As the Golden Age of Hollywood ended and the studio system crumbled, Hopper and Parsons no longer wielded the clout they had once had when all the moguls were forced to kowtow to them. Winchell, too, began to lose his former hegemony, as his New York connections no longer gave him the edge on gossip in film and television. But the die was cast. Gossip had become an integral part of the media, carried on not only by actual gossip columnists such as Liz Smith, but also by mainstream journalists, eager to spice up the news to make a good read.

With the evolution of the Internet, gossip found another happy home. And when Internet gossipmonger Matt Drudge began to spread rumors of President Clinton’s extra-marital affairs, it was not long before it became mainstream news. But the political and media crisis of 1998 has spawned a new debate. Has the media gone too far in reporting the private affairs of public people? Is the press telling the public more than it wants to know? Seventy-five years after Walter Winchell introduced gossip into the mainstream media, we are still reeling from the results. The public debate will undoubtedly continue. The fact, however, remains—American popular culture is saturated with gossip, and its effect will always be felt.

## Goth

Although members of this youth subculture may differ in their own definitions, goth can be characterized by a fascination with all things otherworldly, from vampires to magic and beyond. Like punk, goth comprises a musical genre as well as an attitude, represented by somber acts like Bauhaus, Dead Can Dance, Christian Death, and Faith and the Muse. Often perceived by the general public as little more than “kids who wear black clothes,” the goth scene is in fact a fusion of attitudes stemming from the sublime emotion of Romantic poetry, the macabre images of decadent Victorian poetry, and the contempt for normative bourgeois complacency found in the punk movement. While it is true that goth has been centered around themes of death and morbidity, what often goes unnoticed is goth’s sense of humor—albeit a decidedly black one.

## Gotti, John (1940—)

Known as the “Teflon Don” for his ability to win acquittal during several criminal trials and as the “Dapper Don” for his penchant for expensive, custom-tailored suits, John Gotti was the most visible organized crime figure of the late twentieth century. A media celebrity in the late 1980s and early 1990s, the boastful Gotti offered a public image of macho ultra-confidence that many admirers associated with the iconic American figure of the rebel, and crowds of his supporters often gathered outside the court during his trials. Within the mob, Gotti was reportedly a ruthless enforcer who controlled New York’s Gambino crime family after the 1985 assassination of Paul Castellano outside a Manhattan restaurant. Gotti was ultimately betrayed by his closest associate, Salvatore “Sammy the Bull” Gravano, and convicted on federal racketeering and murder charges in 1992. In addition to Gravano’s devastating testimony, thousands of hours of taped conversations in which Gotti discussed criminal activities with his top associates secured the government’s case against him. He is serving a life sentence in the maximum security federal penitentiary in Marion, Illinois.

## Grable, Betty (1916-1973)

The most popular pinup of American servicemen during World War II, actress, dancer, and singer Betty Grable was the symbol of an era. Dressed in a bathing suit and looking over her shoulder at the camera in her famous pinup, she radiated the optimism of an all-American girl and gave the American servicemen a vision of what they were fighting for. Not only did her image adorn barracks all over the world, but her likeness was used by the military to teach their men how to read grid maps. The star of Technicolor musicals at Twentieth Century-Fox, she reigned supreme, registering as the number one box office star in 1943 and appearing on the list of top stars from 1942-1951. Her legs were considered so close to perfection that they were insured by Lloyd’s of London for one million dollars as a publicity stunt.

Born Ruth Elizabeth Grable in St. Louis, Missouri, her starstruck mother, Lillian, determined to make one of her daughters a star. She failed with elder daughter Marjorie, but Betty, as she was called, not only had talent but was enthusiastic about a show business career herself. She studied dance, singing, and the saxophone. She appeared in her first movie at the Fox Studios in the chorus of *Happy Days* (1929) in a black-face number. She was signed to a one-year contract by lying about her age, but when the executives discovered she was only thirteen, they dropped her option. Her mother was not deterred and arranged for her to appear in Eddie Cantor’s *Whoopie* (1930). Betty was signed as a Goldwyn Girl with a five-year contract, but her career still did not take off. She appeared in a few other films, then

**Betty Grable**

signed to the Frank Fay musical *Tattle Tales*, which closed after only a few performances.

With her film career going nowhere, Grable spent time as a vocalist for several orchestras. During the mid- to late 1930s Grable appeared in more than a dozen films, but it was an appearance in a Fred Astaire/Ginger Rogers film that first brought her some notice. In 1934's *The Gay Divorcee* Grable did a dance number with character actor Edward Everett Horton called "Let's K-knock K-knees." In 1937 Grable married former child actor Jackie Coogan, who at the time was embroiled in a lawsuit against his parents regarding his earnings, and this put much strain on the marriage. Coogan and Grable appeared together in *Million Dollar Legs* (1939), but they later divorced.

Grable was finally being noticed, and Daryl F. Zanuck of Twentieth Century-Fox signed her to a contract. He did not have any immediate plans for Grable, so he allowed her to appear in a musical called *DuBarry Was a Lady* on Broadway. The show starred Ethel Merman and Bert Lahr, but it was Grable who caused a sensation performing the number "Well Did You Evah" with Charles Waters. In 1940 Grable left the show to replace an ailing Alice Faye in *Down Argentine Way*. The film was a huge success, and Grable immediately became a superstar. To follow her "instant" success Grable appeared in musicals such as *Moon over Miami* and *Springtime in the Rockies*. It was during the latter film that she met bandleader Harry James, whom she married in 1943 and with whom she had two daughters.

Although her famous pinup may have been her greatest contribution to the war effort, Grable joined other stars in war bond rallies, entertaining the troops, and appearing at the Hollywood Canteen.

Grable continued to make successful films, although after the late 1940s her popularity began to wane. She also fought with Zanuck, who wanted to put her in serious films, but which Grable knew was not her forte. To make Grable toe the line, Zanuck brought several blond starlets to the studio. Grable appeared with Marilyn Monroe in *How to Marry a Millionaire* (1953), and rather than being threatened she took the younger woman under her wing. Grable had had it with Twentieth Century-Fox, however, and left shortly after. When *Millionaire* was released, it was Grable who received the most critical praise, and she was persuaded to return for the film *How to be Very, Very Popular* (1955), a flop which was Grable's last film.

Grable continued to make successful appearances on television and in live theater productions such as *Guys and Dolls* and in a touring company of *Hello Dolly*. While things were still going well for Grable careerwise, her personal life was not. In October of 1965 she divorced James after more than twenty years of marriage.

In 1969 Grable went to London for the production of a new musical, *Belle Starr*, which was written especially for her. It flopped and closed after sixteen performances. In 1972, shortly after appearing on the Academy Awards telecast, Grable was diagnosed with cancer. After extensive treatments she decided to return to work appearing in *Born Yesterday* in Florida. Unfortunately, the cancer had spread, and within a few months Grable died.

## Graceland

Graceland mansion, home to rock-and-roll phenomenon Elvis Presley for the twenty years preceding his 1977 death, became world-famous after it was opened to the public in 1981. Before the end of its first decade as a tourist attraction (or pilgrimage destination for some fans), Graceland had hosted more than one million tourists, and by the late 1990s it served as a symbol of both the indefatigable hope and immense costs of the American Dream.

Named after the first owner's aunt Grace, Graceland was built in the 1930s to resemble an antebellum, plantation-style manor home. Elvis paid \$100,000-plus for the mansion in 1957. Located on "Elvis Presley Boulevard," a portion of Highway 51 South in Memphis, Tennessee, the majestic-looking Georgian mansion sits amidst an extraordinarily overflowing mass of plasticized suburban sprawl. There are an astounding number of fast-food establishments within a one-mile radius of the estate.

Inside, the front rooms of the house have been designed for the eyes of "company"; in this case, company that would be curious to

know how a poor farmhand's son would live in an atmosphere of newly acquired wealth. There is the obligatory glitzy chandelier in the foyer, an elegant dining room, marble and glass-topped tables, fine porcelain statuary, a gilded piano, overdone white carpeting, yards of gilt-edged draperies hanging about the rooms—in fact, just about everything is trimmed in gold—and much else to indicate wealth and status. A television set sits smack in the middle of one of the front rooms.

Visitors are guided down a dark staircase with carpeted walls and a mirrored ceiling to Elvis's pleasure palace in the basement. One room sports a blinding yellow, white, and black color scheme; one wall of the room houses three built-in TV sets, side by side. Elvis got the idea from President Lyndon Johnson, who needed to monitor all of the evening newscasts at the same time, but Elvis wanted to watch all of the Sunday football games at once. The billiards room is entombed in yards of printed, pleated fabric that covers the walls and ceilings and that enforces a sensation of profound claustrophobia even in those not ordinarily afflicted. Although the pool table was torn years before Presley's death, and he never had it fixed, the keepers of Graceland decided to maintain most such flaws to create a sense that the home is frozen in time. This is a well-intended, though inaccurate depiction of Graceland as it was when Elvis lived there; many of Elvis's latter-day decorating decisions have been swept away. The blood-red carpeting and drapes were changed to a more pleasing blue hue, and a rotating glass statue in the foyer that spurted water was simply discarded as an embarrassment.

There was no way, though, that the keepers could enforce any more than the smallest degree of upper-class nobility upon Graceland. The coup de grace is what everyone at Graceland calls "the jungle room." According to Graceland-approved legend, Elvis and his father happened upon a most intriguing collection of "Polynesian" wooden and fake fur furniture at a Memphis establishment called

Donald's Furniture in the early 1960s. Vernon Presley remarked that it was the ugliest furniture he'd ever seen in his life. Elvis arranged to buy the entire collection. The "throne," as it might be called, features a wooden owl's head at the top and claws dangling from each arm. Fake greenery languishes about the room, and a small waterfall flows behind the throne. The jungle room is at once horrifying and hilarious.

## *The Graduate*

For some the 1967 film *The Graduate* was a sex farce, for others, a generation gap comedy, and for still others, a ballad of alienation and rebellion. In the film, Benjamin Braddock (Dustin Hoffman), a recent graduate of an Eastern college, comes back to his parent's California home with no ambition, no plans, and no self-esteem. He wanders through a maze of suburban clichés and expectations looking

An advertising poster for the film *The Graduate*.

for something to care about, feeling like a pawn in society's chess game. Along comes Ben's father's partner's wife, Mrs. Robinson (Anne Bancroft), offering something to wake him out of his stupor—herself. Content for a while, Ben soon finds his tryst depressing; he is, after all, still aimless. His parents, trying to focus him on something, have picked the perfect girl for him, Elaine Robinson (Katherine Ross), Mrs. Robinson's daughter. Mrs. Robinson forbids the date, and Ben tries to prove Mrs. Robinson right by humiliating Elaine at a strip club, but they end up connecting, and Ben finally feels something. Mrs. Robinson tries to end the relationship by telling her daughter about the affair, but Ben has decided that only Elaine can save him. He pursues her to Berkeley, learns she's about to be married, and barges in on the wedding. Elaine leaves the altar and runs off with Ben; they hop on a passing bus and ride off together.

Happy ending? Those who wanted this to be a romantic comedy thought so. But these virtual strangers barely look at each other on the bus, the triumphant smiles fade from their faces, and they don't utter a word as the haunting beginning of the song "Sounds of Silence" rises on the soundtrack: "Hello darkness, my old friend. . . ." This late 1960s movie took a different look at the generation gap than, say, *Easy Rider*. There were no hippies or protests in this film, no talk of the Vietnam War, and no rock music; easy-listening bards Simon and Garfunkel provided the soundtrack. All of that might have kept the film from being dated, but the film still managed to tell a tale of distinctly generational woe.

*The Graduate*, which was directed by Mike Nichols, is filled with delightful moments: the fleeing lovers use a giant cross to lock their families in the church; an alienated Ben is decked out in scuba gear like an astronaut landing on the Planet of the Parents; a corporate wonk at his parents' party tells Ben that he should think about one word, "plastics"; a classic shot views Ben as a small, frightened man seen under the arch of Mrs. Robinson's bent leg; Ben calls his now-regular lover by the appellation "Mrs."; and perpetual landlord Norman Fell asks Ben if he's "one of those outside agitators." He's not; in fact, Ben may not even be a rebel. He seems to enjoy the products of the corporate culture he despises, like his graduation present, a new Alfa Romeo, and his parent's swimming pool. The real rebel against the status quo, at least at first, is Mrs. Robinson. Aside from depictions of prostitutes, when had a woman with such sexual authority, confidence, and cool intelligence ever been portrayed on screen? But Mrs. Robinson is transformed into a demon. She forbids Ben to see Elaine, not because she wants him to herself, but because the guy she commits adultery with is no longer good enough to date her daughter.

As an odd representative of purity, Elaine falls into a marriage with someone she's "sort of" engaged to, mostly because it's what her parents want. Doesn't she represent what Ben hates? Not to Ben. She's safe, clean, and forgiving, nothing like her mother, and in the same boat as he is. Young Ben, hating everything his parents stand for but never articulating why, gets to screw them in the person of his

father's partner's wife. But ultimately, he ends up with the girl his parents picked for him, and he's still aimless. The film seems to deliberately sow confusion. When he gets off the bus, will Ben look into a future in plastics? Will the lovers live without their parents' financial help? Will they even stay together? These unanswered questions are part of the meaning of the film.

Though Hoffman had been in a few movies, Ben is the role that brought him (and director Nichols, who won an Oscar) fame. Hoffman was 30 when he played the 20-year-old Ben, and Bancroft was only 36. Robert Redford turned down the role of Ben out of fear that he wouldn't be able to convey Ben's naivete. Charles Grodin was cast in the role, but there was a salary dispute. Anne Bancroft wasn't the first choice for Mrs. Robinson, either. The role was offered to Patricia Neal, who was ill, and Doris Day, who was reportedly offended by the character.

*The Graduate* made the third highest box-office profit of any American film up to that time. Written by Calder Willingham with help from Buck Henry (who has a cameo as the hotel clerk), it was based on the novel by Charles Webb. Ironically, the Simon and Garfunkel song "Mrs. Robinson" as we know it was not on the movie's soundtrack—only an instrumental part was. After the film's successful release, Nichols persuaded Paul Simon to write an actual song with lyrics, for use as a marketing tool. It became a huge hit.

## Graffiti

People have been scribbling on walls as long as they have been building them. "Graffiti"—the word comes from the Italian verb *graffiare*, "to scratch"—covers a wide range of public inscriptions, from the early paintings on the walls of caves at Lescaux to quips hastily inked up on contemporary bathroom stalls. The late-twentieth century has seen the development of a market for graffiti as an art form, although the majority of graffiti remains unsolicited and anonymous.

Historically, graffiti has been used primarily as a form of personal communication. One of the earliest uses developed in the United States among hobos who rode the rails across the country in the first decades of the twentieth century. The complicated symbolic language of these transients was scratched in chalk on fence posts and other unobtrusive spots to communicate the receptivity of the townspeople to future travelers.

One of the most famous examples of graffiti in the twentieth century came in the image of Kilroy. James J. Kilroy, a shipyard inspector during World War II, wrote the words "Kilroy was here" in chalk on bulkheads to indicate that he had inspected the riveting. U.S. troops added the scribbled drawing of Kilroy leering over a wall to accompany the inscription "Kilroy was here" and Kilroy became an internationally known phenomenon during the 1940s and 1950s. Kilroy turned up in some very odd places; his first appearance is reputed to have been on the side of the battleship *New Yorker*, discovered by U.S. inspectors after the atomic bomb test at the Bikini atoll, but he has also appeared on top of the torch of the Statue of Liberty and under the Arc de Triomphe.

While American soldiers were spreading Kilroy across the globe, another ultimately more influential form of graffiti was developing in the United States during the 1940s. The exterior walls of

A graffiti-covered wall in Venice Beach, California.

buildings in Hispanic communities in postwar Los Angeles were increasingly decorated with a kind of marking subsequently designated as “old school.” Before the advent of spray paint, these black-and-white drawings were realized entirely in marker to communicate the boundaries of neighborhoods controlled by rival gangs.

Although graffiti continued during the 1960s, it was not until the 1970s that it started attracting public attention as a serious social problem. The visibility of graffiti had steadily been increasing, as graffiti artists started using spray paint to cover larger areas more colorfully than was previously possible. One of the first graffiti artists to achieve notoriety was a tagger, or name-writer, whose signature “Taki 183” began appearing on walls in four boroughs of New York in 1971. Taki was followed by a hoard of fellow taggers, and by the mid-1970s the primary target of graffiti artists hungry for name-recognition had become the trains of the New York City subway system. Throughout the decade, the city of New York fought a battle with enterprising taggers, whose projects grew rapidly from quick signatures to elaborately stylized versions of their street names, dubbed “Wild Style,” that could cover an entire subway car. Even as the transit authorities struggled to remove the colorful paintings, or “throw-ups,” New York graffiti was achieving international recognition as part of a nascent hip-hop culture that included rap music and break dancing. Several films immortalize this period, including *Wild Style* (1982) and *Beat Street* (1984).

Eventually, a coating was developed that inhibited the application of spray paint onto the surfaces of trains, and in the 1980s a booming art market developed an interest in graffiti marketed as an art form. Several galleries in Manhattan began specializing in graffiti art, and former graffiti artists such as Keith Haring, who got his start doing quick marker drawings in his characteristic outline style, and Jean-Michel Basquiat became instant celebrities, with works selling for hundreds of thousands of dollars. The public fascination with graffiti faded by the end of the decade, as graffiti became increasingly associated with the activity of urban gangs.

## Grafton, Sue (1940—)

Along with fellow writers Sara Paretsky and Marcia Muller, Sue Grafton has been credited with popularizing the mystery sub-genre of the female private eye. Although there have been female detectives almost from the beginnings of mystery fiction, in the past they were almost exclusively amateur sleuths rather than detectives for hire. The tough female private eye, written in the tradition of a Mike Hammer or a Philip Marlowe, was unheard of until the late 1970s. Women

writers of this type of mystery were also rare. Due to the growing popularity of Grafton, Paretsky, and Muller, however, other authors have begun to introduce many new female detectives. However, Grafton's Kinsey Milhone remains among the most popular.

It now seems almost inevitable that Grafton would become a mystery writer. She was born in Louisville, Kentucky, the daughter of teacher Vivian Harnsberger and attorney, C. W. Grafton, himself a mystery writer of some note who had several books published in the 1940s and 1950s. She earned her Bachelor of Arts degree from the University of Louisville in 1961 with a major in English Literature. After graduation, Grafton worked in the medical field in various capacities while pursuing her writing. She also married twice and began a family that would eventually include three children.

Grafton's initial forays into novel writing were not in the mystery realm. Her first novel, *Keziah Dane*, was published in 1967. Her second novel, *The Lolly Madonna War*, published in 1969, was made into the motion picture *Lolly-Madonna XXX* in 1973, with Grafton co-writing the screenplay. This led to her early career as a writer for television. During that time she wrote episodes for several television programs such as *Rhoda* and *Seven Brides for Seven Brothers*. Grafton was also a prolific writer of made-for-television movies, such as *Walking through Fire*, for which she won a Christopher Award; the critically acclaimed *Nurse*, which starred Michael Learned; and *Sex and the Single Parent*. With third husband and writing partner, Steven Humphrey, she adapted two Agatha Christie novels for TV—*A Caribbean Mystery* and *Sparkling Cyanide*. It was the experience of working as a writer of television and movies that later made Grafton vow that no Kinsey Milhone novel would ever be used for a motion picture.

Although she was a successful screenwriter, Grafton was determined to leave Hollywood. She planned to try her hand at a mystery novel, as her father had forty years before, and she decided her main character would be a female private detective. Grafton based Kinsey Milhone largely on herself. In 1982 she began the alphabet mystery series with ‘A’ *is for Alibi*, for which she won an Anthony Award. She plans to continue the series through the letter Z and, at her current rate of one Milhone book a year, she should reach that goal about the same time she turns seventy years old. Grafton has won many awards since the first Milhone book, including three more Anthony Awards, a Shamus Award, and an American Mystery Award.

Sue Grafton has had an impact on television and its culture with her screenplays and television shows. However, it is with the popular Kinsey Milhone that she has continued to stretch not only the boundaries of mystery fiction, but also those of acceptable behavior for women, whether fictional or flesh and bone.

## Graham, Bill (1931-1991)

Bill Graham revolutionized the music industry by providing a forum for the explosion of artistic expression in rock and roll during

**Bill Graham**

the 1960s. A teetotaling prime mover of the psychedelic movement, Graham used his shrewd business acumen to present music to the world, making it profitable and self-sustaining. In the process, Graham drew attention to this brilliant period of cultural revolution and focused its creative energy into a performance ethic that has become the standard for live stage presentation.

Born Wolfgang Grajonca January 8, 1931, in Berlin, Graham was the only son in a large Russian-Jewish family. He was sent away to school to escape the Hitler Youth movement, and later, when Hitler invaded Poland in 1939, Bill and his younger sister were transported to France as deportation to labor camps became inevitable. Graham developed few memories of his family, having spent his formative years surrounded by air raids and bomb shelters, and as the Nazis pushed into France in 1941, Bill was separated from his ailing sister as he fled (mostly on foot) with the other refugees. Meanwhile, all but two of his sisters were deported to the concentration camp at Auschwitz.

Like many Jewish refugees during World War II, Bill was sent to New York City. He languished in a foster home until he was adopted by Alfred and Pearl Ehrenreich in 1941, and he quickly learned English from his step-brother Roy. Though he was not a United States citizen, and was ridiculed for his heavy German accent, he became an active, integral part of his ethnic community. When World War II ended he corresponded, and later was reunited, with his surviving sisters.

In high school and in community college, Bill was a hard worker if not a stellar pupil. He worked several jobs and enjoyed the positive reinforcement of a good tip for a job well done, especially as a waiter at various resorts in the Catskills Mountains in the late 1940s. Here he also developed his passion for show business and immersed himself

in theater, film, and Latin music while rubbing elbows with pretentious, high-society vacationers and the stars they came to see. In 1950, though, Graham was drafted at the onset of the Korean War. In the army, he changed his name to Bill (the American equivalent of Wolfgang) Graham (closest to G-R-A-J in the phonebook) and served until 1953, receiving a Bronze Star for valor and—at last—United States citizenship.

Discharged and aimless, he hitchhiked across America and worked with theater troupes in New York City and San Francisco, eventually meeting his future wife Bonnie as well as finding a steady job with the San Francisco Mime Troupe, a politically aware artists' collective. It was when the group was arrested for performing in a public park without a permit that Graham discovered his true organizational calling.

In 1965 Graham arranged a benefit to raise bail money for the Mime Troupe and, seeing a business opportunity, set to work organizing larger and more elaborate community events. A strange synthesis was brewing in San Francisco. The rise of a counter-culture involved attempts at changing society. Performers did more than entertain; they also educated and informed, but too often without a legitimate venue in which to express themselves. Bill Graham filled this void by opening the Fillmore Auditorium, which quickly became the performance space for important cultural and musical events.

Charging nominal fees, Graham exposed the general public to local groups (Grateful Dead, Jefferson Airplane) as well as eclectic opening bands (Ravi Shankar, Miles Davis), claiming “vegetables before dessert” were important. He also supported performance artists, acid tests, be-ins, love-ins, and any other human social experiment in need of a decent sound system. Light shows backed up the music, and shows were advertised by local artists in psychedelic poster art. The Fillmore thus became the entertainment nexus of San Francisco counterculture.

As the 1960s wore on, and more and more initiates were “turned on” to the hippie aesthetic, Graham branched out and opened auditoriums on both coasts. He made a sizable profit from the flower power phenomenon which caused some tension between him and his more obstinate cohorts from the early days. As ticket prices increased so did the pretensions of many performers, and Bill was also often regarded as one of Them—a member of the Establishment. Yet he managed to straddle the line between exploiter and exploited, earning the trust of many musicians and artists whom he helped to foster.

Inevitably, his grassroots business went national. Bill was an integral organizer of the legendary Monterey Pop Festival, and though he only advised its organizers, he made Woodstock possible as well. Due to the widening gulf between audiences and performers in the 1970s, however, Graham closed his Fillmores and began promoting tours to properly present rock and roll to the world. In the 1980s, as behemoth sports arenas seating thousands of people became the standard venue, Bill's production company, “Bill Graham Presents,” pioneered the rock concert as a social statement while his t-shirt and poster business boomed. He promoted some of the first rock concerts in Eastern Europe and organized historic benefits such as Amnesty International's Conspiracy of Hope tour and the Live Aid concert which brought famine relief to Ethiopia.

On October 25, 1991, while leaving a concert he had promoted, Bill Graham was killed in a helicopter crash. A week later, Bill Graham Presents put on a massive free concert in his honor at the Polo Field in Golden Gate Park in San Francisco, the site of many past benefit concerts Bill had organized. Though there was no announcement made regarding who would play, the crowd was estimated at

nearly half a million. Many important groups to whom Bill had given their first break paid tribute to this capitalist who played no instrument, yet whose influence over music and public presentation forever changed popular culture and its interpretation by mass media. He was inducted into the Rock and Roll Hall of Fame in 1992.

Billy Graham, one of the most prominent of America's Protestant evangelists, has preached to more than 200 million people in his many crusades throughout the world, and to countless other millions through the media of radio and television. Considered one of the most successful evangelists in the history of Christianity, he is admired even by many who do not share his religious beliefs. For five decades Americans have named him to the Gallup Poll's lists of the "Ten Most Admired Men in the World." Graham has spoken intimately with many of the most powerful figures of the twentieth century, including ten American presidents, Winston Churchill, Mikhail Gorbachev, Kim Il Sung, and Pope John Paul II. Billy Graham

George Bush has called him "America's pastor," but Graham's influence is global.

When he was born on November 7, 1918, in Charlotte, North Carolina, there was nothing to suggest that William Franklin Graham, Jr., would become a world-renowned personality. His parents were God-fearing country people who reared Billy Frank and his siblings to read the Bible, pray often, and work hard on the family's dairy farm. Graham was 16 years old when Mordecai Ham, a fire-and-brimstone evangelist, came to Charlotte. Like most adolescent males, Billy Frank was more interested in cars, baseball, and girls than in anything an evangelist had to offer. Even after his confession of faith at a Ham service, visible changes in him were slight. Graham admits in his 1997 autobiography, "Although I had been converted, I did not have much of a concept of my life coming under some kind of divine plan. . . . I had no inkling of what my life work would be." He was certain, however, that undertaking and preaching could be ruled out.

Nevertheless, by 1938, Graham, who by this time had dropped the "Frank," felt that God had called him to preach. From that moment his commitment was unswerving. During his years at the Florida Bible Institute, young Graham preached in small churches, in mission services, and on street corners. Later studies at Wheaton College in Illinois gave Graham a liberal arts background and reinforced his conservative biblical interpretation. Time would mellow Graham in many respects; his staccato delivery would become more conversational, his Protestantism would become more ecumenical, his social views would become less judgmental, but he would never swerve from his allegiance to what "the Bible says."

Another significant event of his Wheaton years was his encounter with Ruth Bell, daughter of medical missionaries, who had spent her first 17 years in Asia and was planning to return as a missionary to Tibet. Instead, in 1943, she became the wife of Billy Graham. The young Grahams served briefly as pastor and wife, but Graham soon resigned his church to become a charter vice-president and the first full-time evangelist of Youth for Christ International. He covered the country, conducting YFC meetings in Atlanta, Norfolk, Indianapolis, Princeton, and dozens of other cities.

It was a fortuitous moment. Post-World War II America was a nation of seekers; church membership, sales of religious books, and enrollment at religious institutions were all on the rise. Predictably, so were evangelists. Among their number were some that were no more than confidence men and others who soon fell prey to the temptations of the flesh and the world. Graham, concerned with what he referred to as the Elmer Gantry problem, called together his associates during a Modesto, California campaign. In what came to be known as the Modesto Manifesto, team members agreed that the sponsoring committee would be asked to handle funds with no contributions passing through the hands of the Graham team. They further agreed that each would avoid situations that would place him alone with a woman not his wife. These simple but effective measures protected the Graham team from the scandals that toppled many other evangelists.

A year later California was again the setting for a Graham milestone. The young evangelist had been invited to be the featured speaker at the annual Christ for Greater Los Angeles revival. The Graham team began an operation that would in its general shape become their operating policy for the next five decades: preparatory revivals, small group-prayer meetings, area-wide choir recruitment, counselor training—nine months of preparation in all coupled with thousands of dollars worth of publicity. Despite these efforts, attendance at the services was not extraordinary. Celebrity conversions resulted in a flurry of interest, but then William Randolph Hearst gave

the order that became part of Graham legend: "Puff Graham," he instructed his papers. The result was media saturation that no amount of money could have purchased. Headlines in Hearst papers were followed by wire-service coverage that was followed by coverage in national newsmagazines. By the time Graham left Los Angeles, the revival had run for eight weeks, the aggregate congregation had reached into the hundreds of thousands, and Billy Graham had become a national celebrity.

A 12-week crusade in London, followed by a European tour where he preached to record crowds in Stockholm, Amsterdam, and Berlin, proved Graham's appeal was not limited to Americans. Nevertheless, his greatest triumph may have been the 1957 New York crusade where he preached to two and a half million people in services that lasted from mid-May through Labor Day. The New York Crusade was important for more than its numbers. Graham, whose critics have long faulted him for failing to use his status more aggressively for social causes, integrated his own team with the addition of Howard O. Jones, an action that led to a wave of protests from segregationists. Graham also met privately with Rev. Dr. Martin Luther King, Jr., and invited King to be a platform guest. There can be little question that Graham was uncomfortable with confrontation, and that the concept of civil disobedience troubled the evangelist whose patriotic fervor and anti-Communist rhetoric had been part of his early appeal. But Graham was convinced of the immorality of racism, and as early as 1952 had refused to hold segregated services in Jackson, Mississippi and other Southern cities. Graham's actions may have made a stronger statement to other moderates than his critics recognize.

The New York crusade was also important because for the first time a Graham crusade was broadcast on network television. Graham had already shown himself astute in utilizing media to promulgate his message. *The Hour of Power* radio broadcasts reached millions, as did his syndicated newspaper column "My Answer." The Billy Graham Evangelistic Association would go on to use film, video, and the Internet to reach target audiences, but perhaps no other avenue did so much to make Graham known and admired by most Americans as did the intimate medium of television which brought his crusades into the living rooms of Americans of all creeds, classes, and colors. By the late 1990s the audience for Graham's televised crusades reached 60 million annually.

The 50 years after the New York crusade saw Graham preach in hundreds of countries across the face of the globe. He organized crusades in the former Eastern bloc nations, the People's Republic of China, and, in 1973, one in South Korea where he addressed 1.2 million people, the largest public religious gathering in history. He also served as an unofficial spiritual adviser to President Richard M. Nixon during the Watergate crisis. Thus, Graham had literally taken his message "unto all the world."

His audiences may be worldwide, but Billy Graham remains a peculiarly American figure. His rise from North Carolina farm boy to become the companion of presidents; his curious mix of religion, politics, and celebrity; his eagerness to be liked; his simple faith; his paradoxical blend of ego and humility are all elements of the American psyche. Graham has been presented with the Presidential Medal of Freedom, the Congressional Gold Medal, and a star on Hollywood Boulevard. But Graham answers reporters' queries about how he wishes to be remembered with the single word "integrity," a word that means not only honesty but also completeness, a lack of division. At the end of his autobiography, Graham regrets lost time with his family, lost opportunities for study, and foolish slips into

partisan politics. The one thing for which he has no vestige of regret is his "commitment many years ago to accept God's calling to serve Him as an evangelist of the Gospel of Christ."

## Graham, Martha (1894-1991)

The greatest and most influential choreographer of modern dance, Graham built on the foundations created by American pioneers like Isadora Duncan, Ruth St. Denis, Ted Shawn, and Doris Humphrey. She created and codified a dance language that stressed the downward pull of gravity and balance—and, along with it she identified a series of gestures and movements to express particular emotions in dance. Early in her career she explored American experience in such works as *Steps in the Streets* (1936) about homelessness, *El Penitente* (1940) about a religious cult in the Southwest, and a Shaker wedding in *Appalachian Spring* (1944). Later, Graham explored the spiritual and psychological meaning of classical myths like, for example, the myth of Oedipus in *Night Journey* (1944) and *Clytemnestra* (1958). She began dancing in 1916

and retired as a dancer in 1970, although she continued to choreograph for her company until her death at 96.

## Grandmaster Flash (1958—)

Grandmaster Flash (Joseph Saddler) was a hip-hop pioneer. Using his skills as an electronic engineer he perfected the art of punch phasing and mixing by constructing the first twin-deck turntable using a mixer, headphones, and a monitor switch. Flash polished his technique on the “wheels of steel” and took the art of “scratching” to a new level. He has been imitated by rap deejays ever since. His quick mixing and scratching skills can be heard on his *The Adventures of Grandmaster Flash and the Wheels of Steel*, which was the first rap record to use samples. Flash began to add snippets of rhyme and boasting to his deejaying and soon formed The Furious Five, who did the rapping for him. Together they released the seminal track “The Message” (1982), a vivid portrayal of the underside of the American Dream in New York’s urban ghettos. Flash’s early experimenting with the new hip-hop genre helped to bring it out of abandoned buildings in the South Bronx and into the homes of millions worldwide.

## Grand Ole Opry

The longest-running radio show in broadcasting history, the *Grand Ole Opry* has long been the symbolic center of country music. It represents the pinnacle of success for performing artists, for whom the *Grand Ole Opry* is the country music equivalent of playing Carnegie Hall. The *Opry* is, however, much more than simply a prestige performance venue. Since its inception in 1925, it has brought country music to listeners all across the United States, helping to transform the genre from a regional musical form to a national one. For its rural listeners, spread out across the vast stretches of open space, the *Opry* became part of the common bond that united rural folk across the country, not only providing musical entertainment, but also creating a cultural home for its many thousands of rural listeners.

In the early 1920s, radio was still a new means of communication. As its commercial potential grew, certain radio stations began to

broadcast programs with special appeal to rural listeners. In 1925, George D. Hay, formerly an announcer at WLS in Chicago, which featured a country music program called *The National Barn Dance*, took a job as station director at the new WSM radio station in Nashville, Tennessee. Hay’s first program was the WSM *Barn Dance*, a copy of the WLS show in Chicago which featured just two performers, 77-year-old fiddle player Uncle Jimmy Thompson and his niece, pianist Eva Thompson Jones. The hour-long show consisted of nothing more than fiddle tunes with piano accompaniment, but the show drew such a favorable response that the format was continued for several weeks. Soon, however, the roster and the repertoire broadened, as other local musicians, including banjo and guitar players, came to perform on the show. Most were amateurs and none were paid. The image of *Barn Dance* as a rural program was important, and Hay made sure his performers kept things “down to earth.”

The show’s success continued, and in 1927 George D. Hay changed the name of the show to the *Grand Ole Opry*. The name “Opry” was an intentional jibe at the world of classical music, often perceived as pretentious, and the *Grand Ole Opry* followed NBC’s national *Musical Appreciation Hour*, a show devoted to classical music and opera. Hay announced one evening that although listeners had spent the last hour hearing grand opera, he would now present what he called the “Grand Ole Opry.” The name proved popular, and it became the official name of the show that year. Hay, who called himself the “Solemn Old Judge,” opened the show every Saturday night with the words “Let her go, boys.” And off they went. Among the early popular favorites were banjo player and singer Uncle Dave Macon, African-American harmonica player Deford Bailey (the only African-American performer until Charley Pride in the mid-1960s), and Dr. Humphrey Bate, who hosted one of the many string bands featured on the early *Opry*. As the show grew in popularity, the station’s power grew as well. By the early 1930s, the station’s signal could reach 30 states and parts of Canada.

In the 1930s, the emphasis of the *Grand Ole Opry* shifted away from its rough rural edge and moved more in the direction of modern country music. The *Opry* had proved that country music had a wide appeal, and the potential of that appeal to turn profits for country musicians and for the corporate sponsors of radio programs like the *Opry*, moved the show in a new direction—toward the creation and marketing of country music “stars.” In 1928, Harry Stone joined WSM as an announcer and quickly assumed supervisory duties, replacing George Hay who was relegated to announcing duties on the *Grand Ole Opry*. With his brother David Stone, and stage manager Vito Pellettieri, Harry Stone furthered the commercial potential of the *Opry*. In 1934 Pellettieri began dividing the show into sponsored segments as a way of increasing revenue. Commercial sponsorship of the *Grand Ole Opry* was still very inexpensive in the mid-1930s; a 15-minute segment cost a sponsor only \$100. Promoting new star talent, however, was where the real money could be made. Stone moved the *Opry* away from the amateur string band sound favored during the 1920s, and began promoting new individual stars such as singer Roy Acuff. Stone also managed WSM’s Artist Service, which booked *Opry* stars for personal appearances within the territory reached by WSM’s radio signal. Stone used the *Opry* as an avenue to promote individual stars, whose personal appearances could make good money, of which the *Opry* got a cut as manager. Performers were paid very little for their appearances on the show, but the exposure was invaluable in providing opportunities for stardom, while ensuring that the artists made a living from concert appearances.

This star system, very much akin to the system used to promote Hollywood movie stars at the time, brought new talent to the *Opry* in the 1930s and 1940s. Notable among them were the Delmore Brothers, Eddy Arnold, Hank Snow, Pee Wee King, Ernest Tubbs, Minnie Pearl, Bill Monroe, and others, all of whom were among the biggest names in country music. The biggest newcomer to the *Opry* in the 1930s was Roy Acuff, who joined it in 1938. Acuff had worked earlier in his life as a musician with a traveling medicine show. He recorded his first songs in 1936, and had an early hit with “The Great Speckled Bird.” With his band the Tennessee Crackerjacks (later renamed the Crazy Tennesseans and, later still, the Smoky Mountain Boys), Acuff soon became the leading performer on the *Grand Ole Opry*. At a time when cowboy music was sweeping country music, Acuff managed to prosper under the *Opry*’s new star system, while still keeping close ties to his own southern rural roots, which he had in common with his listeners. Those rural roots were also kept alive by the emerging bluegrass sound of Bill Monroe and his Bluegrass Boys, who were developing a new, hard-driving, string-band sound that combined virtuoso musicianship with close harmony vocals. Among the *Opry*’s biggest female stars in the 1940s and beyond was Minnie Pearl, one of country music’s greatest comediennes, known for her flower hats with the price tag attached, her high-pitched “Howdee!” greeting, and her routines that lovingly chronicled rural life. In the late 1940s, one of country music’s biggest stars, Hank Williams, became an *Opry* regular, thrilling audiences with his honky-tonk sound until his unreliable appearance schedule led to his dismissal in 1952, followed shortly thereafter by his death in 1953.

The *Opry* continued to grow during these years, playing to a continually expanding audience. In October 1939, the *Opry* went national when a half-hour of the show was featured on NBC’s national Saturday night line-up. This was known as the *Prince Albert Show*, sponsored by Prince Albert Tobacco. The *Opry* was also the subject of a motion picture in 1940, called simply *Grand Ole Opry*, and featuring Uncle Dave Macon, Roy Acuff, George Hay, and others. In 1943, the show moved its location to Nashville’s historic Ryman Auditorium in order to accommodate the increased demand among fans to attend the live performances. In 1948, the *Opry* expanded to include a spin-off show on Friday nights on WSM called *Friday Night Frolics*.

During the 1950s, the *Opry*’s sound moved further and further away from its rural origins. New *Opry* managers Jim Denny and Jack Stapp attempted to modernize the show, and although old-timers like Roy Acuff, Bill Monroe, and Hank Snow still made appearances, often hosting their own segments, the *Opry* continued to use its star system approach, promoting younger stars to add to the roster of older, established stars. The *Opry* in the 1950s remained a crucial stepping stone for country talent, hosting such emerging stars as George Jones, Johnny Cash, Webb Pierce, Stonewall Jackson, Little Jimmy Dickens, Porter Wagoner, and others. These trends continued in the 1960s, a decade that saw the emergence of Loretta Lynn, Jim Reeves, Patsy Cline, and Dolly Parton.

By the late 1960s, however, even though the *Grand Ole Opry* remained a prestige performance venue for country musicians, it no longer had the same star-making power. This was a reflection of the declining influence of Nashville, brought about by the realization that it was not the nation’s sole preserve of country music. In the 1960s, California country artists such as Buck Owens and Merle Haggard had demonstrated that country music talent could come from anywhere, and often with a more authentic sound than the more commercial country-pop Nashville had been offering since the late 1950s.

Other factors also reduced the *Opry*’s influence. It refused to acknowledge the growing popularity of rockabilly and rock ’n’ roll music in the 1950s, both of which had country influences, and as a result the show lost a portion of its younger audience. Also, early in the 1960s, the *Opry* lost two major stars with the deaths of Patsy Cline and Jim Reeves. Matters were not made any easier by the fact that the *Opry* paid its performers poorly. Contracts with musicians stipulated a certain number of appearances each year, but the high number of appearances at union scale wages made touring for some of the stars difficult. Consequently, staying close to Nashville in order to fulfill their contractual obligations cut into their income potential from concert performances.

In the 1970s, 1980s, and 1990s, the *Opry* largely redefined itself as a repository for country music’s historic traditions. The show moved out of the Ryman Auditorium in 1974 and into more modern and spacious accommodations in the new Opryland amusement park outside Nashville. There, it continued to draw huge crowds each week, an indication that many were hungry for a taste of this country past. By the end of the 1990s, the *Opry* was still a prestige venue for both established and up-and-coming stars. The relaxation of contractual obligations, put in place by *Opry* manager Hal Durham during the 1970s and 1980s, allowed such younger stars as Clint Black, Reba McEntire, Vince Gill, Alan Jackson, Alison Krauss, and Garth Brooks, among others, to make occasional appearances on the show without cutting too heavily into their concert schedules. Despite the rarity of appearances by country stars of this stature, and the fact that the *Opry* has become home more regularly to older or lesser stars who are no longer making hit records, the *Grand Ole Opry* remains one of the greatest of country music traditions. Most importantly, it has preserved the old-time radio show format that began entertaining country music audiences back in the 1920s.

## Grant, Amy (1960—)

Bringing a flamboyant and youthful sound to what had generally been considered a stiff and formal musical field, Amy Grant changed the face of Christian music. When Grant emerged on the Christian music scene in the 1980s, four categories existed: classical, traditional, gospel, and Jesus rock. Seeing the need for the expression of personal feelings, Grant developed her unique style, which made the old form of Jesus rock acceptable to a greater audience. The Christian message reached a mainstream following of teenagers, college students, and twenty-somethings, through Grant’s use of a rock beat. Contemporary Christian music finally had a young, visible face with a vibrant sound.

Born in Augusta, Georgia, on November 25, 1960, Amy Lee Grant moved to Nashville, Tennessee, as an infant. Religion played an important role in her family life, with her strong belief being

**Amy Grant**

reflected in the songs that she wrote as a teenager. Reflecting what were sometimes intensely personal feelings, her songs served as an outlet through which Grant expressed her thoughts.

Amy Grant's career was launched when Chris Christian played a tape, which Grant had made for her parents, for the Christian music company, Word. Word and the Myrrh label offered the teenage Grant a recording contract, allowing her to present her first album to the Christian market at age 16. The eponymous work, *Amy Grant*, was recorded in Christian's home basement studio. Beginning with this album's release, a gradual change in religious music took place, bringing Jesus rock into a new era. Grant gave contemporary Christian music a revitalized image.

Through her high school and college years, Grant continued to record and perform. Her life revolved around family, church, school, and friends. With each new album, her audience grew, as did her appeal. People began to accept her style, unique sound, and the fresh messages found in the lyrics of her songs. Grant also branched out to record works written by others, most notably her future husband, Gary Chapman ("Father's Eyes"), and a young man, Michael W. Smith ("Thy Word"), who served as her co-writer and eventually followed her into the contemporary Christian field. Grant's popularity continued to increase, as did her honors, awards, and media recognition. Winning numerous Grammys and GMA Dove Awards, her albums have received gold and platinum awards from the music industry.

While Grant's earlier recordings include deeply religious works such as "El Shaddai" (1982) and "Thy Word" (1984), her music began to change with the release of the album, *Unguarded* (1986).

This album created controversy especially the song, "Find a Way." The video for this particular number caused Christian traditionalists concern because of the lack of references to God both in lyrics and imagery. That same year, Grant recorded "Next Time I Fall" with Peter Cetera, which raised more questions about the type of music she was choosing to record.

In spite of these concerns in the Christian community, Grant's popularity continued to grow. She countered the worries on the Christian music front with the album *Lead Me On* in 1988. In 1991, A & M Music, in conjunction with Word, released Grant's first pop collection *Heart in Motion*, in both the Christian and secular markets. With songs like "Baby, Baby," which Grant wrote for her infant daughter, her music reached the Top 40 echelon and her songs became standards. Her critics, however, found the song too sexual in content for a Christian singer. While the album was not overtly religious, the music still carried messages of hope, love, and family. In 1994, Grant released *House of Love*, which combined secular and Christian music with powerful messages regarding all varieties of love—including God's love. Her 1997 album, *Behind the Eyes*, returned Grant to her musical roots as a solo performer using acoustical guitar accompaniment with thought provoking but not necessarily Christian lyrics.

Grant's tours have played to diverse audiences. In the beginning of her career, she performed as a solo act on a bare stage. By 1981, Grant had added a live band and a new performing image. She exhibited dance movements on stage that were more common to rock performers than to Christian singers. Not afraid to let her emotions show, Grant expressed her feelings through both facial expressions and heartfelt pleadings. This exuberance led to a steady increase in young adults attending her concerts, which in turn increased the exposure of a growing contemporary Christian music field. Grant's performance at the Grammy Awards in 1985 gave contemporary Christian music an unprecedented exposure during a primetime live network broadcast, at a time when the musical form needed exposure to the masses. She served as a pioneer in the field, thus opening the door for a wider range of contemporary Christian artists, including the pop stylings of Michael W. Smith, the hard rock sound of Petra, and rap by DC Talk.

## Grant, Cary (1904-1986)

A top box-office draw from the 1930s through the 1960s, movie star Cary Grant personified the ideal attributes of the "leading man" during the golden age of Hollywood. Darkly handsome, with that trademark cleft chin, elegantly attired whether in dinner clothes or soldier's uniform, meeting every challenge with self-deprecating savoir-faire, ready with witty banter or eloquent gesture and possessing a flair for comic timing second to none, Grant was adored by women and admired by men for three decades. Though he occasionally veered from his popular image by attempting more serious roles,

Cary Grant

Cary Grant's forte was light, romantic comedy. He brought to his films a buoyant charm and an effortless improvisational quality that belied the hard work spent making it look so easy. He was Fred Astaire minus the music and plus the chiseled good looks.

The persona the world came to know as "Cary Grant" was the carefully crafted creation of Alexander Archibald Leach, born in Bristol, England, in 1904. As a teenager, Leach forsook an unpromising existence in Bristol for the uncertainties of a theatrical career, joining Bob Pender's theatrical troupe in vaudeville performances throughout England. Pender's Troupe eventually played America, and young Archie went with it. After deciding to settle in the United States, Leach occasionally found vaudeville work, but just as often found hard times. Once in 1922, he earned his keep as a Coney Island stiltwalker. By the late 1920s, Archie's perseverance was finally paying off in leading roles on Broadway. His first film appearance, as a sailor in *Singapore Sue*, a musical short shot at New York's Astoria Studio, led to a contract with Paramount in Hollywood, where he began acting under his new moniker, Cary Grant.

Grant's earliest film roles reveal that he had already developed his "Cary Grant voice," with its unique inflection of Americanized Cockney, impossible to place geographically and therefore concealing his humble origins. But the process of becoming Cary Grant was a slow one, evolving from film to film. "I guess to a certain extent I did eventually become the characters I was playing," Grant once confessed. "I played at being someone I wanted to be until I became that person. Or he became me." At first, nothing more was required of Grant than that he be the stalwart leading man, though he soon displayed hints of the charm to come in his badinage with Mae West in *She Done Him Wrong* and *I'm No Angel*, (both 1933). Under George Cukor's direction, Grant began to loosen up and find himself, portraying a Cockney con-man opposite Katharine Hepburn in *Sylvia Scarlett* (1936). Playing a devil-may-care ghost in 1937's *Topper* seems to have freed Grant still further. That same year's *The Awful Truth* featured Grant's first full-out comedy star-turn. Leo McCarey's direction encouraged improvisation, and the interplay between Grant and Irene Dunne delighted audiences. This hit was immediately followed by Howard Hawks's *Bringing Up Baby*, again co-starring Katharine Hepburn. It was a box-office disappointment but is now recognized as one of the archetypal classics of screwball comedy.

Once he had hit his stride, Grant moved from strength to strength as one of the first big stars to become an independent agent and shop his wares at different studios, thus enabling him to have his pick of the best scripts, directors, and co-stars. Grant proved he could shift suavely from the knockabout Kipling adventure of *Gunga Din* (1939) to the sophisticated romance of *The Philadelphia Story* (1940). Alfred Hitchcock was the first director to take advantage of a certain dark undercurrent in Grant by casting him as a murder suspect in *Suspicion* (1941), though the studio insisted the story be re-written to exonerate Grant's character at the fade-out. Hitchcock and Grant would team memorably thrice more, with *Notorious* (1946), *To Catch a Thief* (1955), and *North by Northwest* (1959). Highlights of Grant's romantic-comedy filmography include *His Girl Friday* (1940, with Rosalind Russell), *The Bachelor and the Bobby-Soxer* (1947, Shirley Temple and Myrna Loy), and *That Touch of Mink* (1962, Doris Day). Grant's career as a top box-office draw was a long one, sustained partly by his shrewd emphasis on the light romantic fare his public seemed most to favor—although there were occasions when Grant attempted a "stretch," as with "Ernie Mott," the impoverished Cockney he played in Clifford Odets' *None but the Lonely Heart* (1944).

In many ways, Ernie Mott was the man Archie Leach might have become had he never left Bristol. An important element of *Lonely Heart* was Ernie's relationship with his mother, played by Ethel Barrymore. Archie's own mother had strangely disappeared for a time when he was a boy, and the adult Cary Grant's relations with women were not as effortless in life as they were on the screen; he was married five times and divorced four. Grant's search for meaning in his life at one point led him to participate in early clinical experiments with LSD, which he claimed were beneficial. Still handsome in his sixties, but growing uncomfortable at playing love scenes with younger actresses, Grant retired from the screen after playing his first character lead in *Walk, Don't Run* in 1966. Film offers kept coming his way, but Grant was content to pursue other business interests and, more importantly, spend time with his daughter Jennifer, the product of his marriage to wife number four, actress Dyan Cannon. In 1986, while on a speaking engagement in Davenport, Iowa, with his wife Barbara Harris, Grant suffered a fatal stroke.

Much though he doted on his real-life role as father, Grant's image in the public mind would always be the dashing chap in the tuxedo who was never at a loss for the right words to charm Grace Kelly or Audrey Hepburn. Thanks to such 1990s films as *Sleepless in Seattle*, Grant's 1957 *An Affair to Remember* remains evergreen in the popular consciousness as the epitome of movie romance. Cary Grant never fully abandoned Archie Leach, and Grant has also come to symbolize the power of creating one's own persona, thus giving a world of Archie Leaches hope for the fulfillment of their own dreams. Once, when told that every man would like to be Cary Grant, the actor replied, "So would I."

Written by John Steinbeck and published in 1939, *The Grapes of Wrath* describes the Depression era journey of the fictional Joad family from the Dust Bowl of Oklahoma to the agricultural fields of California. A film version of the novel, directed by John Ford and starring Henry Fonda, followed in 1940. Together with evocative photographs by Dorothea Lange, the novel and film focused national

attention on the plight of migrant farm workers in California and earned Steinbeck the Pulitzer Prize in fiction in 1940.

The novel recounts the westward journey of the Joads, a three-generation Oklahoma family pushed off their land through a combination of dust storms and foreclosures. Eldest son Tom returns home from the state penitentiary to find the family preparing to head to California in the hopes of obtaining work and eventually a farm of their own. Tom, along with parents, grandparents, an uncle, siblings, and a brother-in-law, are joined in their trek by Jim Casy, an ex-preacher looking to fill the void left by his loss of "the Holy spirit." After leaving Oklahoma, they discover that California is not the land of milk and honey where they can become independent farmers, but rather it is a cold, harsh, uninviting environment, in both the towns and the countryside. Through their journey, Tom and Casy learn about the exploitative practices of landowners and the avenues open to farm laborers to challenge the power of the farm owners. Ma Joad learns, over the course of the novel, that her responsibilities extend beyond the limits of the "family" to "the people." She learns the importance of solidarity in regaining and maintaining human dignity, just as Tom learns the value of solidarity in gaining respect in labor. This message is reinforced in the novel's final scene, in which Tom's sister, Rosasharn (Rose-of-Sharon), having just given birth to a stillborn child, gives her maternal breast to a dying man. By the end of the novel, the Joad family has grown to include the family of man.

*The Grapes of Wrath* is a prime example of the proletarian novel that was popular during the Great Depression in which ordinary working class families (especially agricultural workers) became the focus. Steinbeck strongly believed in the power of literature to bring about change in society through education and example. By exposing the corrupt ways of agribusiness and the benefits of government intervention into the agricultural economy, Steinbeck sought to bring about the creation of a farm labor proletariat. The novel ignited an explosion of controversy over the problems of migrant labor. Accusations about the novel's accuracy led to debates such as the 1940 radio broadcast of "America's Town Meeting of the Air," which addressed the issue "What should America do for the Joads?" Criticisms about the representations of California growers and Oklahoma natives resulted in bans on the book in communities across the nation and most publicly in Kern County, California, a heavily agricultural region of the state.

Stylistically, the novel also recalls the documentary movement of the 1930s in its use of interchapters which depart from the narrative of the Joad family and describe phenomena representative of the migrant population as a whole. The interchapters authenticate the narrative by placing the plight of the Joads within the larger context of Dust Bowl migrants, the agricultural economy, and the American proletariat. Steinbeck portrayed the "Okie" migrants as uneducated, unsophisticated, earthy, and decent folk whose humanity provided a counterpoint to the inhumanity of industrial/agribusiness exploitation. Much like the photography of Margaret Bourke-White, Dorothea Lange, and Walker Evans; and documentary books like Bourke-White and Erskine Caldwell's *You Have Seen Their Faces* (1937), Lange and Paul Taylor's *An American Exodus: A Record of Human Erosion* (1939), and Evans and James Agee's *Let Us Now Praise Famous Men* (1941), *The Grapes of Wrath* sought to improve society through the presentation of information in a highly emotionally charged narrative.

Upon publication, Daryl Zanuck of Twentieth Century-Fox studios acquired the rights to the novel and set screenwriter Nunnally

Henry Fonda (right) at the bedside of Shirley Mill (left) and Jane Darwell in a scene from the film *The Grapes of Wrath*.

Johnson to the task of adapting Steinbeck's prose into a screenplay. Production proceeded under tight security conditions as controversy over the novel mounted. Renowned western director John Ford gathered together a cast of actors including Henry Fonda (Tom Joad), Jane Darnwell (Ma Joad), and John Carradine (Preacher Casy). The film's look, through the stark cinematography of Greg Toland, recalls the documentary vision of government photographers like Russell Lee, Arthur Rothstein, and Dorothea Lange. While more optimistic in tone than the novel, the film presents a bleak look at the conditions of migrant farm workers during the Great Depression. John Ford received the Academy Award for Best Director for *The Grapes of Wrath*.

## The Grateful Dead

The Grateful Dead, with its notorious founding member Jerry Garcia, was a band that epitomized the psychedelic era of American rock 'n' roll music from the 1960s to the 1990s. Even after Garcia's death in 1995, members of the band continued to tour, in part to satisfy the yearnings of the most dedicated group of fans ever to bind themselves to a musical group, the so-called Dead Heads.

A backstage pass from a Grateful Dead concert.

Garcia and friends Bob Weir, Ron “Pigpen” McKernan, Bill Kreutzmann, and Phil Lesh formed the band in the San Francisco Bay Area in 1965 after various incarnations as a blues and bluegrass influenced jug band (Mother McCree’s Uptown Jug Champions) and a blues/rock ensemble (The Warlocks). The various members, especially keyboard players, who were to come and go, included Tom Constanten, Donna and Keith Godchaux, Brent Mydland, Bruce Hornsby, and Vince Welnick. Mickey Hart joined the band shortly after its inception, complementing Kreutzmann as a second drummer, left for a while after his father ripped off the band, and later rejoined them. Pigpen died and the band kept on playing, but with the death of Jerry Garcia the remaining members finally disbanded. They kept playing in their various individual bands, however, and in a combined band called The Other Ones, which approximated the Grateful Dead and continued the Dead’s summer tour tradition.

According to Garcia, he found the name “Grateful Dead” by randomly opening a book and coming upon a dictionary entry describing the legend of those who, returned from the dead, reward a living person who had unwittingly aided them. The folk derivation of the name was fitting, since it summed up the roots of the founding members in the bluegrass, blues, and folk music that was performed in

the early 1960s by artists such as Bob Dylan and Joan Baez. The Dead continued to play folk classics like “Peggy-O,” “Jack-a-Roe,” and “Staggerlee” until the end. The grounding of the Grateful Dead in the American folk tradition contradicts its image as a corrupt purveyor of hallucinatory drugs, but their roots can also be traced to free-spirited Ken Kesey’s Merry Pranksters and Beat figures like Neal Cassady. Jerry Garcia acknowledged this very explicitly in a 1991 interview with *Rolling Stone*: “I owe a lot of who I am and what I’ve been and what I’ve done to the beatniks of the Fifties and to the poetry and art and music that I’ve come into contact with. I feel like I’m part of a continuous line of a certain thing in American culture. . . .” Like the Beats, the hippies and their house band the Grateful Dead continued the rebellion against the conformist 1950s and the middle class culture that had by and large given birth to them.

Some of the Grateful Dead’s first concerts were known as the Acid Tests of the San Francisco Bay area where psychedelic music, visuals, and hippies all came together as harbingers of the raves of the 1990s and the Dead’s concerts between the 1970s and the 1990s. They spawned bands like Phish, which recreated the Dead’s spontaneity in improvisation, and in its nomadic fans and epic tours that extended across America and sometimes Europe.

The Grateful Dead cult started after a call to fans, “Dead Freaks Unite—Who Are You? Where Are You?” was published in the 1971 album *Grateful Dead* (also known as *Skull and Roses*). The Dead fans who answered received concert updates and news that would eventually result in the band’s formation of Grateful Dead Ticket Sales, which successfully bypassed music company and corporate control by selling up to half the tickets to concert venues by mail. From 1973 to 1976 the band also had its own recording company, Round Records/Grateful Dead Records. However, this collective thumbing of noses at the recording industry came at a price, costing them the respect of critics who saw the band as an aberration and a throwback.

There was another downside to the burgeoning Grateful Dead industry. In his last few years Garcia occasionally wearily commented on the fact that a whole group of people—not just the traveling circus of Dead Heads and unauthorized vendors, but the Grateful Dead ticketing and merchandising industry controlled by the band—were dependent on the Dead. Ironically, as the Dead found more popular success after issuing *In the Dark* (1987), problems abounded with unruly fans who crashed the concert gates and participated in uncontrolled vending, sometimes even of controlled substances.

The Grateful Dead’s cult following was almost religious in its intensity. Dead Heads, as they were known, showed their loyalty (or perhaps obsession) by watching *Dead-TV*, a television cable program that first aired in 1988; hitting Grateful Dead-related computer online groups like Dead-Flames, DeadBase, and Dead.net; reading Dead theme magazines like *Relix* and *Golden Road* and the compendium of Dead statistics known as *DeadBase*; tuning into the nationally broadcast Grateful Dead radio hour, aired weekly from the San Francisco Bay Area’s KFOG radio station by long-time fan and Dead historian David Gans; buying the recordings that continued to be issued even after Garcia’s death from the band’s own master sound board tapes of concerts in the “Dick’s Picks” series; and trading the “bootleg” tapes of Dead concerts recorded by fans almost from the beginning, a practice the band in the end condoned. Garcia didn’t make the mistake John Lennon made of comparing his band’s popularity to that of Jesus Christ, but he did remark on the ritualistic nature of its concerts in *Rock and Roll: An Unruly History*: “For some people, taking LSD and going to a Dead show functions like a rite of passage. . . . Each person deals with the experience individually; it’s an adventure that

you can have that is personalized. But when people come together, this singular experience is ritualized. I think the Grateful Dead serves a desire for meaningful ritual, but it's *ritual without dogma*."

Also unlike the Beatles, fans were allowed this great road adventure because the band preferred making its money by touring (or perhaps was forced to tour because of the lack of conventional success) rather than by recording studio albums. Garcia explained in an interview published in *Rock Lives*, "Mostly we're always on the road, because we earn our living by playing. So we haven't had much of the luxury where you just go into the studio for no particular reason to screw around." At the time of Garcia's death, the band was in its 30th year.

In a 1989 *Rolling Stone* interview, Jerry Garcia talked about the last adventure in America that touring with the band allowed. Asked why the fans kept coming back, he answered:

They get something. It's their version of the Acid Test, so to speak. It's kind of like the war-stories metaphor. Drug stories *are* war stories, and the Grateful Dead stories are their drug stories, or war stories. It's an adventure you can still have in America, just like Neal [Cassady] on the road. You can't hop the freights any more, but you can chase the Grateful Dead around. . . . You can have something that lasts throughout your life as adventures, the times you took chances. I think that's essential in anybody's life, and it's harder and harder to do in America. If I were providing some margin of that possibility, then that's great. That's a nice thing to do.

Though Garcia was certainly the charismatic spokesman for the band in its later years, early on Pigpen was the draw for the band. The son of a San Francisco Bay area disc jockey, Ron McKernan was steeped in the blues, playing organ and harmonica, and singing in a harsh, anguished voice perfect for the medium. It was Pigpen who largely set the tone of albums like *Workingman's Dead* and *American Beauty*, classic Dead recordings. It wasn't until 1970 with *Live/Dead* and *Workingsman's Dead* that the band's records really began attracting a sizable number of fans outside of the San Francisco Bay area, and the band toured extensively. Pigpen sang many of the tunes that characterized the Dead at that time, and some which they kept playing until the end—covers such as "Good Morning Little School Girl," "Viola Lee Blues," "In the Midnight Hour," "Beat It On Down the Line," and "Cold Rain and Snow." His death at 27 in 1973 from liver damage was a serious blow, although before his death his absence from gigs due to deteriorating health had begun to lessen his influence on the band. After Pigpen's death, Donna and Keith Godchaux joined the band as keyboard player and vocalist, respectively. As William Ruhlmann points out in *The History of the Grateful Dead*, both events caused the band to diversify its repertoire and approach. Hank Harrison puts it differently in *The Dead*, claiming that the old band also died with Pigpen.

Other neglected de facto "members" of the band included their frequent lyricists, Robert Hunter and John Barlow. Hunter collaborated with Jerry Garcia, while Barlow worked with Bob Weir, and, while he was in the band, Brent Mydland. Robert Hunter, himself a musician, was a member of the San Francisco scene from the beginnings of the Grateful Dead. He never played with them, but penned several of their trademark songs, including "Terrapin Station," "Touch of Grey," "Jack Straw," "Tennessee Jed," "It Must

Have Been the Roses," "Playing in the Band," and "Truckin'." Most of the time Hunter collaborated with Garcia in composing songs. In a 1988 interview with David Gans, published in *Conversations with the Dead*, Hunter was asked why he didn't collaborate with other members of the band more often. He replied that "Garcia makes it easy. You know, he makes himself available to do it, and when I give him a piece of material he'll either reject it or set it, and he gives me changes, which I *will* set, generally—he doesn't give me anything I don't like. . . he's a genius, he's got an amazing musical sense, and no one else makes themselves available or particularly easy to work with."

Hunter was probably referring to the Dead's other primary singer, Bob Weir, who could be difficult to work with. John Barlow, a childhood friend of Weir, referred to himself in interviews with David Gans as "the Grateful Dead's word nigger," but explains that although sometimes Weir may abuse him, he is "only that way when he's feeling a bit uptight and overworked. Then he gets very headstrong about certain creative decisions, and I'm not in a position to gainsay him because he's got to get out in front of a whole bunch of people and sing that stuff." Barlow, an active member of cyberspace by the late 1990s, started out as a poetry and fiction writer, but Weir persuaded him to try his hand at song lyrics after Weir joined the Dead. Barlow's patience was in evidence when the very first song he wrote, "Mexicali Blues," was transformed into a polka number by Weir, something that Barlow hadn't envisioned. As with those lyrics, Barlow often infuses a Western flavor into his songs; they include "Estimated Prophet," "Looks Like Rain," "Cassidy," "Hell in a Bucket," "Heaven Help the Fool," and "Black Throated Wind." Collaborations with Brent Mydland include "Easy to Love You," and "Just a Little Light," while "Throwing Stones" was a Barlow, Weir, and Mydland effort. Mydland's death in 1990 of a drug overdose ended what had promised to be a fruitful collaboration.

Studio albums present polished versions of the Dead's songs, but the concert experience was the essence of the Dead. Improvisation was their chosen method; they claimed never to perform with a set list (although drummers Hart and Kreutzmann admitted practising the famous extended drum solo features known as "Space" that were a capstone of a Dead show's second set). This is one reason why, perhaps, the Dead could keep filling large stadiums on their tours, even in the early 1990s when the live concert industry hit a slump. In 1991 they were the top grossing concert band in the United States. The Dead never had a number one hit—in 1987 the Hunter/Garcia song "Touch of Grey" went only to number nine—but their music was being listened to, and no one knows how many bootleg tapes were trading, and continue to trade, hands.

Every former member of the Grateful Dead, except Bill Kreutzmann, formed a separate band with which they performed, toured, and recorded. Lesh, the only classically trained musician in the group, played on occasion with the San Francisco symphony until he underwent a liver transplant in 1998; upon his remarkable recovery from this operation, Lesh immediately began performing occasional gigs with a roving cast known as "Phil and Friends." Mickey Hart, the most eclectic member of the band, went on to compose and perform experimental pieces, even contributing a composition used in the opening ceremony of the 1996 Olympic Games in Atlanta. He also composed music for Francis Ford Coppola's film *Apocalypse Now* (1979).

At the end of the twentieth century, members of the Grateful Dead were continuing as an industry unto themselves. The band is the

most complete and longest lasting representation of the San Francisco counterculture, begun in the 1950s with the Beats and flowering in the 1960s with the hippies. The band helped to propagate and preserve the spirit of 1960s America at home and abroad with its recordings and tours. That it was never in need of reviving, and continues to thrive in various guises, attests to a thread of continuity in fast-paced American pop culture.

## Gray Panthers

The Gray Panthers seek to redefine old age in America. Founder Maggie Kuhn emphasized that "ageism" diminishes all people by stigmatizing young and old people as less than full members of society. Their mission statement affirms the importance of their relationship: "The Gray Panthers is an intergenerational advocacy organization. We are Age and Youth in Action—activists working together for social and economic justice. Our issues include universal health care, jobs with a living wage and the right to organize, the preservation of Social Security, affordable housing, access to quality education, economic justice, environment, peace and challenging ageism, sexism and racism." The Gray Panthers work with other organizations (notably AARP—the American Association of Retired Persons) for issues of common interest (e.g. preserving Social Security), but they are distinctive in placing a primary emphasis on activism, particularly for those not normally active in the political process.

Philosophically, the Gray Panthers are to the left of AARP, which is more conservative and allied with a variety of businesses and services. For over 25 years, the Gray Panthers have advocated social change, inspired by the dynamic example of founder Maggie Kuhn, who urged, "Speak your mind. When you least expect it, someone may actually listen to what you have to say. Even if your voice shakes, well-aimed slingshots can topple giants."

Maggie Kuhn (1905-1995) had been an activist for many causes during her life, but the organization that made her famous came about when she was forced to retire from the job she loved as an executive of the United Presbyterian Church at age 65. Infuriated by the wasteful nature of bureaucracies that mandated retirement for workers at 65, Kuhn began the process of organizing an advocacy group for older Americans. She recalled the awakening of her consciousness in her autobiography, *No Stone Unturned*: "Something clicked in my mind and I saw that my problem was not mine alone. I came to feel a great kinship with my peers and to believe that something was fundamentally wrong with a system that had no use for us." She believed that the talents, energy, and wisdom of older Americans were being wasted.

With five friends, Kuhn began to hold meetings to try to address the problem, and it quickly grew from six to a hundred members in a year. The original name of the group was the Consultation of Older Persons, which was changed to the Gray Panthers when a member of the media suggested it to Maggie Kuhn as a better fit for her activist organization. This caused some confusion for people who were intimidated by the name, which recalled the Black Panthers, a militant activist organization of the Civil Rights movement. One woman wrote to Kuhn that she wanted to join but didn't want to be part of any "bombings." The new organization was helped significantly by consumer advocate Ralph Nader, who incorporated his own seniors group (Retired Professional Action Group) into the Gray Panthers. His organization had investigated the hearing aid industry, and he published an exposé, "Paying through the Ear." Nader also contributed \$25,000 to the Gray Panthers, which helped significantly as they began their next campaign for nursing home reform. Their efforts (in conjunction with the National Citizen Coalition for Nursing Home Reform) produced a handbook, "Nursing Homes: A Citizen Action Guide," which documented nursing home abuses. By 1974, the Gray Panthers were making their influence felt across the country.

Annoyed by television talk-show host Johnny Carson's character "Aunt Blabby," Kuhn turned her guest spot on the show in 1974 into a tour de force, charming Carson and not incidentally promoting the Gray Panthers. In 1975 the Gray Panthers established a National Media Task Force, which documented ageist stereotyping in broadcasting, which led the National Association of Broadcasters to amend the Television Code of Ethics to include "age along with race and sex." In 1978, the Gray Panthers won perhaps their most satisfying reward for their efforts: the Age Discrimination in Employment Act was passed, raising the mandatory retirement age from 65 to 70. The 1980s were a very successful decade for the organization; the Reagan era provided a spur to activist groups and the Panthers reached an all-time high of 80,000 members. While the Gray Panthers have a much lower profile than the AARP, Maggie Kuhn had a keen sense of what the press would pick up on and always provided them with good copy. She once said, "Old age is an excellent time for outrage. My goal is to say or do at least one outrageous thing every week." In that same spirit, membership materials affirm that "the Gray Panthers movement is in the trenches fighting for the values in which we believe—taking the far out positions which lead to real change."

The Gray Panthers have a strong bond with organized labor and walked the picket line in the successful 1997 United Parcel Services strike. The organization has requested all members who are also union retirees to identify themselves as such so that the Gray Panthers can continue to solidify the close relationship with the AFL-CIO and other unions in their quest for social and economic justice. Many members of the Panthers are lifetime activists, participating in union and progressive politics at a level of commitment that makes them extremely skillful as organizers. Networking is crucial to the success of the Gray Panthers: rather than employ the high-power lobbying techniques of AARP to influence members of Congress, the organization uses its modest resources to work directly with other progressive organizations such as Food First (The Institute for Food and Development Policy).

In 1995, the 10th Biennial Convention honored Founder and National Convener Maggie Kuhn. Kuhn passed away shortly after the convention, and on what would have been her ninetieth birthday, August 3, 1995, the Gray Panthers celebrated her memory in ceremonies across the country. The Panthers' most important achievement after Kuhn's passing was a joint event with the United States Student Association, the first "Age and Youth in Action Summit" in Washington, D.C. in 1996. The next year the organization regrouped and focused attention on producing a successful convention. With the election of a new national chair, 55-year-old Catherine DeLorey, president of the Women's Health Institute, the organization seeks to reaffirm its intergenerational character as it moves into the twenty-first century.

## Great Depression

Starting in 1929 and ending with America's entry into World War II in 1941, the Great Depression marked a turning point in American history by establishing the enlarged federal bureaucracy associated with the post-WWII state. While first and foremost an economic event, the Great Depression affected every aspect of

Workers on relief line during the Great Depression.

American political, social, and cultural life. It was during the depression that the radio and film industries, along with developments in documentary photography, reportage, and literature, helped to develop a national culture based in uniquely American practices, environments, experiences, and ideals.

While the stock market crash of October 1929 is often viewed as the start of the Great Depression, it was by no means the cause of the depression. The crash, and its aftermath of unemployment, bank closures, bankruptcies, and homelessness, were caused by fundamental flaws in the prosperity of the 1920s. The availability and widespread use of credit, the increasingly unequal distribution of wealth, the problems of falling farm prices, and the corporate consolidation of American industry all contributed to the overproduction of farm and industrial goods and the overexertion of credit and speculation. In the wake of the crash, American industrial output decreased rapidly, reaching in 1932 the same level of production as in 1913. Employment reached an all-time low, with 13 million people out of work, roughly 25 percent of the population. For farmers, crop prices had fallen drastically; a bushel of wheat that sold for three dollars in 1920 brought only thirty cents in 1932.

The effect of the depression on American culture was felt in both the public and private sectors. The federal government, through its New Deal programs, subsidized writers, composers, musicians, performers, painters, sculptors, and other artists, and it developed and encouraged cultural programs which focused attention on the United States, its history, traditions, and native arts and crafts. The Federal Writers Project employed writers, editors, and researchers to not only produce works of fiction, usually with American themes, but also to

create several series of books such as the *State Guide Series*, consisting of all-purpose guide books for each state of the union. The Federal Arts Project hired painters and sculptors to create public art for post offices and other public buildings, and developed a network of community art centers in cities and towns across the country. The Federal Theater Project sought to bring the dramatic arts to the general public through local programs such as the Living Newspaper, in which local news stories were acted out in community theaters. Additional programs employed musicians, composers, architects, and other artists. Preservation programs such as the Index of American Design and the Library of Congress' Archive of Folk Song sought to preserve the inherently American character of folk arts. In all, the cultural programs of the New Deal focused attention on the unique aspects of American culture, not only in past arts and crafts, but also in the creation of new works of art.

The mass-media industries of broadcasting and motion pictures responded to the economic realities of the depression and the government sponsored trend towards reinforcing traditional American values. In the 1930s, radio dominated Americans' leisure time. Nearly one third of all Americans owned at least one radio, and even those who did not own a radio usually had access to one through family, friends, or neighbors. The potential radio audience for any program was estimated at sixty million people. As a result of these vast audiences and the huge profits to be made, the radio industry became big business with production companies selling "pre-packaged" shows to sponsors and stations, along with syndicates and networks developing and growing. During the 1930s, comedians were the most popular radio personalities. Jack Benny, Fanny Brice, George Burns and Gracie Allen, Bob Hope, Milton Berle, and Jimmy Durante all had popular radio shows. Musical shows were also a favorite of audiences as almost every station presented remote broadcasts from hotel ballrooms featuring dance orchestras and jazz bands such as Paul Whiteman ("The King of Jazz"), Ralph Ginsberg and the Palmer House Ensemble, and Phil Spitalny and his All-Girl Orchestra, featuring Evelyn and her Magic Violin. Daytime programming was dominated by the soap opera, so named because most were sponsored by soap manufacturers. Writer James Thurber described soap operas as "a kind of sandwich, whose recipe is simple enough. . . Between thick slices of advertising, spread twelve minutes of dialogue, add predicament, villainy, and female suffering in equal measure, throw in a dash of nobility, sprinkle with tears, season with organ music, cover with a rich announcer sauce, and serve five times a week." As opposed to daytime serial dramas, evening dramas contained much better production values and more sophisticated material featuring famous actors. *The Texaco Theater*, *The Philip Morris Playhouse*, *Grand Central Station*, and other hour-long programs presented serious dramatic fare, but the most popular shows were the half-hour long crime-suspense-adventure shows, including *Sam Spade*, *Jack Armstrong: the All-American Boy*, *The Thin Man*, *Sargent Preston of the Yukon*, *The Green Hornet*, *The Shadow*, and *The Lone Ranger*. Even news reporting took on a more entertaining flavor as radio newsmen became celebrities, such as Lowell Thomas, Edward R. Murrow, and Floyd Gibbons, who introduced himself as "the fastest talking man in radio." Forty percent of all Americans preferred to get their news and information from radio, more than any other single source.

Radio took on a whole new importance in the wake of the Depression, primarily through the use of the medium by President Franklin D. Roosevelt. In his "fireside chats," Roosevelt addressed

the country directly from the White House. This mediated communication, due to the intimacy associated with radio broadcasting, developed a more personal relationship between the president and the public than ever before, reinforcing the expansion of federal, especially executive, authority. Radio became much more than a source of local information and entertainment; it became a vital tool of the government to promote and support its programs. Roosevelt's first "fireside chat," explaining the purpose of the bank holiday and subsequent banking legislation, produced enough confidence in Roosevelt and the government that the following day bank deposits outnumbered withdrawals for the first time since the stock market crash almost four years earlier. Radio not only informed people, but also brought them under the influence of a centralized medium which homogenized the information it was disseminating. As Warren Susman argues in his essay "The Culture of the Thirties," radio "helped mold uniform national responses; it helped create or reinforce uniform national values and beliefs in a way that no previous medium had ever been able to do." Illustrating one such uniform national response was the euphoria witnessed in communities, both black and white, over Joe Louis' heavyweight title fights in 1937 and 1938. Informing the public became such a vital part of the radio industry, and so accepted by the public, that a fake "emergency bulletin" as part of Orson Welles' 1937 radio production of H. G. Wells' *War of the Worlds* created pandemonium in towns and cities across America.

As a result of the depression, Hollywood experienced a decline in movie attendance, and it compensated by using the latest technology to its fullest impact to produce movies which would appeal to adult males, the segment of the movie audience that had declined the most. War films such as *All Quiet on the Western Front* (1930) and *The Dawn Patrol* (1930); horror films such as *Dracula* (1931), *Frankenstein* (1931), and *King Kong* (1933); gangster movies such as *Little Caesar* (1930), *The Public Enemy* (1931) and *Scarface* (1932) all took advantage of sound technology to enhance the filmgoing experience. Movies such as Marlene Dietrich's *Blonde Venus* (1932), Jean Harlow's *Red Dust* (1932), and Irene Dunn's *Back Street* (1932) all challenged the prevailing notions of respectable women's roles. Even the glamorous Greta Garbo, in her sound film debut, did not play a socialite, but rather a prostitute. The long awaited moment when Garbo first spoke on film was in *Anne Christie* (1930) as she addressed a waiter in a waterfront dive: "Gimme a viskey. Ginger ale on the side. And don't be stingy, ba-bee." Even a film as superficial as *Gold Diggers of 1933* implied that for women there were limited career paths. In the film's most memorable song, "We're in the Money," chorus girls joke that if they had to give up performing they would have to enter into the world's oldest profession: "We're in the money. We're in the money. We've got a lot of what it takes to get along." Even comedies emphasized this tendency towards anarchy and sex. The most popular film comedians, the Marx Brothers and Mae West, relied heavily on sound to convey their primarily verbal humor, yet both also depended on visuals for the strong physical presence necessary in both slapstick comedy and body enhancing sexual innuendo.

This "golden age of turbulence," according to film historian Robert Sklar in *Movie-Made America: A Cultural History of American Movies*, lasted from 1930 to 1934 when Hollywood, under pressure from civic organizations like the Catholic Church's League of Decency, discovered there was as much, if not more, profit to be made on supporting traditional American values as there was in challenging them. With the 1934 introduction of the Breen Office

(officially the Production Code Administration, but popularly named after Joseph Breen, the film industry's self-imposed censor who had absolute power), the movie industry stopped challenging traditional values by becoming one of their most staunch supporters.

The Breen Office brought about the "golden age of order" in which the social order was restored in films that reinforced traditional notions about social roles and American ideals. Screwball comedies set among the upper classes, such as *Bringing Up Baby* (1938) and *The Philadelphia Story* (1940) replaced the anarchic vision of the Marx Brothers and the brazen sexuality of Mae West. Gangster movies focused not on the lawless, but on the government agent, the G-man. And Hollywood began producing socially conscious films such as *The Grapes of Wrath* (1940) and the films of Frank Capra.

Frank Capra best exemplifies the "age of order" with his morality plays set among the common people of America. Capra produced films which encouraged Americans to reaffirm their beliefs in democracy, community, and humanity. In his "American trilogy," of *Mr. Deeds Goes to Town* (1936), *Mr. Smith Goes to Washington* (1939), and *Meet John Doe* (1941), Capra presented American democracy at its best with each protagonist (Deeds, Smith, and Doe) overcoming the challenges to honesty and decency through perseverance. In *Mr. Deeds*, Gary Cooper stars as Longfellow Deeds, who plans to use his inherited millions on establishing farmers on their own small plots of land in an attempt to recreate the Jeffersonian vision of the democratic yeoman farmer. In *Mr. Smith*, James Stewart stars as Jefferson Smith, a junior senator who envisions a boys' camp in the western wilderness to teach boys the virtues of independence, self-sufficiency, and frontier democracy. And in *John Doe*, Gary Cooper once again stars, this time as Long John Willoughby, a down-and-out baseball player recruited by a big city newspaper to play the role of John Doe, a "common" man who has threatened to end his life as a protest against modern society. John Doe not only becomes a circulation booster, but his simple ideas about neighborly consideration and the "little guys" watching out for each other is readily picked up by an eager public searching for solutions to the depression. The John Doe Movement, with the establishment of John Doe clubs, is manipulated by the tyrannical newspaper owner D. B. Norton, who aspires to political office. Norton and Willoughby come into conflict when Norton's machinations are revealed and Willoughby seeks to stop him. Norton exposes the "fake" John Doe and the movement crumbles. In the end, Willoughby seeks to follow through on "John Doe's" original promise to jump off the city hall tower on Christmas Eve. Like all Capra movies, the honest and decent hero survives the attacks against him through the faith of a loving woman and the eventual realization of "the people." Capra reaffirms traditional ideas about self-help and the private function of charity in the face of adversity, as opposed to more modern ideas in which the federal government assumes responsibility for the health and welfare of individual citizens. Despite the revolutionary medium of motion pictures, late 1930s movies overwhelmingly reinforced traditional values.

In general, the reaction to the Great Depression, by the federal government and the mass media industries, served to maintain traditional American values in the face of economic, political, and social change.

## The Great Train Robbery

Made in 1903, Edwin S. Porter's eleven minute *The Great Train Robbery* is a landmark in the evolution of film editing. Porter's film, in its cutting back and forth between multiple simultaneous story lines, showed that movies need not be restricted to linear story-telling. *The Great Train Robbery* is also interesting as a transitional film; in some scenes the backgrounds are clearly painted, while in others, such as the famous train-top fistfight scene, the action is thrillingly "real."

## Greb, Harry (1894-1926)

Edward Henry "Harry" Greb epitomized the Roaring Twenties. Middleweight champion by 1923, "The Pittsburgh Windmill" lived hard, played harder, and fought hardest. Greb made the sports pages for his myriad, perhaps even historically unparalleled, accomplishments inside of the ring, and he made the front pages for his antics outside of it. Affairs with married women, car crashes, drunken brawls, law suits: Greb was the original media bad boy. He once fought fellow Hall of Famer Mickey Walker outside a pub, several hours after their bruising title fight (Greb won the title fight, Walker the street brawl). His non-stop attack and indomitable fighting spirit seemed to carry over from the ring to his personal life, and in spite of his negative press (and maybe in part, because of it), Harry Greb was a beloved sports icon. According to boxing historian Bert Randolph Sugar, Ernest Hemmingway once accused another writer who did not know who Greb was of "not knowing one of our greatest Americans."

## *Greed*

The bowdlerization of Erich von Stroheim's *Greed* (1924) is almost more famous than the film itself. An adaptation of *McTeague*, Frank Norris' epic novel of avarice, desire, and disintegration, it stars Gibson Gowland as the dentist McTeague, ZaSu Pitts as the wife he murders for money, and Jean Hersholt as the brute Marcus with whom he fights to their mutual destruction in Death Valley. In realizing a cherished dream to do literal justice to the book, Stroheim broke new ground in cinematic realism, both in characterization and the use of actual locations in San Francisco and Death Valley, but emerged with a 42-reel, ten-hour film. Producer Irving Thalberg, the director's nemesis with whom he had previously tangled, ordered cuts and Stroheim tried to oblige. The film, however, was taken away from him and the cuts became a massacre. The final release version was a little short of two hours, with much careful detail lost and the dramatic balance seriously upset by the removal of sub-plots and subsidiary

characters. Nonetheless, *Greed* remains a powerful masterpiece of the silent cinema from one of the medium's few geniuses.

## Greeley, Andrew (1928—)

A self-described "faintly comic Celtic Lancelot" and "perennial dissident priest," Catholic priest, sociologist, and writer Andrew Greeley has stirred frequent controversy within and outside the Church and produced enormous amounts of written work in widely different fields. Beginning late in the 1950s and continuing at a relentless pace thereafter, the water-skiing, celibate priest published countless articles in newspapers, magazines, and scholarly journals, as well as more than 100 books. These range from obscure sociological tracts on religion and ethnicity in the United States to racy bestselling novels filled with sex and corruption, as well as works on relationships, photography, and mysteries. If a central theme ties his work together, it may be his possibly quixotic crusade to "free the riches of the Catholic tradition from the stranglehold of a decrepit and corrupt bureaucracy" and to bring a sense of "God's merciful love" to readers.

A lifelong resident of Chicago, Greeley has been a professor at both the University of Chicago and at the University of Arizona and a longtime researcher at Chicago's National Opinion Research Center. He has become embroiled in numerous controversies, offending persons of all political stripes. His advocacy of liberalization of Church policies on birth control, divorce, and women in the priesthood has angered a conservative Catholic hierarchy, while his opposition to abortion and support of priestly celibacy has offended many liberals. Despite his success as a writer of bestselling novels, he claims his primary occupation as a parish priest and cites his popular books as his most successful outreach.

As a youth Greeley attended Catholic schools and admired the works of G. K. Chesterton, Graham Greene, and other Catholic writers. He decided he wanted to be a priest in second grade and was ordained in 1954. While serving as an assistant pastor in Chicago, he began writing articles for religious publications under a pseudonym and later under his own name. His first book, *The Church and the Suburbs* (1959), grew out of two of his articles that examined the effects of increased affluence on religious belief. In 1962 he earned a doctorate in sociology from the University of Chicago. His sociological work, often based on surveys generated at NORC, has included studies of Catholic education, the priesthood, the paranormal, ethnicity and alcoholism, and Irish Americans, among other things. Religious works like *The Mary Myth* (1977) suggest the "womanliness of God," a recurrent theme in Greeley's nonfiction and fiction. Books like *The Unsecular Man* (1972) make a case for the persistence of religious belief in a supposedly secular age.

Gibson Gowland (left) and ZaSu Pitts in a scene from the film *Greed*.

One of Greeley's main offenses against conventional Catholic doctrine has been to suggest that sex is a sacrament and an expression of God's love rather than a sin when it is not a means of procreation. His outspokenness on this and other issues brought him into conflict with leading church authorities, including John Cardinal Cody of Chicago. Greeley's most critically-acclaimed work of popular non-fiction, *The Making of the Popes, 1978: The Politics of Intrigue in the Vatican* (1979), examines papal politics in Rome in the style of Theodore White, deglamourizing, demystifying, and exposing the papal selection process as an unfair practice in which popes are chosen secretly, undemocratically, and often ineptly. Although the book sold only moderately well, it earned plaudits for its close observation, detailed reporting (much of it thanks to a source Greeley termed "Deep Purple"), and analysis of a rite that has remained shrouded in secrecy for centuries.

In the mid-1970s, convinced that the power of storytelling and emotion rather than dry exposition and philosophy were key to religious belief, Greeley began writing poetry and fiction. His first two novels sold poorly, but his third, *The Cardinal Sins* (1981), made him an overnight celebrity. The story of two boyhood friends, one who goes on to become a simple parish priest and the other who

becomes a cardinal, is laced with sex and corruption. It remained on bestseller lists for more than a year, selling more than three million copies. Greeley followed with dozens of other novels, many of them bestsellers that often included sex, corruption, and violence, set in Chicago, and featuring religious or mystical characters. Like *The Cardinal Sins*, many were better received by the public than by reviewers, who often have complained that Greeley's writing is stiff and his characters two-dimensional. Catholic officials (many of whom, Greeley claimed, never read the books) often criticized the novels for their sex scenes, although Greeley has defended his depiction of sex as tasteful and claimed his own surveys show that his books brought a majority of Catholic readers closer to the Church. He described his novels as "comedies of grace"—parables of God's grace through love—and "the most effective priestly activity in which I have ever engaged," and blamed the anger of his priestly critics on their envy of the wealth and fame his books brought him. Though he has owned expensive houses and cars, he claims he has given away most of his earnings to charity.

Reaching his 70th birthday in 1998, Greeley, who has attributed his productivity to celibacy and long hours at the computer terminal, allowed that he would slow down his pace. But the previous decade

had brought little evidence of declining energy. He produced more than a score of books of nonfiction and fiction. Although the latter earned many unfavorable reviews, they continued to receive an enthusiastic reception from loyal fans. According to Greeley, readers who write him often tell him that his stories have had “an enormous effect on their personal and religious lives, giving them new hope and a new (or renewed) sense of God’s forgiving love.” Among his later works were mysteries somewhat reminiscent of Chesterton’s Father Brown series that feature the adventures of Father Blackwood Ryan, monsignor, who represents the best attributes of Catholic priests: “intelligence, pragmatism, zeal, wisdom, and wit,” rather than the selfishness and insensitivity of other priests portrayed in the books. Greeley also continued to write popular books on relationships, including *Sexual Intimacy: Love and Play* (1988) and *Faithful Attraction: Discovering Intimacy, Love, and Fidelity in American Marriage* (1991).

## Green, Al (1946—)

Admirers call eight-time Grammy winner and Rock ‘n’ Roll Hall of Fame inductee Al Green “the quintessential soul man.” Born in Arkansas, Green grew up in Michigan, and as a youngster toured with his father in a family gospel quartet. He formed his own group “The Creations,” in the mid-1960s, later becoming lead singer for “The Soul Mates.” A solo career with Memphis-based Hi Records rocketed him to fame in the 1970s, becoming “that decade’s most popular purveyor of soul music,” according to the Rock and Roll Hall of Fame. In eight years, Green co-wrote thirteen charting singles including “Tired of Being Alone,” and “Let’s Stay Together.” Fourteen of Green’s albums have appeared on the Top 200 charts; five went gold. Ordained in 1976, he serves as pastor and proprietor of Memphis’ Full Gospel Tabernacle, and recorded nine bestselling gospel albums in the 1980s.

## The Green Bay Packers

As the National Football League’s most successful franchise, with 12 titles since 1929, the Green Bay Packers overcame early financial hardship and a location in a city smaller than any other professional sports team to become one of the most popular teams in all of American sport. In addition to their 12 league titles, the Packers have placed 19 members into the Professional Football Hall of Fame, and they are the only NFL franchise to win three straight league titles, having done so twice (1929 to 1931 and 1965 to 1967). With this long history of amazing success, the Packers have even given a nickname to their hometown of Green Bay, Wisconsin—Titletown, USA. However, the city has undoubtedly earned its strong connection to the club, as city leaders and citizens have aided the team many times since it was founded.

Founded by Earl L. “Curly” Lambeau and George Calhoun in 1919, the Packers owe their team name to the Indian Packing Company, a meat-packing firm in Green Bay. The company, which employed Lambeau at the time as a meat cutter, provided the initial funds for necessary equipment, and allowed the club to use their private athletic fields for practice sessions. Due to the strong debt initially owed to the packing house, the team chose to use “Packers” as their name, Calhoun was named club president, and Lambeau was elected as vice-president and coach, a position he would hold for 30 years. In their first season the Packers won 10 of 11 games against other club teams in the Wisconsin area, but after this auspicious start even bigger things were on the horizon.

In 1921, officials of the company encouraged Calhoun and Lambeau to secure a franchise in the new national professional football league that had formed a year earlier, and would later become the modern National Football League (NFL). Following this grand leap, a long string of financial troubles beset the team, the first of which allowed Lambeau to take full ownership of the club in 1922. The financial difficulties continued throughout the 1920s, however, and it was during this decade that Lambeau sought citywide assistance for the club and formed the Green Bay Football Corporation with financial help from business leaders throughout Green Bay and the surrounding region.

Once the corporation was established, and with it a more stable financial base, Lambeau was able to secure the services of better players and acquire first-rate equipment, allowing the team to become more competitive in the growing professional football world of the late 1920s. By 1929 the Packers had won the first of three consecutive NFL titles during what is commonly known as the Iron-Man Era of professional football, when players commonly played both offense and defense for the entire game. Following these early championships, legal problems in the mid-1930s led the club into financial problems once more, but the local business community again came to the rescue with an infusion of capital, and the team was saved.

In 1935 a new weapon was added to the Packers’ arsenal of great football players, a young end from the University of Alabama named Don Hutson. He became an immediate star in the fledgling NFL, so great that he would be named to the 75th Anniversary Team in 1994, 50 years after his retirement. Hutson led the league in receiving seven times, scoring five times, and also set an all-time record in 1945, personally scoring 29 points in one period. In the Hutson era, the

**The Green Bay Packers with head coach Vince Lombardi, 1967.**

Packers won three more NFL titles (1936, 1939, and 1944). During this period the Packers gained national recognition with their success on the gridiron, and fans throughout the country began to follow the team and the legendary Hutson.

Following Hutson's retirement in 1945, the Packers' fortunes on the field began to decline, along with their gate receipts. By 1949 the club was yet again struggling financially, this time nearing complete bankruptcy. The situation led Lambeau to search for greener pastures, and he left the club to become coach of the Chicago Cardinals. However, the community would not forsake their beloved Packers, and in 1950 a giant public stock sale was organized that raised \$125,000 to save the club from dissolution. This sale, the third such effort by the club since 1923 and the first to be open to the general public, formed a stable financial base for the franchise that has continued ever since. While the club was only moderately successful throughout the remainder of the 1950s, the ground had been laid to set the course for the greater success yet to come.

In 1959 the Packers hired Vince Lombardi, an assistant coach from the New York Giants, to become only the fifth head coach of the team in 40 years. Over the next nine years, Lombardi became a legend in Green Bay and throughout the country, both because of the success to which he led his teams, and for the unswerving loyalty he demonstrated to his players, friends, and colleagues in Wisconsin and

the pro football community. By Lombardi's third season as coach (1961) he had transformed the Packers from a mediocre club to NFL Champions, a feat the team would repeat four more times under his (1962, 1965, 1966, 1967). Within this span the Packers won the first two Super Bowls in 1966 and 1967, setting in motion the development of the Super Bowl as America's premier one-day sporting spectacle. The team's dominance was so commanding during this era that the NFL named the Super Bowl Championship trophy after the Packers legendary leader, the Vince Lombardi Trophy. This honor could be attributed in part to Lombardi's phenomenal success as a coach in Division and League Championship games alone, winning nine out of ten such games in which his teams participated.

During the Lombardi era, Green Bay was not only blessed with exceptional coaching, but also with a collection of Hall of Fame caliber players seldom matched in the history of the NFL. Lombardi himself was inducted into the Hall of Fame in 1971, and ten players who played for him in Green Bay are now also enshrined in the Pro Football Hall of Fame in Canton, Ohio. These players are Jim Taylor, Forrest Gregg, Bart Starr, Ray Nitschke, Herb Adderley, Willie Davis, Jim Ringo, Paul Hornung, Willie Wood, and Henry Jordan. Starr led the Lombardi-era teams as quarterback, and later followed his legendary mentor as Packers Head Coach from 1975 to 1983. His successor in that position was his Green Bay teammate and fellow

Hall of Fame member Forrest Gregg, who led the team from 1984 to 1987, having previously taken the Cincinnati Bengals to Super Bowl XVI in 1982. All of Lombardi's players praised their demanding coach for pushing them to give their very best, but also for his undying loyalty to those men who showed their dedication to him. The influence of Lombardi's charismatic leadership ability has remained evident in the way that many coaches and business executives have continued to follow his axioms, while some even continue to play taped speeches he made regarding leadership, effort and teamwork.

Following the Lombardi era, the Packers slipped into another period of on-field mediocrity, although the fans in Green Bay and throughout Wisconsin continued to support the team unflinchingly with their attendance at games in Lambeau Field. During this period, some critics, skeptical of the Packers' location in a small, mid-western city, blamed the team's poor performance on their hometown. However, the residents of Green Bay, as well as Packer fans throughout Wisconsin and across the country, never lost hope that the team would return to greatness. Following the Starr and Gregg coaching periods, Green Bay hired noted offensive innovator Lindy Infante to coach the team, but nobody was able to emulate the success of coaching legends Lambeau and Lombardi. Throughout the 1970s and 1980s, therefore, the Packers remained a second division team in the NFC Central Division, making the league playoffs only twice between 1968 and 1993.

In 1992 the Packers hired Mike Holmgren, the offensive coordinator of the San Francisco 49ers as Head Coach, and a new era of success dawned. By Holmgren's third season new players had been brought in through the college draft, shrewd trades, and free agency, who would help lead the Packers back into the NFL elite. These players included a young quarterback acquired from the Atlanta Falcons named Brett Favre and a talented veteran defensive leader named Reggie White who was signed as a free agent from the Philadelphia Eagles. These players would lead the Packers on the field as Holmgren and his coaching staff devised schemes that would confound opponents into numerous strategic errors, in a manner similar to the Lombardi era. In 1994 the Packers returned to the playoffs for the first time since 1983, and by 1996 the team had risen to the top of the league, winning Super Bowl XXXI. In 1997 the Packers again reached the Super Bowl, but were forced to bow to the Denver Broncos in one of the closest and most hard fought battles the game had seen in many years. During this dramatic run of success, Favre proved the greatest beneficiary of Holmgren's coaching, moving from a reserve player with the Falcons to winning the League MVP award for three consecutive seasons from 1995 to 1997.

Through all of the team's successes and hardships, the citizens of Green Bay and fans throughout the United States have always supported the Packers. While playing in the smallest city to hold an NFL franchise, the Packers have enjoyed unparalleled fan support, ranging from consistent sell-outs at Lambeau Field to the financial aid of the stock sales that have made the team the only publicly held franchise in professional sports. The Packers have become an institution in American sport, and a "pilgrimage" to Lambeau Field is among the most cherished events for many professional football fans throughout the country. Legions of Packer fans have come to be known as "Cheeseheads" for their devotion to the club, and the comical cheese-wedge shaped hats they wear in honor of the state's most famous dairy product. The cheese-adorned paraphernalia, which

Packer fans wear in concert with the club's green and yellow colors, are among the most popular souvenirs for NFL teams, as well as in all of sport. No other professional franchise enjoys the complete support of its community in quite the same manner as the Green Bay Packers.

## Green Lantern

Green Lantern is one of the oldest and most popular comic-book superheroes. The character first appeared in DC comic books in 1940. Wielding a magic power-ring capable of performing a variety of feats, Green Lantern spent his early years championing the interests of common citizens against crooked stock brokers, greedy businessmen, and corrupt politicians before taking on America's enemies in World War II.

Although his initial comic-book series was canceled in 1949, DC revived and revised the character ten years later and has kept him in publication ever since. The "modern" Green Lantern uses his power-ring in the service of an intergalactic police force. In 1970, Green Lantern's comic book became a vehicle for "relevant" stories that critiqued America's social ills.

## Greenberg, Hank (1911-1986)

Noted as the first Jewish baseball star, Hank Greenberg became a hero to a generation of Jewish fans and led the way for greater Jewish opportunities in baseball. Greenberg debuted at first base for the Detroit Tigers in 1933 and faced anti-Semitism from fans and opposing teams. Yet "Hammerin' Hank" withstood this and managed to win two Most Valuable Player awards, earn four batting titles, hit 58 home runs in 1938, and get inducted into the Baseball Hall of Fame in 1956. Greenberg fought over four years in World War II, and set a precedent after the war by becoming the first Jewish owner and general manager in baseball. Greenberg's popularity changed America's perspective on Jews, and he has come to symbolize a hero who

overcame prejudice to lead his baseball team, his country, and his faith.

## Greenpeace

Formed in 1971 by a group of Canadian and expatriate American Sierra Club members who wanted a more active form of environmentalism, Greenpeace is a global environmental organization with offices in 23 countries and international headquarters in Amsterdam. Its major campaigns include Atmosphere and Energy, Nuclear Weapons and Nuclear Power, Tropical Rainforests, Toxics, and Ocean Ecology. Its mission combines both environmental and peace issues. Since its inception, Greenpeace has been involved in hundreds of highly publicized direct-action campaigns against major polluters and government nuclear testing. Its flamboyant protests in the cause of ocean ecology in the 1970s heightened public awareness to environmental abuses around the world and drew millions of people to its membership list. Political pressure exercised by Greenpeace led to global treaties protecting whales and dolphins. It shocked public sentiment into action with graphic footage of baby seals being bludgeoned to death. In 1998, Greenpeace, one of the world's largest, wealthiest, and most successful environmental groups, had a membership totaling over 5 million people worldwide.

Greenpeace relies heavily on canvassing, telemarketing, and direct mail campaigns for mobilization, retention, and fund raising. Not allied with any political party, it accepts no corporate donations, and ninety percent of its revenues come from membership dues and other contributions. To promote their confrontational tactics, Greenpeace operates an international information service that consists of four units: Hard News and Features, Film and Video, Photo Desk, and Publications Division. It also runs mass-media crusades, drafts and lobbies for international conventions, participates in educational campaigns, and sells Greenpeace merchandise such as T-shirts and posters. Greenpeace concerts, albums, and compact discs, featuring groups such as U2, REM, and other major acts, market the organization's message to the world's youth.

The elemental principle behind the operation of Greenpeace is the American Quaker tradition of "bearing witness"—drawing attention to objectionable activity by unwavering presence at the site of abuse. The organization has a "navy" of eight ships, an "air force" of one hot air balloon and two helicopters, as well as an "action bus." Its bold protests have included sailing into nuclear testing zones, intercepting whaling vessels, and hanging banners from bridges,

skyscrapers, and smokestacks. In the 1970s and 1980s, these demonstrations drew enormous media attention and Greenpeace became a model for other organizations by utilizing the mass media to influence public opinion. As a result of its campaign against the killing of harp seals, people around the globe changed their buying habits and stopped purchasing products made out of the seal pelts. In 1985, After protests against nuclear testing in the South Pacific, the French government sabotaged the organization's flagship, the *Rainbow Warrior*, in New Zealand. The sinking killed Fernando Pereira, a Greenpeace photographer, and sparked worldwide condemnation against France. This incident resulted in a doubling of the group's membership and a tripling of its revenues. It became the organization of choice for many high-profile celebrities and the pet issue for many Western politicians. The French government eventually paid Greenpeace \$8 million in compensation for the destruction of the *Rainbow Warrior*.

During the 1990s, Greenpeace increasingly moved into the corporate board rooms, law offices, and scientific laboratories of the mainstream, but direct action—nonviolently confronting polluters and marine mammal killers—is what Greenpeace is best known for in the public mind. As Chris Rose, program director of Greenpeace UK

in 1993 pointed out, "The moral imperative of demonstrators and direct action to save whales on the high seas was set against rationalizations and sales images of conventional commerce, and the whales won." The mythology of Moby Dick and Captain Ahab that had dominated human consciousness about whaling for over a century had been destroyed. The story became one of courageous whales fighting men in giant boats. Greenpeace's media exploits and public relations drives were the centerpiece of its strategies and the prototypes for other social movements striving to assert a presence in the electronic age. With its reputation as an effective, persistent, and uncompromising environmental organization, grown from its prowess as an efficient publicity machine, Greenpeace has been instrumental in alerting people around the world to environmental evils. Together with other organizations, it succeeded in moving the protection of the environment from a marginal to a central public and moral concern.

## Greenwich Village

Greenwich Village's known history dates back to the sixteenth century, when it was a marshland called Sapokanikan by Native Americans who fished in the trout stream known as Minetta Brook. When the Dutch first settled on Manhattan in 1621, naming the area New Netherlands, all but a small area on the Southeastern tip of the island was left untouched by the Europeans. When the colony passed to British hands in 1664 and became New York, a few farms and estates emerged some miles to the north of the city; the settlement evolved into a country hamlet, first designated Grin'wich in 1713 Common Council records.

The village was transformed overnight in 1828, when yellow fever caused thousands of city dwellers to flee to the Greenwich countryside. Many of these displaced city-folk enjoyed the country, and throughout the following decade the village grew as businesses and residents moved their permanent homes there.

As the population of Manhattan grew, the city felt the need for northern expansion in an orderly fashion. The city council adopted a grid plan in March 1817 which would have placed gridded streets running from river to river, cutting through the heart of the fledgling village. The village people were outraged. During the year that the grid war waged, an anonymous 62-page pamphlet was submitted to the city laying out an argument against the plan. Soon after, the council backed down and limited the grid to the east of what is now Sixth Avenue and north of what is presently Fourteenth Street.

During the early nineteenth century, as New York University grew on the east side of Washington Square, religious denominations

commissioned buildings with elaborate decorative schemes and the neighborhood soon became the site of art clubs, private picture galleries, learned societies, literary salons, and libraries. Fine hotels, shopping emporia, and theaters also proliferated. The character of the neighborhood changed markedly at the close of the century when German, Irish, and Italian immigrants found work in the breweries, warehouses, and coal and lumber yards near the Hudson River and in the Southeast corner of the neighborhood. Older residences were subdivided into cheap lodging hotels and multiple-family dwellings, or demolished for higher-density tenements.

The Village at the turn of the twentieth century was a quite picturesque and ethnically diverse area. By the start of World War I it was widely known as a bohemian enclave with secluded side streets, low rents, and a tolerance for radicalism and nonconformity. Attention became increasingly focused on artists and writers noted for their boldly innovative work. The bohemian atmosphere helped to make Greenwich Village an attraction for tourists. Entrepreneurs provided amusements ranging from evenings in artists' studios to bacchanalian costume balls. During Prohibition local speakeasies attracted uptown

patrons. Decrepit rowhouses were remodeled into "artistic flats" for the well-to-do, and in 1926 luxury apartment towers appeared at the northern edge of Washington Square. The stock market crash of 1929 halted the momentum of new construction.

During the 1930s, galleries and collectors promoted the cause of contemporary art. Sculptor Gertrude Whitney Vanderbilt opened a museum dedicated to modern American art on West 8th Street, now the New York Studio School. The New School for Social Research, on West 12th Street since the late 1920s, inaugurated the "University in Exile" in 1934.

The Village had become the center for the "beat movement" by the 1950s, with galleries along 8th Street, coffee houses on MacDougal Street, and storefront theaters on Bleecker Street. "Happenings" and other unorthodox artistic, theatrical, and musical events were staged at the Judson Memorial Church. During the 1960s a homosexual community formed around Christopher Street; in 1969 a confrontation by the police culminated in a riot known as the Stonewall Rebellion, regarded as the beginning of the nationwide movement for gay and lesbian rights. Greenwich Village became a rallying place for

antiwar protesters in the 1970s and for activity mobilized by the AIDS epidemic in the 1980s.

## Greeting Cards

Forms of correspondence with preprinted written sentiments and illustrative pictures, greeting cards have in many ways replaced more traditional and personalized forms of communication like letter writing by appealing to the needs of busy Americans and their willingness to mark an increasing number of holidays and events in largely commercialized ways. Rather than writing lengthy missives by hand, Americans since the turn of the century have found it easier to purchase prewritten sentiments in the form of greeting cards that they need only sign, address, and mail.

The earliest objects resembling greeting cards were handmade Valentines, popular in Europe and America in the eighteenth and nineteenth centuries. By the 1840s, both English and German chromolithographers had developed techniques allowing them to publish full-color postcards commemorating, primarily, Christmas and Valentine's Day. These enjoyed large commercial success in America as well as Europe, beginning what would become an American habit of sending manufactured rather than personal correspondence. The popularity of these early holiday cards also marked

the increasing mobility of Americans and their need to communicate with friends and relatives now miles rather than blocks away, and appealed to the needs of busy people.

After the Civil War, the United States experienced what historian Leigh Eric Schmidt has termed the "commercialization of the calendar," an increasing prevalence of business-inspired holidays that were marked in increasingly homogenous ways. In about 1866, Louis Prang, a Boston printmaker, perfected his "chromo" process and was therefore able to produce finely detailed printed images in full, bright colors. Prang applied his talents to media of all sorts, including advertising trade cards, fine art prints, and calendars. His work producing Christmas cards, beginning in 1874, was the start of American greeting card production and the gradual unseating of European imports. Soon after Prang's first cards, he added birthday, New Year's, and Easter cards. These early cards, still in postcard form, were often embellished with detailed surface embossing, applied glitter, and silky fringe.

In the first decade of the twentieth century American producers completely overtook European manufacturers, creating a new sensibility for greeting cards and establishing the most enduring form of the greeting card, the folded piece of paper with a picture on the front, a written sentiment of verse inside, and a size-matched envelope. These early companies included the A. M. Davis Company, Rust Craft Publishers, the Keating Company, the Gibson Art Company, Hall Brothers, and American Greetings, which all enjoyed industry solidarity after the formation of the National Association of Greeting Card Manufacturers (later, The Greeting Card Association) in 1913. The success of these companies relied on Americans' increasing propensity to acknowledge a greater number of holidays: Mother's Day, Father's Day, and St. Patrick's Day were quickly added to the modern celebratory schedule. The greeting card industry worked together with the floral, jewelry, and confectionery industries not only to ingrain the importance of holiday celebrations in the collective American psyche, but also to make Americans feel more comfortable about relying on premade commodities to do so.

The most enduring of the early greeting card manufacturers were Hallmark, American Greetings, and Gibson Greetings, all founded between 1907 and 1914. Hallmark, established in 1914 in Kansas City, Missouri, by Mr. Joyce C. Hall and his brother Rollie, was the most successful of the three—in 1995, Hallmark possessed 42 percent of the market, followed by American Greetings with 35 percent and Gibson with 8 percent. With revenues estimated at \$3.8 billion in 1994, it is no wonder that Hallmark has been called the "General Motors of emotion." As such, the company also cultivated its image of being a producer of down-home, conservative sentiments. J. C. Hall was a close friend of Walt Disney, and often incorporated wholesome Disney images into his cards, along with the works of other traditional illustrators like Norman Rockwell. In addition, Hallmark sponsored television's well-known drama series, the Hallmark Hall of Fame, beginning in the 1950s, and coined the slogan, "When You Care Enough to Send the Very Best." To critics, Hallmark had achieved the dubious reputation of being a purveyor of bland, mass-produced feelings that reflected the most banal of middle-American thoughts.

Greeting cards have not only tapped into, but also reflected changing American sentiments, aesthetic preferences, and preoccupations throughout the twentieth century. During the Depression,

some Mother's Day cards came embellished with a precious piece of lace; and special Mother's Day cards during World War II were made and sent to women who had lost their sons in the war. Continuing to tap into the contemporary zeitgeist for their success, card companies in the late 1970s responded to a growing American cynicism, producing "alternative" humor lines alongside their more conservative and sentimental staples. By the mid-1980s larger companies began to capitalize on baby boomers' growing desire for self-expression and feelings of individuality by developing more specific lines of greeting cards. By the 1990s Hallmark itself had its own alternative humor card line called Shoebox Greetings. Its Mahogany line, targeted toward African-American audiences, strove to open up the world of greeting cards to nonwhite faces and sensibilities. Hallmark's Recovery line offered cards for former addicts, and the Thinking of You line included cards for such late-century concerns as downsizing, the needs of caregivers, new divorcees, PMS, and the struggles of weight loss.

With the help of women, who purchased more than 85 percent of all greeting cards in 1998, Hallmark enjoyed \$3.7 billion in revenue, while American Greetings took in \$2.2 billion. Card companies have also realistically acknowledged the potential encroachment of computers into their businesses by setting up in-store kiosks where one can create one's own computer-generated card. Hallmark has even developed a computer program that allows one to produce individualized cards at home.

## Gregory, Dick (1932—)

Dick Gregory brought a unique approach to political activism: he was one of the first African Americans to use his celebrity to promote a variety of political causes. He has intertwined his political beliefs with his work as an athlete, comedian, author, actor, and nutritionist since the 1950s. As the first Black comedian to work in "top-of-the-line" white nightclubs and on television, Gregory was one of the first African Americans to define Black issues for a mainstream white audience. He reached millions with his popular satirical comedy, bringing to light such issues as racism, civil rights, segregation, and nonviolence. He also used his humor to promote his

Dick Gregory

ideals in his movie appearances and books. In the 1960s, Gregory used his visibility as an entertainer to bring political causes like the civil rights movement, the antiwar movement, and the fight against violence, hunger, drug and alcohol abuse, and poor health care to popular attention. He combined his celebrity with such "attention-getting" tactics as fasts for political causes.

Born Richard Claxton Gregory on October 12, 1932, he was raised in poverty in St. Louis, Missouri. Gregory realized the power of politics at an early age; while in high school he was president of his graduating class and organizer of a march against conditions in segregated schools. With his interest in activism, Gregory soon learned the benefits of combining fame with politics. An athletic scholarship to Southern Illinois University (SIU) helped him achieve athletic fame on the track team as the fastest half-miler ever at SIU, and, in 1953, he was the first Black student awarded the school's Outstanding Athlete of the Year award. Gregory used his prominence to desegregate Carbondale's only movie theater.

While in the Army, Gregory performed comedy shows, and by the late 1950s he had begun working in Chicago nightclubs. He parlayed a one-night gig at the prestigious Playboy Club into a six-week run that brought him national recognition, winning him coverage in *Time* magazine and an appearance on the popular *Jack Paar Show*. He subsequently had gigs at numerous nightclubs, concerts,

and on other television shows. Gregory's unique ability to use humor and wit to publicize political discourse to a large cross-section of the general population also brought the attention of Medgar Evers and Martin Luther King, Jr., who asked him to become more involved with the civil rights movement. He performed at benefits for groups like the National Association for the Advancement of Colored People (NAACP) and Congress of Racial Equality (CORE). He became involved with Martin Luther King, Jr.'s Southern Christian Leadership Conference programs, and in 1963 he helped collect and deliver 14,000 pounds of food to people in Leflore County, Mississippi. A strong advocate of King's non-violent movement, he was often jailed with King for civil disobedience.

In the 1960s Gregory wrote a number of books which continued his campaign for the civil rights movement. He titled his 1964 autobiographical work *Nigger* as a shock tactic. The tactic seemed effective as the book sold over a million copies. Gregory ran for mayor of Chicago in 1966 and for president of the United States in 1968. Those experiences were recounted in his book *Write Me In*. Gregory continued his fight to promote civil rights and his theories on how the government has tried to kill the civil rights movement and its leaders in books like *No More Lies: The Myth and the Reality of American History* and *Code Name Zorro: The Murder of Martin Luther King*, which he co-authored with Mark Lane. In addition to his books, Gregory made social commentary comedy records to spread his message even further. One of his records was the first "talk" record to sell over a million copies.

By the late 1960s and early 1970s, Gregory had expanded his activism to address issues including the Vietnam war, healthcare, capital punishment, Native American land and fishing rights, violence, and world hunger. Gregory began using fasts to bring attention to issues. In the tradition of Ghandi, Gregory began one of his many fasts in 1967 to protest the Vietnam War. His forty-day fast was sprawled over the media. Since that first fast, Gregory has fasted over 100 times for political causes, including one fast of 71 days.

In addition to his political causes, Gregory became one of the first celebrities to strongly advocate vegetarianism, becoming an expert on nutrition and a marathon runner in the 1970s. He jogged across the country to gain recognition for his political analysis of health and nutrition issues and his belief that nutritional solutions can help alleviate world hunger. In 1973, he published *Dick Gregory's Natural Diet for Folks Who Eat: Cooking with Mother Nature* and formed Dick Gregory Health Enterprises, Inc. around his nutritional product, the chemical-free, dairy-free Bahamian Diet in 1984. Gregory focused his health work on the African American community, blaming their lower life expectancy on poor nutrition and alcohol and drug addiction. To do his part to alleviate world hunger, he donated 2,600 pounds of his nutritional formula to starving Ethiopians. Gregory's approach to nutrition brought together issues of healthy eating, world hunger, and racism.

Throughout the 1990s, Gregory continued fighting for and gaining recognition for a wide spectrum of political causes. Despite being credited with "opening the door" for many Black comedians, Gregory stayed out of the entertainment business. Instead, his ability to combine wit, intelligence, humor, and political conviction continued to help support many political causes.

## Gretzky, Wayne (1961—)

The greatest hockey player of his generation and one of the greatest of all time, Wayne Gretzky's greatest contribution to the sport is his part in helping to popularize it throughout the United States. The National Hockey League has successfully expanded in California and across the Sun Belt (often, it must be said, at the expense of the game's Canadian roots); NHL-licensed apparel is worn by millions of American young people; and an increasing percentage of players joining professional teams are from the United States.

Gretzky was born in Brampton, Ontario, Canada, began skating at age two-and-a-half, and was taught hockey by his father, Walter. Even as a small child Gretzky's hockey skills were remarkable—at age ten he scored 378 goals in 69 games for a local peewee team,

Wayne Gretzky.

attracting the attention of professional scouts and the national media. When the up-start World Hockey Association began signing players at a younger age than the established NHL, Gretzky became a pro at the age of seventeen, agreeing in 1978 to a contract with the Indianapolis Racers. Like many other WHA teams, the Racers were under-financed, and owner Nelson Skalbania was forced to sell the skinny center to the Edmonton Oilers in one of the most ill-conceived transactions in the annals of professional sports.

In Edmonton, Gretzky joined a team possessed of a number of promising young players. After one year the Oilers organization joined the National Hockey League and Gretzky was able to demonstrate his talents to a larger audience. Despite doubters who pointed to his slight build and lack of speed, in 1979-1980, his first season in the NHL, Gretzky won the Rookie of the Year award. In his second campaign he broke Phil Esposito's single-season points record, and in his third he smashed his own record with an astonishing 92 goals and 212 points. In a sport where fifty goals in a season of eighty games denoted a superstar, Gretzky raised the level of superlatives by reaching the mark of fifty goals in thirty-nine games. In the mid-1980s, the Edmonton Oilers were one of the most exciting and successful teams in league history, winning the Stanley Cup in 1984, 1985, 1987, and 1988.

By 1988, however, Gretzky's talents could command more in salary than a small-market team like the Oilers claimed they could afford, and he was dispatched to Los Angeles for a package of players, draft choices, and \$15 million. The trade that was a disaster for Edmonton fans turned out to be a gift to professional hockey in general and the Los Angeles Kings in particular. With Gretzky's marquee presence in a major mediacentre, the profile of the sport was raised enormously in California and throughout the United States. Gretzky's amiable features appeared in national endorsements, he hosted *Saturday Night Live*, gave interviews to Johnny Carson, and was even cast in a television soap opera. The Forum arena was sold out for the entire season, celebrities flocked to games, and more American children started to play hockey.

The same level of success on the ice was harder to come by. Despite leading the Kings to the Cup finals in 1993, where they lost to the Montreal Canadiens, Gretzky found team management unable to assemble a supporting cast of players as talented as he had enjoyed in Edmonton. At his request, he was traded to the St. Louis Blues in 1996, but this proved to be an unhappy experience, and after that season he signed with the New York Rangers. Once more, his arrival in a large American market sparked media interest, but again his skills, declining with age though still considerable, were insufficient to lift his team to cup-winning form. Gretzky retired from the game on April 18, 1999.

Gretzky holds sixty-one NHL individual records. He won the scoring championship ten times and was voted Most Valuable Player nine times; eighteen times he was voted to the All-Star team (and three times he was the game's MVP). Along with his four Stanley Cups, he played a leading part in three of his country's Canada Cup victories.

## Grey, Zane (1875-1939)

Author Zane Grey had a significant and lasting influence on American culture. Considered the creator of the modern Western novel, his work shaped the imagery of the West in the popular imagination. Many evaluations of the genre concentrate on the literary attributes of its writers. These literary considerations tend to outweigh the cultural resonance of the Western's popular appeal and often lead to the underrating of Grey's work in particular. As well as his ability to establish place and evoke the landscape of the mythical West, Grey endowed his work with a sense of popular history. He also negotiated cultural tensions that revolve around such issues as the coming of modernity, marriage, religion, and the returning veterans of World War I, which appealed to an exceptionally broad range of readers. He was serialized in the *Ladies Home Journal* as well as *Colliers Country Gentleman* and *McCalls*, and numerous books of his were translated into films, some made by his own company. He insisted that these were shot on location, thus introducing, through the cinema, a very particular visual depiction of the West that still endures. Arizona is now known to tourists as Zane Grey country.

Grey was born in Zanesville, Ohio, in 1875. He studied dentistry at Pennsylvania University, and then practiced in New York, where he published his first novel *Betty Zane* under his real name, Pearl Grey. His first books, set in Ohio, were based on family history of the pioneer period, and followed in the tradition of James Fennimore Cooper. However, although filled with adventure, they did not really convey the sense of the Wild West in a cohesive or effective form. Then, in 1907, at the Campfire Club in New York, Grey met Charles Jesse "Buffalo" Jones, a conservationist who labored to save the buffalo from extinction. He joined Jones as a writer and photographer on a trip to Arizona and across the Painted Desert and the Grand Canyon, and during these travels met and lived with Native Americans, cowboys, and Texas rangers; thereafter his writing evolved into authentic and convincing descriptions of the West. He wrote his first account of his travels in *Last of the Plainsmen* (1908), but did not become successful until the publication of *The Heritage of the Desert* (1910), which established his individual style. In the prefatory note to *Last of the Plainsmen*, Grey writes, "As a boy I read of Boone with a throbbing heart, and the silent moccasined, vengeful Wetzel I loved. I pored over the deeds of vengeful men—Custer and Carson, those heroes of the plains. And as a man I came to see the wonder, the tragedy of their lives, and to write about them."

Grey's novels use the frontier west of the 98th Meridian to create a new landscape for the West. This rugged and exacting territory, inhabited by extremes of good and evil, legitimates violence, yet offers redemption. It also provided Grey with a fictional space through which to address the anxieties of the period in which he was writing, and to offer the prospect of escape from them. *The Heritage of the Desert* opens with intense religious imagery projected on to the desert landscape and leads into a dramatic romantic adventure. The eastern hero is nursed back to health by a Mormon, and falls in love with his half Navajo, half Spanish adopted daughter. The girl needs to be rescued from an impending marriage to the villain, a circumstance that culminates in a climactic shoot out. It was, however, with *Riders of the Purple Sage* (1912) that Zane Grey made his name. Originally rejected by the publishers because of its harsh treatment of Mormon

**Zane Grey**

culture, the novel went on to sell two million copies. Grey continued to travel throughout his career and incorporated his experience of landscape and knowledge of oral history directly into his fiction. He published 54 novels in his lifetime, and more were released posthumously. For the most part, they have very simple adventure plots, but are structured into thrilling and romantic episodes sustained by their evocative settings.

At the height of his popularity between 1917 and 1924, Grey's novels made Bookman's top ten bestseller list every year. *The U.P. Trail* (1918) and *The Man of the Forest* (1920), the two major bestsellers, illustrate the appeal of Grey's work. *The U.P. Trail* is based very specifically on the history of the Union Pacific Railroad between 1864 and 1869, and incorporates the endurance of the pony express rider and the introduction of the telegraph to the West. The background to the narrative accords with popular memory. *The Man of the Forest* is set in 1885, within living memory, and the story follows the integration of a woodsman into the community of the West through his romance with a spirited eastern girl. She finds her full potential in the West and is ready to build a homestead in "Paradise Park." Novels such as *The Desert of Wheat* (1919), *The Call of the Canyon* (1924), *The Vanishing American* (1925), *Under Tonto Rim* (1926), and *The Shepherd of Guadaloupe* (1930) are set contemporaneously and deal with modern issues and recent changes. They therefore establish the ethos of the West as a living idea rather than a lost ideal.

The formula that Grey established for the modern Western is one of moral regeneration or redemption, with heroic individuals proving themselves by living up to basic code of American values. His characters live by a "Code of the West" that differentiates between hero and villain, and leads to inevitable confrontation. He presented the Western hero in a manner that would become a central convention. He pays much attention to details of dress, appearance, and stance of his heroic characters. In *Riders of the Purple Sage*, for example, Lassiter is the mysterious gunfighter delineated by his fast draw, his costume, his honor, and his shady past. Here Grey introduced the professional gunman as a hero, but in the majority of his Westerns the older heroes are ready to be re-incorporated into society or commit themselves to very independent heroines. In most cases these women also come to recognize higher moral values through their experience in the West.

Although women are largely absent in the action of the Western, Grey's novels often feature a female protagonist, or pioneer characters. Heroines true to romantic formula are introduced at a stage where they have lost their social identity, which is restored in the course of the narrative through their own test of character in the Western landscape and not merely by the hero. In *Riders of the Purple Sage* Jane Withersteen attempts to stand up to the patriarchal Mormon power structure in which she has been orphaned. Part of the oppression she faces is the terrorism of a gang of outlaws, especially "The Masked Rider" who is revealed to be a girl brought up in the immoral culture of men. Grey is often accused of priggishness in his depiction of his heroes, and this tendency is also found in his heroines. He perfected two extremes of heroine: the cold, flirtatious, eastern sophisticate who reveals her deep and passionate love for the hero, and the practical, unladylike western girl, whose seeming promiscuity proves to be a blind.

These simplistic characters, and his constant appeal to religious symbolism and heightened moral codes, lead Grey's stories very

easily into the realm of melodrama and sentimentality in which the stories address particular fantasies of freedom away from the corruption and constraints of city life. His characters frequently confront the dilemmas of modern life, as does the flapper heroine of *Code of the West* (1934) who chooses marriage to the hero because she recognizes his worth. More pointedly, a similarly drawn heroine in *The Call of the Canyon* (1924) marries a shell-shocked World War I veteran and chooses the harsher, but more essentially American West in which to raise a family. The Western landscape, with its promise of abundant riches, offers the protagonists a chance to re-make their lives according to higher moral values, in contrast to their old life and that of those around them.

Grey is often accused of being either ambivalent or complacent about the Native Americans who feature in his stories. For *The Vanishing American* (1925) he adopted the melancholy stance of Fennimore Cooper regarding the inevitably doomed fate of Native American culture; while the nobility of the Indian is part of the Western myth, he cannot win against the dishonesty of the white man. Regret at the passing of the buffalo herds and other species of wildlife and their habitats can also be detected in Grey's writings, and *The Vanishing American* gives evidence of Grey's grounding in other contemporary concerns, such as corruption in the U.S. Bureau of Indian Affairs, which is exposed by the narrative.

After 1925, Grey no longer appeared on the bestseller list, but his influence continued during the 1940s and 1950s through films based on his books, as well as through *Zane Grey's Western Magazine* and television's *Zane Grey Theatre* (1956-61). However, the Western film as a high budget production went into decline after 1930 until the formula was successfully reworked in John Ford's *Stagecoach* (1939). Although based on an Ernest Haycox story, the film—shot in Arizona and famously featuring Monument Valley—was a perfect expression of Zane Grey's articulation of the West. The revitalized formula, of which Ford was the master, explored the psychological depth of its characters at a time when the morality and romance of the 1920s Westerns seemed old-fashioned and melodramatic to Depression audiences with more complex concerns. Grey continued to publish fiction until his death in 1939, and sold his version of the winning of the West to an international audience, sustaining a myth that remains embedded in popular culture.

## Greyhound Buses

There is barely a town or a city in the United States that is not served by Greyhound bus lines, which began operating in 1914 and became a romantic emblem of America, its wide open spaces and its freedom to travel cheaply and explore the horizons of the country. Swedish immigrant Carl Eric Wickman began the enterprise in Hibbing, Minnesota, shuttling miners to and from work in a seven-passenger Hupmobile. He quickly expanded his operation and began buying out competitors; by 1935 the Greyhound Corporation owned 1,726 buses running over 46,000 route miles. Although their surrounding neighborhoods may have come to seem dilapidated, bus stations often served as the focal point of many a downtown district. Even in this age of the frequent flyer, Greyhound transports more than 45 million passengers annually. The well-known slogan "Go Greyhound . . . and leave the driving to us" rests within our collective consciousness, and the familiar red, white, and blue bus with its

painted profile of an outstretched racing dog has become as much a part of popular culture as any single icon of the road.

## Grier, Pam (1949—)

In the early to mid-1970s, American actress Pam Grier emerged as a tough heroine in the genre of "blaxploitation" films. With Hollywood's history of relegating African Americans to demeaning roles and women to love interests or other support positions, Grier quickly stood out as a groundbreaker. Though she got her start in "B" movies such as *The Big Bird Cage* and *Beyond the Valley of the Dolls* in 1969, Grier soon rose to stardom playing grass roots vigilantes in

*Coffy* (1972) and *Foxy Brown* (1974). Many critics faulted her films for their violence, sensationalism, and reliance on her attractive physique, but also recognized them as vanguard vehicles for portraying blacks as smart and self-sufficient, as well as giving women an important place as strong, confident, and active players. The rise in women's rights and civil rights at the time probably played a factor in the success of Grier's films.

## Griffin, Merv (1925—)

Talk show host Mervyn Griffin began his entertainment career as a singer and emcee with the Freddy Martin big band in the late 1940s. Griffin parlayed his quick wit and affable personality into movie acting opportunities as well as hosting television game and travel shows in the 1950s. He earned his place in the public consciousness, though, as the host of *The Merv Griffin Show*, which ran for 24

Merv Griffin

years from 1962 to 1986. This highly popular television show was, at various times, syndicated by Westinghouse Broadcasting Company and Metromedia as well as playing on the NBC and CBS networks. Known for his jovial, friendly style, Griffin was disparaged as a "softball" questioner by some, and accused of being more concerned with ingratiating himself with his guests than with being a "tough" interviewer. He also founded Merv Griffin Productions, making a fortune producing his talk shows, and packaging dozens of game shows that have continued to grip the nation such as *Jeopardy* and *Wheel of Fortune*. Griffin later made an even larger fortune as an owner of hotels and casinos across the country.

## Griffith, D. W. (1875-1948)

Considered the father of the motion picture and the first great artist of the cinema, director D. W. Griffith revolutionized filmmaking with technical innovations and a narrative structure still in use at the end of the twentieth century. His most significant and controversial movie, *The Birth of a Nation* (1915) established the feature-length film and the Hollywood star system. After a private viewing at the White House, President Woodrow Wilson reportedly remarked that the film "was like writing history with lightning." Released on March 3, *The Birth of a Nation* was not only the longest and most expensive movie to date, but it was the most popular movie of its time and the most politically explosive film in American history.

David Wark Griffith was born on January 23, 1875, in the town of Crestwood in Oldham County, Kentucky. He was an aspiring actor from 1897-1907, traveling from Portland, Oregon, to Boston, Massachusetts, working in stock companies under the name Lawrence Griffith. In 1906, while in Boston, he married his first wife, Linda Arvidson Johnson. His days as a stage actor were unfruitful.

In 1908, the famed director Edwin S. Porter introduced Griffith to his associates at the Biograph Company on 14th Street in Manhattan. Here the young actor gave up his first love to sell stories and ultimately to begin making movies himself. Along with his trusted and accomplished cameraman, G. W. "Billy" Bitzer, Griffith worked at a tremendous pace. From August 1908 through August 1911, he completed an astonishing 326 one-reel films. Through these early years, Griffith experimented with different camera angles, editing, and narrative styles. He used close-ups to produce greater emotional drama and sharp cuts between scenes to quicken a story's pace, believing that action rather than written titles should propel the movie's plot. In 1912 Griffith made a short, *The New York Hat*, with Lionel Barrymore and a young Mary Pickford based on a story submitted by sixteen-year-old Anita Loos, soon to be the most sought-after scenarist in Hollywood. Griffith stayed with Biograph just one more year, but he made his longest and most elaborate film to

D. W. Griffith (third from left) on location.

date in 1913, *Judith of Bethulia*. At four reels, it was four times longer than the standard movie.

Griffith reportedly convinced Bitzer to leave Biograph by telling him that he planned on making the greatest film in history. As an independent producer, Griffith acted as director, producer, distributor, and press agent for his epic *Birth of a Nation*. Based on Thomas Dixon's novel *The Clansman* (1905), Griffith's movie faithfully depicted the Reconstruction Era that immediately followed the U.S. Civil War as a period in which African-American men threatened the purity of the white race politically, socially, and sexually. From 1915 to 1946, a reported two hundred million people saw the film. During the first weeks of the movie's release, Americans lined up along sidewalks and in New York City paid the extraordinary price of \$2.00 a seat for a chance to see the most talked-about movie of the year. With more than twelve reels of film, it ran a record two hours. The movie cost more than \$100,000 to film but grossed an astonishing \$18 million.

The technical innovations that Griffith employed to make his film have continued to impress viewers and film historians alike since 1915. For example, Griffith had Bitzer set up his camera at ground

level to capture the power and frantic torrent of horse hoofs at full gallop on a dusty road. Such a scene illustrated the capabilities of the movie camera if freed from its stationary position in front of a stage. Using an array of camera angles—close-ups, long shots, cutbacks—Griffith proved that directors could make long movies and still hold the audience's attention. Parallel editing—cross-cutting footage of different events—achieved suspense and created the illusion of simultaneous action.

Repugnant to modern audiences yet reflecting widespread American sentiments at the time, the overt racist and nativist imagery, specifically the sympathetic portrayal of the Ku Klux Klan, throughout *Birth of a Nation* provoked the NAACP, a young organization in 1915, to rally black and white people around the country to picket theaters showing the movie. Surprised by the strong reaction to the film and believing it threatened his freedom of speech and, perhaps more importantly, his artistic integrity, Griffith released the anti-bigotry epic *Intolerance* in 1916. As popular as *Birth of a Nation* was, *Intolerance* proved to have a stronger effect on other directors. Among those under Griffith's influence was the famous Soviet director Sergei Eisenstein, who believed the American's style of rapid-fire editing had advanced filmmaking by a decade.

Griffith directed another twenty-six features between 1916 and 1931 but never again enjoyed adulation as the world's most brilliant director. He ended his career working from his Mamaroneck studio, a suburb of New York City, to be closer to the financial center of the movie industry.

## Griffith, Nanci (1954—)

Almost alone among commercially successful singer-songwriters within folk and country music, Nanci Griffith represents a refreshing contrast to the bland offerings of the music industry's hit-making machinery. Defying easy categorization into the standard pigeon-holes, Griffith once described her own style of music as "folkabilly." After 15 albums Nanci Griffith still seems to be steaming ahead at full throttle. No longer scaling the heights but rather traversing the summit ridge of her creative powers, several of her most recent releases have been met with widespread critical acclaim. She has also captivated a legion of loyal fans.

Nanci Caroline Griffith was born July 6, 1953 near Austin, Texas—a town full of good music, where she penetrated the competitive ranks of a near legendary songwriting tradition. She has portrayed her parents as "beatniks" who enthusiastically supported her attempts to become a folksinger. Nanci's first paid gig was at the age

Nanci Griffith

of 14, when she played at the local Red Lion and made \$11. She graduated from Austin's Holy Cross High School, where she strummed guitar for folk mass, then stayed in the neighborhood by enrolling at the University of Texas. Nanci began playing every Sunday night—and would continue to play for five years—at the Hole in the Wall, a dingy little bar across the street from campus. The bar became her proving ground, for—as she once described it—if you can get loud beer-drinkers to hush up a moment and listen to your songs then you must be doing something right. She tried teaching kindergarten for a while, but by this time her heart was firmly attached to her true calling.

Nanci writes and plays folk music. Not one to shy away from this particular "f-word," she capitalizes the term because the people are important to her and so is the music. Invoking the muses of this particular genre has turned into a one-woman crusade to resurrect what's good and true among the earthier forms of the American song canon. In 1994 Griffith won a Grammy Award for her 1993 album *Other Voices, Other Rooms*, which paid tribute to songwriters she has come to admire. Her 1998 release, *Other Voices, Too (A Trip Back to Bountiful)*, serves as a continuation of this project. She cites Carolyn Hester as an influential figure in her early career, but also draws motivation from the Carter Family, Buddy Holly, and the Everly Brothers. By all accounts, Nanci is even more popular in the British Isles than in the United States. Perhaps this stems from her own Anglo ancestry, or perhaps because British sensibilities allow for greater sophistication in popular music. It may also reflect her residential choices: she has maintained a loft in Dublin for more than a decade, and now divides her time between Ireland and a small farm south of Nashville.

Nanci's first album was recorded in 1978 and subsequently reissued by folk-oriented Philo/Rounder Records (as were her next three). A good representation from this initial foray into record making would be the 1984 title, *Once In a Very Blue Moon*. In 1987 she switched to the predominantly country label MCA, and over the next five years released a series of rich offerings with more production input than the spare earlier records. It was also during this time period that Griffith assembled a first-rate touring band—the Blue Moon Orchestra—that has stayed together and backed her efforts for over a decade. Since 1992 Nanci has recorded on the Elektra label, which has given her wide latitude to experiment with new ambitions and soundscapes. Unanimously well received by critics was a 1994 album, the very personal and heartfelt *Flyer*. She has also recorded with artists as diverse as Bruce Cockburn, John Gorka, The Chieftains, and Hootie and the Blowfish. Her songs have been covered—often as hit records—by many other performers, including Willie Nelson, Suzy Bogguss, and Kathy Mattea.

Stylistically, Griffith is capable of assuming many postures. Her voice, at once so full and supple, can be delicate and hesitant one moment, and growling with anger or unassailable determination the next. That soft Texas twang is never too far away. A true storyteller, she likes to experiment with dialect and playful pronunciation. She has great range of expression, and uses her vocal chords like a richly textured instrument. Whether accompanied only by acoustic guitar or backed with a full string orchestra, it makes no difference; Nanci Griffith is able to reach out and tell us about ourselves through song. Thematically, Griffith takes on the broad sweep of land and life, especially trials of the common person trying to negotiate the lonely distances of modern times. There are accounts of working in orchards and on street corners, of dusty towns, drive-in movies and dashboard lights. She writes of rivers and lakes and fields of bluebonnets, geographical metaphors for sensing our place; there are also railroads and highways, and always the alternative of moving on. She accusingly points to racism, violence, and the inexcusable folly of warfare as pernicious tragedies we can ill afford. An avid reader, Nanci credits writers such as Larry McMurtry, Carson McCullers, and Eudora Welty as major inspirations. Her own stories put to song are situated squarely within the great literary tradition of the South, where the people, the lives they lead, and the land they live on are all worthy of notice. But there is something sad and melancholy about this artist's persona, reflecting bittersweet memories of lost loves and roads not taken. There have been some hard times, perhaps even a few regrets. In this, there is more than a hint of autobiography, thereby lending authenticity to its emotional impact. Her characters often live alone, their broken or half-baked dreams seeing them through one day at a time. Yet there is always hope, the yearning for fulfillment and intimacy never quite extinguished. Such an undeniably romantic vision is usually sustained at great cost. Deep down inside Nanci knows that love is a choice we make—though she can never bring herself to venture a decision.

Fortunately her fans do not face the same dilemma. In one of those paradoxes of popular culture, it seems the more things become homogenized and mass-produced, the more we yearn for interaction with a genuine and distinct expression of artistry. Well loved by a devoted group of admirers, Nanci Griffith has one of the more active news groups on the Internet. Members of "NanciNet" discuss everything from favorite albums and musical influences to the social and political commentary inherent in Griffith's songs. Numerous web pages exist that pay tribute to her artistic achievements. For this

reclusive, self-avowed folk singer, such grass roots activism by the people must be gratifying indeed.

## Grimek, John (1910-1998)

During John Grimek's career as a weightlifter, bodybuilder, and magazine editor—which began in the late 1920s and ended in the mid-1980s—he saw weight training change from being an activity shunned by athletes and exercise scientists into an activity universally embraced by these groups. What's more, because of his remarkable combination of muscle mass, athleticism, and flexibility, he was one of the main instigators of the change in attitude. In the mid-1920s, when young John first began to lift, following the example of his older brother George in Perth Amboy, New Jersey, there were very few men and virtually no women in the United States who trained with heavy weights. It was not that heavy lifting was unknown; it was that lifting was anathema throughout the culture. How such nonsense came to be believed by so many people is important to an understanding of the role John Grimek played in demystifying the notion of heavy lifting.

Beginning in the latter half of the nineteenth century, several influential writers began to argue that the lifting of heavy weights would make a person slow and inflexible, and a new word came into the English language: musclebound. These writers, who included Dr. Dio Lewis, William Blaikie, and Dr. Dudley Allen Sargent, warned prospective weight trainers that, in the words of Blaikie, "If you do work suited to a draft horse, you will surely develop the ponderous qualities of that worthy animal." The arguments of these men, who misunderstood genetics as thoroughly as they misunderstood physiology, were soon bolstered by a group of unscrupulous lifters who had built muscular bodies with weight training and wanted to use those bodies to make money. These lifters realized that it would be difficult to prosper by selling barbells and dumbbells through the mail because such weights were expensive to manufacture and costly to ship. However, they also realized that if they denounced heavy weight training in their mail order advertisements, they could then either sell equipment that was very light (e.g., rubber expanders) or simply sell a course of instruction explaining how to do various callisthenic exercises that required no apparatus.

Together, the misguided writers and the dishonest entrepreneurs gave birth to the myth of the musclebound weightlifter, and almost all coaches, athletes, and trainers came to believe that the worst thing an athlete could do was to lift heavy weights. Thus it was that, throughout the first half of the twentieth century, young men such as John Grimek were looked on with suspicion and even hostility as they pursued their dreams of size and strength. Perhaps because of the

belief that weights would make a person slow and “tie you up,” many lifters during that period worked on their flexibility and athleticism so they could disprove the belief. As for Grimek, it became especially important, as he gained muscular size very quickly and easily. In a few short years, his robust constitution and genetic predisposition combined to produce a body of previously unsurpassed perfection.

During most of the 1930s, there were no bodybuilding contests, and the only place where a young lifter/builder could compete in the “iron game” was on the weightlifting platform. Grimek’s first competition was the New Jersey State Championships in Newark, which he won easily, lifting in the heavyweight class (over 82.5 kg or 181.75 pounds). Later that same year he entered the U.S. National Championships, and exceeded the national record in the press, with 242.5 pounds. He moved to York, Pennsylvania, in 1936 to train with the York Barbell Club and to work for the York Barbell Company, and by winning the National Championships that year he qualified for the 1936 Olympic Games in Berlin.

For the next several years, Grimek continued in competition, reaching his best total in 1940 at the National Championships with a press of 285 pounds, a snatch of 250, and a clean and jerk of 325. That same night, he won his first Mr. America title, and by that time he was far more famous in the small subculture of heavy lifting as a bodybuilder than as a weightlifter. In order for him to compete with the true heavyweights in America and around the world, some of whom weighed up to 300 pounds, it would have been necessary for him to gain 40 or 50 pounds, which would have spoiled the symmetry of his already legendary physique. Robert (Bob) Hoffman, the coach of the York Barbell Club team and owner of the York Barbell Company, analyzed the situation correctly: “I frequently say that a man can’t have everything. John Grimek has more than his share and has done more than his share for weightlifting. . . . He became a weightlifter to prove that there is power in a shapely physique . . . Grimek would be stronger if he was heavier, but he would not have his present physique. I think his physique does weightlifting and the entire cause of weight training more good than would his winning of the world’s championship.”

One of the ways Grimek helped the “cause of weight training” was to serve as the prime example of flexible muscle in Bob Hoffman’s magazine, *Strength & Health*, for which Grimek worked as a writer/editor. From 1932 on, in every issue of his magazine, Hoffman hammered away at the myth of the musclebound lifter and Grimek was his biggest weapon. Photographs of Grimek’s flexibility and stories of his athleticism filled the pages of *Strength & Health* and helped to convince skeptical readers that heavy weights would help them, as Hoffman always said, “in their chosen sport.” Another important way in which Grimek helped the “cause” was by taking part in the many exhibitions arranged by Hoffman. Whenever Hoffman was asked to bring some lifters and put on an exhibition, he would accept if at all possible. He knew that only by exposing the public to the truth that heavy lifting would help a man or a woman at his or her chosen sport, could he hope to dispel the myth of the musclebound lifter. All of these exhibitions chipped away at the myth, as audiences saw for themselves how quick and flexible the lifters were, but in the spring of 1940 Hoffman took a group of lifters, including John Grimek, to Springfield College in Massachusetts. What happened there became a pivotal event in the destruction of the myth.

Fraysher Ferguson, a student at Springfield College (where most of the country’s Y.M.C.A. directors were trained), invited Hoffman to

bring the lifters to Springfield for an exhibition because none of his professors believed him when he said that his lifting helped him as an athlete. One of those professors was Dr. Peter Karpovich, the most widely respected physical educator in America at that time and an avowed enemy of heavy lifting. The hall was packed with students and staff that day, and after Hoffman introduced the two top lifters, John Grimek and world heavyweight champion John Davis, Davis did some heavy lifting and Grimek gave a posing exhibition. Although physiques such as Grimek’s had become common by the last decades of the twentieth century, none of the people in attendance in 1940 had ever seen a man with such huge, defined muscles. Following the exhibition, Hoffman invited questions, and the students turned to Dr. Karpovich. True to form, he rose and asked if “Mr. Grimek would mind scratching the back of his neck.” After drawing a laugh by saying his neck didn’t itch, Grimek obliged, then went on to a series of stunts that included standing on a low stool and touching the floor, straightlegged, with his fingertips and then doing a full side to side leg split. John Davis then did a back flip while holding a 50-pound dumbbell in each hand. The audience burst into shocked applause at each new shattering stunt, and afterward Karpovich came down and privately apologized, vowing to undertake research studies that would help him understand how he could have been so mistaken. Indeed, though World War II intervened, when Karpovich returned to his lab in the late 1940s he directed a series of studies that proved to his satisfaction that far from slowing a person down, weight training increased a person’s speed. In time, these studies were published in the most important journals in the field, and the musclebound theory was gradually laid to rest.

It is doubtful whether a person with significantly less muscle mass could have caused such a change in the thinking of those who saw Grimek perform his feats of flexibility. If anyone appeared visually to symbolize the word “musclebound” it was John Grimek during the 1930s and 1940s. Yet if such a man was both limber and graceful, it flew in the face of the myth. Part of Grimek’s power as a performer came from his dramatic ability to pose his body. Many who saw him in his prime have said that his posing was a “ballet of power,” in which he moved from pose to pose in a fluid, natural manner. Most historians of physical culture place Grimek above all bodybuilders before or since in his mastery of physical display. According to Joe Weider, who began his publishing empire in 1940, Grimek “invented modern posing, and no one has ever matched his ability on the posing platform.” Films that remain of Grimek on the platform reveal a performance that combined grace, power, drama, masculinity, and beauty. He was never defeated in bodybuilding competition, and he was the man to whom all other lifter/builders would point when they were told that “lifting will make you musclebound.” As Grimek himself told a group of skeptical Y.M.C.A. directors after an exhibition in which he posed and performed his seemingly miraculous stunts, “Can you do what I do? If you can’t, then you’re the ones who are musclebound.”

## Grisham, John (1955—)

John Grisham's contributions to the world of popular culture in the late twentieth century are enormous. Not only is he largely responsible for the elevation of legal thrillers to a level of popularity never before seen in literary circles, but he has also transcended that genre as his books are eagerly anticipated by those in the movie industry. Ironically, the best-selling author did not find instant success. While working as a lawyer and a Mississippi state legislator, Grisham took four years to write his first novel, *A Time to Kill*. When he finished in 1987, he sent the manuscript to 16 agents, finally connecting with agent Jay Garon. Over two dozen publishers rejected the book before Wynwood Press accepted it. Wynwood decided on a small print run, only 5000 copies, and paid Grisham a mere \$15,000 for what many believe to be his finest book. This, however, would be the last time Grisham was to meet with such difficulty in getting his work published.

Grisham wrote *The Firm* based on guidelines in a *Writer's Digest* article on writing a suspense novel. Paramount bought the film rights for \$600,000 in 1990 before the novel even had a publisher. After the film rights sold, publishers lined up to offer Grisham a

John Grisham

contract. Doubleday, one of the many publishers that rejected *A Time to Kill*, won out and signed Grisham to a three book contract. Grisham closed his law practice and began devoting his time entirely to writing. He wrote his third book, *The Pelican Brief*, in only 100 days. He took six months to write his next book, *The Client*. Grisham found himself in 1993 with *The Client* at number one on the *New York Times* hardcover bestseller list, and *The Pelican Brief*, *The Firm*, and *A Time to Kill* within the first five slots on the *New York Times* paperback bestseller list.

Grisham has not only had a huge impact on the publishing industry. Almost all of his novels have been made into relatively successful films. They have been directed by such big-name directors as Joel Schumacher, Sydney Pollack, and Francis Ford Coppola. They have attracted such critically acclaimed and popular actors as Susan Sarandon, Tommy Lee Jones, Tom Cruise, Gene Hackman, Denzel Washington, Julia Roberts, Matt Damon, Danny DeVito, and Claire Danes. *The Gingerbread Man*, a film released in 1998, was based on Grisham's first original screenplay.

As bestsellers, Grisham's novels have received a great deal of critical attention, and the reviews have been mixed. He is most often criticized for writing formulaic novels and sacrificing character development for plot. Still, even his critics usually admit that he writes a thrilling page-turner. He is often compared to his contemporary Scott Turow, best-selling author of legal thrillers *Presumed Innocent* and *Burden of Proof*. Grisham and Turow, whose first book appeared in the year Grisham finished *A Time to Kill*, are credited with making legal thrillers a hot commodity in the 1990s, adding fuel to the careers of such authors as Richard North Patterson, Steven Martini, and Brad Meltzer.

Grisham's books appeal to a sense of paranoia that prevailed in the 1990s. His books and the films they inspire often deal with people who are fighting corruption and others' self-serving interests at every turn. In *The Firm*, Mitchell McDeere is stuck between the corrupt firm that lured him straight out of law school with an \$80,000 salary and a new BMW, and the FBI agents who are trying to bully him into helping them bring the firm down. In *The Pelican Brief*, law student Darby Shaw stumbles on the truth behind the assassination of two Supreme Court justices and finds herself pursued not only by the man behind the assassinations, but also by various government representatives. The American public seems very ready and willing to believe that the wealthy and the government are corrupt and in cahoots with one another, and that an earnest and intelligent person can get out of even the worst of situations.

Indeed, the 1990s saw an explosion of legal thrillers in print, film, and television. From 1991 to 1998, Doubleday released a new Grisham novel every spring. In a *Publishers Weekly* article, Jeff Zaleski describes the frenzy this begets: "To accommodate it, booksellers around the country clear miles of shelf space; book and audio clubs quicken to fill orders; motion picture studios cajole and connive to get a first peek at galleys." Grisham's impact on publishing is obvious, he is the kind of author, in company with such mega-selling authors as Stephen King and Danielle Steel, who creates big sales for publishers and bookstores alike. His influence reaches into the entire entertainment industry, where film and television studios look to capitalize on Grisham's popularity.

## Grits

Made from finely ground dried and hulled corn kernels, or hominy, grits are a central feature of Southern foodways. Grits are commonly eaten for breakfast and complimented by a wide variety of condiments; including red-eye gravy, butter, cheese, ham, bacon, salmon, shrimp, and sausage. While generally boiled to a porridge-like consistency, grits can also be served with milk and sugar or even cold-sliced and fried. Generations of Southerners have enjoyed grits since Native Americans first introduced Virginia colonists to unrefined hominy, but this Southern staple apparently has little culinary currency outside the region. Indeed, grits are an important element of Southern distinctiveness and celebrated in the region through festival, humor, literature, and song. Packaged instant or quick, grits are a key ingredient in Southern cooking and an enduring feature of Southern identity.

## Grizzard, Lewis (1946-1994)

Lewis McDonald Grizzard, Jr., was a popular and sometimes controversial newspaper columnist who gained fame in the 1980s and 1990s with his popular syndicated newspaper column. Throughout his career, Grizzard's wit entertained readers with a commentary that was unabashedly pro-Southern. His love for his alma mater, the University of Georgia, his attitude toward Yankees, and his well-known marital failures all provided material for his columns, numerous books, audiocassettes, and personal and television appearances. But it was in his life-and-death struggle with heart disease that he touched the hearts of his loyal readers.

Grizzard grew up in the small town of Moreland, Georgia, where he had been born on October 20, 1947. He attended the University of Georgia in Athens, but because he accepted a job with the *Atlanta Journal-Constitution* in his senior year, he did not graduate until years later. Despite his delayed graduation, Grizzard was awarded the distinguished alumni award from his alma mater's College of Journalism and Mass Communication.

Before settling down as a syndicated newspaper columnist, Grizzard worked as sports editor at newspapers in Atlanta and Chicago. By the time of his death in 1994, his columns had appeared in more than 200 newspapers across the United States, and he had authored 14 books of his collected humor. Many of Grizzard's books found their way to the *New York Times* best-selling list, and most remain in print years after his death. True to his persona as a southern "good old boy," he never used a word processor or computer, preferring instead an old manual typewriter.

While his humor won him fame, Grizzard often endured conflicting attitudes toward his work. Some condemned his brand of humor as sexist, homophobic, jaded, and cynical, while others praised him as a great storyteller and a modern-day Mark Twain. A publisher once compared the writer to Faulkner, but implied that Grizzard was more attuned to the average person. Grizzard met criticism of his work with an honesty that marked his writing and humor as distinctly his own. His popularity quickly spread from syndicated columns to books to audiotapes and personal appearances. Probably his best-known appearance was on the sitcom *Designing Women*, in which he played Julia and Suzanne Sugarbaker's (Dixie Carter and Delta Burke) half-brother.

Despite his commercial success, Grizzard's personal life seemed far from successful. He had three failed marriages, which he often wrote about in his columns and books. He married his fourth wife, Dedra, just days before his death. Grizzard had one stepdaughter and no children of his own.

After years of illnesses and surgeries, Grizzard died from complications following heart surgery in Atlanta. After his death, the Lewis Grizzard Museum, operated by the Lewis Grizzard Memorial Trust, was established in his hometown of Moreland. Though admission is free, visitors may donate one dollar to support the Lewis Grizzard Scholarship. Visitors can view such items as the writer's baseball glove, his letter jacket, and his childhood rocking chair among other mementos. Grizzard's book *I Took a Lickin and Kept on Tickin* is a posthumous compilation of previously published essays employing humor to detail his battle with the heart disease that eventually led to his early death.

## Groening, Matt (1954—)

Matt Groening graduated from Evergreen State University in 1977 expecting to become a writer, but cartooning became his claim to fame. By 1991, the creator of the animated television series *The Simpsons* and the nationally syndicated comic strip *Life in Hell* had received his first two Emmys and was listed as one of the Forbes Top 40 earners in the entertainment industry.

Groening's struggles as a writer in Los Angeles after college led to the creation of *Life in Hell*, a comic strip about Binky, a hostile,

### Matt Groening

frustrated rabbit (the only recognizable animal Groening could draw). Instead of sending correspondence to his relatives and friends, Groening sent his first comics because they communicated his feelings. He also tried to sell booklets of his comic strips in the “punk” section of the record store where he worked. In 1978, *Wet*, a magazine which showcased unconventional graphics, ran a few installments of the strip. In 1980, the *Los Angeles Reader*, a weekly alternative paper, hired Groening as circulation manager and began to run *Life in Hell* regularly. Groening transformed Binky from a grouchy pessimist to a hapless victim. He added several characters, Binky’s son, Bongo; his girlfriend, Sheba; and Akbar and Jeff, the identical fez-wearing entrepreneurs. By 1983, the strip was being published in twenty papers and its success led to Groening’s first book, *Love Is Hell*, published in 1984. By 1997, Groening had published twelve *Life in Hell* books, and that year the comic appeared in more than two hundred newspapers.

In 1985, Groening resigned from the *Reader* along with Deborah Caplan (who worked in the paper’s advertising department). Together they established Life in Hell, Inc., with Caplan as the company’s business manager. They married on October 29, 1986, and later had two children—Homer and Abraham. In 1987, James L. Brooks (creator of the television shows *Taxi* and *The Mary Tyler Moore Show*, and director of *Terms of Endearment* and *As Good as It Gets*) approached Groening to create short animated segments of *Life in Hell* for the Fox network’s *The Tracey Ullman Show*. Groening agreed to do segments for the show but, unwilling to relinquish the rights to *Life in Hell*, created an entirely new set of characters—the Simpsons, a blue-collar family including parents Homer and Marge, son Bart, and daughters Lisa and baby Maggie.

By 1989, the Simpsons had become so popular on *The Tracey Ullman Show* that Fox commissioned thirteen episodes for the 1989 fall season. After a delay, the first episode of *The Simpsons* aired in

January 1990, and, within two months, the show was ranked in the Nielson’s top fifteen most watched shows on American television. The creator, developer, animator, director, and executive producer of *The Simpsons*, Groening was nominated for an Emmy for outstanding animated program every year the Simpsons appeared on *The Tracey Ullman Show* and won Emmy awards in that category for each of *The Simpsons*’ first two seasons. He won again in 1994, 1996, and 1998. In 1997, Groening was awarded the George Foster Peabody Award for excellence in broadcasting for *The Simpsons*.

Groening further broadened the appeal of *The Simpsons* in 1993 when he started the Bongo Comics Group (for which he received the Diamond Distribution Gem Award for new publication of the year), which included four monthly comic books—*Simpsons Comics*, *BartMan*, *Itchy & Scratchy*, and *Radioactive Man* (Bart Simpson’s favorite comic book hero). In 1995, Groening founded and published Zongo Comics, established to publish the work of alternative independent artists, which includes the titles *Jimbo*, *Fleener*, and *Hopster’s Tracks*. He added *Krusty Comics* and *Lisa Comics* to the Bongo Comics Group, and *Roswell* in 1996.

Groening’s philosophies are deeply integrated into *The Simpsons*. As he indicated in a 1993 interview with the *Washington Post*, the Simpsons are a blue-collar family similar to cartoon greats like the Flintstones and the Jetsons, but *The Simpsons* tries to go for “real emotions.” Although the characters encounter exaggerated events, the writers have tried to make them react as people would. Episodes of *The Simpsons* are replete with cultural references, from “Dr. Zaius,” the song referring to the 1968 film *Planet of the Apes* sung to the tune of Falco’s 1985 hit “Rock Me Amadeus,” to Mayor Quimby’s Kennedy-esque Boston accent.

The Simpsons have become one of the most recognizable television families in the world. Bart Simpson even made *Time* magazine’s list of the one hundred most important people of the

twentieth century as one of the top twenty Artists and Entertainers. Groening's show has not only captured the television market, but has overwhelmed the commercial market with the Simpsons appearing as toys, in their own video game, on T-shirts, as product endorsers, on compact disks, and on their own Internet web page.

Groening has a second project in production with Fox: an animated series called *Futurama*. Beginning mid-season 1999, *Futurama* is an animated story about a twentieth-century man dealing with life in the year 3000.

## Grunge

Grunge is the name given to the hard rock music produced by bands such as Nirvana, Soundgarden, and others, in Seattle, Washington, from the mid-1980s through the mid-1990s. While the term provides a convenient blanket description, it also hides fairly substantial stylistic differences between the bands. Few, if any, of those groups ever described themselves as "grunge," and the stereotyping of grunge as humorless and angst-ridden is a serious distortion. Nonetheless, the same media scrutiny that bred those misrepresentations turned grunge into a worldwide phenomenon that shaped not only music, but also other aspects of popular culture such as fashion.

Through the late 1970s and early 1980s, punk and hard-core rock had embraced a do-it-yourself attitude in defiant opposition to the bombast and big money of heavy metal and arena rock. However, as the hard-core and punk movements began to wane in the mid-1980s, many of those independent bands retained their amplifiers and distortion pedals but began slowing the tempos of their songs considerably. As a result, many bands (intentionally or not) began to reproduce the sound of the arena rock bands on which they had originally turned their backs. Although this trend occurred throughout America, it became particularly noticeable in two groups of musicians in Seattle, The Melvins and Green River. Hailing from Aberdeen, Washington, The Melvins played a particularly sludgy form of hard rock, touring with their friend Kurt Cobain at the wheel of their

Members of the grunge band Nirvana, from left: Chris Novoselic, Dave Grohl, and Kurt Cobain.

tour bus before he formed Nirvana. Green River also received some attention in independent music circles, before splitting up to re-form as Mudhoney and Mother Love Bone.

Those two groups nicely illustrate the two poles of the grunge movement. Fronted by flamboyant lead singer Andrew Wood, Mother Love Bone's music clearly indicated the band's commercial ambitions, and after just a handful of shows they secured a contract with PolyGram Records—a situation amounting to heresy in the independent music scene. After Wood's death in 1990 from drug-related causes, members of the band secured the talents of San Diego-based singer Eddie Vedder and formed Pearl Jam.

In contrast to Mother Love Bone, Mudhoney openly satirized the entire notion of rock stardom. Their sound was considerably rougher, with front man Mark Arm's vocals closer to a hoarse shout than to singing. Taking their name from the title of a soft-core film directed by Russ Meyer, they embraced a *faux*-sexism that simultaneously spoofed and celebrated the excesses of big-name rock bands.

Soundgarden fell somewhere between the blatant commercialism of Pearl Jam and the unpolished garage sound of Mudhoney. Lead singer Chris Cornell possessed a powerful falsetto that went well beyond that of Black Sabbath's Ozzy Osbourne, his most obvious influence. Soundgarden built its reputation as an independent band, satirizing the misogyny of heavy metal in songs such as "Big Dumb Sex," but a lot of listeners seemed to miss the joke. The group's 1989 album, *Louder than Love*, was nominated for a Grammy, and *Superunknown*, released in 1994, debuted at number one on the *Billboard* charts. By that time the band's sound was closer to

Metallica or Guns 'N' Roses (with whom they had once toured) than to Mudhoney or Nirvana. Soundgarden broke up in 1997.

It is likely that many of these bands would have vanished quietly, or perhaps not even formed at all, if it were not for Sub Pop Records. Founders Bruce Pavitt and Jonathan Poneman recognized the strength of the Seattle music scene and, like Berry Gordian, whose Motown label had popularized the pop and rhythm-and-blues of Detroit in the 1960s, they set out to promote their city's bands. From the label's inception, they showed an ambition previously absent from independent labels. Sub Pop's first release, a compilation of bands who, for the most part, weren't from Seattle at all, described the label as "The new thing, the big thing, the God thing: A multi-national conglomerate based in the Pacific Northwest." Most people thought it was a joke, but Pavitt and Poneman weren't kidding.

Many independent record labels in America had been releasing excellent music that never achieved any degree of commercial success, but Pavitt and Poneman were shrewd marketers with an unrivaled gift for generating hype. They hired a British press agent to promote their bands, and paid a correspondent from the British music newspaper *Melody Maker* to come to Seattle. They believed—correctly—that the best way to promote their bands in the United States was through a reputation that was built abroad. Soon the city was renowned as one of the foremost centers of independent music in the world.

Nonetheless, by early 1991, Sub Pop was nearing bankruptcy. Its salvation came from the wholly unexpected success of Nirvana's first full-length album, *Nevermind*. When David Geffen's DGC label signed Nirvana, the contract stipulated that Sub Pop would receive a two percent royalty if the album sold more than 200,000 copies. Most observers expected it would sell a fraction of that number. However, "Smells Like Teen Spirit," the album's first single, became an overnight anthem, combining an infectious riff with a heavy guitar sound and lyrics which expressed a wry world-weariness. A few months earlier, Nirvana had been known to only a small number of independent music cognoscenti; now they were receiving airtime on top 40 rock and alternative stations throughout the world. Within a year, *Nevermind* had sold four million albums. Pearl Jam's *Ten* was released the same month as Nirvana's album, and although sales were initially slower, it sold an equal number of copies during its first year.

With the success of Nirvana and Pearl Jam, journalists, film crews, and fashion designers began flocking to Seattle to cash in on the music, which the world outside Seattle was calling "grunge." The flannel shirt became the ultimate symbol of grunge couture, although flannels had been popular for years in the national hard-core scene because they were cheap, comfortable and durable. Soon, upscale stores were selling "designer grunge," a bizarre inversion of a look essentially the opposite of fashion. Seattle bands on tour often found crowds dressed in flannels, ripped jeans, and Doc Marten boots: "more Seattle than Seattle" as one musician observed.

Many bands who had prided themselves on a punk ethos now found themselves signing very lucrative contracts. A popular tee-shirt in Seattle depicted the irony. It featured a large picture of a heroin syringe with the caption "I came to Seattle to score, and all I got was this stupid recording contract." The standard defense was an equally ironic pose. Kurt Cobain appeared on the cover of *Rolling Stone* with a hand-lettered tee-shirt which read "Corporate mags still suck"—an allusion to the bumper-sticker "Corporate music still sucks." Even Mudhoney signed with a major label and, in concert, began changing the lyrics of their song "Touch Me, I'm Sick" to "Fuck Me, I'm

Rich." While those might have been effective comebacks, they did nothing to disguise or alter the fundamental fact that bands that had begun by satirizing rock stars suddenly became rock stars.

One of the reasons for that irony is the music that influenced grunge. While most independent music up until that time ignored commercial hard rock (or at least pretended to), grunge reveled in it. Kurt Cobain said "we just accepted the fact that we liked the music we grew up on: Alice Cooper, the MC5, Kiss. . . . We're paying homage to all the music we loved as kids, and we haven't denied the punk-rock energy that inspired us as teenagers." But, with commercial success, many bands began to spend more time polishing their recordings in the studio. That effectively destroyed the "Seattle Sound," much of which came from producer Jack Endino, who used a simple four-track recorder to get a deliberately rough sound. Cobain himself admitted that he thought the production of *Nevermind* was a little too slick. Punk energy was often filtered out by producers looking to make a more palatable recording.

By 1994, many of the original grunge bands had cut their hair and begun to release more mainstream albums. Effectively, Grunge ended with the suicide of Kurt Cobain in the spring of 1994. Nonetheless, it had already forced an essential change in the recording industry; major labels became much more willing to sign new acts, even when they did not fit into a preconceived commercial formula.

## Grusin, Dave (1934—)

Combining classical music training, jazz virtuosity, and a popular culture sensibility, Dave Grusin has become one of the most prolific composers of the late twentieth century. Born and raised in Littleton, Colorado, Grusin was a classical piano major at the University of Colorado. But he had an affinity for jazz and played with such visiting artists as Art Pepper and singer Anita O'Day. After moving to New York to pursue an academic career, Grusin found a job touring behind Andy Williams. He became Williams' musical director and moved to Los Angeles to work on *The Andy Williams Show*. Grusin left the show in 1964 to score the Norman Lear/Bud Yorkin film, *Divorce American Style*. Since then, Grusin has been one of Hollywood's premier composers. Nominated for eight Academy Awards for his scores for such films as *Heaven Can Wait*, *On Golden Pond*, *Tootsie*, and *The Fabulous Baker Boys*, Grusin won an Oscar for *The Milagro Beanfield War*. His work is also familiar to television audiences—he wrote the theme songs for *Good Times*, *Maude*, *Baretta*, and *St. Elsewhere*. Despite his cinematic successes, Grusin has remained true to his jazz roots. Highly respected in the jazz community, his successful recording and performing career has spanned three decades and he has won ten Grammy Awards, making him a modern day musical Renaissance man.

