejected gender roles, 1990s gay youth has rediscovered and embraced butch and femme. While feminism provided the foundation for many 1970s lesbians to discover and acknowledge their own identities, some lesbians in the 1990s call themselves “post feminist” and reject what they see as the unnecessary polarity that feminism espouses. Their gay liberation movement has expanded to include bisexuals and transgendered people.

The Stonewall riots are commemorated each year around the end of June on Gay Pride Day. In cities all over the world, gays gather for parades, marches, celebration, and political action. The 1990s have brought renewed energy to right-wing attacks on gay rights as well as “gay bashing” and other violent attacks on gays. Media coverage of gays and lesbians is limited to gays that fit the conservative “middle America” stereotype, and coverage of radical gays is almost non-existent. Disagreements among gays over sex, race, class, and politics continue. Gay and lesbian identity is still stigmatized, and “coming out of the closet” is still an act of personal courage and risk that many feel unable to perform. However, gays are no longer invisible figures of the shadows. Gay characters appear on many prime-time network television shows and on the covers of national magazines, not only as political figures or as curiosities, but as celebrities and role models. Gay and lesbian youth, while still at risk in many ways, no longer have to rely on whispered epithets to learn what the words “gay” and “lesbian” mean. The decades of secrecy, shame, and oppression that culminated in three days of rioting in Greenwich Village ended that summer, and a new era began. That era is still unfolding.

## Gay Men

While homosexuality has been documented in most cultures throughout history, the modern American gay male community began to form itself in the early 1900s. The word "gay," once widely used in the nineteenth century to describe any sort of debauched behavior, gained a new meaning when gay men in the 1920s and 1930s used it as a code word to identify each other. Though their communities were kept underground for decades, hidden from a larger society, which for the most part condemned homosexuality as immoral and perverted, gay men have exerted a tremendous influence on that society. Through arts, fashion, literature, entertainment, and politics, gay men, both visible and invisible, have been one of the major forces in shaping the twentieth century.

Around the 1920s, urban gays had begun to find ways to meet and socialize. Most gay meeting places were clandestine, but some were tolerated or even considered fashionable by straight society, such as the African-American drag "debutante" balls of the early twentieth century, which were major social events that drew elite society, straight and gay alike. "Drag," where men dress in women's clothes, complete with wigs and makeup, has long been a staple of some men's gay identity, and the gay drag queen is both stereotype and icon.

The 1940s were a galvanizing time for gay communities. World War II caused major population shifts, as young people left rural areas to join the army or get jobs in cities in the defense industry. Gays began to find each other in unprecedented numbers, and, having made these connections, they were reluctant to return to the isolation of small town life. Many remained in urban centers and developed their communities, opening clubs and bars where they could meet and socialize.

The return to "normalcy" after the war led to increased repression and even "witch hunts" for gays in the late 1940s and 1950s, but, like a pressure cooker, repression eventually led to release. The black civil rights movement of the 1960s and later the anti-war movement and women's liberation inspired gays to seek their own rights. In 1969, decades of repression exploded in the "Stonewall Rebellion," three days of rioting in the gay section of New York's Greenwich Village. In the forefront of the riots were the drag queens, the most visible of gay men. By the 1970s, gays enjoyed a visibility and freedom previously unknown in American history.

Though male homosexuality has been stigmatized by mainstream culture both historically and in the present, it is widely known that many men who would never identify themselves as gay have had sexual experiences with other males. In situations where a same-sex environment is enforced, such as prisons and male boarding schools, it is recognized, if not totally accepted, that men and boys will "make do" with other males until females are available to them. That this behavior is considered inevitable has to do in part with the view of male sexuality, which is often seen as a driving force which must be satisfied, quite apart from affection and romance. Gay men, freed from the constraints of female expectations around sexuality, have

often reveled in sex itself, creating clubs and baths for easy access to anonymous sex and claiming areas of public parks as "cruising" areas. While there are certainly many gays who are celibate or monogamous, many gay men freely admit to dozens or even hundreds of sexual partners.

The gay liberation movement of the 1970s, while challenging the oppression of gays, also offered gay men a new pride in their sexuality. As gay identity became more proud and less shameful, the image of the gay bar as a dark hideaway also changed. Gay disco bars, which had flashing lights and loud music with a pounding, sexual beat became the social centers for gay men. The trendy, exciting bars also attracted straight people, moving gay culture dramatically into the mainstream. The disco scene was also heavily associated with casual sex and recreational drug use, which in part was responsible for its end.

By 1981, medical authorities were beginning to identify a new virus the called GRID or Gay Related Immune Deficiency. Soon, they had changed the name of the disease to Acquired Immuno-Deficiency Syndrome (AIDS) and re-evaluated its connection to the gay community. Though AIDS is not a gay disease, it is sexually transmitted and the promiscuous lifestyle and drug use common within many gay male communities made them ideal conduits for the virus to spread. The virus did spread, and, as thousands of gay men died, AIDS became a focus for the work of gay rights activists. Galvanized by the deaths of their friends and lovers, gay men began to organize to fight for de-stigmatization of the AIDS virus, money for AIDS research, and other AIDS related issues.

Because AIDS affects them so deeply, it has continued to be a central issue for the gay men's community into the 1990s. Controversy continues over community response to the virus. Some insist that modification of gay male sexual behavior, such as safe sex and monogamy, is the only responsible way to confront the disease, while others argue that such modification erodes the fabric of promiscuity that is the very basis of gay male identity. Some support Human Immuno-deficiency Virus (HIV) testing, while others question the connection between HIV and AIDS, and most are suspicious of the willingness of government or society to guard the health and rights of gay citizens.

Gay men have been severely punished for their sexual preference by ridicule, threats, and physical abuse. Perhaps because of the misogyny that is rampant in U.S. society, tomboyish behavior in girls is often tolerated and even rewarded, while feminine behavior in a male is almost universally condemned. Boys who are small, gentle, or artistic will in all likelihood, be taunted, sneered at, or beaten at school and even within their own families. "Gay bashings," vicious physical attacks on those suspected of being gay, are still common occurrences. Many states continue to allow a so-called "unwanted homosexual advance" defense for such assaults, the argument being that a flirtation or proposition from a gay is so repugnant that one may be excused for responding with violence.

While gayness has been highly stigmatized, there has been a traditional acceptance, even expectation of gay men in certain occupations. Hairdressers and interior decorators are generally supposed to be gay, and many are, if only because these are occupations that have traditionally been open to identifiably gay men. Fields such as music, art, and theater, have also attracted gay men who wish to be open about their lifestyle, since the arts community tends to be tolerant. Writers like Walt Whitman and James Baldwin, musicians like Cole Porter, and playwrights like Noel Coward are only a small sampling of the many gay men who have made unparalleled cultural contributions.

Gay men have not only been influential in the arts, but also in many other areas where it has been more necessary to keep their sexual preference a secret. On two ends of this spectrum we find Bayard Rustin and J. Edgar Hoover. Rustin, a civil rights leader on a par with Martin Luther King, Jr., was forced to downplay his public identification with the movement by those who thought his gay identity would harm the black struggle. Hoover, head of the Federal Bureau of Investigation for almost 50 years, hid his longtime relationship with Clyde Tolson, his second in command at the FBI, while using his knowledge of the power of such information to manipulate public policy by keeping files on the guilty secrets of public figures.

One well-known facet of gay male culture is the glorification of the diva. Perhaps because they can identify so strongly with public vulnerability, gay men have traditionally selected certain female stars to revere and emulate. Some of these, like singers Barbra Streisand and Bette Midler, owe their propulsion into stardom to their gay male audiences. Others, like Judy Garland and Joan Crawford, simply became icons, one the vulnerable waif, the other the tough bitch, that many gay men identified with.

The identification with the diva is part of another cultural phenomenon, the friendship between gay men and straight women. Sometimes derisively called “fag hags,” straight women who choose gay men for friends are usually seeking a non-threatening relationship with a man. Gay men may also offer more emotional depth in a friendship with a woman than a heterosexual man. Similarly, a gay man may find it comforting to receive emotional support from a source that is not sexual. Such relationships between straight women and gay men (even though the men may not always be overtly gay) have been depicted in films such as *Breakfast at Tiffany's* (1961), *Cabaret* (1972), and *My Best Friend's Wedding* (1997). Even on television, where homosexuality has been scarce, shows like *Love, Sidney* (1981-1983) and *Will and Grace* (1998—) have found success by the safe pairing of gay men with straight women.

While gay-identified men are often oppressed, some social analysts argue that American society itself has a male homosexual perspective that stems from its sexism and patriarchy. Like ancient Greece, where love between men was viewed as the highest form of spiritual and physical connection, American society endows male friendship with a loyalty and honor it does not deem possible in heterosexual relationships. Much is made of male bonding rituals, and, while a slap on the back or a punch in the jaw might take the place of a kiss, nonetheless, male bonding is deeply physical and emotional. A man might never expect to share the intimacy with his wife that he does with his football, hunting, or poker buddies, and, indeed, heterosexual men often voice a low opinion of women. Perhaps it is because gay men demonstrate the tenderness of this male bonding that they are so threatening to a society where men must be rough, tough, and in charge of women. Perhaps in the long run, gay liberation, will result in nothing less than a wider liberation of the social order.

## Gaye, Marvin (1959-1984)

During his tenure at Motown records, vocalist and songwriter Marvin Gaye expanded the boundaries of what soul music could address *and* how it could sound. His early Motown hits “How Sweet It Is (To Be Loved by You),” “Ain't That Peculiar,” and “Ain't Nothing Like the Real Thing” (with Tammi Terrell) helped define the 1960s Motown sound. His 1968 “I Heard It through the Grapevine” became Motown's biggest-selling record to date. On genre-defying albums such as 1971's *What's Going On*, Gaye opened soul music to allow for overt political protest, while on 1978's *Here, My Dear* he reduced his subject matter to a level of pain and honesty that had rarely been touched in any form of popular music. During his lifetime, Gaye battled many demons—the most significant of which was his father, a man with whom Gaye had an ongoing, troubled relationship. That relationship ended tragically April 1, 1984, when Gaye's father gunned him down in his parents' home after a heated argument.

Born Marvin Pentz Gaye, Jr. to a devoutly religious family that belonged to the House of God (a conservative Christian sect that drew from Pentecostalism and Orthodox Judaism), Marvin had a troubled childhood growing up in Washington, D.C. Gaye was beaten almost daily by his father, an ordained minister at the local House of God church, and felt stigmatized and out of place among his peers because of his shy nature and the gossip-attracting, flamboyant personality of his father. Gaye grew up amid perpetual confrontations with his father and, by most accounts, was an unhappy child, except when he was singing.

Marvin Gaye

Starting at a very early age, Gaye buried himself deep in music, learning to play drums and piano in church, and later becoming a soloist in his father's church choir. Upon graduating from high school, Gaye enlisted in the Air Force to escape his family life, but after his discharge he returned to Washington, D.C., and sang around town in a number of Doo-Wop groups. During a tour stop as a backing vocalist with the Moonglows in Detroit, Gaye caught the attention of Motown founder Berry Gordy Jr., who hired him as a session musician and eventually signed him as a Motown artist in 1961. Gaye got to know, and fell in love with, Gordy's sister, Anna (who was 17 years Gaye's senior). They were married in late 1961.

After a few minor hit singles and a poor-selling album in the style of his hero, Nat King Cole, Gaye scored his first Top Ten hit with the up-tempo "Pride and Joy." But Motown's pigeonholing of Gaye as an upbeat party song singer ran in opposition to his desire to sing sweet, romantic ballads and resulted in Gaye's long-running conflicts over artistic direction and control of his career. In addition to churning out up-tempo numbers, Gaye also became known as a duet singer, his most beautiful and gut-wrenching songs sung with Terrell. This pairing generated such classics as "Ain't No Mountain High Enough," "Your Precious Love," and "You're All I Need to Get By." Their musical affair sadly ended when she collapsed in his arms onstage, eventually dying of a brain tumor in 1970. By all accounts, Gaye never emotionally recovered from the loss of Terrell, a woman with whom he had a deep emotional connection, though not a romantic relationship.

By the end of the 1960s, America was in the middle of a social upheaval generated by, among other things, the Civil Rights Movement and the Vietnam War. Gaye wanted to find a way to musically address his social concerns but found Motown's assembly-line hit-making method increasingly constraining. Gaye fought against Motown for the release of *What's Going On* (1971), his personal testament against the horrors of the Vietnam War, environmental destruction, and the indignities of ghetto life. Opening with the strains of his tenor voice singing "Mother mother / there's too many of us dying," *What's Going On* was a landmark album. Released to universal critical praise in magazines from *Rolling Stone* to *Time* (which devoted a long, two-column review to the album), the album freed soul music from the limiting subject matter of simple love songs. It also featured more complex and jazzy arrangements that used strings, as well as songs that seamlessly segued into each other. The album became the best-selling album of Gaye's career, a demonstration that an artist's muse and commerce could successfully coexist.

In 1972 Gaye followed up *What's Going On* with the soundtrack to the blaxploitation flick *Trouble Man*, and in 1973 he released the deeply erotic *Let's Get It On*. It, too, was a massive hit. Now at the high point of his career, he sank to one of the lowest points in his life. Severely depressed, he increasingly took large amounts of cocaine while his marriage to Anna dissolved. During the course of his marriage, Gaye's weakness for women made him unfaithful, but the last straw for Anna occurred when he had a second child with Janis Hunter (whom he later married). In a bizarre divorce settlement, Gaye agreed to pay the entirety of royalties for his next album to Anna. Briefly contemplating making a toss-off album, he instead delved deep into their relationship and created what is among the most unusual albums in popular music history, *Here, My Dear*, a double concept album that documented the rise and fall of their marriage, his unfaithfulness, his cocaine habit, his obsession with prostitutes, and other very personal subjects with songs such as "When Did You Stop Loving Me, When Did I Stop Loving You?" and "You Can Leave,

but It's Going to Cost You." Even the album's cover art visually represented their crumbling marriage. Confronting an audience that was clearly unprepared for such a display of raw emotion and dirty laundry, the album flopped.

Gaye sank deeper into a drug-induced depression and financial collapse. He moved to Europe, where he pulled himself out of his hole and recorded 1982's *Midnight Love*, an album that contained his last big hit and winner of two Grammy Awards, "Sexual Healing." Marvin Gaye was shot and killed by his father in 1984; he was posthumously inducted into the Rock and Roll Hall of Fame in 1987.

## Gehrig, Lou (1903-1941)

Baseball great Lou Gehrig (the "Iron Horse") was, alongside teammate Babe Ruth, a powerhouse player on the New York Yankees

Lou Gehrig

during the 1920s and 1930s until his career was cut short by the degenerative disease that bears his name. Born Henry Louis Gehrig in 1903, he was the son of German immigrants who were living in Manhattan. Gehrig's high-school accomplishments earned him an opportunity to play sports at Columbia University, but he was coaxed into signing a professional contract with Hartford of the Eastern League under the surname Lewis. Gehrig hid his identity but not his talent, and the ruse was soon discovered. Columbia University promptly declared him ineligible for the 1921-1922 school year, but in his second year of college, he played exceptionally in both football and baseball. Paul Krichell of the New York Yankees discovered Gehrig in 1923 and offered him a \$1,500 signing bonus, which Gehrig accepted despite his parents' objections. He played most of the year in the minors before making his Yankee debut in September. Likewise, Gehrig spent most of the 1924 season playing in the minors, but in June of 1925, he began a consecutive game streak that would not end until 1939.

Lou Gehrig made an immediate impact on the Yankees, and his ability to hit propelled him to national stardom by the late 1920s. He hit behind Babe Ruth on baseball's most powerful lineup, which the press nicknamed "Murderer's Row," and succeeded in outhitting Ruth by the early 1930s. Gehrig compiled a streak of thirteen consecutive years with more than 100 runs and runs batted in, and a 12-year streak of hitting over .300. He led the American League in home runs three times and in runs four times, and ranks third all-time in RBIs and slugging percentage. The durable first baseman was selected as the American League's Most Valuable Player twice, won the Triple Crown in 1934, and won six world championships as a Yankee.

Statistics alone did not endear Lou Gehrig to the nation. Representing the tireless worker during the Great Depression, the "Iron Horse" established a record for the number of consecutive games played: 2,130 games in succession from 1925 to 1939. Gehrig's consecutive game streak continued despite back spasms, a broken toe, a broken thumb, and 17 different hand fractures. This record stood for more than half a century until it was surpassed in 1995 by Cal Ripken, Jr. of the Baltimore Orioles.

Gehrig's statistics began to slip in 1938, and he lacked his usual strength and mobility. When Gehrig's teammates congratulated him on a routine ground ball in 1939, he knew it was time to take himself out of the game, and he never again played for the Yankees. His ailing health led him to the Mayo clinic where doctors diagnosed him with a rare and fatal degenerative disease called amyotrophic lateral sclerosis (ALS). Since his diagnosis, ALS has been commonly called Lou Gehrig's disease.

On July 4, 1939, the Yankees honored the newly retired Lou Gehrig in front of 62,000 fans. He received awards, retired his number, and then gave one of the most famous speeches in baseball history. Gehrig thanked the many people who touched his life, telling the crowd "Yet today I consider myself the luckiest man on the face of the earth." The powerful speech electrified the nation and epitomized his humble nature.

Gehrig spent the remaining two years of his life working for the New York City Parole Commission and spending time with family and friends. The Baseball Hall of Fame exempted him from the five-year waiting period, and he was honored by induction in Cooperstown in 1939. The story of unconditional love between Lou and his wife, Eleanor, received national attention, and shortly after Gehrig's death, Hollywood made *Pride of the Yankees*, a movie about his life and

marriage that starred Gary Cooper as Lou Gehrig. The movie was a box-office success and was nominated for Best Picture.

See Dr. Seuss

## *The General*

Johnnie Gray (Buster Keaton) has two loves: his locomotive *The General* and Annabelle Lee (Marion Mack). As the Civil War begins, both *The General* and Annabelle are captured by Union spies and taken north across enemy lines. Johnnie follows and rescues both his loves. Although it was a flop when it was first released in 1927, *The General* is probably the best known and most popular of Keaton's films; it has a more cohesive plot than many of his other works and a larger background with an elaborate battle sequence. Johnnie is consistent with other Keaton characters: he meets every adversity with a solemn lack of facial expression and an unbeatable determination.

—Christian L. Pyle

Rubinstein, E. *Filmguide to "The General."* Bloomington, Indiana University Press, 1973.

## *General Hospital*

Created by writers Frank and Doris Hursley, *General Hospital* was one of two hospital-based daytime dramas to premiere on April 1, 1963 (The other was *The Doctors*). Though pre-dating the height of the feminist movement by several years, it nonetheless appealed to a female audience that enjoyed broadening its attention beyond the home by shifting the conventions of the soap opera from the kitchen to the workplace, and from a focus on the family dynamics to one on relationships between coworkers. The show's developers created the hospital staff as a large surrogate family, and wrote storylines that were in a constant state of flux between the personal and professional challenges presented to the main characters.

During its first few years the drama centered on the friendship of Dr. Steve Hardy and nurse Jessie Brewer, and on their complicated love lives. The self-sacrificing Brewer had suffered for years in a marriage to an unfaithful husband who was much younger than she; although she went on to have a number of relationships and several

Emily McLaughlin and John Berardino in a scene from the television show *General Hospital*, 1972.

marriages, she always seemed to return to her original spouse and to further abuse until his death finally freed her. For his part, Dr. Hardy faced his own problems due to an on-again, off-again relationship with an ex-stewardess named Audrey March. In one storyline Audrey becomes pregnant by artificial insemination during a separation from Steve, goes to Vietnam, returns, marries someone else, becomes pregnant again as a result of marital rape, leaves that husband, and reconciles with the always understanding Steve, who adopts her child.

*General Hospital* seemed to lose its focus during the late 1970s despite the efforts of the Hursleys and later writers, including their daughter Bridget, to stick to themes that had brought the show success in the past. When ratings hit rock bottom in 1977 and ABC was considering canceling the program, a last ditch effort at resuscitation brought in writer Douglas Marland, who had created a number of highly successful, youthful storylines on *The Doctors*, and Gloria Monty, who had directed *Secret Storm*, as the new producer. Monty infused the show with prime-time production values by introducing new scenery, crosscutting, and new lighting, and demanding that the actors speed up the pace of the show. Marland created a new storyline centered on 15-year-old Laura Vining (Genie Francis), a previously peripheral character, and her relationship with Scotty Baldwin (Kin Shriner). The story was further complicated by the introduction of a new rival for Laura, the scheming Bobbie Spencer. When Laura killed a taunting older lover in a rage and allowed her self-sacrificing mother to take the blame, the show's ratings really took off, bringing in a younger audience who became particularly hooked on the unfolding tragedy of the mother and daughter.

While Marland continued to develop the stories into the 1980s, Monty continued to shorten scenes, emphasize action over dialogue, and synthesize emerging trends into the show's plots. The efforts of the two practitioners returned *General Hospital* to a top-ten spot in the ratings.

The show reached its peak in popularity in the early 1980s following the departure of Marland and the hiring of his replacement Pat Falken Smith. Smith created what many considered the most controversial story in soap opera history, that of having Laura marry Scotty, but then become fascinated with an older, more sophisticated man, antihero Luke Spencer (Anthony Geary), who raped her in his deserted disco. The show couldn't afford to slow its pace by having a trial or ordering the incarceration of Luke, so the incident was passed off as a seduction, although Laura subsequently spent a year in therapy trying to recover from the emotional damage done by the attack. Nonetheless, whether it was rape or seduction, the chemistry between the two characters incited fan interest to a fever pitch and, despite critical outcries denouncing the producers for condoning rape, the show began to increase its focus on Luke and Laura. As this happened, mainstay characters Steve and Jessie were demoted to supporting status with but a few lines of dialogue each week.

Luke and Laura's wedding on November 16 and 17, 1981, became the most-watched event in the history of daytime TV, even attracting a guest appearance by Elizabeth Taylor, a fan of the show. Monty then steered the show in a more fanciful direction by having Luke and Laura confront the efforts of a mad scientist who, in an attempt at global domination, decides to freeze the world. Although the storyline disappointed *GH* purists, the theme attracted a new teenage audience, and ratings soared. Within a couple of years, however, both actress Genie Francis and writer Pat Falkin Smith departed the show to develop their careers further. Monty assumed the role of head writer. Although plots were both hit and miss among fans, the ratings continued to increase.

By early 1985, after a succession of writers had tried to move the show in different directions with limited success, Smith returned many of the original characters to prominent roles while his focus continued to be on action-adventure themes. When Smith was succeeded by Claire Labine in the 1990s, the emphasis shifted to social issues such as AIDS, organ transplants, and other emerging medical/ethical issues, and *General Hospital* came full cycle, returning, at least in part, to its original premise of drama in the lives of hospital personnel.

## General Motors

The impact of auto manufacturer General Motors on American culture, the economy, and politics is staggering, as is the sheer size of the corporation. For years, GM was the largest corporation on earth, its value greater than most nations. It was the first company to gross more than one billion dollars a year. When GM had a bad year in 1957, commentators said, “GM sneezed and the economy caught a cold,” so interdependent were the U.S. GNP and the fortunes of GM. Controlling more than half of the market and creating more cars than its domestic rivals combined, GM made and sold cars everywhere in the world. Although regulation, foreign competition, and oil shocks have rocked GM the past few decades, for most of its history it has towered over not just the auto industry, but all industry. And from the farmer-friendly, half-ton pick-ups of the 1930s, to the luxurious Cadillac Coup De Villes or the space-age looking Buick LeSabre of the 1950s, to the Pontiac GTO for the youth longing for “muscle cars” in the late 1950s, to the “uniquely American” 1957 Chevy, to sports cars like the Pontiac Trans-Am of the 1970s, to the one and only Chevy El Camino half car/half pick-up of the same decade, GM has produced not just cars, but symbols of American culture.

While Henry Ford staked his claim on manufacturing genius, the “father” of General Motors, Billy Durant, brought to the industry “the art of the deal.” Durant was not just an entrepreneur, he was an expert dealmaker who merged companies and formed GM as a large holding company. GM started with Olds and Buick in 1908, then added Cadillac a year later. Durant, however, expanded too quickly and was forced out by bankers. Undeterred, Durant hired a racecar driver named Louis Chevrolet to design a new car, and in 1915, Durant merged the two companies and regained control. Durant continued to buy not only auto companies, but also suppliers (Fisher Body) and related companies (Frigidaire, which was sold in 1979). Yet, again, Durant overextended and was forced out in 1920, his place soon taken by Alfred Sloan.

If Ford created modern manufacturing techniques (Fordism) to conquer the massive scale of making automobiles, then Sloan created management techniques (Sloanism) to master the managing of a large-scale firm. Sloan’s management ideas on hierarchical line authority became the model for all large corporations for years. Sloan also became the first GM president to engage in collective bargaining when the United Auto Workers staged a series of successful sit-down strikes in GM plants in Flint, Michigan, in 1937. But Sloan’s greatest triumph was his creation of a styling and color department under the direction of designer Harley Earl in 1927. From this concentration on styling, thus on marketing, GM cemented in the American psyche the fact that, according to David Halberstam, “the car was not merely transportation, but a reflection of status, a concept to which most Americans responded enthusiastically as they strove to move up into the middle class, and then the upper middle class.” With the annual model changes—which were often only cosmetically different from the previous year—new car buyers were hooked. It was Sloan and Durant’s vision of a car for every market niche: new car buyers could start cheap with a Chevy and then, as they earned more, work their way up to an Olds, and everyone would dream of owning a Cadillac.

The war years made GM rich, but its wealth became unprecedented in the 1950s with a combination of pent-up demand, the need for a car for suburban living, and the coming of the interstate highway system. In addition to lobbying for the automobile as *the* mode of transportation for Americans, GM also did its best to destroy the

competition. In 1949, GM, Standard Oil, Firestone, and other companies were convicted of criminal conspiracy to replace electric transit lines with gasoline or diesel buses. GM had replaced more than one hundred electric transit systems in forty-five cities with GM buses. Despite a fine and the court ruling, GM would, with the aid of urban planners like Robert Moses, block efforts at mass transit.

With Earl’s love of the “jet engine look” GM cars came to resemble planes, loaded with chrome and fins. Advances in engineering could have made cars more fuel efficient; instead, GM opted to make cars more powerful and loaded with expensive options like air-conditioning. GM showed off its cars with road shows called Motoramas, which annually drew more than one million spectators. The Motoramas ended in 1961 as GM concentrated its advertising dollars on television. During the 1960s, GM divisions sponsored hundreds of TV shows. With famous ads like “See the USA in the Chevrolet,” GM created a national car culture, made even more attractive with the coming of color television.

Yet, the events of the 1960s also brought about the first chinks in GM’s armor. A poorly designed knock-off called the Corvair inspired a young lawyer named Ralph Nader to write a book about auto safety (or the lack thereof) called *Unsafe at Any Speed*. While the book was troubling to GM, more embarrassing was GM’s clumsy attempt to investigate and intimidate Nader. This led to the spectacle of GM issuing Nader a public apology. The safety issues led to more government regulation of the auto industry, which escalated with emissions and other standards enacted in the 1960s and 1970s. Like all large institutions, GM found itself under attack in the 1960s, but nothing compared to the shocks it would face in the next decades.

Beginning with a lengthy UAW strike in 1970, through oil embargoes, inflation, and recessions, GM lost profit, market share, respect, and dominance into the 1990s. The company underwent a series of huge reorganizations coupled with a titanic downsizing of its work force. The devastating effect of GM’s layoffs is best chronicled in Michael Moore’s bitterly funny 1989 film *Roger & Me*. After a series of management shake-ups, some at the behest of new board member Ross Perot (whose Electronic Data Systems Corporation had been purchased by GM in the 1980s), GM tried to reinvent itself with the Saturn project in 1984. Saturn was an attempt to develop not just a new car, but a new method of manufacturing and selling automobiles based on the Japanese model. While new, Saturn also represented something old in GM’s past: producing the right car for the right market.

## Generation X

Throughout the twentieth century, American historians and social commentators have placed labels on various generations in an effort to capture their characteristic spirit. Generation X—roughly defined as the more than 79 million people born between 1961 and 1981—has been characterized by the media as lazy, laconic, and unfocused, but in the eyes of many, the pejorative label represents propaganda rather than reality. For those outside this generation, the X stands for some unknown variable, implying young adults searching aimlessly for an identity. Many members of Generation X think otherwise, however, and they fill in the blank with such descriptors as diverse, individualistic, determined, independent, and ambitious.

The term “Generation X” worked its way into popular vernacular after the release of Douglas Coupland’s 1991 novel, *Generation X: Tales for an Accelerated Culture*, about three twentysomethings who are underemployed, overeducated, and unpredictable. Other nicknames have emerged, such as the more neutral “13ers” (which indicates the 13th generation since the pilgrims landed at Plymouth Rock). However, most of the other markers have negative overtones, such as “slackers,” “latch-key generation,” “MTV generation,” and “baby busters.” Many members of this generation reject these labels for they not only stigmatize and stereotype, but also reinforce the negative behavior they describe. On the other hand, Karen Ritchie, author of *Marketing to Generation X*, actually prefers the label “Generation X,” for she sees “something anticommmercial, antislick, anti-Boomer, and generally defiant about the ‘X’ label.” She also predicts that soon enough, and rightly so, this generation “will name themselves.”

The members of Generation X can be seen as natural products of the intellectual atmosphere in which they have grown up, for they are the first generation to be raised in the age of postmodernism—a widespread cultural development of the last quarter of the twentieth century. Understanding the often rocky transition from modern to postmodern culture is necessary to understanding how many members of Generation X think and operate. While modernism values a single world view rooted in objective science, postmodernism values multiple world views based on subjective experiences and contingencies. Information and knowledge is gathered in a linear fashion by the modernists, but for postmodernists, particularly those of Generation X, information comes from fragmented and non-linear sources, often in the form of hypertext or visual images. While the modernists revere the classics of art and literature, postmodernists have a broader frame of reference: they not only revere the classics, but they also grant status and value to the productions of popular culture. Ethics for the modernists can be rigid, even self-righteous, but postmodernists have a more situational ethic that resists the concept of “Universal Truth.” Monolithic institutions such as government, education, corporations, and the press which are seen as authoritative by the modernists are viewed with caution and distrust by members of Generation X.

Xers have grown up during the cultural transformation from modernism to postmodernism. The sensibilities of postmodernism are naturally appealing to many members of Generation X, because their young adulthood has been constructed by the postmodern society. Paradoxically, they have simultaneously been victimized by

a society trying to come to terms with a paradigm shift that many find threatening. Members of Generation X often represent that threat to their elders. As a result, these youth are both the product and the scapegoat of a culture in a state of flux.

True to this variable spirit of postmodernism, Generation X defies homogeneity. Extremely diverse in race, class, religion, ethnicity, and sexual orientation, Xers often feel a collective uniqueness that has emerged from shared experiences and cultural circumstances. The unrest of the late 1960s and early 1970s, followed by the uneasy discomfort of the late 1970s and the self-involved consumption of the 1980s, have been the foreground to the 1990s—a decade laden with problems. Social ills like the rise in teen suicide, widespread homelessness, proliferating toxic waste, violent crime, the AIDS epidemic, and a “down-sizing” workforce, coupled with fundamental changes in social structures like the family, caused by rising divorce rates and working parents, have been the realities of the world as Generation X has come of age. Like most younger generations, many Xers resent their parental generation—the baby boomers—for leaving them to repair or endure a society on the brink of collapse. Considering the problems Xers face, it is perhaps no wonder that one of their favorite T-shirt slogans is “NO FEAR,” and it is also representative of the contradictions of their culture that NO FEAR is the corporate brand name of a line of sports clothes.

Lack of fear, however, is not enough to manage America’s social problems, and many baby boomers voice concern that most members of Generation X evince distaste for politics and public affairs. The trust of all Americans in their government has reached increasingly low levels in the 1990s, as members of Generation X have come of age politically. Because they view politics as a hostile and corrupt environment, Xers have tended to be disgusted by political machinations, and thus often disengaged. Political apathy among young people is not a new phenomenon; personal challenges such as education, careers, and relationships often consume their time and energy, leaving little left over for political affairs. Furthermore, political scientists report that, historically, levels of public participation increase with age. However, Xers have never experienced political innocence and have lived within a negative climate of politics their entire lives. This climate has caused many to turn their backs on political involvement, in turn causing a potentially devastating problem in terms of Xers’ future civic and political responsibility.

Neil Howe and Bill Strauss provide a more pragmatic perspective in their oft-cited *13th Gen: Abort, Retry, Ignore, Fail?*, in which they lay out a five-point political credo of Xers: 1. “Wear your politics lightly”; 2. “Survival comes first”; 3. “Try to fix only what’s fixable”; 4. “Clean up after your own mess”; and 5. “Personal style matters.” Howe and Strauss posit that for the 13th Generation, “national politics will drift toward the personal, non-sense, survivalist approach.” Xers are already employing this do-it-yourself attitude by saving early for their retirement. According to Richard Thau, in a 1994 poll of 18-34 year olds, 82 percent believe that Social Security, the U.S. government’s largest benefit program, will deconstruct before their retirement. Thau is the Executive Director of the Third Millennium, a political advocacy group centered in New York with hundreds of members who are dedicated to speaking out on behalf of the interests of the Generation X age group. Likewise, Hans Riemer and Chris Cuomo cofounded 2030, what they describe as a “political action-tank” for Generation X. In Riemer’s words, “so much of what is going wrong today requires innovation and new thinking, and we can respond to these requirements at a more rapid pace than other generations could.” These informed Xers

are responding to the concerns of “massive ignorance” through practical action.

Xers’ cautious and fiscally conservative sensibility has been a challenge to America’s mostly middle-aged advertisers and marketers who have recognized Generation X as a viable and large market. However, they are also the best educated generation in America’s history and were raised on commercial hyperbole. While Xers might respect and enjoy advertisements that are crisp, sophisticated, humorous, and informative, they are savvy enough to realize when hype or insincerity is at work. Karen Ritchie recognizes that “no icon and certainly no commercial is safe from their irony, their sarcasm or their remote control. These are the tools with which Generation X keeps the world in perspective.”

Xer Richard Thau confirms such use of satire and irony in explaining the wild popularity of the “fictional buffoons” who have largely defined Generation X for the nation: Beavis and Butthead, Bill and Ted, Wayne and Garth, Bart Simpson, and the children who live in South Park. Members of Generation X, claims Thau, are clearly educated enough to enjoy “watching these morons because they satirize the image older generations have of us.” Shows like *Friends*, *ER*, *Seinfeld*, *Melrose Place*, *The X-Files*, and *Party of Five* are popular among Xers because they employ friends as family, serialized story lines, and the use of music, three ingredients favored by Generation X viewers. The effect of Generation X on current TV programming can clearly be measured by the launching of three broadcast networks—Fox, UPN, and WB—specifically targeted at Generation X.

Perhaps one of the more joyful memories from the early days of Xers is those three-minute jingles that provided Saturday morning lessons in grammar, math, civics, and science: ABC’s *Schoolhouse Rock*. Rob Owen, author of *Gen X TV*, claims that “these little ditties entered the Gen X consciousness and stayed there.” He also posits that these musical education segments were the forerunner to what we later came to know as music videos. Unlike any preceding generation, the visual element is essential to Xers. Since they have grown up with television, video games, and computers, it is natural that theirs is the generation that added pictures to rock songs. Owen contends that the introduction of the Music Television channel (MTV) “raised the ante” in the entertainment industry when television producers blended music, visuals, and quick cuts for the sophisticated viewing demands of Generation X. When MTV went on the air in August, 1981, targeting the 12-34 age group, members of Generation X responded immediately, so much so that Xers are criticized for having an MTV-attention span, alluding to the quick-cut and fast-paced conventions of music videos. Despite this criticism, the attraction of MTV remains constant, explains Meredith Bagby, because MTV has quite literally made it their business to keep up with the changes in Generation X.

The musical interests of Xers are as diverse as the members themselves. In the early 1990s, many members of Generation X revered grunge rock groups like Nirvana with their furious, angst-ridden lyrics and wailing guitar licks. Nirvana railed against the establishment and a decaying society—issues with which Xers could readily identify. Kurt Cobain was their poet, but his suicide in April, 1994 brought his anguished alienation to a crashing halt. The bullet that ended Cobain’s life created a collective heartache for many members of Generation X. While Cobain screamed in despair, rappers continue to provide their version of the nightly news concerning the happenings on America’s urban streets. Hip-hop and rap music appeal to members of Generation X across all race and ethnic

lines, for like Cobain, rappers speak of the issues of the day while simultaneously affirming black identity. Howe and Strauss describe inner-city Xers as “unmarried teen moms and unconcerned teen fathers; lethal gangsters . . . and innocent hiphoppers who have no illusions about why older white guys cross the streets to avoid them.” Rappers like Tupac Shakur, Queen Latifah, Snoop Doggy Dogg, Master P, Puff Daddy, and Dr. Dre are significant voices for many members of Generation X. The success of Black Entertainment Television (BET), a music network which focuses on urban contemporary sounds, attests to the far-reaching appeal of black music among Generation X. In addition to alternative rock and rap, other genres of GenX music include ska, techno, industrial, country, reggae, and goth.

Though many Xers have a deep connection to music, they are not merely tuning in to the various music networks and dancing at all-night raves. Some have a strong entrepreneurial spirit that belies their media reputation for laziness and lack of focus. For example, Jerry Yang and David Filo, both graduate students at Stanford, cofounded Yahoo!, the first online navigational guide to the Web. Xer Adam Werbach is the youngest president of the Sierra Club, the largest grass-roots environmental organization. Xer Eric Liu edited a collection of essays about Generation X called *Next* and is a foreign-policy speech writer for Bill Clinton. At age 25, Steve Frank became a journalist for the *Wall Street Journal*. Jonathan Karl was hired as a reporter for CNN to represent his generation. Xer David Mays is the founder and editor-in-chief of *The Source*, the immensely popular magazine of hip-hop music, culture, and politics. Twentysomething Kevin Smith financed his first movie, *Clerks*, on his credit card and then went on to make *Chasing Amy*, which earned him the respect of mainstream moviemakers. Beth Kobliner, writer for *Money* magazine, also wrote the bestseller on personal finance for Generation X, *Get a Financial Life!* At only 26, Jeff Shesol is considered an acclaimed historian for his book *Mutual Contempt* about Robert Kennedy and Lyndon Johnson; Shesol also serves as a presidential speech writer for Bill Clinton. Although the title of the 1991 movie, *Slackers*, has been used to label members of Generation X, the above accomplishments clearly negate such a reputation.

In the face of dismissive and stereotypical media portrayals as they learn to navigate the increasingly fast-paced world around them, members of Generation X have learned to cope with guarded optimism, and practical confidence. Although they may be cynical about the conditions of the world in which they came of age, they do embrace an American Dream, albeit a different one from that of their predecessors.

## Gentlemen Prefer Blondes

Novel, stage play, and, most notably, popular 1953 film *Gentlemen Prefer Blondes* began as a series of satiric sketches written by Anita Loos and published by *Harper's Bazaar* in 1925. The series featured two pretty and bright but unschooled flappers, Lorelei Lee and Dorothy Shaw, who joyfully infiltrated the bastions of the ruling class. "The strength behind Loos's heroines lies not in their sexuality per se," as Regina Barreca notes, "but on the fact that they remain on the periphery of social and cultural structures." Their profound hunger to be fully accepted into society is at odds with their outsider's recognition of society's entrenched moral hypocrisy. The series struck a chord with readers, and by the third installment, *Harper's Bazaar* had tripled its newsstand sales.

Loos developed the premise into a novel, which was translated into thirteen languages and adapted into a stage play the following

Marilyn Monroe (left) and Jane Russell in a scene from the film *Gentlemen Prefer Blondes*.

year. The narrative took the form of a diary written by Lorelei, whose attempts to sound cultured resulted in malapropisms ("A girl like I") and whose childlike observations satirized the surrounding society ("He really does not mind what a girl has been through as long as she does not enjoy herself at the finish"). The first film version premiered in 1928 to rave reviews. "Those two energetic and resourceful diamond diggers, Lorelei Lee and Dorothy, have come to the Rivoli Theatre in a splendid pictorial translation of Anita Loos's book," wrote Mordaunt Hall for the *New York Times*; "This film is an infectious treat." The story was transformed into a Broadway musical that made Carol Channing a star in 1949. It was produced as an elaborate technicolor film by Twentieth Century-Fox in 1953, revived as a musical entitled *Lorelei* in 1974, and enacted as a stage play by the National Actors Theatre in 1995. But the most influential vehicle for the story is undoubtedly the 1953 film.

Directed by Howard Hawks, *Gentlemen Prefer Blondes* starred Marilyn Monroe as Lorelei and Jane Russell as Dorothy. The film rose to number one in the nation in August 1953 and generated more than \$5 million for Fox by the end of the year. Monroe got second billing, earning less than one-tenth of Russell's \$200,000 for her work on the film. She was even refused her own dressing room, since she wasn't considered a star. By the end of the year, however, Monroe had starred in three hit films, appeared on the cover of *Look* magazine, and was voted top female box-office star by American film distributors. *Playboy* magazine took advantage of Monroe's sudden celebrity by putting her on the cover of its first issue in December and printing five-year-old nude photographs of her as its first centerfold. The embodiment of the *Playboy* philosophy—combining desirability with vulnerability and exuding sexuality as something natural and innocent—Monroe was perfect for the role of Lorelei, who, as one critic remarked, sometimes "employs an imploring expression, one which seems to imply that she is totally ignorant of her physical attraction." Monroe's star persona coalesced with the film, and thereafter roles such as Pola in *How to Marry a Millionaire* (1953), "The Girl" in *The Seven Year Itch* (1955), and Sugar in *Some Like It Hot* (1959) were written with her specifically in mind.

In the early 1970s, film critics such as Molly Haskell criticized Monroe for "catering so shamelessly to a false, regressive, childish, and detached idea of sexuality." It might seem surprising, then, that *Gentlemen Prefer Blondes* was revived as "a feminist text" by film scholars in the early 1980s. Lucie Arbuthnot and Gail Seneca, for example, pointed out that "Given the mammary madness of the fifties, it is striking that Hawks chose to dress Monroe and Russell in high-necked sweaters and dresses." Actually, the costumes—including skin-tight, red-sequined dresses with thigh-high slits—are far from modest. And the high necklines were not Hawks's choice, but the result of the Motion Picture Association of America going "on breast alert," insisting on seeing costume stills for each of the outfits the two stars would wear in advance. The MPAA red-lined suggestive phrases such as "bosom companions" but allowed lines like the famous "Those girls couldn't drown" to remain in the finished film.

Feminist scholars made a stronger case for the film's progressive depiction of female friendship: "the absence of competitiveness, envy or pettiness" between Dorothy and Lorelei. By many accounts, this reflects a genuine affinity between Russell and Monroe, belying rumors that Monroe couldn't get along with other women. The popular press predicted a giant feud between the two stars during filming, a "Battle of the Bulges" as one male columnist inevitably called it. In fact, according to Todd McCarthy, Russell "welcomed

Monroe at once and gained her confidence professionally and personally.” In Monroe’s last interview with *Life* magazine, conducted just two days before her death in August 1962, she recalled that Russell “was quite wonderful to me.”

Perhaps most strikingly for contemporary feminists, *Gentlemen Prefer Blondes* can be said to draw a moral parallel between the motivations of women who pursue men for their money and men who pursue women for their beauty. Hollywood, of course, has traditionally vilified the former as gold digging and celebrated the latter as love at first sight. But songs like “Diamonds Are a Girl’s Best Friend” suggest that men are fickle and women have but one commodity to exchange under patriarchal capitalism: their youthful beauty. “Men grow cold as girls grow old / And we all lose our charms in the end / But square-cut or pear-shaped / These rocks won’t lose their shape / Diamonds are a girl’s best friend.” Proving herself not to be as dumb as her future father-in-law thinks, Lorelei proclaims that “A man being rich is like a girl being pretty. You might not marry a girl just because she’s pretty, but my goodness, doesn’t it help?”

“The line which separates celebration from satire in American culture is perniciously thin,” as Maureen Turim writes, and “no place is that lack of differentiation more evident than in Howard Hawks’s *Gentlemen Prefer Blondes*.” It is not surprising, then, that Madonna, whose work is characterized by a similar ambiguity, chose to restage Monroe’s “Diamonds Are a Girl’s Best Friend” performance in her 1985 hit music video “Material Girl.”

## Gere, Richard (1949—)

Actor Richard Gere has evolved from a typically brash young leading man, whose career was based primarily on his sexy good looks, into a devoted Buddhist and champion of oppressed people.

A deft musician, composer, and gymnast in high school, Gere attended college on a gymnastics scholarship, then dropped out to pursue a career in music. Acting and composing in summer stock led to a position as an understudy for the lead in the Broadway production of the rock musical *Grease* in 1972, then the opportunity to play the lead in the London production the following year. This was followed by the rare opportunity (for an American actor) to play a season with

Richard Gere

the Young Vic Company in such offerings as *The Taming of the Shrew* in 1974.

His film debut in 1974 was in a bit part as a pimp in *Report to the Commissioner*, which was followed by a more high-profile but similar role as a sexually charged street hustler involved with Diane Keaton in 1977’s *Looking for Mr. Goodbar*, and his status as a sex symbol was confirmed by his starring role in the breakthrough hit *American Gigolo* in 1979. His career then suffered a marked decline due to inferior choices of roles; critics claimed that it was because his film work came second after his burgeoning interest in Buddhism. Having studied the religion, Gere made a visit to the Tibetan refugee camps in Nepal in 1978, and after meeting with the Dalai Lama, declared himself a disciple.

Following his embrace of Buddhism, Gere attempted to break free of his sex-symbol status and try more character-driven work. Returning to the stage in a highly praised performance as a gay concentration camp prisoner in the Broadway play *Bent*, he then accepted an equally challenging role as a desperate young man struggling to get through brutal military officer’s training in *An Officer and a Gentleman* (1982), which proved a box office hit and suggested Gere possessed untapped skills as an actor. However subsequent misfires such as the remake of *Breathless* (1983), *Beyond the Limit* (1983), *King David* (1985), and even Francis Ford Coppola’s

ill-fated *The Cotton Club* (1984) lowered his credibility until his unexpected breakthrough performance opposite Julia Roberts in 1990's megahit *Pretty Woman*, caused producers to take notice. Since that time Gere has re-established his leading-man status in respectable films such as 1993's *Sommersby* (the remake of the French film *The Return of Martin Guerre*), and thrillers such as *Primal Fear* (1996) and *The Jackal* (1997). But Gere's "heart project" was *Red Corner* (1997), which allowed him to bring his career and private concerns together in the story of an American businessman visiting China who is framed for a murder, wrongly imprisoned, and forced to struggle against China's rigidly oppressive legal system.

Devout in his religion, Gere maintained that he meditated daily and spent his time between projects in India with the exiled Tibetans. In fact his very public twenty-year devotion to the faith led the Dalai Lama to personally request Gere's high-profile assistance in the crusade to end China's tyrannous rule of Tibet—a cause which Gere championed to the extent of making a very public plea at the Academy Awards, which in turn led to his banishment from the event. He was also actively involved in campaigning to raise public awareness of the religious and cultural heritage of Tibet in an effort to push for an American boycott of China. Gere has also published a book of photographs he has taken of Tibetans, *Pilgrim*, the proceeds of which were donated to the cause of Tibetan autonomy.

Gere's sense of universal responsibility has also extended to his taking up the cause of oppressed Central American refugees by lobbying Congress on their behalf in 1986, and launching an AIDS awareness program in India, for which he received a Harvard Award in 1997.

—Rick Moody

## Gernsback, Hugo (1884-1967)

An American publisher, editor, and author, Gernsback is perhaps best known as the founder of the modern science fiction literary genre. It was his publication of *Amazing Stories* (1926) that gave him this distinction and drew Americans into reading stories about an unknown future. Indeed, Gernsback's imagination was not only limited to the abstract—not in the sense that what he wrote about was impossible—but his speculation about future technological advancements had a solid basis in science . . . as any good science fiction does. In this sense, he was one of the twentieth century's greatest visionaries.

Gernsback immigrated to the United States from Luxembourg in 1904 and established The Electro Importing Company, the first electrical importing business in America. In 1905 he designed and produced the world's first home radio set and began publishing a mail-order catalog, which he filled with articles discussing new technologies. By 1908, Gernsback's mail-order catalog had grown and evolved into *Modern Electrics*, the first electronics magazine of its kind in the world.

Gernsback began experimenting with science fiction as a way to speculate on the new technologies that exploded on the scene at the

start of the twentieth century. He serialized his first such story, "Ralph 124C 41+: A Romance of the Year 2660," in *Modern Electrics* from April 1911 to March 1912. Though clumsy and simplistic by today's standards, "Ralph 124C 41+" was based on solid scientific principles and made a number of remarkable technological predictions: fluorescent lighting, plastics, synthetic fabrics, stainless steel, juke-boxes, hydroponics, tape recorders, loudspeakers, microfilm, television, radio networks, vending machines, nuclear weapons, and solar energy. Gernsback's story proved so popular among his mostly young and technologically curious readers, that he began including at least one such story in each issue.

Gernsback sold *Modern Electrics* in 1912 and started a larger periodical, *The Electrical Experimenter*, in 1913, which he retitled *Science and Invention* in 1920 (later absorbed into *Popular Electronics*). By this time Gernsback was publishing two or more stories in each issue of *Science and Invention* as well as in its companion publication *Radio News*, and he began to suspect there might be a market for an all-fiction science magazine. In August 1923 he found out when he published a special "Scientific Fiction Number" of *Science and Invention*, which contained six new "scientifiction" stories (Gernsback's term for the new genre) and cover art depicting a man in a space suit. It was so successful that on April 5, 1926, the enterprising Gernsback launched the first magazine in the world devoted exclusively to science fiction, *Amazing Stories*.

Aware of the "historical interest" posterity would have in this new genre, Gernsback stressed both literary quality and scientific accuracy in his new magazine. At first he filled its pages with reprints of stories by Jules Verne, Edgar Allan Poe, and H.G. Wells. But Gernsback quickly attracted such visionary writers as E.E. "Doc" Smith, Jack Williamson, Ray Cummings, and John W. Campbell, whose groundbreaking stories would map out science fiction's major themes. Gernsback also hired Austrian-born artist Frank R. Paul to provide illustrations for many of the magazine's covers and interior stories. Paul's bold style, vivid use of color, and imaginative depiction of scientific gadgetry, future cities, and alien worlds gave *Amazing Stories* a distinctive look and was an important factor in the magazine's success. Bolstered by that success, Gernsback followed *Amazing Stories* with an expanded edition of the magazine titled *Amazing Stories Annual*, which was so popular Gernsback immediately changed it to the more frequent *Amazing Stories Quarterly*.

Gernsback lost control of *Amazing Stories* in 1929 in a bizarre legal maneuver rumored to have been orchestrated by one of his competitors. Within a month, however, the crusading editor launched four new science fiction magazines: *Science Wonder Stories*, *Air Wonder Stories* (both merged in 1930 as *Wonder Stories*), *Science Wonder Quarterly*, and *Scientific Detective Monthly*. Gernsback's new magazines were an overnight success, in part because of Gernsback's solid reputation, but also because he took with him Frank R. Paul and many of *Amazing Stories*' best science fiction writers. But it is Gernsback's editorial in the first issue of *Science Wonder Stories* that is of particular interest to the history of popular culture. It is there he gave the world the term "science fiction."

Scholars have noted that if Gernsback had not launched the first science fiction magazine in 1926, someone else would have seen the market opportunities and published something very similar. As important as timing was in the success of Gernsback's magazines, however, his contribution to the genre goes far beyond having an uncanny business sense. Gernsback had a genuinely altruistic, though perhaps simplistic, belief that technology could bring about a human utopia, and he saw it as his role to instill a love of science and

technology in his mainly adolescent readers. His argument that science could not only be extrapolated but also taught through fiction was one he returned to over and over, and one that was not lost on his readers.

Throughout his life Gernsback continued to invent electronic devices, patenting nearly 80 before his death in 1967. And though he published more than 50 magazines devoted to such diverse topics as radio, humor, sex, economics, crime detection, and aviation, it was with the publication of *Amazing Stories* that he achieved his lasting fame and exerted his most profound influence on popular culture. Shortly after its publication, magazines and newspapers began to carry science fiction stories geared for a wider audience and science fiction quickly began appearing in nearly every artistic medium including books, radio, film, comic books, and television. Moreover, Gernsback's actions inspired two generations of readers and writers and played a major role in establishing science fiction as an independent literary genre. As a tribute to Gernsback's overall contribution to the field, in 1953 the prestigious Science Fiction Achievement Awards were named the "Hugo" Awards.

## *Gertie the Dinosaur*

Billed as "The Greatest Animal Act in the World," the animated cartoon *Gertie the Dinosaur* premiered in Chicago in February 1914. "She eats, drinks, and breathes! She laughs and cries! Dances the tango, answers questions and obeys every command! Yet, she lived millions of years before man inhabited this earth and has never been seen since!!" claimed the posters. Though Gertie was not the first cartoon character to come alive on screen, she might as well have been. As American film critic Leonard Maltin has written, "One might say that Gertie launched an entire industry." Created by the American comic strip artist Winsor McCay, Gertie's silent debut preceded Walt Disney's Mickey Mouse sound film, *Steamboat Willie*, by 14 years. Though animated cartoons date to experiments in Thomas A. Edison's film studio as early as 1906, it was McCay's sophisticated drawings, charming story, and ingenuity that first really gave "life" to animated characters. It was Gertie's charming personality that captured the imagination of filmgoers.

Popular comic strips were made to move early in the history of cinema, but the development of the art and craft of animation was initially inhibited by economic constraints. While audiences and exhibitors expected animated cartoons to be produced with the same frequency as newspaper comic strips, one minute of an animated cartoon required about 1000 drawings (each film frame was one drawing, and passed at the speed of 16 frames per second). The speed of production precluded much analysis of the art, and early animators had to depend on visual gags and dialogue balloons to get a laugh.

McCay, a well-known newspaper cartoonist, inspired by his son's flip-up books and the pioneering films of J. Stuart Blackton, began experimenting with cartoons and motion pictures in 1907. Four

years later, in April, 1911, he premiered his first animated cartoon, *Little Nemo*, based on one of his popular comic strip characters. This short film had no story. Instead, the character asked the audience, in a dialogue balloon, to watch him move as he jumped, flipped, ran, and bounced. To create this short film, McCay hand-colored four thousand frames of 35mm film. He incorporated *Little Nemo* into his vaudeville act and the audience loved it.

Next, McCay created *The Story of a Mosquito*, which took him about a year to make. This new cartoon advanced the techniques used for *Little Nemo*, this time telling a story—of a mosquito's experience with a drunken man. Although McCay's second film, which also premiered as part of his vaudeville act, was well-received, audiences and critics had a hard time accepting that drawings could be brought to life on film, and suspected that the movement was some sort of trick produced with wires and figures.

*Gertie the Dinosaur* was McCay's answer to the sceptics. He chose a dinosaur as his character because the animal was long extinct and no one could claim that the artist was employing trickery to make her move. The idea of a dinosaur as the subject of an animated drawing was far-fetched. McCay's ingenuity, however, lay in the manner in which he presented the one-reel film in his vaudeville act. As Leonard Maltin describes it, McCay performed on-stage with the cartoon, playing Gertie's trainer and interacting with the motion picture. Gertie "obeyed" his commands, cried when he reprimanded her, ate the snacks he tossed her, and playfully teased her trainer. At the end of the film, McCay walked onto the screen, becoming part of the animation, and together he and Gertie walked away.

*Gertie the Dinosaur* was a one-reel film, lasting about 12 minutes. To create his memorable character, McCay inked 10,000 drawings on rice paper and then mounted them on cardboard. He invented a flip machine to check the animation. Most astonishing, perhaps, for current aficionados accustomed to animation cells and computer-generated animation, McCay had to redraw the dinosaur and her background for every frame. He drew over 10,000 Gerties himself, and enlisted John A. Fitzsimmons to reproduce the backgrounds, often by tracing.

The film and its "leading lady" were wildly popular and the dinosaur became an instant star. McCay, however, had little desire to remain involved in the industry that his work had spawned. He preferred, instead, to continue with his newspaper comic strips and vaudeville acts, and to work on his films for his own satisfaction. In further developing the art of animation, McCay created, among others, *The Centaurs* and *The Sinking of the Lusitania*. In these, as in *Gertie*, his graphic precision was far more sophisticated than that of his contemporary animators. Eventually, McCay stopped making films altogether, although early animators, including John Randolph Bray, the inventor of the cell, considered McCay to be the father of their art and their craft. Indeed, McCay himself is reported to have proudly christened himself "the creator of animated cartoons."

## Get Smart

The James Bond craze of the 1960s produced a host of spy heroes eager to cash in on the popularity of 007. Some were slavish imitations, but others reflected a willingness to poke fun at the genre. One of the most successful satires, created by Mel Brooks and Buck Henry, was the television series *Get Smart*, which ran on NBC from 1965 to 1970.

Don Adams played Maxwell Smart, Agent 86 of CONTROL. Barbara Felton was Smart's partner, Agent 99. The inept spy and his far more capable partner fought against the evil organization KAOS. They usually won, mostly due to Smart's tendency to do the right thing for the wrong reason. The show made two contributions to popular culture in the late 1960s—the phrase “Sorry about that, Chief,” and a running gag built around the question “Would you believe,” as in, “Would you believe you're surrounded by 100 armed agents?” “No, I wouldn't.” “Would you believe four Boy Scouts and an angry nun?”

## Ghettos

If it is true that the poor will always be with us, then, by extension, one can argue that ghettos, “the huts where poor men lie,” to quote the poet Wordsworth, are equally eternal, a seemingly insoluble social problem with a long past. The word ghetto carries dark and distressing historical resonance for the Jews of Russia and Europe who, for centuries, culminating in the Nazi atrocities of World War II, were segregated into particular areas by governmental decree. The appalling living conditions that characterized these ghettos carried over to the modern United States, whose cities contain areas that exemplify the dictionary definition of a ghetto as “a densely populated area of a city inhabited by a socially and economically deprived minority.” The existence of American ghettos, determined by specific social and economic contingencies, are also too often dictated by ethnicity, providing a disturbing echo of disadvantage based on race or color for those whose fate has confined them to ghetto conditions.

The ghettos of America began as virtual warehouses for cheap immigrant labor in the late nineteenth century, and evolved into holding pens for disadvantaged humanity, a lost and forgotten segment of the populace. Between 1970 and 1990, the number of persons living in ghettos grew by 92 percent, a figure that continued to rise throughout the 1990s. In this era of global economy, industrial flight threatens to turn not only cities, but also suburbs into new ghettos, which stand as a bleak testament to the vicissitudes of economic exigency that is fed by the manic flight of capital into and out of cities, and, finally, abroad.

Through the late nineteenth century, as coal and electricity supplanted water power, industry moved from riverside factory towns to cities. Proximity to markets, rail transport, and the availability of

Children play on a street in Harlem, 1941.

cheap labor provided economic incentives for the industrial migration, which gave rise to sub-standard housing for the work force built adjacent to the factories with little regard to hygiene or creature comforts. Hence, conditions were crowded and unsanitary. Nonetheless, the dreadful conditions that prevailed in these early ghettos were ameliorated somewhat by the strong social and cultural ties that held the immigrant communities together. For example, Yiddish newspapers and theaters thrived within the close confines of New York's lower East side in the early 1900s, while the 1920s and 1930s saw the process repeated in the black community of Harlem (where, incidentally, middle class Jews had moved to escape the confines of the East side), ushering in the artistic and intellectual burgeoning of the Harlem Renaissance. While the ghettos grew out of economic exploitation and crime flourished in their streets, they housed viable communities to whom the street became a meeting place for the people and an extension of the tenement apartments they occupied. Thus, the ghettos functioned as tight social entities that belied their external appearance of chaos and disorder.

As industry increasingly clogged the inner cities, wealthier residents sought escape from the noise and pollution, and thus began an exodus to bedroom communities outside the city proper. The poor filled the vacuum, occupying once upscale neighborhoods vacated by the affluent where mansions were turned into rooming houses and residential hotels. Bunker Hill, for example, with its stately Victorian mansions situated west of downtown Los Angeles, had been the premier neighborhood in the 1890s. But as the city encroached upon the area and its wealthy residents fled, the stately mansions were parceled into boarding houses for the poor and elderly, a process that

repeated itself in every neighborhood adjacent to the downtown. Over time, these areas became not only physically dilapidated but also morally impoverished. Through newspapers, books—Raymond Chandler in particular, linked Bunker Hill with vice and depravity—and films, the association of ghettos with every manner of social ill spread through the public mind. During the 1940s and 1950s, *film noir* movies frequently used Bunker Hill locations as representative of an imaginary ghetto, a place blighted and beyond redemption. The process of ghettoization was not particular to Los Angeles, but typical of virtually every major American city.

Ironically, as congestion and union activism began to undermine the economic gains that had initially prompted industry moves to central cities, manufacturing, too, abandoned the city, relocating in the suburbs, and away from the threat of union activism. Then, too, the migration of African Americans and other people of color to the cities added to the disfavor in which ghettos were held. For European immigrants, ghettos had often been the first step in a trajectory that led to full assimilation. This could not be said of people of color, large numbers of whom have tended to remain economically, politically, and socially disenfranchised, creating a permanent underclass, trapped in a culture of poverty with few avenues of escape.

Stripped both of employment in industry, and the wealth-creating proximity of middle-class urbanites, poverty-stricken neighborhoods sank deeper into decline as a result of neglect and increasing crime. By the 1940s inner city decline had become a matter of paramount importance to the Federal government. Following World War II, urban theorists began mapping strategies to save the decaying inner cities or, alternatively, to contain the spreading contagion of poverty. Whole city blocks in inner cities were red-lined as slums, thus effectively depriving residents of bank loans, and were subsequently purchased under eminent domain laws, razed to the ground, and replaced by high-rise apartment buildings.

There were several reasons for this particular approach to the problem. It has often been asserted that these planners were utopians, wishing to overlay their international modernist vision on the inner city. In many cases they knew little about how neighborhoods operated, but these massive public works netted huge profits for large-scale contractors, while providing a short-term solution to a desperate housing shortage, and infused massive amounts of Federal funds into the local economy. Unfortunately, Project Housing, as it became known, failed to provide a convivial living environment, neither did they foster stable neighborhoods. The consequence of high-rise projects was further to contain and isolate disadvantaged groups from society at large, causing a concomitant rise in chronic unemployment, youth gangs, and crime—all of the ills, in short, that these projects had sought to eradicate. Neighborhood streets once lined with small businesses and apartment buildings were replaced by sterile plazas, arid and inhospitable; amenities that had once been close at hand now required a trip outside the immediate neighborhood, thus further disabling local economies and rendering them increasingly reliant on Federal assistance.

Racism was implicit in the planning of these massive construction projects, designed to contain and quarantine poor minority groups. Lewis Mumford once wrote that the function of a city street is “to permit . . . the greatest potential number of meetings, encounters, challenges, between all persons, classes, and groups.” This was a view antithetical to the utopian planners. “In the view of the planners,” writes Marty Jezer, “slums and overcrowding were the root cause of crime. The new high-rise red brick housing projects were seen as antidotes to crime, and this became their most spectacular

failure.” In San Francisco’s Western Addition area, a bustling black neighborhood west of the civic center, more than 300 apartment buildings and small businesses were razed, replaced by barracks-like public housing. A functioning neighborhood was thus obliterated in the service of an idea, grim proof of the adage that sometimes the cure is worse than the disease. Perhaps the most significant refutation of postwar urban policy was seen in the 1960s, and again in the 1990s, when overcrowding, misery, frustration, poverty, and despair erupted into riot and conflagration. By the 1990s, projects had become the breeding ground for a major escalation of the trade in and addiction to crack cocaine, with appalling social consequences. Projects have undoubtedly served to intensify African-American and Hispanic feelings of disenfranchisement, and can be pointed to as the match that lit the powder kegs of violence.

The monumental failure of public housing lay in its attempt to impose a bird’s-eye view on social organizations without consideration for the lived experience at ground level. Caught in a spiral of increased public expenditure without the tax base to sustain them, many cities slipped into a long period of decline. In once thriving rust belt cities such as Detroit and Milwaukee, the entire inner city was in effect a ghetto, ringed by suburban bedroom communities. In addition, many inner city projects are being torn down, replaced by middle-income housing (the land is now too valuable to be occupied by the poor), and their former residents dispersed throughout metropolitan areas in a deliberate policy of “spatial deconcentration” intended to offset the possibility of further large-scale riots.