## Guaraldi, Vince (1928-1976)

Vince Guaraldi was one of the finest jazz pianists of the 1950s and 1960s. Eventually the leader of his own group, his resume also included time with jazz greats Cal Tjader and Duke Ellington. In 1963 he won a Grammy for his song “Cast Your Fate to the Wind,” and although Guaraldi recorded many successful albums and had a thriving concert career, he will forever be known as the composer for the Charlie Brown television specials. His music for *A Boy Named Charlie Brown* and *A Charlie Brown Christmas* became irrevocably linked to the Peanuts franchise, and several of his songs, including “Linus and Lucy,” “Red Baron,” and “Great Pumpkin Waltz,” became standard music for all Peanuts specials. Guaraldi’s music introduced children to jazz, and his upbeat, bouncy style seemed a perfect fit to the characters created by Charles Schultz. Although Guaraldi died unexpectedly in 1976, performers from Wynton Marsalis to David Benoit continue to play his compositions and his albums continue to sell.

## The Guardian Angels

Founded by Curtis Sliwa in 1979, the Guardian Angels are a volunteer organization dedicated to protecting law-abiding citizens from violent crime on the New York subway. The organization subsequently spread throughout the United States, and ‘chapters’ were established in cities in Canada, South America, Australia, and Europe. The members, who wear a uniform of red berets and white sweatshirts, carry no weapons, but undergo training in martial arts, first aid, and instruction in citizen’s arrest laws. In 1993, revelations that Sliwa had staged some of the Angels’ much-publicized successes caused the decline of many chapters. However, while law enforcement agencies have tended to skepticism about the Angels’ effectiveness in crime prevention, their presence has frequently shamed authorities into improving policing on subway systems.

## Gucci

The history of the Gucci brand illustrates the precariousness of luxury brand names. Guccio Gucci founded his leather business in Florence in 1906, having been inspired by the beautiful leather luggage of guests at the Ritz Hotel in London where he had worked in the kitchen. After World War II when leather was scarce, Gucci printed his company’s interlocked-G’s logo on canvas luggage and accessories in bright red and green. This phenomenal success in placing high prices on what was inherently less expensive to produce fueled the imagination of the second-generation Guccis. Interlocked G’s were licensed shamelessly and any number of products enjoyed Gucci cachet, despite degenerating quality. In the 1970s, Gucci leather loafers with a gilt horse-snaffle were an expensive favorite of the nouveau riche. By the 1980s, the luxury brand had become a bad joke. In the 1990s, some selectivity was restored, Tom Ford was garnering hype for vulgar but media-generating clothes, and Gucci seemed a business reborn.

## Guiding Light

The longest running soap opera in broadcast history, Procter & Gamble’s (P&G’s) *The Guiding Light*, premiered on radio in 1937. Although recognized as one of the many soaps developed by the legendary Irna Phillips, a 1946 lawsuit ruled that a former writer, Emmons Carlson, share credit for its creation. The veteran soap’s logo, a rotating lighthouse beacon, was an apt metaphor for its significance as a guidepost in the cultural lives of generations of fans and for the genre itself. Over the decades, *Guiding Light* evolved into a paradigm model for the melodramatic excesses of soap opera, both influencing, and being influenced by, its imitators and successors. Within the liberating parameters of its world, it was frequently a ground-breaker, daring to dramatize previously taboo topics, and through its sheer longevity, has permeated American popular culture.

Reverend John Ruthledge (Arthur Peterson) served as the program’s central character for many years, counseling not only family and flock in the fictional hamlet of Five Points, but the nation’s radio audiences, comforting them through economic depression and war, and preaching against such evils as racism. When the show moved production from Chicago to Los Angeles, Peterson resigned, Ruthledge

was killed off, and Five Points was transformed into the town of Selby Flats, California. The original thrust of the program was left far behind, and a new set of characters, the Bauers, became the core family in *Guiding Light*'s new incarnation. The ratings suffered and, with Hollywood thought to be the culprit, the production migrated once again, this time eastward to New York.

*The Guiding Light* premiered on CBS television in 1952, and ran parallel with continuing radio broadcasts for the next four years. Meta Bauer (Jone Allison, later Ellen Demming), who would maintain a presence for four decades, emerged as a popular young heroine at this juncture. When Phillips exited the show in 1958, she eliminated Meta's stepdaughter by having her crippled and then killed in a traffic accident, eliciting a howl of protest from viewers. The proprietorial involvement of soap opera fans thus made its existence known to the creators.

The 1960s saw *The Light*'s setting shift once again, this time to the Midwestern town of Springfield. Agnes Nixon, future creator of *All My Children*, took over the reins as head writer and proceeded to afflict matriarch Bertha Bauer (Charita Bauer) with cervical cancer, a trend-setting idea that had both P&G and CBS worried about negative fallout. However, the only consequence was to educate female viewers about the need for a yearly Pap smear. Nixon was also instrumental in bringing racial integration to Springfield, with Billy Dee Williams and Cicely Tyson, and later James Earl Jones and Ruby Dee, inhabiting the roles of Dr. Jim and Martha Frazier, a professional, African-American couple. This new strand happily failed to validate the misgivings of executives who thought ratings might suffer; rather, it influenced other soaps to strive for racial diversity. In the 1970s, the husband-and-wife writing team of Jerome and Bridget Dobson offered a timely marital rape story based on the real-life Rideout case. The installment, involving nefarious Roger Thorpe (Michael Zaslow) and his wife Holly Lindsey (Maureen Garrett), was imitated by such programs as *Days of Our Lives* and *Another World*. In 1978 the series title was simplified to just *Guiding Light*.

The writing turnover continued in the 1980s. *General Hospital* had recently set the standard for appealing to Baby Boomers and *Light* was now duty-bound to follow its lead. When writer Douglas Marland left *General Hospital* due to creative differences, *Guiding Light* snapped him up. After listening to his own teenage niece's romantic fantasies, Marland paired teen Morgan Richards (Kristin Vigar, later Jennifer Cooke) with much older medical student Kelly Nelson (John Wesley Shipp) and added a jealous golddigger, Nola Reardon (Lisa Brown). Morgan and Kelly slept together while she was still a minor, but CBS balked, albeit briefly, at allowing them to marry. The story turned the coupling of innocent teenage girls with experienced older men into a soap opera staple.

The newly introduced Reardons provided a working-class presence, and after Nola manipulated Kelly into believing he had fathered her unborn child while in a drunken stupor, and as she contemplated abortion, a series of vignettes in which she imagined herself the heroine of such classic films as *Dark Victory* and *Casablanca* delighted fans and prompted mimicry on other programs. In 1982, Marland's tenure with the show ended when he challenged the dismissal of a favorite actor. During this period, scholar Michael Intintoli had ventured behind the scenes at *Guiding Light*, generating a published study entitled *Taking Soaps Seriously*. Among other things, Intintoli chronicled the creators' concerns about targeting youthful demographics.

Various writers tried their hand in Marland's wake, continuing to highlight tangled teen romances. The Lewis oil dynasty and the

upper-crust Spauldings had been added to the cast of characters in the early 1980s, with the Spauldings, especially, slowly displacing the Bauers at *Guiding Light*'s core. But it was brazen Reva Shayne (Kim Zimmer) who emerged as the program's vixen-turned-heroine by marrying her former father-in-law, Lewis patriarch H.B. (Larry Gates), and finally settling on her former brother-in-law Josh Lewis (Robert Newman) for an on-again, off-again, "super couple" turn.

The 1990s began at a cracking pace with the resurrection of villain Roger Thorpe and the death of Reva, and quickened further under executive producer Jill Farren Phelps. A blackout story produced new and intriguing character links. Later, soaps such as *All My Children* and *Sunset Beach* attempted similar shakeups with their own disaster scenarios. Phelps angered fans by killing off matriarch Maureen Bauer (Ellen Parker) in response to focus group data, but the working-class Coopers, led by Vietnam veteran Buzz (Justin Deas), gained a foothold. The super-coupling of Buzz's daughter Harley (Beth Ehlers) and her fellow police officer encouraged replication a few years later on *Another World*. A planned love story between Buzz's other daughter, virginal Lucy (Sonia Satra), and drifter Matt Reardon (Kurt McKinney) did not materialize after Matt's affair with forty-something divorcée Vanessa Chamberlain (Maevie Kincaid). Fans enthralled with the May/September romance wanted more, and writers obligingly shepherded the pair into matrimony and parenthood. Lucy was eventually raped by a cross-dressing psychopath in a story line that had Internet fans fuming about women's victimization and creeping sensationalism.

*Guiding Light*'s top-tier ratings of the 1950s and 1960s had dipped downward with the Baby Boom influx. Caught lagging behind in its attempts to lure this generation and younger viewers, the show failed to recoup its losses during the next two decades. The 1990s saw a parade of personnel, including Phelps and several older actors, axed, while Reva was brought back, first as a spirit and, later, fully embodied—an absurdity that actually gave the show a boost. However, when producer Paul Rauch went further and tried to ape the fantasy-oriented NBC soap *Days of Our Lives* by cloning Reva, Internet fans, who named the clone "Cleva," bristled. Still, as the millennium drew near, the show had become such a comforting fixture in its continuity, trend-setting social relevance, and comparative verisimilitude throughout the better part of six decades, that many of these sometimes disgruntled viewers have remained faithful and "keep turning on the *Light*."

## Gulf War

In the early nineties, the Gulf War marked a new dawn for American hegemony. Former adversaries of American militarism—the Communists, the Arabs, and the American left—were held in check, as the United States armed forces were able to quickly expel an Iraqi invasion of Kuwait. With her Soviet, Chinese, and Arab rivals needing American economic support, the United States obtained the consent of many governments for a war in the Persian Gulf. New techniques in public relations extended this consent to a vast majority of American citizens, making it the most popular war since World War II.

On August 2, 1990, Iraq invaded the kingdom of Kuwait. President Saddam Hussein of Iraq contended that the attack was justified because Kuwait's royals were plundering a commonly held

oil field. Within hours, the large army of Iraq overwhelmed puny defenses and occupied Kuwait. The next day, a majority of Arab states called on Hussein to withdraw. On August 6, the United Nations Security Council imposed a total trade embargo against Iraq. By August 31, Operation Desert Shield had deployed over 60,000 United States troops in Saudi Arabia. In September, the Soviet Union gave support to armed intervention, and on November 29 the United Nations Security Council voted, for the first time since 1950, to use force.

In the Gulf, the new might or New World Order of the United States was unveiled. The unprecedented consent of Communist and Arab states showed how completely the United States dominated politics. With little opposition, Americans acted to preserve the lifeblood of Western economies: the steady flow of cheap oil. On January 17, 1991 military operation Desert Storm, an attack plan to free Kuwait, was unleashed. The United States Air Force flew 1,300 sorties, while the Navy fired hundreds of cruise missiles; almost immediately air supremacy was established and heavy casualties were inflicted on the ground. On February 24, ground forces began their attack. Within 100 hours they were deep inside of Iraq. Six weeks after it had begun, the Gulf War was essentially won.

Satellite transmissions for the first time televised war instantly. With televisions now in nearly every home in America, the war was

General Colin Powell visiting troops in the field during the Gulf War.

broadcast widely and played to high Nielson ratings. American newsmedia, now global corporations vying for market share, sought to outdo one another in a heated competition for the large viewing audience. Live updates, exclusive Pentagon interviews, and dazzling graphics captured the public's attention. Detailed discussions of American military technology helped to explain America's superior machinery of war. As daily reports of United States victories came home, President George Bush's approval rating soared to a presidential record 90 percent. Bush pronounced, "We've licked the Vietnam syndrome!"

At home, some critics accused journalists of anti-Arab and anti-Muslim bias in reporting, but pro-war propaganda mostly avoided the tradition of racializing the enemy. Nor, as in times past, was the invaded country a featured victim. Kuwait's brutal monarchy did not invite a great deal of sympathy. In a highly publicized testimony before the United States Congress, however, a young Kuwaiti aristocrat sobbed as she testified that Iraqi troops had torn babies from hospital incubators and skewered them on their bayonets. The testimony, which was later exposed as a fabrication, helped arouse both public and political sentiment against the purported barbarism of Iraqis.

Most pro-war propaganda targeted Saddam Hussein, whose name became synonymous with evil. From President Bush to the editorials of major newspapers, "Saddam" was the entire focal point for American bombs. Saddam was said to have stockpiles of chemical and biological weapons, a budding nuclear weapons program, and designs on conquering Israel and Saudi Arabia.

Perhaps the most startling Gulf War legacy left to American popular culture was the transformed nature of mass-mediated information. Unlike the Vietnam War, journalists were denied access to the front and could report only on the Pentagon's tightly controlled press releases. Moreover, a great deal of the information and military photography provided to journalists was falsified to augment the image of American military and technological prowess. Reports of Patriot missiles intercepting enemy SCUD missiles later proved to be completely untrue. Dramatic footage of a smart or guided missile entering the shaft of an Iraqi building was discovered to be a hoax. Scenes of death from friendly fire, Iraqi civilian casualties and other carnage were censored by the Pentagon. As it turned out, the much lauded surgical strike, the clean precision of American smart bombs, was actually the neat appendectomy of objective journalism. In the made-for-television coverage of the war, only the most optimistic scenes reached the viewing audience.

Critical opinions of the war had limited space in the newsmedia. The accusation that the United States fought only to restore the flow of cheap oil from Kuwait's dictatorship went unheard. On the home front, massive antiwar rallies in San Francisco and Washington D.C. and at universities and elsewhere received little coverage in the news, and were often balanced with scenes of small gatherings of people displaying yellow ribbons. Yellow ribbons, the symbol of support for the war, adorned schools, shopfronts, citizens, and were included in corporate advertising. Many members of the newsmedia used a graphic of the yellow ribbon in their broadcasts of the war. New advances in the crafting of political spin, military public relations, and television computer graphics collaborated to make a collage of smooth triumph. The soundbite, the live satellite broadcast, and other recent innovations were utilized in the journalistic arena as never before. A picture of national solidarity blanketed the nation. Not since the World War II had such journalistic unity or common opinion been realized.

Despite overwhelming public approval for the war, President Bush and General Colin Powell feared that a prolonged war would generate dissent. Declaring Kuwait liberated and Saddam's might curtailed, Bush terminated the war and declared victory. In the war's aftermath, Bush's popularity fell with an economic recession and with the continued bellicose posturing of Saddam Hussein. Hussein held power through widespread famine and disease resulting from a continuous embargo of Iraq, and remained the single most demonized figure on the political landscape of the 1990s.

## Gunsmoke

In a 1993 *TV Guide* article, *Gunsmoke*, the longest running Western drama, as well as the longest running prime-time show with continuing characters in history (from 1955 to 1975), was named one of the "All-Time-Best TV Programs." The magazine was succinct: "No contest, this was THE TV Western." The series marked a revolutionary approach to a familiar Westerns formula, and its popularity, which led to extensive merchandising that included Matt Dillon dolls, *Gunsmoke* trading cards, and comic books, precipitated a rash of TV Westerns—so much so, that at one point there were approximately 30 prime time contributions to the genre.

Originating as the vanguard of the "adult Western," the show had its genesis as a CBS radio drama that began in 1952, and endeavored to bring realism—and considerable violence—to standard heroics, claiming in its opening narration to be "the story of the violence that moved west and the man that moved with it." The premise involved the denizens of Dodge City, Kansas, circa 1873, who were protected by Marshal Matt Dillon (William Conrad), a tough but fair lawman, who often struggled to reconcile the differences between the law and his personal feelings. Dillon was assisted by the crusty but soft-hearted "Doc" Adams (Howard McNear), and loved by Kitty Russell (Georgia Ellis), the owner of the Long Branch Saloon.

Praised as being better acted and scripted than other radio Westerns, the show enjoyed immense popularity, and its twice-weekly broadcasts were transmitted to U.S. forces abroad during the Korean War. The recipient of several broadcasting awards, *Gunsmoke* had been extensively researched by its writers, who injected such a sense of veracity into the scripts that the head of the Chamber of Commerce of Dodge City is said to have written the producers inquiring as to what years Matt Dillon served as sheriff.

While the radio version continued to run until 1961, the television version of the show debuted as a half-hour drama on September

10, 1955, introduced by John Wayne as “a new kind of Western.” And so it proved. The opening episode, entitled “Matt Gets It,” had its leading character getting shot and, as one critic described it, “left lying in the dusty streets of Dodge, ministered to by a cheap dance hall girl and a seedy looking doctor, while his crippled deputy stood by.” This was a gritty and realistic departure from the formula wherein the heroes of other popular shows such as *The Lone Ranger* and *Hopalong Cassidy* were always larger than life and escaped such indignity.

The television incarnation also featured different actors. While the radio actors had been considered, the producers felt that the visual medium made strongly attractive physical attributes a major requirement, particularly for the role of Matt Dillon. Among the several replacements considered, who were either rejected, or who themselves turned down the offer because TV was still viewed by some as an unworthy medium, were Raymond Burr, Richard Boone, and Robert Stack. While the rumor that John Wayne was approached to play Dillon was without foundation, the big screen’s most famous Western star did suggest a young actor that he’d worked with named James Arness. Beyond bit parts, Arness’ claim to fame was playing the title character in Howard Hawks’ sci-fi classic, *The Thing* (1950). However, his commanding six-foot-seven-inch frame and strong, silent demeanor secured him the role. Feature film veteran Milburn Stone was cast as Doc Adams, and Amanda Blake inherited the role of Kitty, both of them staying with the show for most of its run. Prior to his feature film career and TV star turn in *McCloud*, Dennis Weaver played Dillon’s first deputy, Chester Goode. He was replaced in 1964 by Ken Curtis, a former singer with the Tommy Dorsey band who played scruffy hillbilly deputy Festus Hagen. Also of note was Burt Reynolds’ pre-superstar turn as half-breed blacksmith Quint Asper from 1962 to 1965, during which time many opportunities were found to feature him without his shirt. After Reynolds’ departure, Roger Ewing joined the show as the young novice, followed by Buck Taylor (son of actor Dub Taylor) who arrived in 1967 to play the humble gunsmith Newly O’Brian.

Debuting opposite the popular *George Gobel Show*, television’s *Gunsmoke* was not an immediate hit, but its popularity rose steadily, taking it to number eight in the ratings in its second season. By its third season (1957/58), it displaced the ever-popular *I Love Lucy* to become number one, and remained there for the next four seasons. The series and its cast were all nominated for Emmys that year, with the show winning for Best Dramatic Series. (Dennis Weaver later won in 1959, and Milburn Stone in 1968.)

While the majority of the *Gunsmoke* radio episodes conveniently served as fodder for the teleplays, their brutality had to be toned down for the small screen. While William Conrad’s Matt Dillon was a hardened, abrasive, and often pessimistic loner who could make tragic mistakes, Arness rendered the television Matt as a man of few words, vulnerable, often restraining his personal feelings in order to do the right thing, and never making a mistake. Likewise, while Georgia Ellis’ Kitty was portrayed as a toughened whore and barfly who was nevertheless Matt’s confidante, Amanda Blake became “Miss” Kitty, the owner of the Long Branch saloon who, as Blake contended, “had to walk a very narrow line between schoolmarm sweet and saloon hall tough.” Owing to the restraint of the writing, many have speculated over the Matt-Kitty “friendship,” but the chemistry between them, and the many plot lines requiring their sacrifices for each other, indicated deep and abiding love. That they never married is easily explained: as long as he remained a lawman Matt would not want to risk leaving Kitty a widow. Finally, while

Howard McNear’s Doc could be guilty of greed and cynicism on radio, Milburn Stone transformed the television character into an irreproachable ideal of the dedicated, kindly, and wise country doctor.

Like the radio show before it, the substance of *Gunsmoke* lay in its morality, which pitted the good people of Dodge City against the ugly forces of lawlessness. However, in remaining true to a realistic approach, the scripts not only avoided sentimentality and pat endings, but the writers made sure that, just as in life, the evildoers were not always brought to justice. Then, too, in response to the anti-violence movement of the 1960s, the show’s emphasis shifted from physical confrontation and gunplay to dramatic situations that were more character and issue-driven. *Gunsmoke* began dealing with race, religion, and other social conflicts, and evolved into a sort of dramatic anthology series with the interaction between the regular characters taking a back seat to conflicts faced by characters (often played by guest stars) who were passing through Dodge.

Despite these changes, the central characters and setting of *Gunsmoke* took on a mythic status in America’s collective consciousness. This lofty position was confirmed by events in the late 1960s. Despite its expansion to an hour, and the transition to color by 1966, the show so declined in ratings that CBS decided to cancel it at the end of the 1966/67 season, the producers claiming it to be the victim of “program fatigue.” Public response, however, was immediate and vehement. Letter-writing campaigns were mounted, and CBS affiliates in the Midwest threatened to boycott all of the network’s programs unless *Gunsmoke* returned. Senator Byrd even went so far as to criticize the network’s decision from the floor of Congress. The end result was that CBS president William Paley interceded, and in a last-ditch effort, switched the show to Monday nights when it miraculously zoomed into the top ten until its run finally ended in 1975. It was the last prime time Western series on television.

After its initial run, *Gunsmoke* was revived in a succession of TV movies, beginning with *Gunsmoke: Return to Dodge* in 1987, which up to that date was the most expensive made-for-TV movie of all time. Costing \$3.5 million, it featured James Arness, Amanda Blake, and Buck Taylor. The story had Kitty, who had left Dodge a year before the series’ cancellation, back in her hometown, New Orleans. Matt Dillon has retired from the law to become a trapper, and Newly O’Brian is the new sheriff. The TV movie’s popularity led to four further sequels in the early 1990s. In *Gunsmoke: The Last Apache* (1990), Matt learns that he had sired a daughter by Mike (Michael Learned), the woman he had become romantically involved with while suffering from amnesia in an earlier episode of the series, and sets out to look for the girl, who has been taken by an Indian tribe. The movie was dedicated to Amanda Blake, who, sadly, had recently died from AIDS. *Gunsmoke: To the Last Man* (1991) concerned feuding in the Pleasant Valley Wars of the 1880s and the death of Mike. *Gunsmoke: The Long Ride* was broadcast in 1992, while the last, *Gunsmoke: One Man’s Justice* (1993) found Matt Dillon owning his own ranch. It also revealed details of Matt’s background, and the fact that he had been motivated to become a lawman because his father, a Texas Ranger, had been shot in the back and killed.

*Gunsmoke* retained an extensive supporting cast of townspeople, and supplied many character actors with the opportunity to play a variety of roles over the years. Victor French, later of *Little House on the Prairie* and *Highway to Heaven* fame, played 19 different characters in the course of the run, and directed five episodes. Morgan Woodward, Jack Elam, Denver Pyle, Jim Davis, Claude Akins, Strother Martin, and Lane Bradbury appeared in ten or more roles,

while one of Jeanette Nolan's nine roles—as itinerant “Dirty Sally”—resulted in a short-lived spin-off series in 1974. (Interestingly having been rejected for the television series, William Conrad went on to star in *Cannon*, *Nero Wolfe*, and *Jake and the Fat Man* on TV, while Howard McNear was Floyd the Barber in TV's *The Andy Griffith Show*).

*Gunsmoke* was in television's top ten most watched programs for 13 seasons and was named in first or second place as Best Western Series by the *Motion Picture Daily* annual television poll throughout its run. A 1966 episode entitled, “The Jailer,” starring Bette Davis, was ranked 27th by TV Guide's 100 Greatest (Television) Episodes of All Time. All of the leading actors were inducted into the National Cowboy Hall of Fame, while James Arness received an International Broadcasting Award as Man of the Year in 1973, and in 1989 was voted the number six television star of all time by *People* magazine. The series also won several awards for writing and technical achievement in the course of its long run.

## Guthrie, Arlo (1947—)

Folksinger Arlo Guthrie has preserved the musical and political heritage he learned from his father, Woody Guthrie. He debuted at the 1967 Newport Folk Festival, where he introduced the talking blues composition “Alice's Restaurant Massacre.” This 18-minute anti-war song became a favorite among draft resisters and provided the title for both his first album and a feature film (1969). His popularity soared with his appearance at Woodstock in 1968, and peaked with the release of the single, “City of New Orleans” (1972). By the mid-1970s, Guthrie had re-embraced his folk roots, releasing albums of folk standards and, in 1984, hosting a documentary about his father. In 1991, he opened a community center for HIV/AIDS patients at the Stockbridge, Massachusetts, church in which much of *Alice's Restaurant* was filmed. After landing a role in Steven Bochco's short-lived television series, *Byrds of Paradise* (1994), Guthrie released *Mystic Journey* (1996) on his own label, Rising Son Records. Throughout the 1990s, he wrote books for children, and has toured and performed with his own son, Abe.

## Guthrie, Woody (1912-1967)

Folk singer, composer, writer and homegrown radical, Woody Guthrie became the self-appointed folk spokesman for the Dust Bowl migrants and agricultural workers during the Great Depression. His pro-labor/anti-capitalist stance attracted many radical and left-leaning liberals during the 1930s and 1940s, but his lasting fame came from his influence on the folk revival of the 1960s, especially on Bob Dylan. Best known for ballads such as “This Land is Your Land,”

Woody Guthrie

“This Train is Bound for Glory,” and “Union Maid,” Guthrie's music extended beyond the bounds of radical protest to become American folk classics.

Born in Okemah, Oklahoma, and named in honor of the presidential nominee, Woodrow Wilson Guthrie spent his childhood in several different households in various parts of Oklahoma and Texas. His mother suffered from Huntington's Chorea (the same disease that Guthrie himself later struggled with for 15 years before finally succumbing to it in 1967), and he was often left to his own devices. In 1933, at the age of 21, he married his best friend's sister, but a necessary search for work, coupled with a restless nature, took him on the road, traveling along with many other “Okies” and “Arkies”—displaced farmers and others—who headed to California in search of work. In Los Angeles, Guthrie found work with his cousin Jack “Oklahoma” Guthrie, the singing cowboy, and together they presented the *Oklahoma and Woody Show* on KFVD. Woody's popularity grew as he attracted an audience of transplanted southwesterners who enjoyed his traditional songs and “cornpone philosophy.” He also became politically educated at KFVD, encouraged by station owner Frank Burke, who also produced the radical newspaper *The Light*, for which Guthrie occasionally wrote.

Guthrie's national notoriety developed when he wrote and performed songs about the influx of Dust Bowl migrants into California, and contributed to the communist newspaper *People's World*. In 1940, he released his first album, *Dust Bowl Ballads*. The album included “I Ain't Got No Home in This World Anymore,” a parody of a traditional Baptist hymn; “Vigilante Man,” describing the vigilante tactics of farm labor employers; “Pretty Boy Floyd,” about

the exploits of the Oklahoma outlaw; “Goin’ Down This Road Feelin’ Bad,” a song used in the film version of *The Grapes of Wrath* (1940), and “Tom Joad,” a song about that film’s hero figure that Guthrie wrote after seeing it.

His reputation as a spokesman for the down and out was reinforced through his association with folklorist Alan Lomax of the Library of Congress and singer Pete Seeger. With Lomax, Guthrie recorded songs and stories for the Library of Congress and, with Seeger, he joined the Almanac Singers, a folk-oriented protest group. Lomax, Guthrie and Seeger collaborated on a collection of folk songs published as *Hard Hitting Songs for Hard Hit People* (1967). Guthrie also appeared on numerous radio programs, including *Pipe Smoking Time* and *Cavalcade of America*. Hired for one month by the Bonneville Power Administration in 1941, he composed 26 songs about the hydro-electric construction projects of the Pacific northwest, including “Roll On Columbia,” “The Grand Coulee Dam,” and “Pastures of Plenty.” In 1943, he published the autobiographical *Bound for Glory* (made into a 1976 film by Hal Ashby, starring David Carradine as Guthrie). Throughout the late 1940s and early 1950s, he continued to write protest songs such as “1913 Massacre” about a strike in Calumet, Michigan, and “Deportee” (a.k.a. “Plane Wreck at Los Gatos”) about a plane crash of Mexican deportees. He also began writing songs for children, such as “Take Me for a Ride in the Car-Car,” and “Put Your Finger in the Air.” Guthrie’s *People’s World* columns were collected in *Woody Sez* (1975), and a second literary work, *Seeds of Man*, appeared in 1976. A volume of previously unpublished writings, *Pastures of Plenty: A Self-Portrait*, was published in 1990.

Throughout his writings, Guthrie expressed his belief in justice and his faith that it could be brought to prevail through action. For him personally, action took the form of singing and writing, best exemplified by the slogan proudly displayed on his guitar: “This Machine Kills Fascists.” His sense of the role of a folksinger as crusader for the less fortunate and as a critic of society’s oppressors and manipulators had greater influence on the course of American popular music than his style of singing or any one composition. His philosophy—that “a folk song is what’s wrong and how to fix it”—permeates the protest music of the late twentieth century, from anti-Vietnam War songs of the 1960s to songs of victimization in the 1990s.

From the late 1950s onwards, Woody Guthrie’s influence on a successive crop of folksingers was evident. It began with “Ramblin’ Jack Elliot (who often claimed to be his son), The Weavers, who had a national hit with the Guthrie song “So Long, It’s been Good to Know Ya,” and Bob Dylan, who arrived at his fascination for Guthrie through Elliot. Dylan visited the dying Guthrie in New York in 1961 and composed “Song for Woody,” a tribute using the melody of Guthrie’s “1913 Massacre.” Guthrie’s influence on Dylan is most readily seen in Dylan’s early albums such as *Bob Dylan* (1962), *The Freewheelin’ Bob Dylan* (1963) and *The Times They Are A-Changin’* (1964), and even in the style of the monochrome cover photograph of *The Times They Are A-Changin’*. Protest music of the 1960s owed much to this remarkable individual, whose compositions were revived by new folk groups such as Peter, Paul and Mary, while Phil Ochs and Barry McGuire adopted his style in their own original songs. Woody’s son, Arlo Guthrie, began performing in the 1960s, presenting his father’s work, as well as his own songs such as “Alice’s Restaurant Massacre” (1967).

Reverence for Guthrie continued into the late 1980s and 1990s, with performers such as Bruce Springsteen and John Mellencamp

attributing their own development to his influence in a documentary tribute recording titled *A Vision Shared: A Tribute to Woody Guthrie and Leadbelly* (1988). Springsteen credited Guthrie with the development of his own social consciousness: “To me, Woody Guthrie was that sense of idealism along with a sense of realism that said maybe you can’t save the world, but you can change the world.” Guthrie’s influence on Springsteen is best demonstrated in *Nebraska* (1982), and the Dust Bowl-inspired *The Ghost of Tom Joad* (1995). Mellencamp, believing that later contributions to protest music pale in comparison to Guthrie’s, said, “None of us are ever going to make the impact that Woody made.” Mellencamp’s pro-family farmer songs on *Scarecrow* (1987) illustrate Guthrie’s impact, and Mellencamp even sports a Guthriesque anti-fascist statement on his guitar in the music video, “Your Life is Now” (1998). *A Vision Shared* also features, among others, Emmylou Harris, Arlo Guthrie, Pete Seeger, and the Irish rock band U2, whose lead singer Bono states that “the thing Woody Guthrie left behind to me was a sense of the poetry of ordinary lives . . . I see Woody Guthrie as a poet.”

In 1998 a new collection of Guthrie songs, *Mermaid Avenue*, unveiled lyrics written in the late 1940s and early 1950s, with music composed by British singer/songwriter Billy Bragg and American neo-country rock band Wilco. Augmented with performances by Natalie Merchant, the album is the result of a collaboration between the musicians and Woody’s daughter, Nora, who initiated the project and opened up the Guthrie archives to them. The result introduced his music to yet another generation of listeners.

## Guy, Buddy (1936—)

Perhaps the greatest showman to ever play blues guitar, Buddy Guy was a crucial link between blues and rock ’n’ roll. Virtually unknown to the general public for most of his career, Guy was universally hailed by rock musicians from America and Britain. Guitarists Stevie Ray Vaughan and Jimi Hendrix cited him as a prime influence, and Eric Clapton stated in *Musician Magazine* in 1986 that Buddy Guy “is by far and without a doubt the best guitar player alive.”

The reason for such praise stemmed not just from Guy’s technical skill, but also from his astounding and often unpredictable antics

### Buddy Guy

on stage. Guy held nothing back in performance, torturing his guitar into sonic oblivion and singing himself into a frenzy. Although others have been known to play with their teeth and parade through audiences, Guy was one of the first to do so. Before Guy came to Chicago, blues was played sitting down.

Born on July 30, 1936 in Lettsworth, Louisiana, into a family of sharecroppers, George “Buddy” Guy spent much of his spare time during childhood listening to Muddy Waters, Howlin’ Wolf, and Sonny Boy Williamson on the radio. As Guy grew older, he began hanging out at the Temple Roof Garden, a 300-seat club in Baton Rouge where he would see B. B. King, Bobby Bland, and his biggest inspiration, Guitar Slim.

Guitar Slim (Eddie Jones) had a Number 1 R&B single with “The Things (That) I Used to Do” in 1954 and was the top draw of the southern “Chitlin’ Circuit” of black clubs. Slim was a wild man on stage, wearing outlandish costumes with matching wigs, swinging from the rafters and dancing through crowds on a 150-foot guitar cable. “When I saw him . . . I’d made up my mind,” Guy said in Donald E. Wilcox’s biography, *Damn Right I’ve Got the Blues*. “I wanted to play like B. B. but act like Guitar Slim.” Around this time, an uncle bought Guy his first real guitar for \$52.50.

By the mid 1950s, he was playing around Louisiana behind local musicians “Big Poppa” John Tilley and Raful Neal. In 1957, Guy recorded a demo tape at radio station WXOK in Baton Rouge and decided to try to make it big in Chicago. Guy brought his tape to Chess Records, the top label in town, but got nowhere. After six months of struggling, Guy finally got to sit in with Otis Rush. He began to play regular gigs around town, and his frantic stage show soon set him apart from the crowd.

“Buddy’s act was not premeditated or contrived,” Wilcox said in his biography of Guy. “His style was merely a natural by-product of being self-taught, having a compulsion to play, and being insecure enough to feel that if he didn’t dazzle and hypnotize his audience with the flamboyant techniques he’d seen work for Guitar Slim, he’d be buried by competition from guitarists who were better technicians.”

Word of the crazy kid from Louisiana spread and Chess producer and songwriter Willie Dixon soon recognized Guy’s talent. Dixon brought Guy in and immediately put him to work as a session musician with Muddy Waters, Howlin’ Wolf, Sonny Boy Williamson, and Koko Taylor.

Chess tried recording Guy as a solo artist, but failed to find the right niche. R&B ballads, jazz instrumentals, soul, and novelty dance

tunes were all recorded during the early 1960s, but none were released as singles. Guy wanted to record a set similar to his live shows, boosting his guitar's volume and cutting loose, but Chess wouldn't take the chance. Meanwhile, Guy's reputation spread to Great Britain, where young rockers like Clapton and the Rolling Stones were seeking out Chess singles and learning about Guy. His tour of England in 1965 brought exposure to a generation of musicians eager to soak it up, repackage it, and turn around and sell it to Americans as the hip new thing. "[Chess founder] Leonard Chess would eventually realize his mistake in not recognizing Buddy's appeal in the clubs, or that much of the appeal of the British rock bands was based on the kind of 'noise' that Buddy was producing live," Wilcox noted in his biography of Guy. "Still, Chess had not yet released a single album by Buddy Guy. What saved Buddy at Chess was his versatility."

Guy was invited to play with harmonica player Junior Wells on his Delmark album *Hoodoo Man Blues* in 1965. Delmark, a small jazz label, wasn't interested in producing singles, and encouraged the band to play as if it were a live show. The result was the first recording of a Chicago blues band in its natural environment and the album became the best-selling record in the label's history. On the first pressing, Guy was listed only as "Friendly Chap" due to his contract with Chess.

After leaving Chess in frustration in the late 1960s, Guy recorded for Vanguard Records and continued to play with Wells. In 1972, Eric Clapton convinced Atlantic Records to record Guy and Wells and *Buddy Guy and Junior Wells Play the Blues* was the result. The album should have been Guy's breakthrough, but Clapton's work as producer was hampered by his heroin addiction. The album wasn't completed for two years and was virtually ignored.

Guy continued to record on various small labels, often in Europe, through the 1970s and 1980s, and he bought the Checkerboard Lounge on Chicago's South Side. He later opened Buddy Guy's Legends just south of Chicago's Loop, which soon became the city's premier club.

Guy often jammed with prominent guitarists like Clapton, Vaughan, and Robert Cray and his higher profile helped him land a contract with England's Silvertone Records, which released *Damn Right, I've Got the Blues* in 1990. With guests like Clapton and fellow Brit Jeff Beck, the album was criticized by purists as leaning too far towards rock. Still, it won a Grammy Award as best contemporary blues album and he collected five W. C. Handy awards in 1992. Guy recorded four more albums for Silvertone through 1998, influencing a new generation of young guitarists, including Jonny Lang and Kenny Wayne Shepherd.

## Gymnastics

Once an exercise for warriors preparing for battle, gymnastics has evolved into one of the most avidly followed Olympic events and a popular conditioning activity for all ages. Though male gymnasts are admired for their strength and skill, it is largely women's gymnastics that captivates audiences and inspires thousands of children to take up the sport.

Derived from the Greek word *gymnos*, which means naked, the combination of acrobatics and tumbling that we call gymnastics was devised by the Greeks as an exercise to balance the mind and body and learn skills useful in battle. Other ancient cultures, notably the Chinese, Indians, and Persians, performed similar conditioning exercises. It was in the early nineteenth century that the benefits of gymnastics were popularized in Europe when Friedrich Jahn established *Turnvereins*, or gymnastics clubs, all over Germany. American clubs in the style of Jahn's clubs were opened in Cincinnati in 1848 and in St. Louis in 1865.

By 1881 the European Gymnastics Federation was established in Belgium (renamed International Gymnastics Federation or FIG in 1921), and gymnastics became an Olympic event in 1896. Women's Olympic gymnastics began in 1928. Olympic events involve performing athletic feats of leaping, swinging, and tumbling on a variety of apparatus, judged on the basis of the Code of Points, established and regularly updated by the FIG. For men, there are six types of official apparatus: the floor exercise, the pommel horse, the still rings,

the vault, the horizontal bar, and the parallel bars. Women do the floor exercise as well, along with the vault, the uneven parallel bars, and the balance beam.

Gymnastics underwent an enormous leap in popularity in the early 1970s. In the 1972 Olympics, Soviet gymnast Olga Korbut dazzled both judges and spectators around the world with her athletic and aggressive style, performing a back flip on the balance beam for the first time ever. In 1976, Romanian Nadia Comaneci became the first person in history to earn perfect scores for her gymnastic routines.

The dramatic performances of these skilled athletes and many others created a shift in perspective for women's gymnastics. No longer a demonstration of graceful motion juxtaposed with the male gymnast's display of power and strength, women's gymnastics became a powerful sport in its own right. With the new respect for women gymnasts came a surge in the popularity of gymnastics in the general population. In 1972, fifteen thousand amateur athletes learned acrobatics and tumbling at gymnastics clubs in the United States. A decade later there are one hundred fifty thousand, and the number continues to increase considerably after each summer Olympics. Whether it is Olympic hopefuls training to compete or children learning to tumble at the local community center, gymnastics has taken its place in American society.

With this new popularity comes a certain amount of worry. Competitive gymnastics can be a grueling sport, causing injuries to muscle, bone, and ligament. A 1990 study of Swedish male gymnasts found they had as many degenerated disks in their spines as the average sixty-five-year-old man. While male gymnasts reach their peak of performance in their late teens and early twenties, female gymnasts peak while they are still children of thirteen to sixteen, before bones and other bodily structures are fully formed. Some concerned trainers and parents refer to the "female athlete triad" of eating disorders, delayed onset of menstruation, and premature osteoporosis, which endanger female athletes who begin their careers at increasingly younger ages. It is not uncommon for young gymnasts to begin their training at age five and to work out for five hours a day

by the time they are teenagers. Such demanding schedules combined with super-competitive coaching have pushed young gymnasts to injury and beyond. Small slips while practicing flips and leaps have resulted in several cases of paralysis, the most famous being Sang Lan of China, who fell in a practice session during the 1998 Olympics, breaking her neck.

In response to concerns about the physical and emotional effects of competition on very young girls, the Olympic Committee has changed its rules, making sixteen the minimum age for Olympic teams. Parents and many coaches have also tried to refocus the sport on fun and personal accomplishment and away from the intense competition that drives athletes to risk injury and permanent damage.

Gymnastics continues to grow more popular, especially among young girls, who find needed role models in the strong young women who fly so gracefully through the air at the Olympics. The parameters of the sport keep expanding. When Olga Korbut performed her back somersault on the balance beam in 1972, the move was revolutionary. In less than three decades, ten year olds could do it in gymnastics class, and elite gymnasts in competition perform three back flips in a row. Perhaps that is the real romance of such athletic displays: the ability of a vulnerable young girl to increase the limits of human physical achievement.

## Hackett, Buddy (1924—)

Though primarily known in the 1990s for his nightclub comedy, Buddy Hackett is a versatile performer whose career spans more than half of the twentieth century. He has performed in films, television and cable specials, and has written a book of poetry. He was offered, and refused, the opportunity to replace Curly in *The Three Stooges*, preferring to remain a solo act. Hackett frequently makes himself—his short stature, his rotund build, and his Jewishness—the subject of his humor. His stand-up is risqué in an old-fashioned way; little of the anger and social commentary of Lenny Bruce, Richard Pryor, or Chris Rock is to be found. His cherubic face, twinkling eyes, and gentle self-mockery take off much of the sting from his profane language.

Buddy Hackett was born Leonard Hacker on August 31, 1924, in Brooklyn, New York. After serving in the United States Army he tried his luck as an upholsterer (like his father) and a waiter. Comedy, though, was his calling. He honed his craft at the resorts of the Catskill Mountains, 100 miles northwest of New York City, in the area known as “The Borscht Belt.” Many American Jews came there to vacation in an atmosphere where Jewish culture was celebrated and Jewish humor brought distraction from the troubles of the city. Hackett made his reputation in Catskill venues like the Concord Resort Hotel.

Television was enjoying its first “Golden Age” when Buddy Hackett made his premiere appearance. His night club style fit perfectly with the Dumont series *School House*. The premise came straight from vaudeville: a teacher character (Kenny Delmar) played host to a variety of unruly “students,” actually comedians doing their shtick. Buddy Hackett was among the ever-changing cast, which also included Wally Cox and Arnold Stang. *School House* aired only from January through April of 1949. Hackett remained a presence on early television, however, appearing on *The Tonight Show*, *The Jack Paar Show*, and *The Jackie Gleason Show*.

As the 1950s progressed the television situation comedy developed into the medium’s dominant form. From September 1956 to March 1957, Hackett starred in NBC’s live sitcom *Stanley*. He played Stanley Peck, a newsstand owner who constantly gets in trouble trying to help other people. Future variety series star Carol Burnett played Stanley’s girlfriend, Celia; the voice of imperious hotel owner Horace Fenton was provided by comedian Paul Lynde. The show was not a success. A bigger misstep was CBS’ attempt the next fall to pair Hackett with comedian Jackie Gleason in a revival of the latter’s comedy-variety program. Audiences refused to accept Hackett in Art Carney’s role as Gleason’s sidekick; the series lasted only three months.

Buddy Hackett made a number of memorable film appearances throughout the 1960s, including *The Music Man* (1962), *The Wonderful World of the Brothers Grimm* (1962), and the teen comedy *Pajama Party*. His manic performance in Stanley Kramer’s *It’s A Mad, Mad, Mad, Mad World* (1963) stood out among the film’s overcrowded cast.

The greatest showcase of his acting ability came on television in 1979. NBC’s *Bud and Lou* was a made-for-television biography of the comedy duo of Bud Abbott and Lou Costello. Hackett shined as Costello opposite Harvey Korman’s Abbott. Though the film recreated many of the team’s classic bits, it was the portrayal of their often strained relationship and the sadness of Costello’s later life which allowed Hackett to show the world he could embody a complex dramatic character.

Stand-up comedy remained the backbone of Buddy Hackett’s career. He frequently played casinos in Las Vegas and Atlantic City. In 1983, a new generation discovered his Catskills roots with the Home Box Office (HBO) special *Buddy Hackett—Live and Uncensored*. New fans learned that the funny little guy from Walt Disney’s *The Love Bug* (1969) could swear and speak graphically, and hilariously, about his bodily functions. The program was so successful that in 1986, HBO’s live comedy series *On Location* featured the episode “Buddy Hackett II—On Stage at Caesar’s Atlantic City.”

Hackett has lent his distinct raspy voice to several animated productions, most notably Disney’s *The Little Mermaid* (1989). His character, a seagull named Scuttle, was patterned after him. Scuttle shares Buddy’s hefty build and habit of talking out of the side of his mouth. Much less successful was CBS’ *Fish Police*, a failed attempt to cash in on the success of Fox’s *The Simpsons*, which ran for only a few weeks in 1992.

Buddy Hackett is a comedy legend. In 1997 he appeared in the PBS (Public Broadcasting Station) *Great Performances* special “The College of Comedy with Alan King.” Fellow Catskills veteran King moderated a discussion of comedy with Hackett, Tim Conway, Paul Rodriguez, and Judy Gold. Hackett showed off his willingness to joke

about politically incorrect subjects like Alzheimer's Disease and disability. As always, his high spirits and self-deprecation kept the humor from being insulting. Hackett earned a mark of pop culture distinction when, in 1995, he was the subject of a gag on *The Simpsons*. It comes in the episode "Lisa's Wedding," which is set in the year 2010. In a joke so fast it can only be seen if viewed frame-by-frame, a television newscast announces the search for a series of outlaw celebrities, including "The Artist Formerly Known as Buddy Hackett." The real Buddy Hackett can be found entertaining night club and talk show audiences with simple, bawdy humor which transcends fashion and generations.

## Hackman, Gene (1930—)

Gene Hackman quickly gained critical recognition and Academy Award nominations for his roles in *Bonnie and Clyde* (1967), *I Never Sang for My Father* (1970), and *The French Connection* (1971). Hackman demonstrated considerable range, from the mousy surveillance expert involved in a murder in *The Conversation* (1974) to the delightfully overplayed Lex Luthor in *Superman: The Movie* (1978). Playing an inspirational basketball coach in *Hoosiers* (1986) revived his career from a slight slump. In the 1990s, Hackman found considerable success playing psychologically complex antagonists in movies such as *Unforgiven* (1992), *Crimson Tide* (1995), and *Extreme Measures* (1996). Even when he plays the villain, Hackman retains an amiable integrity that makes his performances compelling.

## Haggard, Merle (1937—)

Country singer, songwriter and guitarist Merle Haggard was among the founders of the popular and distinctive "Bakersfield

**Merle Haggard**

sound." While Nashville was, and is, the undisputed capital of country music, Bakersfield, California, often called the "second Nashville," emerged as its rival, noted for an element of western swing that produced a more up-tempo style than the "Nashville sound." Haggard, with Buck Owens, Tommy Collins, Red Simpson, and Billy Mize, was the core of this western headquarters of country music, and Haggard and Owens rode the sound to stardom over the next two decades. After helping to establish this new "honky-tonk" music, known for its harder edge and barroom themes, Haggard branched out into other styles of music and, by the 1970s, had joined the ranks of country's crossover artists. His career represents a combination of change and tradition: despite the diversity of his music, he always tried to maintain his ties to traditional country music, which earned him a reputation as contemporary country's music-historian. Haggard's unique blending of tradition and change proved to be a recipe for overwhelming success.

While Haggard showed an interest in music from a very early age, his early life was anything but indicative of future success. He was born into poverty in Oakdale, California in 1937, his parents having migrated westward from Oklahoma during the Dust Bowl to seek work as itinerant farmers. His father died when Merle was very young, and the boy lived a rough and reckless childhood. As a teenager he alternated between odd jobs and reform school, and as a young man spent time in jail for various petty crimes. An arrest for burglary finally landed him in San Quentin Penitentiary for three years, an experience that gave him the resolve to change his life. After being paroled in 1960 (Governor Ronald Reagan granted him a full pardon in 1973), he went to Bakersfield and worked a series of odd jobs, mostly manual labor, while moonlighting as a guitarist in the raucous nightclubs and bars in the "beer can hill" area. Over time, his troubled youth became one of his greatest assets, as he churned out hit after hit revolving around themes of barrooms, prisons, and life on the margins of society.

Haggard landed a job as guitarist for a band led by singer Wynn Stewart, and eventually signed his first recording contract with Tally Records. His first hit was “Sing a Sad Song” (1963), followed by a Top Ten single (“My Friends Are Gonna Be Strangers.”) The success of this tune brought a deal with Capitol Records, and by the mid-1960s Haggard was becoming a country music sensation with his songs of drinking, cheating, and breaking the law. During these years he married Bonnie Owens, a musician also under contract with Tally, and assembled a band, the Strangers. Soon Merle Haggard and the Strangers were producing a string of hits, including “Swingin’ Doors” and “The Bottle Let Me Down,” both recorded in 1966, and, that same year, his first number one single, “I’m A Lonesome Fugitive.” Several more of his songs reached the top of the charts in the late 1960s, among them “Branded Man” (1967) and “Mama Tried” (1968). These successes earned him his first Top Male Vocalist of the Year award from the Academy of Country Music. His outlaw image set a trend in the industry—several artists emerged during these years who sought popularity by cultivating a reputation of lawlessness.

Yet, just as he had risen to fame as an outlaw, Haggard soon became a patriotic hero to a large and different sector of the nation. He attracted national attention and caused controversy with the release of “Okie From Muskogee,” in 1969, a song that centered on life in a small Oklahoma town and championed the attitudes of the “silent majority” during the social tumult wrought by the Vietnam War. The song, which declared “we don’t burn our draft cards down on main street,” and “we don’t smoke marijuana in Muskogee,” became an anthem for those Americans who had tired of social unrest and viewed protest against the nation’s policies in Southeast Asia, or American society generally, as a lack of patriotism. Haggard later claimed to be somewhat surprised by the attention the song received, asserting that it had been written as a satire. Nevertheless, in 1970 he recorded “The Fightin’ Side of Me,” also based on the theme of patriotism.

By the early 1970s, the country music industry was undergoing great change as audiences responded to new styles that combined country with elements of other musical genres. Nashville, alert to the trend, introduced a wave of “crossover” artists who could sell records on multiple charts, while more traditional musicians were given correspondingly less play time. Haggard responded well to these changes, revealing perhaps his greatest talent: his ability to maintain his reputation as a traditional country musician and survive the seemingly constant changes in audience taste. His enormously successful single “If We Make It Through December” (1973) established him as one of the industry’s crossover artists by reaching the pop charts; yet he complemented this success with tribute albums to earlier country music icons. The first of these was *Same Train, A Different Time* (1969), dedicated to the music of the “singing brakeman,” Jimmie Rodgers, followed by an album recognizing Bob Wills’ contributions to country music, *A Tribute to the Best Damn Fiddle Player in the World* (1970). It was not long after that Haggard branched out into areas far removed from the honky-tonk style of his early career. His concept albums were well-received: *Land of Many Churches* (1973), a double album focusing on gospel recordings, and *I Love Dixie Blues* (1974), recorded in New Orleans. These brought him recognition and respect both from fans and his peers in the industry for his versatility. By the late 1970s, he was a fixture of the country music scene, making numerous television appearances and even a cameo appearance in the Clint Eastwood movie *Bronco Billy* (1980).

These years brought increased recording success and national popularity. In 1977 Haggard signed with MCA Records, where he

produced even more number one hits, including “Think I’ll Just Stay Here and Drink” and “Rainbow Stew,” bringing his number of chart-making recordings to over fifty. He also made celebrated duet albums with George Jones and Willie Nelson, both of which generated hits: “Yesterday’s Wine” with Jones and “Pancho and Lefty” with Nelson. The album *Pancho and Lefty* earned Haggard and Nelson the Country Music Association’s Best Album of the Year Award.

In 1990 Merle Haggard signed with Curb Records, and was still continuing to compose, record and tour at the end of the decade. His album *Merle Haggard 1996* represents a musical overview of his entire career, offering a wide variety of styles, and duets with country stars young and old. “The Hag,” as his fans came to call him over the years, received almost every major award offered by the country music establishment; and his band, the Strangers, has shared in the fame, garnering numerous accolades from the country music industry, including several Touring Band of the Year awards.

## Hagler, Marvelous Marvin (1954—)

Known outside of boxing circles for his bald head, goatee, menacing stare, and muscular physique, a ring announcer once told Marvin Hagler that if he wanted to be announced as “Marvelous Marvin,” he should go change his name. So Hagler did just that, legally changing his name to “Marvelous Marvin Hagler.” During the 1980s, when athletes’ incomes skyrocketed and attitudes towards athletes in the media changed from idolatry to suspicion and scorn, Hagler came to symbolize the throwback fighter of yesteryear. Where his nemesis Sugar Ray Leonard fought his first professional fight in 1976 on national television for a five figure purse, Hagler began his professional career in obscurity, fighting for very little money. Hagler and Leonard fought for their first world titles on the same card but not against each other; Hagler fought the preliminary bout against middleweight champion Vito Antfermo for \$40,000 and failed to gain the middleweight title when he was awarded a draw in a fight most observers felt he won, while Leonard fought the main event for \$1,000,000 and won the welterweight title with a 15th round knockout against Wilfred Benitez. Leonard was the media darling whose career was carefully orchestrated, Hagler was the blue collar champion who earned everything he ever received.

As a struggling middleweight contender unable to get a title shot, Hagler was once told that he had three things going against him—he was black, he was left-handed, and he was good. In fact that statement was only partly true. Hagler is in fact African American, but while he could fight southpaw, he could also fight right-handed, and he was not just good, he was great. As a result of his being better than just good, he was able to rise above the obscurity to which most talented, black left-handers have been relegated throughout boxing history.

### Marvelous Marvin Hagler

When Sugar Ray Leonard retired in 1982 due to a detached retina, Hagler, who was by then the undisputed middleweight champion of the world, took Leonard's place as the biggest star in boxing. Wins in highly publicized bouts against fellow Hall of Famers Roberto Duran and Thomas Hearns led to endorsement deals, most notably for Right Guard deodorant. Right Guard used Hagler's instantly recognizable face, and the association of his face with brutality, and made an ironic, comic television commercial in which Hagler, perched atop a horse and dressed in equestrian attire, declares that anything less than Right Guard would be "uncivilized." Marvelous Marvin Hagler, the everyman champion, had finally reached the superstar plateau that Sugar Ray Leonard had occupied in his own heyday.

When Leonard eventually returned to the ring in 1987, he and Hagler met in one of the most anticipated fights in the history of boxing. During negotiations for the bout, Hagler insisted on more money than Leonard. Leonard complied, and Hagler received \$14,000,000 to Leonard's \$12,000,000, instead of a \$13,000,000 apiece split. In exchange for the million dollars, Hagler agreed to a 12 round rather than a 15 round distance. The shorter distance theoretically benefitted Leonard, the naturally smaller fighter who would have to expend more energy than Hagler in order to remain competitive in the bout. As it turned out, Leonard started the fight quickly and Hagler came on strong later. Marvelous Marvin's late rounds rally

was not enough, and Leonard won the split decision, taking Hagler's middleweight title. Unlike almost all other former champions, Hagler never made a comeback. Instead he moved to Italy, where this blue collar throwback fighter became, of all things, a popular and successful Italian action-movie star.

## Haight-Ashbury

There are few crossroads with the name recognition of the San Francisco intersection of Haight and Ashbury. A seemingly enchanted place, the Haight-Ashbury district begins at the top of a rise that gradually makes its way west to the beach. The fog drifts up past Golden Gate Park with ritual regularity, settling over the gingerbread Victorians and the Monterey Pines. In the space of a little under five years, the Haight traced an arc from a quaint if somewhat dilapidated

working-class neighborhood to the Mecca of the psychedelic counter-culture and back again. By the early 1970s, there was no longer any indication that the street had once hosted a vibrant alternative society. It had collapsed utterly under the weight of its own inner contradictions.

Comprised of a nine-block stretch of Haight Street ending at Golden Gate Park to the west, Haight-Ashbury, or The Hashbury as it was affectionately dubbed, was the result of a mixture of happenstance and proximity, and the peculiar tolerance of San Francisco, a city well known for a certain moral lassitude left over from the Gold Rush era when it was a lascivious rough-and-tumble city of dubious morality, heralded as the Babylon of the west. The city's reputation made it an attractive spot for bohemians; waves of disaffected artists made habitual migrations to the City by the Bay throughout its history—most notably the Beats of the 1950s, who made it a prime destination in the world-wide Beatnik circuit, along with Paris, Tangiers, New York, and Los Angeles.

In 1963, Beatniks were fleeing North Beach to take advantage of the cheap rents and available storefronts of the Haight. But a sea change took place between the scruffy existential Beats and the earliest denizens of the Haight: LSD. Haight-Ashbury was the site of a remarkable syncretism, an admixture of influences that coalesced

over time into the psychedelic eddy that Haight Street became. Like the collection of thrift-store finery and period costumes the original hippies fancied, their philosophy was fashioned from Eastern mysticism, comic books, science fiction, and the Beat writers who acted as a filtering agent through which the younger poets picked and chose their reading. Similarly, acid-rock emerged out of a grab-bag of styles: Be-bop Jazz improvisation, folk and bluegrass modalities, dabbed on a heavy *impasto* of garage-rock primitivism. For the hippies, LSD was their communion, and rock music their liturgy.

At first the scene was remarkably self-supporting, with small venues catering to a local group of cognoscenti. In 1965, there were an estimated 800 hippies in residence. By 1966, new arrivals had flooded the Haight, with an estimated 15,000 hippies in residence. A more disturbing statistic, but at this point hardly a blip on the radar were the 1,200 runaway teens who flocked to the Haight as if guided by some special teen-alienation magnet. Shops, boutiques, restaurants, and clubs sprang up to cater to the new arrivals, and an activist collective, the Diggers, provided for the needs of the more indigent among them with a soup kitchen, crash pads, and later, a free store.

The year 1967 started off optimistically enough with the first “Be-In,” a massive free concert and showcase of the local musicians.

A hippie parade in the Haight-Ashbury district, 1967.

It was by all accounts a magical event. The next logical phase, or so it seemed to the movers-and-shakers of the community, was to invite the youth of America to the Haight for the summer. They envisioned a kind of hippie training: the youth would come, get turned on, and return from whence they came with the blueprint for a new culture. It didn't quite turn out that way. Young people did arrive for the summer, but they were not the beautiful people the Haight habitués anticipated. "They had bad teeth and acne scars and it was easy to see why they hadn't been voted homecoming king or queen back in Oshkosh or Biloxi or wherever they'd come from," wrote Jay Stevens. "These kids were rejects; they'd come here because they were losers, and while they had a certain Christian appropriateness, it was not what the Council for the Summer of Love had expected."

By summer's end, the dream of a self-sufficient urban conclave of tripping Luddites had dissolved in a miasma of hard drugs, runaways, and incipient neglect. The fragile social infrastructure the counterculture had built was overcome by the onslaught. Tour buses and sight-seers flooded the district, as did reporters. Their dispatches only added to the throng of destitute, addled kids. The indiscriminate use of every variety of drug was legion, as were drug busts, hence informing and informers. "The language was Love," writes Hunter S. Thompson, "but the style was paranoia." That October, the Diggers held a mock burial of the "Hippie, son of Media" in Golden Gate Park. It was a pointed bit of street theater, but it was after the fact. The wave had surged and broken, leaving human jetsam in its wake. By then, the Haight-Ashbury pioneers had already fled to higher ground.

By 1971 Haight Street was once again a depressed commercial district with a couple of struggling mom-and-pop enterprises which predated the hippies. Then came the lean years, the urban blight and street violence, but through the district's darkest hour, tour buses continued to visit the neighborhood, offering a glimpse of what had been. By the mid 1980s, boutiques, used clothing stores and coffee shops lined the street. Bookstores, head-shops, and galleries peddled sixties nostalgia to the new generation of adherents—college students and European tourists who looked on the street as a holy relic. And with the new-found prosperity, old problems reasserted themselves. Homeless celebrants ranged through the park and panhandled on the street corners, their ranks swelled by a second wave of runaway kids: teenage adherents of the Grateful Dead, punk rockers, racist skinheads. Predictably, street violence and drug abuse were not short in following.

Haight Street now lives on marketing the allure of that brief, heady period. There is no longer a pretense that Haight-Ashbury is anything but what it appears to be. Ironically, this new business cycle has thrived longer than the cultural moment on which its products are based. Without its idealistic communitarian ethos, the Haight-Ashbury is certainly more resilient, but what was at one time disturbing, or thrilling, is now little more than a titillation, a pleasant way to spend an afternoon.

## Hair

A new milestone in Broadway history was set in 1968 when *Hair*, the first rock musical, opened to mass popularity. Tackling controversial and explosive issues of the era in a theatrically innovative fashion, the brash and exciting musical sustained a five year run at New York's Biltmore Theater. The show eventually spawned a total of fourteen national companies and produced eleven cast albums in different languages worldwide. A concept musical reflecting the anti-establishment energy of 1960s American "hippie" youth culture, *Hair* was seen by over four million people in its first two years of production, and the show ultimately grossed over \$22,000,000 in revenue. The revolutionary musical generated several hit radio singles and brought to public attention a number of talented performers. The enormous success of *Hair* paved the way for a series of ambitious rock musicals, including *Jesus Christ Superstar* in the 1970s and *Rent* in the mid-1990s.

The project that eventually came to be known as *Hair* evolved in 1965 from the creative minds of Broadway performers Jerome Ragni and James Rado. Although they had never formally written a musical project before, the two co-authors were fascinated by the as yet untapped theatrical potential of 1960s youth culture and began to do field research in New York City. Ragni and Rado interviewed and documented the lifestyles of hippies who had rejected dominant social mores and values, choosing instead to fight for abstract principles like freedom, justice, and liberty. Celebrating the newly arriving "Age of Aquarius," these youth held decided opposition to American military involvement in Vietnam, carried a fondness for marijuana and other experimental drugs, cherished a newfound sense of sexual freedom, and positioned themselves firmly against environmental destruction, racial segregation, and religious dogma.

Ragni and Rado were also enticed by the opportunity to breathe new life into the musical theater scene. Daring musicals like *Cabaret*, *West Side Story*, and *Fiddler on the Roof* had already begun to experiment with form, relying less on text and placing more emphasis on music and dance. In 1968, *Hair* would come to alter the formal possibilities for musicals by explicitly drawing on both experimental theatrical techniques, including those pioneered by visionaries such as Antonin Artaud and Jerzy Grotowski, and on the energy of the avant-garde downtown New York theater scene. In contrast to *Okla-homa*, which had revolutionized Broadway theaters in the 1940s, *Hair* was less concerned with character and plot, and instead focused on thematic content and the depiction of lifestyle.

After completing the bulk of their field research, Ragni and Rado decided to collaborate with Canadian composer Galt McDermot, who wrote the amiable and infectious rock tunes that would bring *Hair* to public endearment. The nearly incoherent plot centered on Claude, a young man who had been drafted to service in Vietnam; his friend Berger who had "dropped out" from society; and their friend Sheila, an anti-war student at New York University. Joseph Papp of the New

A scene from the stageplay *Hair*.

York Shakespeare Festival took an interest in the experimental script and decided to produce it at his Public Theater in downtown New York. Papp's off-Broadway run of *Hair: An American Tribal Love Rock Musical* at the Public Theater was only a modest success, however. Ragni and Rado came into frequent conflict with director Gerald Freedman, who chose to concentrate on the book of the musical and to polish its look rather than attempt to convey the "authenticity" of the youth counterculture on to the stage.

Upon the completion of the run of *Hair* at the Public Theater, Michael Butler, a young wealthy political with a pressing concern for the welfare of Native Americans, took an interest in producing the experimental musical. Butler financially backed the show at the Cheetah, a popular dance hall discotheque in Manhattan. The unsuccessful run proved that the show needed to be overhauled before being brought to Broadway. Tom O'Horgan, a director who had honed an impressive amount of experience in his work at the avant-garde New York theater LaMama, was hired to revamp the show; while Robin Wagner, Jules Fisher, and Nancy Potts were respectively hired to redesign the scenic design, lighting design, and costume design.

O'Horgan virtually wiped the show clean of its narrative and concentrated more intently on the concept. Thirteen songs were added to enhance the show's pro-love, pro-sex, pro-drugs, and racial harmony message.

In its new form, the show fearlessly broke certain taboos of the theater. Headed by the two authors in the leading roles, the young and talented cast demolished the "fourth wall" of the theater by entering through the audience to arrive on stage. The cast often switched roles interchangeably. For the first time on the mainstream stage, audiences witnessed drug use, explicit language, an openly gay character, and drag queens. During the infamous "Be-In" scene, the cast stripped nude under blinking strobe lights to the shock and surprise of the spectators. The show's popularity was enormous; and in April of 1968, the members of the original cast performed a free, jam-packed show in Central Park.

For all its experimental bravery, *Hair* was met with derision by distinguished theatrical critics and lost the Best Musical Tony Award to a more traditional musical, *1776*. Nonetheless, the musical brought to attention a series of gifted performers like Ben Vereen, Diane

Keaton, Melba Moore, and Nell Carter, each of whom went on to greater success in areas of film, television, and music. The musical also spawned a series of spin-off albums like *Disinhearted* that consisted largely of outtake material that had been excised on the show's path to Broadway. As performed by groups like the Fifth Dimension and the Cowsills, infectious songs like "Let the Sunshine In," "Good Morning Sunshine," and "Aquarius" soon topped the American pop charts.

After generating an impressive number of road shows, *Hair* closed on Broadway in 1972. The show was revived in 1977, but by then, the material no longer seemed as topical and original as it had in 1968. In 1978, the musical became reworked as a critically acclaimed film directed by Milos Forman, and in 1988 some of the original cast members rejoined at the United Nations to celebrate the musical's twentieth anniversary reunion concert. A European tour of the musical continued to prove successful into the 1990s; and in 1998, an off-Broadway revival of *Hair* briefly played to commendable reviews. Yet, as evidenced by the success of the rock musical *Rent* in 1995, the impact of *Hair* has been long lasting. A document of a profoundly turbulent and explosive era in American history, *Hair* forever changed not only the look and the sound of the Broadway musical, but also its very possibilities.

## Hairstyles

Human beings have styled and adorned their hair since the beginning of recorded history. This styling has different and often contradictory purposes. As an intrinsic, yet malleable part of the body, the hair and its styling can serve as an intimate form of self-expression. Yet hair is also a public and very visible part of personal presentation, and, as such, hairstyle becomes a public, even a political statement. As part of the physical body, hair has a role in sexuality, and it is often one of the first things noticed in a prospective sexual partner. Hair is also a major component of fashion, the way that society dictates its members should look. Because of its many interpretations, hairstyle can serve as a medium of conformity or rebellion, it can lure or rebuff prospective mates, and it can be a constant source of frustrating labor for the individual who cannot get it to behave.

Though hairstyles have constantly changed, and those changes have often been seen as radical innovations, most styles have come and gone many times. The straight hairstyle that has become popular for women in the late 1990s and was *de rigueur* in the late 1960s and early 1970s is basically the same style that was considered appropriate for unmarried girls in medieval Europe. Though hairstyles are constantly changing, there are usually strictly enforced cultural norms, beyond which it is forbidden to deviate. These norms are enforced by rules in schools and on the job as well as by social pressure.

Throughout history, hair has been shaped and decorated to announce its wearer's place in society. In ancient Egypt, nobility was denoted by a bald, shaved head which was then covered by thick, black wigs made of wool, palm fibers, or human hair, braided and decorated. Ancient Romans made marble wigs for their statues in order to update them as hairstyles changed. They changed often, according to one Roman writer: "It would be easier to count the acorns on an oak tree . . . than to count the number of new hairstyles that appear every day."

In fifteenth-century Europe, a high forehead was prized, and Elizabethan women plucked their hair out to the very tops of their heads. Queen Elizabeth herself had more than eighty red wigs to make sure that her hairstyle was always in perfect condition. Louis XIV brought wigs into fashion in early eighteenth-century France when he wore them to conceal his balding head. In the late 1700s, Madame de Pompadour, mistress of Louis XV, led French fashion with the elaborate hairstyle that was named for her. Women of the day wore flowers, feathers, jewels, and even model ships in hair that was piled high and held in place with beef fat. This pomade often attracted insects, and folklore of bugs and even mice living in the depths of elaborately styled hair persisted right up to the beehives of the 1950s.

Up until World War I, respectable American women wore their hair primly up on their heads, but by the 1920s, women were entering a freer era, as documented in F. Scott Fitzgerald's story "Bernice Bobs Her Hair." Men often express a preference for long, flowing hair on women, and a by-product of both twentieth-century waves of feminism has been the popularity of short hairstyles, announcing a new independence from men. The short bobs of the Roaring Twenties were appropriate for the breezy informality of the times as well as being a sort of feminist statement, freeing suffragists and their sisters from the time-consuming triviality of hair care.

The 1930s and 1940s marked a return to glamour, with cascading tresses. These were reined in somewhat during World War II by a severe, all-business style that reflected women's role working on the home front. In the 1950s and early 1960s, big hair was back, with beehives and stiffly lacquered curls. Many women teased their hair to get the desired volume or wore "rats," balls of hair or netting that were placed underneath to increase hair height. As the hippie counter-culture rose at the end of the 1960s, the natural look came into vogue, and women who had once tortured their hair into tight curls began to iron it or roll it on beer cans and toilet paper rolls to achieve the lank straightness prized both on fashion runways and at university sit-ins. Men, too, began to wear their hair long in the late 1960s, and long, straight hair became a symbol of the youthful culture of protest and revolution. The Broadway musical that claimed to define the generation was called, simply, *Hair*.

With the punk movement of the 1980s, hair fashion exploded beyond any modern precedent. Expressing the nihilistic angst of youth rebelling against complacency, punks made themselves look freakishly dramatic. Both women and men dyed their hair bright blues, purples, and oranges, using gel or dramatic cuts to create sculpted spikes of hair. Some wore their hair in "mohawks," imitating the traditional hairstyle of an American Indian tribe who shaved the sides of the scalp, leaving a sheaf of hair standing in the middle. Though conservative society despaired, the punk rockers did much to liberate the boundaries of fashion.

Though women are usually considered the primary slaves to fashion, men are also quite attentive to their hair, and men's hairstyles have often been the focus of media scrutiny. Whether it was the slicked-back duck tails of the 1950s, the revolutionary shaggy bangs

of the early 1960s Beatles' haircut, or the defiantly shoulder- and waist-length tresses of the hippies of the late 1960s and 1970s, men have frequently used hairstyle as rebellion and self-expression. Sometimes male hair experimentation has drawn more dramatic reactions

than women's changing styles. Perhaps because women are expected to follow fashion, even to look ridiculous in its name, women are allowed more flexibility in hairstyle. A man who deviates from the narrow range of conservative hairstyles permitted for men faces

derision and worse. Long-haired hippies of the 1970s were mocked, threatened, even beaten because of the length of their hair. Schools and businesses have also been slow to permit men freedom to wear their hair in unconventional styles.

Male pattern baldness, and the desire to conceal it, has long been a motivating factor in the hairstyles of older men. Some men try drugs or hair transplants to fight hair loss, while others attempt the often-ridiculed approach of growing one side long and combing it over the top of the head to cover bald spots (a method called a “comb over”). Male baby-boomers now entrenched in middle age have brought into fashion a neat ponytail, often acceptable in the modern business world, which, even paired with a balding pate, makes a discreet statement about its wearer’s “hipness.”

Almost all modern American hair fashion is predicated on the fairly straight or wavy European hair type. Those whose hair is by nature very different from that model, such as African Americans, some Jews, and others, are hard put to force their hair into the prescribed styles. For African Americans especially, hair has been an intensely political issue. Because all things black have been long stigmatized by white American culture, blacks tried for decades with chemicals, machines, and intensive labor to change their hair, even calling natural, tightly curled black hair “bad” hair and straighter hair “good” hair. In the late 1960s, with the rise of the civil rights movement, a notion of “black pride” took hold, and many blacks began to grow their hair out in Afros or “naturals,” which sometimes stood several inches out from the head. In the 1970s and 1980s, inspired by the politics and culture of the Jamaican Rastafarians, some blacks began to let their hair grow long and gather naturally into dreadlocks, soft ropes of hair that retain their shape as they grow.

Many whites find both Afros and dreadlocks on blacks to be threatening, perhaps both because they often go along with radical anti-racist politics and because they represent a new positive black-identified culture that might challenge the dominion of white culture. One reaction of white culture to this challenge has been to repress such expressions of ethnic identity, such as forbidding certain hairstyles in the workplace, but another reaction has been to appropriate them. Many blacks were outraged in 1979 when actress Bo Derek appeared in the film *10* wearing her hair in “cornrows,” or many small braids close to the head. Cornrow braids had long been a traditional African-American hairstyle, but the media and much of the white public greeted Derek’s style as an innovation. Though cornrows enjoyed a brief popularity among whites, few credited the black community as its source. Similarly, in the 1980s and 1990s, some young counterculture whites, seeking a rebellious political statement, or identifying with black struggles, trained their hair to grow in an approximation of dreadlocks. While some blacks may find this imitation to be a kind of support, many consider it to be insulting and ignorant.

If European styles were historically shaped by kings and courtesans, American styles have been most consistently influenced by our own form of nobility—film and television stars. Dynamic actress Louise Brooks led the way to the boyish bobs of the 1920s, while “blonde bombshell” Jean Harlow and redhead Rita Hayworth made flowing curls a fashion favorite. Veronica Lake popularized her trademark look by letting her blond hair cascade in front of one eye. In more recent years, Farrah Fawcett’s shaggy “disco mane” became the most imitated style of the 1970s, and in the early 1990s women flocked to hairdressers requesting the “Rachel” worn by Jennifer Aniston’s character on the television series *Friends*. Men, too, imitate the hairstyles popularized in the media, whether Michael Jackson’s 1980s “Jeri curls” or the slicked-back retro look of “gangster chic”

returning to the 1990s. Even lack of hair became a fashion as some shaved their heads after seeing the style on Irish singer Sinéad O’Connor and actress Sigourney Weaver in *Aliens*.

Hairstyle is not only a personal choice, a fashion statement, or even political action, it is also a multimillion dollar industry. As people struggle to coax their hair into the latest style, the popular color, or the perfect statement of their own values, they purchase a variety of hair products and fashion magazines, and spend hundreds of dollars a year on hairdressers. There is even computer software that allows a user to view her/himself in various hairstyles before making the crucial decision. The hair care industry often relies on a culturally induced insecurity about looks, particularly among women, as well as the notion that a different “look” will bring happiness and fulfillment. The media feeds this insecurity with its ads (“Is it true blondes have more fun?”), talk-show makeovers, and slavish reportage of celebrity fashion. As more images bombard us, it becomes harder and harder to find the personal element of style. However, whether it is African Americans reclaiming a cultural heritage, 1970s lesbians recognizing each other by their close-cropped hair, or punk rockers throwing a purple spiky head in the face of convention, there always seems to be room for genuine identity to peek through the rigidity of fashion.

## Halas, George “Papa Bear” (1895-1983)

George Stanley Halas was “Papa Bear” to almost anyone familiar with the Chicago Bears football team . . . and rightly so. For 61 years Halas was affiliated with the Bears in one capacity or another—he named the Bears, played for the Bears, coached the Bears, and owned the Bears. At the time of his retirement as a coach in 1968, he had compiled the best coaching record in the history of professional football, with 326 wins, 150 losses, and 31 ties. Halas’s teams became known as the “Monsters of the Midway,” winning 11 championships, primarily for their physical brand of football. His greatest moment probably came in the 1940 championship game when his underdog Bears crushed the Washington Redskins, 73-0. From 1970 until his death, Halas served as the first president of the National Football Conference.

## Haley, Alex (1921-1992)

In 1976, author Alex Haley did something no black person had been able to do before: he got Americans to view history from a black perspective. The vehicle he used was *Roots: The Saga of an American Family*, his 688-page fictional interpretation of the genealogy of his family beginning with a kidnapped African boy brought to the United States as a slave in the mid-1700s. It was not the first time Haley had successfully shown readers life from the black perspective. Before he wrote *Roots*, he wrote *The Autobiography of Malcolm X*, a story about the transformation of Malcolm Little from a street-savvy hustler to Malcolm X, a Black Muslim who went from hating whites to becoming an advocate of integration just before he was assassinated by fellow Black Muslims. When Alex Haley died, one creative writing professor, referring to *Roots* and *Malcolm X*, said that Haley had produced two classics in his lifetime. That was not bad for a college dropout who began his career in the Coast Guard as a messboy waiting on white officers.

Haley embarked upon his writing career while still in the Coast Guard. He began by composing love letters for shipmates who did not feel up to the task and then produced articles for magazines. One of his articles, "Hope Springs Eternal," appeared in *Atlantic* in June 1954. While it focused on one of his great aunts, the article mentioned his grandmother's having "a paper tracing her family back to a freed slave," a hint of the phenomenal family saga Haley would interpret a decade later in *Roots*.

About halfway through Haley's 20-year Coast Guard career, the admiral he served as a steward was so impressed by one of Haley's articles that he successfully petitioned the Coast Guard to create the rating of journalist for Haley. After retiring from the Coast Guard in 1959, Haley became a freelance writer, eventually conducting the first *Playboy* interview (with Miles Davis) and several others, including Martin Luther King, Jr., Cassius Clay (later to become Muhammad Ali), Sammy Davis, Jr., Johnny Carson, and George Lincoln Rockwell, a racist and anti-Semitic neo-Nazi.

Just as a modest article about a great aunt became *Roots*, Haley's interview with Malcolm X and an earlier article about the Nation of Islam for *Reader's Digest* led to Haley's collaborating with Malcolm X to write *The Autobiography of Malcolm X*. The book was in type when Malcolm X was assassinated on February 24, 1965, and Haley immediately wrote a lengthy epilogue explaining how he and Malcolm X had collaborated on it. *The Autobiography of Malcolm X* became a bestseller and was adopted in college literature courses around the country. The book was published at a time of growing racial divisions in the United States and rising interest in African-American leaders. Malcolm X, for example, was routinely written

about in the mainstream press and his pronouncements were well publicized. His assassination increased interest in his life, although the book, because it tells the story of redemption and transformation, transcends that tragedy. Spike Lee based his movie *Malcolm X* on Haley's book.

When *Roots* appeared in 1976, it too became an immediate bestseller. News accounts tell of Haley appearing at an autograph session expecting to find hundreds of people, only to be swamped by thousands. He had given African-Americans their sense of identity; he had given them a history. The book appeared during the nation's bicentennial year and Haley dedicated it "as a birthday offering to my country within which most of *Roots* happened." It is worth repeating the subtitle of the book, *The Saga of an American Family*, for it demonstrates that Haley was trying to make a broad statement about everyone's roots, not just those of African Americans, and no doubt he struck a chord. It was as if the entire country was having an identity crisis and readers of any race could better understand their own lives through the multigenerational saga Haley had written.

*Roots* consumed Haley both in researching and writing, and also after it was published. He spent about 12 years doing research, even traveling in the hold of a ship to get a feel for how slaves must have felt when they were being transported in chains from Africa to the United States. He became even more popular after *Roots* appeared as a six-night 12-hour miniseries on television, a show watched by 130 million people. Haley was overwhelmed with speaking engagements and requests he could never satisfy. He gave the world two classics in his lifetime and that is what he will be remembered for.

## Haley, Bill (1925-1981)

Often referred to as the founding father of rock 'n' roll, Bill Haley was the first performer to become famous in association with the new genre. William John Clifton Haley was born near Detroit, but raised in rural Pennsylvania. He left school in 1940, having completed the eighth grade. Coming of age during World War II, Haley was spared military service by a blind left eye. He had become interested in country and western music as a child, and during the war he began to perform on a semiprofessional basis.

**Bill Haley and His Comets**

By late 1943 Haley was a regular member of a country band, and for the next several years he sang, yodeled, and played rhythm guitar in bands like the Down Homers. In 1946 he struck out on his own with a group he called the Range Drifters. Like the other bands with which Haley was associated before 1952, the Range Drifters wore “drug store” cowboy outfits, like Roy Rogers. After a year of unprofitable touring, the Range Drifters broke up and Haley found work of a different kind. He spent the next few years as a disc jockey in various parts of New England and Pennsylvania. On one station, he was able to indulge his growing appreciation of “race music” or R&B, when the station owner began a daring policy of mixing genres—playing country, pop, and R&B shows during the course of any given day.

Bill Haley capitalized on his growing popularity in Pennsylvania and surrounding states by forming a new band, the Four Aces of Western Swing. As the name indicates, the band attempted to bring musical genres together. It was regionally successful and even recorded a few singles in 1948 and 1949. Along with occasional personnel changes over the years, the band also changed its name. By 1950 it was Bill Haley and His Saddlemen and was recording actively on a variety of labels. Increasingly Haley’s repertoire included covers of R&B hits, like the popular “Rocket 88” that the Saddlemen released in 1951. The following year Haley moved to the Essex label and changed the band’s name for the last time. Bill Haley and His Comets was a much better name for a band that by then sought to minimize its Western influences and to shoot for pop stardom.

The Comets had their first real hit, “Crazy Man, Crazy,” in 1953. The next year the band released several records, including “Rock Around the Clock,” which were met with only tepid response. It was in the summer of 1955 that the song finally became a national hit. Its innovative use as theme music in *The Blackboard Jungle*, a powerful motion picture about juvenile delinquency in a New York high school, brought the song (and Bill Haley) to the attention of millions of theater-goers in a few weeks’ time. Decca, Haley’s label,

quickly rereleased “Rock Around the Clock” and it raced to the number-one position on the *Billboard* singles charts in July 1955.

Some commentators find the beginning of the rock ‘n’ roll era in the moment when “Rock Around the Clock” became the number-one pop single in America, ostensibly the first rock ‘n’ roll hit on the pop charts. However, Haley himself could take credit for the first rock hit with “Crazy Man, Crazy” in 1953, as well as a major hit with “Shake, Rattle and Roll” in 1954. The first number-one pop hit that would later be acknowledged as a rock ‘n’ roll song was probably the Crew Cuts’ summer 1954 cover of “Sh-Boom,” originally by the Chords. (“Rock Around the Clock” had its dismal first release at about the same time that “Sh-Boom” was rising to number one.)

Bill Haley and His Comets enjoyed some indisputable firsts, however. They were the first rock ‘n’ roll band to achieve stardom due to exposure in a movie, *The Blackboard Jungle*. In 1956 they became the first band to star in rock ‘n’ roll exploitation films: Alan Freed’s *Rock Around the Clock* and *Don’t Knock the Rock*. Haley’s success in the pop music business was inseparable from his stature as a media star, a correlation that would come to be routine for music giants like Elvis Presley, the Beatles, and many more.

Unfortunately for Bill Haley, rock ‘n’ roll changed rapidly during the late 1950s, while he and the Comets were left behind. After “Shake, Rattle and Roll” and the rerelease of “Rock Around the Clock,” Haley had only two more major hits. “Burn That Candle” came out in November 1955, and “See You Later, Alligator” was released two months later. Aside from a few minor songs to follow, the group was essentially washed up in the United States before the end of 1956. The Comets’ careers as worldbeaters were over in well under two years.

Haley’s problems were just starting. His business manager took the band into bankruptcy shortly thereafter, and his world tour of 1958 resulted in teenage riots and anti-rock editorials in more than one nation. Haley continued to record singles and albums at a furious pace and sold a large number of them around the world without making the Top 40 again. Finally he fled the country, spending most of the 1960s in Latin America in fear of the Internal Revenue Service. In Mexico and elsewhere in Latin America he made and sold many Spanish- and English-language records. On occasion he would tour Europe and South America, places where his popularity had not diminished.

After settling his income tax problems in 1971, Haley returned to live in the United States. His touring continued, however, with longer periods of retirement in between. In 1979 he played for Queen Elizabeth II in a Royal Command Performance, a high point of his career.

For many fans of rock ‘n’ roll, Haley remained one of the most important and influential musicians of his generation. For others, he was an obscure curiosity, unable to change with the times. It is beyond dispute that popular music was heavily influenced by his innovation of mixing country instruments and vocal styles with R&B; the full development of this trend was left to the much younger and more charismatic Elvis Presley, who sprang to stardom only six months after Haley. On February 9, 1981, Bill Haley died in his home in Harlingen, Texas, of a heart attack. He was 55.

## Hall and Oates

Comprised of singer Daryl Hall and guitarist/vocalist John Oates, the middle-of-the-road, Philadelphia-based pop duo Hall and Oates rose to fame in the mid-1970s with emotive ballads like “Sarah Smile” and “She’s Gone.” Initially dubbed “blue-eyed soul” by some critics, stressing that the twosome was a white act singing “black music,” Hall and Oates veered towards a more rock oriented sound at the end of the 1970s, resulting in a slew of platinum singles and albums such as *Private Eyes* and *H2O*. By 1984, their sales had made them the biggest selling duo in history, replacing the 1960s folk act the Everly Brothers. Despite such success, Hall and Oates parted ways after the phenomenally successful 1984 effort *Big Bam Boom*. After the breakup, most of the duo’s backing musicians went on to form the house band for television’s *Saturday Night Live*, while Hall embarked on a mildly successful solo career, and the thickly mustached Oates remained in relative obscurity until a Hall and Oates reunion in the 1990s.

## Hallmark Hall of Fame

The *Hallmark Hall of Fame* specials are among the high points of each television season. The dramas, usually movie-length, bring to the viewers fine actors in quality adaptations of recent Broadway shows or older classic plays, as well as screenplays based on popular books. The presentations are shown during holiday seasons, which are peak card-giving periods, and times that the sponsor, Hallmark Cards, wants to get its name before the public. While the programs are praised for their quality, by industry standards they are not always big hits in terms of ratings. Yet, Hallmark has been steadfast in their support because the quality of the programs enhances the corporate reputation for quality.

The first special was presented on December 24, 1951 as a “thank you” to the consumers who had sent Hallmark Cards over the holidays. The host, Sarah Churchill, briefly thanked the viewers for their support of Hallmark Cards, then Gian Carlo Menotti’s Christmas opera, *Amahl and the Night Visitors* was shown without further interruption. It was the first opera to be shown on television.

Each succeeding year Hallmark has presented some of the most acclaimed programs of any given season. The first specials were often

Shakespearean plays such as *Hamlet* (1953 with Maurice Evans and restaged in 1970 with Richard Chamberlain), *MacBeth* (1954), and *Taming of the Shrew* (1956), but the first programs also included non-classical plays such as *Alice in Wonderland* (1955), *Born Yesterday* (1956), and *Victoria Regina* (1961). The series has been responsible for bringing to television viewers such exceptional plays as *Anastasia* (1967), *Winter of Our Discontent* (1983), *The Secret Garden* (1987), *Stones for Ibarra* (1988), *April Morning* (1988), and *Sarah, Tall and Plain* (1991) which was the highest rated movie of the season—two years later the sequel, *Skylark*, was aired (1993). Also presented in 1993 was *To Dance with the White Dog* which was the top-rated movie for the 1993-1994 season.

*Hallmark Hall of Fame* has also showcased other plays by Shakespeare, including *Richard II* and *The Tempest*, as well as six plays by George Bernard Shaw, including *Pygmalion*, *Saint Joan*, and *Caesar and Cleopatra*. More current works have included Rod Serling’s *A Storm in Summer*, James Costigan’s *Little Moon of Alban*, John Nuefeld’s *Lisa Bright and Dark*, and Sherman Yellen’s *Beauty and the Beast*.

In addition to critical acclamations, some of the presentations have won praise for their depiction of current social problems. Two such acclaimed specials were *Promise* (1986) which concerned the difficulties faced by a man caring for his mentally ill brother, and *My Name is Bill W* (1989) which chronicled the life of the founder of Alcoholics Anonymous. Both specials starred James Garner and James Woods.

Often cited as epitomizing the company slogan, “when you care to send the very best,” *Hallmark Hall of Fame* received a Peabody in 1964 and Joyce Hall, president of Hallmark Cards, was inducted into the Television Hall of Fame in 1985.

## Halloween

Nothing less than a horror-film renaissance was spawned with the release of director John Carpenter’s *Halloween* in 1978. *Halloween* also gave independent film producers something to scream about. With a budget of around \$300,000 and no major studio behind them, executive producers Irwin Yablans and Moustapha Akkad backed the film, which Carpenter co-wrote with Debra Hill (who also served as producer). The film went on to earn an estimated \$55 million, siring several not-so-memorable sequels as well as some worthy and unworthy imitators in the early 1980s.

The plot of *Halloween* is a deceptively simple one. The film begins in the sleepy town of Haddonfield, Illinois, on Halloween night, 1963. Little six-year-old Michael Myers has just murdered his sister with a butcher knife. Cut to fifteen years later. Michael has reached the age of twenty-one within the walls of a mental hospital, under the care of Dr. Loomis (played with fidgety obsessiveness by Donald Pleasence). Loomis describes Myers as a monster who must never be released or allowed to escape. Of course, he escapes on the day before Halloween and returns to Haddonfield to finish what he started. With Loomis giving chase, Myers (described as “the Shape” in the credits, played by Nick Castle) returns home. Myers’ modus operandi is consistent: he goes after high-school girls, including Laurie Strode (played by Jamie Lee Curtis in her first and most recognizable screen role).

With a lean budget and only one star, Carpenter had to depend upon skill and luck to author a film with a tone that is as eerie as it is unprecedented in horror. His musical score is the sparsest imaginable, but the tinkling piano keys above the menacing drone of electronically produced strings and brass set a terrifying mood. Thanks to cinematographer Dean Cundey, *Halloween*’s bright, but somehow claustrophobic daylight exterior shots make even the quiet neighborhoods of Haddonfield seem ominous. The shadowy interiors of Haddonfield’s houses only half reveal the terror within them, making that threat seem even greater.

By locating the threat within a mundane, middle-class suburb, *Halloween* creates the giddy unease of an urban legend. The chants of trick-or-treat rhymes at the beginning of the film, the sexual precocity of the teenaged characters, the babysitting nightmare, the legendary murder fifteen years before—all recall the themes of urban legends, evoking similar campfire-ghost-story responses without exploiting them as mere plot devices. Carpenter’s greatest innovation, as well as his most copied, is the use of the point of view of the monster/stalker. Audiences used to the syntax of horror films—the empty dark space over the heroine’s shoulder, the fake-terror-relief-then-real-terror economy in classic horror films by William Castle and Roger Corman—were introduced to a new phenomenon. By offering the point of view of the Monster, audience instincts for fight or flight were frustrated

and tension in the audience soared. Finally, the monster himself: created by production designer Tommy Lee Wallace simply by painting a two-dollar William Shatner mask white, this false face became the most uncanny of monsters, a blank slate that could hold infinite horrors in the imagination of the audience.

In 1978, audiences consisted mainly of kids the same age as the teenagers being murdered and mutilated in the film. These audiences responded enthusiastically to the psychosexual themes in *Halloween*. Like the many imitators and their sequels that followed—*Friday the Thirteenth*, *Prom Night*, etc.—*Halloween* consisted of teenagers being maimed and slaughtered before, during, or after intercourse. Sex precedes death in these films. Coitus became the foreplay for the climax(es) of the film, the murders of promiscuous (and mainly female) teenagers. Despite the apparent Puritanism and sexism of *Halloween* and its cousins, California-Berkeley Professor Carol Clover finds an almost feminist formula in them. Clover points out that it is, after all, Laurie Strode who survives *Halloween*: “The image of the distressed female most likely to linger in memory is the image of the one who did not die: the survivor, or Final Girl. She is the one who encounters the mutilated bodies of her friends and perceives the full extent of the preceding horror and of her own peril; who is chased, cornered, wounded; whom we see scream, stagger, fall, rise and scream again. . . . She alone looks death in the face, but she alone also finds the strength either to stay the killer long enough to be rescued (ending A) or to kill him herself (ending B). But in either case, from 1974 on, the survivor has been female.”

## Halston

Halston’s (Roy Halston Frowick, 1932-1990) first fame was the simple and much-imitated pill-box hat Jacqueline Kennedy wore at the 1961 Presidential Inauguration. His success continued in the 1970s. Within the maelstrom of Paris fashions, youthquake, minis, and maxis, Halston reasserted the unadorned cut and practicality of American sportswear: easy, simple, and eternal. In 1972, his plain Ultrasuede shirtwaist sold 60,000 copies. Halston’s flowing movement and versatile layers allowed women of all sizes and shapes to find him their perfect designer and Halston came to claim that he would design for every woman in America, to say nothing of custom-order clients Liza Minnelli, Martha Graham, and Elizabeth Taylor. In 1983, he initiated Halston III for J. C. Penney and was dropped from stores who would not permit him to design for their elite clientele and for everyone. Brilliant and charismatic, Halston could make and market anything, except genuine democracy in American fashion.

## Hamburger

In the mid-twentieth century, the hamburger emerged as a symbol of American democracy and prosperity. As fast food became dominant on the American landscape, the hamburger provided to millions of people an inexpensive serving of meat. To consume a hamburger was, in a sense, to fulfill the promise of democracy, and to enact one's Americanness.

The hamburger or "burger," minimally defined as a cooked ground beef patty between two pieces of bread, was born in America sometime around 1890. Loosely based on the ground-beef steak popular in the German town of Hamburg, the hamburger gained national repute at the 1904 St. Louis World's Fair. In the 1920s the White Castle chain of restaurants helped popularize the hamburger,

which was beginning to become a common food in many regions. In the 1930s and 1940s, the Great Depression and World War II severely impacted the ability of most Americans to purchase meat, but after the war, America's economy began to boom, and the hamburger rode the crest of a wave of new prosperity. Simple to prepare and available in every corner of America, the hamburger made meat cheaply available to a nation familiar with hunger and rationing. The hamburger celebrated the end of the war, the democratization of wealth, and America's robust economy.

By 1954, when Ray Kroc bought McDonald's, the hamburger was becoming popular nationwide at diners and roadside stands. With the rapid diffusion of McDonald's franchises in the 1960s, and later with a national advertising campaign for the Big Mac, the hamburger began to take on increased cultural importance. Because of its popularity, its standardization, and its heavy representation on television, the hamburger came to be identified as the most American food. It appeared alongside celebrities and the stars-and-stripes, and it was heralded in television drama, movies, and rock and roll.

The hamburger's surge in importance collaborated with widespread ownership of automobiles. Together, the burger and the car appealed to and reinforced American affinities for speed and convenience. Drive-in and drive-through restaurants proliferated, buoyed by their staple food, the hamburger. The burger could be prepared

The hamburger's popular culture influence is apparent in this sign advertising the Bun Boy fast food restaurant in Indiana, 1989.

rapidly, eaten without utensils, and eaten on the run. In the new culture of fast food, the hamburger could be eaten alone, breaking many ethnic traditions of social dining.

As the quintessential American food, the hamburger was the main way Americans ingested beef, and, in the same bite, the mythologies of beef. In addition to prosperity, beef was linked to manliness and patriarchy, to domination over nature, to physical strength, to athletic prowess, and to being a “red-blooded” or an authentic American. The low cost and widespread availability of hamburgers ensured that all citizens could symbolically—and democratically—impart these national ideals.

Beef’s popularity peaked in 1976, when each American ate 127 pounds of it a year, with the hamburger patty as its most popular shape. In the late 1970s, new consciousness about dietary fat markedly reduced the hamburger’s popularity. By the 1980s red-meat consumption, including hamburgers, was considerably reduced, and many medical studies were linking red meat consumption to cancer and heart disease. While the cattle industry responded with a multi-million dollar ad campaign: “Beef: Real Food for Real People,” fast-food restaurants began to diversify their offerings. While the beef hamburger remained the bedrock of fast food, salads, chicken, fish, and burritos made inroads into the market.

Down from prior levels, Americans in 1995 still consumed twenty-nine billion hamburgers a year: an average of 120 per capita. Together, fast-food chains and cattle ranching made one of the largest industries in America, impacting ecosystems, water resources, and land ownership of large parts of America in its push for a large supply of inexpensive beef—the key to success for the fast-food hamburger. By converting much of the Western wilderness into ranch land, and by securing water rights and government subsidies, cattle ranchers could profitably sell beef at less than a dollar per pound. Powered by the popularity of hamburgers, an enormous cattle industry transformed millions of acres of wilderness. Barbed wire fences, cattle manure, grazing, and drought caused by the diversion of water sources radically altered land from Texas to Oregon. From the 1960s onward, parts of Latin-American rain forests were cleared to raise beef for American fast-food burgers.

By the close of the century, the traditional hamburger was in decline. Environmentalists alleged that the hamburger was a major threat to ecosystems, and health advocates warned Americans to reduce intake of red meat. The small but growing popularity of vegetarianism also challenged the hamburger, and even though most Americans did not disavow meat altogether, many reduced their intake. But while the beef burger was waning in popularity, other versions of the burger were ascendant: the “hamburger” was being reinterpreted. “Burgers” were being made with fish, chicken, turkey, soy beans, or grains. In the 1990s, the “veggie burger,” a grain-based burger, rapidly increased in popularity.

## Hamill, Dorothy (1956—)

Easily recognizable for the pixie haircut that is her trademark, Dorothy Hamill created one of the first true media frenzies surrounding a figure skater. Hamill reigned as a National, World, and Olympic Champion in the 1970s and helped develop the popularity of professional ice skating shows. During the 1976 Olympics, girls all over the world copied her hairstyle, which led to Hamill becoming a spokesperson for hair care products.

Born in Riverside, Connecticut, to Chalmers and Carol Hamill, Dorothy became interested in skating at the age of eight. She began taking lessons with former Czech champion, Otto Gold, in 1965. Almost immediately, the Hamill family decided that their talented daughter should train seriously, with the idea of competing at the national level. Dorothy passed her first Preliminary Test to compete

Dorothy Hamill

in 1965. By 1967 she had switched coaches to train with Swiss coach, Gustav Lussi. She later studied with former U.S. Champion, Sonya Klopfer Dunfield.

Hamill became the U.S. National Ladies Novice Champion in 1969, at the age of 12, and continued to move up the skating ranks. Another coaching change was soon made, and the teenager began studying with Carlo Fassi, who had also coached champion Peggy Fleming. Hamill soon moved up to the Senior Ladies Division. In her first National Championship in 1971, she placed a very respectable 5th place. By 1973 she had matured so much that she barely lost to the National Championship to Janet Lynn. That same year, Dorothy came in 4th in the World Championships.

In 1974 Hamill won the National Championship and went on to represent the United States at the World Championships, which were held in Munich, Germany. During the competition an incident occurred, which will long be remembered by the skating fans who witnessed it. The audience for the long program, upset by low scores given to local skater, Gerti Schrandel, began booing as Hamill prepared to skate. Although they were not booing her, Hamill became so upset she left the ice in tears. A few moments later she again took the ice, having declined the opportunity to compose herself and skate later in the competition. Showing the determination that had already gotten her so far, Hamill skated almost flawlessly and finished with the silver medal behind Christine Erath of East Germany.

During the 1975 season, Hamill defended her National Championship and again finished second at the World Championships, this time to Diane deLeeuw of the Netherlands. Things continued to heat up throughout the season before the 1976 Olympic Games in Austria. Hamill and World Champions deLeeuw and Erath remained neck in neck, with no clear favorite for the Olympic Gold medal. In the media frenzy before the games, however, it became clear that Hamill was the press and audience favorite. Her parents and coach, Carlo Fassi, tried to insulate Hamill from the spotlight as she continued to train for the Olympics. When the games were over, Hamill was crowned the new Olympic Champion. Shortly thereafter, she captured the World Championship, and the interest in Hamill and her professional and private life grew. She became a commercial spokesperson for Short & Sassy hair care products, which capitalized on her famous haircut.

After she turned professional, skating with the Ice Capades, Hamill continued to command the spotlight, although not to the extent she had during the Olympics. She starred in ice shows and popular television specials, such as *Romeo and Juliet On Ice*. It was Hamill who really brought worldwide interest to professional ice shows.

When her first marriage to actor Dean Paul Martin broke up, she married sports-medicine specialist, Dr. Kenneth Forsythe. In 1993, after she had skated with the Ice Capades for several years, Hamill, her husband, and businessman Ben C. Tinsdale, purchased the show. Her first production as part owner was *Cinderella . . . Frozen in Time*. Although the show was a success, the company did not prosper as hoped and, in 1994, a conglomerate acquired it.

Dorothy Hamill helped increase interest in figure skating, both on the amateur and professional levels. She became one of the first real superstars of figure skating. Along the way she also became an icon to young girls all over the world.

## Hammett, Dashiell (1894-1961)

For a writer who turned out only five novels, Dashiell Hammett made a strong and lasting impression on the twentieth century and is considered one of the founding fathers of the hard-boiled school of detective fiction, a tough, unsentimental style of American crime writing. In *The Maltese Falcon* he introduced Sam Spade; in *The Thin Man* it was Nick and Nora Charles. Four decades after his death all his novels remain in print along with many of the short stories and novelettes he wrote for the *Black Mask* detective pulp magazine. The Bogart film version of *The Maltese Falcon* (1941) can still be seen regularly on television or video. All six of the *Thin Man* films,

Dashiell Hammett

starring the memorable team of William Powell and Myrna Loy, are also easily accessible.

Born in Maryland, Samuel Dashiell Hammett dropped out of school while in his early teens, later worked as an operative for the Pinkerton Detective Agency in Baltimore, and served as a driver in the Ambulance Corps during World War I. In the early 1920s, married and living in San Francisco, he began submitting stories to magazines and soon became a regular contributor to *Black Mask*. Using a restrained yet tough vernacular first-person style, he wrote a series about a plump, middle-aged operative anonymously known as the Continental Op who worked for the Continental Detective Agency in Frisco. Based in part on his own experiences as a Pinkerton, the stories offered considerable action, gunplay, romance, and melodrama. When Joseph T. Shaw took over as *Black Mask* editor in 1926, he quickly decided that Hammett was the best man he had; he promoted Hammett to star contributor and worked to persuade other writers to follow in his footsteps.

Of the several dozen stories Hammett wrote for the pulp, nearly thirty were about the Continental Op, and the fat private eye also figured in his first two novels. After being serialized in *Black Mask*, both *Red Harvest* and *The Dain Curse* were published by Alfred A. Knopf in 1929. *The Maltese Falcon* began that same year as a serial and was published as a book by Knopf in 1930, followed by *The Glass Key* in 1931. Hammett's final novel, *The Thin Man*, first appeared in *Redbook* in 1933 and as a book, with a few allegedly risqué lines restored, in 1934.

Both critics and readers were enthusiastic about the Hammett books, and his reputation soon spread beyond the pulpwood and mystery novel ghettos. *The Maltese Falcon* was early added to the Modern Library list and the little remaining fiction Hammett wrote was found in such glossy paper, and high-paying, magazines as *Collier's*. More important to Hammett's future and his finances was the fact that Hollywood took notice of him. The year after *The Maltese Falcon* was published, Sam Spade took his first step into another medium. The initial Warner Brothers version starred former Latin lover of the silents Ricardo Cortez as Spade, and the second, titled *Satan Met a Lady* and ineptly played as a comedy, featured Warren William as the sleuth. Finally in 1941 John Huston persuaded the studio to let him write and direct a new version that stuck closely to the Hammett original. That *Maltese Falcon* became the definitive one, gave Humphrey Bogart the role that helped rejuvenate his career, and helped establish the film noir genre. Hammett, who sold all motion picture rights to his book back in 1931, didn't profit directly from the later two adaptations.

The earliest radio Sam Spade was Edward G. Robinson, who played the role in a 1943 broadcast of the *Lux Radio Theatre*. Bogart himself repeated his role in an early 1946 half-hour version for a short-lived show called *Academy Award*. That same year *The Adventures of Sam Spade* became a regular weekly show. While this latest Spade was not exactly Hammett's Spade, he was a tough, whimsical, and appealing operative; and the show was a hit. Produced by William Spier, it was written for the most part by Gil Doud and Bob Tallman. Howard Duff, who hadn't yet begun his movie career, was cast as Spade. He had a distinctive radio voice and could sound hard-boiled and still get the most out of the gag lines that showed up often in this less gloomy recreation of Hammett's world. The show remained on the air until 1950, when Hammett's political troubles made sponsors and networks wary of him. *The Adventures of the Thin Man* radio show, which had been broadcast fairly regularly from 1941 to 1950, also fell victim to the greylisting of the era. A third Hammett radio

show, *The Fat Man*, was heard from early 1946 to early 1951. Besides allowing his name to be tacked on the program and the nickname of the villain from *The Maltese Falcon* to be used as the nickname for a fat private eye, Hammett had nothing to do with the production. It, too, fell when the other shows did.

Hammett went to Hollywood in 1930 and remained there throughout the decade. According to one of his biographers, "during this period he was credited with one screenplay and contributed original screen stories on at least six credited productions." Some of those original screen stories were contributed to the Thin Man movies that followed the initial one. His other avocations were drinking and Lillian Hellman, neither of which contributed significantly to his well-being, although Hellman was supposedly the inspiration for Nora in the Thin Man series.

Hammett's literary reputation slipped during the 1930s and early 1940s, despite the branching out of his characters into movies and radio. But in the early 1940s Frederic Dannay, the literary half of Ellery Queen, began reprinting Hammett's old pulp stories in the new *Ellery Queen's Mystery Magazine*. That was followed by a series of several paperback reprint collections. These did a good deal to bolster Hammett's standing and gain a new audience for his written work.

Long suspected of being too liberal, Hammett was caught by a subpoena in 1951. As a bail bond trustee for an organization called the Civil Rights Congress, he was asked to provide the names of contributors to the fund. The questioning had to do with four suspected Communists who had jumped bail and vanished. Hammett, although he reportedly didn't know any, nevertheless refused to name names. Convicted for contempt, he spent nearly six months in a federal prison. After suffering from tuberculosis for much of his life, Hammett died in New York in 1961.

## Hancock, Herbie (1940—)

Herbie Hancock has forged a career that has pushed the envelope of jazz music and, in doing so, has reached a wider audience than any other jazz musician ever has. His 1973 album, *Head Hunters*, is the biggest selling jazz record in history. This Chicago native is easily among the most eclectic musicians of any genre. Hancock has worked within the field of jazz playing free, bebop, and fusion styles, and outside performing world music, hip-hop, funk, and dance music. Along with Miles Davis, he helped create the style known as jazz fusion in the late 1960s and, as a solo artist during the early 1970s, Hancock was one of the first to pioneer the use of synthesizers within jazz. And on his 1983 hit single, "Rockit," he introduced the mainstream pop world to turntable scratching, an element of hip-hop music that uses a turntable and an album as a musical instrument by manually manipulating the sounds it makes. Throughout his long

### Herbie Hancock

career, Herbie Hancock has continually evolved and challenged genre boundaries in all forms of music.

A child prodigy, Hancock studied music in school and, at age 11, performed with the Chicago Symphony Orchestra at a young people's concert. He later formed a high school jazz group, played with the likes of Donald Byrd and Coleman Hawkins at local Chicago jazz clubs, and then left for New York City in 1960 to join and record with Donald Byrd's combo. Soon after working with Byrd, Hancock was offered a solo contract with the jazz label Blue Note, which released his 1962 debut, *Takin' Off*. The album spawned the hit and soon-to-be jazz standard "Watermelon Man," positioning Hancock as an important jazz band composer. During the 1960s, Hancock wrote such classics as "Maiden Voyage," "Dolphin Dance," and "I Have a Dream" (a tribute to Martin Luther King, Jr.).

After an extended stint in Miles Davis' second legendary quintet (which also included Wayne Shorter, Ron Carter, and Tony Williams), Hancock released a number of solo albums. He then formed his first important group, Mwandishi, which included Joe Henderson, Johnny Coles, Garnett Brown, Albert "Tootie" Heath, Buster Williams, and, of course, Hancock. From 1969 to 1972, the Mwandishi band explored funk and rock fusion, and was one of the first jazz groups to use a synthesizer, specifically the Moog. Displeased with the poor commercial reception of the records this group produced,

Hancock disbanded Mwandishi, but not before he released *Sextant*, a landmark album that heavily incorporated the synthesizer into the band's laid-back funk vamps.

Hancock then formed the Headhunters, an instrumental jazz/pop/rock/funk combo (featuring Hancock, Bennie Maupin, Paul Jackson, Harvey Mason, and Bill Summers), that became hugely popular. That group's 1973 album, *Head Hunters*, sold more records than any jazz record had ever sold before, beginning a steady stream of success for Hancock that included 17 albums charting from 1973 to 1984. Due to his widespread popularity, many charges of "selling out" were leveled against him—charges which he dismissed as merely being "elitist." His popularity culminated with the release of 1983's "Rockit," an electro-funk breakdancing staple that featured the turntable wizardry of Grandmaster D.S.T., marking the first time the art of the hip-hop DJ was heard by a mainstream audience. This song has been cited as a major inspiration for a generation of hip-hop DJs and artists which followed.

During the rest of the 1980s and 1990s, Hancock released a handful of modestly-selling albums, which included the world music fusion of *Ids Is DA Drum* and, in 1998, an album by the reformed Headhunters.

## Handy, W. C. (1873-1958)

Though he never would have called himself a blues musician, W. C. Handy is often hailed as the "Father of the Blues." Handy grew up immersed in the folk music of the African American people, a music nurtured by slavery and with roots in the various African cultures from which slaves were torn. A trained musician, Handy translated this "primitive" music into compositions that revealed the richness and diversity of the black musical tradition. His "Memphis Blues" was the first published blues tune, and he left a legacy of musical compositions to which much of the modern blues can trace its roots.

William Christopher Handy was born on November 16, 1873, in either Florence or Muscle Shoals, Alabama. Both his father and grandfather were clergymen and were eager for young Handy to follow in their shoes, but Handy developed an early love for music. He recalled in his autobiography, *Father of the Blues*, that his father stated that he would rather follow his son's hears than have him become a musician. Still, Handy persevered, taking vocal lessons

W. C. Handy

from a church singer and secretly buying a cornet and taking lessons from its former owner. By the time he was a teenager, Handy had amassed a good deal of training in music and, at age 15, he joined a travelling minstrel show that began a tour of the South. The tour soon fell apart, however, and Handy returned home to start a normal life.

In 1892, Handy graduated from the Huntsville Teachers Agricultural and Mechanical College and began working as a teacher—until he found out that he could make more working for a pipeworks factory in Bessemer, Alabama. When wages there were cut, Handy left the factory to follow his first love, music. He organized a group called the Lauzette Quartet and left to play the Chicago World's Fair—only to find that they had arrived in Chicago a year early. Dejected, Handy travelled to St. Louis, Missouri, where he eked out a living playing his cornet and soaked up the downscale ambiance of the city's impoverished black population.

Shortly thereafter, Handy, whose reputation as a talented horn player was spreading, had the good fortune to be hired to play for wealthy Southerners in Henderson, Kentucky. "I had my change that day in Henderson," Handy wrote in his autobiography. "My change was from a hobo and a member of a road gang to a professional musician." Handy also found an opportunity to study with a local music teacher, who taught him more about music in a few short months than he had yet learned in a lifetime.

In 1896, a minstrel group known as W. A. Mahara's Minstrels asked Handy to join them, and he traveled extensively with the group from 1896 to 1900 and from 1902 to 1904. On his travels, the group played to an Alabama audience that included Handy's father. "Sonny," his father told him, "I haven't been in a show since I professed religion. I enjoyed it. I am very proud of you and forgive you for becoming a musician." During this time, Handy's band played for white and black audiences. The story is that a white audience asked him to play some of his own music; Handy failed to meet their request and the audience protested. Handy's band was replaced by a group of three local black musicians who played a type of early blues on string instruments. Handy decided that in spite of his musical erudition, he had missed an important lesson. He decided to look into the blues.

Handy put that lesson to good use in 1909 when he was asked to write a campaign song for Edward H. "Boss" Crump of Memphis, Tennessee. The song was soon adapted to include the following lyrics:

Mr. Crump won't 'low no easy riders here.  
We doan care what Mr. Crump don't 'low,  
We gon'to bar'l-house anyhow.  
Mr. Crump can go and catch hissself some air.

This tune, with new words, soon became famous as "The Memphis Blues." It was the first written composition to use the flatted thirds and sevenths, the "blue notes." The great jazz bandleader Noble Sissle claimed that "The Memphis Blues" was the inspiration for the fox trot. Vernon and Irene Castle heard their musical director, James Reese Europe, use the "Memphis Blues" as a cooling off piece during intermissions. The Castles loved the rhythm and developed a slow dance to it, called first the Bunny Hug and then the Fox Trot.

Following the success of this song, Handy decided to specialize in a type of music that was little known outside the South, the blues. Handy had a great musical memory, coupled with a well-developed musical knowledge. He freely acknowledged the roots of his blues being in black folk songs.

Each one of my blues is based on some old Negro song of the South. . . . Something that sticks in my mind, that I hum to myself when I'm not thinking about it. Some old song that is a part of the memories of my childhood and of my race. I can tell you the exact song I used as a basis for any one of my blues.

At the time, the blues had not yet taken on the classical form in which they are known today. This 12 or 16 bar form in which the I-IV-V chords are used in a set pattern, open to variations, was basically established by Handy as he wrote down the music he heard on his band tours. Handy's blues are more polished than the "primitive" blues that preceded him and were played well into the century by musicians such as John Lee Hooker.

In 1912, Handy, after much struggle, published his first song, "Memphis Blues." Others soon followed, including "St. Louis Blues" (1914), "Beale Street Blues" (1917), and 1921's "Loveless Love," a favorite of Louis Armstrong. The difficulty that Handy experienced in publishing his first song led him to found his own publishing house, but he still had a hard time getting his music distributed. In his autobiography he remembered an encounter with a retailer:

At the time I approached him his windows were displaying "At The Ball" by J. Lubrie Hill, a colored composer who had gone to New York from Memphis some time earlier. Around it were grouped copies of recent successes by such Negro composers as Cole and Johnson, Scott Joplin, and the Williams and Walker musical comedies. So when he suggested that his trade wouldn't stand for his selling my work, I pointed out as tactfully as I could that the majority of his musical hits of the moment had come from the Gotham-Attucks Co., a firm of Negro publishers in New York. I'll never forget his smile. "Yes," he said pleasantly. "I know that—but my customers don't."

Despite such difficulties, Handy continued to publish his works, selling many of them from his own music company, the still-existing Handy Brothers Music Company of Manhattan.

Handy's "St. Louis Blues" is the most recorded song in musical history. At his death in 1958 it was still earning him \$25,000 per year. It was the King of England's favorite song and became the Ethiopian fight song against Mussolini. Bessie Smith, with Louis Armstrong on cornet, immortalized the work. Armstrong later recorded the tune a number of times, even playing it as a tango.

In 1917 Handy moved to New York City where he recorded with his Memphis Orchestra. He began his own recording company in 1922, though it soon failed. Handy's written output faltered, as a result of his increasing eye problems, but he continued playing cornet and recorded with a number of top jazz musicians, including Henry "Red" Allen and Jelly Roll Morton.

In 1928 Handy became the first black performer to play in New York's Carnegie Hall. That concert was one of the only elements of Handy's life that was recreated accurately in his film biography *St. Louis Blues* (1958), which starred Nat King Cole as Handy. While largely inaccurate, the film served to spark rerecordings of many of Handy's tunes. Shortly before Handy's death, Louis Armstrong and the All Stars recorded an album of Handy tunes and Handy was recorded reflecting on his career and on Armstrong. The album, *Louis*

*Armstrong Plays W.C. Handy* (1954), was a fine corrective to the movie.

Handy's autobiography, *Father of the Blues* (1941), relates his story and struggles in establishing his work. The fact that the blues were so identifiably black in origin and so different from the usual Tin Pan Alley tunes eventually worked in his favor. Anyone could put the word blues in a song, but not everyone could write an authentic sounding blues tune. Handy could and did. The blues became part of jazz and the basis of rock 'n' roll. Handy's music is inseparable from twentieth-century world music, a fact recognized by the city of Memphis, in which Handy is a legend. There is a park named in his honor, and a statue of Handy stands prominently. Handy is in the Alabama Music Hall of Fame, has had a postage stamp named after him, and is recognized as a major contributor to American music.

## Hanks, Tom (1956—)

One of only two men to ever win back-to-back Academy Awards for Best Actor, Tom Hanks has proven that he is one of the most talented and versatile actors of the twentieth century. From his early days as cross-dressing Kip in the television show *Bosom Buddies*, Hanks went on to win Oscars for two vastly diverse roles. First, he won Best Actor for 1993's *Philadelphia*, in which he played Andrew Beckett, a gay lawyer dismissed from his law firm after being diagnosed with AIDS. In 1994, Hanks brought home a second statue for his portrayal of the title character in *Forrest Gump*, an amiable Southerner with questionable intelligence and the good fortune to be present at a number of important historical events. For his role as Andrew Beckett, Hanks lost so much weight that he lent grim reality to the deteriorating physical condition of the gay lawyer. In *Forrest Gump*, Hanks developed a slow drawl that perfectly presented Gump's drawn-out mental processes and childish naivete. Not one to be satisfied with making history, Hanks followed up the two wins with an Oscar-worthy performance that allowed him to bring a life-long dream close to reality by playing astronaut Jim Lowell in *Apollo 13* (1995). Hanks was also nominated for his performance in 1998's *Saving Private Ryan*, Steven Spielberg's gripping World War II drama.

Tom Hanks was born July 9, 1956, in Concord, California. When he was only five years old, his parents divorced. Hanks and his older siblings lived with his father, while the youngest child remained with his mother. The divorce was followed by multiple sets of step-parents and frequent moves. As the perennial new kid on the block, Hanks learned that people liked him when he made them laugh, so he became

a clown. In 1978 he married Samantha Lewes, with whom he has two children, son Colin and daughter Elizabeth. They divorced in 1985. In 1985, while filming the comedy *Volunteers*, Hanks met Rita Wilson and they were married in 1988. Hanks and Wilson have two sons, Chester and Truman. While accepting the Academy Award for *Forrest Gump* in 1994, Hanks brought tears to many eyes with his acknowledgement of their mutual love and respect.

The years between *Bosom Buddies* (1980-82) and his two Academy awards were full of both successes and failures for Hanks. Director Ron Howard gave Hanks his first shot at superstardom by casting him opposite mermaid Darryl Hannah in *Splash* (1984). He followed these movies with comedies, such as *The Man with One Red Shoe* (1985) and *The Money Pit* (1986), that endeared him to fans but which were panned by critics. However, in 1988 Hanks won over the critics with the role of Josh Baskin in Penny Marshall's *Big*. This story of a young boy who gets his wish to grow up overnight was the perfect vehicle for Hanks because it allowed him to combine his youthful appeal with a mature performance, garnering a Best Actor nomination. Unfortunately, Hanks followed up his success in *Big* with less successful roles in *Punchline* (1988), *Turner and Hooch* (1989), and *The Bonfire of the Vanities* and *Joe Versus the Volcano* (both 1990). His return to critical acclaim came in 1992 with the role of Jimmy Dugan in Penny Marshall's *A League of Their Own*. While

the female stars were the focus in this tale of a women's baseball team, Hanks more than held his own as the bitter, tobacco-chewing, has-been manager of the team.

Hanks' versatility is the key to his success as an actor. The physically and mentally draining role of the gay lawyer in *Philadelphia* was immediately followed by a love story that was to become a classic: *Sleepless in Seattle* (1993). *Sleepless* drew on the earlier classic love story of *An Affair to Remember* (1957) for its plot. Instead of star-crossed lovers, Hanks and Meg Ryan play potential lovers who never get together until the final scene, which takes place at the Empire State Building in New York City. The phenomenal success of *Forrest Gump* was followed by the Disney favorite *Toy Story* (1995). Hanks lent his voice to Woody, a computer-generated cowboy puppet displaced in his boy's affections by spaceman Buzz Lightyear (the voice of Tim Allen). Even in this children's tale, Hanks presents a character to whom his audience can relate and offers friendship as a moral lesson and proof of character development.

Adding producer, writer, and director to his list of accomplishments, Tom Hanks created his own movie with *That Thing You Do!* (1996), a charming, simple story of a one-hit 1960's rock band. *From the Earth to the Moon*, a 1998 mini-series, proved to be even more ambitious. In several installments, the mini-series followed the entire history of the space program.

Tom Hanks has frequently been compared to Jimmy Stewart, an actor who was so well loved that the Los Angeles airport was renamed to honor him after his death in 1997. Hanks and Stewart are, indeed, similar in their appeal to both men and women and in their versatility. It is likely that Tom Hanks will go down in history as the most popular and the most critically acclaimed actor of the latter half of the twentieth century.

## Hanna-Barbera

William Hanna and Joseph Barbera, both through their own creativity and that of their studio, were second only to Walt Disney in the number of memorable, durable, and famous characters they introduced to the art of American animation. Known and loved throughout the world, the Hanna-Barbera cartoons differed from those of Disney in exclusively mining contemporary American life for their ideas, permeating the popular culture with images that reflected it in cartoon form. Their output was prodigious and many of their creations famous, but they will forever be synonymous with the world's most popular cat-and-mouse duo, Tom and Jerry, whose inspired an hilarious adversarial relationship, serviced over 100 cartoon shorts, and won Academy Awards for seven of them, of which *Johann Mouse* (1952) is perhaps the most outstanding of all.

Born in 1910 in Melrose, New Mexico, Hanna began his professional career at age 20, working as a story editor, lyricist, and composer for an independent studio; Barbera, born in New York City in 1911, was an accountant and a freelance magazine cartoonist. The two men met at MGM in 1937, the year they both joined the studio and, with Fred Quimby, created Tom and Jerry. The imaginative narrative line of the cartoons, in which Jerry Mouse emerged the victor of the battles, pushed the frontiers of animated entertainment and risked using more sadistic imagery than was then usual in the genre. Jerry had the distinction of being taught to dance "The Worry Song" by Gene Kelly in a stunning sequence, combining live action and animation, in MGM's *Anchors Aweigh* (1945). And for Kelly's *Invitation to the Dance* (1956), Hanna, Barbera and Quimby directed the third segment of the film, in which cartoon characters and Kelly danced to Rimsky-Korsakov's "Scheherazade."

In 1957 MGM closed its cartoon division, whereupon William Hanna and Joseph Barbera set up their own production company,

Hanna-Barbera, and launched themselves into a new medium—television. They created the first cartoons for television at a time when many people thought it couldn't be done, partly because the expense of the animation process only seemed feasible for feature films. Hanna and Barbera, however, devised a less expensive technique by reducing the size of the storyboards, and if the results lacked the detail and background of animated features, they were nonetheless highly successful. *The Ruff and Reddy Show* premiered on NBC in 1957, paving the way for several decades of Hanna-Barbera cartoons and Saturday morning viewing rituals, and creating characters who became entrenched in American popular culture, recurring in syndication and cartoons for decades. Among the best known were Yogi ("smarter than the average bear") Bear and his sidekick Boo Boo Bear, Augie Doggie and Doggie Daddy, Huckleberry Hound, Quickdraw McGraw, and Snagglepuss. Perhaps their most famous and durable creation was *The Flintstones*. When it aired in 1960, it was the first animated half-hour prime time sitcom on television. Modeled after *The Honeymooners*, *The Flintstones* earned Hanna-Barbera a permanent place in American television history. As the first animated cartoon featuring human characters, the series laid the ground for such later shows as *The Simpsons* and *King of the Hill*.

Besides the lovable and goofy characters of its early years, Hanna-Barbera productions created action and super-hero cartoons in the 1960s. One of the first of these was *The Adventures of Johnny Quest*. Johnny went on adventures with his scientist father and companions Hadji and Race Bannon. First appearing in 1964, the show was revamped in the 1990s with a focus on computer animation. Other heroes of the time were Space Ghost, the Herculoids, Birdman, the Mighty Mightor, and animated versions of the comic-book super team, The Fantastic Four. However, parents' groups eventually objected to the violence and Hanna-Barbera returned to making more humorous cartoons.

The company turned out product at an extraordinary rate and embraced computerized systems. Of their later cartoon characters, Scooby-Doo (named after lyrics from a Frank Sinatra song), was the most popular. A cowardly and often ravenous Great Dane, Scooby-Doo starred in *Scooby-Doo, Where Are You?* (1969) with four teenage co-stars. They traveled around in a psychedelic van called the Mystery Machine, solving mysteries that usually had a supernatural slant. Scooby and the gang enjoyed several incarnations over the next several decades. Also popular in the 1970s were *Josie and the Pussycats*, the *Hair Bear Bunch*, *Penelope Pittstop*, and the villains *Dastardly and Muttley*, while Hanna-Barbera's biggest success of the 1980s was *The Smurfs*, small blue creatures whose names (Handy and Vanity, for example) matched their dominant traits. Led by the red-clad Papa Smurf, the Smurfs constantly fought against the evil Gargamel. Besides the Smurfs, Hanna-Barbera did animated versions of nationally popular live action shows. Cartoon versions of *Happy Days*, *Laverne and Shirley*, *Mork and Mindy*, and *The Dukes of Hazzard* appeared on Saturday mornings courtesy of Hanna-Barbera. Some shows, such as *Josie and the Pussycats* and *Pebbles and Bamm Bamm*, incorporated contemporary rock music into their shows. Though not as memorable as the Disney classics, the songs keyed into the tastes of their audiences at the time, especially the pre-teen audience.

Also during the 1960s, Hanna-Barbera expanded their activities to make a handful of feature films, beginning with *Hey, There, It's Yogi Bear* (1964), and ending with *Jetsons: The Movie* (1990),

**William Hanna (left) and Joseph Barbera**

featuring the characters from their TV series of the same name. If individual Hanna-Barbera characters did not reach quite the icon status of Mickey Mouse, they were more typically American and of this world than Disney's famous creations. The *Jetsons*, for example, were space age counterparts to the *Flinstones*, all of them archetypal American families. The shows exploited the conflicts that typically occur in American homes, while adding gags appropriate to the period. The contemporaneous approach was what probably made these two cartoon families the most famous and memorable of the Hanna-Barbera stable.

Hanna and Barbera won many awards. In addition to their Oscars, there were Emmys, and, in 1988, 50 years after they met, they received the Governor's Award from the National Academy of Television Arts and Sciences. That year, too, the company was absorbed into the Great American Broadcasting company, with Joseph Barbera as president. But perhaps their greatest honor is the impact they had on the American public. Their TV cartoon series were significant in the lives of countless, who entered adulthood still able to sing part, if not all, of the theme songs, and reciting such catch phrases as "Yabba dabba do," "Smarter than the average bear," "Jane, stop this crazy thing!," and "Heavens to Murgatroyd," which had their origins in Hanna-Barbera's cartoons.

## **Hansberry, Lorraine (1930-1965)**

A black American playwright who produced only two plays before her death from cancer at 34, Lorraine Hansberry nonetheless made a tremendous contribution to the American stage and to African American culture. Her first and best known play, *A Raisin in the Sun* (1959), winner of the New York Drama Critics Circle Award, is now considered a landmark of American drama. The story of the struggling Younger family, who aspire to a better life, *A Raisin in the Sun* was the first Broadway production by a black woman, and its commercial success opened the stage doors to other black writers. *The Sign in Sidney Brustein's Window*, Hansberry's challenging but commercially disappointing second play, followed in 1964. Posthumously produced plays *To Be Young, Black, and Gifted* (1969), *Les Blancs* (1970), and *What Use Are Flowers?* (1972), adapted by her ex-husband and literary executor Robert Nemiroff, confirm Hansberry's

great ability to combine artistic integrity and skill with commitment to social reform.

## Happy Days

For ten years, from 1974 to 1984, a fictional image of suburban Milwaukee brought the 1950s back to America through ABC's *Happy Days*. The picture of the world that was painted by this television comedy shaped a whole generation's image of the 1950s. It was world of drive-ins and leather jackets, of cars and girls, but mostly of hanging out and solving day to day problems. It was noticeably *not* the 1950s of McCarthy and Korea. In the first seasons of the show, a number of episodes focused on specific 1950s topics: electioneering for Adlai Stevenson, Beatniks, rock 'n' roll shows, gangs; but after that, *Happy Days* settled into its stride to present a more general backdrop of the period, against which the Cunninghams and Fonzie developed as characters.

In addition to *Laverne and Shirley* and *Joanie Loves Chachi*, *Happy Days* spawned a Saturday-morning cartoon show, *The Fonz and the Happy Days Gang*. Also, the much-loved 1978 sitcom *Mork & Mindy* was based on an episode of *Happy Days*. Indeed, the series was influential in setting the standard for popular comedies during the later 1970s and through the 1980s.

*Happy Days* was created by Garry Marshall, a veteran comedy writer who had worked on the *Dick Van Dyke Show* and who had produced *The Odd Couple*. Marshall produced a pilot for ABC in 1971, titled *New Family in Town*. The network was not interested, and the pilot later surfaced as a segment of *Love, American Style*. Aired on February 25, 1972, it was titled "Love and the Happy Day," and featured Ron Howard, Marion Ross, Harold Gould, and Susan Neher as a 1950s family acquiring their first TV set. In the meantime, however, film director George Lucas had seen the pilot, and used it as the inspiration for his tremendously popular movie *American Graffiti* (1973), with Ron Howard as a 1950s "Everyteen." The success of the movie rekindled ABC's interest in Garry Marshall's original pilot.

Over its lifetime, *Happy Days* was really at least three shows. In the first two seasons, it focused on the life of Richie Cunningham (Ron Howard) and his family, which consisted of Dad (Tom Bosley), a hardware storeowner, Mom (Marion Ross), and little sister Joanie (Erin Moran). Early on, there was also a basketball-wielding, monosyllabic older brother, Chuck, but he left the collective memory along with the actor when cast changes were made after the second season. Outside of the family home, Richie's social life was lived primarily at Arnold's Drive-in, where he hung out with his friends Potsie Weber (Anson Williams) and Ralph Malph (Donny Most), and consulted with his leather-jacketed mentor, Fonzie (Henry Winkler). This early

incarnation was much like the 1950s comedies it emulated, offering a basic and likable story. Then they discovered Fonzie.

By the third season, things on *Happy Days* had changed. The show went to the top of the ratings and became the foundation for ABC's rise as the powerhouse of television in the 1970s. No longer just a show about the antics of high school kids, the series began to focus on the relationship of Fonzie and Richie, their mutual admiration and dependency, and the growth and development of Fonzie.

Eventually, both the fictional Richie Cunningham and actor Ron Howard grew up and left the show, leaving it to feature a younger generation of characters and an adult Fonzie in its final years. While attention was transferred to Joanie and her friends in high school, but within the basic format, the dynamic of the show changed as Fonzie's transformation from rebellious youth to mentor and folk hero became complete.

Two things were true at the outset of this show. Before Ron Howard would accept a role as another television youth (after practically growing up on the *Andy Griffith Show*), he made Marshall promise that his character would be allowed to age each year through high school into college. Fonzie had originally been envisioned by Marshall—and portrayed by Winkler—as a brooding, rebellious dropout. In one of those great bits of television folklore, the ABC network had decreed that Fonzie should wear a cloth jacket rather than the "threatening" leather one. Marshall suggested a compromise, permitting Fonzie to wear the leather jacket when he rode or worked on his motorcycle. So, in the beginning, Fonzie was not seen without his motorcycle. Eventually, however, Fonzie rode his motorcycle less and less, but continued to wear his leather jacket.

Fonzie was originally intended as a minor character, but proved to be extremely popular with the audience and they decided to emphasize the role. To take advantage of Fonzie's popularity, he was moved into an apartment above the Cunningham's garage in 1975. The move enabled Fonzie to maintain his independence, but allowed the scriptwriters to involve him in the Cunninghams' domestic life. The Chuck character was no longer necessary, since Fonzie would fill the role as big brother to Richie.

As *Happy Days* moved into its second and third years, Fonzie received ever more attention. He made *Happy Days* unique and distanced the show from the middle-class family. In many ways, the middle years of this show seemed simultaneously anti-authority, yet accepting of it. Fonzie epitomized all that the middle-class 1950s were supposed to fear. He is cool, he is a drop out, and he gets all the women. Fonzie was the working class character, and the leader of the youth pack around Arnold's Drive-in, the youth Mecca in *Happy Days*' Milwaukee. When Fonzie first came to the forefront, he was the prototypical "hood," whose menace served as a counterpoint to the goodness of Richie and his friends.

This new Fonzie was a more human Fonzie, one who can show his feelings and vulnerability without sacrificing the essential toughness of his character. In this permutation, he became a combination of father confessor and guru to Richie's pals. Fonzie is the epitome of cool (almost to the point of caricature), he is the one who can dispense advice, settle disputes, and serve as role model. This was all a far cry from the standard 1950s sitcom, where only parents could dispense wisdom to children, and working class, non-educated teens were perceived as a threat rather than a role model.

This new dynamic powered the show to its huge success. The rest of the characters, too, were pulled up with Fonzie, but over time it got to be too much—too much formula, not enough pizzazz. So much

The stars of *Happy Days* (from left) Don Most, Henry Winkler, Anson Williams, and Ron Howard.

so, that several years of episodes would feature a trip (to a dude ranch, to Hollywood) where Fonzie can save the day by riding a bull or water skiing over a shark. He became one of the family, and was thus diluted into a stereotype, a “good” role model, as the character was gradually stripped of most of his threatening qualities.

This was not all bad, and the interaction between Richie and Fonzie provided the opportunity to broaden the show’s topics, while Ralph and Potsie were relegated to comic relief. In the fall of 1977, Richie, Potsie, and Ralph began college at the University of Wisconsin in Milwaukee. Joining the cast that season were Scott Baio as Fonzie’s enterprising young cousin, Charles “Chachi” Arcola, who became Joanie’s boyfriend, and Lynda Goodfriend as Richie’s girlfriend, Lori Beth Allen.

Ron Howard and Donny Most left the series in 1980, written out by having Richie and Ralph leave to join the army; in May of 1981 Richie married Lori Beth by proxy, and their baby, Richie, Jr., was born in the fall of 1981. Meanwhile, Fonzie had become a teacher of auto shop at good old Jefferson High. Joining the cast were Ted McGinley as Marion’s nephew Roger, who became Jefferson’s new basketball coach and English teacher, and Cathy Silvers (1980 to 1983) as Joanie’s boy-crazy girlfriend, Jenny Piccalo. In the fall of 1982 Fonzie found himself falling in love with a divorcée named Ashley (played by Linda Purl). Ashley’s daughter was played by Heather O’Rourke. In addition Crystal Bernard joined the show as Howard’s niece, K.C., who lived with the Cunninghams. One reason for this addition was that Joanie was not at home, having moved to her own (short-lived and unsuccessful) spin-off, *Joanie Loves Chachi*. By the fall of 1983, in what would be *Happy Days*’ final season, Fonzie had become the dean of boys at George S. Patton Vocational High. Joanie and Chachi, whose spin-off had flopped, came back to Milwaukee, and plans were made for their wedding. Also returning were Richie and Ralph, who showed up in a special two-part episode.

Increasingly, over its ten-year run, the life of the show took on a more 1970s feel in clothes, in language, and, occasionally, in storyline. It retained the music and basic settings, but seemed to stop caring about the period that was its inspiration. Though Fonzie rose to prominence, it was always Richie who provided the focus and balance for the show. When he left, it was never the same again, and many would say it never recovered, although it went on for four more seasons.

Though it appeared at the same time as reality-based comedies like *All in the Family* and *M\*A\*S\*H*, *Happy Days* opted for lighter humor and interaction. Due primarily to Fonzie, who became such a cultural icon that his leather jacket is part of the Smithsonian collections, this show became a part of social consciousness. For the generation of Vietnam and Watergate, it represented a perfect combination: a nostalgic reflection on an earlier time when life seemed less difficult, with a strong character that can solve the problems and who, while allowing us to see his failings, can retain that strength. Last but not least, *Happy Days* reflected the problems of everyday life, placed at a safe remove and tempered by humor.

## Happy Hour

Happy hour is the two-hour period before dinner when bars offer discounted alcoholic beverages. In the 1920s, “happy hour” was Navy slang for the scheduled period of entertainment on-ship. After the passage of the Volstead Act, civilians held “cocktail hours” at speakeasies, and in their own homes, to fortify themselves before dinner. Post-prohibition cocktail lounges continued the custom of pre-dinner cocktails. “Happy hour” became a common term around 1960; it appeared in a 1959 *Saturday Evening Post* article on military life. Owing its name to the word “happy” as meaning “slightly drunk,” happy hour became known more as an after-work ritual, instead of a prelude to the evening. In the 1980s, bars offered complimentary hors d’oeuvres for happy hour, in response to the heightened enforcement of anti-drunk-driving laws. The military reflected these changes too, when in 1984, General John A. Wickham, Jr. abolished happy hours at United States military base clubs.

## Hard-Boiled Detective Fiction

Hard-boiled detective fiction is often defined in terms of what it is not. It is not set in an English village; the solution is not reached by analyzing clues. To paraphrase Raymond Chandler, one of its most famous writers, it is not about dukes and Venetian vases, or handwrought duelling pistols or curare or tropical fish. Hard-boiled detective fiction emerged in 1920s America as an antidote to such things. It exploits familiar urban and industrial settings; its heroes, and now heroines, are ordinary people, working alone.

Hard-boiled detective fiction can be recognized by four main elements: the language, the setting, the detective, and the detection. The first of these is what links hard-boiled detective fiction with other literature of the period. Hard-boiled language describes things rather than ideas: adjectives are kept to a minimum; it reports what happened and what was said, not how it felt. Perhaps the most famous writer of non-detective fiction in this style is Ernest Hemingway, and many writers of hard-boiled detective fiction have said that they began by imitating him.

This style was also affected by financial concerns. Hard-boiled detective fiction first appeared in the “pulp” magazines and novelettes that were popular during the 1920s; the writers for these magazines were paid by the word, and editors were keen to eliminate unnecessary description that would cost them money. Some “pulp” writers, such as Horace McCoy and Dashiell Hammett continued to use this pared-down style in their later novels, while others, such as Raymond Chandler, thought that readers would actually enjoy description if it were done well. His language still reports only what happened and what was said, but settings and people are described in a poetic and often complex way. Since the 1980s, some hard-boiled writers, such as James Ellroy, have tried to eliminate the single narrative voice altogether; Ellroy presents his readers with transcripts of newspaper and radio reports about the investigation, heightening the illusion of realism and objectivity.

The setting for hard-boiled detective fiction is almost always urban. Perhaps because of its origins in the period of Prohibition and the Depression of the 1920s, the cities it describes tend to be dark, dangerous places run by corrupt politicians and gangster syndicates. Early writers of hard-boiled detective fiction considered themselves to be describing city life in a new, realistic way. The sort of crime that takes place in their stories also could be read about in newspapers. The people in the stories were like people the readers knew or had heard about; they seemed to speak as people really spoke. As Raymond Chandler puts it, the world they describe is “not a very fragrant world, but it is the world you live in.”

The hero of hard-boiled detective stories is most often, though not always, a private detective. It is generally thought that he first appeared in *Black Mask* magazine in 1922 in the form of Carroll John Daly’s Race Williams. Sara Paretsky, who began her V. I. Warshawski series in the 1980s, was among the first to create a hard-boiled detective heroine. Before then he was always a man, and the audience for the stories he appeared in was almost exclusively male. The origins of the hard-boiled detective hero are in the frontier heroes of the nineteenth century, and it could be argued that both types of hero bring order to the lives of the people they choose to help. Where they differ is that the frontier hero assists in establishing new settlements and a new civilization, while the hard-boiled detective only patches up an old and corrupt one. Despite the efforts of writers like Paretsky, since the mid 1970s the police procedural has been the dominant detective fiction form. While the language and action of these novels often owes much to the hard-boiled style, the emphasis on the police implies that the lone hard-boiled private detective is no longer a convincing defense against society’s many ills.

The fourth defining characteristic of hard-boiled detective fiction is the method of detection itself. In keeping with origins in Western and romance stories, the hard-boiled detective is usually presented as being on a quest, and it is the quest itself, rather than its solution that forms the main source of interest for readers. Even in the best examples of the genre, the solution to the mystery is often unsatisfactory or contrived, but rather than wanting to know what has already happened, readers want to find out what will happen next. More particularly, they want to know how the detective will deal with physical and moral difficulties encountered along the way.

From Race Williams to V. I. Warshawski, hard-boiled detective fiction reassures us that individuals can succeed where government law enforcement has failed. Hard-boiled detectives are ordinary people who take extraordinary risks for the sake of what they see as right. They suggest to their fans that however mundane their lives

may seem, and however dangerous the world appears, they too have a little of what it takes to be heroic.

## Harding, Tonya (1970—)

Tonya Harding, considered one of the greatest athletes in women's figure skating in the 1990s, has always been a hard-luck case in that glamorous sport. According to sportswriter Joan Ryan, "Harding's unforgivable sin in the skating community was not that she had no class or taste but that she refused to allow anybody to give her some." National Champion in 1991, Harding's career veered wildly between success and disaster, and was finally ended by her participation in a plot that disabled Nancy Kerrigan on the eve of the 1993 Nationals, which Harding went on to win. The much-hyped "duel" between Kerrigan and Harding at the Olympics fizzled when Harding performed poorly. Capitalizing on the public fascination with the rivalry, a television film, *Tonya and Nancy*, appeared in 1994.

She avoided imprisonment, but was barred from amateur competition and stripped of her National title, and has since struggled to return to skating.

## The Hardy Boys

*The Hardy Boys Mystery Stories* debuted in 1927 as the first series of mysteries written for children, and eventually became the

longest-enduring series of boys' fiction in American history. The Hardys' influence on juvenile fiction and television has been pervasive, while their unequalled longevity has made them icons of nostalgia. A product of the Stratemeyer Syndicate, the company that produced Tom Swift and the Bobbsey Twins, the Hardy Boys first took shape when Edward Stratemeyer pitched the series to his publishers at Grosset & Dunlap in 1926. Expressing the belief that "detective stories are as interesting to boys as grown folks," he outlined a series of adventures that would center on two teenage brothers, whose "work as amateur detectives would furnish plenty of incident, exciting but clean." With those few words, Stratemeyer set the tone that would propel the Hardy Boys from a humble idea to a national phenomenon, encompassing multiple forms of popular media.

Stratemeyer tapped one of his ghostwriters, Leslie McFarlane, to launch the series. As McFarlane later explained in his autobiography, *Ghost of the Hardy Boys*, he welcomed the opportunity to originate a series, rather than merely add to a pre-existing one. "It seemed to me that the Hardy boys deserved something better than the slapdash treatment [prior assignments] had been getting. It was still hack work, no doubt, but did the new series have to be all that hack? There was, after all, the chance to contribute a little style. . . I opted for Quality." Under the pseudonym Franklin W. Dixon, McFarlane continued as the Hardys' primary ghost for twenty years before retiring. By then the series was well established and well loved, and easily survived the transition to different (and often less able) writers.

Educators, however, were not fans of the books, and mounted a strong opposition. Even before the birth of the Hardys, products of the Stratemeyer Syndicate were shunned by librarians and teachers for their sensationalism, flatly formulaic structure and minimal literary value. Despite the truth of these observations, children embraced the books and made them bestsellers.

The popular Hardy formula drew much inspiration from preceding series. Like Stratemeyer's earlier brother-protagonists, the Rover Boys, Joe and Frank Hardy traveled in a pack of three, with their chum Chet Morton (other friends appeared frequently, too) and enjoyed unfettered mobility. On motorcycles, in their boat the *Sleuth*, in planes, trains and automobiles, the Hardys could go anywhere their cases led them. Early volumes mostly kept them in or near their hometown of Bayport, a fictional city on the Eastern seaboard, but as the years passed their travels increasingly took them to foreign countries. The books also offered their readers the vicarious thrill of gadgetry; the Hardys had a laboratory where they used microscopes, fingerprinting kits and other tools of the trade to analyze clues. They could fix anything, could pilot any type of vehicle, and kept abreast of whatever technological innovations were available at the time—from short-wave radios in the 1940s to voice-printing techniques in the 1970s.

The major factor in the Hardy Boys' success, however, was the ingredient that Stratemeyer had believed would make the series unique: its adaptation of the mystery genre for a pre-teen audience. Scholar Carol Billman, calling the Hardys "soft-boiled" detectives, notes that they were launched in the same period that saw the increasing growth of adult detective fiction. What Dashiell Hammett and Raymond Chandler did for mature audiences, "Franklin W. Dixon" did for children. The Hardy Boys, as Billman observed, provided "the novel lure of the detective mystery [fused] with the earlier adventure tale tradition," a combination that accounted for their wide appeal both at home and abroad. (The books have been translated into more than a dozen languages.)

Unlike Chandler's sinister Los Angeles, the Hardys' milieu had to be "exciting but clean," as dictated by Stratemeyer. Bayport is full

of criminals, yet remains a fundamentally safe community. The crimes committed are wicked but not gruesome; Frank and Joe can fight the villains with their fists, they never shoot or stab them. The heroes never smoke, drink, or discover the joys of sex. Although Stratemeyer provided the brothers with “girlfriends,” the relationships were kept innocent and superficial; indeed, the action is decidedly gender-exclusive, with women and girls barely registering but for the more substantial character of the bossy but lovable Aunt Gertrude. The Hardys live in a male-oriented, protected and self-referential world, rich in preposterous adventure yet devoid of any real threats to a child’s peace of mind. The narrowly observed gender distinctions of the Hardy Boys’ universe insulate its young readers from insecurity.

Inevitably, the Hardy Boys’ steadfast purity over the decades gradually reduced them to objects of ridicule as the century grew more knowing and sophisticated, and its youth precocious. After the 1960s, parodies in print and on stage showed the boys in narcotic and sexual situations, including homosexual spoofs that called them the “Hardly Boys.” But the books’ spirit of eternal youth and innocence, so absurd to cynical adults, has been a crucial element of their success with children. Their existence outside social anxieties make them especially appealing to the age group most wracked by those problems. Indeed, the Hardys’ innocence surpasses even that of other Stratemeyer characters. Noting that early Syndicate blockbusters the Rover Boys and Tom Swift lost their popularity after marrying and having children, Stratemeyer’s heir, Harriet Adams, decreed that the Hardy Boys would not suffer the tragedy of maturing. They aged early on in the series, from their mid-teens to their late teens, but thereafter dwelled in a state of arrested development.

Two significant events altered the tone and direction of the *Hardy Boys Mysteries*. A massive revision project was begun in 1959 to modernize the books and erase the most egregious racial stereotyping. Ranging from simple “cut-downs” to completely rewritten stories, the revisions scrubbed away the original narrative flavor, along with the automats, running boards, and ghastly depictions of non-WASPs. The second significant change accompanied Simon & Schuster’s acquisition of the title after Harriet Adams’ death. The publishers revitalized the series, adding new dimensions to plots, locales, and characterizations. The changes influenced the age group the publisher targeted. Between the 1920s and 1950s, Grosset and Dunlap had targeted the series to 10 to 15 year-olds. Simon and Schuster pitched the series to 8 through 11 year-olds. They also extended the franchise, introducing several spin-off series. *The Hardy Boys Case Files*, conceived in 1987 for older readers, increased the levels of danger and violence. The boys’ cases now included murders, while they demonstrated a heightened awareness of the opposite sex (but still no sexual activity). The Nancy Drew and Hardy Boys *Supermysteries*, begun in 1988, featured collaborations between Frank and Joe, and their popular girl-detective counterpart, and another collaboration was attempted in 1992 when the publishers briefly paired the Hardys with Tom Swift. The Clues Brothers, starring grammar-school versions of Frank and Joe, debuted in 1997 for younger children. While these ancillary series were appearing, the core Hardy Boys continued to expand.

Television has adapted the Hardys many times, with varying degrees of success. In 1956 they appeared under the auspices of the Disney juggernaut, starring in two serials on *The Mickey Mouse Club*. The boys, played by Tommy Kirk and Tim Considine, were portrayed as roughly 12 and 13 years old, far younger than their book-ages of 17 and 18. A decade later, Twentieth Century-Fox produced a pilot for an

hour-long series starring a young Tim Matheson as Joe and newcomer Rick Gates as Frank. Though slightly older than Kirk and Considine, these actors were still only about 15, proving that America’s popular imagination definitely saw the Hardys as “boys,” not as young men, no matter what the books implied. In 1969 the Hardys re-emerged as the stars of a Saturday morning cartoon on ABC, characterized as leaders of a “rock” group that solves mysteries between gigs. Reflecting the social inclusivity of the era, the show added a girl and an African-American boy to the Hardys’ band, along with old friend Chet Morton (renamed “Chubby”). Perhaps because the tone of the books had been too compromised, the animated Hardy Boys were a failure, lasting only one season. Among the surprising amount of merchandise inspired by this short-lived program were two record albums of the group’s sugary pop music.

Not until 1977 did the Hardys truly succeed in a television market. Universal Studios’ *The Hardy Boys/Nancy Drew Mysteries* was a prime-time series that alternated episodes of the Hardys’ adventures with those of Nancy Drew in an hour-long format. Shaun Cassidy and Parker Stevenson, clearly young men rather than boys, achieved fame as teen-idols for their roles as Joe and Frank. The series lasted nearly three seasons, each of which took the Hardys progressively further away from the insularity of the books. By the end of its run, *The Hardy Boys Mysteries* (renamed after the cancellation of the Nancy Drew episodes) had the brothers working for the U.S. Justice Department, and routinely involved in romance as well as mystery. In 1995, Nelvana/New Line television produced a half-hour series which aired in syndication, again with a companion Nancy Drew series. After a search that included casting calls over the Internet, Paul Popowich and Colin Gray were chosen to play the brothers. The series received lukewarm reviews, and its popularity was further hindered by its floating status in syndication. Without a prime-time slot or heavy promotion, the show died quickly.

At the same time, the success of the Hardy Boys books began to wane as young readers increasingly turned to more sensational fare. R. L. Stine’s *Goosebumps*, and other series flavored with science fiction or horror, routinely outperformed the classic Stratemeyer Syndicate books. That the Hardy Boys were eclipsed in popularity could be put down to their success in revolutionizing their field—a success largely responsible for the continuing tradition of serial adventures for children, featuring numerous imitators. Ironically, just as the Hardys began to falter with their primary audience, they became increasingly popular with adults. The outpouring of merchandise (toys, puzzles, games), from the multiple television series, as well as the ever-evolving changes in the books’ formats, created a healthy market of adult collectors. The Hardy Boys retains a formidable status as the best-loved American series of boys’ books of the twentieth century.

## Hare Krishna

Of the colorful and exotic features of the American urban landscape during the hippie era in the late 1960s and 1970s, none, perhaps, was so striking as the small bands of men with shaved heads and saffron robes and women in saris gathering at love-ins or on street corners. Together they danced to the sound of Indian drums as they recited their mantra—"Hare Krishna, hare Krishna, Krishna Krishna, hare hare; hare Rama, hare Rama, Rama Rama, hare hare"—and solicited alms.

The worldwide Krishna movement was founded by one elderly man from India who came to America with a vision, determination, and hardly a penny to his name. Born in 1896, Abhay Charan De had already studied economics and English at the University of Calcutta when he became a disciple and the eventual successor of Bhaktisiddhanta Sarasvati Swami, the tenth in a line of gurus beginning in the late fifteenth century with Lord Chaitanya Mahaprabhu, who had founded a religious system within Hinduism particularly devoted to the god Krishna.

A divinity with many of the attributes of the trickster archetype, Krishna appears in India's epic poem the *Mahabharata* as charioteer to his friend Arjuna. A great battle has begun in which, Arjuna realizes, he will have friends and relatives on both sides. He asks

A group of Hare Krishnas involved in public chanting.

Krishna whether he ought to fight or not, and Krishna explains why he should do so, in a classic discourse about reality and illusion (the source of Ralph Waldo Emerson's lines "If the red slayer thinks he slays / And the slain thinks he is slain"). This interlude on the eve of the battle is also the setting for the *Bhagavad-Gita*, or "Song of God," a central text in Hindu religious literature.

Chaitanya and his successors revered Krishna as the essential manifestation of God and prescribed a way of life which eschewed earthly sensory pleasures in favor of meditative practice, study of the *Bhagavad-Gita* and other holy books, and the chanting of the "Hare Krishna" mantra. As such, the followers of Krishna might have been simply one of many Indian sects within Hinduism. The crucial difference came when Abhay Charan De, now called Bhaktivedanta Swami Prabhuda, brought his teaching to America, arriving in New York on a freighter in 1965.

Starting with evening lectures on the *Bhagavad-Gita*, Bhaktivedanta Swami soon attracted a small but enthusiastic band of followers who became the International Society for Krishna Consciousness (ISKCON) in 1966; two years later the group acquired a farm in West Virginia which they dubbed New Vrindavana (after the town in India which was believed to be Krishna's birthplace) and which later grew to 1,000 acres. In 1972, to educate the increasing number of Hare Krishna children, ISKCON started the Gurukula School and its enrollment grew to 150 over the next three years. By the time of Bhaktivedanta Swami's death in 1977, the Krishna movement boasted 10,000 full-time members worldwide, 5,000 of them in America alone, and could claim several million others who came to worship at ISKCON temples.

Those who joined the communities were expected to abstain from drugs, including alcohol, tobacco, coffee, and tea. Sexual relations were permitted only for couples married by an ordained minister in Krishna Consciousness; there was to be no courtship or dating as such, either within the community or with outsiders. Also forbidden were gambling and "frivolous games and sports"; children, however, were encouraged to play games such as a Krishna version of hopscotch called "Hopping to the Spiritual World," "I Love Krishna," and "The Hanuman Hop." For adults, the everyday routine included six temple ceremonies, several hours of classes, work within the temple compound for three hours in the morning, and *sankirtana*—public chanting, preaching, and solicitation of alms—for another three hours each afternoon.

Many devotees saw in the Krishna communities a welcome refuge from a prior life of adolescent turmoil, insecurity, and drug use. But relatives and friends of converts, alarmed by the strictures of the temple regimen and the apparently hypnotic effect of chanting the Hare Krishna mantra 108 times a day, sometimes brought accusations of brainwashing and coercion, particularly when children were involved. The grandparents of one boy whose mother had joined the movement spent 16 months finding him and restoring him to his father, ultimately resorting to counter-demonstrations at Chicago's O'Hare airport, a favorite *sankirtana* site.

Such clashes of worldviews raised troublesome civil liberties issues for the courts and generated adverse publicity for the movement. The public backlash made it harder to raise money openly for Krishna Consciousness, so that sales of books and incense on the street came to be divorced from preaching (some males donned toupees to cover their shaved heads), seeming to defeat the purpose of *sankirtana*.

Anticipating his death, Bhaktivedanta Swami had designated 11 gurus to preside over districts within the worldwide organization, as

well as a Governing Body Council (GBC), which was to be ISKCON's central administrative committee. A crisis of conflicting authority soon erupted between the GBC and several of the regional gurus, four of whom resigned during the next decade. There was also bad press from a California police raid which turned up a large cache of firearms on a ranch owned by the movement, and from the murder of a former member, turned vocal critic, at the New Vrindavana compound.

Nevertheless, ISKCON survived, making changes to accommodate members unable or unwilling to join the temple communities (including outreach to expatriate Indians), and broadening its product line to include vegetarian specialty foods and restaurants. A new generation has found the Krishna-Conscious lifestyle an appealing alternative to what one convert, a former heavy-metal musician, described as "fashion, cliques, sex, drugs, and loud music." As sociologist E. Burke Rochford put it, "ISKCON's ability to adapt to what have often been the most adverse circumstances points to the flexibility and ultimate resiliency of the movement. It is these qualities, combined with the deep faith and commitment of the devotees themselves, which will be the Krishna movement's greatest assets as it approaches the twenty-first century."

## Haring, Keith (1958-1990)

Among the most popular and frequently reproduced graphic images to have emerged from the 1980s are the broad cartoonish outlines of a baby on all fours, a boxlike barking dog, and a series of identical funny little men striking a variety of energetic poses. These figures—featureless yet evocative through outline alone—had their genesis in the spontaneous ink drawings Keith Haring began making in 1980, drawings out of which, the artist told his biographer John

Gruen, his "entire future vocabulary was born." Seeking the incompatible goals of immediate acceptance with the masses and critical recognition from the art establishment, Haring lived fast, painted furiously, and died tragically young.

Growing up in Kutztown, Pennsylvania, where as a young child he drew pictures with his father, Haring was obsessed with the art of Walt Disney, Dr. Seuss, and Charles Schulz's earliest Charlie Brown comics. Television cartoons and the cartoonish sitcoms of the 1960s fascinated him, and he started a local Monkees fan club. In junior high school he won an award for a drawing on adding-machine tape which pitted the hippies against the police—a sign, perhaps, of his budding rebelliousness. After high school, Haring briefly attended the Ivy School of Professional Art in Pittsburgh and worked at the Pittsburgh Arts and Crafts Center. During this period he was influenced profoundly by Robert Henri's book *The Art Spirit*, which echoed Haring's own artistic musings, and by a 1977 retrospective of Pierre Alechinsky, whose work, said Haring, "was the closest thing I had ever seen to what I was doing with these self-generative little shapes."

In 1978 Haring moved to New York City to attend the School for Visual Arts, where his introduction to semiotics, or the study of signs, made a deep impression. He was fascinated by the graffiti in the New York streets and subways and was by 1980 making graffiti himself, eventually collaborating with and promoting other graffiti artists. In the early 1980s he became well-known for a series of surreptitious drawings he made in the New York subway stations on the empty black panels placed there to cover up old advertisements; the barking dog, the "Radiant Baby," and the active little men which became fixtures in much of his later work were all present here. The opening of his big show at New York's Shafrazi Gallery in 1982 was a sensation, attended by famous painters and graffiti artists alike.

Haring often created the art for his gallery shows on-site a few days before their opening. Onlookers were amazed at his ability to complete huge projects quickly with nary a false brush stroke, whether on paper, tarpaulins, canvas, or building facades. Large-scale projects ranged from a section of the Berlin Wall to the walls of museums, hospitals, and churches, generally with the blessing of property owners and often for socially conscious causes. His collaborators included Andy Warhol and William S. Burroughs, both of whom he considered mentors, and armies of neighborhood children. Haring dabbled in body painting and designed sculpture. Commercial projects included painting a car for BMW, ads for Absolut Vodka, and watch faces for Swatch. In 1986 Haring, wanting as usual to communicate to a wide audience, opened the Pop Shop in New York City to sell inflatable babies, toy radios, buttons, embroidered patches, and T-shirts bearing his and others' designs; a similar venture in Tokyo failed. Haring's work was extremely popular in Europe and Japan and as early as 1983 the artist had noticed imitations of his work "springing up all over the world." Throughout much of the late 1970s and 1980s Haring was immersed in recreational drugs and sex, the New York club scene, and friendships with celebrities including Madonna, Brooke Shields, Andy Warhol, and Timothy Leary. Haring died from AIDS in 1990 at the age of 31.

At the close of the twentieth century, Keith Haring's artistic legacy is still being debated. Calvin Tomkins, writing in the *New Yorker*, described Haring's natural gift as "the ability to cover and animate a surface with strong, simple, cartoon-style images that had an iconic resonance." Kurt Andersen, writing in the same publication, found Haring's work unpretentious and unimportant and saw in Haring all the salient artistic features of the 1980s: "a return to figurative style, the disappearance of distinctions between high and

low, and the rise of full-bore marketing and of the overnight sensation.” A major retrospective at New York’s Whitney Museum of American Art in 1997 revealed Haring to be a more versatile and, often, sexually provocative artist than his mass-produced images would suggest. Certainly he was a master of line drawing, a tireless worker, and an adept self-promoter. While antecedents from Fernand Léger to R. Crumb may be cited, Haring’s immediately recognizable work bears his own unique imprint.

## The Harlem Globetrotters

Since 1927, the Harlem Globetrotters have toured continually showcasing the skills of African American basketball players and developing an entertaining blend of athletics and comedy. In the process they have helped to introduce basketball throughout the world, inspired athletes of all races, and laid the ground work for the freewheeling “showtime” style of basketball that has contributed to the growth of basketball’s popularity since the early 1970s. The Globetrotters’ style of basketball, and particularly their style of comedy, were products of American racial segregation and discrimination. Their fancy dribbling, flamboyant passing, and spectacular leaping, which they pioneered, were seminal expressions of an African American athletic style. Their comedic routines (called “reems” by the Globetrotters), drew upon older minstrel show traditions and Sambo stereotypes of African Americans as childish clowns. Both of these dimensions of the Globetrotter—one forward looking and celebratory of African American creativity and excellence; the other looking backward and reinforcing racist images—have contributed to their success.

On their early tours, the Globetrotters and owner/booking agent/coach Abe Saperstein (a Jewish immigrant of Polish parentage), crammed into a small coupe and drove throughout the upper Midwest, taking on town teams for a percentage of the gate. They rarely had money for hotels, and when they did, they often found themselves barred because of their race. The same was true for restaurants. In some locales, the Globetrotters were treated as an anthropological exhibit by people who had never met anyone of African ancestry. Unlike other African Americans who had to endure these indignities, the Globetrotters could also enjoy the subversive pleasure of getting paid to consistently beat white teams on the court. Although the

origins of the Globetrotters’ move into comedy have been shrouded by Saperstein’s myth-making, it is clear that the primary motivation was to increase the likelihood of a return engagement by not running up the score against inferior competition, and providing extra entertainment for fans who were bored by lopsided contests. By the late 1930s, basketball tricks and comedy were an integral part of most performances by the Globetrotters.

The lead clowns—such as Reece “Goose” Tatum and Meadow “Meadowlark” Lemon—enjoyed the laughter, attention, and extra money that their comedic talents brought them. Rather than complaining about assaults to their dignity, they seized opportunities to expand upon the traditional reems. Despite the fact that their humor could easily be interpreted as reinforcing negative racial stereotypes, few Globetrotters have publicly expressed misgivings. One notable exception is Connie Hawkins, a basketball hall-of-famer who spent four years in the 1960s with the Globetrotters. In a 1972 biography, *Foul*, by David Wolf, Hawkins complained that the Globetrotters were “acting like Uncle Toms. Grinnin and smilin and dancin around—that’s the way they told us to act, and that’s the way a lot of white people like to think we really are.” Hawkins’ observations help explain how the Globetrotter’s humor contributed to the team’s success by undercutting the racial implications of their superiority as basketball players.

The formula has been very successful. First, in the 1930s and 1940s their tours expanded to encompass the entire North American Continent. In 1950, they undertook their first European visit, and the following year embarked on an around-the-world tour. The State Department found that the Globetrotters’ happy-go-lucky style was an effective counter to communist propaganda about American race relations, and, along with the armed forces, provided logistical support for their overseas trips during the Cold War. The demand for the Globetrotters was so great in the 1950s, that the team fielded three separate units in the United States, and an all star international squad. Since 1954, the Globetrotters have made numerous television appearances and have starred in their own cartoon series (1970-1973), and a variety show (1974). Although their cultural import has diminished, the Globetrotters continue to tour, make appearances on television and in advertisements, and recently have secured lucrative corporate sponsorships.

As straight basketball players, the Globetrotters were once formidable and influential. Prior to the integration of the National Basketball Association (NBA) in 1950 (a move that Saperstein resisted), playing for the Globetrotters was nearly the only way that an African American could make a living from basketball. Their victory in the 1940 World Tournament of Basketball, demonstrated that they were among the best professional teams in the United States. Wins over the National Basketball League champion Minneapolis Lakers in 1948 and 1949 further enhanced their reputation, and struck a blow for racial equality. Even after the integration of the NBA, the Globetrotters had to be taken seriously as a straight basketball team. From 1950 to 1962 they played an annual series against teams of college all-stars, winning 162 games, and losing only 44. Since the conclusion of this series, the Globetrotters have all but abandoned straight basketball in favor of comedy and entertainment.

More important than their ability to beat top teams was the Globetrotters’ style of play. Against real competition, they generally dropped the reems, but retained the rest of their repertoire. Where most of the white teams in the first half of the century played a stilted, regimented game, the Globetrotters freelanced and had fun. In recent years, the no-look and behind the back passes, thrilling dunks, flashy

The original Harlem Globetrotters, 1941.

dribbling, and gambling help-out defense that they developed and displayed during years of barnstorming, have entered mainstream basketball as key elements of an African American athletic aesthetic. Perhaps their greatest impact has been in demonstrating how basketball skills could be a form of entertainment. NBA stars like Ervin “Magic” Johnson often cite the Globetrotters, particularly master dribbler Marques Haynes, as an inspiration. Much of basketball’s growth in popularity since the 1970s has been due to casual fans who savor those moments that most resemble the Globetrotters at their best. Players who induce smiles and laughter, not with comedic set pieces, but with a surprising pass, a crossover dribble, or an acrobatic shot in the heat of competition are an important part of the Globetrotters’ legacy.

## Harlem Renaissance

Post-World War I Harlem was the undisputed center of a complex cultural movement out of which emerged a proliferation of black intellectuals, writers, musicians, actors, and visual artists. Variouslly called the Harlem Renaissance, the Negro Renaissance, and the New Negro Movement, it was an artistic flowering that coincided with socio-political expressions of black pride—the rise of the “New Negro” and Garveyism—in much the same way as the

Black Arts and Black Power Movements emerged simultaneously in the 1960s. Although scholars posit differing views on when it began and ended, most agree that the movement was at its height between the dawning of the Jazz Age in 1919 and the stock market crash in 1929.

Harlem, the area James Weldon Johnson dubbed the Black “culture capital,” was appropriately the center of this outpouring of black creativity, in part because it held one of the largest settlements of blacks in any area outside the south and, in part, because of the prevailing *zeitgeist* of racial affirmation. Intellectuals such as Johnson and Alain Locke saw Harlem as a place of great opportunity where blacks could, according to Locke, shed the “chrysalis of the Negro problem.” Locke’s 1925 landmark essay “The New Negro” announced the demise of the “Old Negro” and became a kind of cultural manifesto for artists then and for, at least, the next generation.