In the postwar era, the creation of ghettos could at times be attributed to the political disenfranchisement of poor people. Massive public works projects such as highways, freeways, and parkways could change a neighborhood from stability to impoverishment by destroying the built environment. Often political expediency rather than sensible and equitable planning determined the route of such public works. Robert Moses, the longtime planning commissioner of New York, leveled 54 six- and seven-story apartment buildings in East Tremont, a Bronx neighborhood inhabited by elderly Jews and Eastern Europeans, in order to build the Cross-Bronx-Expressway. Another route, which would have destroyed fewer residences, but not spared several commercial structures, was available, but the factory owners had the influence that the residents of East Tremont sorely lacked. Soon East Tremont became a no-man’s-land of condemned apartments and vacant streets. Large swathes of the Bronx suffered a similar fate, making it one of the most desolate and inhospitable urban neighborhoods within the United States, and a reproach to the urban policies of modern America.

In the last three decades of the twentieth century, as the existence of ghettos proved an intractable problem, sociologists postulated various hypotheses to explain the ghetto. De-industrialization, industrial relocation, and neighborhood sorting (the tendency for minorities to leave a neighborhood once a certain economic status is reached) have all been offered as reasons for the proliferation of ghettos in the postwar period. “Neighborhood poverty is not primarily the product of the people who live there or a ghetto culture,” writes sociologist Paul Jaworsky, “but the predictable result of the economic status of the minority communities and the degree to which minorities are segregated from whites and from each other by income.” The problem has been further exacerbated by gentrification (the reclamation of inner city housing by middle-class whites) on the one hand, and further spatial isolation on the other. Indeed, the more desirable inner-city locales become, the more impacted the plight of the poor. The result has been intermittent rioting and a culture of

desperation. Nevertheless, the by-products of ghetto culture—gangster rap, drugs, clothing styles, and drugs—find ready buyers in white, middle-class America. This is perhaps the greatest paradox of the ghetto, that while experiencing almost total disenfranchisement, the music, fashions, and ethos of its inhabitants had come to dominate the trendy styles of the late-twentieth century.

With the present-day policy of destroying the high-rise projects, combined with the cessation of welfare, the ghetto stands to become a much more mobile phenomenon, a ghetto made of shopping carts, cars, vans, and prison cells. The criminalizing of larger sectors of the population is one of the more obvious consequences of the “War on Drugs,” which is in effect a war on the urban poor. Forty years of government policy has done little to ameliorate the problem of the ghetto. If anything, the problem has been exacerbated by Federal intrusion. One is finally drawn to the inescapable conclusion that, unless society finds the will and the means to educate and employ all its members, it will continue to be plagued by a permanent and destabilizing underclass.

—Michael Baers

## GI Joe

The GI Joe action figure, a plastic doll twelve inches tall and dressed as a military man, was the first action figure and the first exclusively boy’s doll, disguised as a war toy. Extremely popular, it was at the same time controversial because of the fighting in Southeast Asia: its introduction by Hassenfeld Brothers in 1964 coincided with the U.S. Congress’ passing of the Gulf of Tonkin Resolution which escalated American involvement in Vietnam. Invented by Stanley Weston, GI Joe was inspired by Mattel’s Barbie, which made its debut in 1959, but GI Joe was different from Barbie in that it had twenty-one movable joints, enabling it to be configured in various combat poses. In the “razor and razor blade” principle of marketing, GI Joe, like Barbie, was “accessorized”; that is, designed to need

A GI Joe action figure.

additional paraphernalia. “Items sold separately” was the saying which accompanied every advertisement for the dolls.

Although the GI Joe action figure originated during the Cold War, it was nonetheless made in the image of the World War II fighting man. According to Hassenfeld’s promotional campaign, the face of GI Joe comprised a composite of the faces of twenty Medal of Honor recipients from the war. American television and cinema were, at the time, frequently glorifying the soldier of the “Good War” in adventure series (*Combat*, *The Lieutenant*, and *Rat Patrol*), docu-cameo-epics (*The Longest Day*, *The Battle of the Bulge*, and *In Harm’s Way*), and big-war films (*The Great Escape* and *Von Ryan’s Express*). Comic books made the World War II fighter a hero as well, represented by DC Comics’ “Sgt. Rock” and Marvel Comics’ “Sgt. Fury.” America’s fascination with the World War II past may have been linked to the uncertainties felt during the Cold War era, as was their fascination with the GI Joe action figure.

A year after its introduction, the GI Joe line was augmented by an action nurse, featuring blonde rooted hair and painted green eyes; and a black soldier heralded as “Action Negro.” Neither sold well, and the nurse was discontinued soon thereafter. On the other hand, GI Joe accessories like the plastic jeep and space capsule were very

popular. In 1968 the Talking Joe offered combat discourse, eight phrases per action figure, produced by the pull of a color-coded string. Not everything that GI Joe said was celebratory (for example, “Medic, get that stretcher up here” and “Prepare wounded for helicopter pick-up”), although it was certainly less negative than what a real soldier would have said slogging in the mire of Vietnam. When war protests grew more bitter, fighting Joe dolls were converted into the Adventure Team to look for buried treasure or to capture wild animals. The logo worn by the Adventure Team uncannily resembled a peace sign. By 1976, the GI Joe action figure became Super Joe and was reduced in size to eight inches, for cheaper production and to enable the selling of more affordable accessories. Two years later, with Kenner dominating the market with its Star Wars action figures, racking up nearly \$100 million in sales, GI Joe was discontinued.

The GI Joe story does not end there, however. Many children wrote Hasbro (Hassenfeld’s later name), asking for the toy soldier’s return. In the year of Ronald Reagan’s first inauguration, GI Joe was reintroduced as “A Real American Hero.” Standing at less than four inches tall, a size based on the Star Wars figures, the new GI Joe was the best-selling toy of the 1982 holiday season. This was quite a feat considering that Mattel at the same time introduced its He-Man and Masters of the Universe action figures. The following year, Mattel hired a film company to create a TV cartoon series based on the Masters of the Universe, inspiring Hasbro to do the same for Joe. In 1983 Mattel sold twenty-three million Masters of the Universe figures, and in the following year sales increased to \$250 million. In 1984 Tonka entered the competition with its GoBots, and Hasbro responded with its Transformer line featuring “good” Autobots and “evil” Decepticons.

In the meantime, the second wave of GI Joe dolls continued to fill a niche, dealing with new foes such as “Destro” and “Drednoks.” In 1986, GI Joe had \$185 million in sales. Two years later, Hasbro claimed that two-thirds of American boys between the ages of five and eleven owned GI Joe dolls. What was new was the official narrative offered by the GI Joe animation series (1983-1987, 1989) and the comic book *G.I. Joe: A Real American Hero* (1982-1994), creating a need for clear enemies. In 1986, the line encompassed all four branches of the American military and was augmented by Japanese, German, Russian, British, French, and Australian fighters. This was in keeping with its World War II theme. Even so, little was suggested by the manufacturer on how boys should play with these figures.

If by the Reagan years it was necessary for a story line to be more explicit, World War II seemed too remote for development. On the other hand, a plot directly focusing on the Cold War was risky during the era of Mikhail Gorbachev. The comic book and animation series created fictional events and a line of enemy soldiers known as Cobra, a group of warriors who sought “to conquer the world for their own evil purposes!” The Gulf War did inspire Hasbro to create a “Duke” figure, a friendly soldier dressed in camouflage fatigues, back at the original twelve inches of height. By alluding to the film actor John Wayne, Duke linked not only World War II (a la *Sands of Iwo Jima*) with the Cold War (as in *The Green Berets*), but also the New World Order (represented by the international coalition which opposed Iraq). Among Hasbro’s new GI Joe offerings for 1998 was the General Colin Powell doll.

## Giant

George Steven’s 1956 film *Giant* reveals the ethics and personalities of the Texas oil industry as it shifted from individually driven concerns to large-scale corporate dominance. Rock Hudson plays Bick Benedict, who presides over the 595,000-acre Benedict Reata Ranch. James Dean plays the film’s most memorable character, Jett Rink, the rebellious upstart who labors on the ranch before striking oil on his small plot of land. Dean, drenched in crude, arrives at Reata in a great moment in American film. Rink becomes the symbol of “new money,” a corrupt, flamboyant oil tycoon and he and Benedict battle for the affections of Leslie Lynton, played by Elizabeth Taylor. *Giant* was Dean’s last film; he died in a car accident on the Texas highway just as the filming was completed.

—Brian Black

## Gibson, Althea (1927—)

Althea Gibson is one of the foremost names in American tennis and in African American history. In a prejudiced, segregated society, and in the even more segregated world of tennis, she carved out a place for herself with her aggressive serve and volley game. She won four grand-slam tournaments and several international titles, in both singles and doubles. But in the United States of the 1950s and 1960s there were few financial rewards for a black woman athlete, and Gibson grew discouraged and reclusive. While her name is known and celebrated by many, few know of the poverty and obscurity in which she currently lives.

Gibson was born in August 1927 on a Silver, South Carolina, cotton farm, the oldest of five children. In 1930, her family moved to Harlem, where her aunt made a living selling bootleg whiskey. The difficulties of growing up on the streets were tempered by the supportive black community atmosphere of Harlem. Tall and strong, Gibson played basketball with the boys and shot pool in the corner pool halls, but it was the game of paddle ball, played in streets blocked to traffic, where she excelled. When blues musician Buddy Walker observed how she easily defeated all comers, he bought her a tennis racquet and arranged for lessons for her at the Cosmopolitan Tennis Club in Harlem.

Gibson once said, “No matter what accomplishments you make, somebody helps you.” In her own case, she received encouragement not only from Walker, but from boxer Sugar Ray Robinson and from

**Althea Gibson**

doctors Hubert Eaton and Robert Johnson, all of whom took particular interest in encouraging young black athletes. With their support, she began to play in tournaments through the American Tennis Association, the oldest black sports organization in the United States. Gibson won the girl's singles championship in 1944 and 1945, and, starting in 1947, she continued to win the title for ten years in a row.

Though Gibson dropped out of high school, her mentors helped her to return, and in 1949, she received a tennis scholarship to Florida Agricultural and Mechanical University in Tallahassee. In 1950, she broke into the world of white tennis. Former tennis champion Alice Marble pleaded her cause with the U.S. Lawn Tennis Association, and Gibson was allowed to play in their famous tournaments at Forest Hills, New York. Though she won her first tourney, she lost the second and became discouraged. The pressure of serving as a role model for her race coupled with persistent money troubles almost forced her to quit the game, but in 1955 the USLTA and the U.S. State Department chose Gibson to represent the United States on a goodwill tennis tour of Asia. This sign of acceptance by the white tennis establishment restored much of her confidence and renewed her commitment to tennis.

Gibson was almost thirty years old when she began the most dramatic phase of her career. She became the first African American to win an international championship when she won the French Women's Singles in 1956. She then went on to win the Italian championship in 1957, and Wimbledon and the U.S. Nationals two years in a row in 1957 and 1958. She was part of the winning doubles team for three years at Wimbledon, as well as in the French Open and the Australian Open. Her powerful game became legendary. "People

thought I was ruthless," she wrote later, "which I was. I didn't give a darn who was on the other side of the net. I'd knock you down if you got in my way."

In 1958, Gibson was the top-ranked women's tennis player when she decided to go professional. Financially, she simply could not afford to continue on a strictly amateur basis. However, her professional career never took off the way she had hoped. She did have a successful run touring with the famous Harlem Globetrotters, playing exhibition tennis games as an opening act before their novelty basketball games. Otherwise, she did not get many offers to play for money and had little success in her bids to initiate a film or recording career. In the 1960s she played professional golf, becoming the first African American member of the Ladies Professional Golfers Association, but her golfing career was undistinguished. After that, she earned a living by working as a tennis coach and for state government sport agencies in New Jersey, where she lived.

Gibson was elected to the Tennis Hall of Fame in 1971. In 1997, she was honored as a barrier-breaking African American athlete at the dedication of the Arthur Ashe Stadium in New York City. Gibson herself did not attend the ceremonies, but few knew it was because she had suffered several strokes and was living in poverty in East Orange, New Jersey, depressed, reclusive, and gravely ill. Some women athletes and coaches were horrified to learn of Gibson's circumstances. Pooling their energies and resources, these women staged a benefit and tribute for Gibson, raising more than thirty-five thousand dollars to help with medical bills and other expenses and to found an Althea Gibson Trust Fund to grant scholarships for women athletes. When she learned of the work that had been done on her behalf, and was given a video in which old friends and young newcomers alike testified how Gibson's life had inspired their own careers, her spirits were lifted immeasurably.

Though she contributed greatly to the sport of tennis, Gibson had to fight against prejudice throughout her career, whether it was a hotel that refused to book a luncheon in her honor or the unwritten prohibition against women earning money from sports. Her career is both an inspiration and a cautionary tale for aspiring young athletes: some games cannot be won with skill and aggressive determination. Perhaps a whole life will only be one point won in the game of changing a culture.

## **Gibson, Bob (1935—)**

Bob Gibson's pitching for the St. Louis Cardinals earned him a dominant place in baseball history. The 6'1" right-hander used an overwhelming fastball and a peerless array of breaking pitches to strike fear in the hearts of National League batters throughout the

**Bob Gibson**

1960s and early 1970s. Gibson reserved his finest performances for the biggest games, outshining all competitors in the three World Series in which he pitched.

A frail child who suffered from a heart murmur, Gibson was encouraged to pursue sports by his older brother, a YMCA athletic director. He signed with the St. Louis Cardinals in 1957 for \$4000, but did not crack the team's starting rotation until 1961. His breakthrough season came in 1963, when he went 18-9, and the Cardinals emerged as a contender for the National League pennant.

Gibson earned a reputation as the ultimate big game pitcher by winning the clinching games of the 1964 and 1967 World Series. In 1964, he held a powerful New York Yankees lineup in check on only two days of rest. In 1967, he beat the Boston Red Sox almost single-handedly, recording three of the Cardinals' four victories. All these wins were just a prelude for what was to come, however.

In 1968, Gibson enjoyed one of the finest seasons ever registered by a major league pitcher. He won 22 games against only nine losses, including a streak of 15 consecutive victories. He recorded 13 shutouts, highlighted by a stretch of 92 innings in which only two runs

were scored against him. His earned run average of 1.12 set a National League record, and was the lowest recorded for a pitcher since 1914. For his efforts, Gibson was voted the National League Cy Young Award by the Baseball Writers Association of America.

As impressive as he was in the regular season, Gibson was even more dominant in the World Series. He struck out a record 17 Detroit Tigers in the opening game of the Fall Classic, prevailing 4-0 over 30-game winner Denny McLain. He won Game Four as well, 10-1, to run his World Series record to 7-1. But when he tried to pitch the deciding seventh game on just two days of rest, even the unhittable Gibson met his match. He carried a shutout into the seventh inning but was beaten by the Tigers' Mickey Lolich, 4-1. It was Gibson's last World Series game.

Thanks in large measure to Gibson's efforts, 1968 went down in baseball history as the "Year of the Pitcher." To compensate for a perceived imbalance, the next season Major League Baseball lowered the pitcher's mound, giving batters a fighting chance against the new breed of power pitchers led by Gibson and the New York Mets' Tom Seaver. Despite these adjustments, Gibson continued to dominate

National League batters well into the 1970s. He won 20 games in each of the next two seasons and was named to the All-Star team both years.

Gibson was feared around the league as one of the most intense, aggressive competitors in baseball. He believed it was a pitcher's right to knock down a batter with a high, inside fastball if the occasion demanded it. Gibson's intimidating demeanor even extended to his own teammates. On one occasion, when catcher Tim McCarver approached the mound for a conference, Gibson glowered at him angrily. "The only thing you know about pitching is you can't hit it," he informed the terrified receiver. McCarver slunk back behind the plate with his words of advice still stuck in his gullet.

Although the Cardinals did not return again to the World Series, Gibson continued to reach personal milestones. He registered 56 total shutouts and became the second pitcher in major league history to amass 3000 strikeouts. When a series of injuries to his arms and legs began to take a toll on him, Gibson realized the end of his career was at hand. After Pete LaCock, a light-hitting first baseman known primarily for being the son of *Hollywood Squares* host Peter Marshall, crushed a grand slam off him in September of 1975, Gibson decided to call it quits. He retired as the winningest pitcher in St. Louis Cardinals history.

In recognition of his achievements, Gibson was elected to the Baseball Hall of Fame in 1981. He worked as a baseball broadcaster, a

Major League pitching coach for several teams, and in 1998 he accepted a position as an advisor to the commissioner of baseball. He continued to speak out on the art of pitching and the state of the game at the close of the century.

## Gibson Girl

A creation from the pen of illustrator Charles Dana Gibson (1867-1944), the Gibson Girl came to be viewed as an ideal image of youthful femininity in the early 1890s. Statuesque and athletic, she was a contemporary incarnation of the beautiful, desirable, and modern woman. In one drawing from around 1900 she is pictured on the golf course in her signature long skirt and blouse. She stands tall and straight, one hand planted firmly on her hip, and lifts her head

Charles Dana Gibson's illustration of "The Weaker Sex."

majestically. Her male partner stands well to the side and stares in rapt admiration. The captivating Gibson Girl appealed to the imagination of a nation that craved an image of femininity that was fresh and uniquely American.

Gibson, the most popular illustrator in the United States at the turn of the century, began his career in New York during the early years of what has come to be known as the golden age of American illustration—the mid-1880s. By 1890 he was drawing for *Life*, *Scribner's Magazine*, *Century*, *Harper's Magazine*, and *Harper's Weekly*. He began drawing the Gibson girl in the early 1890s. She was featured in the first folio edition of his work, which appeared in 1894, and soon became a national sensation. Gibson's wife, the aristocratic Irene Langhorne Gibson, whom he met in 1893 and married in 1895, was widely believed to have been the inspiration behind her husband's creation, but she could not have been his original model. There was, in fact, no single model for the Gibson Girl, and the artist himself claimed that he had used several; moreover, he said that he had never intended to represent any one particular type of woman. Many young society women did actually seek out the illustrator, hoping to enhance their social standing further by posing for the famous Gibson Girl.

As Lois Banner observes, the Gibson Girl has often been identified with high society, the American "aristocracy" to which Gibson himself belonged. Nonetheless, she had qualities that also endeared her to the working class. Two working-class women, in particular, were thought to have been her inspiration: Minnie Clark, a professional model with an Irish working-class background, and the unnamed personal maid to the dancer Loie Fuller. The Gibson Girl, however, was rarely pictured as a working girl, and the settings in which she appeared were almost invariably fashionable. We see her at fancy dress balls, musical and theatrical events, and engaged in then-elite sporting activities. She was essentially a privileged socialite and her image, despite its modern trappings, incorporated traditional aspects of femininity. Contemporary feminists, such as writer Charlotte Perkins Gilman, saw in her the strength, ability, and freedom of the "new woman," although her fundamental appeal was her feminine beauty. Charles Dana Gibson emphasized her decorative qualities when he designed wallpaper for bachelors' rooms featuring a dense pattern of Gibson Girl faces.

The popularity of the Gibson Girl was reflected in many related phenomena in American popular culture. She was a paragon of beauty and style for millions of American women, who sought to emulate her in dress and hairstyle. Songs and plays were written about her, and her image was reproduced everywhere: on dishes and clothing, tablecloths and pillow covers, ashtrays and umbrella stands. For almost two decades she wielded a powerful influence in American popular culture. By the early 1910s, however, her vogue began to wane as a new image of femininity began to emerge—that of the liberated style and daring spirit that would culminate in the Jazz Age flapper at the end of World War I.

## Gibson, Mel (1956—)

American-born, Australian-reared actor Mel Gibson has remained one of the world's most popular film stars for nearly 20 years, and his reputation as a producer and director is on the ascendancy in the late 1990s. With his natural good looks, highlighted by piercing blue eyes, his rich speaking voice, and humorous "bad boy" manner, he long ago went beyond the label *People* magazine placed on him in 1985 as their first ever "Sexiest Man Alive."

Gibson first came to international attention in his second picture, the low-budget 1979 Australian film *Mad Max*. As Max Rockatansky, a highway patrolman living in postapocalyptic Australia, the then 23-year-old Gibson was a bit wooden, but his screen charisma, good looks, and emotional intensity were a hit with audiences throughout the world. Despite the fact that Gibson's then-strong Australian accent was dubbed by an American for U.S. release, the film has remained a cult favorite. Gibson has maintained the "Mad Max"

Mel Gibson

mantle, portraying characters on the edge, from *Lethal Weapon*'s Martin Riggs, his most financially successful characterization, to Scottish patriot William Wallace in *Braveheart* to the lovable paranoid cabby Jerry Fletcher in *Conspiracy Theory*.

Following *Mad Max*, Gibson appeared in several more Australian films. He won an Australian Academy Award for Best Actor for *Tim*, a sentimental love story about a slow-witted man who falls in love with a middle-aged business woman. This was followed in 1981 by an outstanding performance in Peter Weir's antiwar masterpiece *Gallipoli* and an enormously popular cult film *The Road Warrior* (released internationally as *Mad Max 2*).

Although Gibson's early post-Australian films were critically and financially mixed, his reputation grew internationally. Some of his early U.S. films faltered at the box office: *The River*, *Mrs. Soffel*, *The Bounty*, and the Australian-made Warner Brothers release *Mad Max Beyond Thunderdome* were made within an 18-month period in the mid-1980s, and only *Thunderdome* proved financially successful.

The stress of work, success, and long separations from his wife and growing young family proved troublesome for Gibson personally. An arrest for drunk driving in Toronto while filming *Mrs. Soffel* and subsequent bouts of erratic behavior and drinking almost brought his career to an end and earned Gibson the moniker "Mad Mel." To address his problems, Gibson returned to his ranch in Australia and did not make any pictures for almost two years. His next film, the 1987 Richard Donner-directed *Lethal Weapon*, costarring Danny Glover, proved to be his greatest career success to that time and placed him on the level of solid international stardom.

In the early 1990s, Gibson moved permanently from Australia to the United States and began to take charge of his career, moving into the area of producing and directing. With partner Bruce Davey, Gibson had formed Icon Productions in 1989. In addition to producing or coproducing many of Gibson's own star vehicles, Icon turned out more than a dozen films in the late 1990s, including some small films ranging from *Immortal Beloved* to *87*. Its most financially and critically successful film was Gibson's second directorial effort, *Braveheart* (1995), which grossed more than \$200 million worldwide and earned five Oscars, two of which went personally to Gibson, as director and as producer, along with Davey and Hollywood veteran Alan Ladd.

Following on the heels of *Braveheart*'s success, Gibson immediately made the intense action drama *Ransom*, directed by Ron Howard. The film was an immediate hit, earning more than \$300,000 worldwide and bringing Gibson his first Golden Globe Award nomination as best actor. The period 1994-1997 was a high point in Gibson's career, with three of his films earning more than \$1 million domestically, including a fourth installment of the *Lethal Weapon* series. In addition, Gibson cemented his position as a Hollywood mainstay by winning his second People's Choice award for favorite actor and a firm position either at the top or near the top of the annual Harris Poll of America's favorite actors and the world's list of top box-office stars.

On the personal side, unlike most Hollywood stars, Gibson has maintained a solid life away from show business, having married his wife, Robyn Moore, in 1980 and produced seven children. Gibson's religious and political views remain conservative, and his Catholicism has led him to espouse views often unpopular in Hollywood against abortion rights and abortion. His highly publicized distaste for political correctness, love of practical jokes, and bad puns have sometimes gotten him into trouble, as have comments that have occasionally labeled him as anti-feminist and anti-gay.

In early 1999, Gibson and Davey made the decision to move Icon from Warner Brothers (which had been the headquarters since the company was founded and had been Gibson's primary studio for more than a decade) to the Paramount lot in Hollywood, where Gibson had recently completed work on the film noir *Payback*, whose tagline was "prepare to root for the bad guy." In addition to his contacts with Paramount, and the possibility of releasing at least one additional film as part of his 1996 deal with Warner, Gibson and Davey were partnered with Rupert Murdoch in a new Australian studio, planned as the site of Gibson's next directorial effort, an adaptation of Ray Bradbury's *Fahrenheit 451*.

## Gibson, William (1948—)

An American science-fiction writer most renowned for coining the term "cyberspace" in *Neuromancer* (1984), the book hailed by many critics and technology buffs as the seminal work in the cyberpunk genre, William Gibson is most poignant in simultaneously relishing and demonizing the technologies which increasingly shape human relationships at the end of the millennium. The now-legendary idea of cyberspace, defined in *Neuromancer* and employed throughout his fiction, anticipated the Internet as a virtual playground where information is exchanged and where corporations rise and fall: "A consensual hallucination experienced daily by billions of legitimate operators, in every nation, by children being taught mathematical concepts . . . A graphic representation of data abstracted from the banks of every computer in the human system. Unthinkable complexity. Lines of light ranged in the nonspace of the mind, clusters and constellations of data. Like city lights, receding." In a November 1994 interview for the Swedish news program *Rapport* (which is appropriately available on the Internet), Gibson calls the Internet "as significant as the birth of cities" and "a new kind of civilization" in its being primarily user-driven and transnational. Nevertheless, he also admits to not using "too glamorous" e-mail or even "browsing the 'Net," despite their correlation to his fiction, because of their great time investment and tendency to mark elitist distinctions of social class. As quoted by many of the Internet sites dedicated to his work, Gibson has said, "I'm not a techie. I don't know how these things work. But I like what they do, and the new human processes that they generate."

Gibson grew up in a small town on the edge of the Appalachian Mountains, dropped out of high school in 1967, and ended up in Toronto, Ontario, Canada. There he married Deborah Thompson

in 1972. The couple has two children. He later earned a B.A. in 1977 from the University of British Columbia. By the early 1980s, Gibson was making a name for himself with stories such as “Johnny Mnemonic” and “Burning Chrome,” many published in *Omni* magazine.

In his debut novel *Neuromancer*, Gibson evokes a near-future world organized by technological-corporate enclaves that circulate power through an elite of specialized information-manipulators. The players are typically “console cowboys” (cyberspace operators) who navigate the hallucinatory data-field which is cyberspace, “razor girls” (free-lance cybernetic assassins) who roam the “Sprawl” (the extended and dirty metropolis of discarded and constantly renovated technology), and a myriad of Japanese and Chinese syndicates who pull the strings. Hailed by the science-fiction community at its inception and increasingly studied at the university setting, *Neuromancer* won the prestigious Hugo Award, the Philip K. Dick Memorial Award, and the Nebula Award for best novel. It is the first of the Sprawl trilogy, a series which charts how disconnected members of a technological elite inadvertently make possible an AI (artificial intelligence) which covertly seeks to revolutionize human-machine relations. The equally compelling *Count Zero* (1986) and *Mona Lisa Overdrive* (1988) complete the trilogy.

Gibson’s real-life fear of technology-born inequality also shows itself in his fiction. Written during a robust 1980s economy which saw unprecedented economic mergers, the Sprawl trilogy resonates with a new sense of the corporation (“zaibatsu”) as an indomitable Hydra: “the multinationals that shaped the course of human history, had transcended old barriers. Viewed as organisms, they had attained a kind of immortality. You couldn’t kill a zaibatsu by assassinating a dozen key executives; there were others waiting to step up the ladder, assume the vacated position, access the vast banks of corporate memory.” In the *Rapport* interview though, Gibson reveals more real-world optimism in having “great hopes for the Internet” of individual initiative and “very little hope for commercial versions.” Making a prophetic gesture before the National Academy of Sciences in May 1993 with colleague Bruce Sterling, Gibson advocated enhanced online teaching, free software to *all* teachers, and corporate-provided computers to *only* the most economically disadvantaged school districts as an equalizing move for the United States.

Hollywood brought Gibson to the silver screen with *Johnny Mnemonic* (1995), an adaptation of his short story published in the Nebula award-winning *Burning Chrome* (1987), a collection of Gibson’s short fiction. The film stars Keanu Reeves as an “information-courier” whose cerebral data capacity is dangerously overloaded with information critical to an anti-technology resistance movement. Despite its often lethargic plot and juvenile characterization, the film is most successful in casting rapper Ice-T and singer Henry Rollins as prominent “Lo Teks,” a band of renegade fighters which quietly undermines corporate power. The film therefore continues the idea of an “underground” use of discarded technology, established in his fiction, as the ground for resisting larger institutions.

Gibson also has written *Dream Jumbo* (1989), a text to accompany performance art; *Agrippa, A Book of the Dead* (1992), a poem about his father which was encoded on computer disk and eroded rapidly after being read; and, with novelist Bruce Sterling, *The Difference Engine* (1991), a retroactive science fiction novel set in Victorian England. Gibson’s latest prose works, *Virtual Light* (1993) and *Idoru* (1996), continue the provocative vision established in the Sprawl trilogy. Although he spends no time there, the Internet is

fertile with talk of Gibson and itself resonant with the implications of his work.

## Gifford, Frank (1929—)

On the football field, Frank Gifford starred for the New York Giants in the 1950s and early 1960s during the final days of the two-way player. Away from the game, his movie-idol visage made him a larger-than-life sports hero, a figure synonymous with another famous New Yorker of the 1950s, ball player Mickey Mantle. But it was a book about failure that cemented Gifford’s cultural standing. The football star was cast as a central figure in Frederick Exley’s autobiographical novel, *A Fan’s Notes*. After retiring from the Giants in 1964, Gifford married television personality Kathie Lee Johnson, and joined the Monday Night Football broadcasting team helmed by Howard Cosell. He made headlines again in the late 1990s when a tabloid newspaper paid a former flight attendant to seduce him in a bugged hotel room. When the scandal hit, Gifford’s fairytale marriage seemed to be over, but Kathie Lee stood by her man and Frank Gifford’s late-life sin did little to change his standing as an All-American icon.

## Gillespie, Dizzy (1917-1993)

On stage, wearing his black beret, goatee, and wire-rimmed glasses, Dizzy Gillespie was the much-imitated archetype of the jazz hipster. When he raised his trademark bent horn and began to play, cheeks puffed out like a giant chipmunk, he created a sound that defined American jazz, and many of his compositions become lasting jazz standards. Gillespie came of age during a golden time in jazz. In the 1930s and 1940s, brilliant musicians like Gillespie, Charlie Parker, Thelonious Monk, Miles Davis, and Max Roach were playing together in wildly creative jam sessions that would change the face of American music. Though Gillespie’s technical expertise and soaring harmonies on the trumpet made him an integral part of this new movement, perhaps his greatest contribution was his ability to thrive as an African-American musician and public figure in the inhospitable climate of the pre-civil-rights United States. During a career that

**Dizzy Gillespie**

lasted six decades, Gillespie's upbeat attitude, personal stability, and charismatic showmanship were major factors in the popularization of jazz.

Gillespie was born John Birks Gillespie, the youngest of nine children, in the small town of Cheraw, South Carolina. His working-class parents had little energy to devote to their youngest son's education, but Gillespie's father was a part-time bandleader on his weekends off from his bricklaying job. Young John practiced on the band instruments around the house, learning piano and percussion before finally settling on the trumpet as his favorite. When a Works Progress Administration job convinced him he did not want to do manual labor, Gillespie got a scholarship to attend the all-black Laurinburg Technical Institute in North Carolina. There he began to study music theory and the principles of harmony with which he would experiment throughout his career.

In 1935, Gillespie quit school to move to Philadelphia, where he honed his skills on the horn in jam sessions and joined his first band. By 1937, he had arrived at the new jazz mecca, Harlem. Gillespie began to prove himself to the great New York bandleaders and soon had a job in Cab Calloway's band, wowing audiences and musicians alike with his creative virtuosity and stage antics. Fellow trumpeter Palmer Davis gave him the name Dizzy because of his childlike exuberance and zaniness on stage. "Man, this is a dizzy cat," Davis said, and the name stuck. Adding to Gillespie's eccentric image was his unique trumpet, the horn of which was bent almost straight up. Created by accident when a drunken reveler stepped on it, Gillespie insisted on keeping his "bent horn," claiming he could hear his own sound better.

Though it endeared him to fans, Gillespie's unbridled humor got him in trouble more than once, and he lost his job with Calloway in the mid-1940s when the bandleader tired of being the butt of jokes. It was then that Gillespie joined the famous Harlem jam sessions that produced the wildly radical, urgent beat that came to be known as bebop. Polished and developed by Gillespie and saxophonist Charlie "Bird" Parker, bebop got its name from Gillespie's chanted intro to the songs: "Dee-ba-pa-'n-bebop. . . ." Soon fans were yelling, "Play some of that bebop music." Bebop gave jazz a deeper and more complex dimension, and Parker and Gillespie's innovations continue to influence the development of jazz. Though jazz is perhaps the most intrinsically American of all music forms, like everything in America, it is a combination of many influences. Early in his career, Gillespie was introduced to Cuban music, with its roots in the rhythms of Africa. Together with Cuban musicians like Charo Pozo, Gillespie was instrumental in developing the genre of Afro-Cuban jazz, which he worked to popularize up until his death. In 1946, Gillespie started his first big band, where he introduced Pozo on the conga drum. This was an historic event because African-style drums had been banned since the days of slavery, and Gillespie's band marked the first time a jazz drummer had used his hands rather than sticks to play his instrument. It was by such subtle, yet joyously radical maneuvers that Gillespie managed to challenge the racist system while keeping his good nature and popularity. The 1989 film *A Night in Havana* documents Gillespie's connection to Cuban music and culture.

Unlike many other jazz musicians, Gillespie did not fall victim to substance abuse or a self-destructive lifestyle. He married dancer Lorraine Willis in 1940 and remained happily married to her until his death in 1993. In the 1960s, he converted to Baha'i, a religion of Persian origin that focuses on tolerance and love. Gillespie himself was widely loved and respected, even in unexpected places. In 1956, the State Department chose Gillespie as a good will ambassador and sent him to the Middle East and Latin America. Principled as ever, the jazz man refused to speak for the government. Instead, he got to know individuals, played free concerts for children and the poor, and brought back rhythms like the samba and bossa nova to enrich American musical culture.

In 1964, Gillespie surprised the public by running for president. Running on a platform that included abolishing racism and uniting the world's people, Gillespie as always had his tongue in cheek, proposing that the White House be renamed the "Blues House" and suggesting Miles Davis as CIA chief and Malcolm X as attorney general. One of his campaign songs advised, "Your politics oughta be a groovier thing / So get a good President who's willing to swing."

Until his death from cancer in 1993, Gillespie maintained a vigorous schedule, releasing more than five hundred recordings and performing in close to three hundred live concerts a year. His contribution to jazz and to American music in general resides not only in his considerable legacy of classic hits such as "A Night in Tunisia," "Groovin' High," and "Salt Peanuts," but also in his down-to-earth ability to make his music accessible and transcendent at the same time. Drummer Max Roach said of him, "Dizzy was the catalyst, the man who inspired us all."

## *Gilligan's Island*

Airing only three seasons, 1964-1967, *Gilligan's Island* remains one of the best-known shows in television history. The premise of the show is basic: seven castaways are shipwrecked on an uncharted island following a storm and have to survive until they are rescued. The show is remarkable in its popularity and longevity almost in spite of itself. In its first season it received almost universally terrible reviews from television critics. It is still seen by many as one of the dumbest and most absurd shows on television, but its 98 episodes have been in constant syndication since it went off the air more than 30 years ago. Three reunion/sequel television movies in the late 1970s and early 1980s all received good ratings, and the show was the inspiration for two children's animated series.

*Gilligan's Island* was created and nurtured by Sherwood Schwartz (who would go on to create that other astounding hit of the 1960s and 1970s, *The Brady Bunch*). In fact, the show would not have been made at all except for Schwartz's persistence; his book *Inside Gilligan's Island* describes the long struggle to get the show made against the desires of the CBS network chief. Winning its time slot in each of its three seasons, it was abruptly cut from the lineup to make room for the network president's favorite show, *Gunsmoke*.

In describing *Gilligan's Island*, Schwartz said that his plan was to create a microcosm of society. The characters in this society were

extremes in social, financial, and intellectual terms: the leader—Skipper (Alan Hale, Jr.), the bumbling sidekick—Gilligan (Bob Denver), the wealthy—Mr. and Mrs. Howell (Jim Backus and Natalie Schafer), the country girl—Mary Ann (Dawn Wells), the movie star—Ginger (Tina Louise), and the academic—Professor (Russell Johnson). Indeed, the Skipper tries to lead, the Professor is looked to for solutions to problems, the rich people and the movie star sit in an island version of luxury, and Gilligan and Mary Ann are left to do much of the manual labor.

The actual stories relied on slapstick humor. Ostensibly, the castaways wanted to be rescued from their isolation on the island, and in almost every episode they were presented with a possibility of escape. Invariably something happened to foil the plan, usually involving an innocent accident on the part of Gilligan. Quite often the viewer is required to suspend disbelief and accept the fact that the same group that can create elaborate equipment and solve problems with items available on this ever-abundant island is somehow incapable of making good on the many possibilities of rescue. What's more, though upset at the failings, they seem content with their home. They accept each other for their characteristics and their weaknesses, and persist.

Even though this was an uncharted island, many stories included the arrival and departure of a new person to the island only to leave the main characters stranded once again. These guests included everyone from Russian cosmonauts to natives to Hollywood producers to foreign spies and South American dictators, and allowed for comment on contemporary issues and events of the day such as space flight, South American politics, radioactivity, surfing, spies, and Mars pictures.

One of the highest rated film specials in television history, *Rescue from Gilligan's Island* finally brought the castaways home in 1978 where each one found unhappiness with his former way of life. At the end of the movie, they are contentedly shipwrecked again on the same island. *The "Castaways" on Gilligan's Island* (1979) was

The cast of *Gilligan's Island* as they appeared in the 1978 television movie *The Return from Gilligan's Island*.

an attempt to make a new series in the mode of a Fantasy Island/Love Boat resort on their island. *The Harlem Globetrotters on Gilligan's Island* followed in 1981.

## Ginny Dolls

Ginny is an American made 8-1/2 inch doll immensely popular from 1951 through 1959. Produced by Jennie Graves, owner of Vogue Doll Company, Ginny was made of hard, durable plastic developed first for war uses. The doll's size and durability made it convenient for her to accompany a child everywhere. Storybooks relating Ginny's activities such as a trip around the country piqued children's imaginations while quantities of meticulously designed outfits and accessories encouraged play related to the doll's activities. Ginny was a forerunner of action figure dolls that contribute to children's development by encouraging factual-based play. The reasonably priced Ginny dolls were sold many places including drug-stores and department stores.

## Ginsberg, Allen (1926-1997)

The poet Allen Ginsberg, an iconoclast in both his politically charged writing and unconventional lifestyle, epitomized the anti-establishment "Beat" movement of the 1950s and 1960s. In the

Allen Ginsberg

midst of a generation shaped by the aftermath of the Holocaust and the atomic bomb, mass conformity, the hysteria of McCarthyism, and government censorship of personal liberties and civil rights, Ginsberg became a popular voice of artistic defiance. In American popular and academic culture, Ginsberg's influence as a poet, musician, artist, professor, and agitator has continued to grow even after his death. Bearing unofficial titles such as the "father of the Beat Generation," the "prophet of the 1960s," and the "guru of the counterculture movement," Ginsberg remains a cultural icon of one of America's most socially and politically turbulent eras.

Along with other Beats like Jack Kerouac and William S. Burroughs, Ginsberg embraced Eastern philosophies and African American culture, experimented with various drugs, used the raw materials of life as the basis for his art, and subverted numerous societal and middle-class conventions in order to achieve spiritual, political, and sexual liberation. The opening lines of Ginsberg's *Howl*, the poetic manifesto of Beat attitudes and Ginsberg's most widely known work, exemplifies the gritty nature of his poetry: "I saw the best minds of my generation destroyed by madness, starving / hysterical naked, dragging themselves through the negro streets at dawn looking for an / angry fix." Because of its graphic sexual references, *Howl*, became the subject of a 1957 obscenity case that resulted in a landmark acquittal of the poem's publisher, Lawrence Ferlinghetti of City Lights Books. The trial's notoriety pushed Ginsberg into the public spotlight and ensured his status as a popular poet, an indelible symbol of Beat defiance, and a lasting representative of the rebellious spirit of the 1960s.

Despite his reputation as a boisterous nonconformist, Ginsberg grew up shy. He was born in New Jersey on June 3, 1926, to Louis Ginsberg, a moderate socialist and an accomplished lyric poet, and to Naomi Ginsberg, a radical communist during the Depression, who suffered from psychotic delusions until her death. Ginsberg discovered the poetry of Walt Whitman in high school, which sparked his interest in becoming a poet. However, upon his father's advice, he

entered Columbia University in the mid-1940s with the intent of becoming a labor lawyer. At Columbia, he joined a circle of friends that included Kerouac, Burroughs, and Neal Cassady. They exposed him to Manhattan's varied subcultures and fostered his artistic, philosophical and sexual development; each of them would contribute greatly to the Beat movement a decade later.

Ginsberg eventually changed his major to literature and after receiving his bachelor's degree in 1948 was hired as a market researcher in New York City. During this time, Ginsberg experienced a vision of William Blake and awoke, in his own words, "into a totally deeper real universe." He introduced himself to fellow New Jersey poet William Carlos Williams, whose poem about Paterson, New Jersey, moved Ginsberg greatly; Ginsberg would eventually incorporate Williams's broad narrative style into his own poetry. Ginsberg quit his job and left New York in 1953, traveling to Cuba and Mexico. Bearing a letter of introduction from Williams, he arrived at San Francisco in 1954 to meet Kenneth Rexroth and the group of poets, writers, artists, filmmakers, and avant-gardists who would later be at the core of the Beat movement. It was here that Ginsberg composed and first read *Howl* as part of the Six Gallery reading in October 1955.

Not since Brook Farm (a transcendentalist utopian community established in Massachusetts in 1841) had an American cultural-literary group enjoyed such cohesion as the Beat and counterculture movements. At the center of the community was Ginsberg—who coined the term "flower power" in 1965—promoting free love, LSD, and group living in San Francisco's Haight-Ashbury district, the national epicenter of counterculture. He also stood out as a major figure in Vietnam War protests. He was arrested in 1967 in an antiwar demonstration in New York City along with Dr. Benjamin Spock, the famed child psychologist.

In the post-Vietnam War years, Ginsberg's reputation as an agitator grew even more widespread when countries such as Cuba, the former Soviet Union, and Poland deported him for speaking against communism and the persecution of homosexuals while he attempted to establish residency. Within the United States, he participated in the antinuclear, environmental, and gay liberation movements in the 1970s and 1980s. During the first term of the Reagan administration, the FBI placed him on a list of people deemed "unsuitable" as government paid speakers abroad, a list on which black leader Coretta Scott King, feminist Betty Friedan, and consumer advocate Ralph Nader also appeared.

Ginsberg wrote more than forty books of poetry in his lifetime, working up to his death in 1997. His uncensored free-verse style produced as much controversy among academics as his profanity did among the government authorities. However, despite the stones of disdain and censorship thrown in Ginsberg's path, *Howl* has become required reading on college campuses throughout the United States, and his *Fall of America* won the National Book Award in 1972. He was also a member of the American Institute of Arts and Letters.

Ginsberg's love for poetry inspired him to take an active and highly public role in its promotion. In 1974, he helped found the Jack Kerouac School of Disembodied Poetics at the Naropa Institute, the first accredited Buddhist college in the Western world, located in Boulder, Colorado. He also taught English at Brooklyn College in New York. During the 1970s and 1980s, Ginsberg recorded spoken words and songs, and sometimes toured with popular musicians such as the Clash, and Bob Dylan, who cited Ginsberg as one of the few literary figures he could stand. In the 1990s, Ginsberg made more

recordings, collaborating with artists such as Paul McCartney and Phillip Glass. Ginsberg also had a talent in photography; he depicted his subjects—many of whom were people—with great depth of character, expressing visually what he achieved poetically. In 1996, his photographs were displayed in "Beat Culture and the New America: 1960-1965," an exhibition organized by the Whitney Museum of Art, suggesting that Ginsberg's anti-establishment life and work had, near the end of his life, become fully embraced by the country's most entrenched cultural institutions.

## Girl Groups

"Girl group" is a popular descriptive term referring to a genre of all-female singing groups and to the distinctive style of music such a

The Chiffons

group performs. Sexual desire is essential to the girl group image and sound. The genre was nonexistent in the sexually restrictive, first half of the twentieth century, although some all-female groups (like the Boswell and Andrews Sisters) existed. The rise of the genre helped challenge sexual mores in society and helped nurture the growth of a youth-driven culture in America. By 1960, the image of the girl group was everywhere in popular culture—spread across the nation through radio and television. The genre had its ultimate expression in the Supremes in the 1960s. By the 1990s, the image of the girl group, such as the Spice Girls, had become an established musical and cultural symbol.

The girl group image alludes to both youthful innocence and sexual desire (desire usually for the heterosexual men for whom the groups were originally marketed). Traditionally a trio or quartet in number, members are young, attractive women who are groomed in a noticeable way—they appear in matching clothes, for example, or wear designer dresses. Their hair is styled fashionably and members often wear makeup. The image is one of a young woman representing the heterosexual man's ideal woman or Dream Date. She is pretty, she is all made-up, and she is dressed for a lovely dinner, a night of dancing, or a romantic movie. Sex is always a part of the image, although this theme has been used in different degrees throughout the genre's history. The Dream Date is multiplied in the image of her sister singers, and so, together, the group appears as a harem of sorts, ready to entertain and please the man lucky enough to choose (or be chosen by) the women.

Musically, the girl group sound is meant to complement this narrow but highly identifiable physical image of youthful, desirable women. To emphasize the notion of youth, all members generally have young-sounding voices: thin, high alto to soprano range, sometimes nasal in tone. The thinness of each woman's voice allows for easy blending and a uniformity of tone. A voice that is low—say, tenor range—or too full or distinctive is uncommon in the genre, as such voices are considered too mature to convey qualities of youth or too individual to blend invisibly into the sound of the other members' voices. To emphasize the notion of sex, sometimes the voices are decidedly breathy—borrowed from the popular images of the Hollywood sex symbols (such as Marilyn Monroe) of the first half of the twentieth century. As with much popular music, the songs themselves are short and repetitive, therefore memorable, and usually address or convey a situation or emotion right away, allowing the remainder of the song to be used as a showcase for the group's romantic or sexual appeal. The lyrics of girl group songs deal with predicaments of love and sexual relationships, often revolved around pre-coital stress. Before the "Sexual Revolution," many lyrics were controversial, for it was not considered proper for a woman—whose cultural image in America had long been synonymous with virginity—to consider or voice her own thoughts about sexual intercourse, especially in a public forum.

The barriers to what was lyrically acceptable had come down in the 1950s with male musicians such as Chuck Berry, Elvis Presley, and Jerry Lee Lewis, solo artists who were writing and performing songs that entertained and were relevant to teenage experience—particularly the desires for freedom and sexual expression that teenagers were developing from beneath the oppressive morality of the 1940s and early 1950s. By the mid-1950s, these themes of love and sexual relationships were being explored by groups of male singers, and the genre of all-male singing groups became popular. Finally, five classmates at a school in Harlem decided to form an all-female group similar to the male groups that were so popular. Known

as the Bobbettes, they recorded their smash, top ten hit song "Mr. Lee" in 1957. The song had both the flavor of doo-wop (a style many male singing groups were having success with at that time) and many of the characteristics of what would become the "girl group" style: the lyrics were simple and repetitive, and the song emphasized youthful innocence and budding sexual desire. In this case, the song concerned a girl's affection for her favorite teacher. The Bobbettes' later recordings never achieved the level of success that their first single had reached, but another girl group called the Chantels released their first song only a few months after the appearance of "Mr. Lee," and so a trend had begun.

A year later, four other high school girls formed a group of their own. Fans of the Bobbettes and the Chantels, they called themselves the Shirelles and soon became one of the most popular girl groups in the rock 'n' roll era. Their biggest hit was "Will You Still Love Me Tomorrow?" The lyrics described a young girl musing on the loss of her virginity and were well ahead of the times. The song raced to the number one spot on the record charts, making the Shirelles the first black all-female group to have a number one record. Within a few years, dozens of girl groups formed and recorded records, all with varying degrees of success. All followed the girl group format, using slight variations to distinguish themselves from one another. Some of the most popular groups were the Crystals, the Marvelettes, the Chiffons, and the Shangri-Las. Two groups—Martha and the Vandellas, and the Ronettes—brought their own self-confident, "tough girl" innovation to the girl group sound.

Prior to the 1960s, audiences knew a singer's physical image from the live performance. Records were popular, but artists were, in the beginning, rarely shown on the covers of rock 'n' roll records. As girl groups began to appear more regularly on teen-oriented television shows such as Dick Clark's *American Bandstand*, and as their pictures began to show up on record covers, the idea of developing a visual image that supported either a group's tough or softly sweet (but in any case, sexually appealing) sound also became common.

The Motown Records company knew exactly how to use public visual image to their advantage. With shrewd business savvy, the company turned the Supremes—one of the many groups they managed—into the most successful girl group in popular music history. The Supremes capitalized on the use of a group name that implied divinity, on a public image that strove for larger-than-life beauty and sexual appeal, and through the sheer number of record-breaking achievements (including 12 number one hit records). A charm school run by the company taught the three young girls how to behave, dress, dance, and present themselves as young ladies. The Supremes' music was true to the girl group mold—simple, highly repetitive songs about love, yet audiences all over the world took notice of lead singer Diana Ross's breathy, seductive voice—light and thin but unquestionably distinctive. Their performances showcased their graceful, thoroughly choreographed routines and their often dazzling designer dresses. Motown owner Berry Gordy assembled a gifted team of writers to supply the Supremes with an almost endless stream of popular songs. The Supremes also appeared almost weekly on television variety shows and commercials, so by the end of the 1960s their name was household, and their image had become almost the sole representation of the term "girl group": three beautiful women, shining in sequined dresses, singing seductively to the listener. So completely did the Supremes seem to embody the concepts of the girl group that all other girl groups were subjected to a doomed comparison. Through the 1970s and 1980s a number of innovative all-female or female-led

groups appeared (the Pointer Sisters, Heart, the Go-Gos, the Bangles), but these were of a very different sort. Any female group performing in the “girl group” style—now embodied by the Supremes—was guaranteed to fail in the public’s eye as mere imitators.

Girl groups were often hired by other musicians to perform as background singers, so even when the genre began to move out of the public’s eye, its influence was present in much of the subsequent popular musical work that was done in America. By the 1990s, the term “girl group” had developed a negative connotation for some, drawing on the worst stereotypes of the style: music thought of as shallow, low on talent, or vocal beauty but high on studio polish and gimmickry; highly sexual lyrical content; simplistic lyrical texture; and heavy emphasis on public image and physical sexual appeal rather than on the quality of the musical product or performance. In the 1990s a resurgence in the girl group style occurred in rhythm and blues music. Of these groups, a talented few (such as En Vogue) arose that functioned traditionally in many ways, yet embodied the best of what the genre had to offer and received, in return, their share of recognition. However, most of the girl groups in the 1990s had to struggle, in the general public’s eye, to prove themselves against the later, negative image of the girl group.

## Girl Scouts

The Girl Scouts would probably never have come into being if the Boy Scouts had not been exclusively for boys. During the first decade of the twentieth century several thousand girls had wanted to join the new youth group created by General Sir Robert Baden-Powell in England shortly after the Boer War in South Africa, and a parallel organization called the Girl Guides had been quickly organized, with Baden-Powell’s sister Agnes at its head.

Juliette Gordon Low, a native of Savannah, Georgia, had married an Englishman; at the time that she met the Baden-Powells in 1910, she was a wealthy widow who had survived her increasingly abusive marriage, and now had both energy and funds to spare. After a turn at leading a Guides group in Scotland, Low threw herself with gusto into creating an American analogue to the organization, and on returning to Savannah in 1912 formed the first troops in the United States with the eager support of a distant cousin, Nina Anderson Pape, and a naturalist, W. J. Hoxie. Hoxie also collaborated with Low on

revising Agnes Baden-Powell’s Girl Guides handbook for American consumption, including writing some new chapters on camping and nature lore. The first edition of *How Girls Can Help Their Country* was published in 1913. In 1915 the name of the American organization was changed from Girl Guides to Girl Scouts and its headquarters moved from Savannah to Washington; in 1916 the national office moved to New York, where it remained for the rest of the century.

Robert Baden-Powell saw Scouting for boys as a means to a specific end: “to help them become handy, capable men and to hold their own with anyone,” he wrote, adding that a woman with similar training as Girl Guides “can be a good and helpful comrade to her brother or husband or son along the path of life” and that the Girl Guides during the First World War had “quickly showed the value of their training by undertaking a variety of duties which made them valuable to their country in her time of need.” So Girl Scouts, like Boy Scouts, were taught how to survive in the wilderness and the basics of water safety and first aid, and encouraged to learn how to handle firearms. With the motto “Be prepared,” members of both organizations still promise “to do my duty to God and my country, to help other people at all times, and to obey the Scout Laws.” Both groups award merit badges for the acquisition of particular skills. And both sexes wear uniforms—the Girl Scouts’ originally were blue like the Girl Guides’ but were soon switched to khaki, green uniforms being substituted in the late 1920s.

Nevertheless, the separation of the two branches meant that there was less emphasis on a military agenda for the Girl Scouts, and more on developing proficiency in skills rooted in a gendered division of labor. In addition to scoutcraft (woods lore, trailblazing, and mapping, Morse and semaphore flag signaling, and other outdoor skills) the first Girl Scout handbooks contained highly practical instructions in hygiene, cooking, housekeeping, gardening, and child care.

As in England, girls flocked to join the movement in America. Like female suffrage, Scouting implicitly challenged the Victorian ethos of women’s assignment to a male-protected domestic sphere. By getting girls outdoors and into each other’s company, the Girl Scouts offered mastery of real-world skills and gender solidarity. The separate governance of the two organizations also allowed the Girl Scouts to continue to follow a policy of inclusiveness when, in the early 1990s, the Boy Scouts took a stand against membership for religious nonbelievers and homosexuals (losing, as a result, some financial support from corporations and foundations with nondiscrimination policies).

Funding for the Girl Scouts was seeded by Juliette Low’s personal fortune, but the organization remained throughout the century the only entity of its size supported primarily by a bake sale: the annual Girl Scout Cookie drive. The shortbread trefoils and chocolate mints became as much a part of American popular culinary culture as apple pie. Individual member dues are *not* a major source of revenue: at the end of the century, membership was just six dollars a year.

Original Girl Scout Laws mandating kindness to animals and thrift were later broadened into the ecological and social directives to “use resources wisely” and to “make the world a better place.” A significant difference is the extension of the old “clean in thought, word, and deed” rule from personal and public health to include instruction on how to deal with sexual harassment and psychological challenges of adolescence such as stress, moodiness, and self-esteem. One clause which has not changed is the commitment to “be a sister to every Girl Scout,” a fellowship which transcends national barriers. Girl Scouts of the U.S.A. is a member of the World Association of

A Girl Scout troop, c. 1920s.

Girl Guides and Girl Scouts (WAGGGS), which has eight million members in 100 countries, and international meeting centers in England, Switzerland, India, and Mexico.

Girl Scouts range in age from Kindergarten-aged Daisies (named after Juliette Low, whose childhood nickname was Daisy), Brownies (ages 6 through 8), Junior Girl Scouts (aged 8-11), Cadettes (aged 11-14), and Senior Girl Scouts (aged 14-17). A girl may become an Adult Scout at age 18. Not all Scouts follow the progression from Daisy all the way up through Senior, as the many other activities of adolescence, including boys, make competing claims on their time. (“We are feminist rather than feminine,” explained a former Scout leader in the 1990s.) And some girls abandon Scouting because of what they saw as excessively religious undercurrents, despite the organization’s efforts to be nonsectarian and inclusive. Nevertheless, many American women regard Scouting as a happy aspect of their childhood, and one they would readily see their own daughters experience as well.

## Gish, Dorothy (1898-1968)

One of the pioneering actresses of silent film, Dorothy Gish starred in over 20 films directed by legendary filmmaker D. W. Griffith. Like her older sister and co-star, Lillian, Gish played roles that embodied Griffith’s vision of ideal womanhood—charming, chaste, and strong-willed. In particular, Gish earned acclaim for her comic portrayal of “The Little Disturber” in Griffith’s *Hearts of the World* (1918) and as the blind Louise in *Orphans of the Storm* (1921). Even though Gish left film for a successful stage career in the 1930s, in the eyes of the public she remained forever Griffith’s *gamine*.

## Gish, Lillian (1893-1993)

Both frail and tough, innocent and powerful, charming and serious, actress Lillian Gish has defied both categorization and convention. Best known for her work with director D. W. Griffith, in her younger years Gish portrayed pale, waiflike heroines who used emotional strength, hard work, and persistence to protect their chastity—and spirit—from destruction at the hands of lustful men. To many filmgoers, Gish served as a bridge between nineteenth- and twentieth-century values, uniting Griffith's Victorian views on sexual purity with the strong-willed independence of the "modern" girl. Even after Gish left Griffith's studio in 1923, she continued to shy away from overtly sexual roles, and for the rest of her career, Gish remained an

Lillian (left) and Dorothy Gish in a scene from the film *Orphans of the Storm*.

icon of propriety—and a firm believer in the dignity of acting. Gish, who pioneered many of the acting techniques of silent film, worked tirelessly to elevate the cinema from the status of mere entertainment to serious art.

For an actress who championed the respectability of film, Gish's introduction to the world of drama was less than highbrow. At the age of five, Gish debuted in a vaudeville melodrama called "In Convict's Stripes," and a few years later, Gish, her mother, and her sister Dorothy had joined vaudeville touring companies and were traveling around the country with a child actress named Gladys Smith. In New York in 1912, Lillian and Dorothy went to visit Smith, who had been renamed Mary Pickford and was working at D. W. Griffith's Biograph studio. Pickford urged Griffith to hire the Gish sisters, and in the next three years Lillian and Dorothy appeared in over 35 short films. In 1914, Gish starred in her first feature-length film, *Judith of Bethulia*, and in 1915 played heroine Elsie Stoneman in *The Birth of a Nation*. During the next seven years, Gish developed and refined her on-screen persona: in *Hearts of the World* (1918), *Broken Blossoms* (1919), and *Orphans of the Storm* (1922), Gish played downtrodden characters who survived poverty, abandonment, and abuse through tenacity, sacrifice, and luck. In the most famous of these roles, in *Way Down East* (1921), Gish's character Anna Moore floated down a river on an ice floe, hand and hair dragging in the frigid water, until saved by her lover. Prevented by the silent film medium from using spoken words, Gish perfected the art of facial expression, and Griffith, the pioneer of the close-up shot, used Gish's wide eyes and cautious smile to create a depth and intensity unparalleled in early film.

In 1923, a dispute with Griffith over her salary drove Gish to Inspiration Pictures, where she appeared in *Romola* (1924) with William Powell; in 1926, she moved to MGM and starred in *La Bohème* (1926), *The Scarlet Letter* (1926), and *The Wind* (1928). Gish's films at MGM, though, were largely box-office failures, and production head Irving Thalberg suggested that the studio invent a scandal for Gish to boost her popularity. Gish refused, leaving MGM and signing with rival United Artists in 1930. Soon afterwards, when *One Romantic Night* (1930) proved a commercial disappointment, Gish asked to be released from her contract, thus concluding her most productive and creative years in film. As actress Louise Brooks lamented, "Stigmatized as a grasping, silly, sexless antique. . . the great Lillian Gish left Hollywood forever, without a head turned to mark her departure." Brooks, however, turned out to be wrong. Although Gish devoted most of the next five decades to the stage, she returned to Hollywood for a few notable films. In 1947, Gish received an Academy Award nomination for her role in *Duel in the Sun* and, in 1955 she gave a powerful performance as an old woman protecting a group of children from a maniacal killer in *The Night of the Hunter*. No longer the gamine, Gish increasingly portrayed mature, if not spinsterish characters. In 1960, Gish played Burt Lancaster's mother in *The Unforgiven*, and in 1969 she appeared in a television version of "Arsenic and Old Lace," playing one of the spinster sisters with Helen Hayes. In real life, Gish did not marry, although she was admired by many suitors. When asked in the 1920s why he was so fascinated with Gish, co-star John Gilbert, one of her more ardent followers, replied, "Because she is unattainable."

By the 1970s, Gish was widely celebrated as "the first lady of film," and in 1971 she received an honorary Academy Award for her contribution to motion pictures. "This beautiful woman so frail and pink and so overwhelmingly feminine has endured as a working artist from the birth of the movies to its transfiguration," Melvyn Douglas read at the ceremony, "for underneath this wisp of a creature there is

hard steel.” Gish’s iron constitution served her well: in her eighties, Gish continued to act in television, theater, and film, giving her final performance in *The Whales of August* in 1987. She died in 1993, leaving a legacy of hard work, creativity, and versatility. While Hollywood vamps, goddesses, and bombshells came and went, Gish remained a testament to the timelessness of the fine art of acting.

## The Glass Menagerie

Tennessee Williams’s 1944 drama *The Glass Menagerie*, his self-described “memory play,” has been considered a classic of the American Theatre since its debut. The play is Tom Wingfield’s reminiscence of his youth living in a St. Louis tenement in the 1930s with his domineering mother Amanda and his handicapped sister Laura. The 1945 Broadway production was awarded The New York Drama Critic’s Circle “Best American Play.” Since that time, the play has gone on to be performed internationally and adapted several times to film. Its success is attributed to its autobiographical story, its poetic language, and its vivid characterizations.

## Gleason, Jackie (1916-1987)

As his sobriquet, The Great One, implies, Jackie Gleason was a comedian of superlative talents, but one whose persona housed enormous contradictions. A literally larger-than-life performer who became a star on the small screen when he failed to achieve headline status on stage and in the movies during the 1940s, Gleason became “Mr. Saturday Night” during the next two decades, and helped to define the comic possibilities of television. Although he hosted a variety series for over 20 years, the corpulent comedian is best remembered for a situation comedy that lasted only one season: *The*

*Honeymooners*. A high-living *bon viveur*, Gleason achieved success by never forgetting the lowly “Ralph Kramdens” who populated his boyhood.

In a medium where understatement is the cool virtue, broad physicality and verbal bombast were the red-hot core of Jackie Gleason’s game. Even as the medium became more refined, extravagance was Gleason’s badge of distinction. His programs were always lavish spectacles, highlighted by gaudy dance numbers and glamorous starlets. On stage and off, Gleason presided like a monarch.

But poverty and abandonment defined Gleason’s childhood and his later conception of himself. Even in his glitziest productions, there was always a reminder somewhere of the tough mean-streets of his youth. He was born in an impoverished section of Brooklyn on February 26, 1916. His brother died when Jackie was three and his father, an insurance clerk, deserted the family when he was eight. Gleason’s mother supported her son by working in a subway token booth and living with rented furniture.

Jackie quit school at an early age and worked as a pool hustler, comic high diver, and carnival barker to pay the rent. He found his calling as a master of ceremonies at Brooklyn’s Folly Theater, and across the Hudson River at Newark’s Miami Club. His quick wit with hecklers and his energetic charm landed him steady employment at Club 18, a cabaret in Manhattan. Movie executive Jack Warner caught his act and signed him to a Hollywood contract. Beginning in 1941, he played minor parts in a series of movies, including the musical *Navy Blues* (1941) with his idol, Jack Oakie, and *All Through the Night* (1942), a gangster yarn with Humphrey Bogart. Unrecognized by the movie crowd, he returned to New York in 1944 and began to attract notice on Broadway. His appearance in *Artists and Models* led to a larger role in the musical comedy *Follow the Girls*, for which *Time* lauded him as a “likably Loony comic.” Gleason stole the show by impersonating a female naval officer, proving to himself that he could “get away with more as a fat man.” Offers began to pour in: he replaced Bob Crosby on a Sunday night radio show and emceed at Billy Rose’s Diamond Horseshoe. In 1949 he was featured in the Broadway revue *Along Fifth Avenue* with comedienne Nancy Walker. Brooks Atkinson of *The New York Times* recognized Gleason’s ability to move on stage as “a priceless accomplishment in a man who wants to be funny.”

Later in 1949, Gleason returned to Los Angeles to star in a blue-collar situation comedy, *Life of Riley*, a television adaptation of a popular radio series about a bumbling aircraft worker. Producer Irving Brecher was unable to sign the lead of the original radio program, William Bendix, because of movie commitments. Gleason was recruited to play the goodhearted but incompetent Chester A. Riley in one of television’s first comedies recorded on 35mm film. Chester’s catchphrase, “What a revoltin’ development this is!” caught on, but Gleason’s edginess and *joie de vivre* were missing without an audience. Although the series received an Emmy Award for “Best Film Made For and Viewed on Television” (there wasn’t much competition), *Life of Riley* was canceled after 26 weeks. Bendix revived the role for television in 1953, and that incarnation ran for five years.