The creation of a “Negro” Harlem was indeed remarkable, a curious admixture of affluence and poverty, of black creativity and black exploitation. On the one hand, music, literature, plays, and paintings depicting black life flourished; black entrepreneurship thrived; on the political front, the National Association for the Advancement of Colored People (1909) continued its work as the largest civil rights organization in the United States, alongside the National Urban League (1911) and the more controversial politics of Marcus Garvey, who was laying the groundwork for his project of African colonization. On the other hand, even well-intentioned white patrons helped to perpetuate stereotypes of black life that resulted in the paradoxical “Negro vogue” of the 1920s when white spectators went “slumming” in Harlem to see blacks perform in Jim Crow night clubs. They patronized small bars and cabarets formerly frequented only by blacks and, according to Langston Hughes in his autobiography *The Big Sea*, were given “ringside tables to sit and stare at the Negro customers—like amusing animals in the zoo.”

Yet these very contradictions helped to make Harlem the exciting city within a city that it was then and the cultural icon it has since become, in terms of both the place itself and the artists associated with it. It was a place and a time of burgeoning African American music—notably the blues and jazz—and a long list of black performers were recording their own compositions and appearing in black musicals, in concerts, and on radio programs. Classic jazz composers and performers all over the United States were increasingly drawn to New York as the nation’s music center. Articles and books devoted exclusively to jazz were being published, and recording companies specializing in jazz were established. Black female blues and jazz singers, while held in high regard by their fans, were often considered “unrespectable” and their music “low culture” by some members of the black bourgeoisie. The blues revivals of the 1960s and 1980s reflected a major shift in that thinking. Both popular and lesser-known performers of the 1920s were rediscovered through new releases of their recordings that reached broader audiences. Angela Davis, in *Blues Legacies and Black Feminism*, notes that “with the globalization of music distribution . . . the scope of black music and its historically broad cultural implications can no longer be confined to African American communities.” Indeed, in 1987, Congress passed a resolution declaring jazz “a rare and valuable national treasure.”

Writers such as Hughes, Claude McKay, Nella Larsen, Jessie Fauset, Countee Cullen, Zora Neale Hurston, and Jean Toomer appeared on the literary scene, forming a kind of literati that they themselves jokingly referred to as the “Niggerati.” Publishers clamored for anything “Negro,” as Nella Larsen observed, and white patrons such as Carl Van Vechten and Charlotte Osgood Mason (self-proclaimed the “Godmother” because of her financial support of

artists) saw to it that they got what they wanted. Indeed, the overwhelming popularity of Van Vechten’s own controversial novel *Nigger Heaven* (1926), depicting a seamy side of black life in Harlem, epitomized what publishers believed “Negro” actually meant. Similarly, early productions of work by white playwrights Eugene O’Neill and Frederick Ridgely Torrence were instrumental in creating interest in the plays of black writers, and also in bringing talented young black actors, singers, and dancers to the stage. Eubie Blake and Noble Sissle’s 1921 musical comedy *Shuffle Along* was the first black Broadway show of the decade, and Hughes cites it as the show that gave a “scintillating send-off to the Negro vogue.” At various points during its first run, it showcased the talents of Paul Robeson, Florence Mills, and the exotic, controversial entertainer Josephine Baker. Aaron Douglas designed posters advertising the work of various writers and entertainers but is best known for his contributions to major periodicals, including *The Crisis* and *Opportunity*, official publications of the NAACP and The National Urban League, respectively. The simultaneity of art and politics is vividly represented in the use of these two magazines, devoted in part to socio-political reporting of black experience but also to the artistic endeavors of the young black literati.

Clearly, a black cultural flowering was taking place in other major cities at the same time. However, despite the ongoing debates about whether or not the Harlem Renaissance is a misnomer, whether or not it was a successful movement or any kind of movement at all, black Harlem of the 1920s has become a symbolic “figure” that resonates across time and space, as well as across gender, racial, and cultural boundaries. According to James De Jongh, in the epilogue of *Vicious Modernisms: Black Harlem and the Literary Imagination*, “many writers of European and Asian as well as African descent have found the idea of Harlem to be relevant to their preoccupations and employed the figure of black Harlem in significant ways.” Striking examples are the “blaxploitation” films of the 1970s where Harlem is seen as a haven for drug dealing and other illicit operations, teeming with violence. Black filmmakers of the 1980s and 1990s, especially males, have modeled their notions of the “Hood”—any black poor and working-class urban community—on a symbolic figuration of Harlem. Some of the most popular films, although not necessarily set in Harlem, for example *Boyz n the Hood* (1991), attempt to reinterpret the concept of the black urban environment promulgated by earlier popular movies such as *Shaft* (1971) and *Superfly* (1972) with images of racially self-aware men who are connected to, rather than alienated from, family and community. Harlem, reinterpreted, provides the actual setting for one of Spike Lee’s major films, *Jungle Fever* (1991); and the opening of *She’s Gotta Have It* (1986) pays homage to Zora Neale Hurston, a writer rediscovered, indeed reclaimed, by black feminists and co-opted by a host of academicians in a wide range of disciplines. Similarly, novels and short stories set in Harlem continued to be published into the 1990s, and *The Music of Black Americans: A History* cites Quincy Jones’ *Back on the Block* as the album that “took his listeners back to the old inner-city neighborhood” to learn the history of black music.

In many ways, this idea of Harlem has shaped later generations’ views of individual Renaissance artists, thereby determining who emerges as most representative of the place and the period. At the time, however, the issue of representation was hotly debated. Many of the black intelligentsia believed that the cultural arts were a means to correct the distorted images of blacks and to advance their political agendas. Charles S. Johnson, editor of *Opportunity*, set strict guidelines for literary submissions to the magazine. Marcus Garvey was

critical of those he believed “prostituted” their intelligence and art by succumbing to the demands of white audiences. W. E. B. Du Bois espoused the idea that “all Art is propaganda and ever must be.” While some tried in various ways to escape the stigma of “blackness,” others, such as Langston Hughes, one of the chief poets of the period, turned to the folk as a source of material for their work. Hughes proclaimed that the younger black artists were determined to portray their “dark-skinned selves without fear or shame” regardless of what audiences, black or white, thought. This is the attitude that has had the most profound effect on a hip-hop generation of youths who have both reclaimed and reinvented black cultural traditions in their language, music, and dress.

With the stock market crash came the end of an era and, as Hughes put it, the end of the gay times. By then, some of its most enthusiastic proponents were growing disillusioned with the concept of the “New Negro.” Some had simply moved on to take up their careers elsewhere. Garvey had been convicted of mail fraud, spent two years in an Atlanta prison, and been deported in 1927. However, though the “Negro vogue” ended, art and activism did not. Renewed interest in the Harlem Renaissance and in individual artists has prompted a plethora of scholarship, biographies, docu-dramas, plays, and personal sojourns into the past, such as Alice Walker’s search for Zora Neale Hurston’s resting place. Black American music has helped to lessen the gap between “high” and “low” culture. A shift in views about paintings depicting black life might best be exemplified by the current respect for Palmer Hayden, whose work was dismissed during his own day as simplistic and naive, but who notable black artists such as Romare Bearden later extolled as the “leading folklorist” among them. This revival of interest focuses on the Renaissance as a pivotal period in African American culture that intersects with a rich cultural past and a promising future. Through their music, drama, art, and literature, blacks in Harlem’s heyday confronted blackness head-on in a profound desire for self-discovery and, in so doing, left Harlem its most enduring cultural legacy.

## Harlequin Romances

In a market where 60 percent of all households in the United States do not purchase even one book per year, romance novel readers

spend an average of 1,200 dollars a year on their addiction, whether for escape or titillation. Though the compilers of “bestseller” lists scorn to include romance novels, the genre accounts for over 40 percent of all paperback sales in North America and is spreading in popularity to a surprising number of countries around the world. Employing strictly formulaic guidelines and innovative marketing, Canadian publisher Harlequin Enterprises controls 85 percent of the romance market worldwide. Any supermarket or variety store customer will recognize the mildly lurid cover with a title like *Savage Promise* or *Fierce Encounter* on sale by the checkout stand as a romance novel, and almost all will be familiar with the name that is almost synonymous with the romance novel, Harlequin Romance.

Harlequin Enterprises began as a small reprint house in Winnipeg, Manitoba, in 1949 under the leadership of Richard and Mary Bonnycastle. The Bonnycastles bought reprint rights to a variety of out-of-print books in the United States and Great Britain and republished them for Canadian audiences. When Mary Bonnycastle noticed the popularity of their reprints of the romance novels of British publisher Mills and Boon, she suggested that Harlequin focus on romances alone. Her idea was so successful that by 1971 Harlequin had bought Mills and Boon and begun to amass its own stable of writers to churn out romances.

In the 1970s, Larry Heisey, a marketing specialist who had previously worked at Proctor and Gamble, created Harlequin’s most innovative and most successful marketing strategy. Reasoning that almost the entire readership of the romance novel was comprised of women, Heisey figured that the same techniques that sold cleaning products to women could sell them novels—a clearly recognizable brand name and convenient one-stop availability. He developed the Harlequin Presents series with uniform trademark covers, differing only by the particular title, author, and racy cover art. Further, he marketed the books in the places where women already shopped: the grocery store, the drug store, and the variety store. Using these skillful marketing practices, Harlequin’s profits began to rise. In 1975, the company was bought by publishing giant Torstar, which also owns the *Toronto Star* newspaper. In 1985, troubled by competition from Silhouette Books, Simon and Schuster’s new romance division, Harlequin slid around anti-trust laws in the United States to gobble up Silhouette, thus gaining the power to claim a huge share of the romance market which many claimed was on the verge of dying.

In the years following the start of the women’s liberation movement, social critics had predicted the death of the pulp romance novel. Women, they said, would no longer be hypnotized by the gauzy fantasy romances that had allowed them escape in more repressive times. The critics turned out to be wrong. Spurred by its acquisition of Silhouette and its expansion abroad, Harlequin continued to grow. By the 1990s, it had become the world’s largest publisher of romance fiction, releasing over 60 new titles per month and selling over 165 million books per year, in 23 languages and in over 100 countries.

Employing around 2,000 writers and cover artists, Harlequin Enterprises has created a system that turns the writing of romance novels into a kind of science. With strict guidelines as to length (exactly 192 pages for Harlequin Presents novels), and content (plots “should not be too grounded in harsh realities”; writers should avoid such topics as drugs, terrorism, politics, sports, and alcoholic heroes), Harlequin does not allow much room for pesky creativity that could lead to failure. Traditional romance novels all loosely follow the same general formula: a young and beautiful heroine with a romantic name

such as Selena, Storm, or Ariana, meets a rakishly handsome man, often older, often darkly brooding, with a romantic name such as Bolt, Colt, or Holt. They encounter difficulties—perhaps she is unsure for most of the novel whether the man is hero or villain—but by the end of the novel they are passionately reconciled. Happy endings are an absolute requirement for the Harlequin Romance.

Company research shows that the average Harlequin Romance reader is a 39-year-old woman with a household income of 40,000 dollars a year. Forty-five percent of romance readers are college graduates and 50 percent work outside the home. With an ever sharp eye on the consumer market, Harlequin continues to branch out within its chosen genre, offering several different series of novels, with differing guidelines, to appeal to different readers. The Romance line guidelines for authors recommend avoiding “explicit sexual description,” while the Temptation line suggests, “love scenes should be highly erotic, realistic, and fun.” The Superromance and American Romance lines offer longer, more sophisticated novels, while the Love Inspired line consists of Christian romances where faith is featured as prominently as passion. The Golden Eagle adventure line and the Worldwide Mystery line represent Harlequin’s more successful attempts to reach out to the male reader.

Even in foreign countries, the Harlequin formula seems to work. In 1992, the romances sold in Hungary at the astounding rate of 17,000 per day. Even in cultures that are very different from the Western European culture reflected in the novels, such as Japan and the Philippines, Harlequin Romances are welcomed with very little change apart from translation. Indeed, with Caucasian couples in rapt embrace on the cover, the books sell as rapidly in Asia as in Canada. In North America as well, even though heroes and heroines are almost universally white, the books are consumed ravenously by whites and people of color alike, perhaps proving the power of fantasy.

It is perhaps the mostly female writers of the novels who are left with the fewest illusions about the world of the Harlequin Romance. Signed to restrictive contracts, writers are required to choose pen names, also often romantic, such as Desiree or Jasmine, which Harlequin insists add to the fanciful image of their books. There is, however, a very practical side to the pen-name requirement. If an author leaves Harlequin to go to another publishing house, her pen-name remains the property of Harlequin Enterprises, who will probably use it on the work of another writer. This effectively prevents the author from retaining any following she may have gained under the pen name. Another conflict between publisher and author has arisen over the issue of the reversion of rights. It is common practice with most publishers to allow copyright on out of print works to return to the author, so that the author can make use of writing that is no longer being used by the publisher. Harlequin Enterprises has frequently not been willing to return rights to authors, often citing its ownership of the pen name as reason.

Though writers and agents have attempted to reason or force Harlequin into a position more favorable to author’s rights, the publisher has not only refused but often retaliated by refusal to assign more books to recalcitrant writers, and by threatening to convert its contracts to “work for hire.” Under a traditional author’s contract, Harlequin writers are paid an advance fee for a novel (2,000 to 3,000 dollars for beginners, as much as 15,000 for a veteran). After the book is published, authors are paid royalties, or a percentage of sales. A hot seller can bring an author as much as 40,000 dollars in royalties. Under a “work for hire” contract, a publisher buys an author’s work outright, with no further compensation no matter how high the sales.

In spite of such threats, organizations like the Author’s Guild and Novelists, Inc. continue to investigate Harlequin’s questionable policies, including the legality of its 1985 acquisition of Silhouette.

Notwithstanding the drama unfolding around its own corporate policies, Harlequin Enterprises continues to crank out volumes of lushly improbable escape for readers mired down in “harsh realities.” While men might find their escape in sports or action movies, women have tended to seek an exotic world, where women are surrounded by adventure with a passionate reward at the end. Somewhat like magazine serials and somewhat like television soap operas, these romances are not meant to be taken seriously; they are meant to provide a temporary reality far removed from mundane modern concerns. Their popularity is merely an indication of just how much this alternate reality continues to be needed in modern society.

## Harley-Davidson

There are few material objects that hold the degree of mystique that envelops the Harley-Davidson motorcycle. The very name conjures a warehouse of connotations: the loud rumble of a Harley engine; black leather riding apparel; and, of course, the Hell’s Angels and other stereotypically unsavory, grizzled, bearded, beer-swilling, tattoo-covered biker gangs. Over the years, the “hog,” as the bike is affectionately known by its riders, developed a reputation as the preferred transportation of outlaws; a gritty subculture grew up around the motorcycle and established it as an iconic badge in America and abroad. Though remaining the ride of choice for hard core bikers, by the end of the 1990s the Harley—once feared and despised by law-abiding middle and upper-class Americans—had been gradually transformed into well-polished, sporty recreational vehicles for “weekend warriors.” Ironically, possession of a Harley—with its rich history and lore—was becoming a status symbol.

Harley-Davidson motorcycles neither set out to target the fringe element of the market, nor consciously to create the wild image that developed around their products. Soon after the dawning of the twentieth century, draftsman William Harley and his pattern-maker friend Arthur Davidson, set out simply to design and manufacture a motorized bicycle that would eliminate the need for pedals. They were helped along by Ole Evinrude, a German draftsman who later became known for his superior outboard boat motors. Evinrude had worked in a French factory and provided the duo with De Dion engine drawings to get them started. Davidson made the patterns for a small air-cooled engine while Harley designed the bicycle. In need of an

A Harley-Davidson motorcycle, c.1911.

experienced mechanic, they called upon Davidson's brother Walter, a machinist for a Kansas railroad, to come home to Milwaukee, Wisconsin. Another brother, William, later joined the operation as well.

The Davidsons' father, a cabinet maker named William C. Davidson, assisted the entrepreneurs by fixing up a ten-by-fifteen-foot shed in the backyard as the first factory with "Harley-Davidson Motor Company" painted on the door. The "factory" was officially opened in Milwaukee in 1903, and the Harley-Davidson Motor Company was incorporated in 1907. The Harley-Davidson company web site (<http://www.harley-davidson.com>) proposes two reasons why Harley's name comes first: because he built the actual bicycle, or, perhaps, thanks to a gentlemanly gesture by the Davidsons, who outnumbered Harley three to one. Harley became the company's chief engineer and treasurer, while Arthur Davidson was secretary and general sales manager. Walter Davidson was appointed company president, and William Davidson held the position of works manager.

Nicknamed the "Silent Gray Fellow," the original Harley-Davidson motorcycle was a far cry from the thundering, macho vehicle it later became. Initially, the company installed large mufflers to subdue the noise, and tried to sell the bikes as practical family transportation, provided a sidecar was purchased. The product, however, instead caught on with fun-loving sportsmen.

Into regular production of their bikes by 1905, the Harley-Davidson firm moved their factory to Chestnut Street, now called Juneau Avenue, in Milwaukee, where the corporate offices still stand. Their uncle, James McLay, a beekeeper, loaned them money to build the 2,380-square-foot shop. In 1907, they produced 150 motorcycles, and in 1909, the number had increased to 1,149. By 1912, Harley-Davidson cranked out over 9,500 vehicles in one year. The company's sales and their reputation were growing due to the rugged strength and reliability of the bikes, but the firm really started to make its mark in racing competitions. By mid-1910s Harley-Davidson was

the third largest motorcycle manufacturer in the country, and by 1920 held the number one position, with dealers in 67 countries.

With Arthur Davidson concentrating on sales strategy and Bill Harley focusing on testing and development, the company ensured its staying power. By 1953, when its main competitor, Indian, closed its doors, Harley-Davidson became the sole remaining American motorcycle company, and by 1995 it boasted a production of over 105,000 bikes, with demand continuing to grow. Its legendary Sportster model was first released in 1957. Part of Harley-Davidson's success was due to Davidson's initiative in setting up a network of dealers that would sell only Harley-Davidson motorcycles, with an accompanying dedication to those dealers that their profits would come first. In addition, the company boasted a strong product guarantee. Harley-Davidson even survived during difficult economic times, thanks to its foreign sales, and the fact that it supplied the U.S. Postal Service and police departments.

In both World War I and II, Harley-Davidsons were used to run dispatch on the front lines; in fact, nearly all of the company's output during the World War II went to support the Allied forces. At that time, soldiers began the practice of chopping off parts—including headlights and fenders—to make the machine go faster. Thus, the word "chopper" came to refer to an altered Harley. Eventually it was expected that "hog" owners would personalize their bikes, not only by making them into choppers, but also with custom paint jobs or fenders and other unique touches. A couple of theories have evolved as to why Harleys were also dubbed "hogs." One story notes that a Harley racing enthusiast around 1920 used to do his victory laps with his pet pig accompanying him on the bike; the Harley-Davidson web site claims the term is an acronym for the Harley Owner's Group, the company-sponsored club that was formed in 1983.

In 1947, the image of the outlaw biker gained full momentum when an article in *Life* magazine detailed the horrors of a rebel

motorcycle gang who terrorized a town in California. No longer seen as simply sporting enthusiasts, most riders were now lumped with those known as Hell's Angels, a group of criminal-element bikers who took their name from a 1930s Howard Hughes film about flying men. This was bad publicity for Harley-Davidson, but grist to the media mill, which continued to beef up the stereotype, with films like Marlon Brando's *The Wild One* (1954) portraying the biker subculture. Unfortunately, the stories surrounding biker gangs—rape, robbery, beatings, looting—were often more truth than fiction. In the 1960s, journalist Hunter S. Thompson infiltrated the ranks of the Hell's Angels, posing as a member, and wrote a full-length book on his experiences called *Hell's Angels: The Strange and Terrible Saga of the Outlaw Motorcycle Gang*. After his exposé was published, he was mercilessly beaten up by a group of members.

During the 1960s and 1970s, the preferred vehicle for a mainstream motorcycle enthusiast was usually a lower-priced Japanese model, derogatorily nicknamed a "rice burner" and denounced by Harley riders as watered-down imitations of "true" motorcycles. However, foreign bikes were more accepted in polite society because they were free of the stigma of the Harley, which had come to symbolize low-class, dirty deviants. Magazines like *Easy Rider*, featuring half-naked cover models, contributed to the bike's sleazy connotations. However, during the 1980s the image of the Harley rider began to change again. Though the leather-clad anti-social bike gang members still existed, more and more "yuppie" bikers began to take to the open road. In addition to the appeal of Harleys as well-made American vehicles, a new class of men was undoubtedly also intrigued by the outlaw image.

Harley-Davidsons soon became a recreational vehicle for successful businessmen, much like a boat or Jet-Ski. The bikes could be seen lined up outside hip nightspots in major cities on weekends, and streaming down highways headed out of town. Harley accessory boutiques mushroomed in upscale shopping districts around the country. The company set up a slick web site, and appropriated events like Daytona Bike Week in Florida and the annual motorcycle rally and races in Sturgis, South Dakota, for generating corporate publicity. In 1994 Turner Original Productions produced a television special titled *Harley-Davidson: The American Motorcycle*, narrated by actor James Caan and featuring celebrities such as David Crosby, Peter Fonda, Wynonna Judd, and a leather-clad Larry Hagman touting their love of the bike and its accompanying aura. *The Tonight Show* host Jay Leno became another well-known aficionado. As the Harley-Davidson approached its hundredth anniversary, it seemed to be regaining its originally intended use as a vehicle for genteel sportsmen and women, while its continuing popularity remains a tribute to American entrepreneurship and hard work.

## Harlow, Jean (1911-1937)

Known for her platinum blonde hair, low-cut gowns, and buxom figure, Jean Harlow was Hollywood's original "blonde bombshell." Harlow's bold sexuality—she refused to wear undergarments, for example—made her both a box-office hit and an icon of modern sexual freedom. But it was not only Harlow's starring roles—in such films as *Platinum Blonde* (1931), *Red Dust* (1932), and *China Seas* (1936)—that made news. The unexplained suicide of her husband, MGM executive Paul Bern, and her own mysterious death from uremia at age 26, made Harlow a tragic symbol of the fleeting pleasures of Hollywood stardom.

## Harmonica Bands

Although harmonica bands and orchestras have generally been forgotten, the harmonica was one of the most popular musical instruments from the 1920s through the 1940s. Its cheapness made it an ideal instrument for teaching music to children during the Depression, and the harmonica youth orchestras were influential in instilling discipline. In the years between the two world wars—a period called the "the golden age of the mouth organ in America"—sales of the tiny, inexpensive instrument increased dramatically. Bands of harmonica players became famous on the vaudeville circuit, on radio, and in Hollywood films; whole orchestras of harmonica-playing youth were organized in cities all over the United States, and public schools offered harmonica instruction courses. The craze finally hit its peak in 1947 when the Harmonicats' rendition of "Peg O' My Heart" became the number one hit of that year.

It all began during the Boy Council of Philadelphia's 1923 "Boy Week" celebration when philanthropist Albert Hoxie began organizing successful harmonica contests. Hohner Company, a German manufacturer of harmonicas, began sending experts to public schools that year to teach children how to play the instrument. In 1924, over ten thousand children participated in the contest, and in the following years harmonica youth bands began forming, including one led by Hoxie himself: the Philadelphia Harmonica Band. Hoxie's band,

consisting of about 60 young men, was modeled on military lines—the musicians wore marching-band uniforms, were given ranks, and ended each show with “Stars and Stripes Forever.” The band lasted until 1936, traveling around the country and playing for presidents, royalty, and visiting dignitaries, and at events such as the Philadelphia celebration of Charles Lindbergh’s transatlantic flight, the heavy-weight championship fight between Jack Dempsey and Gene Tunney, and Franklin D. Roosevelt’s inaugural parade.

Hoxie also sent harmonica assistants to schools to encourage children to play the affordable instrument during the Depression years. His efforts paid off. By the end of the 1930s over 150 harmonica youth orchestras existed in Chicago alone; 1,200 public school children learned to play it in Dayton, Ohio, and in Los Angeles 115,127 children were enrolled in the harmonica band program from 1927 to 1937. Boy Scouts could earn merit badges for harmonica playing, and over two thousand harmonica bands were formed in the United States during the Depression.

Albert Hoxie’s efforts were not the only factor responsible for the appeal of harmonica bands in the schools. Up until the 1920s the harmonica was based on the diatonic scale and each instrument was limited to the notes found in the key to which it was tuned. However, in the mid-1920s, Hohner Company developed the polyphonia, bass, chord, and chromatic models, which expanded the range of the instrument and the overall sound of the bands. Vaudeville acts using the new instruments began to appear as early as 1927, when the Harmonica Rascals combined music and slapstick comedy onstage. Other bands soon followed, making the instrument even more popular as fans were inspired to try it themselves.

The Harmonica Rascals, formed by Borrah Minevitch, were like “the Three Stooges with mouth organs” and audiences loved them. Their image was based on the ragamuffin/tramp motif and their act centered on Johnny Puelo, a four-foot-one-inch midget who played the largest harmonica available, the polyphonia, for comic effect. The Harmonica Rascals were so successful that Minevitch simultaneously ran three separate bands by that name—each with its own midget—in different regions of the country until the end of World War II. Besides appearing on vaudeville, the Harmonica Rascals had a weekly radio program, and appeared in nine movies between 1935 and 1943. Other 1930s bands, inspired by the Harmonica Rascals, included the Harmonica Scamps, a vaudeville band that featured an African-American midget, and the Harmonicities, an all-girl band boasting a female midget. The Harmonica Harlequins, whose members dressed in clown outfits, formed in 1934 as a competitor to the Harmonica Rascals and worked the vaudeville circuit, played on the radio, and recorded. Other bands from the 1930s include the Cappy Barra Harmonica Ensemble and the Philharmonics, both of whom specialized in big band arrangements; the Harlemonicats, a jazz trio; the Three Harpers, the Stagg McMann Trio, the Harmonica Hi-Hats and the Harmonica Lads.

World War II ended the golden age of the harmonica. A ban on German goods prohibited the importation of harmonicas from Germany, where the highest-quality instruments were made; youth orchestras disbanded and schools halted their instruction programs; and large harmonica bands pared down to smaller units, usually trios. The most famous trio materialized when former Harmonica Rascals Jerry Murad and Don Les teamed up with Al Fiore to form the Harmonicats in the mid-1940s. Their 1947 version of “Peg O’ My Heart”—recorded as a B-side filler—stayed at number one on the *Billboard* chart for 26 weeks. The record subsequently sold over 20

million copies to become the second-most popular 78 rpm of all time, surpassed only by Bing Crosby’s “White Christmas.” The record’s success even convinced the Musician’s Union to accept the harmonica as a legitimate instrument and allow harmonica players to join.

The Harmonicats went on to record 36 albums, and Murad kept the trio alive (Les retired in 1972, Fiore in 1982) until his death in 1996. Other harmonica bands also performed after World War II, but none equaled the success of “Peg O’ My Heart.” The Don Henry trio had a minor hit in the 1950s with their version of “The Saber Dance.” Johnny Puelo, the original midget from the Harmonica Rascals, formed the Harmonica Gang, which appeared on television with Milton Berle, Dean Martin and Perry Como in the 1950s, played live at the Latin Quarter in New York and the Stardust in Las Vegas, and recorded seven albums until Puelo’s retirement in 1973; and Dave Doucette had some success with his quintet The Stereomonic in 1968, and with the Big Harp in 1975.

The size and versatility of the harmonica—in all of its forms—allowed entertainers to combine music with comedy on the vaudeville stage, which proved to be the inspiration and/or the training ground for many future American harmonica soloists and session players such as Richard Hayman, Pete Pedersen, Mike Chimes, Leo Diamond, Alan Shackner, Charles Newman, and the world-famous soloist Larry Adler, who elevated the tiny instrument to near-classical status in the concert hall.

## Harper, Valerie (1940—)

Valerie Harper was a little-known actress-dancer when she was cast as Rhoda Morgenstern, neighbor and best buddy of Mary Richards, on CBS’s landmark 1970s TV sitcom *The Mary Tyler Moore Show*. Harper emerged as one of television history’s most beloved second bananas. The Jewish, Bronx-accented Rhoda was a true New York neurotic: obsessed by her weight and her looks; uncomfortably single and ever-anxious in her relationships with men; and a perfect wisecracking comic contrast to Mary, the more subdued, always perfectly-coifed Midwesterner.

Harper won three Comic Supporting Actress Emmy Awards for playing Rhoda. In 1974, she left the series to star in *Rhoda*, a *Mary Tyler Moore Show* spin-off. Here, Rhoda Morgenstern was relocated to New York, and her character was far more attractive and assertive. Early in the show’s first season—in one of the all-time top-rated TV sitcom episodes—Rhoda married Joe Gerard (David Groh). Meanwhile, Rhoda’s sister and neighbor Brenda (Julie Kavner) became the homelier, insecure second banana. *Rhoda* lasted four seasons, during which she and Joe separated—and Harper added another Emmy to her mantle, this one as Outstanding Series Comic Actress.

## Harper's

*Harper's* magazine, one of America's most culturally significant periodicals, was founded in 1850 under the name *Harper's New Monthly* magazine by the New York-based Harper & Brothers, the largest publishing company in nineteenth-century America. Initially conceived as a miscellany—a collection of reprints from other publications—consisting mostly of fiction, *Harper's* gained a broad middle-class audience by positioning itself as the Victorian reader's gateway to refinement and respectability. In the twentieth century, *Harper's* transformed itself into the magazine of choice for an elite, well-educated readership whose opinions and tastes have helped shape the nation's political debates and social trends.

With an antebellum circulation of two hundred thousand, *Harper's* was easily the best-read and most influential magazine of its time; its list of nineteenth-century contributors reads like a roll call of some of the era's finest British and American fiction writers. But in spite of its long record of prosperity, by the end of World War I, *Harper's* was in financial trouble, its circulation down to seventy-five thousand. Over the course of the first few decades of the twentieth century, the genteel, culturally ambitious, middle-class readership upon which *Harper's* had based its success had fragmented. A number of forces, including a widening income gap between rich and poor, increasing cultural diversity through immigration, the rise of the suburbs, and the impact of emerging technologies such as film and radio, split the relatively unified nineteenth-century reading public into lowbrow, middlebrow, and highbrow audiences. Those periodicals which were able to maintain a mass national circulation, such as *Ladies' Home Journal* or the *Saturday Evening Post*, did so by cutting prices and simplifying article content in order to appeal to the largest possible audience, while relying on extensive advertising to compensate for lost subscription revenue.

Rather than follow the lead of the mass-market magazines to try to regain its position as market leader, *Harper's* decided to redefine itself as the journal for the well-educated and well-read, seeking serious, though not scholarly, discussion of the issues of the day. In 1925, editor Thomas Wells redesigned the magazine, slimming it down and removing most of the elaborate artwork. The new *Harper's* assumed a distinctly progressive—never radical—political tone. Most significantly, the amount of fiction, long the magazine's hallmark, was reduced and replaced by nonfiction articles debating major social and political issues to satisfy its readership.

As its mid-century editor, Frederick Lewis Allen, noted, the types of issues discussed in the magazine's pages evolved with the changing interests of its audience. In the 1920s, *Harper's* was full of articles on the social upheaval of the modern era. Numerous articles voiced concerns about the role of the newly enfranchised and emancipated woman and her impact on family life. Other writers like James Truslow Adams in "Is Science a Blind Alley?" expressed fears about the decline of religion in the face of rapid technological change. By

the 1930s, moved by the Great Depression and the specter of war in Europe, *Harper's* turned toward political and economic issues, such as the rise of German and Japanese power abroad and the possibility of social unrest among the unemployed at home.

The entrance of the United States into World War II solidified the magazine's increasingly global focus. *Harper's* wholeheartedly supported the war effort; Henry L. Stimson defended the bombings of Hiroshima and Nagasaki in its pages. Editor Lewis H. Lapham has noted that through the 1950s and the 1960s *Harper's* was a significant forum for America's cold-war intellectuals, including Arthur Schlesinger Jr., Van Wyck Brooks, Richard Hofstadter, and Henry Steele Commager. Later, as the role of the public intellectual waned, and as public cynicism waxed in the Vietnam and Watergate eras, *Harper's* responded again by changing to a more journalistic, exposé-oriented style.

In 1965 *Harper's* magazine was acquired by the Minneapolis Star and Tribune Company, which was buying up Harper & Row (the successor of Harper & Brothers) stock. By 1980 the magazine was once again in debt. When the new owners considered terminating *Harper's*, the John D. and Catherine T. MacArthur Foundation and the Atlantic Richfield Company provided funds to set up the *Harper's* Magazine Foundation, headed by John R. MacArthur, to publish the magazine independent of its parent and make it less reliant on subscription and advertising revenue.

In 1984, under the leadership of editor Lapham, *Harper's* was again redesigned. In a pair of editorials, Lapham invoked the nineteenth-century origins of the magazine, comparing the situation of Americans of the 1850s facing a new national industrial economy to that of his own readers as the country became integrated into a new global economic order, and vowed to continue to provide a national forum for debate on issues of social and political importance. Interestingly, Lapham also reaffirmed *Harper's* original mission as a miscellany, but with a difference. While the editors of 1850 had offered their readers what they felt was the best in entertaining and useful information, Lapham announced new departments which would offer representative statistics, or small excerpts from significant publications or public documents in a context often designed to startle the reader and to demystify or even mock the offered text. That change alone, from a tone of Victorian earnestness to one of postmodern irony, speaks volumes about the altered self-image of the writer-intellectual—from ardent educator to alienated commentator—over the course of more than a century. Lapham also promised to continue what he suggested the magazine had tried to do since its inception, to steer a middle course between the banalities of mass-market journalism and the jargon of highly specialized publications.

The magazine's major goal at the end of the twentieth century—to provide a national forum for debate on those forces and trends with global origins and impact to an elite readership—is perhaps problematic. There is some difficulty inherent in identifying national interests as being those of this comparatively small group of readers. As of 1998, *Harper's* had a circulation of 216,630, a healthy and respectable number, to be sure, but hardly comparable to the million-plus circulations of mass-market periodicals, and only slightly more than the magazine's highest circulation in the nineteenth century. Whether *Harper's* magazine's fiercely loyal readers continue to represent, under rapidly changing conditions, what editor Lapham has called the nation's "general interest" is a question only the twenty-first century can answer.

**Hate Crimes**

Crimes of violence motivated by hatred based on race, religion, ethnicity, gender, or sexual orientation have always been a part of the American political landscape. At various times legislative efforts have been made to address the problem, such as laws passed in the late 1960s making it a federal crime to interfere violently with black Americans exercising their legal civil rights. In the 1980s, an American society trying to assimilate the changes wrought by the various liberation movements of the 1960s and 1970s began to look for stronger ways to show its intolerance for bias-motivated crimes. Defining these crimes as "hate crimes," some groups began to lobby for them to be treated as more heinous than crimes not motivated by the perpetrator's prejudice and to be punished more severely.

Political organizations such as the Southern Poverty Law Center and the New York City Lesbian and Gay Anti-Violence Project began to keep records of the occurrence of bias-motivated crimes. Pressured by such groups and by the victims of hate crimes, the federal government passed the Hate Crimes Statistics Act. Passed in 1990, and later extended at least through 2002, the act requires the Federal Bureau of Investigation to monitor and keep reliable statistics on crimes motivated by prejudice based on race, religion, ethnic or national origin, disability, or sexual orientation. In 1996, these statistics showed that 8,759 hate crimes were reported, the majority of them racially motivated.

More than forty states have enacted hate crimes statutes requiring stiffer penalties for a crime if it is categorized as a hate crime. These laws are controversial for many reasons. Conservatives minimize the occurrence of hate crimes, accusing interested groups of

inflating the figures. They ridicule the laws as "identity politics," insisting that "thought police" will be required to prove motivation. Even some liberals express concern that the laws potentially interfere with free speech. Racial bias, homophobia, and other prejudices are cultural problems, they say, and must be solved by education rather than legislation. Supporters of hate crime legislation argue that hate crimes deserve greater penalties because they have more serious implications for society than crimes which are not motivated by bias. They cite the fear engendered in targeted groups as a whole by the crimes of intimidation against them, and point to Nazi attempts at the genocide of Jews, Gypsies, gays, and other groups as an example of what can occur in a society that tolerates hate crimes.

Another element of controversy is the inclusion of sexual minorities as a protected group. Of the states that do have hate crime laws, only about half include sexual orientation in their wording. While right-wing groups and politicians resist any sort of legitimization of gay lifestyles, many gay and lesbian groups continue to fight for state and federal hate crime laws that will include crimes against them.

Part of the problem of enacting hate crime legislation lies in attempting to define hate crimes. While beatings, murders, and firebombings of churches, synagogues, or community centers are clear examples of criminal activity, some actions are less obvious. Some states have included cross burnings and swastika displays under their hate crime laws only to be challenged in court for limiting free speech. Many groups, especially colleges and universities, have instituted codes of speech in an effort to outlaw racial epithets and slurs but many argue that the abridgment of free speech is not the answer. Many feminists have lobbied to have rape and domestic violence included as crimes of hate against women. That definition was included in the 1993 Violence Against Women Act, but the hate-crime wording was eliminated in the final version. Though hate-crime legislation was primarily introduced in the hopes of curbing the cross-burnings, synagogue-bombings, and beatings associated with racism, anti-Semitism, and homophobia, it also covers any bias-related crime. Ironically, one of the first supreme court decisions supporting hate-crime laws dealt with an African-American perpetrator in a crime against whites.

Though the debate goes on over the best way to deal with hate crimes, it seems to be clear from statistics that bias-motivated crime continues to be a global problem. Whether the perpetrators are angry, often disenfranchised, individuals or members of an organized hate group such as the Aryan Nation or the Ku Klux Klan, perhaps the debate itself is an important step in eliminating these crimes. The light of exposure robs them of their most frightening and powerful aspect—the secret complicity of society.

## Havlicek, John (1940—)

While the National Basketball Association's Boston Celtics have had a history of illustrious players, perhaps none is as closely associated with a single moment in the team's history as John Havlicek. Few Celtics fans cannot imitate long-time Celtics' announcer Johnny Most's raspy yell, "Havlicek Stole the Ball, Havlicek Stole the Ball," describing the player's crucial steal as time ran out in the seventh and deciding game of the 1965 Eastern Division Finals against perennial Boston rival Philadelphia, which preserved a narrow one-point win for Boston and opened the way for another Boston championship.

Perhaps it is ironic that Havlicek is so famed for a single play, for his career was marked by a longevity and consistency which few players in NBA history have been able to match. Havlicek's steal came early in a distinguished career, during which he played on eight NBA Championship teams and appeared in 13 All-Star games, among his many honors. His hallmark was an almost supernatural endurance, as Havlicek remained in perpetual motion on both offense and defense throughout entire games. At 6 feet, 5 inches, Havlicek was able to play both guard and forward, using his size and strength to overpower smaller guards and his quickness to beat larger, slower forwards with drives to the basket and quick passes. In addition to his

John Havlicek

physical stamina, Havlicek also was an avid student of the game. Longtime Boston sportswriter Bob Ryan notes in *The Boston Celtics* that Havlicek's "physical abilities were exceeded by his extraordinary basketball mind. If he saw his opponents run a play, he made a note of the hand signal or verbal call that initiated it. Thereafter he always got the jump on it. He couldn't understand why other players didn't retain basketball knowledge equally well."

A three-sport star in high school, Havlicek initially played both baseball and basketball at Ohio State University, although he cut short his baseball career at OSU to concentrate on basketball. Nonetheless, Havlicek's versatility and athletic ability was so great that he was drafted by both the National Football League's Cleveland Browns in the seventh round of the NFL draft and the Celtics in the first round of the NBA draft following his graduation from OSU in 1962. Havlicek was the last player cut by the Browns, where he tried out as a wide receiver, which allowed him from that point on to devote himself solely to basketball.

Havlicek joined the Celtics in the midst of the team's run of eight consecutive championships between 1959 and 1966. For his first four seasons, a time when the Celtics were rich with veteran players, Havlicek enjoyed the role of "Sixth Man," coming off the bench late in the first quarter of games to provide instant scoring at a time when other players were putting their weaker reserve players in the game. While Havlicek played this vital reserve role on the Celtics championship teams of the early and mid 1960s, he became an even more central figure in the teams' 1968 and 1969 championship seasons, as older veterans gradually became less effective. In 1968, for example, Havlicek scored 40 of Boston's 100 points in a hard-fought seventh game victory over Philadelphia in the Eastern Division Finals, which put the Celtics into the NBA Finals.

The early 1970s were a more difficult period for the Celtics following the retirement of Bill Russell in 1969, although Havlicek raised his level of play to a new high, enjoying his best scoring seasons in 1970-71 and 1971-72 and leading the league in minutes played in both seasons. In 1972-73, the Celtics had their best-ever regular season record, 68-14, but lost in the Eastern Conference Finals against the New York Knicks, hampered by a shoulder injury that Havlicek suffered in the third game of the series.

Havlicek, or "Hondo," as he came to be known by Celtics fans in an homage to the John Wayne movie of the same name, concluded his career as a leader and elder statesman for a younger generation of Celtics during championship campaigns in 1974 and 1976, both of which offered a number of memorable moments. In the 1974 NBA Finals, the Celtics defeated the Milwaukee Bucks in a seven-game series that included one overtime and one double-overtime game. Havlicek was named the Most Valuable Player in that series. In the 1976 NBA Finals, the Celtics faced the Phoenix Suns, who played the Celtics in the first four games of the series for a 2-2 tie. Boston won Game Five by a score of 128-126 in three overtimes in one of the greatest games in NBA history, due in no small part to several key baskets by Havlicek, and returned to Phoenix to close out the series in six games.

Following the 1976 season, the Celtics nucleus of the past two championships began to disperse for various reasons. Havlicek retired following the 1977-78 season, one of the worst in Boston history, at age 37, as the sixth-leading scorer in NBA history, scoring an impressive 29 points in his final game at Boston Garden. Havlicek's all-around play and consistency is reflected in his career statistics. Havlicek holds Boston records for most games played, most minutes played, and most points scored, and he ranks second in team history in

assists and third in rebounds. He was elected to the Naismith Memorial Basketball Hall of Fame in 1983 and named one of the NBA's 50 greatest players in 1996.

## *Hawaii Five-O*

By the time the final episode aired on April 4, 1980, *Hawaii Five-O* was the longest continuously running police drama in the history of television. The show premiered in September of 1968 and retained loyal viewers for most of its 278 episodes. Producer Leonard

Freeman, the main creative force behind the show, brought together the elements that made the show a hit: a well chosen cast that went virtually unchanged for ten years, dynamic music, and the lush scenery of Hawaii.

The main appeal of the show was the main character, the tough, no-nonsense Steve McGarrett, who was the head of the Five-O. McGarrett's elite special investigating unit dealt with crimes that were too big for conventional police forces, and he answered only to "the Governor and God." Freeman's original title for the series was *The Man*, and every criminal in the Aloha State knew that McGarrett was the man. And when the wrong element came to the Hawaiian shores from elsewhere, McGarrett was quick to let them know "you're on my rock now." In the pilot, recurring nemesis Wo Fat described McGarrett as "the proverbial character you would not want to meet in a dark alley."

Jack Lord played the role of McGarrett with intensity. Lord was a driven perfectionist and dedicated himself to the show. Lord's McGarrett was a larger-than-life character who struck fear into the hearts of the islands' criminal element and inspired fierce loyalty from the men and women he commanded. After Freeman's death in 1974, Lord became the guiding force behind the show.

McGarrett's right-hand man was Danny "Danno" Williams, played by James MacArthur. In the pilot, the part of Danno had been

Jack Lord on the beach filming an episode of *Hawaii Five-O*.

played by Tim O'Kelly, but when he did not get a favorable rating from a test audience in New York Freeman replaced him with MacArthur before the regular series began filming. MacArthur proved to be a crucial ingredient in the successful chemistry of the show. The best remembered and most often repeated line from *Hawaii Five-O* was McGarrett's clipped command of "Book 'em Danno." For eleven seasons, Danny Williams was a loyal and stolid sidekick to McGarrett. MacArthur tired of the role and left the show at the end of the 1978-79 season. The successful formula was lost, and the series could only limp along for one additional year.

While the network required that the two lead characters be played by haoles (Caucasians from the mainland), the other members of the Five-O team were played by local actors. Kam Fong Chun (credited as Kam Fong), who had served on the Honolulu Police Department for eighteen years before turning to acting, played Chin Ho Kelly for ten seasons. For the first five years of the series, local musician and stand-up comic Gilbert "Zoulou" Kauhi (credited as Zulu) played Kono Kalakaua. After Zulu's departure two new characters were introduced: Ben Kokua, played by Al Harrington, and Duke Lukela, played by Herman Wedemeyer.

In addition to dealing justice to murderers and mobsters, Hawaii Five-O was occasionally called on to save the free world from Communism. McGarrett fought his own cold war against red Chinese spy Wo Fat, played by Khigh Dhiegh. Wo Fat matched wits with McGarrett in the series pilot, "Cocoon," and in ten episodes of the series. In the final episode of the series, titled "Woe to Wo Fat," their conflict came to a resolution when McGarrett personally locked Wo Fat behind bars.

Perhaps the most memorable element of *Hawaii Five-O* was Morton Stevens's driving theme music. Stevens won Emmys for his scores to the episodes "Hookman" and "A Thousand Pardons, You're Dead."

The cast played out their dramas in the midst of the photogenic scenery of the Hawaiian Islands. Producer Freeman insisted that the series be filmed entirely on location in Hawaii. Some members of the Hawaiian tourism industry initially were concerned that the weekly portrayals of murder and corruption would make the islands seem too dangerous. However, the small screen visions of palm trees and blue skies enticed many viewers to take a firsthand look. As *Hawaii Five-O* became a hit, tourism soared.

## Hawkins, Coleman (1904-1969)

The first jazzman to win fame as a tenor saxophonist, Coleman Hawkins joined Fletcher Henderson's band in 1923 and was already its star when young Louis Armstrong was added a year later. Unmatched on his instrument—once ignored by jazzmen—Hawkins brought his distinctive warm tone to slow ballads like "Body and Soul" and a surging profusion of notes to fast numbers. In the 1930s he worked for five years in Europe, enhancing his international

reputation. When bebop appeared on the scene in the 1940s, the innovative Hawkins recorded this new jazz form with Charlie Parker and Dizzy Gillespie. His primary interest remained conventional swing, working often with his favorite trumpet man, Roy Eldridge, in both Europe and America.

## Hawks, Howard (1896-1977)

Considered one of the great film auteurs of the Hollywood Studio era, Howard Hawks directed forty-six films and has the distinction of being one of the few directors to work in every major genre, including the gangster film (*Scarface*, 1932); the war film (*The Road to Glory*, 1936, and *Air Force*, 1943); the screwball comedy, (*Bringing Up Baby*, 1938); the biopic (*Sergeant York*, 1941); the Western (*Red River*, 1948, and *Rio Bravo*, 1959); science fiction (*The Thing*, 1951); film noir (*The Big Sleep*, 1946); and the musical

Howard Hawks

(*Gentleman Prefer Blondes*, 1953). His films are among the most popular still shown on U.S. television.

Hawks started in film as a prop man for the Mary Pickford Company in 1919. Within six years, he had risen to editor, scriptwriter, and assistant director. He directed his first feature film in 1926. His first all-talking film was produced four years later, a First National release entitled *The Dawn Patrol*. Arguably, his most important film as a director during his early years was *Scarface*, starring Paul Muni and Ann Dvorak. Though finished in 1930, the film was not released until 1932 because the producer, Howard Hughes, fought over censorship issues with the Hays Office, the administrative body which oversaw the industry's Production Code, which found the film too violent and amoral. Upon release, it was a critical and popular success, and was instrumental in establishing the gangster genre.

Other films for which Hawks is praised include *Only Angels Have Wings* (1939), *His Girl Friday* (1940), and *To Have and Have Not* (1944). As with most auteurs, artists of the cinema who have managed to transcend the studio system and "imprint" on their oeuvre thematic motifs and a formal style unique to their use of film as personal expression, Hawks is noted for his visual style and recurring character types and themes. The "Hawksian vision," as described by film scholar Peter Wollen, consists of a high value placed on the camaraderie of exclusive all-male groups with women as threat to the all-male community, professionalism of the protagonists; and in comedy, regression to childhood and the reversal of gender roles.

In 1975, the Academy of Motion Picture Arts and Sciences presented Hawks with an Honorary Award, for a master American filmmaker whose creative efforts hold a distinguished place in world cinema.

## Hayward, Susan (1918-1975)

After some years of apprenticeship, stardom and the first of five Oscar nominations came to former photographer's model Susan Hayward with *Smash-Up—The Story of a Woman* (1947). From then on the gifted, husky-voiced, and ravishing redhead, despite playing a range of parts that included sultry temptresses, rich bitches, and intrepid heroines, became uniquely identified with suffering, both harrowing and poignant but always gutsy. A huge box-office draw during the 1950s, she won hearts portraying singer Jane Froman who was crippled in an air crash, was superb as singer Lilian Roth suffering from alcoholism in *I'll Cry Tomorrow* (1956), won her Academy Award for *I Want to Live* (1958) in which she went to the gas chamber, and was the natural choice to star in the remakes of *Back Street* (1961) and *Dark Victory* (retitled *Stolen Hours*, 1963). Born

Edythe Marrener in Brooklyn, New York, she suffered much off-screen, too—a stormy marriage, custody battles, and a suicide attempt before dying of a brain tumor at the age of 56.

## Hayworth, Rita (1918-1987)

The most glamorous Hollywood screen idol of the 1940s, it was Rita Hayworth for whom the press coined the phrase "love goddess." Expertly packaged and produced by various different men throughout her career, Rita Hayworth was transformed from a half-Spanish dancing girl into an "American classic" and the favorite pin-up to thousands of GIs. Best known for her role as the *femme fatale* Gilda in Charles Vidor's 1946 film of the same name, she embodied a dangerous brand of femininity.

She was born Margarita Carmen Cansino in Queens, New York, to an Irish mother and Spanish father. The Cansinos were a family of professional dancers. "They had me dancing almost as soon as I could walk," Hayworth later recalled. As a voluptuous thirteen-year-old Hayworth became her father's co-star and began captivating audiences with her sensual stage presence. It was in 1933 that Hayworth was spotted by executives from the Fox Studios and was given her first break as a dancer in the epic *Dante's Inferno*. After a string of second-rate movies, her contract at Fox was terminated when

Rita Hayworth

her mentor Winfield Sheehan was fired and she was subsequently dropped. She then met the middle-aged Edward Judson, a shrewd businessman who saw her as a marketable product. They married in 1937. Judson negotiated her contract at Columbia, where she was to work for the next twenty years for the tyrannical Harry Cohn, who treated her as a “combination daughter, slave and financial investment.” Between them, Judson and Cohn created her new image, removing all traces of Latiness: her surname was changed to the Anglo “Hayworth,” a new spelling of her mother’s maiden name, her low hairline was lifted by electrolysis and her hair dyed auburn. These flowing auburn locks became Hayworth’s trademark; directors would urge her to “act with her hair” which she does unforgettably on her entrance in *Gilda*.

At Columbia, Hayworth’s break as a serious actress came with the film *Only Angels Have Wings* (1938) with Cary Grant. Her success in this picture and a subsequent photo shoot for *Life* magazine turned her into a real star. She starred in a couple of musicals with Fred Astaire, *You’ll Never Get Rich* (1941) and *You Were Never Lovelier* (1944), and the couple caught the public’s imagination. Astaire allegedly named her as his favorite dancing partner. Hayworth had her biggest success with the movie *Cover Girl* (1944) with Gene Kelly. Divorced from Judson since 1942, Hayworth announced she had married noted director and wunderkind Orson Welles during the shooting of *Cover Girl*.

Gossip columnists were puzzled by this match between Beauty and Brains, but the couple were famously smitten by each other. In 1944 Hayworth gave birth to a baby girl, Rebecca, but by 1946 the marriage had ended. That same year Hayworth starred in *Gilda*. The ad line announced, “There never was a woman like Gilda”; Hayworth was soon to learn that there was never a *role* like Gilda either. The film is a tale of a destructive love triangle, in the words of the leading man Glenn Ford, about “how hate can be as exciting an emotion as love.” Hayworth’s mesmerizing dance routine to the song “Put the Blame on Mame,” in which she performs a partial strip tease, removing two long black satin gloves and throwing them to the crowd, is highly erotically charged. In a concession to the film censors, the script later reveals Gilda’s virtue, she had only pretended to be a tramp to incense her lover. The film was a box-office smash.

In 1948 Harry Cohn assigned Hayworth to work with her estranged husband Orson Welles on *The Lady from Shanghai*. Hayworth played the “preying mantis” Elsa, a twisted version of Gilda upon whose fame Welles was hoping to cash in. Welles, in a characteristically maverick move, had Hayworth’s hair cropped short and bleached blonde for the part. Hayworth’s new hair was not a success with her fans nor with her boss at Columbia and the film flopped. Cohn rushed through Hayworth’s next movie *The Loves of Carmen* for release that same year to soften the blow.

Later that year Hayworth went on a trip to Europe, where she met and fell in love with the international playboy Prince Aly Khan. Their subsequent marriage made Hayworth a princess. Aly had been entranced by the film *Gilda*, as was often the case with the men in her life. Hayworth remarked sadly to a friend, “Every man I’ve known has fallen in love with Gilda and woken up with me.”

Hayworth’s comeback movie *Affair in Trinidad* (1952), in which she starred with Glenn Ford again, was the last time she played the central sex symbol. Hayworth continued to work consistently throughout the 1950s while her personal life continued in its disastrous vein, with two more marriages that both ended in divorce. She began to suffer from alcoholism and later on from Alzheimer’s; after a

long struggle with the disease she died in 1987. Her last film was *The Wrath of God* at MGM in 1972.

Hayworth was a typical product of Hollywood, transformed from Margarita Cansino and relentlessly promoted by husbands, directors, and studio bosses. Adored by men but also admired by women, she was the symbol of American glamor and beauty of the time. Although she played a catalog of siren roles, including the legendary Carmen and Salome, in reality she was the exact reverse: unassuming, reserved, and eager to please. Ultimately Rita Hayworth was the hardest role for the reserved Margarita Cansino and playing it took its toll upon her life.

## Hearst, Patty (1954—)

The granddaughter of newspaper publisher William Randolph Hearst, 19-year-old heiress Patty Hearst was abducted from her Berkeley college residence in February 1974, sparking the biggest manhunt since the Lindbergh kidnapping. Surprisingly, Hearst was next spotted in bank surveillance footage, brandishing automatic weapons during robberies. She released statements stating she had sided with her captors, members of the revolutionary Symbionese Liberation Army, and renounced her family. Los Angeles police had a televised shootout with SLA members, but Hearst, who now called herself “Tania,” fled. She was apprehended in September of 1975. At her trial, famed defense attorney F. Lee Bailey maintained that Hearst had been brainwashed by SLA leaders through psychological torture, and was thus not responsible for her crime spree. Hearst was nonetheless convicted and sentenced to prison in 1977. Two years later, her sentence was commuted by President Jimmy Carter. The Hearst episode was sensationalized in the media of the day. She married her prison guard and retired to life as a middle-class homemaker. By the 1990s, however, she was resigned to her notoriety and began writing mystery novels and acting in outré movies, including bad-taste auteur John Waters’ *Pecker* (1998).

## Hearst, William Randolph (1863-1951)

Larger-than-life American publisher William Randolph Hearst acquired his first newspaper, the *San Francisco Examiner*, in 1886. Over the next two decades, he built a media empire which revolutionized journalism. His dictatorial style and sensational approach to the news generated a fortune as well as controversy. Hearst's seemingly limitless ambition led him to campaign for social reforms, serve in Congress, run for the presidency, famously ignite the Spanish-American war, and become, according to recent biographer Ben Proctor, "arguably the best-known American, not just in the United States but around the world."

In the eyes of many, Hearst personified the American dream. Born to Phoebe Apperson, a Missouri school teacher, and George

William Randolph Hearst

Hearst, a self-made millionaire miner and rancher, William Randolph Hearst parlayed family support, fierce independence, and a sense for drama into enormous wealth and power. In 1880 his father acquired the *Examiner* as payment for a gambling debt. "I am convinced," Hearst wrote to his father from Harvard six years later, "that I could run a newspaper successfully. Now, if you should make over to me the *Examiner*—with enough money to carry out my schemes—I'll tell you what I would do. . . ."

At its height, Hearst's empire published twenty-eight newspapers and nine magazines. His motto was simply "Get Results." Within a year he doubled the *Examiner's* circulation. He modeled it after Joseph Pulitzer's newspapers, emphasizing human interest, crusading for worthy causes, and making up news stories if there were none to be found. His newspapers were among the first to offer obituaries and to regularly cover weather and women's issues. Hearst also made it a policy to pay for talent. He invested in stars like Thomas Nast, Stephen Crane, Mark Twain, and the great "sob sister" investigator Annie Laurie.

In 1895 he bought the *New York Journal* and entered into a circulation war with Pulitzer. Within a year the *Journal's* circulation tripled. Not even the comics pages escaped the competitive frenzy. Pulitzer ran the popular strip "The Yellow Kid." Hearst hired the cartoonist away. When Pulitzer hired a new cartoonist, the two newspapers' advertising departments plastered the city with yellow promotional flyers. The campaign gave rise to the term "yellow journalism," which subsequently became a derisive reference to the sort of sensational excesses in news coverage that characterized the Hearst-Pulitzer circulation war.

A legendary anecdote, perhaps apocryphal, describes the excessive competition between the two men, the increasing power of the press, and Hearst's reckless force of will. From roughly 1895 until the end of the Spanish-American war in 1898, Hearst and Pulitzer attempted to attract readers with trumped-up anti-Spanish atrocity stories from Cuba. Although Spain had consented to U.S. demands with respect to Cuban politics, Hearst sent artist Frederick Remington to the island. Remington cabled Hearst to say "[e]verything is quiet. There is no trouble here. There will be no war. Wish to return." Hearst replied: "Please remain. You furnish the pictures, I'll furnish the war."

Hearst's newspapers were distinguished largely by their style. They were among the first to use striking photographs and illustrations. They specialized in flashy headlines and sensational reports of topics like fires, crime, sex, and sports. Hearst encouraged his editors to conduct endless streams of lotteries, giveaways, and serials. He formed a "murder squad" of writers who chased criminals and a "detective corps" of investigative reporters paid to keep check on people in positions of power. Hearst also demanded his newspapers serve the masses. They ran stories calling for improved police and fire protection, better roads, sewers, schools, and hospitals. They promoted the eight-hour workday and public assistance after the 1906 San Francisco earthquake.

Overt political stances taken by Hearst publications eventually provoked accusations of opportunism. Critics maintained that Hearst abused his First Amendment rights. They accused him of recklessness and insatiable greed, suggesting that he sparked the Spanish-American War just to sell his newspapers. Readers also grew wary of Hearst's tactics, boycotting his newspapers in the wake of the

assassination of President McKinley in 1901 because they believed that relentlessly inflammatory articles and editorials endorsed by Hearst inspired the assassin.

Although he was often denounced for his nationalist politics, Hearst publications helped construct an American national identity, especially within burgeoning early-twentieth-century immigrant communities. In his efforts to reach the widest possible audience, Hearst directed his editors to seize upon the human element in the news, to encourage writers to craft stories which emphasized similarities among Americans by underlining universal fears and desires.

By the time he entered into politics at the turn of the century, Hearst was well practiced at using his media outlets to fuel his political interests. Although many believed he orchestrated both Theodore and Franklin D. Roosevelt's successful presidential campaigns, he largely failed to realize his own political ambitions. He served two terms as a U.S. representative, but lost bids to become governor of New York and mayor of New York City.

Despite his unsuccessful foray into formal politics, Hearst and his movie-star mistress Marion Davies often entertained world leaders and celebrities at his California estate, San Simeon, a museum-like place many referred to simply as Hearst Castle. People accepted invitations to visit San Simeon out of friendship, curiosity, and fear. Hearst reveled in his role as eccentric kingmaker, unabashedly using his media power to promote his friends and ruin his enemies. In the end, however, he seemed to consider more people enemies than friends. He gained a reputation as a xenophobe, a red-baiter, and a fascist. He vehemently opposed anything or anyone who interfered with his profits, forbidding his employees to unionize, fighting against taxation, and demonizing hemp growers with a famous "reefer madness" campaign because they posed a threat to the profits he made supplying timber to the paper-making industry.

Hearst's life inspired the 1941 Orson Welles film *Citizen Kane*, a stirring portrait of a media tycoon ruined by his own excesses. After a Hollywood preview, Hearst launched a full-scale campaign against the movie and its director, effectively blocking the film's distribution by threatening lawsuits, running venomous reviews, and yanking advertising.

Even into his eighties, Hearst maintained firm control over his newspapers, regularly sending out memos to editors across the country. His print-media companies were among the first to enter radio and television broadcasting. He also produced movie newsreels and is widely credited with creating the comic strip syndication business. Hearst's King Features Syndicate became the largest distributor of comics and text features in the world. Threatening, inspiring, domineering, William Randolph Hearst was a genius entrepreneur with an appreciation for the value of information that was ahead of his time.

## Heavy Metal

Heavy metal, a genre of rock music that was hugely popular in the United States and much of the world during the 1980s, not only left an influence on successive trends in rock music, but affected the cultural tastes and style of its many fans. The heavy metal sound was characterized by loud and distorted guitars and vocals; its image by aggressive male posturing and a preoccupation with sexuality, identity, and the corrosion of traditional social institutions. While sometimes causing controversy, even outrage among the establishment for its perceived negative influence on youth, heavy metal expanded the range of recognized images and sounds in rock 'n' roll, developing a formula that combined musical virtuosity with social rebellion. While the groups achieved little Top 40 success even at the height of the genre's popularity, their albums and concerts outsold all their contemporaries, and outlasted them in influence.

Historically, the term "heavy metal" refers to radioactive elements or powerful artillery units. While heavy metal music was not directly named to signify either of these traditions, the bands have always welcomed the associated imagery. Rock critics first began applying the label in the late 1960s, referring primarily to the British bands Deep Purple, Led Zeppelin, and Black Sabbath. These three are considered to have laid the framework for the genre. Deep Purple brought classical influences, Led Zeppelin adapted and applied the African-American blues hook, and Black Sabbath lent an air of dark mysticism to their work. Each stressed the importance of distorted guitar sound and long guitar solos.

Axl Rose of the heavy metal band Guns N' Roses.

Heavy metal might never have reached beyond a fanatical cult following if not for a reintroduction of the genre's principles by British and American chart-friendly bands at the beginning of the 1980s. From overseas came Def Leppard, Judas Priest, Iron Maiden, and Ozzy Osbourne (the original vocalist of Black Sabbath). Home-grown American metal of this era included KISS, Van Halen, and Mötley Crüe. This second generation of heavy metal artists was better groomed and less gloomy than their predecessors, and their heavy metal was about lifestyle as well as music. Their songs were played on MTV as often as on the radio and, for the first time, heavy metal records found a market among women and minorities. However, the music never lost its core following of white, teenage suburban males. Record sales remained more stable than any other genre of the 1980s, and bands from the expanding array of heavy metal groups often dominated the top five album spots. Pop and rap acts incorporated guitar solos, a revived blues tradition, and power chords. MTV premiered *Headbanger's Ball* in 1986, and the show quickly became their top-rated offering. Throughout the decade, heavy metal dominated summer tour attractions such as the "Monsters of Rock" and "US Festival."

With so much commercial success, heavy metal was bound to splinter. Bands who toned down their anger, and the volume on their guitars, came to be referred to as "glam metal" or "pretty metal." Groups such as Bon Jovi, Warrant, and Poison sold albums on their hairsprayed, long locks and sexually risqué lyrics. Bon Jovi produced the third-best-selling album of the decade in 1986 with *Slippery When Wet*. By contrast, bands like Metallica and Megadeth were intent on preserving a rawer, purer form of heavy metal, and gained the mainstream in the late 1980s. Termed "speed metal" or "thrash" because of their blistering drum beats, these bands infused an animal, Punk-rock sensibility into heavy metal, playing loud and hard, growling or screaming, and delving into the psychological and pathological. Crunching along amid the mainstream were the gloomy "dark metal" bands, a subgenre of throwbacks to the early days—led by Judas Priest and Iron Maiden—who employed visual and lyrical images of fantastic worlds, monsters, and heroes.

The heyday of heavy metal appeared to coincide with a period of cultural mistrust in America. The divorce rate was increasing and an American president had resigned. While disco and lite rock dominated the airwaves, heavy metal, like punk rock, built a following around tearing down discredited social institutions. The thrill of a heavy metal concert or a punk show lies at least partially in the bold flaunting of as many rules of decency as possible. While punk called for a rebellious stance against conformity and a simplicity in its attack on social mores, heavy metal insisted on musicianship and even virtuosity. Guitar heroes of the heavy metal age needed to display stage presence, pure speed, and a thorough knowledge of blues and classical music. Heavy metal publicized their heroes through extravagant concert productions and live videos.

The enormous negative reaction of mainstream America to heavy metal music indicates just how influential it was. Tipper Gore, wife of then-senator Al Gore, formed the Parental Music Resource Center in the early 1980s to examine the effects of modern music lyrics on American youth. The PMRC took Ozzy Osbourne to court for "Suicide Solution," a song they claimed encouraged and glorified suicide (Ozzy maintained that it warns of the dangers of drink). Their next target was Judas Priest—the PMRC claimed that when they played Judas Priest's 1978 album *Stained Class* backwards they found satanic messages on it. Though each case was resolved in the

musicians' favor, critics continued to connect heavy metal to Satanism, violence, and drug use. Black Sabbath's use of symbols such as the inverted cross, and Iron Maiden's album, *Number of the Beast*, seem to invite such attacks. The bands almost always pointed to the ultimately positive message of their work—while, for example, they openly dabbled in the occult, the good guy always won.

The graphic imagery of heavy metal's most lasting offspring, speed metal, horrifies many casual listeners. "Landmine has taken my head/has taken my arms/has taken my legs . . ." shouts Metallica in 1998's "One." Again, a closer examination of the song reveals an anti-war theme. Heavy metal artists have never denied that they lead a life laced with sex and drugs—Van Halen's 1978 debut single "Running With The Devil," long considered a prototype of the genre, celebrates a life led with no regard for social convention or restriction. "We're not like this because we're in a rock band," said Van Halen's David Lee Roth in one interview, "we're in a rock band because we're like this."

Whether or not one gives any credence to the supposed sociological or psychological messages claimed by its adherents, heavy metal indubitably advanced rock 'n' roll by breaking through visual and lyrical taboos. Though eventually commercially successful in their own right, heavy metal bands climbed to that success through the ranks of the counterculture, and proved that there was much more to the American popular music scene than reaching the Top 40. Its hard-core, purist nature would demand "authenticity" from the next generation of musicians. The guitar heroes of heavy metal upped the ante for rock stars of their era by insisting on classical training and technical prowess, while their feral, sexual lead singers reminded fans and singers that the essence of rock 'n' roll lay in excess.

## Hee Haw

This long-running (1969-92) television series kept the comedy-variety genre alive into the 1990s with its mix of down-home humor and musical performances from top country and western acts. *Hee Haw* was one of the first shows to draw a southern rural audience to network television. Sketches set in fictional "Kornfield Kounty" affectionately parodied the lives of farmers, moonshiners, and small town dwellers. Hosts Roy Clark and Buck Owens were established country stars who brought musical credibility to the comedic proceedings. The series garnered consistently high ratings, both during its CBS run and as one of the pioneer successes in first-run syndication.

Willard Scott (left) and Roy Clark on the television show *Hee Haw*.

*Hee Haw* had the longest run of original syndicated episodes of any television series.

This quintessential show of the South was actually the product of three Canadians and a New York City-born Italian-American. In 1967 producer Sam Lovullo (the New Yorker) was working on CBS' *The Jonathan Winters Show* when writers John Aylesworth and Frank Peppiatt were brought on board. *The Jonathan Winters Show* was a comedy-variety series with an audience composed mostly of urban northeasterners. Lovullo noticed that ratings, particularly in the South, rose significantly when the musical guests were country and western stars like Roy Clark and Jimmy Dean. At the same time, CBS was seeing ratings success with rural situation comedies like *The Beverly Hillbillies* and *Green Acres*. A rural variety show seemed a logical move for the network. Aylesworth and Peppiatt created the concept. Their personal manager and fellow Canadian Bernie Brillstein came up with the name *Hee Haw*. When CBS canceled *The Jonathan Winters Show* after the 1968-69 season they sent Lovullo, Aylesworth, and Peppiatt to Nashville, Tennessee, to produce the new show in the country music capital of America.

Hosts Clark and Owens were natural choices. Roy Clark was a virtuoso on guitar and banjo. His amiable comedic personality had been previously showcased on *The Jonathan Winters Show* and *The Beverly Hillbillies*. Buck Owens was one of Nashville's premiere songwriter-performers. At the time of *Hee Haw*'s creation he was hosting a regionally syndicated television variety series and looking for a vehicle with which to reach the national audience. He too had appeared on *The Jonathan Winters Show*. Owens and Clark's wide-ranging abilities helped blend together the series' mix of country music and broad sketches.

The cast included a number of comedians and musicians with a country background and style. Writer-actor Archie Campbell, twins Jim and Jon Hager, Louis "Grandpa" Jones, Lulu Roman, David "Stringbean" Akeman, and former real-life moonshiner Junior Samples were among the original group to populate sketches like "The

General Store" and "The Kornfield." In 1970 the show acquired perhaps its most prized catch: comedienne Minnie Pearl. Her trademark gingham dresses, hat with price tag attached, and gently humorous anecdotes on rural life became staples of the show. In later years, George "Goober" Lindsay (of *The Andy Griffith Show*), Misty Rowe, actor Slim Pickens, and even Jonathan Winters would spend time in *Hee Haw*'s ensemble.

The show debuted June 15, 1969. It was an instant ratings success. The traditional music and "down-home" humor struck a chord with audiences weary of social unrest and uninterested in seeing television taboos shattered by comedians like the Smothers Brothers. Though originally a summer replacement series, *Hee Haw* was added to CBS' prime time line-up in December 1969. Its impact was already clear. Earlier that year, on the weekend of August 15-17, half a million rock fans, hippies, and war protesters made Woodstock the counterculture event of the twentieth century; the rest of America made *Hee Haw* the number one show of the weekend.

During its run *Hee Haw*'s guest list was a virtual who's who of country music in the 1960s, 1970s, and 1980s. Merle Haggard, George Jones, Tammy Wynette, Ray Charles, Waylon Jennings, Charlie Rich, Ronnie Milsap, Johnny Cash, and Boxcar Willie all graced the *Hee Haw* stage. Singers like Garth Brooks, Randy Travis, and Vince Gill, who would see great success in the country music boom of the 1990s, made some of their first national television appearances on *Hee Haw*. Even non-country performers visited the Korn field: pop vocalists Sammy Davis, Jr. and Phil Harris, baseball legends Mickey Mantle, Johnny Bench, and Roger Marris, and actors Ernest Borgnine, Leslie Nielsen, and John Ritter all made appearances.

CBS canceled *Hee Haw* after the 1971-72 season. The network had tired of its rural image; also axed that year were *The Beverly Hillbillies*; *Green Acres*; *Gomer Pyle, USMC*; and *Mayberry RFD*. The producers wasted no time in finding a new home for the show. *Hee Haw* debuted in first-run syndication September 18, 1971. Most markets aired it Saturdays at 7:00 p.m., a time slot ceded to local stations as a result of the Federal Communications Commission's Prime Time Access Rule, which forbade off-network reruns on affiliates from 6:00-8:00 p.m. These stations needed programming, and *Hee Haw* was a pre-packaged, proven hit.

*Hee Haw* was so popular it spawned a spin-off in the fall of 1978. *Hee Haw Honeys* starred regulars Misty Rowe, Gailard Sartain, Lulu Roman, and Kenny Price, and young actress Kathie Lee Johnson, who would become better known by her married name, Kathie Lee Gifford. Their characters—Misty, Willie Billie, Lulu, Kenny, and Kathie Honey—are a Nashville family who own a country nightclub. Like its parent show *Hee Haw Honeys* featured musical guests and cornpone humor. It failed to match the older show's success, lasting only 26 episodes.

*Hee Haw* remained relatively unchanged until 1991. Slipping ratings inspired Gaylord Entertainment, the owners of the show, to revamp the format. Much of the cast was replaced. The old "Korn field" set was gone, and a new bright, modern stage appeared. The look was reminiscent of the 1980s pop music series *Solid Gold*. Longtime viewers felt angry and betrayed. Ratings fell precipitously, and the series was canceled. The last original *Hee Haw* aired May 30, 1992.

Though production ended, the series was far from gone. Reruns of the classic episodes began airing on the Nashville Network. *Hee Haw* quickly became one of the cable network's most popular offerings. A live stage version at the Grand Ole Opry in Nashville

brought the Korn field briefly back to life. *Hee Haw* is still treasured by fans of traditional country music and down-home, simple good times.

## Hefner, Hugh (1926—)

If America experienced a sexual revolution in the latter half of the twentieth century, then one of the first shots surely was fired by Hugh Marston Hefner in 1953, the year that he introduced *Playboy* magazine to the world. The first issue of the magazine featured a centerfold of a nude Marilyn Monroe (who had posed for it years earlier, before attaining the stardom she enjoyed in 1953), and it sold well enough to guarantee that other issues would follow in the months to come.

The "shocking" new magazine was based in Chicago, the city where Hefner, the older of two sons, had grown up in a typical middle-class household. After army service and college, Hefner married and then tried to earn a living as a free-lance cartoonist. In this he was unsuccessful, but he did land a low-level job with *Esquire* magazine, the most prestigious "men's magazine" of the day, which featured articles and photo layouts on elegant clothing, sports cars, and other "male" interests. Nude photos in American periodicals in the early 1950s were limited to a few "nudist" and "art photography" magazines that skirted the edge of the law and were sold "under the counter" at newsstands when they were available at all.

Within a year after *Playboy's* premiere, Hefner's life had undergone significant changes. He was devoting all of his time to the magazine, except for the attention he gave to the beautiful and sexually available young women who worked for, or posed for, the magazine. The Hefners separated in 1955, with divorce to follow in 1959. Mrs. Hefner retained custody of the couple's two children. As the magazine's circulation continued to grow, Hefner began to adopt the lifestyle epitomized by his publication's title. He *became* a playboy, and he had the business sense to realize that being a public embodiment of what the magazine was all about could attract even more readers. For *Playboy* was, from the beginning, more than just a "skin magazine." There were the nude pictorials, of course—generally three per issue, including the centerfold "Playmate of the Month"; but like *Esquire* before it, *Playboy* featured articles about luxury cars, fine food, wine, stereo equipment—in short, everything the modern "playboy" would want to own. And if, as was likely, the

Hugh Hefner

reader's income was insufficient to support the described lifestyle—well, he could always dream, and *Playboy* would be there to provide the material for his fantasies.

Hefner's playboy image shifted into high gear in 1959 with his purchase of a seventy-room mansion on Chicago's Gold Coast. After extensive remodeling (including installation of a revolving, circular bed, eight feet in diameter, in the master bedroom), the Playboy Mansion was open for business, and its business was pleasure—pleasure for its sole permanent resident and for his many and frequent guests. A brass plate on the mansion's front door had engraved on it the Latin phrase "Si non oscillas, noli tintinnare," which the host loosely translated to mean "If you don't swing, don't ring."

Beginning in 1962, the magazine's articles on the good life began to be accompanied by a dose of philosophy—*Playboy* style. The December issue of that year included the first installment of Hefner's "Playboy Philosophy." There would be twenty-five installments in all (amounting to about 150,000 words) before the series ended in 1966. In these columns, Hefner defended his magazine's content and values, assailed his critics, and espoused positions on social issues—he was in favor of increased sex education, legalized abortion, and freedom of expression; and opposed to censorship, prudery, and archaic sex laws. In addition to decrying the sexual puritanism of American life, Hefner was also an early and vocal advocate of civil rights for minorities. The magazine's editorial content reflected this view, as did Hefner's policy for booking entertainers at the mansion, the chain of Playboy Clubs that began in 1959, and two syndicated television shows (*Playboy's Penthouse*, 1959-61, and *Playboy after Dark*, 1968-70). Hefner brought in black

entertainers (such as Sammy Davis Jr., Dick Gregory, and Nancy Wilson) at a time when having “black” acts in a predominantly “white” venue just was not done.

Hefner’s empire went through some tough times in the late 1970s and 1980s. Circulation of the magazine declined, partly due to competition from publications like *Penthouse* and *Hustler*, both of which were often more sexually graphic than Hefner wanted *Playboy* to be. Further, the close relationship existing between the Reagan administration (which came into office in 1981) and fundamentalist Christian groups like the Rev. Jerry Falwell’s Moral Majority made for a political climate that was inhospitable to sexual liberationists like Hefner.

Hefner unloaded the Chicago Playboy Mansion in the early 1980s and moved full-time into Playboy Mansion West, an estate he had purchased in Los Angeles. After suffering a mild stroke in 1985, Hefner began turning over day-to-day operation of his empire to his daughter Christie, whom he had brought into the business eight years earlier. In the late 1990s, Christie Hefner worked as chairman and CEO of Playboy Enterprises, Inc., although her father remained listed as editor-in-chief of the magazine.

Hugh Hefner was married a second time in 1989, to former Playmate of the Year Kimberly Conrad. The union produced two children, but the couple separated in January of 1998, allowing Hefner to return once again to his “playboy” lifestyle.

## Hellman, Lillian (1906-1984)

One of the most daring and inventive playwrights of her generation, Lillian Hellman’s own life was the stuff of drama. As Carl Rollyson has written, “The key to Lillian Hellman’s character, to what made her a legend in her own time, was her sense of herself as a grande dame.” Indeed, Hellman is not only remembered for her work—award-winning plays such as *The Children’s Hour*, *The Little Foxes*, and *Watch on the Rhine*—but for her audacious persona. A tough-talking, cigarette-smoking Jewish woman from New Orleans, Lillian Hellman loved attention. She got it through her plays, through her difficult relationship with the brilliant writer Dashiell Hammett, and through her left-wing politics. When called before the House Un-American Activities Committee, Hellman refused to be a friendly witness, uttering her most famous line: “I cannot and will not cut my conscience to fit this year’s fashions.” In her advancing years, Hellman wrote three extraordinary memoirs, making her very public life even more so. When a story from one of them was made into a major motion picture, *Julia* (1976), starring Jane Fonda and Vanessa Redgrave, Hellman became a heroine to a new generation of women. Lillian Hellman liked money; she also liked fame. She got both, and became, in the process, a one-of-a-kind American icon.

## Hello, Dolly!

*Hello, Dolly!* occupies an enduring place in popular American culture. Not only has it become one of the most popular Broadway musicals since its opening in 1964, but it is a musical adaptation of playwright Thornton Wilder’s *The Matchmaker*. The original production furnished Carol Channing with one of her trademark roles as turn-of-the-century New York widowed matchmaker and “fixer” for all occasions, Dolly Gallagher Levi. Dolly’s second-act entrance at the Harmonia Gardens Restaurant, where she sings the title song as she descends a red-carpeted staircase into the company of her admirers for a show-stopping production number, has become one of the classic scenes of the musical theater.

With music and lyrics by Jerry Herman, book by Michael Stewart, and choreography and direction by Gower Champion, *Hello, Dolly!* played 2,844 performances in its initial New York run. The show won a myriad Tony Awards, including best musical, book, score, actress (Channing), and director-choreographer. Channing’s co-stars in the original cast included David Burns, Eileen Brennan, and Charles Nelson Reilly. The 1969 film version, which Herman considers definitive, starred Barbra Streisand and Walter Matthau, was directed by Gene Kelly, and marked the last of the big Hollywood musicals. It is oft-revived all over the world and on Broadway.

## Hell’s Angels

During the height of their notoriety, the motorcycle gang Hell’s Angels made headlines from coast to coast, with stories appearing in the *New York Times*, *Newsweek*, *Time*, *True*, the *Nation*, and a host of other publications. With their death’s-head emblem, outré habits, and the mystique of modern-day Quantrill’s raiders, the Angels were tantalizing to the press. In fact, their seedy allure was heightened by the press to such a degree that it spawned a national—and then

international—fascination with outlaw motorcyclists. From magazines and books, the Angels' story spread inexorably to movie theaters, and biker movies became so popular that they inspired a rash of films based on the Angels' true-life exploits. Predictably, the fictional amplification of their misdeeds bore only a faint resemblance to the real-life models, increasing their fascination, so much so that the Angels now have charters throughout Europe and beyond.

It all started in California after World War II "when most ex-GIs wanted to get back to an orderly pattern: college, marriage, a job, children—all the peaceful extras that come with a sense of security," wrote Hunter S. Thompson, whose book is perhaps the definitive work on the Angels. But not everybody felt that way: "There were thousands of veterans in 1945 who flatly rejected the idea of going back to their prewar pattern. They wanted more action, and one of the ways to look for it was on a big motorcycle." In California, where the weather is clement year-round and a premium is placed on mobility of all kinds, these young men congregated in groups—adopting names like the Booze Fighters or the Market Street Commandos—regularly making runs to resort towns throughout the state—trips that were always tinged by menace. These were the culprits who tore up the agricultural town of Hollister, California, in 1947, the first motorcycle riot, coverage of which inspired producer Stanley Kramer and actor Marlon Brando to make *The Wild One* in 1954.

In Fontana, California, a steel town east of Los Angeles, the original Hell's Angels emerged out of the wreckage of an earlier club, the Booze Fighters. They were blue-collar types, scornful of normalcy, and among motorcycle outlaws, the Angels were soon known as the toughest, most obdurate of the motorcycle outlaws—kings of violence and depravity. For fifteen years the San Bernardino Angels were the de facto leaders, bestowing new charters at their whim. But the Berdoo Angels, as they were called, who had a reputation for inspired depravity, persisted in their folly a might too long. They became the victims of massive police harassment—much deserved no doubt—and soon the chapter had been decimated by an exodus to Oakland, known as the promised land to Angels, and by the early 1960s a large concentration of Angels had gathered in the Bay Area.

For all their colorful ways, it took until the mid-1960s for them to come to the attention of the state law enforcement apparatus. The occasion was a Labor Day Run to Monterey which had resulted in allegations of rape, and although the defendants were eventually acquitted, the state attorney general's office was alarmed enough to launch a six-month investigation. Much of the report was unfounded or so prejudiced as to be beyond credulity, and the Angels might have faded back into obscurity were it not for a sole *New York Times* correspondent in Los Angeles who filed a lurid dispatch. Appearing in the *Times* gave the bikers credibility. *Newsweek* and *Time* weighed

Two members of the Hell's Angels.

in with their own alarms. Other publications followed, and soon the bikers had grown accustomed to the media's presence and were earnestly trying to capitalize on their new-found fame.

The heightened publicity had benefits and drawbacks. The Angels truly enjoyed seeing themselves in print, and their presence acquired a certain amount of hip cachet in bohemian circles throughout the Bay; but police harassment had increased exponentially, and many of the outlaws were summarily dismissed by their employers as a result of the ensuing hysteria. Many of the Angels grew restive over the fact that they had failed to profit from the storm of controversy that had swept over them. And they had become self-conscious. Oakland President Sonny Barger, having grown accustomed to giving well-attended press conferences, took himself seriously enough to attack a peace march in Oakland, the first time the Angels had shown even the faintest interest in politics. The attack and its subsequent notoriety heralded a drop in media interest, but Hollywood was just catching on.

From the philosophical 1969 *Easy Rider* (not so much a biker film as a paean to the myth of the outlaw biker), arguably the best of the lot, to the outlandish *Werewolves on Wheels*, the myth of the nefarious yet noble biker was worked through all its possible permutations to varying degrees of success and/or profit. First of the group was *The Wild Angels* (1966), starring Peter Fonda and Nancy Sinatra. Director Roger Corman, always quickest to the draw, had cobbled together a story from elements of the Lynch Report; and in its story of paying tribute to a fallen comrade (based on the death of a Sacramento Angel that January), *The Wild Angels* came closest to portraying the Angels in their natural state. Yet, the film had an equivocal tone, part denunciation, part hero worship, and it set the standard for the rash of biker films that would follow. *The Born Losers*, released the following year, concentrated on the Angels' reputation for gang rape, and so was a slightly less sympathetic account. After the Angels' participation in the havoc at Altamont, the Angels' screen persona degenerated further. By the early 1970s, the genre was commonly linked with the occult or Satanism.

Since the coverage of the Hollister motorcycle riot in 1947, the relationship between the media and the bikers has always been symbiotic. The Angels' appeal was archetypal—the vanishing outlaw beset on all sides by an increasingly regimented society. It is arguable that had not the national news media, and then Hollywood, exploited the Angels' very existence, they would have remained a local phenomenon. As it was, Hell's Angels clubs sprang up in Great Britain, Germany, the Scandinavian countries, even in the Soviet Union where Angels rode World War II-era army surplus machines when they rode anything. In 1994, the Angels made news when a rival gang blew up the Swedish Hell's Angels clubhouse near Oslo with hand-launched rockets stolen from a Swedish military base. The Hell's Angels phenomenon was truly international in scope.

As for the California Angels, they persisted at the fringes of society, often making headlines for their role in various drug-smuggling conspiracies, but the threat and the allure were gone. They seemed more like picturesque anachronisms than voracious, threatening marauders. As of the late 1990s, there are magazines devoted to outlaw motorcyclists, and an annual run to Sturgis, North Dakota, is a well-organized, fairly tame event, drawing participants from around the world. But still, when a big Harley piloted by an Angel in cutoff jeans jacket and the ubiquitous death's-head patch pulls past on the freeway, the frisson is palpable, and one can imagine the fear and trepidation such a sight would have inspired back in the summer of 1965.

## Hemingway, Ernest (1899-1961)

At the height of his popularity, Ernest Hemingway was hailed as the greatest writer of American literature, a hero of several wars, a world-class sportsman in the fields of bullfighting, boxing, hunting, and fishing, and a connoisseur of food, wine, writing, and painting. He was viewed as a colossus who strode all fields of action, excelling in all the manly pursuits. At his worst, Hemingway was derided as a writer who specialized in evasion and repression; an illiterate, inarticulate ox who avoided literary circles to disguise his own limitations; a bully, misogynist, and homophobe with the world's most famous castration anxiety; a self-aggrandizing egotist and poseur who

**Ernest Hemingway**

shamelessly promoted the legend of his exploits in popular magazines; a belligerent and jealous writer who betrayed and publicly insulted all the authors who helped his career; an overpaid, glorified journalist who sold his talent to feed his ego, ending up as a rich, decadent alcoholic who succumbed to dementia in later years, and who finally took his own life when he realized that he could not write anymore.

Born Ernest Miller Hemingway in Oak Park, Illinois, on July 21, 1899, Hemingway developed his terse style by writing for the *Kansas City Star* in 1917. In 1918 he volunteered as a Red Cross ambulance driver in Italy, where he was badly wounded attempting to save a soldier's life. Hemingway's war experiences and his severe injuries seem to have carved a deep scar in the young man's psyche, and he suffered from insomnia and a fear of sleeping in the dark. All his early writing reveals a preoccupation with violence and wounds, and a terror of death. The honesty with which Hemingway wrote about naked emotions in the 1920s—which contrasts sharply with the bloated legend of himself that he promoted in the 1930s and beyond—was immediately greeted as a major innovation in modern writing. His rapid development and swift rise to acclaim derived from his willingness to learn from older writers: while living in Paris among the expatriates he sought, and followed, the advice of Gertrude Stein, James Joyce, Ezra Pound, Ford Madox Ford, and F. Scott Fitzgerald.

Though most famous for his terse, stark narrative style and realistic dialogue, Hemingway was certainly not the first to write plainly and simply; he did not singlehandedly overthrow the decadent conventions of the Victorian novel. Many predecessors, including Mark Twain, Gertrude Stein, and Sherwood Anderson, had cleared

the prolix path that Hemingway strode more boldly. He did however drive verbal terseness and austerity to its limit, setting an unsurpassable standard, while avoiding Stein's and Anderson's eccentricities. Hemingway's early prose was taut and brittle, achieving its effects through extremely subtle suggestion while refusing to be "literary." He jettisoned the worn accouterments of alliteration, assonance, simile, and metaphor to look directly at life and report only what he saw, unencumbered by literary conventions. This does not mean, however, that Hemingway's fiction was stripped of emotion, as it may seem to a careless reader. Hemingway refrained from describing emotion, avoiding phrases like "he felt," or "he thought," and discarding adverbs and adjectives, but he suggested the characters' emotions by reporting what they saw, noticed, or did. For instance, in the short story "Big Two-Hearted River," Hemingway conveys the anxiety of a veteran, Nick Adams, returning home from the war and trying to repress his painful memories. But the author does this not by telling us that Nick is trying to repress his thoughts, but rather by meticulously reporting Nick's concentration on mundane but consoling activities such as fishing and making lunch. Such indirect and subtle effects were quite powerful when done well, but could result in long passages of pointlessness when done badly, as in some of his later work.

Also notable in his early writing is a willingness to portray what his characters really felt rather than what they were supposed to feel. He did not care to write edifying stories: if his character felt empty and hollow after an event that was supposed to make a respectable man feel sad, the story gained power through its honest realism. The most successful specimens of Hemingway's method were his short stories. His first novel, *The Sun Also Rises* (1926), also managed to sustain the dramatic tension and power of the shorter works. Hemingway made extensive revisions at Fitzgerald's suggestion, and the book revealed remarkable parallels with Fitzgerald's *The Great Gatsby* (1925). But ironically Hemingway soon displaced Fitzgerald as the major new author of the postwar generation. Fitzgerald had been feted as the author of the Jazz Age, and appealed to collegiate readers stateside. Hemingway became known as the author of the "Lost Generation" (though the phrase, made famous by Gertrude Stein, referred cynically to the same generation as Fitzgerald's Jazz Age). Hemingway made a stronger impression among war veterans, and *The Sun Also Rises* became the most significant work of the growing genre of post-war novels about world-weary veterans. The book was amazingly influential: young women began talking like the flippant heroine, Brett Ashley, and young men started acting like Jake Barnes or Hemingway's other male characters, muttering tough-sounding understatements and donning the repressive sackcloth of machismo. Hemingway's portrayal of the wounded, taciturn hero resounded among men who might not ordinarily read "serious literature," and validated an archetype in popular culture which survived for several generations in icons such as John Wayne, Charles Bronson, and Clint Eastwood.

Hemingway's next novel, *A Farewell to Arms* (1929), returned to the theme of the wounded soldier, and the pastoral charms of escape and a "separate peace." It was a bestseller, as all of Hemingway's subsequent books would be, and secured his reputation as a major author. Unfortunately, *A Farewell to Arms* marked the end of Hemingway's rapid development and uncompromised artistic integrity. In 1932, he published *Death in the Afternoon*, a handbook on the art of bullfighting. Treating bullfighting as a tragic ritual, the book provides many insights into Hemingway's views on death, performance, courage, and art—all important themes in his fiction. Although the book has interesting digressions on literature, it also has entire

chapters devoted to specific bullfighting techniques or appraisals of long-dead bullfighters which make for very tedious reading.

But the real subject of the book was not bullfighting; it was Hemingway. In *Fame Became of Him*, John Raeburn identifies nine personae that Hemingway projected in *Death in the Afternoon* and in later autobiographical works: world traveler, arbiter of taste, bon vivant, heroic artist, exposé of sham, initiated insider, battle-scarred stoic, sportsman, and manly man. Three of these—arbiter of taste, world traveler, and bon vivant—form a cluster of roles typical of the literary gentleman. Writers can often be counted on to offer tips on wine, dining, arts, and travel. In these roles Hemingway was similar to the effete, foppish dilettantes whom he usually detested, such as Ford Madox Ford or Henry James. To a lesser extent, the roles of heroic artist, exposé of sham, and initiated insider are also common among writers. The heroic artist who suffers for his muse was a familiar pose of the Romantics (particularly Byron), and the exposé of sham has a long pedigree in satirical writing. The battle-scarred stoic had become a common, though resonant, figure in post-war writing. The initiated insider was partly related to the veteran figure, but initiation into a select fraternity of like-minded fellows became quintessentially Hemingway. He pretended to follow a code of conduct which was all the more dignified for being unspoken, above defense, and inscrutable to outsiders.

But the uniqueness and popularity of Hemingway's public personality lay in joining these highbrow roles with those of sportsman and manly man. Readers knew of his interest in fishing, hunting, and bullfighting from his early fiction, where these sports were embraced as pastoral pleasures of escape for the physically or mentally wounded, solitary pastimes for taciturn men. But when described as Hemingway's own hobbies in his non-fiction, they lost the therapeutic element—presumably because Hemingway was loath to admit any psychological wounds—and became games of competition, obligatory tasks of masculinity, demonstrations of "cojones," or balls. Indeed, Hemingway seemed to devote the rest of his life from the 1930s onward to proving his *cojones*, perhaps embarrassed by theories that Jake Barnes, the protagonist of *The Sun Also Rises* whose penis was shot off in the war, was an autobiographical character. In later works Hemingway seemed to dissociate himself from such vulnerable characters, and also alienated himself from writers—an unmanly lot—by quarreling with, defaming, and even threatening almost every major writer of his generation. He derided homosexuals in *Death in the Afternoon*, dismissing the artistry of Gertrude Stein, Oscar Wilde, André Gide, Walt Whitman, and Francisco Goya on the theory that they were inherently flawed and therefore disqualified as artists.

Such masculine posturing proved enormously popular, and soon after *Death in the Afternoon* Hemingway began a series of essays for the newly founded men's magazine, *Esquire*, which was marketed toward a sophisticated, though not intellectual, audience. He wrote 36 *Esquire* essays on topics such as fishing, hunting, and wine. He even wrote beer ads disguised as essays. Whereas *Death in the Afternoon* had a professed artistic impetus in Hemingway's desire to view death in order to write "truly" about the experience, the *Esquire* articles lacked any artistic purpose and were pointedly non-literary. Hemingway was beginning to fashion a new character, whose name was Ernest Hemingway. He continued this farce in another book of non-fiction, *Green Hills of Africa* (1935). A personal account of Hemingway's safari adventure, *Green Hills of Africa* reads more like a novel than *Death in the Afternoon*, sporting vivid descriptions of action and dialogue. But Hemingway's style of writing "truly" faltered the

more he wrote about himself: the book simply promoted the virile Hemingway legend without revealing anything intimate about the author. The *Esquire* experience and his swelling fame distorted his self-awareness and blurred his ability to distinguish fact and fiction. His self-aggrandizing grew more frequent as the burgeoning medium of photojournalism got bigger and flashier. Hemingway's striking demeanor and handsome, husky appearance made him a favorite of glossy magazines such as *Life* and *Look*, which wedded big colorful photos to the trenchant aphorisms Hemingway was happy to provide.

Another product of Hemingway's African adventure was the short story, "The Snows of Kilimanjaro," which told of a writer who, dying of gangrene while hunting in Africa, realizes too late that he has squandered his talent. The protagonist laments "poor Scott Fitzgerald" as a writer ruined by his fascination with the rich. Hemingway thus deflected suspicion that the ruined writer of the story might represent himself by this slanderous jab at Fitzgerald. Whether or not he needed this decoy to write with his old frankness, he wrought a rich and complex story. However, most critics recognized that the declining writer was Hemingway himself, and soon it would be obvious to everyone.

When Hemingway finally returned to novel writing in 1937 with *To Have and Have Not* he was a very different writer from the artistic innovator of the 1920s. Whereas his earlier fiction masterfully portrayed vulnerable characters through extremely subtle prose which seemed to mirror the repressed nature of the character himself, in *To Have and Have Not* repression triumphs over revelation. Masking his own vulnerabilities, Hemingway also masked those of his characters, stripping them of human interest. His latest protagonist, Harry Morgan, a tough-talking weapons smuggler in trouble with the mafia and the government, betrayed no weakness and awoke no pathos. After losing his arm in an accident, he stoically responds, "[If] you lose an arm, you lose an arm." The novel was barely distinguishable from pulp fiction. Hemingway's half-hearted attempts at political significance made the work more embarrassing than redeeming. During the Depression, critics of the New Left favored novels of social relevance, like those of John Steinbeck or Sinclair Lewis. Many writers of the 1920s, such as Fitzgerald and Thornton Wilder, had fallen out of critical favor for their indifference to politics. Hemingway, who seemed to appeal to the common man because of his simple prose and simple pleasures, was urged by some critics to write more socially relevant stories. He capitulated with *To Have and Have Not*, and found favor with the more naive members of the Left, but most critics recognized the novel as politically simplistic. Although the novel was a bestseller, and Hemingway was more popular than ever, his critical reputation sunk to its lowest.

Whereas William Faulkner had spent the 1930s producing one masterpiece after another in the most astonishing series of achievements in American literature since Henry James, Hemingway had churned out a preponderance of facile nonfiction, mostly in slick popular magazines. Always jealously competitive, Hemingway responded to the challenge of Faulkner's achievement and set out to regain the championship he had held in the 1920s. The result was *For Whom the Bell Tolls* (1940), his longest and most ambitious work. The novel seems to have been intended as his masterpiece, embracing a wider range of themes than any of his previous novels. However, Hemingway's carefully crafted style was ill-suited for such a broad canvas, and the novel's sheer bulk diluted the potency of his prose. The novel was almost as politically simplistic as *To Have and Have Not*. Although Hemingway strove to weave grand themes of nature,

technology, and the unity of mankind, his truer, deeper preoccupations were still with the solitary man proving his mettle and facing death alone. The hero, Robert Jordan, was cut from the same cloth as earlier Hemingway heroes, solitary, glum, absinthe-drinking men. Robert Jordan was a professor of Spanish, but the intellectual side of the character was sketchy, unconvincing, and incongruent with his more familiar Hemingwayesque traits. The intended effect of the novel was unachieved. Hemingway failed to unify his themes and symbols, all the more ironic since the unity of mankind was the overarching theme. Nevertheless, the novel was extraordinarily successful, selling 360,000 copies and generating a movie.

Hemingway continued to make money by writing for *Collier's* magazine as a war correspondent in Europe during World War II. The 1940s were highly profitable for Hemingway, and brought him fame as a war hero (although the extent of his military participation is disputed). He did not return to novel writing until 1950. At the pinnacle of fame and arrogance, Hemingway consented to an interview with Lilian Ross, in which he boasted about his forthcoming work and his enduring position as "champ" in American fiction. This memorable character sketch, entitled "How Do You Like It, Now, Gentlemen?," was very different from the usual adulating articles honoring Hemingway as a champion sportsman and manly man. Although affectionate, the sketch revealed Hemingway's eccentricities and egotism. He called himself Papa, posing as the wise, grizzled old man of American letters. He claimed that he had once lived with a bear in Montana, where they drank and slept together. But what proved to be most embarrassing to Hemingway was his boast that his forthcoming novel would be his best ever. When *Across the River and into the Trees* appeared four months later, it was almost unanimously regarded as the worst novel of his career. It was an abysmal work, so poorly written that it seemed a parody of his own style, riddled with his pet words "good," "true," "well," and so on. Though not without redeeming qualities, it is best enjoyed as a parody of the famous Hemingway style from the master's own pen.

The contrast between Hemingway's published boastfulness and the critics' sudden disfavor became even more painful when Faulkner won the Nobel Prize that same year. Five years earlier Faulkner had been a well-kept secret, and Hemingway (in his role as initiated insider and arbiter of taste) had been able to confide to Jean-Paul Sartre and others that Faulkner was a better writer than himself. Once Faulkner won the Nobel Prize, and myriad belated accolades tumbled his way, Hemingway could no longer regard himself as the champ of American letters, as he had boasted in the Ross interview, and he turned on Faulkner, declaring that no one ever wrote a decent novel after winning the Nobel Prize. Meanwhile, Hemingway labored over a long autobiographical novel, *Islands in the Stream*. The novel was disjointed, tedious, and uninspired. Aging, alcoholic, and unhealthy, Hemingway seemed to be losing his talent. However, he salvaged the last part of the novel and published it as an independent work in *Life* in 1952 as *The Old Man and the Sea*. A painfully poignant tale of an aged fisherman who catches the biggest marlin of his life and loses it to sharks, the story was told in a beautifully simple, chaste style that surpassed anything Hemingway had written since the 1920s. Struggling with artistic and physical decline, Hemingway had made one final effort to write truly, and succeeded by reaching inside himself to wrench out the painful theme of failure. "Man was not made for defeat. A man can be destroyed but not defeated." The *Life* issue sold five million copies, and the story was instantly hailed as a masterpiece. In 1954, Hemingway won the Nobel Prize, largely on the achievement of *The Old Man and the Sea*.

Throughout the 1950s Hemingway worked on a novel, *The Garden of Eden*, but remained unhappy with it and withheld publication. He also discovered a cache of memoirs he had begun in the 1920s, and proceeded to revise and expand them into a book called *A Moveable Feast*. The rediscovered writings reminded Hemingway of his youth, when he was establishing his reputation as a bold new artist of uncompromised integrity, and made it painfully clear that the aging writer had squandered his talent for the gratifications of fame. Although he had accused Fitzgerald and Faulkner of ruining their talent on stories for the *Saturday Evening Post* and movies for Hollywood, Hemingway had compromised his talent even more grotesquely by creating an absurd fabrication of himself. His public persona was his own worst character and had infected most of the characters he had created since the 1920s. Realizing that he could no longer write, nor maintain his own egotistical standards, Hemingway shot himself on July 2, 1961.

The adulation continued years after his death, and posthumous novels, stories, and nonfiction continued to appear well into the 1990s. But biographies also appeared, and emerging evidence gradually revealed Hemingway to be a despicable man motivated by egotism, jealousy, and a sexual insecurity that led him to ridicule others and prove his own manhood ad absurdum. Such macho posturing already seemed out of place in the 1960s, and utterly ridiculous by the 1990s, though academic interest in Hemingway continued to thrive under deconstructive and feminist approaches to literature. By the turn of the century it seemed unlikely that Hemingway would ever regain the swollen stature of his middle period. However, his influence over American literature is immense and ubiquitous. As one of the major prose stylists of the English language, he has bred more imitators than any other American writer. But few authors were able to attain the suggestive power and subtlety of Hemingway's finest work. Faulkner captured it in his stark, brittle potboiler, *Sanctuary*, and Fitzgerald employed a certain Hemingwayesque subtlety amid the softly echoing motifs of *Tender Is the Night*. But more often one found mere verbal imitation by inferior authors such as Erskine Caldwell, who simply borrowed the outward trappings of conscientious monosyllables and tough dialogue for their otherwise conventional narrative and perfunctory symbolism. Hemingway's best fiction set a standard that few could attain, not even the later Hemingway.

## Hemlines

---

Hemlines have been equated with both fashion and culture, defining particular decades, generations, economies, media, and gendered ideologies, thereby working as imagistic markers within systems of popular culture. Couture culture's system of design traditionally has fed the contents of fashion magazines with fantasy imagery fabricating a "look," color, or hemline for readers. Such is the case with Christian Dior's New Look of 1947, the essential feature of which was the full skirt fish-tailing from cinched waist to mid-calf. This shape and length were adapted for department-store and catalogue sales and for home-sewing patterns, thus becoming part of popular fashion.

Hollywood's studio system of the 1930s and 1940s established a primary place for designers, whose costumes glamorized the female star, made her a screen icon, and typified the genre character she played, especially in melodrama and film noir. Two films released in 1957, *Designing Woman* (Minnelli) and *Funny Face* (Donen), parodied the arbitrariness of the fashion system and its fixation on the viewable woman.

Television sitcoms of the 1950s and 1960s conventionalized the look of the well turned-out wife and mom, dressing her in the essential style and hemline seen in the costuming of Gracie Allen (*The George Burns and Gracie Allen Show*), Lucille Ball (*I Love Lucy*), Harriet Nelson (*The Adventures of Ozzie and Harriet*), and June Cleaver (*Leave It to Beaver*). Weekly, these original sitcom women performed their domestic roles wearing variations of the New Look's vertical line, most commonly the shirtmaker dress of trim bodice and sleeves, tailored collar, buttoned front, and mid-calf skirt flaring out from a defined waist. The full skirt was often underpinned by a crinoline. But, whether flaring or straight, their dresses often were accessorized by that symbol of the proper woman, a neat strand of cultured pearls. The middlebrow American homemaker represented in these sitcoms was a picture of postwar comfort, consumerism, and suburbia. She was also a trickster who juggled her husband's money to maintain her image by shopping for fashionable clothes.

British designer Mary Quant's radical miniskirt of the 1960s, emerging out of a "swinging" London of Carnaby Street and boutique-store culture, countered the Americanized femininity of Lucy and her sitcom generation.

Boutique culture's eclecticism prevailed into the 1970s, displacing the long-or-short hemline dilemma with fashionable options, notably the "maxi," which fell to the ankle or below. Mid-calf lengths, given the term "midi," were reincarnated in looser styles and fabrics. By the 1980s, the long-or-short hemline dilemma had become passe, though still part of fashion rhetoric in style magazines and department store flyers promoting "seasons," "the new" or "the latest" in ready-to-wear labels and commercial brands.

Asymmetrical hemlines in variation (a short front with dipping back, or a side-to-side diagonal) signalled the compromise of designers in the 1980s and early 1990s. Similarly, the flash effect of vertical off-side slits, found on every skirt length from maxi to mini, made one leg visible and emphasized the thigh. Manufactured in office wear as well as evening garb, this style allowed for greater mobility but also a loss of skirt-control when the wearer sat down. The ladylike posture of crossed legs became an instinctive defence against exposure. The vertical side-slit was less about utility than about projecting a feminine essence—reminiscent of the New Look, if more sexualized.

In the late 1990s the hemline debate has been given timely twists and fell victim to self-conscious parody in the popular television series *Ally McBeal*. Ally's short skirts (the micro-mini in tailored form) are a feminine tool to test, sometimes to arrest, the sexist patriarchal structures of the legal system and courtroom. Anne Hollander argues in *Sex and Suits*, "... the first [1960s] function of small, short modern skirts was to put women's clothed bodies into a complete physical correspondence with men's ... visual assumption of public equality for men and women." Ally McBeal's ultra short skirts bring forward this struggle for the contemporary young woman within American culture who presumably strives to be taken seriously as a professional and to be desirable to men. Ally's short hemlines and sputtering naive persona externalize the cultural tentativeness that followed a long line of fashionable sitcom figures, from Lucy and Gracie as maneuvering wives in the 1950s to Mary Tyler Moore's single woman negotiating with male newsroom colleagues and boy-friends in the 1970s.

Ally McBeal's character is popular culture's good girl reincarnated, whose short skirts do not render her sexually secure or successful. At the same time, Ally's quirkiness exudes what the cool if neurotic bad girl of 1950s "B" movies had to suppress. The "bad but beautiful" movie genre persona of actress Ida Lupino in *Women's Prison* (Seiler, 1950) is embodied by her simple, sophisticated costuming. In her pencil-slim, mid-calf dark skirt and crisp white blouses, Lupino's mean prison warden metes out a professional woman's control. Unable to handle power, in this tale of morality she is not only asexual but must die. It is the decent women prisoners, garbed in striped shirtmaker dresses, midi-length, who are domesticated and make sacrifices in order to survive. In the moment of her destruction, the warden's clean blouse and midi skirt give way to a straightjacket, her cold femininity and existence erased.

American film, television, and magazines can be charted historically through fashion and hemlines for shifts and slippage in the popular imagery and ideologies of femininity. One slippage is the persistence of retro hemlines and looks. In late 1998 *Vogue Patterns*, a magazine for home sewers, launched a Vintage Vogue Collection of their patterns from the late 1930s to mid-1940s, a service said by the editor to be based on contemporary readers' "wishes" and "needs." Pleated, straight, and A-line skirts all fall below the knee or to mid-calf in these designs, perhaps a conservative reordering in the face of Ally McBeal's minis and the trendy knit maxi skirt of the 1990s.

## Henderson, Fletcher (1898-1952)

---

As a bandleader, composer, and arranger, Fletcher Henderson was one of the definers and shapers of jazz music in the swing era of the 1940s and 1950s. After graduating from Atlanta University with majors in chemistry and math, Henderson moved to New York in

1920 for post-graduate study. There he accepted a part-time job as a pianist with W. C. Handy, and his career goals changed. In 1923 he assembled a band widely recognized as the first large jazz orchestra, one that included such celebrated sidemen as Louis Armstrong, Coleman Hawkins, and Benny Carter. His most lasting work came in the swing era as an arranger for the Dorsey brothers and Benny Goodman. His style of big band jazz featured the reeds pitted against the brass section as well as highly rhythmic passages of ensemble chords by the entire band. Typical Henderson arrangements can be heard on recordings of “King Porter Stomp” and “Sometimes I’m Happy” by the Goodman band.

## Hendrix, Jimi (1942-1970)

Jimi Hendrix was the quintessential 1960s rock star. A black superstar in what was by then predominantly a white industry and an American who first found success in Great Britain, Hendrix embodied many of the contradictions of the late 1960s music scene. As a guitar player, he single-handedly redefined the genre’s most important instrument and remains widely considered the best ever to have played it. As a performer, he combined showmanship and musicianship in equal parts, and played the best remembered sets of the two best remembered music festivals of the period. His death at age 27 from an overdose of drugs (albeit prescription) completed the picture of what became a cultural archetype of the late twentieth century: that of the enormously talented, misunderstood rock star whose meteoric rise to fame is matched by a tragic fall and early death.

Johnny Allen Hendrix was born in Seattle on November 7, 1942, to 17-year-old Lucille Hendrix while his father, Al, was in the army. His early childhood was one of nonstop confusion, as he lodged with a variety of family members in houses and hotels as far away as Texas, California, and Vancouver. In 1946 Al changed his son’s name to James Marshall. Lucille died in 1958 when Jimmy was 15, the same year he got his first guitar. He began playing in the high school band until he dropped out in 1960. Arrested for riding in a stolen car, Hendrix received a suspended sentence by promising to sign up with the military. He became a parachutist in the 101st Airborne in 1961. He soon tired of the military life, though, and was discharged after breaking his ankle in 1962. At this point he became a professional musician, setting up his own group in Nashville with army buddy Billy Cox, and backing up a variety of rhythm-and-blues artists who came through town. In the spring of 1963, Hendrix left Nashville as part of “Gorgeous” George Odell’s band.

For the next three years, Hendrix backed up many of the biggest names in R & B—the Isley Brothers, Little Richard, Ike and Tina Turner, King Curtis, Sam and Dave—though he made no significant recordings. Anxious to make his own music, he settled in New York City in 1965 and by early 1966 was focusing his efforts on his own band, Jimmy James and the Blue Flames. They performed in the

Jimi Hendrix

Greenwich Village folk-rock club Café Wha? for a pittance in front of a scant audience, but his astonishing command of blues, soul and rock guitar styles greatly impressed fellow musicians like Mike Bloomfield, John Hammond Jr., and a small group of cognoscenti. In September of 1966, Animals bassist Chas. Chandler, who was looking to make his mark as a manager and producer, signed Hendrix and took him to England.

London was in the midst of a blues craze, led by John Mayall, the Rolling Stones, and Eric Clapton. It was immediately apparent that Hendrix was head and shoulders above the top local guitarists: Clapton, Jeff Beck, and Pete Townshend all made a point of seeing Hendrix wherever he was playing, before he had a recording contract or even a band. After sitting in at London’s hippest clubs, Hendrix formed the Jimi Hendrix Experience with two young white Englishmen, bassist Noel Redding and drummer Mitch Mitchell. At Chandler’s insistence, the group’s first single was a cover, “Hey Joe,” but the gifted guitarist soon demonstrated his skill as a composer and came up with the next single, “Purple Haze”—probably his best known composition. Though there is no evidence that Hendrix had taken LSD at that point, his generous use of guitar effects—unusual intervals like flatted fifths and sharp ninths, and bizarre lyrical themes—perfectly suited him to lead the psychedelic movement which was starting to sweep through rock ‘n’ roll.

Released in the spring of 1967, the first Experience album, *Are You Experienced?* was a tour de force, replete with complex guitar sounds that had never been heard before. By then, following the Beatles' lead, every British band that counted was scrambling to pile up as many weird sounds and special effects as they could, but none had Hendrix's touch for making consistent musical sense with them. Like Stevie Wonder a few years later, Hendrix humanized electronic effects, using the rapidly advancing technology of the late 1960s to communicate timeless emotions. And when it suited the material, he could create perfectly beautiful music without any effects at all (as in "The Wind Cries Mary," the third Experience single). The album also contained his first protest song, "I Don't Live Today," which he often dedicated in concert "to the American Indian." And he wasn't above exploiting the stereotype of the macho black male, as in "Fire."

The U.S. release of the album was supplemented with the "A" sides of the first three singles; two blues numbers were excised, helping create the myth of Hendrix as an ahistorical, purely intuitive talent. A highly anticipated performance at the Monterey Pop Festival in June 1967 marked the Experience's American debut, complete with guitar-burning theatrics, and cemented Hendrix's reputation as an international star, though his wild appearance and demeanor tended to be promoted at the expense of his musicianship. A second album, *Axis: Bold As Love*, followed close behind the first; it contained his most-covered composition, "Little Wing," the individualist anthem "If 6 Was 9," and an experimental tape collage, "EXP," plus innovative use of effects like wah-wah and phasing.

By the end of 1967 Hendrix's relationship with Chas. Chandler had deteriorated, and he took over the production reins himself for his next album, *Electric Ladyland*, at the same time keeping to a heavy touring schedule. Released as a double LP in October 1968, the set's sprawl offended some critics, and the UK cover, featuring photos of 21 nude women, caused some controversy, but it went to the top of the charts (the only No. 1 album Hendrix ever had in the United States) thanks to hard rock classics including "Voodoo Chile (Slight Return)" and the Bob Dylan cover "All Along the Watchtower." Despite their commercial success the Experience was having problems. Hendrix was arrested in Sweden in January 1968 after smashing up his hotel room, a lawsuit by unscrupulous producer Ed Chalpin was holding up the band's royalties, and Noel Redding was more interested in his side project, Fat Mattress. The Experience broke up in June 1969 after abortive attempts at a fourth album, and Hendrix went into seclusion in upstate New York while he tried to figure out his next move.

Even without a steady band, Hendrix's mystique was enough to earn him headliner status at the Woodstock Music and Arts Festival. Unfortunately, being the final act at a chaotic three-day show meant that he and his barely rehearsed rag-tag group finally went on stage at eight o'clock on Monday morning when most of the crowd had already left. If not for the sound and film crews on hand, Hendrix's performance might have gone virtually unnoticed. As it was, his ear-splitting rendition of "The Star Spangled Banner" became the symbol of the peace-and-love counterculture celebration. Offstage, however, Hendrix was overwhelmed by problems. He was busted for bringing drugs into Canada; his Band of Gypsies group with Buddy Miles and Billy Cox fell apart shortly after forming; nearly every dollar he made touring was sunk into the building of his own state-of-the-art recording studio, Electric Lady Studios. Several more attempts at recording went sour, even though a new band stabilized around Cox and Mitchell, and it wasn't until mid-1970, after the studio was completed, that Hendrix was able to make a serious push to finish a new

album, tentatively titled *First Rays of the New Rising Sun*. Recording was complicated by a judgment awarding Ed Chalpin rights to one album's worth of Hendrix material. The award was based on a 1965 contract Hendrix had signed with Chalpin that Chandler had inadvertently failed to buy out—not a bad return on a one dollar investment—and several songs intended for *First Rays* wound up on a hastily assembled live recording, *Band of Gypsies*, released in April 1970. Though seriously flawed, the album did include "Machine Gun," an anti-war number with a lengthy, breathtaking guitar solo. *Band of Gypsies* was the last album Hendrix would live to see released.

In August 1970, Hendrix reluctantly left New York, where the new album was nearing completion, for a European tour. He played in front of his largest audience yet at the Isle of Wight Festival, but the tour fell apart a few days later after a bad LSD trip sent Cox into paranoid delusions. On September 18, after spending several days visiting friends, Hendrix took several prescription sleeping pills belonging to girlfriend Monica Dannemann, fell asleep and never woke up—he choked to death in the ambulance en route to the hospital. Though Rolling Stone Brian Jones had died prematurely in 1969, Hendrix was the first well-known rock star to die of a drug overdose. What seemed a tragic isolated accident at the time soon became just another cliché surrounding the fast-paced rock 'n' roll lifestyle: Janis Joplin died of a heroin overdose two weeks later, and Jim Morrison followed in less than a year, giving anti-hippie pundits plenty of ammunition to attack rock music as hedonistic and self-destructive.

But Jimi Hendrix's three complete albums (dozens more, mostly of abominable quality, followed after his death) and countless live appearances had changed popular music more than any superficial moralizing could undo. Beyond his direct imitators—Stevie Ray Vaughan, Ernie Isley, Robin Trower, Funkadelic's Eddie Hazel and Mike Hampton—Hendrix's influence extended directly and indirectly to all pre-punk guitar players; Led Zeppelin and a horde of hard rock and heavy metal bands made their careers exploring areas Hendrix had opened up. In rock 'n' roll, almost any black man with a guitar was compared with Jimi Hendrix, including musicians as dissimilar as Vernon Reid and Prince; while Chuck Berry and Little Richard are remembered as musical founders but not as continuing sources of inspiration. Criticism is necessarily reductive: a white rock band will often be compared to the Beatles, the Stones or the Velvet Underground; a white male solo artist to Bob Dylan, Jim Morrison or Bruce Springsteen; a female singer to Janis Joplin or Joni Mitchell. But for black men in rock, Jimi Hendrix is the only archetype available.

## Henry Aldrich

The quintessential teenager of the 1940s, Henry Aldrich was born on the Broadway stage in 1937. He reached his widest audience

through radio, a string of “B” movies, and a television series. Henry Aldrich, who was likable, clean-cut, and monumentally prone to mishap, influenced a whole generation of teen characters on the radio, in movies, and even in comic books.

While college youths had become popular culture stereotypes in the 1920s, high school kids didn’t really get that much notice until a decade later. Swing music and the jitterbug craze helped put them on the map. Writer Clifford Goldsmith introduced Henry Aldrich in his play *What A Life!* According to radio historian John Dunning, Goldsmith “was virtually penniless and making his living on the high school lecture circuit when he wrote the play.” In 1938, the then immensely popular crooner Rudy Vallee invited Goldsmith to write some skits about the Aldrich Family for his weekly radio variety show. Next came a similar invitation from Kate Smith’s variety show, and by the autumn of 1939 *The Aldrich Family* was a regular weekly radio program, sponsored by Jell-O on NBC.

The family lived in a typical small town and consisted of Henry, his parents, and his older sister Mary. His high school pal Homer was underfoot virtually all of the time. The opening of the show became one of the best known, and most quoted, in radio. Henry’s long-suffering mom would call him—“Henry, Henry Aldrich!”—and he’d reply, in his harried adolescent croak, “Coming, Mother!” Ezra Stone, who had created the role on the stage, was the first radio Henry, with Jackie Kelk as Homer. House Jameson, who also played the radio detective known as the Crime Doctor, was the head of the household.

The show, though it touched on real family situations, was played for rather broad comedy. Preoccupied with girls, cars, and school, Henry saw no reason why he shouldn’t have all the rights and perks of the adult he felt he’d be any day now. His anxious and elaborate schemes and his frequent dreams of glory led him into all sorts of unforeseen complications. His parents, of course, rarely understood him, and often acted as though he might have contracted some rare disease that caused him to run amok on occasion, or behaved as if he might even be an alien invader masquerading as their son.

Paramount Pictures turned Goldsmith’s play into a movie in 1939, casting Jackie Cooper as Henry. The script was by Charles Brackett and writer-director Billy Wilder, whose several brilliant creations included the same year’s *Ninotchka* for Garbo. Cooper appeared in the second film in the series in 1941, with Eddie Bracken as his sidekick, and then turned the role over to Jimmy Lydon. Less handsome and gawkier than Cooper, Lydon made nine Henry Aldrich films. John Litel, who’d also been girl detective Nancy Drew’s screen father, was Sam Aldrich, and Olive Blakeney was Henry’s mom. She later became Lydon’s off-screen mother-in-law.

Henry and his kin were early arrivals on television, with *The Aldrich Family* premiering on NBC on October 2, 1949. An actor named Robert Casey was the first of five juveniles who took turns enacting the role of Henry Aldrich. Jackie Kelk moved from radio to TV to play Homer, and House Jameson returned to repeat Sam Aldrich. Three actresses portrayed Mrs. Aldrich: Lois Wilson (1949, 1951), Nancy Carroll (1950-51), and Barbara Robbins (1952-53). Jean Muir, a movie actress in the 1930s and 1940s, had been scheduled to take over the part in 1950, but because of her liberal sympathies she found herself listed in *Red Channels*, the right-wing publication dedicated to rooting out alleged Communist sympathizers from the entertainment business. Muir was blacklisted by the sponsor and the network and never got the chance to say, “Henry, Henry Aldrich!”

*The Aldrich Family* remained on radio and television until 1953, when Henry stepped aside to make way for a new breed of teenage stereotypes.

## Henson, Jim (1936-1990)

Puppeteer and filmmaker/director Jim Henson was the genius behind the world famous puppet creations known as Muppets. By the end of the twentieth century, Henson’s name was synonymous with modern puppetry, children’s television programming, and family based entertainment. With his talented team of artists, he revolutionized the ancient art of puppetry by fusing it with twentieth century technology—first through his television shows *Sesame Street* (1969) and *The Muppet Show* (1976), then through films and computer animation. Yet Henson was not famous solely for his technical innovations. His work expressed a strong moral vision—humorous, uplifting, full of tolerance, and love—that viewed all individuals as worthy of respect. It was this vision, expressed through his life-like puppets, that transcended lines of age and culture (Henson’s work has been seen in 120 countries), and brought Jim Henson praise as his century’s greatest entertainer-educator.

## Hep Cats

An important term in the history of African American slang, a “hep cat” was a jazz aficionado in the marijuana-using urban subculture of the 1940s and 1950s. A hep cat’s essential qualities included a free-spirited rejection of societal convention, intense creativity, and an unflagging rejection of all things “square.” First entering the language in the late 1930s, the term was an amalgam of “hep,” an older term meaning “smart” or “aware,” and “cat,” slang for “man.” Its roots stretch back to the Wolof language of Africa where

“hepi” meant “to see,” and “hipi” meant “to open one’s eyes,” while “hipicat” translated as “wise” or “informed.” As hep cat was appropriated by white beatniks in the 1950s, African Americans turned to using fresher terminology like “hip” and “hipster.” Continuing to evolve with stylistic changes in American musical and drug-related subcultures, its roots survive in terms like hippie and hip-hop.

## Hepburn, Audrey (1929-1993)

From her first starring role as a princess in *Roman Holiday* (1953), Audrey Hepburn, the daughter of an Anglo-Irish banker and a Dutch aristocrat, was lauded for bringing a stately “European” elegance to Hollywood. Her director in 1954’s *Sabrina*, Billy Wilder, declared: “After so many drive-in waitresses in movies, here is class.” Hepburn’s androgynous looks and waifish physique—photographer Cecil Beaton called her “the gamine, the urchin, the lost Barnardo boy”—challenged and redefined the dominant popular image of femininity in the fifties, the curvaceous, all-American bombshell typified by Marilyn Monroe. Hepburn often played royalty (*Roman Holiday*; *War and Peace*, 1956) or a poor, modest girl who achieves a fairy-tale rise to high society (*Sabrina*; *Funny Face*, 1957; *My Fair Lady*, 1964). Though cast somewhat against type as a scandalous socialite in *Breakfast at Tiffany’s* (1961), Hepburn’s Holly Golightly, as Robyn Karney observes, “passed into the iconography of the 1960s.”

## Hepburn, Katharine (1909—)

Always a role model for female independence, self-determination, and integrity, actress Katharine Hepburn is thought by many to be one of the most monumental and enduring of all of Hollywood’s stars. At the end of the twentieth century, Hepburn holds the record for Oscar wins (four) and nominations (twelve).

Hepburn spent her early years in Hartford, Connecticut, where her parents were liberal intellectuals who did not raise their children along traditional sex roles, but encouraged them to excel at all their endeavors and expand their boundaries. Her father was a successful physician and her mother an active suffragette, which gave Hepburn an expanded view of woman’s role from an early age.

Audrey Hepburn

Hepburn was drawn to acting early and participated in local productions before going to Bryn Mawr and appearing in college theatricals. She graduated in 1928 and made her Broadway debut in *The Warrior’s Husband* (1932) for which she garnered critical praise. She was then approached by Hollywood, but thinking Hollywood was not “legitimate,” she demanded an extremely high salary, which, to her amazement, RKO accepted. Hepburn made her screen debut in 1932 in *Bill of Divorcement* starring John Barrymore, which was both a critical and box-office success. Upon her arrival in Hollywood Hepburn refused to conform to the standard starlet mold. She preferred to wear slacks to revealing dresses, avoided publicity, and closely guarded her private life. She shunned the party crowd of Hollywood and demanded to be dealt with respectfully.

She won her first Oscar for her third film, *Morning Glory* (1933), in which she played the aspiring actress/understudy who, after many manipulations, becomes an overnight success when the veteran actress has a breakdown that necessitates the understudy taking her place. The same year she appeared as Jo in *Little Women*, a role that she found personally rewarding. One of her next projects was the screwball comedy *Bringing Up Baby* (1938), which ranks as one of the best examples of the genre. Hepburn portrayed the madcap heiress

Susan Vance, who falls in love with an absentminded paleontologist (Cary Grant) and enlists his aid in caring for a tame leopard named Baby to keep him from marrying his staid assistant. Later that same year Hepburn appeared in *Holiday*, again with Grant.

For some reason, film exhibitors branded her “box office poison” despite her many successes, and Hepburn left Hollywood for Broadway, where she appeared in *The Philadelphia Story*, forgoing a salary in favor of a percentage of the profits and screen rights. It was a huge hit and enabled Hepburn to return to Hollywood with the upper hand. She sold the screen rights to MGM but maintained creative control, which allowed her to choose the director and her costars (Cary Grant and James Stewart). The film broke attendance records and won Hepburn the New York Film Critics Award as well as her third Oscar nomination.

Her next film, *Woman of the Year* (1942), paired her for the first time with Spencer Tracy and began a twenty-five-year-long relationship that ended only with Tracy’s death. On-screen they were a remarkable team that made eight more films together: *Keeper of the Flame* (1942), *Without Love* (1945), *The Sea of Grass* (1947), *State of the Union* (1948), *Adam’s Rib* (1949), *Pat and Mike* (1952), *Desk Set* (1957), and their final film, *Guess Who’s Coming to Dinner?* (1967). Offscreen they remained devoted to one another and were seldom seen apart. Hepburn did appear in several films without Tracy during this period. In *African Queen* (1952) she portrayed an uptight spinster who falls in love with Humphrey Bogart’s reprobate supply-boat “captain.” She also appeared in *Summertime* (1955); *The Rainmaker* (1956); *Suddenly, Last Summer* (1959); and *Long Day’s Journey into Night* (1962).

Katharine Hepburn

She retired from the screen for several years as Tracy became more ill but both returned in 1967 to appear in their last picture together, *Guess Who’s Coming to Dinner?*, for which she won her second Oscar. She won her third Oscar for *The Lion in Winter* (1968) in which she portrayed Eleanor of Aquitaine, and her fourth for *On Golden Pond* (1981), for which she also won the British Academy Award.

While her work on television has not been as extensive, her performances have been of consistent quality. She received Emmy nominations for her performances in *The Glass Menagerie* (1973) and *The Corn Is Green* (1979), and won an Emmy for her portrayal of an elderly woman who finds *Love among the Ruins* (1975). She has also starred in several television movies including *Mrs. Delafield Wants to Marry* (1986), *Laura Lansing Slept Here* (1988), *The Man Upstairs* (1992), and *This Can’t Be Love* (1994).

## Herbert, Frank (1920-1986)

Science fiction writer Frank Herbert is ranked among such well-respected authors of imaginary worlds as J. R. R. Tolkien, C. S. Lewis, and Isaac Asimov. Though he wrote more than twenty novels and several short stories, his fame is linked to his “Dune Chronicles.” His first book in the series, *Dune* (1965), won the first-ever Nebula award and shared a Hugo award for best novel. Although initially rejected by twenty publishers, the book became the best-selling science fiction book in history, with more than twelve million copies sold. By the end of the twentieth century the book had not yet gone out of print. Intended as the beginning of a trilogy, *Dune* instead spawned five sequels, with a sixth left unfinished at the time of Herbert’s death in 1986. *Dune* was made into a major motion picture in 1984. The series, set on the planet of Arrakis, or Dune, follows the history of the Atreides family over thousands of years. The “Dune” saga is considered one of the greatest science fiction stories ever written.

Born in Tacoma, Washington, in 1920, Frank Patrick Herbert possessed a wide-ranging mind. He attended the University of Washington for a year in 1946 before becoming a reporter. He worked as a reporter and editor of west coast newspapers, including the *Glendale Star* (California), the *Oregon Statesman*, the *Seattle Star*, and the *San Francisco Examiner*, between 1939 and 1969, and later an educational writer for the *Seattle Post-Intelligencer* from 1969 to 1972. With the success of *Dune* in 1965, however, Herbert was able devote his attention to his novel writing. But he did continue to lecture and act as a social and ecological consultant.

A strong believer in self-reliance and ecological harmony, Herbert generated his own energy on his small farm with solar heating, methane gas from chicken dung, and wind power (from an

improved windmill design for which he was awarded a U.S. patent). Herbert wove many of his ecological ideas into all his novels. Throughout his work Herbert provides his readers with complex adventure plots and probing questions about the cosmos, human nature, and society.

*Dune* is a work of extraordinary complexity, telling the story of the desert planet Arrakis and its inhabitants. Set 25 centuries in the future, the novel introduces a universe that is controlled by two opposing political powers, the Imperium and the Great Houses. The interstellar civilization is a precarious balance between the political, military, and economic forces of the largest powers as well as the disruptive smaller independent organizations, including the Spacing Guild (which has a monopoly on interplanetary travel), the Bene Gesserit order, the massive CHOAM trading company, and the Bene Tleilax. The story is a remarkable metaphor of late twentieth-century American society with the blending and balancing of political, economic forces with religious, cultural, and business interests—and of course the ever present, but largely ignored, ecological phenomena. *Dune* successfully created the most complete and detailed imaginary world ever before written.

The success of *Dune* was a turning point in science fiction publishing. The book's popularity broadened the audience of science fiction. It also "paved the way for large advances, bigger printings, best-seller status, and heavy subsidiary sales for many other writers," according to Willis E. McNelly. The ecological thinking examined in *Dune* made it a college campus cult classic, in fashion with J. R. R. Tolkien's *Lord of the Rings* or the original *Star Trek* series. The attention directed toward *Dune* in the 1970s and 1980s was in many ways the predecessor of the type of fandom that sprang up around *The X-Files* in the 1990s. Many young people strived to become more ecologically minded, patterning themselves after Herbert's character Liet Kynes, the planetary ecologist, who was aware of and concerned with the consequences of human actions on the environment. The novel also attracted those interested in the effects of drugs on behavior. The book discussed a substance called spice, which increased awareness and cerebral functions and allowed Mentats (human computers) to pursue their vocation in a world that has banned thinking machines. Users of controlled substances claimed many of the same effects as those discussed in *Dune*. Although illegal, hallucinogens called "smart drugs" were used in areas of California to aid complex problem solving and another street drug, named "ecstasy," reportedly improved sexual awareness and pleasure.

Despite the intense interest in turning *Dune* into a movie, a script written by David Lynch, and a 40- to 50-million dollar budget, the resultant film flopped in 1984. But the disappointing film did not damage the cult-like interest in Herbert's original material. By the late 1990s, New Amsterdam Entertainment (NAE) announced that, in cooperation with ABC and The Sci-Fi Channel, it would produce a six-hour miniseries adaptation of *Dune* (although the future of this series is uncertain).

Herbert's "Dune Chronicles" inspired several popular musicians. Iron Maiden, a heavy metal band, performed what they called a Dune song, "To Tame a Land," on their 1983 *Piece of Mind* album. The Blind Guardian released a Dune inspired song, "Traveler in Time," from *Tales From the Twilight World* in 1991. A German techno band called itself Dune. The band's electronic instrumentals were popular in American techno dance clubs in the mid-1990s where the oft repeated refrain of "the spice must flow" could be heard.

Some of the jargon found in *Dune* has infiltrated popular speech. Many analogies have been made between the *Dune* storyline, with its

obsession over the spice melange, and the Middle Eastern oil reserves and their influence on the global economy. "The spice must flow," a quote from a third grade guild navigator, is referred to quite often in its modern version "the oil must flow." In addition, statements such as "long live the fighters," "the gom jabbar," and "fear is the mind killer" are as ingrained in popular jargon as "may the force be with you" from *Star Wars* and "Grokking" and "Sharing Water" from *Stranger in a Strange Land* by Robert Heinlein.

The *Dune* story has been adapted into several games. In 1979, Avalon Hill created a board game called "Dune the Board Game" based on the novel. Five years later, Parker Brothers developed a board game titled "Dune," which was based on the movie. Computer versions of the *Dune* saga soon appeared on the market. In 1992, the first computer *Dune* game combined both strategy and adventure. A sequel, titled "Dune II: The Builders of Dynasty," followed in 1993. An improvement over the first, *Dune II* became an even bigger hit. It was awarded the 1993 Strategy Game of the Year Award. The continuing success of *Dune II* led to the introduction of "Dune 2000," released in 1998. "Dune 2000" is a real-time strategy game that can be played singly on CD-rom, over the Internet, or over local area networks. The game is focused on military strategy and political intrigue with Fremen warriors battling legions of Sardaukar and House Harkonnen plotting against House Atreides while the Emperor, the Guild Navigators, and the Bene Gesserit reek havoc where they can. Five Ring Publishing produced "Dune: The Eye of the Storm," a customizable card game, which was very popular in the 1990s. Though the games follow much of the *Dune* saga, none have incorporated any serious consideration of ecology, which was one of Herbert's central ideas in the series.

Herbert had considered *Dune* a "training manual for consciousness." Others agreed and the *Dune* Chronicles have been used in architecture, literature, and philosophy, among other courses at universities across the country. Herbert attributed the popularity of *Dune* in college classrooms to the genre of science fiction, which he noted "lends itself to that because we're dealing with ideas a great deal of the time." Indeed, Herbert's greatest contribution lies in his imaginative ideas.

## ***Hercules: The Legendary Journeys***

Initially starting out in 1993 as a made-for-TV movie, *Hercules: The Legendary Journeys* became a syndicated television series in the 1995-96 television season. Starring Kevin Sorbo as the half-god Hercules, the series combined action, special effects, and camp to create one of the most popular syndicated shows of the 1990s, rivaling the *Star Trek* franchise and *Baywatch* for ratings. In fact, the show spawned a number of spin-offs and imitators.

The show's executive producers, Sam Raimi (the writer and director of cult favorite movie *The Evil Dead*) and Ron Tapert, combined unlikely elements to make the show a success. The show deviated from previous incarnations of the Greek hero played by such

musclemen as Steve Reeves and Lou Ferrigno. Sorbo, while lean and muscular, was not just a muscle bound hero. Though he usually beat up villains and groups of bad guys in highly choreographed and often farcical fights, he was chiefly portrayed as a hero with heart. The show's title narration told the story: It was a time when the gods were cruel and played with mortals. Hercules, the son of Zeus and the mortal Alcmena, stood up for the common man against his family, the gods.

But just portraying Hercules as champion of the people didn't account for the show's popularity. Many reviewers gave credit to the fact that the show used pop culture references and a healthy dose of camp to entertain a broad spectrum of the television audience. For instance, the show didn't care about historical or mythological accuracy. It went instead for hipness and, at times, silliness. In one episode titled "Porkules," Hercules was transformed into a super-strong pig. Ares, the god of war, was always dressed in leather as was the goddess Discord. Their choice of attire was the source of many double entendres about their possibly kinky preferences. Apollo, the sun god, was portrayed as riding a type of golden snowboard and talking like a late-twentieth-century adolescent.

The show offered plenty of action. Almost every episode featured Hercules and Iolaus, or one of the other heroes, battling a group of armed men. These scenes feature Hercules and his cohorts butting

heads, throwing men through the air, doing flips, and throwing old fashioned punches. While violent, most shows had no deaths. Occasionally though, a battle scene was just that, a battle with fatalities. Hercules also faced off against special effects monsters, such as Echidna.

The show also displayed wit and imagination. The producers did a post-modern episode that featured the cast looking for Kevin Sorbo, the actor. Another episode was a retelling of the movie *Some Like It Hot*. The producers and writers of the show weren't afraid to take chances.

Besides Hercules, the show had a cast of regular characters. Hercules's constant sidekick throughout the first five seasons was Iolaus, played by Michael Hurt. Ares, played by Kevin Smith; Autolycus, the King of Thieves, played by Bruce Campbell; and Salmeoneus, played by Robert Trebor, were also regulars. On some occasions, the show never even featured Hercules but focused on the supporting characters.

One of the characters to appear on the series was Xena, Warrior Princess. Xena's character was spun off into its own series, and actually became more popular than *Hercules*. The two shared supporting casts and occasionally crossed over from one show to the other. The characters were also the co-stars of an animated movie. A second spin-off of the show was *Young Hercules*, a show broadcast on Saturday mornings on the Fox network. The show featured the adventures of the juvenile Hercules and Iolaus.

After *Hercules* scored big in the ratings, other companies brought out mythic figures to try to cash in on the show's success. However, such shows as *Sinbad* and *Tarzan* didn't have the popular appeal of *Hercules*. Besides television, Hercules and Xena found a large home on the Internet with many fan pages devoted to both shows. Computer games and multi-player on-line games featured the characters as well.

## Herman, Woody (1913-1987)

Along with Benny Goodman and Artie Shaw, Woody Herman was one of a triumvirate of clarinet-playing band leaders in the big band era. Playing a high-pitched instrument that could cut through the sound of the ensemble in those days of poor amplification, Herman for more than fifty years headed one of the most popular and innovative of the bands in the swing era. His greatest contributions to jazz history came from his ability to organize and sustain a talented big band that was wholly dedicated to the cutting edge of jazz during the severe economic trials of the Great Depression. His band, Herman's Herd, spawned a number of great jazz soloists as well as writers and arrangers of major importance.

Born Woodrow Charles Thomas Herrmann of German parents in Milwaukee in 1913, Herman seemed destined for the spotlight from the age of nine. He toured the state of Wisconsin for eight weeks as one of a troupe of actors who played a live prologue to the

Woody Herman

screening of silent films. That same year Herman began studying the alto sax and clarinet. His teacher, Herman recalled, was Art Beuch, "an old German fellow who would take nothing but hard work." His advice to the budding jazzman was: "Practice until you turn blue and your lip is numb and your teeth hurt and you may accomplish something."

When Herman began playing in local dance bands in high school, he became dedicated to the life of a jazzman. He left home at seventeen with a band led by Tom Gerun, playing in a reed section that included Tony Martin, who later gained fame as a singer and film star. After unsuccessfully trying to form his own band, Herman joined the Isham Jones orchestra in 1934 and was featured on tenor sax, clarinet, and vocals on the band's Decca records. When the band folded two years later, the 23-year-old persuaded key sidemen to join a band he was organizing on his own. In that year—the depth of the Great Depression—Herman ran his band on a cooperative, share-the-profit basis. Featuring the blues as well as some pop songs in their repertoire, the band slowly gained fame, soon to be enhanced in 1939 by their biggest hit, the upbeat blues piece "Woodchopper's Ball," which ultimately was to reach the five million mark in sales.

Still overshadowed by the Basie, Ellington, and Goodman bands, Woody Herman's Herd had begun to attract national attention. Dave Dexter, writing in *Downbeat* in January 1940, suggested that a part of the band's problem in finding major bookings was the delay caused by the band members (as shareholders) voting on each booking proposition.

In 1941 the band filmed a musical short for Warner Brothers in Brooklyn, and later that year they went to Los Angeles to be featured

in a Universal picture called *What's Cookin'?*. The Andrews Sisters and Donald O'Connor also appeared in this "typical wartime musical," as Herman called it.

When the band began a new recording contract with Columbia in 1945, it was coming under the strong influence of the new bebop style of jazz played by Charlie Parker and Dizzy Gillespie. Joining the band at this time were three devout boppers: Neal Hefti, Shorty Rogers, and Pete Candoli, and Herman's First Herd was soon widely known as one of the most advanced and innovative bands of its era. Davey Tough, the perfect drummer for the new Herd, received belated acclaim when he raised the band to new heights in 1944-45 on a series of nationwide radio programs. His unique style can be heard on such Columbia record hits as "Apple Honey," "Laura," and "I Wonder."

In 1946 the great Russian composer Igor Stravinsky composed *Ebony Concerto* expressly for the Herman band, adding to the band's prestige after a sold-out performance in Carnegie Hall. That year the band won the *Downbeat*, *Metronome*, *Billboard*, and *Esquire* polls. Gunther Schuller, in his book *The Swing Era*, attributed this great success to the highly original arrangements by Ralph Burns and Neal Hefti and to the band's playing "night after night with an infectious exuberance, an almost physically palpable excitement and a never-say-die energy."

In 1986, still active at age 73 after fifty years as bandleader, Herman led his band on a jazz cruise aboard the *SS Norway*, and after spending time in the hospital with heart problems, led the Herd in November at the Kennedy Center awards ceremony in Washington. He died in October of the following year.

## Herpes

The Herpes simplex virus I (oral) and II (genital) are persistent, embarrassing, and often devastating sexually transmitted diseases. Symptoms can include small painful blisters or lesions around the lips, nose, mouth (cold sores), or genitals; fever; headaches; swollen lymph glands; and feelings of isolation and depression. Herpes spreads through direct contact with infected areas, and is only detectable with a blood test as the virus can remain dormant indefinitely. After an initial outbreak, herpes can disappear for months, only to recur during periods of stress or a weakened immune system. Between 50 and 80 per cent of the American adult population is infected with a form of herpes, yet only one third of these carriers ever experience symptoms. There is no known cure for herpes, but it is not life threatening, and advances in treatment have made living with herpes more manageable and less stigmatizing.

## Hersey, John (1914-1993)

Born in China to missionaries, John Hersey began his journalism career as a correspondent for *Time* and went on to cover World War II for that magazine and *Life*. He had already won a Pulitzer Prize for a World War II novel he had written—*A Bell for Adano* (1944)—when in 1946 *The New Yorker* published in a single issue his most famous and enduring work, titled simply *Hiroshima*. The 31,147 word nonfiction story described the experiences of six survivors of the atomic bombing by the United States of the Japanese city. The bomb killed 78,150 people, injured 37,425, and left 13,983 missing. Forty years after *Hiroshima* appeared, Hersey updated the story with an epilogue telling how the lives of the six survivors had progressed. Overall, he published 25 books during his career.

## Hess, Joan (1949—)

Joan Hess has infused her mystery writing with her knowledge of her home state of Arkansas and its regional culture. She has two important mystery series—the first features Claire Malloy, a book store proprietor who is the widow of an English professor, and the second is set in Maggody and features Arly Hanks, who returns to Maggody after an unsuccessful marriage, as its central character. Both series are set in Arkansas and are marked by a kind of off-center humor that enlivens the action and rounds out the characters. Among the books in the two series are *Strangler Prose*, *The Murder at the Mimosa Inn*, *Dear Miss Demeanor*, *A Diet to Die For*, *A Holly Jolly Murder* (all Claire Malloy), *Malice in Maggody*, *Mischief in Maggody*, *Maggody in Manhattan*, *O Little Town of Maggody*, and *The Maggody Militia* (all Arly Hanks). In addition, Hess has another series featuring Theo Bloomer, written under the name Joan Hadley. Hess has won the American Mystery Award, among others, and is president of the American Crime Writers League.

## Heston, Charlton (1924—)

"'Hard' is what I do best," Charlton Heston once told a photographer. "I don't do 'nice.'" Strange words, perhaps, coming from an actor who has specialized in playing symbols of rectitude

such as Moses, Judah Ben-Hur, and even Jehovah Himself. Yet this steely-eyed, jut-jawed performer has excelled at infusing his heroic portrayals with an almost fearsome iconic power. He has brought a comparable flintiness to his civic life as a firearms activist and itinerant right-wing gadfly.

A speech and drama graduate of Northwestern University, Heston was a stolid if unspectacular presence in Westerns and war pictures of the 1950s. He made his big (Red Sea) splash playing Moses in the 1956 epic *The Ten Commandments*. That Biblical classic started him on a long string of historical parts, including the title roles in *Ben-Hur* (1959), for which he earned a Best Actor Oscar, and *El Cid* (1961). He also played a muscular Michelangelo in *The Agony and the Ecstasy* (1965).

In 1968, Heston made *Planet of the Apes*, a film *Entertainment Weekly* called “the *Citizen Kane* of guilty pleasures.” As George Taylor, an astronaut stranded on a world ruled by simians, Heston chews the scenery with the voracity of a starving dog attacking a T-bone steak. Glowering, grimacing, and barking at his ape captors through clenched teeth, Heston is the apotheosis of Nixonian macho. “Damn you! God damn you all to hell!” he rails into the empty sky at the film’s climax—and we feel like lining up obediently to face the brimstone.

*Planet of the Apes* proved a career turning point for Heston—the precise moment he made the transformation from respected leading man to endearing camp figure. He solidified that newfound status with two early 1970s science-fiction films, *The Omega Man* in 1971 and *Soylent Green* two years later. Both pictures traded on his macho man persona, affording him copious amounts of screen time with his shirt off and an automatic weapon in his hand. The reactionary subtext was unmistakable. In the first film, he fights off an army of hippie zombies; in the second he vainly tries to save the planet from government-sponsored euthanasia (those damned liberals!). In both movies he ends up prostrate (“Soylent Green is PEE-pullllll!!!”), sacrificing his own life for humanity, in a crucifixion pose. Perhaps Heston wished to end his career by playing every possible permutation of the godhead.

There were other prominent roles for Heston in the 1970s. He did a string of disaster movies, most notably *Earthquake* (1974), but turned down the lead in *Jaws* when he had tired of them. After growing too old to carry a picture by himself, he settled comfortably into character actor status. He was used, effectively, by Kenneth Branagh as the Player King in the British auteur’s 1997 production of *Hamlet*.

For the most part, however, Heston concentrated on political endeavors. He spoke out often and endlessly on right-wing causes, from family values to “white pride.” “I’m pissed off when Indians say they’re Native Americans,” he railed to *Time* in 1998. “I’m a Native American, for Chrissakes!” Especially dear to Heston’s heart was the right to gun ownership. In 1997, “Moses,” as his critics invariably derided him, was elected first vice president of the National Rifle Association (NRA). The next year the actor ascended to the presidency itself, ousting a candidate who was deemed “too conservative” by the NRA rank and file. While liberals may have shuddered at the thought of Charlton Heston being considered a moderate alternative, the actor continued to provide them with red meat for their fundraising letters. In speeches, he publicly called for the return of a society where one could “love without being kinky . . . be white without feeling guilty” and other back-to-the-future nostrums.

## Higginson, Major Henry Lee (1834-1919)

A Boston Brahmin who had been a major in the Civil War, Higginson was the sole founder of the Boston Symphony Orchestra in 1881. He set the example for other businessmen to establish a tradition of noblesse oblige in the performing arts that in Europe had initially been the province of landed aristocracy.

Higginson approached the task with a unique blend of “boosterism,” sound business principles, and overtones of evangelical Christianity and patriotism. He would not tolerate any deviance from the high musical and operational standards he set by the professionals he engaged. Higginson believed firmly that men who had survived the Civil War (he himself had been wounded) had a moral obligation to make America a better country, which meant creating better cultural institutions. It also meant a willingness for an aristocracy—in America it would be comprised of businessmen—to step forward and take responsibility for those developments.

## High Noon

Director Fred Zinnemann’s film *High Noon* was made during the McCarthy era. Consequently, it has been invested with political significance way beyond the striking simplicity of its plot. The allegorical claims that are made for it originated with its screenwriter Carl Foreman, a victim of the McCarthy witchhunt in Hollywood, who professed to see his script as an allegory of his own situation. Fred Zinnemann denied this interpretation, considering it the story of a man driven to act in accordance with his own conscience, while conceding that the town in which the action takes place is “a symbol of democracy gone soft.” The nature of the film’s message continues to challenge the film scholars, historians and critics who examine and analyze it, but in the annals of popular culture it remains a classic Western, one of the best of all time. To legions of ordinary moviegoers, *High Noon* conjures the lasting image of Gary Cooper’s weary and reluctant hero, the young Grace Kelly’s ice-maiden beauty, Dmitri Tompkin’s haunting theme song, “Do Not Forsake Me, O My Darling,” and Floyd Crosby’s atmospheric black and white photography.

Carl Foreman based his screenplay on “The Tin Star,” a two-page magazine story. Played out in “real time”—the 90 minutes in which the incidents take place correspond to the 90-minute running-time of the film—denoted by Zinnemann’s artful use of a clock as a

Gary Cooper as Sheriff Will Kane in the film *High Noon*.

marker that contributes to the tension, the story begins 10:40 a.m. on a Sunday morning in the fictional frontier town of Hadleyville. Sheriff Will Kane (Gary Cooper), is at his own wedding reception, prior to retiring and leaving town to start life afresh with his young quaker bride, Amy (Grace Kelly). During the festivities, however, Kane is warned that Frank Miller (Ian MacDonal), a murderer whom he had helped to convict, has been released from the penitentiary. Miller is heading for Hadleyville to exact revenge by killing Kane and will arrive on the 12:00 noon train. Three of Miller's old cohorts are already waiting at the otherwise deserted train depot to escort him into town for the fatal shoot-out.

Amy implores her new husband to leave town immediately but, determined to face out Miller and rid the town of the killer's malign influence, he ignores her pleadings, and those of others, including Helen Ramirez (Katy Jurado), his former lover, who urges him to take his new bride and escape to safety. For an hour, between 10:45 a.m. and 11:45 a.m., Kane attempts to drum up support from among the townspeople, but nobody is willing to stand by him. A number of people begin to throw their belongings into wagons, preparing to leave town temporarily before the trouble starts at noon; even Kane's deputy, resentful at having been passed over for the job in favor of a

stranger, deserts him. Amy, too, prepares to leave—on the same train that is bringing Miller to town—and, while waiting at the hotel, learns from the clerk that many inhabitants of Hadleyville would like to see Miller kill her husband because they want a return to the kind of town where saloons and gambling are allowed to flourish.

The noon train arrives on time. Frightened and alone, but wedded irrevocably to his own moral code, Kane makes out his will and prepares to face the gunmen, who ride into town. He ambushes one, and kills a second in a shoot-out. Hearing the gunfire, Amy rushes to her husband's aid, shoots another of Miller's henchmen in the back, but is seized by Miller himself as a hostage. During the struggle that ensues in her trying to free herself, Kane is able to shoot Miller dead. He throws his badge in the dust and rides out of the deserted town with his wife.

When *High Noon* was released it was not an immediate hit. In the strained climate of the times, that gesture of Kane's—throwing away his badge—was interpreted by some as an insult to Federal authority and led to accusations of subversion. As Zinnemann interpreted it, Kane's action was simply intended as "a gesture of contempt for a craven community." The film captured the public imagination only gradually, but its excellence was recognized in the winning of four Academy Awards (music score, title song, editing, and best actor) and three nominations (picture, screenplay, and director), and over the years it came to gross several million dollars of profit.

While widely viewed as a "classic" Western, several commentators consider *High Noon* a realist Western, providing a documentary depiction of a place and its people that was undoubtedly representative of a hundred towns across the frontier during the 1870s. It can also be read as a commentary on the genre itself, one that observes the classical unities of time and action. Some have even credited the film with inaugurating a new subgenre, the "adult western," in its mature treatment of its otherwise familiar "good vs. evil" theme. What cannot be denied, however, is that *High Noon* changed the Western genre by both streamlining and rethinking it as both an extension and a commentary upon the classic tradition.

As opposed to the ultimate redemption of townspeople in such later films as *The Magnificent Seven*, the citizens of Hadleyville are craven to the end. This is, of course, in direct opposition to the mythology of the West, in which the venality of the common man is redeemed by a folk hero whose bravery in the face of overwhelming odds inspires them to rise above themselves for the common good. On the other hand, the contradictory currents running through the town (development vs. frontier lawlessness) and the ambivalence of the citizens who, each for their own reasons, refuse to side with Kane can be taken to represent the currents of the American political climate in the 1950s. This interpretation is underpinned by the deliberate vagueness of the town's location and the film's exact historical time period. Thus, on an allegorical level, Hadleyville could be any town at any point in history, where the common man falls prey to cowardice and fear, and the high moral courage of the few is severely tested. The chronological symmetry of the film and the relentless progress of the ever-present clock not only helps create and maintain tension, but counterpoints Kane's agonizingly slow progress in trying to recruit help and decide his course of action.

In its characterizations, the film offers an anti-mythological touch that sets it apart from most examples of the Western genre. Will Kane does not conform to the usual heroic figure that audiences of the 1950s had come to expect. Both the character and the man who portrayed him are somewhat past their prime. Cooper, who was not in the best of health, appeared haggard and drawn, and conveyed an air

of world weariness—precisely the quality that director Zinneman had in mind. The female characters also depart from the female stereotype found in most Westerns. Though both Helen and Amy are emotionally involved with Will and are diametrically opposed (Helen is a fiery Hispanic businesswoman, Amy a Nordically cool and devout Quaker pacifist), both are highly principled and intelligent and cannot be pigeonholed. They are allowed to move the action forward by their principled stands, and are able to bond across racial lines while respecting their differences. Both survive the action and give strong evidence of strength and independence. This was not only rare in traditional bound Westerns, but flew in the face of 1950s American social convention when women had not yet assumed positions of power.

In the opinion of many, *High Noon* has continued to stand head and shoulders above most frontier Westerns in its depiction of ethical conflicts and ideas that cannot be confined to one particular genre, place, or time, but which always seem to manifest themselves in their most elemental form in the Western. The film has been credited as a significant influence on later Westerns, inspiring such thoughtful and revisionist films as *Pat Garrett and Billy the Kid* (1973), *Butch Cassidy and the Sundance Kid* (1969), *The Wild Bunch* (1969), *High Plains Drifter* (1973), *The Shootist* (1976), and *Unforgiven* (1992), all of which dealt with the ending of the Western way of life and the death of the “six-gun mentality.”

## Highway System

In the mid-1950s, at a time when Detroit automobile manufacturers sold 7.92 million cars in one year and 70 percent of American families owned automobiles, the American road system was still noted for its inadequacies. No four-lane highways existed, except for the eastern toll roads, and expressways were to be found only in the nation’s cities. President Dwight Eisenhower, who once made the trip from coast to coast along the nation’s roads, was well aware of the problems and became the originator of the interstate highway system. Building a national highway system was more expensive and elaborate than most New Deal programs. In addition, the highway system shifted economic power to the Sunbelt, bypassing the main streets and roadside towns that had been travel waystations, and homogenizing

American roadside culture. By making longer commutes possible, the highways changed how many of us worked.

Americans have had a long fascination with transcontinental travel and with linking both coasts by roads. The first continental crossing by automobile was made in 1903 by physician H. Nelson Jackson, who drove from San Francisco to New York in 65 days. As early as 1911, legislation was introduced in Congress calling for seven national highways, one of which was to be transcontinental.

Traveled Americans at this time were often more familiar with Europe than with their own country. New York socialite Emily Post’s 1915 cross-country automobile trip illustrates how little faith Americans had in the transcontinental road system. When Post asked a well-traveled friend the best road to take across the country, she replied, “the Union Pacific (Railroad).” Her friend greeted Post’s intentions with incredulity:

Once you get beyond the Mississippi the roads are trails of mud and sand. . . . Tell me, where do you think you are going to stop? These are not towns; they are only names on a map, or at best two shacks and a saloon! This place North Platte why, you couldn’t stay in a place like that!

Post’s friend might seem to be the quintessential ethnocentric Manhattanite, but her concern was not misplaced. Most of the improved roads early in the century were centered around cities. Often, “improvement” merely meant that the road was graded; there was no asphalt or concrete, and brick and gravel roads were scarce. If the rain did not make roads impassable for motorists, a trip during dry weather was bumpy and dusty.

After the formation of the Lincoln Highway Association in 1913, the first coast-to-coast highway was completed by 1915, running from San Francisco to New York, at a cost of \$10 million. Sensing the commercial importance of a continuous route, towns and cities in between the coasts competed to have the highway run through their towns. Known as “America’s Main Street,” the Lincoln Highway “was the last, great nineteenth-century trail,” Lyell Henry, Iowa City historian and Mount Mercy College professor, told writer Dave Rasdal. “In the early days, automobile routes were called trails. The Lincoln does overlap a considerable amount of the Oregon Trail.” Now, a sixty to ninety day transcontinental automobile trip had been cut to twenty to thirty days. Despite the improvements, the two-lane routes, with their low speed limits and stop-start traffic, hampered the trucking industry.

By the 1930s, road travel was further eased by the completion of long-span bridges like the San Francisco Bay Bridge, the Golden Gate Bridge, and the Mark Twain Bridge which spanned the Mississippi at Hannibal, Missouri. Popular tourist attractions, like the Henry Ford Museum and Greenfield Village, accelerated tourism in the late 1920s.

Before the 43,000 mile interstate system was created, the toll roads had been the first major development in the highway system. The Pennsylvania Turnpike, the nation’s first toll road, was “the first long-distance, high-speed, limited-access, four-lane divided road—the direct conceptual predecessor of the interstate system,” writes Dan Cupper in *American Heritage*. The Lincoln Highway (U.S. Route 30) and the William Penn Highway (Route 22), may have provided continuous routes, but such narrow two-lane roads were a nightmare to drive, especially in rough terrain like the Allegheny Mountains of western Pennsylvania. During winter, the narrow roads’ sharp curves and steep grades made travel so treacherous that trucking

Typical freeway traffic, c. 1960s.

companies rerouted their shipping hundreds of miles to avoid trouble spots.

When the Pennsylvania Turnpike opened in 1940, only 11,070 out of 3 million miles of roadway were wider than two lanes. But turnpike engineer Charles M. Noble wrote in *Civil Engineering* in 1940 that the days when roadways were challenges to be surmounted by motorists were coming to an end:

Every effort has been directed towards securing uniform and consistent operating conditions for the motorist. . . . [T]he design was attacked from the viewpoint of motor-car operation and the human frailty of the driver, rather than from the difficulty of the terrain and methods of construction.

On opening day, a sunny October 6, 1940, motorists waited up to four hours to enter the turnpike and join the new accessible automotive experience.

After decades of false starts by Congress on the issue of highway development, Eisenhower began the first moves towards a national highway system in 1954. Like many other Americans who fought in Europe during World War II, Eisenhower was impressed by Hitler's autobahns, Germany's modern and broad four-lane highway system.

In addition, Eisenhower sought a national transport system that could facilitate military movement or evacuation from the cold war threat of nuclear attack. This need was underscored by the Formosa Straits crisis of 1955, in which tensions rose between the U.S. and China over the perceived threat to Taiwan by the mainland communists. More than any real danger of military conflict with China, the incident raised concerns about America's ability to evacuate cities like Washington, D.C.

Eisenhower knew the hardships of road travel from personal experience. In 1919, as a lieutenant-colonel, Eisenhower joined an army truck convoy on a cross-country trip to test Army vehicles. Traveling mostly along the Lincoln Highway, from Washington, D.C., to San Francisco, the convoy contained almost 300 men and took 56 days. Eisenhower's biographer, Stephen Ambrose, describes Eisenhower's experience as "a lark. He camped out for the entire summer . . . went hunting and fishing, played practical jokes and poker, and thoroughly enjoyed himself." However, the trip also impressed upon the future president just how "miserable the American road network was—the convoy hardly averaged five miles per hour."

Eisenhower's goal to improve the nation's roads faced many of the same obstructions as road builders of the prior two decades. One of the constant factors had been federal/state disputes over who pays

for construction. As Phil Patton, the author of *Open Road: A Celebration of the American Highway*, argues, “the whole phylogeny of federal-state relations is recapitulated in the ontogeny of every interstate.” Once the project was underway, Eisenhower soon discovered that it would not be easy to realize his vision. The high price of urban land acquisition drove costs higher, and construction stalled as funding methods were debated. Eisenhower, writes Ambrose, “envisioned a road network that would link all U.S. cities with populations of 50,000 or more with defense installations.” He also felt that the main part of the system would be composed of farm-to-city routes, with highways that traveled around the cities, rather than through them. In order to sway Congressional votes for the 1956 Interstate Highway Bill, the administration negotiated a large share of expenditures for big cities which largely opposed the bill. Foreseeing how “very wasteful (it is) to have an average of just over one man per \$3,000 car driving into the central area and taking all the space required to park the car,” Eisenhower once considered a tax on city-bound automobiles, but soon abandoned the idea. Another aspect of the president’s vision failed to materialize: he did not want to see billboards along the new highways.

Regardless of the obstacles and imperfections, the effects of the new highway system were enormous. Economic power shifted away from the small towns that the old routes passed through as new sectors of the economy grew around the beltways. City freeways changed the patterns of urban life as entire neighborhoods were sacrificed, and highways facilitated the spread of the suburbs that created a middle-class exodus from the city limits. The era of building the system ended around 1969 as a backlash emerged against tearing down entire city neighborhoods for highways. Money was diverted towards mass transit, and Congress slowed funds for maintaining the highway system.

The man who shared Eisenhower’s vision, Francis Turner, the secretary to the committee that was charged with implementing the highway system, found himself caught in the backlash just as he became the head of the Federal Highway Administration. Turner had shared Eisenhower’s vision of the farm-to-city routes. “Having conquered mountain ranges, rivers, and swamps,” writes Patton, “they were being stopped by human forces. Soon no mayor could support a downtown interstate.” Turner derided mass transit, commonly referred to as “rapid transit”; Turner called it “rabbit transit.” “If you like waiting for elevators,” Patton quotes Turner as saying, “you’ll love rabbit transit.”

If the Eisenhower administration was unconcerned with the project’s social effects, others, argues *American Heritage* contributor Lawrence Block, decried the changes in roadside culture, citing the highway system as a homogenizing factor:

When you drove across the country in 1954, bouncing along on bad roads, risking ptomaine in dubious diners, holing up nights in roadside cabins and tourist courts, you were rewarded with a constant change of scene that amounted to more than a change of landscape. There were no chain restaurants, no franchised muffler-repair shops, and even brands of beer and gasoline were apt to change when you crossed a couple of state lines.

Once the national highway system was built, writes Drake Hokanson in *The Lincoln Highway*, it became possible to “cross the entire state of Wyoming and never smell sagebrush,” instead to enjoy a “great franchised monoculture that extends from sea to sea.”

These lamentations for the changes along the road might be labelled as mere nostalgia, if it were not for the overwhelming role that the road and road travel has played within American culture. As early as the nineteenth century, Alexis de Tocqueville in *Democracy in America* recognized the restlessness in our national character:

If at the end of the year of unremitting labor [the American] finds he has a few day’s vacation, his eager curiosity whirls him over the vast extent of the United States, and he will travel fifteen hundred miles in a few days to shake off his happiness.

“O public road,” serenaded Walt Whitman in 1856, “You express me better than I can express myself.” John Steinbeck portrayed the road as symbolic of the Okie’s search for prosperity during the depression-era migration to California in *The Grapes of Wrath* (1939). The modern myth of the road is contained in the works of Jack Kerouac, especially *On the Road* (1957), as a place to find the real America as well as a forum for self-discovery.

The sense of adventure afforded by the new roadways was popularized in the media by productions like the television show *Route 66* (1960-1964). Named after the highway that ran through the American southwest, *Route 66* featured two young drifters who traveled the road in their Corvette. True to the myth of hitting the road to discover America, the TV heroes traveled through small towns and cities, encountering outcasts and dreamers in an existential drama. Kerouac’s beatnik vision was converted for mainstream palatability, putting a stamp of approval upon “the search for America.”

Of course, not all Americans lamented the passing of the highway system of old. On the new highways, long-haul truckers and travellers now found it possible to drive from one coast the other in less than a week. Many regarded the new roadways as technological marvels. Cloverleaf intersections, in which two highways interchange through a series of entrance and exit ramps that resembled the shape of a four-leaf clover, were one such marvel. In the era of the Sputnik launch, even highways were associated with the Space Age by being called “roads to the future.” Early postcards of highways depicting tunnels and cloverleaves, with the legend “America’s Super Highway,” portray the sort of regard for highways that would seem inconceivable in later years.

The changes to American life and the benefits provided by the interstates are now so largely taken for granted that they exist below the level of consciousness. Because the highways have become so much a part of the landscape, these changes were seldom felt, although they can be easily measured. In 1994, for instance, the average motorist traveled about 3,000 miles a year on the interstate system. The number of accidents per year remained more or less constant prior to, and after, the construction of the interstates; however, the number of vehicles tripled between the 1950s and 1990s.

The mythic qualities of the road are connected to regaining the sense of discovery embodied by the pioneers. Several car models were named after explorers: DeSoto, Cadillac, Hudson. The frontier sense of car travel did not seek to compare itself to the hardships felt by the pioneers, but to the sense of adventure one gained in discovering one’s own land. These qualities were manifested by strange people, places, and food, the threat of speed traps, wrong turns, or the backwoods sheriff who could turn a minor road violation into a night in jail. In this analogy, the highways acted as the settlement, and fears of the unknown were mitigated by roadside tourist attractions, familiar brand-name advertising, and restaurant and hotel chains. In a

decade that many Americans look back upon as dull and sterile, the “frontier” was being tamed for a second time.

## Hijuelos, Oscar (1951—)

New Yorker Oscar Hijuelos’ bestselling novels are epic family sagas of the twentieth-century Cuban-American experience. His debut, *Our House in the Last World* (1983), charts the cultural identity crisis of two brothers and their Cuban-born parents in New York during the years after World War II. Pulitzer Prize-winning *The Mambo Kings Play Songs of Love* (1989) flamboyantly depicts 1950s New York as a musical, multicultural melting pot. The Irish-Cuban protagonist of *The Fourteen Sisters of Emilio Montez O’Brien* (1993) is torn between fulfilling the mainstream American Dream of movie stardom and the dotting, redeeming love of his all-female family. All of Hijuelos’ novels, including even the more understated and contemplative *Mr. Ives’ Christmas* (1995), exhibit a troubled fascination with the cultural hegemony of Hollywood. It is therefore appropriately ironic that the 1992 Warner Brothers production, *The Mambo Kings*, brought Hijuelos’ work to a wider, moviegoing public.