Several months after the cancellation, Gleason landed a television role that was totally suited to his strengths. He was hired as host of the live variety series, *Cavalcade of Stars*, on the DuMont television network. DuMont was a struggling fourth network with little money for programming, but proved an excellent training ground for future stars on the established networks. Both previous

**Jackie Gleason**

hosts of *Cavalcade*, Jack Carter and Jerry Lester, were stolen by NBC for big-time variety shows. In the two years that Gleason hosted the low-budget DuMont show, he laid the groundwork for his impending future success.

On *Cavalcade* the comedian developed the variety format, and his repertory of characters that would serve him well for the next 20 years. Unlike other variety hosts, such as Milton Berle or Sid Caesar, who relied mostly on new sketches each week, Gleason based his comedy on recurring characterizations, many of which were comic extensions of people he grew up with in Brooklyn. There was the ever complaining Charles Bratton, known as The Loudmouth; the sweetly meek Fenwick Babbitt, who would sometimes explode; the hapless Bachelor, a silent figure struggling to cope alone; and garrulous Joe the Bartender, caught in an endless monologue about the idiosyncratic patrons of his establishment. Two creations revealed the polar sides of Gleason's sensibility: the innocent savant, The Poor Soul, a silent homage to the vulnerable, saintly Little Tramp of Charlie Chaplin, and the ostentatious playboy, Reginald Van Gleason III, a baroque vision of wealth and grandeur.

Jackie's most famous character, Ralph Kramden, debuted later than the others, but was probably Gleason's best understood creation. There were, as he explained, "hundreds of them in my neighborhood." Gleason was so close to the yearning and unquiet desperation of his bus driver that he gave him the same address as his boyhood residence, 358 Chauncey Street. *The Honeymooners* began modestly enough as a six-minute sketch portraying a long-married working-class couple who stayed together despite life's blows and disappointments. Unlike the foolishness of *Life of Riley*, Gleason wanted this pair based on realism; he instructed his writers "to make it the way people really live." Pert Kelton first played Alice, the wife, and gave her a battle-scarred feistiness. To everyone's surprise, the audience identified with the Kramden's struggles and *The Honeymooners* sketches became longer and richer in comic incident.

For an early Reggie van Gleason sketch, the show hired an agile player from *The Morey Amsterdam Show*, Art Carney. Gleason and Carney hit it off immediately and remained partners in one way or another until the end. Carney had a cameo in the first *Honeymooners* sketch as a policeman, but he was so adept at playing sidekicks that

the role of Ralph's buddy, the sewer worker Ed Norton, was quickly created for him. This pairing eventually developed an archetypal resonance with Carney who would be a Sancho Panza to Gleason's Don Quixote.

The other networks quickly recognized Gleason's popularity on DuMont. He appeared as a special guest star on CBS' *The Frank Sinatra Show* and there was talk about making him a regular. He also hosted *The Colgate Comedy Hour* on NBC, and in 1952 William Paley, Chairman of CBS, lured Gleason and his staff to CBS by quintupling his salary. The bigger budget for *The Jackie Gleason Show*, which premiered on September 20, 1952, allowed for splashier production numbers, including an opening extravaganza with the June Taylor dancers which Busby Berkeley would have been proud to own. Gleason also employed beautiful chorines, known as the Glea Girls, to introduce segments of the show, while he himself became one of the show's grand inventions, sipping his "tea" as if it were laced with alcohol and uttering his trademark phrases "How sweet it is," "You are a dan-dan-dandy crowd," and "And Away we go!" Soon the Gleason show owned Saturday nights and was second in the overall ratings, behind *I Love Lucy*.

On top for the first time, Gleason pushed himself into other creative arenas. Although he could not read music, he composed the signature melody for his variety show, *Melancholy Serenade*. Deciding that the common man needed background music for his pleasures, he composed over 40 mood albums, beginning with *Music for Lovers Only*, whose collective sales reached 120 million. He scored an "original symphony in ballet," entitled *Tawny*, which *The New York Times* called "a poem for eye and ear, a simply superb example of inspired television artistry." In 1954 Gleason also produced a summer music show for the Dorsey brothers, Tommy and Jimmy, which became the regular series, *Stage Show*. The comedian took personal credit for giving Elvis Presley his first network exposure on the Dorsey program.

In 1953 Gleason made his dramatic acting debut, portraying a manipulative comic in a *Studio One* production. He starred in several live television dramas, which led to the resurrection of his movie career. He received an Academy Award nomination for his role as Minnesota Fats in *The Hustler* (1961) and critical acclaim for his sleazy boxing manager in *Requiem for a Heavyweight* (1962), but was less successful as a deaf mute in *Gigot* (1962), a sentimental tale that he also wrote. In 1959 he made a triumphant return to the stage as an irresponsible drunk in *Take Me Along*, a musical adaptation of Eugene O'Neill's *Ah, Wilderness!*

Gleason strayed several times from his successful variety formula. In 1955 Buick offered him one of the largest contracts in television history to produce *The Honeymooners* on film, but Ralph and Alice (played by Audrey Meadows since the move to CBS) did not click with the audience. Eventually, however, these 39 episodes of *The Honeymooners* became a financial bonanza in syndication. In 1961 Gleason inexplicably tackled the quiz show format, and his *You're in the Picture* became one of television's most notorious debacles, lasting only one week. During the early 1960s he launched *The American Scene Magazine*, using his characters to comment on societal change. In 1964, when he relocated his television series to Miami Beach, "the Sun and Fun Capitol of the World," he reverted to his characteristic brand of splashy entertainment. Although the variety format was losing its luster, Gleason remained in the Nielsen Top Ten throughout the decade.

After his move to CBS, Gleason insisted on total control of his variety series. He participated in every aspect of production, from

casting to set design to merchandising. With Orson Wellesian bravado, his end credit proclaimed, "Entire Production Supervised by Jackie Gleason." As he once explained, "I have no use for humility . . . In my work, I stand or fall by my own judgment."

Gleason emerged in an era of live television when comedians dominated the airwaves. Despite changes in American culture and television, he was able to produce and star in his type of variety program until 1970. After that, he revived *The Honeymooners* as holiday specials and starred as a Southern sheriff in several *Smokey and the Bandit* movies. When he died on June 24, 1987, the country was rediscovering the "lost" episodes of *The Honeymooners* from the 1950s. Gleason demonstrated that commercial television could be a medium for original comic expression, and his work has spoken to the American Everyman. As critic Tom Shales has noted, "Gleason was perhaps as much the auteur as Chaplin was or as Woody Allen is."

## Glitter Rock

From 1972 to 1974, a wave of primarily British rock acts—dubbed Glitter Rock—emerged to enjoy massive success with a sound that marked a radical departure from the peace/love/sandals vibe of the recent past. The new movement celebrated the superficial, made androgyny look cool, and marked a complete departure from the more earnest "save the world" sentiments of the hippie era. *Rolling Stone* writer David Fricke described glitter rock as "the tidal splash of pop guitars, raging puberty, and elegant anarchy." Male singers often sported shag haircuts, eyeliner, lipstick, outrageous clothing, and towering platform shoes with abandon. Yet the music that came out of this era—David Bowie and Roxy Music would create some of glitter's greatest sonic legacies—would land an assured place in the annals of rock history, and the genre has been posited as the most innovative event to sweep through the pop music landscape before punk rock.

"Glitter was urban panic music," wrote Jon Savage in *Gadfly*, in describing the marked distinction between glitter rock and hippie

Glitter rock artist Gary Glitter.

rock. “Instead of natural fibers, you had crimplene, glitter, fur; instead of LSD, alcohol and downers; instead of albums, singles were the focus; instead of authenticity, synthetic plasticity ruled; in place of a dour, bearded machismo, you had a blissful, trashy androgyny.” The summer of 1972 is usually tagged as the moment of glitter’s genesis, and London the place, but the chart-success version of glitter—called glam in the United Kingdom—did owe a small debt to an obscure young American band, the New York Dolls. Living in Greenwich Village and originally playing Otis Redding covers in what was called the “Oscar Wilde Room” at the Mercer Art Center, the Dolls had long hair, dressed in platform shoes, and wore a great deal of makeup. Part of their inspiration came from the late 1960s Greenwich Village theater scene—particularly the gross doings of the Ridiculous Theater Company—and they became the next hot band to catch when Andy Warhol and his entourage began frequenting the Mercer shows.

A management team thought it better to launch the Dolls first in London, and they flew over and found instant success. Contracted to open for Rod Stewart, they became the first group in music history to tour with a major rock act without ever having produced an album or even a single. Then one of the Dolls, Billy Murcia, died of a Quaalude

overdose, and the band was eulogized in the music press for a time. They emerged again with a new drummer in December of 1972, signed to the Mercury label, but their career fizzed after just two albums. To add to the band’s troubles, American audiences assumed that they were gay at a time when homosexuality was a new and very controversial topic for many.

Back in London, however, the vibe was quite different. Glitter/glam rock was huge by the summer of 1972. Its precursor came in the spring of 1971 with a young and attractive singer, Mark Bolan, and his band T. Rex. “Get It On (Bang the Gong)” and subsequent tracks like “20th Century Boy” and “Diamond Meadows” came to be deemed classics of glitter. Like most pop culture movements, glitter originated as a reaction against something else. In this case it was the ubiquity of the hippie. By 1972 the long-hair-and-granola look was even being coopted in advertising images. The Beatles were gone, and bands like Yes, the Moody Blues, Fleetwood Mac, and Led Zeppelin were huge, as was country rock; long dirge-like tunes were in vogue. Glitter celebrated artifice and the *soignée*, and through it ran strong elements of camp. Furthermore, the spectacle of men wearing makeup was still enough to make people halt on the street and cause periodic uproars in the mainstream press. Homosexuality had only been decriminalized in Britain in the late 1960s, and the gay-rights movement in the United States only dated back to the summer of 1969. The average man or woman of a certain age still found it dreadfully uncomfortable even admitting that gay men and women existed at all, so taboo was the topic prior to these years. Thus glitter rock and its accoutrements—the weird album covers, the high-resolution rock poster, the aping of the look of one’s favorite singer—found great resonance with the teen generation.

Several crucial albums were released in 1972 that portended a new era in rock. Roxy Music, led by Bryan Ferry and including Brian Eno at the time, has been termed the ideological vanguard of the movement. Their self-titled debut LP and the single “Virginia Plan” both arrived in the summer of 1972 to massive success. Very rock-guitar chords and booming drums melded with Ferry’s arch, almost poetic lyrics, and made Roxy perhaps the most enduring of all glitter bands, and one that virtually never fell out of critical favor. This Eno period is usually termed their zenith; they disbanded after the release of *Country Life* in 1974 and subsequent reformations never really achieved the initial edge.

David Bowie and his Ziggy Stardust persona is also inextricably linked with glitter rock. His massive success with androgynous outfits and spacey lamé bodysuits was the mainstream rock manifestation of the whole glam movement. His 1972 album *The Rise and Fall of Ziggy Stardust and the Spiders from Mars* is deemed one of the quintessential releases of the genre. Moreover, Bowie would produce a number of significant albums in a short span of time, also vital to the glam-rock discography: Mott the Hoople’s *All the Young Dudes*, Lou Reed’s *Transformer*, and Iggy Pop and the Stooges’ *Raw Power*, all released in 1972. That same year, Bowie told an interviewer in the British music paper *Melody Maker* that he was gay (later amending it to “bisexual”), which caused a huge stir. He became the first pop star to ever to make such an admission.

Further musical events that summer of 1972 made glam/glitter a commercially viable movement. Gary Glitter, a forgotten English singer from the 1950s and 1960s, had a huge hit with the kazoo-like guitars and one-word lyrics (“Hey!”) in “Rock and Roll (Part II).” A massive success in England that reached the Top Ten in the United States, the single would go down in history as the essential sports-stadium rouser by the 1990s. “Instantly nostalgic, but like nothing

else on earth, 'Rock and Roll' cut through everything that was around that English summer, through the T. Rex sparkle and David Bowie sashay, through Slade's patent stomp and Sweet's candied pop," wrote Dave Thompson in *Goldmine*, "and though it didn't quite make #1, it hung around the chart so long there's not another song on earth that recaptures the moment like [this] one."

Several other tracks signify the glitter rock moment, such as the cult favorite "Baby's on Fire," from a Brian Eno solo project. Other British bands quickly climbed onto glam once its moneymaking potential had been established, but produced music with far less panache and artistic endurance than Bowie, Roxy, or T. Rex. Slade and Sweet were two such acts, and would become the begetters of the 1980s glam metal movement; Queen also grew out of this era, and surprised many by successfully riding the glitter rock well past its announced demise. Glitter rock also marked a turning point in pop music: prior to 1972, American and British tastes had more or less corresponded. Yet glam failed to catch on in the United States as it did in Britain, and the shock-rock proto-Goth Alice Cooper was its only true homegrown commercial success.

By 1974, the New York Dolls had disintegrated after more problems with drugs, the Stooges broke up, Bowie released an album of vintage cover tunes, and Elton John—perhaps the most commercial and internationally successful manifestation of glitter rock—was a huge success. The cross-dressing camp of glitter rock was successfully translated into a stage play, *The Rocky Horror Picture Show*, which became a cult film almost from its debut in 1975. The last gasp of real glam in the United States came with Sweet's Top Ten hit, "Ballroom Blitz," in the summer of 1975.

Already by that summer, punk was in its nascent stages in England and would hit full-force the following year. Hallmarked by vulgarity, tattered clothing, and almost unlistenable, anything-but-melodic music, punk was, not surprisingly, a reactionary movement—against the satiny, coiffed look of glitter with its electric pianos and Wildean sentiments. A little over a decade later the outlandishness and alternative sexuality of glitter rock were standard pop music clichés, embodied most successfully by Boy George, Prince, and even Madonna. *Velvet Goldmine*, a 1998 film by Todd Haynes, borrowed its title from a Bowie song of the era and was heralded as a sign of glitter rock's revival. Set in London in the early 1970s, it follows the rock 'n' roll love story of a bisexual rock star in space-age apparel and his far punker American friend, a clear stand-in for Iggy Pop. Numerous luminaries from alternative music stepped in to create and/or record for the *Velvet Goldmine* soundtrack, and filmmaker Todd Haynes recalled in interviews how profoundly some of the music and imagery from the glitter rock era had affected his adolescent years. "It was a moment when it was cool even for straight people to appear bisexual," the film's editor, Jim Lyons, told Amy Taubin in the *Village Voice*. "There's a clear nostalgia for that period when we believed that we were going to have a better and better society, and that feminism would win, and homosexuality would be completely accepted."

## Gnagy, Jon (1906?-1981)

Jon Gnagy was a man who taught himself how to draw and then taught millions of youngsters how to follow in his footsteps, thanks to the then-new medium of television. With his checkered shirt and vandyke beard, Gnagy was one of the fixtures of 1950s television, demonstrating simplified techniques of line and shade to children, many of whom were drawing along in front of their television sets at home with the aid of one of Gnagy's *Learn to Draw* workbooks. Although criticized in some esoteric art circles, Gnagy defended his methods, which enabled him to remain popular on the tube from the beginning of the 1950s until the middle of the decade. In the years since, other telegenic art instructors have found similar success by patterning their shows after the man who introduced a generation of baby-boomers to the world of do-it-yourself art.

The Kansas-born Gnagy taught himself how to create art while recovering from a childhood illness. The skill later helped him earn a living as everything from a sign-painter to an advertising art director. He started teaching his techniques—based on Cezanne's fundamentals, he claimed, using the basic tools of cube, ball, and cone—on experimental video outlets in 1946. CBS started featuring Gnagy nationally in 1950 on 15 minute shows known variously as *Draw with Me*, *You Are an Artist*, and *Jon Gnagy Learn to Draw*. Though criticized for oversimplification and for promoting imitation rather than creativity, Gnagy felt that his methods were appropriate for his medium and his audience. There was no quarrel from the many youngsters who faithfully watched his shows and had their parents buy his instruction kits throughout the early 1950s. After leaving television, Gnagy continued to lecture on his favorite subject. He died in 1981 at age 74.

## *The Godfather*

One of American popular culture's most resilient narratives is that of the Mafia and its antiheroic gangsters, and one of this genre's most popular and poignant products is Francis Ford Coppola's *The Godfather* trilogy, based on Mario Puzo's novel of the same name. Released in 1972 to universal acclaim and rewarded with several Academy Awards, including Best Picture, *The Godfather* instantly fixed its place in the American cultural psyche, establishing itself as the de facto gangster film to which all other subsequent exercises in the genre would be compared.

Powered by Marlon Brando's timeless delivery of the film's namesake, Godfather Vito Corleone, the film also established the futures of Hollywood royalty Al Pacino (Michael Corleone), Robert Duvall (Tom Hagen), and James Caan (Sonny Corleone), all of whom are most recognized for the roles they played in this sprawling and sensitive study of two generations of Mafia membership and power—especially Pacino, who would go on to the starring role in *The Godfather Part II* (1974) and *The Godfather Part III* (1990). More importantly, the blinding success of the first two *Godfather* films immediately marked Coppola as a major player in Hollywood, allowing him green lights on almost any project he set his hands on, leading to the legendary conflicts with his producers as well as

Brando during the shooting of *Apocalypse Now* (1979) and his ambitious attempt to form his own studio/distributor conglomerate, Zoetrope Studios, in 1980.

In 1972, Coppola adapted Mario Puzo's popular novel for the screen, and although the two worked together on the script, Coppola dramatically shaped the project during the shooting. The second installment was entirely his creation. Cutting out much of the novel's romanticized violence, the director decided to instead focus on the Corleone family dynamics, personalizing the film in accordance with his own experience growing up as the second-generation son of an Italian immigrant. The Mafia, as always, was the perfect vehicle for the consideration of American culture and values, Coppola asserted in an interview: "I feel that the Mafia is an incredible metaphor for this country. Both America and the Mafia have roots in Europe . . . both the Mafia and America feel they are benevolent organizations. Both the Mafia and America have their hands stained with blood from what it is necessary to do to protect their power and interests. Both are totally capitalistic phenomena and basically have a profit motive."

Indeed, the strength of *The Godfather* trilogy's appeal lay in the collusion of the two phenomena, one which ran throughout the genre in its most moving expressions, from Paul Muni's bravura performance in *Scarface* (1932) to Martin Scorsese's immediately canonical *GoodFellas* (1990). All installments in the gangster genre engaged

The cast of *The Godfather*: (from left) Al Pacino, Marlon Brando, James Caan, and John Cazale.

the audience's sympathies for the lead character as an independent businessman living out his version of the American Dream. In fact, there is a built-in bias toward the Mafia, especially within *The Godfather*, as a conglomerate of well-intentioned businessmen looking out for the best interests of their families; as critic Roger Ebert has explained, "During the movie we see not a single actual civilian victim of organized crime . . . The only police officer with a significant speaking role [Sterling Hayden] is corrupt." The ideas of law and order are specific to the machinations of the various families of the Mafia, replacing the exterior world with the cloistered, fiercely loyal world of organized crime; in fact, one of the first scenes in *The Godfather* involved Brando castigating an undertaker, who describes himself as a "good American," for going to the police for help. Interestingly enough, the film's violent finale, which juxtaposes the exhaustive murders of each of Michael Corleone's opponents (a figurative baptism of Corleone power through death) with the literal baptism of his child, was cheered by audiences as a shining example of American triumph. This moral ambiguity and veiled criticism of the American legal and political system's inefficacy is one which has coursed through popular culture's fascination with organized crime, one which was an interesting accident to Coppola, who had actually structured his movie to be a criticism of the ethnic and religious hypocrisy within the Mafia. Instead, the audiences were attracted by the poignant scenes of family cohesion in the face of social and economic pressure; in this sense, Coppola's film had the endearing, if violent, nature of some of the best work of Frank Capra, including his classic *It's a Wonderful Life*.

*The Godfather Part II* applied Coppola's intended criticisms of organized crime and religious hypocrisy even further, culminating in Michael Corleone's assassination of his own brother Fredo and his disruption of his marriage for the sake of the family business. There is no noble Brando figure in the second installment: everyone from Michael, his family, the Nevada governor, and local citizenry is completely corrupt. The ethnic cohesion and protection which coursed through the first installment is totally disrupted, a monumental disappointment augmented by Coppola's insertion of an earlier scene of a cheerful birthday party for Vito Corleone at the end of the film. An ultimately tragic figure, Michael Corleone, by the end of *The Godfather Part II*, has compromised not only his Italian heritage, his ethnic identity, and his family, but has positioned himself as the type of win-at-all-costs American immigrant criticized in the first installment, one who, even in the possession of unquestionable power and influence, can no longer trust anyone because he can be trusted by no one. By *The Godfather Part III*, Michael has extended his power as far as the Vatican, which he implores for redemption for the murder of his brother, but he still ends up powerless as his daughter is murdered at his side by the end of the film.

Resistant to the idea of establishing his *Godfather* series as a trilogy for years (Coppola asserted that if he ever did make a third installment, it would have to be a farce), the failure of his Zoetrope Studios (in which a good deal of his personal funds were invested) and the relative failure of his artistic product following *The Godfather* and *The Godfather Part II* (only one of his post-*Godfather* films, *The Outsiders* in 1983, met with any measurable mainstream success), Coppola capitulated to the American infatuation with the Corleone family business and released *The Godfather Part III*, inciting further controversy by casting his own daughter, Sofia, as Andy Garcia's love interest. Sofia Coppola's mediocre delivery shattered the prodigious but deteriorating reputation of her father, whose legendary status seemed to exist parallel to the lasting impact of the trilogy. But

it did not diminish the technical skill, daunting vision, and deeply personal attention which Coppola nevertheless employed in his following films. Regardless of his future projects, Coppola has assured himself immortal status in film history on the strength of *The Godfather* trilogy alone. *The Godfather Part III*, predictably, was a moderate success at the box office, garnering \$70 million, but it was another star vehicle for Pacino and newcomer Andy Garcia. It also fulfilled American popular culture's desire for closure while fulfilling Coppola's desire for a sharp critique of the inherent destruction and corruption within the relentless pursuit of power and wealth which lies at the heart of the American Dream.

## Godfrey, Arthur (1903-1983)

The arrival of genial, folksy Arthur Godfrey on television was the most publicized event of the 1948-49 season. The reviewers pulled out all the stops in praising "the old redhead," and he became the only personality in TV history to have two top-rated programs run simultaneously in prime time for an extended period. *Arthur Godfrey's Talent Scouts* aired on Mondays and *Arthur Godfrey and His Friends* on Wednesdays for eight-and-a-half seasons. In 1952-53, the programs ranked two and three, just behind *I Love Lucy*. Even more remarkably, Godfrey's morning radio show, every Monday through Friday, continued during this time with high ratings, his fan base growing with multiple exposures. TV critic Ben Gross of the *New York Daily News* summed up Godfrey's appeal: "It is his friendliness, his good cheer, his small-boy mischievousness, and his kindly philosophy."

*Godfrey's Talent Scouts* brought little known or newly discovered professional talent to perform before a live nation-wide audience, with an applause meter deciding the winner. The host's witty banter and interviews with contestants plus a high quality of talent delighted the listeners. Some of the winners—including Pat Boone, Carmel Quinn, the Chordettes, and the McGuire Sisters—later became regulars on *Arthur Godfrey and His Friends*. Also appearing on the show were many other soon-to-be-famous performers, including Rosemary Clooney, Tony Bennett, Connie Francis, Steve Lawrence, Leslie Uggams, and Patsy Cline. Two big stars missed by the show's screening staff, Elvis Presley and Buddy Holly, both flunked the show's auditions.

For his weekly variety hour, Godfrey assembled a personable group of talented regulars, chosen with an eye to audience demographics. Frank Parker and Marion Marlowe sang romantic duets for the mature audience, and Julius LaRosa was the bright young singer with appeal to bobby-soxers. There was also the bashful Hawaiian singer, Haleloke, as well as the Chordettes, a squeaky clean

Arthur Godfrey

barbershop quartet from Wisconsin. Other popular regulars were Janette Davis, Bill Lawrence, and the Toppers. Tony Marvin was the mellow-voiced announcer, while Godfrey enhanced the proceedings, sometimes playing his ukulele and singing in a gravelly croon. As he had on radio, Godfrey kidded his sponsor's products, but he refused to endorse any product he did not like personally.

When Godfrey underwent surgery for a hip replacement in May 1953, it almost seemed as though the whole country sent him get-well cards. The press continued to revere him until October of that year, when a dramatic turnaround occurred and Godfrey became controversial—suddenly maligned by columnists who had praised him. The controversy was ignited by his firing members of his popular TV family of stars for what seemed to be petty reasons. He dismissed Julius LaRosa on the air in October 1953, charging that he “had become too big a star.” He told the press that LaRosa had lost his “humility,” a remark that was to come back and plague Godfrey for the rest of his career. LaRosa made immediate well-publicized appearances on *The Ed Sullivan Show*, cut several hit records, and was given a series of his own, before his career faded after a few years. In April 1955, Godfrey fired Marion Marlowe, Haleloke, and the Mariners in one fell swoop.

Part of the public forgave him. His *Talent Scouts* continued until July 1958, and the *Friends* show until April 28, 1959, but his popularity never matched that of the sensational early 1950s. Godfrey survived an operation for lung cancer in 1959 but, except for a brief interval on television's *Candid Camera* in 1960-61, his television career was over. He worked on radio until 1972, when he broadcast a tearful farewell over CBS. Coincidentally, it had been tears that

brought him to national attention as he gave a touching description of President Franklin D. Roosevelt's funeral in 1945.

—Benjamin Griffith

## Godzilla

The lead monster character in a series of successful Japanese science fiction films, Godzilla has rampaged across movie screens worldwide for over 40 years. His popularity and recognition rivals that of Superman and Mickey Mouse. In Japan, where he is known as Gojira, he has dominated popular fantasy for every generation to come of age since the 1950s. The films have inspired toys, games, clothes, model kits, comic books, novels, fan magazines, candy, television commercials, and countless imitations. Godzilla movies are often lumped in with B-grade and camp cinema in America, where audiences almost exclusively see edited, badly dubbed versions of the Japanese originals. Fans who investigate the series carefully discover that many entries, particularly the early ones, are thoughtful, well-crafted efforts by respected members of the Japanese film community. Though an American remake in 1998 did not fare as well as expected, the character maintains a loyal following in the United States and abroad. The “King of the Monsters,” as he has been called often, is likely to reign for years to come.

Godzilla's screen debut was in Toho Co. Ltd.'s *Gojira* (1954). The name, meaning “whale-ape,” was allegedly inspired by a burly studio employee. *Gojira* was, at the time, the most expensive movie ever produced in Japan, costing around \$900,000. The film was a huge success—grosses topped \$7 million—and the film spawned a new style of Japanese cinema: the *kaiju eiga*, or giant monster genre.

Toho producer Tomoyuki Tanaka was first inspired to make a monster movie by the successful reissue of RKO's *King Kong* (1933) in 1952. By the next year, a new breed of American science fiction creature, the giant monster, was drawing audiences to U.S. theaters and the newly popular drive-ins. Films like *The Beast from 20,000 Fathoms* (1953) and *Them!* (1954) played off Cold War anxieties; the monsters' creation and/or release on the world was the result of nuclear energy. The terror of nuclear war took physical form as the atomic mutant. As the only nation ever attacked by atomic weapons Japan had its own reasons to fear such mutations, and memories of the Hiroshima and Nagasaki bombings were still fresh in the early 1950s. *Gojira* turned these fears and memories into cinematic terror.

As an enduring character Godzilla is largely the product of four men. Producer Tanaka oversaw the original *Gojira* and remained with the series through the 1990s. Director Ishiro Honda was a friend and colleague of Akira Kurosawa, arguably Japan's greatest cinematic genius. A visit to Hiroshima in 1946 inspired in Honda a desire to tell the story of atomic devastation on film. He regarded monsters as

**Godzilla**

tragic figures, the result of mankind's abuse of technology. Special effects director Eiji Tsuburaya was an admirer of Willis O'Brien's stop-motion effects in *King Kong*. His work in the Godzilla films pioneered what would come to be called "suitmation" (suit + animation); his monsters were played by actors in molded latex suits. The process eventually became synonymous with Japanese monster movies, though not everyone could do it as well as Tsuburaya. Composer Akira Ifukube was a respected classical musician and scholar. His score, parts of which reappear subsequently in the series, became nearly as recognizable as Godzilla himself. The booming contrabass perfectly symbolizes the monster's rumbling gait.

*Gojira* came to America two years later as *Godzilla, King of the Monsters* (1956). B-movie producers Richard Kay and Harold Ross purchased the American distribution rights from Toho and, along with Joseph E. Levine, adapted the film for U.S. audiences. The dialogue was dubbed in English (as would be all successive U.S. theatrical and TV releases of Godzilla movies.) The producers reconstructed the original sets to shoot new footage with Raymond Burr as American newspaper reporter Steve Martin. All mentions of the atomic bombs dropped on Hiroshima and Nagasaki were edited out. *Godzilla, King of the Monsters* opened in New York City in April, 1956. Levine promoted the film heavily, and it proved a huge hit in the United States, becoming the first Japanese picture to play outside art cinemas, in mainstream first-run theaters.

In film, success breeds sequels. Toho released its second Gojira film, *Gojira No Gyakushu* (1955) ("Gojira's Counterattack") only months after the first, and a year before the creature's American debut. With this feature, Toho began its longstanding practice of

selling the rights to each of its monster movies individually. Warner Brothers acquired *Gojira No Gyakushu* for the American market. They did not, however, acquire the name Godzilla, even though Toho owned it and could have sold it to them. Consequently, the film was released as *Gigantis the Fire Monster* (1959).

The sequel received a somewhat shabbier treatment than its predecessor. Warner originally intended to construct an entirely new film using only the special effects sequences from *Gojira No Gyakushu*, but it was never made. Instead the Japanese original was dubbed in English. Voice performers include George Takei, who gained fame as *Star Trek*'s Mr. Sulu, and *Kung Fu*'s Keye Luke, best known then as Charlie Chan's number one son. (In 1978 he would again lend his voice to a Japanese-to-American adaptation when Sandy Frank brought the animated *Science Ninja Team Gachaman* to America as *Battle of the Planets*.) Narration was provided by Daws Butler, who gave voice to a number of Hanna-Barbera's animated characters. Stock footage of rockets and creature effects was added. The original score by Masaru Sato was replaced with music from Universal's film music library, including the theme from *The Creature from the Black Lagoon* (1954). Upon release *Gigantis the Fire Monster* was placed on a double feature with the American *Teenagers from Outer Space* (1959), a film so bad its director was never allowed to make another.

Godzilla disappeared from theaters until 1962 while Toho and Ishiro Honda branched out to other creature features like *Rodon* (1956) (called *Rodon* in America) and *Daikaiju Baran* (1958) (U.S. title *Varan the Unbelievable*). The monster's return came about due to the efforts of Willis O'Brien. His concept for a *King Kong* sequel, wherein the giant ape fought a rebuilt Frankenstein monster, was purchased by Toho. They took out Frankenstein and added Gojira. Tanaka, Honda, Tsuburaya, and Ifukube all returned to the positions they held on *Gojira*. The film they made, *Gojira tai Kingukongu* (1962), departed from the atomic age terror themes of the first two films, taking a more comedic, family-friendly tone with elements of slapstick and satire. It became the most widely seen Gojira film in Japan.

The U.S. release, Universal's *King Kong vs. Godzilla* (1962), loses much in the translation. Sequences are cut, and scenes of English-speaking television reporters are added in an attempt to clarify the truncated action. Ifukube's score is gone, replaced by music from the distributor's previous films. Without the subtleties of the original, the film is little more than an extended build-up to a fight between two men in monster costumes. For the first time, American audiences received a taste of what the genre would devolve into in a few short years.

For years after the film's release a rumor circulated among fans that there were two different endings to *King Kong vs. Godzilla*. Allegedly, Godzilla is triumphant in the Japanese version, but the outcome was changed to please U.S. audiences by having "their" monster win. The story, though, is apocryphal. Kong is, and always was, the winner.