## Hiking

As views of nature in America have changed during the twentieth century, so too has the recreational practice of hiking. Throughout the twentieth century hiking was linked to a love of the outdoors, and was a means by which to express a connection to the land. But as the meaning of the American landscape for Americans changed with time, so too did the popular meaning of hiking.

The idea of hiking for amusement would not gain widespread attention until the presidency of Theodore Roosevelt (1901-09). With the ear of the nation, Roosevelt became the greatest proponent of outdoor appreciation. Where earlier politicians had urged Americans to exploit natural resources, farm, and conquer wilderness, Roosevelt often called for preservation of nature. Deeply influenced by the British Imperial fashion of making one’s manhood by entering and besting nature, Roosevelt traveled to many wild places. In the Dakotas, Michigan, and other parts of America, Roosevelt “roughed it” camping and hunting. He helped to popularize a masculinity based not on comfort and cultivation, but upon strength and the ability to tolerate hardship. By entering nature, one could prove one’s “rugged individualism.”

Roosevelt’s regard for nature and individualism coincided with and helped forge America’s emerging sense of itself as a new kind of nation. United States democratic ideals clashed with popular concepts of the limp-wristed privilege and elitism of European aristocracy. Fearing European “flabbiness” and “slothful ease,” Roosevelt and others promoted contact with nature so as to cultivate in Americans a “vigorous manliness” and a “life of strenuous endeavor.”

America also came to view itself as a growing industrial giant, reaping seemingly limitless resources from a great expanse. To hike was to enter nature to appreciate the stuff of which America was made. America was coming to see itself as a nation favored by God, and its land was part of God’s gift to the nation. Roosevelt, and “naturalists” such as John Muir and Aldo Leopold, were also concerned to preserve the stunning beauty of America. Europe had annihilated much of its wilderness, and Americans had already plundered millions of acres. The still popular writings of Henry David Thoreau and John Muir, the paintings of Thomas Moran, and later the photography of Ansel Adams, revealed new ways of seeing the natural world. A powerful American “wilderness cult” became the vanguard of a movement to protect millions of acres of wilderness. This movement somewhat slowed resource extraction and greatly accelerated forest recreation. Out of all of these ideas “hiking” came into being.

Ironically, it was the popularity of the automobile which gave hiking its greatest boost. As the twentieth century aged, the proliferation of cars brought millions of Americans to their forests and parks. In the 1950s, widespread car ownership, new parks, and new ideas about recreation in nature resulted in an explosion in visits to wilderness preserves. At this time, “hiking” was typically a short jaunt from the car, followed by a picnic. Though adventurous, hiking was closely affiliated with the prevailing notion that leisure was to be relaxing and peaceful.

People often see wilderness as the antithesis of civilization. As such, hiking in the wilderness offers salvation from a variety of social ills. For example, urbanites throughout the twentieth century sometimes went hiking to have contact with a natural world which they seldom saw. Overdeveloped suburbs and “concrete jungles” of urban blight left some people alienated from the natural world. Hiking

could “renew the spirit.” In the 1970s, the fitness movement and the environmental movement changed the practice of hiking. Better and lighter equipment—the external frame backpack, the down sweater, and the lighter hiking boots—helped to increase enjoyment of overnight adventures.

In the 1970s and 1980s, hiking grew exponentially. As the nation sought to move beyond the pain of the Vietnam War and as environmentalism grew in popularity, communing with nature was a way of living simply and finding harmony with the Earth. By being in the woods, many hikers were enacting their environmental beliefs and “getting back to nature.” Groups such as the Sierra Club not only lobbied government to preserve wilderness, but recruited hikers as part of their preservation strategy. Hikers were easily converted to conservation, and hikers helped to change the way wilderness was used. In the later quarter of the twentieth century, hiking was extended to all parts of the continent, as places once looked upon as “wastelands” were seen and experienced as sites of stark, arid beauty. In a sense, these areas were symbolically reclaimed for nature through the act of hiking. Land once considered “useless” for anything but resource extraction could be transformed by hiking—hiking literally made use of the land.

## Hill Street Blues

First airing on January 15, 1981 and ending its broadcast television run on May 12, 1987, *Hill Street Blues* broke new ground to become one of the most critically acclaimed television dramas ever, and won 26 Emmy Awards for NBC. Police dramas had been a staple, if not a cliché, since the beginning of prime time television broadcasting, with shows such as *California Highway Patrol* and *Dragnet* setting the standard from the 1950s onwards. These series featured straight-laced, tight-lipped cops upholding the law in a black-and-white world where every crime was solved within 30 minutes. The focus changed radically when NBC President Fred Silverman, his network mired in third place, gave Steven Bochco free rein to create and produce a show that would reinvent television police drama. As Robert J. Thompson, Director of the Center for the study of Popular Television at Syracuse University summarized it, “What Bochco

The cast of *Hill Street Blues*.

did in 1981 was change the television cop show by making it more realistic.”

Steven Bochco had chosen television over work in film, and both he and the medium benefited. After graduating from Carnegie Tech, Bochco had a film script produced at Universal Studios in 1971. By the time *Silent Running* (a knockoff of *2001: A Space Odyssey*, starring Bruce Dern) was released, he had decided to leave film for television. Bochco told British ITV’s distinguished *South Bank Show* presenter Melvyn Bragg, “In a week and a half I wrote a script. . . . It was a shocking experience for me. It was so devalued by the actors involved, and . . . it made me determine somehow to get more control over the things I wrote.” Seeking that control in television, Bochco wrote several scripts for NBC’s Sunday Mystery Movie, *Columbo* (also produced at Universal Studios), between 1971 and 1973 and, with these writing credits to back him up, he created or produced several television pilots and series for NBC, including *The Invisible Man* (1975), *Delvecchio* (1976), and *Paris* (1979). With his television apprenticeship behind him and NBC’s Nielsen ratings in the doldrums in the late 1970s and early 1980s, Bochco got his opportunity. The result was *Hill Street Blues*.

Much of the show’s style derived from police documentary films, particularly Susan and Alan Raymond’s *Police Tapes* (1977) and Frederick Wiseman’s *Law and Order* (1969). The *cinema verite* style adopted for *Hill Street Blues* had previously been seen on television only in the news, and it lent a startling immediacy and realism to prime time drama. *Hill Street* employed shaky, hand-held cameras and grainy film stock that appeared to be the result of pre-exposing, or “flashing,” the stock. The result was a low-contrast,

shadowy, and claustrophobic world, well suited to the characters and story lines. Interior shots were particularly tight, busy with supporting cast members and extras going about police business in the background while close shots of the main characters filled the foreground. This heightened realism had a profound influence on the genre, and altered the style of successive series, which were quick to apply the new gritty, hard-edged approach of *Hill Street*.

In addition to its landmark style, *Hill Street*'s plot lines and subject matter were also new to prime time network dramas. Law and order was negotiated in interrogation rooms and courtrooms, and the lines between criminal and cop were often blurred. The serial nature of *Hill Street* was also critical to this more naturalistic treatment of the criminal justice system. While prime time soap operas like *Dallas* had serial plots, the impulse of most police dramas was to present a self-contained story in a closed 30-minute format or, as Bochco had learned with *Columbo*, a two-hour movie slot. But the plots and the characters that filled *Hill Street* were too complex for quick resolution.

The characters, too, were innovative, exhibiting human dimensions of weakness as well as strength that came to dictate character-driven cop series such as the contemporaneous *Cagney and Lacey* and, notably, of course, Bochco's later *NYPD Blue*. Bochco, rather curiously, described his characters in a 1997 *New York Times* interview as "broad-brushed, almost comedic. . . ." Foremost among the ensemble cast was Precinct Captain Frank Furillo, played by Daniel J. Travanti. Furillo is an unwaveringly ethical leader, a recovering alcoholic (as was Travanti) married to sane and professional Public Defender Joyce Davenport, played by Veronica Hamel. Other characters are more idiosyncratic: Frank's shrill ex-wife (played by Bochco's wife Barbara Bosson) is arrested for marijuana possession in one episode; Sergeant Phil Esterhaus (Michael Conrad) died of a heart attack *in medias coitus*; and Detective Mick Belker (Bruce Weitz) was not above biting suspects to subdue them. Other cast members included Charles Haid, Michael Warren, Taurean Blacque, Kiel Martin, Ed Marinaro, Joe Spano, Rene Enriquez, James B. Sicking, and Dennis Franz as Detective Norman Buntz. Franz's relationship with Bochco crossed over into *NYPD Blue*.

*Hill Street Blues*, along with the sitcom *Cheers*, made NBC's Thursday lineup unbeatable and helped the network climb back into the Nielsen ratings race by the mid-1980s. Mike Post's theme music became a hit on radio, just as his theme for *The Rockford Files* had done in the 1970s. By the end of the decade *Hill Street* had spawned innumerable imitators, including *St. Elsewhere* (often called "*Hill Street* in a hospital") by Bochco protégé David E. Kelley. Bochco continued experimenting with the form, creating a show about minor league ball players called *Bay City Blues*, but he was not infallible. The 1990 musical drama *Cop Rock*, in which characters launched into song in the middle of an arrest or a court proceeding, was a bizarre and unfortunate mistake. *NYPD Blue*, Bochco's series for ABC, first aired in October of 1994 and continued to push the envelope where content was concerned, airing mild nudity that caused some affiliates to cancel or pre-empt the show. The furor died down after the first season, and *NYPD Blue* became a huge and ongoing critical and ratings success. Bochco then broke new ground yet again with *Murder One* (1995), a one-season serial that followed one murder trial to its conclusion, and carried unmistakable resonances of the O. J. Simpson case.

In a 1995 interview in the *New York Times*, Bochco, referring to *Murder One*, clarified his vision for television drama. "What we're trying to do," he said, "is create a long term impact. One which requires its viewership to defer gratification for a while, to control that

impulse in anticipation of a more complex and fully satisfying closure down the road. It's the same commitment you make when you open up to the first page of a novel." And Daniel J. Travanti reminisced in a 1997 interview in *The Washington Post*, "It's nice to know that in a minor key, we are legendary." Unlike most such legends, however, *Hill Street Blues* indubitably impacted on American cultural expectations of the genre, and the successful series that have followed in its wake stand on its shoulders.

## Hillerman, Tony (1925—)

Since 1970, writer Tony Hillerman has developed the detective fiction genre with his highly regarded series of detective novels set on Navajo customs and culture. His two Native American detectives, Joe Leaphorn and Jim Chee, pursue their investigations in and around the Navajo reservation that covers parts of Arizona, New Mexico, and Utah. Hillerman's major innovation to detective fiction has been to transplant an essentially European American method of detection into the Native American cultural context. The effect is to reveal the method's shortcomings and address Native American concerns by showing that a detective must have intimate knowledge of the specific culture in which a crime takes place. Without that knowledge of cultural difference, the so-called analytical method of detection cannot be used successfully to solve a mystery. For a white writer even to consider entering such a difficult cultural arena as this is remarkable in itself, but criticism of Hillerman's work suggests he has done so with great sensitivity, subtlety, and no little success.

Hillerman was born and brought up in a small farming settlement near Konawa, Oklahoma. His father and uncle ran a farm and a general store during the 1930s, and Hillerman attributes his skill as a storyteller to the social gatherings on the front porch of the store; he describes his mother in particular as a great storyteller. He escaped dust-bowl-struck Pottawatomie County first by attending Oklahoma State University and later, having dropped out of his chemical engineering degree to help on the farm, by enlisting in the army and going to fight in Europe.

Extracts from his wartime letters home were published as a story by a journalist with the *Daily Oklahoman*, and it is this that pushed Hillerman toward writing as a career. After the war he returned to the University of Oklahoma where he gained a bachelor of arts degree in journalism. Suitably qualified, he found work as a journalist for newspapers and news bureaus in Oklahoma, Texas, and New Mexico. His decision to begin writing fiction coincided with his return to academic study, and after completing a master of arts degree in 1965, he became a faculty member at the University of New Mexico in Albuquerque, where he eventually became chair of the Department of Journalism.

Only one of Hillerman's fourteen published detective novels does not have a Native American setting or theme. In 1995 he departed a second time from the Navajo theme, and also from detective fiction, to write a novel, *Finding Moon*, based in Asia at the time of the fall of Saigon. He has written detective short stories and

nonfiction essays and books on subjects such as the southwestern states, Navajo culture, and the process of writing. He has also written a children's book, edited various collections of essays about the West, and (with Rosemary Herbert) is the editor of a collection of American detective stories.

For a man who grew up in relative poverty and cultural isolation, Hillerman has achieved remarkable success, both in his career on the faculty of the University of New Mexico, but especially as a writer of detective fiction. Critical responses to his fiction have been almost universally good, and his books have sold well. Among the several awards he has won are the prestigious Mystery Writers of America Edgar Allan Poe Award for *Dance Hall of the Dead* (1973) and the Mystery Writers of America Grandmaster Award (1989).

## Himes, Chester (1909-1984)

College dropout, pimp, bootlegger, and convicted armed-robber, Chester Himes began writing his acclaimed "Harlem Cycle" of crime novels in Paris in 1957. His most famous creations, the black detectives Coffin Ed Johnson and Gravedigger Jones work as a team and deal with transgressors in a ruthless, violent way, brandishing and using huge guns to settle disputes. The absurdity of the level of violence the two detectives both mete out and suffer is presented as representative of the wider absurdity of the lives of African Americans, and perhaps the absurdities of Himes's own life. Whatever Coffin Ed and Gravedigger do, they cannot end the cycle of crime and violence that grips black city life, just as, in Himes's view, whatever African Americans do, they cannot escape the cycle of racism that controls their lives.

The "Harlem Cycle" crime thrillers describe life among the struggling poor of Harlem in such vivid detail as can only come from experience, but Himes was born into a respectable, middle-class family in Jefferson City, Missouri. His father was a college professor who was head of the mechanical department of the Lincoln Institute in Jefferson and later worked at Alcorn College in Mississippi. His mother was a descendent of wealthy southern whites and made a point of declaring the family's superiority whenever she could, often criticizing her husband for his dark skin. This contrast between his father's dark skin and his mother's pride in her pale almost-whiteness reappears in Himes's novels as a dynamic of good and evil; evil

characters in his work tend to have light-colored skin. After his father lost his job at Alcorn, the Himes family moved to St. Louis and later to Cleveland, Ohio, where the relationship between his parents deteriorated. Himes graduated from high school in Ohio and, after recovering from falling down an elevator shaft, began studying at Ohio State University.

Himes's university career did not last long. In his own way he began to resist the discrimination he experienced even among young African Americans by rejecting what he called the "light-bright-and-damn-near-white" social clique at the university in favor of friends he made among gamblers, pimps, and prostitutes in the ghetto. As a result he was forced to resign his college place, and began a short but formative career as a criminal, selling bootleg whiskey during Prohibition and taking part in robberies. After his parents' divorce, and his father's decline into menial, low-paid jobs, Himes was eventually involved in an armed robbery, for which he was given a twenty-year prison sentence. With encouragement from his devoted mother, he began to write in prison, and published stories in magazines such as *Abbott's Monthly*, owned by and marketed to African Americans. He also managed to sell occasional stories to the more lucrative *Esquire* magazine, from which he concealed his racial origins.

Himes served seven and a half years in prison and, when he was paroled in 1936, began trying to earn a living from his writing. He continued to write for the magazines, but when he and his first wife, Jean, moved to California during the war, he worked in the shipyards and began to write his first novel, *If He Hollers Let Him Go*, which he completed in 1945. Himes had a difficult time with the autobiographical protest novels he wrote in the following seven years, all of which struggled to find publishers. His parents died, his marriage to Jean failed, and his various affairs with white women, most notably with Vandi Haygood, ended in disaster. In 1953, with money from the advance on *Cast the First Stone*, he bought a ticket to France. He lived briefly in London and Mallorca, co-wrote a novel with a woman he had met on the ship from New York, and finally moved to Paris.

In 1957, he met Marcel Duhamel of the publishing house Gallimard, which published American hard-boiled novels under the famous imprint, "La Série Noire," and was recruited to write detective stories. The first of these, published in America as *For Love of Imabelle* (1957), and now known as *A Rage in Harlem*, won the "Grand Prix de la littérature policière" in France and made him famous overnight. He wrote a total of ten detective novels, nine involving Gravedigger and Coffin Ed, one of which, *Plan B*, was published posthumously in 1993. The "Harlem Cycle," as these novels have become known, allowed him to address the themes of racism and violence that had made his earlier novels unpopular. As Stephen F. Soitos states, in Himes, racism is present among both blacks and whites, and as such his novels represent the growing awareness among African Americans in the 1950s of race and class, though his attitude towards women is far from progressive. His detectives are only too aware of the absurdity of their real task. They must protect whites and white society from black criminals and the latent chaos of Harlem so that they do not become too afraid to go there. If that should happen, black criminals and con artists would be deprived of their income.

Although his Harlem crime novels won awards and sold well from the start, it is only since the 1980s that they have been given the critical attention they deserve. Like James Baldwin, another African American writing in France about life in New York, Himes looked back at America with the clarity of an exile's eye. His elaborate hierarchies of good and evil characters, signaled by their skin color,

and his experiments with nonlinear time and simultaneous plot events in his novels have informed the work of later novelists such as Ishmael Reed. Although they were written for commercial reasons, Himes's crime novels are an angry continuation of his early challenges to America, and a significant contribution to the development of American detective fiction.

## The Hindenburg

The May 1937 explosion of the German airship *Hindenburg* is one of the most memorable disasters of the twentieth century, outshining other more serious and costly catastrophes. Of the ninety-seven passengers and crew on board, thirty-six lost their lives in the conflagration. Images of its fiery denouement would make their way through the pop culture pantheon, onto T-shirts and album covers (most famously, the eponymous debut of Led Zeppelin), while the mystery of the *Hindenburg's* final flight would inspire a feature film (1975) and numerous documentaries. Various theories on the cause of the explosion blame a hydrogen leak, electrostatic discharges in the air igniting the ship's highly flammable fabric covering, or an anti-Nazi act of sabotage. A NASA scientist claimed to have resolved the dispute in favor of the flammable covering thesis in 1997, but doubters remained. "For reasons which are not clear to me even now, however," wrote Michael Mooney in his history of the flight, "the *Hindenburg* disaster seemed to sear the memory of everyone even remotely connected to it." Perhaps it was a conjunction of the times, the fragile peace preceding World War II, and the spectacular manner of the airship's end.

Perhaps it was because the *Hindenburg* was destroyed in direct view of the assembled press, with cameras clicking and newsreel film rolling and radio announcers squawking excitedly into their microphones, their coverage competing with the screams of the dying. "Here it comes, ladies and gentlemen, and what a sight it is, a thrilling one, a marvelous sight," exclaimed radio announcer Herb Morrison for the benefit of his listeners in Chicago as the *Hindenburg* prepared to dock over a Lakehurst, New Jersey, airfield. Only moments later his tenor changed abruptly from enthusiasm to abject terror. "It's burst into flames," cried the horror-stricken reporter, "It is burning, bursting into flames and is falling . . . Oh! This is one of the worst . . . Oh! It's a terrific sight . . . Oh! . . . and all the humanity!" Morrison broke down, finding himself unable to continue.

Spectators on the ground claimed they saw a small explosion toward the stern followed by an enormous secondary burst. The

lighter-than-air *Hindenburg* plummeted toward earth, passengers leaping from the observation platform as it descended. Others managed to flee from the wreckage once it came to rest on the airfield—some parting the white-hot aluminum superstructure with bare hands. The unlucky were trapped in the burning superstructure or were mortally wounded in escaping.

Zeppelin travel had attracted those who disliked sea travel, those for whom time was of the essence, and a great many who were attracted by the sheer novelty of airships. Thus far, zeppelins had provided safe, fast transport between the Americas and Germany for close to twenty years. (Only Germany had managed to master the art of the zeppelin, with French and English efforts ending in failure.) Having served a year of regular flights between Germany and New York, the *Hindenburg*, 804 feet long with a cruising speed of 78 miles per hour, was the largest and most advanced of the airships, providing comfortable, luxurious passage in a fraction of the time it would take the fastest steamer to traverse the Atlantic.

According to the dramatic sabotage legend, a letter had arrived at the German Embassy in Washington, D.C., the day before the flight warning of a saboteur among the paying passengers. As a result, security was unusually thorough, and Captain Ernst Lehmann, the newly appointed director of the Zeppelin Company (his predecessor having resigned in disgrace), and two SS officials scrutinized the passengers. By journey's end, Captain Lehmann was convinced the letter was a figment of SS paranoia. Nothing of import had transpired. He did not know that Erich Spehl, a young rigger on the ship whose job it was to tend to the bags of highly flammable hydrogen within the aluminum superstructure, had surreptitiously planted a bomb within Gas Cell IV long before the ship had left its hangar. It was left to Spehl to rip open the gas bag shortly before landing and set the timer on his rudimentary bomb. It was not Spehl's intention to kill anyone: the innocent farm lad was motivated to perform his "act of genius" by his older, sophisticated girlfriend under whose tutelage Spehl had grown violently opposed to the Nazi regime. As the *Hindenburg* circled to position itself for landing, Erich Spehl slit the gas cell and set the bomb's timer for two hours, long after the passengers and crew should have disembarked. Unfortunately, the timer malfunctioned, or in his haste, he set it wrong. The *Hindenburg* was just preparing to dock when the bomb exploded, burning the silk bag and allowing air to rush in and mix with the highly flammable hydrogen.

Whether the explosion was caused by such a saboteur or not, a more dramatic black eye for the Nazi regime could scarcely have been planned. The disaster was featured in newsreels within the week, and it made a phenomenal spectacle, the bright white flames leaping into the dark sky as the silhouetted bulk of the zeppelin descended gracefully toward the earth. The German government, hoping to avoid an international incident, ascribed the disaster to "an act of God." A binational commission was convened, but the Germans had been expressly warned not to find any evidence of sabotage. The FBI, in turn, played along, but the commission met nightly, and convictions were aired off the record. The decision to sweep the mess under the rug abruptly brought any further experiments with passenger airships to an end.

## Hippies

The post war “baby boom generation” was something of an anomaly both to parents and to the children they would eventually

raise. Growing up amid the contradictory conditions of prosperity and paranoia that prevailed during the 1950s, as they grew into adults this young generation tired of abundance and yearned for a more “authentic” life. Their quest initiated outlandish fashions and tastes, broke taboos, and, together with an eager television and music business, monopolized the culture industry, saturating public discourse with hedonistic and sentimental idioms. With the objective of a new classless society of sincerity and trust, some of these young people adopted the term “hip” from beatnik slang and donned the flowery, flamboyant posture of “hippies.”

By the mid-1960s, hippies began to appear in high schools, colleges, and enclaves around the country. Their unique combination of hedonism and morality depended on the spin they placed on the “generation gap” that separated them from their elders: in high moral gear, hippies projected every conceivable social and ethical defect of society onto their parents—the generation who, having survived depression and war, clung to middle-class prosperity and values like drowning sailors to a life vest. From the perspective of the young, this “materialism” was evidence of the bleak life of “straight” society,

and of the moral bankruptcy that spawned war, environmental damage, racism, and sexual persecution.

Starting around 1964 and increasing steadily into the early 1970s, hippies began gathering in lower income, inner city neighborhoods (the same areas their parents had worked so hard to escape) such as New York's East Village and, particularly, San Francisco's Haight-Ashbury, and later formed communes and settlements in the countryside. Largely white, middle class, and educated, hippies whipped up their own philosophy of natural living, easy sexual and social relations, sincerity, and hedonism through a blend of Eastern mysticism, left-wing social critique, and Beatnik appropriations of African-American slang. To the hippies, "squares" were "uptight," out of touch with their feelings and with each other, and it was this isolation from human feeling which had made them such aggressive, authoritarian, and often brutal people. The hippie lifestyle, on the other hand, was not only more fun, it was morally superior.

Drugs played a special part in this hedonistic moral rebirth. By "blowing one's mind," drugs allowed one to see through the fake values of middle-class materialism and into the profound layers of one's innermost being. The hippie political outlook was just as fanciful. Hippies imagined the older generation working together in a massive authoritarian conspiracy called "the Establishment," or "the Man." They believed the main objective of the recognized social order was to restrain and control the innocent love of life, nature, and happiness that defined hippie life. The Vietnam war provided a ready target for hippie opposition and rebellion: the words "peace" and "love" became symbolically loaded terms, lumping together a call for military withdrawal from Vietnam, an attitude of

mutual acceptance and trust between people, and a sense of personal awareness and happiness. The famous photograph of a hippie protester inserting flowers into the rifle barrels of a line of National Guard troops demonstrates the unique style of hippie morality, which connected personal feeling with political intent.

It is possible to bracket a viable and active hippie counter culture between the years 1965 and 1973. Over this period, a few important dates stand out: in 1966, the Beatles, having already made long hair an important emblem of youth culture, released *Sergeant Pepper's Lonely Hearts Club Band*, rock's first concept album. The jacket featured the band in lavish, mock Napoleonic military garb, a look that coined much early hippie camp and whimsy. One song in particular, "A Day in the Life," crystallized the hallucinatory drug-induced sense of the absurd which was to become known as "psychedelic." The song wove together two quite different sounds; one, sung by Paul McCartney, took an everyday, commonsensical tone, "woke up, got out of bed, dragged a comb across my head. . . ," while the other, sung by John Lennon, interrupted McCartney's narrative to coo dreamily, "Ahhhhhhh. . . I'd love to turn. . . you. . . on. . ." The song seemed to split reality into two, the mundane and the fantastic, the square and the hip. And, along with another track on the record, "Lucy in the Sky with Diamonds," *Sergeant Pepper* was thought to advocate psychedelic drug use as the necessary bridge from the drab world of old straights to the lush and expressive world of the young and the free.

In 1967, the Monterey Pop Festival provided the first in a series of major outdoor rock concerts, and in 1969, the Woodstock Music and Arts Festival provided the movement's thrilling climax. Hundreds of thousands of hippies clogged the region around the concert trying to get in, and, after airlifts of food, water, and flowers from state troopers, the event subsided without incident, a testimony to the solidarity and mutual goodwill of a counterculture guided by feelings of love and peace. However, over time, the climate of the counterculture changed: hippie urban frolicking turned into serious homelessness and poverty, and the drug culture grew into an organized and dangerous underworld. Petty criminals, drifters, and profiteers overran many of the hippie hangouts and communes. The Manson murders and a violent outbreak of violence and murder at a concert at Altamont, California, in 1969 brought to the fore a growing tension within hippie culture between middle class and idealistic hippies and a growing criminal drug culture with no idealistic pretensions to speak of.

But more than the criminal underclass, the hippie movement faced a far greater challenge from the same force that had brought it into existence: the mainstream media, which commercialized hippie culture and dulled its radical edge. By 1970, psychedelic styles were a common feature of advertising, bell-bottom pants were marketed to children, and even conservatives were seen to sport sideburns and long hair. When Lyndon B. Johnson was photographed in retirement on his farm with hair down to his shoulders, it was clear that the counterculture had become mainstream culture.

## Hirschfeld, Albert (1903—)

Since 1927 Al Hirschfeld's instantly recognizable pen-and-ink drawings for the *New York Times* have chronicled the worlds of theater, film, television (when it came along), and indeed virtually every area of performance based artistry in the last three-quarters of the twentieth century. His mastery of the sinuous line to reveal the essence of a performer or role remains undiminished. Calling himself not a caricaturist but a "characterist," Hirschfeld has relied on wit and humor, never malice, to bring life to his subjects and a smile to the faces of those who read the *New York Times*. Since the birth of his daughter Nina in 1945, Hirschfeld has regularly hidden her name in the folds of clothing or elsewhere, prompting many admirers to an even closer reading of his eloquent drawings. Energy unabated, he produced in 1991 the designs for a set of United States postage stamps honoring great American humorists, while in its final 1997-1998 season he drew a set of *TV Guide* covers featuring the stars of *Seinfeld*.

## *Hispanic Magazine*

A "Latino version of *People*" at the time of its 1988 debut, *Hispanic* was one of the first general interest magazines for Hispanic Americans to be printed in English and nationally distributed. Launched in Washington, D.C. by Cuban native Fred Estrada, with former New Mexico governor Jerry Apodaca as his publisher, *Hispanic* initially revolved around celebrity photo spreads and articles that were roundly dismissed as "fluff." The debut issue featured Raquel Welch "of all people" on its cover, as Estrada's son Alfredo would later lament. After a dismal first year of receipts, *Hispanic* underwent extensive reformatting. Becoming far more career and professional-oriented, the magazine's new focus was on the achievements of Hispanic business leaders and politicians such as Secretary of Housing and Urban Development Henry Cisneros, with regular articles on corporate America and its relationship to Hispanics.

The shift was successful. Almost immediately, ad pages increased by more than 200 percent and, by its third year, *Hispanic* was turning a profit. Reformatting was so successful, in fact, that *Hispanic* continues to be confused with its competitor, the California-based *Hispanic Business* (founded in 1979), which threatened a copyright infringement lawsuit in 1993.

While many print periodicals faced increasing difficulty in an era of expanding media technology, *Hispanic* remained solvent throughout the 1990s, largely due to the rapidly increasing demographic of Hispanic Americans, whose numbers were growing at five times the rate of the general population. It was a trend that advertisers had taken over two decades to grasp. Whereas in 1977, the total national ad expenditures in all Hispanic print media were only about \$800,000, by 1997 that figure had skyrocketed to \$492 million. As Alfredo Estrada noted, referring to the "lean" early years, "the idea that Hispanics spoke English was heresy [in those days] . . . even now, some advertising agencies remain wedded to the idea that the only effective way to reach Hispanics is in Spanish." Indeed, as recently as 1992, *Hispanic* challenged *Forbes* magazine for its claim that the Hispanic market was practically non-existent. Why then, asked a Hispanic writer, had 70 of the Fortune 500 companies invested in it?

Early pioneering Latino magazines such as *Nuestro* (published from 1975 to 1981) and *Latina* (1982-1983) may not have survived long enough to witness the exponential growth in advertising revenue, but the fact that they existed at all certainly paved the way for publications like *Hispanic*. In turn, the hard work of the Estrada family broke down barriers for later competitors, some of whom were based in large entertainment and publishing conglomerates, such as *People en Español*, launched by Time Warner in 1996, and *Latina*, which was first published by African American-owned Essence Communications in 1996.

In the 1990s, *Hispanic* saw several changes in operation strategies and long-term goals, which seemed both to expand and focus its efforts at once. The publication instituted, for example, the "Latina Excellence Awards," in an effort to "honor Hispanic American women who have made significant contributions in their chosen field of endeavor," as well as the "Schools of Excellence Awards," to pay tribute to secondary-school principals with unique academic and enrichment programs for Hispanic students.

Other changes included relocating its family-owned publishing headquarters, in 1994, from Washington, D.C. to Austin, Texas. The consortium (which now owned Florida-based *Vista* as well), also joined the new wave of publishers offering titles for Latinas; its quarterly supplement, *Moderna*, became a stand-alone publication in 1996.

In 1999 *Hispanic's* circulation was a solid 250,000. Estrada remained chairman and founder, while Alfredo, a former lawyer and graduate of Harvard University, served as editor and publisher. When the elder Estrada heard one advertiser note that the flood of new publications for Latinos had finally "brought credibility to Hispanic print," he asked, incredulous, "What am I, chopped chorizo?" By the year 2050, Hispanics will comprise nearly 25 percent of the American population. Over a decade ago, *Hispanic* was one of the first to offer them a publication that honored their dreams and triumphs.

## Hiss, Alger (1904-1996)

Alger Hiss's life up to 1948 seemed, on the surface, to be an American success story. He attended Johns Hopkins and Harvard Law School and was a stellar student at both institutions. As he pursued his law career and joined the State Department in Washington, D.C., his road to success was soon blocked by accusations that he was a Soviet spy. Hiss would work relentlessly to clear his name, but to no avail. He died haunted by the specter of accusations brought against him during a period in America marked by political infighting and mass hysteria.

At Harvard, Hiss met a professor named Felix Frankfurter—a future Supreme Court justice. He served a term as a law clerk to Justice Oliver Wendell Holmes, continuing what he thought was his pursuit of a successful career in law. This was followed by private law practice in Boston and New York. The election of Franklin Roosevelt, however, brought Hiss to Washington to work on the New Deal. He worked at the Agricultural Adjustment Administration and was also a lawyer for the Nye Committee, a committee of Congress which was investigating the arms industry. In 1936, Hiss joined the State Department.

In 1939, a man named Whittaker Chambers paid a visit to Assistant Secretary of State Adolf Berle. Chambers claimed to be a former Communist who knew of the existence of “fellow travelers” in the federal government. Chambers made similar claims in follow-up interviews with the Federal Bureau of Investigation (FBI). Alger Hiss was one of the persons fingered by Chambers, but the allegations were not acted on at the time.

Hiss took part in the 1944 Dumbarton Oaks Conference, which tried to lay the framework for a postwar United Nations Organization and an international economic order. Hiss also accompanied President Roosevelt to the historic 1945 conference of the major Allied leaders in Yalta. In 1947, he became president of the Carnegie

Alger Hiss

Endowment for International Peace after being recruited by John Foster Dulles, a New York lawyer who later became President Eisenhower's hard-line anti-Communist Secretary of State.

In 1948, the Hiss Case began when Chambers gave testimony to the House Committee on Un-American Activities (HUAC). Chambers alleged that he had known Hiss in the 1930s, and that both of them had been Communists. Hiss was allegedly part of a Communist underground which existed in the federal government during Roosevelt's administration and which tried to turn federal policy in directions desired by the Communists. Chambers denied, however, that he had been involved in any spying.

Hiss demanded, and got, an opportunity to appear before HUAC. He denied the charges of Communism, and he denied having known Chambers. Hiss gave an impressive performance, but one member of HUAC, a freshman Republican congressman named Richard Nixon, wanted to look deeper into the matter. HUAC agreed that Nixon could continue with the investigation in order to find out if Chambers and Hiss had actually known each other.

Chambers was then summoned to give testimony in executive session, where he gave details (some accurate, some not) about Hiss and his wife from the period when Chambers claimed to have known Hiss. There was then a secret session at which Hiss was examined by HUAC members. Hiss backtracked on his earlier denial of having met Chambers. He had met a man called George Crosley who might have been Chambers. But Hiss denied knowing “Crosley” as a Communist. In a later face-to-face confrontation, Hiss confirmed that Chambers was the George Crosley he had known in the 1930s. Hiss also challenged Chambers to repeat his allegations outside the context of a congressional hearing so that Hiss could file a defamation lawsuit.

Chambers did indeed repeat outside of Congress his charge that Hiss was a Communist. Hiss, as promised, sued Chambers for defamation. Then, during the pretrial discovery phase of the lawsuit, Chambers made new accusations. Reversing his earlier testimony, Chambers said that Hiss had spied for the Soviet Union, using Chambers as a courier. To back up his dramatic accusation, Chambers produced various documents, including what he said were papers typed by Hiss—allegedly copies of government (mostly State Department) documents which Hiss had made, and then turned over to Chambers for use by the Soviets. Chambers also produced some allegedly incriminating microfilm representing State Department documents which Hiss had desired to send the Soviets. The microfilm had been hidden in a hollowed-out pumpkin on Chambers's farm until he felt able to turn them over to HUAC.

Chambers's espionage allegations were serious, and federal prosecutors believed them, but the statute of limitations on espionage had expired in Hiss's case. He was, however, indicted by a New York grand jury for allegedly committing perjury about espionage and his relationship with Chambers.

In Hiss's two trials, the prosecution backed up Chambers's story by trying to show that the Hiss typewriter had been used to write some of the documents in Chambers's possession. Hiss countered by attacking Chambers's credibility and by using character witnesses. And the list of character witnesses was impressive. Felix Frankfurter (Hiss's former teacher, now on the Supreme Court), Justice Stanley Reed, and Illinois governor Adlai Stevenson all appeared to vouch for Hiss's character. His first trial in 1949 ended with a hung jury (the vote was eight to four for conviction). At a second trial, Hiss was convicted, and he subsequently served forty-four months in prison.

For the remainder of his life, Hiss denied having spied for the Soviets. He wrote two books defending his innocence, and he had

many supporters among those who thought that the Hiss prosecution was simply a politically motivated effort by conservatives to smear the New Deal and the Democrats by making up stories about Communists in the government. According to the pro-Hiss view, the Hiss prosecution was a product of the anti-Communist hysteria of the times. When Richard Nixon resigned from the Presidency as a result of the Watergate scandal, Hiss supporters argued that if Nixon was capable of the “dirty tricks” of the Watergate period, he was certainly capable of fabricating a case against Hiss. In the post-Soviet era, a Soviet general in charge of certain secret archives announced that there was no evidence in the archives that Hiss had been a spy, although he later added that such evidence might have been overlooked or destroyed.

Hiss’s opponents cite Soviet documents which seem to confirm Chambers’ account of a 1930s spy ring in Washington. Hiss’s enemies also point to recently declassified United States translations of secret Soviet communications. One of the communications describes an agent who is described in such a way as to fit only four people, including Hiss. Historians and others continue to debate the veracity of Chambers’s claims as part of the continuing reassessment of events during the Cold War.

## Hitchcock, Alfred (1899-1980)

Universally acknowledged as “The Master of Suspense,” the British-born film director Alfred Hitchcock reached the zenith of his accomplishments within the American film industry, with a series of now classic psychological thrillers that remain a constant presence in the cultural landscape of the moviegoer. Regarded as one of the major artists of Hollywood’s Golden Age, Hitchcock created and perfected his own genre of thriller, one which was by turns romantic, comedic, and macabre, and his unique gift for creating suspense has given the adjective “Hitchcockian” to the language. A supreme cinematic stylist, it was said of him that he filmed murder scenes as if they were love scenes and love scenes as if they were murder scenes. Thanks to his hosting of *Alfred Hitchcock Presents* during the 1950s, he became probably the only film director whose face was recognizable to the general public, although, master showman that he was, he made a fleeting trademark appearance in virtually every one of his films,

Alfred Hitchcock

giving audiences the added *frisson* of trying to spot him on the screen. His mastery of film technique, refined in the silent era, combined with his ability to, as he put it, “play the audience like an organ,” made his films extremely popular—so popular, in fact, that the respect of his critics and peers was not immediately forthcoming. Today, however, his place in the cinematic pantheon is secure, and his work continues to exert an overwhelming influence on upcoming generations of filmmakers. For better or worse, Hitchcock’s most lasting impact may prove to have been the floodgate of still-escalating violence which he unleashed on screen in his 1960 masterpiece, *Psycho*.

Alfred Joseph Hitchcock was born in suburban London on August 13, 1899. Raised in a Catholic household by an emotionally repressed father, he was a painfully shy child. Years later, he would often repeat the story of how his father had instructed the local police to place the boy in a cell for a short time in order to demonstrate what happens to bad little boys who misbehave. A recurring theme of his films is a fear of the police. Young Hitchcock developed an interest in art, but his first job was as a technical clerk in a telegraph company. In 1919, he joined the Islington branch of the Famous Players Lasky film company as a designer of title-cards. He was hired as an assistant director for the production company run by Michael Balcon and Victor Saville in 1923, where he met Alma Reville, a petite film editor whom he married three years later. Reville would remain Hitchcock’s collaborator and confidante for the remainder of his life. After starting to write scripts, Hitchcock was sent to work on a German-British co-production at the UFA studios, famous home of the German Expressionist cinema, which would eventually reveal its influence in his own work.

By 1925, he had worked on half-a-dozen British silents in various capacities as assistant director, art director, editor, and co-scriptwriter. That year he directed his first solo feature, *The Pleasure Garden*, but it was his third, *The Lodger* (1926), that began to earn him his early reputation. Starring the British composer of “Ruritanian” musical romances and matinee idol of the musical stage, Ivor Novello, the tale concerned a mysterious stranger wrongly thought to be Jack the Ripper. Many years later, Hitchcock said of the film, “It was the first time I exercised my style . . . you might almost say it was my first picture.” He only returned to the thriller form six pictures and three years later with *Blackmail*, the first British talkie or, more accurately, part-talkie (it had begun shooting as a silent). Alternating thrillers with “straight” pictures for a time, Hitchcock truly hit his stride in 1934 with *The Man Who Knew Too Much*, a fast-paced story of kidnapping and espionage, filled with memorable set-pieces such as the assassination attempt during a concert at Albert Hall. He remade it in 1956 starring James Stewart, Doris Day, VistaVision and the song “Que Sera Sera”, but despite its massive box-office success, critics continue to agree that the early version was the more refined and effective.

*The Man Who Knew Too Much* launched what is now referred to as Hitchcock’s “British period,” in which he turned out one successful thriller after another, notably *The Thirty-Nine Steps* (1935) and one of the most famous of British films, *The Lady Vanishes* (1938). The former, one of several screen versions of John Buchan’s novel, starred Robert Donat and Madeleine Carroll, and set the tone for many Hitchcock classics to follow, in its combination of comedy, action, and romance, and its theme of an innocent man hounded by the police as well as the arch-villains. Though it would take a generation for the more intellectual film critics to catch up with the public which made these movies hits, Hitchcock’s films were remarkable for the craft with which they so skillfully hooked audiences and kept them in suspense for an hour and a half. The director paid immaculate attention to working out every detail, and often claimed that, with the script and storyboard complete, the actual filming itself was an anticlimax. He called upon the fullest vocabulary of cinema, from casting and camera-work to editing and sound, to tell his stories, and was a great believer in the power of montage, which he employed masterfully.

Inevitably, Hollywood beckoned, and Hitchcock signed a contract with producer David O. Selznick. Their first collaboration, *Rebecca* (1940), from the novel by Daphne Du Maurier and starring Joan Fontaine and Laurence Olivier, was largely British in flavor, but won Hitchcock the first of his five Academy nominations for Best Director, seven additional nominations (including one for Judith Anderson’s immortal Mrs. Danvers) and carried off the Best Picture and Cinematography Oscars. *Rebecca* was an unqualified triumph, but Hitchcock chafed under the oppressively hands-on methods of his producer, and yearned for artistic independence. Meanwhile (sometimes on loan-out to other studios), he directed American films that continued his cycle of spy-chase thrillers but, in keeping with the World War II years, cunningly carried anti-Nazi propaganda messages as in *Foreign Correspondent* (1940, with Joel McCrea in the title role as an American war correspondent tangling with Nazi thugs), *Saboteur* (1942, with Robert Cummings tangling with Fifth Columnists), *Lifeboat* (1944, with Tallulah Bankhead and others surviving a German torpedo and seeking safety), and *Notorious* (1946), the second of three with Ingrid Bergman and four with Cary Grant, who infiltrate a group of Nazi conspirators in South America in one of the director’s most stylish thriller-romances.

Sometimes cited by Hitchcock as his personal favorite, *Shadow of a Doubt* (1943), which starred Joseph Cotten as a killer escaping detection by “visiting” his adoring relatives, brilliantly dramatized the terrors that can lurk in the shadows of a seemingly normal small town. It was this penchant for perceiving the disturbance underneath the surface of things that helped Hitchcock’s movies to resonate so powerfully. Perhaps the most famous demonstration of this disjunction would come in *North by Northwest* (1959), where Cary Grant, seemingly safe on a sunny day, surrounded by miles of empty farm fields, suddenly finds himself attacked by a machine-gunning airplane. Before the rich collection of war years thrillers, there was a beguiling and polished foray into domestic comedy drama with *Mr. and Mrs. Smith* (1940, with Carole Lombard and Robert Montgomery) and the romantic and sophisticated suspense tale *Suspicion* (1941, Grant and Fontaine), which pointed the way toward Hitchcock’s fertile 1950s period.

The postwar decade kicked off with the adaptation of Patricia Highsmith’s novel *Strangers on a Train* (1950), in which Farley Granger and Robert Walker swap murders. The film climaxed with one of Hitchcock’s most famous and memorable visual set pieces, a chase in a fairground. It was filmed in black and white, as was *I Confess* (1952, with Montgomery Clift as a priest who receives an unwelcome confession). To date, the Master of Suspense had only ventured into color twice (*Rope*, 1948, and, one of his rare failures, *Under Capricorn*, 1949). Now, he capitulated to color for the remainder of his career, with the well-judged exceptions of the Henry Fonda vehicle, *The Wrong Man* (1956), and his most famous film, *Psycho*. Along with color, his taste for blonde leading ladies took on an almost obsessional aura and led, during the 1950s, to films with Grace Kelly, Doris Day, Eva-Marie Saint, Kim Novak, Janet Leigh, Julie Andrews, and, famously in *The Birds* (1963) and then in *Marnie* (1964), the previously unknown Tippi Hedren (whose career swiftly petered out thereafter).

His professional reputation secure, Hitchcock gained his artistic independence and entered a high period in which he turned out success after success, some better than others, but all of them entertaining. However, along with *North by Northwest*, which saw out the 1950s, the two masterpieces of the decade emerged from his three-picture collaboration with James Stewart, and marked a new dimension of interior psychological darkness that, in each case, infused every frame of an absorbing plot line. The films were, of course, *Rear Window* (1954) and *Vertigo* (1958), both of which dealt with obsession under the deceptive guise of a straightforward thriller. The first, with Stewart laid up with a broken leg and witnessing a murder across the way as a result of spying on his neighbors by way of a pastime, hinted at voyeurism; the second, in which he turns the lookalike of an illicit dead love into an exact copy of her predecessor (both played by Kim Novak), deals in guilt and sick delusion. *Vertigo*, for sheer artistic expertise, combined with Stewart’s grim, haunted performance and the disturbing undertones of the piece, is quite possibly the most substantial of the postwar Hitchcock oeuvre, but the public impact of his first for the new decade capped all of his recent accomplishments.

The director’s first excursion into unabashed horror, *Psycho* (1960) sent shock waves which continue to reverberate through the genre. The murder of Janet Leigh in the shower has been imitated, suggested, and ripped off in countless films since, and has become part of the cinema’s iconography. In certain cases, such as *Dressed to Kill* (1980), Brian De Palma made no secret of the fact that he was drawing on the association in open homage to Hitchcock. *Psycho*

(which drew on the Ed Gein multiple murder case for its inspiration) caused much controversy on its release, and has since been analyzed endlessly by film historians and academics. When a shot-by-shot color remake by Gus Van Sant, made ostensibly as the highest form of compliment to the original, emerged late in 1998, a rash of fresh argument was unleashed as many bemoaned the pointlessness of the exercise or, indeed, the travesty that many considered it to be. The original is generally considered as Hitchcock's last great film, attracting additional reverence for the contribution of his frequent collaborators Bernard Herrmann (who composed the pulsating score) and Saul Bass, the great designer of opening titles. Several of the Hitchcock masterpieces owe a debt to these two creative artists, and the Bass titles for *Vertigo* remain a work of art in their own right.

The follow-up to *Psycho*, *The Birds* (1963) was less highly regarded, but is a durable and complex experiment in terror, and a monument to technical expertise. In the late 1990s it, too, became the subject for renewed examination and analysis, notably by the controversial feminist academic Camille Paglia, who admired it greatly. There were only five more after *The Birds*—a varied quintet that signaled a decline in the director's prodigious powers—and he bowed out, somewhat disappointingly it has to be said (but he was, after all, 77 years old), with *Family Plot* in 1976. By then, however, thanks to TV's *Alfred Hitchcock Presents*, he had cemented his image in the public consciousness as the endearingly roly-poly master of dryly witty gallows humor. In his later years, Hitchcock had the pleasure of being lionized by the newer generations of film-makers, and the wistful experience of attaining honors which long earlier should have been his. Although, inexplicably, he never won an Oscar for directing, the Academy did ultimately honor him with the Irving Thalberg Award in recognition of his work, and he was also made the recipient of the American Film Institute Lifetime Achievement award.

Knighted by Queen Elizabeth II, he died Sir Alfred Hitchcock a few months later, at his Bel Air home in 1980. Almost two decades after his death, and almost 40 years after his last great film, Hitchcock remains a symbol of a certain kind of entertainment and excitement in a darkened movie theater. He is still one of the most admired and most emulated of movie-makers, but his many imitators have never remotely replicated his consummate artistry or penetrated the personal and private obsessions that drew him to stories of innocence accused, double identities, morbid romance, and the other themes and undercurrents now recognized as Hitchcockian. If the mid-twentieth century has rightly been called "The Age of Anxiety," then Hitchcock was the quintessential artist of his time.

## Hite, Shere (1942—)

Shere Hite burst upon the American scene in 1976 with the publication of her first book, *The Hite Report: A Nationwide Study on Female Sexuality*. Since then, she has authored a number of other best-selling books on sex and relationships—delighting her publishers, intriguing her public, and frustrating many social scientists, who consider her research to be seriously flawed.

Born Shirley Diana Gregory in St. Joseph, Missouri, Hite spent her childhood being shuttled between parents, grandparents, and other relatives. She earned bachelor's and master's degrees in history from the University of Florida. She then moved to New York City, where she dropped out of a doctoral program at Columbia, worked as a model, and eventually joined the National Organization for Women (NOW). Feminism led her to the realization that female sexuality had rarely been studied scientifically, and the determination to change that fact set Hite on the path that ultimately led to the writing and publication of *The Hite Report*.

The method that Hite used to gather data for her first book was also employed in most of the succeeding volumes. Hite pays to have surveys printed in a number of national publications, and invites readers to answer the questions (all requiring mini-essays) and mail in the surveys. For *The Hite Report*, she placed her surveys in such publications as *Ms. Magazine*, the *Village Voice*, and *Modern Bride*.

It is this method of research which has brought Hite so much criticism from those versed in the techniques of survey administration. Her approach to data gathering involves what is referred to in social science as a "self-selecting sample"—that is, the only people included in the "sample" (the pool of respondents) are those who choose to participate by answering and returning the questionnaire. Such respondents are likely to be both few in number and extreme in their views on the subject of the survey, since only those with the strongest opinions will usually take the trouble to fill out and mail the survey.

This approach to gathering data may explain the results that Hite reported in her books. She found that 70 percent of her responding women who had been married more than five years reported having an affair, and 76 percent of them claimed not to have feelings of guilt about their infidelity. More than 95 percent of women surveyed for Hite's third book claimed to have suffered "emotional and psychological harassment" from their men, and 98 percent replied that they desired "basic changes" in their relationships with husbands or lovers.

These, and similar results, which Hite freely generalizes to all American women, are usually at odds with other surveys using more traditional methods. For example, Hite's statistic about a 70 percent infidelity rate is in sharp contrast to a survey funded by *Playboy* that found 34 percent of married women reporting infidelity, and another study, sponsored by *Redbook* magazine, which reported the figure to be 29 percent.

Undeterred by her critics, Hite continued to produce books using similar survey methods, several of which were best-sellers. In the 1980s, she moved to Paris and her books began to take on more of a

“self-help” aspect, such as her 1989 work, *Good Guys, Bad Guys: The Hite Guide to Smart Choices*. In the 1990s, she published her first novel, *The Divine Comedy of Ariadne and Jupiter*, and also set up an internet site, through which she offered her services as either a “business consultant” or “personal consultant,” and where she posted an exhibition of her art works.

## Hockey

North American hockey is a fast and violent game, played on ice, which began in Canada in the mid-nineteenth century. The six-member teams, wearing skates and heavy pads, use sticks with which to propel a flat rubber disk known as the puck. It is thought that hockey derives its name from the French word for a shepherd’s crook, in reference to the shape of the sticks with their curved playing end. The origins of ice hockey are much debated, and have been sought in several other sports such as hurly, shinty, bandy, field hockey (played with a small, hard ball) or the Native American Mic Mac game; but there seems to be general agreement that the earliest match that can be identified with any certainty as hockey was played in 1855 on a frozen harbor by soldiers of the Royal Canadian Regiment in Kingston, Ontario. It remained an outdoor game for the next 20 years, played by nine-man teams, and—influenced by the rules of rugby—no forward passing.

Students at Montreal’s McGill University played the first indoor game in 1875, and developed the first hockey league in 1877. In 1883, the McGill team won the first game to be termed a “world championship” and, ten years later, teams were competing for the Stanley Cup, donated by Canada’s governor-general, Lord Stanley, in a national championship. By then, the game had spread across the border to Yale and Johns Hopkins universities in the United States, and to Europe.

In the spirit of most sport during the Victorian era, when competing for financial gain was considered ungentlemanly and socially unacceptable, hockey flowered as an amateur game. This changed in the first decade of the twentieth century, which saw the advent of professional hockey. The world’s first professional team, the Portage Lakers of Houghton, Michigan, was American, albeit using imported Canadian players. It was organized in 1903 by J. L. Gibson, a dentist, who, in 1904, established the first professional circuit, the International Pro Hockey League. Other leagues soon sprang up in Canada: the Ontario Professional League, the Pacific Coast Hockey Association, and the National Hockey Association. By this time most teams were using only seven players a side, but the

NHA, for reasons of economy, dropped yet another man from the ice, and six a side eventually became the standard team composition.

The most innovative of the leagues was the PCHA formed by the wealthy Patrick family. They led the way in building arenas for indoor hockey played on artificial ice. They also pioneered rules that allowed the goalie to move about, permitted forward passing, and credited with an “assist” those players setting up a goal-scorer. The league expanded to the American northwest and in 1917 the Seattle Metropolitans became the first U.S. team to win the Stanley Cup.

In 1917 the NHA gave way to the National Hockey League, which was to become the dominant professional league in the world. The NHL had teams in Toronto, Montreal, Hamilton and Ottawa, and after 1926, when it shrewdly bought out the Pacific Coast League and acquired all its players for \$250,000, it had no rival. It began to admit American franchises, of which the first was the Boston Bruins in 1924, followed by short-lived teams such as the Pittsburgh Pirates, Philadelphia Quakers, St. Louis Eagles, and the New York (later Brooklyn) Americans. American teams that endured included three that entered in 1926: the New York Rangers, the Detroit Cougars (later the Falcons, later the Red Wings), and the Chicago Blackhawks. Canadian franchises that flourished for a time, only to disappear, included the Ottawa Senators (which had won four cups during the 1920s), Hamilton Tigers, Montreal Wanderers, Montreal Maroons, and Quebec Bulldogs.

When World War II ended, only six teams remained in the NHL but many consider the period between 1945 and 1967 to have been the golden age of hockey. It was certainly the era of elegant skaters and scorers such as Maurice “Rocket” Richard and Jean Beliveau of the Montreal Canadiens, Frank Mahovlich of the Toronto Maple Leafs, and Andy Bathgate of the Rangers; and of powerful forwards such as Johnny “The Beast” Bucyk of the Bruins, and Gordie Howe and “Terrible” Ted Lindsay of the Red Wings. There has never been a trio of goaltenders to match Chicago’s Glen Hall, Montreal’s Jacques Plante (inventor of the goalie mask), and Detroit’s Terry Sawchuk. Rock-hard defensemen like Doug Harvey and Elmer “Moose” Vasko contended with players who had perfected the slap-shot which could propel the puck over 100 mph—shooters such as “The Golden Jet” Bobby Hull and Bernie “Boom Boom” Geoffrion.

The expansion of the NHL to six more American cities in 1968 and the appearance in 1971 of 12 more teams in the rival World Hockey Association diluted the quality of the sport. Players of exceptional talent, however, such as the magical Bobby Orr, could still shine. Orr revolutionized his position when he became the first defenseman to win the scoring trophy. The bidding wars for players that ensued during the 1970s drove up salaries and costs, thus causing many franchises to go under during the decade, and the frenzy stopped only in 1979 when the WHA folded and its four remaining teams were accepted into the NHL. One of the players who came in to the NHL from the WHA was Wayne Gretzky of the Edmonton Oilers, who went on to set innumerable scoring records in the 1980s and 1990s before retiring amid fanfare in 1999.

Up until the 1980s the overwhelming majority of professional players were Canadian, but developments in world hockey soon began to change that. An amateur team from the United States had caused an upset in the 1960 Winter Olympics when they returned with the gold medal, but that victory did not have nearly the impact of the 1980 “Miracle On Ice” when an under-dog American squad, amid Cold War tensions, defeated the seemingly unstoppable Soviets to reach the Olympic finals where they beat Finland for the gold. A number of players on this team went on to the NHL and their example

A physical altercation develops between the Philadelphia Flyers and the Boston Bruins during the 1974 Stanley Cup Finals.

encouraged many more young Americans to take up the game and do well at it. These new recruits to the big league were joined by a flood of highly skilled players from newly democratized countries in Eastern Europe seeking employment in North America.

There was plenty of work for the newcomers. The NHL was committed to a relentless policy of expansion, targeted particularly in the American west and sun belts, with the expectation that, by 2001, there would be 30 teams in the league, 24 of them in the United States. The aim was to penetrate large media markets that would provide the kind of giant television contracts that American networks were handing to professional baseball, basketball, and football leagues. The NHL had not yet hit television paydirt by 1999 (largely because Americans still preferred watching televised bowling and stock car races to seeing hockey on the small screen), while spiraling costs had caused the demise of small-market clubs in Canada and stretched the resources of many franchises in America.

As the millennium approached, the fate of hockey looked uncertain. College hockey in the United States, and women's hockey throughout the world, seemed set for more success; in Russia, however, once mighty teams were in a state of poverty-stricken post-communist collapse. Canada seemed destined to breed great players, while being unable to afford to watch them play in person. In the United States, the question was whether the National Hockey League

could afford to continue relying largely on gate revenues, with so little financial assistance from television. Faster than football, more violent than pro wrestling, at once graceful and crude, hockey had yet to completely win over the American sports fan.

## Hoffman, Abbie (1936-1989)

One of the most colorful figures to emerge from the social turmoil of the 1960s, Abbie Hoffman put his personal stamp on the

activism of the decade with his insistence that radical politics find expression in personal attitudes as well as political positions. Linking the spirited hedonism of the hippies with the politics of the Civil Rights movement, the New Left and the anti-war movement, Hoffman's attitude was pure hippie—*Revolution for the Hell of It* was the title of his first and most influential book. His doctrine of absurdity and wit, combined with an unmatched media savvy, marked him for the elite ranks of the counter-culture. A founding Yippie, and a hippie, activist, visionary and knave, he left an enduring legacy of influence and controversy.

Born in Worcester, Massachusetts, in 1936, Abbie Hoffman's life was an extraordinary patchwork of triumphs, calamities, and accidents. After fighting the Ku Klux Klan in Mississippi, he moved to New York where he joined the hippie counter-culture and undertook a series of flamboyant public stunts designed to infuse the growing hippie mob with political purpose. After organizing protests at the Democratic National Convention in 1968 he went underground in 1973, reappeared in 1980 to resume his activist work, and committed suicide in 1989.

Abbie Hoffman

In 1967, Hoffman left the Deep South for Manhattan's Lower East Side, where he joined the "diggers," a group of hippie community pranksters and activists, and opened a store to sell craft products produced in Mississippi homesteads. Together with Jerry Rubin, Hoffman formed the "Yippies" ("Youth International Party" was offered as the formal name only when pressed by reporters), and began a campaign of high-profile stunts meant to focus media attention on the movement. He understood what the media wanted and he set out to give it to them, aiming to swell the ranks of the movement with new conscripts through publicity. His actions, promoted with press releases and high-level media contacts to ensure maximum hype, emphasized the whimsy and humor characteristic of hippies. In one incident, bags of dollar bills were dumped from the visitors' gallery onto the floor of the New York Stock Exchange, causing mayhem as investors squabbled over the cash. In another, soot bombs were sent to Con Edison to protest pollution standards, and over 3,000 marijuana cigarettes were mailed to people randomly selected from the phone book, one of who turned out to be a prominent journalist. A celebration of the Spring Equinox at Grand Central drew over 6,000 hippies to a midnight gathering at the cavernous station, where police in riot gear waited nervously outside as hippies ran wild, tearing the hands off clocks, dancing, and squealing "Yippee!!" Hoffman's "Exorcism of the Pentagon" was another landmark event, drawing 50,000 hippies to the nation's capital in an effort to levitate the entire Pentagon complex through magical means. The hippies joined hands, forming a human chain around the building as television crews soaked up the colorful event.

However, the tone of Yippie activism changed at the 1968 Democratic National Convention in Chicago. Yippies gathered there to offer a "festival of life" to counter what they called the "convention of death," but their innocence and prankishness turned into ugly riot as the demonstration was consumed in police violence. Outside the convention, where Hubert Humphrey was clinching the Democratic nomination for president, hippies, anti-war activists, and others massed, chanted, and sang, and when Chicago Mayor Richard Daley ordered police to disperse the throng, widespread panic and bloodshed resulted, lending credibility to the conservative call for law and order then being touted by Republican presidential candidate Richard Nixon. Hoffman and seven others stood trial as "the Chicago Eight" for conspiring to incite the riot, though after Black Panther Bobby Seale was remanded for separate trial by Judge Julius Hoffman, the Chicago Seven (which included Rubin and other Yippies and anti-war activists) achieved nationwide notoriety. Though Judge Hoffman issued 175 contempt citations during the trial, the seven were ultimately found innocent and other charges of "crossing State lines to incite a riot" were dropped on appeal in 1973.

By the early 1970s, however, Abbie Hoffman had other problems. Faced with accusations of egoism and showmanship from the organized left, and charged with chauvinism and authoritarianism from feminists, hippies, and other cultural factions, he now found himself standing at the center of a splintering movement. His response was to "resign" in an open letter addressed to the movement in 1971, and in 1974, fearing a lifetime jail term on a cocaine possession charge, he went into hiding, where he would remain for six years. Even underground, however, Hoffman retained his media "smarts," granting a well-publicized interview to *Playboy* magazine, in which he pledged to maintain his resistance and organize an underground movement aimed at toppling the government of the United States. After undergoing plastic surgery and taking up a prominent role incognito as a community environmental activist in

Canada, Hoffman came out of hiding in 1980 to face charges. He served only a short term before he was once again free to resume his activism until his death. Hoffman's public stunts secured his lasting reputation as a spirited activist, cemented by the wide circulation of his books. *Revolution for the Hell of It*, *Steal This Book*, and *Woodstock Nation* were, and continue to be, staple reading for activists and latter-day hippies. His later titles included *Steal This Urine Test*, a commentary on the drug testing craze of the 1980s, and *Square Dancing in the Ice Age*.

## Hoffman, Dustin (1937—)

Beginning in the late 1960s, Dustin Hoffman established himself as one of his generation's finest film actors and helped usher method acting into the American cinema mainstream. From his first screen success as Benjamin Braddock in *The Graduate* (1967), Hoffman appeared in a series of diverse films that showcased his great range and indicated the rise of the character actor as superstar. He and actors such as Gene Hackman, Jack Nicholson, and Robert De Niro symbolized a new breed of movie star that was known more for fully inhabiting their characters than for their perfect profiles. Hoffman was, at times, criticized for being "difficult" to work with, but none could criticize his ability to employ the teachings of the method tradition that stressed the performer's ability to temporarily "become" his character.

Born on August 8, 1937, in Los Angeles, California, this son of a Columbia Pictures set decorator and an aspiring actress was named after silent screen cowboy star Dustin Farnum. He developed an early interest in performing, and his acting career began at age 12, when, as the shortest boy in John Burroughs High School, he was recruited to play Tiny Tim in a production of *A Christmas Carol*. He was an accomplished pianist and enrolled in the Los Angeles Conservatory of Music to study classical and jazz piano. By 1957, he began to devote less time to his music and increasingly concentrated on acting. He studied at the famed Pasadena Playhouse and later moved to New York. He entered The Actor's Studio, where he developed his craft alongside his roommates, future film stars Robert Duvall and Gene

Hackman. Under the direction of noted acting teacher Lee Strasberg, Hoffman was taught the method's performance goal of becoming rather than acting. To support himself he took on a series of jobs, such as janitor, waiter, and weaver of Hawaiian leis. He even worked as a hospital attendant in a psychiatric ward, where he observed the patients' behaviors in the hopes of improving his dramatic technique. Hoffman established himself as a respected New York theater actor in the early 1960s by appearing in acclaimed works like *The Journey of the Fifth Horse* and the British comedy *Eh?* However, Hoffman's ultimate goal was to become a film star.

After years of honing his craft, Hoffman became an "overnight" sensation in 1967 with the release of director Mike Nichols's *The Graduate*. The film concerned an innocent college graduate who is seduced by an older woman. Although Charles Webb's novel, upon which the film was based, described the character of Benjamin Braddock as a handsome, well-bred, surfer-type, Nichols gave the role to the short, dark Hoffman. Furthermore, at age 30, Hoffman was a decade older than the character. Hoffman's performance as the confused and depressed college graduate who begins an affair with a friend of his parents, the infamous Mrs. Robinson, captured the mood of the American youth of the late 1960s who had grown disenchanted with their parents' generation. Author Jeff Lenburg quoted a letter to *The New York Times* written by a university student shortly after the film's release to demonstrate the impact it had upon the youth culture. The student wrote: "I identified with Ben . . . I thought of him as a spiritual brother. He was confused about his future and about his place in the world, as I am. It's a film one digs, rather than understands intellectually." The baby boomer generation's uncertainty of the

future was best captured in the film's final scene where Ben and Elaine (Mrs. Robinson's daughter) flee her wedding and mother only to realize the uncertainty of their final destination. Hoffman was nominated for an Academy Award for his portrayal of the embodiment of 1960s youth angst.

Following his early success in *The Graduate* Hoffman appeared in a number of landmark films. In 1969, he starred as the tubercular small-time street hustler Ratso Rizzo in *Midnight Cowboy*. The controversial film about male prostitution was an enormous hit and the first x-rated film to win the Academy Award for best picture. For *Little Big Man* (1970), Hoffman aged on screen from a teen to the age of 121 to play Jack Crabb, a witness to U.S. mistreatment of the American Indians. He portrayed the doomed comedian Lenny Bruce in *Lenny* (1974) and starred as *Washington Post* reporter Carl Bernstein in the Watergate drama *All the President's Men* (1976). He was named best actor in 1979 for his performance as a divorced father facing a child-custody battle in *Kramer vs. Kramer*. In 1984, he returned to the stage for a widely praised performance as Willy Loman in *Death of a Salesman*. His ability to play both straight drama and broad comedy is seen in his most acclaimed roles. In *Tootsie* (1982) Hoffman mocked his reputation as a difficult actor by playing a man who disguises himself in drag to get a job on a soap opera. For *Rainman* (1988) he masterfully depicted an autistic savant. He earned a second Oscar for this classic performance. Hoffman remained a popular performer into the 1990s and scored another hit as a Hollywood producer attempting to cover up a presidential sex scandal in *Wag the Dog* (1998). Hoffman's filmography also contains one of Hollywood's most notorious disasters—the comedic misfire *Ishtar* (1987).

Dustin Hoffman has remained a star after more than 30 years in film because he invests all his portrayals with sensitivity and realism. He commented on his technique by stating: "All I know is I try to be as personal as I can in my work, by being personal, to be able to bring to it a truth in what I observe and what I feel." Through his method acting skills and non-flashy, realistic appearance he opened mainstream American film to a style of performance that had seldom been achieved before on screen.

## Hogan, Ben (1912-1997)

With his perfect swing, golfer Ben Hogan achieved a kind of mythic stature in the collective mind of the American public. During his career, Hogan won sixty-three tournaments, including nine major championships. He was the PGA tour's leading money-winner five times, won the Vardon Trophy for lowest scoring average five times, and was one of the first inductees into the World Golf Hall of Fame in 1974. As awesome as that record is, the folklore concerning Hogan's

**Ben Hogan**

arduous rise to the top of his profession and his famed comeback after a near-fatal auto accident nearly transcends it.

Perhaps the most famous photograph of Hogan (collected in *The Hogan Mystique*, 1994) captures much of the essence of the mystique: a shot of Hogan's flawless swing taken at its height and from the golfer's back, it extends outward to feature an attentive gallery on two sides of a tree-lined fairway. Thus, Hogan's face is not shown; his personal identity is subordinated to a frozen image of the mechanical perfection of his golfing prowess. Throughout his career, Hogan was notoriously aloof from competitors, the press, and even his public. In addition, the peak years of his achievement preceded the wide coverage of golf by television; thus he was not captured repeatedly in widely distributed images as were Arnold Palmer, Jack Nicklaus, Gary Player, and Lee Trevino. Hogan became, though, something of an icon to these later figures, and what they admired was "Hogan's game" and the story of the literally painful way in which it had been developed.

The son of a blacksmith, Hogan was born in small-town Dublin, Texas, in 1912 and moved with his family to Fort Worth in 1921. His father, who had suffered from depression and alcoholism, committed suicide the following year, and Hogan's family was immediately plunged into poverty. In order to help out financially, young Ben became a caddie at Glen Garden Country Club, thus discovering the

sport that would change his life. At Glen Garden, he met a fellow caddie, Byron Nelson, with whom he quickly became a fierce competitor.

Hogan turned professional in 1930 but would achieve success only after years of relative obscurity. Throughout this early period, his status on the PGA tour was always subordinate to that of Nelson. Hogan was not in effect a natural golfer and only realized his famous swing by regularly practicing until his hands literally bled. Perfection resulting from a puritan work ethic, long a central ingredient in American mythology, would become an essential element of the Hogan mystique. This grim self-creation was also a key factor in his legendary aloofness; always struggling to improve, he never felt that he had time for, nor did he see any point in, small talk with his playing partners or courting tournament galleries.

Hogan did not win his first tournament on the tour until 1940, when he won four. He followed that with five victories in 1941, but his new success was interrupted when he was drafted into the U.S. Army in 1943. It was in the immediate postwar period that Hogan began to dominate the PGA tour and his legend started to take form. He won his first major title, the PGA tournament, in 1946. In 1948, he repeated his success in the PGA and, in a rare exhibition of golfing perfection, won his first of four U.S. Open championships. Just as he seemed finally to have reached the peak of his success and his career, he was nearly killed in an automobile accident in February of 1949. His doctors were not certain first that he would live, then that he would walk again, and then that he would play competitive golf again. Hogan did all three, returning to the tour in January of 1950. In that year, he won his second U.S. Open: the often recounted "Hogan comeback" was under way, and the final ingredient was added to the Hogan mystique, that of the courageous underdog who survived extreme adversity.

The story would prove so compelling that Hollywood would have to film it, even if inadequately. *Follow the Sun*, supposedly the story of Hogan's life and climaxing with his comeback, was released in 1951. Its script was clichéd; and Glenn Ford, as Hogan, was badly miscast. In the words of Hogan biographer Curt Sampson: "Ford, an unathletic man whose hobby was gardening, held the club as if it were a trowel and swung it like a rake."

In 1953, Hogan reached the pinnacle of his golfing career when he won the U.S. Open, his second Masters tournament, and his first British Open, thus sweeping three of professional golf's four major events (he did not enter the PGA tournament that year). The British Open win in Carnoustie, Scotland, especially contributed to the Hogan myth. Already known as "Bantam Ben," he was nicknamed "The Wee Ice Mon" by Scottish fans who were simultaneously paying tribute to his determined concentration and his triumph over physical adversity. (Hogan was, in fact, of average height). In July of that year, he was treated to a ticker tape parade down Broadway in New York City.

Hogan wrote a popular five-part series on the basic elements of the correct golf swing for *Sports Illustrated* beginning March 11, 1957. After retiring from competitive golf in 1971, Hogan fittingly devoted his time to manufacturing and selling golf clubs until his death on July 25, 1997.

## Hogan, Hulk (1953—)

While limited in his talent as an in-ring performer, Hulk Hogan's physique, interviews, and incredible personal charisma made him the undisputed star of a professional wrestling boom that began in 1984 and remains, with the exception of a few years, stronger than ever in the late 1990s. Throughout this time, Hogan has been the most recognizable personality to nonprofessional wrestling fans. To promoters, Hogan has been a marketable presence, headlining live events, selling merchandise, performing on television, and appearing in the main event for the majority of Pay-per-View (PPV) shows. Hogan has parlayed his wrestling fame into roles in movies, television, and commercials. Simply, he is the greatest drawing card in the history of professional wrestling.

Hulk Hogan

Born Terry Bollea, Hogan began weightlifting as a teenager while living in Tampa, Florida. After studying business administration and music at the University of South Florida, he was discovered by two professional wrestlers when he was playing bass in a rock band. Hogan started wrestling in the southern United States under names such as Terry "the Hulk" Boulder and Sterling Golden. Hogan first hit the big time with the World Wrestling Federation (WWF) in the early 1980s. With "heel" manager Classie Freddie Blassie at his side, Hogan played the muscular, egotistical blond villain. As was then a common occurrence, Hogan left one wrestling territory and moved to the next: the Minneapolis-based American Wrestling Association (AWA).

Though Hogan had appeared in both the WWF and AWA, it was his trips to Japan which created the phenomenon known as "Hulkamania." Japanese wrestling fans immediately took to Hogan, and he became a superstar. Upon his return to the United States, he was booked back in the AWA as a "heel." But the fans rejected that role for Hogan and, instead, cheered him. He was turned "baby face" and quickly set attendance records across the Midwest. Hogan extended his success in the ring with a small but very noticeable part in *Rocky II*; playing "Thunder Lips" he was paired with Rocky in a charity boxer vs. wrestler match. By 1983, Hulk Hogan was the biggest name in professional wrestling, but this was only the beginning.

Vince McMahon, Jr. lured Hogan from the AWA and made him the star of his nationally expanding WWF promotion. In 1984, Hogan defeated the evil Iron Sheik in less than ten minutes at New York's Madison Square Garden to become the WWF champion. Hogan began starring in wrestling shows across the country as the WWF became nationally syndicated and featured on cable programs. Hogan's feud with Roddy Piper in 1984 led first to the "brawl to settle it all" broadcast live on MTV, and then a few months later to "Wrestlemania," the first wrestling event broadcast on closed-circuit TV nationally. Hogan teamed with TV actor Mr. T in the main event. Taking advantage of a late cancellation, Hogan and Mr. T were able to host *Saturday Night Live* the evening before "WrestleMania." The success of "WrestleMania" soon won it a monthly show on NBC, and Hogan bolstered the show's popularity. He was featured on the cover of *Sports Illustrated* and in *Time*. Hogan's image was everywhere: on T-shirts, on the cover of a record album, in wrestling videos and TV guest appearances. After a hugely successful match against Andre the Giant at the Pontiac Silverdome—which drew over 80,000 people plus another million or so watching on closed circuit TV and the very young PPV industry—NBC moved wrestling to prime time in February 1988.

But by the early 1990s, Hogan encountered his most serious challenge in wrestling, when a doctor affiliated with the WWF was arrested for dealing illegal steroids. The case expanded to include WWF owner Vince McMahon, with Hogan as a witness for the government. Hogan went on the *Arsenio Hall Show* and denied being a steroid user or abuser, confessing only to a limited use of steroids for medical purposes. Although at the trial he confessed to more use. The prosecutor mocked Hogan's catch phrase extolling children to "say your prayers and eat your vitamins" while "all the while [the WWF was] pumping him with steroids." After Hogan won the main event at "WrestleMania XIII," he disappeared from wrestling as the steroid scandal intensified. A short comeback proved to be a flop as Hogan's physique had shrunk, and with it, seemingly, his popularity. After losing the WWF title in June 1993, which he had won again at "WrestleMania XIV," Hogan severed his relationship with the WWF.

After some movie and television work, including a short-lived show called *Thunder in Paradise*, Hogan returned to the U.S. wrestling scene in the summer of 1994 just as the verdict of “not guilty” came down in the WWF steroid case. Hogan went to work for Ted Turner’s World Championship Wrestling (WCW) and had an immediate impact, as ratings and PPV revenue increased. But Hogan’s act had played too long. Even though he was still a “good guy,” Hogan was booed at arenas.

After failing to toughen up his image, Hogan finally “turned” on the fans in 1996 and adopted the persona of Hollywood Hogan, forming, along with other wrestlers, a group called the New World Order (NWO). The NWO soon became the hottest gimmick in wrestling and Hogan was the focus of the promotion: always in the main event, always in the key part of the television programs. Behind the scenes, Hogan was acting as the de facto “head booker” deciding which wrestlers got TV time, wins, and championship belts. Hogan also demonstrated his star power, drawing celebrities such as NBA players Dennis Rodman and Karl Malone into the ring. One of the most memorable of these celebrity fights was between Hogan and *Tonight Show* host Jay Leno in the “Hog Wild” PPV in August 1998. Hulk Hogan’s flamboyance and theatrics has come to epitomize the appeal of professional wrestling.

## Hogan’s Heroes

Depending upon whom one asks, *Hogan’s Heroes* was either a cutting edge situation comedy or a testament to how desensitized to human suffering American television viewers had become in the 1960s. The basic plot of the popular television show centered around American Col. Robert Hogan, played by Bob Crane, and a band of other prisoners of war, who had established a secret complex within and below the grounds of Stalag 13, a Nazi concentration camp. From there they engaged in sabotage and rescue operations against the Third Reich. Every bed was a passageway, every coffee pot a radio. For six seasons on CBS, Hogan and his group used a stash of supplies, that would have made the Third Army envious, to confound Hitler’s hapless forces in and around Dusseldorf.

*Hogan’s Heroes* was loosely based on the play *Stalag 17*, triggering a lawsuit by the producers of the play, but also contained elements of the 1963 hit movie *The Great Escape*. Hogan’s team was composed of demolition expert Andrew Carter (Larry Hovis), radio

operator Ivan Kinchlow (Ivan Dixon), all-around procurer Peter Newkirk (Richard Dawson), and chef Louis LeBeau (Robert Clary). Their primary nemesis was Wilhelm Klink (Werner Klemperer), a pompous colonel who sought promotion to general by constantly reminding his superiors that “No one has ever escaped from Stalag 13!” He was aided by Sgt. Major Hans Schultz (John Banner), who regularly stumbled across Hogan’s escapades but, unable to fathom the consequences of his perceptions, managed to ignore them by chanting the mantra “I see nothing!” Among Klink’s regular superiors were General Albert Burkhalter (Leon Askin) and Gestapo Major Wolfgang Hochstetter (Howard Cain). The show never actually featured Adolf Hitler as a character, but he was impersonated twice—once on radio and once in person—to great comic effect.

While *Hogan’s Heroes* was a popular show, it was also a lightning rod for controversy. In 1965, when the program first aired, organized reaction to America’s involvement in Vietnam was intensifying. It did not help matters much that corporate America was making huge amounts of money and the “silent majority” was settling back once a week to revel in the lighthearted high jinks, as a fun-loving bunch of POWs confounded their dumb-but-lovable Nazi tormentors. This was not new territory. *McHale’s Navy*, which debuted in 1962, featured Ernest Borgnine as the Commander of an American PT boat crewed by a load of drunks and petty thieves and catered to by an escaped Japanese POW named Fuji, who they hid from their dumbfounded commanding officer Admiral Binghamton (Joe Flynn). But the members of *McHale’s Navy* rarely fought the enemy face-to-face. By comparison, a whole concentration camp of prisoners, who could have left at any time and chose not to, policed by representatives of a system of imbecility that appeared to stretch all the way to the top of the chain of command, was more than many people, particularly those less than a generation removed from the war, could stand.

The show’s defenders countered that it was meant to be nothing more than slapstick entertainment. Indeed, the action of the show was extremely unrealistic—in one episode they smuggled a whole German army tank into camp, in another Hogan convinced Klink and Burkhalter that the war was over. They also pointed out that Clary had spent most of his early life in a concentration camp and thought ridicule a more than appropriate treatment of the Nazis. But those defenses mattered little to the show’s critics, and *Hogan’s Heroes* was regularly attacked throughout its run.

## Holbrook, Hal (1925—)

On April 6, 1959, a thirty-four-year-old actor named Hal Holbrook literally became the seventy-two-year-old Mark Twain and made theatrical history as the creator of a new genre. From his hair to his shoes, from his voice to his movements, Holbrook was, from that night on, a living version of the icon of American literature. What was

Werner Klemperer (left) and Bob Crane in a scene from the television show *Hogan's Heroes*.

so extraordinary and historical about this innovative dramatic event was that no actor had ever done a one-person show for two hours not merely reciting, but acting out a character. Holbrook's feat was a masterpiece of creativity; his acting was electrifying, and he received standing ovations every night. Holbrook thus initiated the one-actor play based on an historical, political, or literary figure.

For more than forty years Holbrook has advanced the public's knowledge of Samuel Clemens's writings. Prior to that momentous evening, the young actor had invested years of research in a scholarly study of Twain to create *Mark Twain, Tonight!*, which he has played more than two thousand times in forty-eight states, Canada, Eastern and Western Europe, and Scandinavia. In recognition of his unique contribution to the humanities, Holbrook received an honorary degree from Ohio State University in 1979; since that time many other institutions have awarded him similar honors. He has also received an Outer Critics Circle Award, a Drama Desk Vernon Rice Award, a Tony, and a special OBIE Award for *Mark Twain, Tonight!*

Along with his stage work in *Twain* and other plays including *King Lear* and *Death of a Salesman*, Holbrook has been a well-respected television and film actor since the 1950s. He is the recipient of five Emmy awards: for *Mark Twain, Tonight!* (1966, CBS); for his

portrayal of Lincoln in *Sandberg's Lincoln* (1973), for his Kennedy-like senator in *The Senator* (1971), and two for his performance as Commander Bucher on the ill-fated *Pueblo* (1973); and for his part as the informational host of *Portrait of America: Alaska* (1989). He also accepted the challenge to be cast in the very first television drama dealing with homosexuals in the critically acclaimed *That Certain Summer* (1972). Holbrook portrayed Abraham Lincoln in the *North and South* TV miniseries in 1985 and 1986; Reese Watson in *Designing Women* (with third wife, Dixie Carter) from 1986 to 1990; and "Wild Bill" McKenzie in several *Perry Mason Mystery* episodes in the 1990s. Holbrook has acted in numerous motion pictures, most of which were not worthy of his exceptional talent with the notable exception of his portrayal of "Deep Throat" in the award-winning *All the President's Men*.

Holbrook was born in Cleveland but was raised by his grandfather in Hartford, Connecticut. He attended Culver Military Academy and Denison University where he majored in acting. After his graduation, he and his first wife, actress Ruby Holbrook, toured the southwestern United States, playing Shakespeare to small-town high schools. These road shows ceased after two children arrived, and Holbrook returned to New York to act in the CBS television day series

*The Brighter Day* from 1954 to 1959. At this time, Holbrook was encouraged and backed financially by his former drama teacher at Denison and others to take his one-man Twain to Broadway.

## Holden, William (1918-1982)

From his discovery in the late 1930s actor William Holden rose to be one of the most dependable and most likeable leading men of 1950s Hollywood, appearing to personify the mild-mannered charm of the Eisenhower era while, at his best, suggesting that the period's integrity and feeling went deeper than its relatively bland, conformist tendencies sometimes suggested. During more than forty years Holden had seventy roles where, for the most part, he met his fate with varying mixtures of wryness, cynicism, and good humor that was always believable and often attractive, but particularly successful in the mid-1950s.

Holden revealed a homely and good-natured appeal in a number of features including *Golden Boy* (1939) and *Our Town* (1940) before joining the wartime air force. On his return, following a number of forgettable Westerns, he got an important break in Billy Wilder's *Sunset Boulevard* (1950) as a late replacement for Montgomery Clift. Here, Holden showed a seedier version of where his good looks might lead him playing a failed Hollywood scriptwriter turned gigolo.

William Holden

Though the film was not a popular success, roles in *Born Yesterday* (1950) and his Oscar-winning performance in the prison camp comedy *Stalag 17* (1953) brought a much higher profile. The lovable rogue of *Stalag 17* is archetypal of Holden's best roles: relatively mild-mannered but opportunistic, brave if necessary, but preferring to avoid confrontation. A series of roles as cads, lovers, and occasional reluctant heroes followed—*The Moon Is Blue* (1953), *Sabrina* (1954), *The Country Girl* (1954), *The Bridges at Toko-Ri* (1954), *Love Is a Many Splendored Thing* (1955), *Picnic* (1955), *Bridge on the River Kwai* (1957)—most of which were highly successful. One of the top ten box-office stars from 1954 to 1956, Holden was able to arrange a deal for *Bridge on the River Kwai* bringing him 10 percent of the film's gross. However, as his looks began to fade and as audiences sought younger, more overt rebels, Holden was no longer a box office certainty (in 1968 he made *Variety's* list of overpaid stars). As an increasingly grizzled figure, marked by the alcoholism that would kill him in his 1960s, he was still capable of outstanding performances: most notably in *The Wild Bunch* (1969) as a sadistic and psychopathic cowboy, and as the fading anchorman in *Network* (1976), clinging wearily, grimly, to job and wife.

Holden was a reliable and consistent, rather than dazzling, performer whose films could be depended on to succeed in an uncertain period in Hollywood for many actors. Like John Wayne or Robert Mitchum, Holden appeared most successful where he did not need to "act," but merely characterize a certain form of masculinity which appeared particularly attractive to 1950s audiences. Not as attached to the uncompromising code of the Wild West as Wayne or as superhumanly laid back as Mitchum, his masculinity had a broad appeal. Holden's good nature is tempered by a skepticism and suspicion that gives an edginess to his heroism and sees his moral choices made with his self-preservation very much in mind. In a sense, he reflected the experiences of a generation of men who had been at war and knew the dangers of moral absolutes and strict codes of behavior that do not allow for circumstances (essentially the subject of *Bridge on the River Kwai*). Also, the stability and the prosperity of the 1950s carried fears of both failure and the banality of conformity. Holden offered a believable, but attractive, male lead with choices to do good or bad who swung convincingly between the two before making the right decision (allowing Bogart to get Hepburn in *Sabrina*, not taking Grace Kelly from Bing Crosby in *The Country Girl*).

Holden flourished in the space between the bad guy heroes of the 1930s and 1940s gangster movies and the increasingly youth-oriented anti-heroes of the 1960s. He was an understated representation of male hopes and fears in the 1950s, of the anxiety that individualism is impossible in an increasingly rationalized world and any attempt to be different might bring failure down on the precariously placed wage slave. Holden is a hero of this period exactly because in so many of his roles his actions are in spite of his skepticism of heroics, in spite of his quite palpable sense of self-preservation.

## Holiday, Billie (1915-1959)

Billie Holiday, certainly one of the foremost American song stylists and often called the greatest American jazz singer, was born Eleanora Harris on April 7, 1915 in Philadelphia. After her birth to Sadie Harris, the facts about Billie are often in dispute, due in large part to Billie's own tendency to spin tales about her life that have small kernels of truth but cannot be accepted wholesale as fact. The truth about her life is as interesting, if not more so, than her invention—recent biographers benefitted from extensive oral interviews done for a projected biography by Linda Kuehl (who died before completing it).

Listening to her recordings is a parallel version of her tumultuous and heartfelt life, one that expresses her beauty and soulfulness—however, as writer Hetty Jones warns, “Sometimes you are afraid to listen to this lady.” Her short life was consumed by trouble: the wrong men, alcohol, heroin, racism, and just plain hard times, yet her personality was so winning that it shone through her vocals and she was well loved by her friends. What is certain is that the singer gave as good as she got; alternately tough-minded and intensely vulnerable, she helped create the mystique of Lady Day and nurtured it throughout her career.

Her “autobiography,” *Lady Sings the Blues* (written by *New York Post* writer William Dufty), is the prime source for the Billie Holiday mythology; she bragged that she had never even read it, yet enough of her salty humor and dramatic timing made it into the book to capture an audience that was more than ready to accept it. What was

Billie Holiday

painful to Billie was often transformed in the narrative; the circumstances of her birth being a good example. Her mother, Sadie, told Billie her father was Clarence Holiday, a talented guitarist best known for his work with Fletcher Henderson's band, and Billie states in the book that “my mother and father were just a couple of kids when they got married.” They were never married nor lived together; Clarence Holiday acknowledged Eleanora, though their relationship was strained and awkward as he was married to another woman and disliked having his daughter around as evidence of his past.

Growing up in Fell's Point, a tough waterfront neighborhood in Baltimore, Eleanora experienced a brief, brutal childhood—her mother, forced to take work in New York as a maid, left her daughter in the care of abusive relatives. Only her great-grandmother (who she recalls with special fondness in *Lady*) was a source of solace to the little girl. Picked up for truancy, she was sent to the House of Good Shepherd for Colored Girls, a Catholic residential facility, where she was baptized and found some stability after a succession of “stepfathers” and being shunted around. Her recollections of Good Shepherd were mixed; she was glad to escape the harsh institution. Sadie wasn't able to handle her daughter, having enough problems of her own, and the breaking point came when the eleven-year-old girl was raped by a neighbor. She was returned to Good Shepherd, but stayed only a short while before returning home to Sadie.

The seminal event of young Eleanora's life was the discovery of jazz—she absorbed her first musical education listening to her lifelong idol, Louis Armstrong, on a Victrola in a neighborhood brothel. “I heard a record by, as we call him, Pops, and it was called ‘West End Blues’ and . . . he sang ‘Ooh be doo,’ and I would wonder why he didn't sing any words and he had the most beautiful feeling.” She always credited Louis Armstrong as her major influence as a singer, although she was certainly influenced by Bessie Smith and others; Billie loved Armstrong and performed with him on a number of occasions.

Now fifteen, Eleanora became a prostitute in madam Alice Dean's house, and soon was declared “out of control” by her guardian. Her exodus from Baltimore marked a turning point in her life when she made her way to New York to join her mother, who was employed as a maid. She was picked up in a Harlem vice raid along with Sadie, charged with prostitution and spent a short time in a workhouse. After her discharge she found could make a good living as a singer in clubs, and in juke joints she perfected her craft. At this time she adopted her father's surname and chose “Billie” after silent film actress Billie Dove. She loved the life, and she also took to marijuana, a commonplace in the music world—aficionados were called “vipers” and “sticks” were cheap and easy to find. Billie had a prodigious tolerance for all substances: alcohol, marijuana, and finally, heroin. It would be a mistake to focus on Billie Holiday as a singer ruined by addictions, yet there is no doubt her appetites shortened her life and harmed her voice. She was part of a culture that accepted drugs easily—one critic called them “an occupational hazard.”

The discovery of Billie Holiday has been claimed by more than one person, and she herself told a story about auditioning as a dancer at “Pod and Jerry's” and being hired as a singer which was more fancy than fact. What is true is that white jazz writer and producer John Hammond did hear her sing in early 1933 and was astonished by what he heard, but it wasn't until November of that year that he was finally able to schedule a recording session and later signed her for Columbia Records. The next year she met saxophonist Lester Young, her soul mate musically and personally: their friendship was one of Billie's deepest and most enduring relationships. It was Young who

named her “Lady Day” (the “Day” from Holiday) and christened Sadie, “Duchess” when he lived with them after he first came to New York. Billie called him “Prez” (short for “President” since he was “the greatest” in her opinion) and their careers would intertwine over the years with memorable recordings to prove it. Billie liked and supported other female singers: she and Ella Fitzgerald admired each other; she also befriended the young Lena Horne.

Billie may have sung the blues, but she was primarily a jazz singer and one of the best interpreters of pop music ever. She disliked the title of her autobiography for that reason (the publisher chose it). In the words of the musicians who almost universally admired her: “She had ears,” meaning she understood the music thoroughly, earning the respect of Count Basie, Artie Shaw, and many others. Duke Ellington said Billie was the “coolest.” Her signature song, “Strange Fruit” is indescribably wrenching; an indictment of lynching so potent it silenced audiences whenever she performed it—with “Strange Fruit” her artistry confronted the fashionable jazz world of Cafe Society with the brutal reality of racism that black musicians knew first hand. Lillian Smith told Billie the song inspired her to write her novel of the same name. Touring the South with Artie Shaw’s band, Billie felt the force of Jim Crow. In her autobiography she stated, “It got to the point where I hardly ever ate, slept, or went to the bathroom without having a major NAACP-type production.”

A song Billie Holiday made her own, “The Man I Love,” along with “T’ain’t Nobody’s Business If I Do,” and especially, “My Man” have been often held up as an example of how Lady Day felt about the men in her life. Billie was often exploited and abused by many people she trusted, but her choices reflected her deep ambivalence about love, and a measure of masochism. Musicians who worked with her loved her and deplored her boyfriends. One, Bobby Tucker, a favorite accompanist, called them “pimps,” because they “lived off her,” particularly the brutal John Levy and husband Louis McKay, who managed the singer by facilitating her drug habit and draining her financial resources. Hospitalized several times and jailed at Alderson Federal Reformatory in 1947, Holiday was penalized for her high-profile troubles—she lost her New York City Cabaret license, which paradoxically opened up venues like Carnegie Hall (where she performed several legendary concerts in 1948) but severely restricted her ability to make her living.

The 1972 film *Lady Sings the Blues*, a showcase for singer Diana Ross crafted for her by Berry Gordy as a new venue for Motown, distorted Billie Holiday’s life story and created a love story from Louis McKay’s viewpoint (he served as a technical advisor on the picture). Despite Ross’s strong performance, the film failed to create a convincing portrait and was critically panned. It did generate new interest in Billie Holiday and her recordings, which translated into such diverse appreciations of Holiday such as Alice Adams’s novel *Listening to Billie* and an Australian film, *Billy’s Holiday* (a fantasy wherein a male fan discovers he can sing like his favorite singer). Images of Holiday are ubiquitous on such items as t-shirts and posters: the “Lady with the Gardenia” (the flower she often wore in her hair), dressed to kill in elegant gowns, is an icon that has not only endured but has become ever more popular, much as Marilyn Monroe or Elvis has. In her discography, the Verve recordings (beginning in 1946) are often touted as her greatest, with her voice at its mature best and her spirit radiant in songs she made standards: “All of Me,” “Autumn in New York,” “Don’t Explain” and the song she co-authored, “God Bless the Child,” best reflects Billie’s essential personality—an artist, first and foremost. A last recording, the

controversial “Lady in Satin” shows the singer diminished but still innovating, working with a lush orchestral accompaniment.

Her death on July 17, 1959 followed a long, sad decline precipitated by the death of Sadie and accelerated by her addiction. Hospitalized in New York in May, 1959, she was arrested for possession of narcotics in her hospital bed, a last indignity. In a 1956 interview, Billie told Mike Wallace why she thought jazz greats die young: “we try to live a hundred days in one day, and we try to please so many people. Like myself, I want to bend this note, bend that note, sing this way, sing that way, and get all the feeling, eat all the good foods, and travel all over in one day, and you can’t do it.”

A legendary stylist, Frank Sinatra, stated: “Billie Holiday was, and still remains, the greatest single musical influence on me.” Her friend, writer Leonard Feather, said of Billie that “her voice was the voice of living intensity, of soul in the true sense of that greatly abused word. As a human being, she was sweet, sour, kind, mean, generous, profane, lovable, and impossible, and nobody who knew her expects to see anyone quite like her ever again.”

## Holiday Inns

Kemmons Wilson transformed roadside accommodations by building or franchising look-alike motels known as Holiday Inns. In 1952, entrepreneur Wilson, a high school dropout and home builder, opened the first Holiday Inn in Memphis, Tennessee, after returning

from a road trip to Washington, D.C., with his wife and five children, disappointed with the typical motel or roadside cabin of the day—overpriced, cramped units charging \$2 extra for each child. Wilson's first motel, opened at the start of the postwar auto travel boom, was the prototype for the thousands of Holiday Inns that later formed a global giant much imitated by newer hotel-motel chains. Wilson retired in 1978, and 18 years later Holiday Inns Inc. was acquired for more than \$2.2 billion by the British firm Bass PLC., which, by century's end, operated or franchised more than 2,700 Holiday Inns and other hotels in 90 countries. Holiday Inns caught the public's fancy by offering uniformly family-friendly, unsurprising, and moderately priced accommodations, with each motel easily recognized by a large green and white sign.

## Holliday, Judy (1921-1965)

Judy Holliday, in her relatively limited career, elevated the stock character of the dumb blonde from a movie stereotype to a complex combination of naiveté, common sense, intelligence, and vulnerability in a handful of memorable roles on stage and screen.

Born Judith Tuvim in New York City on June 21, 1921, Judy Holliday began her career in 1938 as a telephone operator for Orson Welles's Mercury theater company. This led to friendships with Betty Comden, Adolph Green, and others, who formed a cabaret act, called "The Revuers." From Greenwich Village night clubs, the act moved to posh New York clubs and, eventually, to a 16-week radio show on NBC and an extended run at Radio City Music Hall. "The Revuers" headed for Hollywood in 1944, but failed to gain important notice.

Holliday, however, performed supporting roles in three films at Fox, but her contract was not renewed. She headed back to New York, where she was cast in the 1945 play, *Kiss Them for Me*, playing the part of Alice, a dumb blonde. Judy was praised for rendering her character's sensitivity and vulnerability. Audiences loved her, but the play lasted only 14 weeks.

In 1946, Holliday replaced Jean Arthur in *Born Yesterday* when Arthur left the play in Philadelphia. She learned the part of Billie Dawn in three days, and the play was a sensation when it opened on Broadway at the Belasco Theater on February 4, 1946. This led to the part of Doris Attinger in the film *Adam's Rib* (1949) with Spencer Tracy and Katharine Hepburn at MGM. According to Hollywood legend, this role was really Holliday's screen test for Harry Cohn, the tyrannical boss at Columbia Pictures. Following this first success, Holliday starred as Billie Dawn in the film version of *Born Yesterday* (1950), which was released in December 1950. Holliday won an Academy Award as best actress for the role, beating out Bette Davis, Gloria Swanson, Celeste Holm, and Anne Bancroft.

In 1952 Holliday was accused of communist leanings by the McCarran Committee. The accusation kept her out of films briefly, but she performed in a series of roles in *The Marrying Kind* (1952), *It*

*Should Happen to You* (1954), *Phffft* (1954), and *Solid Gold Cadillac* (1956). In 1956 she was back on Broadway, cast as the lonely telephone operator in *Bells Are Ringing*, a Comden and Green, Julie Styne musical. The show had a three-year run, which led to her assignment by MGM to repeat the role in the 1960 film version opposite Dean Martin. It would be her last film. In 1963 she was diagnosed with breast cancer, and following a valiant two-year struggle, she died on June 7, 1965, two weeks before her 44th birthday.

## Holly, Buddy (1936-1959)

As a songwriter, performer, and musician, Buddy Holly remains one of the most influential rock 'n' roll entertainers of all time. Artists such as the Beatles, the Rolling Stones, Bob Dylan, the Byrds, Eric

Buddy Holly

Clapton, Pete Townshend, Elton John, and Bruce Springsteen have all acknowledged Holly's influence on their music. His career was painfully short, lasting from September 1957—when "That'll Be the Day" became a chart-topping hit—to February 3, 1959—when Holly died in a tragic plane crash in Iowa. But, as Holly biographer Philip Norman has pointed out, in that short period of time, "he created a blueprint for enlightened rock stardom that every modern newcomer with any pretense at self-respect still aspires to follow."

Holly's musical legend is replete with many firsts. He was the first rock performer to insist on artistic control over his material. He was the first to write his own songs, and the first to arrange them and supervise his own studio sessions. He was the first to master the technical aspects of the recording business, achieving effects with echo, double-tracking, and overdubbing. He was the first rocker to eschew the "pretty boy" looks of most performers of the 1950s, adopting a more bookwormish look complete with black horn-rim glasses. In addition, he was the first rock performer capable of attracting a faithful male audience as much as a female one. Holly was only twenty-two years old when he died, but he left behind a legacy of songs that have steadily grown in stature and influence, making him one of the genuine legends of popular music.

Born on September 7, 1936, in Lubbock, Texas, Holly's musical influences included country and western music and rhythm and blues. At age five, Holly made his first appearance on stage, joining his brothers Larry and Travis in a talent contest that won them five dollars. During his childhood, Holly took lessons to play the guitar, violin, and piano, and taught himself boogie-woogie rhythms on the piano. At age twelve, he entertained friends with Hank Williams' songs, and in 1949 formed the Buddy and Bob bluegrass duo, with friend Bob Montgomery. During this period, Holly learned to play the banjo and the mandolin, and in 1949 he made his first recording—a song titled "My Two Timin' Woman"—on a home tape recorder. By 1952, Buddy and Bob had become a sensation in Lubbock, and they recorded two songs in Holly's home that year and another in 1953. Also in 1953, they performed on KDAV radio, added Larry Welborn on bass, and were given their own program, *The Buddy and Bob Show*. KDAV disc jockey "Hipockets" Duncan became the trio's manager, landing them shows in the West Texas area. The trio added fiddler Sonny Curtis and steel guitarist Don Guess to the group in 1954, and together they made recordings in the Lubbock and Wichita Falls studios. That year the group added drummer Jerry Allison and opened Texas concerts for Bill Haley and his Comets and Elvis Presley. Holly was intrigued by Presley's rock 'n' roll style, but continued to play country music.

Holly's group landed its first recording contract in December 1955 with Decca records. The band, now minus Montgomery, recorded four songs in a Nashville studio on January 26, 1956. From that session, Decca released "Blue Days, Black Nights," backed with "Love Me," under the name of Buddy Holly and the Three Tunes. However, by September 1956, Holly left Decca because of the label's insistence that he continue playing country music, and due to the loss of his band members because of differences with Decca's session men. In late 1956, Holly, Allison, and Welborn traveled to Clovis, New Mexico, where they recorded two songs at a local studio. After returning to Lubbock, Holly formed the Crickets with Allison and Wiki Sullivan, who played rhythm guitar. On February 25, 1957, they returned to Clovis and recorded the classic "That'll Be the Day," trading their country stylings for a definitive rock 'n' roll sound. Numerous record companies rejected the song until it was released by

Brunswick Records in May 1957. With Clovis studio owner Norman Petty now their manager and Joe B. Mauldin having joined the group as bassist, "That'll Be the Day" received heavy promotion and reached number one by September 1957.

On the heels of the release of "That'll Be the Day," Buddy Holly and the Crickets spent three months touring the United States, playing such venues as the Apollo Theater in New York and Howard Theater in Washington, D.C. Holly's band recorded an impressive body of work in 1957, including such classics as "Words of Love," "Maybe Baby," "Not Fade Away," "Everybody," "Oh Boy," and the legendary "Peggy Sue." Holly was very experimental in the studio, and used a variety of new production techniques, including overdubbing vocals and double-tracking guitar parts. "Peggy Sue" reached number three on the charts in the United States and "Oh Boy" number ten during 1957. The group closed out this watershed year by appearing on the *Ed Sullivan Show*, an appearance they repeated in January 1958.

That same month, the Crickets recorded "Rave On" in New York and toured Australia for six days, then recorded "Well . . . All Right" on February 1958. Then, in early March of that year, Holly's group toured England, where their songs were topping the charts. Upon their return to America, the Crickets joined a tour assembled by disc jockey Alan Freed that included Jerry Lee Lewis and Chuck Berry. Also in 1958, Holly married Maria Elena Santiago, recorded "Heartbeat," "Wishing," and "Love's Made a Fool of You," and held recording sessions that included extra musicians, including Waylon Jennings, Phil Everly, and King Curtis.

By the time Holly's group toured the Northeast and Canada in October 1958, tension was growing between Holly and manager Petty, and there was friction among band members because of their lead singer's expressed desire to become a solo artist. During the tour, Holly left his manager, with the Crickets leaving Holly to stay with Petty. On October 21, 1958, Holly, working with producer Dick Jacobs and studio musicians, recorded "True Love Ways," "It Doesn't Matter Anymore," "Raining in My Heart," and "Moondreams." In January 1959, Holly assembled a new band, also to be called the Crickets, to take on the "Winter Dance Party" tour of the Midwest. Included in the tour were Ritchie Valens, the Big Bopper, and Dion and the Belmonts. The tour began on January 23, 1959, in Milwaukee, Wisconsin, and the evening show on February 1 was canceled due to bad weather. The tour then played Clear Lake, Iowa, on February 2. Following this fateful show, Holly, Valens, and the Big Bopper chartered a small plane to take them to the next date in Moorhead, Minnesota. The idea was to avoid taking the tour bus, which had previously broken down and had a defective heater. Shortly after takeoff, the plane crashed in a cornfield about five miles north of Clear Lake, killing Holly, Valens, the Big Bopper, and their pilot. Don McLean later memorialized the date as "the day the music died" in his song "American Pie."

Holly's popularity skyrocketed after his death, with his influence still impacting the contemporary music scene. Even as late as the 1980s, unreleased Holly material was still being issued. During the 1970s, Paul McCartney purchased the Holly song catalogue, and he began sponsoring annual Buddy Holly Week celebrations. Holly fan clubs, magazines, books, and Web sites flourish, and movies and musicals have been based on his life. A statue of him stands in Lubbock, and two memorials to Holly have been placed in Clear Lake, Iowa. One memorial is a large, grey stone located at the Surf Ballroom, where Holly performed his last show. The other is a guitar

and three records fashioned out of stainless steel placed at the crash site.

## Hollywood

In America, Hollywood is the promised land—a sun-kissed Mediterranean playground with the weather of a modern-day Eden. For much of its history, Hollywood was the place where the old rules no longer applied. If one was beautiful enough, or talented enough, or simply talked a good game, one could cast off the Protestant work ethic like a ratty winter coat and join the gilded throngs of a new American aristocracy. Hollywood was enticement personified; anything and everything could be bought, nothing was out of reach. Money flowed like water from its jeweled grottoes, and sex was in all around, as palpable as the scent of eucalyptus wafting down through Benedict Canyon. Through the twists and turns of its history, the California town named Hollywood has remained America's capital of glamour *non pareil* (even after downtown Hollywood had become a

sleazy mixture of tourist attractions and dilapidated office buildings, the legendary stars imbedded on Hollywood Boulevard covered in grime, and frequently, obscured by the bodies of the homeless). In its Golden Age, Hollywood was a glamour factory, a metropolis of illusion. Enormous film studios lined its side streets, talent agencies occupied its office buildings, swank restaurants and nightclubs occupied its busy thoroughfares. It was the home of the stars, who built monuments to their image high above in the Hollywood hills, hard by the famous Hollywood sign, beckoning through the smog like a red dot on a map signifying, you are here.

But where exactly was "here?" How did this remote backwater change so suddenly from citrus groves and barley fields into the headquarters of the eleventh largest industry in the United States? In part it had to do with the early economics of the film industry, in part with the weather. In 1887, long before the film industry was a reality in Hollywood, let alone a going concern, a Kansas real estate tycoon named Horace Henderson Wilcox began mapping out the streets of a town built especially for stolid Midwesterners, sick of ice and snow. Being pious Midwesterners themselves, they banned saloons and offered land gratis to any church willing to locate there. The Wilcoxes' embryonic community was nestled at the foot of a ridge of gentle hills which sheltered the farms from the brutal desert winds, twelve miles from the Pacific Ocean. It was an idyllic setting, and fittingly, Wilcox's homesick wife named the nascent settlement Hollywood after the country place of a family friend.

Hollywood was not exactly an overnight success. In 1903, future *Los Angeles Times* publisher Harry Chandler and railroad tycoon General Moses Hazeltine Sherman formed a syndicate that managed to get the still vacant fields incorporated as an independent municipality—a prime example of the land speculation so typical of Los Angeles history up to the present day. They built a trolley line from downtown (the population at the time was a mere 500 people) and a

The Hollywood sign overlooking the city of Los Angeles, California.

thirty-three room Spanish-style hotel on as-yet-unpaved Hollywood Boulevard. To stimulate sales, Chandler and Co. liberally posted signs reading SOLD among the lots, perhaps the first in a long line of Hollywood subterfuges. In order to attract what they considered as solid citizens (Midwestern farmers) they continued in the pious tradition of the Wilcoxes: beside outlawing saloons, in 1910 the Hollywood Board of Trustees officially banned movie theaters, at which time there was not a one.

The film industry came to Los Angeles in 1907 as the result of a fluke. Winter storms prompted William Selig of the Chicago-based Selig Studios to send his leading man west in search of an alternate location. The filming of *The Count of Monte Cristo* (1908), the first film shot in California, was completed in Laguna Beach not long after, and Selig was so taken by the area that he returned the following year, setting up shop in a converted Chinese laundry east of downtown. Soon film companies were flocking to Los Angeles. There were both financial and legal reasons for the move. Outdoor shoots could occur year round, and the Los Angeles basin afforded a wealth of natural scenery. "It was all rather pristine and primeval," writes Otto Friedrich. "Cops and robbers chased each other through the streets and directors improvised their stories as they went along. The official histories explain this first flowering as a happy combination of sunshine, open spaces, and diverse settings: the Sahara, the Alps, and the South Seas could all be simulated within Los Angeles' city limits." A further incentive lay in Los Angeles' remote location. Independent film producers were then at war with the Edison syndicate, who, by enforcing patents on film and projection equipment, were set on milking the industry ad infinitum. In remote Los Angeles, collecting royalties would be no easy endeavor for the Edison bund.

At first, the majority of studios settled in Edendale, a hilly and somewhat congested area just west of downtown. It wasn't until 1910 that the first film studio, the Nestor Film Company, established itself in Hollywood proper. (By a happy coincidence, the city of Los Angeles had subsumed Hollywood, rendering the prohibition against movie theaters null and void.) By the 1920s, film production was wholly centered in Hollywood, with a scattering of studios established to the north, in Burbank, or southwest in Culver City. The stars had also staked their claim to the geographic high-ground, moving from the downtown—the adjacent Silver Lake was the neighborhood of choice for the earliest silent stars—to the Hollywood Hills and just west to the lush canyons of Beverly Hills.

By some accounts (most notably, Kenneth Anger's lurid, sensationalistic bio-dissection, *Hollywood Babylon*), the silent era was a never-ending party of dope, booze, and aggressive promiscuity. In this innocent time, drugs were an acceptable subject for pictures. In 1916, for instance, Douglas Fairbanks starred in *The Mystery of the Leaping Fish*, appearing as Coke Ennyday, a somewhat besotted detective who availed himself liberally of "joy powder." It was a free and easy time, and the stars, by wallowing in their licentiousness, appeared to be testing the limits of public opinion. And push they did, with tragic results. In 1920, popular starlet Olive Thomas committed suicide in Paris, occasioned by her failure to procure heroin; in 1921, comedian Fatty Arbuckle was arrested for the death of aspiring starlet Virginia Rappe during "rough sex." The following year director William Desmond Taylor was murdered in his home, and once again the studio publicists worked overtime at damage control. But the hemorrhaging had gone too far. In the wake of public outrage, the Hollywood production heads reluctantly appointed William H. Hays, a Republican functionary, to act as arbiter of the public morality. Into the 1940s, the notorious Hays Commission would pass judgment on

all Hollywood product. Hays declared that the movies needed purifying, both in content and cast. To aid in the latter, he released a notorious black-list, the kiss of death for many a screen idol. Wallace Reid, one of Paramount's biggest stars, made the list (he died in a sanitarium the following year), as did Juanita Hansen and Alma Rubens, both popular leading ladies, and both soon to be deceased.

At the time, the 1920s were considered a Golden Age in Hollywood, but in fact they were merely a holding pattern, killing time until the next big thing—sound—came along. In short order talkies separated the wheat from the chaff. Actors who had succeeded on their looks, but were not trained in elocution (or who had unfortunate speaking voices, or thick regional accents) became also-rans, as irrelevant as yesterday's newspaper. Clara Bow, born and raised in Brooklyn, found her career effectively ended when she blew out the microphones on her first sound scene. One of Hollywood's most successful leading men, John Gilbert, found his career ruined after sound technicians neutered his tenor voice, and Marie Prevost's career was ruined by her thick Bronx accent; each had succumbed to alcoholism by the mid-1930s.

With the advent of sound, the movies—and Hollywood itself—entered into maturity. No longer a curiosity, movies, and moviemakers, were the unwitting producers of dreams, miners of the American unconscious. Apart from a few fallow periods—the early 1960s, for instance—what the astute student of film lore observes is the complex inter-relationship between entertainment and the values of a people. And like the compartmentalized functions of the brain itself, the different studios each specialized in a particular sub-myth; Warner Brothers specialized in gangster films, (the reptilian rear-brain); Universal made its living off of horror films (the unconscious); MGM, rigorously wholesome light-hearted fare (shades of the super-ego); Columbia, wise-cracking screwball comedies (the ego) and Frank Capra pictures (another example of the socializing super-ego). Moviegoers could take their pick from a smorgasbord of the unconscious, and the relationship was reciprocal only insofar as a film that failed to tap into deep-seated archetypes was apt to sink from view in a matter of weeks.

As the instrument of our unconscious desires, film stars took on a preternatural significance. They were demi-gods and goddesses, archetypes, and by the same token, repositories of innately American virtues and vices. And Hollywood itself was their charmed playland, the center of a galaxy of restaurants, bars, and nightclubs like a neon-lit Mount Olympus come to life (in fact, a Hollywood housing development of the 1960s was named Mount Olympus). For a time, the places where film people staged their debauches became as well known as the stars that patronized them. Chasen's, Musso & Frank's, The Brown Derby, and The Montmartre—these names evoke an era where film deals were made over three martini lunches and stars relaxed after a tough day of shooting at one of several exclusive watering holes. Celebritydom was enjoyed in public, movie stars less cloistered than they are today. At lunch time, crowds would gather around Hollywood eateries in the hopes of catching a glimpse of a Cary Grant or a Marlene Dietrich. While the rest of the country struggled through the Depression, Hollywood wallowed in abundance, and far from taking umbrage with their antics, the public took their high-living as a reassuring sign that better times lay ahead. "Around the globe Hollywood became Tinseltown, a land of dreams and luxury," writes Ronald L. Davis. "For the American public, raised on an ethic that emphasized success, material wealth, and social mobility, Hollywood embodied a national ideal."

Similarly, the nation's movie palaces acted as an extension of this mythology. If the studios were in the business of selling dreams, then the theaters with their slavish attention to detail augmented that feeling. The gilded, air-conditioned temples were calculated to awe, and for many, the very act of going to the movies was a panacea, where for thirty cents one could temporarily shut out the overwhelming tide of misery around them. Although Hollywood was not alone in its luxurious theaters, those that lined Hollywood Boulevard became world famous, especially for the red-carpeted premieres they so frequently hosted. Graumann's Chinese Theater became something of a national landmark, for its premieres as well as the foot and hand prints embedded in fresh concrete around the box office. While over the course of time, the Chinese Theater's neighbors—the El Capitan, the Egyptian—have fared poorly (until very recently), Mann's has remained a virtual institution, along with Musso & Frank's, the last vestige of Hollywood's glamour years.

Even as Hollywood wallowed in its good fortune, its destruction was at hand. 1939 had been a good year for Hollywood. The movie industry was the nation's eleventh largest industry, grossing \$700 million that year, attracting more than fifty million Americans to the nation's theaters every week. Within a decade, this illusion of omnipotence would prove to be just that, illusory. After two decades of staving off Justice Department anti-trust lawsuits, the moguls had relented and divested themselves of their theater holdings and ended their unreasonable, but lucrative, booking practices (in effect, theater owners were forced to buy films in blocks, accepting many duds in order to book the one film they wanted). In addition, the star-system the moguls had pinned their fortunes on had backfired with disastrous results. Enormous salaries were one thing, but when the stars began packaging their own deals, in effect usurping the role of the studios, the moguls could only watch in horror as the power they had so carefully nurtured slipped through their fingers. Now it was the actors, agents, and managers who called the shots.

Television was a contributing factor to the demise of the studio system. The big studios ignored the threat, and only marginal companies like RKO realized a profit, hiring their facilities out to the upstart medium. Through the 1950s and early 1960s, the studios watched their profits evaporate as they grew further out of touch with the post-war audience. Even then, Hollywood generated a kind of anti-alchemy with Film Noir, one of film's most enduring and symbolically rich genres, so perfectly in step with the mood of paranoia and desperation sweeping over the land. But Film Noir's richness was unintentional; for the most part, the genre consisted of "B" movies and programmers, not the kinds of epic, sweeping dramas that studios took pride in.

Ironically, it was these same "B" movie actors and directors, more attuned to the changing times, who saved the majors, ushering in the New Hollywood, what was for many the last Golden Age of American movie-making. By the early 1960s, Hollywood profits had withered on the vine. Film production companies were being snapped up by oil and insurance companies (like Gulf & Western's acquisition of Paramount), which looked upon the film industry as an opportunity to diversify their investments. Desperately casting about for a white knight to rescue them from the financial doldrums, executives began to take chances. First there was Mike Nichols' *The Graduate* (1967), a film that not only redefined the parameters of what could be shown, but in casting Dustin Hoffman in the lead opened up the way for ethnic actors such as Robert De Niro and Al Pacino to be treated as legitimate leading men. There was no one true breach that destroyed the dam of Hollywood's old system, it was more like many small

ruptures in a dike. *The Graduate* was followed by *Bonnie and Clyde* (1967), *Easy Rider* (1969; producer and star Peter Fonda joked that before the film was finished, the executives shook their heads in incomprehension, and afterwards, nodded their heads in bewilderment), then *Midnight Cowboy* (1969), all films that would have been unthinkable ten years before. The executives, who were as scornful of this new generations' politics as they were of their artistic influences, could finally do nothing more than let the floodwaters inundate them.

It would not last long. The 1970s were a time of great artistic ferment in Hollywood, a changing of the guard in which the director, who had long been considered no more than a glorified technician by the studios, was now a hero. With their newfound power, directors explored territory that only a decade earlier would have been strictly forbidden. As director Robert Altman put it, "Suddenly there was a moment when it seemed as if the pictures you wanted to make, they wanted to make." This was the decade when Martin Scorsese, Francis Ford Coppola, William Friedkin, Hal Ashby, and Peter Bogdanovich burst into prominence, making edgy, uncompromising films. The dark side of the auteur equation, however, was that as the decade edged towards its conclusion, the film budgets grew more outrageous; directors, fueled by a combination of drugs and hubris, grew more stunning in their arrogance; and when the inevitable shift in the cultural winds hit, it was the studio executives, nursing a decade of bruised egos, who had the upper hand.

Hollywood operates by a complex logarithm that is by nature amoral. In the Glamour Years, Hollywood produced and the audience bought tickets—a simple equation—but with the advent of marketing, sneak previews, and audience polling, the situation had come full circle. America spoke with its dollars, and Hollywood had become very attentive. But what really spelled the death knell of the New Hollywood was the success of two films: *Star Wars* (1977) and *Jaws* (1975). What a nation weary from over a decade of war and civil unrest wanted was entertainment; not the sort of entertainment television could provide, but spectacle. America wanted to be wowed, and that is exactly these films did. Within a few years, a man named Don Simpson would turn spectacle into a science, producing a string of mindless, but entertaining hits, simple films that could be summed up in twenty-five words or less. His first hit, *Flashdance* (1983), could be summed up thus: blue collar dancer yearns to be ballerina. Naturally film critics decried Simpson's films—*Top Gun*, *Beverly Hill Cop*, *Days of Thunder*—but the high concept film was now king. And through the 1980s and 1990s, it was the event film, the summer blockbuster, that was Hollywood's bread and butter, an all-American spectacle of excess: sex, violence, and mind-boggling special effects. In effect, these films were simply glorified genre films.

Of course, Hollywood has always been a business, as one of its nicknames, the Glamour Factory, makes abundantly clear. What it sells is glamour, sex, violence, physical beauty, and extravagance, while convincing the public it is buying virtue and art. From the moment Chandler and company set out their faked "SOLD" signs on the vacant lots, the modus operandi of Hollywood—deception—was firmly entrenched. And while Hollywood Boulevard molders, with only a few relics of the glory years remaining amongst the cheap tourist gift shops, the homeless people, and Scientology buildings, its legend is still repackaged and sold to a naive public. Hollywood will always be a valuable commodity. While the locus of power in the entertainment industry has moved elsewhere, down-at-the-heels Hollywood remains its most visible symbol.

But while the shifting dynamics of the industry have made Hollywood-the-place obsolete, it still remains a powerful symbol.

More than can ever be measured, Hollywood created the dreams of America in the twentieth century, allowing generations access to a symbolic tapestry in the darkened hush of the movie theater. It is a paradox that while Hollywood can be defined and measured in square mileage, the map of its streets is but a dim shadow of the much more complex and ineffable map of the American psyche. Hollywood exists and yet it is entirely ephemeral, a locked room in the collective unconscious. In 1949, David O. Selznick was wandering the empty streets of Hollywood late one night when he turned to his companions, saying, "Hollywood's like Egypt. Full of crumbling pyramids. It'll never come back. It'll just keep on crumbling until finally the wind blows the last studio prop across the sand." He was right and he was wrong. The myth of the place has become an archetype, and even while multinational corporations own every major studio outright, there has never been any question that Hollywood remains the center of film production both in spirit and in substance.

## Hollywood Squares

One of television's most popular game shows during its 15 year run from 1966 to 1981, *Hollywood Squares* combined high camp, humor, and a modicum of intellect to become an audience favorite. As described in *Entertainment Weekly's* "The Best Game Shows of All Time," "Nine celebs sat inside a three-story ticktacktoe board and parried questions with wacky ad-libs (which turned out to be scripted)." Hosted by the good-natured Peter Marshall, the squares were occupied by A- and B-list stars from film, television, and music. The center square, however, was the hub of the show. First occupied by Ernest Borgnine, the center square came to be the domain of the acerbically witty and very camp Paul Lynde, and was later taken over by the inimitable Joan Rivers. A hip new *Hollywood Squares* debuted in 1998 with Whoopi Goldberg in the coveted center square, proving that pop culture always has a place for amiable schlock.

## The Hollywood Ten

In the fall of 1947, a group of ten prominent artists working in film who were to enter American history as the Hollywood Ten, were subpoenaed by the House Un-American Activities Committee (HUAC) as part of investigations into "the extent of Communist infiltration in the Hollywood motion picture industry." Taking the First Amendment, the Hollywood Ten denied HUAC's constitutional legitimacy as well as its right to inquire into an individual's personal and political beliefs, and refused to answer any of the Committee's questions. In their prepared statements, they went so far as to compare the activities of the Committee to those of Nazi Germany and stated that HUAC heralded the onset of a new fascism within American life. The Ten's refusal to co-operate in admitting to their political affiliations resulted in their being tried at the Washington, D.C., Federal court in April, 1948. Found guilty of contempt, writer-producer Herbert Biberman, director Edward Dmytryk, producer-writer Adrian Scott, and screenwriters Alvah Bessie, Lester Cole, Ring Lardner, Jr., John Howard Lawson, Albert Maltz, Samuel Ornitz, and Dalton Trumbo were each sentenced to one year in jail and a thousand-dollar fine. They were blacklisted by the film industry, and for many years were able to work only by living abroad or under cover of a pseudonym. (Robert Rich, for example, who won an Oscar for *The Brave One* in 1956, was actually Trumbo).

The Hollywood Ten became a benchmark for resistance against the investigative powers of the congressional committees during the Cold War, but their treatment left a shameful blot on the community that ostracized them. It was an omen for a much wider process that expanded to all sectors of American society and eventually all but destroyed the liberal left in America. The cultural consequences of their indictment and the subsequent blacklisting of many of their distinguished peers were serious—Hollywood was deprived of many of its finest and most intelligent creative talents, and the climate of fear that came to prevail led to blandness, even sterility, of artistic expression and new ideas for fully a decade.

Matters grew worse when Edward Dmytryk recanted his position and agreed to co-operate with the HUAC. He was released early from jail, admitted past membership of the Communist Party, and took himself to England. Ironically, Dmytryk is admired for the socially conscious, humane stance of some of his best work, including the anti-fascist drama *Hitler's Children* (1943) and *Crossfire* (1947), a serious attempt to address anti-Semitism. He returned from exile in 1951, stood as a witness in the HUAC's second round of hearings into Hollywood and named names. He was not alone. Altogether over this dark period in Hollywood's history, some 300 "witnesses" confessed to their own past Communist affiliations, and many also

The set for the 1970s game show *Hollywood Squares*.

incriminated their fellows. Among the more celebrated who failed to take the First Amendment were writers Clifford Odets, Isabel Lennart and Budd Schulberg, actors Sterling Hayden and Larry Parks, and, famously, the great director Elia Kazan, whose appearance to receive a special Oscar at the 1999 Academy Awards ceremony opened old wounds and provoked furious controversy.

The fate of the Hollywood Ten exemplified that of anyone who refused to cooperate with the HUAC. The refusal of any individual to name names before the Committee was interpreted as evidence of Communist or fellow-traveling sympathies, and the fate of the Ten instigated an ignominious cycle of cowardice and betrayal in the Hollywood community. The FBI put many creative artists under surveillance, and at least two victims of the hearings committed suicide. The roll call of those either “named” by their peers or blacklisted on suspicion is long, shocking, and substantial. Among the many who suffered the harsh artistic, economic, and social consequences of blacklisting were writers Ben Barzman, Waldo Salt, Dashiell Hammett, Lillian Hellman, documentarist Joris Ivens, director Joseph Losey, writer-directors Carl Foreman, Jules Dassin, and Abraham Polonsky, actors Anne Revere and Gale Sondergaard, satirist Dorothy Parker, and Paula Miller (Mrs. Lee Strasberg). Foreman, Dassin, and Losey in particular continued to forge careers in Europe; the more fortunate actors found work on the stage, while

others were forced into retirement. Actor John Garfield died in 1952, aged 40, from a heart attack said to have been caused by the strain of the investigations.

Blacklisting began to fade in the late 1950s, along with the rest of the McCarthyite hysteria that had for so many years held Americans under threat. Many of the previously blacklisted writers and directors were able to return openly to Hollywood, where their achievements were a salutary lesson in the loss that films had suffered by their absence. Thanks to the insistence of Kirk Douglas and Otto Preminger respectively, Dalton Trumbo was the first screenwriter to re-emerge under his own name on the credits of *Spartacus* and *Exodus* (both 1960). Robert Rossen added *The Hustler* (1961) to his distinguished body of work pre-1951. Abraham Polonsky, whose career had been completely ruined by the hearings and his subsequent exile, came back to make only his second of three films, the highly regarded Western, *Tell Them Willie Boy is Here* (1970), and Ring Lardner, Jr. wrote the Academy Award-winning screenplay for *M\*A\*S\*H* (1970). Carl Foreman, who had just completed the screenplay for *High Noon* (1952) when he was blacklisted, never returned from Britain, but was posthumously acknowledged in 1985 for his previously uncredited Oscar-winning work on *The Bridge on the River Kwai*. Waldo Salt received the Oscar for *Midnight Cowboy* (1969), shared it for *Coming Home* (1978), and was nominated for *Serpico* (1973).

The unwavering courage of the Hollywood Ten and others continues to stand as a historic reproach to the movie moguls who caved in to McCarthyite demands to “clean up” their industry.

## Holocaust

Over the span of four nights, between April 16 and 19, 1978, approximately 120 million Americans watched at least some of an NBC miniseries that graphically portrayed the genocide of six million Jews during the Nazi era. Commercial prime-time television may have seemed an unlikely venue for this kind of subject matter, but *Holocaust* appeared during a moment in American network history when more serious subject matter threatened to get a toehold in prime time. The phenomenal and unprecedented success the year before of the miniseries *Roots* paved the way for *Holocaust*. In fact, NBC gave the production its go-ahead during the week that *Roots* aired. That series' record-breaking Nielsen numbers apparently gave the network confidence that if American viewers were willing to sit through night after night of brutal, realistic depictions of slavery in America, then those same viewers might also brave the images of genocide.

Producer Herbert Bodkin, director Marvin Chomsky (who had directed an episode of *Roots*), and writer Gerald Green did not want to just produce a Jewish *Roots*, however. They managed to avoid some of the production issues that were problematical in *Roots*. While *Roots* was shot entirely on the Hollywood back lot, *Holocaust* was filmed in Europe. The Matthausen concentration camp in Germany stood in for Auschwitz, thus giving camp scenes a chilling sense of verisimilitude. Also eery were some responses to the project during its production. In Germany and Austria, many local technicians declined to work on the shoot. Swastikas occasionally appeared on sets. Officials in Hungary, Czechoslovakia, and Yugoslavia refused permission to film in their countries, arguing that the script contained “Zionist” elements.

*Holocaust* also differed from *Roots* in that it avoided filling its cast with highly recognizable stars. The producers didn't want viewers to be distracted by the star power of performers, but rather to accept the actors as the characters they played. *Holocaust's* cast included then little-known players as Meryl Streep, James Woods, and Michael Moriarty.

Like *Roots*, *Holocaust* used the family melodrama genre to tell its sweeping tale of human misery and survival. The series focused on two German families: the Weisses, who were thoroughly assimilated German-Jews; and the Dorfs. Most of the Weisses are sent to concentration camps. The artist son (James Woods) finds himself in

Tereisen, the Nazis' “model” camp for high profile Jews, especially those with artistic talent. The narrative focuses on the utter squalor and horror of the place and the attempt by artists to document their experience there. The Weisses' daughter (Blanche Baker) is raped and then put into a hospital for the mentally ill, where the Nazi policies toward “mental defectives” ensure that she is quickly killed. Mr. and Mrs. Weiss, along with their Catholic daughter-in-law (Meryl Streep), end up in Auschwitz. A particularly graphic scene portrays the supposed “showers” the women were to have; the audience views a portrayal of them being gassed. Only the youngest son (Timothy Bottoms) survives. He escapes a concentration camp and joins Jewish partisans fighting the Germans. The Dorf family includes Erik (Michael Moriarty), an unemployed lawyer, and his ambitious wife, who persuades him to take a job with the Nazi security forces. Dorf rises quickly through Nazi ranks, becoming an aide to top architect of the Final Solution, Heinrich Heydrich (David Warner).

The miniseries received many of the same criticisms heaped on *Roots*. It took one of history's greatest human horrors and turned it into a soap opera. It made the unimaginable too easily accessible. It gave audiences only abject Jewish passivity on the one hand and heroic, active Jewish resistance on the other hand. Other critics praised the production for not flinching from brutality. There was no turning away from scenes of mass murder, torture, and death camp ovens. The realism proved too much for some midwestern NBC affiliates, who found scenes of naked women driven to the gas chambers too graphic and asked NBC to delete the offending scenes in their markets. Critics also complimented the series for not portraying the Nazis as boot-clicking, saluting caricatures. Instead, the actors played their characters as ordinary people who too easily followed the instructions of a fascist regime. Notably, the actors did not attempt German accents.

While *Holocaust* was a success in North America, it became a phenomenon of historic proportions when broadcast in West Germany in January 1979. Nearly half of the population watched at least some of the series, the vast majority responding to it positively. Germans had been exposed to relatively little information about the Nazi period or the Holocaust since the end of the war. The broadcast of *Holocaust* may have broken that silence. The miniseries was preceded by the showing of documentaries and followed by television debates and phone-in programs. Almost overnight, Germans, especially younger ones, demanded discussion of Germany's Nazi past. In the political arena, the showing of *Holocaust* may have also been instrumental in influencing the Bundestag to vote to discontinue a policy of statute of limitations for Nazi war crimes.

In North America, *Holocaust* demonstrated that network television could tackle weighty issues of human tragedy. In Germany, the miniseries might have caused an entire nation to reflect seriously on its historical demons.

## Holyfield, Evander (1962—)

The only fighter besides Muhammad Ali to become a three-time heavyweight boxing champion, Evander Holyfield might unfortunately be remembered not for his achievements, but as the boxer whose ear Mike Tyson bit off in June 1997. In the 1990s, Holyfield

and Tyson portrayed the diametrically opposing images of professional boxers. Holyfield rejected the snarling pitbull image projected by Tyson and so many boxers and instead presented the calm, reasoned demeanor of a serious professional.

Holyfield, raised in Atlanta, Georgia was the youngest of eight children. A scrawny child who sat on the bench during most of his sophomore football season because he was so small (five feet four inches tall, 115 pounds), Holyfield grew to 6 feet 2 inches and trained hard to reach about 212 pounds. Nevertheless, Holyfield was still considered little in the world of heavyweight boxing, where opponents weighing 230 pounds regularly entered the ring. Undaunted by his many doubters, who thought his lighter weight meant he wasn't as powerful as his opponents, Holyfield steadily rose through the heavyweight ranks to become the undisputed heavyweight champion in 1990. Losing his title in 1992, he reclaimed it from Riddick Bowe in 1993. Having lost his title a second time in 1994 to Michael Moorer, Holyfield discovered that he had a heart problem and was forced to retire.

A devout Christian, Holyfield had always given much of the credit for his success in the ring to God and to his spiritual upbringing. Relying on his faith and continuing his rigorous training schedule, he made it back to the ring. Holyfield was poised to win the heavyweight title in 1997 from Mike Tyson, who had recently reentered the ring after his stint in prison for a rape conviction. When Tyson bit off a portion of Holyfield's ear, the fight was stopped. Holyfield won a rematch later that year and remained a top contender in the heavyweight ranks at the turn of the century.

## *Home Improvement*

The ABC network sitcom *Home Improvement* first aired on September 17, 1991 and ran for eight seasons, through May 1999. During only its second season, the show was renewed for three additional seasons, an unusual decision in the television industry. Based on the stand-up comedy routine of its star, Tim Allen (born Timothy Allen Dick in 1953), *Home Improvement* initially reflected Allen's love of power tools, cars, and Sears department stores, as well as mirroring his own family situation. Allen portrayed Tim Taylor, the host of cable TV's “Tool Time.” His wife, Jill, was portrayed by Patricia Richardson. More than just comedy, though, *Home Improvement* epitomized the concerns of the largest generation in history, the baby boomers.

The Taylors were a representation of the average American family of the 1990s, and their struggles, although treated with light-hearted humor, reflected the struggles of the show's demographic. In the main, three fundamental concerns of the boomer generation were examined on a weekly basis—relationships, family, and the search for spirituality.

One trend that *Home Improvement* influenced was a return to more defined gender roles. While women in the 1960s and 1970s discarded their bras and retained their own last names within marriage, while men grew their hair long and explored the sensitive side of their natures, couples in the 1990s rediscovered the fundamental differences between the sexes. *Home Improvement* gave propulsion to such bestselling pop psychology books as John Gray's *Men Are From Mars, Women Are From Venus* (1992), with its, at times, stereotypical gender roles. On “Tool Time,” buxom tool-girl Heidi (Debbe Dunning) seemed more like window-dressing than a flesh-and-blood character. In the Taylor household, Tim grunted, worked on cars, was obsessed with “more power,” and didn't read unless a book had the word “illustrated” in the title. He was into sports and often didn't listen to his wife. Jill, on the other hand, didn't understand cars and called tools “thing-a-ma-jigs.” An example of Mars/Venus stereotyping was seen in the episode “Shooting Three to Make Tutu,” where Jill wanted Tim to take one of their sons to the ballet, but he had plans to take him to a basketball game instead. In this episode, and others like it, real men don't like ballet (or opera), and women don't like sports.

The series, however, wasn't content merely to stereotype male/female relationships, and in stretching itself, made the characters search for an identity beyond roles. Jill Taylor lost a job, found another, struggled with how to keep family and job together (“Abandoned Family”), and decided to go back to college. Tim Taylor dealt with the death of a mentor (“Arriverderci, Binford”) and the arrival of a new boss; he dealt with work rivalries and an inferiority complex with Bob Villa (“What About Bob”). In other episodes, *Home Improvement* broke the stereotype of the dumb male that it had helped to perpetuate. The formula that had always put Tim in the wrong was overthrown as Jill realized her own shortcomings (e.g., “Heavy Middle” and “Slip Sleddin' Away”). Their three boys (Zachary Ty Bryan, Taran Noah Smith, Jonathan Taylor Thomas) grew older and dealt with issues of their own: identity, dating, sex, drugs, and pulling away from Mom and Dad. Al Borland (Richard Karn), originally cast as a foil to Tim, became even more sensitive—the man every woman wants, the representative of the 1990s Iron John manhood movement (see “Reel Men” for Al's yearning for male bonding). Heidi was given more to do as she juggled work with a new baby.

As Tim Taylor was fond of saying on “Tool Time,” “It's not just about home improvement, it's about male improvement,” and *Home Improvement* could be said to be about marriage improvement. Episodes didn't shy away from tough topics that boomers were having to confront in their own marriages, such as sexual temptation on both sides (“Eye on Tim” and “Jill's Passion”), legal separation of friends and family members (“He Ain't Heavy, He's Just Irresponsible”), marriage counseling, lack of intimacy, and taking each other for granted (“Taking Jill for Granite”).

*Home Improvement* reflected the concerns of an aging baby boomer population. It resisted a sitcom staple that infuses life into dying ratings: an impending pregnancy. Instead, it went in the opposite direction and began pulling in extended family. Boomers became increasingly aware of aging parents, and so the series introduced Tim's mother and brothers, Jill's parents and sisters. In “Taps,” the audience vicariously experienced the death of a parent as Jill lost her father. In “No Place Like Home,” Tim dealt with his mother selling the home in which he grew up. In the final season, Jill faced an emergency hysterectomy (“Love's Labor Lost”), forcing her into menopause, a condition with which female audiences could readily identify.

During the 1990s, the baby boomers were frantically searching for who they were and where they fit into the cosmos. The idealistic 1960s had faded, along with their bell-bottom jeans, leaving many to wonder where their ideals had gone. Their search for spiritual values was found in Wilson (Earl Hindman), the Taylors' over-the-fence neighbor. He regularly gave out spiritual platitudes with as much profundity as a fortune cookie, but Wilson developed along with the show and audiences saw more of his family, heard the story of his dead wife ("My Dinner with Wilson"), and watched romance bloom in his life. Wilson's wisdom, like spirituality in the latter 1990s, drew on many wells: Buddha, Jesus Christ, Mark Twain, Shakespeare, Gandhi, Galileo. A running gag, and a technical challenge to the crew, was Wilson's partially obscured face, reflective of the boomers' belief that spirituality has many faces and none are clearly illuminated.

*Home Improvement* won many awards, including Emmys, People's Choice, and TV Guide Reader's Poll, as did its two central stars, Allen and Richardson. Tim Allen won the People's Choice Award for "Favorite Male Performer in a Television Series" for the eight years of *Home Improvement's* run. He won the Golden Globe Award for "Funniest Actor in a Television Series" in 1997 and was nominated again in 1998. Patricia Richardson was nominated four times for an Emmy as "Outstanding Lead Actress in a Comedy Series" and twice for the Golden Globe Award. The show held a mirror up to the baby boom generation, and the baby boom generation made sure that the Taylors knew they were America's Family.

## Home Shopping Network/QVC

Home Shopping Network (HSN) and Quality, Value, Convenience (QVC) were responsible for a historic change in American consumer habits, and have become as much a feature of television as religious channels. These two cable television channels feature live broadcasts of themed sales presentations, 24 hours per day, during which viewers can call a toll-free telephone number, speak with the presenters live on the air, and order the products.

Home Shopping Network got its start in 1977 when a Clearwater, Florida, radio station agreed to accept an advertiser's merchandise in lieu of payment of an overdue bill. Saddled with 112 electric can openers, the station manager offered them for sale on the air. When they sold out instantly and callers clamored for other products, he established a regularly scheduled radio show called *Suncoast Bargaineers*. In 1981, the show moved to a local access cable channel in a Tampa Bay area and was given a new name: Home Shopping Channel. In 1985, it was renamed Home Shopping Network (HSN) and transmitted 24 hours per day through cable and broadcast

television to a national audience, becoming a publicly quoted company on the American Stock Exchange in 1986.

In 1990, HSN stock became available on the New York Stock Exchange, and in 1995 Barry Diller, former Chairman of the Board and CEO of Paramount Pictures and Fox, was welcomed as Chairman of the Board of HSN. James Held, Senior Vice-President of Bloomingdale's department store was named President and CEO. In 1997, HSN's parent company (HSN, Inc.) acquired a controlling interest in Ticketmaster, the world's largest special events ticketing company. In 1998, after purchasing the majority of Universal Studios Inc.'s television assets, HSN, Inc. changed its name to USA Networks, Inc., and purchased the remainder of Ticketmaster. That year also saw the premiere of a Home Shopping Channel in Spanish, the result of a partnership with Univision. With 4,000 employees and more than five million active customers, by 1998 HSN had become an electronic retailing giant rivaled only by one other conglomerate: QVC.

HSN faced its first major competition in the electronic retailing forum in 1986. Quality, Value, Convenience (QVC), Inc., was founded in West Chester, Pennsylvania, by Joseph Segel, founder of the Franklin Mint. With revenues of over \$112 million, QVC broke the American record for first full-fiscal-year sales by a new public company and, like HSN, QVC broadcast live 24 hours per day. By 1993, QVC boasted access to 80 percent of all U.S. cable-subscribing households. Reaching 64 million cable households and three million satellite dishes in the United States alone, QVC made more than two billion dollars in sales in 1997 as the result of 84 million phone calls and 56 million orders. QVC, through a 1997 joint venture with BSkyB in the U.K. and Ireland, reached an additional 6.6 million households, broadcasting live 17 hours per day. QVC became best known for its jewelry sales, which accounted for 35 percent of its programming time, and made it one of the world's largest purveyors of 14-carat gold and sterling silver jewelry. At times derogatorily referred to as QVCZ, the channel brought cubic zirconium to the forefront of the shopping public's consciousness with its sales of Diamonique, a low-cost alternative to diamonds.

Home shopping evolved from the world of impulse buying to become a relevant, meaningful form of shopping by the late 1990s. The customer base of HSN and QVC spans all socioeconomic groups, who share two common characteristics: cable subscription and above-average disposable income. The products offered on the channels vary from hour to hour because of the varying demographics of viewers at any given time. Because the channels offer unconditional, money-back guarantees on their products, consumers are able to shop with confidence. Many Americans now prefer to shop from home for the sake of convenience, but for bedridden or other homebound individuals, QVC and HSN offer a viable link to the outside world. Instead of relying solely on caregivers for their shopping needs, homebound people have access to a significant means to independence. The regular hosts of home shopping programs came to provide viewers with a sense of companionship because, unlike ordinary news or talk show hosts, the electronic retailers take calls directly from the viewing audience and, indeed, consider it their job to chat with the callers and not always push a hard sell. Many viewers avidly follow the hairstyles of the hosts, and what few personal details they can glean about them, speculating about their off-screen lives with the fervor of soap-opera fans.

Critics of home shopping held that it was tantamount to the downfall of Western civilization because it gave already television-dependent people yet another excuse to avoid the outside world. They found fault with the hyper-enthusiasm of the product-selling hosts,

claiming that viewers were not even permitted to formulate their own emotional responses to the products because the hosts, like deadpan singers in a Greek chorus, force-feed reactions to the audience. However, the elimination of any room for (mis)interpretation is precisely what has appealed to so many consumers. Since every feature of a given product is described in detail, and the sometimes skeptical questions of callers answered candidly, live on the air, viewers feel secure in their understanding of the benefits and drawbacks of the product. Home shopping television may have helped internet shopping in its infancy. By the time retailers began to offer their wares on the world-wide web in the mid-1990s, channels like QVC and HSN had acclimated Americans to the concept of remote shopping. Consumers were thus less leery of giving their credit card numbers to a disembodied voice (in the case of home shopping channels) or to a faceless computer screen.

## *The Honeymooners*

*The Honeymooners* is one of television's best-remembered and most imitated comedies in the history of television. Although the series ran for only one year in prime time (during the 1955-1956 season on CBS), it has succeeded remarkably in syndication and on videocassette. Generations of viewers have identified with Jackie Gleason's portrayal of Ralph Kramden, the aggravated bus driver from Brooklyn, whose dreams of advancement were continually upended.

*The Honeymooners* was among the last of the urban, working-class comedies on 1950s television. As the nation experienced postwar prosperity, so did the families on television. The Nelsons on *The Adventures of Ozzie and Harriett*, the Andersons on *Father Knows Best*, and the Cleavers on *Leave It to Beaver* all lived in the tree-lined, secure suburbs. By 1955, even the prototypical proletariat family, the Goldbergs, had moved out of the city. The Kramdens, however, were the exception. Ralph and his exasperated wife, Alice (Audrey Meadows) were stuck in the urban chaos—a cold-water apartment above a noisy, New York street, without any creature comforts of Eisenhower conformity. Their main possessions were a plain dining table and a depression icebox. They shared their lower-class frustrations with the upstairs neighbors, the Nortons. Slow-witted Ed (Art Carney) worked in the sewers, while his wife Trixie (Joyce Randolph) commiserated with Alice about their common hardships. Unlike the suburban couples on television, the Kramdens and the Nortons were childless, just trying to keep themselves above water.

Much of the comedy revolved around the couples' schemes to get rich quick. In the classic episode, "Better Living Through Television," Ed and Ralph appear in a television commercial to sell

Happy Housewife Helpers. The yearning to get out of near poverty reflected Gleason's own boyhood: he had grown up in the same Brooklyn environment as Ralph. Gleason wanted his show to be based in reality so he instructed his writers to "make it the way people live. If it isn't credible, nobody's going to laugh."

Gleason introduced Ralph and Alice (first played by Pert Kelton) on his DuMont variety series, *Calvacade of Stars*. Gleason's original writers, Joe Bigelow and Harry Crane, wanted to call the sketch "The Beast," but Gleason understood underneath Ralph's blustery exterior was a tremendous need for affection. In the opening monologue of this October 5, 1951 telecast, he saluted another Ralph, Ralph Branca of the Brooklyn Dodgers, who served the infamous homerun pitch to Bobby Thomson during the 1951 playoff game against the New York Giants. Like his namesake Branca, Kramden would suffer the blows of fate; but no matter what, his love for Alice endured. From the beginning, Ralph proclaimed to her, "Baby, you're the Greatest!" The six-minute live sketch, also featuring Art Carney as a policeman, proved so popular that Gleason and company created new struggles for the couple. Soon afterwards, the physically agile Carney joined the regular cast with actress Elaine Stritch as the first Trixie.

A year later, William Paley of CBS stole Gleason and his staff from the downtrodden DuMont network. Gleason was given a much larger budget to produce a weekly live extravaganza on Saturday nights. A younger actress, Audrey Meadows, was hired to replace Kelton, who suffered from heart difficulties and political accusations. Gleason had created many memorable characters—Joe, the Bartender, the Poor Soul, and Reginald Van Gleason, III—but the audiences wanted more of the Kramdens. During the first three years, *The Honeymooner* sketches grew from ten minutes to over 30.

In 1955 the Buick Motor Company offered Gleason six million dollars to produce *The Honeymooners* as a weekly situation comedy for two years. The corpulent comedian formed his own production company and used a new film technology, the Electronic process, to record the series live on film. The program was shot two times a week before an audience of 1,100 people. During the first season Gleason was disturbed by the amount of rehearsal time and felt that these recorded episodes lacked the spontaneity and originality of the live sketches. He discontinued the series after 39 programs and decided to return to the live, variety format. He sold the films and syndication rights to CBS for a million and half dollars.

*The Honeymooners* remained a prominent part of Gleason's succeeding variety series with the writers trying to do something unusual with the trusted material. During the 1956-1957 season of *The Jackie Gleason Show*, the Kramdens and the Nortons took a live musical trip to Europe. At the end of the season, Carney left the series, and Gleason did not revive the sketch until his 1960s extravaganza, *The American Scene Magazine*. When Carney was available, Gleason revived the sketch on videotape, often with new cast members. Sue Ane Langdon and Sheila MacRae played Alice, while Patricia Wilson and Jean Kean were recruited for Trixie. Despite the changes, the familiar catchphrases remained: "One of these days . . . Pow! Right in the kisser!"; and "Bang! Zoom," Ralph's stock phrases to Alice as well as Ed's greeting to Kramden, "Hiya there, Ralphie boy."

After his variety series ended in 1970, Gleason produced four more *Honeymooner* specials with Carney and the returning Meadows. But Ralph Kramden remained fixed in the popular imagination because the 39 episodes of *The Honeymooners* were a perennial success in syndication. For over 20 years a local station in Manhattan played them every night. There was great celebration among fans when The Museum of Broadcasting and Jackie Gleason unearthed the

live sketches during the mid-1980s. Those “lost” episodes found another life on cable television and the home video market.

Whether as a recorded situation comedy or a live sketch, *The Honeymooners* is a comic reflection of urban, postwar America. America is a land of opportunity for dreamers like Ralph Kramden, even though success remains elusive. The search for the American Dream turned Arthur Miller’s salesman, Willy Loman, into a tragic hero; the same quest made Gleason’s bus driver a comic archetype. His bravado and anxieties can be felt in all subsequent, working-class underdogs on television—Fred Flintstone, Archie Bunker, Roseanne, and Homer Simpson.

## Hooker, John Lee (1917—)

The undisputed “King of the Boogie,” John Lee Hooker has not only achieved commercial success—a rare feat among blues singers—but he has maintained it for over five decades. His one-chord,

droning grooves lend themselves, as Robert Palmer writes, to “building up a cumulative, trancelike effect.” Although he has attempted to redefine himself in recent years, much to the detriment of the legendary style and talent that made him famous, Hooker is still an original whose contributions to music in the twentieth century remain in a category of their own.

Born near Clarksdale, Mississippi, on August 22, 1917, Hooker’s primary influence was his stepfather, Will Moore, a Louisiana-born guitarist who played in a style very different from that of other Delta players. Occasional visits by legendary bluesmen like Blind Lemon Jefferson, Charley Patton, and Blind Blake (who all knew Moore) certainly influenced young John Lee’s style as well, especially his singing.

Leaving home at 14, Hooker settled in Memphis, where he worked as an usher in a Beale Street movie theater while moonlighting as an entertainer at neighborhood house parties. After a seven-year stint working for a cesspool draining company in Cincinnati, he relocated to Detroit in 1943. With the city’s factories operating at peak wartime production, jobs were not hard to find and Hooker continued to limit his musical forays to occasional sit-ins and weekend gigs at various Hastings Street clubs.

One night, a black record-store owner heard Hooker playing in a friend’s living room and took him to see Bernie Bessman, a local record distributor. Bessman helped to record Hooker’s first single, the seminal “Boogie Chillen,” a primitive effort featuring only guitar and vocals. Issued by Modern Records in 1948, “the thing caught afire,” as Hooker later remembered. “When it come out, every jukebox you went to, every place you went to, every drugstore you went, everywhere you went, department stores, they were playin’ it in there. And I was workin’ in Detroit in a factory there for a while. Then I quit my job. I said, ‘No, I ain’t workin’ no more!’” With the success of follow-up efforts like “Hobo Blues,” “Hoogie Boogie,” and

“Crawling King Snake Blues” over the next year, Hooker never came to regret his decision.

Although contractually bound to Modern Records during this period, Hooker recorded for many other labels using a variety of pseudonyms including “Texas Slim,” “Delta John,” “Johnny Lee,” “Johnny Williams,” and even “Little Pork Chops.” He finally reached an exclusive agreement with Vee-Jay Records in 1955, recording from then on under his own name. The format of his music, however, changed dramatically with the addition of a backing band, often including the superb duo of guitarist Eddie Taylor and harmonica player Jimmy Reed. While most of Hooker’s Vee-Jay material lacked the spark of his initial recordings, he did re-enter the charts in 1958 with “I Love You Honey,” in 1960 with “No Shoes,” and finally in 1962 with “Boom Boom.”

After cranking out “Big Legs, Tight Skirt,” his last hit for Vee-Jay, in 1964, Hooker underwent another round of label-hopping, recording for Verve, Chess, and BluesWay, among others. His 1960s recordings presented him in a variety of contexts—folk bluesman, old-time boogie master, or quasi-rock-and-roll artist—always in an attempt to appeal to the changing blues-rock audience. Hooker became a major figure in both the British blues invasion (with two major groups, the Yardbirds and the Animals, both tackling “Boom Boom”) and the American folk-blues revival, with acoustic recordings and frequent coffeehouse appearances. In 1970, he teamed up with rock artists Canned Heat for the hit album *Hooker ‘n’ Heat*; unfortunately, many of his subsequent recordings were blatant attempts to recapture the album’s popularity and redefine Hooker as a rock-and-roller.

Bandmate and slide guitarist extraordinaire Roy Rogers organized a 1989 recording session which eventually became *The Healer*, a major comeback album for Hooker. Once again, he returned to the spotlight, though in this case more due to the superstar guests who

John Lee Hooker

appeared on the album, including Bonnie Raitt, Keith Richards, Carlos Santana, Robert Cray, and Los Lobos. The disc won a Grammy Award as best traditional blues recording, and set the stage for another all-star session, *Mr. Lucky* (1991), which featured guitarists Albert Collins and Johnny Winter, among others. Hooker went into semi-retirement after the album's release, enjoying his newfound wealth and fame. He continued, however, to record and tour when inspired, even appearing in television commercials for Pepsi-Cola. He now stands as one of the few remaining links to the Delta blues tradition; a living legend and a true original.

## Hoosiers

Basketball in many parts of the country is like religion, and *Hoosiers*, a 1986 film written by Angelo Pizzo and directed by David Anspaugh, is a clear homage to that sentiment. Set against an idyllic rural Indiana backdrop, *Hoosiers* traces the training of the team at the tiny Hickory High School for the state basketball championship. The film looks at first glance like the classic David versus Goliath sports movie, with a predictably familiar ending but, in this case, predictability neither lessens the impact of the drama, nor detracts from audience response to the emotions and feelings that are revealed on the screen.

Some very prominent actors were drawn to this small-budget production. Gene Hackman portrays Norman Dale, a former college coach who was fired for striking a player in a moment of rage. The troubled Dale, now head coach of the Hickory Huskers, has come to Indiana as his last chance to work at the game he loves. The always excellent Hackman gives a convincing portrayal of a man who, throughout the action of the film, attempts to contain his competitive nature and learn to trust others. Barbara Hershey plays Myra Fleener, a teacher who tries to draw the town phenomenon, Jimmy Chipwood, away from basketball and into the classroom. A relationship develops between Coach Dale and the teacher Fleener, despite their differences on the future of Chipwood. Dennis Hopper tackles the role of Shooter, the town drunk who constantly recounts the glory days of his high school basketball career. The relationship between Dale and Shooter that develops illustrates Dale's attempts to give somebody a second chance—something that he himself had been denied years before. Hopper's performance earned him an Oscar nomination.

*Hoosiers* was based on the true story of little Milan High School, which shocked the Indiana basketball world by winning the state championship in 1954 on a last second shot. True to form, the Hickory Huskers also make the improbable charge through the series, defeating larger schools and better teams. Star player Jimmy Chipwood, played by Maris Valainis, makes the winning shot with time running to immortalize himself and his team in the town of Hickory and all of Indiana.

Though no surprises appear in this familiar underdog story, *Hoosiers* is still able to maintain the tension and excitement needed to entertain audiences. The film provides an accurate depiction of life in rural Indiana in the 1950s, with several high school students forced by necessity to work on the farm instead of playing basketball. The all-white Huskers battle a city team made up of largely black players and a black coach in the championship game, another accurate portrayal of social life in the Midwest in the 1950s. *Hoosiers* also clearly demonstrates the importance of high school athletics to small, rural communities. Almost the entire town would caravan to every away game and to each step of the state tournament. The community meeting held to determine the fate of Coach Dale midway through his season, and the Saturday morning discussions at the barber shop illustrate just how important the team is and how much civic pride athletics can create.

## Hoover Dam

The Colorado River bobs and jukes through the crisp sandstone of the western high plains. Earliest explorers saw it as a defining characteristic of Arizona and much of the semi-arid western United States. Today, the river is a monument to American riverine technology, as aqueducts and hydroelectric dams use the Colorado to make the American West a hydraulic society. The first of the incursions into the river is also the most famous: Hoover Dam.

Opened in 1935, Hoover Dam stands as a larger-than-life symbol of fluctuating meaning for generations of Americans. Even without such symbolic significance, the dam remains among the nation's most impressive engineering achievements.

A major part of the dam's significance derives from the structure itself. The dam, which has long-since repaid the \$165 million cost for construction, is a National Historic Landmark and has been rated by the American Society of Civil Engineers as one of America's Seven Modern Civil Engineering Wonders. The structure contains over 4 million cubic yards of concrete, which if placed in a monument 100 feet square would reach 2.5 miles high—higher than the Empire State Building.

As proposed in 1910, the mammoth Boulder Dam (as it was first referred to) served as the linchpin of a western land-use policy known as reclamation. After policymakers and developers finally conceded that a serious lack of rainfall stood in the way of their dreams of the "garden of the West," they sought a way to turn their adversity into opportunity. Reclamation grew out of the impulse to "reclaim" these dry, barren regions by applying human ingenuity to the few existing waterways, including the Colorado. In 1912, five western states agreed on the Colorado Compact, which parceled up the great river's flow among the signees—including at least two states that never made contact with the river. Most of the flow, including the electricity made at Hoover Dam, would be managed by the Six Companies contractors

**Hoover Dam**

to power development over 300 miles away in southern California. By the late 1990s, the majority of Hoover Dam's power is passed over wires to Los Angeles.

The symbolic significance of this immense structure became obvious immediately, which led developers to name it after President Herbert Hoover (an engineer who had been a great supporter of the project). Upon its completion in 1935, Hoover Dam became a symbol of America's technological prowess, firmly placing the United States with the great civilizations in world history. One observer described it as the "Great Pyramid of the American Desert, the Ninth Symphony of our day" and "a visual symphony written in steel and concrete. . . . magnificently original, strong, simple, and majestic as the greatest works of art of all time and all peoples, and as eloquently expressive of our own as anything ever achieved." Particularly during the Great Depression, Hoover Dam's restoration of national confidence led to its appearance throughout popular culture, including advertisements, Coca-Cola serving trays, and numerous collectible mementos.

Hoover Dam remains a symbol in contemporary America; however, the changing attitude of river-management technology has altered its image. In the 1990s, many observers saw Hoover Dam as the symbol of all the development that has prohibited the Colorado from reaching the ocean for over twenty years. As the great dams begin to clog with silt, many observers suggest that Hoover and the other dams may have only a limited life. Marc Reisner noted that "we set out to tame the rivers and ended up killing them." He suggested that Hoover and others might eventually be viewed as "uniquely productive, creative vandalism."

In terms of structural design, though, Hoover Dam will always serve as a symbol of the modern era. For many Americans, achievements such as this sleek yet powerful dam led the way to a century of innovation and development.

## Hoover, J. Edgar (1895-1972)

When J. Edgar Hoover died in 1972, the *New York Times* wrote of him, "For nearly a half century, J. Edgar Hoover and the FBI were indistinguishable. That was at once his strength and its weakness." Hoover was a strong personality, fiercely patriotic, and highly organized and controlling. Head of the Federal Bureau of Investigation (FBI) from the presidency of Calvin Coolidge until the presidency of Richard Nixon, he transformed the face of the United States Justice Department and became the definition of law enforcement in America, for better or worse.

John Edgar Hoover was born into a solidly middle class neighborhood in Washington, D.C. His father was in the Coast Guard and later worked as a low-level employee of the federal government. Brought up to the exacting standards of his strict mother, Hoover determined he would surpass his unambitious father. He remained

**J. Edgar Hoover**

devoted to his mother, living with her in the house in which he was born until her death in 1937.

Hoover received both a bachelors and a masters of law at George Washington University, and went to work for the government. He worked at the Library of Congress until the advent of World War I. In 1917, seeking to avoid the draft, which would force him to leave his aging parents, he obtained a clerical job at the Department of Justice, from which he moved up quickly. An extremely moralistic man, Hoover was virulently anti-Communist and anti-radical, and he gained prestige in the Justice Department by overseeing its wartime campaign against American radicals. In 1924, he took over as head of the Bureau of Investigation of the Justice Department (renamed Federal Bureau of Investigation in 1935).

When Hoover took over as director, the Bureau was a slack organization, largely made up of political appointees and "hacks," who were not law enforcement professionals. Hoover immediately began to revamp the organization, first firing much of the staff and retraining those who remained. He eliminated the seniority system of promotions and instituted a merit system, with regular performance reviews. Over the course of his almost 50-year directorship, he succeeded in turning the FBI into one of the world's most efficient crime fighting organizations, with a state-of-the-art criminal lab, an ingenious fingerprint filing system designed by Hoover himself, and a prestigious training school for law enforcement agents.

Hoover is perhaps most famous for his success against the gangsters of the prohibition era, arresting renowned crime figures such as Al Capone and John Dillinger, and for his post-World War II activity against the Communist Party and against the Ku Klux Klan. He also grew infamous for abusing the power of his agency and exceeding its jurisdiction. If he turned the FBI into a crack crime-fighting force, he also turned it into an internal secret surveillance tool. Hoover's FBI employed tactics of infiltration, provocation, illegal wiretapping, and even burglary to amass volumes of damaging information about both public figures and private citizens. Even presidents and their families were not exempt from FBI scrutiny. This information was kept by the director in secret files that were allegedly used to control the activities of government officials, influence the outcome of elections, and quash public dissent. In the 1960s, with the support of President Lyndon Johnson, Hoover created counterintelligence programs (COINTELPROs) to infiltrate and disrupt the activities of many leftist organizations, the Black Panthers and Students for a Democratic Society among them.

Hoover and his G-men were hailed as heroes during the gangster-fighting days of prohibition. Although they garnered much popular support during the anti-Communist 1950s, with the rise of the New Left in the 1960s more people began to question the authority of the FBI. On March 8, 1971, a small group calling themselves "Citizens' Commission to Investigate the FBI" broke into the agency's offices in the town of Media, Pennsylvania. They found and publicized files proving the illegal activities involved in the FBI's COINTELPROs, changing the public image of Hoover's Bureau from dashing G-men to secret police.

J. Edgar Hoover died suddenly in 1972 of undiagnosed heart disease. He had been a religious man, an unbending moralist, obsessed with details and with eradicating any threats to the American way of life as he defined it. Though Hoover had used his agency to enforce Lyndon Johnson's civil rights legislation and to root out the Ku Klux Klan, he was personally a racial bigot and the FBI had a poor record of hiring minorities. Throughout his life he was followed by rumors of homosexuality. He was a dandified dresser who was never

romantically associated with women, but who did form intimate attachments with men, notably Clyde Tolson, his second in command at the FBI, with whom he had a long, close friendship which some compared to marriage. Hoover violently denied any allegations that he had sexual relations with men, and his strict moral code would certainly forbid either the relations themselves or the acknowledgment of them. It is the type of information one might expect to find in a confidential folder in a secret file at the Federal Bureau of Investigation.

## Hopalong Cassidy

A multimedia cowboy hero, Hopalong Cassidy first appeared in a series of magazine stories that were published in 1905 and 1906. Clarence E. Mulford, who was residing in Brooklyn at the time and had never been West, was the author. His Cassidy was a tough, tobacco-chewing redhead, who bossed the hands at the Bar-20 Ranch and got his nickname from the fact that a gunshot wound in his leg had left him with a permanent limp. The more familiar image of this popular American fictional hero, however, is the one personified in movies and on television by silver-haired actor William Boyd. Boyd's Hopalong Cassidy was a dapper, soft-spoken cowboy, who almost always wore black, and was taken into the hearts of millions of kids. In his later television incarnation, Hopalong products became one of the first merchandising sensations inspired by television.

Mulford, who worked for over 20 years in a civil service job, sold his earliest Hopalong Cassidy stories to a travel monthly called *Outing Magazine*. The first collection of those stories in book form was titled *Bar 20* and came out in 1907. All told, Mulford wrote over two dozen novels and story collections about his limping, hard-bitten cowhand between then and 1941. Much of the material appeared

William Boyd (right) as Hopalong Cassidy in a scene from the film *Hoppy Serves A Writ*.

initially in such pulp fiction magazines as *Argosy* and *Short Stories*. A dedicated researcher and collector of Western lore, Mulford did eventually travel extensively in the Western states but, despite the popularity of his books, he is remembered today chiefly as the man who coined the name that others used to create an almost entirely different hero.

As Francis M. Nevins pointed out, “the man ultimately responsible for Hoppy’s transformation into a screen hero was Harry Sherman.” An entrepreneur since silent movie days, and one of those who helped finance *The Birth of A Nation*, Sherman bought the screen rights to the Mulford books and then put together a movie production outfit to make the films, which were distributed by Paramount. The actor Sherman chose to play Cassidy was also a veteran of the silents. A protégé of Cecil B. DeMille, William Boyd became a star in the 1920s in such films as *The Volga Boatman* and *The Yankee Clipper*, but by the mid-1930s he’d slipped some and was appearing in lower budget action films. The first movie in Sherman’s cowboy series was *Hop-A-Long Cassidy*, released in 1935. In this film, the prematurely grey Boyd actually did limp, but in later outings he lost the limp, and the hyphens.

A formula was established from the start. Hoppy always had two sidekicks—one young and handsome (played originally by James Ellison), the other, crusty and humorous (first portrayed by Gabby

Hayes). Known as a hellraiser in real life, Boyd reformed as the series progressed and Hopalong, who soon acquired the black outfit that was to become his trademark, also underwent changes. As a movie hero, he never drank, smoked or swore, and his relations with women were almost always nothing more than avuncular. A hit from the first, the Hoppy series eventually stretched to 66 titles. As one film historian noted, the pictures, “long on human interest, short on violence, were especially popular with family audiences.”

Hopalong first moved into comic books at the end of 1942, as a back up feature in Fawcett’s *Master Comics*. The following year, Fawcett started a *Hopalong Cassidy* comic book, which they kept going until 1954. In the late 1940s, Boyd took over the production of the Hoppy films and also bought the rights to all of the earlier Sherman productions. This proved to be an especially wise move. In 1949, NBC started showing the movies nationally, every Friday night from eight to nine p.m. and, as the number of American households with television sets grew, so did Hoppy’s popularity. “The show became a hit very quickly,” wrote Richard O’Brien, “and almost as quickly a wide variety of manufacturers leaped aboard Hopalong’s bandwagon. There were Hopalong Cassidy costumes, tin windups, toy soldiers, binoculars, dart boards, knives, badges, shooting galleries, and of course a wide variety of guns and holsters.” A comic strip began in 1949, drawn by Dan Spiegle and distributed by King Features.

In 1951, Boyd, who had last played Hoppy in 1948, produced and starred in a *Hopalong Cassidy* television series. It ran on NBC until the end of 1952, with movie veteran Edgar Buchanan as the hero's crusty sidekick. A radio show had been put together in 1948, but it wasn't until the character became a craze through TV that it showed up on national radio—first on Mutual and then on CBS. Andy Clyde, the resident old coot sidekick from the later movies, repeated his role as California Carlson on the radio networks. The show was last heard late in 1952. During the heyday of Hoppy, Boyd became a national celebrity and his personal appearances drew enormous crowds of dedicated kids. Hoppy gradually faded away, although the comic book, taken over by DC, continued until 1959. By the time he retired, Boyd, who controlled all the merchandising on the character, was a multimillionaire. He died in 1972.

## Hope, Bob (1903—)

Entertainer Bob Hope is unquestionably an American show-business icon and the facts surrounding his multi-decade, multi-generational success sustain the myth. Hope's entertainment persona has been evident in every decade of the twentieth century, from his 70 movies to celebrating an unprecedented 56 year-contract with NBC in 1993. He entertained American troops in both war and peace time and was hailed as "America's most prized ambassador of goodwill throughout the world" when presented with the Congressional Gold Medal by President Kennedy.