Gojira/Godzilla returned in 1964 in *Mosura tai Gojira*, known in the U.S. as *Godzilla vs. The Thing*. This time Godzilla's enemy is a Toho-created monster, the title creature of *Mosura* (1961), called *Mothra* in America (she is a benevolent giant moth). In this film the creative team of Tanaka, Honda, Tsuburaya, and Ifukube delivered a somewhat different, but extremely enjoyable, spin on the *kaiju eiga* motif. For the last time until 1984 Godzilla is portrayed as a threat to the world. Mothra is called upon to fight the lizard, though she has just laid an egg and is about to die. A battle royal ensues. In what is likely the most touching sequence in the entire series, Mothra sacrifices

herself fighting Godzilla. Soon after she dies, her egg hatches—and two larval Mothras emerge. They spin a cocoon around Godzilla, who falls into the ocean in defeat. The film reprises the more purely fantasy atmosphere of *Mothra*, bringing back the two pretty, six-inch-tall female fairies who act as heralds to the creature. The women are as memorable a part of the film as the monsters: they speak in unison, and sing a song to Mothra whenever they wish to call her. The emotional core of *Godzilla vs. The Thing* has long made it a favorite of fans, many of whom regard it as the high point in the series.

Godzilla, Mothra and the twin fairies, and Rodan returned only nine months later in *Ghidrah, The Three-Headed Monster* (1964). While not on the level of its immediate predecessor, it is an exciting film with much action and excellent suitmation effects. It is most notable as the beginning of Godzilla's "good monster" phase. Godzilla, Rodan, and Mothra team up to rid the earth of the menace of Ghidrah, a golden, fire-breathing dragon from outer space. In Japan, the monster was understood to be a metaphorical representation of China, symbolizing Japanese fears of Maoist expansionism. This was largely lost on American matinee audiences. Mothra, always a good monster, jumps into the fray immediately, but Godzilla and Rodan would at first rather fight each other. They eventually experience a change of heart (after a "discussion" in monster growls and roars) and the three earth creatures drive Ghidrah back into space.

For the rest of the 1960s and into the 1970s, the Godzilla films closely followed a formula established by the next entry, *Kaiju Daisenso* (1965). The title translates as "The Giant Monster War" though the U.S. title is *Monster Zero*, or *Godzilla vs. Monster Zero* for home video versions. In this film, an alien race tries to take over earth using a monster. Godzilla stops them. It was the first Godzilla film to use an American actor, Nick Adams, in the original cast. Director Ishiro Honda left the series for a time after this film, citing his reluctance to humanize Godzilla. His vision and style would be sorely missed.

Godzilla releases had become an annual event for Toho, but with increased quantity came decreased quality. *Ebirah, Horror from the Deep* (1966)—better known as *Godzilla vs. the Sea Monster*—saw Jun Fukuda step in as director. Akira Ifukube was replaced. Godzilla is missing from the first half of the picture, which is padded out by a story of a group of young men who discover an island where the natives are being enslaved by a vaguely defined paramilitary organization based on another island. Godzilla fights their monster and puts things right. *Son of Godzilla* (1967) is an outright children's film. Godzilla and his little mutant lizard son, Minira (Minya in the U.S.), battle a giant spider. The baby Godzilla is laughable; he resembles Barney the Dinosaur far more than he does Godzilla. His freakish appearance and strange, crying noises make him Toho's most annoying creation.

*Kaiju Soshingeki* (1968), released in the U.S. as *Destroy All Monsters*, was the last vestige of the exciting and creative original Godzilla series. In an attempt to regain its older fans, Toho pulled out all the stops. Honda returned, and so did most of Toho's stable of monsters. As the film begins all of the monsters are exiled to a peaceful life on a remote island. But aliens again attack earth, taking control of the monsters and unleashing them on major cities. After much destruction, the earth people regain control of the creatures and turn them on the aliens—only to have Ghidrah appear out of space, leading to a final decisive showdown. Naturally, the good monsters win. The film offers more action than the previous two combined. For a brief moment, the excitement which spawned the films' earlier success was back.

From *Godzilla's Revenge* (1969) and through the 1970s the Godzilla films went steadily downhill. Eiji Tsuburaya died and Ishiro Honda left Toho. Fukuda returned as director. *Godzilla vs. the Smog Monster* (1971) tries, unsuccessfully, to integrate anti-pollution messages with its juvenile monster story. While the monster Hedora (meaning "pollution") is an interesting amalgamation of aquatic creature and industrial waste, he is not nearly enough to redeem the picture. *Godzilla on Monster Island* (1972), known on home video and cable as *Godzilla vs. Gigan*, sees the lizard destroying an amusement park (complete with Godzilla attraction) which serves as a base for aliens and their monster. In a creative move perhaps more misguided than the creation of Minira, Godzilla speaks. In *Godzilla vs. Megalon* (1973), he is teamed with Jet Jaguar, a robotic rip-off of the popular television character Ultraman (who was, ironically, the creation of Eiji Tsuburaya). The series was now firmly lodged in juvenile territory. *Megalon*, along with *Sea Monster*, would eventually become fodder for cable's *Mystery Science Theater 3000*, wherein a man and his robot puppets mercilessly mock the worst movies ever made. *Godzilla vs. the Cosmic Monster* (1974) featured a robotic "Mechagodzilla." Honda and Ifukube returned for *Terror of Mechagodzilla* (1975), but it was too late. There would be no more Godzilla movies for nine years.

Godzilla was temporarily gone, but definitely not forgotten. By this time his name and image had entered the popular consciousness. In the United States the movies played as reruns on local television. With *Star Wars* (1977) creating a boom in science fiction, the door was open for new Godzilla product. In the fall of 1978, NBC offered *The Godzilla Power Hour* as part of its Saturday morning children's lineup. The series was an animated adventure from Hanna-Barbera. Ted Cassidy (Lurch of *The Addams Family*) provided Godzilla's roars. Godzilla's adventures were packaged with other animated shows in various combinations and aired until May, 1981.

Godzilla's true return came with the remake/sequel *Gojira* (1984), released in the United States a year later as *Godzilla 1985*. Based on an original story by Tomoyuki Tanaka, the film takes Godzilla back to his origins as a city-stomping bad monster. Raymond Burr returns (in the American version) as the reporter Martin (but not Steve this time), the only living American who had seen Godzilla during his initial attack. The story ignores the sequels. Heavy promotion on both sides of the Pacific helped the film achieve some financial success, despite a nearly universal critical drubbing. Godzilla's new profile even earned him appearances in TV advertisements for Nike shoes and Dr. Pepper soft drink.

The King of the Monsters was back. Toho's new sequels, starting with *Gojira tai Biorante* (1989), never reached American theaters, though it did receive an official U.S. home video release as *Godzilla vs. Biollante*. As they became available on VHS and laserdisc in Japan (and sometimes before), the new Godzilla films began to be traded among tape-collecting fans in America. These unauthorized copies, known as "bootlegs," kept Godzilla alive in front of the eyes of a small but very dedicated and resourceful group of monster-movie lovers. Toho continued through the early 1990s, as Godzilla once again met Ghidrah, Mothra, and Mechagodzilla, as well as Space Godzilla. The new series climaxed with *Gojira tai Desutoroia* (1995). Godzilla is apparently wiped out by a weapon called the "oxygen destroyer," the same device which had dispatched him in the 1954/1955 film. His end came mainly to make way for yet another incarnation: a big-budget, Hollywood treatment of the story.

An American Godzilla film seemed only logical given the success of Steven Spielberg's dinosaur epic *Jurassic Park* (1993). Digital technology made realistic dinosaurs possible on the screen. A script was written which had the lizard being discovered in the Pacific and shipped to New York City for study, where he breaks loose and wreaks havoc. Jan DeBont, fresh from his success on the film *Speed* (1994), was set to direct. DeBont believed only a huge epic could sell Godzilla to a 1990s audience. "You can do a Godzilla movie two ways," he declared, "like the Japanese do it with men in costumes and miniatures . . . the other way is to do it right." Though he stressed the need for a compelling story, he still seemed to view the digital special effects as the key. Fortunately for him, it was two other filmmakers who would learn firsthand how wrong he was.

DeBont left the project over TriStar's refusal to let the budget exceed \$100 million. The studio was subsequently acquired by Sony, who could afford to put that and more into a film. The project fell into the hands of Dean Devlin and Roland Emmerich, creators of the hugely successful alien invasion movie *Independence Day* (1995). Hopes were high among fans and studio executives when the pair announced that their next project would be a Godzilla adaptation. It soon became the most anticipated film of 1998. Posters, merchandise, and theatrical trailers (which did not show the monster) whetted the public's appetite. Other studios shuffled their summer release schedules; none wanted to open their event movie (expected blockbuster) against the King of the Monsters. Box office gross in the United States alone was expected to reach \$250 to \$300 million.

Trouble appeared even before the film's release. Devlin and Emmerich scrambled to make the announced release date of May 18, 1998. Time to finish the digital effects grew short. Many full-body shots of the monster were replaced with quicker, cheaper ones of the feet or tail. Fans and the press wondered why no still photos of the monster were being released. The budget reached \$125 million, with tens of millions more spent on promotion.

*Godzilla* (1998) opened big, but disparaging reviews and bad word-of-mouth soon took their toll. Many fans were left unimpressed by the redesigned Godzilla, who looked and moved like a Tyrannosaurus Rex. The scaled-down effects were further diminished by much of the action taking place at night, in the rain. The slim plot lifted elements from previous science fiction hits, including *Alien* (1979) and *Jurassic Park*. Large quantities of tie-in merchandise went unsold. Hardcore fans took to referring to the new monster by the acronym GINO: Godzilla in Name Only. The dank, charmless film earned \$138 million dollars in America, and another \$221 million overseas. *Godzilla* became the latest example of a relatively new species in Hollywood: the \$100 million-plus grossing flop. While not a financial disaster of *Waterworld* (1995) proportion, it was nonetheless a major disappointment in relation to cost and expectation. Most in Hollywood agreed that, at least in the immediate future, a sequel was unlikely.

All was by no means lost for Toho's best known creation. The 1998 movie was released on VHS, laserdisc, and DVD, earning more than respectable figures on sales and rentals. Fan publications such as *G-Fan* and countless internet sites feed the public's appetite for news and discussion on the character. In 1999 Toho announced tentative plans for a new Japanese film which would take Godzilla into the new millennium. More importantly, the character is alive in the imagination of moviegoers worldwide. Godzilla is like Dracula or the Frankenstein monster: he will never die, no matter how many times movie heroes might kill him. He is inescapable, a part of our culture and language. His shadow looms large not only over Tokyo Bay, but

anywhere lovers of fantastic films sit facing a lighted screen or cathode ray tube, awaiting the next jolts of excitement and adventure. The King of the Monsters has well and truly earned his throne.

## Gold, Mike (1893-1967)

Born to Jewish immigrants on New York's Lower East Side, Itzok Issac Granich changed his name to Mike Gold to avoid persecution in the Red Scare of 1919. A Harvard dropout, Gold entered Greenwich Village circles in 1914 and became perhaps the most influential leftist literary critic of the 1920s. After authoring "Towards Proletarian Literature" (1921), a radical manifesto that encouraged writers to promote revolution, Gold assumed editorship of *New Masses* in 1926. In 1930, he published *Jews Without Money*, a work of autobiographical fiction inspired by his tenement-house childhood. He spent the Depression decade writing for the Communist *Daily Worker*. Brash, irreverent, and dogmatic, he praised the class-conscious radicalism of Woody Guthrie and Langston Hughes and assailed Ernest Hemingway and Thornton Wilder for failing to promote social change. His politics confined him to France in the late 1940s and 1950s, and to relative obscurity in American literary

history. His influence on radical writers, however, has been recovered in the late 1990s.

## Goldberg, Rube (1883-1970)

Rube Goldberg was a professional cartoonist for over 60 years, the creator of more than a dozen nationally syndicated comic strips, and the winner of a Pulitzer Prize for political cartooning, yet he is remembered at the end of the twentieth century chiefly for one thing—the Rube Goldberg Invention. In various strips over the years

he concocted elaborate, multi-part machines to perform the simplest of tasks. These struck readers as extremely apt comments on the overly complicated and often circuitous lives led by just about everybody in modern society. Eventually, Goldberg's inventions earned him a listing in most dictionaries and made his name part of the language. Rube Goldberg Machine competitions continue to be held in high schools and colleges around America, and Purdue University has an annual National Competition for the best Goldberg variations.

Born Reuben Lucius Goldberg into an affluent San Francisco family, Goldberg attended the University of California at Berkeley and majored, at his father's urging, in engineering. But he was also in on the founding of the college humor magazine, *The Pelican*, to which he became a contributing cartoonist. By 1904, in spite of his engineering degree, young Goldberg was working on the *San Francisco Chronicle*, and a year later he was drawing sports cartoons for the *San Francisco Bulletin*. Soon he moved to New York City to draw for an assortment of newspapers, starting with the *Evening Mail*, at impressive increases in salary each time he moved to the next publication. He drew such daily strips and panels as *Mike and Ike*, *They Look Alike*, *Lunatics I Have Met*, *I'm The Guy*, *Cartoon Follies*, *The Candy Kid*, and *Foolish Questions*. This last-named panel, much imitated

Rube Goldberg

over the years, offered rude answers to obvious inquiries—“Q. Did your hat fall in the water? A. No, I threw it in there for some frogs to use as a ferry boat. Q. Is this number 99? A. No, mister, it’s number 66—we turned the house upside down just for a change.”

Goldberg began including inventions in his strips, often attributing them to Professor Lucifer Gorgonzola Butts, a sort of screwball anagram of his own full name. The inventions, which were presented in cartoon diagram form, involved not only sundry mechanical devices, especially pulleys, but ingredients that were not always readily available to more conventional inventors. These included a hungry goat, a dancing Eskimo, a miniature elephant, waltzing mice, a college boy, a penguin, an electric eel, Miss Las Vegas, and a palooka hound, plus numerous bowling balls, pistols, midgets, fish, and umbrellas. The components of each mechanism were labeled with letters of the alphabet so that a reader could construct his own intricate machine to perform such simple tasks as opening a can, uncorking a bottle, or slicing bread. The typical description accompanying a Goldberg invention is exemplified by that for a device designed to wash dishes while one is out. It begins, “When spoiled tomcat (A) discovers he is alone he lets out a yell which scares mouse (B) into jumping into basket (C), causing lever end (D) to rise and pull string (E),” etc. Goldberg sometimes admitted that an invention might not function perfectly and so he offered alternatives. The dishwashing instructions concluded with, “If the cat and turtle get on to your scheme and refuse to cooperate, simply put the dishes on the front porch and pray for rain.”

Goldberg’s major Sunday page, *Boob McNutt*, began in 1915 and survived until 1934. The strip was syndicated in the Hearst papers by the McNaught Syndicate. It starred a plump, redheaded, and accident-prone young man, dressed somewhat like a silent movie comedian, and, as his name implied, was naïve and none too bright. The feature has been described as “an eclectic jumble of satire, burlesque, fantasy and cockeyed technology.” From 1922 onward Boob was preoccupied with the courtship of a pretty girl named Pearl, who was the target of many a fiendish scheme constructed by the strip’s villains. Mike and Ike, their panel defunct, joined the cast, along with Bertha the Siberian Cheesehound. Goldberg had done a mock adventure strip, *Bobo Baxter*, in the middle 1920s, and in the early 1930s he drew a serious daily. *Doc Wright* was ahead of its time, trying soap-opera continuities years before *Mary Worth* made them fashionable, but it lasted less than two years.

*Lala Palooza* came along in 1936, daily and on Sundays, and concerned itself with the humorous adventures of the plump, rich Lala and her layabout brother Vincent. Even though Vincent now and then came up with an invention in the Professor Butts vein, *Lala* was not successful and ended in 1939. Next came Goldberg’s last go-round in the funny papers with *Side Show*, a Sunday page that offered a hodgepodge of different features under one roof: *Crackpot College*, *Little Butch*, *Brad and Dad* and, of course, a *Weekly Invention*. By then, Goldberg was getting considerable help with the drawing from his longtime assistant Johnny Devlin. He and Devlin also had a hand in putting together *Feature Funnies* in 1937. When the comic book ceased reprinting *Lala Palooza* pages in its lineup, Devlin drew new ones, glamorizing and streamlining Lala considerably.

Goldberg began drawing political cartoons in the early 1940s for the *New York Sun*, and after the paper suspended publication he signed with the *New York Journal American* and King Features Syndicate. He had quite a bit of help from Warren King, who later became the political cartoonist for the *New York Daily News*. One of these collaborations won Goldberg a Pulitzer in 1948. He also put

together many cartoon books, wrote a novel, and helped found the National Cartoonist Society. The highest annual NCS award is called a Reuben in his honor.

## Goldberg, Whoopi (1949—)

Whoopi Goldberg rose from humble circumstances and a troubled youth to become a highly respected and successful actress. As one of the first African American actresses to maintain mainstream success, she personifies America’s growing acceptance of performers from across the racial spectrum. Her outspoken nature and willingness to present her offscreen persona to the public has made her one of the most high-profile African Americans of the 1990s.

Rising to prominence in the mid-1980s, Goldberg became one of the most recognizable faces in the entertainment industry as she moved easily between comedy and drama on both stage and screen.

Whoopi Goldberg

Her outspoken humor reflected her experiences as a former drug addict and welfare mother who had moved from the depths of poverty to the heights of celebrity. Goldberg first appeared onstage at the age of eight but did not gain attention until 1982 with the premiere of *Spook Show*, a one-woman review in which she played several characters. She made her film debut in *The Color Purple* (1985). Offscreen, she occasionally found herself at the center of controversy as she sparred with other prominent African Americans.

Born Caryn Johnson on November 13, 1949 (some sources list the year as 1955), the girl who would later assume the name of Whoopi Goldberg was raised in the multicultural section of New York City called Chelsea. She was an imaginative child who was encouraged to become a performer by her mother. Her life took a downward spiral, however, when she dropped out of school in the ninth grade. She began to use drugs, had several abortions, and found herself living on the streets. By age seventeen she had weaned herself off heroin, and she eventually married her drug counselor. The couple had one daughter, but the marriage was short-lived. As a single mother, Goldberg survived on welfare and through a series of temporary jobs such as bricklayer and mortician's make-up artist. Throughout this period she was determined to have a career in theatre. In the mid-1970s, Caryn Johnson decided to change her professional name to "Whoopi Cushion" so agents and audiences would remember her. Her mother suggested she use the last name "Goldberg" because it sounded more serious. Author James R. Parrish notes Goldberg's gimmicky name soon gained her great attention: "Audiences were forever surprised that the owner of this odd Jewish-sounding name turned out to be an African American who had a strange hairdo and a very special look."

Goldberg moved to the West Coast in 1974 to perform with several drama and improvisation groups in the San Diego and San Francisco areas. Her reputation grew with the premiere of *Spook Show*, which showcased her range of characterizations. Among her most popular personas were "Little Blonde Girl" and "Fontaine," an educated junkie. Goldberg populated each performance with more than a dozen alter egos engaging audiences with their provocative views on contemporary society. In early 1984, director Mike Nichols saw her show and immediately offered to produce it on Broadway. Nichols's interest in the young actress gained her much media attention and shifted her career into high gear. Steven Spielberg cast Goldberg as the abused Celie in the film version of Alice Walker's *The Color Purple*. Her movie debut won raves, and she was nominated for an Academy Award. After her promising start in film, Goldberg's career began to skid as she appeared in a series of forgettable and overly-broad comedies like *Jumpin' Jack Flash* (1986), *Burglar* (1987), and *Fatal Beauty* (1988). She rebounded in 1990 as Oda Mae Brown, a storefront medium, in the popular film *Ghost*. This performance earned Goldberg an Academy Award for best supporting actress and made her the first black woman to win an Oscar since Hattie McDaniel in 1939. Goldberg's subsequent film work offered audiences a strong mix of comedy and drama. In *The Long Walk Home* (1990) she played a Southern maid in the 1950s, while Robert Altman's 1992 *The Player* showcased her as a no-nonsense detective. She endeared herself to children as the voice of a hyena in *The Lion King* (1994) and enjoyed much acclaim for her *Sister Act* nun comedies in 1992 and 1993.

Goldberg's TV career failed to match the success of her movie work. In 1990 she starred in *Bagdad Café*, a mediocre sitcom, and 1992 saw her as host of a syndicated talk show. She did, however, find

some small-screen success through a recurring role as an alien on *Star Trek: The Next Generation* and as the center square on 1998 revival of the game show *Hollywood Squares*. Goldberg twice hosted the Academy Awards.

Goldberg's on-screen persona has tended to be that of a sassy, self-reliant, and always likable woman. Away from the set, however, she became known for being unafraid to court controversy. She angered Jews with several ethnic jokes in her selection "Jewish American Princess Fried Chicken" in the book *Cooking in Litchfield Hills*. Other high-profile blacks, including Jesse Jackson and Spike Lee, criticized her for her infamous 1993 appearance at the Friars Club with then-companion Ted Danson. Public outrage ensued as Danson appeared in blackface mouthing offensive jokes written by Goldberg. The pair later apologized for the incident. On the other hand, Goldberg has garnered respect for her appearances as a co-host, with Billy Crystal and Robin Williams, at the annual Comic Relief telethons for the homeless.

## Golden Books

From its humble beginnings in the Midwest, Golden Books publishers developed into the most successful publisher and entertainment company for children in North America with such classics as *Pat the Bunny* and *The Poky Little Puppy*. By the end of the century, in addition to storybooks, Golden Books Entertainment products included children's television productions, audio and video recordings, interactive software, educational workbooks, craft products, puzzles, party accessories, gift-wrap products, invitations, and stationery. As of Golden Books' fiftieth anniversary in 1992, there were more than one thousand Golden Books titles.

In 1907, Edward Henry Wadewitz purchased a small printing company for less than three thousand dollars. He and his partner, Roy A. Spencer, operated it in the basement of a building in Racine, Wisconsin. Incorporating small publishers, puzzle makers, playing card manufacturers, and stationery engravers and adding high-volume printing equipment, the company grew under the name of Western Printing and Lithographing. The leap toward children's publishing began in 1933, when Wadewitz signed a contract with Walt Disney for exclusive book rights to all Disney licensed characters. In 1939, with Simon and Schuster, Western printed Walt Disney's *Bambi*, the precursor to the Golden Books that would dominate the juvenile book market for the rest of the twentieth century. The series developed, by 1942, into Simon and Schuster's

“Little Golden Books” line of hardcover, forty-two page, illustrated story books for children.

Little Golden Books became standard fare in home libraries from that decade on through the 1960s. In part, their appeal went beyond entertainment to include a smattering of educational value: the books’ title pages included a note that the stories were “prepared under the supervision of Mary Reed, Ph.D., [who was associated with] Teachers College of Columbia University.” But the main attraction came in owning these brightly illustrated, neatly bound, and affordable stories at a time before local public libraries included much in the way of children’s literature. For the children who read them and the adults who purchased them, they suggested a value beyond their twenty-five-cent price. The books appeared to be expensive with a distinct, gold-colored, foil trim along their spines. They contained a decorative space on the inside cover that read “This Little Golden Book belongs to” with a line for the child to personalize. And children loved the famous characters in the stories. With these features, the company created a sense that Golden Books provided a special treasure for each child who owned one.

In association with Whitman Publishing Company, Dell Publishing Company, Simon and Schuster Incorporated, and Walt Disney, Western Printing maintained the lead in children’s favorites. Western moved its corporate headquarters to Fifth Avenue offices in New York and changed its name to Golden Books Family Entertainment Incorporated. Golden Books printed many popular titles that continue to be sold from generation to generation. *Pat the Bunny*, first published in 1940, is noteworthy as one of the first touch-and-feel books for children and has been a continual best-seller among children’s books. *The Poky Little Puppy* (1942), one of the original twelve Golden Books, tells the story of an adventurous puppy; its sales exceeded fourteen million copies by the end of the century. Other celebrated publications from the company’s early years include books about Lassie, the Lone Ranger, Mickey Mouse, Donald Duck, and other animated Disney characters, and a holiday collection including *Frosty the Snow Man*, *Rudolph the Red-Nosed Reindeer*, and *Baby’s Christmas*. Religious titles include *David and Goliath*, *Noah’s Ark*, and *My Little Golden Book about God*.

The company’s early domination of the children’s book market enabled it to continually secure contracts with well-known children’s authors, illustrators, and entertainers. Golden Books produced popular works by Margaret Wise Brown, Richard Scarry, and Mercer Mayer. Jim Henson’s Muppets and Sesame Street characters have been featured in Golden Books since the 1970s. Other popular stories to which Golden Books secured printing rights are Winnie-the-Pooh, Tarzan, and Star Wars. In the 1990s, Golden Books bought rights to Shari Lewis productions, including videos and television shows featuring the famous Lamb Chop and Charley Horse puppets. Even a European favorite, Ludwig Bemelmans’ *Madeline*, became property of Golden Books with the production of Golden Books Entertainment videos based on Bemelmans’ books.

## Golden Gate Bridge

The Golden Gate bridge, with its soaring art deco design, its ability to sway 27.5 feet in high winds, and its arches posed against the backdrop of the sea, more than any other monument symbolizes San Francisco. It spans a submerged cleft in the coastal mountain range, dubbed the “Golden Gate” by prospectors on their way to California’s gold fields in the mid-1800s. When completed in 1937, it was the world’s longest suspension bridge (1.86 miles) and the highest structure west of New York (745 feet). Its chief engineer was Joseph Strauss.

Its daily load of approximately 100,000 cars is supported by cables that are three feet in diameter. When the thick fog pours in rendering it invisible from land, the bridge’s distinct color, “international orange,” keeps seagulls from crashing into it.

—Adrienne Russell

The Golden Gate bridge, in San Francisco.

## *The Golden Girls*

The situation comedy *The Golden Girls*, which aired on NBC from 1985 to 1992, was one of television's first successful representations of the lives of older women and an unlikely hit in a television landscape populated by young, sexy performers in shows designed to appeal to a youthful audience. The series focused on four single women living together in Miami as they faced the issues of aging in America. Created by veteran television writer and producer Susan Harris, the show balanced controversial social themes with raucous, often ribald, humor. Starring a cast of seasoned actresses, who were all in their late fifties or early sixties, *The Golden Girls* emphasized that life does not end with menopause and that older women are still vital, energetic, and worthy of the attention of the mass viewing audience. Audience acceptance of the series was immediate. It placed in the top ten its premiere season by winning a following among all age groups. Strong public approval was matched by much critical praise. The series was twice named best comedy, and each of the leads earned Emmy awards for their performances.

One of TV's dominant female voices, Harris (who wrote for *All in the Family* and *Maude*, and created *Soap*) earned her greatest critical and commercial success with *The Golden Girls*, representing a breakthrough for women on television both in front of and behind the camera. In 1984, actress Selma Diamond appeared in a brief sketch titled "Miami Nice" at an NBC affiliates meeting. The performance was designed to test the audience's reaction to a comedy revolving around an older woman. The positive response to the piece encouraged NBC to purchase a pilot of the premise written by Harris. She assembled a strong cast of actresses to play the group of women facing their "golden years" together. Bea Arthur, the star of *Maude*, played Dorothy, a loud divorcee and substitute teacher. She lived with housemates Blanche (Rue McClanahan), a lusty Southern widow, and Rose (Betty White), a naive widow from a tiny town in Minnesota. The trio was joined by Sophia (Estelle Getty), Dorothy's Sicilian mother who moved in after a nursing-home fire. The pilot episode also featured actor Charles Levin as the women's gay housekeeper, but the character was dropped by the second show. The friendship of the "girls" as they supported each other through various problems became the core of the series.

The series' humor grew from Harris's distinctive writing and her actresses' strong characterizations. Arthur's Dorothy was an extension of her *Maude* character. Divorced from a husband who betrayed her with a younger woman, no-nonsense Dorothy embodied the sense of reason for the series as she demonstrated that a woman did not need a man to be happy. Throughout the series her more flighty roommates tested her patience. Blanche appeared to have stepped from a Tennessee Williams play, the Southern belle struggling to hold onto her former glory. Much of the show's raunchy humor came from her recounting a lifetime of wild sexual exploits. Rose provided a contrast to Blanche in that she was more innocent and conservative. A highlight of many episodes consisted of her telling stories about the loony inhabitants of her hometown of St. Olaf. The series' most popular character was the octogenarian Sophia, played by the much younger Getty. Her sarcasm was said to come from the effects of a stroke that destroyed the "tact" portion of her brain. This allowed the character to speak her mind and make jokes at the others' expense.

Harris gave her characters many opportunities to discuss issues beyond aging. Dorothy faced clinical depression, Rose befriended a lesbian, Blanche was distant with her children, and Sophia briefly

remarried. Most of all, they displayed the strength of female bonding. In 1992, the series ended as Dorothy married and moved away. The remaining cast returned to TV the following year with the short-lived sitcom *The Golden Palace*, in which Rose, Blanche, and Sophia ran a small hotel on Miami Beach.

*The Golden Girls* proved both that audiences would accept older female characters on series television and that a woman could helm a series and provide it with a distinctive voice and personality. Television historians David Marc and Robert Thompson view the series as an indicator of future programming as baby boomers age and begin to demand more senior characters on the small screen.

## **Goldwyn, Samuel (1879-1974)**

One of the most successful of the early independent film producers, Samuel Goldwyn will be remembered for many of his classic films, for his uncultured style, and for his misuse of the English language—so-called Goldwynisms such as "a verbal agreement isn't worth the paper it's written on." Goldwyn was one of a pioneering group of immigrant men who came to America and helped shape the Hollywood studio system.

He was born Samuel Gelbfisz in Minsk, Poland. At 16, he emigrated to London and then New York state to make his fortune. Once in America, Goldfish, as he was now called, obtained work at Louis Meyers and Son as a glovemaker and by age 18 was one of the top glove salesmen in the world and a partner in the Elite Glove Company. When the woman he was trying to court married Jesse Lasky instead, Goldfish was introduced to Lasky's sister, Blanche. They married in 1910 and had a daughter, Ruth.

In 1913 Goldfish became interested in a career in the motion picture industry. From his initial idea of owning movie theaters he progressed to a desire to be a motion picture producer. Eventually he persuaded his brother-in-law to join him, and together they formed the Jesse Lasky Feature Play Company with Goldfish managing sales for the company. In 1914 the company had its first release with Cecil B. DeMille's successful *The Squaw Man*, one of the first feature-length films made in Hollywood. In 1916 the Goldfishes divorced, and it was only a matter of time before Goldfish had a falling out with his Lasky. The company's partners overthrew him, but when the company merged with Adolph Zukor's Famous Players to form Famous Players-Lasky Corporation, Zukor named Goldfish chairman of the board. By the end of 1916, however, Goldfish had managed to sabotage his position there and was forced to resign.

In November 1916 Goldfish formed a partnership with the Selwyn brothers and formed Goldwyn Pictures. The company selected the original Leo the Lion as its company logo, and eventually Goldfish changed his last name to Goldwyn. He broke away from

Samuel Goldwyn

Goldwyn Pictures in 1922 after a contract dispute and was therefore only a stockholder when it merged to form Metro-Goldwyn-Mayer. He immediately formed a new Goldwyn Pictures Company and produced projects independently through United Artists. His first success as an independent producer, *The Dark Angel* starring Ronald Colman, was released in 1925, the same year he married Frances Howard. The couple later had a son, Samuel, Jr.

While his output could not match the major studios, Goldwyn produced several successful movies. Colman, the only star he had under contract, starred in several of these: *Bulldog Drummond* (1929), *Stella Dallas* (1929), and *Dodsworth* (1936). In the early 1930s Goldwyn had what was probably his greatest failure. He discovered a Swedish actress named Anna Sten and was convinced he had found a star who would be greater than Greta Garbo. Unfortunately, Sten had a problem with the English language and did not show much talent. It took Goldwyn several years and several bad films before he admitted his mistake and released her from her contract.

The year 1939 is considered special for the number of classic films it produced. One of these was the Goldwyn film *Wuthering Heights*, starring Laurence Olivier and Merle Oberon. That same year James Roosevelt, son of the U.S. president, was selected as president of United Artists. By 1940, Goldwyn and United Artists were calling it quits, and Goldwyn thereafter distributed his work through RKO

Studios. Goldwyn continued producing films that would become classics, such as *The Little Foxes* (1941) and *The Best Years of Our Lives* (1946), generally considered his finest. Its unflinching look at veterans returning home after World War II won nine Academy Awards.

In 1954 Goldwyn paid \$1 million plus 10 percent of profits for the film rights to the Broadway musical *Guys and Dolls*—the largest sum paid to that time. While that film in 1955 and Goldwyn's final film, *Porgy and Bess*, in 1959 were minor successes, Goldwyn's time had passed, and he knew it. The golden era of Hollywood was over, and many of his contemporaries were dead. Goldwyn would survive until 1974, but his career was finished.