The fifth of seven sons, he was born Leslie Townes Hope in Eltham, England, on May 29, 1903. His father, William Henry Hope, was a stonemason who decided on an impulse to migrate with his family to Cleveland, Ohio. His Welsh mother, Avis Townes Hope, who had been a concert singer, instilled in him a love for music and entertaining. Hope would later claim that he first warmed to an audience laughing at him when his voice cracked while singing at a backyard family reunion. In 1920, by virtue of his father's naturalization, "Bob"—the name by which the world would later know him—and his brothers also became U.S. citizens.

After high school, Hope took dancing lessons from African American entertainer King Rastus Brown and from vaudeville hooper Johnny Root. A natural, he soon began teaching classes. He also worked briefly as a newspaper reporter and tried amateur boxing under the name of Packy East. At 18, Hope persuaded his girlfriend, Mildred Rosequist, to become his dance partner. Appearing at nearby vaudeville houses they worked their way to the generous wages of \$8 an night. But the partnership would not last long: when Rosequist's mother finally saw their act she thought it was just too risqué for her

daughter. Hope then teamed up with a friend, Lloyd Durbin. After developing their act in local bookings they were hired by the Bandbox Theater in Cleveland as a "cheap act" for the Fatty Arbuckle Show. Arbuckle, who headlined the touring revue, loved Hope and Durbin's comedy/dancing act and helped the boys get better bookings. Following the accidental death of Durbin, Hope took on another partner, George Byrne, with whom he developed a blackface act.

After several career reversals, Hope and Byrne were almost ready to give it all up when they were hired to emcee Marshall Walker's Whiz Bang review in New Castle, Pennsylvania. Hope went out on stage alone and entertained the audience with his ad-libbed wisecracks. He was using for the first time a technique that would prove good enough to last through seven decades: not only parrying and jousting with anything an audience member or fellow comic could throw at him, but also being brave enough to wait on stage in front of the toughest audience until everyone had gotten his jokes.

In 1929, Hope went to New York and was given a movie screen test, but was told his "ski nose" had killed his possibilities. With material from legendary gagster Al Boasberg, Hope continued his career on stage, appearing in *The Antics* of 1931. His performance impressed the audiences and led to an even better theatrical gig—*The Ballyhoo* of 1932—in which Hope was encouraged to ad-lib to his heart's content. But his first major recognition, by critics and the public, came in 1933 for his wise-cracking role as Huckleberry Haines in the highly successful Broadway musical, *Roberta*. Not only Hope's professional life would change from then on: one of his co-performers in the musical, George Murphy, introduced him to a young singer, Dolores Reade. After a brief courtship, Dolores and Bob got married in February 1934. They went on to have four children and four grandchildren.

With his vaudeville show at New York's Capitol Theater came along his first radio appearance, on the "Capitol Family Hour," hosted by Major Edward J. Bows, which originated from the theater every morning. After guest spots and semi-regular work on a couple of shows, Bob was signed on by Pepsodent toothpaste for his own show on NBC. He went on to become a huge radio star and a Tuesday-night regular for the next 15 years.

On his half-hour program, Hope opened with a monologue which fired off barbs about current news events and usually set the tone for the rest of the show. Every time a news story broke, everybody would look forward to hearing what Hope was going to say about it on his next show. With his "and I wanna tell you" catch phrase, he inaugurated a comedy style in which no joke, whether resulting in irrepressible laughs or a just a smile, was any more important than the next one coming up.

In 1937 Hope traveled to Hollywood to film *The Big Broadcast of 1938*, in which he sang the Oscar-winning song "Thanks for the Memories" as a duet with Shirley Ross. The song has been his signature theme ever since. Between 1934 and 1936 he had appeared in eight comedy shorts, all filmed in New York, but his first screen hit would come only in 1939 with *The Cat and the Canary*. In the next year he struck it big with *Road to Singapore* (1940), the first of seven successful "Road" pictures he was to make over the years with Bing Crosby and Dorothy Lamour, highly praised for featuring in-jokes about Bob and Bing's private lives.

Relying heavily on rapid quips and topical wisecracks, Hope built his own style of screen comedy which would reach a peak in the western parody *The Paleface* (1948). His films of the 1950s were a mixed bag and were less and less profitable. Writer/directors Norman Panama and Melvin Frank suggested that Hope should start playing

straight dramatic roles. The advice resulted in Hope playing Eddie Foy Sr. in *The Seven Little Foys* (1955), a character which gave him the chance to combine drama and humor. Hope's last dramatic role was as New York City Mayor Jimmy Walker in *Beau James* (1957). In the same year, Hope started working as his own producer and brought forward successes like *Alias Jesse James* (1959) and *The Facts of Life* (1960), with Lucille Ball as his co-star.

In the 1960s, however, the public began to find Hope's films increasingly less entertaining. With *Boy, Did I Get a Wrong Number* (1966) and *The Private Navy of Sgt. O'Farrell* (1968), he dissatisfied even his most loyal fans. Besides, Hope's conservative political ideas were at odds with the general frame of mind concerning the Vietnam War. At that point, Hope was criticized severely for not being able to separate his stage persona from his political beliefs. When traveling to entertain the troops, he found for the first time a welcome that was less than enthusiastic and his overall career was never quite the same from then on.

Television came calling as early as the 1930s, but Hope was not at all convinced the "new" entertainment medium would succeed. He participated in an experimental show for CBS; in the first commercial television broadcast on the West Coast in 1947; and as a surprise guest on Ed Sullivan's "Taste of the Town" in 1949. But his formal debut on NBC television would only happen on Easter Sunday in 1950. Douglas Fairbanks, Jr., Beatrice Lillie, and Dinah Shore were Bob's guest stars in the special *Star Spangled Revue*, sponsored by Frigidaire. His annual trips overseas to entertain the U.S. troops—which had started full bore during World War II and lasted through Korea and Vietnam, to the Persian Gulf conflict of 1990/91—soon became a regular Christmas television event. For 60 consecutive years Hope aired his specials with NBC-TV stars. But his jokes were gradually becoming outdated and predictable, his style getting more and more insipid. In 1996 something that everybody was already expecting happened: NBC announced the end of their contract with Bob Hope. That year's *Bob Hope Salutes the Presidents* was his final Christmas special.

Hope's work with NBC guaranteed him a place in the Guinness Book of Records as the entertainer with the longest-term television contract. He is also in Guinness as the most honored entertainer in the world, for he has more than two thousand awards and citations for humanitarian and professional efforts, including 54 honorary doctorates. Although he never received an Oscar for his acting, Hope frequently emceed the ceremonies and he himself won special Academy Awards five times (1940, 1944, 1952, 1959, 1965), for humanitarian action and contribution to the industry. In July 1976, by order of Her Majesty Queen Elizabeth, Hope was made an Honorary Commander of the Order of the British Empire (CBE) for his services to British troops around the world during World War II and his lifetime professional achievements were acknowledged by Kennedy Center honors in 1985.

Hope has also been an avid golfer and his name became associated with the *Bob Hope Desert Classic*, an annual event that produced millions of dollars for charity. The extensive list of his golfing buddies includes presidents Dwight D. Eisenhower, Richard Nixon, Gerald Ford, Ronald Reagan, George Bush, and Bill Clinton.

Hope, who over the years assumed the stature of a national institution, authored several humorous books about his career and travels. He has been honored and befriended by presidents of the United States since Roosevelt. President Johnson honored Bob with the Medal of Freedom and President and Mrs. Carter hosted a White House reception in celebration of his 75th birthday. Harry Truman

played the piano for him and Bill Clinton bestowed on him a Medal of the Arts. In his nineties and nearing total blindness, Hope is likely find consolation in knowing his long years dedicated to the entertainment industry were extremely profitable: with his fortune estimated at hundreds of millions, mostly in real estate, securities, oil and gas wells, thoroughbred horses, a broadcasting company, and at one point the Cleveland Indians baseball team, he is one of the richest performers ever.

## Hopkins, Sam "Lightnin'" (1912-1982)

Blues guitarist Sam "Lightnin'" Hopkins enjoyed a six-decade career that took him from the streets of Houston to festival stages around the world. As a youngster, Hopkins worked with guitarist Blind Lemon Jefferson as a "guide boy" before striking out on his own in 1946. For the next several years, he had a string of national rhythm and blues hits for the Aladdin, Modern, and Mercury labels, including "Katie May," "Shotgun Blues," and "Lightnin's Boogie." As musical styles changed, however, Hopkins found himself out of vogue, and eventually landed back in Houston.

"Rediscovered" in the early 1960s and repackaged as a folk-blues artist, Hopkins found a role in the forefront of the blues revival, starting at university coffeehouses, on television programs, and on European tours. He continued to record for a variety of labels including Vee-Jay, Arhoolie, and Verve. In 1967, filmmaker Les Blank captured Hopkins' eccentric lifestyle in the documentary *The Blues Accordin' to Lightnin' Hopkins*. Hopkins died in Houston in 1982.

## Hopper, Dennis (1936—)

From young Hollywood rebel, to counter-cultural icon, to dropped-out druggie, to acclaimed character actor, Dennis Hopper's art has often mimicked his life. In the process, however, he came to exert a profound cultural influence on Hollywood, opening the way for the new, independent, youth-oriented cinema that took hold in the 1970s.

Dennis Hopper

As a starstruck boy born and raised on a farm in Kansas, Hopper dreamed of becoming a Hollywood actor. When his family moved to San Diego, California, 14-year-old Dennis fell in with a drug-using party crowd. But he also found an outlet for his acting ambitions by working at the Old Globe Theatre and the La Jolla Playhouse, where he was cast in his first professional role. At 18, Hopper was signed to a seven-year contract with Warner Brothers. There, he appeared in a small role in *Rebel Without a Cause* (1955) and became a close friend of James Dean and Natalie Wood.

Hopper's breakthrough film was *Giant* (1956), starring Dean, Rock Hudson, and Elizabeth Taylor, and for most of the next 10 years he was known as a rebellious but gifted and successful young actor. It wasn't, however, until he tried his hand at directing that he became a Hollywood icon. In 1969, Hopper and his good friends Peter Fonda and Jack Nicholson made *Easy Rider*, a film that reflected the attitudes of nearly a decade of the counter-culture from which it sprang. *Easy Rider* captured the imagination of a generation, shone the spotlight on future megastar Nicholson and, significantly, caused convulsive changes in the thinking of the established movie industry. He used his heightened success and new influence to direct *The Last Movie* (1971) on location in Peru, but the result was a muddled drama and a commercial and critical disaster. Hopper then dropped out for almost 15 years, doing drugs in New Mexico and making foreign films.

He returned to Hollywood respectability with an astonishingly brilliant portrait of psychologically disturbed brutality in David Lynch's indie favorite, *Blue Velvet*, in 1986. That same year he made *Hoosiers*, another independent film, which earned him an Oscar nomination. His comeback was complete, and in 1988 he directed the decently crafted *Colors*. Actor, director, writer, photographer, and art collector, Dennis Hopper continued to work in a varied and variable mix of movies throughout the 1990s, by which time he had become Hollywood's favorite iconoclast and a pop culture institution.

## Hopper, Edward (1882-1967)

Born in 1882 in Nyack, New York, Edward Hopper developed a style of realist painting that art critic Rolf Günter Renner suggests revealed the limits that humanity and nature impose on each other. This tension is put into sharp relief in one of Hopper's best known paintings, *Gas, 1940*, which shows a lone attendant checking the pumps at a Mobil gas station bordered by woods. Hopper is perhaps most widely recognized for his *Nighthawks* (1942), a painting of two men and a woman late at night in a diner, which entered the popular realm as a poster, "Boulevard of Broken Dreams," with the men transformed to James Dean and Humphrey Bogart, the counterman to Elvis Presley, and the woman to Marilyn Monroe. Hopper's figures in this and other paintings displayed an edginess and detachment from the moment, possibly in search of something grander. The poster commodified this alienation through the figures of tragic, troubled movie stars.

Hopper studied illustration at a commercial art school for two years before switching to the New York School of Art in 1901. There, he worked most closely with Robert Henri, a member of the Ashcan School. Hopper's studies of people seem to build on the urban gaze of Ashcan School painter John Sloan, whose etchings hovered between reportage and voyeurism. Hopper travelled to Europe three times between 1906 and 1910. Thereafter, he settled in New York City and summered at South Truro near Cape Cod with his wife Josephine (Jo) Verstille Nivison, whom he married in 1924.

Until the mid-1920s Hopper worked as a commercial artist. In 1925 he painted *House by the Railroad*. The painting captured Hopper's themes of loneliness, detachment, and alienation. Hopper said his goal was "to achieve the best possible realization of my most intimate impressions of my surroundings." According to Gail Levin, Hopper's biographer, the eerie mood of this painting led to it being used as a model for the house in Alfred Hitchcock's 1960 film *Psycho*.

The German filmmaker Wolfgang Hastert has suggested that Hopper's paintings are like storyboards for films. In a short film on the painter he drew comparisons to Hopper's work and films such as *Paris, Texas*, by Wim Wenders, and *Blue Velvet* by David Lynch. The brooding nature of Hopper's work lends itself to such comparisons and his use of light and shadow could be compared to the technical dimensions of film noir. One reason Hopper's work draws such analogies is that much of it deals self-consciously with the process of looking. In many of Hopper's paintings, the field of sight is clearly from the outside looking in or the inside looking out. For instance, in *Office in a Small City* (1953), Hopper lets us look from the outside at a man at work, and simultaneously, at the vision before that man from his office window.

**Edward Hopper**

Hopper's wife Jo was a constant presence in his life and paintings. The photographer Arnold Newman has suggested that his 1960 photograph of Hopper at South Truro, in which Jo dances in the distant background while Hopper grimaces at the camera, is indicative of their relationship, with Jo always in the background. But Jo was a constant figure in Hopper's paintings and Renner suggests paintings such as *Girlie Show* (1941), *New York Movie* (1939), *Summertime* (1943), and *Western Motel* (1957)—all of which feature a woman similar in appearance to Jo—reveal a sexual tension, perhaps unfulfilled desire, in Hopper's work. Renner further suggests that *New York Office* (1962), in which a woman is framed in light through a large office window, shows Hopper finally realizing sexual fantasies by dominating the female figure through the act of painting.

The initial attraction of Hopper's paintings for many might well be a surface appeal to an idealized American past. The paintings, however, retain their allure because they stretch the imagination beyond their initial appeal into often forgotten realms of American life.

## Hopscotch

Children in Europe and in North, Central, and South America, as well as in Russia, China, and India, play the same hopping game, with only minor variations, and variously called hopscotch, potsy, paradise, heaven and hell, airplane, and hop-round. The game is played on a pattern chalked on a sidewalk or traced in dirt. The pattern consists of several single and occasional side-by-side squares or circles, which are often sequentially numbered. Play begins when a player tosses an object (usually a rock) into the pattern, then hops into the pattern, careful to skip the square containing the rock and to land without touching the lines in all the empty squares. Scholars believe the game may be as much as a thousand years old, suggesting that the pattern derives from the figure of the labyrinth, a motif found as far back as the iron age, and through which youth were required to walk during an initiation ceremony.

## Horne, Lena (1917—)

The career of singer and entertainer Lena Horne has both evolved with and mirrored the times. From the Jim Crow years in the South, to the 1950s McCarthy blacklists, to the Mississippi marches for Civil Rights, Lena was there as a performer and a sympathizer, despite the fact that her career often suffered according to the extent of her involvement. From her beginnings—at the age of 16—as a chorus girl at Harlem's whites-only Cotton Club in the 1930s, Horne developed a reputation as a moderately talented singer with a tendency to coast on beauty and charm. But Horne was troubled by the fact that her celebrity image did not seem to match her personal beliefs. It seemed that every decision she faced about roles to take or songs to sing resonated with symbolic reference to race. Too refined (and "too white") to be taken seriously as a blues singer, she honed her image as a cabaret artist, only to be criticized for a perceived lack of warmth in her vocal delivery that was itself partly based on the "down and dirty" stereotype she could not fulfill. Her marriage to a white man, music arranger Lennie Hayton, also contributed to her reputation, as her African American fans were offended by her perceived betrayal of faith. Horne's autobiography, *Lena*, written in 1965, captures all these experiences in memorable detail, reading like a textbook on the combined effects of race and class in American cultural life during the twentieth century.

As a movie actress under contract to Metro-Goldwyn-Mayer in the 1940s and 1950s, Horne's light skin held her back from playing

Lena Horne

African America roles, for which she wasn't "black" enough, and from white roles, for which she was too "colored." When she tried using dark make-up on her fair skin, she felt it looked like the blackface used in a minstrel show. Max Factor was called in to create a special foundation color for Horne called "light Egyptian," later used for white actresses playing mulattos. One option Horne did not especially like was to play Latin parts, though she did so in the otherwise forgettable film *Panama Hattie* (1942). In fulfillment of her contract with MGM, she was frequently asked to perform "guest numbers" as a chanteuse, elegantly gowned and leaning against a pillar. These sequences would then be edited out of the films for showings to white audiences in the South. Horne found greater satisfaction in all-black films like the fanciful religious fable *Cabin in the Sky* (1943) and *Stormy Weather* (1946), for which she was leant to Twentieth Century Fox. Based on the life of dancer Bill "Bojangles" Robinson, the title song to *Stormy Weather* became Horne's theme song in the years to come.

Over the next thirty years, Horne stayed busy performing in posh clubs in New York, Hollywood, and Las Vegas; making television appearances on the popular shows of the day, including those of Ed Sullivan and Perry Como; and taking part in numerous political

benefits. One goal she seemed unable to fulfill was finding the right part in a Broadway show. Although she enjoyed singing the songs of Harold Arlen and Yip Harburg in the musical *Jamaica*, which opened in 1957, she hated her part; that of a silly island woman in love with American consumer goods. It took another two decades and several personal tragedies (Horne lost her father, her son, and her husband to fatal illnesses within a few short months in 1967-68) for Horne to find the right role.

In 1981, at age 64, when other performers might have been ready to retire, she opened in *Lena Horne: The Lady and Her Music*, which was to become the longest-running one-woman show in Broadway history. She held the audience's rapt attention from the opening phrase of her first song—Cole Porter's aptly titled "From This Moment On." The public was re-introduced to a woman they never really knew, who evinced a bold sense of humor and the ability to laugh at herself. After her Broadway success, Horne's recording career also blossomed, with releases like *We'll Be Together Again* (1994) and *Being Myself* (1998), which she produced at the age of 81. Horne's renditions of old standards like "My Buddy" and "Willow Weep for Me" mix poignancy with wit, echoing the experiences of a full and courageous life.

## Horror Movies

No popular genre has proven more reflective of America's unpredictable cultural mood swings than the horror movie. At the same time, no popular genre has proven more conducive to the expression of idiosyncratic nightmare visions than the horror movie. If these claims seem contradictory, even vaguely paradoxical, that is hardly surprising. For the horror genre consists of a group of texts as diverse as they are numerous, as controversial as they are popular, as conservative (or progressive) in their overt messages as they are progressive (or conservative) in their subtler implications. But although the horror genre may be lacking in firm boundaries or essential features, its rich and storied history, which spans the entire twentieth century, exhibits a remarkable degree of coherence. There are at least three reasons why this is so. For one thing, what appear at first to be utterly dissimilar entries often turn out upon closer inspection to conform in crucial ways, whether formally, stylistically, or thematically. For another thing, as is typically the case with pop cultural phenomena, market forces have dictated that the most commercially successful entries would each spawn a host of unimaginative imitators. This in turn has led to a fairly reliable boom-and-bust periodization of the genre. But most importantly, what all horror movies have in common is the intention to transform, through metaphor, symbol, and code, real-life fears—whether historically specific or psychologically universal—into terrifying narratives, uncanny images, and, above all, cinematic representations of monstrosity. Not all horror movies succeed in realizing this intention (many of them fail), but it is the fact that they try that makes them horror movies.

The horror film genre has its roots in the English gothic novels of the eighteenth and nineteenth centuries. After the Selig Polyscope Company produced a brief adaptation of *Dr. Jekyll and Mr. Hyde* in 1908, the stage was set for Robert Weine's masterpiece of German Expressionist cinema, *The Cabinet of Dr. Caligari* (1919). *Nosferatu* (1922), F. W. Murnau's silent magnum opus starring an emaciated Max Schreck as the decidedly unglamorous, unromantic undead Count, soon followed. Universal Pictures, heavily influenced by the dark, shadowy German style, imported a number of that country's most gifted film technicians in an effort to stave off bankruptcy. It worked—in just a few years, Universal became king of the sound horror movie. Classic versions of *Phantom of the Opera* (1925), *Dracula* (1931), and *Frankenstein* (1931) made household names out of their larger-than-life monster-stars, Lon Chaney, Bela Lugosi, and Boris Karloff. These pictures were exceedingly popular not least because audiences of the time were desperate for entertaining diversions as the Great Depression loomed. Although sober admonitions were issued against such human foibles as avarice, impetuosity, and, especially, scientific hubris, the source of threat in these films was nearly always supernatural. And, to reassure viewers that things would turn out all right, the monster was always soundly defeated in the end.

Universal's reign ended towards the beginning of the Second World War, and the studio eventually stooped to the level of self-parody with such entries as *Frankenstein Meets the Wolf Man* (1946) and *Abbott and Costello Meet Frankenstein* (1948). During this period, RKO producer Val Lewton wisely encouraged his directors to avoid the straightforward depiction of violence, and attempt instead to make viewers conjure up images of horror by means of suggestion and innuendo. Jacques Tourneur's *Cat People* (1942) is without a doubt the most highly acclaimed Lewton production, but the influence of Lewton's cinematic approach and techniques extended all the way into the 1960s, as evidenced by Robert Wise's masterful *The Haunting* (1963).

America's Cold War anxieties, coupled with advancements in special effects technology, gave rise to a cycle of highly successful science-fiction horror movies in the middle of the century. Some of these films, most notably *The Thing from Another World* (1951) and *The Invasion of the Body Snatchers* (1956), focus on man's brave (i.e. "patriotic") battle against a hostile alien threat. Others, such as *Them!* (1954), reflect American fears of atomic explosion and radioactive fallout. But it was a return to traditional horror film iconography that proved most responsible for the genre's huge popularity boom in the late 1950s. A small British studio, Hammer Films, took advantage of the industry's greater permissiveness with respect to the depiction of violence and sexual activities; starting with *The Curse of Frankenstein* in 1957, Hammer released a string of highly colorful, gruesomely detailed versions of the Universal classics. American International Pictures quickly followed suit, churning out its own series of campy horror-comedies, starting with *I Was A Teen-age Werewolf* (1957). AIP also acted as distributor for Mario Bava's atmospheric Italian masterpiece, *Black Sunday* (1960), as well as for Roger Corman's cycle of Edgar Allen Poe adaptations, most of which starred Vincent Price as a mentally unstable aristocrat. In these color gothics, lavish set designs and extravagant costumes served to reflect the decadence of Poe's characters. Price also starred in William Castle's best-known gimmick horror film, *The Tingler* (1959), which made use of "Percepto" technology—really just theater seats equipped with electric buzzers—to shock audience members during key scenes.

In 1960, two films—Alfred Hitchcock's *Psycho* and Michael Powell's *Peeping Tom*—effectively initiated a whole new era in the history of horror cinema by making their monsters not just human, but psychologically realistic. The killers in these movies—both male, both normal enough on the surface—are driven by instinctual drives and irresistible compulsions to commit murder against sexually transgressive women. Making disturbing connections between male-upon-female voyeurism and the objectification of women, between gender confusion and murder as substitute for sex, these two films suggest in the most vehement of terms that monstrosity is as likely to be located within (at least if you are a male) as without.

The majority of horror movies to come out in the 1960s and 1970s—though by no means all of them—followed the lead of *Psycho* and *Peeping Tom*, and audiences were treated to a not-always-so-impressive array of deranged psychotics, demented schizophrenics, homicidal maniacs, and general, all-purpose, knife/machete/chainsaw-wielding madmen. And the occasional madwoman. *What Ever Happened to Baby Jane?* (1962) was the first in a series of "menopausal murder stories" starring aging actresses whose characters are driven to perform grotesque acts of violence in the best Grand Guignol spirit. In *Halloween* (1978), John Carpenter's phenomenally successful slasher (or, more precisely, stalker) movie exemplar, the *Psycho/Peeping Tom* elements, though still operative, are finally overshadowed by an intense, life-or-death game of terror waged between the (now masked, now superhuman) psycho killer and the film's only surviving female. Partly to create space for sequels, partly to exploit the insecurity and paranoia of modern viewers, open-ended narratives soon became the order of the day. Following directly on the heels of *Halloween* came the outer-space slasher *Alien* (1980), the campier, bloodier, and just as popular *Friday the 13th* (1980), and a host of progressively less original and less successful slasher variants.

Although Hitchcock, "master of suspense" that he was, typically eschewed focus on bloody spectacle in favor of tension building sequences and the occasional shock effect, another director of horror movies working in the 1960s, Herschell Gordon Lewis, took precisely the opposite approach. His low-budget, independently-produced "splatter films"—given such transparent names as *Blood Feast* (1963) and *Color Me Blood Red* (1965)—promised to make up for their lack of narrative suspense with an abundance of gory close-ups. Although Lewis' films appealed only to a small number of hard-core horror fans, they achieved a kind of cult status, and, whether directly or indirectly, have exerted a powerful influence on the genre. Tobe Hooper's much-discussed *Texas Chainsaw Massacre* (1974), in which a male family of unemployed slaughter house workers set their sights on a group of vapid teenagers, can be seen as (among other things) a slasher/splatter hybrid; the film's tagline, for example, reads "Who will survive, and what will be left of them?" Canadian writer-director David Cronenberg, whose disturbing and highly-original works include *Scanners* (1980), *Videodrome* (1983), *The Fly* (1986), and *Dead Ringers* (1988), has been highly praised and harshly criticized for raising "body horror" to an art form. Few if any would say this about Sam Raimi, whose "splattick" cult faves *The Evil Dead* (1982) and *Evil Dead II* (1987) somehow manage to find the humor in gore. And in Italy, legendary horror film directors Mario Bava, Dario Argento, and Lucio Fulci made successful contributions of their own to the splatter subgenre with such entries as *Bay of Blood* (1971), *Deep Red* (1975), and *Zombie* (1979), respectively.

Because of their emphasis on male-against-female violence and the heinous nature of the crimes they depict, the slasher and splatter

Max Von Sydow in a scene from the horror film *The Exorcist*.

subgenres (to the extent that these are distinguishable) have repeatedly been accused of exploitation, misogyny, even sadism. Wes Craven's *Last House on the Left* (1972), Meir Zarche's *I Spit On Your Grave* (1978), and Abel Ferrara's *Driller Killer* (1979) were all banned in England under the controversial "video nasties" bill that passed through Parliament in 1984. Brian De Palma's *Dressed To Kill* (1980) raised the ire of feminists by featuring a male transvestite who murders (punishes?) women for their promiscuity and/or sex appeal. And John McNaughton's *Henry: Portrait of a Serial Killer* (1990), denied an R rating by the MPAA in spite of favorable reviews by such prominent critics as Roger Ebert, was finally released (unrated) four years after sitting on a distributor's shelf. That there are misogynist messages in many of these films is undeniable; recently, however, attention has been drawn to the fact that, in a number of slashers/splatters, female ingenuity and the employment of self-defense are actually championed. Nowhere is this more apparent than in the rape-revenge cycle of horror movies that appeared in the late 1970s-early 1980s.

Backing up a bit, for those who choose to downplay the revolutionary significance of *Psycho* and *Peeping Tom*, 1968 inevitably marks the birth of the modern horror movie. *Rosemary's Baby*,

Roman Polanski's paranoid urban gothic, stars Mia Farrow as an ingenuous young newlywed who moves into a Manhattan apartment building only to discover that her kind old neighbors are really devil-worshipping witches. Conspiring with Rosemary's husband and obstetrician (among others), they have effected a diabolical plan to make Rosemary the mother of Satan's child. Based on the best-selling novel by Ira Levin, *Rosemary's Baby* effectively taps into fears and anxieties surrounding pregnancy and childbirth. Because the film is shot almost entirely from Rosemary's point of view, it succeeds in conveying her growing sense of alienation and despair as she struggles to find someone she can trust in a huge, unfriendly city.

Also appearing in 1968 was George Romero's *Night of the Living Dead*, widely considered to be among the most distressing horror movies of all time. Made for only \$114,000 (in stark contrast to the big-budgeted *Rosemary's Baby*), and unrated at the time of its release, this no-frills black-and-white film centers on a small group of isolated individuals who try, with little success, to stave off the murderous advances of an ever increasing army of flesh-eating zombies. Although notable for its excessive gore and apocalyptic overtones, *Night of the Living Dead* is effective primarily because it conveys so well the claustrophobia and hysteria of the trapped party,

and because it vividly portrays the horror of seeing members of one's own family turned into monsters before one's very eyes. Not without socio-political implications, Romero's film also serves to register the dissatisfaction of America's "silent majority," and illustrates the breakdown of patriarchal order under highly-stressful conditions.

*Rosemary's Baby* and *Night of the Living Dead* were followed by a slew of movies which locate the source of horror within the nuclear family. If *Psycho* and *Peeping Tom* made the monstrous human, these films brought the monstrous home, making it not so much human as familiar. More than ever before, generic horror conventions were now being put to use, especially by auteur directors, in the service of social statement. One finds in this period movies such as *Deathdream* (1972), Bob Clark's tale of a young soldier, killed in combat at Vietnam, who is temporarily brought back to life—unfortunately as a vampiric zombie—by his mother's passionate prayers. Larry Cohen's *It's Alive!* (1974) re-presents the Frankenstein legend in distinctly modern terms, giving the role of ambivalent creator to the father of a grotesquely deformed baby-on-a-rampage. Not all of these films were low budget, independently-produced affairs. In his eagerly anticipated 1980 adaptation of Stephen King's *The Shining*, for example, Stanley Kubrick uses haunted house conventions primarily as a means of exploring the real-life horrors of alcoholism, child abuse, and domestic violence. Even the plethora of "revenge of nature" films that came out in the late 1970s after the massive success of Steven Spielberg's PG-rated *Jaws* (1975), were most of them family horror movies at heart. Participating in a tradition that goes at least as far back as Hitchcock's *The Birds* (1963), and, arguably, all the way back to James Whale's *Frankenstein* (1931), these pictures—*Squirm* (1976), *Piranha* (1978), and *Alligator* (1982), to name a few—externalize the manifest source of horror, all the while insinuating that what should be most feared is something lying within the individual, the family, or the community at large.

By far the most acclaimed and talked about family horror movie of the 1970s and 1980s was William Friedkin's *The Exorcist* (1973). Winner of two Academy Awards and nominated for eight others, this film was the subject of intense media scrutiny from the time of its initial release. Loosely based on a reported real life exorcism, the film chronicles the efforts of a disenchanted priest to save the life of a young girl who has been possessed by demonic forces. The display of Christian iconography in the presence of foul sexual language, nauseating special effects, and graphic exhibitions of self-mutilation outraged many religious groups. But stripped of its demonic-possession theme, *The Exorcist* provides a moving commentary on, among other things, the uselessness of modern medicine when confronted with unknown illnesses, the crises of guilt and responsibility faced by single mothers, and, in general, the difficulty parents have comprehending and responding to their often aggressive, hormonal children. Although inspired by *The Exorcist*, and highly successful in its own right, Richard Donner's own "satanic child" film, *The Omen* (1976) lacked its predecessor's underlying concern with domestic issues. Instead, it terrified viewers with threats of the apocalypse, and, what ultimately amounts to the same thing, the infiltration of evil agents into the political sphere.

Although the proportion of horror movies within the overall film population continued to increase well into the 1980s, by the end of the decade it was obvious that a staleness had set in. *Halloween* was up to its fourth sequel in 1989, *Friday the 13th* its seventh, and the overuse of narrative and technical conventions was (not surprisingly) accompanied by a decline in viewer interest. But with Jonathan Demme's Academy Award-winning *The Silence of the Lambs* (1991) selling the

mystique of the serial killer to mainstream audiences, the horror-thriller-suspense hybrid received a massive boost in popularity. In the mid-1990s, glossy, big-budgeted, star-powered films such as *Copycat* (1995), *Se7en* (1995), and *Kiss the Girls* (1997) focused on the gruesome handiwork of charismatic, creative serial killers and reflected public fascination with those who commit mass murder on principle (or so they would have us believe), not merely because of some underlying psychosexual disorder.

Other, more conventional horror movies of this period sought to supernaturalize the serial killer. Inspired by Wes Craven's modern classic *A Nightmare on Elm Street* (1984), in which a once-human child murderer takes revenge on those who lynched him by invading the dreams of their offspring, films such as *Child's Play* (1988), *The Exorcist III* (1990), *The Frighteners* (1996), and *Fallen* (1997) either give supernatural powers to a serial killer or else give serial killer characteristics to a supernatural being. Another Wes Craven movie, *Scream*, was a sleeper hit in 1996, and became the first in a slew of neo-stalkers. These highly self-reflexive works, which include *Scream 2* (1997), *Halloween H20* (1998), and *Urban Legend* (1998), contrive to satirize stalker film conventions while still providing genuine scares; they succeed in this task only insofar as they are able to avoid too heavy a reliance on the very conventions they are mocking. Despite the fact that almost all of the neo-stalkers to come out in the late 1990s have done quite well at the box office, many critics view the ever-increasing emphasis on parody, intertextuality, and pastiche as signs that the genre has exhausted itself, and that a dark age in horror cinema is imminent.

In spite of such gloomy predictions, judging from the horror movie revivals of the late 1950s, early 1970s, and mid-1990s, it seems safe to declare that no matter how grim things may look at times, the genre's eventual return from the deadness resulting from excess, imitation, and oversaturation is inevitable. At least as inevitable as the next wave of young people desperate to consume accessible texts in which their ambivalent attitudes towards society, family, and self receive imaginative—and so relatively safe—communal expression. Unless, of course, America's self-proclaimed moral guardians finally succeed in having laws enacted which would place strict limitations on the freedom of horror movie writers and directors to (re-)present our collective nightmares in the bloodiest of hues. Even then there would be no real cause for alarm; for the most committed of the lot would in that case surely go back to the Lewton-Tourneur-Wise school of "fear by suggestion," and rediscover ways of horrifying viewers that do not depend on the so-called "spectacle of death."

## Hot Dogs

Long a staple of sports arenas and backyard cookouts, the unpretentious hot dog is one of America's favorite sandwiches. More than 20 billion of them are consumed in the United States each year.

Allegedly married to the ubiquitous bun when Harry Stevens, who sold ice cream at New York Polo Grounds, instructed his crew to sell frankfurters on rolls, the hot dog did not become famous until it came to Coney Island, New York. Though the hot dog had been served at Feltman's 7,000 seat restaurant for years, Nathan Handwerker, once an employee at Feltman's, sparked interest in the hot dog when he sold his dogs for a nickel (half the price of Feltman's) at his hot dog stand just steps away from the subway stop on Coney Island. Interest in hot dogs was so great that Oscar Meyer began marketing hot dogs in supermarkets in the 1930s. Not only was Oscar Meyer the first to sell hot dogs through supermarkets, it was also the first to specifically target children as consumers of the food. From 1936 Oscar Meyer's

Weinermobile began driving across the country promoting its hot dogs to children.

In its simplest iteration a hot dog consists of a frankfurter in an oblong-shaped bun with any of various toppings including mustard, ketchup, pickle relish, cheese, sauerkraut, and beans. Legend has it the hot sausage sandwiches were given their descriptive moniker by sports cartoonist T. A. "Tad" Dorgan, who caricatured the wieners as dachshund dogs at the turn of the century. The term "hot dog" first appeared in print in the *Oxford English Dictionary* in 1900. Traditional hot dogs are made of beef, pork, veal, chicken, or turkey, with or without skins. Regular hot dogs are about six inches long, although they are also available in two-inch "cocktail" and foot-long varieties.

## Hot Pants

Hot pants were a short-lived fashion of the early 1970s that evoked the unconventional attitudes of the youth that had burgeoned in the 1960s. An adaptation of the 1960s mini skirt, hot pants offered the wearer a measure of modesty that the mini could not provide. For those who wished their panties to be revealed, the stylish solution lay

in short, tight, sometimes cuffed, hot pants. Designed to be worn either as an item of clothing in its own right, or as the revealed undergarment of maxi-length outfits, hot pants looked smartest when worn with tights (fishnets, opaques) and platform boots. The open fronts and side slits of maxi outfits permitted legs and hot pants to be visible, effecting a mod look and attitude that signified the trendiness of the wearer in that period.

## Hot Rods

Americans love speed. It suffuses our culture, coloring every aspect of it from food to mail service. It should come as no surprise, therefore, that the automobile holds a hallowed space in the American myth. Nowhere is this more evident than in the culture of the hot rod, a rich substrata in popular culture dedicated to the car. The popularity of the hot rod ties in with this American preoccupation with youth, speed, and individualism, and the artists who pioneered the hot rod have after years of ignominious labor become recognized as master artists outside of this very specific milieu. Over 50 years after its invention, the hot rod is still omnipresent on the road and off, dedicated to the pursuit of speed and style, or rather, speed in style.

Hot-rod culture first emerged in the early 1940s—the war years—particularly in Los Angeles, where, as Tom Wolfe writes of the period, “Family life was dislocated, as the phrase goes, but the money was pouring in, and the kids began to work up their own style of life—as they’ve been doing ever since.” In these early years, aesthetics and necessity joined to create a new form of car. Owing to war rationing, cars and car parts were scarce, and under-age car enthusiasts resorted to junkyard salvaging, creating hybridized cars with primitively hopped-up engines.

The aggressively declass  activities of these youngsters, who engaged in illegal drag race competitions and ostentatiously public congregations at drive-in restaurants, created an atmosphere of public alarm, not unlike that which accompanied the Hell’s Angels two decades later. Part of the public opprobrium had to do with appearances. Hot-rodders cultivated a distinctly sinister look, chopping (lowering the top of the car) and channeling (lowering the body itself down between the wheels) their cars, which gave them a sinister appearance. The ’32 Ford Roadster, one of the most popular objects of customizing of all time, in the hands of the hot-rodder was reduced to little more than a streamlined square, brightly painted and wedged to 30 inch tires and an enormous chrome engine. Nor did frequent contretemps between police and illicit road-racers improve the hot-rodders’ reputation. A whole hot rod culture had emerged around the rituals of customizing, cruising, and drag racing. In Los Angeles, drag racing took place on a deserted stretch of road in Culver City nicknamed “Thunder Alley,” and large-scale police raids were a not uncommon occurrence.

The public might have viewed hot-rodders with distaste, but a middling movie writer named Robert Petersen was fascinated by the religious fervor with which teenagers were pouring money into their cars. In the late 1940s Petersen started *Hot Rod Magazine*, which eventually ballooned into Petersen Publishing, a magazine empire devoted to automotive speed and beauty. By the early 1960s, there existed not only Petersen’s conspicuous empire, but models, T-shirts, toy cars, stickers, music groups, and movies; in short, any product

Two men working on their hot rod, 1953.

tangentially associated with hot-rodding was produced and rapidly consumed. But even after the point where hot-rodding had been “rationalized,” as Wolfe puts it, subjected to capitalism’s “efficient exploitation,” the hot rod’s anti-social qualities remained central to their allure.

This brazen nose-thumbing quality was best expressed by Ed “Big Daddy” Roth, a customizer who specialized in a baroque, grotesque creations, exemplified in automobiles with names like the Beatnik Bandit and Mysterion, and T-shirts with brand names like Weirdo and Monster (harkening back to the pieced-together Frankenstein quality of early hot rods) that featured grotesque hot-rodding creatures (Wolfe calls them “*Mad* magazine Bosch”) alongside slogans such as “Mother is wrong” or “Born to Lose. Writes Wolf:

Roth pointed out that the kids have a revealing vocabulary. They use the words “rotten,” “bad,” and “tough” in a very fey, ironic way. Often a particularly baroque and sleek custom car will be called a “big, bad Merc” (for Mercury) or something like that. In this case “bad” means “good,” but it also retains some of the original meaning of “bad.” The kids know that to adults, like their own parents, this car is going to look sinister and somehow like an assault on their style of life.

The first act in the narrative of the avant-garde artist begins with the rebellious artist struggling, ignored and unrecognized, with his work. Then comes recognition, then absorption into the mainstream, where the artists ideas are assimilated and become commonplace. So

it was that the superstars of customizing—Roth, Daryl Starbird, George Barris—started their careers as pariahs and ended with Detroit car makers wooing them as highly valued consultants. In fact, Detroit had been assiduously following their careers for some time. Barris, who claimed to have had more than twenty designs lifted from him by Detroit, recounted for Tom Wolfe that Detroit stylists knew all about cars he had customized as far back as 1945, way back in the early days of customizing. Stylistic innovations such as tailfins, bubbletops, frenched headlights, and concealed headlights all derived from the customizers. The early era of muscle cars—Rivieras, Sting Rays, Barracudas, and Chargers—all drew freely upon hot rod aesthetics.

By the late 1990s hot-rods were a recognized art form, with Roth and his peers exhibiting their work in museums and galleries. A entire magazine empire is engineered around hot rods, and ever since the Robert Petersen put on the first hot rod car show back in 1948, such shows have been a perennially popular attraction. Hot rod clubs continue to flourish, nourished by each new generation of teenage boys who become obsessed with customizing. And so the tradition continues in unbroken lineage from the original World War II era kids to today's customizers of Japanese imports, affectionately known as "rice-rockets." It is a tradition, and as such, it is more about craft than rebellion, but the outlaw implications of hot-rodding still hold true. A custom car is by its very nature a menace, and in this menace lies the allure.

## Houdini, Harry (1874-1926)

Before there was a Doug Henning, a David Copperfield, or a Siegfried and Roy, Harry Houdini was the celebrity magician without peer. A worldwide celebrity thanks to his relentless touring, he was the first entertainer to take full advantage of the emergent mass media, engaging in death-defying public stunts that cannily made use of newspapers, radio, and film. Had Houdini simply been another skilled magician, he might have been forgotten along with the generation of

**Harry Houdini**

vaudevillians from which he sprang, but the magnitude of his exploits, combined with his tormented personality and unexpected demise, have left an allure that has hardly dimmed over the passing decades. Houdini was a figure out of Greek tragedy: the indestructible warrior with an Achilles Heel, and his legend, like all archetypal figures, has only increased with time.

Born Erich Weiss in Budapest, Hungary, Houdini was the son of a rabbinical scholar of somewhat dubious credentials who moved his family to America in 1878 after securing a position as rabbi for a small synagogue in Appleton, Wisconsin. Ultimately, Mayer Weiss was not to the liking of his small-town flock. Perhaps it was his advanced age, or his European conceits or his habit of conducting services in German, but for whatever reason the congregation cut him loose, and the Weiss family, now numbering seven, moved to Milwaukee, barely scraping by on Mayer's earnings as a freelance minister. Young Erich felt the family's poverty keenly, and was hurt by his father's humiliation; in his later years he would take pains to ennoble the hapless rabbi. When the family had finally settled in Manhattan, Erich found work as a tie-cutter at the age of eleven. His ailing father—who soon was laboring alongside Erich in the tie factory—and the rest of the family joined him in short order. It was

with a measure of relief that Erich and his family witnessed the passing of the ill and unhappy head of the household in 1892.

Houdini possessed a meager education, but he retained as part of his father's legacy a deep respect for learning, and it was a book that changed his life. While reading *The Conjurers Unveiled*, French magician Robert-Houdin's autobiography, 17-year-old Erich discovered not only a fascination with all things illusory, but a template on which to build his own fictionalized autobiography. Robert-Houdin appears to have replaced the unsuccessful Rabbi Weiss as the young man's father figure, and Erich excised vast chunks of his tome to fill in the holes of his own shabby biography, even borrowing the dead magician's moniker to replace his own name.

With his father dead, Erich was no longer constrained in his career choices by filial piety, and embarked on his career as a professional magician as one half of the Houdini Brothers. Harry (possibly a version of his nickname, Eiri) with his young wife, Bess Rahner, acting as assistant, plied the length and breadth of the country playing dime museums, burlesque shows, traveling carnivals, and medicine shows. One trick in particular, a bait and switch act, was a favorite with audiences, and the astute Houdini was soon specializing in escape tricks of a myriad variety, which had the added advantage of familiarity in their resemblance to the stunts of many spiritualist mediums. The escape tricks were especially well suited to Houdini, a small, compact man with a lifetime enthusiasm for sports, for they demanded strenuous exertion, muscular control, and prodigious endurance. For seven years he labored in obscurity and was in the midst of rethinking his career options when he was offered a position on a vaudeville circuit by theater impresario Martin Beck.

At the turn of the century, vaudeville was the height of mass-entertainment, and theater chains, in stiff competition for audiences, were building palatial theaters to house their acts. For an entertainer such as Houdini, accustomed to making \$25 a week, vaudeville was a quantum leap in remuneration and prestige. Under the management of Beck, Houdini was soon gaining nationwide notoriety and commanding a substantial salary. To promote his act, he had begun making a practice of escaping from jails and police stations, miraculously freeing himself from manacles and cells alike. Houdini was always anxious to keep one step ahead of the competition: as a refinement, he began to perform his escapes in the nude or dressed only in a loincloth, flabbergasting the police and inflaming the public's curiosity with each successive news story.

When he sailed for England in the summer of 1900, Houdini had established himself as the "Handcuff King," adept at unshackling himself under a variety of conditions. He was not long in creating a sensation in Great Britain and on the Continent. Europe embraced his act with such enthusiasm that he stayed a full five years. He continued his habit of escaping from jail cells and offering a prize to anyone who could produce a lock he could not pick. This practice almost led to public humiliation in Birmingham, when a local judo expert and teacher of physiognomy devised a system of shackles that left the magician nearly immobilized. For a torturous hour and a half he struggled with his bonds, finally freeing himself, but not without casting a pall of suspicion over the escape with the suspicious filing marks he produced in his efforts.

Returning to the United States in 1905, Houdini was alarmed by the legion of shameless imitators that had sprung up in his absence. He forsook handcuffs, leaving them to the copycats, and concentrated on new escapes, ideas for which flowed out of him in a constant stream. He had always known the importance of remaining in the

public eye, and he began to perform high-visibility stunts, escaping from straitjackets, bags, crates—whatever could be thrown off a bridge. He toured for the next ten years, constantly refining his act, innovating, and pushing his body to the limits of endurance. This period saw the introduction of the milk-can escape, the Chinese Water Torture (perhaps the best remembered of his escapes and the most frequently performed today), the Vanishing Elephant and, for outdoor performances, an aerial straitjacket act. In this last, with his ankles secured by heavy rope, he was hauled to the top of a skyscraper and, suspended above the crowd, was left to wriggle free. In terms of cinematic potential the aerial straitjacket escape improved on his previous publicity stunts a hundred-fold.

With the advent of film, Houdini realized that vaudeville's days were numbered. By 1918, he was hard at work on his first film. Until his death in 1926, he would for the most part forsake live performances for film acting, and moved to Los Angeles, where he starred in his first short, *The Grim Game*. Not content simply to star in movies, he started his own production company, which lost money at an alarming rate. But while Houdini the movie star carried on with his work in a desultory fashion, Houdini the whistle-blower was waging a fierce battle against the forces of hokum. Besides being a possessor of tremendous energy, he had a streak of the pedant in him. He had met the author Arthur Conan Doyle, the creator of Sherlock Holmes and a believer in spiritualism. Houdini, who had made his living artfully faking his way out of impossible situations, was skeptical of such beliefs. He had made a parlor game out of unmasking mediums and now directed his towering scorn at one Mina Crandon—better known as Margery—a society woman who, with the aid of her deceased brother, Walter, had impressed *Scientific American* as a legitimate medium. Houdini would have none of it, and in a series of seances where he deduced one trick after another, finally reduced Margery to fuming impotence and irrevocably splintered the *Scientific American* panel.

In December of 1925 Houdini launched his two-and-a-half-hour extravaganza, *Magic*, on Broadway. It was his first big tour in a number of years, and started with a first act consisting of nothing but magic tricks—he even went so far as to pull a rabbit out of a hat to prove he was a magician—followed by an expose of spiritualism, and then an escape act. For the status conscious Houdini, *Magic* was a step up. This was a theater, not a vaudeville house, and when the show opened, it placed Houdini in direct competition with the lions of Broadway. The show ran through the spring, with time out for Houdini to take his anti-spiritualist campaign to Washington where he testified for Congress. During this break, he had a chance to unmask another fraud, a fakir named Rahman Bey, who allowed himself to be submerged in a coffin for an hour, claiming he had put himself in a trance. Houdini would have none of it. He trained himself to ration oxygen, and in a glass-fronted coffin he remained underwater for an hour and a half. It was to be his last unmasking.

When the tour resumed in the fall, Houdini seemed rundown. If the testimony of his friends can be believed, he had also become convinced of his imminent death, and tearfully bade goodbye to several of his acquaintances. In Albany, he broke his ankle while being hoisted into the Chinese Water Torture apparatus and continued the tour on crutches. When he arrived in Detroit, he had a temperature of 102. Persevering through the night's performance despite his condition, he collapsed backstage immediately after, and was soon hospitalized with a ruptured appendix. After surgery, peritonitis set in and the master escapologist died six days later, on October 31, 1926. Houdini lore contends that the ruptured appendix resulted from a hit

in the stomach. Houdini took great pride in his physical condition and often asked men to punch him to prove the strength of his abdomen muscles. In Detroit a man asked him if his muscles were indeed that strong and Houdini said they were. The man punched him, but Houdini was not expecting it and therefore was not prepared. It is unclear if this incident did in reality take place, but it does add to the eeriness surrounding his death.

Harry Houdini was a transitional figure in the cultural pantheon, marking the end of the Victorian era and the beginning of the modern one. A complex man, he was a textbook case of repressed neurosis in which Freud would have delighted. For a man whose very livelihood depended on nerves of steel, he was notoriously emotional. Vain and egotistical, he left a trail of broken friendships and hurt feelings in his wake. An immigrant of humble origins, he was obsessed by status, once buying a dress commissioned by the recently deceased Queen Victoria in order that his mother might wear it while entertaining her old-world relatives. Yet, despite his mother-love, his status-consciousness, his Victorianisms, Houdini was quick to embrace the expanding technical universe. A lover of gadgetry, Houdini filled his house with a surfeit of modern appliances. A masterful manipulator of the mass media, he did not allow the thrust of progress to leave him stranded as it had so many of his confederates in vaudeville. In the archetypal pattern of a tragic hero, Harry Houdini had been struck down by his own blind ambition, but it is for his extraordinary feats of endurance that his legend lives on.

## Houston, Whitney (1963—)

Singer Whitney Houston, an African American beauty with a clear soprano voice, became a megastar in the 1980s. She was born (in East Orange, New Jersey) the daughter of gospel singer Cissy Houston and a cousin to singing star Dionne Warwick, and began singing herself at age 11 with the New Hope Baptist Choir. In her teens she sang backup for Chaka Khan and Lou Rawls, but at 18 became a successful model and appeared in television comedies, while pursuing her singing career. This took off when she was signed exclusively by Clive Davis of Arista Records. Under his careful management, she launched her first album, *Whitney Houston*, in 1984. It sold 14 million copies, setting a debut album record. She became a household name and, by the late 1990s, she was the recipient of five Grammy Awards, 21 American Music Awards, and numerous Gold and Platinum discs. In 1982, Houston married singer Bobby Brown, and embarked on a screen career, starring opposite

Kevin Costner in *The Bodyguard*. She acted on screen again in *Waiting to Exhale* (1985), directed by actor Forest Whitaker with an all-female African American cast, and in *The Preacher's Wife* (1996) with Denzel Washington. All three movies yielded massive hit songs, most notably "I Will Always Love You." Houston's commanding, multi-octave range has allowed her to sing a wide range of material—gospel, R&B, pop, rock, and, most popularly, love ballads. By the late 1990s, despite commercial competition from performers such as Mariah Carey, Whitney Houston was still a favorite among female American vocalists, both at home and in Britain.

## *How the West Was Won*

Featuring narration by Spencer Tracy, individual segments directed by Henry Hathaway, John Ford, and George Marshall, a gigantic all-star cast (including Henry Fonda, Karl Malden, Gregory Peck, George Peppard, Debbie Reynolds, Jimmy Stewart, Eli Wallach, John Wayne, Richard Widmark, and Walter Brennan), and an engaging story and thrilling action sequences, MGM's *How the West Was*

James Stewart in a scene from the film *How the West Was Won*.

*Won* (1962) is widely considered one of Hollywood's greatest epics. The film episodically tells the story of three generations of the Prescott family, who migrate Westward over a fifty year period during the 19th century. This was the first theatrical release featuring Cinerama, a filming technique which employs three cameras sharing a single shutter in order to replicate the scope of the human eye. The process is far less impressive on TV or video cassette. In theaters, however, the film, much of which was shot on location in various spots throughout the American West, is spectacular. Despite Cinerama's initial popularity, after *How the West Was Won* few films successfully utilized the process, which ultimately resulted in its demise. Nevertheless, *How the West Was Won* remains a classic example of big-budget Hollywood filmmaking at its best.

## The Howdy Doody Show

Howdy Doody was the name of a 27-inch, big-eared, freckle-faced, wooden puppet. Howdy appeared in a starring capacity on an immensely popular children's television show of the same name that ran on NBC from 1947 to 1960. It was broadcast live from 30 Rockefeller Plaza in New York City.

*The Howdy Doody Show* was the creation of Robert E. Smith (1917-1998), a former radio personality, who appeared along with his wooden counterpart at first on a weekly basis and later five days a week from Monday through Friday, starting at 5:30 in the afternoon. Howdy, clad in a red bandanna, dungarees, and a checkered shirt, would exchange banter with Smith, whose on-screen persona was that of Buffalo Bob Smith, and interact with the colorful denizens of Doodyville, among whom were the following: Phineas T. Bluster, the crusty mayor of Doodyville; Flub-a-Dub, a zoological pastiche comprised of eight different animals allegedly caught by Buffalo Bob himself in a South American jungle; Princess Summerfall Winterspring, a puppet at first but later a real person played by Judy Tyler; Clarabell the Clown (first played by Bob Keeshan, also known as Captain Kangaroo), a virtual mute who engaged in Harpo Marx-like antics and frequently brandished a seltzer bottle with which he would squirt Bob; and miscellaneous others. Hallmarks of the show were the Peanut Gallery, a kiddy audience between the ages of three and eight; the call and response between Bob and the Peanut Gallery, which had the former shouting "Say, kids, what time is it?" to which the galvanized Gallery would respond, "It's Howdy Doody time"; and the Howdy Doody theme song, the music of which was borrowed from "Tar-ra-ra-boom-de-ay."

*The Howdy Doody Show* holds a number of records. It was, for example, the first daily show on NBC to feature live music and the first to be broadcast in color. When it placed Buffalo Bob in New York and Howdy in Chicago for a special broadcast to celebrate

**Buffalo Bob Smith and Howdy Doody, 1952.**

NBC's having become a transcontinental network, it became the first show to employ the split-screen technique. And as Smith himself put it, "We were the first show on every day in quite a few markets. . . . There was no daytime television, just a test pattern until 5:30. We were the first show to reach 1,000 shows, then 2,000."

The importance of *The Howdy Doody Show* is not confined to record-breaking firsts, however. Howdy, Buffalo Bob, and the rest of the cast made an indelible impression on their baby-boomer fans. In 1970 Smith received a call from a graduate student at the University of Pennsylvania who asked him to come to the campus to do a show. At first, he thought it was a hoax, but the student was serious. Smith agreed and a *Howdy Doody* revival was born. Columnist Bob Greene wrote in 1987 that the show "may have been the most important cultural landmark for my generation."

Howdy Doody resides at Robert Smith's former home in Flat Rock, North Carolina. A replica, known as Double Doody, now resides at the Smithsonian Institution.

## Howe, Gordie (1928—)

In the world of professional hockey, Gordie Howe gained legendary status as a record-setter and as an all-around athlete. Known for his longevity, Howe played into his fifties in a demanding sport in which professionals typically retire in their early thirties. His prowess, on and off the ice, led to his honorary title of "Mr. Hockey." Outside the world of professional hockey, Howe's name and awards served to generate interest in a professional sport that has received little recognition compared to football, basketball, and baseball.

In 1946, at the age of 18, Howe began his professional career as a right wing forward with the Detroit Red Wings of the National Hockey League (NHL). After 25 years with the Red Wings and five decades as a professional, he retired in 1980 at the age of 52. It was his second retirement.

Gordie Howe was born on March 31, 1928, in Floral, Saskatchewan, Canada, the fourth of nine children. He played amateur hockey and had one year in the minors before joining the NHL. Howe's first three years with Detroit were less than stellar, but by 1949 he was the highest scorer in the NHL playoffs. By the early 1950s, he had become the first player to win three consecutive scoring titles. His other records included becoming the League's top scorer

Gordie Howe

six times, and being named six times as the League's Most Valuable Player. When he retired from the Red Wings, he had set NHL records for playing in 1,687 games, for scoring 1,809 points on 786 goals and 1,023 assists, and for serving 1,643 penalty minutes.

His numerous "most" records are detailed in his official biography at the National Hockey League Hall of Fame. They include most seasons played, most regular-season games, most career goals in regular season play, most winning goals, most career assists by a right winger, most career points by a right winger, and most selections to the NHL All-Star team. He also set several All-Star Game records.

Ambidextrous and known for his incredible strength, Howe's playing style has been described as a combination of effortless and deceptively fast skating and outstanding stick-handling. When he first started as a professional, his father said he worried that his son might kill someone if he happened to get into a fight because of his strength and his ability to use both hands. As a young man, Gordie had impressed his father with his strength when he had worked summers on construction crews and could easily heft 90 pound cement sacks with either hand.

Howe was also known for his astonishing staying power. After a two-year retirement (1970-1972), he returned to professional hockey at age 45. The physician who gave him his team physical described Howe's pulse rate as comparable to that of a man half his age. His dedication as a player is revealed in a story about the 1950 Stanley Cup semi-final series when he slammed his head into a sideboard. The blow knocked him unconscious and he had to be transported to the hospital for immediate brain surgery. As he was wheeled into the operating room, he apologized to the team manager for being unable to help the team more that night.

Despite seeming laconic, Gordie Howe was never considered introverted on the ice, practicing what he called "religious hockey"—a philosophy in which he considered it better to give than to receive. His NHL penalty record of 1,643 penalty minutes and his career record of 2,421 penalty minutes attest to this. According to *Fischler's Ice Hockey Encyclopedia*, former Red Wings teammate Carl Brewer once called Howe the "dirtiest player who ever lived. A great player, but also the dirtiest. He'd gouge your eye out if you gave him a chance, carve you up. He's both big and tough and used his size to intimidate guys."

In 1971, at age 43, Howe retired from the NHL and was elected to the NHL Hall of Fame in 1972. Two years later he made a remarkable comeback, joining the World Hockey Association (WHA) to play for the Houston Aeros with his sons Mark and Marty. The three Howes led the Aeros, winning the AVCO Cup and WHA titles in both 1974 and 1975. At age 47, Howe was awarded the Most Valuable Player in the 1975 playoffs. In 1977, he again left professional hockey, but in 1979, aged 51, he returned once more, this time to play with the Hartford Whalers. Howe finished his pro career in the 1979/80 season at the unprecedented age of 52.

In celebration of his fiftieth year in hockey and to set a record as the only professional hockey player to play in six consecutive decades, Howe briefly came out of retirement in October of 1997, at age 69, adding to his professional longevity record by playing an opening shift with the Detroit Vipers of the International Hockey League.

During the 1950s and 1960s when Gordie Howe was at his career peak, hockey great Dave Keon, former captain of the Toronto Mapleleafs (quoted in *Fischler's Ice Hockey Encyclopedia*), observed there were "two weak teams in the NHL and four strong

ones—and the strong ones were Toronto, Montreal, Chicago, and Gordie Howe.”

## Howlin' Wolf (1910-1976)

Standing six-foot-three and weighing almost 300 pounds, Chester Burnett, popularly known as “Howlin' Wolf,” was, in the words of Giles Oakley, “one of the most menacingly forceful singers of his time.” A farmer until his eighteenth birthday, Wolf's life was dramatically altered by a chance meeting with Delta legend Charley Patton. The marriage of his half-sister Mary to harmonica player Sonny Boy Williamson further shaped Wolf's musical style.

Howlin' Wolf

Howlin' Wolf's 1950s sides for Chess Records stand as some of the finest blues records ever produced. Hits like “I Ain't Superstitious,” “Little Red Rooster,” and “Spoonful” became even more popular when covered by British rock bands. In 1970, Chess attempted to capitalize on Wolf's newfound popularity with a white audience by teaming him with a British “supergroup” including Eric Clapton and members of the Rolling Stones. Howlin' Wolf died of heart failure in 1976; 15 years later, he was inducted into the Rock 'n' Roll Hall of Fame.

## Hubbard, L. Ron (1911-1986)

Founder of the Church of Scientology in the second half of the twentieth century, La Fayette Ron Hubbard was known chiefly in literary circles as a talented and prolific author of pulp fiction from the time of his first sale in 1934 until the early 1950s. In those penny-a-word days, if survival was to be maintained, being prolific was just one of the job requirements, and Hubbard more than met it. His stories appeared in magazines devoted to high adventure and mystery, as well as science fiction. Perhaps his two most famous stories in that genre were *Fear* and *Typewriter in the Sky*. Because of his skills at weaving the fantastic into plausible narratives, Hubbard was among such authors as Robert Heinlein and Isaac Asimov whom editor John Campbell relied on to fill the pages of *Astounding Science Fiction*, the leading periodical in its field.

Yet, it was ultimately not a story but an essay in *Astounding* which marked the turning point for Hubbard and eventually thrust him into the international arena. Campbell was so taken with Hubbard's new ideas for developing human potential that he printed Hubbard's 1600-word article, “Dianetics,” in the May 1950 issue of *Astounding*. Hubbard's thesis traced all human misery and misunderstanding to the distorted and confused signals received by the fetus in the womb. Further, it was Hubbard's contention that a person could “clear” himself of these misapprehensions and inhibitions by submitting to an “auditing” process of questions-and-answers conducted by a practitioner of Dianetics. (According to Scientology literature, the term Dianetics is a combination of the Greek words *dia* “through” and *nous* “soul.”)

Although widely ridiculed by medical professionals (especially psychiatrists, who could claim with some justification that Hubbard's new science had appropriated certain psychological tenets for its own purposes), the “Dianetics” article created sufficient stir that Hubbard soon expanded it into a full-length book, *Dianetics: The Modern Science of Mental Health*. The book, in turn, sold well (it is still in print) and created interest in many individuals to invest in “becoming clear.” Author Hubbard was now in the Dianetics business, training auditors and charging fees for their services. By 1954, in a move considered by some to be an attempt to gain mainstream respectability (and circumvent prosecution for quackery), Dianetics had evolved into an official religion, dubbed with the new name Scientology. Healing has been a long-time tradition in many religions, and in the

**L. Ron Hubbard**

early 1950s, faith-healers (such as Oral Roberts) were as prevalent on television as professional wrestlers. Significantly, those who claim to heal under the auspices of a given religion are not customarily held to the same rigorous standards of accountability as are medical professionals.

For years, a possibly apocryphal story has circulated in science-fiction circles that at a gathering of his fellow writers, the young Hubbard had declared that the way to become rich would be to found a new religion. (Some state that Hubbard was indeed at the discussion in question but that it was another man who made the infamous pronouncement.) The fact remains that Hubbard prospered. By the end of the twentieth century, there were hundreds of Scientology churches around the world. Almost as long as it has been in existence, Scientology has been an object of controversy, accused of everything from cultic brainwashing to tax evasion. Yet despite these attacks, including government investigations, Scientology has always defended itself rigorously in court and in the public media, and weathered each storm largely unscathed. And, despite many books and periodical articles (including a 1991 cover story in *Time* magazine) which have attempted to debunk Scientology's precepts and reveal unscrupulous practices, the Church of Scientology seems in the 1990s to be thriving more than ever. As a religion born in the twentieth century, Scientology has proven itself a most media-savvy church, taking full advantage of modern methods, from television to cyberspace, to promote its methodology, attack what it views as the evil of psychiatry, and engage in positive public relations. The Scientologists' claims for Hubbard's teachings include techniques to improve education and combat drug addiction, although mainstream acceptance of

these ideas, particularly when it would mean forming an alliance with the controversial Church of Scientology, has not been forthcoming.

Hubbard eventually went into seclusion, remaining the subject of rumors and speculation until his death was announced in 1986. But Scientology goes on. This twentieth-century church may or may not be a cult, but it certainly believes in the power of "the cult of celebrity." To bolster its claims, an army of publicists continually point to prominent men and women in the arts who feel that Scientology has been of immeasurable benefit in their personal and professional lives. Among these accomplished citizens are film stars John Travolta and Kelly Preston (Travolta's wife), Tom Cruise and Nicole Kidman (Cruise's wife), jazz musician Chick Corea, and composer Mark Isham. The church is populated by many people who feel they have gotten their money's worth from following its precepts. As long as Scientology is recognized as a religion in the United States, its adherents are free to place their faith in it, as are those of any other religions, whether their roots can be traced back for many centuries or to the more recent outcropping of "New Age" spirituality.

## Hudson, Rock (1925-1985)

Actor Rock Hudson's unmistakable masculinity made him a screen idol of the 1950s and 1960s. Hudson was a traditionally handsome figure and a romantic hero when such types were becoming rare. He was brought into film as the heir to Clark Gable and Gary Cooper. His broad shouldered, six-foot frame and dark brooding eyes gave him an enormous screen presence. He was twice voted the nation's top box office draw and was the recipient of numerous national and international awards. He also earned the respect of critics, in particular for his fine performances in *Magnificent Obsession* (1954) and *Giant* (1956).

Born Roy Scherer, Jr., on November 17, 1925, in Winnetka, Illinois, Hudson was a member of a blue-collar family. His father was an automobile mechanic and his mother a telephone operator. Hudson's years at New Trier High School were ordinary: he sang in the

**Rock Hudson**

school's glee club, and residents of the city remember him as a shy boy who delivered newspapers, ran errands, and worked as a golf caddy. The 1937 movie *The Hurricane* captivated and inspired Hudson to an acting career.

In 1943 Hudson was drafted into the Navy. After a military discharge in 1946, he briefly returned to Winnetka and worked as a piano mover. After doing poorly as a salesman in his father's appliance shop he took on a job as a truck driver with a food company. He moved to Los Angeles to pursue an acting career and applied to the University of Southern California's dramatics program, but was rejected due to poor grades. Pursuing his dream of becoming a film star, Hudson sent out numerous resumes and photographs to movie studios. He received only one response, from talent scout Henry Wilson, a representative for David O. Selznick.

Wilson renamed the ruggedly handsome young man "Rock Hudson"—Rock for the Rock of Gibraltar, and Hudson for the famous New York river. Hudson was introduced to the Hollywood studios, but did not make a lasting impression due to his shyness. His screen test for Twentieth Century-Fox studios was so bad that it was shown to beginning classes as a classic example of poor acting.

Hudson landed his first acting job in a one-line bit part in Raoul Walsh's *Fighter Squadron* (1948). According to Hollywood legend, Hudson needed 38 takes to get his line ("Pretty soon you're going to have to write smaller numbers") correct. But Hudson learned to act on the job, and within six years he had appeared in 28 pictures. The roles were primarily characters lacking depth.

Hudson soon came under the wing of Universal Studios tutor Sophie Rosenstein, who helped him in his bit parts and supporting

roles. During the 1950s he was cast in longer parts in a series of adventure and "B" pictures. After the release of *Magnificent Obsession*, Hudson's career took off. In 1954 *Modern Screen* magazine cited Hudson as the most popular actor of the year, and in 1955 *Look* magazine named him as the top male movie star. He was wed to Phyllis Gates in 1955; the marriage lasted three years, and Hudson did not remarry.

Hudson's acting career proceeded in a new direction as a sustaining figure in women's pictures. Under the professional direction of George Stevens, Hudson was able to give real depth to the characterization of Texas rancher Bick Benedict in *Giant* (1956). After Richard Brooks's notable *Something of Value*, and a moving performance in *A Farewell to Arms* (1957), the actor moved into comedy roles, usually paired with Doris Day. While the films varied in quality, they allowed Hudson the opportunity to explore his comedic talents. Utilizing innuendo, the films bridged the gap between humor and permissiveness. From 1959 to 1965 he portrayed humorous characters in *Pillow Talk* (1959); *Come September* (1961); *Lover Come Back* (1961); *Send Me No Flowers* (1964); *Man's Favorite Sport* (1964); and *Strange Bedfellows* (1964). Hudson afterward appeared in a number of unsuccessful and mediocre films.

By age 55 Hudson was faced with a dilemma: whether to pursue a fading film career or take roles in television. Initially Hudson was not interested in a small-screen career, but the series *McMillan and Wife* (1971), in which he starred as the police commissioner of San Francisco, proved to be a hit. He made few worthwhile films afterward, and he appeared in two television miniseries, *The Martian Chronicles* (1980) and *The Star Maker* (1981). He also was cast in the poorly conceived *Devlin Connection* (1982). His last recurring television role was in *Dynasty* (beginning in 1981).

Hudson made his final screen appearance in the 1984 television film *The Las Vegas Strip Wars*. The following year, while in Paris seeking medical treatment for an undisclosed illness, Hudson collapsed. The news broke that Hudson had been diagnosed with AIDS. Friends stated he had discovered that he had the disease in mid-1984, but chose to continue acting on *Dynasty* while secretly undergoing treatment. For years Hudson, his managers, and the studios had avoided the issue of his homosexuality. His illness, however, brought it into the open. Author Armistead Maupin stated he met with Hudson in 1976 and urged him to reveal his homosexuality. Acquaintances often described Hudson as gay, but he refused to publicly comment on or acknowledge the reports. Rock Hudson became the first major public figure to declare he had AIDS.

His last appearance at a benefit hosted by former leading lady Doris Day revealed the horrifying truth of AIDS in vivid and unflinching detail. Before his death Hudson stated, "I am not happy that I am sick. I am not happy that I have AIDS. But if that is helping others, I can at least know that my own misfortune has had some positive worth." Rock Hudson passed away at his home in Beverly Hills, California, on October 2, 1985.

## Hughes, Howard (1905-1976)

When he passed away on August 16, 1976, billionaire financier Howard Hughes was considered the world's most mysterious man. Rumors abounded about the strange way he looked, his eccentricities, and the odd way he lived. But before he became a man on the run, moving from continent to continent with his cadre of Mormon aides, Hughes was the embodiment of the Jazz Age wealthy playboy, the 1930s-era aviation hero, the 1940s and 1950s millionaire-as-superstar, and the 1960s Las Vegas casino mogul. Along the way, he also

Howard Hughes

riled censors and packed movie houses with several milestone films that pushed the boundaries of sex and violence.

Born in Houston on Christmas Eve, 1905, Howard Robard Hughes Jr. was the son of an oilman who had developed a drill bit that revolutionized oil drilling the world over. The Hughes rock bit, or rollerbit, was the foundation of the family fortune that Hughes Jr. inherited at age eighteen. That fortune financed Hughes's earliest Hollywood ventures, which began in 1926 and climaxed with the monumental World War I aviation epic *Hell's Angels* in 1930. Because its production spanned the silent and talkie eras, the early sound movie required reshoots and a new leading lady. Hughes chose the unknown starlet Jean Harlow. He also took over as director. By the time of its lavish premiere, "Hughes's Folly," as it was called, was the costliest movie of its time. With its dazzling aviation sequences and Harlow's presence, it also proved a crowd-pleaser, establishing Hughes as a major filmmaking force. But after producing several significant films of the early 1930s, including *The Front Page* and the violent *Scarface*, he turned his attention to the skies.

His love of aviation had begun at age fourteen with a five dollar flight in a Curtiss flying boat. An astute flight student, he made headlines in 1932 when he was discovered working under an alias for American Airlines as a baggage handler. With Hughes Aircraft Company, he developed and built the planes in which he made various speed records. Those efforts led to the development of the first retractable landing gear, flushed rivets, streamlined airplane designs, and advances in high-altitude flying. His July 1938 flight around the world, in three days, nineteen hours, enshrined him as a ticker-tape hero and the country's most famous aviator since Charles Lindbergh. Hughes's romances with Ginger Rogers, Katharine Hepburn, and others gave the matinee-idol-handsome Hughes a reputation as a ladies' man.

His interest in women, and the female figure, was evident when he returned to filmmaking with the audacious western *The Outlaw*. Producer-director Hughes was so determined to glorify his leading lady's bustline that he once stopped production in order to design a better brassiere for newcomer Jane Russell. He spent two years editing the movie and battling censors, and finally opened *The Outlaw* in 1943. Inexplicably, he pulled it from distribution after eight record-breaking weeks. Rereleased in later years, the film, which remains noteworthy for its early depiction of cleavage, denoted Hughes's obsessive nature and eccentricities.

The 1940s saw Hughes wielding his power and wealth to romance a "Who's Who" of Hollywood luminaries, including Bette Davis, Ava Gardner, Rita Hayworth, and Lana Turner. Expanding his empire, he became principal shareholder of TWA Airlines in 1947. That same year he also defiantly faced a Senate subcommittee hearing involving the HK-1, Hercules. Popularly known as the Spruce Goose, the government-funded, eight-story plane had not been completed in time to ferry soldiers over the ocean during World War II. When government sources doubted it would fly at all, Hughes personally proved them wrong. Though the flight of November 2, 1947, lasted less than one minute, it was a benchmark in aviation history.

Yet Hughes was already on a dark, downward spiral, as symbolized by his July 1946 crash while test piloting an XF-11 photo reconnaissance plane. Obsessive-Compulsive Disorder had not yet been diagnosed, but Hughes has since been identified as a classic OCD sufferer. This biologically based condition led to his dependence on drugs, which were first given to him following the 1946 crash.

Hughes ventured back into filmmaking in 1948, purchasing a controlling interest in RKO Pictures. The studio legacy included such

revered titles as *King Kong*, *Citizen Kane*, and the Fred Astaire-Ginger Rogers musicals. Under Hughes, filmmakers were dismayed to learn that they had to cast Hughes's assorted girlfriends, including Terry Moore. But during his tenure, Hughes personally salvaged a career that became legendary: following a notorious September 1948 marijuana arrest, Robert Mitchum thought his career was over, but Hughes stood by the actor and went on to cast him in a string of enjoyable crime thrillers. Hughes, who never did set foot on the studio lot, eventually became sole owner of RKO, which he sold in 1955. Shortly afterward, he became so reclusive that when he and actress Jean Peters secretly married in 1957, both used assumed names.

In the 1960s, as his companies pioneered space and satellite ventures, Hughes lived behind the blackened windows of the Desert Inn penthouse suite, amassing a then-unsurpassed Las Vegas desert kingdom of casinos and hotels. He left the city in the dead of night in November 1970 and thereafter was a man on the run. Pursued by various government agencies, attorneys, process-servers, and the media, he was so isolated that the publishing world fell for an elaborate hoax perpetrated by writer Clifford Irving, who claimed he was working with Hughes on his autobiography.

Following Hughes's death and the ensuing battle for his money, revelations detailed his germ phobia, food fetishes, and drug usage. That the once dashing, adventurous Hughes had died weighing just ninety-three pounds, with broken hypodermic needles imbedded in his arms, was proof that money does not buy happiness. Meanwhile, the hoaxes continued, most notably that of the "Mormon will." The fraudulent document left money to gas station attendant Melvin Dummar, whose saga was the impetus for the 1980 film *Melvin and Howard*.

## Hughes, Langston (1902-1967)

With his essay "The Negro Artist and the Racial Mountain" (1926), writer Langston Hughes helped to define the spirit that motivated the Harlem Renaissance, a black cultural movement of the 1920s. In the essay, he argues against blacks seeking integration at the expense of race pride and proclaims that instead "we younger artists who create now intend to express our individual dark-skinned selves without fear or shame," a bold statement for those racially unsettling times that were marked by lynchings and riots. Perhaps his determination to affirm, indeed revel in, black culture had something to do with his father's hatred of black people, a sentiment that affected the son profoundly. Hughes wrote in his autobiography *The Big Sea* (1940) that "my father hated Negroes. I think he hated himself, too, for being

a Negro." Unlike his father, early in life Hughes had been seduced by the *joie de vivre* of a people who simply could have been bitter because their lives were filled with injustice. In nearly everything he wrote, and he wrote more than fifty books in every conceivable genre, he sought to capture the complexities of, and pay homage to such people, especially those who were poor or of modest means. He believed that they "had as much in their lives to put into books as did those more fortunate." Thus, the black folk idiom, the rhythm and tones of its language and music, was the only choice for Hughes, and he became the poet laureate of the people for one simple reason—he spoke their language.

Hughes himself had very humble beginnings, and it may well have been his memory of those beginnings that fed his desire to be in touch with the masses. He was born James Langston Hughes on February 1, 1902, in Joplin, Missouri, to James Nathaniel and Carrie Mercer Langston Hughes, who separated soon after his birth. He lived on and off with his mother, but primarily lived with his grandmother for the first twelve years of his life. After his grandmother's death, he lived with friends of hers whom he referred to as Auntie and Uncle Reed, then went to live again with his mother, who had remarried and given birth to another son. In the loneliness of such a childhood, Hughes turned to books. Even living as modestly, often quite poorly, as they did, his mother took him to see plays and introduced him to literature. His grandmother had been a great storyteller, and although her staunch pride sometimes prevented their having enough to eat, the stories she told about heroic blacks seemed to instill a similar pride in Hughes that would later manifest itself in his deep affection for his people and in the stories he eventually would tell.

His early poems were in imitation of Paul Laurence Dunbar and Carl Sandburg until he began to find his own voice, drawing on his observations of the people and culture that so fascinated him. For example, the inspiration for "When Sue Wears Red," extolling the majestic beauty of African American women, was a "little brownskin girl" from the South whom he had met at a high school dance. At age seventeen, he wrote one of his best-loved and most enduring poems, "The Negro Speaks of Rivers," published in *Crisis* in 1921, the first of his poems to appear in a national publication. It was later set to music by composer Howard Swanson, and Marian Anderson performed it at Carnegie Hall. His collection of blues and jazz poems, *The Weary Blues* (1926), was an unprecedented use of those particular cultural forms, winning him first prize in *Opportunity* magazine's literary contest and establishing him as an influential writer whose art was deeply rooted in racial pride. Hughes's biographer, Arnold Rampersad, commented that poems such as "The Negro Speaks of Rivers," "Mother to Son," and "Harlem" are "virtual anthems of black America."

Hughes's participation in the Harlem Renaissance, major though it was, constitutes only a small part of his literary career. His influence has been far-reaching, extending beyond the black American community. His appointment by President Lyndon Johnson as the American representative to the First World Festival of Negro Arts, held in Dakar, Senegal, in April of 1966, attests to his having achieved a widespread international reputation. Senegal's poet-president Léopold Sédar Senghor considered Hughes important to the concept of *négritude*, saying that "we considered Langston to be the greatest black American poet because it was Langston Hughes who best answered our definition," according to Rampersad in *The Life of Langston Hughes*. Senghor believed Hughes to be a "model . . . for the world." Also,

The hula hoop in action.

according to Rampersad, the *New York Times* reported that while Hughes was attending the festival “young writers from all over Africa followed him about the city and haunted his hotel the way American youngsters dog favorite baseball players.”

The impact of Hughes’s work did not diminish with his death in 1967. Many scholars have come to see him as black America’s most original poet; long before the Black Arts Movement of the 1960s, Hughes’s poetry reflected the idea that black music is essential to the artistic creation of an authentic “black” voice. Further, the kind of fusion of black music and literary forms that has come to be associated with his poetry is reflected in much of the black popular music of the 1970s, 1980s, and 1990s. His poem “Afro-American Fragments” inspired the title of a music CD made in 1995 by Ensemble Sans Frontière, which pays tribute to Hughes and musicians Dizzy Gillespie, Charles Mingus, and Miles Davis. Perhaps the blues revival of the 1980s and Congress’s resolution declaring jazz a “rare and valuable national treasure” has helped to secure Hughes’s acceptance by mainstream literary audiences, for he is the only African American to be included in the “Voices and Visions” series that explores the lives and works of thirteen famous American poets.

The last line of *The Big Sea* reads, “Literature is a big sea full of many fish. I let down my nets and pulled. I’m still pulling.” One has only to look at his legacy of poetry, drama, musicals, libretti, fiction,

and nonfiction to know that even now the poet of the people is “still pulling.”

## Hula Hoop

One of the simplest concepts in toy design, the hula hoop deserves the title of the most popular, mid-twentieth century fad. In 1958, children and fun-loving adults were reeling and wiggling, trying to spin the four-foot, plastic hoops around their waists. Marketed by the toy manufacturer Wham-O, the hula hoop was introduced to

the public in California and quickly became popular throughout America. The craze crossed both oceans; within a year hula hoops were a mania in Europe, the Middle East, and Japan. Approximately one-hundred million hoops were sold in the first year of the toy's production.

When two young chemists working for Phillips Petroleum discovered a durable, heat-resistant, and inexpensive plastic (Marlex), the material turned out to be perfect for the production of the kind of hoops that were used in exercise gyms. American children loved the fun of gyrating like a hula dancer to keep the colored, lightweight plastic rings aloft. The hula hoop craze introduced the public to the plastics industry that would produce everything from baby toys to automobile parts as the twentieth century progressed.

## Hull, Bobby (1939—)

To become a legend, a hockey player needs something special in addition to great playing abilities. In the case of Bobby Hull, the Chicago Black Hawks famous #9, his speed and the incredible force of his slapshots have contributed to give "The Golden Jet" a unique profile. One of the finest hockey players ever to take to the ice, he became a three-time NHL point-scoring champion, and two-time MVP while playing left wing for the Black Hawks. He is still considered the best left-winger in the history of hockey.

Born Robert Marvin Hull on January 3, 1939, in Pointe Anne, Ontario, he progressed quickly through the minor league hockey ranks. At age 10, he was already considered a potential NHL player. He played junior hockey in Hespeler and Woodstock, Ontario, and with the St. Catharines Tee Peees, where he was coached by Rudy Pilous, his future Black Hawks coach.

The blond player earned the nickname "The Golden Jet" because of his speed, power, and charisma. He joined the Chicago Black Hawks for the 1957-1958 season, and played left wing for them from 1957 to 1972. (His brother, Dennis, also played for the Hawks from 1964 to 1977). Although his first two seasons were not particularly brilliant (with only 31 goals, 13 in the first year, 18 in the second), he used them to perfect his speed and his unique slapshot. He was considered the NHL's fastest skater, clocked at 28.3 mph with the puck, 29.7 without it. His powerful, booming slapshot—clocked once at 118.3 mph, some 35 mph above the league average—was thought to be the league's hardest. That "high-velocity piece of lead," according to goalie Jacques Plante, could easily thrust a goalie backward into the net—along with the puck.

Gradually, Bobby Hull became a top player for his team. With 39 goals in his 3rd season, 31 in his 4th, he led Chicago to their first Stanley Cup in 23 years in 1960-61. The following year, he matched the NHL's 50-goal scoring record, before raising it for the first time ever to 54 in 1965-1966 and to 58 in 1968-1969, even while playing

part of the season with his mouth wired shut because of a broken jaw. In 16 NHL seasons, Hull scored 610 goals and added 560 assists (for a total of 1,170 points) in regular season play, plus 129 points (62 goals and 67 assists) during the Stanley Cup playoffs. He led the NHL in goals scored in seven different seasons.

Bobby Hull displayed all the skills of some of the game's best players: he perfected Boom-Boom Geoffrion's slapshot; he had the speed of Howie Morenz, the goal-scoring abilities of Maurice "Rocket" Richard, and the strength and control of Gordie Howe. Not surprisingly, he was voted hockey's Player-of-the-Decade in a 1970 Associated Press poll of writers and sportscasters. He won the Ross Trophy three times, the Lady Byng once, the Hart twice, and the Patrick Trophy in 1969 for the outstanding contribution he made to hockey in the United States. He was a regular choice in All-Star selections, named ten times to the First NHL All-Star Team and twice to the Second Team.

In 1972, a contract dispute with the Hawks management caused a major surprise when Hull jumped to the Winnipeg Jets of the upstart World Hockey Association. Hull's contract made him hockey's first millionaire, as the Jets were offering high salaries to attract stars to their team. For the Black Hawks, it was a major setback: his departure may have cost the organization close to \$1 billion over ten years due to drops in attendance. The NHL tried legal action to block the move,

and then arranged to punish Hull by leaving him off of the 1972 Team Canada. His decision, however, made history: by switching from a hallowed NHL team to an upstart WHA team, Hull immediately raised the interest of spectators in WHA hockey. He remained a top player with Winnipeg, scoring 77 goals during 78 games in 1974-75, and adding 303 goals and 638 points to his career numbers.

In 1980-1981, Hull tried to come back to NHL hockey with the New York Rangers, but did not make the team. A legendary figure, his time was past. In 1983, he was elected into the Hockey Hall of Fame. A great hockey player and a pleasant person, in his retirement Hull farmed and ran cattle breeding operations across Canada. His son, Brett Hull, achieved stardom of his own while playing for the Dallas Stars.

## Hunt, Helen (1963—)

Helen Hunt began a prolific acting career as a child, appearing in several television series and made-for-TV movies, beginning with her debut in *Pioneer Woman* (1973). Fame finally found her with *Mad About You* (1992—1999), an NBC sitcom about the evolving relationship of the Buchmans, a young married couple. As Jamie Buchman, a role that earned her several Emmys, Hunt explored the difficult marital and career challenges of the 1990s. Her success with both the public and the critics in *Mad About You* and in the movie *The Waterdance* (1992) earned Hunt leading roles in the special-effects blockbuster *Twister* (1996) and the moving comedy-drama *As Good As It Gets* (1997), for which she won an Academy Award.

## Hunter, Tab (1931—)

On the basis of his picture-perfect looks, Tab Hunter became a teenage idol and a leading man of the 1950s. Tall, blond, tan, and

athletically built, he was called “Golden Boy” by the press. It was then-powerful agent Henry Willson who Hollywoodized his name, saying, “We’ve got to tab him something.” Willson was also responsible for transforming Roy Scherer, Jr., into Rock Hudson. Like Hudson, Hunter was typical of the actors who enjoyed careers in the wane of the so-called star system: handsome and engaging, with boyish charm but limited acting range.

A native of New York, Hunter was born Arthur Kelm. He later took his mother’s maiden name to become Arthur Gelien. He joined the Coast Guard at age fifteen, but was discharged when it was learned he had lied about his age. At eighteen, while working for a Southern California riding academy, a friend suggested that he try show business.

After a bit part, Hunter caught moviegoers’ attention as a shipwrecked sailor opposite glamorous Linda Darnell in the 1952 title, *Island of Desire*. Then came the 1955 box-office hit, *Battle Cry*. His depiction of a young wartime Marine caught up in a love triangle proved his ticket to stardom. It also made him a darling of the fan magazines, which photographed him on dates with Natalie Wood and Debbie Reynolds, and invited their own readers to “Win a Date with Tab Hunter!” Along with being thrust into the spotlight, Hunter was shoved into the recording studio. “If you can carry a tune at all, we’d like you to record it,” enthused a Dot Records executive. After all, the

airwaves were then pivotal to the teen idol phenomenon. Hunter's resulting musical foray, "Young Love," was the country's top single for four weeks in 1957. Then under contract to the Warner Bros. studio, he went on to record for their label.

He also went on to display pronounced acting potential. A 1958 *Playhouse 90* TV production, "Portrait of a Murderer," found him effectively playing against type. That same year he held his own opposite Gwen Verdon in the movie version of the hit musical, *Damn Yankees*. In the candid 1959 movie, *That Kind of Woman*, he was convincing as an idealistic soldier in love with another man's mistress, played by Sophia Loren.

But his movies became less prestigious as his fans matured. Moreover, though he had successfully weathered innuendo wrought by negative press in 1955, when the scandal magazine *Confidential* detailed his early arrest, at a "pajama party" where "boys were dancing with boys and girls with girls," a 1960 dog-beating trial appeared to alienate fans and the media. Accused of having beaten his pet weimaraner, the avowed animal lover was acquitted. But offers dwindled afterward. Turning to TV, he was a bachelor-artist in the short-lived *The Tab Hunter Show*. By the mid-1960s, the luster of his manufactured stardom had worn off, proof that Hollywood can break careers as quickly as it makes them. As Hunter himself put it, "This town uses you and discards you and goes on to the next thing."

To survive the 1970s he made movies in Europe, toured the American heartland in dinner theater, and appeared on TV game shows. In 1977 he also briefly joined the cast of the quirky TV series, *Forever Fernwood*; lampooning himself, he played a character who had fallen into a vat of Rust-Oleum, undergone plastic surgery, and

awakened to discover that he looked like Tab Hunter. It was due to his lustrous 1950s image that Hunter was cast in *Polyester*, as the love interest of a disillusioned housewife played by the 300-pound female impersonator, Divine. Directed by offbeat filmmaker John Waters, and filmed in "Odorama," the movie became a cult favorite. As a result, Hunter reunited with "leading lady" Divine in *Lust in the Dust*, a 1985 western spoof which he coproduced. He has subsequently appeared in small roles in obscure films.

## Huntley, Chet (1911-1974)

As part of the most successful television broadcasting team in television history, Chet Huntley (with co-anchor David Brinkley) was responsible for NBC's winning the news ratings war against CBS and ABC in the 1960s. Beginning in 1956 and until 1970 when Huntley retired, the *Huntley/Brinkley Report* was a household staple for millions of Americans. By 1960, the *Huntley/Brinkley Report* was America's top-rated news show and remained there until 1969. The two men formed an unlikely but successful team. Huntley's resonant voice and straightforward style seemed a perfect match to Brinkley's more cryptic, somewhat cynical approach. Their balanced reporting style was perhaps best epitomized by their well known sign-off line: "Goodnight, Chet." "Goodnight, David, and goodnight for NBC News."

## Hurston, Zora Neale (1891-1960)

A prolific novelist, folklorist, anthropologist, and critic, Zora Neale Hurston was one of the inspiring personalities of the Harlem Renaissance. Her diverse interests intertwine in her most influential novel, *Their Eyes Were Watching God* (1937), where the narration of

Tab Hunter

a black woman's quest for self-identity is interspersed with folk-tales, which Hurston had collected during a research trip supervised by noted anthropologist Franz Boas. In 1943, her autobiography *Dust Tracks on a Road* (1942) won *The Saturday Review's* Anisfield Award for the best book on race relations. Although this award made her a well known public figure, she always refused the role of spokesperson for the African American community. She also held controversial views on race, which led her to write an article against school desegregation in 1955. In the years following her death, notably in the 1980s and 1990s, Hurston's work has achieved a prominent position in the American literary canon.

## Hustler

As the twentieth century drew to a close, pornography was a \$10 billion-a-year business in America. About \$1 billion of that cash flow was generated by magazine sales. One of the most provocative and controversial of the so-called "men's magazines" was Larry Flynt's *Hustler*. The raunchy periodical, founded on its publisher's oft-stated desire to cater to the "erotic imaginations of real people," helped redefine the "mainstream" of porn and wielded an influence far beyond the cloistered realm of XXX literature.

In its essence, the *Hustler* story is inseparable from that of its founder, Larry Flynt. A child bootlegger from the mountains of Kentucky, Flynt escaped the torpor of Appalachia at age 15 by joining the United States Army. Upon leaving the service, and surviving a failed first marriage, he established a profitable chain of go-go bars. In 1972, he moved into publishing, starting up an eponymous newsletter for his Hustler club. The new periodical, later expanded into a glossy magazine, became notorious for its explicit depiction of the female genitalia. Whereas the other men's magazines of the time, like *Playboy* and *Penthouse*, bathed their nude models in a gauzy glow that obstructed the view of their "naughty bits," Flynt's *Hustler* examined every nook and cranny of the distaff form with an almost gynecological zeal. The approach shocked many in the beginning—no doubt a part of Flynt's plan all along—but had soon resulted in expanded parameters for what could and could not be shown in a newsstand periodical.

A host of imitators cropped up in the wake of *Hustler's* initial success. Often they bore titles that aped *Hustler's* pornoscenti cachet, titles like *Swank*, *Gent*, and *High Society*. But few of these publications could match Flynt's élan or his flair for generating publicity. In 1975, Flynt created a furor by running telephoto pictures of a naked

*Hustler* publisher Larry Flynt.

Jackie Onassis sunbathing in Greece. Amid howls from the world's opinion elites, Flynt gleefully cashed his checks. The scandalous photo spread helped attract 1.3 million readers to *Hustler*—and allowed a former strip club owner from Appalachia to rake in more than \$30 million a year.

Not surprisingly, Flynt's ability to reach a mass audience made him a ripe target for all manner of detractors. Foremost among these were American feminists, to whom Flynt gave plenty of ammunition. *Hustler's* visual features repeatedly portrayed sex as ugly and dirty, with women depicted in rape fantasies, smeared with excrement, or likened to pieces of meat. One infamous cover showed a woman being fed into a meat grinder. The backlash to such content was swift and visceral. In an op-ed piece for the *New York Times*, Gloria Steinem compared *Hustler* to a Ku Klux Klan publication and derided Flynt for printing images of women being "beaten, tortured and raped" and "subject to degradations from bestiality to sexual slavery."

African Americans and other minority groups also heaped scorn on *Hustler*, for its monthly parade of cartoons and features that were blatantly racist, bigoted, or putridly scatological. Even fellow pornographers had little tolerance for this type of material. "I think [Flynt's] dangerous and demented," opined *Penthouse* publisher Bob

Guccione. "I don't believe he's normal by any stretch of the imagination. He's very sick and disoriented." To all of these critics a defiant Flynt had the same answer: "We're an equal opportunity offender," he declared repeatedly, adopting the rhetoric of civil rights law to defend his cause. "Every month we try to figure out who we haven't offended yet."

*Hustler* has not lacked for high-profile defenders. One of Flynt's most ardent apologists has been the outspoken author and academic Camille Paglia, who lauded the maverick publisher as "a hero" who "forces people to confront their own buried snobbery about the South and working-class culture." Paglia went on to laud *Hustler* for "being totally frank, playing no more games, laying it out for everyone to see. It's the kind of explicitness you'll see in tribal cultures."

Nevertheless, such "explicitness" has cost *Hustler* dearly among mainstream advertisers, almost all of whom have shunned the magazine despite having no qualms about gracing the pages of *Playboy* and *Penthouse*. Even more damaging, Flynt has found himself hauled into court on numerous occasions to defend the magazine against indecency charges. The legal cost of defending *Hustler* over the years has been estimated at \$50 million. It was during one such trial, in 1978, that *Hustler's* publisher nearly paid the ultimate price for his commitment to pornography. Joseph Paul Franklin shot Flynt twice from close range with a high-powered rifle outside a courthouse where he was being prosecuted for obscenity. Flynt survived the attack, but lost the use of his legs permanently.

The after-effects of the assassination attempt nearly sank *Hustler*, as a devastated Flynt briefly found religion under the tutelage of President Jimmy Carter's evangelical sister, Ruth Carter Stapleton. The bizarre life change found its way onto the pages of the magazine, which suffered a drop in circulation. Flynt's subsequent addiction to painkilling drugs, with the attendant high spending, resulted in a severe money crunch.

In the 1980s, Flynt reconsidered his spiritual awakening and opted to return *Hustler* to its raunchy roots. He placed advertisements in the Hollywood trade press offering \$1 million to any top television or film actress who would pose nude in the pages of the magazine. Spurred by the advent of videocassette recorders, he started producing porno videotapes under the *Hustler* imprimatur. The first entry depicted an 18-year-old medically certified virgin being deflowered in front of the cameras. "She was holding out for the right man," Flynt crowed, "but the right price won out."

*Hustler's* ability to keep publishing such sordid material was nearly compromised during the Reagan era, when Moral Majority leader Jerry Falwell sued Flynt for libel over a scatological ad parody depicting the preacher in an outhouse having sex with his mother. After a lower court ruled in Falwell's favor, the United States Supreme Court in 1988 reversed the decision and upheld Flynt's right to satirize a public figure. Some First Amendment advocates began hailing Flynt as a poster child for free speech, though many other civil libertarians felt uncomfortable with the association.

Flynt's defenders were plainly cheered by the appearance in 1996 of a reverential biopic, *The People vs. Larry Flynt*, directed by Academy Award winner Milos Forman and starring *Cheers* hayseed Woody Harrelson as the eponymous pornographer. The film sugarcoated many of the more tawdry facts of Flynt's life, while avoiding the issues of *Hustler's* racism and misogyny entirely. Though dismissed as a tendentious mess by some critics, and savaged by feminists as a whitewash, the feature nonetheless proved a major hit and gave the bumptious publisher a brief ripple of renewed popularity.

Flynt used his newfound status as a media darling to his own advantage in 1998, injecting himself into the debate over the impeachment of President Bill Clinton. In the October issue of *Hustler*, he offered up to \$1 million to anyone willing to admit to having an affair with a member of Congress. His target, he claimed, was the "hypocrisy" of conservatives who were pursuing Clinton for lying about sex, while leading less-than-pure lives themselves. By December, Flynt had bagged his first victim, when Representative Robert Livingston, the Republicans' choice to be Speaker of the House, resigned after investigators hired by *Hustler* determined that he had been unfaithful to his wife. With Flynt promising more damaging revelations for the future, Americans of all political persuasions briefly recoiled at the thought that such a figure could effectively alter the course of history.

## Huston, John (1906-1987)

The multi-faceted John Huston entered modern cinema history in 1941 when he wrote the screenplay for *The Maltese Falcon*, also making his directorial debut. The film established his reputation, began a significant working relationship with Humphrey Bogart, and pointed to his preference for mining literary sources for his material—in this case, Dashiell Hammett. In the course of a long and decidedly erratic career, Huston dealt memorably with human greed in *The Treasure of the Sierra Madre* (1947), winning Oscars for his screenplay and direction, and *Key Largo* (1948); plaudits greeted *The Asphalt Jungle* (1950), often considered his best film, and he entranced audiences by pairing Katharine Hepburn's missionary and Humphrey Bogart's booze-drenched river trader as companions in adversity in *The African Queen* (1952)—an idea beguilingly echoed by Deborah Kerr's nun marooned on a wartime Pacific island with Robert Mitchum's marine in *Heaven Knows, Mr. Allison* (1957). (*The African Queen* was voted one of the 100 best American films of the century by the AFI in 1998.) Huston acted frequently from the 1960s on, and, while many look fondly on his genial Noah in *The Bible*, which he directed in 1966, it is his tycoon in Polanski's *Chinatown* (1974), oozing cruelty and corruption, that is burnt in the collective memory.

As a director, Huston's films reflected his wide interests and, like the man, often present a rough exterior beneath which hovers tenderness, or even romantic idealism. Most of his heroes are either fiercely independent or social misfits, or both: the artist Toulouse-Lautrec, played by Jose Ferrer in *Moulin Rouge* (1953), Gregory Peck's Captain Ahab (*Moby Dick*, 1956), the eponymous *Freud* (a tortured and miscast Montgomery Clift, 1962), Stacy Keach's disintegrating prizefighter in *Fat City* (1971, one of Huston's quality films in a period of failures). His best work reflects a sense of irony and a sharp attention to character, focused in a decisive narrative style, as in *The Man Who Would Be King* (1975), adapted from Kipling and one of his last real successes. Some of the films are off-beat and tend to

**John Huston**

misfire, though the imagery of elephants and the accompanying doom-laden message of *Roots of Heaven* (1958) is interesting, and while comedy barely features in his *oeuvre*, he ventured successfully into parody with the spoof adventure-thriller *Beat the Devil* (1954, Bogart again).

Although a five-times married womanizer in life, with a handful of exceptions, women are largely peripheral to Huston's heavily masculine on-screen world. As David Thomson accurately observes, "There is no real female challenge to the smoke-room atmosphere of the films. But there is a list of female onlookers as wan and powerless as Jacqueline Bisset in *Under the Volcano*, Elizabeth Taylor in *Reflections in a Golden Eye* and Dominique Sanda in *The Mackintosh Man*." One might add a dozen others, but the casting of his daughter Anjelica in *Prizzi's Honor* (1987), one of his last and most entertaining films, helped her to an Oscar.

Huston's failures, ranging from the pretentiously arty such as *Under the Volcano* (1984) through the tedious, the slapdash and the irredeemably dreadful (e.g. *The List of Adrian Messenger*, 1963) are numerous, and seriously tarnish his reputation. In truth, it is almost impossible to define the particular gift, characteristic, or achievement that led to his enduring position as a Hollywood—indeed, an American—legend, and perhaps it is to the man himself that history must look for the answer. It was not only his huge frame and powerfully craggy face that made him larger than life, but his hell-raising extroversion and colorful exploits, coupled with courage and an adventurous nature (as well as a mean streak). He was born in Nevada, Missouri, on August 5, 1906, the son of the distinguished actor Walter Huston, and later himself fathered sons, Tony and Danny, who

became a screenwriter and a film director, respectively. He had a peripatetic childhood, traveling the vaudeville circuit with his father and the horse-racing circuit with his mother (they divorced when John was seven), left school at 14 to become a boxer and, at 19, embarked on a short-lived career as a stage actor in New York, also marrying the first of his wives.

For the next 12 years or so, Huston led an unsettled life that embraced a period as an officer with the Mexican cavalry, small parts in a few films, and reporting for the New York *Graphic*. A fruitless stint as a contract scriptwriter in Hollywood followed before he took off for a nomadic and often poverty-stricken existence in London and Paris, where he studied painting. Back in Hollywood by 1937, he settled in as a writer at Warner Bros., applying himself seriously to his work, which included collaborations on such films as *Jezebel* (1938), *Dr. Ehrlich's Magic Bullet* (1940), *High Sierra*, and *Sergeant York* (both 1941).

Professionally, the sheer length, breadth, and range of Huston's filmography astonishes: in a career that began in 1929 with an acting role in *The Shakedown*, and ended with his directing of *The Dead* in 1987, he accrued almost 90 credits in his various capacities as screenwriter, director, and/or actor. He joined the army in 1942 and made three of the most acclaimed documentaries ever to emerge from the conflict of World War II. The most searing of these, *Let There Be Light* (1945), dealing with the treatment and rehabilitation of shell-shocked soldiers, was banned by the War Department because of its sensitive subject, and was first shown publicly in 1980.

In 1947, along with William Wyler and others, Huston formed the Committee for the First Amendment to counteract the HUAC Hollywood witchhunt. The following year, with the expiration of his Warners contract, he formed Horizon Pictures with independent producer Sam Spiegel, and in 1952, unable any longer to tolerate the McCarthyite atmosphere, he bought a vast country estate in Ireland. He resided there for 20 years with his family, living the hunting-shooting-fishing life of a squire between films. In 1972, he moved to Mexico, married and divorced for the last time, and made nine more films, including his only musical, *Annie* (1982).

In 1987, increasingly ill with emphysema and keeping himself alive with an oxygen tank and sheer will, John Huston directed *The Dead*. Adapted from James Joyce by his son Tony and starring his daughter Anjelica, this delicate and elegiac piece marked the exit of one of American cinema's great warriors.

## Hutton, Ina Ray (1916-1984)

A pioneer in bringing women musicians onto the jazz scene, svelte Ina Ray Hutton, "The Blonde Bombshell of Rhythm," led an

all-girl swing band, the Melodears, from 1935-39 and again in a television series in 1956. Although her idea was ahead of its time, when the Melodears opened a set with their theme song, "Gotta Have Your Love," few would dispute critic George Simon's claim that "Without a doubt, the sexiest of all big bandleaders was Ina Ray Hutton."

At age fourteen, Chicago-born Ina Ray, the younger sister of June Hutton (who sang with Tommy Dorsey's Pied Pipers) was already in show business, singing and tap dancing with Gus Edwards's vaudeville revues at the Palace Theater in New York City. Four years later she was in the chorus line of the Ziegfeld Follies and George White's Scandals. Her background in dance prepared her for her special style of leading a band, more choreography than conducting.

Changing mind-sets in that era was difficult, and Simon, reviewing an appearance by Hutton's Melodears, wrote: "Only God can make a tree, and only men can play good jazz." Fans of the Melodears praised the band's soloists: Betty Sattley on tenor sax; Alyse Wells, who played several instruments; and Betty Roudebush on piano. Another musician in the band, Ruth Lowe, went on to write two great Frank Sinatra hits: "I'll Never Smile Again" and "Put Your Dreams Away."

After the Melodears folded in 1939, Hutton fronted a band of male musicians in the 1940s, one critic describing her technique as "waving her long baton in a languorous, seductive sort of way." If Hutton's beauty had attracted the crowds, the critic added, good dance

music by the band held them there. By 1943, as the band continued to find a wider audience, it took on an international flavor with the addition of the Kim Loo sisters. Stuart Foster was a popular soloist in the band. One of the leading musicians in the band, tenor saxophonist and arranger George Paxton, went on to form his own orchestra in 1944, but his greatest success came in heading one of New York's most successful music publishing businesses as well as being head of a recording company.

In the early 1950s Hutton returned to her original concept, leading a jazz orchestra of female musicians. Aired nationally on NBC beginning in July 1956, her half-hour variety show had no male regulars or guests. The musicians included Mickey Anderson, clarinet; Deedie Ball, piano; Harriet Blackburn and Lois Cronin, trombones; Janie Davis, Peggy Fairbanks, and Helen Hammond, trumpets; Evie Howeth and Margaret Rinker, drums; and Helen Smith, Judy Van Ever, Zoe Ann Willey, and Helen Wooley, reed section. The show ended in September 1956.

## *I Dream of Jeannie*

NBC's *I Dream of Jeannie* popped onto the NBC airwaves from 1965-1970, debuting with a handsome young Air Force astronaut, forced to abort a mission, parachuting down onto a deserted island. While waiting for the rescue team, he finds a groovy purple bottle and uncorks it. In a puff of smoke, a curvaceous genie in a harem outfit appears, calls him Master and instantly falls in love with him. Coming hot on the heels of *Bewitched* (and instigating the age-old "Jeannie or Samantha" debate among guys), *Jeannie* featured another magical blonde who was denied use of her powers by the misguided man in her life. The difference was, Jeannie called her roommate (and the man she loved) "Master," although one could argue that Jeannie was really the one in charge of that relationship.

Barbara Eden, who played Jeannie (and occasionally, her naughty sister) told *Entertainment Weekly*, "'Master' didn't mean she was a slave. 'Master' was the master because he got the bottle." Nevertheless, Jeannie did stop calling him Master once they got married, which was toward the end of the series run. The long-suffering character's name was actually Anthony Nelson played by Larry Hagman.

The only other character who knew of Jeannie's existence at first was Tony's girl-crazy best friend and fellow astronaut, Roger Healey, played by Bill Daily. The supporting characters included Dr. Bellows,

the base psychiatrist and perpetually dour straight man (Hayden Rorke), his overbearing wife Amanda (Emmaline Henry), and an assortment of commanding officers. The first year it was General Stone (Philip Ober), to whose daughter Melissa Tony was engaged, but jealous Jeannie made short work of that. By the second season father and daughter were both gone, the series went to color, and General Peterson (Barton MacLane) came in as the authority figure for most of the series after that, replaced only in the last season by General Schaeffer (Vinton Hayworth). Originally captains, Nelson and Healey became majors during the course of the series.

When Captain Nelson was first rescued, he tried to tell everyone about his magic discovery, but no one believed him, least of all Dr. Bellows who diagnosed him as delusional. Adding to that was the fact that Jeannie would disappear if anyone but Tony and Roger were around, often leaving them holding the bag. And therein lay the rub week after week: well-meaning, mischievous Jeannie would "blink" Tony into trouble, leaving him to find a way to explain it to Dr. Bellows. Sometimes Roger added to the mix, putting Tony into situations that made Jeannie jealous; her favorite punishment was "blinking" someone into the tenuous position of hanging by a rope over a pit of alligators. The show's magical element gave the writers carte blanche with historical figures and situations; Tony was either "blinked" back in time, or they were "blinked" to him. Viewers also got to learn some unsubstantiated history of the Fertile Crescent—after all, Jeannie, like Spock and Data from the *Star Trek* universe, never, ever used contractions and was originally from Baghdad.

*I Dream of Jeannie* could only have existed where and when it did, on the cusp of the women's movement. Notwithstanding the whole master-slave issue, the arc of the show from beginning to end could also be interpreted as a metaphor for an old-fashioned view of the "power" that women have over men. She knows she'll land him, she uses her "magic" on him; he tries to deny the power and remain a bachelor, but finally succumbs. It's interesting to note that in subsequent attempts at featuring genies in sitcoms (all of them awful), the genies have been male. (In one especially misguided 1983 attempt called *Just Our Luck*, the genie was an African American male . . . with a white "master.")

The show also captured the mid-to-late 1960s fascination with the post-Kennedy space program. After all, the genie could just as well have been found by a tire salesman, but Nelson was an astronaut, frequently sent off on missions. The moon landing seemed as magical as Jeannie's powers back then. It was somehow fitting that the series ended soon after the actual moon landing and as the more jaded 1970s began.

Nineteen seventy-three brought an animated *Jeannie* to Saturday mornings. This Jeannie wasn't discovered by an astronaut, but by a high school student named Corey Anders. In 1985, the dream heroine returned to television in the unimaginatively titled TV movie *I Dream of Jeannie Fifteen Years Later*. Barbara Eden and Bill Daily came back with it, but Larry Hagman, by then again a household name as the ruthless J.R. Ewing on *Dallas*, would have seemed quite out of place and Wayne Rogers (Trapper from TV's *M\*A\*S\*H*) signed on as Tony Nelson. This movie had a special significance: viewers were finally treated to the sight of Jeannie's belly button. Although Eden had spent much of the original series in a low-cut harem outfit, the pants were high-waisted enough to cover her navel, by order of NBC

Barbara Eden in a scene from the television show *I Dream of Jeannie*.

(they didn't seem to have a problem with cleavage). Another network rule the series had to follow was that Jeannie's bottle could never be seen in Tony's bedroom.

Eden and Daily reunited again in the TV movie *I Still Dream of Jeannie* in 1991. The original series, created by bestselling schlock novelist Sidney Sheldon and presumably named after the old Stephen Foster tune, enjoyed rerun success on "Nick at Nite" in the 1990s. "It's timeless," said Barbara Eden in *Entertainment Weekly*. "A genie is always in a costume, and the guys in the show are in uniform, so it doesn't become dated."

## *I Love a Mystery*

The Golden Age of Radio produced many successful adventure series, but none is recalled with quite the same mixture of devotion and awe as Carlton E. Morse's *I Love a Mystery*. Radio historian John Dunning says that the program "weaves a spell over its fans that is all but inexplicable"; Gerald Nachman notes that it "was the most respected show of its type"; and Jim Harmon brands it simply as "the greatest radio program of all time." While nostalgia often filters the static of creaky plots and wheezing gags characteristic of much old-time radio, the few extant recordings of *ILAM* prove it to be worthy of its extravagant reputation and have made it the "most-sought of all radio shows," according to Dunning. *ILAM* is to the world of radio mystery what *Amos 'n' Andy* is to radio comedy and *One Man's Family* is to radio soap opera—the peak achievement of its particular form. The bizarre adventures of the trio forming the A-1 Detective Agency ("No job too tough, no mystery too baffling") may have been too outrageous to be especially influential in the world of popular entertainment, and the series was not successful in its few forays into books and movies (although Indiana Jones would have fit right in as a fourth partner), but the program still bears examination for the way in which it exhibits, and yet transcends, many of the qualities which defined the classic era of radio drama.

*ILAM*'s opening train whistle, followed by the haunting strains of Sibelius's "Valse Triste" and the eerie chiming of a clock, first sounded in 1939, heralding an initial string of 15-minute and half-hour serial adventures which would come to the end of its line in 1944. Reappearing in 1948 in a curiously muted form as *I Love Adventure*, the series finally got back on track in 1949, with a new cast reprising the scripts from the initial run, until the last chime sounded in 1952. Regardless of the format, Carlton Morse wrote the series at a feverish pitch, with a globe right next to him to help locate the next

exotic setting to which he would zip his peripatetic heroes and rapt listeners. Whether holed up in a gloomy mansion with "The Thing That Cries in the Night" or facing down the mad Holy Joe on "The Island of Skulls," *ILAM*'s intrepid trio would be certain to encounter enough baffling mysteries, beautiful women, and howling terrors to outrage parents and delight their offspring.

Jack Packard was the leader of the group, a tough-talking rationalist who could find a logical explanation for anything he couldn't punch, but never found a dame he could trust. Texas cowboy Doc Long was Jack's loyal assistant ("Honest to my Grandma!") and spent most of his time making certain that the many damsels in distress rejected by Jack were well taken care of. The trio was rounded out occasionally by spunky secretary Jerri Booker but most famously by British Reggie Yorke, who was voiced by a young Tony Randall in the show's later years and could be counted on to lend a more gentlemanly air to the proceedings. Plunging headlong into whatever harebrained escapade Morse could conjure up, the three comrades lived a life so outlandish as to make *The Shadow* or *The Green Hornet* seem positively sedate in comparison.

While the series was most notable for its creative exaggeration of adventure genre trappings, it was innovative in at least three other ways as well. Although Jack, Doc, and Reggie encountered only the most remarkable mysteries and terrible villains, the three men themselves were satisfyingly ordinary. Lacking any special abilities beyond their love of a good scrap and grim determination, they were often puzzled, incorrect, or just plain scared out of their wits, lending to the otherwise fantastical goings-on a realism that listeners could identify with and share. The prosaic nature of the program's heroes was another key ingredient in *ILAM*'s unique formula, which combined elements from the private eye and adventure genres to create a new form capable of encompassing both traditional "whodunits" and blood-and-thunder terrors. Listeners could never know, from one case to the next, which would get a greater workout, thinking caps or fists. Finally, Morse was innovative in his storytelling style. While most radio dramas switched settings several times an episode, Morse liked to open and close each installment in the same location and to approximate "real time" as closely as possible. Such adherence to Aristotelian unity not only bolstered the show's verisimilitude, but also heightened the suspense and allowed Morse to give each of his varied settings a powerful and individual atmosphere.

While the crazed characters and bizarre plots made the most immediate impact, it is the peculiar mood associated with each adventure that remains in the memory—the sound of a phantom baby crying before each murder in Grandma Martin's gloomy mansion, for example, or the howling winds of the Western ghost town with the unlikely name of Bury Your Dead, Arizona, or the "roar with lights and shades in it" which conjured the image of the giant waterfall hiding the magical "Stairway to the Sun." It is, finally, this almost dreamlike evocation of an other-worldly reality that enables *I Love a Mystery* to haunt listeners long after the final train whistle vanished in the distance.

## *I Love Lucy*

*I Love Lucy* is, without question, the most popular and influential television comedy of all time. Since its debut on CBS on October 15, 1951, the show has been translated into almost every language in the world and has run continuously in international syndication in over 100 U.S. markets and virtually every country in the world for almost half a century. When the show first began to rerun episodes in 1959, its ratings outperformed most of CBS's new programming that year. Such is the continuing popularity of the show that each episode is also available in Spanish, Japanese, Italian, Portuguese, and French. The program has also become a popular culture phenomenon inspiring worldwide fan clubs, web sites, retrospective screenings, and memorabilia for avid collectors. Post cards featuring classic scenes from the show, CDs of music from the show, dolls, lunch boxes, T-shirts, pajamas, aprons, and videotapes of the show continue to sell at a phenomenal rate.

A scene from the television show *I Love Lucy*.

In 1983, a Los Angeles television station honored Lucille Ball on her 72nd birthday by airing a 13 hour *I Love Lucy* marathon running from nine o'clock in the morning until ten o'clock at night. The station vaulted to number one in the ratings and stayed there for the entire day with each half hour winning its time period. The show has also been honored by the Academy of Television Arts and Sciences and by the Museum of Television and Radio.

The secret of the show's continuing popularity beyond the fact that it was incredibly funny and unceasingly creative is that it held up a mirror to every married couple in America and although the mirror was more of the fun house than the cosmetic type, it was still unstintingly honest in its depiction. "We just took ordinary situations and exaggerated them," Ball admitted.

Additionally, the unpretentious family oriented sitcom virtually revolutionized the production and distribution of television shows, setting the standard for all of the TV shows to follow. The show was one of the first comedies performed before a live audience. It also originated the concept of producing a program on film instead of broadcasting it live. Shot with three cameras, the show could be fully edited before it was shown. Using film permitted the rebroadcast of high quality prints of the show at a time when most of its competitors were rerunning their programming on poor quality kinescopes of live shows photographed off of the TV screen. The use of film hastened the move of the television industry from New York to Los Angeles which, during the 1950s, became the hub of filmed programming. It also popularized the concept of reruns, and proved that recycled programming could have renewed life on local stations once its network prime-time days had ended.

Despite the later success of *I Love Lucy*, the show was viewed by many as a long shot when it began. In the late 1940s Lucille Ball had been playing opposite actor Richard Denning on a popular radio show *My Favorite Husband*. CBS-TV became impressed with the show and wanted to bring it to television, but Ball would only agree if her real husband Desi Arnaz could play opposite her in the Denning role. According to a number of sources, this demand was a ploy on her part to save her marriage, which had been gradually deteriorating. Although Ball and Arnaz had been married since 1940, they had been separated by the demands of their work with him touring with his band while she was confined to Hollywood making films. According to Ball, if both stayed in one place and did a television show, the process of working together would help their relationship. Unfortunately, CBS executives and the program's potential advertisers didn't buy the idea, feeling that casting a thick-accented Latino as the husband of a typical American wife would not sit well with U.S. viewers.

To convince them otherwise, the two performers formed Desilu Productions, put together a 20-minute skit and took it on a cross-country barnstorming tour. When the TV show did not immediately materialize, however, Lucy went back to radio and Desi returned to his band. By the end of 1950, CBS relented somewhat, agreeing to let them do a pilot of the proposed show but declined to finance its production or the air time. Undeterred, Ball and Arnaz raised the money themselves and came up with a script about a successful bandleader and his movie star wife. Yet, the show could not find a sponsor willing to put the show on the air. The basic problem was that the pilot was too vaudeville-esque with an over-emphasis on rapid repartee and one liners.

At this point, composer Oscar Hammerstein, Jr., who had toured with Arnaz, stepped in and suggested that the show be re-written. He lobbied to keep the comedic sense of the show but to shed the movie star trappings and to make the characters appear more like an ordinary

couple. Arnaz remained a band leader but, would be a struggling one, like many Americans, he would occupy his time trying to get his big break. When the show began, his character was earning \$150 a week leading the house band at New York's Tropicana night club. Ball's character would be an ordinary housewife harboring visions of breaking into show business that she would act upon almost weekly with inevitably comic results.

Another stumbling point for the show was the title. Arnaz was an unknown quantity, while Ball had a popular following from her motion pictures and radio work, so CBS wanted to call the program *The Lucille Ball Show*. Ball objected because Arnaz's name was not in the title so an advertising agency executive working on the show suggested the "off the wall" title *I Love Lucy*. Since the *I* stood for Arnaz, Ball quickly agreed feeling that the almost equal billing would help her marriage. Not only was her husband's name in the title but with this format he was actually listed first.

The show's production location became yet another source of contention. CBS wanted to broadcast from New York City, the center of the fledgling television industry in 1950 but the Arnazes were reluctant to leave Los Angeles and their show business connections in case the show failed. CBS objected because broadcasting from Los Angeles would mean that the rest of the country would be able to view the show only through the use of kinescopes. Arnaz suggested that if the show were shot on 35 millimeter film as motion pictures were, CBS could distribute high quality prints to network affiliates throughout the country in a manner similar to the distribution systems employed by most movie studios. The production costs would be higher but the overall product would be much better.

The network agreed but was still faced with the never-before-attempted problem of actually filming a 30-minute TV show. To overcome this hurdle, CBS hired Oscar-winning cinematographer Karl Freund (*The Good Earth*, 1937) who collaborated with Ball and Arnaz on treating the show like a stage play and filming it before a live audience, a rare occurrence in 1950. It was also decided to film with three cameras, each shooting from a different angle, and then edit the best shots into the finished product. Director Marc Daniels, one of very few directors to have experience with three cameras, was hired to direct the show. Daniels also had a background in the theater working with live audiences.

To provide counterpoint for Ball and Arnaz's married couple, another couple who lived upstairs joined the cast of characters. After a number of actors and actresses were considered, the parts went to Vivian Vance and William Frawley. However, both were considered risky choices at the time. Vance was coming off a string of stage successes but was not nationally known (in fact, the Arnazes had never heard of her when her name was proposed); Frawley was rumored to be an alcoholic and unreliable. But, the producers took a chance on both.

The show's four lead characters of Lucy and Ricky Ricardo; Fred and Ethel Mertz (Frawley and Vance) related to each other amazingly well. The combination of the younger, more affluent Ricardos and the older, fixed-income Mertz's gave the show's writers a number of opportunities to take the show in different directions without beating the same themes to death week after week. One episode might find Lucy and Ethel involving themselves in a crazy scheme with Ricky and Fred attempting to teach them a lesson. The next might feature the two men planning a secret outing with the women attempting to crash the party. The Mertzes provided a mainstream older couple to offset the always volatile mixed marriage of the Ricardos.

The Ricardos portrayed a recognizable American family. Together, they explored the dynamics of their relationship in a manner that was new to television sitcoms. They were able to convey the fact that while they were adversaries in many of Lucy's "break into show business" shenanigans, they were also deeply in love with each other at the same time. Though bonded as a couple, each character maintained his own unique individuality.

Lucy, with her natural clown-like features reflected a combination of Yankee bravura with a touching vulnerability. Although, true to the times, she was cast as a housewife, she displayed a striking independence and was unafraid to speak her mind to her macho Latin husband. For his part, Ricky Ricardo represented a spectrum of familiar characters. Beginning with the macho hubris of a Latin lover, his expressive face and brown eyes ran the gamut from childlike vulnerability to fiery Latin anger that expressed itself through an hilarious accent that mangled the English language beyond repair.

Lucy, was a stage-struck schemer, possessed with a hyperactive imagination. The character relied on an arsenal of visual and vocal tricks in her effort to execute her wild schemes to crash the world of show business or to outsmart her husband when she got caught. The first was her tendency to drop her jaw in an open-mouthed stance to express her disbelief at what was occurring. If this didn't work, she would hold both arms straight out in front of her and then drop her forearms to indicate that something had gone wrong. Vocally, she would adopt a high pitched voice that erupted in a shriek when she was caught in an embarrassing moment. Then came the cry, monumental in nature, which would rise from her gut and then slowly wail its way up the register to the pitch of a police siren. This would be followed by a blubbing whimper that would constitute her final plea for sympathy and understanding. If her adversary happened to be Ricky, as was most often the case, she would then throw his mangled English language back at him as he attempted to read her the riot act.

The writers used the characters' differing ethnic backgrounds to great comedic effect. Ricky Ricardo's accent and nationality formed the nucleus of some of the show's more popular running gags. In addition to his mispronunciation of words, which was a very real occurrence for Arnaz as well as his character Ricky, the Cuban actor also erupted in a string of Latin epithets whenever he got mad. As Arnaz admitted in an interview, he had to walk a fine line in his use of the language to make sure that it came across as humor instead of rage. "It was the most difficult problem I faced while playing Ricky," he said. "It helped to overemphasize the Latin use of hands and arms when I was excited. Most of all, the rat-tat-tat parade of Spanish words helped me tread that thin line between funny-mad and mad-mad." He augmented this with an ability to pop out his eyes in an inimitable expression of incredulity in reaction to Lucy's antics.

The Mertzes, on the other hand, provided a calmer counterpart to the fiery Ricardos. Ethel and Fred were, first and foremost, older than their downstairs neighbors and somewhat more passive. The Vivian Vance character provided a "girlfriend" for Lucy and a partner in crime. Fred was a pal of Ricky's and someone who helped him in his schemes to thwart Lucy. He also provided one of the series' recurring gags with many jokes and episodes being built on his tightness with a buck. He simply did not like to spend money—a fact that would send the other three characters into a tizzy.

The show premier won unanimous critical approval. It achieved the 16th position in the ratings within eight weeks and climbed to number three by the end of the season with an average of 29 million viewers watching the show each week. The premise was established

in the pilot show when Lucy disguised herself as a clown to sneak into Ricky's nightclub act. Throughout the rest of the season, she continued to rebel against the confines of her life as a housewife and the unfair restrictions of a male-dominated society that seemingly conspired to thwart her dreams of breaking into show business. Each of her attempts to enter into the entertainment world ended in a spectacular mess and she is inevitably forced to backtrack into the shackles of home and hearth.

The show was so popular that department stores, doctors, and dentists canceled their Monday night hours because viewers would not leave their TV sets. During the presidential elections, candidate Adlai Stevenson's office was flooded with hate mail when he cut in on *I Love Lucy* for a five-minute campaign spiel. This mistake was not repeated a decade later when CBS was tempted to pre-empt morning reruns of the show to televise the Senate Vietnam War hearings but backed away due to fears that viewers would be outraged.

In succeeding seasons the show continued to build on the basic premise as their on-screen married life evolved. In the second and third seasons the show centered on the birth of Little Ricky, which was the most popular episode in television history for many years (interestingly, more people watched the birth of Little Ricky than watched the inauguration of Dwight D. Eisenhower as 34th President of the United States and the coronation of Queen Elizabeth of England, all in 1953). Predictably, the biggest adjustment for Lucy lay in the impact of motherhood on her dreams of crashing into show business. The fourth season found Ricky landing a screen test with a Hollywood studio and devoted a number of episodes to a cross country trip from New York to Hollywood where Lucy became involved in a number of adventures with celebrity guest stars including a now famous encounter with William Holden in a comedy of mistaken identities.

The fifth season found the family returning to New York but quickly taking off on a laugh-filled adventure tour of Europe. The final season revolved around the exploits of now five-year old Little Ricky and the couple's move to the suburbs. Ricky purchased the Tropicana and renamed it the Club Babalu and the family grew in affluence and began to tackle a variety of family issues.

One of the prime secrets of the show's success in addition to the chemistry among the four regulars was that the production team stayed relatively intact over the full run of the show. The writer/producer Jess Oppenheimer and the two regular writers Madelyn Pugh and Bob Carroll, Jr. came over with Ball from the *My Favorite Husband* radio show and only three directors were employed during the show's original production: Marc Daniels (1951-52), William Asher (1952-56), and James V. Kern (1955-56).

By 1957, however, Ball and Arnaz had grown tired of the weekly grind of series TV and ceased production of the program. But that was not the end of the characters. The characters were featured over the next three years, a series of 13 one-hour episodes airing as specials and as episodes of the *Westinghouse-Desilu Playhouse* which ran from 1958 to 1960. Their production company, Desilu, which was started primarily to produce *I Love Lucy*, grew from 12 employees in 1951 to 800 in 1957 and branched out into producing a number of well-regarded programs including *The Danny Thomas Show* for other networks and producers. In 1958, the company purchased the old RKO Studios and continued to be one of the most influential producers of the 1950s and 1960s.

The Arnazes divorced in 1960 and Ball went to New York to appear in a Broadway show *Wildcat*. She married comedian Gary

Morton and returned to network TV in 1962 with *The Lucy Show*, which also featured Vivian Vance and Gale Gordon. The show ran until 1968 when it was retitled *Here's Lucy* and featured Ball's real life children Lucie and Desi, Jr. Vance made only sporadic appearances between 1968 and 1971 but the show continued until 1974 as part of the CBS Monday night comedy block that dominated the ratings for the entire period that Ball's show ran.

## I Spy

The popular NBC network program, *I Spy* ran for three years from 1965 to 1968. Arriving in the wake of the James Bond phenomenon in the mid-1960s, it was one of several American television series of the period whose fantastic plots revolved around matters of espionage. It was the alchemical starring partnership of Robert Culp and Bill Cosby, however, that elevated *I Spy* to the pantheon of well-loved and well-remembered escapist entertainment, although the duo was supported by scripts that were consistently witty. The stars played secret agents, who roamed the world masquerading as a professional tennis player (Culp) and his manager/trainer (Cosby). Cosby thus became the first black actor in American television to star in prime-time drama as a hero-character on an equal footing with his white fellow actors. Noteworthy, too, for its foreign locations, *I Spy* was filmed almost entirely outside the United States, frequently in Mexico, in the Mediterranean areas of Europe, and in Asia.

## *I Was a Teenage Werewolf*

*I Was a Teenage Werewolf* is generally considered the first of a genre of horror films targeting teenage audiences. The birth of this genre can be attributed to television, drive-in theaters, and the rise of suburbia. Because adults in the 1950s were content to stay home and watch television, teenagers became the marketing targets of the motion picture industry. The film was the brainchild of 29-year-old producer, Herman Cohen. American International Pictures (AIP) released the film to much notoriety. In this very conservative and frightened era, parents and even the federal government felt the delinquency depicted in the film would promote the same type of behavior offscreen—there were government investigations which attempted to prove this. All this negative publicity brought teenagers to see the film in droves—it became AIP's biggest money maker of 1957 and spawned a series of films putting a different spin on the original title.

## Iacocca, Lee (1924—)

Lee Iacocca grew up as a blunt-spoken, patriotic son of immigrants, and rose to become president of the Ford Motor Company and later, chief executive officer of the Chrysler Corporation.

Born Lido Anthony Iacocca in Allentown, Pennsylvania, in 1924, Iacocca earned an engineering degree from Lehigh University and a masters degree from Princeton University before joining Ford Motor Company as a student engineer in 1946. After less than a year he talked his way into a sales job and, at the age of thirty-three, became the head of all national car marketing at the company's Detroit headquarters. He became vice president and general manager of the Ford Division in 1960.

In his new position, Iacocca recognized the growing power of the youth market and organized a team to design a car for it. Iacocca repackaged the engine and platform from the moderately successful Ford Falcon and placed it within a European-inspired, stylish shell. The result was the Mustang, a small car that sat four people and weighed less than most cars on the road. At \$2,300 each, Ford sold more than four hundred thousand Mustangs in 1964, its first model year. The car's styling captured the excitement of youth. The average age of car buyers was thirty-one. Soon Mustang clubs sprang up around the country, and Mustang paraphernalia such as key chains

Lee Iacocca

and hats were suddenly available everywhere. A picture of the Mustang ran simultaneously on the covers of both *Time* and *Newsweek*, and Lee Iacocca also appeared in it.

In 1970, Iacocca was named president of Ford, second in the company only to Chairman Henry Ford II. Iacocca soon brought out another successful car, the Cougar, as well as a large failure, the Pinto. When Iacocca's aggressive ambition and showboating drew the ire of Ford, a power struggle developed between the two men. As each attempted to outmaneuver the other, Ford installed other executives above his former number-two man. In 1978, Iacocca was fired. Ford Motor Company had earned profits of \$1.8 billion in each of the previous two years.

Iacocca soon accepted the position of CEO at the unprofitable and debt-ridden Chrysler Corporation across town. He was famous when working at Ford, but at Chrysler, Iacocca built himself into a celebrity. The car industry in America traditionally represented the best successes of American capitalism. But, by the 1970s, it had come to signify inefficiency and the abdication of America's economic leadership role to international, or "foreign," competition. When Iacocca took over Chrysler, it was the smallest of the "big three" American automakers and was rapidly losing money and market share.

Iacocca made a number of radical, public steps to turn the company around. He did what was then unthinkable and lobbied the American government to bail Chrysler out of its financial problems. After a protracted public debate in the media and on Capitol Hill, both houses of Congress approved \$1.5 billion dollars of loan guarantees for the company. Iacocca won discounts from his suppliers, wage concessions from his workers, and loan payment reschedulings from Chrysler's creditors. These actions were unprecedented. The auto industry had traditionally fought government interference and proudly recalled the day Henry Ford shocked the country by doubling his workers' wages. Its executives had boasted of how America's prosperity was tied to its successful auto industry.

As part of his aggressive salvage effort, Iacocca put a face on America's tenth largest corporation, appending his signature to Chrysler print ads, and personally appearing in its television ads. He played the role of the blunt, tough-talking, honest businessman by challenging the public, "If you can find a better car—buy it!" He not only personalized the fight to save Chrysler as *his* fight but represented it as America's fight to save itself. In Chrysler's television ads he appeared surrounded by red, white, and blue, entreating viewers, "Let's make America mean something again." Iacocca's public persona was the right image at the right time. Under Ronald Reagan, a wave of patriotism swept the country, and the American carmaker's challenge to be proud of America and its products was met with a warm response.

In 1980, Chrysler released its line of utilitarian K-cars, similar in build to Iacocca's beloved Mustang but its polar opposite in terms of character and style. The K-cars were boxy, plain, and functional. They were spare, restrained cars for a time of diminished economic expectations. Iacocca, ever the patriot, boasted that, though they were small and light, they were still "big enough to hold six Americans." His next move was to introduce the nation's first minivan. It was wildly successful, and other automakers soon released their own versions.

By 1984, the Chrysler Corporation had paid back its loans seven years early and was a remarkable success story by any measure. Iacocca was treated as a national hero and was considered a possible presidential candidate. In the mid-1980s, he published a best-selling autobiography and served as chairman of the commission that renovated the Statue of Liberty.

Iacocca retired from Chrysler in 1992. After his departure, he publicly criticized the new management's efforts to improve quality and, in 1996, joined an investment group seeking to acquire the automaker. The effort failed and, ironically, earned him such enmity from within Chrysler that it canceled plans to name its new headquarters after him.

As the father of the Mustang, Iacocca considered himself a "car man" who disdained the "bean counters" at Ford and understood what made automobiles magical and exhilarating to Americans. Though he depended on the government, his workers, his creditors, and his suppliers to help Chrysler out of trouble, his unabashed challenge to be proud of America and its products won him the image of a self-reliant patriot out to redeem the country. Throughout, Iacocca was a master creator of products, profits, and his own image.

## IBM (International Business Machines)

According to the *Washington Post*, "IBM didn't invent the computer . . . it invented the computer industry." Eventually expanding to become the largest company in the world, International Business Machines (IBM) came to represent, at different points in its history, the best and the worst of big business and American corporate culture.

Charles Ranleigh Flint, the "Father of Trusts," founded the Computing-Tabulating-Recording Company in 1911 upon the acquisition and merger of three manufacturers of such products as shopkeepers' scales, punch clocks, and large tabulating machines used by the census bureau. Flint hired Thomas J. Watson, Sr. to run his new company.

Watson was a star salesman and business executive at National Cash Register before joining what would become IBM. Upon his arrival, he implemented a system of territories, quotas, and commissions for his salesmen. The motto "T-H-I-N-K" was posted in all branch offices and salesmen were required to dress in sharp blue suits and white shirts. Those who met their quota joined the One Hundred Percent Club. The methods were successful, and by 1920, the company had tripled its revenues to \$15.9 million. Watson renamed the firm International Business Machines in 1924. The sales focus and buttoned-up image Watson honed during the company's early days came to define IBM through the remainder of the twentieth century.

But beyond his sales focus, Thomas Watson was evangelical in his company pride and instilled his brand of optimism in his employees. He offered perks such as company sports teams, bands, and family outings. In the 1930s, IBM became one of the first companies to offer life insurance, survivor benefits, and paid vacations to its staff, and during World War II, it used profits from manufacture of weapons for the government to start a fund for widows and orphans of IBM war casualties.

From its origins as a manufacturer of tabulating machines, hawked by impeccably-dressed salesmen, IBM came to dominate the computer mainframe market in the 1950s, 1960s, and 1970s, earning the moniker, "Big Blue." Fueled by the personal computer boom of the early 1980s, the company became the largest and most profitable corporation the world had yet known. Ranked as America's most admired company year after year in surveys of U.S. businesses, IBM astonished the business community and consumers alike with its consistent growth and profitability, its lifetime employment policy, famed management methods, crack sales force, and technological leadership. It represented to many the ideal of what American corporate culture and big business could achieve.

By the early 1990s, however, IBM had come to represent just the opposite. In a very public fall from grace, it recorded the largest ever loss in corporate history, abandoned its lifetime employment guarantee, and shed tens of thousands of workers. The company, it seemed, had become the epitome of an overgrown, anonymous, monopolistic,

An IBM computer and printer c. 1980s.

bureaucratic monster—outmatched in marketing and technology by swifter, nimbler competitors; too big to change, it appeared destined to collapse under its own ungainly weight. By the end of the twentieth century, though, IBM staged a turnaround, and reemerged as a profitable corporate giant once more.

From the beginning, IBM grew rapidly. Through the 1920s and 1930s, the company profited by renting electric punched-card accounting machines to large companies. During the Great Depression, famously holding to its optimism and faith that the economy would improve, the company continued production at full capacity, even as sales declined. By 1936, IBM held 85 percent of the office machine market, with sales of \$26 million. New Deal programs, such as the Social Security Act of 1935, required businesses and government alike to keep more records, thus increasing the demand for IBM's punched-card tabulating systems. By 1940, IBM had revenues of \$46 million and a workforce of nearly 13,000 employees. Wrote *Fortune* that same year, "The International Business Machines Corp. has beheld no past so golden as the present. The face of Providence is shining upon it . . . it has skirted the slough of the Great Depression . . . its growth has been strong and steady."

It was the mainframe computer business that propelled IBM's explosive growth in the post-war era. After World War II, Watson Sr. greatly increased the firm's research and development budget, and his son, Thomas Watson, Jr., championed computer development. In 1948, IBM installed one of its first computers, a-buzz with thousands of neon lamps, relays, switches, tape readers, and punches on the ground floor of its New York headquarters for passersby to gawk at through a window. By 1960, there were 5,000 computers in the United States, most of them made by IBM, whose annual revenues had ballooned to \$1.6 billion.

During this period, IBM was legendary as a fair and generous employer. Watson, Sr. had not resorted to mass layoffs during the

Depression, and continued to pay salaries to absent employees serving in World War II. The firm generously paid moving expenses for transferred employees, guaranteeing a minimum resale price for their homes and retraining spouses for jobs in their new cities. Most famous of all was IBM's guarantee of lifetime employment for all workers.

Through its introduction of what became large-scale public goods, the company became an institution. IBM created FORTRAN in 1957, the world's first widely accepted computer language. In 1964, it implemented the largest civilian computerization task ever undertaken, the revolutionary SABRE reservation system used by American Airlines, and proceeded to implement similar systems for the other major airlines. In 1973, IBM created and implemented the ubiquitous Universal Product Code and bar code systems used in supermarkets.

But IBM's core business was mainframe computers, and in this area, it held a 70 percent market share through the 1960s. Its competitors, left to split up the remainder of the industry, were often referred to in the business press as the "seven dwarfs." IBM's investment in research and development was unmatched. In the 1960s, the company undertook the largest ever development project up to that point, a five-billion-dollar effort to create the next generation of mainframe computers, an effort larger than the Manhattan Project.

As technology advanced, computing power became less concentrated in large mainframes and, by the mid-1970s, personal computers were possible in the home, each as powerful as the early mainframes of decades before. IBM's next challenge was to sell these types of computers, not directly to other businesses via its sales network as in the past, but to consumers through the retail market. In the early 1980s, the company unveiled its line of personal computers, which propelled its growth ever higher, even as new competitors such as

Apple Computer and Microsoft began to stake out claims in the growing market with their own rapid growth.

Dubbed by *Barron's*, “America’s most beloved stock” and by *The Washington Post*, “long the bluest of the blue-chip performers,” the reliability and size of IBM stock and dividend growth was renowned. Said *Barron's*, “just about everyone and his dog owns IBM.” Watson, Jr. was labeled by *Fortune Magazine*, “the greatest capitalist in history.” IBM was highlighted in the 1982 business book *In Search of Excellence*. It grew to be the most valuable company in the world in 1984, worth \$72 billion and earning the largest profit ever to that point, \$6.6 billion.

But as IBM’s reputation was growing as a fair, wildly successful and innovative company, it was coming to represent something else, too. In 1969, the government began a 13-year, ultimately unsuccessful, anti-trust case against the accused monopolist. In 1975, IBM pulled the plug on its five-year Future Systems development project for the next generation of mainframe computers, effectively wasting over \$100 million and many millions of staff hours. The impression was spreading that IBM was just too big and involved in too many businesses; too bureaucratic to execute or innovate, as a monopoly it just didn’t have to try.

In 1984, the year of IBM’s record profits and valuation, a comparatively small upstart, Apple Computer, ran a historic television advertisement during the Super Bowl. In the ad, an endless regiment of identical gray drones stared at a large screen, listening to a speech by an authoritarian leader—only to be freed by a colorful interloper who shatters the screen. This portrayal of “Big Blue” as “Big Brother” was an explicit reference to George Orwell’s dystopic totalitarian vision in his novel *1984*.

The final blows came in the early 1990s, when the company suffered its first loss in history and its stock market value fell by more than half. In 1993, the company took a loss of \$8.5 billion. Said *Barron's* in late 1992, “The old saw that IBM is always a safe stock pick, handed down through the generations . . . finally bit the dust last week.” Also in 1992, *Fortune* wrote about IBM’s “bulging, lethargic bureaucracy,” and said, “employee morale is in the dumps,” labeling the company a “humbled American corporate behemoth” with an “inward-looking culture” that had “lost touch with consumers.” According to *The Wall Street Journal* in 1993, the company had “unraveled.” IBM ran nearly one hundred different voluntary buyout and early retirement programs to reduce staff while trying to maintain its no-layoff policy.

By the late 1990s, IBM had largely recovered. By hiring its first ever CEO from outside the company, acquiring other firms, and selling off some of its businesses, it was able to regain profitability, but not its unquestioned dominance in what had become a much larger industry.

For many Americans, IBM—strong, paternalistic, and rapidly growing—was emblematic of the triumph of American corporate culture for most of the twentieth century. Indeed, their methods and image were similarly regarded internationally. This made its dramatic failures in the early 1990s all the more astonishing, as observers watched the company rapidly become a symbol for all that was wrong, not right, with corporate America. Its reemergence in the late 1990s saved the company, but not the rarefied ideal that large, benevolent corporations could represent the best of an ingenious, industrious, and compassionate American business culture. An American myth that IBM helped to create, it now helped to dispel.

## Ice Cream Cone

The ice cream cone is a familiar feature of the American leisure landscape, carrying with it associations of fairgrounds, ice cream parlors, drugstore soda fountains, and all-American kids (and adults) enjoying a sunshine treat. Since its invention early in the twentieth century, the cone has spread to become a common confection all over the developed world. Ice cream itself was a popular confection in America as early as the 1800s, but was only placed in an edible

A triple scoop vanilla ice cream cone.

container 100 years later. The first patent for an ice cream cone maker was granted to New York City ice cream vendor Italo Marchiony in 1903, but aficionados continue to debate the true inventor of the cone. The popularity of the ice cream cone dates to the 1904 St. Louis Exposition, when Ernest Hamwi, a Syrian who sold waffles next to an ice cream concessionaire, thought to combine the two treats, creating the “World’s Fair Cornucopia”—a portable way to eat ice cream.

During the 1920s and 1930s, new cone designs came out almost every year, resembling real or fanciful objects such as skyscrapers and rocket ships, but by the 1940s, two main types dominated the cone market—the flat-bottomed “waffle” cone cast from batter, and the pointed “sugar” cone, made from a large waffle-patterned wafer. Along with the rise of specialist ice cream shops like Ben & Jerry’s in the 1980s came a new interest in homemade cones. Sometimes costing as much as the ice cream itself, the new waffle cones, hand-baked and hand-rolled, are offered in a variety of flavors, including chocolate, chocolate chip, oat bran, and honey.

## Ice Shows

No sport grew as phenomenally during the last two decades of the twentieth century as figure skating. Having been a favorite sport among women, its popularity was bolstered by Olympic gold medal winners Peggy Fleming (1968), Janet Lynn (1972), Dorothy Hamill (1976), Scott Hamilton (1984), Brian Boitano (1988), and Kristi Yamaguchi (1992). While diehard fans followed the sport through various ice shows, competitions, and television performances, it was the bumbling fiasco of the attack on Nancy Kerrigan in 1994 by the cohorts of a jealous Tonya Harding that propelled figure skating into the news headlines. By the end of the twentieth century, it ranked second behind pro football in television ratings. It is particularly significant that the sport came so far after suffering the devastating loss of its entire roster of top skaters and coaches in an airplane crash on the way to the World Championships in Lyon, France, on February 5, 1961.

Though ice shows benefitted greatly from a new surge in popularity with increased exposure and million-dollar incomes for top skaters, ice shows had been an American tradition since the early twentieth century. The first show was held at the Hippodrome in New York City in 1915. It was followed by an ice ballet imported from Berlin, *Flirting in St. Moritz*, which ran for an unprecedented 300 days and inspired the movie *The Frozen Warning* in 1916. The Ice Follies began in 1936 and continued to entertain audiences for 30 years. Ice skating had its super stars even in its early days. Norwegian

skating sensation Sonja Henie enticed fans to ice shows by the thousands and eventually skated her way into Hollywood films.

The Ice Capades was the most venerable of ice shows. Beginning on February 14, 1940, in Hershey, Pennsylvania, it featured some of the greatest names in ice skating: Dick Button, Scott Hamilton, Jane Torvil, Christopher Dean, and Dorothy Hamill, who bought the show in 1991. Hamill believed that the focus of the show should be on telling a story rather than on the disjointed vaudevillian skits of the past. *Cinderella Frozen in Time*, for example, turned the classic fairy tale into a skating spectacular. Unfortunately, the Ice Capades foundered under her stewardship.

In 1986, after Scott Hamilton won the 1984 gold medal for men’s figure skating, he determined that skaters should have more opportunity for participating in the sport they loved. The result was Stars on Ice, sponsored chiefly by Discover Stars of America. Each year, roughly a dozen top skaters spend December through April touring the country, providing fans with performances that are elegant, breathtaking, or funny. A number of other ice shows, including Campbell’s Tour of World Champions and Disney’s World on Ice, have followed suit. Before the establishment of these modern ice shows, skaters often performed in ten to twelve shows a week, a grueling schedule that sapped both their energies and their talents. While the shows appear glamorous, they require hard work from skaters who spend much of the year traveling from city to city and rarely staying long enough to enjoy the local sights. They frequently spend holidays away from their families and friends, and members of the professional skating world often fall victim to broken relationships that cannot survive the strain.

For fans, though, ice shows are memorable events. No other sport offers the diversity of so much talent. Whether it be the spectacular jumps of Brian Boitano, the crazy antics of Scott Hamilton, the sheer beauty of Kristi Yamaguchi, the elegance of Ekaterina Gordeeva, the awesomeness of Isabelle Brasseur and Lloyd Eisler, the innovativeness of Jane Torvil and Christopher Dean, the athleticism of Surya Bonaly, or the unexpectedness of Gary Beacom, ice shows are sheer magic.

In addition to the traveling shows, television has become a smorgasbord of skating talent. Virtually every major skater has had at least one television show devoted to his or her talents. In 1988 Brian Boitano became the first male athlete to have his own television special with *Canvas on Ice*. In addition, his *Skating Romance* specials were featured annually on American television. In December 1998, the USA network aired *Skate against Hate*, one of a number of theme-related shows with Boitano as both producer and star. Peggy Fleming, a frequent star of skating specials after bringing home the gold in 1968, joined co-host Dick Button in serving as commentator for ice skating competitions. Scott Hamilton frequently joins them, along with appearing in specials of his own, such as *Disney’s Scott Hamilton Upside Down*. Both Nancy Kerrigan and Kristi Yamaguchi also became regular hosts for skating events. Canadian Elvis Stojko appeared in *Elvis on Ice*. Russian skater Ekaterina Gordeeva starred in the Christmas specials featuring Snowden the snowman. Boitano joined Russian skaters Oksana Baiul and Viktor Petrenko in an ice show version of *The Nutcracker Suite*.

With its phenomenal success, ice skating has become a gold mine for skaters and promoters alike. Kristi Yamaguchi reportedly earned three to four million dollars a year in the late 1990s. Other millionaire skaters include Brian Boitano, Scott Hamilton, Nancy Kerrigan, and Oksana Baiul. Michelle Kwan and Tara Lipinski, who won the Olympic silver and gold respectively in the 1998 Olympics,

were well on the way to joining that elite group by the end of the century. Paul Wylie, 1992 silver medalist, chose to continue skating over entering Harvard Law School, declaring that he would be foolish to give up the income of a high profile professional skater. Given their enormous popularity and ability to rake in huge revenues, ice shows will continue to entertain a besotted American public and inspire young skaters to reach for the gold.

## Ice-T (1958—)

Releasing his first track, “The Coldest Rapper,” in 1983, Ice-T became Los Angeles’s first rap artist. He has since become one of America’s most outspoken rappers, boasting a violent past in which he claims to have been shot twice. Indeed, his name was inspired by

Ice-T

former pimp and best-selling author Iceberg Slim. Ice-T recalled in his book *The Ice-T Opinion*, “He would talk in rhyme—hustler-like stuff—and I would memorize lines. People in school would always ask me to recite them.” Ice-T’s experiences as a gang member provided the material for four albums in three years. Although the first rapper to have warning stickers placed on his album sleeves, Ice-T emerged as a voice for dispossessed black youth. He went on to become an institution on the West Coast, running his own record company, Rhythm Syndicate.

Ice-T was born Tracy Marrow in Newark, New Jersey. Following his parents’ death he moved to Los Angeles and attended Crenshaw High School in South Central L.A. His journey to the big time was anything but smooth. He made several records and appeared in three hip-hop films, *Rappin’* (1985), *Breakin’* (1984), and *Breakin’ II*, without any notable success. It wasn’t until a few years later that he signed a record deal with Sire Records, releasing his debut album *Rhyme Pays* in 1987. While most of the album’s tracks dealt with the familiar topics of sex and women (for example, “I Love Ladies” and “Sex”), two stood out in particular: “6 in the Morning” and “Squeeze the Trigger.” These tracks were to define the subject matter of Ice-T’s later hardcore rapping: living in the ghetto, street violence, criminal activity, and survival. He stated, “I try to walk the edge. I’m going to tell you what you need to hear, not what you want to hear.” Indeed, it was the latter track that inspired actor/director Dennis Hopper to ask Ice-T to contribute the title song to his movie *Colors* (1988), a brutal depiction of gang culture in L.A.

Following the success of the track “Colors,” Ice-T released his second album *Power* (1988). The record depicts an L.A. cityscape that would not be out of place on the set of a blaxploitation movie: pimps, hookers, hit men, cars, and drugs. This was backed up by wah-wah guitar riffs and samples borrowed from Curtis Mayfield giving the album the sound of 1970s funk. On “I’m Your Pusherman,” Ice-T lifted a track wholesale from Mayfield’s *Superfly*.

Ice-T’s third album, *Freedom of Speech* (1989), seemed to demarcate a shift to an even more militant stance. The track “Lethal Weapon” recalls Public Enemy’s “Miuzi Weighs a Ton,” adopting a violent persona with lines such as “I’m a nigger on the trigger/Madder than a pit bull.” Ice-T still had not discarded his earlier pimp/player image, which is evidenced in his fourth album *Original Gangster (O.G.)* (1991). The title of the album coined a new phrase that entered the rap lexicon, and the album as a whole was placed alongside some of rap’s best recordings.

Ice-T recorded two more albums, *Home Invasion* (1993) and *Born Dead* (1994), as a solo artist and appeared in several films, the most notable being his part as a cop in *New Jack City* (1991). In addition to his solo performances, Ice-T also formed a spinoff metal/hardcore band called *Body Count* that released an eponymous album in 1992. The inclusion of the notorious track “Cop Killer” ensured further headlines and earned Ice-T the number-two slot on the FBI National Threat list.

As Ice-T continued to appear in films and on television throughout the 1990s, the controversy he incited receded. His gangster persona was copied and perfected by many other West Coast “gangsta” rappers such as Snoop Doggy Dogg and Dr. Dre. Nonetheless, it could be argued that without Ice-T these rappers would not have become a part of popular culture in America, for he was the first West-Coast rapper to gain respect in rap’s birthplace, New York City.

## In Living Color

Airing on Fox Television from 1990-1994, the series *In Living Color* was the first sketch comedy to feature a majority African American cast. Keenan Ivory Wayans was the creative force behind the show, which included his brother, Damon Wayans, and a smattering of other comic actors such as David Alan Grier, Tommy Davidson, Chris Rock, and Jim Carrey. *In Living Color* brought to the screen lasting characters like Homey the Clown, gay film critics Blaine and Antoine in "Men on Film" (with their ratings system of "two snaps up"), and the oblivious Fire Marshal Bill, in addition to a troupe of well-choreographed female dancers ("Fly Girls") that appeared after skits. Though the show was sometimes criticized for its stereotypes and objectionable material, it was nevertheless respected for being the first to address urban themes in such a context.

## The Incredible Hulk

The Incredible Hulk is one of Marvel Comics' most popular superheroes. Created in 1962 by Stan Lee and Jack Kirby, the Hulk is a green-skinned brute with enormous physical strength, dull wits, and a hot temper. He is the alter-ego of Dr. Bruce Banner, a nuclear physicist accidentally exposed to gamma radiation. Banner transforms into the Hulk during times of stress.

Along with Spider-Man, the Hulk established Marvel's definitive formula of troubled superheroes alienated from the society that they fight to protect. Constantly misunderstood by the public and persecuted by the authorities, the Hulk became a natural favorite among young people during the 1960s and 1970s who identified themselves with anti-establishment trends.

The Hulk's popularity peaked in the late 1970s when his comic book was adapted into a successful prime-time CBS TV series. Despite frequent revisions in the Hulk's appearance and character during the 1980s and 1990s, he remains one of the most recognizable superheroes ever produced by the comic-book industry.

## Independence Day

Directed by Roland Emmerich, *Independence Day* was an epic film about an apocalyptic invasion of the Earth by extraterrestrials. The film opened in July of 1996 to enormous box-office profits. It benefitted from a canny advertising campaign featuring as its centerpiece a shot of the destruction of the White House and set a record by collecting \$100 million in six days. *Independence Day* went on to earn \$306 million, putting it among the top ten highest grossing films ever. Most critics were less kind to the film, pointing to its stereotypical ethnic characters, an implausible *deus ex machina* ending, and a rather nationalistic subtext disingenuously cloaked behind its multicultural pretensions. Others pointed to the extremely derivative nature of the film, including not-so-subtle science fiction borrowings from *The War of the Worlds*, *The Day the Earth Stood Still*, *Alien*, *Star Wars*, *Close Encounters of the Third Kind*, *V*, and *The X Files*. Nevertheless, audiences flocked to *Independence Day*, making it the cinematic success story of 1996.

Set in the month of July during a year in the early twenty-first century, the film opens ominously, with a shot of a gigantic shadow, accompanied by rumbles and tremors, passing over the site of mankind's first lunar landing. Scientific and military organizations alike quickly detect that an immense object one-fourth the size of the moon, apparently under intelligent control, is taking up a position in near-Earth orbit. The object, which turns out to be a mother ship, releases 15 smaller, but still miles across, disc-shaped craft that enter the Earth's atmosphere in clouds of fire to hover silently over major world cities. The film then introduces its major characters, all of whom will transcend personal failure to become heroes in the upcoming battle: the politically embattled U.S. President and veteran Gulf War pilot, Thomas Whitmore; Steven Hiller, an F-16 pilot and failed NASA applicant; Jasmine Dubrow, Hiller's exotic-dancer girlfriend; David Levinson, a New York cable-television scientist who has failed at his marriage and his career; Constance Spano, Levinson's ex-wife and aide to President Whitmore; and Russell Casse, an alcoholic cropduster and Vietnam War veteran pilot. As a panicked civilization becomes increasingly destabilized, Levinson discovers that the discs are using Earth's satellites to synchronize a countdown to a simultaneous worldwide attack. Accompanied by his father, Levinson convinces Constance to tell the president about the imminent attack. Though the news comes too late for any effective evacuation, the president, some of his staff, and the Levinsons are able to escape Washington just as the discs, acting in concert, fire their primary weapons to create firestorms that engulf and utterly destroy the world's major cities, including New York and Los Angeles.

The second part of the film focuses on mankind's counterattack against the alien invaders. The president, who has lost his wife in the invasion, personally commands the national, and eventually worldwide, effort. Hiller not only survives a massive but futile F-16 attack on one of the discs and its hordes of fighters, but also manages to

shoot down and capture alive one of the aliens. During the counteroffensive, Whitmore learns to his anger that a covert branch of the government, kept secret even from the president, has been studying an alien fighter, captured in the late 1950s, at the infamous Area 51 in the Nevada desert. Through close inspection of the captured ship, Levinson finds that he will be able to introduce a disabling computer virus into the alien computer network, provided someone can dock the smaller fighter with the mother ship. Hiller volunteers to fly the alien fighter. Meanwhile, the president and Russell Casse, among other volunteers, suit up to fly a coordinated F-16 attack against all of the discs the second the virus paralyzes the alien craft and lowers their shields. Whitmore delivers an inspirational speech to the amassed volunteers shortly before the attack. Even with the virus successfully introduced and the shields down, however, the discs prove too hardy for missiles until Casse's suicide plunge into a disc's primary weapon shows the other pilots how to bring the discs down. Hiller and Levinson, barely escaping the destruction of the mother ship, fly back to Earth to find that the smaller discs have all been destroyed as well. The victory, which takes place on July 4, ensures that Independence Day will no longer be only an American holiday.

German-born Roland Emmerich and American Dean Devlin, the creative duo behind *Independence Day*, first teamed up in the United States for 1992's *Universal Soldier*, which starred Jean Claude Van Damme. Emmerich and Devlin achieved name-recognition status and modest commercial success with 1994's *Stargate*, a film about aliens, time travel, the modern military, and ancient Egypt. For *Stargate*, Emmerich directed, co-wrote, and co-produced and Devlin co-wrote and co-produced, as would be the case with their next project. According to its creators, *Independence Day* was conceived to be an homage to war and adventure movies, specifically the 1970s epic-scale and multi-character disaster movies. The chairman of Twentieth Century-Fox, Peter Chernin, agreed to back Emmerich and Devlin's project. Solid, recognizable actors such as Will Smith (Steve Hiller), Bill Pullman (President Whitmore), Jeff Goldblum (David Levinson), Randy Quaid (Russell Casse), Mary McDonnell (the First Lady), Judd Hirsch (doting Jewish father Julius Levinson), Harvey Fierstein (David's boss Marty Gilbert), and Brent Spiner (in a brief but unforgettable cameo as the outlandish Dr. Brakkish Okun, scientific leader at the Area 51 research facility) were cast. Location shooting began in 1995. Manhattan provided an urban background for crowd reaction shots to the awe-inspiring arrival of the interstellar visitors. The Bonneville Salt Flats in Utah served as a panoramic backdrop for the scene where Hiller leads an enormous caravan of refugees to the Area 51 facility. The hangars of the old Hughes aircraft facility in Los Angeles housed the special effects facilities involving the film's extensive pyrotechnic and miniatures (aircraft, cities, alien ships) work. In postproduction, dozens of computer-generated images were combined with existing special effects shots to create an intricately layered, visually spectacular depiction of the alien invasion. (The special effects won the 1996 Academy Award in that category.) The film ultimately cost \$71 million, which was not an extravagant amount by 1990s cinematic budgetary standards. The resultant financial success of *Independence Day* placed enormous pressure on Emmerich and Devlin to produce a film of similar spectacle and profitability as a follow-up. However, their 1998 film *Godzilla*, while profitable, was considered to be one of 1998's big-budget flops. Also released in 1998, the laser disc edition of *Independence Day* is eight minutes longer than the already lengthy theatrical release, primarily because of additional dialogue between the principal characters and

one scene involving Dr. Okun's inspection of the interior of the alien fighter.

## The Indian

Numerous tribes of Indian people populated the Americas for thousands of years before the arrival of Europeans. As Jack Weatherford writes in his book, *Indian Givers*, these peoples created great architectural monuments, made intelligent use of natural resources, created new plant species through selective breeding, made great discoveries in mathematical and astronomical knowledge, and reshaped the physical landscape. But as impressive as the achievements of Indian peoples have been, the *image* of "the Indian"—in literature, in the visual arts, in advertising, in entertainment, and elsewhere—has cast a far longer shadow upon the consciousness of the Euro-American society than the living individuals themselves. This has been true since the earliest days of European contact.

One of the earliest outlets for disseminating the image of "the Indian" was the outpouring of "Indian captivity narratives," which began in the early eighteenth century. These popular writings recorded hair-raising tales—both true and fictional—of settlers captured by Indians. Bearing titles such as *The Redeemed Captive Returning to Zion* (1707) by Massachusetts minister John Williams, they followed a rather predictable formula. In it, a white hero or heroine was abducted, underwent sufferings and even torture, was initiated into Indian society, but was finally and miraculously delivered once again to his or her own people, through the grace of God. The Indian which emerged out of these narratives was typically a *savage beast*: primitive, sadistic, cunning, filthy, villainous, and altogether terrifying. Especially in the Puritan era, he was often shown as a direct tool of Satan, and he shrank not even from such vile acts as human mutilation, dismemberment, and cannibalism.

The captivity narratives were more than just a well-loved form of American entertainment, although they were certainly that: virtually no first edition copies of captivity narratives exist today because people actually read them until the pages disintegrated. But besides diverting their audience, the captivity narratives also instructed. Their wide circulation made them a very influential source of information about Indians in both America and Europe, and one which allowed the Puritans to think through their place and mission in the "New World." In them, America became the new, biblical "Promised Land" to be given over to them, the children of God, after the occupying hordes of pagans, the children of Satan, had been driven out.

It is hardly the case, however, that all the images of the Indian in America have been negative. To stand alongside the "bad Indian" of the captivity narratives, Americans also invented a "good Indian" or "noble savage." The good Indian was handsome, strong, gentle, kind, brave, intelligent, and unfettered by the artificiality and various

corruptions of “civilized” life. One powerful version of the “good Indian” appeared in the early nineteenth century. This was the image of the Indian as *wise healer*. By this time, Euro-Americans had discovered that American Indians had a sophisticated knowledge of a great many medical procedures and preparations (including bone setting, febrifuges, and painkillers). Whereas the “bad Indian” had been ideologically useful to the dominant society, the Indian healer turned out to be commercially useful. White purveyors of patent medicine began capitalizing on widespread respect for Indian medical knowledge by associating their products with Indians, and traveling medicine shows such as the Kiowa Indian Medicine and Vaudeville Company often featured Indian performers. Unfortunately, however, the main ingredients in patent medicines commonly consisted of alcohol, cocaine, or opium, rather than any of the more useful therapeutic substances known to Indian physicians. The increasing sensationalization of medicine shows, along with the professionalization and increasing social power of white physicians, eventually caused “Indian medicine” to fall into disrepute.

Nevertheless, “the Indian” did not disappear from public consciousness with the eclipse of the “healer” image. In 1883, William F. (“Buffalo Bill”) Cody introduced a new kind of traveling entertainment, the wild West show, which also featured Indian performers. Here, however, these performers appeared as ferocious *warriors*. In staged battles, they assaulted wagon trains, fired off volleys of arrows, and displayed impressive equestrian skills. Many Indian people—including even the great Sioux chief Sitting Bull—acted in these shows. The same warrior image had been featured in the cheap paperbacks of the mid-nineteenth century known as “dime novels,” and it was eventually transferred with little alteration into Western movies, the first and most famous of which was *The Great Train Robbery*. Like the captivity narratives which were their literary forebears, the Western movies frequently thematized the savage horrors which awaited whites who fell into Indian hands. “Save the last bullet for yourself” was Hollywood’s oft-repeated advice to anyone fending off an Indian attack.

The Western shows, books, and movies defined the war-bonneted Plains tribesman as *the* prototypical or “real” Indian. This image has remained the standard against which Indian-ness was commonly measured even into the closing years of the twentieth century. Yet those years have also introduced some new roles for this standardized Indian to play. One of the more important is the role of the *gentle ecologist*. American boys’ and girls’ clubs such as the Scouts, Woodcraft Indians, and Campfire Girls played a significant role in the dissemination of this, another “good Indian” image, ever since the early years of the twentieth century. The clubs packed young people off to summer camps with Indian-sounding names where they were to enjoy outdoor sports and natural living after the supposed fashion of native peoples, who were imagined as innocent children of nature with a deep knowledge of its secrets. American youths progressed within the hierarchy of the clubs by acquiring knowledge of such things as woodsmanship, nature lore, and the production of rustically imagined Indian crafts such as “buckskin” clothing and birchbark models.

Commercial advertising has also made free use of the ecologist image, and its best-known representative was the late Iron Eyes Cody, an actor who starred in an educational campaign for the nonprofit organization, Keep America Beautiful, in the 1970s. The television

advertisement in which Cody rode a horse down a beach polluted with garbage, silently surveyed the desecration of the land, and finally allowed a single tear to slip down his weathered cheek, burned itself into the minds of an entire generation of Americans. The advertisement is interesting for at least two reasons. For one thing, it reveals a great deal about how Americans conceptualize “the Indian.” Its remarkable symbolic efficacy both depends upon and illustrates some of the most powerful modern racial stereotypes: that Indians are typically stoic and unemotional (what depth of suffering can move an *Indian* to tears!) and that they are bound to the natural world in a romanticized and inexpressible union. For another thing, although Iron Eyes Cody is still one of the most recognized “Indian” figures in America, he was *not* of Indian ancestry. Rather, he was the son of two Italian immigrants. In this, Cody is a typical Hollywood figure. Whereas many of the performers in the early wild West shows were, in fact, Indians, many of the best known actors who later played them in films and on television have not been.

If Americans in the 1970s used the imagery of the Indian to address developing ecological values and concerns, they had other uses for it as well. This was a period in which the hopefulness with which the post-World War II generation had once viewed science and technology had begun to fade, and in which Americans had become increasingly discontented with the visions for human fulfillment which these held out. People expressed a renewed interest in spirituality, but many of them found the faiths of their parents unsatisfying. They turned, accordingly, to non-Western traditions, including those of American Indians. Out of this burgeoning spiritual discontent was born the image of the *mystical ceremonialist*. Americans were widely introduced to this impressive personage by anthropologist Carlos Castaneda. In his long series of fictionalized books, starting with *Journey to Ixtlan* (once considered to be accurate ethnography), Castaneda relates the story of his supposed tutelage by “Don Juan,” a Yaqui *brujo*, or possessor of traditional Indian sacred knowledge. The articulation of Castaneda’s immensely popular works with the counterculture’s interest in the use of mind-altering drugs to expand ordinary consciousness is evident; he describes in detail the many revelatory experiences that he had while under the influence of peyote (a substance officially classified in the United States as a hallucinogenic drug, but which some tribal peoples use, under carefully controlled ceremonial conditions, as a sacrament).

The mystical ceremonialist did not disappear when other preoccupations of the counterculture fell by the wayside. Instead, he was reinvented in the 1980s and 1990s by adherents of that loose association of movements collected together under the rubric of “New Age” spirituality. The “New Age” includes religious believers who may call themselves Wiccans, goddess worshippers, Druids, eco-feminists, and many other names. Its followers have replaced their predecessors’ preoccupation with drugs with an equally intense interest in a variety of esoteric subjects such as reincarnation, crystals, alternative healing, astral projection, extra-sensory perception, and the like. Accompanying all these various fascinations is a frequent attraction to (more or less accurately reproduced) versions of traditional, American Indian ceremonial practices. The New Age faithful ravenously consume “how-to” manuals penned by Indian “shamans” (often self-proclaimed and fraudulent), who purport to reveal everything from the sacred beliefs and rituals of Indian medicine people to their secret sexual practices. Inquirers also crowd seminars, workshops, and “spiritual retreats” claiming to offer the experience of Indian rituals and they flock to reservations and sacred sites to

participate in Indian ceremonies. Some non-Indians have associated themselves so closely with this recent image of the mystical Indian as to assert that they were “Indian in a past life,” even though they currently exist in a non-Indian body.

The upsurge of interest in Indian sacred rituals created by the image of the mystical Indian has created a great deal of tension in Indian communities. As Cherokee scholar Andy Smith writes in her ironic essay, “For All Those Who Were Indian in a Former Life,” “nowadays anyone can be Indian if he or she wants to. All that is required is that one be Indian in a former life, or take part in a sweat lodge, or be mentored by a ‘medicine woman,’ or read a how-to book. . . . This furthers the goals of white supremacists to abrogate treaty rights and take away what little we [Indians] have left. When everyone becomes an ‘Indian,’ then it is easy to lose sight of the specificity of oppression faced by those who are Indian in *this* life.”

Of all the many images of Indians which have remained with Americans into the last years of the twentieth century, perhaps the most vulgarly stereotyped appears in the sports mascot. Professional and college teams include the Kansas City Chiefs, the Atlanta Braves, and the Florida State Seminoles. Innumerable high schools similarly name themselves the “Indians,” “Injuns,” and “Savages.” Indian mascots range from the Cleveland Indians’ clownishly grinning “Chief Wahoo” to the Washington Redskins’ dignified silhouette of a warrior. Fans for all these teams frequently sport feathers and “war paint” at games, give “war whoops,” beat “tom-toms” and perform the “tomahawk chop,” a slicing gesture intended to encourage the players to “scalp” the other team.

Non-Indian (and some Indian) commentators contend that sports mascots are intended to honor American Indians and their historic record of bravery in battle. However, many others, including representatives of the American Indian Movement and the American Indian Education Commission, have protested. They complain that the use of Indian names and imagery suggests a blind spot where this specific racial group is concerned. Brian Barnard, in “Would You Cheer for the Denver Darkies?,” wonders if anyone would fail to see the offensive implications of a team which “honored” African Americans by christening itself as the title of his piece suggests. And what if the same team sponsored half-time shows featuring mascots in blackface and Afro wigs, who danced around grunting their own version of supposed African chants?

Some Indian leaders have brought lawsuits against particular sports teams, alleging racial discrimination or human rights violations. So far, these suits have not succeeded, but protests against mascots have made some headway. For instance, in 1994, the University of Iowa announced that it would no longer play non-conference athletic events against teams which employed Indian names or symbols. Several universities have banned from their campuses the buffoonish Chief Illiniwek, a white University of Illinois student dressed as an Indian, who performs at half-time. And some newspapers (including the *Minneapolis Star Tribune* and the *Portland Oregonian*) have decided not to print the names of specific teams with Indian names or mascots. Instead, they simply refer to “the Washington team,” “the Atlanta team,” and so on. Teams themselves have sometimes opened discussions on the question of whether they should change their names or their mascots, but the suggestions are frequently met with angry resistance from fans. Avis Little Eagle reports in a 1994 *Indian Country Today* article, that

students at the University of Illinois recently responded to such a proposal with the slogan, “save the chief, kill the Indian people.”

American popular culture has played host to a diversity of images of “the Indian” over a period of several hundred years. Through all the changes, however, certain things have remained fairly constant. One is the tendency of the Indian to function as a magnifying mirror of Euro-American values and concerns. Non-Indians have persistently made and remade their ideas about Indians to serve the social goals of every historic period. Indians have functioned sometimes as a vehicle for social criticism, as in the ecology movement’s exploitation of associations between Indians and nature which reproved American irresponsibility toward the land. They have served, at other times, as a foil against which non-Indians have displayed all that is right with America and the European settlement thereof. This is nowhere more evident than in the wild west shows which boldly dramatized the juggernaut of conquest: the inevitable and laudable progress of “civilization” over all that was savage, primitive, untamed.

A second constant in popular imagery of Indians is the assumption that their cultures and peoples are “vanishing”—that they have died out, or will soon do so. James Fenimore Cooper’s much-loved, nineteenth-century novel, *The Last of the Mohicans*, and a great many romanticized, popular artworks of a related theme, depend for their poignant appeal upon this motif. See, for instance, Frederick Remington’s easily recognized bronze, “The End of the Trail,” which Remington described as depicting the hapless, homeless, and helpless Indian, discovering himself driven to the final, Western rim of the American continent by European expansion. A corollary of the vanishing Indian theme is the belief that there are no more “real” Indians: that those who may *claim* an Indian identity today have lost the culture which once distinguished them from other Americans, and their racial “authenticity” along with it.

Finally, throughout American popular culture runs a constant and pronounced fascination with the idea that non-Indians can “become” Indians. The fantasy is tirelessly replayed all the way from the earliest captivity narratives through modern movies (including such blockbusters as *Little Big Man* and the more recent *Dances with Wolves*), which frequently feature protagonists who somehow traverse the great racial divide between red and white. The New Age sensibility, which allows the overburdened, modern executive briefly to exchange his or her Fortune 500 responsibilities for a weekend spent “crying for a vision” (with the able assistance of a shaman-for-hire), is a final (and often extremely capital-intensive) culmination of this journey of the non-Indian imagination.

Clearly, the use of “the Indian” in popular culture betrays complex psychological dynamics which have manifested themselves on a national scale. No doubt the ability of “the Indian” to serve as a projection screen against which the dominant society has played out both its greatest aspirations and anxieties—whatever those implied at the moment—derives in large part from the essential *emptiness* of the image. As Robert Berkhofer suggested in his book, *The White Man’s Indian*, at no time has the Indian in popular culture ever been developed into an actual person. Instead, he is invariably bereft of complexity, motive, personality, or other individualizing features. The result is an infinite possibility, a metaphor which can be employed to give substance to the most starkly diverse ideas. Because “the Indian” is simply a container to be filled with the purposes of the speaker, he can be used interchangeably as, for instance, the symbol of savagery *and* as the symbol of primal innocence.

The persistent themes of the vanishing Indian and of the non-Indian who becomes an Indian are a bit harder to explain than America's ability to use "the Indian" as a vehicle for exploring and communicating an enormous range of its own concerns and interests. Jack Forbes addresses this problem in his essay, "The Manipulation of Race, Caste, and Identity: Classifying AfroAmericans, Native Americans and Red-Black People." He suggests that the aforementioned themes originate in Americans' persisting knowledge of themselves as aliens in a "New World" wrested from its first inhabitants only through unspeakable violence. From the beginning of the European occupation of America, he writes, Indians "had to vanish because they were a threat or an impediment to the colonial settlers. That is, the colonial settlers could not truly become 'native' until the real natives were gone. . . ." Moreover, Forbes continues, "[t]his is the most compelling reason why 'Indians' must still vanish. Their continued existence as a separate population is a constant reminder of the foreignness" of American immigrants. This theory addresses not only the enduring American fascination with the vanishing Indian, but also with the idea of "becoming" Indian. Changing one's racial identification is a way to complete the symbolic journey from conqueror to conquered and to achieve vindication for the national sins of the past.

Nevertheless, with Indian people as with humorist Mark Twain, "reports of their death have been greatly exaggerated." The last decades of the twentieth century have seen many important contributions to popular culture which speak in the voice of individuals who have most certainly *not* "vanished." These works honestly express and address the concerns and values common to Indian people themselves, rather than those of the larger society, and they have no need to explore the notion of "becoming Indian" because their authors have been Indian all along. Into this category, one might place, for instance, novels such as M. Scott Momaday's *House Made of Dawn*, a familial and tribal recollection of Kiowa migration, Louise Erdrich's *Tracks*, the story of an Ojibwe family struggling to retain its tribal allotment, and Leslie Marmon Silko's *Ceremony*, a poetic and profound excursion into the tormented world of a Vietnam veteran who returns to his childhood home in Laguna Pueblo. That these sophisticated works, with their carefully-elaborated themes and characters, have proven popular with audiences of both Indians and non-Indians suggests that America at the dawn of the twenty-first century may be ready to encounter Indian people in their individual and tribal particularity and real-life complexity. It has taken 500 years, but perhaps America is finally becoming willing to think about Indian people as more than a series of interchangeable representatives of the generic category of "the Indian."

## Indianapolis 500

For most of the twentieth century, the Borg-Warner trophy, awarded to the winner of the Indianapolis 500 Motor Speedway race, has been the most coveted prize in auto racing. Known as "the greatest spectacle in racing," the Memorial Day event—which since the late 1960s has actually been run on the Sunday before Memorial Day to permit the scheduling of a rain delay—has featured the best drivers and the fastest speeds in the sport.

The Indianapolis 500 consists of 200 laps around the Indianapolis Motor Speedway's two-and-a-half-mile oval. The first race, in 1911, lasted most of the day; the 1997 race was won by Arie Luyendyk in less than three-and-a-half hours. The first race averaged a then staggering 74.5 miles per hour but, by the end of the century, the course speed record was held by Rick Mears, who won the 1991 race with an average speed of over 176 miles per hour. One other difference is notable: Ray Haroun took home a hefty \$10,000 for winning the first Indianapolis 500, while 1998 winner Eddie Cheever pocketed over \$1.4 million.

Like most non-team sports, the history of auto racing is chronicled in the personalities who defined its various eras. Other than one notable exception, NASCAR's Richard Petty, racing's dominant personalities gravitated to Indianapolis. In the early years, when the Speedway was paved with over three million bricks (a 36-inch strip of which is still visible at the finish line), it was the home of barnstormers like Haroun, Ralph DePalma, and Howdy Wilcox. In those days, drivers would carry mechanics in the car with them, and repairs would be undertaken on the track.

The next great Indianapolis legend was Wilbur Shaw, who won the race three times in four years (1937 to 1940). In 1946,

**The 1996 Indianapolis 500.**

Shaw convinced Anton “Tony” Hulman to buy the Speedway from an ownership group that included the legendary Captain Eddie Rickenbacker; Shaw became its president. It was under the guidance of Shaw (who died in a plane crash in 1954) and Hulman that the Indianapolis 500 became the premier auto-racing event in the world. The 1950s and 1960s saw Indianapolis become the unofficial home of racing greats such as Maury Rose, Bill Vukovich, Johnnie Parsons, and Parnelli Jones, who drove the first turbine-powered race car to within six laps of a win before gearbox failure cost him the race.

The personality that most defines the Indianapolis 500, though, is A.J. Foyt, Jr. Foyt first raced in Indianapolis in 1958 and continued to be an integral part of the facility’s lore for the next 40 years. His records include most career starts (35), most consecutive starts (35), most competitive miles during a career (12,273), and most races led (13). Foyt’s record of four wins is matched only by his contemporary Al Unser. Another reason why Foyt has cast such a long shadow over Indy racing is that he stands as a nostalgic contrast to the reality that championship racing has now become the province of only the best-financed teams. The names of drivers like Rutherford, Andretti, and Clark have been overshadowed by the names of owners like Penske and Newman/Haas. Because so much money is now at stake in championship Indy-car racing, the complexion of the sport is changing, and the pre-eminence of the Indianapolis 500 is in danger. In 1994, Speedway president Tony George inaugurated the Indianapolis Racing League, a circuit meant to compete with the Championship Auto Racing Teams League established by Roger Penske. The friction between the rivals has caused many of the sport’s most

popular drivers to skip the Indianapolis 500 in order to boost CART’s leverage in the marketplace. The outcome of this controversy will go a long way toward determining for how long, or if, the Indianapolis 500 will remain “the greatest spectacle in racing.”

## Industrial Design

The “American system” of mass production, successfully implemented during the mid-1800s, was characterized by the large-scale manufacture of standardized products with interchangeable parts. Much different than the individualized hand craftsmanship which preceded it, this method of production required artificially-powered machine tools and simplified operations, endowing products made from machine production with a certain aesthetic—an industrial design. At first used for the manufacture of revolvers, clocks, pocket watches, and agricultural machinery, the American system eventually produced most consumer goods.

Sewing machines and typewriters were the first products consciously designed with different contexts of use in mind—an early implementation of industrial design. In order to sell his sewing machines, Isaac Singer believed that they should be ornamented when in the home in order to fit into the more decorative aesthetic of the domestic sphere; likewise, they should be plain black when found in a factory setting. Early typewriters shared the same aesthetic variations as their sewing machine counterparts, and these were two of the earliest manufactured objects influenced by the machine ethic that produced them.

A few decades later, in 1908, Henry Ford improved upon assembly line production by making an automobile, the Model T, specifically for a mass market. Ford believed in the design philosophy called “functionalism,” a system also touted by architect Louis Sullivan (1856-1924). Functionalism, one of the first self-conscious modern design movements, stressed that an “honest” design did not hide what an object did, a belief summed up most eloquently by Sullivan’s famous phrase, “form follows function.” As historian Gregory Votolato wrote, “Sullivan and Ford approached design as a means of addressing social, technical and commercial problems specific to the time and place. In its early years of development, the automobile, like the skyscraper, called for a design which would tap a huge, potential demand and which would make the most efficient use of the available technology in its production and construction.” Frank Lloyd Wright (1869-1959) was a well-known proponent of the functionalist aesthetic, but designed only for an exclusive clientele. It was not until the rise of business in the 1910s and 1920s, which required the mass manufacture of office equipment and furniture, that functionalism was brought to the masses.

During the 1910s, the fine arts, especially from Europe, still remained influential in popular design, overshadowing the sheer power of machinery and industry that would prevail in the following decades. Art Nouveau, expressed most clearly in the work of Belgian designer Henry van de Velde, was based on organic forms and the insistence that production occur in small craft workshops—a reaction against the forces of machine-driven mass production. Although meant for the elite, his designs were easily and readily appropriated for the mass market. Dadaist Marcel Duchamp celebrated prosaic utilitarian objects as works of art, promoting the idea that ordinary objects should be works of art. Le Corbusier expounded Purist theories, believing that man was merely another functional object like a machine, and that objects should be made as extensions of the human body. Piet Mondrian and Gerrit Rietveld expressed the ideals of De Stijl, a movement founded in Holland in 1917. De Stijl condensed things down to their fundamental elements—basic shapes, right angles, and primary colors which could be applied as easily to furniture or paintings. Although these schools all enjoyed many followers and influenced to various degrees the design of consumer goods, the most influential on American industrial design was the Bauhaus movement, founded in Germany in 1919. Walter Gropius, Marcel Breuer, and Mies van der Rohe, among others, believed that art and technology could be unified and used to produce objects of good design and integrity.

It was not until the crash of 1929, however, that industrial design in America became professionalized and considered a valid pursuit in its own right. Many designers who were previously involved in the theater or in advertising were put into service during the Depression to find viable and useful product designs in a small yet very competitive market. These American designers were highly influenced by the Modernist aesthetic of the Bauhaus, which celebrated industrial materials, like metal and elevated machines, to works of art. In addition, they brought industrial design into the home, applying Modernist principles to appliances, furniture, and even architecture.

Walter Dorwin Teague (1883-1960) started out as a graphic designer, and began applying his skills to the three-dimensional realm during the mid-1920s. Throughout his career he designed cameras for Kodak, and became well known for improving on the designs of heavy machinery and office equipment. Raymond Loewy (1893-1986), a Frenchman who emigrated to America, became well known in the field after he redesigned the Gestetner duplicating machine, making it more functional and better looking. In 1935, Loewy improved upon the design of the Coldspot refrigerator for Sears, enclosing the cooling unit with white enameled steel, giving it chrome hardware, and adding features with the needs of the user in mind: it could accommodate different-sized containers, had a semi-automatic defroster, and came with instant-release ice cube trays.

Henry Dreyfuss (1904-1972) was originally a stage designer who opened up an interior design business in 1929. In 1937, he redesigned the telephone for Bell, giving it a low profile and combining the receiver and earpiece into one handset. It was a simple design—easy to use, easy to clean, and easy to manufacture. Dreyfuss was particularly interested in the interaction between humans and the objects around them. He spent much of his time studying the human body and was the first true proponent of ergonomics, best expressed in his books, *Designing for People* (1955) and *The Measure of Man* (1961).

Norman Bel Geddes (1893-1958), yet another stage designer, put his talents to work designing more substantial objects like airplanes. Although he did not invent streamlining, he did democratize it. Popular between 1927 and the beginning of World War II, streamlining was characterized by smooth metal surfaces, long, sweeping, horizontal curves, rounded edges, and the elimination of extraneous detail. It was based on scientific principles and produced shapes with the least resistance in water and air. Streamlining was a wildly popular design aesthetic that appeared in objects from railroads and camping trailers to toasters and juicers and symbolized speed, efficiency, and a forward-looking mentality that was much needed during the Depression years. Examples of streamlining included the Boeing 247 of 1933, the Douglas DC1 (an all metal structure with an aluminum skin), and Carl Breer's 1934 Chrysler "Airflow."

Industrial design styles did not change much during the decades immediately following World War II. Sullivan's "form follows function" credo had become the accepted canon in the design world. The exceptions to the functionalist design aesthetic appeared in the automobile industry. The Cadillacs and Buicks of the 1950s and early 1960s were known for their outlandish colors—pink, turquoise, yellow—and for their exuberant body styles, complete with jutting "tailfins" that resembled something from outer space.

As an outgrowth of the celebration of post-War material abundance and American primacy in the world, most American homes were filled with products of American design. By the mid-1960s, this began to change—the liberal culture was becoming more tolerant of design variations, and other countries began to contribute their taste cultures to the American public. Slim-line Bang and Olufsen stereos, from Denmark, and the more militaristic Japanese versions began appearing in the dens of American audiophiles. Italian Olivetti typewriters appeared alongside IBM (International Business Machines) Selectrics in the corporate office. Braun coffee makers from Germany showed up in progressive kitchens.

By the late 1970s and early 1980s, technology put toward the miniaturization of electronic equipment radically changed Americans' material universe. While Dreyfuss, Teague, Bel Geddes, and the other modernists could place functional objects in attractive packages, they could not get rid of their bulk. The impact of computers was revolutionary, both in terms of how people communicated and in the nature of design itself. Computers used on the production line allowed for more flexibility, shorter production runs, and therefore more differentiation in design—a return to the nature of production 100 years earlier. In addition, smaller parts like microchips allowed the products themselves to become smaller, more portable, and more personal, symbolizing the increasing interpersonal disconnectedness and self-interest pervading the culture at the end of the twentieth century. Watches with LED (Liquid Electronic Display) crystals threatened to make analogue time-telling obsolete; it did not, but did create a new meaning for analogue faces which hearkened back to a nostalgic past. Microcomponents also meant that electronic gadgets became very toy-like: the "mouse" used with the Macintosh computer was only one example. Indeed, the triumph of microprocessing made machines both personalized and intimate—people often wore them on their bodies. The Sony Walkman was a portable stereo that one strapped on one's belt or wore around the neck; similarly, people carried pocket calculators, beepers, cellular telephones, and even

laptop computers. The influence of microcomputers on design, what historian Peter Dorner called “the electronic technologist’s great gift to designers” was “the means to create working icons of personal freedom through greatly enhanced power and portability.”

At the same time microprocessing was allowing objects to become smaller, thinner, and more portable, postmodern design also changed the outward appearance of industrially-produced objects. Architect Robert Venturi (1925—) became one of the first American proponents of postmodern design with his 1972 book *Learning From Las Vegas*. Formally established in Italy in 1981 and called “Memphis,” the school of postmodernism embraced exuberant styles and colors. Memphis, referring to both Elvis and Egypt, reacted against the cultural supremacy assumed by modern design, which its proponents saw as a constant restatement of the power of technology and the triumph of large American corporations. In contrast, postmodern design attempted to be more egalitarian, incorporating stylistic elements from both high and low art—from marble to formica, from Greek columns to polka dots. Michael Graves (1934—) was another American architect and designer who embraced the postmodern aesthetic, and began designing toasters, picture frames, and other housewares for a middlebrow department store chain near the end of the 1990s, indicating a “trending downward” of taste, and selling what had formerly been high style to the masses. The appearance of postmodernism to some, however, marked the triumph of surface over substance. Influenced more by the information than the industrial age, postmodernism perhaps signaled the end of the reign of industrial design and the beginning of a new design ethic based on and in the hyperreality of cyberspace rather than the materiality of tangible objects.

## The Ink Spots

With their wistful, plangent, sentimental love songs, the Ink Spots are redolent of the 1940s, when their music provided a romantic backdrop to lovers throughout the years of World War II and beyond. They had their first and greatest hit, the million-seller “If I Didn’t Care” in 1939, while among the best and most enduring of the many that followed were “My Prayer”; “I Don’t Want to Set the World on Fire”; “To Each His Own”; “Maybe”; “Java Jive”; “Prisoner of Love”; “It’s a Sin to Tell a Lie”; and “I’ll Never Smile Again.”

The group was formed in Indianapolis in 1932, initially calling themselves the Riff Brothers, then the Percolating Puppies. The original members were tenor and lead vocalist Jerry Daniels; Ivory Watson, baritone vocals and guitar; Charles Fuqua, tenor vocals, guitar and ukulele; and Orville “Hoppy” Jones, bass vocals and guitar. In 1934, the quartet settled on calling themselves the Ink Spots, and Bill Kenny eventually replaced Jerry Daniels. It was Jones who conjured up their trademark “talking chorus” in which the lead singer speaks, rather than sings, for added dramatic effect. Across the decades, the Ink Spots underwent numerous personnel changes. Perhaps the most significant came in 1945, when Bill Kenny was replaced by Jim Nabbie, who led the group until his death in 1992.

All the popular black vocal “doo-wop” groups of the early rock ‘n’ roll years owed a supreme debt to the Ink Spots. Their soft, smooth, group harmonizing, backing the steady, silky-throated vocalizing of their lead singers, inspired a generation of adolescents who started out singing on urban street corners in the early 1950s, some of whom went on to score some of rock ‘n’ roll’s earliest hits. Nobody, however, quite succeeded in emulating the unique sound of the Ink Spots, whose high delicate tenors seemed almost to have originated from classical music’s counter-tenor tradition. The Ink Spots were inducted into the Rock and Roll Hall of Fame in 1989 and, extraordinarily, although they had long been superseded in the charts, and their original members were no more, the Ink Spots were still touring the country in the 1990s, a nostalgic throwback to a gentler past.

## Inner Sanctum Mysteries

During a period from 1941 to 1952, which spanned the golden era of classic radio, this macabre anthology series invited listeners

each week to pass through its famous opening creaking door into a world which provided a unique mixture of horror with the darkest of comedy. In its own era, *Inner Sanctum* was perhaps the quintessential radio program, using sound to produce effects which wove a spell unique to the medium. In a larger sense, the show's peculiar combination of chills and chuckles has influenced the American horror genre ever since and has found expression in everything from EC Comics in the 1950s to the self-referential works of Stephen King and Wes Craven in the 1990s. A listener today who has the nerve to step through the *Inner Sanctum* doorway (being careful not to bump into that corpse "just hanging around over there") will discover a world both historically distant and entertainingly familiar.

There were three principal ways in which *Inner Sanctum* used sound to horrify and amuse its listeners. First among these was, of course, the famous creaking door, an effect which radio historian John Dunning has said "may have been the greatest opening signature device ever achieved." The door was the brainchild of the program's creator Himan Brown, who once claimed that it was one of only two sounds in all of radio to be trademarked—the other being the NBC chimes. Regardless of its legal status, however, there is no doubt that the ominous squeak of the *Inner Sanctum* portal takes its place right along with Fibber McGee's overcrowded closet, the menacing chuckle of the Shadow, and the sputtering of Jack Benny's car as the most well-remembered sounds of old-time radio—causing Stephen King to recall years later that "nothing could have looked as horrible as that door *sounded*." Brown's second achievement in sound was *Inner Sanctum*'s innovative use of the organ. While other suspense programs used the instrument in its musical guise, Jim Harmon reports that Brown "warned his organist never to play a recognizable song . . . or even an original snatch of melody." The man at the somber Hammond organ was to play sharp "stings"—a high musical note struck to emphasize an important piece of dialogue and "doom chords" designed to produce a sense of unease and foreboding in listeners. Dunning goes so far as to claim that "the organ became one of the star players . . . brooding, ever-present, worrying, fretting . . . the epitome of radio melodrama." Finally, Brown was grimly innovative in his creation of realistic sound effects to lend the outlandish goings-on the necessary believability to render them truly terrifying. Only on *Inner Sanctum*, for example, would the soft thunk of a man's skull being crushed be so deliciously captured in the sound of a small metal hammer striking a melon, a Brown favorite.

Presiding over this dark world of sound was the show's famous host, Raymond. Played most notably by Raymond Edward Johnson (1941-1945), Raymond was the source of much of the program's black humor as he ushered listeners in and out of the creaking door with a series of ghoulish puns ("Quiet now—no 'coffin.' We have 'grave' matters to uncover") and doubtful morals ("Careful the next time you ask your wife to 'pass' the knife. She may do it—right through you. Good Niiiiight!") The tradition of the sardonic host to horror would find equally memorable expression years later in American popular culture in figures such as the Cryptkeeper in EC Comics and Rod Serling in television's *The Twilight Zone*, but the stories introduced by Raymond were unique in their ability to arouse and exploit audience fears of the supernatural before ultimately providing a "realistic" explanation. As otherworldly as the universe of the *Inner Sanctum* sometimes seemed for most of the tale, events were always finally shown to be the result of a very human combination of folly and foible—of greed, ambition, and just plain bad luck.

The show's self-imposed need to create situations which were as outlandish as possible and yet capable of such "rational" explanation in the final moments led to some of the most wildly improbable twists and turns imaginable, and it is this element which makes the series both memorable and campish simultaneously. It is also for this reason that the creative peak of the program is usually regarded as the early series of episodes performed by Boris Karloff and Peter Lorre and based upon classic works by Poe and Maupassant, skilled practitioners of the peculiar art of "realistic horror."

In its unique mixture of horror and humor, classics and camp, the supernatural with the everyday, *Inner Sanctum* helped shape the face of popular horror in all media—even in its own time promoting a whole set of *Inner Sanctum* novels and occasional movies. And yet the series can also be fondly recalled today as a program which exploited the basic elements of radio perhaps more than any other show, taking an entire generation of listeners deep into the "inner sanctums" of their own imaginations.

## The Internet

The term didn't appear in a major American newspaper until 1988, but the Internet has become the most powerful individual electronic communications network in the world's history. From high-pressure advertising to a brief message from a political prisoner, Internet e-mail and World Wide Web sites make it possible for anyone with a computer, software, and an appropriate connection to speak to the world at the speed of light with the touch of a keypad. In the process, the Internet has added a host of new phrases and words, such as information superhighway, spam, hyperlink, chat rooms, flames, and dotcom, into the English language and revolutionized the culture. It has also led to serious concerns about the ready access it provides to pornography, violence, and hate literature, the loss of personal privacy it has occasioned, the spread of mis- and dis-information, and the future of books, newspapers, and magazines. Yet, efforts were underway at the end of the twentieth century to increase the transmission speed of Internet connections still further, and to create a second Internet, both of which would provide computerized copies of entire feature films and books in seconds and make possible the first practical mix of moving images, sound, and the printed word.

The telegraph, or the Victorian Internet, as historian Tom Standage has called it, was the antecedent of the Internet. The earliest scheme for using electricity to send messages appeared in a British magazine in 1753, and two French brothers transmitted the first electronic message in 1791, but it was American inventor Samuel F. B. Morse who gave the United States Congress an opportunity to buy outright his patent to the telegraph technology in 1844. The government failed to see the advantage of a single, standardized electronic communications network, however, and thousands of privately owned telegraph companies resulted before they were gradually purchased or put out of business by the telegraph monopoly, Western Union. In turn, the monopoly provided everything from the first professional National League baseball scores in 1876 to breaking the news of the bombing of Pearl Harbor in 1941 and the sending of love messages, all at a low, nearly universal cost. The American Telephone and Telegraph (AT&T) system, developed in the wake of Alexander Graham Bell's patent of the telephone in 1876, became the standardized telephone monopoly, controlling long and most short distance communication for radio and television networks and interpersonal information consumers.

One factor common to the telegraph and telephone was that neither could work without interconnection. A telephone without someone to call is useless. Even the first cumbersome, room-sized electronic computer, however, developed by Iowa State University physicist John V. Atanasoff between 1939 and 1942, could function alone. As a result, it took longer for people to recognize the advantages of computer networks. In 1964, a group of scientists at the

RAND Corporation conceived of a configuration of computers interconnected by pathways similar to telephone lines as a means for military personnel to communicate following a nuclear war. Such an occurrence would have disrupted standard military communication channels, preventing surviving military personnel from coordinating a response. Such a network would not have a central station and thus could continue operating even if major portions were destroyed.

In 1969, Advanced Research Projects Agency Network (ARPANET) was created as a system of 20 individual computer stations, or nodes, located at various distances from one another. Each node used a common language, or control protocol, that allowed it to communicate electronically, and a transmission protocol that made all nodes equal rather than a central station hierarchy. By using special connections between the nodes, messages could be sent from one place to another on a number of pathways. Even if several nodes were destroyed in an attack, messages could still be transmitted as long as there was at least one remaining pathway. Both AT&T and Western Union had developed multiple contingency plans for their systems, but they required block-long manual switchboards in central locations vulnerable to attack. ARPANET, however, could re-route critical messages between nodes and around interruptions instantaneously, without any human intervention.

Three years later, 46 university and research organization networks were added to the system and ARPANET began to grow, as the Internet would, by chance rather than design. Perhaps one of its strongest appeals was that no one could predict accurately its future. UNIX was developed as a common operating system language in 1972. Branches with names such as Bitnet and Usenet were developed, attracting new users. Rapid communication characteristics allowed the first computerized electronic mail—e-mail—as researchers corresponded with each other. Group e-mails could be sent simultaneously at the touch of a key, eliminating the age-old need for duplicate messages to be created. Discussion areas, called news groups, allowed users to meet with others interested in specifically designated topics. The decentralized Jeffersonian democracy of the Internet held appeal for Americans in the 1970s and 1980s, the decades of individualism and corporate downsizing. The decline of Western Union and the court-ordered breakup of AT&T in 1982 only added to the attraction of a communications system without a central station or control. There were 500 host computers on the Internet, as some people were calling it, by 1984.

In spite of its wider advantages, the growth of the Internet was tightly controlled by the military during its first years. The Department of Defense did permit university nodes to share supercomputing resources, reducing the need for physical travel. That allowed researchers to perform complicated computerized research at a fraction of the otherwise expensive cost of main-frame computing machines. However, the news groups and university research-oriented networks such as CSNET (Computer Science Network) and NSFNET (National Science Foundation Network) soon began to overtax the system in the 1980s, dictating a new addressing system that allowed users to distinguish between government or educationally-endorsed content and content generated by individuals or groups without sanction or authority. The new addressing system allowed the Internet to evolve from a medium for simple back-and-forth messages such as the telegraph and telephone to one capable of providing a more complex mass audience content, similar to small-scale publishing or broadcasting. The glut of the new network traffic inspired the military to

develop a new network for itself and the use of the ARPANET declined until it ceased to exist in June 1990. But the military left a deep impression on the Internet before it left. Beyond the Internet's decentralized structure and the teaching of three generations of computer scientists in the difficult art of computer networking, the military helped spawn startup computer network companies such as 3Com and the manufacturer of Ethernet.

Meanwhile, major developments were taking place in computer hardware and software that would broaden the appeal of the Internet. Marcian Hoff, Jr. of Intel Corporation combined several integrated electronic circuits into a tiny piece of electronics called a microprocessor in 1972. The new chips performed arithmetic and logic functions and could be programmed just like traditional, more expensive wired circuits. The availability of the new Intel microprocessor attracted the attention of computer hobbyists and home experimenters such as Stephen Wozniak and Steven Jobs, who began marketing the Apple I in Wozniak's garage in 1976 and created the Apple Macintosh in 1980. Mainframe computer manufacturer IBM unveiled its own "micro" computer in 1981, employing an operating system provided by Harvard University dropout Bill Gates. Within a few years, Apple and IBM had created a market for a previously unknown product, the personal computer. Other manufacturers, including Dell, Hyundai, and Gateway, joined the fad, selling inexpensive "clones" of the IBM PC, and software writers developed thousands of programs to use on the new machines, from computerized spreadsheets and word processors to a wide variety of mind-boggling games. But until the Internet, one of the greatest strengths of personal computers, communication, remained largely untapped. In fact, software baron Gates actively opposed the Internet until 1995.

As the military backed away from the Internet in the 1980s, the content evolved from serious, often computer-related topics to material more representative of popular American culture. Not surprisingly, the first three alternative news groups, known as alt. groups, were alt.sex, alt.drugs, and alt.rock and roll. The High Performance Computing Act of 1991, sponsored by then U.S. Senator Albert Gore, opened the Internet to elementary and high schools and community colleges. The telephonic backbone of the Internet enabled it to spread from the United States to other countries that had existing systems coupled with political systems that allowed at least a limited form of free speech, and the Internet became truly global by the late 1980s. The growing Internet audience attracted new application developers, people whose aspirations went beyond data processing to providing uses such as education, reference, and entertainment. Businesses also began logging onto the Net, as it was being called, to conduct research and share information. The National Science Foundation accepted the task of managing the Net's backbone in 1987, but its task was just that—to manage, rather than control, the growth. The speed at which the quantity and variety of information became available was so dramatic that published directories could not keep up with it. Computerized organizational systems such as Archie, named not after the comic-book character but as a version of the word "archive," Wide Area Information Servers or WAIS, and Gopher, named after its creator University of Minnesota's mascot, became the first "search engines," providing databases of various Internet resources broken down by categories, subjects, and locations.

By the end of the 1980s, the Internet had most of the hardware technology it needed, but it lacked visual appeal or any demonstrable

superiority other than speed over print. Screens were limited to two colors, crude illustrations often created by alphabetic letters, and unattractive computer-style typeface. One solution was the introduction of the World Wide Web (WWW) in 1989, in which vast amounts of information, including graphics and print-style type faces, could be delivered. Another was the advent of hypertext markup languages (HTML) in 1991. The term "hypertext" was coined by Theodor A. Nelson in 1972 and meant information referencing. For centuries, print authors had used internal text references or footnotes to direct readers to related or supportive information, but the process of finding those materials could take days, months, or even years. Clicking with a mouse on a hyperlink, a highlighted or underlined passage in a Web text, could speed a reader to related information instantaneously. The process was manipulative in that the links were chosen by an author, and often confusing since there was no predictable, logical basis for the order of documents consulted. Nonetheless, readers had never before been able to check the veracity or gain a more detailed explanation of information presented to them so quickly and effortlessly. The process of hyper-linking between all of the files and directories of the Internet, as if it were one large computer, was simplified in 1992 when the National Center for Supercomputing at the University of Illinois wrote and released the first Web "browser" Mosaic, software that allowed Web users to switch between Web sites more easily. The Illinois program evolved into the Netscape Corporation in 1994.

The proliferation of personal computers and modems, electronic devices that allowed differing types of computers to communicate with each other over telephone lines, accelerated the growth of the Internet. The number of host computers on the Net rose from 80,000 in 1989 to 1.3 million in 1993, 2.2 million in 1994, 10 million in 1996, and perhaps 50 million by the end of the century. The first movie, *Wax: Or the Discovery of Television Among the Bees*, was "Netcast" in May 1992. Presidents had complained about a lack of access to the American electorate since George Washington, but Bill Clinton became the first to provide a daily perspective on his administration on a mass basis via a White House Web site in 1993. Congress followed suit a year later along with thousands of federal, state, and local agencies, and politicians. The first "Wanted" poster was posted on June 24, 1994, the same year the first computer radio station went on-line, and the first music concert (the Rolling Stones from Dallas' Cotton Bowl) was shown live. Libraries began offering Web versions of books, and newspapers and magazines, the last bastion of print culture, began putting their contents on line for free. The latter practice helped stimulate advertising on the Internet, first made possible in 1991. Internet ads were an anathema to traditionalists but the only practical means of supporting expensive commercial ventures such as news-gathering organizations. Even by the end of the twentieth century, subscription fees for services other than expensive, large-scale databases were few and far between on the Web. The *Wall Street Journal* was the only major newspaper or magazine to be profitable, charging an up-front subscription fee for its Web site. The growing commercial character of the Internet was acknowledged in 1995 when the National Science Foundation backbone became commercially supported. An Internet Activities Board (IAB) guides the evolution of the Internet, the Internet Address Network Authority (IANA) assigns network numbers, and a hired private company, Network Solutions, Inc., registers Web site names.

Like the personal computer and software industries, the Internet created new dynasties of American wealth. When tax preparation firm H & R Block purchased CompuServe in 1980, no one expected that the unknown computer time-sharing company would one day account for one-third of its parent company's profits. CompuServe was joined in the national on-line computer bulletin board industry, made possible by improvements in personal computer modems, by a specialized bulletin board service for Commodore users, an early PC competitor of the Apple, that had developed a graphical rather than letterset user interface in 1985. The firm evolved into an Apple and Windows bulletin board server known as America Online (AOL) by 1993. Both CompuServe and AOL began offering Web access and by 1996, AOL accounted for 55 percent of all household usage of the Web or proprietary consumer services. AOL bought CompuServe in 1998 and purchased Netscape the following year, generating tremendous proceeds each time. The profit turnaround was even quicker for the founder of Netscape, Jim Clark, who became an instant billionaire in 1995 when his company went public. Two Stanford University students, Jerry Yang and David Filo, made \$65 million dollars each in one day when their Internet search engine company, Yahoo! went public in April 1996. The stock of online auction house eBay, one of a growing number of Internet companies known as dotcoms, increased 2,000 percent in value in less than a year when it went public in 1998, and the stock of other new Internet companies frequently doubled or trebled in price overnight upon going public. Not to be outdone altogether, the public jumped on the Internet financial bandwagon at the turn of the century by buying and selling securities through economical on-line brokerage firms offering margin loans. Unfortunately, trades still had to be transacted by human brokers, raising concerns among the Securities and Exchange Commission that orders were not being acted upon as quickly as they could or that traders would inadvertently plunge themselves into debt. And new Internet companies such as Amazon.com promised, but have not always delivered, massive profits in the brave new world of e-commerce.

With the advantages of the Internet have come numerous societal concerns. The FBI and police added computer specialists to their ranks to deal with on-line paedophiles and stalkers and established special centers to handle Internet fraud cases. Historically, pornography has often been one of the first areas to be exploited by a new mass communication technology and the Internet has been no exception. The pervasiveness of sexually explicit images induced Congress and President Clinton to approve the Communications Decency Act of 1996, which prohibited indecency on the Internet to persons under 18. The Supreme Court declared most of the law unconstitutional the following year. Ironically, the House of Representatives was considering a replacement act in September 1998, at the same time that the explicit Kenneth Starr Report on President Clinton's sexual indiscretions was released to the general public on the Internet by Congress. The shooting deaths of 12 Colorado high school students in 1999 took on an additionally tragic aspect when it was discovered that one of the student murderers had an AOL Web site critical of athletes and African Americans and laden with information on anarchism and bomb construction.

From their first widespread instance in 1988, viruses became a scourge to computer users as they were spread exponentially via the Internet. Virus-protection software became a necessity that fueled a new industry as professionals sought to keep up with amateur virus

creators. Chat rooms and other forms of "cyber"-conversation renewed concerns about how people were spending their time. More than 50 million people sent e-mails in 1996, but the seductive genie of computer messaging has encouraged stream-of-consciousness bursts that often involved inadvertent shedding of inhibitions. Software billionaire Bill Gates saw a series of blunt e-mails between his executives become a smoking gun in an anti-trust case against Microsoft. All of these concerns were made more difficult to regulate or censor due to the decentralized nature of the Internet. Efforts by the Federal government and microprocessor manufacturer Intel to provide discrete identification of Internet users met with resistance from privacy advocates.

With the Internet still a relatively new medium of communication at the dawn of the twenty-first century, there were many grandiose predictions for its future. Part of the American economic expansion of the 1990s was based on the prospects of Internet-related companies such as Yahoo!, Netscape, AOL, Amazon.com, and eBay, but critics warned of an Internet bubble that could lead to a general economic downturn much like earlier technology booms such as electricity and defense spending. Cable and telephone companies positioned themselves to provide so-called broadband and DSL Internet service, persistent 24-hour lines that allow instant Internet access without the necessity of individual modem connections, at speeds fast enough to allow downloading of full-length movies, books, and other large files. WebTV and other new companies were banking on an Internet-television hybrid. An initiative started by 34 universities in 1996, Internet2 will be a high-bandwidth computer network allowing real-time video streaming and 24-hour user access. The Internet is a story of luck and hard work by many, but it recognizes and plugs into a basic human need: as an unknown e-mailer paraphrased French philosopher Rene Descartes, "I post, therefore I am."

## Intolerance

*Intolerance* (1916) is one of the first great American epic films. Over three-and-one-half hours long, it has a complex narrative which consists of four separate melodramatic plots. Each is set in a different era, and all four are intercut to create a complicated historical critique of injustice and intolerance throughout the ages. Three of the stories concentrate upon the effects of historical events upon ordinary people.

D.W. Griffith, who has been called the father of the American Cinema, was America's first great movie showman, and the first director who saw moviemaking not merely as entertainment but as an important art form. Stung by charges of racism leveled at him by the critics for his first important feature, *Birth of a Nation* (1915), Griffith responded by making *Intolerance*, a film of a complexity and scale never seen before this time—a film so grand in its conception that the original rough cut was, according to film historian David Cook, eight hours long. Although it was a critical success and is considered a masterpiece of the silent cinema, the rather preachy *Intolerance* was not a success at the box office.

## Invisible Man

First published in 1952, Ralph Ellison's (1914-1994) *Invisible Man* revolutionized the literary and cultural world by examining the near-total lack of awareness of African Americans that pervaded mainstream society. One of the most widely read novels in American literature, *Invisible Man* has been translated into at least 15 languages and has undergone numerous printings and special editions. It has been called the *Moby Dick* of the twentieth century—epic in scope, mythic in subject, and classic in structure. Part of its appeal lies in its quintessentially American theme: the quest for identity. What distinguishes Ellison's treatment of this theme is his bold creation of a central character who is black and unnamed, everyman and no one.

Foregrounding black identity while universalizing the central character on his quest for self-realization, the text expands the

horizons of the American hero to include racial difference. By naming the invisible condition of his central character, Ellison broke barriers of silence and challenged traditional representations of African Americans, anticipating the movement for racial equality of the 1960s.

The book's central metaphor of the "invisible man," however, raises many questions, as Susan Parr and Pancho Savery point out. Particularly important is the question of how best to view the novel: should it "be valued primarily as a work with universal implications, as an example of the best that the American literary tradition offers, or as a representative of black American fiction?" To what extent do the social and political issues represented in the text contribute to its power? Given the nonfictional parameters of these social issues, should the novel be judged by aesthetic or sociological terms? That this novel has opened up these questions points to its importance in helping to shape a continually evolving American identity.

Built on a classical three-part structure consisting of a prologue, a 25-chapter narrative, and an epilogue, the book is narrated in first person by an unnamed narrator and follows a circular rather than linear trajectory. The prologue begins with the narrator's announcement of the book's major interrelated themes of identity and race, innocence and experience, and rebirth and transformation. "I am an invisible man," he says, and the reader enters into the world of the narrator after the series of events about to be told have already taken place. Elaborating on his condition of invisibility, the narrator goes on to say "That invisibility to which I refer occurs because of a peculiar disposition of the eyes of those with whom I come in contact. A matter of the construction of their inner eyes, those eyes with which they look through their physical eyes upon reality." Thus stated, Ellison's narrator brings to light unspoken tensions generated by divisions of race and class.

Much like a bildungsroman, the novel traces the development of the narrator as a young man who believes in the possibility that hard work will reward him with success, through a number of painfully illuminating episodes. Although he retains his innocence through disillusioning experiences, he does mature and undergoes rebirth. From his Southern hometown of Greenwood, he travels to Harlem, and passes through a series of initiations into adulthood. These adventures are often represented as surreal and dream-like, narrated in an energetic and intense voice, often punctuated with humor as he makes observations about white culture and learns more about black history.

Among his most pivotal early experiences is the death of his grandfather, who first opens the young boy's eyes to the fact that appearances do not always represent reality. Following this are his humiliating experiences at a "battle royal" and public speaking contest, which results in an award which sends him to college. Ultimately expelled, he finds his way to Harlem, where he works in a paint factory that blows up, joins "The Brotherhood" of the Communist Party, and eventually returns to the basement where the reader first met him in the prologue. Pondering his condition, he is matter-of-fact: "So, there you have all of it that's important," he says, "Or at least you almost have it. I'm an invisible man and it placed me in a hole—or showed me the hole I was in." Devoid of anger or self pity, the narrator remains philosophical, recognizing that "the world is just as concrete, ornery, vile and sublimely wonderful as before, only now I better understand my relation to it and it to me."

*Invisible Man* is thick with allusions to other texts, literary, philosophical, political, and psychological. Ellison draws from sources as diverse as classical European texts, major American works of

literature, African American literature and folklore, Native American mythology, children's games, sermons, blues and gospel music, as well as his own experience. Music plays a major role illuminating some of the book's major themes. Ellison himself identified five works as essential background reading to *Invisible Man*: Melville's *Moby Dick*, Malraux's *Man's Fate*, Stendhal's *Red and the Black*, Twain's *Huckleberry Finn*, and Dostoevsky's *Brothers Karamazov*. In short, as Mark Busby writes, "Ellison uses everything he knows, not to prove anything to anybody but to exploit as fully as possible the artistic materials he is conjuring—to render Harlem with enough accuracy that Harlemites who read the book would recognize the place. . . ."

Ellison was awarded the National Book Award for *Invisible Man* (his only novel) in 1952. His other work includes two collections of essays, *Shadow and Arts* (1964) and *Going to the Territory* (1986), which were republished posthumously in 1995 under one title, *The Collected Essays of Ralph Ellison*. A collection of short stories, *Flying Home and Other Stories*, was also published posthumously in 1996.

## Iran Contra

No other scandal in American history has had such far-reaching complexities with so few consequences as the Iran-Contra scandal that plagued presidents Ronald Reagan and George Bush in the 1980s.

During the presidency of Ulysses S. Grant, corruption was the order of the day, and cabinet members and federal judges were forced to resign to avoid impeachment. Grant prudently decided not to seek a third term. Warren G. Harding, considered by most scholars to be the worst president of all time, was spared removal from office only by

his death. His wife then burned his papers to spare what was left of his reputation. Richard Nixon was not so fortunate. Once he was ordered to release tapes of conversations conducted in the Oval Office that revealed a coverup of the Watergate hotel break-in, Nixon reluctantly resigned. Bill Clinton was dogged by opponents from the point that he became the frontrunner in the 1992 presidential campaign. While he survived the Whitewater scandal, in 1998 he became only the second president to be impeached when he was accused of lying under oath about having an affair with a White House intern. Both Ronald Reagan and George Bush, however, survived their presidencies with few scars. Unlike the Watergate defendants, the Iran-Contra defendants escaped prison terms.

On the surface, Iran Contra was an arms-for-hostage exchange. Upon closer examination, it was much more. President Ronald Reagan and his advisors chose to sell arms to Iran, a designated enemy of the United States, in order to finance the activities of the anticommunist insurgents known as the Contras in Nicaragua. While noted scholar Theodore Draper wrote in his extensive study of the Iran Contra affair that "selling arms to Iran and funding the Contras was two separate operations carried out by the same Reagan errand boys," they were inherently connected because the Reagan administration could not have financed the Contras without the proceeds from the arms sale.

In November of 1986, a Beirut magazine broke the story that the United States had sold arms to Iran despite an embargo against such activities that had been in effect since 1979. The American public later learned that after arms were shipped to Iran through Israel, American hostages were released. While still reeling from the repercussions of this story, the Reagan administration was forced to admit that it had used from 10 to 30 million dollars of the money from the arms sale to finance the Contras' battle against the Sandinista-led government in Nicaragua, even though both groups had been charged by international groups with human rights violations. Later Reagan wrote in his memoirs that he believed that dealing with the moderates in Iran would open up channels of communication. Critics argued that the action took place simply because it was a pet project of the president's; and when Congress refused to appropriate the money, Reagan looked elsewhere for funds.

Other than Ronald Reagan and Vice President George Bush, the chief players in the Iran-Contra scandal were Bud McFarlane and John Poindexter, both national security advisors, and Oliver North, a mid-level member of the National Security Council staff. A subsequent congressional investigation determined that the three were the "ringleaders of a cabal of zealots who were headquartered in the National Security Council (NSC)." The common consensus was that the three believed higher-ups who told them that selling arms to Iran was a way of easing existing hostilities. While North and Poindexter took advantage of the Fifth Amendment's protection from self-incrimination during the investigations, McFarlane talked to members of Congress. He later attempted suicide when faced with the repercussions of the scandal. Oliver North, who was considered by many to be a fall guy for the entire affair, became a cult hero and escaped prison when a federal judge handed down his judgment: three suspended sentences, two year's probation, \$150,000 in fines, and 1200 hours of community service. In 1992 Admiral John Poindexter was found guilty on five separate charges, and Caspar Weinberger was indicted on charges of perjury and making false statements

Oliver North being sworn in during the Iran Contra Hearings.

during the inquiry. Nevertheless, in 1992 outgoing president George Bush quietly pardoned McFarlane and the others who had been found guilty on Iran-Contra charges. Both the Tower Commission appointed by Ronald Reagan and a subsequent investigation by Special Prosecutor Lawrence Walsh revealed serious misconduct throughout Iran-Contra activities.

In his autobiography, Oliver North admitted that Ronald Reagan knew everything that was going on from the beginning. Whether Richard Nixon had known what was going on from the beginning had been instrumental in his eventual resignation. Robert Timberg argued that there were inherent similarities with the Watergate scandal: abuses of authority existed in both; a bunker mentality was prevalent in both; presidential coverups followed the unveiling of the facts in both; Oval Office tapes proved involvement and coverups in both; televised hearings were held in both; and world-class irresponsibility permeated both. Nixon, he wrote, was smart but paranoid. Reagan was not nearly so smart; yet he was charming and made a slicker getaway. Whatever his reasons for engaging in the activities of the Iranian hostage deal and funding the Nicaraguan Contras, Ronald Reagan admittedly did both. Later investigations revealed that George Bush had been privy to the activities from the beginning. Both finished their terms while retaining the respect of the American people. It will be left to future scholars with the benefit of hindsight to understand why.

## Iron Maiden

Perhaps the quintessential heavy metal band, Iron Maiden has sold more than forty-five million records worldwide, remaining the object of a faithful international fan base since the early 1980s. Numerous hit singles and platinum albums have also attested to the consistence of the listening habits of metal fans long after the much-maligned genre had ceased to make headlines in the music press. Ditching the more bluesy grooves of hard rock bands from the 1970s such as Deep Purple and UFO, Iron Maiden came up with a faster, riff-laden, yet melodious song structure which set the standards for what most listeners came to understand to be heavy metal. A marked preference for lyrics grounded on horror, mythology, wars, and history became another of the genre's key reference points, not to mention gargantuan onstage production values and globe-trotting concert tours.

Iron Maiden was formed in London in 1976 by bassist Steve Harris. At the height of the so-called "punk revolution" spearheaded by Sex Pistols and The Clash, Harris persisted with heavy metal through constant lineup changes and difficulties in finding performing venues. By the time both punk and disco were on the decline, however, Harris had managed to recruit more reliable group members, including singer Paul Di'Anno and lead guitarist Dave Murray. After playing the club circuit, the band began to generate some minor attention in the press, and produced an independent three song record in 1979. The single pressing of three thousand copies sold out so quickly that EMI offered them an album deal.

The early 1980s marked what the British press dubbed the "New Wave of British Heavy Metal": Iron Maiden, Def Leppard, Saxon, and other bands began to storm into the domestic charts and soon enjoyed international success. Heralded by the hit single "Running Free," from *Iron Maiden* (1980), their self-titled debut album, reached an impressive fourth place in the UK charts. This allowed the band to enlist the services of producer Martin Birch for their second album, *Killers* (1981). Birch had been at the helm of some classic Deep Purple albums in the 1970s and proved himself capable of bringing out the best in the band. Elaborate introductions and solos and an overall "cleanness" of sound became trademarks which countless musicians soon attempted to emulate. Harris always remained at the creative center, writing most of the songs, but the lineup now also featured a second lead guitarist, Murray's longtime friend Adrian Smith, who would write and co-write some of the band's greatest hits such as "Wasted Years" and "2 Minutes to Midnight." Early on, Maiden began to be identified with its fictitious mascot, "Eddie," a mummified zombie designed by artist Derek Riggs and featured on all their album covers. The band began playing larger venues in Europe and the United States, touring in support of Kiss and Judas Priest, and discovered the fanatical enthusiasm of their Japanese fans after a number of headline appearances in Japan. Surprisingly, at the end of the tour, Di'Anno departed, citing stress and exhaustion.

Former Samson singer Bruce Dickinson joined the band in 1981. The energetic and charismatic frontman became an immediate favorite with fans and indelibly embodied Iron Maiden's mainstream success in the 1980s. An accomplished songwriter with powerful, semi-operatic vocal skills and manic stage antics, Dickinson is also one of rock's most imitated singers. *The Number of the Beast* topped the UK charts in 1982, and the album's Satanic-themed cover and title song generated considerable outrage among conservative groups in numerous countries. Iron Maiden soon became a household name, alongside those of Black Sabbath, Ozzy Osbourne, and AC/DC whenever the supposedly harmful influence of heavy metal on young listeners became an issue of heated debates.

The album *Powerslave* (1984) probably saw the band at its peak in the studio, with exemplary instrumental passages that culminated in the thirteen-minute epic "The Rime of the Ancient Mariner," based on the Samuel Taylor Coleridge poem. *Powerslave* led to a mammoth-scale, year-long world tour—ambitiously labeled the "World Slavery Tour"—and sell-out crowds on four continents. A tradition of sorts was also inaugurated in 1984 when Maiden played a pioneering tour of Poland at a time when, among renewed international heights of nuclear fear, virtually no other Western artists ventured beyond the Iron Curtain. Over the years, the band would constantly

Members of the band *Iron Maiden* (l-r) Adrian Smith, Bruce Dickinson, Dave Murray, Nicko McBain, and Steve Harris.

make an effort to “brave” new territories previously ignored by other bands, such as Moscow, Istanbul, and even war-torn Sarajevo. Another high point of their 1984-85 tour was an appearance at the megalomaniac “Rock in Rio” festival in Brazil, in front of an estimated crowd of two hundred thousand people.

After five consecutive platinum albums in the United States, Iron Maiden saw local musical tastes shift toward the more commercial sounds and glamorized looks of groups like Bon Jovi and Cinderella. The band’s popularity dwindled in North America during the late 1980s and early 1990s, but its international following remained strong, as evidenced by two headline appearances at the annual “Monsters of Rock” festival in Donington, England, in 1989 and 1992 in front of one-hundred-thousand-plus crowds. In 1993, Dickinson announced his departure after eleven successful years, leaving for a more low-profile solo career. The search for his replacement began through an international contest sponsored by the band, resulting in thousands of tapes being sent in by would-be rock stars. Blaze Bayley, formerly with Wolfsbane, was ultimately announced as the new singer. With the retirement of Martin Birch, Harris himself was now at the helm producing the band’s records and videos.

Apart from Birch, another backstage personality who played a key role in the lasting success of Iron Maiden was manager Rod

Smallwood, the man who, from the beginning, ran the band’s financial and commercial arm, Sanctuary Music. In the late 1990s, Sanctuary was also managing a number of other bands—whose records were sometimes produced by Harris—and even entered London’s stock market in an ambitious (and successful) move. Maiden also proved to be multimedia-savvy with the creation of a state-of-the-art video game featuring Eddie and by re-releasing all of its albums in enhanced CDs containing the band’s music videos.

## Ironman Triathlon

The Ironman Triathlon, arguably the world's toughest endurance competition, has come a long way from very humble origins. In 1977, a group of recreational athletes and naval officers in an Oahu bar got into a dispute over who was the better athlete—the runner, the swimmer, or the cyclist. Trying to resolve the argument, Naval Commander John Collins jokingly proposed a race combining the 2.4 mile “Waikiki Roughwater Swim,” the 122 mile “Cycle around Oahu,” and the Honolulu Marathon. A year later, 15 bold adventurers gathered on a Waikiki beach to attempt the first Ironman Triathlon, unaware they were to become a part of history. By the early 1990s, the annual Hawaii Ironman had become an internationally-televised professional competition, and the Holy Grail for hundreds of thousands of triathletes worldwide. It had also helped transform the world of exercise, inspiring the entire concept of cross-training and countless other multi-sport events.

Triathlons first gained recognition in 1979, when *Sports Illustrated* published an article on the second annual Hawaii Ironman. The next year, a highlight package was aired on ABC's *Wide World of Sports*. Although the Ironman was presented as an obscure competition for only the most obsessed athletes, the telecast still helped

Natascha Badmann wins the women's division of the 1998 Hawaiian Ironman Triathlon.

launch hundreds of other multi-sport challenges. In 1981, the Hawaii competition was moved from Waikiki to the Kailua-Kona on the Big Island, to take advantage of the spectacular backdrop of open shores and lava fields. But it was the telecast of the dramatic 1982 Hawaii Ironman that truly placed triathlons in the public conscience. Just two miles from the finish line, women's leader Julie Moss collapsed, in severe glycogen debt, but refused to accept any medical attention. She staggered over the final two miles, literally crawling to the finish line as Kathleen McCartney passed for the victory. Viewers around the world watched in awe, wondering not only whether she would finish the race, but whether she would survive. The next year, the field of competitors doubled and over 12 million people tuned in for the live telecast. The popularity of triathlons skyrocketed through the 1980s, resulting in the establishment of other major Ironman races, a World Cup Circuit of shorter races, and thousands of multi-sport events for more recreational athletes. The multi-sport craze swept the world, inspiring other “extreme” adventure races, like the multi-day Eco-Challenge and the Raid Gauloises, combining trail running, cycling, mountaineering, paddling, and sometimes even sky-diving.

By the late 1980s, triathlons had become both a professional competition, where full-time athletes competed for prize money and sponsorship, and the ultimate challenge for the amateur athletes. The Hawaii race, with its mumuku headwinds and searing temperatures, often reaching into triple digits along the lava flats, remained the main event; just to enter, competitors had to either qualify at a national competition or hope for one of the coveted lottery spots. As the competition grew, being a triathlete came to require more than a large lung capacity and a large threshold for pain; it required a large wallet. A week in Hawaii plus all the equipment—including titanium bicycles, wetsuits, shoes, accessories like heart-rate monitors, and enough food to replace the 5000 calories a triathlete might burn in a day of training—could cost thousands of dollars. The Ironman slowly became a sport for the rich, a status symbol for business executives and athletes in other disciplines.

The competitive men's field was dominated by six-time winners Dave Scott and Mark Allen throughout the 1980s and early 1990s. In the dramatic 1989 Hawaii Ironman, Allen narrowly edged Scott after racing side-by-side for nearly eight hours. Scott made a miraculous comeback in 1994, returning at the age of 40, after a two and half year retirement, to place second. The competition increased throughout the 1990s, and the winning time dropped substantially. Luc Van Lierdes' record 8:04 hour time set in 1996 is over three hours faster than Gordon Haller's 1978 winning time. The improvement over the years in the women's field was even more remarkable. In 1992, eight-time winner Paula Newby-Fraser finished in just under nine hours, an astonishing four hours faster than Lyn Lemair, the first female winner in 1979.

In 1998, the Hawaii Ironman celebrated its twentieth anniversary. In just two decades, it evolved into the world's most recognized endurance race, with 1,500 competitors, including 140 professional triathletes, competing for pride and \$250,000 in prize money. During its 20 years, the multi-sport race has completely transformed the world of exercise, spawning the entire concept of cross-training and capturing the imagination of both recreational and professional athletes around the world. The simple bar bet also received its ultimate compliment, when a shorter version of the competition became an official medal sport for the 2000 Olympics in Sydney, Australia.

## Irving, John (1942—)

The novels of John Irving have been regular bestsellers ever since *The World According to Garp* won international acclaim in 1978. Irving's first novel, *Setting Free the Bears* (1968), established many of the fictional characteristics that would earn him critical and popular favor in works that include *The Hotel New Hampshire* (1981), *The Cider House Rules* (1985), *A Prayer for Owen Meany* (1988), and *A Son of the Circus* (1994). Believing that "exquisitely developed characters and heartbreaking stories were the obligations of any novel worth remembering," Irving is a comic novelist whose books are distinguished by engaging heroes and detailed plots. Thematically, many have returned to issues of parenthood, children, the relationships between men and women, and the entanglements of sex. Irving's novels have sold in their millions and both *The World According to Garp* and *The Hotel New Hampshire* have been made into films.

## *It Happened One Night*

A spoiled and willful young heiress, cocooned from reality by bodyguards and her father's trillions, jumps ship off the Florida coast when her father wishes to have her recent unconsummated marriage to a gold-digging roue annulled. Her worried father hires detectives to comb the land for his runaway daughter, offers a hefty reward for news of her, and has headlines blazon her disappearance while she sets off to reach New York by cross-country bus—her first foray into the real world of ordinary people. She runs into difficulties and a broke, straight-talking journalist who has just been fired. He recognizes her, spots a scoop, and escorts her through a series of adventures to the obligatory climax of temporary misunderstandings and true love.

Such are the bones of *Night Bus*, a short story by Samuel Hopkins Adams that, retitled *It Happened One Night*, became not only one of the most successful, enduring, and best-loved romantic comedies of all time but—as written for the screen by the accomplished Robert Riskin, directed by Frank Capra with a sure sense of its characters, its comedy, and its humanity, and played with irresistible charm and polish by Clark Gable and Claudette Colbert—was arguably the most influential contribution to screwball comedy.

Screwball was a genre born of the troubled times of the Depression to provide a perfect escape from the humdrum into a celluloid world teeming with glamor, wealth, romance, and laughter. Curmudgeonly or eccentric, but never dangerous, characters supplied a thread of reality. The films satirized the rich in an era of poverty, but did so with affection, often creating a happy alliance between the idle rich and the ordinary working person. Heroines were spirited, independent-minded women, a liberating departure from the sweet-natured and compliant wives or girlfriends, hard-bitten molls, or fallen women who were the staple characters of pre-1930s cinema, and the "feel-good" plot resolutions were always arrived at via comedy, often so screwy as to give the genre its name, but constructed, in the best of them, with infallible logic and sincere conviction.

*It Happened One Night* conformed gloriously to the rules, and did so with seamless panache. Gable's middle-class journalist, virile, opportunistic, and commanding, gets more than he bargains for from Colbert's heiress, whom he addresses as "Brat" throughout but who turns out to have unexpected wit and intelligence. In a series of inspired sequences that have become justly famous anthology pieces, the pair constantly turn the tables on each other. The best known of these are the "walls of Jericho" and hitchhiking scenes. In the first, he turns the tables on her apprehensive suspicions by lending her his pajamas and stringing a blanket between two beds in a room they're forced to share (Gable's removal of his shirt to reveal a bare chest famously sent the sales of undershirts plummeting); in the second, she triumphs, seductively hitching her skirts to get them a ride after his self-proclaimed expertise with his thumb has failed to stop a succession of vehicles.

The chemistry between Gable and Colbert is potent, a battle of the sexes in which acid insults give way to warm wisecracking and then to a beguiling sweetness and vulnerability in both of them. Aside from the major set-pieces, the film offers a cornucopia of treasureable lunacies—Alan Hale's singing crackpot who gives them a ride; Colbert's unsuitable suitor clad in top hat and tails piloting himself to their wedding in a gyroplane; Gable and Colbert fooling detectives by faking a blue-collar marital row, to mention but three. Amidst the comedy Capra, always a devoted chronicler of the common man, introduces an episode on the bus when a group of passengers play and sing popular songs. Colbert's childlike glee and amazement as she listens to "That Daring Young Man on the Flying Trapeze" serves to highlight with some poignancy her previously cosseted isolation—a moment of truth in the fantasy.

Arguably the first, and certainly the greatest, of the screwball comedies of the 1930s, the tale of *It Happened One Night's* success is a tale of alchemy: all the right ingredients combined and perfectly controlled to create a concoction of pure magic. It is also, like so many Hollywood success stories, a tale of happy accidents. In 1934 little Columbia, run on a relative shoestring by the foul-mouthed autocratic Harry Cohn, was considered a Poverty Row studio, and struggled to

Clark Gable and Claudette Colbert in a scene from the film *It Happened One Night*.

compete with giants such as MGM. One of its few assets was Frank Capra who, having fallen on hard times after his first early successes with silent comedy, accepted a contract with Columbia in the late 1920s which later proved to have been the turning point in the fortunes of both studio and director.

Capra read *Night Bus* in *Cosmopolitan* magazine and persuaded an unenthusiastic Cohn to buy it for \$5000. Capra wanted MGM's Robert Montgomery for the role of journalist Peter Warne, but Louis B. Mayer refused to loan him out. He proved amenable, however, to the idea of lending Clark Gable to Columbia, viewing a spell on Poverty Row as suitable punishment for his rising star who, in a rebellion against his tough-guy typecasting, had checked himself into a hospital on grounds of overwork. Several actresses having rejected the role of heiress Ellen Andrews, Columbia turned to Claudette Colbert. (Her debut film, *For the Love of Mike* [1927], directed by Capra, had been a failure.) By now desperate to fill the role, Columbia agreed to Colbert's punishing demands: double her contract salary at Paramount and a shooting schedule guaranteed not to exceed four weeks. The auguries were not of the best.

At the 1935 Academy Awards, *It Happened One Night* made a grand slam, winning the Oscars for best picture, director, screenplay adaptation, actor, and actress, an unprecedented feat not equaled until *One Flew Over the Cuckoo's Nest* forty-one years later. Its success elevated Capra's status, made Colbert a star, brought Gable superstardom and his desired freedom of choice, and transformed Columbia into a major studio.

The film set the tone for a certain style of romantic comedy officially defined as Capraesque over sixty years later and, like all true works of art, defied time to give pleasure to successive generations of viewers.

## *It's a Wonderful Life*

Although a box office failure in 1946, Frank Capra's *It's a Wonderful Life* today is a well-loved Christmas classic for many Americans. Combining sentimental nostalgia and tough realism to deliver a popular message of faith in God and faith in basic human decency, the film tells the story of everyman George Bailey (James Stewart), and his desire to escape what he considers the everyday boredom of his hometown, Bedford Falls. Despite his efforts, events conspire against him, forcing him to give up his dreams of travel he stays home to run the family Building and Loan. In the meantime, without realizing it, George becomes a pillar of his community, helping to protect the people of Bedford Falls from Mr. Potter (Lionel Barrymore), a mean, frustrated millionaire. Finally, on Christmas Eve 1946, Potter threatens George with financial ruin. George considers suicide but is rescued by an elderly angel, Clarence Oddbody (Henry Travers). Clarence shows George how much poorer the world would

be without him, teaching him that each life touches another, and that no one is a failure as long as one has a friend. The film ends on an exhilarating note as grateful friends bring George all the cash they can scrape together and help him defeat Potter.

*It's a Wonderful Life* began life as "The Greatest Gift," a short story by Philip Van Doren Stern. Stern had sent it as a Christmas card to his friends, and the story was later published in *Good Housekeeping*. Charles Koerner, head of production at RKO, purchased the rights to "The Greatest Gift" and hired three writers—Dalton Trumbo, Marc Connelly, and Clifford Odets—to make it into a screenplay. However, they were unable to produce a solid script. Odets's main contribution, it seemed, was to name one of George's children "Zuzu." Knowing that Capra (just out of the army and trying to establish his own production company, Liberty Films) was looking for good material for his first postwar film, Koerner offered it to him. Delighted with the story, Capra bought the film rights and developed a script with writers Frances Goodrich and Albert Hackett (Jo Swerling and Dorothy Parker also contributed, although they received no screen credit).

The film Capra crafted from this final script is an artful mixture of nostalgia, light sentimentality, and film noir. Capra makes clear links between George's personal life and national events (for example, the influenza epidemic of 1919, the Roaring Twenties, the Great

James Stewart (center) in a scene from the film *It's a Wonderful Life*.

Depression, and World War II) that would profoundly and nostalgically resonate with his audience. Although many of these milestones were moments of great trial for the country, he sentimentalized them by depicting his small-town characters as facing these difficulties with courage, pluck, and warmth. For example, during the Depression, we see George and his new bride, Mary (Donna Reed), successfully fend off Potter's attempted takeover of the Building and Loan. In a remarkable example of American virtue, the couple sacrificed their own honeymoon money, loaning it to their worried customers. Later that night, in a warm and endearing scene, Mary arranges a simple, homespun honeymoon complete with a roaring fire, a homemade dinner, and local townspeople crooning "I Love You Truly" outside. By contrast, Capra depicts the world without George as a dark, cold, and pitiless place. Borrowing shooting techniques from the popular film noir genre, he used deep shadows and uncomfortably odd close-ups and camera angles to produce the paranoia, distrust, and heartlessness that reigns in a George-less Pottersville.

Considering the film's immense popularity today, it may be hard to believe that it was not a hit with the audiences or critics of 1946, who were not quite ready to accept a dark Christmas story. Furthermore, it was simply too naive in the wake of the Second World War. The film's heartwarming conclusion could not expunge the dark cruelties of Pottersville. Although it was nominated for a Best Picture Academy Award (with Capra and Stewart also receiving nominations), it could not draw enough box office to cover its production costs. Liberty Films went under, and the rights to *It's a Wonderful Life* reverted to Capra's distributor, RKO. Capra went on to make other films, including *State of the Union* (1948) and *A Pocketful of Miracles* (1961), but his career never recovered.

Eventually, RKO sold *It's a Wonderful Life* to television, where it began to develop a following each Christmas season. By the late 1980s, the film was enormously popular among holiday audiences. With the advent of cable, it could be seen on various networks for practically twenty-four hours a day, generating thousands of dollars in advertising revenue. (Ironically, however, Capra received no royalties, having lost them to RKO with the collapse of Liberty. The situation was later rectified when grateful broadcasters paid him a large sum of money.)

Capra himself called *It's a Wonderful Life* his favorite of all his films. Most critics also have come to recognize the film as Capra's best and most typical work, although not always without reservations. The *New Yorker*, for example, grudgingly admitted that "in its own icky, bittersweet way, it's terribly effective."

## *It's Garry Shandling's Show*

*It's Garry Shandling's Show* was the beginning of comedian and sometime 1980s *Tonight Show* guest host Garry Shandling's ongoing exploration of lives led in front of the camera, while parodying the world of television; his magnum opus, the fruits of these years, is *The Larry Sanders Show*.

Shandling, with former *Saturday Night Live* writer Alan Zweibel, created *It's Garry Shandling's Show*, which was on Showtime from 1986 to 1988, and Fox from 1988 to 1990. The gimmick of the show was inspired by a device that hadn't often been used since the 1958 end of *Burns and Allen's* run: breaking the fourth wall. Shandling played himself, a neurotic comedian, and regularly talked to the camera, making observations, updating the plot, or interjecting a joke. The difference was that everyone else in the cast knew they were on television, too; sometimes other characters criticized Shandling for paying too much attention to the camera or to his appearance, or complained about not being featured in an episode. And, of course, the live audience was in on it, too. If Shandling were leaving, he'd tell the audience they could use his living room while he was gone, and they would. He would also go into the audience to get reactions, or "take a call from a viewer."

The sitcom took place in Shandling's Sherman Oaks condominium. The supporting cast included Garry's platonic friend Nancy (Molly Cheek), his mother Ruth (Barbara Cason), his married friend Pete (Michael Tucci), Pete's wife Jackie (Bernadette Birkett), their intellectual son Grant (Scott Nemes), and nosy condo manager Leonard (Paul Wilson). In 1989-1990 season, both Garry and Nancy acquired steady love interests: Nancy's was Ian (soap opera actor Ian Buchanan) and Garry's was Phoebe (Jessica Harper), whom he married before the show ended.

The format and premise allowed guest stars to drop by and play themselves, among them Tom Petty, Zsa Zsa Gabor, and the late Gilda Radner in one of her last television appearances. There was also a 1988 election special with *Soul Train's* Don Cornelius providing political analysis. Garry's "wedding" was attended by Bert Convy, Connie Stevens, and Ned Beatty. Besides covering Shandling's trials and tribulations with girlfriends, his mom, and his friends, *It's Garry Shandling's Show* lovingly spoofed television conventions and sitcom "rules" with parodies of *Lassie* and *The Fugitive*. Even the show's theme song winked at tradition: "This is the theme to Garry's show, the opening theme to Garry's show, Garry called me up and asked if I would write his theme song. . . ."

The idea for the show originated in a sketch on NBC's *Michael Nesmith in Television Parts* that featured Shandling narrating a date with Miss Maryland to the camera. The sitcom was pitched to the three networks, all three of which turned it down. Showtime, for whom Shandling had done two successful comedy specials, *Garry Shandling: Alone in Vegas* (1984) and *The Garry Shandling Show 25th Anniversary Special* (1986), picked it up. Though other shows (such as *Moonlighting* and *Saved By the Bell*), came to break the fourth wall occasionally during the 1980s, *It's Garry Shandling's Show's* use of the device was fresh and innovative, providing the creators with an effective outlet to skewer their own industry.

## Ives, Burl (1909-1995)

Perhaps the most versatile entertainer America has produced in the twentieth century, Burl Ives did it all. He sang; acted on stage, screen, and television; wrote songs and prose; compiled books of traditional music—which he often arranged—and taught music in a series of popular guitar manuals. Once dubbed by Carl Sandburg as "the mightiest ballad singer of any century," throughout his life Ives remained quintessentially American. A man of strong populist leanings (as evidenced by his 1949 autobiography *The Wayfaring Stranger*), Ives always saw himself as a grassroots folksinger. It is Ives's musical legacy that remains his most significant contribution, preserving for

**Burl Ives**

future generations an enormous wealth of material, a musical portrait of the America he had known.

Born to a farm family of modest means in Jasper County, Illinois, Ives was raised on music. His whole family sang. His maternal grandmother taught him the ballads of her Scotch-Irish-English forefathers. By the time he was four, Ives was performing in public as a child entertainer and evangelical singer. Pressured to pursue a more conventional career than minstrel, in 1927 he entered Illinois State Teachers College with a mind toward becoming a football coach, but he left a year shy of attaining a degree, preferring to live the life of a vagabond to the static life of a teacher. Recalling his college career, Ives said, "I never did take to studies."

But Ives had several innate talents which kept him afloat during his early professional years, and they eventually would prove his most distinctive features as an entertainer. He was a friendly man, of abundant natural charm, with an innate gift for storytelling. He was also a singer who labored for years to perfect his voice. And at a time when folk music was looked down on as a musical form, Ives's faith in the ballads he had learned at his grandmother's knee—and while traversing the country—preserved him through the lean years prior to his meteoric rise to fame.

While wandering throughout forty-six of the forty-eight states, Ives supported himself by playing music in bars or doing odd jobs, sleeping rough, and hitchhiking from town to town. In 1931 he was living at the International House in Manhattan, a cheap hotel catering to foreign students, working in its cafeteria while he continued the formal musical training he had begun in Terre Haute, Indiana. An avid music student, Ives absorbed the classical canon, finding work singing in churches and in madrigal groups. But his ambitions were hampered by a sinus problem which affected his voice as well as his lingering doubts about singing classical music. At heart he was still a folk balladeer. He credits one Ella Toedt, a well-known voice instructor of the day, with curing his sinus problem—enduring a year of falsetto exercises before he was rid of the blockage—and with encouraging his folk music. Soon Ives was singing ballads at charity events and parties, sharing his vast repertoire of folk songs with appreciative audiences that often included some of the leading lights of New York's leftist intelligentsia.

He was encouraged by his show business friends to try a hand at acting. Ives won a small part in an out-of-town production, then charmed his way into a nonsinging part in the Rodgers and Hart musical *The Boys from Syracuse* (1938). The duo then cast him in a traveling production of *I Married an Angel*, which Ives followed with a four-month engagement at the Village Vanguard. By 1940 he had his own radio show, *The Wayfaring Stranger*, on which he sang and told stories from his years of traveling. Suddenly, folk songs were in vogue.

By 1945 Ives was starring in *Sing Out Sweet Land*, a musical revue based on the folk songs he had popularized on his radio broadcasts, and the next year he made his film debut, playing a singing cowboy in *Smoky*. He went on to appear in numerous Broadway productions, in films, and began a recording career that would eventually number more than one hundred releases. His visibility was further enhanced by his appearance as Big Daddy in the 1958 film *Cat on a Hot Tin Roof*, a role he already had popularized on Broadway. That year he won an Oscar for his performance opposite Gregory Peck in *The Big Country*.

Throughout the 1960s, 1970s, and 1980s, Ives continued to appear in theater, film, and television productions, such as the *Roots* TV miniseries (1977), and portrayed a mean-spirited racist in noted filmmaker Samuel Fuller's last film, *White Dog* (1982). He also kept abreast of the times, expanding his repertoire to include standards like "Little Green Apples," and going so far as to cover Bob Dylan's "The Times They Are A-Changing," although his fling with the counterculture was brief.

By the time of his death in 1995, Ives was best remembered as a singer of children's songs; a narrator of animated Christmas specials for television; the kindly, avuncular man with the hefty girth.

## Ivy League

The term "Ivy League" is informally used to describe eight East Coast universities—Brown, Cornell, Columbia, Dartmouth, Harvard, Princeton, the University of Pennsylvania, and Yale—which are acknowledged as among the most prestigious postsecondary schools in the United States. The ivy image derives from the fact that these institutions are also among the oldest in the country, with stately buildings and beautiful historic campuses. Because of highly selective admissions criteria, an "Ivy League" degree represents the near-guarantee that a graduate will rise to the top of his—or, only since the 1970s, her—profession (the Ivy League colleges were originally all-male institutions). As educational writer Joseph Thelin wrote, the mystique of the Ivy League describes "the process by which the collegiate ideal has been . . . associated with trade marks, and brand-name imagery."

The term itself did not originally connote academic excellence: it was coined in the late 1930s by Cas Adams, a *New York Herald-Tribune* reporter, who bestowed the name on the schools because he noticed that buildings on all eight campuses were covered in vines. Before the 1880s, as Thelin wrote, "contacts between these institutions were few" until intercollegiate athletic teams began to develop.

A view of the Ivy League's Yale University.

Walter Camp, a Yale student in the 1870s, had all but invented college football and, by the turn of the century, the eight universities were dominating the sport.

With applications to most Ivy League universities topping 20,000 a year by the 1990s, and acceptance rates hovering between 10 and 15 percent, it is not hard to see how the Ivy League sets the benchmark of exclusivity against which other postsecondary institutions are measured. Many high school seniors and their parents invest so much in acceptances—from SAT preparation classes to costly counselors—that they overlook colleges that do not have such recognizable brand names. Loren Pope, author of the college-application handbook *Looking beyond the Ivy League*, is one of many authors who try to dispel myths of an Ivy League education as making or breaking one's future success. The first myth on Pope's agenda is

“An Ivy . . . College Will Absolutely Guarantee the Rich, Full, and Successful Life.” More often than not, however, efforts to dispel these myths serve only to perpetuate them.

## J. Walter Thompson

---

Number one in industry billings from 1922 to 1972, the J. Walter Thompson agency redefined the advertising industry and transformed the business of media in America. Founded in New York City as Carlton and Smith in 1864, the agency was originally a broker of advertising space in religious journals. The agency hired its namesake, James Walter Thompson, in 1868. Thompson purchased the agency from William James Carlton in 1877, renamed it after himself, and rapidly positioned it as the exclusive seller of advertising space in many leading American magazines.

Most large magazines had existed on subscription and newsstand revenue alone. To create a market for ad space, Thompson persuaded reluctant publishers—who feared advertisements would tarnish their images—to accept advertising in their pages. Thereafter, America’s largest magazines relied on advertising as their largest source of revenue, increasing the import of the composition of a publication’s readership, and its appeal to advertisers.

Stanley Resor joined the company in 1908, and soon hired copywriter Helen Lansdowne. He purchased the agency in 1916 and the two were married the next year. Together they remade the agency and developed it from a mere broker of space into a full service shop that conceived and executed major national advertising campaigns.

Print advertising of the previous era emphasized brand identity, iconic images, and simple slogans. J. Walter Thompson pioneered a new strategy aimed at delivering a “hard-sell” print ad, known as the “reason-why” approach. These advertisements typically captured the reader’s attention with a bold, capitalized statement accompanied by an artistic or arresting image. The ad copy methodically outlined each selling point of the product and ended with a free or reduced-price product offer.

Women made most household purchasing decisions at this time and Helen Lansdowne Resor, in her words, “added the feminine point of view” to advertising to ensure that it was “effective for women.” Her wing of the offices was known as the Women’s Copy Group. Among the most famous advertisements produced under Helen Lansdowne Resor were campaigns for Lux soap, Maxwell House coffee, and Crisco shortening. Her infamous “A skin you love to touch” ad for Woodbury’s Facial Soap featured a man seductively caressing a woman’s arm and kissing her hand. The overt sexuality caused a number of *Ladies’ Home Journal* readers to cancel their subscriptions but launched one of the most successful selling techniques of all time.

In 1912, Stanley Resor commissioned the market research study, “Population and Its Distribution.” The study detailed both the composition of the American population and the distribution of retail and wholesale stores across the cities and rural areas. In 1915 Resor was the first to open a research department, inaugurating the massive efforts of corporate America to determine consumer desires.

As part of this effort, Resor hired John Hopkins University behavioral psychologist John B. Watson in 1920. Watson theorized that humans are capable of only three basic emotions—love, fear, and

rage—and sought to tap these feelings with advertising. Watson’s application of psychology to advertising anticipated the later use of psychological and subliminal selling techniques.

Watson’s hiring coincided with the trend toward “whisper” advertising that sowed insecurity in the reader. One such J. Walter Thompson ad, for Odorono deodorant in 1919, read in part, “It is a physiological fact that persons troubled by underarm odor seldom detect it themselves.” The use of testimonials from stars, such as Joan Crawford’s 1927 endorsement of Lux Soap, was another of the agency’s firsts.

The J. Walter Thompson agency first led the industry in billings for 1922, and held that position for the next 50 years, its revenues growing from \$10 million to nearly \$1 billion during this period. By 1938, national radio advertising surpassed that in magazines. As with magazine publishers, early radio operators initially resisted commercial advertising. But by 1933, J. Walter Thompson’s clients sponsored nine weekly shows including *Kraft Music Hall* and the *Fleischmann Yeast Hour*. Products were promoted in short “spots” that lasted from 15 seconds to a couple of minutes and were often live mini-dramas in their own right complete with original jingles. Television advertising adopted the same model in the 1940s and 1950s.

As a result of J. Walter Thompson’s innovations, most media depend upon advertising as their primary source of revenue. Advertising is so culturally ubiquitous and established that advertisements themselves are considered an art form worthy of serious critique. Numerous awards annually honor outstanding work.

Americans are bombarded with thousands of advertising messages each year and most can recite slogans and jingles from their most, or least, favorite advertisements. “Where’s the beef?”—a line from a Wendy’s restaurants television spot of the 1980s—was embraced so eagerly by the public that Walter Mondale used it as a rejoinder in a presidential debate. The Nixon Administration’s machinations and untruths once led Ralph Nader to label it a “J. Walter Thompson production” and, in fact, five of Nixon’s top aides were former employees. The creative pressure and client dependency that is the recognizable perpetual state of agencies was captured in television programs such as *Bewitched* in the 1960s and *thirtysomething* in the 1980s.

In the 1950s, J. Walter Thompson was one of the first agencies to aggressively expand internationally, eventually growing into a global corporation. It finally lost its number one billings ranking in the 1970s when smaller “hot shops” emerged as creative boutiques more in tune with the era’s cultural shifts and other large global agencies grew to comparable size and reach. In 1980 it became a subsidiary of JWT Group Inc., a Delaware-based holding company that was in turn purchased by the British marketing firm WPP Group in 1987.

The J. Walter Thompson agency’s influence on the multi-billion dollar advertising industry and the media it supports was profound. Informative, persuasive, seductive, and intrusive, advertising became omnipresent in the national media and the national consciousness. As the industry leader for decades, both creatively and financially, J. Walter Thompson defined the advertising agency to a public inundated with its product.

## Jack Armstrong

In perhaps the longest high school career on record, Jack Armstrong remained an All-American Boy for close to two decades. For the greater part of its radio life, *Jack Armstrong, the All-American Boy* was a 15-minute-a-day children's serial. The show began in the summer of 1933 and didn't leave the air until the summer of 1951—although it was considerably modified by then. The sponsor for all those years was Wheaties, the Breakfast of Champions. The show originated in Chicago, long the center for soap operas and the adventure serials that filled the 5-6 pm children's hour on radio. The producer of the Jack Armstrong show was an advertising agency headed by Frank Hummert—who with his wife Anne would later produce such long-lasting programs as *Ma Perkins*, *Just Plain Bill*, *Our Gal Sunday*, and *Mr. Keen, Tracer of Lost Persons*. The writer who developed the idea and turned out the initial scripts was Robert Hardy Andrews, a prolific and supremely self-confident man, and the first actor to portray the clean-cut and adventure-prone Jack was Jim Ameche.

Jack, who attended high school in the Midwestern town of Hudson, excelled as both an athlete and a student. He was clearly inspired by the dime novel hero Frank Merriwell. While every show opened with a vocal quintet singing the school fight song—"Wave the flag for Hudson High, boys, show them how we stand"—Jack spent relatively little time behind a desk or even on the gym floor. Instead, accompanied by his teen friends Billy and Betty Fairfield, he traveled to the four corners of the world and got entangled in an endless series of intriguing adventures. During the early years of the program Jack, Betty, and Billy journeyed to the Northwest to work with the Royal Canadian Mounted Police, found a lost tribe of Eskimos in the Arctic, outwitted cattle rustlers in Arizona, hunted for a lost city in the jungles of Brazil, and returned to Hudson to round up a gang of counterfeiters. A character named Captain Hughes served as a mentor and adult companion on many of the adventures. Don Ameche, Jim's brother, was the first actor to play that role.

In the spring of 1936 Talbot Mundy, who'd written such successful adventure novels as *King of the Khyber Rifles*, *Jimgrim*, and *Tros of Samothrace*, was having money problems. So he accepted the job of writing *Jack Armstrong*, and stayed with it until his death in 1940. He took Jack and his companions to such locations as Egypt, Easter Island, India, Africa, and Tibet. Most of those spots had been favored settings for Mundy's novels and stories in the 1920s and 1930s. According to Jim Harmon, it was Mundy who introduced a new mentor in the person of Uncle Jim to the show in the fall of 1936. The uncle of Billy and Betty Fairfield was an industrialist and an inventor. Actor James Goss had a distinctive radio voice that fit "the

commanding but warm father figure" he played. Uncle Jim traveled with the young trio on their adventures, many of which stretched across several months. Mundy was able to recycle not just settings but plots from his novels. In an early 1937 story, for instance, Jack and the gang end up in Africa hunting for the ivory treasure to be found in the Elephants' Graveyard. The plot, with considerable changes, was earlier used in Mundy's 1919 novel *The Ivory Trail*.

The program was a great promoter of premiums. Whenever a portable gadget was introduced into a continuity, listeners could be certain that it would eventually be offered for sale. But first its utility and desirability—emphasized in many instances by the fact that the current villains would do almost anything to get hold of the object in question—were usually romanced for several weeks. All kids usually had to do to get their copy of the gadget was to send a Wheaties box top and a dime. There were dozens of premiums from 1933 to 1948. Among them a Torpedo Flashlight, a Pedometer, an Explorer Telescope, a Secret Bombsight, a Dragon's Eye Ring, a Rocket Chute, an Egyptian Whistling Ring, and Tru-Flite model planes. The more popular items sold in the millions.

The only outside merchandising in the 1930s involved two Big Little Books issued by the Whitman Publishing Co. Both *Jack Armstrong and the Ivory Treasure* (1937), which once again used the Elephants' Graveyard story line, and *Jack Armstrong and the Mystery of the Iron Key* (1939) were based on Mundy scripts. These small, fat illustrated novels had pictures by the gifted Henry E. Vallely. His Jack was a handsome fellow in polo shirt, jodhpurs, and riding boots, who looked to be in his early twenties. The Jack Armstrong property didn't seriously branch out into other media again until after World War II. The year 1947 was when several things happened—not only a movie serial but also the start of a comic strip and a comic book. Columbia Pictures produced the 15-chapter serial with John Hart, later to play the Lone Ranger on television for two seasons, as a somewhat older Jack. In the spring of that year, the Register and Tribune Syndicate introduced a *Jack Armstrong* newspaper strip. Bob Schoenke was the artist and, as one comics historian has pointed out, his "Jack was nowhere near as dashing as Vallely's and looked more like the sort of youth who'd spend much of his time on the bench." The strip was dropped in 1949. The *Parents' Magazine* outfit started a comic book late in 1947. Like their *True Comics*, it was rather dull and polite, never capturing the fun and gee-whiz spirit of the radio show. It, too, folded in 1949, after just 13 issues.

Charles Flynn had inherited the role of Jack in 1939 and, except for a year out for military service, he stayed with it to the end. In 1947, with the popularity of daily serials waning, Wheaties transformed *Jack Armstrong* into a half-hour program heard two or three times a week. Then in 1950 the title was changed to *Armstrong of the SBI*. Jack had started working for the Scientific Bureau of Investigation some years early and also had acquired a new mentor, Vic Hardy, a reformed crook, who headed up the SBI. Uncle Jim had long since been phased out, Billy went next, and only Betty remained of the old gang in the final days; through all those adventurous years she and Jack had never been more than just good friends.

## The Jackson Five

When Motown recording artists, the Jackson Five, burst upon the music scene in 1969, this group of five brothers followed an extremely successful career trajectory that launched the youngest brother, Michael Jackson, into superstardom. But as a group, the Jackson Five was more than the sum of its parts, or even the sum total of Michael Jackson's charisma: all of the brothers were talented singers and songwriters in their own right. During the 1970s, they enjoyed a lengthy string of hit singles, becoming the most popular black soul vocal group of all time.

The Jackson Five were comprised of Jackie Jackson (born May 4, 1951), Tito Jackson (born Oct. 15, 1953), Marlon Jackson (born Mar. 12, 1957), Jermaine Jackson (born Dec. 11, 1954) and Michael Jackson (born Aug. 29, 1958)—all of whom sang. The five brothers were born into a very large family run by authoritative patriarch,

Joseph Jackson, an aspiring amateur musician who occasionally played around their hometown of Gary, Indiana. In addition to those five brothers, there were three sisters (Rebbie, La Toya and Janet) and one brother, Randy Jackson, who joined the group when they moved to Columbia Records and were re-dubbed the Jacksons.

The Jacksons were a musical family. Joseph and his wife Katherine often led the brothers in singing harmony-rich songs in the family's living room during their childhood. As the result of constant practice overseen by Joseph, the boys—soon dubbed the Jackson Five—evolved into a popular regional act that eventually came to the attention of Motown president and founder Berry Gordy. In 1969 Motown signed the group, and their first single, "I Want You Back," went to number one on the *Billboard* Pop charts in January of 1970.

This began a string of thirteen top-twenty pop singles, including "ABC," "I'll Be There," "Never Can Say Goodbye," "Mama's Pearl," and "Dancing Machine," among others. The Jackson Five were among the last groups to produce hits following Motown's tradition of using in-house songwriting and recording teams, a practice that had become increasingly infrequent once Motown artists Marvin Gaye and Stevie Wonder had begun to break out on their own. And soon, the assembly line Motown production techniques began to

displease the maturing Jackson brothers, who also demanded more artistic control. It was this issue that led to their departure from Motown, prompting both a \$20 million law suit by Motown for breach of contract, and the family's first major split, when Jermaine stayed with Motown, while his brothers signed with Epic Records in 1976. Randy Jackson filled Jermaine's shoes and the group was renamed The Jacksons.

During the 1970s, the Jackson Five virtually formed a franchise, with regular tours, an animated cartoon featuring the brothers, and a 1976 variety show hosted by the brothers. Eventually, both Michael and Jermaine struck out on their own as solo artists, with the others soon to follow. Michael Jackson, of course, became the most successful solo artist of the family. His fame reached its apex with 1983's *Thriller*, which sold over 45 million copies worldwide, charted at number one in every Western country, generated an unprecedented seven Top Ten singles, and won eight Grammys. Even though none of the other brothers have ever come close to rivaling Michael Jackson's commercial sales, the brothers have remained a near constant, though not overwhelming presence on the R&B charts. And while Michael Jackson's career began to decline after a series of scandals and a couple of poor selling albums (*HIStory* and *Blood on the Dance Floor*), sister Janet Jackson's career remained strong through the end of the 1990s. The Jackson family's omnipresence in popular culture from 1969 to the end of the millennium has guaranteed their status as a de facto musical dynasty.

## Jackson, Jesse (1941—)

Baptist minister and civil rights leader Jesse Jackson was the leading advocate for racial equality in the United States by the 1980s, and his initial bid for the presidency marked the first serious attempt by an African American for a nationwide office in United States history and provided a great stimulus to black registration and voting.

Jackson was born to a single mother in Greenville, South Carolina, in 1941. Raised by his mother and stepfather in modest surroundings, Jackson also lived near his affluent father, witnessing and resenting the material well-being of his half-brother. These tensions fueled a lifelong determination in him to transcend his initial surroundings. Ambitious, charismatic, and intelligent, Jackson achieved success as a student and as an athlete in segregated Greensboro, earning a scholarship to the University of Illinois in 1959. When his dream of playing quarterback failed to materialize, Jackson left Illinois and transferred to North Carolina Agricultural and Technical College where he met his future wife, Jacqueline Davis, in 1963. He later attended the Chicago Theological Seminary and was ordained a Baptist minister in 1968.

At first hesitant to engage in direct action, Jackson was increasingly drawn away from his studies by the mushrooming southern civil

Jesse Jackson

rights movement. After an initial stint with the Congress of Racial Equality, Jackson began to work with Martin Luther King, Jr. in 1965 as a young staffer at the Southern Christian Leadership Conference. While not especially close to King personally, Jackson's effective organizing skills did lead King to appoint him to head efforts to expand SCLC operations in Chicago. Jackson's work in Chicago formed the basis for King's unsuccessful 1966 Chicago Campaign for Freedom. Following the Chicago campaign, Jackson was placed in charge of Operation Breadbasket, the economic arm of the SCLC. On April 3, 1968, Jackson stood beside King on the balcony of the Lorraine Motel in Memphis, Tennessee, when an assassin's bullet ended King's life. In a controversial episode following the murder, Jackson appeared on national television and before a rally the next morning still wearing his bloodstained olive turtleneck. Some perceived his actions as a disrespectful attempt to manipulate King's death for personal gain.

Following King's assassination, Jackson sought to counter growing white reaction to civil rights gains nationally by focusing on economic empowerment rather than traditional civil rights issues. After breaking with SCLC in 1971, Jackson founded Operation PUSH, People United to Save Humanity (later changed to Serve Humanity), to press the business and financial community for jobs and increased economic opportunity for African Americans and other people of color. As director of PUSH and self-appointed black ambassador to the white business community, Jackson gently threatened to boycott selected firms that did not move toward greater racial equality in their dealings. In 1981, the Coca-Cola Company became the first corporation to sign an agreement to increase business with African American

vendors and expand management opportunities for black people. Similar agreements were reached with Kentucky Fried Chicken, Anheuser-Busch, Seven-Up, and Burger King. Operation PUSH ultimately grew to include seventy chapters and more than eighty thousand members. Jackson also began his foray into international politics at this time. In 1979, despite substantial criticism and pressure from the American government, he met with Yasir Arafat, head of the Palestine Liberation Organization to discuss the prospects for a peaceful settlement to the PLO/Israeli conflict in the Middle East. Similarly, in 1983, again to considerable negative press at home, Jackson met with the head of Syria and came away with the release of captured navy pilot Lt. Robert Goodman.

By the early 1980s, Jackson had become the black leader most capable of mounting a presidential bid. In October 1983, Jackson announced his candidacy for president, emphasizing economic empowerment for minorities and increased voter registration among black citizens. Jackson sought to stir a grassroots opposition movement and confront both the Republican and Democratic establishments as a populist insurgent. His rousing oratory, combining elements of uplift (“I am somebody!”) and militancy (“It’s Nationtime!”), began to attract a large popular following. In the antiphonal style he had learned from Afro-Christianity, Jackson would chant, “There is a freedom train a comin’. But you got to register to ride, so get on board and get on with it.” In response, his audience would yell, “Run, Jesse run! Run, Jesse run!” Jackson’s bid was hurt, though, after a journalist reported an off-the-record derogatory reference to New York City as “HymieTown.” Despite denials and numerous apologies, the incident continued to dog Jackson throughout the campaign. Nevertheless, he ran a surprisingly strong third in the Democratic primaries, polling more than three million votes.

In 1988, Jackson recast himself from a race leader to a multi-racial, progressive populist. He sought to “Keep Hope Alive” with an alliance between people of color and white workers, appealing to inner-city churchgoers, the urban poor, Midwestern farmers, Rust Belt auto workers, and even some of the old George Wallace constituency. In the end, Jackson garnered 6.7 million votes in the primaries and produced a full third of the convention delegates, forcing significant concessions in the platform from the eventual nominee, Michael Dukakis. While he did not capture the Democratic nomination, Jackson’s successful showing in 1988 made him one of the country’s most prominent African American leaders as well as a significant force on the Democratic left.

Following the 1988 election, though, Jackson struggled to define a coherent new course of action. He hoped to build on his electoral successes by forming the Rainbow Coalition, a multiracial, progressive countermovement emphasizing economic and racial justice for all Americans and an end to the sexual exploitation of women. Some members hoped the Rainbow Coalition would serve as the foundation for a new third party, while others envisioned the coalition as a liberal-left pressure group working from within the Democratic Party. In 1989, though, Jackson undercut the potential of the new group when he demanded that he alone make appointments to state chapter chairs. By centralizing control at the national level and, thus, curtailing local independence and autonomy, Jackson severely crippled the Rainbow Coalition as a mass membership and activist organization. In addition to his attempts to build an effective progressive political coalition, Jackson served as “shadow senator” for Washington, D.C., in the early 1990s and hosted a national television talk show, “Both Sides,” on the Cable News Network.

The mid-1990s found Jackson more at ease with the Democratic Party and the Clinton presidency. Initially a gadfly, hoping to cajole the administration toward more progressive positions, Jackson settled into an established political role as advisor and minister to the president. In what may be the precursor to a third presidential bid in 2000, Jackson began to reorient himself in the late 1990s toward issues of economic justice, appearing with poor white workers and their families in Appalachia as well as with poor people of color in cities across the country. In 1997, Jackson founded the Wall Street Project, aimed at bringing capital into the inner city and more minorities into brokerages.

## Jackson, Mahalia (1912-1972)

With her magnificently powerful contralto voice, superb rhythmic control and passionate commitment to her music, the late Mahalia Jackson remains widely considered the best of all gospel singers. She added a dimension to American cultural life in reaching a wide white audience, entering territory previously crossed by black artists only in the fields of jazz and blues, and achieved the highest accolade for any performing artist: the universal reference to her by her first name only. The daughter of a preacher, she listened in secret to the records of Bessie Smith, and was influenced by them, but steadfastly eschewed the blues in her own performance, dedicating herself to gospel music. “I can’t sing one thing and then live another, be saved by day and the devil undercover, I’ve got to live the life I sing about in my song.” This line from the Tommy Dorsey composition “I’ve Got to Live the Life I Sing About” became Mahalia Jackson’s credo.

The singer’s allegiance to gospel music brought her the rewards of wealth and fame, and earned her the undisputed title of “the world’s greatest gospel singer,” paving the way for the acceptance and integration of gospel music into the wider American culture. In 1948, she and Theodore Frey established the National Baptist Music Convention as an auxiliary to the National Baptist Convention, and that year her recording of “Move On Up A Little Higher” was the first gospel song to sell a million copies, largely to a black record buying public. Jackson was one of the first gospel singers to use the Hammond organ and the piano as accompaniment, and one of the first to introduce gospel music into more familiar contexts. She sang for programs in support of the Civil Rights movement and, as a confidante of Dr. Martin Luther King, Jr., sang at the March on Washington as a prologue to his famous “I Have a Dream . . .” speech.

Jackson was born on October 26, 1911 in New Orleans. Her mother died when she was five years old, and she was raised within

**Mahalia Jackson**

the Baptist religion, absorbing the church music that would prove the major influence on her life and her music. At the age of 16, she moved to Chicago to stay with an aunt, and supported herself in a variety of humble domestic jobs while, at the same time, joining the Greater Salem Baptist Church and singing with the Johnson Singers, a quintet that toured local churches. She turned down an offer from Earl Hines, but met Tommy Dorsey, with whom she forged a mutually beneficial relationship. (Some of Dorsey's songs were dedicated to Jackson). By 1938, Jackson had married, opened a beauty and floral shop, and acquired real estate. Her early performances in Chicago were in diverse venues. Not accepted in the established black churches, she had to perform at storefronts and in basement halls, and it was Studs Terkel, author and radio host, who first presented her to his largely white radio audience.

Few of Jackson's early performances were recorded but she signed with Decca, for whom she recorded "God Shall Wipe Away All Tears" (1934) and "God's Gonna Separate the Wheat . . ." (1937). These early recordings were artistically but not commercially successful, and her refusal to record blues music led Decca to drop her. In 1948, she signed with Apollo records and recorded her million-plus bestseller, the Rev. W. Herbert Brewster's composition, "Move On Up a Little Higher," and cut a long-playing album, *No Matter How You Pray*. Her early recording repertoire is mixed and the artistic quality variable—the Apollo recordings suffer from technical problems and undistinguished accompaniment, but her voice is in fine form. By 1952, her relationship with Apollo had reached an impasse and she signed with Columbia records in 1954. The Columbia sessions, consisting of early compositions previously recorded on

Apollo as well as new material, generally excelled in both technical and artistic quality, and she made several albums for the label. By the 1950s, she had engaged Mildred Falls, a gem of a gospel pianist, who received neither the recognition nor the remuneration that she deserved, and organist Ralph Jones, as her accompanists. The duo was called the Falls-Jones Ensemble.

When in her finest form, Jackson's contralto swoops, dives, and easily vacillates from high declamatory shouts to low lyrical melodies, couched in the style of black preachers and executed within a single breath. She confounded musicologists by breaking all the rules while holding her audiences spellbound. Jackson and her pianist Mildred Falls also made liberal use of blues phrasing, together with the rhythmic vitality of the sanctified church. Notable and memorable recordings in her repertoire of congregational style chants, hymns, and African-American spirituals include "Amazing Grace," "Nobody Knows the Trouble I've Seen," "Didn't It Rain," and "Deep River," as well as Dorsey compositions such as "Precious Lord." She recorded a small number of secular songs such as "I Believe." Jackson frequently sang parts of a song without meter and preferred songs heavily infused with the scale, chords, and modified structure of blues. "Walk Over God's Heaven," "Move On Up a Little Higher," "Jesus Met the Woman at the Well," and "I'm Going to Live the Life I Sing About" fall into this category.

Jackson performed at the Newport Jazz Festival in 1958, and is featured singing "The Lord's Prayer" at the end of the film *Jazz on a Summer's Day*. She sang, too, with Duke Ellington's band, both at the Festival and in the studio, explaining away her participation by saying that she considered Ellington's band "a sacred institution." The same year she appeared in the film *St. Louis Blues*, the biopic of W.C. Handy that starred Nat "King" Cole, and then provided the emotional climax to Douglas Sirk's remake of *Imitation of Life* (1959), singing "Trouble of the World" at the tear-sodden funeral of Lana Turner's black maid (Juanita Moore). By then, Jackson had given many international concert tours and was world famous. During the 1950s and 1960s she appeared frequently on television and sang at John F. Kennedy's inauguration.

By the late 1960s she commanded mostly large, white audiences in Europe and America, but by then her voice and her health were in decline. Her favorite pastime was cooking and she continued to consume the rich soul food of her home, New Orleans, including red beans, rice, and ham hocks. She weighed as much as 250 pounds at one time. Her grueling touring schedule, her entrepreneurial ventures, two failed marriages, and other personal problems had exacted a heavy toll on her health. Mahalia Jackson suffered heart failure and died in Chicago at the age of 60. Her body lay in state as thousands of mourners filed past to pay their respects to this unique performer. At her funeral, her good friend Aretha Franklin sang "Precious Lord," just as the great gospel singer herself had done at the funeral of Martin Luther King.

## Jackson, Michael (1958—)

The nucleus of his own mammoth pop sideshow, pop singer Michael Jackson absorbed the most affecting African American musical traditions with which he had grown up, infused them with his own musical eccentricity and the popular trends and technology of the moment, and created a popular explosion of nearly unprecedented proportions. Although perceived as the ultimate sexual, racial, and social “Other,” between 1982 and 1984 Jackson helped sell over 40 million copies of the record album called, most appropriately, *Thriller*. In the late 1980s, Jackson again established new records with his album *Bad* and its accompanying worldwide concert tour. During the early 1990s, Jackson’s inscrutable off-stage antics made him one of the best-known eccentrics in modern history.

By the time Jackson left on the notorious 1984 “Victory Tour” as lead singer of the Jacksons pop-soul singing group, he had already broken all the rules of popular success in the late-twentieth-century music industry. A teen idol without any apparent sexual interests of his own, he attracted a huge popular audience without compromising his black musical roots, and displayed eccentricities that constantly kept him in the headlines. An obviously unhappy man, Jackson revealed his social and personal discontent in his overwhelming, unavoidable, and disturbing strangeness. That strangeness reached disconcerting proportions in 1993, when a thirteen year old Beverly Hills boy made a criminal complaint against Jackson alleging sexual molestation—a claim Jackson repeatedly denied. After a thirteen month investigation—during which time Jackson settled a multi-million dollar lawsuit—the district attorneys in Los Angeles and Santa Barbara counties announced that they would not file charges unless and until a child witness agreed to testify against Jackson in open court. They also announced that the case would not close until the statute of limitations ran out in August of 1999.

Michael Jackson

Those allegations continued to disrupt Jackson’s career well into the late 1990s. He suffered financial setbacks during this time and, while his albums still sold well in Europe, they did not fare as well in the United States. As of 1999, Jackson had not recorded an album of all new material since the early 1990s. Instead, he concentrated on arranging his personal financial matters, frequently announcing plans to fund theme parks in such places as Poland, Brazil, Japan, and Las Vegas.

Before the “madness” of *Thriller* and the subsequent publicity stunts and notorious allegations regarding his personal life, Michael Jackson was a member of a family singing group from Gary, Indiana, called the Jackson Five. In addition to Michael himself, the group originally included four of his five brothers. A child performing sensation from the age of five, Jackson was one of the nation’s finest 1960s rhythm & blues vocalists long before his grade school graduation. An acolyte of James Brown and Jackie Wilson, the young Jackson was also a dancer of nearly unmatched ferocity and versatility. His singing skill far surpassed any other child recording artist; young Michael almost literally sang his heart out. The eleven-year-old boy sang of desire, joy, anguish, and loss with all the sophistication and embittered knowledge of a man in his 40s. His presence on the radio in the early 1970s stunned and impressed listeners. Very quickly, the group amassed a vast collection of gold records and was able to move to a California mansion.

Although clearly gifted, Michael did not come by his success “naturally”; he was trained by a fierce, brutal, and unforgiving group leader: his father. Joseph Jackson was a crane operator at a Gary steel mill who left a music career behind in the early 1950s to support his rapidly growing family. He put his guitar away in a closet as a “memory piece” and warned the children never to touch it. When nine-year-old Tito Jackson was caught playing the guitar in 1962, he was, by his own account, “torn up” by his father. This was the founding event of the Jackson Five; after the incident with Tito, Joseph began to organize the youngsters into a singing group. The group, at first, did not include three-and-a-half-year-old Michael; he made his entrance when his parents caught him imitating older brother Jermaine’s singing. They were alarmed and delighted, and Michael was immediately installed as the group’s tiny new front man.

Michael and his siblings have reported being beaten and terrorized by their father during their childhood. Joseph Jackson ran long daily rehearsal sessions armed with belts and switches, which he used with frequency and severity. Sister La Toya Jackson has said that the beatings the siblings endured were bloody and often involved the use of fists, while Michael reported in his autobiography that he fought back with his own small fists. “I would fight back and my father would kill me, just tear me up. Mother told me I’d fight back even when I was very little, but I don’t remember that. I do remember running under tables to get away from him, and making him angrier.” Joseph denied this charge to the Associated Press with telling succinctness: “Maybe I should’ve punched La Toya, like any other normal parent would do, but La Toya stayed quiet and never did get into any trouble or nothing.” La Toya Jackson also made charges of sexual abuse against her father, which he has repeatedly denied. At the age of thirty-four, Michael said he was still frightened of his father and that on meeting him, he often “would get sick; I would start to regurgitate.” Joseph responded to this, too. “If he regurgitated,” Joseph told Michelle McQueen on ABC-TV’s *Day One* program in 1993, “he regurgitated all the way to the bank.”

Joseph kept a grueling rehearsal schedule and groomed his sons to be polished professionals in a very short time. By the age of nine,

Michael was singing in nightclubs, working side by side with strippers and drag queens, and getting an education in the process. “This one girl with gorgeous eyelashes and long hair came out and did her routine,” he later wrote, “She put on a *great* performance. All of a sudden, at the end, she took off her wig, pulled a pair of big oranges out of her bra, and revealed that she was a hard-faced guy under all that make-up. That blew me away.”

In late 1968, Michael and his brothers were on their way to New York for a taping of their first television appearance on *David Frost*, when they received a call from Motown Records. The group handily passed their audition for Berry Gordy, owner and founder of Motown, then the largest black-owned business in America. Gordy told the boys that they would have three number one records in a row, and become The Next Big Thing. The success engendered by Michael’s singing and dancing prowess went beyond even Gordy’s confident estimates. The young brothers became the first black teen idols and Michael made his first “teen dream” solo album at age twelve. Rock critic Vince Aletti expressed amazement at the ability of so young a boy to convey such subtle emotions as “anguish and doubt” with startling authenticity.

During the winter of 1972–73, Michael’s voice broke, leaving both his career and that of the group in question. The music business has been generally unkind to former boy sopranos, and Berry Gordy seemed ready to move on to other projects. It looked as though Michael Jackson was destined to be a pubescent golden-oldie. The group began to think seriously of breaking their contract. According to his memoirs, it was fifteen-year-old Michael himself who presented Berry Gordy with the ultimatum: “Let us have creative control or we’re gone.” In 1974, the family held a press conference to announce that they would sign a new record contract with Epic Records, a division of the CBS Records conglomerate.

After two lukewarm CBS albums with the group, and one big success, Michael made good on CBS’s plan for him to record a solo album, though he later remarked that he felt they were merely securing their investment. He had his own, more grandiose plans for a solo career. His first tentative step in this direction involved his acceptance of Gordy’s offer to co-star in an all-African American version of *The Wizard of Oz*, renamed *The Wiz*. Oscar-winning producer Quincy Jones was the musical director of *The Wiz*. Jones got on well with Michael during the shoot, and when Jackson suggested that Jones produce his next solo album, he agreed. The collaboration worked both musically and artistically: the *Off The Wall* album turned out to be smooth as silk, with Jones applying sandpaper to Jackson’s audible and exciting rough edges. The tracks conformed to a soft, cascading beat underneath the rich, erotic yearning of Jackson’s voice. This new voice, full and mature with low moans and floating falsetto wails, was entirely unrecognizable. The child sensation was gone—in more ways than one.

It was during this period that Jackson began to display, for the first time, some of the odd personal characteristics for which he would later gain notoriety. During the filming of *The Wiz*, Jackson gave several promotional interviews. Timothy White of the rock magazine *Crawdaddy* was assigned to interview Jackson and found him quite amusing. He said Jackson appeared “to be in some sort of daze” as he ate food with his fingers at a glitzy French restaurant in Manhattan. During this transitional time, Jackson began to hone his skills as a songwriter. On the Jacksons’ album *Triumph*, he unveiled the idiosyncratic and disquieting songwriting style that would drive the success of the *Thriller* album. One song, called “This Place Hotel,” “came from a dream I had. I dream a lot,” he told a reporter. “Live

and sin,” the song begins, making the narrator’s guilt an overwhelming and permanent condition. Set in a haunted hotel run by “wicked women” who appear suddenly in groups of two or three, the singer is trapped by “faces staring, glaring, tearing through me.” Probably inspired by the unstable nature of public fame, Jackson’s legendary paranoia makes its first appearance: “Every smile’s a trial thought in beguile to hurt me.” At one point, the singer declares bluntly, “hope is dead.” The singing is pained, open-throated, and raw.

In 1982, Jackson was completing work on his second Quincy Jones collaboration. Determined that the new album must match or exceed *Off The Wall*’s popularity, Jones and Jackson sought more powerful music. When Jackson brought in a tape of a new song, “Beat It,” Jones began to realize that Jackson could become a powerful phenomenon—a crossover to the “white rock” market. Jackson’s hard rocking song about backing away from a fight fit perfectly in the rock style. Jones brought in metal guitarist Eddie Van Halen to do a solo, and the pounding beat coupled with the song’s accompanying visual representation of a rhythm & blues singer performing “white” rock began literally to change the face of the music industry.

As the album neared the end of production, Jones still needed one more solid hit and asked Jackson to write another song. For reasons that are unclear, Jackson wrote a fierce song denying paternity of a little boy whose “eyes were like mine.” “Billie Jean” is now considered a rock classic. There are times during the song when it seems that the arrangement just cannot keep up with the singer’s passion, and Jackson’s frenzy seems barricaded by the cool, solid majesty of the arrangement, singing as if lives really did depend on listeners believing his story. The magic of the song is, of course, that the singer is not really sure if he believes himself.

The new album quickly jumped to number five on its release. This time, reluctantly, Jackson did a great number of promotional interviews. He spoke to reporters from *Ebony*, *Newsweek*, *Interview*, and *Rolling Stone* and filled out written questionnaires for other publications like *Creem*. He did television shots for *Entertainment Tonight*, *Ebony/Jet Showcase*, and *America’s Top Ten*. The interview that everyone talked about, however, was the February 17, 1983 cover story for *Rolling Stone*.

“I’m the type of person who will tell it all, even though it’s a secret. And I *know* that things should be kept private,” Jackson explained to interviewer Gerri Hirshey, neatly encapsulating the “secret” of his success as well. Hirshey described him as extremely nervous and flighty; he suffered the interview as if he were getting stitches. He said he liked to watch cartoons and explained why: “It’s like everything’s all right. It’s like the world is happening now in a faraway city. Everything’s fine.” Hirshey says the interview remained tense until Jackson relaxed when talking about his animals; he even forced Hirshey to play with his boa constrictor. Then, unbidden by Hirshey, he asked, “Know what I also love? Mannequins . . . I guess I want to bring them to life,” he went on. “I like to imagine talking to them.” It may have been with those lines that *Thriller* mania really began. It wasn’t just that Michael Jackson sounded or even looked peculiar; he’d marked himself as irrefutably “Other,” a stranger in a strange land.

By early spring of 1983, “Billie Jean” skyrocketed to number one on the *Billboard* charts, and remained there for seven weeks. This song was followed almost immediately by “Beat It” which stayed on top four weeks. *Thriller* also reached number one and stayed there. At one point in early 1983, Michael Jackson had an unprecedented

number one record on four charts: pop singles and albums, and Black singles and albums. To promote “Billie Jean,” CBS had meanwhile financed an expensive “music video,” a little film set to the tune. The chief outlet for airing these videos was the cable channel founded in 1981 called Music Television or MTV. According to a September 22, 1986 *T.V. Guide* story, the cable channel refused to air the video because they said it was not “rock and roll” enough for their format. When CBS threatened to pull all its videos from the cable channel, “Billie Jean” became a rock ‘n’ roll song.

In 1983, Michael participated in the *Motown 25* televised reunion and stole the show with his innovative and breathtaking dancing. He unveiled his famous “moonwalk” for the first time, spun as if on ice skates, and perched precariously on his toes for the briefest moment. He pursued his dance in a sort of calamitous rage. Michael seemed to sense that this was his chance to escape the confines of mere stardom and become something quite different: not the “star” he’d been for years, but an iconic signifier on the order of Marilyn or Elvis. The show aired in May, with “Beat It” and *Thriller* already laying waste to the charts. After this, there was a buzz of excitement surrounding Jackson, as if each new gesture brought with it a revelation.

As time went on, the revelations his gestures brought were increasingly disturbing. The shadowy transformation revealed itself quickly; in 1984, Michael Jackson very reluctantly submitted to his father’s pressure to go on a concert tour with the Jacksons. This “Victory Tour” turned into an unmitigated disaster; high ticket prices created a backlash, the tour was mismanaged, the infighting unmerciful. In the end, Michael himself decided to give away all his proceeds to charity.

After the tour, Michael Jackson “went away” for a while in an attempt to cope with an onslaught of unprecedented pop pressure. He severed many ties with his family, and finally moved out of the family home to a new ranch in Santa Barbara County that he called “Neverland.” When he did appear in public, he often wore a surgical mask over his face, which served to hide the cosmetic changes he was making to his appearance. His skin became lighter (due, he said later, to a skin disease), his nose thinned after several surgeries, and he added a cleft to his chin. During this time, Jackson engaged in a variety of eerie publicity stunts. His manager announced Jackson’s wishes to sleep in a hyperbaric chamber and purchase the skeleton of Joseph Merrick, England’s “Elephant Man.” By the time he returned to the popular music scene in 1987, Jackson was widely regarded as a freak. Although his music still sold alarmingly well (and was alarmingly good), and though he was perhaps more famous than ever, by 1993 Jackson was a figure of extreme curiosity, arousing as much pity as fascination.

That the denouement was troubling should not have been altogether surprising; Jackson’s life since *Thriller* seemed to consist of a series of troubling crises. On August 17, 1993, a Los Angeles County child protective services caseworker took down a report alleging that Jackson had molested a young boy. (In November of that year, the underage son of one of Jackson’s former employees also made a claim of impropriety to L.A. County’s CPS.) After Jackson settled the civil case and the investigation closed, he resumed his career. First he married Elvis Presley’s daughter Lisa Marie, and when that union ended after 18 months, he married and produced two children with Debbie Rowe, a Los Angeles nurse. By the late 1990s, Jackson seemed to simply revel in his role as a human oddity.

## Jackson, Reggie (1946—)

Slugging outfielder Reggie Jackson was a larger-than-life figure who saved his best performances for baseball’s biggest stage. Nicknamed “Mr. October” for his ability to shine in baseball’s autumn post-season showcase, Jackson earned Hall of Fame status based

Reggie Jackson

largely on his prodigious World Series play. He was also the first baseball player to have a candy bar named after him, a powerful indicator of his impact on the popular imagination.

The native of Wyncote, Pennsylvania, was chosen second in the 1967 amateur draft by the Oakland Athletics. He quickly established himself as a powerful home-run hitter who struck balls out of the park at a near-record pace. He first grabbed national headlines when he swatted a home run over the roof at Tiger Stadium during the 1971 All-Star Game in Detroit, and the A's domination of the World Series from 1972 to 1974 kept him firmly planted in the public eye. Though a knee injury kept Jackson out of the Fall Classic in 1972, he returned the following season with a stellar campaign. The American League's Most Valuable Player with a .293 average and a league-leading 32 home runs, Jackson was named World Series MVP as well, establishing the post-season reputation he was to solidify in years to come. In June of 1974, *Time* magazine put Jackson on its cover. "Reginald Martinez Jackson is the best player on the best team in the sport," the periodical proclaimed.

Baseball's brave new world of free agency gave the rising superstar the chance to test his value on the open market. The New York Yankees responded with a lucrative five-year contract offer. Jackson leapt at the chance to play in the world's largest media market. The marriage of convenience between the swaggering Jackson and the club's dictatorial owner, Cleveland shipbuilder George M. Steinbrenner III, was to prove an eventful one.

Arriving in New York, Jackson almost immediately proclaimed himself "the straw who stirs the drink"—alienating the Yankees' team captain, Thurman Munson, along with almost everyone else in town. Sportswriters found Jackson made for great copy, but his manager, Billy Martin, couldn't stand him. Martin looked for every opportunity to humiliate his star slugger, benching him for no reason at one point and pulling him off the field mid-game at another. Their feud came perilously close to blows on more than one occasion. Nevertheless, the feudin' Yankees steamed over the American League on their way to the American League pennant.

The 1977 World Series proved to be the high point of Jackson's career. "Mr. October" became the first player ever to hit five home runs in one World Series. He clouted three in the sixth game alone, on three consecutive pitches, off three different Los Angeles Dodger pitchers. That feat, never accomplished before or since, helped earn Jackson Most Valuable Player honors as the Yankees took the championship four games to two.

That off-season, Jackson became the toast of New York. While still in Oakland, he had once boasted, "If I played in New York, they'd name a candy bar after me." Someone at Standard Brands Confectionery was obviously taking notes that day, because in 1978 Jackson got his candy bar. The *Reggie!* bar was a crumbly lump of chocolate, peanuts, and corn syrup sculpted to the approximate diameter of a major league baseball. It cost a quarter (quite a bargain in the age of inflation) and came packaged in an orange wrapper bearing the slugger's likeness.

Sportswriters had a field day with the unpalatable confection. One wag wrote that when you opened the wrapper on a *Reggie!* bar, it told you how good it was. Another derided it as the only candy bar that tasted like a hot dog. But the ultimate verdict came from Yankee fans, 44,667 of whom were given free samples on April 13, 1978, when the Yankees opened their home campaign against the Chicago White Sox.

In typical Jackson fashion, the slugger clouted a home run in his first at-bat, making it four "taters" in four swings at Yankee Stadium dating back to the sixth game of the 1977 Series. The raucous crowd

then showered the field with *Reggie!* bars as Jackson made his trip around the bases. Ugly orange wrappers quickly carpeted the green field. The only detractor from the prevailing air of absurdist resignation was White Sox manager Bob Lemon, who grouched, "People starving all over the world and 30 billion calories are laying on the field."

Lemon was whistling a different tune that August when, after being fired by the White Sox, he took over for Billy Martin as Yankee manager. The volatile Martin had finally worn out his welcome with a drunken screed against Jackson and Steinbrenner in which he famously declared, "One's a born liar, the other's convicted"—an apparent reference to the imperious shipbuilder's rap sheet for making illegal contributions to Richard Nixon's presidential campaign. Undeterred, Lemon, Jackson, and the Yankees stormed to a second straight World Series championship.

Jackson wore out his own welcome with Steinbrenner in 1982, when the owner refused to renew his contract. He played a few seasons with the California Angels before returning to Oakland for his final season in 1987. In retirement, Jackson served as a coach with several teams before accepting a nebulous front office position with the Yankees in 1996. He was fired by Steinbrenner in 1998 for running up thousands of dollars in unapproved expenses on his team credit card. The merry-go-round, it seems, has not stopped for "Mr. October."

## Jackson, Shirley (1916-1965)

About her short story "The Lottery," Shirley Jackson wrote, "It was not my first published story, nor my last, but I have been assured over and over that if it had been the only story I ever wrote or published, there would be people who would not forget my name." First printed in the *New Yorker* in June of 1948, the chilling story of ritual violence generated more mail to the magazine than any piece of fiction before or since, and hundreds of shocked readers canceled their subscriptions. Since then, "The Lottery" has been translated into hundreds of languages and made into a radio play, two television plays, a ballet, and even an opera. It is ubiquitous in short story anthologies and part of the required curriculum of many high school English programs.

The story concerns a ceremonial custom in a small, unnamed town. With masterful strokes, Jackson builds a sense of trepidation and horror, describing a perfectly normal village making preparations for their annual lottery. Children gather piles of stones as the villagers arrive, excited and nervous, in the town square. The ritual is performed with the utmost seriousness and formality, with a few murmurs about other towns giving up their lotteries. Finally, Mrs. Hutchinson's name is chosen and the villagers stone her to death.

Jackson avoided graphic violence or gross-out horror at all times. Her no-words-wasted style is especially evident in the last line

of "The Lottery": "It isn't fair, it isn't right," Mrs. Hutchinson screamed, and then they were upon her." The ugly flow of blood that must accompany her appalling end is left to the imagination of the reader.

The torrent of mail that descended on the *New Yorker* offices could broadly be divided into three categories. Some readers wrote to demand an explanation for the story; others wrote abusive letters, venting their spleen against Jackson for her "sick" surprise ending. The most bizarre and disturbing response came from those who inquired where these lotteries took place, and whether they could go and watch. Jackson generally refused to explain the meaning of the story, but suggested in private to at least one friend that anti-Semitism in North Bennington, Vermont was at its heart. (Her husband, literary critic Stanley Edgar Hyman, was Jewish.) On another occasion she told a journalist, "I suppose I hoped, by setting a particularly brutal rite in the present and in my own village, to shock the readers with a graphic demonstration of the pointless violence and general inhumanity of their own lives [but] I gather that in some cases the mind just rebels. The number of people who expected Mrs. Hutchinson to win a Bendix washer at the end would amaze you."

Shirley Jackson was born in San Francisco on December 14, 1916 (not 1919, as in some accounts), and grew up in California and in Rochester, New York. She graduated from Syracuse University in 1940 and married Stanley Edgar Hyman. They settled in North Bennington, Vermont, in 1945, where they owned an enormous library and hosted dinner parties for guests who included literary luminaries Bernard Malamud, Ralph Ellison, and Dylan Thomas. They also raised four children.

Dubbed "the queen of the macabre," Jackson wrote dozens of short stories, most of which, like "The Lottery," concerned gothic terrors lurking just beneath the surface of everyday life. In addition, she authored a series of darkly funny stories about her family's bustling home life, collected in *Life Among the Savages* (1953) and *Raising Demons* (1957). Unlike many horror writers, she had an elegant way with the English language. Famously, one critic wrote, "Miss Jackson seemingly cannot write a poor sentence."

Her novels *The Haunting of Hill House* (1959) and *We Have Always Lived in the Castle* (1962) are classics of the horror genre. Her understated yet intensely powerful brand of horror inspired even Stephen King, who dedicated his novel *Firestarter* "In memory of Shirley Jackson, who never had to raise her voice." King also wrote that Eleanor Vance, the heroine of *The Haunting of Hill House*, "is surely the finest character to come out of this new [identity-centered] American gothic tradition," and, coupling her with Henry James, asserted that this novel and *The Turn of the Screw* are "the only two great novels of the supernatural in the last hundred years." In 1963, *The Haunting of Hill House* was made into a horror film, *The Haunting*. Directed in Britain by Robert Wise, it failed to live up to the standard of the book but, in keeping with Jackson's literary style, no violence is shown directly, and an aura of fear pervades the film from start to finish.

A sometime witch, Jackson claimed she could bring kitchen implements to the top of a drawer by "calling" them. She was an excessive smoker, drinker, and eater, and a workaholic writer prone to debilitating anxiety. After intense periods of productivity, she would endure periods of serious depression, and also suffered on and off from asthma. She died of heart failure in North Bennington on August 8, 1965.

## Jackson, "Shoeless" Joe (1887-1951)

"Shoeless" Joe Jackson endures in baseball lore as the game's tragic hero, the naive country boy who became embroiled with big-time gamblers in the infamous "Black Sox" scandal of 1919 and who was subsequently banned for life from the sport, cutting short an otherwise brilliant career.

The illiterate son of a Southern miller, Jackson grew up near Greenville, South Carolina. He acquired his famous nickname while playing baseball with the local mill teams as a teenager. Having

"Shoeless" Joe Jackson

bought a new pair of spikes, Jackson found himself with blistered feet. Desperate to play and unable to wear his old shoes due to the soreness, Jackson lumbered out to right field in stocking feet. The crowd picked up on Jackson's lack of footwear, and henceforth he became known as "Shoeless" Joe.

Jackson's stellar play in the mill leagues attracted scouts, and, in 1908, he signed with the Philadelphia Athletics. Frightened by big cities and wary of leaving his family behind, Jackson initially refused to report. In 1909, he made his debut with the Athletics, but endured intense taunting from teammates and fans for his alleged ignorance and naivete. A disheartened Jackson failed to live up to his promise with the Athletics, and manager Connie Mack shipped the young outfielder to the Cleveland Indians. In Cleveland, Jackson developed into a star. In 1911, his first full season, Jackson batted .408; the following year, he batted .395. His stellar defense in the outfield and fearless base running made Jackson a complete ballplayer and ticketed him for the baseball stratosphere.

Strapped for cash, the Indians sent Jackson to Chicago in 1915 in exchange for three undistinguished players and \$31,500. Jackson hit an uncharacteristically low .301 for the championship-winning 1917 White Sox, but rebounded with a more typical .351 for the 1919 team, which lost that season's World Series to the Cincinnati Reds.

In September of 1920, in the midst of one of Jackson's greatest seasons, in which he was batting .392 with 121 RBI, a shocking revelation rocked the country: eight White Sox players, including Jackson, had conspired with gamblers to fix the 1919 World Series. Jackson admitted his complicity in the scheme shortly after journalists had uncovered the sordid tale. Emerging from a Chicago courtroom, where he and his teammates were standing trial for defrauding the public, Jackson, according to baseball lore, stumbled upon a teary-eyed youngster whose only words to Jackson were "Say it ain't so, Joe." The grand jury ultimately acquitted all the players, but new baseball commissioner Judge Kenesaw "Mountain" Landis subsequently banned them all from the sport for life. Jackson returned to his native South Carolina, where he started a dry-cleaning business and occasionally played in sandlot and outlaw games.

A groundswell of support for Jackson's reinstatement to baseball developed after his death in 1951. Alternately pointing to his naivete and to his .375 batting average in the World Series as evidence that he had not deliberately tanked the series, supporters of Jackson pushed for his reinstatement and his admission to the Hall of Fame. Writers romanticized Jackson's tragic tale; the Chicago outfielder was the subject of W. P. Kinsella's wistful *Shoeless Joe*, later turned into the major motion picture *Field of Dreams* (1989). The 1988 movie *Eight Men Out* also attempted to rescue Jackson and the others from their misdeeds, suggesting that the gambling fix represented the players' only escape from Chicago owner Charles Comiskey's penury. Still, as of the late 1990s, there appeared little chance that baseball's governors would absolve Jackson from his sins.

## Jakes, John (1932—)

John Jakes was born in Chicago, Illinois, on March 31, 1932. His parents fostered a love of the library in him and his association with books has followed him throughout his life. Jakes has enjoyed a long and distinguished writing career but has worked hard for his success. He is the prolific author of over seventy books and over two hundred short stories in such diverse categories as mystery and suspense, science fiction, the western, and children's literature. He is, however, best known for his best-selling historical fiction and intergenerational family sagas. He was so prolific in the mid- to late twentieth century that one rumor stated that John Jakes was actually the pen name for a group of writers, historical researchers, and publishers. His works have sold millions of copies each and several have had the distinction of being on the *New York Times* Bestseller List. His historical novels have been so influential that he is often referred to as the "godfather of the historical novel" and "the people's author."

John Jakes's early plans to be an actor lasted until he sold his first short story and felt the exhilaration of publication. He graduated with a degree in creative writing from DePauw University and went on to earn a master's degree in American Literature from Ohio State

John Jakes

University. He also has been awarded several honorary degrees and has served as a writer-in-residence and research fellow at several universities. Such recognition shows his dedication to the historical accuracy of his works and his influence as a popular historian. Jakes worked at several advertising agencies as a copy writer after graduation while devoting his spare time to the pursuit of his writing career. Mary Ellen Jones quotes him as remarking that his inspiration came from “the swashbuckling adventure films of the 1930s and 1940s” that offered adventure and romance within a framework of loosely-based historical events. His most famous works include the eight-volume Kent Family Chronicles, the North and South trilogy, *California Gold*, *Homeland*, and its sequel, *American Dreams*. Six of his novels have been made into television miniseries, with the North and South saga being one of the highest rated miniseries of all times.

John Jakes has enjoyed a wide following as a writer of American historical fiction. Historical fiction and the historical romance novel have enjoyed widespread popularity in America since the career of popular author Sir Walter Scott in the early nineteenth century. John Jakes is best known for his works in this tradition of historical fiction that are set in America. Jakes traditionally places his fictional characters into a background of real historical events and personages based on extensive research. This attention to detail makes his works dominate in an important field of public history. Jakes adopts this work ethic because he is aware that he is often the reader’s only source of history. He also understands that the author must entertain the reader in order to educate them. Jones characterizes his works as promoting “an optimistic affirmation of America and its principles.” Jakes’s popularity should assure him a lasting reputation as “America’s History Teacher.”

## James Bond Films

The James Bond films, concerning the adventures of the debonair British secret agent, are one of the most successful series of films in cinema history, with 18 official films released between 1962 and 1997. Collectively they are known for a number of elements, including spectacular stunts, outrageous villains, and beautiful women. The films have survived multiple changes in the actors playing Bond and changing times as well, to captivate the public imagination the way few other series have.

The roots of the Bond character begin with British author Ian Fleming, who served in World War II as a member of British Intelligence. In the early 1950s he began a career as a writer with the publication of *Casino Royale*, a hardboiled adventure about British Intelligence agent James Bond. The book contained many elements the character would eventually be renowned for: an exotic location (the casinos of Monaco), an outrageous villain (Soviet agent Le Chiffre), and a beautiful woman (the doomed Vesper Lynd).

Fleming’s books were an instant sensation, with their mixture of high living, violence, and sex proving irresistible to readers. No less a public figure than President John F. Kennedy was a professed fan of Fleming’s spy fiction. Inevitably, film and television producers courted Fleming for the rights to his creation, but found little success. One such failed deal, with Irish film producer Kevin McClory in 1959, would come back to haunt Fleming.

In 1961, Fleming closed a deal with producers Harry Saltzman and Albert “Cubby” Broccoli to make the first Bond film, *Dr. No*. While its pace and style may seem slow and old fashioned to contemporary audiences, the film’s casual violence and even more casual sex shocked and excited the crowds of the 1960s. Scottish actor Sean Connery, who played Bond, became a star for his tough, ruthless portrayal of the secret agent. The image of the film’s love interest, actress Ursula Andress, rising from the ocean in a white bikini with a knife strapped to her side, has become an indelible commentary on female sex appeal.

Ian Fleming would die in the early 1960s, but his most famous creation was already destined to outlive him. A second film was soon in production, and when *From Russia with Love* was released in 1963, it found more success than the first. It was not until the release of *Goldfinger* in 1964, however, that the films reached their highest pinnacle yet. The film, concerning Bond’s efforts to stop a madman’s attempt to detonate a nuclear warhead in the Fort Knox gold depository, became one of highest grossing films of its time. It captured the public’s imagination with its fantastic imagery and set a standard future Bond films would have to work hard to match: the body of a nude woman covered in gold paint; production designer Ken Adam’s spectacular stainless steel Fort Knox; Bond’s Aston Martin DB-5, a classic automobile equipped with a number of deadly gadgets; the most famous Bond woman of all, Honor Blackman playing Pussy Galore; mad villain Auric Goldfinger and his lust for gold; and Goldfinger’s lethal henchman Odd Job and his razor-edged bowler hat. Sean Connery was never more appealing to audiences. His blend of ruthlessness and humor defined the part of Bond for a generation.

Connery starred in the next two Bond films: *Thunderball* (1965) and *You Only Live Twice* (1967). *Thunderball* was the source of litigation from McClory, who accused Ian Fleming of using material they had developed together in 1959. McClory won the lawsuit and was involved in the 1965 production, which concerned the terrorist hijacking of a pair of nuclear warheads by Bond’s arch enemies, the forces of SPECTRE. The Bond films reached fantastic heights in *You Only Live Twice*, with its gorgeous Japanese scenery and incredible technology of sleek space rockets and SPECTRE’s glimmering headquarters in the heart of a dormant volcano. It also marked the first on-screen appearance of one of Bond’s more sinister foils, Ernst Stavros Blofeld, played by Donald Pleasance. While the films’ successes continued unabated, Connery had tired of the role and wanted to seek other challenges as an actor.

*On Her Majesty’s Secret Service* (1969) was the first Bond film to feature an actor other than Connery in the role of the deadly agent. George Lazenby, an inexperienced actor, took over the role. While competent, he lacked Connery’s appeal and conflicts with producers prevented him from taking the role again. The film is considered by some purists to be one of the better Bond films; it hews closely to its source novel and features former *Avengers* star Diana Rigg as Bond’s doomed wife, Tracy. Box office results did not reach the heights they had under Connery, however, and he was coaxed back for a farewell performance in *Diamonds Are Forever*. The baton was finally passed for good when Roger Moore took over the part in *Live and Let Die*

Sean Connery (as James Bond) with Tania Mallet (as “The Golden Girl”) on the set of the film *Goldfinger*.

(1973). Moore’s portrayal differed considerably from Connery’s; Moore lacked Connery’s sense of menace, but compensated with his own sophistication and sense of humor, creating a lighter kind of Bond film which was perfect for the jaded 1970s.

Moore would return in *The Man With the Golden Gun* to face off against Christopher Lee’s villain, Scaramanga, but box office receipts were dropping. Broccoli bought out his partner Saltzman, and came back in 1977 with *The Spy Who Loved Me*, Moore’s third as Bond and the most lavish to date. It found tremendous success with audiences. The film was laden with expensive sets and elaborate stunts, including a sleek sports car that transformed into a submersible. It also included the steel-toothed villain Jaws, played by the imposing Richard Kiel. Moore returned again in the successful *Moonraker* (1979), which took advantage of the late 1970s craze for science fiction spawned by the blockbuster *Star Wars*. It had Bond in an outer space adventure centered around the Moonraker space shuttle.

*For Your Eyes Only* (1981) marked a return to more realistic espionage adventure that would continue in Moore’s next two efforts as Bond, *Octopussy* (1983) and *A View to a Kill* (1985). *A View to a*

*Kill* would be Moore’s last film as Bond. His decision to retire from the part led to respected stage and film actor Timothy Dalton assuming the license to kill. His first outing, *The Living Daylights* (1987), was a moderate success. His next effort, however, *License to Kill* (1989) was poorly received by critics and fans alike. While a superb actor who stayed true to Fleming’s characterization of Bond as a dark, driven man, Dalton’s grim performances simply came as too much of a change after the lighthearted Moore. The Bond saga would now endure a six year hiatus, owing to protracted legal and financial troubles involving the films’ producers and studio, Metro Goldwyn Mayer/United Artists. When Bond returned, however, it was with a bang.

*Goldeneye* (named for Ian Fleming’s Jamaica estate) was released in 1995 to excellent reviews and the highest ticket sales in the series’ history. Irish actor Pierce Brosnan assumed the role at last (after briefly having the part and then losing it to Dalton due to his commitment to the television series *Remington Steele*) to great acclaim. His mixture of Connery’s toughness, Moore’s humor, and his own good looks and skills as an actor made him perfect for the

role. His next effort, *Tomorrow Never Dies* (1997) was another huge box office and critical success.

Certain unofficial Bond productions have seen the light of day through the years. Eon Productions did not obtain the rights to *Casino Royale* in 1961—they had already been sold for a black-and-white CBS television production starring American actor Barry Nelson as Bond. These rights were then bought for a late 1960s spoof of the Bond phenomenon starring David Niven, Orson Welles, and Woody Allen. Kevin McClory's *Thunderball* rights led to *Never Say Never Again* (1983), which featured one last encore by Sean Connery as Bond.

More than just a series of massively successful films, Bond has worked his way into the fabric of our culture. His name and certain other phrases—license to kill, Agent 007—have become synonymous with action, adventure, and a glamorous lifestyle. The Bond series has spawned uncounted spoofs and imitators, from the 1960s spy craze that included the Matt Helm films, the Flint movies, and the television series *Mission: Impossible*, *The Man from UNCLE*, *The Avengers*, and *The Wild, Wild West*, to such 1990s productions as the spectacular *True Lies* and the affectionate spoof, *Austin Powers: International Man of Mystery*. Bond theme songs frequently become Top 40 hits. Moreover, the Bond films have in large part set the bar for the action film genre with their incredible stunts and high production values.

Bond also reflects the changing times. The Bond of Connery—sexist, violent, and cruel—so popular in the 1960s changed with the changing attitudes of the times, especially concerning women, into the more gentle and funny Bond of Moore in the late 1970s and 1980s. As the Cold War ended, Dalton's Bond found himself facing a maniacal drug dealer in *License to Kill* and the AIDS crisis prompted a monogamous (!) Bond in *The Living Daylights*. In the new world order of the 1990s, Brosnan's Bond has faced ex-Soviet agents in *Goldeneye* and a crazed media baron in *Tomorrow Never Dies*. Through the years, Bond has even quit smoking.

Bond has lasted this long because of his appeal to our fantasies. Bond enjoys the exotic locales, expensive clothes, and fantastic technology that few people experience in their lives. Men envy his appeal to women, and women find actors portraying Bond attractive in their own right. Through him, both genders can live a life of danger, excitement, and heroism. He changes with the times in order to remain relevant. Where his contemporaries have largely vanished, Bond remains visible without compromising the heart of the character.

## James, Elmore (1918-1963)

Undeniably the most influential electric slide guitarist of all time, Elmore James revolutionized the blues with his raw, sharp sound. Born in Canton, Mississippi, in 1918, James first learned to

play on a homemade instrument fashioned from a broom handle and a lard can. James became an itinerant musician in his teens, frequently meeting up with other players including the legendary Robert Johnson and Howlin' Wolf. After serving in the Navy during World War II, James moved to Memphis and became a frequent "guest star" on local radio stations.

James' first solo recording, "Dust My Broom," became the largest rhythm and blues hit of 1951. Not long after the session, James moved to Chicago, assembling his all-star band the Broomdusters and recording for the Chess label. In the next ten years, he shuttled back and forth between Chicago and Mississippi before suffering a fatal heart attack in 1963. In 1980, Elmore James was elected to the Blues Foundation's Hall of Fame, and in 1992 he was inducted into the Rock 'n' Roll Hall of Fame.

## James, Harry (1916-1983)

Reared in a circus atmosphere by parents who toured with the Big Top, Harry James studied trumpet with his father and won the Texas State Championship with a solo at age 14. One of the star trumpet players of the swing era, 20-year-old James made his recording debut with the Ben Pollack Band in September 1936. Three months later he was a featured sideman with the Benny Goodman Band, a springboard to forming his own swinging, Basie-style band in January 1939. Ironically, James' biggest hits with his own band were *not* the upbeat numbers like "Two O'clock Jump," but the dulcet-toned, non-jazz solos like "You Made Me Love You." James continued to play in the style of his favorite horn men, Louis Armstrong and Muggsy Spanier, and the band remained widely popular into the late 1950s.

## Japanese American Internment Camps

Between February and November 1942, nearly 120,000 West Coast residents of Japanese descent were evacuated from their homes and sent to government War Relocation Authority camps in remote areas of the West, South, and Southwest. Many of these Japanese and Japanese Americans would spend the remainder of World War II in the camps, which were located in Gila River, Arizona; Granada, Colorado; Heart Mountain, Wyoming; Jerome, Arkansas; Manzanar,

California; Minidoka, Idaho; Poston, Arizona; Rohwer, Arkansas; Topaz, Utah; and Tule Lake, California. The largest camp, Tule Lake, housed nearly 19,000 internees, while Granada held about 7,000. The camps' residents lived in crudely built barracks, and ate, bathed, and washed clothes in communal facilities. Each camp was surrounded by barbed wire and guarded by armed soldiers. The first camp, Poston, opened in May, 1942. Nearly two years later the government began closing the camps starting with Jerome, in June, 1944, and ending with Tule Lake, in March, 1946.

The internment of the issei (first generation) and the Nisei (second generation, American-born) was authorized by President Franklin D. Roosevelt through Executive Order 9066 (February 19, 1942), which sanctioned the evacuation of any and all persons from "military zones" established along the coastline. Although the federal government also viewed persons of German and Italian descent with suspicion, only residents of Japanese ancestry were forced to leave their homes.

Executive Order 9066 was a response to Japan's attack on Pearl Harbor on December 7, 1941. Following the attack, government officials including U.S. attorney general Francis Biddle, Los Angeles congressman Leland Ford, and California attorney general Earl Warren called for securing the issei and Nisei population. They believed that West Coast Japanese helped plan the attack on Pearl Harbor and hoped the internment would prevent further acts of disloyalty. Studies indicate, however, that anti-Japanese sentiment, which had been building on the West Coast since the late nineteenth century, played a role in the forced evacuation. These studies point to the fact that only West Coast issei and Nisei were removed—not those living in Hawaii or on the East Coast—and that the residents calling for their removal were California nativists, laborers, and farmers, who had long viewed Japanese immigrants as social and economic threats. The 1982 report issued by the Commission on Wartime Relocation and Internment of Civilians concluded that the removal of the issei and Nisei was not a military necessity, but occurred because of racism, wartime hysteria, and poor political leadership.

Under the direction of Lieutenant General John L. DeWitt, the issei and Nisei were first evacuated to assembly centers at county fairgrounds and racetracks, and they were later moved to the permanent relocation camps. In some locations, such as Terminal Island in San Pedro, California, residents of Japanese descent were given as few as two days to dispose of, or store, their belongings before departing. In other areas, the evacuees had several weeks to prepare. Though the Federal Reserve Bank and the Farm Security Administration helped handle the property and belongings of the issei and Nisei, they lost hundreds of thousands of dollars through quick sales of their homes and land at below-market prices. While in camp the evacuees suffered additional losses through vandalism, arson, and neglect of the belongings that had been stored.

Life in the camps proved difficult. Internees had lost their jobs, social networks, and educational opportunities and were removed from "mainstream" life. Angered by the loss of their rights and freedom, and bitter towards the U.S. government, internees sometimes directed their hostility toward one another. In some camps riots broke out during clashes between pro-Japanese and pro-American factions. A loyalty test administered by the War Relocation Administration also helped to factionalize the evacuees. As a result of the turbulence, hundreds of young Nisei left the camps when the opportunity appeared. Colleges such as Oberlin in Ohio sponsored Nisei students, allowing them to relocate and resume their education. Christian churches arranged for Nisei to work in homes and offices

located in the South and Midwest. In addition, more than 1,000 men joined the U.S. military forces and served in the all-Nisei 442nd Regimental Combat Team.

Although many evacuees protested the removal, four individuals, Fred T. Korematsu, Mitsuye Endo, Minoru Yasui, and Gordon K. Hirabayashi, challenged the constitutionality of the relocation order through the courts. Initially all four petitions were denied. But in December of 1944 the U.S. Supreme Court decided that Endo's detention in the camps violated her civil rights. Following this decision, in January of 1945, the War Department rescinded the evacuation orders and arranged for the internees to leave the camps.

It was not until the 1970s that branches of the U.S. government acknowledged any wrongdoing. In 1976, President Gerald R. Ford proclaimed that the evacuation was wrong. The 1982 commission report and its condemnation of the relocation sent an even stronger message. In 1983 Fred Korematsu, Gordon Hirabayashi, and Minoru Yasui, refiled their petitions, which the court granted. The change in political tenor encouraged the Nisei and Sansei (third generation) to seek redress and reparations for the forced relocation. Their organizing efforts culminated in September of 1987, when the U.S. House of Representatives formally apologized to the former evacuees and provided \$1.2 billion as compensation.

## Jaws

Steven Spielberg's *Jaws* (1975) is a significant cultural landmark in the Hollywood cinema of the late twentieth-century. In addition to the unprecedented box-office gross, which made it the first film in history to top \$100 million on its initial release, it established its relatively unknown 27-year-old director as a powerful creative force. Spielberg went on to achieve major financial and critical success in the "new Hollywood" with a string of memorable films that confirmed him as Hollywood's pre-eminent storyteller. This supreme gift was unveiled in *Jaws*, a fundamentally very simple tale that seamlessly combined elements from the action adventure, thriller, and horror genres. Exciting, engrossing, and scary, *Jaws* is also, in the final analysis, fun, as were the then fashionable "disaster" movies such as *The Towering Inferno* (1974), which it far outstripped in providing well-characterized protagonists in a setting designed to strike a chord with Americans of all ages.

One of the earliest examples of the now familiar Hollywood staple, the "summer blockbuster," *Jaws* was released to an eager

public in June of 1975. The film's plot centered on a series of fatal shark attacks at the beaches of a New England resort town, and the efforts of an ill-matched trio of men to kill the 25-foot great white shark responsible for the deaths. Promoted through a massive advertising campaign and given unprecedentedly widespread distribution by Universal studios, *Jaws* lived up to the expectation it generated. With its rousing adventure and horror elements and its crowd-pleasing finale, it became a worldwide phenomenon, and for at least one summer made millions of people very nervous about swimming in the ocean.

If the success of the film was nothing short of remarkable, the novel upon which it was based had proved a commercial phenomenon in its own right. In January 1973, author Peter Benchley submitted to the New York publishing house of Doubleday the final draft of a novel inspired by his memory of a monstrous great white shark caught off the coast of Montauk in 1964. In a documentary accompanying the laser-disc release of the film, Benchley recalls how several titles (such as "Stillness in the Water" for example) were considered and rejected for the novel before the simple, visceral *Jaws* was chosen. Very quickly, Bantam paid for paperback rights to the novel, and Hollywood producers David Brown and Richard Zanuck bought not only the film rights, but also the services of author Benchley for a first-draft screenplay. This early interest in the novel, combined with

book-club deals and an aggressive promotional strategy by Doubleday and Bantam, ensured the novel's climb to the top of the *New York Times* bestseller list, where it stayed for months.

Benchley's book is divided into three sections. The first opens with a nighttime shark attack upon a skinny-dipping young woman, whose mutilated body is discovered on the Amity town beach the next morning, leading the chief of police to urge the mayor to close the beaches for a few days. The request is refused, and the shark strikes again, killing a six-year-old boy and an elderly man in two separate attacks in full view of horrified onlookers. Now forced to close the beaches, the authorities hire Ben Gardner, a local fisherman, to catch the shark, but he disappears at sea, another victim. Part one ends with the arrival of Matt Hooper, an ichthyologist there at the invitation of the editor of Amity's newspaper.

Part Two focuses on the domestic tensions between chief of police Brody and his wife Ellen, whose discontent with her marriage leads her into a brief affair with the handsome and rich Hooper. Brody suspects the affair just as his battle to keep the beaches closed during the lucrative Fourth of July weekend reaches its highest pitch, and he learns that the mayor is fighting so hard to re-open the beaches because he is in debt to the New England Mafia. Brody reluctantly opens the beaches again, the shark almost kills a teenage boy, and the town hires another shark fisherman named Quint to tackle the

problem. Out of duty and a sense of guilt, Brody accompanies Quint and Hooper on Quint's boat, the *Orca*, to search for the man-eating fish.

The shark hunt occupies the final third of the novel. Blue-collar fisherman Quint takes an immediate dislike to the collegial Hooper, and the hostility between Hooper and Quint and Hooper and Brody acts as a human counterpoint to the ensuing struggle between man and fish. The shark proves to be larger and fiercer than anticipated, and Quint's repeated failure to harpoon their quarry compels Hooper to descend beneath the surface, in a shark cage, in an effort to kill it. The shark tears the cage apart and devours Hooper. On the last day of the hunt, Quint manages to harpoon the shark, but the weight of the fish sinks the boat and Quint is drowned. Brody is unexpectedly saved when the shark succumbs to the harpoon wounds and dies.

The Academy Award-nominated film that grew out of this narrative kept the main characters and the basic three-act structure but radically changed the characterizations and deleted the Hooper/Ellen subplot. Also gone were the mayor's links to the Mafia, while Brody was transformed from a local man to a New York outsider, facing his first summer as police chief of Amity where, ironically, he has come in order to escape urban violence. Hooper became a much more humorous and sympathetic character, to the extent that later drafts of the script spared him from the fatal jaws of the shark. While retaining Quint as a blue-collar antagonist for the preppie Hooper, thus providing an extra focus for tension aboard the somewhat ramshackle *Orca*, the fisherman's mania for shark hunting was explained as a result of his having survived a shark feeding frenzy following the sinking of a cruiser during World War II. Instead of drowning as in the novel, Quint is eaten during the shark's final wild assault upon the *Orca*.

All of these changes were beneficial to the screenplay, giving it a more straightforward line and lending it veracity. Spielberg and Benchley reportedly argued over many of the changes, including Spielberg's suggested new ending. Spielberg wanted a much more cathartic resolution and came up with the idea that one of Hooper's oxygen cylinders should explode in the shark's mouth. Benchley scoffed at the idea, insisting that no one would believe it. Spielberg's vision prevailed, and the author subsequently admitted that the filmmaker was right. Aside from Benchley, and Spielberg himself, screenwriters John Milius, Howard Sackler, (both uncredited) and Carl Gottlieb (credited) contributed to the script at different stages in its development and throughout the location shooting. By all accounts, the actors and/or crew improvised much of the dialogue and many of the most memorable moments, but unlike countless other films where too many cooks invariably spoil the broth, *Jaws* finally achieved a convincing coherency of plot and character.

Production difficulties were foreshadowed by the early script problems and initial casting choices that fell through before the three crucial leading roles went to Roy Scheider (Brody), Robert Shaw (Quint) and Richard Dreyfuss (Hooper), all three of whom turned in convincing and compelling performances. After an extensive scouting expedition, production designer Joe Alves selected Martha's Vineyard as the location for the fictional Amity and Robert Matthey built three full-size mechanical sharks at a cost of \$150,000 each. The producers hoped that the mechanical sharks, when inter-cut with second-unit footage of real great white sharks shot off the coast of Australia by famed underwater team Ron and Valerie Taylor, would prove convincing enough to scare audiences, which they triumphantly did. During the production, however, the mechanical sharks caused

much anguish (one sank during a test, and the complex hydraulic system exploded during another test run). The recalcitrance of the models prevented Spielberg from showing them on screen as completely as he had intended, and may actually have helped the film's suspense by keeping the killer shark's appearances brief and startling. Other troubles, such as changing weather conditions, shifting ocean currents, and labor disputes were serious impediments, and worried studio executives even considered abandoning the production. All of these combined difficulties extended the original 52-day shooting schedule into over 150 days, and the \$3.5 million initial budget quickly ballooned into \$12 million.

In the end, what saved *Jaws* from anticipated disaster was the brilliance of Spielberg's unifying vision, which somehow managed to impose order on the chaotic shoot, John Williams' Oscar-winning score with its now famous four-note motif for the shark scenes, and the director's close collaboration with film editor Verna Fields. In post-production, the two managed the near impossible by matching several scenes that had been shot months apart in completely different weather and ocean conditions. Fields won the editing Oscar, yet screenings of the rough cut had brought a lukewarm response from studio executives. Finally, in March of 1975, a sneak preview for the public was scheduled in Dallas. By all accounts, the audience loved the film, screaming loudest when the shark surprises Brody as he ladles chum off the stern of the *Orca*. Eager to get one more terrified shriek out of future audiences, Spielberg re-shot the scene where Hooper discovers the body of fisherman Ben Gardner in a swimming pool, and the film was ready for more sneak previews and exhibitor screenings. Stars Roy Scheider and Richard Dreyfuss were mobbed as heroes after one New York preview and favorable word of mouth spread rapidly. By the time *Jaws* was released to 490 theaters in June, the stage was set for it to become the most financially successful motion picture of all time until the summer of 1977, when George Lucas's *Star Wars* broke its record. Nearly every summer since 1975 has seen the major Hollywood studios competing to gross as many hundreds of millions of dollars as possible. Though many films have since surpassed *Jaws*' box-office success and three inferior sequels have somewhat diluted the impact of the original, the movie about a man-eating shark is often praised (or blamed) as the beginning of a Hollywood revival. By 1999, it was still holding its own in Hollywood history as the eleventh highest grossing film of the twentieth century.

## Jazz

Of all the great American musical forms—blues, rock 'n' roll, country, and jazz—jazz has proven to be the most subtle, the most flexible, the most capable of growth and change, the one which has developed from folk art and popular art to fine art. Due partly to the extraordinary talents and innovators who have dotted the history of jazz, the wide range of artistic possibilities available to jazz are inherent in the form itself: a music which is structured enough to permit intricate compositions for ensemble play, but loose enough to allow for individual improvisation, individual style and voicing, and considerable virtuosity.

Jazz developed around the turn of the twentieth century in the South and Southwest, particularly New Orleans. It built on a number of earlier African American musical forms, including blues and ragtime, and European-influenced popular music and dances. The first great New Orleans jazz innovators, such as Buddy Bolden (who never recorded), Louis Armstrong, Bunk Johnson, Jelly Roll Morton, Freddie Keppard, King Oliver, and Sidney Bechet, added a number of key African American musical techniques to conventional popular and dance music styles. The two most important were the blue note, a microtonal variation on conventional pitch, and the complex rhythmic variations developed from the polyrhythmic heritage of African drumming. These additions gave jazz the rhythmic flexibility that came to be called “swing”—an almost indefinable quality which has been summed up best in the Duke Ellington song, “It Don’t Mean a Thing If It Ain’t Got That Swing.”

Although there are reports of jazz being played in the first few years of the twentieth century, the early musicians were not recorded. The first recorded jazz album came in 1917 when a white group, the Original Dixieland Jazz Band, recorded for both Columbia and RCA Victor, with million-selling results. It took longer for record companies to take a chance on black jazz musicians. Mamie Smith’s

recording of “Crazy Blues,” in 1920, began a blues craze, and many of the early appearances on record by the great African American jazz masters, like Armstrong, were as accompanists to blues singers.

Meanwhile, as the recording industry grew throughout the 1920s, the post-World War I generation found itself restless, dissatisfied, and looking for expressions of his own identity. The era was called the Jazz Age, but the Jazz Age was basically a white, middle-class phenomenon, and the music which became popular was mostly by white groups like the Original Dixieland Jazz Band. Some of them were excellent musicians—in particular Iowa-born cornetist Bix Beiderbecke.

The African American musicians of New Orleans continued to be the artistic vanguard of jazz, although the scene had shifted. King Oliver was one of many who moved to Chicago. Arriving in 1918, he formed his first band in 1920, and was joined by Louis Armstrong in 1922. Oliver’s New Orleans-style ensemble jazz influenced many musicians, both black and white, but it was Armstrong who became jazz’s seminal influence. He left Oliver in 1924 to join Fletcher Henderson’s orchestra in New York, then returned to Chicago to record with his own groups, the Hot Five and the Hot Seven. Armstrong’s extraordinary technique and his artistic intensity and innovation dominated jazz, and as a result, the role of the soloist became predominant. Armstrong in the 1920s not only created one of the greatest artistic legacies of any American artist, he also established the importance of individual creativity in jazz.

During this same era, however, ensemble jazz was developing into orchestral jazz—the big bands, featuring section arrangements and tight organization. Armstrong, through his work with Henderson, was important here too, in integrating the concept of fiery, original jazz solo work into the large ensemble framework. Equally important in Henderson’s band was the work of Coleman Hawkins, a great soloist who, more than any other musician, introduced the tenor saxophone as an important jazz solo instrument.

Just as jazz experienced its first great wave of popularity in the 1920s, the era of the phonograph record, Prohibition, and the speakeasy, big-band jazz was also a product of its time. As newly-legal nightclubs closed and musical groups disbanded due to the hardships incurred by the Great Depression, jazz continued to find audiences in major supper clubs, such as the Cotton Club (located in New York’s Harlem, but open only to white audiences), and ventured into the increasingly important medium of radio. With fewer venues, the bigger, richer sound of big-band jazz become more popular. At the same time, the glut on the market of talented musicians drove salaries down, and made it cheaper for a successful bandleader to hire a large group.

The single most successful band of the big band, or Swing Era, was led by Benny Goodman. Goodman’s success was due to his brilliant musicianship and his organizational and promotional skills, but it was also due to the fact that he was white. Goodman used his preeminence to advance the mainstream acceptance of black jazz musicians. He not only hired Fletcher Henderson as an arranger, which was a behind-the-scenes job, he integrated his band, hiring great black musicians like Teddy Wilson (piano), Lionel Hampton, and Charlie Christian. There had been a few other integrated jazz groups before, but none as successful as Goodman’s group.

Artistically, the Duke Ellington and Count Basie bands represented the pinnacle of the big-band style. Ellington, who began as a bandleader in the mid-1920s, and continued to lead a band far beyond the Swing Era, until his death in 1974, may have been the first jazz musician to gain an international reputation as a serious artist—the

Jazz musician Al Jarreau.

first to draw attention to jazz as a serious art form, although this battle was not to be won for a long time. By the end of the 1970s, jazz was being taught in universities, and major grants and awards were going to jazz musicians and composers. But in 1965, Ellington was passed over for the Pulitzer Prize for music because of a stubborn insistence by older conservatives on the committee that jazz was not really art.

Count Basie, who came from the Kansas City tradition of blues-influenced jazz, was arguably the most important figure in developing the concept of “swing” in the big-band idiom. J. Bradford Robinson, in *The New Grove Dictionary of Jazz*, says that his rhythm section “altered the ideal of jazz accompaniment, making it more supple and responsive to the wind instruments.” Basie’s approach to rhythm, and the musical innovations of his leading soloists, particularly tenor saxophonist Lester Young, provided an important basis for the revolutionary changes that were to come.

Throughout the 1930s, jazz was primarily popular music. Goodman, Ellington, and Basie played for dances, just like the “sweet” big bands led by Sammy Kaye, the Dorsey Brothers, and others. But in the 1940s, jazz enjoyed the fruits of the steady growth of the previous decade. After the end of Prohibition, a new generation of jazz clubs had begun to grow throughout the 1930s. They tended to be small, which meant they created a demand for small group jazz, generally a rhythm section and two lead instruments. The most important of these clubs were on 52nd Street, in New York, making New York more than ever before the center of jazz creativity.

New jazz musicians, primarily black, gravitated to New York, where they represented an urban, sophisticated generation. Impatient with what they perceived as the “Uncle Tom” image of many black showmen, like Armstrong and Cab Calloway, they presented themselves as cool, cerebral, and introspective. They were artists, more than entertainers.

These new musicians investigated the possibilities of improvisational music, trying more complex rhythms and harmonies and improvisations built on melodic and chordal substitutions which went way beyond conventional melodies. The two most important figures in the modern jazz, or bebop, movement were alto saxophonist Charlie Parker and trumpeter Dizzy Gillespie. Their experiments galvanized an entire generation of musicians, who began to hear music in a whole new way. Experimentation became the new wave of jazz. In 1941 Minton’s, a small club in Harlem, became the center for a series of after-hours jam sessions which soon attracted all the best players who were interested in the new music.

Modern jazz attracted a fiercely dedicated audience, though it was never as large as the audience for the big bands. It created a style: the hipster, who wore a beret, sunglasses, and a goatee, and listened to unintelligible music and spoke in an unintelligible slang. Jazz, and the jazz subculture, filled an important role in the post-World War II era, as mainstream America plunged headlong into the conformity of prosperity, and a small vanguard was left to search for more elusive artistic and social values.

The artistic legacy of the bebop and cool jazz years, the 1940s and 1950s, is extraordinary. Besides Parker and Gillespie, other important figures include Thelonious Monk, Max Roach, Gerry Mulligan, the Modern Jazz Quartet, Sonny Rollins, Dave Brubeck, and Miles Davis, who was to play an increasingly important role in the next decades of jazz.

In addition to the achievements of individual musicians, the modern jazz era also drew attention to the aesthetic importance of jazz. It began to be described, for the first time, as “America’s classical music.” Widespread acceptance of jazz as an art form was

slow in coming to America, however; European intellectuals embraced it much more quickly.

During the 1950s, the jazz audience became more communal. The 1940s prototype had been the night-owl, club-hopping hipster; in the 1950s, the jazz festival became a fixture. The first jazz festival was held in Nice, France, in 1948; the first in America was the Newport (Rhode Island) Jazz Festival in 1954. By the 1990s, there were estimated to be close to 1000 significant jazz festivals held annually around the world.

As the experimental sounds of modern jazz entered the mainstream, and became accepted by mass audiences (TV shows like *Peter Gunn* used jazz soundtracks), young jazz musicians were finding a new avant-garde. An historic 1959 engagement at New York’s Five Spot Cafe by alto saxophonist Ornette Coleman was a milestone in the emergence of free jazz. While bebop had explored unusual possibilities and inversions in conventional chord and harmonic structures, free jazz virtually dispensed with them.

Coleman, Don Cherry, and Cecil Taylor were among the young iconoclasts who pioneered free jazz. At first rejected by the 1950s jazzmen, they proved impossible to ignore, and soon major jazz figures like John Coltrane, Eric Dolphy, and even Miles Davis were exploring its possibilities.

Free jazz was the artistic vanguard of the anti-establishment 1960s. Like bebop before it, it made previous styles sound tired and a little formulaic. Unlike bebop, though, it never established itself beyond a small, avant-garde audience. Nevertheless, it remained an important alternative musical direction.

The indigenous music of the 1960s was rock, and by the end of the decade, some jazz musicians were becoming intrigued by the artistic possibilities of this phenomenally popular form—most importantly, Miles Davis. Davis had been listening to Jimi Hendrix and other rock innovators, and he realized there was musical promise in a fusion between the improvisational freedom of jazz and the simple beat of rock. At the same time, rock musicians like John McLaughlin and Jack Bruce were being drawn to the creative possibilities of jazz.