## Golf

Golf is the strangest of games. Invented by the Scots perhaps as early as the 12th or 13th century, it is played in an area that can vary in size anywhere from 30 to 200 acres; it can be an individual or a team sport; it is essentially a mental game rather than a physical one; and it pays homage to a concept largely ignored in other sports: aesthetics. Golf also has an established code of honor that is a rarity in most sports. When a player breaks a rule, accidental or not, they are expected to penalize themselves. To the eye, golf appears a sedate game devoid of action. To the player, it is a mind-numbing, physically demanding, and more often than not, demeaning, sport—a test of character more than athletic ability. It is game played in the mind, on a field awash with lush grass, stately trees, meandering creeks, and manicured greens, each of which are physically endearing but taken together represent an obstacle course to be negotiated for 18 arduous holes. The ultimate and all-too-simple goal: to hit the ball as few times as possible.

The story of golf is as much a tale about change as it is tales about great players, miraculous shots, and dramatic victories. Great players have been the constant in a game that has changed dramatically over the last 700 years. From wooden balls (prior to 1440), to feather-stuffed, leather-covered balls known as “featheries” (1440 to 1848), to gutta percha balls made from the sap of trees indigenous to Malaysia (1848 to 1901), to rubber balls made from winding rubber thread around a solid rubber core (1901 to the present), to the solid core balls commonly used today, the game has relentlessly evolved. And, of course, as balls changed, so did clubs. The first clubs had shafts made of wood, probably ash. Wood clubs had long, broad heads while the irons tended to have large faces, square toes, and nicked sockets. Sometime during the feather ball period, perhaps in the late 1770s, club-making became profitable enough that artisans began taking up the craft. By the 1800s most shafts were made from ash or hickory, while all sorts of woods—beech, pear, apple—were used to fashion the heads of wooden clubs. Depending on the course, the number of holes also varied, usually ranging from five to 18. The

shape and size of club heads also regularly were changed in the early years of the game, either to improve accuracy or increase distance, or both. As time passed, the number of clubs also increased: from two or three in the 1600s, to four or five in the 1700s, to five or six in the 1800s, to eight or nine or even ten by the late 1900s. Today, a normal set of clubs numbers 14, and can be made of materials with space age sounding names like graphic, tungsten, and titanium. Every year hundreds of companies produce thousands of variations of golf clubs in what appears to be a never-ending technological war, all with the purpose of helping a golfer hit a little white ball toward a very small hole an awful long distance away.

Not surprisingly, the first golf club and course was established at St. Andrews, Scotland, in 1754, the place many golf historians believe the game was first played (Some historians argue that the game may have been invented much earlier by the Romans, but there exists little substantial evidence to support this theory.). One hundred and three years later, in 1857, St. Andrews hosted the first National Club Championship with 11 clubs participating. Three years later Willie Park became the first British Open champion when he won at Prestwick. The popularity of golf in the British Isles spread throughout the second half of the nineteenth century, and by 1888, the first club in the United States, also called St. Andrews, was open for play. In 1895, the United States Golf Association (USGA) sponsored its first championship: the Men's Amateur. Before the end of the year, however, two other championships were contested: the Men's Open and the Women's Amateur. Championship golf was embraced by both the British and Americans, and would lay the groundwork for golf's vast growth in the twentieth century on both the amateur and professional levels.

Although the history of the game is difficult to compartmentalize because of its longevity, once golf clubs began to open and championships were initiated, three distinct periods can be discerned—the early period (1896-1916), the golden age (the 1920s, 1930s, and 1940s), and the television era. The beginning of the early period is marked by Harry Vardon's victory in the British Open in 1896 and ends with the formation of the Professional Golfers' Association (PGA) in 1916. The golden age was marked by some of the greatest legends the game has seen. In the 1920s, two players dominated the game, Bobby Jones and Walter Hagen. By the 1930s, men like Gene Sarazen, Lawson Little, Sam Snead, Ben Hogan, Ralph Guldahl, Craig Wood, Henry Picard, and Jimmy Demaret pushed the game to even greater popularity. In the early 1950s, Ben Hogan and Sam Snead held sway, but the popularity of the game reached an all-time high with the coming of Arnold Palmer and the television era. With his trademark attacking style and charismatic personality, Palmer revolutionized the game from a marketing standpoint, and television rushed in to capitalize. Although the game was still considered one played by the well-to-do, Palmer's dynamic style of play and his incredible popularity brought the game to millions of Americans who previously displayed little interest in the game.

Palmer's emergence in the 1950s as the dominant player also laid the groundwork for a recurring theme in golf—head-to-head competition for the top spot. In the 1920s, Jones and Hagen battled; in the 1940s it was Hogan and Snead. By the 1960s Palmer and Jack Nicklaus had become the marquee players. In each instance the result was the same—the game grew in popularity. Although Nicklaus has since been named golfer of the century, he, too, was challenged by players like Tom Watson, Johnny Miller, and, later, Greg Norman. By the 1990s, the newest "personalities" in golf—Tiger Woods and the

Ryder Cup (a team competition between the best golfers in Europe and the United States)—have been responsible for popularizing the sport to heights never previously attained.

At the professional level, golf appears to be in an upward growth pattern. Besides the PGA pro tour in the United States, professionals play on tours in Asia, Europe, Africa, and Latin America. There is a women's tour, the LPGA, a senior tour, and the Nike tour, for players attempting to earn their way unto the more lucrative PGA tour.

Golf, however, still exists primarily for the amateur player. Perhaps the most dramatic change in recent years (besides the ongoing technological changes in club design and composition), has been demographic. More Americans than ever play—26.5 million in 1997—and more blue-collar workers—about 34 percent of all golfers—have taken up what once was once termed the "Royal and Ancient Sport." In the United States, women now comprise almost 22 percent of the golfing population, and because of the influence of players like Tiger Woods, more minorities and children are playing the game. Since 1970, the number of players has increased by more than 15 million while the number of golf courses has risen by almost 6,000, from 10,848 to 16,010 in 1997. While the game has traditionally been considered one played by rich people on private courses, more than 70 percent of the courses in the United States are open to the public, and four out of every five courses being built are public facilities.

However, the exclusion of minorities from many private clubs, at least until recently, had for years been golf's "dirty little secret." The original constitution of the PGA of America required that members be Caucasian, and not until black golfer Bill Spiller filed suit against the PGA did that change in the early 1950s. Unfortunately, conservative traditionalism blended with elitism to keep most private country clubs "white only" facilities well into the 1980s. When it was revealed that Shoal Creek Country Club near Birmingham, Alabama, the site of the 1990 PGA championship, had no black members, adverse publicity seemed to accomplish what years of criticism failed to yield—a realization among many private clubs that exclusionary policies were both racist and non-productive. Within a year of the 1990 PGA, both Shoal Creek and Augusta National, the home of The Masters golf tournament and generally considered the last bastion of segregated golf, had black members. Other clubs around the country followed suit. With the emergence in the 1990s of Tiger Woods, who was part African American, as one of the best players in the world and the biggest drawing card since Arnold Palmer, the golfing public was more integrated than ever before.

## *Gone with the Wind*

*Gone with the Wind*, the epic Civil War-era novel and film, described as “the romance of a baggage and a bounder,” has no peer in literary history when its longevity and profitability are considered. Beloved by readers and filmgoers throughout the world for over sixty years, *Gone with the Wind* continues to captivate audiences and generate profits, and for many Margaret Mitchell’s novel supersedes history in depicting “the War Between the States.” Called racist and inaccurate by historians who find its sugarcoating of the Old South and the Ku Klux Klan appalling, nonetheless it has created an industry of literary and commercial output that shows no sign of slowing down as *Gone with the Wind* approaches its 70th anniversary. Its appeal is worldwide, and the epic is particularly popular in Japan, Germany, and Russia, perhaps indicating that *Gone with the Wind* has a special resonance for nations who have experienced defeat and occupation. The ur-text of “The Lost Cause,” *Gone with the Wind*’s most powerful moment comes when a famished and exhausted Scarlett, defiant, vows: “As God is my witness, I won’t let them lick me! If I have to lie, steal, cheat, or kill—I’ll never be hungry again!”

The author, Margaret Mitchell, reluctantly allowed her manuscript to be published in 1936, and then was stunned and overwhelmed by its success. The book has sold more copies than any book besides the Bible, and won the Pulitzer Prize in 1936, a sensation in Depression-era America. The film adaptation premiered in 1939 to immediate acclaim, culminating in 10 Academy Awards. *Gone with the Wind* reigned supreme as the box office champion until the 1970s and remains the most popular film of all time (when dollars are adjusted for inflation). As with the novel, the love story of Scarlett O’Hara and Rhett Butler has fared less well at the hands of some critics, notably author Lillian Smith, who described the novel as “slick, successful but essentially mediocre fiction. . .”; [*Gone with*

Vivien Leigh and Clark Gable in a scene from the film *Gone with the Wind*.

*the Wind*] “wobbles badly like an enormous house on shaky underpinnings.” Despite its flaws, what is obvious is its staying power, proof of *Gone with the Wind*’s timeless appeal for its fans.

*Gone with the Wind* is a rich, sentimental, and starkly partisan story of a Southern belle, charming and selfish, who recklessly pursues the wrong man (the genteel Ashley Wilkes) throughout the narrative which spans the Civil War and Reconstruction, marrying three times, enduring war, famine, and personal tragedy. At the story’s end, after the death of the saintly Melanie Wilkes, who resolutely loved Scarlett despite her pursuit of her husband, she finally recognizes that her now-departing husband Rhett Butler is indeed her true love. Rhett, weary of her contrivances, answers her heartfelt “Oh, where shall I go, what shall I do?” with one of the best-known exit lines in literary history: “Frankly, my dear, I don’t give a damn.” Not to be outdone, Scarlett sniffs a bit, then declares brightly: “I’ll get him back . . . I’ll think about that tomorrow. After all, tomorrow is another day!”

Much has been made of the connections between Scarlett, the flirtatious and determined heroine, and her creator. Margaret Mitchell (who had first named her character Pansy) was a young reporter who stubbornly went her own way throughout life: routinely flying in the face of Atlanta society, marrying (and divorcing) the unsuitable and abusive Red Upshaw, then marrying his best friend, John Marsh. Marsh is best known for his literary midwifery: he brought a typewriter to his restless wife, then mending from an accident, and suggested she write her novel. From these modest beginnings came the phenomenon of *Gone with the Wind*: “I would go to the apartment and frequently she was at that little table where she worked,” recalled Harvey Smith, a friend of Mitchell’s. “We all joked about it: ‘Well, you know she’s writing the world’s greatest novel.’ . . . And, by God, she was.”

Peggy Mitchell furtively wrote her epic novel in a tiny, cramped apartment in a down-at-the-heels house in midtown Atlanta; she affectionately called the place “The Dump.” While Mitchell drew on her own life to create her characters, her primary inspiration was her family lore: her mother Maybelle and particularly her grandmother Fitzgerald were her models for Scarlett. Mitchell’s Irish Catholic background allowed her to further enhance her tale; a successful immigrant plantation owner, Gerald O’Hara rebukes his frivolous daughter and evokes her spiritual connection to Tara, the family plantation. “Why, land’s the only thing in the world worth working for, worth fighting for, worth dying for, because it’s the only thing that lasts” is the unifying theme of *Gone with the Wind*.

Ignoring the standard wisdom that Civil War films were “box office poison,” producer David O. Selznick fought to bring the novel to the screen, and in wheeling and dealing in pursuit of his goal lost the majority of the financial rights to the film to MGM in return for the coveted services of the “King of Hollywood,” Clark Gable. The film’s pre-production has generated legends of its own, from the discovery of the manuscript by Selznick assistant Kay Brown (sold for a record \$50,000) to the “Search for Scarlett”—a publicity stunt dreamed up by publicist Russell Birdwell, a nationwide search for the right woman to portray Mitchell’s heroine. The episode was portrayed amusingly by Garson Kanin in his novel and television film *Moviola: The Scarlett O’Hara War* (1979 and 1980, respectively). The screen tests of actresses famous and on the rise are an indication of how fiercely this battle raged in Hollywood: Paulette Goddard, Bette Davis, and Alabama-born Tallulah Bankhead claimed they alone could portray Scarlett, and even arch-Yankee Katherine Hepburn was discussed. Although there is considerable dispute about the way

Selznick found Vivien Leigh, the exquisite British actress who would win an Oscar for her portrayal, the legend is that Selznick's brother Myron, a leading agent, brought Leigh to the set of the "Burning of Atlanta" scene, arguably the most famous sequence of the film. "I want you to meet Scarlett O'Hara," said Myron, as the flames consumed old sets and illuminated Leigh's lovely face. In fact, she had been brought to his attention earlier, but the contrived "introduction" may indeed have persuaded Selznick, as he confided to his wife Irene in a letter, calling her "the Scarlett dark horse—she looks damn good."

Casting the other leads proved to be problematic as well, especially in the case of Leslie Howard, who, like Gable, resisted being cast. Gable, the overwhelming choice of the public, feared he wasn't able to handle the part of the blockade-running romantic lead. Said Gable: "It wasn't that I didn't appreciate the compliment the public was paying me," he said. "It was simply that Rhett was too big an order. I didn't want any part of him. . . . Rhett was too much for any actor to tackle in his right mind." Howard believed himself too old and miscast as the hopelessly idealistic and weak-willed Ashley. Olivia de Havilland, under contract by Warner Brothers, effectively wore down the resistance of the studio heads with her persistence; she knew Melanie was the role to establish her as a serious performer. One of the film's finest performances is Hattie McDaniel's Mammy; her sensitive and slyly subversive portrayal won the best supporting actress Academy Award, the first Oscar for a black actor. Butterfly McQueen, so memorable and very controversial as Scarlett's skittish and indolent servant Prissy, similarly transformed what might well have been a one-note characterization by a lesser talent.

Further complicating matters were the three directors of *Gone with the Wind*: George Cukor was fired early in the production, although de Havilland and Leigh secretly sought his advice during filming, then Victor Fleming, Gable's close friend and a "man's director," (also director of *The Wizard of Oz*) walked off the picture, and Sam Wood was brought in; he and Fleming split up the work, which was staggering by any measure. Vivien Leigh, featured in nearly every scene, worked constantly, and permanently damaged her fragile health. Sidney Howard's script trimmed some characters and plot, yet remained remarkably faithful to the book. Finally, after 11 months of shooting and over four million dollars spent, *Gone with the Wind* at last premiered in a much-ballyhooed spectacle staged by the city of Atlanta in 1939, attended by the stars, Selznick, and Mitchell herself.

The cultural impact of the film is hard to overestimate—in southern theaters as late as the 1960s, the technically astonishing and highly effective crane shot of the ragged Confederate flag fluttering over the vast assembly of Atlanta's dead and wounded provoked sobs, applause, and spontaneous emotion, including the occasional "rebel yell." The film's length of 222 minutes (punctuated by an intermission) deterred few, swept up as they were by the storyline. Max Steiner's stirring "Tara's Theme" is ubiquitous among movie scores, a perennial favorite. Film historian Leonard Maltin called *Gone with the Wind* "if not the greatest film ever made, certainly one of the greatest examples of storytelling on film. . . ." Even in numerous re-releases, and after being shown on television many times, *Gone with the Wind* continues to do well; in 1998, a restoration of the film's original negative led to lucrative video and DVD releases, as well as a theatrical re-release. A spectacularly visual film, *Gone with the Wind* used Technicolor to its greatest effect; William Cameron Menzies' brilliant cinematography remains a landmark achievement.

*Gone with the Wind* has unlimited kitsch potential: from Madame Alexander dolls to Scarlett Christmas ornaments, souvenir books (including the *Gone with the Wind Cookbook*, which has plenty of recipes from Mammy and Melanie, but none from Scarlett), fan clubs, online websites crammed with *Gone with the Wind* trivia and news, and in—an echo of the "Search for Scarlett"—"lookalike" contests and professional Scarlett, Melanie, and Rhett lookalikes, the story continues to fascinate. Bed and Breakfasts (notably the "Inn Scarlett" in Georgia) offer the fan a *Gone with the Wind* immersion experience, and exact replicas of the famed "Green Curtain" dress or "the Barbecue dress" are widely available. *Gone with the Wind* has been the subject of many parodies—memorably by comedian Carol Burnett, who lampooned Scarlett while wearing the "curtain dress" with the rod intact. "The Dump," now handsomely restored by German company Daimler-Benz and a favorite tourist destination, survived two arson attempts and opened in 1997.

The literary reputation of Mitchell's book has been favorably reassessed by numerous critics, and with the rise of Southern history and literature as a subject of scholarship, *Gone with the Wind* has become a touchstone, spawning numerous symposiums and studies, with Scarlett herself lionized as "modern" and a feminist heroine. In 1988, the Mitchell estate finally allowed an authorized sequel; *Scarlett* (by romance writer Alexandra Ripley) appeared in 1991. Panned by critics but financially successful, the CBS 1996 miniseries similarly proved popular.

## Good Housekeeping

By dint of its very title, *Good Housekeeping* magazine stands as a symbol of a past era in American life. Along with *Redbook*, *Woman's Day*, *Ladies' Home Journal*, and others, *Good Housekeeping* belongs to what is known in industry parlance as the "Seven Sisters" of women's service magazines, and achieved its most pervasive success in an era when the bulk of middle-class women stayed at home and focused their energies on cooking, cleaning, and their children. *Good Housekeeping* and its cohorts "gradually built up the power of the matriarchy," wrote John Tebbel and Mary Ellen Zuckerman in *The Magazine in America, 1741-1990*. "Mom was . . . a figure of responsibility, dignity, and authority in the magazines." *Good Housekeeping*, however, differed from the other women's service magazines in its slightly elitist air; clearly aimed at women running economically stable households, in its heyday the periodical featured articles on how to choose a children's camp while, in a 1998 issue, readers received a run-down on the capital-gains tax.

*Good Housekeeping* began in 1885 as a ten-cent bi-weekly founded in Holyoke, Massachusetts, by Clark W. Bryan, a local journalist. Following on the heels of the success of *Ladies' Home Journal*, from the start *Good Housekeeping* catered to the young, affluent homemaker, a distinction that would later set it apart from its competitors in the field. It did not shy away, for instance, from feature stories on how to deal with hired help around the house. The first edition solicited reader contributions for a write-in contest on the topic "How To Eat, Drink and Sleep as a Christian Should." In 1891 it became a monthly, and in 1911 it was acquired by the Hearst publishing empire and its offices relocated to New York City.

From the start *Good Housekeeping* offered domestic guidance in the form of recipes, etiquette advice, and child care issues; it also contained more fiction and poetry in its pages than other women's magazines. In 1900, the magazine founded its famous Good Housekeeping Institute, which moved to state-of-the-art facilities in New York in 1912 and came under the guidance of a renowned former chemist from the United States Department of Agriculture. The GHI conducted research into food purity, tested products for safety, and in general brought a scientific approach to housekeeping. Its findings often became editorial features in the magazine itself, and from 1902 the magazine offered its "Ironclad Contract," the promise that any product advertised in *Good Housekeeping* would perform as promised. The "Seal of Approval" evolved over the next few decades in legal language and scope of guarantee, in order to deal with enforced compromises that result from this problematic mix of editorial focus and advertising revenue.

Circulation achieved the one-million mark in the 1920s, and the magazine—like much of the old-money, upper middle class in America—was virtually unaffected by the Great Depression of the 1930s, though its competitors suffered. Much of *Good Housekeeping's* tone was set in the years between 1913 to 1942 under the editorship of William Frederick Bigelow. (The magazine would not

have its first female editor until 1994.) Bigelow introduced renowned writers such as W. Somerset Maugham and Booth Tarkington to the roster of fiction contributors, and the illustrations came from the pen of celebrated American artists such as Charles Dana Gibson. Keeping true to the magazine's focus on the sanctity of motherhood, its cover featured illustrations of children, at least through the 1950s; adult celebrities began appearing in the 1960s, but the December issue almost always still features an elaborate gingerbread house, with instructions inside on how to bake and construct this time-consuming *piece de resistance* of holiday festivities.

In the golden era of the Seven Sisters—the 1950s and 1960s when circulation and advertising pages reached an all-time high—*Good Housekeeping* continued to set itself apart, and above, its competitors in the field. It maintained its policy against liquor or tobacco advertising, and shied away from the tragic first-person tales found in other women's magazines, but did have an advice column written by Dr. Joyce Brothers. An etiquette column from Elizabeth Post, a descendant of the legendary authority Emily Post, gave readers advice about table manners and dealing with nosy neighbors; Elizabeth Post's daughter-in-law Peggy continued the column in the late 1990s.

After a circulation high of 5.5 million in 1966, *Good Housekeeping* lost readership and with that, advertising revenues, over the subsequent decades, as more American women entered the workforce on a full-time, permanent basis throughout the 1970s and 1980s. *Redbook* and other service publications responded to the trend, focusing their features and advice on how to manage both a household and a job outside the home, but *Good Housekeeping* did not. By the early 1990s, this orthodoxy had served the magazine well, and it began positioning itself toward a new demographic: career women who were giving up work in their thirties to become full-time suburban moms. The magazine launched its "New Traditionalist" ad campaign to attract readers and revenue with this focus. It remains one of the top performers in the Hearst media empire.

## *The Good, the Bad, and the Ugly*

The last and most expensive of director Sergio Leone's "Dollar" trilogy grossed a respectable \$6.1 million in 1966 and solidified Clint Eastwood's status as a major Western star. Following the success of Leone's *A Fistful of Dollars* (*Per un pugno di dollari*, 1964) and *For a Few Dollars More* (*Per qualche dollaro in piu*, 1965), *The Good, the Bad, and the Ugly* (*Il buono, il brutto, et il cattivo*, 1966) signifies the aesthetic high point of the Italian-produced spaghetti westerns, which revitalized the western hero through Eastwood's portrayal of the calculating "Man with No Name." Energized by Leone's vibrant film style and Ennio Morricone's didactic score, *The Good, the Bad, and the Ugly's* international influence permanently altered popular conceptions of the western and its themes.

*The Good, the Bad, and the Ugly's* plot follows the progress of three ruthless gunfighters racing to obtain \$200,000 in stolen Confederate gold. Beginning the film with a series of three lovingly constructed murder scenes, Leone employs extreme long shots and close-ups, piercing sound spikes, and dramatic freeze frames that introduce Tucco the Ugly (Eli Wallach), Angel Eyes the Bad (Lee Van Cleef), and "Blondie" the Good (Clint Eastwood) with his signature style of bravado exposition. As the story unfolds, all three principals form and break alliances in search of Bill Carson's hidden treasure.

The epic design of Leone's scenarios redefined the film image of the American West. After early collaborations with innovators like Michelangelo Antonioni and Robert Aldrich, Leone invested his

Clint Eastwood in a scene from the film *The Good, the Bad, and the Ugly*.

western scenes with an obviously distorted, often frenetic perspective. Unlike the stagy studio sets of B-grade Hollywood Westerns, Leone's plastic camera expanded adobe farm houses and barren deserts into exaggerated oceans of space peopled by minuscule though deadly specks of humanity. No Westerns since John Ford's dramatic Monument Valley films had offered such profoundly dynamic compositions. Leone's wild spectacles of dueling gunfighters, public hangings, Civil War battles, and prison camps create an darkly comic, self-consciously chaotic view of western society. At one point, Tucco and Blondie engage a pack of Angel Eyes' assassins in the middle of a bombed-out ghost town. While artillery continues to demolish the buildings around them, Tucco and Blondie nonchalantly utilize the rising dust as cover and peep out of new bomb craters to survey their enemies. Leone's freewheeling camerawork reaches its expressive heights during the montage of whip pans and zooms that describe the finale of an absurdly bloody Civil War battle on a bridge, and during the tension-building long shots that commence the climactic three-way gunfight in a sprawling deserted cemetery.

Much of *The Good, the Bad, and the Ugly's* success depends on Ennio Morricone's infamously parodic score. As a discordant aural accompaniment to the crazed animations and incongruous antique fonts that constitute the title sequence, Morricone's campy revision of distinctive western sounds gives all three "Dollar" films a Monty Python-flavored musical edge. For *The Good, the Bad, and the Ugly*, Morricone deconstructs clichés of the western soundtrack to create a distinctively catchy theme of shriek-propelled, psychedelic yodeling that became as popular as Eastwood's nameless hero. In the spring of 1966, *The Good, the Bad, and the Ugly's* main theme went to No. 1 on the American billboard charts alongside the Rolling Stones' "Jumpin' Jack Flash." With all its crazed energy, Morricone's score thematically accentuates key moments of Leone's narrative through its invocation of familiar western harmonies. In *Once upon a Time: The Films of Sergio Leone*, Robert Cumbow explains:

The score to *The Good, the Bad, and the Ugly* taps Civil War movie conventions in its use of a lilting sentimental ballad played off a recurring march tune. The ballad, "Story of a Soldier," is derivative of the Confederate standard "Lorena" (a leading motif in Max Steiner's score to *The Searchers* . . . and in David Buttolph's music for *The Horse Soldiers*, for which it is the main theme). Sung phonetically by an Italian chorus, the lyrics of the song are only sporadically intelligible, but they reflect an antiwar tone consistent with both the film's treatment of war and the prevailing mood of ballads appearing during the period.

Cumbow also notes the innovative use of human voices and unconventional instruments in the soundtracks to all three "Dollar" films as an especially affecting element of "Morricone's offbeat orchestration." In *The Good, the Bad, and the Ugly*, Morricone's campy vocal orchestrations amplify not only the opening credits but also the introductory vignettes and Tucco's frantic, nearly orgasmic search for the buried gold in the cemetery.

In many ways, the spectacle of Eli Wallach's drunken, disheveled Tucco embodies the heart of Leone's film. Eastwood is undoubtedly the box-office star, but the plot and the camera continually privilege Tucco's furious escapades. Grinning, chuckling, and thieving his way through crowds of bitterly serious supporting characters, Tucco's vulgarity, tenacity, and humor make him the most endearing

of the three mercenaries. Leone gives Tucco the most entertaining scenes as he crashes half-shaven through a barbershop window after plugging three bounty hunters, makes faces at an appalled elderly bystander during his own execution, and surprises a would-be assassin by hiding his pistol under the froth of his bubble bath. Tucco even rules the final moments of Leone's 160-minute film as his cursing of Blondie rises in a shocking echo that initiates the last flourish of Morricone's score. Tucco clearly personifies the aesthetic agenda of Leone's entire "Dollar" trilogy. In *The Good, the Bad, and the Ugly*, themes of war, murder, and greed fuse into a pseudo-serious, gore-punctuated epic that intercuts Tucco's torture scene with the lilting strains of a band in a Civil War prison camp. Combining the deadly serious with the sickly comic, Leone's entertaining, anarchic western formula parallels James Whale's Universal horror films, Stanley Kubrick's satirical science fiction, and Tim Burton's gothic *Batman* series.

## Good Times

Throughout its initial success and later criticism, sitcom *Good Times* revolutionized prime-time television. While the story lines of 1950s and early 1960s television sitcoms provided little more than cautious counsel on the minor vicissitudes of family life, the decade of the 1970s ushered in what came to be known as the era of relevancy in television programming. In *Good Times*, which aired on CBS from February 1974 to August 1979, suburban street crime, muggings, unemployment, evictions, Black Power, and criticism of the government were frequent and resounding themes. The show is regarded as perhaps the first in prime-time television to tackle such issues with any measure of realism. It stretched the boundaries of television comedy and provided a different view, not only of black family life, but of the social fabric of 1970s American society in general.

*Good Times*, along with *Maude*, *Sanford and Son*, *The Jeffersons*, and television's most controversial sitcom *All in the Family*, was the creation of independent producer Norman Lear, whose programs, built on confrontational and ethnic-style humor, helped revolutionize prime-time television during the 1970s. *Good Times* was developed as a spin-off of the earlier hit show *Maude*, which starred Bea Arthur and Bill Macy, and featured the sometimes controversial machinations of a well-appointed, middle-aged, married couple. Their black housekeeper, Florida, was portrayed by veteran actress Esther Rolle, who was chosen to star as Florida Evans in *Good Times*.

The appearance of *Good Times* is noteworthy in that, along with *The Jeffersons* and *Sanford and Son*, it was one of the first prime-time television sitcoms featuring a mostly African-American cast since the controversial *Amos 'n' Andy* show had been canceled amid a firestorm of protest in 1953. *Good Times* was also unique in its funny but sometimes poignant portrayal of an African-American family eking

out an existence in a high-rise tenement apartment in an urban Chicago slum. The program exploited, with comic relief, such volatile issues as inflation, unemployment, discrimination, and the apparent reluctance of the government to do anything about them. In addition to the Florida character and James (John Amos), her frequently unemployed, but looking-for-work husband, the cast of *Good Times* included their teenage son, J.J., portrayed by comedian Jimmie Walker; their grown daughter, Thelma (Bernadette Stanis); and an adolescent son, Michael, portrayed with gusto by a talented young Ralph Carter. A fortyish woman named Wilona (Ja'net Dubois) made frequent appearances as the Evans's supportive neighbor. Later in the series, a very young Janet Jackson of the musical Jackson Family fame joined the cast as Wilona's adopted daughter.

*Good Times*'s popularity and good ratings were rooted in the fact that it offered solace for a TV audience fed up with the Vietnam War, Watergate, high interest rates, and unemployment. Both blacks and whites could identify with the difficulties the Evans family faced, and the show became a champion for the plight of the underclass. Black viewers especially appreciated how the program highlighted the good parenting skills of James and Florida. In spite of their difficult situation, they never shirked on their responsibility to teach their children values and accountability. The Evans's ability to remain stalwart in the face of difficult odds was the underlying theme of many episodes.

*Good Times* is also significant for the controversy that haunted the show's production. Disputes developed about the program's changed direction; in particular, the ever-popular J.J. character. J.J.'s comical, but at times undignified, antics raised the resentment of many in the black community. With his toothy grin, ridiculous strut, and bug-eyed semblance, to some he had metamorphosed into a coon-type stereotype of former times. More and more episodes were centered around his farcical exploits, featuring his trademark exclamation, "DY-NO-MITE!" All but forgotten was the daughter Thelma, James's search for a job, Michael's scholastic interests, and family values. "We felt we had to do something drastic," Rolle stated in the *Los Angeles Times* in 1978, "we had lost the essence of the show." After both Rolle and Amos left the program in protest, attempts were made to soften the J.J. character and continue the program without the James and Florida characters. But with an employed and more mature-acting J.J., and the return of Rolle, ratings for *Good Times* declined. The program failed, and the series was canceled but continued to enjoy success in syndication.

## Goodbye, Columbus

A collection of five stories and one novella, *Goodbye, Columbus*, Philip Roth's first book, published in 1959, introduces the basic themes that Roth explores more fully in the novels that have followed and that have in turn been shaped by the critical response to *Goodbye, Columbus*. Published at a time when anti-Semitism was still prevalent in the United States and memories of the Holocaust still fresh, *Goodbye, Columbus* led a number of influential Jewish readers to question Roth's depiction of American Jews from the perspective of a writer for whom Jewishness was more cultural than religious, and assimilation and individual identity more pressing matters than survival and collective memory. While some charged Roth with disloyalty and self-hatred, others welcomed *Goodbye, Columbus'*

author into the front rank of the diverse group of Jewish-American writers then beginning to dominate American fiction. The less specifically Jewish implications of Roth's comic genius and irreverence were underscored by the release of the successful film version of the title novella in 1969, two years after *The Graduate*.

## Gooden, Dwight (1964—)

Pitcher Dwight Gooden enjoyed one of the fastest rises to stardom in baseball history, but he ended up the sport's major casualty

in the 1980s war against cocaine. Gooden won the National League Rookie of the Year Award in 1984 for the New York Mets; the following year, at the age of 20, he became the youngest pitcher ever to win the Cy Young Award. Heralded as “Doctor K,” Gooden quickly became the toast of New York, but by 1987 the young pitcher was forced to enter a drug rehabilitation center for his cocaine addiction. Repeated violations of league drug policy limited Gooden’s effectiveness and ultimately resulted in his suspension from baseball for the 1995 season. He subsequently kicked his drug habit and enjoyed some success with the New York Yankees and the Cleveland Indians in the late 1990s, notably in pitching a no-hitter against the Seattle Mariners on May 14, 1996.