Purists refused to accept jazz-rock fusion as real jazz. Its rhythmic regularity deadened the swing of jazz. But many noted jazz musicians, particularly Davis alumni Herbie Hancock and Chick Corea, embraced the new form. A number of young musicians, like the members of the group Spiro Gyra, made their entire careers playing fusion. None of them were very good.

Fusion was essentially an artistic dead end. The next generation of jazz musicians was not much interested in pursuing its leads. Jazz in the late 1970s, 1980s and 1990s became in many ways a retro music. With no new dominant style, many young musicians looked to the past—all eras of the past. The most dominant young musician of the 1980s and 1990s, trumpeter Wynton Marsalis, showed on his early albums that he could play in all styles, from the free jazz of Ornette Coleman to the classic jazz of Louis Armstrong.

A salient symbol of this era is the jazz repertory company, a jazz orchestra made up of young musicians, devoted to playing the jazz classics. The National Jazz Ensemble, founded by bassist Chuck Israels, was the first of these, and the Lincoln Center Jazz Orchestra, led by Marsalis, was probably the best known. This was the era during which jazz studies courses entered the universities, when the Smithsonian Institution issued its Classic Jazz collection, when grants for jazz studies, composition, and performance burgeoned in both the government and private sectors. Equally important to this period was the CD explosion, which created a new listener interest in the jazz of all periods.

The 1980s and 1990s, even without developing a new sound, have their own importance in the history of jazz for precisely this recombinant quality. Jazz developed so fast—no other art form in human history has moved from folk to popular to fine art in such a short amount of time—that its revolutionary vanguard frequently eclipsed earlier styles. Players not in the vanguard were too often dismissed as “moldy figs,” in the slang of the beboppers. That changed in the 1980s and 1990s. The artistry—and the modernity and innovation—of artists like Armstrong, Hawkins, and Basie became fully recognized.

Jazz will probably never again be the popular music it was in the 1930s. But it remains something other than an art music to be put alongside classical music in the concert halls and the academy. It retains that mystique of something hip, something adventurous, a music for the vanguard of young audiences to graduate to, after rock begins to lose its immediate appeal.

## The Jazz Singer

Produced in 1927, *The Jazz Singer* brought sound film to Hollywood. Directed by Alan Crosland and starring Al Jolson, the film was based on the 1922 short story “The Day of Atonement” by Samson Raphaelson. This story of Jewish assimilation to American

culture through popular music has been adapted as a Broadway play (starring George Jessel in 1925), two radio plays (both starring Al Jolson in 1936 and 1947), a televised production (starring Jerry Lewis in 1959), and two subsequent film versions (starring Danny Thomas in 1953 and Neil Diamond in 1980). *The Jazz Singer* not only illustrates the emergent sound technology of the 1920s, but also illustrates the mainstream acceptance of jazz music and comments on the acculturation process of immigrants to America.

*The Jazz Singer* recounts the story of Jackie Rabinowitz, the son of immigrant parents in New York, who is expected to succeed his father, as well as many ancestors, as the cantor in their synagogue. But young Jackie has ambitions of fame and fortune as a jazz singer, expressing himself in American popular music instead of Jewish religious music. Jackie's intentions of singing popular music leads to his father's denunciation and sends Jackie (now Jack Robin) to a career on the vaudeville circuit. As Jack's career progresses he falls in love with Mary Dale, a star dancer and gentile. Jack's two worlds collide when he accepts a part in a Broadway revue (starring Mary) and returns to New York upon his father's sixtieth birthday. Jack's father has still not accepted his son, but seeing him results in his father falling ill. In the film's climatic scene, Jack must decide between the show's opening on Broadway or filling in for his dying father at the synagogue singing “Kol Nidre” for *Yom Kippur*, the day of atonement. Jack fulfills his father's dying wish, and still manages to make it big on Broadway, bringing a sense of balance between his parents' old-world immigrant ways and his new Americanized life.

*The Jazz Singer* is often referred to as the first sound film, yet this is only partially true. The idea of synchronized sound and motion picture is as old as the movies themselves, but it was not until the early 1920s that a workable method of recording both image and sound came into use. Warner Brothers studio was the first to undertake sound film production, primarily as a last ditch effort to battle the larger studios who had, by the 1920s, solidified their hold on the movie industry. Warner's first efforts at sound film were variety programs with talking shorts, musical numbers, and staged productions using a sound-on-disc recording technology. Fox studios also entered the sound film market with its Movietone newsreels which presented news stories with a sound-on-film technology. Different studios could utilize different sound formats since each studio primarily exhibited at their own theaters. Warner's *The Jazz Singer*, however, was the first feature film to integrate the use of sound, both music and dialogue, into the story itself. The film is primarily a silent film with a musical soundtrack, but in several scenes, synchronized singing and dialogue are presented, most notably in the scene where Jack sings to his mother and after finishing one song says to her “You ain't heard nothin' yet.”

The film's significance goes beyond its historical role in film technology to illustrate the mainstream acceptance of jazz music as an American art form. Even though the music in the film is not, strictly speaking, jazz music, it does contain elements of jazz style, such as increased syncopation and a blues tonality. More importantly, the film expresses the belief that jazz music is an Americanizing force since it is a uniquely American form of music. The original author of the story, Samson Raphaelson, wrote in the introduction to the published stage play that “in seeking a symbol of the vital chaos of America's soul, I find no more adequate one than jazz.” Ironically, in order to perform jazz music onstage Jack Robin dons the costume of a minstrel performer, including blackface. Jack “becomes” black in order to become an American, and in the process reinforces nineteenth-century stereotypes of African Americans in popular culture.

The film promotes both acculturation and the maintenance of ethnic identity as significant parts of economic prosperity and success, the American dream.

## Jeans

Jeans, or more commonly blue jeans, comprise the range of casual or work trousers made most often of indigo blue cotton denim with reinforced stitching at the seams and metal rivets placed at stress

points. Though introduced as durable work clothing, jeans have become an almost universal part of modern culture, and are worn by people all over the world as both work and fashionable attire. Blue jeans, originally associated with the hard-working spirit of miners during the California Goldrush, were most directly descended from the “waist overalls” developed by Levi Strauss and Jacob Davis in 1873. Featured in American movie Westerns as early as the 1930s and 1940s, jeans began to attain cult status through their association with pop icons. Military servicemen during World War II wore jeans regularly while engaging in leisure activities, but it was their children growing up during the 1950s who embraced blue jeans as a symbol of their generation. Banned from many public schools, hard-to-get in stores outside of the United States, and worn by rebellious characters of movies of the 1950s, jeans became a symbol of power for the restless youth of the 1960s. Eventually jeans became popular worldwide through the influence of U.S. servicemen stationed overseas, through the popular influence of the cinema, and distribution of mass marketing media. Levi's blue jeans were first sold in Europe in 1959; by the end of the twentieth century denim blue jeans could be found in

virtually every country on the globe. The manufacture of jeans had become a worldwide industry, supporting a wide variety of styles, colors, designers, fashions, and accessories, as the notion of jeans as a symbol of comfort, leisure, and youthful status replaced that of jeans as durable work wear.

Jean fabric, originally a tough, long-lasting, blended twill fabric, can be traced to twelfth century Genoa, Italy. The term “jeans” has been applied generally to describe the working man’s outer wear in Europe since the seventeenth century. The modern blue jean, however, is most often manufactured not from jean fabric but from denim. The name “denim,” from “serge de Nimes,” refers to a finer grade serge fabric, also a twill, which appears to have originated in Nimes, France. Denim was originally a woven blend of wool and silk, but U.S. textile mills began using cotton as a substitute for the more expensive imported wools and linens and as a means of gaining independence from foreign suppliers as early as the mid-nineteenth century. The popular favor this trend gained resulted in the continuing use of cotton in both denim and jean fabrics. Denim tends to wear better, becoming softer with each successive wash, as opposed to jean fabric. One popular myth of the nineteenth century claimed that any worker who once wore denim would never go back to wearing jeans; at any rate denim fabric eventually became the preferred material for the manufacture of work jeans.

The modern connotation of jeans is usually of a line of denim trousers developed by dry goods manufacturer Levi Strauss in San Francisco in the 1870s. Popular myth ascribes Levi Strauss with the invention of blue jeans, imagined somewhat romantically as a figure rising to the occasion of hardship and innovation during the California Goldrush by the creation of much-needed overalls for miners using surplus tent canvas and surplus indigo for dye. In actuality, company archives of Levi Strauss & Co. attribute the invention of modern jeans to Jacob Davis, a Latvian tailor who immigrated to Reno, Nevada. According to company records, Davis invented a process whereby copper rivets were added to stress points in the seams which greatly enhanced their durability. Davis’ overalls were an immediate success among the miners. Wanting to establish a patent for his process of rivetting overalls but not having the funds to do so, Davis reportedly approached Strauss, a successful dry goods merchant in San Francisco, and offered to share the proceeds with Strauss if he would put up the money for the patent. Strauss agreed, and a patent was issued in 1873. Trousers made using this process were known as “waist overalls” until 1960, when the common term “jeans” was inserted into Levi Strauss & Co. company advertising and literature.

Western stars of the 1940s and early 1950s such as John Wayne started the popular association of jeans with the hero myth of rugged individuals who braved harsh elements and savage attacks and helped build the American West. Later in the 1950s stars such as Marlon Brando and James Dean, portraying desperate men on the fringe of society gave jeans an association of rebelliousness. The clothing worn in these movies was espoused by impressionable youth as a symbol of the carefree lifestyle they wished to emulate. In truth, jeans had been commonly worn by U.S. military servicemen during World War II as leisure wear. After the war, veterans continued to wear jeans for recreation, and children born during this era naturally associated the wearing of blue jeans with leisure activities.

Jeans gained notoriety in American schools in part because of the popular association with rebelliousness, itself a derivation of

simple leisure. Leisure wear was considered to give students the wrong impression of the importance of school activities throughout the 1950s and 1960s. In actuality, the original complaint against the wearing of waist overalls in schoolrooms seems to have stemmed from the fact that the copper rivets damaged wooden desks and chairs. Nonetheless, jeans were banned from many schools until as late as the early 1980s. The outlaw notion has only added to the popularity of wearing jeans among youth looking for status and peer acceptance.

Whatever the case, jeans gained notoriety and became a highly integrated symbol of the anti-establishment movement during the 1960s. This association has persisted through the end of the 1990s, when other popular youth forms including “gansta rap” music, skate-boarding, and baggy clothing have influenced the wearing of jeans by the incorporation of styles symbolizing yet another disenfranchised generation. In the 1960s, styles changed dramatically to accommodate the needs of wearers to associate with the societal fringe. Ironically, a pair of blue jeans became part of the permanent collection of the Smithsonian Institution in Washington, D.C. in 1964. Jeans were elevated to the level of art in this era, as blue jeans were decorated, modified, painted, and displayed as one of the most defining American icons. The first jeans developed exclusively for women were introduced on the market in this decade. Later, during the 1980s, jeans fashions returned to the cultural mainstream with the advent of designer jeans, denim trousers distributed by famous designer labels such as Calvin Klein, Jordache, and Guess. Almost as a closure to the vast cycle of development of jeans fashions, a trend toward “vintage jeans” grew out of the 1990s, when many aging members of the original “blue jeans generation” sought to inculcate the earlier, uncomplicated days of leisure during their childhood. Also by the end of the twentieth century, corporations enforced increasingly relaxed standards of work attire, and instituted “casual days” and the “dress-down Friday” in the American workplace. Many workers choose to wear jeans on these days as an acceptable choice for casual work wear.

## Jeep

The Jeep is a multipurpose light motor vehicle developed by the U.S. Army Quartermaster Corps for Allied military forces in World War II. Designed by Colonel Arthur William Sidney Herrington

(1891-1970) at the Marmon Motor Corporation in Indianapolis, one million jeeps were manufactured by the Willys-Overland Motors Company in Toledo and under license by American Bantam Car Company and the Ford Motor Company from 1941 to 1945.

The small, sturdy, versatile Jeep had the ruggedness of a truck and the maneuverability of an automobile. It carried four passengers or one-quarter ton of cargo over difficult terrain at speeds up to 65 mph. The origin of its name is unclear. It may derive from its military nomenclature, general purpose vehicle (g.p.), or come from Eugene the Jeep, a 1936 Popeye comic strip character drawn by E. C. Edgar. In any case, American newspapers were using the name Jeep by 1941. The fast, lightweight, all-terrain reconnaissance vehicle was used in World War II by all U.S. military forces as well as the British, French, Russian, Australian, and New Zealand armed forces. The war correspondent Ernie Pyle recalled the Army jeep was "as faithful as a dog, as strong as a mule and as agile as a goat." The United States military continued to use M38A1 jeeps for various purposes at the end of the twentieth century.

Army surplus jeeps were used in a variety of agricultural, construction, and commercial purposes by American veterans familiar with the jeep's practicality. By 1945 Willys-Overland designed the CJ-2A jeep, the first model intended for civilian use, an all-steel sedan or station wagon used as a two-wheel drive seven passenger or delivery vehicle. By 1949 a four-wheel drive, six-cylinder jeep was produced for the growing number of drivers who used it for fishing, hunting, skiing, and other recreational off-road activities.

In 1953 the Kaiser-Frazer Company acquired the Willys-Overland Company and produced the larger, wider CJ-5 Willys Jeep Station Wagon, a functional four-wheel drive utility vehicle. This civilian jeep, based on the Army M38A1 jeep used in the Korean war, became a milestone in postwar American automotive history, was manufactured for 30 years in 30 countries, and sold in 150 nations. By 1963 the new Jeep Wagoneer marked the end of the classic Willys Wagon which ceased production in 1965. The Wagoneer was the first sport utility vehicle (SUV), and by 1970 it tripled annual jeep production and was imitated by Ford, Chevrolet, and Chrysler.

In 1970 the American Motors Corporation took over the Kaiser-Jeep Corporation, thus gaining the Wagoneer's expanding baby boomer market. Throughout the 1970s more comfortable models derived from the jeep were seen on highways around the world as Plymouth, Toyota, and Isuzu introduced similar off-road vehicles (ORV). In the 1980s, when fuel conservation was no longer the concern it had been in the 1970s, larger, heavier, more expensive SUV models became popular with suburban motorists. Although not replacing the jeep, the most popular SUV models, with names evocative of the outdoors and the Western frontier (such as the Navigator, Explorer, Renegade, Blazer, Mountaineer, Trooper, Rodeo, Wrangler, Comanche, Cherokee, and Pathfinder), combined the rough and tough jeep reputation with the appealing features of the station or ranch wagon and the pick-up truck.

When Chrysler absorbed AMC in 1987, it was largely to gain the jeep's increasing share of the market. A right-hand drive Jeep Cherokee model was produced for the U.S. Post Office and in Britain, Australia, and Japan, and the Grand Cherokee replaced the Wagoneer in 1993. Chrysler, having merged in 1998 with the Daimler Benz Company, continued to produce a variety of Daimler Chrysler jeep models for civilian, military, and government drivers.

Since World War II, when soldiers drove the American jeep around the world, it has proven to be a ubiquitous war-horse, workhorse and the most popular vehicle ever manufactured. One indication of the jeep's popularity with the G.I.s was Glenn Miller's Army Air Force Band recording of "Jeep Jockey Jump" in 1943 and Fats Waller's song "Little Bo Peep Has Lost Her Jeep." The 1944 movie *Four Jills in a Jeep* recreated a USO troupe entertaining soldiers during the war. Television featured the jeep in two popular programs: *The Roy Rogers Show* (NBC, 1951-57) had a jeep named Nelliebelle, and *The Rat Patrol* (ABC, 1966-68) showed a U.S. Army jeep squad harassing Rommel's Afrika Korps during the war.

Perhaps the most unusual legacy of the jeep may be the Manila jeepney. These brightly colored, elaborately decorated jeep taxis carry one-third of the city's commuter and tourist traffic daily. Many other tourist and resort centers used jeeps for off-road recreation at the end of the twentieth century, as did millions of dedicated jeep motorists around the world.

## Jefferson Airplane/Starship

Formed in 1965, Jefferson Airplane was the most commercially successful band to come out of San Francisco in the mid- to late 1960s. Along with contemporaries like the Grateful Dead, they pioneered a blend of folk, blues, and psychedelia to play what became known as West Coast Rock. Their presence at some of the 1960s' defining cultural moments attests to their status as one of the key bands of this era.

While Jefferson Airplane's eclectic sound could be traced to folk music and the blues, it also signaled significant departures from such generic origins, with its distorted, extended guitar improvisations and lyrics which referred to altered states of consciousness and counter-cultural concerns. As *Time* pointed out in June 1967, what became known as the San Francisco sound "encompasses everything from blue-grass to Indian ragas, from Bach to jug-band music—often within the framework of a single song."

Bay Area artists like Jefferson Airplane only could have flourished in historically tolerant San Francisco and in close proximity to the University of California campus at Berkeley. Living communally in the hippie epicenter of Haight-Ashbury, the band drew much of its support and attitude from this politically active and culturally experimental milieu. Sharing in their audience's background, values, and choice of chemical stimulants, the symbiosis between the group and their fans was typical of an initially democratic musical scene. As Airplane guitarist Paul Kantner himself acknowledged, "it was like a

**The Jefferson Airplane: (from left) Spencer Dryden, Marty Balin, Jorma Kaukonen, Grace Slick, Paul Kantner, and Jack Casady.**

party. The audience often far overshadowed any of the bands, and the distance between the two was not that great. Grace [Slick] used to say that the stage was just the least crowded place to stand.”

Jefferson Airplane was the first of the San Francisco bands to sign for a major record label. Their debut album, *Jefferson Airplane Takes Off* (1966) was moderately successful. However, it was not until original vocalist Signe Anderson departed and was replaced by Grace Slick that the band achieved wider acclaim and commercial success. Slick left rival band The Great Society to join the Airplane, and significantly brought two of their songs with her—the anti-romantic love song “Somebody to Love” and the trippy “White Rabbit.” These tracks subsequently became the first of the group’s top ten hits and featured on the breakthrough album *Surrealistic Pillow* (1967), which stayed in the Billboard top ten for most of what became known as the “Summer of Love.”

The counterculture was built around rock music, which expressed its values and acted as a powerful recruiting vehicle for the movement. In January 1967, Jefferson Airplane had played at a counter-cultural gathering christened the “Human Be-In” alongside the poets Allen Ginsberg and Gary Snyder in San Francisco’s Golden Gate Park. Later in the same year they appeared at the nation’s first national rock festival in Monterey, which drew an audience in excess of 200,000. While this event also was billed as a counter-cultural

happening—“three days of music, love, and flowers”—it was also undeniably a shop-window for profit-making talent. As Jon Landau wrote, Monterey witnessed an “underground culture at [the] point of transformation into mass culture.”

Subsequent late 1960s recordings consolidated the band’s commercial appeal. In 1969, they appeared at Woodstock, an event which confirmed that rock music was now big business and that any counter-cultural politics it might espouse had taken a backseat to hippie chic. In December of that same year Jefferson Airplane performed at Altamont—an event mythologized as symbolic of the death of the decade’s youthful optimism. While the Rolling Stones played “Sympathy for the Devil,” a number of Hells Angels murdered a black spectator, Meredith Hunter, and later attacked Airplane member Marty Balin when he tried to help another black youth. For Jon Landau, “Altamont showed that something had been lost that could not be regained.”

In recognition of this shift in mood, the band released the angrier, more explicitly political album *Volunteers* (1969). Its lyrical and musical aggression channeled the frustration and outbursts of violence that characterized the tail end of the 1960s. In “We Can Be Together” the group called on listeners to unite and overthrow the “dangerous, dirty and dumb” policies of the Establishment, and screamed “Up against the wall, motherfuckers.” *Volunteers*

was a powerful statement about post-Chicago 1968, Vietnam-embroiled America.

By the early 1970s any lingering idealism in both the Bay Area music scene and the counter-cultural movement that it fed and served had evaporated. During this period, founder member Marty Balin left and the band released two more studio albums and a live set, the last release to bear the Jefferson Airplane name.

The 1970s and 1980s were marked by personnel changes and shifts in musical style. Under the creative control of Kantner and Slick the band evolved into Jefferson Starship. Balin's return in 1975 coincided with a revival in the band's commercial fortunes. However, both Slick and Balin (again) left in 1978, and 1979's album *Freedom from Point Zero* saw the band move towards a hard rock formula suited to the lucrative stadium market. Detoxed and dried-out, Grace Slick returned to the lineup in the early 1980s, and a now Kantner-less Starship emerged with a series of MTV-friendly hits such as the self-mythologizing "We Built This City" and the anodyne "Nothing's Gonna Stop Us Now." Things turned full circle in 1989, when Grace Slick left Starship and joined up with the rest of the original lineup to resurrect Jefferson Airplane.

It has become impossible to separate West Coast Rock from the counter-culture. This was ably demonstrated when "White Rabbit" was memorably featured in Oliver Stone's Vietnam movie *Platoon* (1986), in which it functioned as audio shorthand for a specific cultural moment. As rock critic Robert Palmer has pointed out, "behind the media-friendly facade of peace, love, and flowers, the sixties were a period of violence, conflict, and paranoia." The story of Jefferson Airplane demonstrates this tension.

## *The Jeffersons*

In 1971, independent producer Norman Lear introduced the most controversial sitcom in television's brief history. That show was the groundbreaking CBS program, *All in the Family*. One particular

occasional character was Archie Bunker's irascible black neighbor, George Jefferson (originally played by Mel Stewart). Jefferson never backed down from a fight, sparring successfully with the bigoted Bunker and generally winning the argument. In 1973 the role was assumed by veteran actor Sherman Hemsley. This character was such a hit with viewers that Hemsley was soon cast in the spin-off series, *The Jeffersons*, which first aired on CBS Television in January of 1975 and was, like *All in the Family*, the brainchild of writer-director and independent producer Norman Lear.

*The Jeffersons* focused on the lives of George and his wife Louise Jefferson—a nouveau riche African American couple. The show's gospel-toned opening musical theme, "Movin' on Up!" played while George and Louise moved into "their dee-luxe apartment in the sky." George was a successful businessman, millionaire, and the owner of seven dry-cleaning stores. Louise (played by Isabel Sanford) was a former maid attempting to adjust to the life of a woman of means. Together they lived in a ritzy penthouse apartment on Manhattan's fashionable and moneyed East Side with their son, Lionel (played at various times by Damon Evans and Mike Evans). Their home was filled expensive furnishings, and they even had their own black housekeeper, a wise-cracking maid named Florence (played by Marla Gibbs).

A unique supporting cast included an eccentric Englishman neighbor named Harry Bentley (Paul Benedict), the ever-obsequious Ralph the Doorman (Ned Wetimer), and most significantly, Helen and Tom Willis, (Roxie Roker, Franklin Cover) an interracial couple with two adult children—one Black, one White—the first such scenario on prime time television. George's elderly mother, the quietly cantankerous "Mother Jefferson," played by Zara Cully, made occasional appearances until the actress's death in 1978.

George Jefferson was rude and headstrong and referred to white people as "honkies." An article in *Ebony* magazine described him as "bombastic, frenetic, boastful, ill-mannered, prejudiced, and scheming." Louise, referred to by George as "Wheezy" spent most of her time apologizing for him. Some of the funniest moments came with the repartee between George and Florence the maid, who contributed to the humor with her continuous putdowns of George. She referred to him as "Shorty" and never missed a chance to put him in his place, fully contemptuous of the expected etiquette between employee and employer.

George, though a millionaire businessman, was often positioned as a buffoon or the butt of everyone's joke. As the *Ebony* article noted, "He was often the victim of his own acts: a put-down that backfires, a contrivance that goes astray, an ego-filled balloon suddenly deflated." No one, not even his maid took him seriously. Some blacks questioned whether audiences were laughing *with* George and his contempt of convention, or *at* George as he made a fool of himself? As with *Amos 'n' Andy* some twenty years prior, America's black community remained divided in their assessment of the program—even as the conservatism of the Reagan years brought a slight change in the tone of the program.

*The Jeffersons* was an enormously popular and highly rated program that lasted ten years on prime time television. Along with two other Lear products (*Good Times* and *Sanford & Son*) it featured a mostly African-American cast, the first such programming since the cancellation of the infamous *Amos 'n' Andy Show* in 1953. With its sometimes biting humor and daring scenarios it helped set a new tone

Sherman Hemsley (left) and Isabel Sanford celebrate the 200<sup>th</sup> episode of *The Jeffersons* with series creator Norman Lear (center).

in prime time television, while proving that programming with black casts could be successful and profitable, earning it a significant place in the history of 1970s television.

## Jell-O

Once given its trademarked name, Jell-O quickly became "America's Most Famous Dessert" with more than one million boxes sold every day by the late 1990s. Even more than apple pie or hot dogs, Jell-O epitomizes not just American cuisine, but America itself and has been one of its most enduring icons. Powdered gelatin, invented in 1845 by Peter Cooper, was one of the first convenience foods in America, making the arduous task of preparing gelatin from scratch—boiling calf's hoofs for hours—merely a matter of adding water to powder and leaving in a cool place to set. Not until the end of the century, however, did the concept of granulated gelatin catch on. In 1897, Pearl B. Wait invented a fruit-flavored gelatin, named Jell-O by his wife. Because of low sales, he sold the patent to Orator Francis

Woodward in 1899 for \$450. Woodward began his first advertising campaign in 1902, making Jell-O, manufactured by the Genesee Pure Food Company of Leroy, New York, a worthy contender with Knox, Cox, Plymouth Rock, and other instant gelatins on the market at the time.

Although gelatin was an important ingredient in aspics and desserts, its rigorous preparation requirements meant that before the turn of the century it only graced the tables of the wealthy, who had the time, money, equipment, and paid labor to make such dishes. Preparations like powdered gelatins democratized desserts in America. Jell-O, the most popular, was inexpensive, initially selling for ten cents a box, and simple to make. Further, Jell-O instituted a premium system that allowed one to send away for free “melon” molds with the purchase of so many boxes of Jell-O products. Even in its early years, Jell-O came in a variety of flavors that allowed women to create many bright, fanciful dishes; strawberry, raspberry, orange, and lemon were the first flavors and continued to be the most popular. Jell-O also offered an Ice Cream Powder which, something like a frozen pudding, brought a variation of the frozen confection to the homes of the masses. In addition to these, the Genesee began producing D-Zerta, the first sugar-free gelatin, in 1923. Later that same year, the company changed its name to the Jell-O Company, and was then acquired by the Postum Company in 1925, forming the foundation for what would become General Foods. Rounding out its product line, the Jell-O Company introduced its pudding powder in 1929, eventually making 51 different flavors.

Advertising played a key role in Jell-O’s popularity over other gelatins and made it the quintessential “American” dessert. From the beginning, brightly colored promotional recipe booklets touted the Jell-O product line and also educated women about how to use this new foodstuff. The Jell-O Girl appeared in 1903 as the personification of Jell-O’s purity and ease of preparation. In later years the talents of well-known people were instituted to promote Jell-O. Rose O’Neil, creator of Kewpie dolls, refashioned the Jell-O Girl in 1908. In the 1920s, such familiar artists as Norman Rockwell and Maxfield Parrish illustrated its print material. Even L. Frank Baum, author of the Oz series, published a set of his books in conjunction with Jell-O.

In later years, as advertising media expanded, so did Jell-O’s use of popular talents, including famous celebrities. Jack Benny and Mary Livingston promoted it on radio, coming up with the catchy “J-E-L-L-O” tune. Kate Smith sang the praises of Jell-O in magazine advertisements during World War II. In the 1950s, such luminaries as Roy Rogers, Andy Griffith, and Ethel Barrymore became spokespeople. From the 1970s through the 1990s, beloved actor and comedian Bill Cosby was the chief spokesperson for Jell-O and Jell-O Pudding.

As a food, Jell-O has recorded transformations in eating patterns and ethnic and regional variations in American foodways. Jane and Michael Stern have said that “More than any other food, Jell-O symbolizes how America really eats . . . Jell-O is Americana in a mold.” At the beginning of the twentieth century, Jell-O proved to be an affordable and accessible version of a previously upper-class food, hence its great appeal. In later years it reflected events in American history and changes in food fads. During World War I, Jell-O still sold for ten cents a box and appealed to a woman’s need to live within her budget during the expensive war years. During World War II, Jell-O answered the needs brought on by food rationing, as it could make low-sugar desserts and main dish salads.

Because Jell-O by nature is a colorful and moldable substance, the things made from it have embodied America’s aesthetic sensibilities of the time, from daring dishes like Egg Slices en Gelée in the

roaring 1920s to modern one-crust instant pudding pies in the convenience-driven 1950s to postmodern creations like Pistachio Almond Delight—also known as Watergate Salad—in the 1980s. Jell-O not only manifested adult preoccupations but also appealed to the younger set. Ever since the days of the Jell-O Girl, Jell-O was associated with children, who have comprised a large group of Jell-O’s consumers. Bill Cosby’s 1970s “Kids Love Pudding” campaign was followed by the advent of multi-colored, multi-shaped Jell-O Jigglers for children of the 1980s, and increased the popularity of gelatin-based candies like Gummy Bears in the 1980s and Gummy Worms in the 1990s.

Jell-O’s versatility has been a large factor in its enduring nature as an icon in American culture during the twentieth century. It has frequently appeared as a palliative dessert on hospital meal trays, accompanied families to potluck dinners as a side dish, and shown up in the lunch boxes of school children. It has also been used in ways not officially approved of by the General Foods Corporation. Jell-O “shooters,” popular in the 1980s and 1990s, were college novelty cocktails that mixed Jell-O powder with vodka or grain alcohol and, once congealed, were eaten with spoons out of cups or by the cube from trays. Novelty wrestling, a popular bar entertainment during the 1980s, involved body-to-body combat of typically scantily-clad women; when not wrestling in mud, they wrestled in Jell-O, with lime being the most popular color/flavor.

## Jennings, Peter (1938—)

The man who would eventually help to usher in the age of the super-anchor, veteran journalist Peter Jennings, got an early start to his broadcast career. At age nine he was the host of *Peter’s People*, a short-lived Saturday morning children’s radio show on the Canadian Broadcasting Corporation. For the precocious Jennings, journalism qualified as a family business. When the Canadian Broadcasting Corporation was established in the mid-1930s, his father Charles Jennings became its first voice, and was known as the “Edward R. Murrow of Canada.”

Jennings was born in Toronto. A high school drop-out, he never finished tenth grade. Initially discouraged by his father from choosing journalism as a career, Jennings worked as a bank teller for three years before joining a small private radio station in Brockville, Ontario. In 1961 Jennings made the transition to television, joining one of Canada’s first private television stations. There his duties included everything from reporting news to hosting a Canadian version of *American Bandstand*. When his television station became part of CTV, Canada’s first national private chain, Jennings was appointed co-anchor of the national newscast. His work in this role caught the attention of ABC (American Broadcasting Corporation) news executives in New York.

Hired by ABC’s *World News Tonight* in 1964, Jennings and his first wife, Canadian Valerie Godsoe, moved to New York City.

**Peter Jennings**

Within a year, the twenty-six year-old Jennings became America's youngest national network anchor ever, an appointment that failed because Jennings lacked journalistic experience and in-depth knowledge of the United States. After three years of miserable ratings Jennings resigned and was replaced by Frank Reynolds. The network made Jennings a traveling correspondent, and he quickly headed overseas. In 1969 he opened a permanent ABC bureau in Beirut, Lebanon, the first time an American-based television reporter had a full-time post in the Arab world. Jennings spent seven years in Lebanon as Beirut bureau chief, during which time he also met and married his second wife, Anouchka.

In 1975, Jennings returned to Washington, D.C., to anchor *A.M. America*, the predecessor to *Good Morning America*. Disliking both the job and the city, however, he arranged a transfer to London by 1977. In 1978, while still posted in London, Jennings was named co-anchor of the ABC evening news as part of an innovative three-anchor system that included Frank Reynolds in Washington and Max Robinson in Chicago. Referring to his time in London as his "dream job," because the triumvirate system gave him both the flexibility to travel and the status to cover major news stories, he stayed in the position for six years. While in London he met and married his third wife, Kati

Marton, in 1979. By 1982, the couple had two children, Elizabeth and Christopher.

In 1983 one of the anchoring triumvirate, Frank Reynolds, became ill with cancer, and Jennings reluctantly returned to the United States to fill in during his illness. In an interview he explained his problem with being sole anchor: "Anchor people are slaves to the daily broadcast. Very high-priced slaves I grant you. But slaves." Instead, Jennings prefers field reporting, and has been known to speak with a "little regret about not being in the trenches covering stories." When Reynolds died, however, Jennings was re-appointed to the sole anchor position he had held sixteen years earlier.

Jennings and his peers Dan Rather and Tom Brokaw have transformed the role of network news anchor into superstar journalist. In their book *Anchors*, authors Robert and Gerald Goldberg explain that while Walter Cronkite was "the original 800-pound gorilla," Jennings, Rather, and Brokaw have "acquired a different order of magnitude." These super-anchors command huge salaries, and have their trustworthiness figures measured just like the president. Acting as the "living logos" of the network news divisions, they provide news to more Americans than any other source.

Some analysts point to Jennings' coverage of the 1986 Challenger space shuttle explosion as a career milestone, from which point his "credibility, both internally at ABC and with the American public, has continued to grow." Once described as a "natural anchor" who had to work hard "to turn himself into a reporter," Jennings had grown into his role as star journalist. Acclaimed for his ability to ad-lib in live broadcasts, Jennings has said that he considers this skill to be a critical function of anchors. Despite the fact that the majority of Jennings's editorial work involves rewriting rather than writing, colleagues have described his writing style as "distinctive," and "cooler" than that of Rather or Brokaw. Analysts have noted a tendency for Jennings to reverse the traditional order of a news story, for example, putting the punch line before a joke. Described as "perhaps the most hands-on of any of the anchors," Jennings reportedly spends a great deal of time working with correspondents on the phone and editing their stories. While co-workers often laud his willingness to spend time working with people, sharing ideas, contacts, and opinions, some have complained about a tendency toward micro-managing and perfectionism. Most of all, however, observers note that Jennings applies those stringent standards to himself. Reportedly never satisfied with his performance, he has been frequently quoted as saying, "I always tend to look at the program in terms of how many nights I can be proud of. The top score is rarely more than two and a half a week. Never close to four."

The recipient of many awards, to date Jennings has won the *Washington Journalism Review's* award for the nation's best anchor five times. A nine-time Emmy recipient for news reporting, he also has received several Alfred I. duPont-Columbia University and Overseas Press Club Awards. In one year alone Jennings won Harvard University's Goldsmith Career Award for excellence in journalism and the Radio and Television News Directors Paul White Award, chosen by the three major networks' news directors. In a 1995 tribute, the *Boston Globe* echoed the earlier praise given to Jennings's father, saying that Jennings had inherited Edward R. Murrow's mantle.

## Jennings, Waylon (1937—)

A professional musician since the 1950s, Waylon Jennings is known for his contribution to the country and western "Outlaw Movement" of the 1970s. Along with Willie Nelson, Billy Joe Shaver, Kris Kristofferson, Tompall Glaser, and wife Jessi Colter, Jennings bucked the Nashville system in a big way. His 1973 release *Honky Tonk Heroes*, with all but one song penned by Shaver, defined the movement and the era. Recorded with his road band and not the slick studio musicians that most Nashville labels preferred, Jennings

Waylon Jennings

created a sound that was edgy and most certainly of the traditional honky tonk variety.

Born Waylon Arnold Jennings in Littlefield, Texas, he learned to play guitar, formed his own band, and was a DJ on a local radio station by the time he was 12. Leaving school several years later, he ended up in Lubbock where he became friends with future rock 'n' roll legend Buddy Holly. A mentor of sorts, Holly produced Jennings's first recording, a single on Brunswick released in 1958 called "Jole Blon." Later that same year Jennings joined Holly's band, the Crickets, playing bass during the course of Holly's final tour. It was Jennings who gave up his seat to the Big Bopper, on the ill-fated airplane that crashed in Mason City, Iowa, on February 3, 1959. Along with Holly and the Big Bopper, a young L.A. rocker, Ritchie Valens, lost his life. Jennings was devastated and returned to Lubbock where he worked as a DJ.

In 1960 a move to Phoenix and the formation of a rockabilly band, the Waylor's, gave Jennings another shot at success. Signing with the independent Trend label, the Waylor's cut a number of singles. While the records failed to create a buzz, Jennings did get his first shot as a record producer at Audio Recorders. A move to Los Angeles followed as did a contract with Herb Alpert's A&M Records. Alpert looked at Jennings as a pop artist, but Waylon was already hip-deep in country music. His only single for A&M was "Sing the Girl a

Song, Bill.” By 1965 he made the move to Nashville where he worked with Chet Atkins and Bobby Bare for RCA. It was at this time that he and Johnny Cash formed a strong bond while living together.

Releasing Top 40 hits such as “That’s the Chance I’ll Have to Take,” Jennings quickly moved into the Top 10 with tunes like “Only Daddy That’ll Walk the Line” by 1968. But, he was working with session players and Jennings wanted to move his sound more towards the hardcore side of country music. During the 1970s he began recording songs by a songwriter named Kris Kristofferson and working with Willie Nelson. Releasing *Singer of Sad Songs* and *Ladies Love Outlaws* provided the foundation for the “Outlaw Movement” that was to come. Just as significant, in 1972 Jennings sought to have more control and successfully renegotiated his RCA contract demanding total control over the production of his next project. This project was *Honky Tonk Heroes*.

Gaining momentum, Jennings had his first No. 1 single in 1974, “This Time.” He followed that up with another No. 1, “I’m a Ramblin’ Man” and a No. 2, “Rainy Day Woman.” By 1975 he also was crossing over to the pop charts with “Are You Sure Hank Don’t It This Way.” Awarded the Country Music Association’s male vocalist of the year award moved him into mainstream popular culture in 1976. This was underscored by the release of *Wanted! Outlaws*, recorded with his wife, Nelson, and Glaser. It hit No. 1 on the pop charts and made Waylon Jennings a superstar.

The next decade would secure Jennings’s place in the collective consciousness of popular culture. Working with Willie Nelson, a series of duets resulted in hits like “Mammas Don’t Let Your Babies Grow Up to Be Cowboys” and the multi-platinum 1978 album *Waylon & Willie*. As a solo artist, Jennings scored big on both the country and pop charts with “Luckenback, Texas (Back to the Basics of Love)” and made his presence known as part of the success of the hit TV series *The Dukes of Hazzard*, for which he also wrote the theme song. Expanding beyond the music, he would appear in several television movies and have a cameo in the big-screen release *Maverick* in 1994. A guest spot on the Fox series *Married with Children* also brought Jennings popular attention.

By the mid-1980s, Jennings’s musical career was suffering from a lack of radio air-play. The pop-tinged “hot, young country” fad made it nearly impossible for Jennings and his peers, including country crooner George Jones, to be heard. Radio-driven, country and western music had always appealed to a grass roots fan base that depended upon radio for entertainment. This shift made it difficult for Jennings to remain at the top of his profession by industry standards. Still, joining up with old friends Nelson, Cash, and Kristofferson, Jennings forged ahead and formed the super group, the Highwaymen in 1985. Releasing three projects over the next decade, the Highwaymen had a No. 1 hit with their first single, “The Highwayman.”

Then, after 20 years with RCA, Jennings moved to MCA in 1986. He had several hits, most notably “Rose in Paradise,” but found he was stifled by age discrimination within the country music industry. In 1990 he went over to Epic and had a Top 40 single with “Wrong” and “The Eagle” in 1991. Back with RCA, he released *Waymore Blues (Part II)* in 1994. By 1996 Jennings had signed with Texas independent label Justice Records and released the critically acclaimed *Right for the Time*. That same year, RCA put together a twentieth anniversary edition of *Wanted! The Outlaws*.

In 1998, Jennings overcame major health problems, much as he had done earlier when he had been forced to deal with drug and alcohol abuse. Any thoughts of the Highwaymen coming together again were put to rest when Johnny Cash became ill. However,

Jennings joined a new band, the Old Dogs. Along with Mel Tillis, Jerry Reed, and Bobby Bare, Jennings created a strong country sound that defied the youth-oriented country music business. With songs penned by Shel Silverstein, the topic of the Old Dogs projects was “getting old.” With humor and irreverence, the country music foursome gleaned strength from their unity and shared history as they came to terms with the process of aging. Released on Atlantic Records, *Old Dogs, Vol. I* and *Vol. II*, gave notice that Jennings was once again a working artist. Nothing would keep him down, not old age, ill health, or an ungrateful music industry.

During the course of his career, Jennings has maintained a high level of individuality and always remained true to his own vision. Musically, he set in motion a precedent that upholds the traditional tenets of country and western music. Younger artists, artists who refuse to kowtow to the Nashville system, cite Jennings as a strong influence. He also has made his presence felt in music beyond the bounds of country, recording with Neil Diamond and Mark Knopfler and performing in 1996 on the Lollapalooza Tour with heavy metal stars Metallica. Gritty and honest, Jennings’s distinctive baritone and sense of self has made him a towering influence within country and western music.

## Jeopardy!

The popular television game show *Jeopardy!* reversed the “question and answer” format typical of most trivia shows, to the delight of fans who have followed the show either on NBC or in syndication since its debut in March of 1964. The unique format of *Jeopardy!* was established in response to the quiz show scandals of 1958, giving contestants the answers up front and requiring them to provide the correct questions. Three contestants vied for cash by supplying correct questions to answers revealed on a board of thirty squares, containing five answers in each of six categories.

The show, originally hosted by Art Fleming, consisted of three rounds: Jeopardy, Double Jeopardy, and Final Jeopardy. When the show returned to television in 1984, after a five-year hiatus, its host was veteran game-show host Alex Trebek. With his erudite manner and textbook pronunciation of foreign words and phrases, Trebek became the object of both admiration and scorn, gaining a wide viewership of fans riveted by the show and critics eager to see his rare blunders. By the end of the 1980s *Jeopardy!* had become one of the most popular first-run syndicated series, packaged by King World Entertainment with the perennial primetime favorite *Wheel of Fortune*. *Jeopardy!* became a lucrative merchandising vehicle as well, spawning home versions of the game and computerized scoring devices that viewers could use to play along at home.

## Jessel, George (1898-1981)

George Jessel lived his life in show business, and he toiled with boundless energy to adapt to the changing modes of the entertainment world. His professional career spanned three-quarters of a century, from 1907 to just before his death. Primarily, he was a live-audience entertainer, with his show business persona evolving from the cocky-but-lovable Jewish-American immigrant boy, to the middle-aged professional emcee and purveyor of nostalgia, to the pompous, self-proclaimed Toastmaster General pose of his last twenty years.

With an unfailingly brash personality, semitic good looks, a nasal voice, and quick-tongued wit, Jessel began performing in musical-comedy “kid acts” at the age of nine, shortly after the death of his father. Before long he was a featured performer with other youthful talents such as Eddie Cantor and Walter Winchell in vaudeville acts produced and written by Gus Edwards. By the time he reached his twenties, Jessel had developed into a successful vaudeville monologist, with a specialty routine of speaking on the telephone to his immigrant Jewish “Momma.” Each of his dozens of comical

George Jessel

telephone routines similarly began, “Hello, Operator! Fentingtrass 3522. Hello, Momma? Georgie!”

In spite of his prosperity in vaudeville, Jessel strived to conquer New York’s legitimate stage. He received his break in 1925 when he was awarded the role of Jack Robin/Jake Rabinowitz in Samson Raphaelson’s *The Jazz Singer*, a melodrama about a young man torn between the confining world of his Jewish roots and the exhilarating American culture of the Jazz Age. Jessel successfully performed the role in New York and around the country for two years and was negotiating with Warner Brothers to star in the film version. Yet the role was not to be his, due in part to his extraordinary demands for remuneration, and the fact that Al Jolson (who had been Raphaelson’s inspiration for writing *The Jazz Singer*) had become interested in playing the screen role. Jessel may have been a headliner in vaudeville and a success in the play, but Jolson was the king of their profession, a nationally known top draw who would garner a much larger audience. Jessel never forgave Jolson for usurping the role, and publicly griped about the circumstances of the loss for decades.

Jessel’s own career as a film star was quite short-lived, in part because his ethnicity limited his opportunities for lead roles. Also, the few feature films he made in the late 1920s demonstrated that his guileless acting style was more suited to the stage than to the close scrutiny of the motion picture camera. He fared better in radio, and on stage as a nightclub and variety show emcee/singer/joke teller.

By 1945, as American soldiers were returning home from World War II, Twentieth Century-Fox recognized a desire among moviegoers to look backwards with longing to the lifestyle of the early years of the century. Acknowledging in the middle-aged Jessel an expertise in selling nostalgia to audiences, Fox signed him to produce musicals which featured warm memories of show business and home life. Among the charming and heartwarming films he produced in the immediate post-war years are *The Dolly Sisters* (1945), *When My Baby Smiles at Me* (1948) and *Oh, You Beautiful Doll* (1949). Yet Jessel’s personal life was fraught with scandal. He was married four times, claimed numerous love affairs, and was involved in a \$200,000 paternity suit.

As Jessel aged, he became more effusive in his on-stage monologues. As a popular emcee, he made elaborate after-dinner speeches at testimonials to leading performers. This style of monologue evolved into Jessel’s becoming the self-proclaimed “Toastmaster General of the United States.” By the Vietnam War years, he had become an aging self-parody as he appeared on television talk shows in military regalia. Here, he endlessly pontificated on the state of the world and shamelessly name-dropped as he cited his association with politicians and royalty. As more years passed and many of his colleagues and friends died, he put his talent for speech-making to work as a eulogizer at many celebrity funerals.

Even when his own health was fading, Jessel refused to quit show business. Blind and arthritic, he continued to work. Although his audience had dwindled and he was considered—by those who remembered him at all—the ghost of vaudeville past, Jessel still performed, telling jokes in restaurants and obtaining an occasional club date.

## *Jesus Christ Superstar*

Few musical forms have fallen into such low repute as the rock opera. Through the bombastic efforts of a handful of well-meaning composers, the whole enterprise has become almost synonymous with egotism in the minds of pop music consumers. Yet the form continues to have its adherents. A stage revival of The Who's trailblazing *Tommy* opened to packed houses on Broadway in 1995. And *Jesus Christ Superstar*, the mind-blowing 1970 rock opera about the last days of Christ, continues to work its magic on theatergoers the world over in countless touring company and summer stock productions.

Originally conceived as a stage musical, *Jesus Christ Superstar* was the brainchild of two enterprising English whiz kids, composer Andrew Lloyd Webber, who was twenty-three, and lyricist Tim Rice, who was twenty-six. The pair's 1968 collaboration, *Joseph and the Amazing Technicolor Dreamcoat*, had set the Old Testament story of Jacob's feuding sons to a throbbing backbeat, to the consternation of many in the rabbinate. With *Superstar*, the composers took the even more audacious step of setting the sufferings of Jesus to music. Not surprisingly, they had difficulty finding financial support for such a venture. Eventually they were forced to give up their stage plans and settle instead for a double-sided record set. Dubbed a "concept album" in the hipster parlance of the times, the LP was released in late 1970 with a drab brown cover featuring almost no religious iconography. But such precautions did little to stave off the inevitable ecclesiastical backlash.

The question of blasphemy aside, few could dispute the quality of the recording itself. A tight backing band provided muscular support for vocalists Murray Head, Ian Gillian, and Yvonne Elliman. The LP's 24 songs chronicled the final days of Jesus, from his entry

A scene from the film *Jesus Christ Superstar*.

into Jerusalem through his trial and crucifixion by the Roman authorities. A number of songs were cast in the form of dialogues, with various New Testament figures hurling accusation and invective at one another. The balladeering chores were assigned to the Hawaiian-born Elliman, whose mellifluous renditions of "Everything's Alright" and "I Don't Know How to Love Him" became FM radio staples.

Not surprisingly, a mass market rock 'n' roll composition on so hallowed a subject could not pass public scrutiny without generating some religious controversy. But negative reaction to *Superstar* was muted and with good reason. While hardly the stuff of a theological dissertation, *Superstar* in the final analysis was no less scripturally sound than the average Catholic missal. Other than the arguably tasteless references to Christ as "J.C.," there was little here to offend Christian traditionalists. The issue of Jesus's resurrection was bypassed entirely, consistent with the entire "opera's" depiction of Jesus as an imperfect mortal struggling with a divine commission he could not fully understand. "If you knew the path we're riding," wailed "Jesus" Gillian in one typical number, "you'd understand it less than I." Perhaps most galling to strict spiritual constructions, however, was the central role afforded to Judas Iscariot, voiced with quivering urgency by Murray Head. Questioning both the political message and personal behavior of his master in such songs as "Heaven on Their Minds," this Judas is no treacherous asp but rather a conflicted, doubting Thomas.

*Jesus Christ Superstar* sold more than 2 million copies in 12 months and became 1971's number-one-selling album. In July of that year, 13,000 *Superstar* fans packed Pittsburgh's Civic Arena to see the opera performed in concert. That performance was just the runner-up to a full-blown Broadway production—the realization of Rice and Lloyd Webber's original dream—that opened at the Mark Hellinger Theater in New York on October 12, 1971. Newcomer Jeff Fenholt assumed the role of Jesus, while a youthful Ben Vereen essayed the part of Judas. Surprisingly, Andrew Lloyd Webber would later renounce this production, which lasted just 20 months on the Great White Way.

More to the composer's liking was the 1973 film version, directed by Norman Jewison. Today the film seems dated, with its army of scraggly hippies disembarking from a psychedelic bus. But it benefits from a number of strong performances. Black actor Carl Anderson makes a dynamic Judas, while Texas rock drummer Ted Neeley, an understudy in the Broadway production, brings a wild-eyed passion to the title role. Derided by some as "the screaming Jesus" for his piercing tremolo, Neeley got the part only after Ian Gillian turned it down because he could make more money touring with his band Deep Purple. Neeley has since turned playing Jesus Christ into a career, calling himself "a palette on which people project the Jesus they came to see."

Spurred on by a wave of 1970s nostalgia, *Superstar* has been revived in the 1990s. A 25-month, 116-city anniversary tour, starring Styx's Dennis DeYoung, was mounted in 1994. It is estimated that musical theater productions of the show have grossed in excess of \$150 million worldwide. Certainly it launched its co-composers into celebrity status. Since ending their professional relationship in 1978, Rice has gone on to co-write the songs for Disney's *Lion King*; Lloyd Webber created *Cats* and *Phantom of the Opera*, which would amass a fortune of some \$1.15 billion.

*Jesus Christ Superstar* continues to meet with some localized pockets of resistance from those who disagree with its portrayal of a flawed, all-too-human Jesus. But its greatest defenders remain its

legions of devoted fans who were acknowledged in a comment by one-time Judas Ben Vereen: "What the people up in arms failed to look at is that as long as people were rockin' to Jesus, everything was gonna be all right for humanity."

## Jet

On the heels of his success with *Ebony*, the African American version of *Life*, Chicago magazine publisher John H. Johnson was looking to start a new publication in 1951. Magazine trends that year pointed away from the large-format publications such as *Life*, *Look*, and *Ebony* to pocket-sized digests, fast information for busy readers. Johnson envisioned a black version of *Quick*, a short-lived mainstream news digest, providing a weekly synopsis of important news and events for African Americans. *Jet* magazine, introduced on November 1, 1951, quickly gained acceptance among blacks for providing understandable, accurate information, and they came to view it as the definitive word on current events, the so-called "Negro's bible." In the process of achieving that fame, *Jet* was also the first national publication to print the photograph of the corpse of a fourteen-year-old boy lynched for whistling at a white woman in Mississippi in 1955. That picture alerted African Americans, especially those in the press, to the building civil rights movement in the South a full year before the Montgomery, Alabama, bus boycott.

*Quick*, a vest pocket-sized magazine featuring capsulized news that Americans could read "on the bus or in the beauty parlor," was introduced by Gardner Cowles, Jr., the publisher of *Look*, in 1949. It represented a problem for advertisers because its small size, four by six inches, required special advertising copy, and Cowles discontinued the publication in 1953 due to a lack of advertising. John H. Johnson, the Chicago magazine publisher who had started his business with a \$500 loan from his mother in 1942, planned to use the profits of *Ebony* to support his new pocket-sized publication until advertisers could adjust. The word "jet" was tailor-made for his purposes, meaning dark velvet-black on one level, fast on another. "In the world today, everything is moving along at a faster clip," Johnson wrote in the first issue. "Each week will bring you complete news coverage on happenings among Negroes all over the U.S.—in entertainment, politics, sports, social events as well as features on personalities, places and events." The first issue of *Jet* sold out and garnered a circulation of 300,000 within six months, making it the largest black news magazine in the world.

*Jet* was still a new publication during the tempestuous 1950s but lynching was an old problem in the South, dating back to slavery. The U.S. Supreme Court's 1954 *Brown v. Board of Education* school desegregation case had made the South a dangerous place for blacks again, a fact that visiting Northern blacks did not always recognize. When fourteen-year-old Emmett Till, a Chicago boy visiting relatives

in Money, Mississippi, allegedly whistled at a white woman in August 1955, he was lynched and his corpse mutilated. His mother asked photographers to shoot pictures of his mangled body when it was returned to Chicago for burial. Johnson and his editors agonized over the gruesome photographs but published them in the September 15, 1955, *Jet*, providing the first national coverage of the murder. The issue sold out, traumatizing African Americans and preparing “the way for the Freedom Movement of the sixties,” as Johnson recalled. An interracial team of *Jet* and *Ebony* reporters and photographers covered the resulting trial in Mississippi, alerting other Northern journalists to the deteriorating situation in the South. The Montgomery, Alabama bus boycott, begun by Rosa Parks and led by the Rev. Dr. Martin Luther King, was born a year later, on December 1, 1955.

*Jet* went on to cover the civil rights movement, along with other business, education, religion, health, medicine, journalism, politics, labor, and crime news of the day. In the 1990s its contents were set: “Census” was a weekly digest of births and deaths. “Ticker Tape” was a Walter Winchell style feature discussing news and news personalities written by Washington D.C. bureau chief Simon Booker. “This Week in Black History” provided a recap of traditional and more recent historical events. “People are Talking About” offered gossip about personalities. “Sports” provided an overview of black athletes and predominantly black teams and “Jet Beauty of the Week” showed a traditional bathing beauty. The magazine also listed the top 20 Black singles and albums along with television highlights and a weekly photo. *Jet* offers no editorial comment, although the stories and images of African Americans are positive and upbeat, reflecting Johnson’s conservative beliefs in free markets and working within the system. Its circulation at the end of the twentieth century was around 900,000.

## Jet Skis

In 1974, Kawasaki introduced the Jetski, a revolutionary jet-propelled, single-person watercraft capable of speeds up to 40 mph. Based on the concept of a motorized waterski, the original Jetski required the rider to stand and use considerable strength and balance for control. It was not until 1986, when Yamaha introduced the Waverunner, a more manageable sit-down version, that “personal watercraft” gained widespread appeal. Within ten years, it blossomed into a \$300 million a year industry with annual sales over 200,000 in the United States alone, and led to the creation of two competitive

Jetski racing circuits. But in the late 1990s, increased complaints about safety, fuel emissions, and noise resulted in a public backlash. Several states enforced mandatory driver’s education and minimum age restrictions, and some areas, including Lake Tahoe, the San Juan Islands, and the majority of the National Parks, banned the craft outright. Industry experts agreed that the continued popularity of personal watercraft would depend on improved driver education and cleaner, quieter engines.

## Jewish Defense League

In 1968, Rabbi Meir Kahane started the Jewish Defense League (JDL) in the Orthodox Jewish neighborhoods of Brooklyn, New York. The JDL was initially a vigilante organization dedicated to the protection of Jews but, fueled by the fanaticism of its founder, it swiftly grew to become one of America’s most high profile terrorist organizations. Between 1968 and 1987, members of the JDL committed 50 terrorist acts directed at the Palestine Liberation Organization, Soviet officials, and one Nazi war criminal. The organization forged close links to the conservative extremist Kach party in Israel. Rabbi Kahane was murdered by an Egyptian fundamentalist on November 5, 1990, and on February 24, 1995, Baruch Goldstein, a former JDL member, opened fire on Palestinians at prayer, killing 35 people. This massacre resulted in the banning of the Kach party by the Israeli government.

## JFK (The Movie)

Upon its release in 1991, director Oliver Stone’s controversial film *JFK* elicited cries from citizens who insisted that the U.S. government make public confidential Warren Commission files pertaining to the 1963 assassination of President John F. Kennedy. That the government made public some (but not all) of the files following the film’s popular success not only reflects the power of Stone’s film but also the overall power of film as a pop culture medium.

With *JFK*, Stone challenged the government by providing an alternative theory to the one reached by the Warren Commission. Stone not only consulted texts by popular historians (Jim Garrison and Jim Marrs) and historical records, but he also posited his own interpretation of events concerning JFK’s assassination. Furthermore, although many individuals and groups have challenged the Warren Commission Report since its release, for the most part the mass public had not responded to the report with a collective fervor until Stone presented his film. Following the film’s release, acting in response

A jet skier jumping a wake.

to—among other things—*JFK* viewer outcry, President George Bush “signed into law the President John F. Kennedy Assassination Records Collection Act of 1992. [T]he bill provided for the establishment of an independent commission charged with releasing all government records related to Kennedy’s assassination except those that clearly jeopardized personal privacy or national security.”

Stone’s film chronicles the events propelled into motion by New Orleans District Attorney Jim Garrison in 1969, when Garrison brought New Orleans businessman Clay Shaw to trial, accusing him of conspiring to assassinate JFK. In the film, Stone presents myriad characters—some actual, some hypothetical, and some composites. The technical achievements of *JFK* add a dimension of realism to the film, but this realism gives audience members (particularly historians) a potential problem in distinguishing fact from fabrication. For example, Stone blends actual Zapruder film footage with his fabricated footage, editing them together in a seamless fashion. Finally, in *JFK*, viewers learn about Stone’s theory in which the American government, the military, the Mafia, Cuban nationalists, the military-industrial complex, then Vice-President Lyndon Johnson, and, of course, Clay Shaw and Lee Harvey Oswald all conspired to assassinate JFK.

The overall response to *JFK* by both the general public and the media was both positive and negative. Positive responses mostly

came from those viewers whom Stone enlightened, such as younger citizens out of touch with the assassination. The negative responses to the film came (and still come) from those whom Stone attacks, mainly the press, the government, and historians. Interestingly, to promote further reading on the topic and to appease his harshest critics, Stone released a fully-documented screenplay to the film, replete with some ninety critical articles dealing with the film as well as the assassination itself and actual historical records.

Stone included the phrase “The Story That Won’t Go Away” in his title for *JFK*. If overall response to the film provides any indication, this story certainly has not gone away. If anything, Stone brought it back into the public consciousness with *JFK*—a film whose power relies not upon its accuracy in portraying certain events but on its ability to reopen one of the darkest chapters in American history.

## Jogging

If there was a physical activity that caught on during the last few decades of the twentieth century, it was jogging. Running and sprinting had been around since time immemorial and were associated with competitive running. Jogging, on the other hand, achieved currency when individuals took up the deliberately paced trotting as part of fitness regimes. At some point, when the briskness or doggedness of noncompetitive jogging reached a certain level, the more

impressive word “running” came to be more or less interchangeable with “jogging.”

James (Jim) Fixx was an important figure on the cusp of the jogging boom. In 1977, Fixx triggered a revolution in physical activity with his book *The Complete Book of Running*. He made getting out of bed early to put on sweat clothes and sneakers the stylish thing to do. Panting and sweating became fashionable. Although Fixx popularized the movement, years earlier Dr. Kenneth Cooper had advocated jogging as a healthful activity in his book *Aerobics* in 1968. Others, such as runner Bill Rodgers, had promoted physical activity as good for one’s health. But runners credited Fixx with universalizing the sport through his book, which sold almost a million copies in hardback over a few years. He got overweight people off couches and onto the roads of America. He advocated jogging or running as good for everything, from weight loss to better sex. He said joggers digested food better, felt better, and had more energy.

Would-be converts to running could identify with Fixx as an average guy, perhaps like them. In his book, he described how running changed his life. He was overweight and smoked two packs of cigarettes a day before hitting the road at age 32 in New York City,

Kevin Costner as District Attorney Jim Garrison in Oliver Stone's *JFK*.

**Members of the National Jogging Association.**

where he worked as a magazine editor in Manhattan. “One of the more pleasant duties was to entertain authors at lunches and dinners,” he wrote of his editor’s job in the foreword to his book. He noted that in high school he weighed 170 pounds but ballooned later to 214 pounds. His only activity was weekend tennis. Ironically, it was a pulled calf muscle from playing tennis that led to regular jogging. He started running slowly to strengthen the muscle and later became a running addict, competing eight times in the famed Boston Marathon.

Fitness experts urged people to get physical examinations before starting rigorous running programs. This included stress tests where the heart could be tested by cardiologists during a fast walk on a treadmill. The purpose of jogging was to improve the heart and lungs by improving the delivery of oxygen through the body. Speed was not the main goal, fitness experts said, but time spent performing an aerobic activity which strengthened muscles and overall cardiovascular system. Trainers suggested three or four runs a week, to give muscles that break down during exercise time to renew between runs. The experts said that during runs, an individual’s pulse rate should rise to about 70 or 80 percent of his or her maximum rate. The rule of

thumb for calculating one’s maximum rate was 220 minus one’s age. Thus, a 40-year-old runner’s rate should rise to a level somewhere between 125 and 145 beats a minute. To test the level of strain, runners were urged to take a talk test. If they could not talk easily while running, they were straining and should slow down.

Fixx stressed that running could lower cholesterol and blood pressure, thus improving the cardiovascular system and otherwise giving people better lives. Fixx himself, however, could not outrun his own genes. His father had suffered a heart attack at the age of 36 and died seven years later. While running on a country road in Vermont in 1984, Jim Fixx himself, fell and died of a heart attack, shocking American and the running world. As it turned out, Fixx had not paid enough attention to earlier signs of heart problems, including chest pains he experienced only weeks before he died. He was 52.

Fixx’s death stunned runners but did not stop them. U.S. presidents had already taken up the jogging craze and others continued it. A famous picture of Jimmy Carter showed him exhausted after a jog. George Bush became the first well-known Republican jogger—other Republican presidents, such as Dwight Eisenhower and Gerald

Ford, were better known for golf. But Bush combined both a form of jogging and golf. He was known as a speed golfer who would dash through an 18-hole course as fast as he could. Democratic president Bill Clinton was an often photographed jogger who had run daily through the streets of Arkansas when he was governor. When he went to Washington as president, he caused a brief furor by having a jogging track built around part of the South Lawn of the White House to shield his running form from the prying lenses of photographers.

Senators, congressmen, and celebrities such as Madonna, the singer-actress, were runners as were ordinary housewives, businessmen, and students, all of whom were determined to get in their regular runs. Some runners ran into physical problems, however, including knee, leg, and muscle injuries. In 1994, Senator Slade Gorton of Washington suffered a mild heart attack while running in Boston. He was hospitalized and later recovered.

The influence of Fixx, Bill Rodgers (who won eight Boston and New York marathons between 1975 and 1980), and other advocates of a good workout spread. They pioneered a movement that led to an industry of exercise schools, aerobics programs, television shows, sports stores for runners, special clothing, public health campaigns aimed at combating inactivity and lowering cholesterol, and, above all, the ubiquitous running shoe. They changed the landscape of America and created a scene where city streets and country roads featured walkers, joggers, runners, and others out getting some exercise.

## John Birch Society

The death of Senator Joseph McCarthy in 1957 left a vacuum in the conspiracy-minded wing of the American conservative movement. In 1958, retired candy-manufacturer Robert Welch, who suspected that the Wisconsin Senator had been murdered by the Communist conspiracy, formed the John Birch Society to continue McCarthy's mission. The Society took its name from Captain John Birch, a young American soldier killed by Chinese Communists in 1945 and regarded by Welch as the first American martyr of the Cold War.

Like McCarthy, the Birch Society offered an ideology that combined anti-Communism with anti-liberalism and populism. For the Birch Society, Communism included not just the external threat of the Soviet Union, but also the more pernicious danger of internal subversion by the "creeping socialism" of the New Deal. Liberals and moderate conservatives are regarded by the Society as being either Communist agents or unwitting dupes. Especially dangerous are elitist liberal intellectuals, allegedly in control of the universities, the mass media, and the government. At various times, Welch estimated that between 60 to 80 percent of America was under Communist control.

In building up the Birch Society, Welch drew on his considerable managerial expertise as a successful businessman, but he also deliberately imitated what he perceived as the tactics of the communist enemy. Like Lenin, Welch created a tightly organized and well-disciplined movement with little room for debate. Not a political party but a political movement, the Birch Society sought to control the Republican Party at the grass-roots level. The Society also sought to influence public opinion by sponsoring a wide variety of magazines—*American Opinion*, *The New America*—and books—*Global Tyranny . . . Step by Step*.

As the Cold War heated up in the early 1960s, the Birch Society gained tens of thousands of members and was a powerful force in the Republican Party in states like California, Texas, and Indiana. The Society played an important role in securing the nomination of Barry Goldwater as the Republican candidate for president in 1964. In the early 1960s, the young George Bush actively invited Birch Society members to fill key Texas Republican party offices.

Yet, in its moment of greatest political influence, the Birch Society came under increasing scrutiny and criticism. The Anti-Defamation League denounced the extremism of the Society while cartoonist Walt Kelly mocked their paranoia in his comic strip *Pogo*. In 1961 Welch described former President Dwight Eisenhower as a "dedicated, conscious agent of the Communist conspiracy." In response, mainstream conservatives like William F. Buckley, Jr. felt that they had to distance themselves from the Birch Society. In the pages of *National Review* Buckley denounced "the drivel of Robert Welch." In 1965 Goldwater called upon all Republicans to "resign from the Society."

After the mid-1960s, the Society underwent a steep decline in membership and also changed its orientation. Unwilling to support the war in Vietnam, which he saw as being sabotaged by Communists in the American government, Welch turned his attention to domestic issues like the civil rights movement (opposed with the slogan "Impeach Earl Warren"). African Americans who fought for civil rights were seen by the Society as pawns of an anti-American conspiracy and described as "indigenous animals" and "gorillas."

Balanced against this focus on racial politics was a radical extension of the Birch Society's conspiracy theories. In 1966 Welch declared that "the Communist movement is only a tool of the total conspiracy" controlled by the "Bavarian Illuminati," which he believed had masterminded the French and Russian Revolutions, the two World Wars, the creation of the United Nations (U.N.), and many other world events. The U. N., as the supposed center of a world conspiracy, became a particular bete-noir for the Society, which adopted the slogan "U.S. out of the U.N.!"

Initially, Welch's elaborate conspiracy theories about the Bavarian Illuminati and the U.N. alienated members and further marginalized the Society. Yet even in its low point of the 1970s, the Society had some prominent and influential supporters, including Congressman Larry McDonald of Indiana. Further, with the death of Robert Welch in 1985 and the accession of G. Vance Smith to leadership, the Society began to re-vitalize itself.

In the conspiracy-minded 1990s, the era of the *X-Files*, the Birch Society has gained new prominence and popularity. In the post-Cold War world, many other right-wingers, especially those belonging to militia groups, share the Society's fear of the U.N. Among right-wing militias, the Birch society is respected as an organization of scholars who have uncovered the secret agenda of the U.N.—although, unlike some of the militias, the Birch Society does not advocate overthrowing the government by violence. "There is a plethora of newsletters,

tabloids, magazines, and radio shows out there mimicking us,” complained G. Vance Smith in 1996. Smith did take comfort in the fact that more respectable media organs were now spreading the Birch Society gospel to the unconverted. For example, Pat Buchanan, co-host of Cable News Network’s (CNN) *Crossfire* and perennial Republican presidential candidate, has praised the Society’s *New American* magazine for “its advocacy, its insights, its information, [and] its unique point of view.” A special issue of the *New American* devoted to conspiracies sold more than half a million copies in 1996.

Outside of politics, the Birch Society has also exerted remarkable influence on popular culture. Its ideas have been frequently parodied, notably in the movie *Dr. Strangelove* (1964), where the character General Jack D. Ripper mouths Birch Society conspiracy theories. *Mad* magazine mocked the Society along the same lines in 1965. In the 1996 movie *Conspiracy Theory*, the main character has a copy of the *New American* in his apartment. Despite its small numbers and eccentric ideas, the Birch Society has been a unique and potent force in American life for more than 40 years. In an age of conspiracy theories, the Birch Society has been at the forefront of American paranoia.

## John, Elton (1947—)

Pop music’s most flamboyant superstar during the early 1970s, Elton John has become the music industry’s most consistently successful artist, fielding a Top 40 single every year since 1970. John’s penchant for outrageous costumes and zany eyeglasses made him one of rock ’n’ roll’s most recognizable icons during the 1970s. He is also a tremendously gifted songwriter, whose versatility and ability to churn out memorable melodies has guaranteed him longevity in a field where so many of his fellow performers quickly faded into obscurity.

Born Reginald Kenneth Dwight on March 25, 1947 in a London suburb, he showed prodigious talent as a pianist at a young age and, at eleven, won a scholarship to the prestigious Royal Academy of Music, where he attended classes for gifted children. Although classically trained, Reginald loved rock ’n’ roll, particularly performers such as Buddy Holly, Chuck Berry, and Ray Charles. He joined his first band in 1961, Bluesology, a blues-soul-rock combo, which had moderate success opening for American acts throughout the 1960s. But as other bands rose to stardom, the teenage musician grew frustrated and quit the band. Changing his name to Elton John, he auditioned for lead singer in a number of bands before hooking up with lyricist Bernie Taupin in the late 1960s. The duo became one of the top songwriting teams in England before John won his first record contract.

Elton John

After the release of their moderately successful first album in 1969, Taupin and John collaborated on a lushly orchestrated eponymous second effort, which quickly climbed the charts in America and England on the strength of the Top Ten single, “Your Song.” Following up with three albums in less than two years—*Tumbleweed Connection*, *Madman across the Water*, and *Honky Chateau*—Elton John soon became one of the most prolific and popular rock ’n’ roll musicians of the 1970s.

Although Taupin and John produced hit after hit throughout the decade, it was John’s flamboyant onstage persona that made him a star. Taking his cue from the early 1970s Glam Rock movement in Britain, John was a peerless live performer, wearing anything from ostrich feathers to \$5,000 eyeglasses that spelled out his name in lights to a Donald Duck costume. John’s sartorial splendor became his trademark, as his singles such as “Crocodile Rock,” “Daniel,” and “Bennie and the Jets” became global top-ten hits.

In 1976, Elton John revealed his bisexuality in an interview with *Rolling Stone*. His confession was said to have put off many of his fans and his popularity gradually began to wane. In truth, though his sexual orientation may have deterred some of the American public from buying his records, it was more the case that John’s prolific output of sixteen top-twenty singles in four years and fifteen LPs in seven years had left him exhausted. He took a hiatus from performing, cut back on his recording schedule, and even stopped working with Bernie Taupin.

In 1981, Elton John signed with Geffen Records and, throughout the decade he continued to produce gold albums, each of which contained at least one top-forty single. However, while his career

remained successful, John's personal life was in a state of turmoil. He had become addicted to cocaine and alcohol and he struggled with substance abuse throughout the 1980s. After announcing his bisexuality in 1976, John was afraid to reveal his homosexuality and, in 1984, he married Renate Blauel. Four years later, he was divorced and, after playing a record-breaking five nights at Madison Square Garden in 1988, Elton John auctioned off all of his costumes and memorabilia, effectively breaking with his past.

In 1991, Elton John announced his sobriety and his homosexuality, and also established the Elton John AIDS Foundation. As the first celebrity to befriend AIDS patient Ryan White, John has tirelessly given of his time and energy in contributing to the fight against AIDS. Since the early 1990s, John has continued to release successful albums and singles on a yearly basis, reestablishing himself as one of pop music's most consistent performers, even as he devoted more and more time to his philanthropic efforts.

In 1994, John collaborated with Tim Rice to create the music for Disney's *The Lion King*, which earned him an Academy Award for best original song. Three years later, Elton John once again came to global attention, with the deaths of two close friends in less than two months of each other. Shortly after attending the funeral for murdered fashion designer Gianni Versace with Princess Diana, John performed at the internationally televised memorial service for the princess herself, playing a revised version of his hit single, "Candle in the Wind." His recording of the single, with all proceeds going to charity, became the fastest-selling single of all time. Four months later, HRH Queen Elizabeth II named the fifty-year-old Elton John a Knight of the British Empire.

The subject of an unsparing 1997 documentary, *Tantrums and Tiaras*, made by his partner David Furnish, John has made peace with both himself and his persona, becoming a perfect role model for millennial pop culture. Flamboyant yet sober, the philanthropic celebrity continues a pop music phenomenon, even as he embraces his new spiritual ethos. The metamorphosis of John through the decades has seemed to mirror the popular mood, even as the talented singer continues to help define what the world likes to hear.

## Johns, Jasper (1930—)

With only two years of formal art training from the University of South Carolina, Jasper Johns moved to New York City at the age of twenty-four. A southerner, Johns was born in Augusta, Georgia, and brought up in the Carolinas. He supported himself as a window decorator and a salesman in a Manhattan bookstore while painting during his spare time. Johns painted objects that were familiar to both

him and his audience. He once stated, "Using the design of the American flag took care of a great deal for me because I didn't have to design it. So I went on to similar things like targets—things the mind already knows. That gave me room to work on other levels." The innovative way that Johns approached common subjects attracted the attention of art dealer Leo Castelli. Castelli was visiting Johns's upstairs neighbor and friend, the artist Robert Rauschenberg, in 1957, when the art dealer asked for an introduction to Johns. Castelli, immediately taken with the paintings of flags and targets including *White Flag* (1955) and *Target with Plaster Casts* (1955), added Johns to his stable of gallery artists, beginning a relationship that has lasted more than thirty-five years. In 1958, Johns had his first solo exhibition at the Castelli gallery; it was an unqualified critical success for both artist and dealer, establishing both of their reputations. The show sold out and the Museum of Modern Art bought a total of five pieces, an unprecedented amount from an artist's first show.

Signaling the end of Abstract Expressionism, Jasper Johns's paintings, prints, and sculptures helped usher in the era of American Pop Art in the late 1950s; additionally, his artwork became instrumental to the tenets of minimalism and conceptual art. Beginning in the 1950s, Johns's appropriated images of flags, targets, maps, the alphabet, numbers, and text contrasted sharply with the abstracted, emotion filled paintings that exemplified Abstract Expressionism. His use of commonplace symbols focused the attention onto the surface of the canvas. His chosen media, encaustic, oil, or acrylic paints, were as important, if not more important than his subject matter. His artwork inspired several generations of artists and his adaptation of cultural icons and mass media signage have become almost as familiar as the images they mimic.

Johns's early work in the 1950s and 1960s reflected the influences of Marcel Duchamp and the found object; Johns collected items such as ceramic pieces, brooms, and rulers, and attached them to his canvases. Several actual sized, cast sculptures of everyday items such as beer cans, light bulbs, and flashlights along with Johns's painted repetition of flags, numbers, and letters became abstracted and ceased to exist as powerful objects; the representations become tools of the medium and exert their power only as an artwork. Johns's artwork challenges the line between art and reality. His concern was with questioning the basic nature of art, with the process as the significant core of the works. The process, to Johns, was of utmost importance and his images were often the result of chance or accident. Variations in letters and numbers were consequently a result of the types of stencils available. Decisions on placement did not necessarily stem from aesthetics, but from necessity; for example, the bronze cast elements of a light bulb, *Bronze* (1960-61), came back to Johns in pieces—the bulb, the socket, and the cord. Johns left them unassembled, feeling that the pieces issued a provocative statement in that form.

With the beginning of the 1970s, Johns's work became increasingly abstract. In the mid-1970s, he adopted a method of cross-hatched painting as seen in *The Dutch Wives* (1975). The wide brush strokes covered the entire canvas, again focusing in on the process and technical aspects of his medium; Johns has remarked that he was "Trying to make paintings about painting." However, this abstract period soon gave way to a more representational era in the 1980s. Johns began to pay homage to his artistic inspirations, Pablo Picasso, Paul Cezanne, and Edvard Munch, in a body of work that embodied some of his most revealing personal and psychological matter. John's contemplation on the cycle of life and death in *The Seasons* (1986) incorporates a shadowy figure of Johns's body; this imagery refers to Picasso's *The Shadow* (1953).

The paintings, sculpture, prints, and drawings by Johns all contain either biographical elements or iconographical components from the second half of the twentieth century. Johns changed the direction of American painting with his adaptation of common icons and his emphasis on the technique of painting. His later works, filled with psychological dramatics, continue to have the impact of earlier works that redefined the common symbols and icons of American culture. Often reproduced, Johns's *Flags* and *Targets* have become popular greeting card and poster images, introducing new generations to his work.

## Johnson, Blind Willie (c.1900-1947)

Blind Willie Johnson was an itinerant Texas street singer who made his last record in 1930 and died in poverty. Yet such was the force and individuality of his guitar playing and singing that all thirty of the gospel songs he recorded during his brief professional career are easily available today. His versions of "If I Had My Way I'd Tear This Building Down," "Keep Your Lamp Trimmed and Burning," and "Bye and Bye I'm Going to See the King" are now considered classics and have attracted admirers in many fields of popular music.

Johnson dropped back into obscurity after his fifth and final recording session for Columbia Records in the spring of 1930 and for many years his strong, highly personal renditions of gospel songs could be heard only on bootleg records. But eventually, through the efforts of jazz historians like Samuel Charters, more and more people became aware of his work. Eventually Columbia reissued Johnson's entire output in both cassette and CD formats.

An intensely religious man, Johnson nevertheless utilized many of the techniques of the rowdy, secular blues in his performances. On most of his recordings he'd shift from his normal tenor to a gruff, growling bass and his slide guitar playing, done with the blade of a pocket knife, was harsh, intense, and impressive. "He had few equals as a slide guitarist," said Francis Davis in *The History of the Blues*. Although Johnson's faith underlies all of his performances, there's a grimness to many of his songs. Many are of such stark intensity that one can imagine his causing his sidewalk listeners' hair to stand on end.

Johnson was not born blind, but lost his sight as a child after his angry stepmother threw lye in his face. He eventually took to the streets of his native Marlin, Texas, and sang on corners, begging with a tin cup. He played in other Texas towns and eventually in neighboring states. It is uncertain who discovered him and persuaded him to record for Columbia. The company had a fairly ambitious program of

issuing what were then called race records, employing scouts to work throughout the South. Blind Willie Johnson cut his first six 78-rpm sides in a makeshift studio in Dallas in early December of 1927. According to Charters, the first record, issued on Columbia's 140000 Race series, sold extremely well—over 15,000 copies, better than the popular Bessie Smith was doing—and Johnson from the start "was one of the strongest selling artists in the Columbia series."

Only one picture of Johnson is known to exist. It comes from a small ad that was run in black newspapers to promote the first record. "I Know His Blood Can Make Me Whole" appeared on one side, "Jesus Make Up My Dying Bed" on the other. The company assured

potential buyers that Blind Willie Johnson “sings sacred selections in a way that you have never heard before.”

In December of 1928 Johnson cut four more sides, again in Dallas. This time a woman named Willie B. Harris, whom Charters says was Johnson’s first wife, recorded as a sort of backup singer. It was another year before Johnson, accompanied by a different woman singer, recorded again. These third and fourth sessions took place in New Orleans in a studio set up above Werlein’s Music Store, on the French Quarter side of Canal Street. The last session was in Atlanta, where Blind Willie Johnson, again working with Harris, recorded ten songs.

The Depression ended his recording career, as it did that of many other folk artists. Johnson, with a new wife, continued his wanderings, singing and begging on street corners in Texas and Louisiana. They eventually settled in Beaumont, Texas, and he died there of pneumonia in 1947. He’d slept in their shack after a fire had gutted it and the dampness caused his sickness. Many years later Charters tracked down his widow and when he asked her if she’d brought her sick husband to a hospital, she answered that she had but “they wouldn’t accept him.”

## Johnson, Earvin “Magic” (1959—)

Earvin “Magic” Johnson was one of the marquee basketball players of his era. He began his National Basketball Association career in 1980. During the following decade, he and Larry Bird helped to elevate the popularity of professional basketball to previously unscaled heights. Johnson’s wall-to-wall smile and ingratiating manner made him a favorite of hoop and non-hoop fans alike. Nonetheless, he will be remembered for much more than his exploits on the hardwood. On November 7, 1991, he shocked America—and the sporting world in particular—by announcing his retirement from basketball because he was HIV-positive. This admission, in such a public forum, forever altered the face of the AIDS plague. AIDS no longer could be ghettoized and trivialized as a disease whose sufferers were promiscuous gays and intravenous drug abusers, or lived far away on another continent.

Earvin Johnson, Jr., the sixth of ten children, grew up in Lansing, Michigan, and was dubbed “Magic” by a sportswriter after amassing some sterling statistics—36 points, 18 rebounds, and 16 assists—in a high school game. Wherever he played, Johnson helped to pilot a winner. For four straight years, he made the Michigan all-state high school team. In his senior year he tallied 28.8 points and 16.8 rebounds per game and led Lansing’s Everett High School to a 27-1 record and the state championship. He attended Michigan State University, where as a freshman he guided the Spartans to a 25-5 record and their first Big Ten championship in 19 years. He capped

Earvin “Magic” Johnson

his college career in 1979, when he was a sophomore. That season, Michigan State won the NCAA title and Johnson, who averaged 17.1 points per game, was named the tournament’s most outstanding player.

The 6’ 9” point guard decided to turn pro after his second year at Michigan State and was selected by the Los Angeles Lakers as the first overall pick in the 1979 NBA draft. In his first year with the team, he maintained his status as a winner by helping the Lakers take the NBA title. He capped off his season by being the first rookie cited as MVP of the NBA finals. In the deciding game against the Philadelphia 76ers, he replaced an ailing Kareem Abdul-Jabbar at center and went on to score 42 points, adding 15 rebounds and seven assists in a 123-107 victory. However, Johnson lost Rookie of the Year honors to Larry Bird, who became one of his chief on-court adversaries during the 1980s.

In his 13 seasons with the Lakers, Johnson astounded fans and players alike with his no-look passes, clutch baskets, and “showtime” style of offense. He led the team to four additional NBA titles, with the Lakers’ 1987 victory against Bird and the Boston Celtics especially sweet. In the deciding minutes of Game 4, with the Celts holding a one-point lead, Johnson won the contest with an Abdul-Jabbar-like sky hook. The Lakers went on to beat their rivals in six games.

In 1987, 1989, and 1990, Johnson was the league’s MVP; he also earned two additional MVP citations for starring in the NBA finals.

Prior to his retirement he played in 11 All-Star Games, and in 1990 he was the contest's MVP. Between 1983 and 1991, he was first-team all-NBA. He led the NBA in assists on four occasions. During the 1990-91 season he broke the all-time NBA assists record and completed his career with 10,141.

Johnson came out of retirement to score 25 points and make nine assists in the 1992 NBA All-Star game, helping the West earn a 153-113 victory and winning a second All-Star MVP trophy. Near the end of the contest, he inspired the crowd by making successive three-point shots while being defended by Michael Jordan and Isaiah Thomas. Johnson joined Jordan, Bird and other NBA stars as a member of the U.S. Olympic Dream Team, which drubbed opponents by an average of 43.8 points per game, earned a Gold Medal at the 1992 Barcelona Olympics, and helped to escalate the sport's popularity across the globe. He then announced his pro comeback, but retired again prior to the beginning of the 1992-93 NBA season. In March, 1994, Johnson became head coach of the Lakers, but quit as the team completed the season with a 5-11 record. He also became a minority owner of the team and came out of retirement one last time during the 1995-96 season, in which he played in 32 Lakers games. Also in 1996, he was cited as one of the 50 Greatest Players in NBA History.

In his post-NBA career, "Magic" Johnson has been a frequent guest on TV talk shows. His own venture into late-night television, *The Magic Hour*, flopped soon after its 1998 premiere. More importantly, he is a celebrity who has eagerly donated his services to an array of charitable organizations. He has been active as a fundraiser for the Starlight Foundation, the American Heart Association, the Muscular Dystrophy Association, the American Cancer Society, the United Negro College Fund, and the Urban League. He has offered his name and his presence to a host of HIV/AIDS awareness programs. He established the Magic Johnson Foundation, which bestows grants to community-based, youth-oriented organizations.

He became chairman and chief executive officer of Magic Johnson Enterprises, whose projects include the Johnson Development Corporation, Magic Johnson All-Star Camps, and Magic Johnson Theaters. He believes that all business endeavors must benefit society and so his theater chain, developed in conjunction with Sony Entertainment, consists of state-of-the-art multiplex cinemas located in economically depressed urban neighborhoods. The first opened in Baldwin Hills, a run-down area of Los Angeles.

## Johnson, Jack (1878-1946)

Jack Johnson, the first modern African American heavyweight boxing champion of the world, served as a lightning rod for the racial turmoil of the early twentieth century. Johnson won the heavyweight title in 1906 and then defeated a series of "Great White Hopes," culminating in his epic match with ex-champion Jim Jeffries which was billed from the start as a battle between the "The Hope of the White Race vs. The Deliverer of The Negroes." The implications of Johnson's ensuing easy victory frightened many white Americans, inspired many black Americans, and upset the understood racial hierarchy of Victorian America.

One of six children, Arthur John Johnson was born in Galveston, Texas in 1878. Johnson lived a tough childhood and dropped out of school after receiving five or six years of elementary education. By the mid-1890s, Johnson earned a living by working a variety of jobs around the port of Galveston and by participating in battle royals. Organized by all-white athletic and social clubs for the entertainment of their members, battle royals featured groups of young black man fighting in a ring until only one man was left standing. These "exhibitions" had no rules, and the last fighter in the ring received a

Jack Johnson

small purse of a few dollars for his efforts. A frequent winner of these matches, Johnson gradually began to be matched one-on-one against the best local fighters, both black and white, in traditional boxing matches. By the turn of the century, Johnson had beaten all challengers in eastern Texas, and he took to the road to find new competition.

Over the next few years, Johnson traveled all over the country, from Philadelphia to Chicago to San Francisco, learning the “manly art” and slowly building a national reputation. By 1903, Johnson had beaten all the best black heavyweights in the country and had claimed the mythic “Negro Heavyweight Championship.” A separate title for black boxers was necessary, because the white champion, Jim Jeffries, following a tradition established in the 1890s by America’s first boxing superstar, John “The Boston Strongboy” Sullivan, refused to cross the color line and box against African American fighters.

In 1905, though, with only a lackluster group of white fighters to challenge him, Jeffries tired of the boxing game and retired without having been beaten. In the ensuing scramble for the now-vacated championship, a mediocre Canadian boxer named Tommy Burns claimed the title. Over three years of mounting disinterest, Burns defended his championship for smaller and smaller purses against an increasingly weak selection of white boxers. Finally in 1908, in order to generate interest (and a larger payday), Burns agreed to fight Johnson, still a leading contender for the championship. Although Burns was the heavy favorite of both the gambling community and the crowd—which showered Johnson with racial epithets throughout the fight—he was no match for the stronger and quicker black fighter. Johnson dominated the fight for 13 rounds, punching the overmatched white boxer at will until police stopped the match and saved the bloody and battered Burns the indignity of being knocked out.

After more than five years of fruitless challenges, Johnson had finally gotten his day in the ring and had proven himself against the best white boxer in the world. While white America struggled to come to grips with the fact that an African American had been crowned the heavyweight champion, Johnson returned to Chicago to celebrate his victory. Much to the chagrin of mainstream America, however, Johnson refused to play by the prevailing racial rules of the day. Instead of being humble and respectful as African Americans were expected to act, Johnson flaunted his newfound wealth, buying fast cars and throwing lavish parties. More threatening to many Americans, though, Johnson broke the ultimate taboo and publicly romanced white women.

In response to the new champion’s behavior, Jack London, writing in the *New York Herald*, echoed the popular sentiment and appealed to the last great white champion: “But one thing now remains. Jim Jeffries must now emerge from his alfalfa farm and remove that golden smile from Jack Johnson’s face. Jeff it’s up to you. The White Man must be rescued.” After Johnson defeated several mediocre white challengers, Jeffries bowed to the public pressure and, though overweight and out-of-shape, agreed to come out of retirement to fight for the title. Scheduled for July 4, 1910 in Reno, Nevada, the build-up to the fight was frenzied and front page news across the country. The conventional wisdom reasoned that, although the black boxer was emotional, strong, and violent, the smart, quick, and scientific Anglo-Saxon would easily win the match. Once again, however, the expectations of white America were shattered. The old and tired ex-champion was simply no match for Johnson. Again, the black fighter controlled the action in the ring, toying with his opponent and delivering a savage beating for 15 rounds, until Jeffries’ corner men stopped the fight.

White America reacted with disbelief and anger after Johnson’s victory. The nearly all-white crowd filed out of the arena in silence, as social critics wondered how an African American could be so successful. More ominously, white Americans began to take out their frustrations on their helpless black neighbors. In cities around the country, “race riots” broke out in response to the fight, as gangs of whites descended violently on innocent blacks to forcefully remind them of their position in society despite Johnson’s victory.

Finally, the federal government undertook to do what no white boxers had been capable of, defeating Jack Johnson. In 1912 Johnson was arrested and convicted of violating the Mann Act. Known popularly as the White Slave Traffic Act, the Mann Act made it illegal to transport women across state lines “for the purpose of prostitution or debauchery, or for any other immoral purpose.” The law was intended to target organized rings of prostitution, and, although Johnson was technically guilty for travelling around the country with several of his white girlfriends, he was one of only a handful of people ever tried under the Mann Act for anything over than participation in prostitution.

Before his sentencing, however, Johnson fled the country and remained abroad for the next seven years during which time he lost his title to a 6-6, 250-pound giant from Iowa named Jess Willard. Having lost his title and squandered his winnings, Johnson returned to the United States in 1920 and was sentenced to one year in jail. Although he would fight a few times in the 1920s, his serious boxing days were over, and Johnson drifted into the relative obscurity of an ex-champion. On June 10, 1946, outside of Raleigh, North Carolina, Johnson was killed in a car accident. Although eulogized as a good fighter, no representatives from the boxing community attended his funeral, and Johnson had become a shell of the person who 40 years earlier had terrified white Americans and upset the racial sensibilities of white America.

## Johnson, James Weldon (1871-1938)

James Weldon Johnson enjoyed success as a novelist, poet, songwriter, educator, diplomat, lawyer, and as an official of the National Association for the Advancement of Colored People (NAACP). A celebrated writer and active leader, Johnson was a venerated figure of the Harlem Renaissance. He believed that artistic achievement was a key to racial uplift, and he urged fellow African American artists to assimilate black folk culture into their work. His novel *The Autobiography of an Ex-Colored Man* (1912) explores the

dilemmas faced by a light-skinned black man who turns away from his cultural heritage and decides to “pass” for white. Johnson’s ideas and themes had a marked influence on the African American literary tradition, as shown in works by Jean Toomer and Ralph Ellison. Johnson was also a talented musician and songwriter who penned the lyrics to “Lift Every Voice and Sing” (1900), which has become the official song of the NAACP and is widely known as the “Black National Anthem.”

## Johnson, Michael (1967—)

The unique convergence of spectacular achievement, special time and place, and creative image allows certain athletes to make indelible impressions on the popular mind. Michael Johnson exemplifies this phenomenon—his name evokes memories of an unprecedented accomplishment in track and field, the 1996 Olympic Summer Games at Atlanta, and golden running shoes. Few athletes have more consciously planned their moment of greatest triumph than did Johnson. Deprived of individual achievement in the 1992 Summer Olympics in Barcelona by illness and aware of the American public’s relative disinterest in track and field, he relentlessly determined that he would make the Atlanta Olympics uniquely his own. He resolved to win both the 200 and the 400 meter races in Atlanta, something that had never been attempted in the Olympics, and to do so while wearing golden shoes. The pre-Olympic pressure on Johnson was enormous, with the media nominating him in advance as the star of the Atlanta games. Spectacularly fulfilling his own and others’ expectations, he first won the 400 meters easily, literally running away from the rest of the field. Three days later, he won the 200 meters in the astonishing world-record time of 19.32 seconds. At the age of twenty-nine, Johnson was unquestionably the dominant figure in international track and field.

Even before Atlanta, he had established an impressive record as a sprinter. In the 1995 World Championship meet held in Goteborg, Sweden, he previewed his Atlanta performance by completing the 200-400 double and won a third gold medal by anchoring the winning United States 4 x 400 meter relay team. He had previously won three World Championship gold medals (individually the 200 meters in 1991 and the 400 meters in 1993 and as the anchor of the U.S. 4 x 400 meter relay team in 1993). Nevertheless in a sport that traditionally valorizes youth, Johnson had been something of a slow starter. A native of Dallas, he never won a Texas state high school running championship.

Born on September 13, 1967, Johnson is the son of a truck driver and an elementary school teacher. His father, Paul Johnson Sr., determined that his five children would obtain college degrees and

began teaching them early the virtues of planning and dedication. All five children did in fact earn degrees, and son Michael proved to be an especially receptive student of his father’s lessons. As an adult, Michael leads a rigidly compartmentalized life and has been described by friends and rivals as being virtually inhuman in his concentration and dedication on immediate tasks and challenges. Michael attended Skyline High School in Dallas where, an obviously gifted athlete, he surprised people by participating in track rather than football. Upon graduation, he was recruited by Baylor University’s track and field coach Clyde Hart, primarily to fill out Hart’s successful relay teams. Under Hart’s tutelage, Johnson’s potential as a sprinter began to manifest itself quickly, though injuries kept him from recording the collegiate record that he might have (he did win the NCAA 200 meter championship in 1989 and 1990 and the NCAA outdoor 200 meter title in 1990).

After graduation from Baylor, Johnson’s running achievements became more and more spectacular until they culminated in the Atlanta Olympics. In between though, there was Barcelona. Going into the 1992 Olympics, Johnson was viewed as the meet’s most certain individual winner, but he contacted food poisoning and failed to qualify for the finals in either of his events. He did, however, win his first Olympic gold medal as a member of the U.S. 4 x 400 relay team. After Barcelona his determination began to pay off even before Atlanta. Between 1992 and 1996, he was virtually unbeatable; and between 1989 and 1997 he won an amazing fifty-eight consecutive 400 meter finals. Beginning in 1993, awards began to pour in for Johnson, climaxing in 1996 when he received the Sullivan Award as U.S. amateur athlete of the year and the Associated Press Male Athlete of the Year Award.

Since Atlanta, Johnson’s career, because of recurring injuries, has been less than spectacular. The biggest damage to his golden image was truly unnecessary. Johnson agreed to an exhibition race on June 1, 1997 with Olympic 100 meter champion Donovan Bailey of Canada to determine the mythical title of “world’s fastest human.” From the beginning, the event took on a carnival atmosphere; and, with fifty meters left in the race, Johnson, who was trailing Bailey, pulled a muscle in his left thigh and dropped out. Afterward, Bailey ridiculed Johnson on Canadian television, calling him a “chicken” and a “coward.” Responding to criticism, Bailey subsequently apologized for his harsh comments. The entire episode proved a black eye for track and field rather than the boost anticipated by the two competitors and their sponsors. Still plagued by the thigh injury, Johnson went on to have a mediocre 1997 season. Yet the golden touch had not entirely deserted him; and, when he could not otherwise qualify, Johnson was granted a waiver to compete in the World Championships in Athens, where he won the 400 meter finals. This win represented his seventh World Championship title, second only to Carl Lewis’s eight.

In 1998, he won the 400 meter championship in the Goodwill Games at Uniondale, New York, and anchored the U.S. 4 x 400 meter relay team to victory in world record time. The Bailey race fiasco seems not to have seriously damaged Johnson’s image. He will always be the man who achieved the “impossible double” and who ran the “astonishing” 19.32 in the 200 meters in the Atlanta Olympics while wearing his golden shoes. If he hasn’t reawakened U.S. interest in track and field, he is a nationally and internationally admired athletic figure. At the age of thirty-one, he remains the golden boy of running.

## **Johnson, Robert (1914?-1938)**

Arguably the most influential figure in the history of the blues, Robert Leroy Johnson was at once a virtuoso guitarist, a gifted poet,

and a skilled vocalist. Johnson, who emerged out of the Mississippi Delta in the early 1930s as one of the premier practitioners of the blues form, left a recorded legacy of just 41 songs. However, the tracks he laid down over two sessions in 1936 and 1937 became fundamental to the repertoires of other blues players and, after the "rediscovery" of the blues by white musicians in the 1960s, to blues-influenced rock artists everywhere. (Among the most covered and recorded Johnson compositions are "Crossroads Blues," "Sweet Home Chicago," and "Love in Vain.")

So prodigious were Johnson's skills on the six-string guitar, a legend (fostered by Johnson himself) grew up around him that he had sold his soul to the devil in exchange for this particular gift. Johnson's violent and untimely demise, allegedly at the hands of the jealous husband of one of his many lovers, combines with the romance of his shadowy, itinerant life to make him one of the most celebrated folk legends of the twentieth century. His enormous talent and the dark reputation he self-consciously promoted help explain his enduring place in the popular imagination. The fact that Johnson, unlike many other talented blues musicians of the early part of the century, was

recorded has further cemented his reputation as one of the all-time greats of the genre.

Born in Hazelhurst, Mississippi, to Mary and Noah Johnson, “Little Robert” was fascinated with making music from an early age. As sharecroppers in the fertile but dirt-poor Yazoo basin, the Johnsons had neither the inclination nor the means to give Robert a formal musical education, and certain of his contemporaries have suggested that young Robert, while wildly enthusiastic about music, was not much of a musician. Eddie James “Son” House, Jr., one of the most respected blues performers of the generation before Johnson’s, remembered the youngster as an eager apprentice, but one who did not at first show much promise. Johnson would show up at the juke joints and house parties, where House was a Saturday night fixture, and beg the older man to teach him to play. Rebuffed and mocked by the older musicians he worshipped, Johnson eventually took to the road in search of a willing mentor.

A reluctant maestro, Eddie “Son” House nevertheless made a large impression on the young Johnson. House’s sometime traveling partner Willie Brown, later immortalized in a Johnson song, also affected the youngster profoundly. (“You can run, you can run,” Johnson sings in the last verse of “Crossroads Blues,” hinting at the cost of his infernal bargain, “Tell my friend poor Willie Brown. / Lord, I’m standing at the crossroads / I believe I’m sinking down.”) Johnson’s style, however startlingly unprecedented it seems in retrospect, was in fact fashioned from elements taken from such players as 1920s Texas great Blind Lemon Jefferson, Mississippi Delta legend Charlie Patton, and, of course, House.

Johnson’s brand of the blues emphasizes an intricate interplay between guitar and voice. In many of his recordings, he highlights sung lines with rhythmic bursts of guitar playing, typically playing a bass line with his thumb while picking out chords and riffs with his fingers. A major innovator of slide-guitar technique—in which the player frets the instrument with a glass or metal object—Johnson routinely makes his guitar sound like a human voice, his voice like a guitar. On such numbers as “If I Had Possession Over Judgment Day,” he creates a drum-like beat with slide fingerings. He pushes his plangent alto across the verses, often dropping into a speaking voice at the end of lines (e.g. “Stones in My Passway”).

His early travels account in part for the mystery in which Johnson’s life would always be shrouded. He traveled under both his father’s and two stepfathers’ names (Dodds and Spencer), but on returning to his home county was coy about where he had been. He further bolstered his mysterious reputation by bragging that he’d made a Faustian pact to become the best guitar player alive—a publicity strategy that had been used to great effect by older blues men such as Skip James, whose “Devil Got My Woman” Johnson refashioned as “Hellhound on My Trail.” Johnson’s wanderlust remained unsatisfied throughout his brief life, as evidenced by his two-year ramble with Johnny Shines and Walter Horton from 1933 to 1935. Two widely reproduced photographs of Johnson exist: one seems to have been taken in a coin-operated photo booth, the other, a studio portrait, features a giddy-looking Johnson in a new suit and hat. The obscure provenance and suggestive composition of the two pictures have fed the imaginations of scholars and fans alike, and have helped keep the Johnson legend alive.

More crucial to the continuation of the legend than the photographs, though, are the sound recordings Johnson cut. These were made during a boom period for so-called “race records”—78 rpm recordings of African American blues and jazz singers, aimed at the non-white market. Race records were a big business in the 1920s and

1930s, and music scouts from the white-owned record companies were commonly sent into the American south in search of new talent. Blind Lemon Jefferson, whose artistic influence on Johnson is noted above, was one of the top-selling artists of his day, and thus a model of both aesthetic and business success for Johnson. (Jefferson became so popular that Paramount, his record company, began issuing his sides with lemon-colored labels.) In 1936, Don Law, an American Recording Company (ARC) engineer tasked to find the next Blind Lemon, recorded Johnson in San Antonio, Texas. Law famously reported that Johnson suffered so badly from stage fright that the young singer recorded his songs facing the back wall of the hotel room in which the session was held.

Johnson’s shyness has entered somewhat too easily into the historical record. The story of an enormously talented but bashful country boy overwhelmed and intimidated by the big city has, of course, a certain charm. But a convincing explanation for Johnson’s apparently timid behavior in Law’s improvised recording studio might be found in his reluctance in other contexts to show other musicians his riffs. He was, it seems, somewhat notorious among musicians in the south for his refusal to reveal his unconventional fingerings to potential competitors, and was known to conceal his hands from audiences as he played. This secrecy, of course, had the collateral advantage of enhancing his satanic reputation.

Whatever his motives for turning away from the team from ARC, Johnson managed to lay down a bona fide hit during the San Antonio session, the sly “Terraplane Blues.” The song, which playfully confuses a complaint about a lover’s infidelities with a car owner’s frustration over a rough-running jalopy (anticipating by decades smashes such as Chuck Berry’s “Mabeline” and Prince’s “Little Red Corvette”), sold around 5,000 copies and established Johnson’s reputation as a leading performer of the blues. Sings Johnson: “Now, you know the coils ain’t even buzzin’ / Little generator won’t get the spark / Motor’s in bad condition / You gotta have these batteries charged. / But I’m cryin’ please, please don’t do me wrong / Who been driving my Terraplane / Now for you since I been gone?”

Law recorded Johnson again in July of 1937, this time for Vocalion Records, in Dallas. In the second session, Johnson recorded what would become some of his best-loved, most enduring sides, “Dust My Broom” and “Love in Vain.” Together with the first session, the second provided the 29 cuts which, much to the delight of blues and folk aficionados, Columbia brought out in 1961, nearly a quarter century after Johnson’s death. Before the appearance of the Columbia LPs, Johnson’s records were known to only a very select few—notwithstanding the 1930s juke box popularity of “Terraplane Blues.” Johnson’s entire recorded oeuvre, the 29 songs from the 1961 release plus 12 alternate takes, was at last released in 1991, again by Columbia.

Robert Johnson has the dubious distinction of being the only blues musician to have had a Ralph Macchio movie made about his legend (*Crossroads*, 1986). The film, with guitar playing taking the place of martial arts for “The Karate Kid,” is significant in that it suggests the longevity and seemingly universal appeal of the Johnson legend. For better or worse, Johnson’s songs have been recorded by such British rock heavyweights as Led Zeppelin, the Rolling Stones, and Cream, groups whose work continues to have a considerable influence on rock musicians on both sides of the Atlantic. The mysterious circumstances of Johnson’s death—some say he was knifed, others claim that, like his hero Blind Lemon Jefferson, he drank poisoned coffee—have further enhanced the romance of his

story. A particularly provocative rumor that has circulated about Johnson is that just prior to his death he had been in Chicago, where he put together an electric-guitar based combo. Whether Johnson was in Chicago or not, his influence there shines through clearly in the work of, among others, Muddy Waters, viewed by many critics as the next link in the chain connecting traditional country blues to electrified blues-based urban forms such as rhythm and blues, soul, and rock and roll.

## Jolson, Al (1886-1950)

Al Jolson lived “The American Dream.” Born in Lithuania, Jolson rose through the ranks of vaudeville as a comedian and a blackface “Mammy” singer. By 1920, he had become the biggest star on Broadway, but he is probably best remembered for his film career. He starred in *The Jazz Singer* (1927), the first talking movie ever made, and his legend was assured in 1946 with the release of the successful biography of his life called *The Jolson Story*. Jolson was the first openly Jewish man to become an entertainment star in America. His marginal status as a Jew informed his blackface portrayal of Southern blacks. Almost single-handedly, Jolson helped to introduce African-American musical innovations like jazz, ragtime, and the blues to white audiences. The brightest star of the first half of the twentieth century, Jolson was eternally grateful for the opportunities America had given him. He tirelessly entertained American troops in World War II and in the Korean War, and he contributed time and money to the March of Dimes and other philanthropic causes. While some of his colleagues in show business complained about his inflated ego, he certainly deserved his moniker: “The World’s Greatest Entertainer.”

Perhaps it should come as no surprise that the man who made his mark singing “My Mammy” in blackface was himself a “mamma’s boy.” Jolson was born Asa Yoelson in Seredzius, Lithuania, sometime between 1883 and 1886. He was the youngest of four children—the baby of the family and his mother Naomi’s favorite. When Asa was four, his father, Rabbi Moshe Reuben Yoelson, left Lithuania to put down roots for the family in America. From age four to age eight, Asa was raised by his mother. She introduced him to the violin and told him that if he practiced hard he could become a star performer in America someday. When Asa was eight Rabbi Yoelson brought his family to Washington, D.C., where he had found work as a rabbi and a cantor at a Jewish congregation. Later that same year, Naomi died. Seeing his mother in her death throes traumatized young Asa, and he

Al Jolson

spent much of his life struggling with that trauma. After her death, he remained withdrawn for seven months until he met Al Reeves, who played the banjo, sang, and introduced him to show business. At age nine, Asa and his older brother Hirsch changed their names to Al and Harry, and by age 11 Al was singing in the streets for nickels and dimes that he used to buy tickets to shows at the National Theater.

After running away from home to New York City and doing a stint with a circus, Al joined his brother Harry on the vaudeville circuit. In 1904, the brothers teamed up with a disabled man named Joe Palmer to form a comedy troupe. A friend of Joe’s wrote them a comedy skit, but Al was uncomfortable with it until he took James Dooley’s advice to try performing it in blackface. Jolson remained in blackface for the rest of his stage and screen career. His blackface routine was a hit on the vaudeville circuit and he came to New York to perform it in 1906. His trademarks were a whistling trick that approximated a frenetic birdcall, a performance of vocal scales, and very dramatic facial expressions. He billed himself “The Blackface with the Grand Opera Voice.” After his New York debut, he had success as a blackface comedian and singer in California. In 1911 he returned to New York to star in *La Belle Paree*, a vaudeville revue. There Jolson quickly established himself as the biggest star on Broadway.

Jolson’s film career began inauspiciously with a short film for the Vitagraph Company in 1916. In 1923, he agreed to star in a film by D. W. Griffith, but backed out of his contract after filming had begun because Griffith had assigned an assistant to direct Jolson’s scenes. In 1926, he made another short film for Warner Brothers, and in 1927, he was signed to star in a screen version of Samuel Raphaelson’s play *The*

*Jazz Singer*. This was the role that Jolson had waited his whole life to play. Based on Jolson's own life, it was the story of a Jewish boy named Jackie Rabinowitz who runs away from his father, who is a cantor from the old world, because Jackie wants to be in show business. Jackie returns home to chant the Kol Nidre service as his father lies on his deathbed. The film was incredibly popular because it combined old silent film technology (words printed on the screen) with four dramatically innovative vitaphone "talking" sequences. Jolson quickly became the first movie star in the modern sense. He went on to make *The Singing Fool* (1928), *Say it with Songs* (1929), *Mammy* (1930), and *Big Boy* (1930) before returning to Broadway in 1931. His star dimmed a bit in the late 1930s and early 1940s until the highly acclaimed biographical film *The Jolson Story*, starring Larry Parks, was released in 1946. Parks mouthed the songs which Al Jolson himself sang for the film, and the sound track of the film sold several million copies.

Al Jolson was to jazz, blues, and ragtime what Elvis Presley was to rock 'n' roll. Jolson had first heard African-American music in New Orleans in 1905, and he performed it for the rest of his life. Like Elvis, Jolson gyrated his lower body as he danced. In *The Jazz Singer*, white viewers saw Jolson moving his hips and waist in ways that they had never seen before. Historian and performer Stephen Hanan has written in *Tikkun* that Jolson's "funky rhythm and below-the-waist gyrations (not seen again from any white male till the advent of Elvis) were harbingers of the sexual liberation of the new urban era. Jolson was a rock star before the dawn of rock music." Al Jolson paved the way for African-American performers like Louis Armstrong, Duke Ellington, Fats Waller, and Ethel Waters. It is remarkable that a Jewish mamma's boy from Lithuania could do so much to bridge the cultural gap between black and white America.

## Jones, Bobby (1902-1971)

Golf has changed over the years. Balls fly farther. Clubs are made of space-age materials like graphite and titanium. Courses are longer, more demanding, and come in more shapes and sizes with more grass types than ever before. But no one, not ever, dominated the game during any era like Bobby Jones did during his. No one has ever won so much in so short a time. From 1923 when he won his first major, the United States Open, to his retirement in 1930, Jones won the U.S. Amateur five times, the U.S. Open four times, the British Open three times, and the British Amateur once. In 1930, at age twenty-eight, he accomplished what no one else has done when he won the Grand Slam—the U.S. Open, the British Open, the U.S. Amateur, and the British Amateur—in the same year. After winning

**Bobby Jones**

his first major, Jones won 62 percent of the major championships he entered. There is little question that golf has had its share of greats: Harry Vardon, Walter Hagen, Gene Sarazen, Byron Nelson, Sam Snead, Ben Hogan, Arnold Palmer, Jack Nicklaus, Tiger Woods. But no one has come close to matching Jones's record. No one has dominated his contemporaries as completely. And Jones did it all for fun, for free, as an amateur.

Robert Tyre Jones, Jr., stood out in other ways. Of the top echelon players in golfing history, he was one of the most highly educated, with degrees in mechanical engineering (Georgia Tech), literature (Harvard), and law (Emory). Born in Atlanta in 1902, Jones was the son of attorney Robert Jones and his wife Clara. From an early age it was apparent that the youngster possessed a special talent. He began playing golf at age five; at age nine he won the junior championship at East Lake, his father's club; at age 14 he won the Georgia State Amateur; at age 15 he won the Southern Amateur; at age 17 he was runner-up in both the Canadian Open and the U.S. Amateur. Jones's early success was so great that public expectations may have hindered him in tournaments, since he won no major titles until 1923. However, it appears that during this time, Jones, a perfectionist prone to bursts of anger, learned to control his emotions so well that throughout the remainder of his career he would be known for his sportsmanship and decorum on the course.

Jones's retirement, however, did not mean he was finished with golf. Although uninterested in endorsements, he produced a series of movie shorts entitled "How I Play Golf," and even helped design a new standard of golf club for Spalding Company. However, no one accomplishment demonstrated Jones's remarkable versatility as clearly as his great masterpiece—the Augusta National Golf Club. Jones, who helped raise funds to purchase land in Augusta, Georgia, known as Fruitland, co-designed the course with Dr. Alister MacKenzie. In 1934 the first annual Invitational tournament was held. By 1938 it was being called the Masters, and it eventually came to be considered as one of the four major tournaments in the world.

In 1948, Jones contracted syringomyelia, a rare and crippling spinal disease. His condition worsened over the years until he was eventually confined to a wheelchair. His greatest tribute came in 1958, when he received the Freedom of the City Award at St. Andrews, Scotland, in what many have called one of the most moving ceremonies in the history of game.

## Jones, George (1931—)

Despite the trends that transformed country music over the second half of the twentieth century, George Jones continued to thrill audiences with his traditional "honky-tonk" voice, which remained a steady force in the industry from the 1950s onward. Initially, Jones was an improbable star, offering a twangy voice reminiscent of earlier hillbilly music at a time when rock and roll was making inroads into country music, but with his emergence as a star in the late 1950s, he went on to become a country music icon—indeed, contemporary star Garth Brooks once commented that "anybody who has ever wanted to sing country music wants to sound like George Jones." Between 1951 and 1971, Jones placed at least one song on the country top ten charts each year, and has won every major industry award in existence, including Single of the Year, Artist of the Year, and Video of the Year. He has lived a tumultuous personal life, complete with battles with drug abuse, divorce, and arrest.

Jones's early life made him an unlikely candidate for stardom. He was born in Saratoga, a small town near Beaumont in the "big thicket" area of East Texas, tucked away in the deep pine woods. He was the youngest of seven children born to a poor family. His father worked as a pipe fitter and truck driver to support the family during the Depression, but young George was surrounded by music as a child. His mother played the piano at church, and the entire family

George Jones

listened to country music on the radio, especially the "Grand Ole Opry" broadcast from Nashville, and Jones came of age listening to musical heroes Floyd Tillman, Ernest Tubbs, Roy Acuff, and Bill Monroe. In the years during and after World War II, an older Jones made his way to dance halls in towns such as Port Arthur and Orange, which were brimming with wartime industrial growth, and found the atmosphere intoxicating.

George began playing the guitar in high school, and from then on focused all of his energies on becoming a recording star. Attempting to sound like his heroes Roy Acuff and Hank Williams, he sought out venues such as local clubs and events such as school dances where he could hone his skills. He joined the marines during the Korean War, served for three years, then returned to Texas where, beset with doubts that he could ever break into show business, he found employment as a house painter. Nonetheless, he continued to sing and play guitar whenever he could, and over the next few years became a regular of the Texas honky-tonk circuit, performing in small towns throughout the area. Based on his local success, Jones then contacted producer Pappy Dailey at Starday Records, located in Beaumont, about making a record. The partnership proved a good one—Starday, as a local record company, was one of the few country music labels that was not moving into the rockabilly style then taking Nashville by storm.

The Starday label recorded and released Jones's first hit, "Why Baby Why" in 1955, but his first couple of years as a recording musician met with varied results. He was invited to join the Grand Ole Opry in 1956, a lifelong dream come true, and two years later left Starday for a deal with the more prestigious Mercury label. In 1959, his single "White Lightning" reached number one on the country charts, and by 1961 he was a country music celebrity, recording two number one hits, "Tender Years" and "She Thinks I Still Care." These prompted the Country Music Association to name him Male Vocalist of the Year in 1962 and 1963. Throughout the 1960s, Jones recorded hit after hit under a variety of labels, including United Artists, Musicor, and Epic. Singles that reached number one included "Window Up Above," "We Must Have Been Out of Our Minds," "Take Me," and "The Race is On." While dominating the country charts, he also toured ceaselessly, both nationally and internationally, seemingly without rest.

His celebrity status and the exhausting pace of his tours began to take a serious toll on George Jones. During the 1960s he began drinking heavily which, periodically, led to his cutting concerts short or canceling them altogether. He appeared drunk on stage regularly, and by the mid-1960s his career seemed to be on the verge of collapse. In 1967, however, it was rejuvenated when he began touring with singer Tammy Wynette, who had recently emerged as a new country music star. The combination was ideal, for both sang ballads in a traditional country style and both were known for their very distinctive voices. Fans were thrilled when Jones married Wynette in 1968—his third marriage—a relationship which proved to be more public than private. On stage, they sang both solos and duets, generally ending a concert with a song proclaiming their mutual devotion. The marriage proved lucrative, too, as the couple began recording together under the Epic label, churning out hit after hit in the early 1970s—including the 1974 number one, "We're Gonna Hold On." At the same time, Jones recorded solo hits such as "The Grand Tour" and "The Door," both of which reached number one in 1974.

Although the public image of his star-studded marriage to Wynette bolstered Jones's career, it was not long before he again began to experience hard times. He and Tammy lived in constant pursuit by reporters, and the resultant strain caused their relationship to grow turbulent and destructive. As the situation worsened, Jones again began to drink heavily. Their inevitable break-up added bizarrely to their public appeal and in 1976, the year they divorced, the couple recorded "Golden Ring" and "Near You," both of which became hits. In the years following the divorce, Jones's career once again seemed to be nearing the end. He missed several show dates, leading to numerous legal entanglements and an eventual declaration of bankruptcy, and the early 1980s found him more often in the news for his legal problems than his music. He was arrested on a number of occasions relating to his alcohol and drug abuse, and was sued by ex-wives and numerous creditors.

Yet Jones continued to perform and record, even during the darkest times. In 1980, he released what is perhaps his best known single, "He Stopped Loving Her Today," considered by some to be the best country music recording ever. A major hit, it won him Single of the Year from the Country Music Association in 1980 and 1981. Jones's personal problems never affected his popularity and he continued recording a string of hits throughout the 1980s. In 1986, he entered a new phase of his career by winning the Country Music

Association's Video of the Year award for his single "Who's Gonna Fill Their Shoes"; in 1991, he signed a new recording deal with MCA Records, and the following year he was selected as a member of the Country Music Hall of Fame. In the late 1990s, Jones enjoyed further success by incorporating rock and roll into his music with hits such as "I Don't Need Your Rockin' Chair" and the successful album *High-tech Redneck*.

While these new hits demonstrated the singer's versatility and his willingness to experiment with contemporary styles, he continued to thrive on the music that had first brought him success. His album *It Don't Get Any Better Than This* (1998) is very much in the traditional George Jones style, and he also recorded a reunion album with Tammy Wynette called *One* in 1995. In many respects, George Jones stands as a reflection of country music itself: open to innovation while rooted in tradition.

## Jones, Jennifer (1919—)

Actress Jennifer Jones's affair with the renowned producer David O. Selznick attracted a great deal of attention and launched her career. He signed her to a long-term contract, changed her name, and prepared her for stardom. Her first screen lead was in *Song of Bernadette* (1943), a film whose popularity earned her an Academy Award. She was nominated for Oscars as best supporting actress in *Since You Went Away* (1944), *Love Letters* (1945) and *Love Is a Many Splendored Thing* (1955). While Jones played a wide variety of characters, including the innocent and placid as well as the tempestuous and sensuous, she was not considered a formidable actress. But she undoubtedly captured a mood Americans longed for because, ultimately, she became one of the most popular melodramatic actresses of the 1940s.

## Jones, Tom (1940-)

Many comparisons have been drawn between Welsh singer Tom Jones and rock legend Elvis Presley. Both appropriated singing styles associated with black R&B music, both became infamous for their sexually charged dancing styles, and both were loved for over-the-top Las Vegas club performances in the 1960s and 1970s. Indeed, Jones and Presley maintained a well-documented admiration for each other and often performed cover versions of each others' songs. However, Jones' diversity and longevity far exceeded Presley's. Throughout the 1980s and 1990s, when many of his contemporaries had devolved into all-but-forgotten lounge lizards, Jones performed pop, rock, country, and dance tunes, often collaborating with a roster of acts half his age for the ears of equally young listeners.

Born Thomas Jones Woodward in Pontypridd, South Wales, on June 7, 1940, Jones grew up in the song-filled atmosphere of a coal-mining community, often putting on performances for his mother in the family living room. However, Jones' days of such youthful frolic were relatively short, and by age seventeen he was both a husband and father. Having no real training in a trade, Jones bounced between a number of odd jobs to support his growing family, including glove cutting and selling vacuums door-to-door. Nevertheless, Jones still

Tom Jones

found the time to sing at night in local dance halls, and after a number of years he had earned a sizable reputation fronting Tommy Scott and the Senators, a rock and soul outfit influenced by R&B singers Solomon Burke and Jackie Wilson, as well as Elvis Presley and Jerry Lee Lewis.

After being discovered by songwriter and manager Gordon Mills in 1963, Jones was able to sign with the Decca label. Jones' debut single was only mildly successful, but the follow-up, "It's Not Unusual," became a giant international hit, as well as Jones' signature tune. However, the unbridled sexual delivery of Jones' singing, as well as his pelvis-thrusting dance moves, were considered too racy for conservative broadcast companies like the BBC. Moral squeamishness could not restrain public demand, and after "It's Not Unusual" was leaked out by an off-shore pirate radio station, Jones became a highly visible sex symbol. Throughout the 1960s, many of Jones' singles were major hits, notably the Burt Bacharach-penned "What's New Pussycat," and he honed his stage performance touring with world-class acts like the Rolling Stones.

During the 1970s, Jones occasionally scored with singles like the uptempo dance cut "She's a Lady," but his presence on Top 40 charts gradually declined, perhaps due to changing currents in pop music. However, his popularity as a live performer grew. Fully the master of his wide-ranging voice, Jones injected such raw passion into his stage shows that often adoring fans were moved to tossing their underwear at Jones' feet. He became an essential booking for the top clubs in the Las Vegas circuit, and was even given his own television variety show on the ABC network, *This Is Tom Jones*.

For years, Jones kept a relatively low profile, but in the late 1980s his career took on an expected new breath of life. Beginning with a remake of the Prince song "Kiss" in collaboration with the British electronic innovators the Art of Noise in 1988, Jones worked with many younger acts from diverse musical backgrounds, meeting with a high level of approval from all age groups. In 1992, for example, Jones masterminded a unique six-part series called *The Right Time* in which he gave tribute to a number of musical genres through intimate performances with acts as wide-ranging as Joe Cocker, Stevie Wonder, the dance groups EMF and Erasure, and pop warblers Shakespears' Sister. Continuing in this vein, in 1994 Jones signed to the Interscope label, a company devoted almost exclusively to edgy young acts like Nine Inch Nails and Snoop Doggy Dog. As with country legend Johnny Cash, it seemed that Jones was able to extend his legacy into the generation of the 1990s, largely without the element of irony or kitsch appreciation that tinged the later careers of other 1960s holdovers.

Dead bodies fill the Peoples Temple compound after mass suicide in Jonestown, Guyana.

American country of Guyana during the 1970s has become synonymous with fanatical cultism and mass suicide. The group had originated in northern California under the leadership of pastor Jim Jones. As Jones became increasingly megalomaniacal and unstable, he relocated his church and its followers to an isolated jungle compound, where he used brainwashing tactics to break their will and force them to comply with his demands. Government officials in the United States became concerned after hearing reports of church members being held against their will, and a delegation was sent to investigate. After a violent confrontation between cultists and the delegation, Jones ordered his followers to commit suicide by drinking a cyanide potion. Those who refused were shot. When United States officials entered the compound on November 18, 1978, they found 914 bodies, including that of Jones himself.

## Jong, Erica (1942—)

Erica Jong's first novel, *Fear of Flying* (1973), made her one of the central figures of the sexual revolution of the 1970s. Her frank and explicit depictions of women's sexual desire shocked the world and gained her the praise of everyone from *Playboy* editors to John Updike. But women have given her a more mixed reception. While her many works of fiction and poetry about women fulfilling their fantasies of sexual abandon played well among the newly liberated generation of women in the 1970s, feminists of the 1980s and 1990s have challenged her promotion of anonymous sex for its own sake and her claim to speak for baby-boomer women's sexual desires. Nonetheless, her fame rests on the fact that she brought the difficulties of women trying to balance love, sex, self-development, and creativity to the attention of a mass audience.

Jong grew up in an affluent Jewish family in New York and attended Barnard College. She was a Ph.D. candidate at Columbia, studying eighteenth-century British literature, when she began her

career as a writer. She published two volumes of poetry, and when her *Fear of Flying* caught the attention of Henry Miller, who compared the book to his *Tropic of Cancer*, and John Updike, who compared it to Philip Roth's *Portnoy's Complaint* and J. D. Salinger's *Catcher in the Rye*, her name became a household word. She was repeatedly asked by reporters to help explain women's perspectives on sexual liberation, and her frank, sassy commentary provided good copy for *Playboy* and *Redbook* alike.

*Fear of Flying*, which opens with the then-shocking intimation that the heroine is not wearing a bra, captured a cultural moment when women were shedding propriety and clothing in an attempt to gain fulfillment and freedom, giving birth to feminism and the sexual revolution. It tells the story of Isadora Wing, a writer who accompanies her stiff, cold, psychiatrist husband to a conference in Zurich. There she meets an Englishman who seems to epitomize unrepressed, guiltless sexual fulfillment, which she calls the "zipless fuck," a phrase that became a catchword for her generation and has been forever associated with Jong's popular image. Isadora soon learns, though, that the man who has rescued her from her prosaic life is impotent, causing her to return to her husband. The book ends with Isadora convincing herself that her search for empty and meaningless orgasms was no substitute for true self-development.

Jong continued Isadora's story in *How to Save Your Own Life* (1977) and *Parachutes and Kisses* (1984). In the first book, Isadora becomes a successful author, leaves her husband, begins life over with a young screenwriter, and has a baby. In the final installment of the trilogy, Isadora finds herself deserted by the father of her baby and has to learn how to be a single mother. What has stood out for readers and critics, in all three books, and her many other novels, short stories, and poetry, is Jong's message that sexual freedom is paramount to self-discovery for women.

While her subsequent books never repeated the success of *Fear of Flying*, she has continued throughout the 1980s and 1990s to be a prominent voice on women's issues. She has been pitted against other feminists like Camille Paglia, Katie Roiphe, and Andrea Dworkin on talk shows and in popular magazines, accused of upholding the virtues of heterosexual experimentation for women in a time when date rape and violence against women are prominent concerns. Other feminists simply consider her recipe for liberation an inadequate one. Amy Virshup has argued that despite Jong's advocacy of self-empowerment, "it is always Mr. Right who leads [her heroines] onward and upward." And Anne Z. Mickelson has charged that her depictions of sex mirror those found in "girlie magazines" and that "by adopting the male language of sexuality, Jong is also fooling herself that she is preempting man's power." In her memoir *Fear of Fifty* (1994), Jong went on the counter-offensive, attacking the "puritan feminists" who she feels have tried to silence her for her positive portrayals of heterosexual sex and motherhood.

While Jong has longed for a permanent place in America's high literature, she has remained a popular icon. She has called the success of *Fear of Flying* a "curse," adding that it "typecast me in a way that I've been trying to get free of ever since. I'm enormously grateful to it, and yet very eager to be seen as a woman of letters and not just Erica 'Zipless' Jong." But even as she has attempted to solidify her reputation, even writing *The Devil at Large: Erica Jong on Henry Miller* (1993), in which she describes her literary relationship with this prominent writer, she has also remained tied to her historical moment. In *Fear of Fifty* and *What Do Women Want?: Bread, Roses, Sex, Power* (1998), she has portrayed herself as a spokesperson for baby-boomer women who wanted sexual fulfillment and empowerment

in the 1970s and who want to reinvent their relationships with men on the basis of love and mutual respect in the 1990s.

## Joplin, Janis (1943-1970)

Regarded as the greatest white female blues singer, Janis Joplin is also remembered as a hedonistic, hard-drinking, bra-disdaining, bisexual challenger of social conventions. She often is associated with Jimi Hendrix and Jim Morrison, a trio of dynamic performers

Janis Joplin

who all died within a year of each other between September 1970 and July 1971, and whose “live hard, die fast” philosophy not only epitomized the 1960s but also tolled the end of that spectacular, turbulent epoch.

The young Joplin was an intelligent, creative girl with many interests and talents. Born January 19, 1943, in Port Arthur, Texas, she was raised by liberal parents who encouraged her interests in music, art, and literature. Her favorite author was F. Scott Fitzgerald, and she identified with the glamorous, ruinous lives of Scott and Zelda Fitzgerald and her favorite singers, Billie Holiday and Bessie Smith. She learned to sing the blues, as well as play guitar, piano, and autoharp. But Joplin’s main ambition was to become an artist: she drew and painted, and majored in art in college. Her interests drew her to the beatnik scene in San Francisco in 1964, where she met Robert Crumb and other artists. She sold paintings, sang with various blues bands, and developed an amphetamine addiction. In 1965 she returned to Texas to withdraw from the temptation of drugs, and she returned to college.

A year later she was invited back to San Francisco to sing with Big Brother and the Holding Company. She returned to find the beatnik scene succeeded by the hippie scene. She partied with the Grateful Dead, Country Joe and the Fish, and Jefferson Airplane. Joplin soon distinguished herself even among these luminaries with her booming, unbridled vocals and the raw, electric blues of Big Brother. They cut several singles, and their growing reputation took them to the Monterey International Pop Festival. Cashing in on Joplin’s new popularity, Mainstream Records repackaged their singles as *Big Brother and the Holding Company, Featuring Janis Joplin* (1967). Released without the band’s permission, it is an uneven album wavering between folk, psychedelic, and pop music. Their next album, *Cheap Thrills* (1968), revealed a band that had found its identity in raunchy electric blues. Joplin is at her best in the sultry, sizzling “Summertime” and “Piece of My Heart,” which reveals the tortured combination of toughness and vulnerability that became her trademark.

Big Brother was never esteemed by the critics, and Joplin was persuaded to form a new band for her next album, *I Got Dem Ol’ Kozmic Blues Again Mama!* (1969), but she never developed a rapport with the Kozmic Blues Band. With two sax players and a trumpeter, they had a brassy sound that smothered Joplin’s vocals. Nor was there anything particularly cosmic about their blues style, which was more mainstream than Big Brother’s. Joplin recognized the unsuitability of this group and formed the Full Tilt Boogie Band. The brassy sound of the Kozmic Blues Band was discarded, and the two keyboardists—rather than the two aggressive guitarists of Big Brother—allowed Joplin’s vocals free rein.

Joplin wrote few of her own songs, but turned others’ songs into her own through wrenching, probing performances. She chose her songs well, finding a medium through which she could express her soul in all its passion and insecurity. Prescriptive feminists are uncomfortable with the sexual desperation Joplin revealed in her recordings, but singing was her catharsis; she was not only rebelling against the double standards of the age but also exploring her soul more honestly than prescriptivism allows. Ellen Willis claims that Joplin was compelled to stay in show business because of the limited opportunities that would have awaited her as a woman. The truth is that Joplin sang because she loved and needed it, and she had plans to open a bar when her singing career ended. The *female=victim* equation shows little appreciation for the bold young woman who left her hometown for San Francisco in 1964, relying only on her talents

to make it on her own, and announced to the male-dominated rock world that “a woman can be tough.”

Joplin’s popularity was now at its zenith, and she felt pressured to live up to her hedonistic image, attempting to sustain the intensity of her stage performances in her daily life. She drank constantly and resorted to heroin. She lost contact with the sensitive woman she had been and started rumors that she was unpopular in school and had been estranged from her parents (although letters printed in *Love, Janis* reveal that she was always close to her family). This side of Joplin was exploited in the sensationalistic 1979 Bette Midler film *The Rose*, loosely based on Joplin’s life.

On October 4, 1970, after a recording session with Full Tilt, Joplin died from a heroin overdose. “Buried Alive in Blues” was left as an instrumental, but *Pearl* (1971) is otherwise complete. It is Joplin’s most polished album, containing the unforgettable “Me and Bobby McGee.” It is difficult to listen to Joplin’s music without a pang of regret for her tragically wasted talent, but she often said that she would rather live intensely than spend a long life in front of the TV. When friends warned her that she would lose her voice if she kept shrieking, she replied that she would rather give it her all and be a great singer while young, rather than be a mediocre singer with a long career. Joplin’s excess was part of her artistry.

The enduring fascination Joplin commands is testified by many posthumous releases, including *Janis Joplin in Concert* (1972), *Janis Joplin’s Greatest Hits* (1973), *Janis* (documentary and soundtrack, 1975), *A Farewell Song* (rarities, 1983), *Janis* (three-CD box set, 1988), *Janis Joplin: 18 Essential Songs* (selections from the box set, 1995), and *Janis Joplin with Big Brother and the Holding Company, Live at Winterland ’68* (1998). Joplin was elected to the Rock and Roll Hall of Fame in 1995.

## Joplin, Scott (1868-1917)

As a pioneering African American composer of ragtime music, Scott Joplin took part in a musical revolution in America at the turn of the twentieth century and left an enduring mark on the musical culture of the country. Best known during his lifetime for *Maple Leaf Rag* (1899), Joplin wrote some two dozen compositions in the catchy, syncopated style that served as accompaniment to cakewalk dancing, to new forms of urban sporting life, and to a more generalized revolt against nineteenth-century gentility and restraint. He helped establish the conventional structure of ragtime compositions and successfully blended familiar genres of European music with African American rhythms and melodies into a genuine musical hybrid. After 1900, ragtime music emerged as the first nationally recognized American music, and Tin Pan Alley publishers flooded the popular sheet music market with thousands of snappy, syncopated songs and piano pieces.

Scott Joplin

Hiram K. Moderwell, one of Joplin's contemporaries, called ragtime the "folk music of the American city," and John Stark, the publisher of *Maple Leaf Rag*, dubbed Joplin the "King of Ragtime Writers."

Although he was unquestionably born with a musical gift, Joplin's genius must be attributed at least partly to childhood influences from the region of his birth. Born near Linden, Texas, in 1868, the second son of sharecroppers Jiles and Florence Joplin, the future composer grew up amid former slaves and their rich musical traditions. As a youngster he heard black work songs, spirituals, and ring shouts, as well as the European waltzes, schottishes, and marches that black musicians like his father performed at white parties and dances. When the Joplins moved to Texarkana, which had sprung into existence in the early 1870s at the junction of the Texas & Pacific and Cairo & Fulton Railroads, Scott not only attended school but also learned to play the piano belonging to a wealthy family whose house his mother cleaned. As his talent developed, he began studying with a German music teacher (thought most probably to be Julius Weiss) from whom he learned the basic elements of serious European compositions and the rhythms, melodies, and harmonies on which they depended. Joplin began performing as an adolescent, impressing those who heard him with the originality of his music. As one contemporary later recalled, "He did not have to play anybody else's music. He made up his own, and it was beautiful; he just got his music out of the air."

It is not known exactly when Scott Joplin left Texarkana, but sometime in the 1880s he set out to make his living as an itinerant musician. It also is not known where he worked and lived before he gained fame in Sedalia, Missouri, in the 1890s. Oral histories place

him at the World's Columbian Exposition in Chicago in 1893, where he tried out some of his arrangements with a newly formed band performing, no doubt, in the city's tenderloin district. He was convinced that his rhythmically daring music had a ready, eager audience. Ragtime's misplaced accents, its complex melodies that flowed from bass to treble and back, and the flurry of its notes invited toe-tapping, knee-slapping, head-bobbing movement from those who heard it; it was perfect for the flashy strutting of the popular cakewalk. Moreover, the 1890s economic depression, which affected the middle class as well as the underpaid or unemployed working class, sparked a nationwide questioning of the long-held American belief in self-denial and personal restraint. Joplin's music literally struck a chord with a generation ready to shake off the vestiges of nineteenth-century propriety by kicking up its heels to the exuberant strains of ragtime.

Following the World's Columbian Exposition, Joplin made his way to Sedalia, Missouri, an important railhead in the east-central part of the Show-Me State. More significantly, perhaps, for the black musician, Sedalia was the home of the George R. Smith College for Negroes. Joplin enrolled in music courses at the black institution and began performing in various settings in Sedalia along with other talented African American musicians, earning a reputation as a popular entertainer and composer of ragtime music. He performed with the Queen City Band, an all-black group that provided music for various public entertainments, and played in clubs, brothels, dance halls, and at private parties. He also mentored and collaborated with younger black musicians such as Arthur Marshall and Scott Hayden. Marshall remembered his teacher as "a quiet person with perfect manners who loved music and liked to talk about it." He was "a brother in kindness to all."

Undoubtedly the most important association Joplin formed in Sedalia was with a white publisher of sheet music, John Stark. By the time Stark published *Maple Leaf Rag* in 1899, Joplin had published four other compositions—two marches, a waltz, and *Original Rags*. Although skeptical of the marketability of Joplin's work—he viewed the composition as too difficult for local patrons—Stark admired *Maple Leaf Rag* and agreed to put out a limited printing. Very quickly, orders for Joplin's rag began to pour in, and Stark issued several new editions over the next few years. Stark moved his business to St. Louis in 1900 and continued to publish Joplin works—*Peacherine Rag* (1901), *Augustan Club Waltz* (1901), *A Breeze from Alabama* (1902), *Elite Syncopations* (1902), *The Entertainer* (1902), and *The Strenuous Life* (1902). Stark also promoted Joplin's career by declaring him the "King of Ragtime Writers," by aggressively marketing his latest works, and by regularly contributing advertising copy and articles about him to the nationally circulated *Christensen's Ragtime Review*. Stark's business sense no doubt contributed to Joplin's decision to write *The Cascades* (1904) as a tribute to the attraction of that name at the Louisiana Purchase Exposition in St. Louis in 1904. As Joplin's fame spread, he, too, moved to St. Louis, where he lived from 1901 to 1907. There he continued composing, performing, and mixing socially and professionally with such black musicians as Tom Turpin, Sam Patterson, and Joe Jordan.

While writers after his death remembered Joplin principally as the composer of dance-hall music, Joplin himself harbored grander ambitions for his art. Even as he relied on sheet music sales, teaching, and performance to make a living, he devoted much of his creative energy to the writing of serious music with syncopated rhythm. His first such effort, a ragtime ballet called *The Ragtime Dance*, featured current African American dance steps choreographed to vocal and piano accompaniment. Although he had composed several profitable

rags for Stark in 1901 and 1902, the publisher only reluctantly agreed to publish *The Ragtime Dance* in 1902, but it never sold well. *The Guest of Honor*, a ragtime opera that unfortunately no longer exists, marked Joplin's second venture in the field of serious composition. In 1903, he formed the Scott Joplin Drama Company in St. Louis and recruited former students to perform in the ambitious work. The cast rehearsed and Joplin rented a theater, but only one dress rehearsal is known to have taken place because Joplin failed to find financial backing for the production. Despite these setbacks, the composer continued his endeavors toward the incorporation of African American and ragtime motifs into serious music and after 1907 worked feverishly on his second opera, *Treemonisha*.

Joplin spent the last decade of his life in New York, where he worked on *Treemonisha*, published more than 20 compositions, including such well-known pieces as *Gladiolus Rag* (1907), *Pine Apple Rag* (1908), and *Solace—A Mexican Serenade* (1909), gave private music lessons, and performed on the vaudeville stage. He was an early active member of the Colored Vaudevillian Benevolent Association, whose membership included many of the cultural leaders in black Harlem. His obsession with the seriousness of his work was reflected in *School of Ragtime—Six Exercises for Piano* (1908), which demanded "proper time" and "the supposition that each note will be played as it is written." "[T]he 'Joplin ragtime' is destroyed," he insisted, "by careless or imperfect rendering." He railed publicly against flashy performers who played his, and other, rags too fast and sloppily, and he decried the vulgar lyrics that accompanied many popular ragtime songs.

Most importantly, in 1911, Joplin finished his second opera and began searching diligently for financial backers and a suitable venue to stage a performance. The opera's main theme—the need for education in the African American community to combat the pernicious effects of ignorance and superstition—placed the work squarely in the middle of one of the most serious debates spawned by the "Race Question." Moreover, in a rare newspaper interview in 1911, Joplin defended *Treemonisha* as serious—not popular—art: "In most of the strains I have used syncopation (rhythm) peculiar to my race, but the music is not ragtime and the score is grand opera." The opera was performed only once during Joplin's lifetime, in 1915, and the production suffered from lack of props, costumes, and an orchestra. It was met by utter critical silence and quickly faded from collective memory.

The failure of Joplin's second opera coincided with the composer's personal decline. Although reasonably successful as a composer and performer, and widely recognized as the King of Ragtime, his adult life had not been happy. In 1900 he had married Belle Jones, who offered little support for his artistic endeavors and who either died or left him shortly after the death of their only child in 1906. A second marriage ended quickly and tragically with his wife's death. Lottie Stokes, Joplin's third wife, whom he married in New York, cared for her husband during his final battle against the debilitating symptoms of syphilis. Increasingly distracted, frequently unable to play the piano or compose, and grown unreliable as a private music teacher, Joplin spent the final two years of his life in the throes of the disease that eventually took his life on April 1, 1917.

More than 50 years after his death, Joplin became the focus of popular and scholarly attention when Vera Brodsky Lawrence recovered and republished his collected works, Joshua Rifkin recorded many of them, and the hit movie, *The Sting* (1973), featured his music. In the wake of this rediscovery, biographies of Joplin began to appear, and *Treemonisha* was revived by serious opera companies around the

country. In his own day, however, the musician faced numerous barriers to his success, only some of which he overcame. Race prejudice, of course, placed severe limits on the kinds of compositions that would garner financial support, while his lack of academic credentials hindered his acceptance as a serious composer among both blacks and whites. Despite these injustices, Scott Joplin was a vital contributor to the cultural shake-up that took place in the United States in the early 1900s, and his classic ragtime pieces helped propel the nation into the modern era.

## Jordan, Louis (1908-1975)

One of America's most prominent musicians of the 1940s, Louis Jordan was a singer, a baritone and alto sax player, a clarinetist, and a bandleader. From 1942 to 1951, he had 18 number one hits on the R&B chart and was one of the biggest African-American box office draws in the country, besides being an important figure and role model in black popular entertainment. His music reflected his African-American roots while appealing to both black and white audiences. His combo, Louis Jordan and the Tympany Five helped to define the shuffle boogie rhythm as well as "jump," a term first used in jazz and later in rhythm and blues, that referred to the instrumentation of trumpet, alto and tenor sax, piano, bass, and drums. The innovative Jordan was the first jazz musician to make a short film based on one of his popular hit songs ("Caldonia"), an early precursor of the contemporary music video. His influence on rock and roll can be heard in the music of Bill Haley, Chuck Berry, Fats Domino, and James Brown, among others.

From his earliest years, Jordan was guided and motivated by a strong conviction and desire to become an entertainer. "I wanted to give my whole life to making people enjoy my music. Make them laugh and smile. So I didn't stick to what you'd call jazz. I have always stuck to entertainment," he once said. Jordan embodied a melding of visual showmanship, detached humor, impeccable musicianship, and a gratifying original and rhythmic vocal style.

Born Louis Thomas Jordan on July 8, 1908 in Brinkley, Arkansas, Louis Jordan was the son of James Jordan, a musical talent, and of a mother who died when he was young. James Jordan, his father was a multi-instrumentalist, organizer of the local Brinkley Brass Band, and a motivational figure in his life. As a boy, Jordan sang in the local Baptist church, mastered the clarinet and saxophone family of instruments, and during the summer, along with his father, toured with the Rabbit Foot Minstrels and Ma Rainey's TOBA Troupe. These early experiences developed in Jordan a passion for perfecting his music through disciplined rehearsals and an appreciation for showmanship.

**Louis Jordan (center).**

Jordan worked as a sideman with Ruby Williams's band in Hot Springs, Arkansas before moving on to Philadelphia.

Once in Philadelphia, professional opportunities presented themselves to Jordan. He met Ralph Cooper, bandleader and coordinator of the amateur night at the Apollo Theater in Harlem, who hired him as member of the Apollo house band. Jordan joined Chick Webb's band, playing at the Savoy Ballroom from 1936-1938. He left the Webb band confident enough to organize his own group, "The Louie Jordan Elks Rendezvous Band," (the "Louie" spelling was intentional since people often mispronounced his name as Lewis), which began its engagements at The Elks Club in Harlem. The band's name was later changed to Louis Jordan and His Tympany Five, which remained constant despite personnel changes. The word tympany was included for a period because drummer Walter Martin actually played that instrument in the group.

Louis Jordan and His Tympany Five became one of the most successful small bands in jazz history. Jordan signed a Decca contract that lasted from 1938-1955, recording many compositions in its "Race Series." His recording of "A Chicken Ain't Nothing but a Bird" signaled a pivotal point in the direction and kind of material Jordan would record. This song's novelty lyrics, shuffle and boogie rhythm, and the soloing of lead instrumentalists all proved to be a successful formula. The subsequent recording of "I'm Gonna Move

to the Outskirts of Town," a 12-bar blues, launched Jordan as a major recording star. Then followed a string of major hits posting in the top ten on the R&B chart, including "What's the Use of Getting Sober" (1942), "Five Guys Named Moe" (1943), "Ration Blues" (1943), "G.I. Jive" (1944), "Is You Is Or Is You Ain't (Ma' Baby)" (1944), "Mop Mop" (1945), "Caldonia," (1945), "Don't Let the Sun Catch You Cryin'" (1946), "Choo Choo Ch'Boogie" (1946), "Ain't That Just Like a Woman" (1946); "Ain't Nobody Here But Us Chickens" (1946), "Let the Good Times Roll" (1946), "Open the Door Richard" (1947), "Beans and Corn Bread" (1949), and "Saturday Night Fish Fry (Part I)" (1949), among others. Jordan's recording of "Caldonia" and the short film of the same name marked the first time that a film was based on a tune. This arrangement was a huge success with both white and black audiences. When rock and roll came into its own in the 1950s, Jordan's career began to decline and his contract with Decca ended. He signed with Mercury records and rerecorded old hits, including "Caldonia." Jordan moved to Los Angeles in the early 1960s and recorded one album with Ray Charles's Tangerine label. He formed Pzazz, his own record label in 1968.

A number of Jordan's recordings can be classified as blues, which Jordan sang with perfect diction in a sophisticated, cosmopolitan, smooth, and crooner style that attracted black and white audiences. For a number of his touring engagements, promoters booked

his band to play two separate engagements in the same evening—one for a white and one for a black audience. He also led a big band from 1951-52.

Jordan was a competent jazz improviser, and his work on alto sax is memorable. His choice of songs as well as his own compositions were based on gospel, blues, jazz, and the vernacular of black speech and African-American folk culture. Jordan sang about the subjects of black folk, women (chicks and chickens), Saturday night fish fries, drinking, love, and partying—in sum the travails and pleasures of African-American experience in urban areas after their postwar migration. Jordan's music epitomized an era of good times, paving the way for rhythm and blues. He continued to tour until he collapsed and died of a heart attack on February 5, 1975 in Los Angeles. Since his death, there has been a gradual rebirth of interest in his work, with his music featured in various movie sound tracks such as *The Blues Brothers*. *Five Guys Named Moe*, a musical that featured Jordan's music, opened on Broadway in 1992 and captured a Tony Award nomination for best musical.

## Jordan, Michael (1963—)

The most successful and skilled player in the history of professional basketball, Michael Jordan came into the public eye in the mid-1980s. He went on to win six NBA (National Basketball Association) scoring championships (1990/91, 1991/92, 1992/93, 1995/96, 1996/97, 1997/98) and five Most Valuable Player awards (1987/88, 1990/91, 1991/92, 1995/96, 1997/98). An international sports icon and a role model for youth and adults alike, Jordan helped redefine the male athlete as a figure of sublime grace, technical skill, and ferocious athleticism. His determination, diligence, and fiercely competitive attitude also enhanced the public perception of black masculinity during the 1980s and 1990s. Aside from his professional prowess, as a commercially valuable endorser and an entrepreneur, Michael Jordan became one of the highest paid sportsmen of his era and announced his final retirement from basketball in 1999 while at the top of his game.

Michael Jordan was born on February 17, 1963, in Brooklyn, New York. His father, James Jordan, was a General Electric employee, and his mother Delores worked as a supervisor at a local bank. Soon after Michael's birth, the family relocated to Wallace, North Carolina, and then to Wilmington, where the young Jordan was raised. In early childhood as well as adolescence, Michael showed exceptional skill in all areas of sports, including baseball and football. When he suffered a minor injury while playing football in high school, his parents encouraged him to pursue basketball. Jordan did not initially make the starting squad for his high school basketball team, but made the lineup in his junior year, having shot up to six-foot-three in height. (He would eventually reach his maximum height of six-foot-six-inches). Much of his early skill and training in basketball was derived from playing with his brother Larry in the backyard at home; in his formative years he also idolized and patterned himself

Michael Jordan

after the legendary Julius Erving (a.k.a. Dr. J.), one of the great players of the 1970s.

After high school, Jordan settled on attending the University of North Carolina at Chapel Hill, where he would play on the basketball team under coach Dean Smith. Although Smith by reputation rarely played his freshmen, Jordan's unique abilities guaranteed him time on the court. The young athlete quickly became known for his incredible agility and dexterity on the court, as well as for his ability to think instinctively and create innovative shots. For his efforts, Jordan was voted ACC (Atlantic Coast Conference) Rookie of the Year. After bringing his team to the NCAA (National Collegiate Athletic Association) championships, he won nearly every major individual award in college basketball, including the Wooden Award, the Naismith Award, and the Rupp Trophy. He was also voted College Basketball Player of the Year by *The Sporting News*. In 1984, at 21 years of age, Jordan made the United States Olympic Games basketball team under coach Bobby Knight. Averaging a remarkable 17 points a game, Jordan led the team to a gold medal in eight straight wins. The Olympic win brought Jordan to high visibility in basketball circles and made him a household name in America.

After announcing his decision to leave school early and enter the NBA draft in 1984, Jordan was selected by the Chicago Bulls in the first round (third pick overall). Wearing jersey No. 23 in his rookie professional season, he averaged 28.2 points a game, third highest in the league. With his outstanding leaping ability and uncanny grace in the air, Jordan seemed to defy the laws of gravity. His spectacular individual efforts were fodder for latenight sports highlight programs and quickly fed his growing legend. For the combination of his high

scoring abilities and his stylish acrobatics, the handsome, soft-spoken player was voted Rookie of the Year and was rapidly becoming America's best-loved sports star. The (at that time struggling) Nike shoe company took advantage of Jordan's popularity and signed him to a lucrative endorsement deal that resulted in the Air Jordan shoe, which quickly became the most successful product in sports marketing history. The high sales of the product marked the beginning of a long and commercially rewarding relationship between Nike and Jordan.

Throughout his 1985/86 season, Jordan continued soaring to new heights. When he fractured his ankle early in the season, the dedicated star ignored doctors' orders and went back to regular play, despite the danger of doing more serious damage. By the end of the season, however, he had led his team to the playoffs against the Boston Celtics. On May 20, 1986, Jordan established a NBA Playoffs record by scoring 63 points in a single game against the Celtics. He continued his high scoring rate through the 1987/88 season and became the first player to win both the Defensive Player of the Year award and the NBA scoring title in the same year. He also took home the Most Valuable Player (MVP) award in the All-Star game. Although he again won the scoring title in the 1988/89 season, Jordan remained personally unsatisfied that he had not yet managed to lead the Bulls past Eastern Conference power (and hated rivals) Detroit and into the NBA finals.

In the 1990/91 season, his seventh in the NBA and under new coach Phil Jackson, Jordan received increased on-court support from his gifted teammate Scottie Pippen. As a result, the Bulls finally advanced past Detroit to an NBA finals showdown with the Los Angeles Lakers. In the much publicized on-court match-up between Jordan and the Lakers' legendary Magic Johnson, the Bulls finally prevailed, and Jordan received the title he had so long fought for. In the following 1991/92 season, he took home his third consecutive MVP award and his sixth straight NBA scoring title with a 30.1 point average per game. In the playoffs that year, the Bulls repeated as champions against the Portland Trailblazers by bouncing back from an 81-78 deficit in the final game. Jordan scored 12 of the Bulls' final 19 points to clinch a 97-93 victory.

The successes continued to rack up for Michael Jordan over the forthcoming seasons. In 1992, he once again joined the U.S. team for the Olympic Games. Supported by Magic Johnson, Larry Bird, and others, the American "Dream Team" won their games by an average of 44 points, securing the Gold Medal. In the 1992/1993 NBA season, Jordan took home his seventh straight scoring title and won the championship against Charles Barkley and the Phoenix Suns. Jordan averaged 41 points per game in the six-game final series.

By this time, Jordan's success had brought him international superstardom, yet his most important role was, perhaps, behind the scenes. In 1990, he had married Juanita Vanoy. Together, the couple would raise three children (Jeffrey, Marcus and Jasmine) in the Highland Park suburb of Illinois, and the sports star would eventually bring home \$45 million a year from endorsement deals that ranged from breakfast cereal to his own line of cologne products. He also purchased a restaurant in Chicago, Michael Jordan's Steak House, which instantly became a popular tourist stop. His profile had risen to such an extent that he even hosted an episode of NBC television's *Saturday Night Live* in 1991.

Although Jordan, well-known for his charity work, was widely recognized as an admirable role model, there were persistent rumors that he had become addicted to gambling, and some began to criticize him for overly aggressive behavior on the court. In 1993, his father

was shot to death in South Carolina by two local youths who were attempting to steal his automobile. On October 6th of the same year, in the midst of the tragedy surrounding his father, Jordan shocked the world by announcing his retirement from basketball. He was only 30 and at the peak of his game and popularity. Speculation persisted that Jordan's "retirement" was actually a league-ordered suspension of the NBA's brightest star amid substantiated stories that Jordan was wagering hundreds of thousands of dollars on golf games.

Again to the surprise of the public, Jordan took advantage of his retirement to pursue one of his long lost dreams: he signed with the Chicago White Sox to play minor league baseball, with the swaggering declaration that his ultimate goal was to make the major leagues. Although numerous onlookers took this new career move to be a publicity stunt or a way to stay competitively sharp during his "suspension," many of his fans were intrigued by his daring. Jordan rode the team bus, shared small locker rooms, and received a pittance in comparison to his salary during his tenure with the Bulls. Unfortunately, in contrast to his performance on the basketball court, Jordan's abilities on the baseball field were limited even on a minor-league standard. Yet, his courage to try and his humility on the baseball field made the larger-than-life sports star seem more human and more vulnerable, further endearing him to his already loyal fans. In the meantime, the Chicago Bulls were suffering without their star player and were quickly eliminated from the playoffs. The NBA as a whole also suffered; sorely missing Jordan's star appeal, the playoffs in 1993 between the New York Knicks and the Houston Rockets drew an uncharacteristically low television audience.

Providence intervened for Jordan fans. On March 18, 1995, due to a baseball strike, Jordan returned from his 18-month hiatus from the court to rejoin the Bulls. In his return game—against the Indiana Pacers—Jordan posted 19 points, 6 rebounds, 6 assists, and 3 steals in 43 minutes of play. Eventually, however, the Bulls were defeated in the playoffs by the Orlando Magic, who were bolstered by the presence of young and versatile players like Shaquille O'Neal and Penny Hardaway. In the 1995/96 season, Jordan and the Bulls were joined by the outrageous Dennis Rodman, ironically their longtime nemesis from the Detroit Pistons' Bad Boys days.. Along with Rodman and Pippen, Jordan once again led the Bulls to the NBA title, their fourth in six years. The star also picked up his eighth scoring championship with a 30.4 points per game average, as well as another MVP award; that year he also claimed *Sport Magazine's* award as the top athlete of the last half of the twentieth century. In 1996, Jordan made his film debut in the half-animation, half-live action star vehicle *Space Jam*, which was a box office hit.

In the 1997/98 season, Jordan was given a \$30 million contract for one year's play, and also earned his fifth MVP Award. He became the first player in history to be selected to the NBA All Defensive First Team nine times, beating Bobby Jones's previous record of eight. Jordan was named MVP of the 1998 All-Star Game, and won his sixth NBA championship after leading the Bulls past the Utah Jazz in the playoffs.

On January 13, 1999, aged 35 and at the top of his game, Michael Jordan again announced his retirement, this time on the heels of a protracted labor dispute which saw the league lock-out the players over a dispute in their collective bargaining agreement. It seemed the proper time for perhaps the greatest player ever to step down. In just 14 years, Jordan had risen not only to a certain place in the basketball Hall of Fame, but also to the highest level of status and achievement in global popular sports culture. Throughout his professional career, he

had been a shining symbol of the American Dream, expanding the very possibilities of human achievement in his field. In the June 1998 issue of *Hoop* magazine, one writer described Jordan professional career as the new “universal measuring device in appraising greatness.”

## Joy of Cooking

An eight-hundred page cookbook that begins with a quote from Goethe's *Faust* seems an unlikely candidate for a spot on a list of the best-selling books of the century, but Irma S. Rombauer's *Joy of Cooking* (first edition 1931), sold 14 million copies before 1997—a record that speaks for itself in terms of the enormous influence it has wielded in the development of social culture. In 1977 a revised edition was issued by its new publisher, Simon & Schuster, and despite the vast changes in the eating habits of American households over the decades, the detailed tome again landed on the best-seller lists. By the end of the twentieth century, it was the top-selling all-purpose cookbook in publishing history, deemed the bible of American culinary customs, from cocktails to custards.

Part of *Joy of Cooking*'s success lies in the way it presents the art of food preparation in simple, forthright terminology. Rombauer was a widowed St. Louis socialite of patrician German birth when she began assembling her wealth of recipes into book form in 1930, partly at the request of her two grown children. Married to a lawyer in 1899, she had had little experience in the kitchen as a young wife, and like other affluent women of the era, she relied on domestic staff to help plan and cook meals for family dinners and social events. Her husband was an avid outdoor man, however, and had instructed her in some of the basics of the camp stove. Over the next few decades Rombauer matured into an accomplished chef and renowned hostess. One of her aims in writing the book was to persuade American women that cooking was not a daily, labor-intensive, time-consuming chore, but rather a delight, indeed, a “joy.” The book's title has something of an ironic tinge, because Rombauer's husband had suffered from depression for much of his adult life, and committed suicide in the family home in St. Louis a few months after the stock market crash of 1929. He left his wife and two children an estate of just 6000 dollars, and Rombauer used half of that sum to put her first edition into print.

The recipes that Irma Rombauer assembled for the first *Joy of Cooking: A Compilation of Reliable Recipes with a Casual Culinary Chat* (1931) provided new cooks with the basics. Illustrated by her artistic-minded daughter, Marion Rombauer Becker, the book sold 3,000 copies, literally out of Rombauer's St. Louis home. The stylized, art-deco cover depicted a gowned St. Martha of Bethany, the patron saint of cooks, slaying a dragon representing kitchen drudgery;

inside were to be found old European recipes, such as braised heart slices in a sour sauce, adapted for use with American ingredients and tools. There were several meat dishes that reflected traditional peasant economics, whereby when an animal was slaughtered almost no inch of it went to waste—neither brains nor tongue, intestine or feet. On a lighter note, Rombauer told readers about her cook, Marguerite, and Marguerite's culinary prowess. Her chatty style extended to explaining the mechanics of food preparation: she assumed, for example, that novices in the kitchen did not know how to separate egg whites when a recipe called for it, and so guided them through it; likewise, she instructed them in other fundamentals such as flour sifting and deboning chicken.

In 1936, Indianapolis publisher Bobbs-Merrill brought out a *Joy of Cooking* edition rewritten and enlarged by the author. This version displayed Rombauer's unique set-up for each recipe that became the book's most famously identifying feature. Ingredients were listed in bold type so that a recipe could be quickly scanned to determine whether the ingredients were on hand in the pantry or refrigerator; more importantly, just what to do with those ingredients was detailed in a step-by-step sequence. This edition was an immediate success, due in part to the fact that, with the Great Depression, many well-to-do households could no longer afford to keep servants, and numerous affluent American women had recently entered the kitchen full-time. They sorely needed Rombauer's instructions.

In 1939, Rombauer was far ahead of her time in recognizing the need for a cookbook designed to help working women prepare quick and easy meals. *Streamlined Cooking* was the result, and the relatively recent invention of the pressure cooker was a key element in many of the main-dish recipes. It was not as successful as her first volume, but when she merged the two into a 1943 edition of *Joy of Cooking*, she hit upon the perfect formula. Combining the easy recipes from *Streamlined* with the step-by-step instruction method of *Joy* produced an instant classic. Large numbers of women were working outside the home as a result of labor shortages created by World War II, and Rombauer's recipes took the countrywide wartime food rationing into consideration. When the third revision of the book appeared in 1951, household help had become a relic of a bygone era for all but the wealthiest of households. Census figures from between 1930 and 1960 tracked a decrease in the median age of men and women at the time of marriage, and the number of households, families, and married couples zoomed from 34.9 million in 1940 to 52.7 million in 1960. Though many women worked outside the home during this era, the image of the competent, attractive homemaker advanced by advertising and television programs was firmly entrenched by the postwar decade, and *Joy of Cooking* became the “how-to” guide to achieving domestic fulfillment for legions of American women.

By the 1960s *Joy* was a perennial best-seller, the standard bridal-shower gift, and a staple accessory of almost every middle-class household. “Its virtues were its compendiousness, its useful tables and explanations, its pragmatic, clear directions and a certain sprightly and encouraging tone,” declared Diane Johnson in a 1997 assessment for the *New York Review of Books*. Johnson explained that later food critics of the 1970s and 1980s railed against some the book's more archaic elements and reliance on processed foods, especially after American culinary tastes grew more daring and gourmet cooking became all the rage. This trend was exemplified by Julia Child's *Mastering the Art of French Cooking*, first published in 1961, which made the canned-soup recipes in the *Joy of Cooking* seem not only dated but somewhat pedestrian. By the 1962 edition, Marion Rombauer

Becker had taken over the project, though her mother's name remained on the cover, and this and successive editions were revised, with certain recipes discarded, to reflect America's increasing culinary sophistication. The quote from Goethe remained, however: "That which thy fathers have bequeathed to thee, earn it anew if thou wouldst possess it."

Irma Rombauer died in 1962, and her *New York Times* obituary noted that "the cookbook that brought her fame is considered one of the most lucid and accurate ever written. Mrs. Rombauer wrote charmingly and well about food." The paper also credited her with introducing elegant European recipes in accessible terminology "so they could be prepared with relative speed and ease by the average American housewife." A fifth edition of *Joy of Cooking* published in 1975 became the best-selling of all with an estimated 3.5 million copies sold in 20 years, and, despite editorial changes, still provided many delightful reminders of a bygone era. "Unless you choke your duck, pluck the down on its breast immediately afterward, and cook it within 24 hours, you cannot lay claim to having produced an authentic Rouen duck," begins the recipe for Duckling Rouennaise, a modified version of the genuine article. The recipe instructs readers to roast a five-pound bird on a spit or rotisserie, and then serve sliced in a chafing dish with a sauce prepared from its crushed liver, veal pate, onion, butter, and burgundy wine. Recipes for veal kidney, blood sausage, lamb head with a rosemary wine sauce, and pig's tails still abounded, and even a diagram for skinning a squirrel remained. *Stand Facing the Stove: The Story of the Women Who Gave America "The Joy of Cooking"* (1966) is a chronicle of the book and its successive revisions by food writer Anne Mendelson, who praised the 1975 edition for its flaws as well as its virtues. "It records," wrote Mendelson, "the sheer improbability of twentieth-century American cooking from the Great Depression to the Ford administration, a lawless melange of blueprints for progress, nostalgic hankerings, gourmet cults, timesaving expedients, media-inspired fads, and unexpected rebellions."

Rombauer's grandson, Ethan Becker, revised *Joy* for a 1997 edition, the first in over two decades. Expanded to an exhaustive 1100-plus pages, the latest release vaulted to the best-seller lists immediately. As always, it had changed with the times: leaner, low-fat recipes prevailed, and a range of new ethnic dishes such as Vietnamese pho were included. In 1998 publisher Scribner brought out a facsimile of the very first edition, complete with the dragon-slaying, St. Martha cover.

## *The Joy of Sex*

Published in 1972, during a period when the English-speaking world was experiencing a rapid relaxation of many of its Victorian-era taboos about the open discussion of sexuality, Dr. Alex Comfort's "lovemaking manual," *The Joy of Sex*, caused an immense stir for its frankly nonpuritanical and lighthearted approach to a subject previously shrouded in religious stricture and clinical seriousness. For readers eager to "swing" with the "sexual revolution," or just to perk up a drab marital bed, this volume, and its sequels and spinoffs over the next two decades, were the first mass-market books that offered graphic text and illustrations designed to help people guiltlessly expand their sexual horizons by experimenting with new techniques and positions. Although it was welcomed in many progressive circles, *The Joy of Sex* was roundly criticized for its gender and cultural bias that singularly described female organs with vulgar language; that relied on expressions like "exotic" and "oriental" to describe some unfamiliar techniques; and that dismissed same-sex relations as trivial and unfulfilling. Still, the book was considered a breakthrough for the way in which it brought sexuality to the arena of everyday conversation, paving the way for the more relaxed approach taken by later sexologists like Dr. Ruth Westheimer and Dr. Judy Kurlansky.

As published by Crown, *The Joy of Sex; A Gourmet Guide to Lovemaking* (also known in some editions as *The Joy of Sex: A Cordon Bleu Guide to Lovemaking*) was described in the jacket copy as "the first really happy and outstanding new lovemaking manual, a contemporary Western equal to the great Eastern classics of the *Kama Sutra* and the *Pillow Books of China*." Based on the "experience of happily married people and edited by Dr. Alex Comfort with the advice of doctors and professional counselors," the book offered more than one hundred line drawings and several pages of paintings in full color by Charles Raymond and Christopher Foss. Also included were sixteen pages of "oriental exotic art from Japan, India, and China." Although Comfort, a British gerontologist, social activist, and poet-novelist, was listed as the book's "editor," in reality he researched and wrote the entire manuscript, explaining later that he could not be identified as its author because of restrictions that then prohibited British physicians from writing "popular" books. Although the book claimed to be based "on the work of one couple," Comfort later confessed that he employed other "consultants" as source material. It was Comfort's original intention to illustrate *The Joy of Sex* with actual photographs of couples, but the photos never "caught the proper zest," as he later told Hugh Kenner. "There was always an expression that asked, 'Am I doing it right?' So two artists [Raymond and Foss] worked from the photographs to produce the illustrations you see. . . . But if the pictures help people turn on, that's part of what the book is for," he explained.

In his introduction, Comfort wrote that "one aim of this book is to cure the notion, born of non-discussion, that common sex needs are odd or weird." He added, "There are, after all, only two 'rules' in good sex, apart from the obvious one of not doing things which are silly, antisocial, or dangerous. One is 'don't do anything you don't really enjoy,' and the other is 'find out your partner's needs and don't balk them if you can help it.'" Comfort wanted couples to be willing to acknowledge a wide "range of human needs" that might include practices and fantasies—aggression and role-playing, for example—that "the last half-century's social mythology pretended weren't there."

Based on his premise that fine sex was analogous to a cook's finesse in blending ingredients and techniques to create a meal of both "culinary fantasies as well as staple diets" ("just as you can't cook without heat, you can't make love without feedback," he wrote), Comfort organized his menu-like table of contents into four sections: Starters, Main Courses, Sauces and Pickles, and Problems. Among the "sauces and pickles" were several dozen "dishes" that in a more puritanical age would have been called naughty or even perverse; the hodgepodge bill-of-fare included items both familiar and obscure: anal intercourse, bondage, "foursomes and moresomes," grope suits, harness, ice, motor cars, pompoir, railroads, rubber, vibrators, and viennese oyster. (Comfort later confessed to curious readers that the "grope suit," a purportedly Scandinavian gadget designed "to induce continuous female orgasm," was really a "joke" he invented.) Some of the items listed incurred the wrath of critics who objected to Comfort's cultural insensitivity in describing certain sexual techniques using Western-centric terms such as "chinese style," "indian style," "japanese style," and "south slav style." Other items, perhaps evocative of an earlier, Anglocentric bias when French postcards were considered the ultimate in naughtiness, were cast in terminology such as "feuille de rose," "pattes d'araigné" and "postillionage."