## GoodFellas

Chosen by the American Film Institute as one of the 100 greatest American films of the last 100 years, Martin Scorsese’s *GoodFellas* (1990) has done more to demythologize organized crime than any other major contemporary film, while cementing its maker’s reputation as, arguably, America’s greatest director still living and working at the end of the twentieth century. *GoodFellas* was based on Nicholas Pileggi’s 1985 bestseller, *Wiseguy: Life in a Mafia Family*, which recounted the true story of Henry Hill. A low-level mobster who rose up through the ranks, Hill was involved in the biggest cash robbery in America’s history, was caught dealing cocaine, turned

The cast of *GoodFellas* (l-r) Ray Liotta, Robert De Niro, Paul Sorvino, and Joe Pesci.

State’s evidence, and entered the Federal Witness Protection Program. Behind its glossy and absorbing gangster-thriller surface, the film offered an unvarnished account of Mafia brutality that came to set a standard—seldom achieved since—for the moral focus of serious crime films, and illuminated public understanding of the culture in which organized crime flourishes.

Set in Scorsese’s home ground of New York City, whose underbelly he had so successfully exploited in many of his films, including the early *Mean Streets* (1973) and the masterly *Taxi Driver* (1976), *GoodFellas* marked the climactic contribution to the director’s cycle of underworld subjects, and the one to which he successfully brought an epic approach. His by now practiced craft and brilliantly individual brand of expressionistic realism imbued *GoodFellas* with black comedy, often memorably ironic, sharp social observation, and scenes of deeply shocking but never gratuitous violence. The film is very long, but absolutely enthralls in its unfolding of a tale in which audiences watch the young lad Hill grow to manhood in the Mafia, and was lent further power by a large cast that, as British critic Max Loppert wrote, was “a galaxy of New York character acting at its athletic, up-front best.” At the center was Ray Liotta as Hill, surrounded and supported by, among others too numerous to mention, a menacingly detached Robert De Niro, Oscar-winning Joe Pesci as the viciously manic Tommy DeVito, Paul Sorvino as Mafia boss Paul Cicero and, as Hill’s middle-class Jewish wife, a superb Lorraine Bracco. Together, this ensemble vividly and realistically impersonated the real-life sociopaths they were portraying, articulating a world of men whose daily business embraces every known felony from arson and extortion through dealing in drugs and firearms to cold-blooded killing in the pursuit of money and power.

Hill was an insider who remained outside; although he was involved in the mob’s scams, thefts, and murders, he was half-Irish and half-Sicilian, and only thoroughbred Sicilians could become “made men” within the Mafia. While the book dealt with the facts of the case, Scorsese puts flesh on the bones by making choices as to what he includes and how he treats it. The book, for example, detailed the 1978 theft of six million dollars from a Lufthansa cargo at Kennedy Airport, but where a lesser director would show the theft in all its detail, Scorsese shrewdly omits it entirely; his concern is with the lives of the perpetrators and how they are affected in the aftermath of the operation. The haul is so huge that a number of them, though warned to lie low, start living extravagantly, thus worrying De Niro’s Jimmy Conway that their behavior will tip off the cops. He deals with their indiscretion by having each of them—some ten in all—killed, fully aware that their elimination will bring the added advantage of increasing his own percentage of the take.

This expert and imaginative ability to transpose and select creates dramatic juxtapositions from the start. Pileggi’s book began with Hill describing his childhood, lived across the street from a cab stand controlled by the mob. He reveals how he was attracted by the apparent glamour of the mobsters’ lives, admiring them for their power and wealth so that, from the age of 12, his dream was to be one of them. By contrast, *GoodFellas* opens midway through the story, with the adult Henry driving along a deserted road at night, accompanied by Jimmy and Tommy. He hears a strange thumping sound, speculates on its cause (a flat? Did he hit something?), and they pull over to investigate. The three men climb out, circle to the back of the car, and Henry opens the trunk to reveal a beaten and bloody cohort who, to their collective astonishment, is still breathing. Tommy lunges forward with a huge knife and brutally stabs him, after which Jimmy pumps four bullets into him. As the stunned Henry moves to

close the trunk, he says in voice over, “As far back as I can remember, I always wanted to be a gangster.”

The story then flashes back to Henry’s formative years across from that cab stand, his first youthful errands for the mob, and his meeting of Jimmy and Tommy. In a now classic scene, Tommy is first spotted telling an anecdote that has his fellow mobsters in stitches and Henry saying, “You’re funny.” Tommy suddenly becomes threateningly confrontational. “Funny how? . . . I mean funny like I’m a clown? I amuse you? I make you laugh?” The tension builds until Henry finally realizes that Tommy is putting him on, and everyone laughs. From then on, whenever Tommy starts down the same confrontational road with someone else, audiences are lulled into thinking he’s kidding again, so that his eventual explosion into uncompromisingly bloody violence is all the more shocking.

The film moves at a dazzlingly fast but perfectly controlled pace, its imagery enhanced by freeze-frames, jump-cuts, continuous takes, voice-overs, and on-screen date-and-place information that emphasizes its biographical origins. Unlike the book, which ends with Henry purporting to be happily ensconced in the Witness Protection Program, the movie ends with a distraught Henry trapped in suburbia. As he picks up the morning paper from the front porch of a row of identical houses, he says in voice over, “I’m an average nobody. I get to live the rest of my life as a schnook.”

Comparisons with Coppola’s *The Godfather* and its sequel proved inevitable—they are great films, epic in scope, and making much of the Family’s code of honor. But as Nicholas Pileggi told the *New York Times*, “The honor code is a myth. These guys betray each other constantly. Once Henry’s life is threatened, he has no qualms about testifying. He does no soul-searching, because he has no soul.” *GoodFellas* is mired in the minutiae of everyday life, set among the lawns and shrubs of suburbia and stripped of other than fleeting, vulgar, and spurious glamour. The beatings and killings are always sick and brutal, never macho or alluring. The effect is to expose the sickening reality of the criminal lifestyle, revealing it in all of its violence, dishonor, and empty aspirations.

—Bob Sullivan

## Goodman, Benny (1909-1986)

Known as the “King of Swing,” bandleader Benny Goodman left his mark on the swing era of the late 1930s and early 1940s in several important areas. He adapted both jazz and popular songs into a unique style of big band jazz. His superb technique and distinctive

**Benny Goodman**

solo style made him the outstanding clarinetist of that era. During a time of racial segregation, he became the first leader to include African Americans in his orchestra. He innovatively returned jazz to its roots by using band members in small combos—from trios to sextets. His career was long-lasting, and when almost seventy, he impressed jazz critic John McDonough as “the only bankable jazz star left who can fill a concert hall all by himself,” adding that “the Goodman mystique has not only survived, it’s thrived.”

When Chicago-born Benny was ten he joined a synagogue boys band, immediately showing a natural aptitude for the clarinet. Within a year he enrolled in the boys’ band at famous Hull House, which offered free instruction in the arts to children of immigrant families. There his teacher was Franz Schoep, an instructor of woodwinds in the Chicago Symphony. Benny was twelve when he appeared on stage in Chicago doing an impersonation of clarinetist Ted Lewis, even then attracting the attention of bandleader Ben Pollack, who later hired him. At thirteen Goodman was playing phenomenal jazz solos with the famous Austin High Gang, which included such stars-to-be as saxophonist Bud Freeman, drummer Dave Tough, cornetist Jimmy McPartland, and clarinetist Frank Teschemacher. When he first jammed with the band, McPartland said, “This little monkey played about sixteen choruses of ‘Rose’ and I just sat there with my mouth open.”

At thirteen, he was a full member of the musicians’ union and working several nights a week in clubs and dance halls. In August 1925, the sixteen-year-old prodigy left Chicago wearing adolescent knickers to join Ben Pollack’s band in Los Angeles. Pollack led one of the best jazz bands in the United States during the late 1920s and early

1930s. By 1927 Goodman was gaining the respect of other musicians, and that same year Melrose music publishers issued a folio called *One Hundred Jazz Breaks by Benny Goodman*. In 1928 he left Pollack briefly for the Isham Jones band, but when Pollack got a job that year in New York City, young Goodman rejoined him for the chance to play regularly with such standout jazzmen as Bud Freeman, Jimmy McPartland, Glenn Miller, and Jack Teagarden. He was undaunted by his fellow stars, and Pollack commented that “Benny Goodman was getting in everybody’s hair about this time, because he was getting good and took all the choruses.”

In 1929 he began a successful career as a freelancer in New York City, playing in Broadway pit bands and on recordings and radio. Of the 130 recording dates Goodman made during this period, only about fifteen were genuine jazz sessions. In these, however, he played with such jazzmen as Bix Beiderbecke, Red Nichols, Joe Venuti, Fats Waller, blues queen Bessie Smith, and even his early idol, Ted Lewis.

By 1933, having determined the kind of music he wanted to play, Goodman began making plans to organize his own band, and in 1934 the Benny Goodman Orchestra was featured on an ongoing NBC radio series called “Let’s Dance.” After a few recordings on Columbia, he signed a long-term contract with Victor in 1935 and took his band on the road. Success was gradual at first, but with the extraordinary arrangements of Fletcher Henderson, enhanced by the solos of Goodman, trumpeters Bunny Berrigan, Ziggy Elman, and Harry James; pianists Jess Stacey and Teddy Wilson, and drummer Gene Krupa, the band attained phenomenal nation-wide success in 1936. On January 16, 1938, Goodman, wearing white tie and tails, led his band into Carnegie Hall for the first pure jazz concert held there. The vocals of Peggy Lee—including “Why Don’t You Do Right?” and “My Old Flame”—helped the orchestra remain a prime attraction until it was disbanded in mid 1944 to allow Goodman to focus on concerts with his combo groups.

He reorganized his big band in 1945 and appeared as its leader off and on until 1950, when he toured Europe with a sextet. After that, he fronted the big band on only one brief tour in the spring of 1953, involving himself in a number of other projects. He assembled a special band in 1955 to record the soundtrack for the film *The Benny Goodman Story*, starring Steve Allen as Goodman.

A wide variety of projects drew his attention: in the winter of 1956-57 he toured the Far East and in 1962 the Soviet Union, both for the State Department; sandwiched between were appearances with the Budapest String Quartet as well as concerts of works he had commissioned from Bartok, Hindemith, and Copland.

In the early 1970s he presented a television show from Carnegie Hall in which he reunited his original quartet and played a memorable version of “I’m a Ding Dong Daddy from Dumas.” The same group, with an ailing Gene Krupa, played the 1973 Newport Jazz Festival.

By the 1980s Goodman’s health problems began to increase as he suffered from arthritis in his fingers and a heart ailment that required a pacemaker. As late as 1986 he continued to play with a big band on occasional radio broadcasts. His biographer, Russell Connor, found these performances “brilliant, effortless, faultless, inspiring,” adding that the sidemen were “visibly impressed.”

The respect of his peers was far more important to Goodman than the long string of victories in jazz polls taken by *Downbeat*, *Metronome*, *Playboy*, and *Esquire*. His special niche was to change the course of jazz during the swing era. He was the “King of Swing,” who, as James L. Collier wrote, “opened the door for the bands which rushed through the gap—among them Basie, Herman, Barnet,

Lunceford, Berigan, Crosby, Webb, Shaw, and eventually Kenton, Raeburn and the modernists.”

—Benjamin Griffith

## Goodson, Mark (1915-1992)

Fondly known as the godfather of television game shows, Mark Goodson produced and created some of television’s top-rated and most enduring programs, including *The Price Is Right*, *The Match Game*, and *Family Feud*.

Born in Sacramento, California, to Russian immigrant parents, Goodson was a shy and introverted child. Despite his reserved character, he pursued a career in the radio industry. In 1937 he landed his first job as a disc jockey at radio station KCBS in San Francisco. Two years later he was hired by Mutual Broadcasting System as an announcer, newscaster, and station director. In 1941 Goodson moved to New York to work as a radio announcer. It was here that he first became involved with game shows by emceeing the radio quiz show *The Jack Dempsey Sports Quiz*. In addition, Goodson tried his hand at acting while performing on the radio program *We the People* that aired during the Second World War; Goodson depicted the characters who had German and Japanese accents. In 1943 Goodson created his first network show for ABC, *Appointment with Life*, a dramatic series based on the files of a marriage counselor. During this time Goodson was also writing and directing installments of *The Kate Smith Variety Hour*.

In 1946, Goodson teamed up with Bill Todman to form Goodson-Todman Productions. Their first creation was a radio game show entitled *Winner Take All*, which aired on CBS. During the next couple of years, the two created several more successful radio shows, thereby creating a strong presence in network television. Goodson created the duo’s first television program, *What’s My Line*, which premiered on CBS on February 1, 1950. The program was an overnight success, airing weekly for seventeen years. Over the next thirty years, Goodson-Todman Productions continued to produce hit game shows and develop the widely used formats.

Complementary opposites, Todman managed the business side, while Goodson was the creative and productive force. Goodson created many of the essential attributes that define game shows. For example, Goodson-Todman Productions was one of the pioneers in set design, using bright colors and flashing lights. Goodson also pioneered the celebrity panel on the game show. In an attempt to boost ratings, Goodson introduced the celebrity panel in the 1950s on

*What's My Line?* The program featured a panel of four celebrity guests who guessed the occupations of the contestants. Over the years Goodson perfected the practice of the celebrity panels on programs such as *Password* and *The Match Game*. Goodson's celebrity panels were and still are imitated by other game show producers.

In 1979 Bill Todman died, leaving all of Goodson-Todman Productions in control of his partner. The name of the company was changed to Goodson Productions, and Goodson continued to focus on producing game shows and expanding his media group. In 1986, Goodson created the Goodson Newspaper Group, which consolidated several daily and weekly newspapers. By 1992 the group published eight daily, six Sunday, and twenty-five weekly newspapers.

Two weeks before his death in December 1992, Goodson was inducted into the Academy of Television Arts and Sciences Hall of Fame. This award topped a long list of other achievements that included three Emmy awards, the National TV award of Great Britain, and a star on the Hollywood Walk of Fame.

Yet nothing represents Goodson's contribution to television better than the longevity of the shows themselves. There has not been a weekday since 1946, when *Winner Takes All* premiered on radio, that a Goodson program has not been on the air. Goodson-Todman's thirty-plus game shows include *Winner Takes All* (1948-52); *Beat the Clock* (1950-62, 1968-71, 1979-80); *What's My Line?* (1950-74); *The Price Is Right* (1956-65, 1972—); *To Tell the Truth* (1956-77); *Password* (1961-67, 1971-75, 1979-81, 1985—); *The Match Game* (1962-69, 1973-82); *He Said, She Said* (1969); *Concentration* (1973-79); *Tattletales* (1974-80, 1982-84); *Mindreaders* (1979); *Blockbusters* (1980-82, 1987); *Match Game/Hollywood Squares Hour* (1982-83); and *Trivia Trap* (1984).

Goodson-Todman also produced a few episodic shows: *The Rebel*, *Jefferson Drum*, *The Richard Boone Show*, *Philip Marlowe*, and *The Don Rickles Show*.

## Gordy, Berry (1929—)

Founder of the Motown music empire, Berry Gordy was for many years America's most successful black businessman.

Gordy was one of eight children from a middle-class family in Detroit; his father, Berry Gordy, Sr., was a contractor and entrepreneur. The elder Gordy's gospel of achievement and competition found a respectful audience in his son, but Berry Gordy, Jr., always sought wealth rather than merely middle-class success. Gordy dropped

out of high school to pursue a career in boxing and fought in 19 mostly successful professional bouts, but he quit the ring after concluding that he would never be great. Shortly afterwards he was drafted, serving in Korean War combat.

Returning to Detroit in 1953, Gordy started a jazz record store with borrowed money. It failed after a short time, and he next took an assembly line job at a Ford plant. Gordy's sisters had by then obtained the cigarette concession at one of Detroit's better black nightclubs, and he began spending much of his free time there. He was composing songs in his head during his long, boring shifts at Ford, and attempted to persuade the nightclub's talent to use his material. In 1957, with the first of his marriages falling apart, Gordy quit his Ford job to devote himself to composing full-time.

It was Jackie Wilson, an old acquaintance from his boxing days, who first recorded songs by Berry Gordy. Wilson was just on the brink of success when Gordy gave him "Lonely Teardrops" and several other songs to use, but he quickly discovered that a composer's royalties were very small, especially in the frequently corrupt music business of the day. He started doing freelance record producing as well, learning valuable lessons but still not making much profit.

In 1959, on a shoestring budget, Berry Gordy founded his own music production company. He named it Motown after Detroit, the Motor City, and brought several of his siblings and their spouses into the business. One brother-in-law was writer/producer/singer Harvey Fuqua of Harvey and the Moonglows; another was Marvin Gaye, who would become one of Motown's biggest, and most troubled, stars. Gordy also employed a number of would-be singers and writers in secretarial and production capacities, thus assuring a constant supply of willing talent at very little cost to himself.

Berry Gordy's earlier careers had prepared him well for Motown. From the outset he was a stickler for high production values, and quickly created a recognizable "Motown sound." He also sought to broaden his appeal beyond his core customer base of young black people to a larger and more affluent older white audience. In order to mask how many records Motown was releasing, Gordy created and managed a variety of labels, such as Tamla, Soul, Gordy, Rare Earth, and many others.

Early acts produced by Motown included Smokey Robinson and the Miracles, Mary Wells, Marvin Gaye, the Temptations, Martha and the Vandellas, the Spinners, the Marvelettes, and Stevie Wonder. In the years to come, Gordy would sign up such performers as the Four Tops, Gladys Knight and the Pips, Junior Walker and the All-Stars, the Isley Brothers, the Commodores, and the Jackson Five. In many cases, after a few years in Motown's mixture of production wizardry and tight-fisted, arbitrary control, the now-established stars left for greener pastures. Some critics argue that few ever sounded as good after Motown as they had as part of it.

Gordy retained almost complete ownership of his company, making him a very wealthy man. When his struggling female group, the Supremes, finally began to make a name for themselves, he determined to make Diane Ross—as she was then known—into a major star. Diane Ross was a skinny schoolgirl when the Supremes started with Gordy's record label, and was plunged, like many other new acts, into Motown's whirlwind of training bent on making stars. Following the practice of the big Hollywood studios, Motown's Artist Development Department coached the youngsters on speech, choreography, stage behavior, costume, and of course on singing. Diane, soon Diana, Ross of the Supremes was Motown's greatest success story, rising from poverty in Detroit to international stardom, just as Berry Gordy willed it. His strategy was methodical. First, he put

Berry Gordy (right) receiving the NAACP Award of the Year from commentator Barry Gray, 1968.

Ross's name ahead of the group, then he fired Florence Ballard, her former equal and arguably the best singer ever to call herself a Supreme. Next, he separated Ross from the group and built her up as a solo act. Finally, he began to invest some of his millions in motion picture production, but only when Diana Ross was given the lead in each film. *Lady Sings the Blues* (1972), a biographical film about Billie Holiday, was a smash hit.

During production of the next film, *Mahogany* (1975), the producer's suggestions came so often that the director resigned, and Berry Gordy eventually took directorial credit for the film. It was

quite successful; other films in which Gordy was involved were less so. *The Wiz* (1978) was an abject flop, losing millions despite the presence of Ross and Michael Jackson. Gordy left the movie business shortly thereafter. In 1972, much to the chagrin of Detroit residents and his employees, Berry Gordy relocated Motown to Los Angeles.

Gordy lived through many changes in the American recording industry, and left an indelible mark on popular music. A list of the artists who recorded for Motown's many labels over a 35-year period would include a disproportionate number of major stars whose songs

created a musical dynasty. It was the end of an era when Berry Gordy sold Motown to the media conglomerate MCA in 1994.

## Gospel Music

Gospel music is arguably the most important African-American musical tradition. Throughout the twentieth century it has managed to instill a vision in African-Americans with its message of hope, love, and compassion through the power of Jesus Christ. Gospel music has also had a profound influence on religious and secular music, enabling it to become a part of the broader American culture.

During the Antebellum period, African-Americans used religious and sacred songs as a tool of liberation in order to help them survive the terrible institution of slavery. Once emancipation had been achieved, they then relied upon spirituals such as “Nobody Knows the Trouble I See,” “Steal Away,” “Didn’t My Lord Deliver Daniel,” “Ezekiel Saw the Wheel,” and “In that Great Gettin’ up Morning,” to help them make the transition from slavery to freedom. Beginning in the early twentieth century, however, African-American religious music would enter a new age with the birth of black Pentecostal churches and denominations. With a strong worship emphasis on emotionalism and speaking in tongues, many traditional hymns were instantly “gospelized” by increasing the tempo and, at times, by adding percussion accompaniment. Instrumental in this phenomena was Charles Price Jones of Jackson, Mississippi, founder of the Church of Christ (Holiness) USA, who as the father of African-American Pentecostalism composed over 1,000 songs for his congregation. Jones’ songs—such as “I’m Happy With Jesus Only” and “Jesus Only”—were unique in that they expressed the feelings and expressions of African-Americans after slavery.

Beginning in the 1920s, black religious music was introduced to the Quartet movement. Whereas most sacred music was sung by congregations, The Fisk Jubilee Singers of Nashville were responsible for popularizing the groups as they sprang up east of the Mississippi River. Because of their amazing popularity, record companies such as RCA Victor, Paramount, and Columbia, cashed in on the demand for this type of music in the Urban North by recording and promoting the quartet sound. Radio stations also sought to capitalize on the growing popularity of black religious music. Stations such as WLAC of Nashville, with its 50,000 watts, played the music at night to listeners as far away as Chicago, Philadelphia, and New York.

Seeking to take advantage of the growing popularity of black religious music, Thomas A. Dorsey of Chicago took African-American religious music to a new level by combining blues and jazz rhythms to traditional hymns; he labeled his sound “gospel.” Dorsey, a former jazz and blues pianist, decided to give his talents to “the Lord” in 1932 and in that same year he organized a gospel choir at Chicago’s Pilgrim Baptist Church. One year later he organized the

National Convention of Gospel Choirs and Choruses (NCGCC). Thus, he had begun a career that would eventually lead him to compose over 500 songs. His most famous was “Take My Hand Precious Lord.” In addition to directing and composing, Dorsey also opened a gospel music publishing house and soon thereafter he was labeled the “Father of Gospel Music.” Although Dorsey was indeed a prolific songwriter, he did not operate in isolation. He worked with other artists such as Sallie Martin and the popular Mahalia Jackson. Between 1938 and 1947 Jackson made several recordings, but her most popular—“Move On Up A Little Higher”—catapulted her into gospel music fame. On the heels of the popular recording she secured a weekly CBS radio program and she also made a number of appearances at the famed Apollo Theater and the on *Ed Sullivan Show*. Since she was one of the first gospel artists to take her work to a secular audience, Jackson quickly became an international star and many today consider her the “World’s Greatest Gospel Singer.”

Beginning in the 1950s, other artists—the Dixie Hummingbirds, the Blind Boys of Alabama, and the Sensational Nightingales—filled churches, auditoriums, and jazz festivals with their unique style as they followed Jackson’s lead in taking their message to a broader audience. Again, the media sought to take advantage of the popularity of gospel music by establishing such nationally syndicated television programs as *TV Gospel Time*. Although the show had a short existence it was nonetheless instrumental in bringing gospel music to a non-religious crowd.

While some artists were bringing gospel to new listeners, others such as James Cleveland were gaining notoriety within traditional gospel circles. Born in 1930 in Chicago, Cleveland served as composer, arranger, and pianist for several gospel groups before starting his own, the James Cleveland Singers, which performed many of his 500 songs. What made Cleveland unique was that he introduced the nation to the “Gospel Choir.” At times, his choirs would number several hundred as they entertained audiences with their hand clapping, dancing, and singing, while arrayed in their fashionable robes. In 1968 Cleveland organized the Gospel Music Workshop of America (GMWA) and because of his success he received three Grammy Awards; in 1981 he was awarded a star on the Hollywood Walk of Fame.

In spite of Cleveland’s broad appeal, there was a faction inside the gospel music industry that wanted to take gospel into the mainstream; quite simply, they wanted to imitate the more popular rhythm and blues songs. Leading this movement was Edwin Hawkins, who in 1969 recorded “Oh Happy Day,” which rose to number one on the Top Fifty Chart with its catchy beat and rhythmic sound, but without any references to God or Jesus. A new generation of gospel was born.

Other artists such as Andrae Crouch followed Hawkins’ crossover success by writing gospel lyrics for more popular secular songs. Although Hawkins and Crouch were forerunners of this “new gospel music,” their popularity was still largely confined to the ears of black churchgoers. Beginning in the late 1980s, however, contemporary gospel groups such as Take 6 and the Winans began to take the gospel message to an ever wider audience. During their heyday both groups could easily fill a concert hall as they played their new style to the sacred and the secular. By the 1990s gospel music had grown to a billion-dollar industry, thanks in part to such artists as Kirk Franklin, whose debut album *Why We Sing* reached number one on the Billboard Gospel Chart and Number 13 on Billboard’s Rhythm and Blues listing. Today, gospel music continues to be an important thread in the fabric of American popular music.

## Gossip Columns

As America shed its provincial nineteenth-century sensibilities and slowly entered the modern era, the media emerged as one of the twentieth century's most powerful forces. But until the early 1920s, journalism was still influenced by an older ethos of taste and good

Gossip columnist Hedda Hopper in 1959.

breeding—until Walter Winchell. An ambitious young New York newspaperman, Winchell brought gossip into the mainstream media, breaking longstanding taboos in favor of a press for whom nothing was sacred and no one was guaranteed privacy. During his heyday, two-thirds of the adult population of America listened to Winchell's radio broadcast or read his column, as America clamored to learn "the dirt" about the rich, the famous, and the powerful. The ultimate tool of a democracy, gossip became the great leveler, breaking down distinctions of class, race, and gender, in favor of a society where no one is above reproach and everyone is the subject of gossip. His influence was pervasive, spawning such hugely successful gossip mongers as Hollywood's Hedda Hopper and Louella Parsons, whose fame soon came to exceed even Winchell's. What once was shocking soon became expected and, over the course of the twentieth century, gossip has become an integral component of mainstream journalism from which no one has become exempt—not even, as the world found out in 1998, the President of the United States.

The emergence of gossip columns and columnists as powerful new journalistic forces and voices during the early twentieth century would not have been possible without the creation of a new class of Americans—celebrities. The invention of motion pictures and their consequent development into an immensely popular form of entertainment gave birth to a new kind of fame—celebrity. Where once fame had been the result of heroism, genius, talent, wealth, or aristocratic birth, the movie industry promoted their new personalities to bring in audiences. A truly democratic art form, movie actors may have been more beautiful, more ambitious, and sometimes even more talented than the average American, but they were generally no better born. Celebrities were thus tantalizing to the American public, who saw in them the breakdown of an old social order and new possibilities for themselves. The public clamored to know as much as possible about celebrities and the media tried to meet their demand. This reciprocal relationship spawned the mass media frenzy that has defined the twentieth century.

Gossip has always existed, but it did not become a big business until the 1920s in the United States. Although Walter Winchell made gossip a staple of the modern press, as his biographer, Neal Gabler, has written, the tough-talking Winchell "no more invented gossip than he invented slang." During the 1880s, Louis Keller, a New York patent attorney, published a rag called *Town Topics*, devoted exclusively to the goings on of high society and the nouveau riche—as Gabler notes, "the bawdier the better." Soon most of the major papers had society columns, but most stayed clear of hard line gossip. In the 1920s, however, Stephen Clow started *Broadway Brevities and Social Gossip*, on the premise that he could make money by getting people to pay him not to print gossip about them. Clow was later brought to trial, but the idea stuck and would continue to crop up throughout the twentieth century. Still, the traditional press tried to avoid engaging in libelous gossip, particularly after Supreme Court Justice Louis Brandeis wrote an important article in the *Harvard Law Review* condemning gossip and arguing for the legal right to privacy. But the tide was turning.

Neal Gabler writes that the media "were exerting an almost inexorable pressure toward gossip by engendering a fascination with personalities. In the movies, magazines and the tabloids, personalities were sales devices; once the public became aware of these personalities, its curiosity was insatiable. With the interest in place, all that was needed to cross the line to gossip was someone with the audacity and nerve to begin writing frankly about the various private doings of the

celebrated—someone who would defy the taboo. That was where Winchell came in.”

Although the “respectable” papers refused to have anything to do with reporting gossip, for the tabloids the line was a little blurrier. In 1924, a new tabloid called the *Graphic* hit the streets—a publication dedicated to the masses that would not be afraid to splash sex across its front pages. On the staff of the *Graphic* was a 27-year-old former vaudevillian named Walter Winchell, who had spent the past four years establishing his reputation as a Broadway reporter; Winchell loved gossip, and he longed to print it in his column.

Inspired by the *Graphic*'s dictum to print “Nothing but the Truth,” Winchell’s Monday column, “Mainly About Mainstreeters,” stunned the theater and journalism worlds. He printed straight gossip. Sex, extra-marital affairs, and illegitimate children all found their way into Winchell’s Monday pieces. Nothing was out of bounds. And Winchell made it additionally juicy by printing the gossip in bold type, virtually creating a new gossip lingo composed of innuendo, double entendre, and slang. Gabler writes:

Not surprisingly, the journalistic Old Guard was enraged by the affront to privacy, but the avidity with which the Monday column was devoured by readers left no doubt that Walter had tapped into the American psyche, into something beyond voyeurism, even if it would always be difficult to define precisely what he had struck. Part of it was the general interest in anything that had to do with the new class of celebrities. Part of it may have been attributable to urbanization . . . As the twenties transformed America from a community into a society, gossip seemed to provide one of the lost ingredients of the former for the latter: a common frame of reference. In gossip everyone was treated as a known quantity . . . Like slang, gossip also made one feel knowing, ahead of the curve . . . The rich, the powerful, the famous and the privileged had always governed their own images. Now Winchell, with one act of defiance, had taken control and empowered his readers.

Walter Winchell once said, “Democracy is where everybody can kick everybody else’s ass. But you can’t kick Winchell.” During the height of his power, Winchell was untouchable. He struck fear into the hearts of the rich, famous, and vulnerable, even as he delighted a national audience of millions. He became one of the most powerful men in America, a friend to J. Edgar Hoover, an advisor to Franklin Delano Roosevelt, and, later, a staunch supporter of McCarthyism. The puissance of his pen became the scourge of his enemies, for although he could make someone’s reputation, he could also break it. Yet, as Alistair Cooke once wrote, his devastating power “was the promise of American freedom and uninhibited bounce, he was Americanism symbolized in a nose-thumbing at the portentousness of the great.”

There were, of course, many others who jumped on the gossip bandwagon. Ed Sullivan began his career writing a theater column for the *Graphic*. Other major gossip columnists would include Dorothy Kilgallen, Sidney Skolsky, and, of course, Louella Parsons and Hedda Hopper. Hopper and Parsons would, in fact, come to rule Hollywood much as Winchell did New York.

More than 15 years younger than Winchell, Louella Parsons was a large, strong-willed woman who carved out a career for herself

when she was in her thirties, working as a Chicago reporter on the fledgling movie business. When she moved to New York in 1918, she began campaigning to earn the attention of media mogul William Randolph Hearst, by inserting glowing praises and weekly mentions of his paramour, actress Marion Davies, in her weekly column. By the early 1920s, Hearst had given Parsons a job and by the mid-1920s, she had moved to Hollywood and had become globally syndicated. She quickly became the most powerful woman in Hollywood, demanding and receiving every scoop in the movie business. Like Winchell, she was unafraid to print the truth, to sniff out scandal, and to tell secrets.

In the mid-1930s, a former actress named Hedda Hopper was hired to write a competing column. Though she and Parsons had once been friends, they soon became arch-enemies, competing for every scoop. Their rivalry upped the ante immediately, and gossip flew from their dueling pens. For almost 30 years, Hollywood was held in their grasp—as Hopper and Parsons made and ruined careers. When Louella Parsons broke the story of Ingrid Bergman’s illegitimate child with director Roberto Rossellini, the actress did not work in Hollywood for almost a decade. Neither Parsons nor Hopper were above being vindictive and destructive, and both could inspire genuine rage among members of the motion picture community helpless to fight them. When Joseph Cotten once kicked the chair on which Hopper was sitting to bits, after having an extra-marital affair announced in her column, his house was filled with flowers and telegrams from others who had been similarly maligned. But like Winchell, when Hopper and Parsons liked someone, nothing was too much to do to help—and their power could become a boon for someone struggling to make it in movies.