Besides the expected condemnations by conservative religious critics, *The Joy of Sex* came under fire from feminists who complained that Dr. Comfort used street-slang terms for women's body parts while describing male organs in clinical fashion, and from nonmainstream couples who found their lifestyles were demeaned or ignored in the book. In the 1972 edition, same-sex behaviors were relegated to the "problems" section, under the misleading heading of "bisexuality." Though Comfort generously admitted "all people are bisexual: that is to say they are able to respond sexually to some extent towards people of either sex," he made few friends in the gay and lesbian community when he declared that "Being homosexual isn't a matter of having this kind of response, but usually of having some kind of turn-off towards the opposite sex which makes our same-sex response more evident or predominant." Comfort concluded the section on "bisexuality" by declaring "Straight man-woman sex is the real thing for most people—others need something different but their scope is usually reduced, not widened, by such needs."

This heterosexist attitude inspired the publication, in 1977, of the gay-positive *The Joy of Gay Sex*, by Dr. Charles Silverstein and Edmund White, with illustrations by Michael Leonard, Ian Beck, and Julian Graddon. It was Dr. Silverstein who, in 1973, had successfully persuaded the American Psychiatric Association to remove homosexuality from its list of mental disorders. In his introduction, Silverstein wrote that *The Joy of Gay Sex* was "by gays, for gays, about the gay subculture that comes equipped with its own rituals, its own agonies and ecstasies, its own argot."

With the emergence of the AIDS crisis in the 1980s, both *The Joy of Sex* and *The Joy of Gay Sex* underwent revisions and new editions that promoted safer sex, a topic that had been thought relatively unimportant in the 1970s when, for example, Comfort could write that, between lovers, "Sex must be physically the safest of all human activities (leaving out social repercussions)" or when Silverstein could write "Gonorrhoea (clap) is the most serious disease facing gay men." Safer-sex instruction, together with illustrations of models using condoms, were included in some of the sequels and spinoffs to both series, including Comfort's *The New Joy of Sex* (1992) and *The New Joy of Gay Sex* (1991), in which Silverstein

collaborated with Felice Picano, with illustrations by Deni Ponty and Ron Fowler.

## Joyner, Florence Griffith (1959-1998)

One of the most beloved athletes of the late twentieth century, Olympic track and field star Florence Griffith Joyner, or more commonly "FloJo," inspired legions of young aspiring female athletes with her speed, her confidence, and her winning looks. Almost as famous for her muscular physique and her flamboyant style, particularly her six-inch-long, intricately patterned and polished fingernails, Joyner made the track and field establishment sit up

Florence Griffith Joyner

and take notice, and officials and fans alike mourned her sudden death, at 38, of an apparent heart seizure.

Blazing down the track in brightly colored outfits, including her one-legged tights, Joyner was hailed as the world's fastest woman runner at the peak of her career in the mid-1980s. A phenomenal sprinter holding records in the 100- and 200-meter dashes, she also won three gold medals and two silvers at the 1988 Summer Olympics in Seoul, Korea. While a planned comeback in 1996 failed to materialize due to an Achilles tendon injury, Joyner continued to be a presence in track and field events even after her Olympic sweep.

Born December 21, 1959, Joyner was raised in the projects of the Watts district of Los Angeles, the seventh of ten children of electronics technician Robert Griffith and his wife, after whom Florence would be named. Starting to run for sport at age seven, Joyner continued her hobby even after doctors found the teenaged runner had a heart murmur and advised her to quit. Under the tutelage and encouragement of coach Bobby Kersee, Joyner earned a sports scholarship to the University of California, Los Angeles. During her time at UCLA, she ranked as NCAA champion with a 22.39 time on the 200-meter dash before graduating in 1983 with a degree in psychology. After college, Joyner continued to develop her phenomenal speed, and went on to win the silver medal in the 200 meters during the 1984 Olympics in her home town of Los Angeles.

Retiring briefly from running after her Olympic victory to pursue work as a bank secretary and beautician, Joyner was encouraged to return to the track by Kersee. Her records in the 100- (10.49) and 200-meter (21.34) dashes in Seoul remained unbroken after her death. In October 1987 she married coach and Olympic gold medalist Al Joyner, the older brother of heptathlon world-recordholder Jackie Joyner-Kersee. The couple made their new home in Mission Viejo, California, and in 1988 Al Joyner took over coaching duties for his wife from Kersee. The couple's daughter, Mary, was born in 1991.

Retiring from her career as a sprinter in 1989, Joyner turned her enormous energies to designing sportswear and working toward getting her cosmetology license. Her determination and desire for perfection drove her in these areas as they had her running career. She also designed uniforms for the NBA team the Indiana Pacers, and co-chaired the President's Council on Physical Fitness as a means of further inspiring young athletes.

Joyner's untimely death at age 38 was noted by President Clinton, who told reporters that "We were dazzled by her speed, humbled by her talent, and captivated by her style. Though she rose to the pinnacle of the world of sports, she never forgot where she came from." While some in the media speculated that Joyner's rumored use of performance-enhancing drugs such as steroids may have contributed to her death, such rumors had consistently been disproved throughout her career: during the Olympics she was tested for drug use 11 times without problem. It was widely known that the athlete had suffered from a number of medical problems throughout her career and had been hospitalized on several occasions. She also experienced increased episodes of fatigue during 1997. An autopsy revealed that Joyner died in her sleep of asphyxiation, the result of an epileptic seizure. Left behind to mourn this energetic and inspiring athlete were her husband, her seven-year-old daughter Mary, and legions of fans who considered themselves fortunate to have witnessed the amazing performance of the fastest woman in the world.

## Joyner-Kersee, Jackie (1962—)

Born in East St. Louis, Illinois, and raised in a house she remembers as "little more than paper and sticks," Jackie Joyner-Kersee eventually became known throughout the world as one of the finest female athletes of all time. The winner of six Olympic medals, three of them gold, a record-holder in both the multi-event heptathlon (the female version of the decathlon) and the long jump, and a world-class basketball player, Joyner-Kersee stands as an example of how strength and determination can triumph over adversity. An African-American, she has battled racial discrimination and gender bias and triumphed in the male-dominated field of athletic competition, despite her personal battle with a debilitating medical condition.

Born on March 3, 1962, Joyner-Kersee was one of four children born to Al Joyner and his wife, Mary. Her brother, Al Joyner, is also an athlete who has achieved Olympic greatness, winning the gold in the triple jump in 1984; he would marry runner Florence "FloJo" Griffith in 1987. An active child, Joyner-Kersee joined the track team at East St. Louis's Lincoln High School, where she benefited from having some excellent coaches and excelled at the long jump. However, her performance on the basketball court was what got her noticed, and after graduating in 1980, Joyner-Kersee was able to attend the University of California, Los Angeles on a basketball scholarship.

At UCLA Joyner-Kersee first met Bob Kersee, a controversial coach who would have a great impact not only on her career but on her personal life as well. Her college years proved to be challenging as, under Kersee's direction, the young athlete perfected her skills and ultimately won the NCAA heptathlon two years in a row, as well as walking away with the 1982 USA championship. The injury that would dog Joyner-Kersee's career—a pulled hamstring—first made itself known as she prepared to compete in the 1983 World Championships in Helsinki, Finland, and she was forced to withdraw. She was also diagnosed with an asthmatic condition requiring constant medication. However, Joyner-Kersee's medical setbacks were nothing compared to learning of the tragic death of her 37-year-old mother, Mary, who had been the young woman's inspiration. While Joyner-Kersee's grief momentarily threatened to derail her academic and athletic career, she rallied, as she had from each of her medical setbacks, and went on to pursue her dreams. Graduating with a major in history in the top ten percent of her class from UCLA, she was also named the school's athlete of the year in 1985, and won the Broderick Cup for being chosen the country's most outstanding female collegiate athlete.

Her first year out of college would prove to be a momentous year for Joyner-Kersee. She and her coach were married in January of

**Jackie Joyner-Kersey**

1986, and Kersee continued to coach his wife to a heptathlon victory at that year's Goodwill Games in Moscow. Setting the world record of 7,148 points for the event during the Games, Joyner-Kersey competed in other events across the country, winning the Jesse Owens Award for outstanding performance in track and field that same year.

Joyner-Kersey made outstanding performances in a number of events during 1987, including the Mobil Indoor Grand Prix (winner, women's overall), the Pan American Games (winner, long jump), and the World Championships, held in Rome, where she equalled the world record of 24 feet 5 1/2 inches in the long jump. She suffered her first major asthma attack after returning from the Rome Games, and doctors prescribed the short, periodic use of prednisone, a steroid banned in athletic competition, in addition to her regular medication. Because Joyner-Kersey resisted becoming reliant upon drugs and stopped taking any medications as soon as she felt better, her condition worsened over the coming years, and during 1993's spring games she would be forced to compete wearing an allergen-filtering mask. Meanwhile, the 1987 Jesse Owens Award would once again go to Joyner-Kersey for her outstanding track and field performance that year.

Joyner-Kersey continued to break records over the following decade. In 1988's Olympic Games she took the gold in both the heptathlon and long jump, and equalled the U.S. record for 100-meter

hurdles. Sidelined by a painful injury to her right hamstring during the heptathlon's 200-meter run at Tokyo's 1991 World Championships, a resolute Joyner-Kersey worked her way back into top form, taking the gold for the heptathlon and the bronze for the long jump at the following year's Olympic Games at Barcelona.

Joyner-Kersey set the U.S. record for indoor 50 hurdles before losing the heptathlon event at the Olympics for the first time in her career in 1996. Despite the recurrent hamstring injury that forced her to withdraw from the event, she still managed to win the Olympic bronze in the long jump while in Atlanta. She also renewed her love affair with basketball, joining the Richmond, Virginia, Rage and playing in the newly formed American Basketball League for women.

Her performance at the 1998 Goodwill Games held in New York City would signal Joyner-Kersey's retirement from athletic competition. And what a performance it was. Ending the two-day, seven-event heptathlon with an outstanding performance in the 800-meters, she took the title with 7,291 points, breaking her own world's record set in 1986. Her Goodwill victory was Joyner-Kersey's 25th win out of the 36 multi-event competitions she had entered during her career. Retiring after an amazing career, Joyner-Kersey had plans to build a youth center in her native East St. Louis, and to begin raising a family with her husband.

## Judas Priest

Rock band Judas Priest, originally British, gained national recognition in the United States in the 1980s. They were one of the first such groups to be associated exclusively with the term “Heavy Metal” and their onstage theatrics included motorcycle rides, pyrotechnics, and the wearing of leather outfits with chain and spike accessories. Their music evoked a dark fantasy world where rugged heroes wandered in ruined landscapes and defeated evil forces. A decade of hard rock was shaped by the image and message of Judas Priest, and their influence permeated to new forms of rock in the 1990s.

The band was officially formed in 1969 when the original British Invasion of groups such as the Beatles, the Rolling Stones, and the Yardbirds slowed down and made way for American rockers. The original members of Judas Priest hailed from Birmingham in the industrial midlands of England, where Black Sabbath and many other

Rob Halford of Judas Priest.

British hard rock groups got their start. Judas Priest's first American record release, 1977's “Sin after Sin,” gained them only a cult following in the United States, and it was not until their album *British Steel*, released in 1980, that the band received significant air play with the singles “Living After Midnight” and “Breaking the Law”—loud and simple party anthems that showcased vocalist Rob Halford's alternately growling and screaming voice. 1982's “Screamin’ for Vengeance” featured Judas Priest's typical mix of machismo and futuristic doom and was their largest success to date, while their throaty tribute to pride and revenge, “You Got Another Thing Comin,’” entered the pop charts and was the band's first successful video.

In 1985, Judas Priest was cited in a suit filed by Tipper Gore's Parental Music Resource Center as being influential in several highly publicized suicide pacts. The secret messages found in their songs “Let's Be Dead” and “Do It” were presented as evidence, and although no direct link was ever established, the case attests to Judas Priest's stature as a figurehead for the genre of Heavy Metal. The band survived this legal onslaught and several lineup shifts during the 1990s, continuing to release new work 30 years after their inception. Younger Heavy Metal groups expanded, diversified, and absorbed enough mainstream norms to sell records, but Judas Priest remained loud and angry, true to their roots.

Priest's formula for success—aggressive presentation, operatic screams, extended guitar solos, allusions to mythology and apocalypse—would be adopted and adapted by many other acts over the next decade. Their guitarists K.K. Downing and Glenn Tipton had long bleached hair; Halford had impressive biceps to match his clenched teeth, and rode his Harley-Davidson on stage as the last encore for each elaborate concert. They tapped into a mysterious suburban longing—young record-buying white males seemed particularly attuned to Judas Priest's territorial posing and violent fantasies. Judas Priest was one of the first Heavy Metal bands to expand successfully beyond the comfortable realm of mammoth concerts and album sales; they cracked the MTV market in an age where pop and new wave dominated the channel, and managed somehow to maintain a reputation as purists and outsiders even at the height of their commercial success. Grunge musicians of the next generation often mentioned Judas Priest as a primary influence, and “Breakin’ the Law” found new cult life when MTV's *Beavis and Butthead* air-guitared regularly to the song in the 1990s. Rarely has a musical act so consistently and unabashedly typified a late twentieth-century style of musical expression.

## Judge

A flourishing weekly American humor magazine for close to sixty years, *Judge* was renowned during the 1920s for bringing a new

generation of sophisticated humor writers and cartoonists to the attention of American readers, including S. J. Perelman, Theodor Seuss Geisel ("Dr. Seuss"), Ralph Barton, Johnny Gruelle, Ernie Bushmiller, and Harold Ross.

*Judge* was founded in New York City in 1881 and survived until 1939 in its initial run, offering a mix of jokes, short humor pieces, reviews, and gag cartoons. The humor magazines of the nineteenth century, unlike late twentieth-century publications such as *Mad* and *Cracked*, were aimed at grown-up readers and included topical and political observations as well as broad comedy and ethnic jokes. *Judge* was founded just five years after the appearance of one of its chief competitors, *Puck*, which, as one historian has pointed out, soon "shed its crude image—with jokes about minorities, slapstick humor, and puns—and became a sophisticated humor magazine with longer articles and more society and suburban subjects." Similar to *Puck* in form and content, *Judge* also owed something to Britain's well-established *Punch*. A key figure in the early development of *Judge* was cartoonist James Albert Wales, who left *Puck* to put together the group that launched the new magazine.

The next major humor weekly to come along was *Life*, which debuted in 1883. *Puck* folded in 1918, but *Judge* and *Life* remained rivals well into the 1930s. Though never quite as slick or sophisticated as *Life*, *Judge* managed to hold its own against its competitor, and by 1925 proclaimed "Larger circulation than any other humorous weekly in the world" on its covers. The man credited with boosting *Judge*'s circulation over 100,000 was Norman Anthony, who became editor in 1923. He promoted the single-caption cartoon—as opposed to the traditional he-she type of earlier years—and with coming up with theme issues devoted to a specific topic, such as the Advertising Number, Celebrities Number, Radio Number, and College Number. Among the new contributors Anthony recruited for these issues were S. J. Perelman, "Dr. Seuss," and cartoonist Jefferson Machamer. Initially a cartoonist as well as a writer, Perelman contributed somewhat surreal cartoons as well as humor pieces and magazine parodies; his cartoons were always accompanied by a block of copy in the style that would later show up in his *New Yorker* pieces and in the nonsense dialogue he contributed to the Marx Brothers movies. Harold Ross, who later founded the *The New Yorker*, worked for Anthony briefly, and other eventual *New Yorker* contributors, such as Chon Day, Charles Addams, Gardner Rea, and Whitney Darrow, Jr., all did work for *Judge*. Other contributors included Milt Gross, Don Herold, William Gropper, Bill Holman (creator of *Smokey Stover*), Vernon Grant, and Ernie Bushmiller (creator of *Nancy*). *Judge*'s theater critic in the 1920s and early 1930s was the formidable George Jean Nathan, and movie reviews were provided by Pare Lorentz, an acclaimed documentary filmmaker.

Anthony was lured away to *Life* in 1929 and was replaced as editor by John Shuttleworth. In 1931, Anthony created *Ballyhoo*, a much more raucous magazine that satirized advertising and many other icons of popular culture. *Life*, a monthly by that time and trying unsuccessfully to mimic *The New Yorker*, ended its run in 1936, selling its title to Henry Luce for his new picture weekly. By this time, *Judge* itself was a monthly, and for a time ran a cover line: "Including the humorous tradition and features of *Life*." The magazine held on until 1939 before folding; it was revived twice, but never regained its earlier popularity.

## Judson, Arthur (1881-1975)

Between 1930 and 1950, Arthur Judson exerted unprecedented influence in the field of classical music in the United States, acting as unofficial chief advisor to the country's major symphony orchestras. The engagement of both conductors and soloists for symphony concerts depended, to an extraordinary degree, on his recommendations. Officially, Judson held dual positions as president of Columbia Concerts Corporation, the country's leading artists' management agency—which came to be known as "the Judson Empire"—and simultaneously managed the New York Philharmonic and Philadelphia orchestras. However, it was not only his powerful status that won the trust of orchestra boards, but his knowledge of music and his impeccable judgment of quality. To these virtues were added shrewd business sense, and an instinct for what would draw audiences. As artists' manager, he was known to represent only the finest musicians and, accordingly, won their confidence and loyalty. No one person since has taken control of classical music to the same extent as Arthur Judson.

## Judy Bolton

Judy Bolton was the protagonist of a popular girls mystery series. Unlike contemporary series produced by syndicates and ghost-writers using pseudonyms, the Judy Bolton series was created and written entirely by Margaret Sutton. Grosset & Dunlap initially published four volumes in 1932, then printed one per year through 1967 for a total of 38 volumes. Many of the stories were based on real events, sites, and Sutton's or her acquaintances' experiences. The books appealed to readers because Judy Bolton was more realistic than other series sleuths. Four million copies of Judy Bolton books sold before the series was canceled.

Sutton wrote her first books before the Nancy Drew series was published, but Grosset & Dunlap was not interested in her idea. Sutton was told how syndicate books were written, and she declined to write formulaic plots. Because of Nancy Drew's popularity, girl detective stories became marketable, and an editor at Grosset & Dunlap contacted Sutton about publishing the Judy Bolton tales. In 1932 *The Vanishing Shadow*, *The Haunted Attic*, *The Invisible Chimes*, and *Seven Strange Clues* were issued. More interested in literary craft than commercial success, Sutton's writing did not resemble the contents of mass marketed books sold in other series. Judy Bolton differed from other detective heroines in girls series books because she realistically grew up and was not frozen at a specific age. She was

also concerned about social issues and sensitive to members of other socioeconomic classes and cultures. Judy chose her friends and cases because she was interested in those people and wanted to improve their living conditions. Although she was not as popular as Nancy Drew, she provided a stronger role model for readers.

In the first book, Judy, a doctor's daughter, was a red-haired, 15 year-old high school student living in northwestern Pennsylvania during the 1930s. Judy wanted to be a detective, explore the world, and solve problems, but her life remained ordinary, sometimes disappointing, and not spectacular like Nancy Drew's. In the series, Judy aged to 22 years old, graduated from high school and college, worked, married, and accepted adult responsibilities. This maturation did not limit her adventures or inquisitiveness and reinforced the reality of her stories unlike other series in which characters were static and artificial. Judy traveled and met new people, establishing relationships beyond her family. She confronted social issues and displayed tolerance and acceptance of others. Judy Bolton was also depicted as sometimes being outspoken, temperamental, and capable of making mistakes, causing her to appear more human to readers, who could identify with Judy more than with flawless detectives such as Nancy Drew. Judy relied on her intellect, not her appearance, and used her ability to surmount obstacles instead of counting on material goods or family connections like Nancy Drew. Judy persistently sought the truth with the help of her cat Blackberry, brother Horace, friend Honey, or romantic partner Peter Dobbs, a Federal Bureau of Investigation (FBI) agent who considered Judy his equal. They liked to solve mysteries together.

The Judy Bolton series successfully endured for three decades. Grosset & Dunlap canceled the series after number 38, *The Secret of the Sand Castle*, was published in 1967. Sutton believed that Grosset & Dunlap capitulated to pressure from the Stratemeyer Syndicate because Judy Bolton ranked second to Nancy Drew in sales. The monopolistic syndicate disliked competitors and discouraged Grosset & Dunlap from advertising and distributing series books. Sutton also claimed that the syndicate had stolen plots and titles from her books for their series. She had planned a thirty-ninth book, *The Strange Likeness*, set in the Panama Canal Zone where Judy gave birth to twins Peter and Pam.

Scholars have scrutinized the Judy Bolton books for themes and symbolism, praising the sound plots, thrilling pace, realism, and social commentary. Some critics have labeled Judy as a feminist who was an independent thinker; a confident, capable person who resented restrictions based on gender. They have identified such recurrent series themes as the problems of urbanization and the search for identity. Scholars stressed that Judy's encounters with stereotypes about ethnic and religious groups and awareness of class consciousness addressed timeless issues that would impact readers of all generations. Judy challenged prejudices and attempted to understand circumstances so that she could change them. The books provided commentary about child labor, unsafe work conditions, unemployment, and elitism. For example, Judy cleverly hosted a costume party so that members of different social classes did not know the identity of each other and mingled. Although the books never mentioned the Depression during which they were created, many of the mysteries were connected to economic conditions, situations, and motivations.

The Judy Bolton books were nostalgic collectibles for adult women. Marcia Muller, pioneering author of hard-boiled detective novels featuring the savvy female protagonist Sharon McCone, revealed that Judy Bolton was her favorite teenage girl detective because Judy seemed real and could speak for herself. Muller also

stated that the Judy Bolton mysteries were interesting and not improbable like other series. In 1985, author Kate Emberg and a group of collectors formed the Judy Bolton Society which published the *Judy Bolton Society Newsletter*. This group became the Society of Phantom Friends, named for the thirtieth volume in the series, and its newsletter, *The Whispered Watchword*, discussed Judy Bolton and other series books. Every summer the Margaret Sutton Weekend enabled fans to visit book sites. The Phantom Friends developed a friendship with Sutton and presented her their Life Achievement Award. Emberg wrote and published a new Judy Bolton, *The Whispering Belltower*, with Sutton's permission, and *The Talking Snowman* was co-written by Sutton and Linda Joy Singleton. Phantom Friends Melanie Knight, Rosemarie DiCristo, and Linda Tracy compiled the *Guide to Judy Bolton Country*, a comprehensive reference manual about all aspects, major and trivial, of the Judy Bolton books. Judy Bolton fans have also created internet sites about the popular character and the local school in Sutton's hometown painted a mural of Judy Bolton for an art and history project. Because the Judy Bolton series was out of print, Applewood Books and Aeonian Press published facsimile reprints in the 1990s. Avid collectors, including Sutton, continue to search for original volumes in used bookstores.

## Juke Boxes

Automatic record players activated by putting a coin in them were one of the earliest methods of making money from Thomas Edison's phonograph invention. The juke box really came of age in the 1930s and 1940s when the Great Depression almost eliminated the sale of records to individuals and made the coin-slot record player an important source of musical entertainment. These machines brought specific kinds of music to the public and played a part in the ascent of swing and rock 'n' roll as mass movements of popular culture.

The failure to develop a long-playing record in the first half of the twentieth century put a premium on technology which could automate the process of playing several records one after the other. The first automatic record changer was patented in 1921, and it was followed by many different devices that could pick and play discs; some could even play both sides of a record.

The first coin-slot machine with electronic amplification and a multi-record changer was produced in 1927 by the Automatic Music Instrument Company. AMI was joined by J. P. Seeburg, Rudolph Wurlitzer, and the Rockola Manufacturing Company in devising coin-slot machines with advanced record-changing mechanisms that could select from 20 or 24 discs.

At the end of the 1920s, only around 50,000 of these machines were in use, but the repeal of Prohibition in 1933 brought about a dramatic change in social life as Americans flooded back to bars and clubs. No popular drinking establishment was without one. The name

An old-fashioned juke box.

juke box originated from the lingo of the South, where dancing or “jooking” to records was a popular pastime. Small drinking establishments with only recorded sound as their musical entertainment were called “juke joints.” Here patrons would dance to blues or country music that they selected from the discs stored in the juke box. In the hedonistic atmosphere of these bars, loud dance music, comedy routines, and raunchy songs about sex were popular choices on the juke box. Dancing was a very important part of social life, and swing records on a juke box were the next best thing to attending (and paying for) a live concert. The juke box made the most of the technological development of amplification and loud speakers. It could project sound to every corner of a bar or soda fountain. The very loud volume of the playback made it possible to hear and dance to the music above the noise of a crowded bar. For listeners during the 1930s, juke boxes gave them the highest volume of sound reproduction outside the movie theater.

The Great Depression drastically cut back the sale of records, which many considered to be a luxury good. Radio became a major source of music in the home, but listeners still wanted to pick the music they wanted when they wanted to hear it. Instead of buying a record for a dollar they paid a nickel to hear it on a juke box. During the 1930s the number of juke boxes in use rose to a high of 500,000, and they could be found in taverns, pool halls, restaurants, hotels,

cafes, bus stations, and even beauty parlors. More than half of the nation’s juke boxes were in the South. The store of records in the nation’s juke boxes required changing every week, and by 1936 over half of all record production in the United States was destined for them. The demand for records for juke boxes provided valuable work for musicians during the Depression, especially for jazz and blues musicians, whose livelihoods were most threatened by the bad economic times. Many of the classic jazz and blues records of the 1930s were made for juke boxes.

The customers’ choices of recordings provided valuable information in the marketing of recordings, and juke boxes were fitted with indicators that displayed to the operator which of the discs were the most popular. Returns from juke boxes were an important indicator of the growing popularity of rhythm and blues records in the 1940s and then rock ’n’ roll in the 1950s. Independent record companies often had to resort to bribery to get juke box operators to use their records, and there were allegations made that this lucrative business was often in the hands of organized crime. In the postwar years juke boxes became larger and more ornate; the modernistic designs of Wurlitzer made the coin-slot machine stand out in a bar or restaurant. But the days of the juke box were numbered as a booming economy allowed consumers to buy their own records. Attempts to produce video juke boxes in the 1960s and 1970s were technically successful but could not return this machine to the dominant place in public entertainment it enjoyed in the 1930s and 1940s.

## Julia

Debuting on NBC in September, 1968 *Julia* was the first network television series to star an African American in the leading role since *Amos ’n’ Andy* and *Beulah* left the air in 1953. The gentle situation comedy featured Diahann Carroll as Julia Baker, a widowed black nurse with a six year-old son, Corey, living a thoroughly integrated lifestyle in a Los Angeles apartment building. Surrounded by whites, the Bakers encountered only the most innocuous instances of prejudice. The series reached the airwaves during a particularly incendiary moment in American race relations—the aftermath of Martin Luther King’s assassination; a “long hot summer” of riots and burning in inner city ghettos, and rising Black Power militancy. Inevitably, the series, which ignored all these issues, stirred controversy. *Julia* was dismissed by some as a “white Negro” and the series was considered irrelevant, if not dangerous, especially because it featured no African American male characters of authority or narrative importance. On the other hand, the series was praised for opening

doors to subsequent African American sitcoms and for demonstrating that American audiences, black and white, could enjoy non-stereotyped black characters on prime-time. After a successful three year run, *Julia* left the air in 1971.

## Juliá, Raúl (1940-1994)

Raúl Juliá was a beloved stage and screen actor who was admired for his work on and off the screen. Due to his fine training and technique, he was one of the few Hispanic actors successful in transcending cultural stereotypes to win a diverse and interesting series of roles in Hollywood and abroad. Juliá broke onto the stage in New York in Hispanic community plays and through Joseph Papp's innovative casting in the New York Shakespeare Festival's production of *Macbeth* in 1966. He continued to appear in Shakespeare

Raúl Juliá

Festival productions, and made his Broadway debut in 1968. In the early 1970s, Juliá broke into film, the medium that led to his greatest popularity.

Born Raúl Carlos Juliá y Acelay in San Juan, Puerto Rico, on March 9, 1940, into a relatively well-off family, Juliá began acting in school plays and, while studying law at the University of Puerto Rico, continued devoting much time to amateur productions. Juliá moved to New York to study acting in 1964 and shortly thereafter made his stage debut in a Spanish-language production of Calderón de la Barca's classic *La vida es sueño* (*Life Is a Dream*). Soon, Juliá was performing in the Hispanic neighborhoods of the city in small theaters and in the open air.

In 1966, famed producer Joseph Papp gave Juliá his first break, disregarding Juliá's ethnicity and casting him in *Macbeth*. Juliá subsequently performed in a number of Papp plays, including Shakespeare's *Hamlet*, and Hispanic community theater in the late 1960s and early 1970s. Juliá went on to be cast in Broadway roles, to receive rave reviews and four Tony nominations for work in *The Two Gentlemen of Verona*, *Where's Charley*, *Threepenny Opera*, and *Nine*. His debut on Broadway was as the servant Chan in Jack Gelber's 1968 production of *The Cuban Thing*. A milestone in his career was the success of Papp's *Two Gentlemen of Verona* and Juliá's Tony-nominated portrayal of Porteus in this musical adaptation; the play moved from Central Park's Delacorte Theater to Broadway's St. James Theater.

During the 1980s and early 1990s, Juliá created a distinguished career as a film actor, playing a wide variety of roles from romantic detectives to evil villains. One of his most highly acclaimed parts was that of a revolutionary in the Academy Award-nominated *Kiss of the Spiderwoman* in 1985. Juliá also played some very popular offbeat roles in such highly commercial films as *The Addams Family* (1991) and its sequel, *Addams Family Values* (1993). Among his other noteworthy films are *The Eyes of Laura Mars* (1978), *One from the Heart* (1982), *Compromising Positions* (1985), *Tequila Sunrise* (1988), *Moon over Parador* (1988), *Tango Bar* (1988), *Romero* (1989), *The Rookie* (1990), and *Havana* (1990).

When not acting on stage or screen, Juliá made frequent appearances on *Sesame Street*, and donated his services to the Hunger Project, an international organization whose goal it is to eradicate hunger by the year 2000. Juliá also worked with Hispanic community organizations, most notably the Hispanic Organization of Actors (HOLA). He died of a massive stroke on October 24, 1994.

## *Jurassic Park*

*Jurassic Park* is the title of Michael Crichton's best-selling novel (1990) and its popular film adaptation by Steven Spielberg

A Tyrannosaurus Rex attacks in a scene from the film *Jurassic Park*.

(1993). In the story *Jurassic Park* is the name of the theme park placed on a tropical island where millionaire John Hammond plans to exhibit live dinosaurs created out of fossilized DNA. Following the technophobic discourse originally enunciated by Mary Shelley's novel *Frankenstein* (1818), Crichton and Spielberg narrate how, inevitably, the supposedly safe environment of the park collapses under the pressure of the dinosaurs' instincts. The attack of the dinosaurs turns an enjoyable inaugural tour of *Jurassic Park* into a nightmare for Hammonds' team, his family, and his guests, including prestigious scientists. *Jurassic Park* was followed by a less successful sequel, *The Lost World* (novel by Crichton, 1995; film by Spielberg, 1997). The plot focuses here on another island where the species of the park breed unchecked and on the efforts of another group led by Dr. Malcolm, a victimized guest in *Jurassic Park*, to stop the dinosaurs and the men who want to capture them for commercial purposes. *The Lost World* is, incidentally, a title that relates Crichton's and Spielberg's work to the fiction that originated the vogue for dinosaurs: Arthur Conan Doyle's novel *The Lost World* (1920) and its silent film adaptation by Willis O'Brien (1925).

Like *Frankenstein*, *Jurassic Park* examines the ethical dilemmas involved in using technoscience to create life out of dead matter. The targets of Crichton's criticism are the frivolous use that business may make of biotechnology and the lack of a proper control on

laboratories working with human and animal DNA. But Crichton is also concerned by the dependence of scientific research on business interests. This is shown in the relationship between the paleontologist Alan Grant, the main character in *Jurassic Park*, and Hammond. Hammond's funding of Grant's research places the principled scientist at the same level of dependence as his unprincipled colleagues. Ambitious young scientists and unscrupulous businessmen like John Hammond may form a lethal alliance leading to dangerous ventures like *Jurassic Park* and even to the extinction of human life on Earth. Dr. Malcolm, Crichton's spokesman in the novel, emphasizes the technophobic message when he protests that "there is no humility before nature. There is only a get-rich-quick, make-a-name-for-yourself-fast philosophy. Cheat, lie, falsify—it doesn't matter." In the novel version, the dinosaurs eventually kill both Hammond and Malcolm. Hammond's death is presented as an act of poetic justice. Malcolm's somehow unjust death proves the accuracy of his use of chaos theory, but also of Crichton's apocalyptic vision.

In Spielberg's *Jurassic Park*, Hammond and Malcolm survive, whereas the dinosaurs are destroyed. The grim moralizing of Crichton's cautionary tale and his introduction of chaos theory are thus significantly modified to make way for hope. Spielberg's happier ending even forced Crichton to ignore the death of Dr. Malcolm to make him reappear as the accidental hero of *The Lost World*. But beyond its

hope for the future—and for a future sequel—Spielberg’s film differs from Crichton’s novel in an important aspect. The technophobic message of Crichton’s novel has to compete for the spectators’ attention with Spielberg’s skilful use of special effects. The film’s appeal is based on the celebration of the technology behind the animatronics (electronic puppetry designed by Stan Winston) and infographics (computer simulations developed by ILM) employed to represent the dinosaurs. By endorsing Spielberg’s films, Crichton undermines his own message. The association of technology and business appears to have at least a positive outlet in the world of entertainment: film. But this is an ambiguous message. Spielberg’s and Crichton’s Midas’ touch suggests that, should they decide to open the real Jurassic Park, people would flock to meet the dinosaurs—hopefully not to be devoured by them—thanks to, rather than despite, the novels and films. People do go, indeed, to the Universal Studios theme parks, where the fake dinosaurs of *Jurassic Park* can be seen.

Feminist writers like Marina Warner have criticized a problematic aspect of *Jurassic Park* (film and novel): the sex of the dinosaurs. They are all created female, so as to ensure that no natural reproduction takes place on the island, and also because, since all embryos are initially female, “from a bioengineering standpoint, females are easier to breed,” as Dr. Wu notes. The scientists refer, though, to giants like the Tyrannosaurus Rex as male. The irony that was not lost on feminist commentators is that the scientists of Jurassic Park also believe that females are easier to control. As the plot develops, this is proved radically wrong. After wreaking havoc on the island, some female dinosaurs mutate into males capable of starting sexual reproduction. This is presented by Crichton in ambiguous terms, as a symbol of life’s unstoppable drive towards reproduction. The controversial theme of the female monster that threatens human life with uncontrolled reproduction is also the focus of films like *Aliens* (1986) and *Species* (1995). Godzilla, though, turns out to be a hermaphrodite in the eponymous 1998 film.

Dinosaurs are always popular with audiences of all ages, which helped *Jurassic Park* (novel and film) become an enormous hit. The popularity of these creatures is based on their unique status as monsters: they are threatening monsters of nightmare because of their enormous size, but also the fragile victims of a mysterious turn in the path of evolution. Dinosaurs send a clear Darwinian message to adult readers and spectators, inviting them to consider the thin threads on which human life depends. In *Jurassic Park* genetic engineering, rather than a freak of evolution, transforms the dinosaurs from relics of the prehistoric past into a threat for the future, akin to that of other monsters of science fiction, often extraterrestrial. Dinosaurs also make wonderful toys for children, as Spielberg and Universal Studios know well. But the true measure of *Jurassic Park*’s success can only be assessed by a glimpse into the future that lets us see whether the real Jurassic Park will ever open.

## Juvenile Delinquency

This term refers to lawbreaking by minors, including status offenses such as truancy, homelessness, and being unsupervised by a suitable adult guardian. The term appeared first after the Civil War when criminologists and social reformers called attention to the poverty, disease, crime, and inadequate home life in urban, often immigrant, communities. Jane Addams, Robert Woods, Florence Kelley, and other settlement house leaders in the 1890s lobbied state legislators and private and public charities to eliminate juvenile delinquency by eradicating these social problems. They proposed new school attendance, public health and safety laws to protect children. Activists concerned with assisting troubled youth founded recreational organizations (such as the Boy Scouts and Girl Scouts), team sports, Sunday schools, juvenile courts, pediatric medical clinics, and the field of child psychology during the early twentieth century.

Sociologists and criminologists, many from the University of Chicago, argued that delinquents were a byproduct of poverty, since statistics seemed to indicate that the incidence of crime increased with unemployment. Later studies attributed delinquency to a wide range of environmental conditions associated with poverty: overcrowded, slum-like dwellings, a low level sanitation, and inadequate recreation. By the 1920s the Harvard Law School Crime Survey supported this view, particularly according to research conducted by Sheldon and Eleanor Glueck. They used an interdisciplinary approach for a multiple-factor theory of juvenile delinquency. The evidence they gathered pointed to the quality of a child’s family life as the most important factor criminal behavior. Recidivism rates were high among juvenile delinquents despite professional intervention. However, after 1950 most sociologists blamed delinquency on individual or family dysfunction rather than low social or economic class.

Adolescent gang wars, although not unheard of in the nineteenth century, became a national concern after World War I and more so after World War II. Many urban streets and parks were unsafe. Despite greater police patrols and an expansion of state reform schools for delinquents, juvenile delinquents continued to avoid school and loiter and make trouble in public spaces. Churches and social workers developed summer camps and other recreation programs to control the problem. They also initiated foster home services. American psychologist G. Stanley Hall, who coined the term adolescence in 1901, advocated the scientific study of juvenile delinquency. The British-American psychiatrist William Healy, the first child psychiatrist in the United States, pioneered diagnosis of emotionally disturbed children in Chicago (1900) and Boston (1917). He and his wife, Augusta Fox Bronner, trained a new generation of social workers, psychologists, and probation officers to treat young offenders.

During the Great Depression, Hollywood recognized juvenile delinquency as an important urban problem that rendered great material for movie plots. Some of the films that grew out of this recognition were *Angels With Dirty Faces* (1938), *Boys Town* (1938), *Crime School* (1938), and *They Made Me A Criminal* (1939). *Rebel Without a Cause* (1955) was centered around alienation felt by middleclass, suburban teenagers. *West Side Story* (1961), a film adaptation of the landmark Broadway musical by Leonard Bernstein, was a modern revision of Shakespeare's *Romeo and Juliet*, featuring gangs in New York City in the 1950s in lieu of the two feuding families. *Blackboard Jungle* (1955), the first film to feature rock 'n' roll music, showed the harrowing experience public school teachers encountered in a New York City high school in the 1950s. The treatment of rebellious middleclass adolescents in modern psychiatric centers was depicted in *Born Innocent* (1974). In contrast, *Boyz N the Hood* (1991) portrayed senseless violence and drug abuse in South Central Los Angeles black teenage gangs.

Juvenile delinquency remained a serious social and legal problem into the late twentieth century. Many conservative activists and scholars proposed that it was exacerbated by the 1960s sexual revolution and excessive drug use. Some criminologists reported that

most criminal behavior was perpetrated by unemployed young male, and later included female, delinquents. By the close of the twentieth century youthful criminal offenders continued to frustrate the population, particularly law enforcement and educational professionals and the victims of juvenile criminal conduct.

## EDITOR'S NOTE

---

Thirty some years ago Ray Browne and several of his colleagues provided a forum for the academic study of popular culture by forming first the *Journal of Popular Culture* and later the Popular Culture Association and the Center for the Study of Popular Culture at Bowling Green State University. Twenty some years ago Thomas Inge thought the field of popular culture studies well enough established to put together the first edition of his *Handbook of Popular Culture*. In the years since, scholars and educators from many disciplines have published enough books, gathered enough conferences, and gained enough institutional clout to make popular culture studies one of the richest fields of academic study at the close of the twentieth century. Thirty, twenty, in some places even ten years ago, to study popular culture was to be something of a pariah; today, the study of popular culture is accepted and even respected in departments of history, literature, communications, sociology, film studies, etc. throughout the United States and throughout the world, and not only in universities, but in increasing numbers of high schools. Thomas Inge wrote in the introduction to the second edition of his *Handbook*: “The serious and systematic study of popular culture may be the most significant and potentially useful of the trends in academic research and teaching in the last half of this century in the United States.”<sup>2</sup> It is to this thriving field of study that we hope to contribute with the *St. James Encyclopedia of Popular Culture*.

The *St. James Encyclopedia of Popular Culture* includes over 2,700 essays on all elements of popular culture in the United States in the twentieth century. But what is “popular culture?” Academics have offered a number of answers over the years. Historians Norman F. Cantor and Michael S. Werthman suggested that “popular culture may be seen as all those things man does and all those artifacts he creates for their own sake, all that diverts his mind and body from the sad business of life.”<sup>1</sup> Michael Bell argues that:

At its simplest popular culture is the culture of mass appeal. A creation is popular when it is created to respond to the experiences and values of the majority, when it is produced in such a way that the majority have easy access to it, and when it can be understood and interpreted by that majority without the aid of special knowledge or experience.<sup>3</sup>

While tremendously useful, both of these definitions tend to exclude more than they embrace. Was the hot dog created for its own sake, as a diversion? Probably not, but we’ve included an essay on it in this collection. Were the works of Sigmund Freud in any way shaped for the majority? No, but Freud’s ideas—borrowed, twisted, and reinterpreted—have shaped novels, films, and common speech in ways too diffuse to ignore. Thus we have included an essay on Freud’s impact on popular culture. Our desire to bring together the greatest number of cultural phenomena impacting American culture in this century has led us to prefer Ray Browne’s rather broader early definition of popular culture as “all the experiences in life shared by people in common, generally though not necessarily disseminated by the mass media.”<sup>4</sup>

### *Coverage*

In order to amass a list of those cultural phenomena that were widely disseminated and experienced by people in relatively unmediated form we asked a number of scholars, teachers, librarians, and archivists to serve as advisors. Each of our 20 advisors provided us with a list of over 200 topics from their field of specialty that they considered important enough to merit an essay; several of our advisors provided us with lists much longer than that. Their collective lists numbered nearly 4,000 potential essay topics, and we winnowed this list down to the number that is now gathered in this collection. We sought balance (but not equal coverage) between the major areas of popular culture: film; music; print culture; social life; sports; television and radio; and art and performance (which includes theatre, dance, stand-up comedy, and other live performance). For those interested, the breakdown of coverage is as follows: social life, 23 percent (a category which covers everything from foodways to fashion, holidays to hairstyles); music, 16 percent; print culture, 16 percent; film, 15 percent; television and radio, 14 percent; sports, 10 percent; and art and performance, 6 percent. A variety of considerations led us to skew the coverage of the book in favor of the second half of the century. The massive popularity of television and recorded music, the mass-marketing of popular fiction, and the national attention given to professional sports are historical factors contributing to the emphasis on post-World War II culture, but we have also considered the needs of high school and undergraduate users in distributing entries in this way.

### *The Entries*

The entries in this volume vary in length from brief (75 to 150-word) introductions to the topic to in-depth 3,000-word explorations. No matter the length, we have asked our contributors to do two things in each entry: to describe the topic and to analyze its

significance in and relevance to American popular culture. While we hope that users will find the basic factual information they need concerning the topic in an entry, it was even more important to us that each user gain some perspective on the cultural context in which the topic has importance. Thus the entry on MTV, for example, chronicles the channel's rise to world popularity, but also analyzes the relationship between MTV, youth culture, and consumerism. The entry on John Ford, while tracing the outlines of the film director's long career, assesses the impact Ford's films have had on the film Western and on Americans' very perceptions of the West. Given the brevity of the entries, we chose to emphasize analysis of a topic's contribution to popular culture over a full presentation of biographical/historical information. The entry on World War I, for example, offers an analysis of how the war was understood in popular film, print culture, and propaganda rather than a blow-by-blow description of the actual military conflict.

Entries are accompanied by a list of further readings. These readings are meant to provide the user with readily accessible sources that provide more information on the specific topic. As befits a multimedia age, these "further readings" come not just from books and magazines, but also from albums, liner notes, films, videos, and web sites. Users of the Internet know well the perils of trusting the information found on the World Wide Web; there are as yet few filters to help browsers sift the useful from the absurd. We cited web sites when they provided information that was unavailable in any other known form and when our reasonable efforts to determine the veracity of the information led us to believe that the information provided was valid and useful. We have occasionally provided links to "official" web sites of performers or organizations, for the same reason that we provide citations to autobiographies. All web links cited were accurate as of the date indicated in the citation.

### *Organization and Indexing*

Entries are arranged alphabetically by the name under which the topic is best known. For topics which might reasonably be sought out under differing names, we have provided in-text cross references. For example, a user seeking an entry on Huddie Ledbetter will be referred to the entry on Leadbelly, and a user seeking an entry on Larry Flynt will be referred to the entry on *Hustler* magazine. Far more powerful than the cross references, however, are the indexes provided in the fifth volume of the collection. The general index is by far the most powerful, for it leads the user searching for information on Humphrey Bogart, for example, to the entries on Lauren Bacall, *Casablanca*, *The Maltese Falcon*, *The African Queen*, and several other entries that contain substantive information about Bogie. Equally powerful is the subject index, a list of categories under which we listed all pertinent entries. Consulting the subject index listing for Sex Symbols, for example, will lead the user to entries on Marilyn Monroe, the Varga Girl, *Playboy* magazine, David Cassidy, Mae West, and a long entry on the Sex Symbol, among others. Finally, a time index, organized by decades, provides a list of the entries that concern each decade of the twentieth century. Those entries that concern nineteenth-century topics are indexed by the first decade of the twentieth century.

We encourage readers to use the indexes to discover the fascinating intertwinings that have made the development of popular culture in the twentieth century such a vital field of study. Using the indexes, it is possible to uncover the story of how the American humor that was first made popular on the vaudeville stage evolved into first the radio comedies that entertained so many Americans during the Depression and War years and later the sitcoms that have kept Americans glued to their television screens for the last 50 years. That story is here, in the entries on Vaudeville, the Sitcom, *Amos 'n' Andy*, and the many other programs and comedians that have defined this tradition. A teacher who wishes students to uncover the similarities between sitcoms of the 1950s, 1960s, 1970s, 1980s, and 1990s might well ask the students to use this collection to begin their research into such comedies. Similarly, a teacher who asks students to explore the cross-pollination between musical genres will find that the indexes reveal the mixing of "race music," rhythm and blues, gospel, soul, and rock 'n' roll. It is hoped that this collection will be of particular use to those instructors of high school and undergraduate courses who challenge their students to discover the real cultural complexity of the music, films, magazines, and television shows that they take for granted. This collection should also be of use to those more advanced scholars who are beginning new research into an area of popular culture or who are looking for some context in which to place their existing research.

Several of our advisors deserve special thanks: Paul Buhle, George Carney, B. Lee Cooper, Jerome Klinkowitz, and Ron Simon all showed an extraordinary level of commitment and helpfulness.

It has been a pleasure to work with the nearly 450 contributors to this collection; we've appreciated their expertise, their professionalism, and their good humor. # INTRODUCTION

## *The Art of Everyday Life*

Sometimes, when I'm wandering in an art museum looking at the relics of an ancient civilization, I find myself wondering how a future society would represent a defunct American culture. What objects would be chosen—or would survive—to be placed on display? Would I agree with a curator's choices? Were I to choose the items that some future American Museum of Art should exhibit to represent twentieth-century American culture, here are some I would name: an Elvis Presley record; a Currier & Ives print; a movie still from *Casablanca*. To put it a different way, my priority would *not* be to exhibit fragments of an urban cathedral, a painted landscape, or a formal costume. I wouldn't deny such objects could be important artifacts of American culture, or that they belong in a gallery. But in my avowedly biased opinion, the most vivid documents of American life—the documents that embody its possibilities and limits—are typically found in its popular culture.

Popular culture, of course, is not an American invention, and it has a vibrant life in many contemporary societies. But in few, if any, of those societies has it been as central to a notion of national character at home as well as abroad. For better or worse, it is through icons like McDonald's (the quintessential American cuisine), the Western (a uniquely American narrative genre), and Oprah Winfrey (a classic late-twentieth century embodiment of the American Dream) that this society is known—and is likely to be remembered.

It has sometimes been remarked that unlike nations whose identities are rooted in geography, religion, language, blood, or history, the United States was founded on a democratic ideal—a notion of life, liberty, and the pursuit of happiness elaborated in the Declaration of Independence. That ideal has been notoriously difficult to realize, and one need only take a cursory look at many aspects of American life—its justice system, electoral politics, residential patterns, labor force, et. al.—to see how far short it has fallen.

American popular culture is a special case. To be sure, it evinces plenty of the defects apparent in other areas of our national life, among them blatant racism and crass commercialism. If nothing else, such flaws can be taken as evidence of just how truly representative it is. There is nevertheless an openness and vitality about pop culture—its appeal across demographic lines; its interplay of individual voices and shared communal experience; the relatively low access barriers for people otherwise marginalized in U.S. society—that give it real legitimacy as the art of democracy. Like it or hate it, few dispute its centrality.

This sense of openness and inclusion—as well as the affection and scorn it generated—has been apparent from the very beginning. In the prologue of the 1787 play *The Contrast* (whose title referred to the disparity between sturdy republican ideals and effete monarchical dissipation), American playwright Royall Tyler invoked a cultural sensibility where “proud titles of ‘My Lord! Your Grace/To the humble ‘Mr.’ and plain ‘Sir’ give place.” Tyler, a Harvard graduate, Revolutionary War officer, and Chief Justice of the Vermont Supreme Court, was in some sense an unlikely prophet of popular culture. But the sensibility he voiced—notably in his beloved character Jonathon, a prototype for characters from Davy Crockett to John Wayne—proved durable for centuries to come.

For much of early American history, however, artists and critics continued to define aesthetic success on European terms, typically invoking elite ideals of order, balance, and civilization. It was largely taken for granted that the most talented practitioners of fine arts, such as painters Benjamin West and John Singleton Copley, would have to go abroad to train, produce, and exhibit their most important work. To the extent that newer cultural forms—like the novel, whose very name suggests its place in late eighteenth- and early nineteenth-century western civilization—were noted at all, it was usually in disparaging terms. This was especially true of novels written and read by women, such as Susanna Rowson's widely read *Charlotte Temple* (1791). Sermons against novels were common; Harvard devoted its principal commencement address in 1803 to the dangers of fiction.

The industrialization of the United States has long been considered a watershed development in many realms of American life, and popular culture is no exception. Indeed, its importance is suggested in the very definition of popular culture coined by cultural historian Lawrence Levine: “the folklore of industrial society.” Industrialization allowed the mass-reproduction and dissemination of formerly local traditions, stories, and art forms across the continent, greatly intensifying the spread—and development—of culture by, for, and of the people. At a time when North America remained geographically and politically fragmented, magazines, sheet music, dime novels, lithographs, and other print media stitched it together.

This culture had a characteristic pattern. Alexis de Tocqueville devoted 11 chapters of his classic 1835-40 masterpiece *Democracy in America* to the art, literature, and language of the United States, arguing that they reflected a democratic ethos that required new standards of evaluation. “The inhabitants of the United States have, at present, properly speaking, no literature,” he wrote. This judgment, he made clear, arose from a definition of literature that came from aristocratic societies like his own. In its stead, he explained, Americans sought books “which may be easily procured, quickly read, and which require no learned researches to be understood. They ask for beauties self-proffered and easily enjoyed; above all they must have what is unexpected and new.” As in so many other ways, this description of American literature, which paralleled what Tocqueville saw in other arts, proved not only vivid but prophetic.

The paradox of American democracy, of course, is that the freedom Euro-Americans endlessly celebrated co-existed with—some might say depended on—the enslavement of African Americans. It is therefore one of the great ironies of popular culture that the contributions of black culture (a term here meant to encompass African, American, and amalgamations between the two) proved so decisive. In another sense, however, it seems entirely appropriate that popular culture, which has always skewed its orientation toward the lower end of a demographic spectrum, would draw on the most marginalized groups in American society. It is, in any event, difficult to imagine that U.S. popular culture would have had anywhere near the vitality and influence it has without slave stories, song, and dance. To cite merely one example: every American musical idiom from country music to rap has drawn on, if not actually *rested* upon, African-American cultural foundations, whether in its use of the banjo (originally an African instrument) or its emphasis on the beat (drumming was an important form of slave communication). This heritage has often been overlooked, disparaged, and even satirized. The most notable example of such racism was the minstrel show, a wildly popular nineteenth century form of theater in which white actors blackened their faces with burnt cork and mocked slave life. Yet even the most savage parodies could not help but reveal an engagement with, and even a secret admiration for, the cultural world the African Americans made in conditions of severe adversity, whether on plantations, tenant farms, or in ghettos.

Meanwhile, the accelerating pace of technological innovation began having a dramatic impact on the form as well as the content of popular culture. The first major landmark was the development of photography in the mid-nineteenth century. At first a mechanically complex and thus inaccessible medium, it quickly captured American imaginations, particularly by capturing the drama and horror of the Civil War. The subsequent proliferation of family portraits, postcards, and pictures in metropolitan newspapers began a process of orienting popular culture around visual imagery that continues unabated to this day.

In the closing decades of the nineteenth century, sound recording, radio transmission, and motion pictures were all developed in rapid succession. But it would not be until well after 1900 that their potential as popular cultural media would be fully exploited and recognizable in a modern sense (radio, for example, was originally developed and valued for its nautical and military applications). Still, even if it was not entirely clear how, many people at the time believed these new media would have a tremendous impact on American life, and they were embraced with unusual ardor by those Americans, particularly immigrants, who were able to appreciate the pleasures and possibilities afforded by movies, records, and radio.

Many of the patterns established during the advent of these media repeated themselves as new ones evolved. The Internet, for example, was also first developed for its military applications, and for all the rapidity of its development in the 1990s, it remains unclear just how its use will be structured. Though the World Wide Web has shown tremendous promise as a commercial enterprise, it still lacks the kind of programming—like *Amos 'n' Andy* in radio, or *I Love Lucy* in television—that transformed both into truly mass media of art and entertainment. Television, for its part, has long been the medium of a rising middle class of immigrants and their children, in terms of the figures who have exploited its possibilities (from RCA executive David Sarnoff to stars like Jackie Gleason); the new genres it created (from the miniseries to the situation-comedy); and the audiences (from urban Jews to suburban Irish Catholics) who adopted them with enthusiasm.

For much of this century, the mass appeal of popular culture has been viewed as a problem. “What is the jass [*sic*] music, and therefore the jass band?” asked an irritated New Orleans writer in 1918. “As well as ask why the dime novel or the grease-dripping doughnut. All are manifestations of a low stream in man’s taste that has not come out in civilization’s wash.” However one may feel about this contemptuous dismissal of jazz, now viewed as one of the great achievements of American civilization, this writer was clearly correct to suggest the demographic, technological, and cultural links between the “lower” sorts of people in American life, the media they used, and forms of expression that were often presumed guilty until proven innocent.

Indeed, because education and research have traditionally been considered the province of the “higher” sorts of people in American life, popular culture was not considered a subject that should even be discussed, much less studied. Nevertheless, there have always been those willing to continue what might be termed the “Tocquevillian” tradition of treating popular culture with intellectual

seriousness and respect (if not always approval). In his 1924 book *The Seven Lively Arts* and in much of his journalism, critic Gilbert Seldes found in silent movies, cartoons, and pop music themes and motifs fully worthy of sustained exploration. Amid the worldwide crisis of the 1930s and 1940s, folklorist Constance Rourke limned the origins of an indigenous popular culture in books like *American Humor* (1931) and *The Roots of American Culture* (1942). And with the rise of the Cold War underlining the differences between democratic and totalitarian societies, sociologists David Riesman and Reuel Denny evaluated the social currents animating popular culture in Denny's *The Astonished Muse* (1957), for which Riesman, who showed a particular interest in popular music, wrote the introduction.

European scholars were also pivotal in shaping the field. Johan Huizinga's *Homo Ludens* (1938), Roland Barthes's *Mythologies* (1957), and Antonio Gramsci's prison letters (written in the 1920s and 1930s but not published until the 1970s) have proved among the most influential works in defining the boundaries, strategies, and meanings of popular culture. While none of these works focused on American popular culture specifically, their focus on the jetsam and flotsam of daily life since the medieval period proved enormously suggestive in an American context.

It has only been at the end of the twentieth century, however, that the study of popular culture has come into its own in its own right. To a great extent, this development is a legacy of the 1960s. The end of a formal system of racial segregation; the impact of affirmative action and government-funded financial aid; and the end of single-sex education at many long-established universities dramatically transformed the composition of student bodies and faculties. These developments in turn, began having an impact on the nature and parameters of academic study. While one should not exaggerate the impact of these developments—either in terms of their numbers or their effect on an academy that in some ways has simply replaced older forms of insularity and complacency with new ones—it nevertheless seems fair to say that a bona fide democratization of higher education occurred in the last third of the twentieth century, paving the way for the creation of a formal scholarly infrastructure for popular culture.

Once again, it was foreign scholars who were pivotal in the elaboration of this infrastructure. The work of Raymond Williams, Stuart Hall, and others at Britain's Centre for Contemporary Cultural Studies in the 1950s and 1960s drew on Marxist and psychoanalytic ideas to explain, and in many cases justify, the importance of popular culture. Though not always specifically concerned with popular culture, a panoply of French theorists—particularly Jacques Derrida, Louis Althusser, and Michel Foucault—also proved highly influential. At its best, this scholarship illuminated unexamined assumptions and highly revealing (and in many cases, damning) patterns in the most seemingly ordinary documents. At its worst, it lapsed into an arcane jargon that belied the directness of popular culture and suggested an elitist disdain toward the audiences it presumably sought to understand.

Like their European counterparts, American scholars of popular culture have come from a variety of disciplines. Many were trained in literature, among them Henry Nash Smith, whose *Virgin Land* (1950) pioneered the study of the Western, and Leslie Fiedler, who applied critical talents first developed to study classic American literature to popular fiction like *Gone with the Wind*. But much important work in the field has also been done by historians, particularly social historians who began their careers by focusing on labor history but became increasingly interested in the ways American workers spent their free time. Following the tradition of the great British historian E. P. Thompson, scholars such as Herbert Gutman and Lawrence Levine have uncovered and described the art and leisure practices of African Americans in particular with flair and insight. Feminist scholars of a variety of stripes (and sexual orientations) have supplied a great deal of the intellectual energy in the study of popular culture, among them Ann Douglas, Carroll Smith-Rosenberg, and Jane Tompkins. Indeed, the strongly interdisciplinary flavor of popular culture scholarship—along with the rise of institutions like the Popular Press and the Popular Culture Association, both based at Bowling Green University—suggests the way the field has been at the forefront of an ongoing process of redrawing disciplinary boundaries in the humanities.

By the 1980s, the stream of scholarship on popular culture had become a flood. In the 1990s, the field became less of a quixotic enterprise than a growing presence in the educational curriculum as a whole. Courses devoted to the subject, whether housed in communications programs or in traditional academic departments, have become increasingly common in colleges and universities—and, perhaps more importantly, have become integrated into the fabric of basic surveys of history, literature, and other fields. Political scientists, librarians, and curators have begun to consider it part of their domain.

For most of us, though, popular culture is not something we have to self-consciously seek out or think about. Indeed, its very omnipresence makes it easy to take for granted as transparent (and permanent). That's why trips to museums—or encyclopedias like this one—are so useful and important. In pausing to think about the art of everyday life, we can begin to see just how unusual, and valuable, it really is.

## Kahn, Roger (1927—)

---

Roger Kahn's 1972 bestseller *The Boys of Summer* instantly set the standard for nonfiction baseball writing. The memoir eloquently captured the essence of the 1950s Brooklyn Dodgers, analyzing the courage of Jackie Robinson, Roy Campanella, and teammates both on the diamond and in their post-baseball lives. A former reporter for the New York *Herald-Tribune* and protégé of John Lardner (1912-1960), Kahn established himself as the premier baseball author of his generation with a series of critical and popular successes. Kahn's simple, clear prose evoked family and literature, and articulated the hold baseball continues to have upon the American consciousness. *Memories of Summer*, which included poignant profiles of Willie Mays and Mickey Mantle, was published in 1997, the same year Kahn led a failed quest to bring the Dodgers back to Brooklyn. Kahn's admirers ranged from Ronald Reagan to Robert Frost, who discussed the fortunes of the Boston Red Sox with Kahn during a 1960 interview.

Hans von Kaltenborn

## Kaltenborn, Hans von (1878-1965)

---

With his peppery but precise delivery, the "Dean of Commentators," Hans von Kaltenborn, was a familiar feature of the American airwaves for over 30 years. Kaltenborn started his career as a newspaperman, but then moved to radio at the very moment the new medium was beginning to establish itself as a disseminator of news. In the 1920s, when broadcast news was rare and usually consisted of a narrative accounting of current events, Kaltenborn maintained the unorthodox view that newscasters should not only report facts and information, they should provide analysis and insight into the situation "behind the headlines." Often regarded as the first regular radio news commentator, Hans's vast knowledge of foreign affairs and international politics amply equipped him for covering crises in Europe and the Far East in the 1930s. His vivid reporting of the Spanish Civil War and the Czech Crisis of 1938, more than any other feat of broadcasting, firmly established the credibility of radio news in the public mind and helped to overcome the nation's isolationist sensibilities.

Throughout his life, Kaltenborn was rarely far from the news. He was born on July 9, 1878, to German immigrant parents in Milwaukee, and when old enough left his father's building material business to do odd jobs at a local newspaper. His press career began in earnest when, at age 19, he joined the Fourth Wisconsin Volunteers Infantry and covered the Spanish-American War for the Merrill (Wisconsin)

*Advocate*. He moved to the Brooklyn *Eagle* in 1902 and entered Harvard's journalism program three years later. Always restless, Kaltenborn spent his summers traveling in Europe and lecturing on conditions there when he returned home. It was in this latter capacity that Kaltenborn developed the oratorical skills that would serve him well when he switched mediums.

On April 4, 1922, while working as an *Eagle* editor, Kaltenborn delivered the first current events analysis in radio history while covering a coal strike for WVP. The same year, he broadcast a news summary live from the Statue of Liberty for WYCB. Throughout the 1920s, Kaltenborn's on-air activities were confined largely to the New York area, with a weekly half-hour program of commentary for WEA and "Kaltenborn's Digest" for WOR. In 1923 he became the first "network" newscaster when a Washington, D.C., station decided to link with WEA and carry his broadcasts. By 1929 he was a national personality and could be heard over 19 CBS stations.

In 1930, after 20 years with the press, he resigned from the *Eagle* and became a full-time broadcaster. His national radio exposure was given a major boost by his coverage of the 1932 Hoover-Roosevelt presidential campaign, and when his "Kaltenborn Edits the News" program moved to a Friday-evening spot in 1935.

Unlike many of his contemporaries, Kaltenborn understood the nature of his radio audience. While he spoke rapidly, he was always

lucid and rarely employed complex words or long sentences. He quickly overcame the blustering habits he had acquired as a platform speaker and adopted an informal and more conversational vocal style that appealed to listeners. Rather than use a script, he preferred to speak extemporaneously, often making gestures as if he could actually see his vast audience. His penchant for ad-libbing often brought him into conflict with sponsors and network executives, who expected to review his speech before airtime. In 1948, Harry Truman delighted the nation when he imitated Kaltenborn's "clipped style" for the newsreel cameras.

While in the mid-1930s newscasts were unsponsored and attracted diminutive audiences, signs of conflict in Europe increased public interest in radio news. Kaltenborn was quick to recognize this fact. In 1936, he brought the events of the Spanish Civil War into millions of American living-rooms with his live report of the Battle of Irun. With microphone in hand and concealed within a haystack, Hans gave listeners a complete blow-by-blow account as Franco's forces endeavored to drive the Loyalists from the field. His eyewitness report was "punctuated by machine gun fire," and he even managed to remain on the air after exploding shells severed a main cable. With this broadcast (the first live report of a combat action), Kaltenborn gained the admiration of the entire broadcast community and earned for his *Headlines and Bylines* program a position in CBS's coveted Sunday lineup. Kaltenborn's other broadcast achievements in the 1936-37 period included reports from the League of Nations and the London Economic Conference and interviews with Hitler and Mussolini.

While Kaltenborn achieved many notable on-air triumphs by 1938, his coverage of the Czech Crisis in September of that year made him a household name. When Hitler's demands for the cessation of the Sudetenland threatened to plunge all of Europe into war, Kaltenborn spent 18 days in CBS's Studio Nine keeping America informed of every phase of the crisis. Sleeping on a cot and subsisting on a diet of onion soup and coffee, Hans would rush to the microphone whenever a new flash or bulletin was received, deliver the news to an anxious public, and immediately comment on it. Every time he performed this ritual, all broadcasts on the 115-station network were instantly interrupted. In addition to reading dispatches and providing commentary, Kaltenborn also acted as the first modern news anchor, coordinating the on-air reports of other network correspondents stationed at points throughout Europe. Given his knowledge of German and French, Hans was able to provide simultaneous translations of the speeches of Hitler and French Premier Daladier. By September 28, Kaltenborn had made 85 separate broadcasts on the situation. This feat brought him over 50,000 letters and telegrams of praise, as well as *Radio Daily's* "Most Popular Commentator" award. His enormous renown earned him both a sponsor (Pure Oil) and a contract guaranteeing complete editorial freedom (quite unprecedented). The faith Kaltenborn's listeners developed in radio news as a result of his Czech Crisis broadcasts contributed to the widespread hysteria produced when CBS "covered" another conflict the following month—Orson Welles' *War of the Worlds*. Kaltenborn's reputation for being the first and most reliable man on the air led to a woman's comment on the public panic: "How ridiculous! Anybody should have known it was not a real war. If it had been, the broadcaster would have been Hans."

In the summer of 1939, when Germany signed a nonaggression agreement with the Soviet Union and threatened the integrity of Poland, Kaltenborn mobilized for another crisis. As Europe moved closer to the brink, he spent three weeks on the continent interviewing

key political and diplomatic figures. When he delivered the news of the outbreak of World War II in September, over half of all radios in America were tuned to him.

In 1940, Kaltenborn found himself immersed in controversy. While the United States was officially neutral in the European war, Hans was an outspoken interventionist. His broadcasts in favor of aiding Britain were bitterly criticized by the American First Committee. When this position brought him into conflict with CBS news director Paul White, Hans relocated to NBC.

In 1941, Kaltenborn's commentaries dwelt increasingly on the need for American vigilance and defense in the Pacific. He observed the gradual deterioration of U.S.-Japanese relations and warned of an aggressive move by the latter weeks before Pearl Harbor. With America's entry into the war, Kaltenborn remained an active broadcaster. Despite his age (63), he carried a microphone to every major battlefield (from Guadalcanal to Rome) and interviewed soldiers and statesmen alike. In 1945 he fulfilled a personal mission when he covered the opening of the new United Nations in San Francisco. His wartime accomplishments were recognized with the 1945 DuPont Radio Award and nine other honors in 1946.

Kaltenborn remained at NBC after the war and continued regular newscasting until 1953. Thereafter he made several television appearances, but never developed an affection for the visual medium. Kaltenborn's rich on-air life and his many broadcast achievements are chronicled in his autobiography, *Fifty Fabulous Years* (1950), and in a string of books containing his most well known radio commentaries—*Kaltenborn Edits the News* (1937), *I Broadcast the Crisis* (1938), and *Kaltenborn Edits the War News* (1942). When he died in June of 1965, much of the broadcast industry and many of his former associates attended his New York City funeral.

## Kansas City Jazz

Jazz flourished in Kansas City during the 1920s and 1930s, becoming a key part of a significant happening in American sociopolitical history, as well as an important musical style. The rapidly spreading popularity of jazz in the 1920s led to the rise of the "territory bands," bands located throughout the Midwest and Southwest, which designated a specific city, often a small one, as home base and played dance dates throughout the surrounding territory. Jesse Stone, later the chief producer at Atlantic Records, and Walter Page were among the best known of the territory bandleaders. Other

musicians who got their start in the territories included Earl Bostic and Buster Smith.

Kansas City, Missouri, became the most important of the territorial centers with the ascension of the political machine run by Tom Pendergast. Pendergast's high tolerance for corruption led to a wide-open city during the Prohibition era, which became a center for anyone looking for booze, gambling, prostitutes, or entertainment. As a result, many of the important territory bands, such as Page's (originally from Oklahoma City) made their way to Kansas City, where clubs were open 24 hours a day and the music never stopped. It was estimated that in the mid-1920s, in the area centered by Vine Street and bounded by 12th Street to the north and 18th Street to the south, there were at least 50 clubs featuring music at any given time.

The first major Kansas City bandleader was Kansas City native Bennie Moten, whose band included during its run of ten years (1922-32) such musicians as Walter Page, Hot Lips Page, Eddie Durham, Eddie Barefield, Count Basie, Ben Webster, Buster Smith, and Jimmy Rushing.

Moten's band became a model for the Kansas City sound, which was based on ragtime and blues. Kansas City jazz typically featured a full, big-band sound, with simple arrangements that were based on riffs, or two- to four-bar musical phrases, rather than on fully developed melodies. This left a good deal of room for solo work, and some of the most important soloists in jazz developed within the Kansas City bands, including Coleman Hawkins (who left Kansas City early, in 1922), Ben Webster, Herschel Evans, and most importantly, Lester Young and Charlie Parker.

Other important Kansas City bands included Walter Page's Blue Devils and Andy Kirk's Clouds Of Joy. Page, a bassist, pioneered the "walking" bass style that became the rhythmic underpinning of swing and bebop. The Blue Devils included Young, Smith, Hot Lips Page, Count Basie and Jimmy Rushing. After his own group disbanded, Page played with Moten and Basie. Kirk's band, which included Don Byas, Howard McGhee, and Fats Navarro, and was noted for the arrangements of piano player Mary Lou Williams.

Williams was one of many significant piano stylists who flowered in Kansas City. The two great piano influences on the Kansas City players were ragtime (ragtime composer Scott Joplin was a Missourian) and blues. While blues was a prime ingredient in all Kansas City jazz, perhaps the foremost purveyors of Kansas City blues were pianist Pete Johnson and blues shouter Big Joe Turner. Turner was the bartender at the Sunset Club, where Johnson played piano, and he sang from behind the bar, with a powerful voice that needed no amplification. The owner of the Sunset Club and other clubs was Piney Brown, who would come to be the archetype of the Kansas City sound through Turner's "Piney Brown Blues" ("I dreamed last night/I was standin' on 12th Street and Vine/I shook hands with Piney Brown/And I could not keep from cryin'").

The most important piano player and the most important band leader to emerge from Kansas City was William "Count" Basie. Basie, unlike most of the other territory musicians, was not a native Midwesterner. Originally from New Jersey, he was stranded in Kansas City when a touring group he was with broke up. He then played for a while as an accompanist in silent movie theaters until he joined the Blue Devils in 1928 and Bennie Moten's Kansas City Orchestra in 1929. When Moten's group disbanded in 1932, its core musicians, including Walter Page and drummer Jo Jones, became the

core of the Count Basie Orchestra, which also featured Evans, Young, Harry Edison, Dicky Wells, Buck Clayton, and vocalists Rushing and Helen Humes.

Turner and Johnson were important in bringing the Kansas City sound to wider recognition when they were included in John Hammond's famous 1938 Spirituals to Swing Concert at Carnegie Hall. But it was primarily Basie who brought Kansas City jazz to nationwide popularity and ultimately international fame through radio broadcasts, touring, and recording.

Although the Kansas City club scene was affected by the Great Depression, it endured through the 1930s. The indictment of Boss Pendergast for income tax evasion in 1939 marked its conclusion. Before its popularity dwindled, however, it produced a mighty harbinger of the future, pianist Jay McShann, who came to Kansas City in 1936, formed a sextet in 1937, and put together his first big band in 1939. McShann's band was solidly blues- and riff-oriented, but it was also known as a breeding ground for new musical ideas. Charlie Parker joined McShann's band in 1940. His 12-bar solo on the band's 1941 recording of "Sepia Bounce" contributed to the bebop revolution of the 1940s.

## Kantor, MacKinlay (1904-1977)

In a literary career spanning nearly 50 years, MacKinlay Kantor grew from a pulp fiction writer who simply sought to earn a living to a highly respected novelist who made significant contributions in several genres. While he is perhaps best known for his 1956 Pulitzer Prize-winning novel *Andersonville*, Kantor also wrote influential works in the areas of detective fiction, westerns, and social commentary.

An Iowa native, Kantor began his writing career in the early 1920s, working as a reporter and columnist for an increasingly large series of newspapers in his home state and writing pulp fiction for various inexpensive publications. After several years, Kantor moved to Chicago, where he sought a larger canvas for his writing. Although he struggled initially, his first book, *Diversey*, which dealt with gang warfare in Chicago, was published in 1928, after which Kantor published a long string of books, articles, and short stories. Kantor served as a war correspondent during World War II from 1943 to 1944 and as a combat pilot for the U.S. Air Force in 1945. The latter experience provided the basis for his writing success that brought him national exposure.

While Kantor had published a number of works prior to the outbreak of World War II, his 1945 novella *Glory for Me*, based on his experiences as an air force gunner, was adapted for the big screen in 1946. The result was the film, directed by William Wyler, *The Best Years of Our Lives*, which traces the experiences of three World War

II veterans and the difficulty they have adjusting after returning home. The film won several Academy Awards, including an unprecedented double award to veteran Harold Russell, who portrayed a sailor who lost both his hands in the war, for best supporting actor and for bringing hope to returning veterans. Kantor's story also served as the basis for the television movie *Returning Home*, made in 1975.

The publication of the historical novel *Andersonville* a decade later brought Kantor even greater recognition. Kantor had long been fascinated with the Civil War, and the book was the result of the author's renowned diligent and thorough research. The book, which recounts the suffering of Union prisoners in a Confederate prison camp in Georgia. Prominent Civil War scholars such as Bruce Catton and Henry Steele Commager praised Kantor's book as the greatest Civil War novel ever written. The book spawned several made-for-television films, including the 1970 *The Andersonville Trial*, which portrays the war crimes trials of the camp's commanders, including the head official, Wirz, who was the only Civil War soldier executed for war crimes. The book was later adapted into a television miniseries (*Andersonville*) in 1995. Kantor's final novel, *Valley Forge*, published in 1975, was another fictional work based on historical events. It portrays the difficult experiences of the Continental Army during the American Revolution.

Although best known for his historical fiction, Kantor drew fans for his works of suspense fiction, which largely have deal with criminal police and legal procedure in their plots. Throughout the 1930s, Kantor produced a large number of pulp fiction suspense stories, including a series dealing with the exploits of Nick and Dave Glennan, Irish-American brothers who are police officers. Kantor frequently rode along with police forces, partly for research for his stories, and partly because he developed friendships with a number of police officers.

Kantor credited his early experience in writing pulp fiction for his later success. He was quoted in *Gale Literary Databases*, "I used to write a great deal of stuff for the pulp detective-and-crime story magazines, in the years when I had to make my living that way, and I don't think that my rather complicated talents were harmed in the least. The severe routine of such endeavor stimulated my sense of plot and construction, which need stimulation very badly indeed."

Among the awards Kantor won during his career are the O. Henry Award for his short story "Silent Grow the Guns," as well as the Presidential Medal of Freedom for his career work. He also received honorary doctorates in literature from Grinnell College, Drake University, Lincoln College, and Rippon College. In addition to his work as a war correspondent in World War II, Kantor served as a war correspondent during the Korean War in 1950 and worked as a consultant for the U.S. Air Force from 1951 to 1977. Kantor died of a heart attack on October 11, 1977, in Sarasota, Florida. He and his wife of over 50 years, Florence, had two children.

## Karan, Donna (1948—)

At the age of 26 and a week after her baby was born, Donna Karan was catapulted into recognition when she was named chief designer of Anne Klein upon Klein's death in 1974. Like Klein, Karan projected her personality and life-style into her clothes: active, versatile sportswear. She often layered body suits with easy, loose wraps. And by the 1980s, Karan had made blazers a basic for Anne Klein Company. In 1984, backers of Anne Klein set up Karan in her own business, which would later become one of the first publicly traded fashion houses. Donna Karan as a public company is something of a paradox because her designs are so idiosyncratic and personal. She designs for herself, certainly for a buxom physical type, and for a New York sensibility identified in her DKNY label. Yet her attire worn by celebrities, including Barbra Streisand, has made Karan a celebrity of the fashion world.

## Karloff, Boris (1887-1967)

One of the most famous horror movie stars of all time, Boris Karloff has become virtually synonymous with Frankenstein. As depicted by Karloff in 1931, Frankenstein was a sympathetic figure, a gentle monster. This image of Frankenstein has remained in the popular psyche for almost 70 years. Although he acted in over 150 films, Boris Karloff will always be irrevocably associated with his monster, and thus will remain a popular culture icon for eternity.

Boris Karloff was born William Henry Pratt on November 23, 1887 in a London suburb. The youngest of nine children, William never knew his father, a British Civil Servant who died in India when William was a baby. After the death of his mother a few years later, William was raised by his siblings, one of whom enjoyed a brief career as an actor on the London stage. From boyhood, William was drawn to the theatre and attempted to emulate his older brother the actor by appearing in school theatricals. The rest of his family, however, wished him to follow in the footsteps of his father and so William prepared for a career in the Civil Service.

William graduated from Kings College, London, with the intention of applying to serve in the consulate in Hong Kong. But his passion for acting had not waned and he attended the theatre every chance he could get. Finally he decided to pursue his theatrical ambitions and, to escape family disapproval, at 22 he left England for Canada. William traveled across the country for more than a year, taking odd jobs, before arriving in Vancouver, where he tried to break

**Boris Karloff**

into the local repertory company. After months of rejections, William spotted an advertisement for an experienced character actor in a company in Kamloops, British Columbia. Deciding to change his name to fit the “role,” he remembered an obscure relative on his mother’s side of the family named Karloff. Feeling William also was not quite right, he settled on Boris, and he got the job.

For almost ten years, Boris Karloff honed his craft in repertory companies throughout Canada. In 1917, Karloff arrived in Los Angeles, where the fledgling movie industry was booming. After a slow start, the tall, striking actor began to win extra roles and small speaking parts in silent pictures. Because of his strong, dark features, Karloff was usually cast as a villain, appearing in more than 40 silent pictures. But when Hollywood switched to sound, the actor’s theatrical training proved an asset, and he found his niche.

In 1930, Universal Pictures gambled on a film based on Bram Stoker’s *Dracula*. Starring Bela Lugosi in the title role, the film was a huge success. Universal decided to capitalize on the public’s new-found taste for horror movies with *Frankenstein*, also starring Lugosi. But the actor did not like the role and wanted to drop out. When the studio informed him that he would only be released from his contract if he could find another actor for the part, Lugosi suggested Boris Karloff.

Directed by James Whale, *Frankenstein* became an immediate classic. Karloff, whose strong features, athletic build, and considerable height were perfect for the role, gave a subtle and sympathetic performance that won over critics and touched the hearts of audiences. Universal immediately cast the versatile actor in two more leading roles, *The Mask of Fu Manchu* (1932) and *The Mummy*

**Boris Karloff’s incarnation as Frankenstein’s Monster.**

(1932). The two films cemented his popularity and, in 1932, 45-year-old Boris Karloff became a star.

Throughout the 1930s, Karloff starred in a string of popular horror pictures for Universal, including *The Black Cat* (1934), *Bride of Frankenstein* (1935), *The Raven* (1935), and *Son of Frankenstein* (1939), playing mad scientists and tormented monsters. He was also regularly cast as Asian characters and starred in a series of “Mr. Wong” detective movies. By the early 1940s, however, with the world at war and the United States on the brink of joining in, public interest in horror movies had waned and Karloff’s livelihood was threatened. But the veteran actor tramped on. In 1941, he starred in the Broadway production of *Arsenic and Old Lace* and, throughout the decade, Karloff found work in a wide variety of films, from the occasional horror picture to comedies such as *The Secret Life of Walter Mitty* (1947).

Unlike many Hollywood stars, Karloff never fought his type-casting. He understood that he owed his fame to Frankenstein and thus was good-humored about spoofing his horror image in films such as *Abbot and Costello Meet the Killer, Boris Karloff* (1949). By the early 1960s, with horror movies once again in vogue, the aging actor found himself a cult hero and very much in demand. He appeared with fellow horror stars Basil Rathbone, Peter Lorre, and Vincent Price in two popular films for American International Pictures, *The Raven* (1963) and *The Terror* (1963). He brought his creepy voice to the role of the Grinch in the television version of Dr. Seuss’s children’s Christmas tale, *How the Grinch Stole Christmas!* (1966). And in 1968, the 81-year-old Karloff gave an extraordinary turn as an aging horror-movie star in Peter Bogdanovich’s first film, *Targets*.

Karloff loved his profession, and he never stopped acting in movies. Famous for playing monsters, Karloff's real-life gentle spirit and gracious demeanor shone through on screen, no matter how scary the role. He embraced his cult status, becoming in the process one of popular culture's most beloved figures, the man behind the gentle monster.

## Kasem, Casey (1932—)

One of the most identifiable voices in radio and television, Casey Kasem is known throughout the world as the personality behind radio's most successful countdown program, *American Top 40*. Born Kemel Amin Kasem in Detroit in 1932, Kasem dreamed of becoming a baseball player until his broadcasting career began at WJLB Detroit in 1954. While he appeared in several motion pictures, numerous commercials, and television cartoon series (most notably as the voice of Shaggy on the popular *Scooby Doo* series) Casey Kasem did not become a household name until the debut of *American Top 40* on July 4, 1970. Considered to be the standard-bearer in modern countdown programs, Kasem revolutionized the format with his unique style and warm personality.

Kasem's trademark "teaser-bio" format, which he first employed at an Oakland, California radio station, became not only the hallmark of *American Top 40* but also influenced countless disk jockeys and similarly themed radio programs. Kasem's "teaser-bio" technique allowed him to essentially "tease" the audience by discussing a recording artist's previous chart singles, biographical information, or any other relevant information before playing the actual song.

In addition, Kasem allowed listeners to send in personal letters with musical requests. These "long distance dedications" were then read on the air beginning with two words known throughout the world by radio listeners: "Dear Casey." Arguably the most popular and recognized segment of the program, Kasem's "long distance dedications" became as ingrained in popular culture as the songs ranked on the program.

To credit Kasem's contribution to popular culture based purely upon innovative formatting in radio programming would certainly be a sufficient legacy for most on-air personalities, but Kasem's most notable and identifiable characteristic is unquestionably his unique vocal delivery. With his warm voice and reliance on active words and phrases (such as "pole-vaulting," "leapfrogging," and "tumbling") Casey Kasem brought a friendly, sportsmanlike atmosphere to the competitive arena of record sales and airplay statistics that have won millions of fans.

The success of Kasem's *American Top 40* on FM stations around the world resulted in several television series based around the

Casey Kasem

*American Top 40* format. With the fragmentation of radio formats beginning in the early 1990s, Kasem kept pace with changing musical tastes and trends. In addition to *American Top 40*, Kasem has hosted a variety of countdown programs such as *Casey's Hot 20* (for the adult contemporary market), all using the "teaser-bio" format.

Proof of Kasem's remarkable impact on radio and television is evident not only in his staying power at the edge of the twenty-first century but the numerous honors and awards he amassed. Casey Kasem's legendary status was cemented with a star on the Hollywood Walk of Fame, the *Billboard* Lifetime Achievement Award, and induction into the Radio Hall of Fame.

## *Kate & Allie*

*Kate & Allie* was one of network television's most popular comedies dealing with feminist issues during the 1980s. Created by Sherry Coben and supervised by veteran producers Bill Persky and Bob Randall, the series revolved around two divorcees, Kate McArdle (Susan Saint James) and Allie Lowell (Jane Curtin), who shared a Greenwich Village apartment and were adjusting to a new single lifestyle with three children between them. *Kate & Allie*, which debuted on CBS on March 19, 1984, dealt with practical problems faced by women recently on their own: how to achieve financial independence, how to date again, and how to care for kids who were growing up too quickly in the city. The women, friends since high school, evolved over the years, holding down different jobs and eventually starting a catering business together. The series reflected questions of identity and personal growth experienced by many working women, who helped to make *Kate & Allie* a Top Twenty show for three consecutive seasons. The series experienced a decline when Allie got married and was cancelled after 122 episodes in 1989.

## *The Katzenjammer Kids*

The mischievous brothers Hans and Fritz Katzenjammer were invented by German-born cartoonist Rudolph Dirks in 1897. Along with the Yellow Kid, Happy Hooligan, and Little Nemo, they became pioneering stars of the American newspaper funny paper sections that burgeoned in the early 1900s. The Kids, along with their Mama, the Captain, and the Inspector, are also among the very few comics characters ever to have two separate and independent pages devoted to their activities.

The Kids—Fritz was the blond one and Hans the dark-haired brother in the original cartoons—made their debut in William Randolph Hearst's *New York Journal* on Sunday, December 12, 1897. Dirks was twenty when he was asked by his editor to come up with a feature in the vein of the fiendish youths Max and Moritz, created some three decades earlier in Germany by Wilhelm Busch. Much more than imitations, the Brothers Katzenjammer developed distinct personalities of their own. They were brilliant strategists, impressive orators, clever conversationalists, and experts at creating explosions, setting traps, and persuading assorted animals, especially elephants and wildcats, to participate in their schemes. They were dedicated to attacking conformity, pomposity, adult authority, and the traditional values held by society. Combining the best qualities of con men, burglars, guerrilla warriors, and jesters, they elevated prankery to a fine art. The lads, along with the other central characters, spoke in a

sort of vaudeville Dutch dialect that was rich with such words as "dollink," "dumbkopf" and "dod-gasted."

Dirks broke with William Randolph Hearst in 1913 and, after protracted legal battles, took his characters to Joseph Pulitzer's rival *New York World* in 1914. The final court decision, however, basically affirmed that both Hearst and Dirks had the rights to the characters. In Hearst papers across the country *The Katzenjammer Kids* again appeared, while in those newspapers using *World* features the page was eventually called *The Captain and the Kids*. The new artist employed by Hearst to draw its strip was Harold H. Knerr, a talented cartoonist from Philadelphia who'd inked a *Katzenjammer* imitation titled *The Fineheimer Twins* for several years. Though he never explained why, Knerr switched the names of the boys, making Hans the fair-haired one and Fritz the darker one in his pages.

Both versions began setting the Katzenjammer Kids and the other characters in less urban, even exotic locales. The boys and their Mama, along with their star boarders, the Captain and the Inspector, began taking trips to all parts of the world. By the middle 1920s Dirks had his crew residing on a tropical island that was ruled over by black royalty. Although the Knerr and Dirks versions were supposed to be completely independent of one another, Knerr soon had his crew settling down on one of the Squee-Jee Islands. Knerr's island had similar rulers, but he added some new characters of his own in the persons of a spinster school teacher named Miss Twiddle and her two pupils, little blonde Lena and the curly-haired and hypocritical Rollo Rhubarb, who equaled the Kids in slyness and plotting. By adding Lena to the mix, Knerr was able to expand the range of Hans and Fritz's activities, and both of them suffered through spells of courting the girl.

By the late 1930s, both versions were being reprinted in competing comic books. For several years in that decade, the United Feature Syndicate, which had taken over the feature when the *World* folded, offered a daily *The Captain and the Kids* strip. Wacky in the Marx Brothers mode, this mock adventure strip was written and drawn by Bernard Dibble, a former Dirks assistant and ghost. Dirks continued to sign his page, but in the middle 1940s turned the drawing over to his son John. The senior Dirks died in 1968 and United stopped its version in 1979. Knerr died in 1949 and the Katzenjammers continued under such artists as Doc Winner, Joe Musial, and Hy Eisman, who was still drawing them in the 1990s.

## *Kaufman, Andy (1949-1984)*

Andy Kaufman burst onto the national scene as a guest on the very first *Saturday Night Live* in October of 1975. Standing in the middle of a bare stage accompanied by an old record player, Kaufman put on a recording of the *Mighty Mouse* theme song. He stood silent until the chorus, when he broadly lip-synched "Here I am to save the day," then went mute until the chorus arrived again. This type of

perplexing yet hysterical performance became Andy Kaufman's trademark and is his legacy as an original comic force. Despite his untimely death at the age of 34 from lung cancer, Kaufman's impact on popular culture was dramatic. Kaufman was a comedian who never told a joke; instead he broke the mold by creating a new comic style that was as much performance art as traditional stand-up.

Although Kaufman started as a stand-up working clubs like the Improv, he never considered himself a comedian. Steve Allen, in his book *Funny People*, wrote that Kaufman was "right when he claims not to be a comedian. A comedian, quite simply, wants laughs. Andy demands more. He calls for an emotional involvement that runs a fuller gamut. He wants you to feel uncomfortable, uneasy, unhappy, ecstatic, deeply moved, derisive, bored. He wants you to believe his characters are who they claim to be and react accordingly." Throughout his career, Kaufman challenged his audience. On another *Saturday Night Live* appearance, Kaufman's "joke" was simply to read from *The Great Gatsby*. He could delight an audience with stunts such as taking his Carnegie Hall audience out for milk and cookies and infuriate another audience by bringing a sleeping bag on stage and napping as part of his performance.

Kaufman used a *Saturday Night Live* appearance for another stunt that blurred the line between reality and illusion. After Kaufman was cut from an episode in 1982, he publicly feuded with producer

Dick Ebersol. The feud climaxed when a telephone poll was held to determine whether or not Kaufman should be allowed back on the show. He lost, and never appeared again. A similar feud was displayed on *Saturday Night Live's* competitor *Fridays* just a year earlier. During a live show in February 1981, Kaufman got into an argument and physical altercation with members of the cast and crew. Again, this hoax perpetuated by Kaufman and the show's producers was perceived as real by many viewers.

The apex of this part of his career was Kaufman's involvement in professional wrestling. A lifelong wrestling fan, particularly of villain wrestler "Nature Boy" Buddy Rogers, Kaufman declared himself the "Inter-Gender Wrestling Champion" and began challenging women in his concert audience to wrestle. His match with *Playboy* model Susan Smith was featured in the magazine's February 1982 issue. After a match against a woman in Memphis, Kaufman became involved in a pro wrestling feud with local champion Jerry "The King" Lawler, which included Kaufman sending videos mocking the Memphis fans. Kaufman was "injured" by Lawler during a match, and the two appeared for an interview on the *David Letterman Show* in July 1982, supposedly to offer apologies. Things got heated and Lawler slapped Kaufman hard across the face, knocking him down. Kaufman responded with an obscenity laced tirade and announced he was suing NBC. All of this was treated as front-page

news, and as real. It was, like other things in Andy's hoax history and professional wrestling, merely an elaborate ruse.

Kaufman played the bad guy in the feud with Lawler and delighted in people jeering him. He invented a heel entertainer character called Tony Clifton, the world's most obnoxious performer, who would taunt his audience. Kaufman claimed he was not Clifton, which was somewhat true as his writing partner Bob Zmuda often played Clifton. Kaufman went to great lengths to create the illusion that Clifton was real.

Kaufman's performance as Latka Gravas on the critically acclaimed television series *Taxi* (1978-1983) was his biggest mainstream success. Latka was based on one of Andy's most popular characters: "the foreign man," a twitchy immigrant who spoke in a combination of broken English and gibberish. Kaufman's best-known bit was the foreign man telling old jokes, doing horrible impressions, then launching into a brilliant impersonation of Elvis Presley.

While successful on TV and in concert, Kaufman only made a few movies. *Heartbeats* (1981) was a critical and commercial dud. Better received were his two wrestling movies: *I'm from Hollywood* (1992), which chronicles the feud with Lawler; and his send-up of the art house hit *My Dinner with Andre*, called *My Breakfast with Blassie* (1993), where Kaufman conversed with retired pro wrestler Fred Blassie at a coffee shop. Most of Kaufman's best moments were captured in NBC's *A Comedy Tribute to Andy Kaufman* (1995).

Another tribute to Kaufman was the 1992 hit song "Man on the Moon" by REM. The song talks about Kaufman "goofing on Elvis." *Man on the Moon* was also the title for a 1999 film about Kaufman's life starring Jim Carrey. As with Elvis, there is a persistent rumor that Kaufman is still alive. With his penchant for hoaxes, it was a rumor that spread widely, and faking his own death indeed was something Kaufman had considered. Kaufman was brilliant at defying reality as an entertainer and highlighting irony as a comedian. He was, according to Ron Rosenbaum, "going where few comedians had dared go before . . . he made comedy dangerous again."

## Kaye, Danny (1913-1987)

Specializing in tongue-twisting patter songs, Danny Kaye was a consummate entertainer and comic. He is well remembered for a string of comedies for Samuel Goldwyn in the 1940s, as well as his persistent and honorable efforts for charities, especially UNICEF (United Nations International Children's Emergency Fund).

Born David Daniel Kaminsky in Brooklyn, New York, in 1913, he had a very mixed career in entertainment prior to his motion picture debut. He was a genuine vaudevillian; a dancer, a singer, and a comedian, though without much success at first in any of these careers. He first appeared in pictures in some two-reel comedies, such

as *Getting an Eyeful*, *Cupid Takes a Holiday* and *Dime a Dance*, that were moderately amusing but failed financially—these shorts were later compiled into the inaccurately titled film *The Danny Kaye Story*.

He managed, however, to make his Broadway debut in 1940, and his fortunes turned as he met and married his talented lyricist Sylvia Fine, who provided him with most of his best material. His number, "Tchaikowsky," from the musical *Lady in the Dark*, in which he named 54 Russian composers in 39 seconds, proved to be a memorable show-stopper.

Samuel Goldwyn caught the comic at a nightclub and resolved to make a star out of him. He tried to get Kaye to get his nose fixed (Kaye refused) and did persuade him to lighten his hair to brighten his features. Goldwyn placed Kaye under contract and featured him in a mediocre wartime musical, *Up in Arms* (1944). "The Lobby Number," a song about waiting in line at the movies and then waiting through an endless parade of meaningless credits, was one of the only bright spots of the production that featured Kaye.

Much better was *Wonder Man* (1945), with Kaye in a dual role as twin brothers, one of whom is murdered for fingering a mob boss. The ghost of the murdered brother inhabits the body of his milquetoast twin, who is forced to impersonate the brash entertainer. The film's highlight comes when, in trying to evade some killers and alert the police, Kaye assumes the identity of an opera singer and improvises his part.

But Kaye soon came to feel that he was being treated as a specialty act rather than as an actor. Goldwyn placed him in lackluster remakes such as *The Kid from Brooklyn* (a 1946 remake of Harold Lloyd's *The Milky Way*) and *A Song Is Born* (1948), a misfired adaptation of James Thurber's *The Secret Life of Walter Mitty* with Kaye as the day-dreaming Mitty impersonating various occupations, and a well-intentioned but failed musical bio *Hans Christian Anderson* (1952). Kaye restricted himself to one film a year, devoting the rest of his time to performing on radio, on records ("Civilization" with the Andrews Sisters was a particular delight), and on the stage.

*On the Riviera* (1951) for Twentieth Century-Fox was yet another dual role film as well as a remake of both *Folies-Bergère* and *That Night in Rio*. For Warner Brothers, Kaye appeared in *The Inspector General* (1949), based on the Gogol story. He was determined to take over control and direction of his film career, forming with his wife Sylvia their own production company, Dena, named after their daughter. They hired the writing-directing-producing team of Norman Panama and Melvin Frank, who conjured up Kaye's two finest films and for the first time fashioned characters for him that audiences could really care about. The first was *Knock on Wood* (1954), with Kaye as a ventriloquist who finds himself caught up in international espionage and at the climax eludes his pursuers at a ballet.

Even better, however, was *The Court Jester* (1956), at \$4 million the most expensive screen comedy up to that time. Kaye plays a member of the underground protecting the rightful king of England, an infant who bears the birthmark of the purple pimpernel on his bottom. Kaye is forced to impersonate Giacomo, the King of Jesters and Jester of Kings, who it turns out is the usurper's (Basil Rathbone) secret assassin. Unforgettable are Sylvia Fine's version of "The Jester's Lament," the witch's warning ("The pellet with the poison's in the vessel with the pestle; the chalice from the palace is the brew that is true!"), and the send-up of swashbuckling scenes at the end.

In between, Kaye appeared in Paramount's *White Christmas* (1954) as Bing Crosby's buddy; together they seek to boost the

popularity of Dean Jagger's winter resort. Despite the film's mediocrity, it proved his biggest hit. Kaye received a special Oscar in 1954 "for his unique talents, his service to the Academy, the motion picture industry, and the American people."

Kaye tried another musical biography in Mel Shavelson's *The Five Pennies* (1959), where he played bandleader Red Nichols, but once Danny Kaye routines were written into the storyline, the film made it seem as if Nichols was impersonating Danny Kaye. The film's one true highlight was Kaye's dynamic duet with Louis Armstrong. Kaye returned to form in *On the Double* (1961), where he was once more in a dual role as an American GI asked to impersonate a British military martinet. At the climax, Kaye also impersonates Adolf Hitler and a Dietrich-like chanteuse named Fräulein Lily. But a try at slapstick comedy in Frank Tashlin's *The Man From the Diner's Club* (1963) failed to serve Kaye's talents well.

Television beckoned and Kaye dropped his film career to embark on his own television variety program, *The Danny Kaye Show*, which ran from 1963-1967. He returned to film once more to play the philosophical Raggpicker in *The Madwoman of Chaillet* (1969), but while his "trial" scene performance in which he "defends" the knaves of the world was outstanding, the rest of this adaptation of Jean Giradoux's play was decidedly lackluster. Despite his lack of formal training, Kaye had an interest in trying his hand at conducting and was given various gigs as a comic guest conductor at various city orchestras. He returned to Broadway to play Moses for the Richard Rodgers' musical *Two by Two* in 1970.

The last of Kaye's great work was done for television. He appeared in two television specials in 1976, as Geppetto in *Pinocchio* and as Captain Hook in *Peter Pan*, as a concentration camp survivor who protests street demonstrations by Neo-Nazis in *Skokie* (1981), and as a mysterious old man who possesses a watch holding Earth's last hour in Harlan Ellison's "Paladin of the Lost Hour" for the revived *Twilight Zone* series (1985).

Kaye leaves behind a legacy of entertaining performances on Decca Records, several show-stopping comedy routines and songs in various films (where he usually played shy but lovable schnooks who won the girl at the end), an increased awareness of the aims of UNICEF, and a pair of powerful dramatic performances on television.

## Keaton, Buster (1895-1966)

With the possible exception of Charlie Chaplin, Buster Keaton stands as the greatest comedian of the silent movie era. Keaton

**Buster Keaton**

appeared in well over 100 shorts and features during his fifty-year film career. At the height of his popularity, he played aloof, stone-faced characters (he only smiled once in a film), who fiercely battled both nature and out-of-control machinery to achieve modest goals (usually for the affections of a woman). Much of his best work was lost for decades, only to be rediscovered by an appreciative new generation of filmgoers in the 1950s.

Keaton began learning his craft at an early age. Born Joseph Francis Keaton in Piqua, Kansas, in 1895, Buster spent his youth traveling the vaudeville circuit with his parents, who staged a mildly popular comedy act. By age five, Buster, who received his nickname from a family friend after he tumbled down a flight of stairs without hurting himself, had become the star attraction of "The Three Keatons." His primary role in the show was to absorb his father's abuse—he kicked, punched, and threw Buster around the stage with little regard for his well-being. Buster's ability to take this abuse without showing pain or emotion brought roars of approval from packed houses and lifted the act to prominence.

Keaton's big break came in 1917 when he met comedic film star Roscoe "Fatty" Arbuckle, who was familiar with his vaudeville work. Arbuckle asked him to make a brief appearance in his current short, *The Butcher Boy*. Keaton accepted and never returned to the stage. The film was a hit, and Keaton joined Arbuckle's Comique Studio as an actor, director, and gag writer. He eagerly studied Arbuckle's filmmaking methods and made them his own. He adapted the emotionless demeanor he had affected for his stage act to the screen, and tried to strike a balance between Arbuckle's slapstick style and his own, more subtle brand of humor. The resulting mix

worked, and the two made a number of successful films between 1917 and 1920. When Arbuckle left Comique in 1920, Keaton was put in charge of the studio's comedy unit.

Making the most of his new-found authority, Keaton made a string of acclaimed two-reel comedies that contain some of the finest moments ever captured on film. Many of his gags had a surrealistic quality. In *The High Sign* (1920), for example, he sits down on a bench and unfolds a newspaper which, when fully exposed, completely engulfs him. He wanders, lost, through a maze of want ads before escaping through a hole in the paper. His best work also took advantage of audiences' love and fear of the modern, mechanized world. Sometimes, as in *The Electric House* (1922), machines go too far. Keaton's elaborately wired house goes haywire, causing his washing machine to throw dishes and his escalator to move so quickly that it hurls people out of a window. At other times, man is clearly the master of machine. In *The Blacksmith* (1922), Keaton (without realizing it) manages to turn a white Rolls-Royce black, one handprint or blowtorch mark at a time. The infernal and filthy machine meets its final demise when Buster shatters its windows with a sledgehammer, then crashes an engine into it. Sometimes the laugh was at man's expense, sometimes at the machine's, but the two were always inextricably linked, both in audiences' world and Keaton's.

Keaton's sense of absurd surrealism and his use of machines as comedic vehicles carried over into his full-length comedies. In 1923, he directed his first feature film, *The Three Ages*, a satire of D.W. Griffith's *Intolerance*. Although it was an admirable debut, he did not really hit his stride until *Sherlock Jr.* (1924), in which he plays a projectionist who, while dreaming, becomes a character in the movie he is showing, a concept that Woody Allen would later use in *The Purple Rose of Cairo*. Keaton cranked out four more films in the next two years, including his hilarious *The Navigator* (1924), before producing his magnum opus, *The General* (1926). In this, his favorite film, he plays a young, Southern train engineer eager to enlist in the Confederate Army. The Army rejects him, claiming that he is more valuable as an engineer than a soldier. Adding insult to injury, the Yankees steal his beloved locomotive and spirit it across their lines, with Keaton furiously chasing in another engine. He eventually steals back his train, and the film climaxes with a spectacular crash as a bridge collapses under the pursuing bluecoats' train. Besides containing some priceless comedy, *The General* has an epic sweep that was matched by few films in the silent era.

Keaton's work during the 1920s should have been enough to ensure his place among the immortals of film. And yet, he was in very real danger of being forgotten. Even at the peak of his popularity, he was unfavorably compared to rival comic Charlie Chaplin (who he privately loathed). Critics labeled Chaplin an "intellectual" comedian, while Keaton was merely an average funnyman who knew how to take a fall.

His sound-era films did little to enhance his reputation. In 1928, Keaton gave up his independence and signed with MGM. He made the leap to talking films but found himself being typecast as an incompetent bumbler. Worse, he had to play second banana to the scene-stealing comic Jimmy Durante. The two combined on several dreary films in the 1930s that effectively ended Keaton's career. He continued to make mostly forgettable films into the 1960s, highlighted by memorable appearances in *It's a Mad, Mad, Mad, Mad World* (1963) and *A Funny Thing Happened on the Way to the Forum* (1966), and also starred in two short-lived television shows. His silent movies sat in film cans, unwatched and disintegrating. The release of *The Buster Keaton Story* (1957), a mostly fictionalized account of his

life, renewed interest in his films, which were restored and finally acknowledged as classics. He received a special Academy Award in 1959 for his "unique talents." His body torn by a lifetime of smoking and periodic bouts of alcoholism, Buster Keaton died of cancer in 1966.

## Keillor, Garrison (1942—)

The humorist Garrison Keillor is best known as the host of *A Prairie Home Companion* (1974-1987; 1993—) and the *American Radio Company* (1989-1993), both of which have been carried nationally on public radio to up to five million weekly listeners. He has also published stories for the *New Yorker* and novels about radio

Garrison Keillor

and small town life in the Midwest. Keillor is the consummate storyteller, whose creation of the small town of Lake Wobegon, Minnesota, where “all the women are strong, all the men are good-looking, and all the children are above average,” has won him a large following of listeners and readers drawn to the nostalgic, down-home sentiment of his monologues and stories.

Born Gary Edward Keillor in Anoka, Minnesota, he grew up in rural Brooklyn Park, where he was a devoted listener of popular radio shows like *Fibber McGee and Molly* and *Gangbusters*. Because his fundamentalist parents banned television until Keillor was in high school, he tended to see television as sinful and radio as a magical doorway to another world far away from his hometown. In 1991, Keillor published *WLT: A Radio Romance*, a novel that recreates the golden days of radio and suggests the nostalgia Keillor feels for the medium. As he told Reed Bunzel, “There’s no romance in television; it’s just the Wal-Mart of the mind. Radio is infinitely sexier.”

Keillor began in radio in 1963 at KUOM at the University of Minnesota, where he was an English major. Simultaneously, he was also honing his writing skills, wanting to follow in the footsteps of the legendary Mark Twain and his favorite writers at the *New Yorker*, E. B. White and James Thurber. He published his first story in the magazine in 1970. Ever since, he has had a dual career as a radio personality and a writer.

In the 1970s, Keillor created a popular morning show on St. Paul’s public radio station which would eventually be called *A Prairie Home Companion*. The show combined many styles of music, humorous spots for made-up commercial sponsors—like Powdermilk Biscuits (which “help shy persons get up and do what needs to be done”) and Jack’s Auto Repair—and tall tales that bordered on burlesques of small town life. Over the years, Keillor would develop his style of storytelling to more closely resemble local-color realism told from the visitor’s point of view. Opposed to the ironic distance maintained by contemporary stand-up comics, Keillor wanted the freedom to poke fun at the provincialism and Lutheran view of life that pervaded small towns in Minnesota, while also creating sympathy for his characters (many of them based on people he knew). The result—his nearly 30-minute-long monologues on the news from Lake Wobegon—has become the most admired aspect of his radio shows.

With the publication of his most popular novel, *Lake Wobegon Days* (1985), Keillor solidified the identity of the small Minnesotan town in the nation’s imagination and established his own persona as the hometown boy who could never go home again. Two years later, he published *Leaving Home: A Collection of Lake Wobegon Stories*, and left St. Paul, where he had been producing *A Prairie Home Companion*, to move to Denmark with his new wife and devote himself to his writing. Within a few months he returned to settle in New York, where he fulfilled his long-time dream of being on staff at the *New Yorker*. But in 1989, Keillor returned to radio with his *American Radio Company*, which like *A Prairie Home Companion*, was a throwback. It drew many well known musical acts and tried to shed the small town image of its predecessor, becoming more of a glitzy big city program. Keillor’s new persona was that of a Midwestern boy who was wide-eyed and lost amidst the wonders of New York, which had beckoned to him through his radio as a child. Within a few years, though, Keillor’s radio company was forced to leave New York because of the exorbitant expense of producing its shows there.

In 1993, Keillor made the difficult return to Minnesota, where he resumed broadcast of *A Prairie Home Companion*, which combines many of the elements of his original show with those of his New York show. It continues to be a mainstay of public radio programming

nationwide. Keillor and company take the show on the road and broadcast a portion of the season from New York, drawing large audiences wherever they go. The show still features its trademark news from Lake Wobegon and commercial sponsors, which include Bertha’s Kitty Boutique and Bebop-a-rebop Rhubarb Pie (“Nothing takes the taste of humiliation out of your mouth like a piece of rhubarb pie”), as well as recurring spots like Guy Noir, reminiscent of old detective shows.

Keillor’s career continues on its dual path. He published the novel *Lake Wobegon Boy* in 1997 to much acclaim and is writing a film script. Although National Public Radio had refused to distribute Keillor’s radio program in the 1980s because it believed the show would have only regional appeal (causing Minnesota Public Radio to form its own distribution network), Keillor has proven that Americans from New York to California cannot get enough of the sentimental nostalgia and good-natured humor that pervade Keillor’s stories about Lake Wobegon.

## Keitel, Harvey (1939—)

The long, prolific career of New Yorker Harvey Keitel comprises close to 80 films. They can be roughly divided into three main periods: 1973-1980, the years marked by his collaborations with Martin Scorsese; 1980-1992, a decade that Keitel spent waiting for his breakthrough while he made a long list of films in the United States and Europe; and the period after 1992, when he became a popular actor thanks to Quentin Tarantino’s *Reservoir Dogs*. Two biographical books about Keitel included the word “darkness” in their subtitles. Indeed, many in the audience appreciated, above all, Keitel’s ability to act out through his roles deep emotional conflicts that seemingly have to do as much with his characters’ as with the actor’s allegedly dark personality. Whether this darkness is part of Keitel’s public or private persona, the fact is that it has been an essential factor to his status as star.

No doubt, Keitel should be seen as a cult star rather than as simply a star, because in his work he has been constantly associated with cult directors working within independent cinema. The first to give him a chance as an actor was Martin Scorsese, who counted on Keitel’s talent for roles in *Mean Streets* (1973), *Alice Doesn’t Live Here Anymore* (1974), and *Taxi Driver* (1976). The association with Scorsese was later renewed when Keitel played Judas in the controversial *The Last Temptation of Christ* (1988). This film marked the beginning of the end of a long period in which Keitel kept away from Hollywood, apparently embittered by his failure to land the role of Captain Willard in Francis Ford Coppola’s *Apocalypse Now!* (1979). It is important to note that during those years of semi-exile, Keitel played roles in European films of diverse nationalities, some of them

**Harvey Keitel**

better known—*Death in Full View* (Germany, 1980) or *La Nuit de Varennes* (Italy, 1982)—and others better forgotten. Keitel, however, maintained the links with European filmmaking even into the 1990s, when he became regarded as a well established star in Hollywood. He played, thus, the main role in the noted Greek film *Ulysses' Gaze* (1995), a film very far from the usual Hollywood fare.

At home, Keitel's association with independent cinema finally led to stardom thanks to his roles in Quentin Tarantino's cult hits *Reservoir Dogs* (1992) and *Pulp Fiction* (1994). Tarantino also benefitted greatly from this association, for Keitel was actively involved in the production of both films. The early 1990s brought Keitel other leading roles, first as the corrupt lieutenant of Abel Ferrara's violent, mystic *Bad Lieutenant* (1992) and then as the unlikely hero of Jane Campion's rereading of Victorian melodrama in *The Piano* (1993), possibly the first film in which Keitel was cast against type in a romantic leading role. Keitel's definitive entrance into mainstream Hollywood brought him roles in Ridley Scott's *Thelma and Louise* (1991) (Keitel had previously played one of the two duelists in Scott's 1977 TV film of Joseph Conrad's story "The Duelists") and the adaptation of Michael Crichton's novel *Rising Sun* (1993). The third name closely associated to Keitel's is that of writer Paul Auster. Keitel played Auggie Wren in *Smoke* and *Blue in the Face* (both 1995), films scripted by Auster, and starred in Auster's

debut film as director, *Lulu on the Bridge* (1998). Keitel's successful career developed, thus, in three fronts simultaneously: Hollywood mainstream cinema, American independent films, and European cinema.

Keitel is not easy to class in the Hollywood categories of leading or supporting actor. His many leading roles in independent films did not receive as much publicity as they deserved. As far as Hollywood is concerned, Keitel is one of the star supporting actors, but not a figure at the same level as his friend Robert de Niro, or Al Pacino. Keitel has taken, however, greater risks than may big stars would have assumed when playing, for instance, the tormented policeman of *Bad Lieutenant* or Champion's romantic hero in *The Piano*. Not only because of the physical nudity he indulged in in both, but mainly because of the force of the emotional nakedness he is capable of. It might well be that independent cinema affords versatile actors like Keitel more ground to test their acting instincts than Hollywood mainstream cinema, hence Keitel's fidelity to men such as Scorsese, Tarantino, or Auster. And theirs to him.

## Kelley, David E. (1956—)

With the success of the quirky hit *Ally McBeal* in the mid- to late 1990s, David E. Kelley established himself as the decade's pre-eminent producer-writer of popular television series. Hired by Steven Bochco to write for *L. A. Law* in 1986, Kelley demonstrated his aptitude early on for revealing the conflict between interior concerns and external realities, a gift that he can apply to drama and comedy with equal facility. At his best, Kelley creates programming that eschews formulaic plots and neat, tidy endings in favor of three-dimensional characters facing credible ethical dilemmas; these dilemmas, as notably in *Ally McBeal*, are often underscored by unsettling, self-reflexive fantasy commentaries that openly air difficult issues. He refined his techniques with some slightly surreal plots on *Picket Fences* (1992) and *Chicago Hope* (1994) before launching *Ally McBeal* and *The Practice* in 1998. Kelley, rare for a producer, writes much of every episode of his own productions. His judgment, acumen, and direct involvement has made him something of a television "auteur," and in 1999, he accomplished the unprecedented feat of a Golden Globe double, winning the Hollywood Foreign Press

awards for both for the best comedy (*Ally McBeal*) and best drama series (*The Practice*). Kelley is married to actress Michelle Pfeiffer.

## Kelly Bag

The Kelly bag became an American fashion institution in 1956. In September 1956, five months after she married Prince Rainier of Monaco, the former film star Grace Kelly returned to the United States for a two-month visit, clad in fashionable maternity wear and sporting a square, black bag that she had purchased for the journey. The princess was widely photographed carrying the large leather bag in front of her expanding waistline, and a fashion trend was born. Known from then on as the Kelly bag, it was in fact manufactured by Hermès, the chic and expensive Paris design house who had been making the pocketbooks—each of which was fashioned by hand—since 1935. The bags were scaled-down models of the Hermès saddlebags that were made to hold the bridles and riding tack of the European rich. For many American women, the bag symbolized the elegance and style for which Grace Kelly was known both on screen and off, but it has remained in favor with succeeding generations to become the most popular Hermès handbag ever.

## Kelly, Gene (1912-1996)

A dancer and choreographer of enormous grace and indefatigable vitality, Gene Kelly created a new synthesis of music and dance in American movies. In 1942 he made his first film with Judy Garland. In the next decade he made an unprecedented series of lively movie musicals, including *On the Town* (1949), *Summer Stock* (1950), and *An American in Paris* (1951), culminating with *Singin' in the Rain* (1952) which Kelly starred in, choreographed, and co-directed with Stanley Donen. Kelly's unique achievement was to expand the range of dancing in the movies. For Fred Astaire and Ginger Rogers dancing took place in a refined social world; for Kelly dancing was part of everyday life and the real world. In place of the ballrooms of Astaire and Rogers, Kelly danced on car roofs, tables, and sofas, in streets

## Kelly Girls

Since the 1960s Kelly Girls has been synonymous with female temporary office workers. Originally a groundbreaking temporary employment service, the name has expanded to a generic, describing all temporary workers, including those who are neither female nor employees of Kelly Services. Kelly Girls describes not only a company and a type of work, but a cultural and economic phenomenon, the shift from the permanent career employee to the flexible "temp." Even *Forbes Magazine* headlined its July 16, 1986, article about the practice of hiring nuclear scientists and technicians on a temporary basis, "Sophisticated Kelly Girls."

In 1946, William Russell Kelly opened Russell Kelly Office Services in Detroit to provide inventory, calculating, typing, and

copying services to local businesses. When his clients began to ask if Kelly's employees could come to their places of business to work, Kelly was happy to oblige. He began to offer workers who could fill in when needed in a variety of situations due to employee illness or vacations, busy seasons, or special projects. His hiring base was largely female, many of them housewives and students.

Kelly had tapped into a genuine employer need, and his business grew. In 1954, he opened his second office in Louisville, Kentucky. In 1956 Russell Kelly Office Services was changed to Kelly Girls, and by 1964 there were 169 offices in 44 states. The Kelly Girl became the perfect pre-feminist icon of the working woman—brisk, efficient, and unthreatening. After all, she was not a woman but a girl, and only temporary, just filling in.

In 1966, Kelly Girls became Kelly Services, and the company continued to expand the field of temporary employment. Living up to its motto "Tested, Bonded, Insured and Guaranteed," Kelly created specialized computer software for training workers with amazing rapidity to use a wide variety of word processing equipment. With many awards for business achievement and sales of over three billion dollars in 1996, Kelly Services is one of the leaders in the industry, along with employment giant Manpower, Inc., the Olsten Group, and newcomers like MacTemps.

The profit-driven economy of the 1990s dramatically increased the role of the temp worker. When Kelly Girls first began, there were three classifications of workers: clerk, typist, and secretary. By the 1990s Kelly Services had over 120 classifications. Besides the "pink collar" jobs, such as secretary and teacher, and the industrial jobs, temps are hired in management, technical, professional, and even executive positions.

While temporary work is touted as advantageous to a diverse group of workers because of flexibility and variety, in fact the majority of temp workers are minority young women who are hired for clerical or industrial jobs. While some are attracted to the flexible hours and training, almost two thirds would prefer permanent employment if it were available to them.

Corporations are drawn to the use of temps for a variety of reasons. It is a simple way to replace permanent workers who are off the job temporarily or to add extra hands during peak production periods. Sometimes a worker's skills, like computer programming or consulting, are only needed on a short-term basis. By going through a temp agency, an employer can avoid the interviewing and hiring process, and, often, also avoid paying benefits. Some employers, capitalizing on this advantage, have created a new category of worker, the "permatemp," hired on as a temporary worker, but kept on the job for months or even years without the benefits afforded to permanent employees.

In response to this, some employee advocates are attempting to organize temporary workers to fight against violations of their rights. One such group in Greenville, South Carolina, the Carolina Alliance for Fair Employment, has been working since 1984 to force employers to comply with state and federal employment laws.

The nebulous status of the temporary worker is chillingly dramatized in Jill and Karen Sprecher's 1998 movie *Clockwatchers*, about four female temp workers. Within a claustrophobic office atmosphere, the temporary workers are portrayed as invisible and powerless. The bosses do not even bother to learn their names or distinguish their faces, and their small acts of rebellion are mostly futile.

Temporary employment has undeniable advantages for both the employee, who may be able to learn a wide variety of skills on an individualized schedule, and the employer, who can inexpensively fill

in employees as needed. It can be problematic, however, working in an atmosphere where neither employee nor employer feels responsibility toward the other. The Kelly Girl, trim and brisk in her suit and carrying her steno pad may be out of date, but she initiated the era of the temporary worker. It remains to be seen whether the temporary worker will become the disposable worker.

## Kelly, Grace (1928-1982)

Her icy beauty and regal poise made Grace Kelly one of the most popular movie stars of the 1950s. But when she married into one of

Grace Kelly

Europe's oldest royal families, becoming Her Serene Highness Princess Grace of Monaco, she became the star of a real-life fairytale romance that captured the global imagination.

Born into a wealthy Philadelphia family, Grace Kelly was raised in a household that valued achievement. Her father, Jack, had been a champion Olympic rower who became a successful businessman, so Grace and her siblings were encouraged to excel in both athletics and academics. Well-educated at parochial and private schools, Grace made her debut in Philadelphia society at sixteen, but after graduating from high school in 1947, the young blond beauty left Philadelphia for New York City, where she attended the American Academy of Dramatic Arts. After finding work as a model and in small roles on television, Kelly made her Broadway debut in 1949. With her strikingly perfect features and exquisite blond beauty, it was not long before she was brought out to Hollywood, where she made her first film appearance in 1951.

A year later, Grace Kelly starred as Gary Cooper's wife in *High Noon*, and overnight she became one of Hollywood's most sought-after leading ladies—the quintessential cool blonde. Signed by MGM in 1953, Kelly starred opposite Clark Gable in *Mogambo*, for which she garnered her first Oscar nomination. A year later, she would win the Academy Award for Best Actress for her performance in *The Country Girl*.

Kelly's next three films, all directed by Alfred Hitchcock, would become instant classics. As noted in Baseline's *Encyclopedia of Film*, Hitchcock "made brilliant use of her signature combination of cool, elegant charm and smoldering sensuality in *Dial M for Murder*, *Rear Window* and *To Catch a Thief*."

By the mid-1950s, Kelly was Hollywood's most popular movie star—an aristocratic beauty whose poise was no on-screen act. Her charm captivated one of the world's most eligible bachelors. While attending the Cannes Film Festival in 1955, Kelly had been introduced to Prince Rainier, the monarch of the tiny Mediterranean principality of Monaco. Afterward, Kelly returned to the States to film *High Society* with Bing Crosby and Frank Sinatra, but it would be her last film. In April 1957, Grace Kelly wed Prince Rainier in a ceremony which her biographer, Robert Lacey, wrote, was "the first modern event to generate media overkill." Guests included Ava Gardner and Aristotle Onassis.

Following her marriage, Kelly retired from acting. However, because she was under contract to MGM, the wedding was filmed as a movie and shown in the United States, which only increased her fame at home and around the world. Although her film career had lasted only six years, images of Princess Grace entertaining Hollywood celebrities at Monaco charity events and appearing around the world with other European royalty continued to command an audience in the United States, and she remained one of America's most popular public figures.

After the birth of three children—Princess Caroline, Prince Albert, and Princess Stephanie—rumors circulated that Grace was unhappy and lonely in her marriage. She had hoped to return to acting in 1964, when Hitchcock offered her the lead in *Marnie*, but negative public opinion in Monaco had forced Prince Rainier to decline on her behalf. Even as she grew older and gained weight, the fairy-tale appeal of Grace's marriage continued to intrigue and delight American audiences, who followed her life and that of her children. And when those children, particularly her daughters, turned out to lead wild and sometimes problematic lives, Americans ate up the European soap opera with glee. And so the United States joined Monaco in

mourning upon Princess Grace's death in a car accident on the windy roads above Monaco.

Because she stopped acting in her twenties, Grace Kelly remains locked in the public imagination at the height of her beauty. Although her status as a cultural icon is certainly enhanced by her marriage into royalty, her image as one of the most beautiful women ever to grace the silver screen can never be tarnished, even by rumors of her unhappiness or the knowledge that she did not remain the unsullied beauty she once was. Grace Kelly—beauty incarnate and an American Princess—still remains one of America's most intriguing stars.

## Kennedy Assassination

The images are remarkably familiar. The convertible limousine winds its way through Dallas crowds; John F. Kennedy, America's youngest president, smiles and waves in the backseat; gunfire, three jerks, the limousine slows and then accelerates; Jackie Kennedy shrieks and covers her husband; an emotional Walter Cronkite tells the nation that its president has died, removes his glasses, and wipes his eyes.

On November 22, 1963, President John F. Kennedy was shot as he paraded through Dallas, Texas. That same afternoon, Dallas police arrested their suspect, Lee Harvey Oswald, an itinerant, self-described "Marxist-Leninist" who had lived in the Soviet Union. Within days, Oswald was also dead, shot by club-owner Jack Ruby on national television in the basement of a Dallas police station.

Kennedy's election to office marked, for some commentators, a new age in American political culture. "History with a capital H had come down to earth, either interfering with life or making it possible; and that within History, or threaded through it, people were living with a supercharged density: lives were bound up within one another, making claims on one another, drawing one another into the common project," Todd Gitlin explained, capturing the sense of immediacy that televised politics had brought to the American social sphere in the early 1960s. Americans knew Kennedy as "the television president," and their relationship with the man and his politics was infused with this sense of immediacy.

It should come as no surprise, then, that Kennedy's violent and sudden death moved the American public so dramatically. Kennedy's funeral rites were a profoundly public affair, broadcast on each of the nation's television networks, and witnessed in 93 percent of the

**John F. Kennedy's assassin, Lee Harvey Oswald.**

country's television-viewing households. "America wept," *New York Times* columnist James Reston wrote, "not alone for its dead young President, but for itself. The grief was general, for somehow the worst in the nation had prevailed over the best."

What is surprising, however, is the range of responses the Kennedy assassination has elicited in the decades following. The official body convened to investigate the assassination, the Warren Commission, issued a report confirming that Lee Harvey Oswald was indeed the murderer and asserting that Oswald had acted alone. Almost immediately, critics began to contend that the scenario reconstructed in the Warren Report seemed unlikely at best, dismissing in particular the infamous "single bullet theory," which proposes that one bullet was responsible for multiple injuries to Texas governor John Connally, who was riding in the front seat of the car, and to the president. For many, Kennedy's death revealed a dark, conspiratorial underside to American politics. It was a loss of American innocence and a prototype for the turbulent decade that lied ahead. From them have come hundreds of conspiracy theories that attempt to account for Kennedy's killing.

Initially, these theories came largely from Europe. Soon, however, conspiracy theorizing on the Kennedy assassination became a

cottage industry in America, with leftists charging that a pact involving American security forces, the Mafia, and even Kennedy's vice president, Lyndon Baines Johnson, killed the president, and rightists uncovering plots that involved the Soviet Union, the Civil Rights movement, and American Communists.

By no means the first, one of the most prominent of the Kennedy conspiracy theorists was New Orleans district attorney, Jim Garrison. Garrison charged New Orleans businessman Clay Shaw with conspiracy to kill the president and, in 1967, Garrison brought him to trial. Shaw was acquitted, but in 1991, filmmaker Oliver Stone gave Garrison's theory a second hearing before the American movie-going public. Stone's *JFK* is a fast-paced, paranoid film that mixes Abraham Zapruder's 8 millimeter amateur film of the Dallas shooting and other pieces of historical footage with staged material and describes the assassination plot as "a riddle wrapped in an enigma inside a riddle." It brought crankish conspiracy theorizing into the American spotlight, rekindled the debate over Kennedy's death (and generated a new debate of its own about the popular media's cultural authority and responsibility), and was a booming commercial success. Fifty million people saw *JFK* in movie theaters, and the film brought Stone two Academy Awards.

The spread of conspiracy theorizing about the Kennedy assassination may be due, in part, to what Richard Hofstadter has called "the paranoid style in American politics." Largely, however, it seems to stem from a more innocent source. Television beamed the drama of the Kennedy assassination and its aftermath directly into the homes of millions of Americans. It made the Kennedy funeral the most widely watched television event in American history. Every American who was alive at the time, it seems, knows where they were when Kennedy was shot. And that is because, in a sense, every American was there, in Dallas, with the President as he died.

## Kent State Massacre

For 13 seconds on May 4, 1970, Ohio National Guardsmen opened fire on students protesting the Vietnam War at Kent State University in Kent, Ohio, killing four and wounding nine others.

A protestor holds a sign at the Kent State demonstration after the Massacre.

What had merely been a small campus demonstration—one of thousands nationwide, quickly developed into a symbol of the Vietnam era in America. A Pulitzer Prize winning photograph taken at the shooting of an anguished young woman kneeling over the body of a dead student with her arms raised in despair became a significant illustration of the end of the Woodstock era. Any romantic notions of the 1960s ended with the Kent State massacre.

On April 30, 1970, President Richard M. Nixon appeared on national television to announce that U.S. troops were invading Cambodia to strike suspected guerrilla strongholds. The new policy contradicted his previous plan, which pledged that a “Vietnamization” of the war would gradually reduce America’s involvement in the conflict. Reaction to the escalation of the war effort was immediate and intense, especially on the nation’s college campuses, where over 1.5 million students protested the announcement. Nixon fueled the outrage by labeling the student protesters “bums” who were “blowing up the campuses.”

On May 1, a late night disturbance in downtown Kent fueled by a warm spring evening, students leaving local bars, and a motorcycle gang led Mayor Leroy Satrom to declare the city under a state of emergency. Although the city suffered only minor damages, the next day the mayor requested the presence of the Ohio National Guard to quell the unruliness. Even with the soldiers on campus, student

protesters held a rally the next day and the university ROTC building was burned down. The destruction of the ROTC building was a major event leading to the violence at Kent State, but the mystery over who set the fire has not been solved. Initially, it was assumed that the fire was started by radical students, but others speculated that it may have been set by government agents to provide a reason for government intervention.

Ohio Governor James Rhodes arrived in Kent on May 3 and condemned the student radicals, comparing them to Nazi brownshirts and communists. That evening, protesters gathered on campus but were forced to leave with the assistance of teargas. A sit-in held on Main Street was also dispersed by the troops.

A rally was scheduled for May 4 and drew approximately 2,000 students, many of whom were curious onlookers and shuffling between classes. National Guard officers ordered the protesters to leave and shot tear gas into the crowd when the command was not followed. Over 100 fully armed guardsmen then moved against the students. The troops advanced toward the students, over a hill, and then down to a practice football field. When they reached a fence at the far end of the field, some of the soldiers knelt and aimed their weapons at the demonstrators. While the troops massed together, students retreated into a parking lot between several buildings. Others lobbed rocks and tear gas canisters back at the guardsmen.

After ten minutes, the troops moved back up the hill. When they reached the crest, a group of 28 guardsmen wheeled around and fired in the direction of the parking lot. They fired 61 rounds of ammunition. Of the 13 people killed or injured, only two were actively participating in the demonstration. One student was killed while walking to class and another, ironically, was an ROTC student. Many of the injured students were more than 100 yards from the guardsmen.

Kent State was shut down after the shootings and remained closed for the rest of the school year. As news about Kent State spread, campus unrest escalated. Nearly 500 colleges were closed or disrupted. Ten days later, another campus shooting occurred at Jackson State University in Mississippi when police and state patrolmen fired into a dormitory at the all-black school, killing two students and wounding nine others. The lack of attention given to the massacre at Jackson State embittered many African Americans.

The Kent State Massacre bookends a generation that began with the assassination of President John F. Kennedy in 1963 and included the murders of his brother Robert F. Kennedy and civil rights activist Martin Luther King, Jr. in 1968. Kent State was transformed from a sleepy midwestern college into the symbolic epicenter of student protest in the Vietnam era.

Kent State remains a symbol of antiwar protest and government repression. The incident has been immortalized in countless books and even a television movie, but nothing was more stinging than the Crosby, Stills, Nash, and Young song "Ohio" with its haunting lyrics, "Tin soldiers and Nixon's coming—Four dead in Ohio!"

## Kentucky Derby

The oldest continuously run sporting event in the United States, the Kentucky Derby is America's most famous horse race, rich in tradition and celebrated by racing fans throughout the world. In May, 1875, Colonel Meriwether Lewis Clark, taking his lead from the English Derby at Epsom Downs, established the race for three-year-old thoroughbreds over a one-and-a-half-mile course (later reduced to a mile and a quarter). Attracting an annual crowd of more than 100,000 spectators, the Kentucky Derby has been called the "greatest two minutes in sports." It is also the first leg of racing's most sought-after goal, the Triple Crown, awarded to those rare horses who win at the Kentucky Derby, the Preakness, and at Belmont.

The Kentucky Derby race in progress, Churchill Downs, Louisville, Kentucky.

Although the idea for building a race track and attracting the best horses to a rich, classic race originated with Colonel Clark, a visionary promoter in his mid-twenties, the business and promotional talents that elevated the Derby to a race of international importance came from a Louisville tailor named Matt Winn, who began managing the failing track in 1902. As a boy, standing on his father's flat-bed truck, Matt had seen Aristides win the first Derby at the Churchill Downs race track in Louisville, Kentucky, and attended every single Derby after that—75 in all—before his death in 1949. The event received a boost in prestige in 1915 when Harry Payne Whitney agreed to run his filly Regret. She led from the start, becoming the only female thoroughbred to win the Derby until the 1980s, when Genuine Risk and Winning Colors duplicated the feat. After the race, Whitney remarked that he did not care whether or not Regret ever raced again. "She has won the greatest race in America," he said, "and I am satisfied." From then on, Winn was determined to keep the Kentucky Derby at that high level.

Racing historian Joe Estes has divided the Kentucky Derby story into three periods: 1875 to 1898, 1899-1914, and 1915 onwards, with the first period highlighted by the appearance at Churchill Downs of the finest American thoroughbreds, both from Kentucky and the great stables of the northeast. Though the purses were not large, owners were motivated to improve the breed of racehorses by competing with

the best. One of the racing stars of this early period was Isaac Murphy, an African-American jockey who rode Buchanan to victory in 1884, Riley in 1890, and Kingman in 1891. His record of three Kentucky Derby wins was not equaled until 1930, when Earl Sande won on Gallant Fox, and it was not surpassed until 1948, when Eddie Arcaro won the fourth of his five Derbies on Citation. Murphy has been credited with the highest winning percentage of any jockey, 44 per cent. The significance of this phenomenal record is evident when compared with that of Eddie Arcaro, the greatest of modern era jockeys, whose lifetime winning average in a more competitive era was 22 per cent. Among the memorable horses of the first years were Hindoo, who had a string of 18 consecutive race victories that included the 1881 Derby; Ben Brush, who won the first mile-and-a-quarter Derby in 1896; and Plaudit, the winner in 1898.

From 1899 to 1914, the great stables in the northeast began shipping their horses to the American Derby at Washington Park in Chicago, and the Kentucky Derby became more of a local race. When a horse named Donerail won in 1913 and paid \$184.90—the longest odds of any Derby winner in history—the classic race received some beneficial publicity, but it was not until 1915 that the modern era began, signaling the return of America's greatest racehorses to the "run for the roses." Racing fans remember such brilliant thoroughbreds as Exterminator, Sir Barton, Zev, Black Gold, Bubbling Over, Gallant Fox, Twenty Grand, Cavalcade, Omaha, War Admiral, Whirlaway, Count Fleet, Assault, Citation, Swaps, Carry Back, Northern Dancer, Majestic Prince, Riva Ridge, Secretariat, and Seattle Slew.

The most famous of American racehorses, Man o' War, overwhelmingly voted the greatest horse of the first half of the twentieth century, did not run in the Kentucky Derby but did win the other two Triple Crown races. He only raced for two seasons (1919-29), but he won 20 of 21 races and established speed records at five tracks over various distances. He was such a compelling favorite that he raced at odds as short as 1-100. Retired to stud in late 1920, Man o' War sired 64 horses who ran in stakes races, one of his sons being War Admiral, winner of the 1937 Triple Crown. Gallant Fox, who won the Triple Crown in 1930, raced for two seasons, winning 11 of 17 starts. His winnings of \$308,275 in 1930 held the single season record for 17 years until purses escalated after World War II. He sired Omaha, the Triple Crown winner in 1935, and numerous other successful horses. Gallant Fox and Omaha remain the only father-son combination to win the Triple Crown.

Whirlaway, a nervous and erratic animal with an unusually long tail, won the Triple Crown in 1941, and his record-breaking run in the Derby, ridden by Arcaro, stood for the next 24 years. Noted for spectacular stretch runs, he would either win gloriously or lose badly, compiling a record of 32 wins in 60 races, but he was the first horse to earn more than half a million dollars; Citation, the 1948 Triple Crown winner, was the first horse to win a full million. Native Dancer, the first outstanding horse whose major victories were seen on national television, finished second to Dark Star in the 1953 Kentucky Derby, marking his only defeat in a career of 22 races. At his death his offspring had won more than \$4 million in purses. The first televised Derby was won in 1952 by Hill Gail.

In 1973 Secretariat became the first Triple Crown winner since Citation in 1948. An unusually large chestnut, 16 hands in height, he combined size with amazing speed. He was the first horse to run the Derby in less than two minutes, also setting a record for the final half-mile and quarter-mile. At Belmont he won by 31 lengths while establishing the track record of 2:24. In 1977, a "Cinderella" horse,

Seattle Slew, became the first horse who, unbeaten in his racing career, also won the Triple Crown. Slew had been bought as a colt by Mickey and Karen Taylor and Jim and Sally Hill for the bargain-basement price of \$17,500 in 1975. They sold him to a syndicate for the then-record sum of \$12,000,000 in 1978, the year that Affirmed became the third Triple Crown winner of the 1970s, an amazing decade for racing.

Jockeys have played a prominent role in the history of the Kentucky Derby. Eddie Arcaro and Bill Hartack each won the classic race five times, and Willie Shoemaker rode into the winner's circle four times. During a remarkable seven years from 1958 through 1964 Shoemaker was America's leading moneymaking jockey. Angel Cordero joined the legendary Isaac Murphy and Earle Sande as a three-time winner in 1985. In 1970 Diane Crump made history as the first female jockey to ride in the Kentucky Derby. Raleigh Colston became the only person to own, train, and ride a Derby runner; he rode Searcher in the first Derby and owned and trained Colston, the third-place finisher in the 1911 race.

125 years later (its 125th anniversary is to be celebrated on the first Saturday in May, 2000), the race is still being contested on the same hallowed turf that the first Derby winner trod. The Kentucky Derby has thus entered a third century, firmly entrenched as a celebrated occasion in "the sport of Kings."

## Kentucky Fried Chicken

When Corbin, Kentucky, restaurateur Harland Sanders began to establish a chicken franchise business in the mid-1950s, the pressure-cooking process he had developed twenty years earlier ensured his position at the forefront of the American fast food revolution. In 1964, Sanders sold the flourishing Kentucky Fried Chicken Corporation for \$2 million. However, by retaining the "Kentucky Colonel" as a roving ambassador, and instituting his image as the corporate icon, the company was able to continue promoting its product as "finger lickin' good" chicken in the best tradition of Southern-fried home cooking. The "down home" identity was somewhat compromised by PepsiCo's \$840 million buyout in 1986. The company was rebranded "KFC"—the word "fried" deemed inappropriate in an era of consumer health-consciousness—and integrated with other PepsiCo-owned fast food chains, Taco Bell and Pizza Hut. Nevertheless, the Southern patrician visage of the Colonel continues to decorate thousands of KFC's worldwide.

## Kern, Jerome (1885-1945)

Jerome Kern was one of the most significant composers for Broadway and Hollywood. With his string of Princess Theater musicals, the immortal musical *Show Boat* (1927), and his songs for stage and screen, Kern in many ways defined the American popular song.

Through his series of Princess Musicals such as *Oh, Boy!* (1917), Kern helped to create an intimacy in the musical comedy which helped to end the dominance of European imports on Broadway. But it was with *Show Boat* (1927) and its cavalcade of songs such as "Ol' Man River" and "Can't Help Lovin' Dat Man" that Kern achieved his greatest fame. Other important Kern songs include "Smoke Gets in Your Eyes" from *Roberta* (1933) and "All the Things You Are" from *Very Warm for May* (1939). He wrote songs for the films *Swing Time* (1936) and *You Were Never Lovelier* (1942), among others. He won two Academy Awards for best song, in 1936 for "The Way You Look Tonight" and in 1940 for "The Last Time I Saw Paris." Kern, in his scores for stage and screen, established a standard for popular song which exists to the present day.

## Kerrigan, Nancy (1969—)

The 1993 United States figure skating champion, Nancy Kerrigan, was recognized as an elegant and artistic practitioner of the sport, one of America's premier ice princesses. In 1994, the beautiful Kerrigan was catapulted into much wider and most unwelcome fame through an internationally scandalous incident that brought her arch-rival, Tonya Harding, into international disrepute, and irrevocably altered the image of the sport. Already the holder of the 1992 Olympic bronze medal, Kerrigan was the favorite for the gold at the upcoming Winter Olympics in Lillehammer, Norway, at the time of the 1994 U.S. Championships in Detroit, Michigan, which doubled as the Olympic Trials that year. On the eve of the championships, while practicing at Detroit's Cobo Arena, Kerrigan received an injurious thwack on her

right leg, which put her out of competition. The assailant, Shane Stant, proved to be part of a conspiracy of four men, one of whom was Harding's husband, Jeff Gillooly, and the attack was planned to put Kerrigan out of action, thus clearing the way for Harding to win the U.S. title, and a place at the Olympics. The gifted Kerrigan, granted an exemption from the U.S. trials, won the silver at Lillehammer, finishing only a fraction of a point behind Oksana Baiul, the Ukrainian gold medalist. Harding was allowed to skate at the Olympics, and the final free skate between Kerrigan and Harding drew record television ratings. Kerrigan subsequently endured bad press when she sniped at Baiul, was overheard to complain about her corporate sponsor, and married her agent. She took a break from her career to have her son, but returned to the rink as a professional skater, enjoying considerable popularity and financial rewards, while the sport itself, thanks to the 1994 scandal, attracts major viewing figures on television.

The anti-Kerrigan conspiracy backfired disastrously. The four men involved all served prison sentences, while Harding—put on three years' probation, divorced from Gillooly, and banned from the U.S. Figure Skating Association—has remained covered in ignominy.

## Kershaw, Doug (1936—)

Doug Kershaw, from Tiel Ridge, on the Gulf Coast of Louisiana, was one of the first to popularize southwest Louisiana's Cajun sound, an infectious dance music characterized by fiddles and accordions as lead instruments. French is the language of most Cajun music—Hank Williams' "Jambalaya" is essentially an English lyric to the Cajun standard "Grand Texas," and Little Richard's "Keep a-Knockin'" is an Anglicized rock 'n' roll version of "Tu Peut Coupez." Kershaw, however, sang in English from the beginning, and that gave him a quick in-road to a larger musical world. With his brother Rusty, he went to Nashville in the mid-1950s. They made several records together as "Rusty and Doug," culminating in Kershaw's breakout hit, "Louisiana Man," which reached number four on the country charts in 1961. "Louisiana Man" never reached the top 100 on the pop charts, but an appearance on Johnny Cash's hit television show made Kershaw a pop phenomenon, and his flamboyant fiddle style and stage presence (he favored velvet Edwardian suits) put him in demand as a solo act. He has recorded duets with Hank Williams, Jr., and Fats Domino, and in 1960, "Louisiana Man" became the first song broadcast back to earth from the moon during the Apollo 12 Mission.

## Kesey, Ken (1935—)

Described as a psychedelic outlaw and the “Dr. Strange” of American letters, Ken Kesey’s fame as a counterculture luminary was assured with the impact of his novel, *One Flew Over the Cuckoo’s Nest* (1962). Kesey was a champion wrestler who graduated from the University of Oregon and studied creative writing at Stanford, where he discovered the bohemian life he continued to pursue. Over the years, he turned that life into the stuff of fiction, traveling across the country in a psychedelic-colored bus (now in the Smithsonian Institution) with his band of Merry Pranksters, whose adventures were chronicled by Tom Wolfe in *The Electric Kool-Aid Acid Test* (1968) and by Kesey himself in *The Further Inquiry* (1990). Kesey fraternized with Timothy Leary, fled to Mexico to avoid prosecution for marijuana possession, and lived in a commune with his wife Faye (who bore him three children) and others, including Mountain Girl, who bore his fourth child, Sunshine. While embracing this unconventional lifestyle, Kesey wrote several major novels and other fiction, including two charming children’s books. *One Flew Over the Cuckoo’s Nest* (1962), was his first novel. The story of an unlikely redeemer who triumphs over the authoritarian “Combine” run by Big Nurse Ratched, the work was partly based on Kesey’s own experiences as the paid subject of drug experiments at the Veteran’s Hospital in Menlo Park. It remains a comedic masterpiece and a cult classic, lent further weight by the 1975 multi-Oscar-winning film version, starring Jack Nicholson.

## Kewpie Dolls

The creation of Rose O’Neill (1874-1944), Kewpie Dolls were one of many crazes that swept America, and the world, in the early years of the twentieth century. Baby like figures with a tuft of hair (or top knot) similar to very young infants, the figures were popular prizes at carnival and amusement parks and also sold through retailers. The figures are still popular among doll collectors and are still manufactured under license from the original molds by Lee Middleton Original Dolls.

The figures originally appeared in *Ladies Home Journal* around 1905 as heading and tail illustrations accompanying stories by O’Neill. At the prompting of her editor, O’Neill expanded the drawings into a series of illustrated verse for children and dubbed her creations kewpies after cupid. In 1910 she moved her characters to the *Woman’s Home Companion*. According to O’Neill, hundreds of letters began to arrive from admirers seeking a doll of some kind. At first O’Neill responded with paper dolls, but in 1912 she filed a design pattern for a doll.

At first the new dolls were manufactured for the Borgfeldt company of New York by a number of European doll makers, such as the renowned German firm Kestner, and were mostly china, or bisque, dolls. At this time the bulk of dolls sold in America were manufactured in Europe. America’s entry into World War I altered this arrangement and other manufacturers such as the Mutual Doll company began producing Kewpies. These later dolls were made from a variety of materials. The dolls were probably modelled in clay from O’Neill’s drawings by Joseph Kallus, often described as O’Neill’s assistant. After O’Neill’s death, Kallus controlled the licensing and manufacture of Kewpie dolls until his death in 1984 when Jesco acquired the rights.

In the 1910s Kewpies were a hot property and O’Neill received licensing proposals for a variety of products including cutlery, crockery, baby carriages, ice cream molds, and long johns. Many manufacturers simply bypassed O’Neill and appropriated the name and image for use in their products. William Hecht used Kewpies as the name of a line of children’s clothing without authorization. Japanese toy manufacturers turned out unauthorized Kewpies much in the manner of the cheap knock-off copies of brand name goods that are readily available in South East Asia.

Kewpie Dolls came in a variety of sizes and types. O’Neill authorized military Kewpies in American, German, French, and British uniform. Likewise, Kewpies came as cowboys, farmers, bellboys, and firemen. There were also black Kewpies known as Hottentots.

One licensing venture that appealed to O’Neill was a comic strip version of the Kewpies. In 1917 O’Neill produced a weekly page for the Sunday comic supplements featuring drawings and verse. It appeared for a year. In the mid-1930s, she revised the feature as a comic strip proper with word balloons and a continuous story line. But the strip was short lived as a result of O’Neill’s declining health.

Rose O’Neill’s Kewpie Dolls packaged cuteness as an item for purchase. It says something about the commercialization of American culture in the twentieth century that the readers of her early stories were not satiated by the illustrations and requested something more tangible. The ubiquitous nature of the dolls is attested to by the appearance of “kewpie” in standard dictionaries to describe a type of doll rather than a brand name product.

## Key West

Located on an eight-square-mile coral island off the southern tip of Florida, Key West is the southernmost city in the continental United States. Its location and environment give the place a mystique as the Last Resort, the place where mainland North America dribbles to an ambiguous end in the Caribbean. As an artifact of popular culture, Key West generates powerful and often contradictory cultural messages: it is at once a quintessential Navy town and a haven for

**The 1930 model of the Kewpie Doll.**

literary figures, beachcombers, and assorted eccentrics. During the Cuban Missile Crisis in 1962 and thereafter, it served the rhetoric of American presidents as a rugged outpost of democracy vis-à-vis Castro's Cuba with its Russian missiles "just 90 miles from our shores."

Contrary to popular belief, the name Key West has nothing to do with the island's western aspect in the Florida Keys, which seem to drift languorously from the mainland like a strand of seaweed. The name is really a corruption of Cayo Hueso (Island of Bones), the name given the island by Spanish explorers after they reputedly found the skeletal remains of native people slaughtered in a fierce battle. Perhaps the coral rock that forms the island suggested bony encrustations to superstitious sailors wary of shipwreck on the jagged reefs that have long made Key West a nautical graveyard and a refuge for smugglers, salvagers, and castaways.

For much of its history, Key West has been the site of a U.S. Navy base. Commander David Porter established the first Navy presence there in the 1820s, and imagined he had created the "Gibraltar of the Gulf." Key West prospered as the only southern city to remain under Union control throughout the Civil War. At the

time of the Spanish-American War, the entire Atlantic fleet was based in Key West's harbor. During World War II, the island was known rather dubiously as the "Singapore of the West." Resident poet Elizabeth Bishop predicted in 1942 that after the war a ruined Key West would be "nothing but a naval base and a bunch of bars and cheap apartments." The island regained some of its dignity in 1946 when President Harry Truman procured the Naval commandant's headquarters for his "Little White House." Although its presence was much diminished by the 1990s, the Navy still owned a quarter of the town at century's end.

All things nautical contribute to the island's famous ambiance. Winslow Homer discovered Key West in 1885, finding watercolor the perfect medium through which to capture the shimmering cerulean seas and lush green landscapes drowsing under a tropical sun. For poet Wallace Stevens, the essence of Key West was its aqueous ambiguity, its ephemeral substance surrounded by the "ever-hooded, tragic gestured sea." His well-known poem, "The Idea of Order at Key West," can be interpreted as a hymn either to order or disorder, or to a subjective reality simultaneously negotiating between both.

Even the act of withdrawing to the bustling, commercial North, and away from sultry Key West, can bring uncertainty, as Stevens laments in the poem "Farewell to Florida." Here, the poet watches from a ship as "Key West sank downward under massive clouds/And silvers and greens spread over the sea. The moon/Is at the mast-head and the post is dead. But yet: Her mind had bound me round."

More than any other writer, Ernest Hemingway is associated with Key West in the popular mind. After leaving Paris in 1928, Hemingway acted on the suggestion of fellow writer John Dos Passos and established residence in a rented house in Key West with his wife, Pauline. In 1931, the Hemingways bought an 80-year-old limestone villa where they lived together until they divorced in 1940, and which now serves as one of the island's principal tourist attractions. Hemingway wrote several short stories, many articles, and one novel, *To Have and Have Not*, about Key West, which he portrayed as seedy, decadent, and impoverished, "the St. Tropez of the poor." Hemingway's growing celebrity soon obscured the more prosaic details of his life. Leicester Hemingway writes that his brother's Key West period "begins in the public mind with a picture of a bronzed giant fighting huge fish, then heading inshore for the roughest, toughest bar to celebrate the catch, possibly pausing somewhere to beat out a letter to *Esquire*, using words growled from one corner of the mouth. It was not like that ever." But the Hemingway Days Festival, which began in 1981, celebrates the machismo image of the writer with parodies and pastiches of his works, contests in which white-bearded and barrel-chested men compete in Hemingway lookalike contests, costume parties, arm-wrestling competitions, and drinking bouts at Sloppy Joe's Bar.

A long line of other writers, including Jack London, Tennessee Williams, Robert Frost, John Hersey, Tom McGuane, Truman Capote, Alison Laurie, Elizabeth Bishop, and Annie Dillard, have found Key West congenial. Popular crime and mystery writers such as Laurence Shames and James W. Hall have used the city as the backdrop for their stories, exaggerating its eccentricities. In "Bones of Coral," Hall describes Key West as an "outpost for the unstable, maladjusted, the just plain insane. If they weren't insane when they came, they turned that way. They became islanders, devolved creatures."

More likely, they were merely inspired to become beachcombers, boozers, and faux marooned mariners awaiting the next tide. Singer Jimmy Buffett and his Coral Reefer Band, with their besotted, ersatz-pirate, parrot-pop anthems, celebrate this offbeat, unfettered Key West attitude, which can be decanted in Buffett's Margaritaville Cafe on the island and purchased in any of the dozens of souvenir shops and tee-shirt emporia. Conch Republic Days each year advance this maverick tradition, commemorating the island's ostensible secession from the United States in 1982, with the imaginary Conch Republic surviving as a symbol of Key West's singularity as the Last Resort.

## The Keystone Kops

By the end of the 1990s, almost nine decades since their first appearance on the early silent screen in *Hoffmeyer's Legacy* (1912), Mack Sennett's Keystone Kops had long entered the language as a byword for bungling, absurd, and hilarious incompetency. Icons of the early comedy "flickers" that made Sennett the most significant, famous, and successful pioneer of film comedy, the Kops, named for Sennett's Keystone company, featured regularly in the American silent era slapstick movies pioneered at Keystone Studios from 1912. With the release of *The Bangville Police* (1913), the Keystone Kops were established as a much-loved American institution and an integral element of Sennett's production output and comedy style. Sporting handlebar mustaches and ill fitting uniforms, the conscientious but utterly inept policemen (and sometimes the Keystone Firemen) fell out of cars, under cars, over cliffs, and more often than not over themselves, all at artificially high speed, defining the art of slapstick in which Sennett specialized and which would be refined by the arrival of Charlie Chaplin at his studio in 1914.

Mack Sennett was blessed from the beginning with a stable of gifted comic practitioners, tuned into Keystone's rambunctious style with its emphasis on sight gags, pratfalls, and the throwing of custard pies (a routine that originated there), and enhanced by Sennett's under-cranked camera, speeded up frames, and skillful editing. Among these artists were Ford Sterling and Chester Conklin, the most famous members of the zany police force whose escapades, in which reality was suspended and subverted to create a world of comic chaos, characterized the approximately 500 slapstick comedies and farces made at Keystone.

Renowned for carrying out their own hair-raising, and frequently dangerous stunts, the original Kops line-up featured actors Charles Avery, Bobby Dunn, George Jesky, Edgar Kennedy, Hank Mann, Mack Riley, and Slim Summerville. Mann, who played police chief Teeheezel, was subsequently replaced by Ford Sterling, and with Sennett using the group as a proving ground for ambitious young actors seeking a career with the studio, the line-up changed frequently, at one time including Roscoe "Fatty" Arbuckle among its uniformed members. Despite their considerable success with contemporary audiences, however, the Kops were eased out of the regular Keystone roster within four years. Many other Sennett comedies continued to feature the group's chaotic brand of slapstick, and they were paid homage, making a return (of sorts) in *Abbott and Costello Meet the Keystone Kops* (1954).

The influence of the Keystone Kops on the development of comedy is of paramount importance in the history of the cinema. This could be most particularly perceived in the films of Laurel and Hardy and, later, in cruder form, The Three Stooges. And while, over the decades, verbal humor came either to replace or complement visual humor, the preposterously farcical elements that informed the antics of the Kops have survived in variously modified forms to the present

day. Sennett's imagination has influenced the material and performances of comic artists from Jerry Lewis through Mel Brooks to Robin Williams and Jim Carrey.

## King, Albert (1924-1992)

Albert King was one of the most distinctive, innovative, and influential blues guitarists of the postwar era. He was one of the only blues players to sell records and play for white audiences without losing his traditional black following. His years with Stax Records in the 1960s produced a series of albums that blended classic blues with modern R & B and soul.

King was an imposing figure—standing 6'4" and weighing over 250 pounds—and it could be heard in his music. His muscular guitar

tone and economical use of notes was sustained by a raw power nearly impossible to copy. A left-handed player, King played his Gibson Flying-V guitar upside down and backwards, so rather than fret notes quickly up and down the neck, King was forced to use his strength to bend notes, producing a strikingly vocal quality. His tone was an inspiration to white guitarists Stevie Ray Vaughan and Michael Bloomfield as well as fellow lefty Otis Rush. British guitarist Eric Clapton played an Albert King solo nearly note-for-note in his 1967 hit "Strange Brew" with Cream.

King was born in Indianola, Mississippi, not far from fellow blues guitarist B. B. King, who was about 18 months younger. Albert would often joke that they were brothers, but the two didn't meet until both were famous. Although they cited the same musicians—Blind Lemon Jefferson, Lonnie Johnson, and T-Bone Walker—as their biggest influences, the two Kings sounded nothing alike. While B. B. danced above the beat with a jazz player's phrasing and a treble tone, Albert dug deep into the groove with thick, meaty bends. While B. B. rose to prominence in the 1950s, Albert had to wait into the mid-1960s, when he was over 40 years old, to make his mark.

As a child, King built his own guitar from a cigar box and whisk broom wires. He finally bought his first real guitar, a Guild acoustic, from another young man for \$1.25 when he was 18. He spent the next 15 years picking cotton, working construction, driving a bulldozer, and developing his beefy musical style. In the early 1950s while living in Oceana, Arkansas, King formed the In the Groove Boys, his first band, with some friends.

King soon moved to Gary, Indiana, where he began playing drums for Jimmy Reed. In 1953, he cut his first singles, "Bad Luck Blues" and "Be on Your Merry Way," for the Parrot label in Chicago. King's next recordings were for the Bobbin label in St. Louis in 1959. Here he adopted a big band swing style, led by Johnnie Johnson, the pianist who played on many of Chuck Berry's greatest

**Albert King**

recordings. King remained with Bobbin and Cincinnati's King label, which leased some of the Bobbin sides, until 1963, when he made the move to Stax Records in Memphis.

King's union with the Stax house band of Booker T. and the MGs resulted in some of the best and most popular blues records ever produced. Drummer and producer Al Jackson, organist Booker T. Washington, bass player Donald "Duck" Dunn and guitarist Steve Cropper, plus the Memphis Horns of Wayne Jackson and Andrew Love, provided the perfect foundation for King's career. *Born under a Bad Sign*, released in 1967, was a revelation. Most of the songs strayed from typical 12-bar blues shuffles, but King was right at home.

"We were, basically, on top of the music scene as far as what we thought the R&B public wanted to hear," Cropper said in *Blues Guitar: The Men Who Made the Music*. "So it was a little more polished, a little slicker than some of the other blues coming out. He had his own unique style, and it still got in the blues rack. But the songs that we picked for him and some of the arrangements we did wound up in the pop and R&B racks, too."

Rock critic Robert Palmer said in the liner notes to *Albert Live*, a double album released in 1977 and available on the Tomato label, that King's impact at the time of the release of *Born under a Bad Sign* "was as inescapable among blues players as John Coltrane's influence was on jazz."

King became popular with young, white audiences in the late 1960s when rock promoter Bill Graham booked King to open a series of shows at the Fillmore Auditorium in San Francisco, sharing bills with Jimi Hendrix and Janis Joplin. King's second album on Stax,

*Live Wire/Blues Power*, was recorded at the Fillmore, and is regarded as one of the finest recordings of blues in concert.

King continued to push the boundaries of blues into the 1970s by playing with the St. Louis Symphony and becoming the first blues player to appear with full orchestration. His 1972 album, *I'll Play the Blues for You* built upon *Born under a Bad Sign* with a James Brown funk feel.

King's mid- to late 1970s releases took on a disco feel, which was an attempt to update his sound. These albums were overproduced and failed to capture the energy of his previous work. King continued to record for Fantasy Records of Berkeley, California, which had bought out Stax, and returned to form with his final album *I'm in a Phone Booth, Baby* in 1984. King continued to tour until his death from a heart attack on December 21, 1992, in Memphis.

## King, B. B. (1925—)

To people the world over, B. B. King is the literal personification of blues. No blues or rock 'n' roll musician in the postwar era in America could escape his influence, either directly or indirectly. His fusion of acoustic country blues with jazz set the stage for a half century of development in African American music. Although he never attained the widespread commercial success enjoyed by others, King rose to his billing "King of the Blues" without compromising his style or musicianship.

King is credited with bringing vibrato to the electric guitar, and the stinging, fluttering sound of his guitar, named Lucille, was totally unique and instantly recognizable. His story is one of the most amazing in American music. His rise from picking cotton in Mississippi to touring the world has become part of the mythology of the American Dream.

Riley B. King was born September 16, 1925, on a farm near Itta Bena, Mississippi. His parents separated when he was four, and he lived with his mother until her death when he was nine. He then lived with his maternal grandmother, his father in nearby Lexington, and on his own, supervised by an extended family of aunts, uncles, and caring white plantation owners. His earliest musical memories were the hollers of fellow field workers and his first exposure to the guitar came in church, where he heard the Reverend Archie Fair play. He listened to the records of Blind Lemon Jefferson and Lonnie Johnson on an aunt's Victrola.

"Blind Lemon and Lonnie hit me the hardest, I believe, because their voices were so distinct, natural, and believable. I heard them talking to me," King said in his autobiography, *Blues All Around Me*. "As guitarists, they weren't fancy. Their guitars were hooked up to their feelings, just like their voices . . . No one melded my musical manner like Blind Lemon and Lonnie. They entered my soul and stayed." As a teenager, King fell under the spell of T-Bone Walker,

### B. B. King

the swinging Texan who pioneered the electric guitar along with Charlie Christian. Other key influences were Gypsy guitarist Django Reinhardt from Belgium and saxophonists Lester Young and Louis Jordan.

King bought his first guitar for \$15 when he was 12 and played it while singing tenor with the Elkhorn Jubilee Singers, a gospel group he organized with a cousin and two friends. By the mid-1940s, King moved to Memphis and sought out his cousin, Bukka White. Already a famous musician, White took King under his wing. King's signature vibrato developed as a result of his failure to master White's slide technique.

King played blues and gospel on street corners around Beale Street and landed a 10-minute show on radio station WDIA sponsored by Pepticon, a cure-all tonic. King was a hit and became a regular disc jockey known as the Beale Street Blues Boy, later shortened to B. B. His radio show led to bookings outside Memphis and the recording of his first singles in 1949 on the short-lived Bullet label.

King was soon discovered by Ike Turner, at that time working as a talent scout for Modern Records. King had a hit with "Three O'Clock Blues" which spent 15 weeks at the top of Billboard's R&B (rhythm and blues) chart in 1951, which allowed him to tour nationwide.

King stayed with Modern Records until 1962 when he left for ABC Records—signing a contract he has honored for over 35 years.

Through the 1950s and 1960s, King kept up an unbelievable touring schedule, playing as many as 340 dates a year. He recorded *Live at the Regal*, one of the finest examples of live blues, in 1965 at Chicago's Regal Theatre. Still, King remained a star only on the "Chitlin' Circuit" of black clubs. He fell through the cracks when rock 'n' roll came around, unable to cross over like Little Richard, Fats Domino, or Bo Diddley, and did not fit in with the soul movement of the 1960s like Ray Charles or the Motown Records roster. Furthermore, he was unable to capitalize on the blues revival of the 1960s, where country blues artists like Lightnin' Hopkins and Son House were embraced by white folk music fans. Academics saw King's electric guitar and swinging horn section as a corruption of the country blues tradition.

Things changed for King in 1968 when he hired manager Sidney Seidenberg. Seidenberg booked King into white rock venues like the Fillmore Auditorium in San Francisco and on the *Tonight Show* and *Ed Sullivan Show* on television. Seidenberg's work paid off in 1970 when King's biggest hit, "The Thrill Is Gone," reached number 15 on the Billboard pop chart. Continuing to push for mainstream bookings, Seidenberg opened up Las Vegas and booked tours of the Soviet Union and Africa.

King's fans had always been older, but he gained exposure with a much younger audience when Bono of the Irish rock group U2 wrote a duet with King, "When Love Comes to Town," in 1988. The song

made the U2 concert movie *Rattle and Hum* and won an MTV (Music Television) Video Music Award. King also spent three months opening for U2 on the band's North American tour.

The winner of countless awards and honors, including seven Grammy Awards, King continued to play over 200 dates a year into the late 1990s. His 1993 album *Blues Summit*, consisting of duets with 11 other top blues performers, maintained his reputation as an American institution. That reputation was confirmed when his life was celebrated by President Bill Clinton at the Kennedy Center Honors in 1995.

## King, Billie Jean (1943—)

Intensely competitive and outspoken in her demand for equality for women athletes, Billie Jean King changed the face of women's sports, paving the way for today's professional women athletes. Holder of a record 20 Wimbledon titles and winner of all four Grand Slam tournaments, King is perhaps best remembered for her defeat of Bobby Riggs during the epic Battle of the Sexes in 1973. Passionately dedicated to tennis, to women's rights, and to being one of the best athletes, male or female, of her day, Billie Jean King's heroic actions redefined what was possible for women, making her a role model for generations to come.

Billie Jean Moffitt was born in Long Beach, California, on November 22, 1943. The daughter of a fireman and a homemaker, and the sister of future San Francisco Giants relief pitcher, Randy Moffitt, Billie Jean was an athletic girl who excelled at softball. At a very young age, she announced to her mother that she planned to do something special with her life, and when she discovered tennis a few years later, she dedicated herself to the sport. Because the Moffitts could not afford a membership at the local country club, Billie Jean learned her sport on the public courts. By the time she was 12, she was good enough to play in sanctioned tournaments, and her father started moonlighting, while her mother sold Avon and Tupperware, so that their daughter could compete. As a teenager, Billie Jean not only fought the elitism of tennis, but she was also aware that girls' sports were valued differently than boys', when the boys' team received funding and the girls had to fend for themselves.

In 1961, 17-year-old Billie Jean qualified to play doubles at Wimbledon and she and her partner, Karen Hantze, funded by a local businessman, flew to England to compete. They won, becoming Wimbledon's youngest women's doubles winners ever. But in the

Billie Jean King

early 1960s, winning Wimbledon was not enough to start a career in tennis. In fact, there were no real careers in tennis for women. Tennis was an amateur sport, and the only money to be made was a few hundred dollars under the table for showing up at a tournament. So Billie Jean returned home and enrolled at Los Angeles State College, where she fell in love with a fellow student named Larry King.

Billie Jean and Larry married in 1965, and Billie Jean put her husband through law school by playing tennis, which she continued to do with great success, winning all the big tournaments. In 1968, the major championships were finally opened up to professionals as well as amateurs. But the prize money for the women was dramatically unequal to that awarded to the men—women sometimes earned as little as one tenth of what men did. This infuriated King, who conceived of the idea of starting a women's tour.

In 1970, King and a group of women players refused to play an important tournament where the prize money was eight to one in favor of the men. Instead, with the aid of Gladys Heldman, the founder of *World Tennis* magazine, they put together a competing tournament in Houston, with \$5,000 in prize money. The powers-that-be in the tennis world threatened to suspend the defecting players, but the women held fast. When Heldman solicited \$2,500 more in prize money from Philip Morris, who was marketing a new cigarette for women, the tournament was named the Virginia Slims International, and the first professional women's tournament was held.

By 1971, with Billie Jean King as the spokeswoman, the Virginia Slims women's tour was founded. Although some of the players, most notably Chris Evert, refused to sign on, the tour was a success in its first year. And so was King, who continued to do well in

the major tournaments, beating Chris Evert in the United States Open final that same year, becoming the first woman athlete to win \$100,000 in prize money in a single year.

Within two years, all the women players would join the tour and tennis would never be the same. Billie Jean King, however, still had more causes for which to fight. Holding her ground against all dissenters, she pushed through the Women's Tennis Association, their own union. Women's sports, buoyed by Title IX, which prevented discrimination against women athletes, had begun to change. Then came the event that would transform King into a feminist heroine beyond the boundaries of tennis.

In 1973, 55-year-old former Wimbledon champion, Bobby Riggs, played the number two woman in the world, Margaret Court, in a tennis match that would prove, Riggs hoped, that men were better athletes than women. In what has been referred to as the Mother's Day Massacre, Riggs beat Court in straight sets. As Billie Jean King later wrote, "My first reaction was, 'Oh no, now I'm going to have to play him.'" Indeed, a match was soon arranged between Riggs and the number one woman on the tour.

On September 20, 1973, 30,000 fans filled the Houston Astrodome and 50 million viewers tuned in on television to watch Billie Jean King take on the self-proclaimed male chauvinist pig, Bobby Riggs, in the Battle of the Sexes. Fit, tanned, and ready to play, King won the \$100,000 winner-take-all match in three straight sets. More than a sports event, the King-Riggs match became a defining moment in American popular culture and feminist history, one of the few events that elicits an exact response to the question, "Where were you when. . .?"

At the end of her career, King was outed as a lesbian, becoming the first woman in professional sports to bear the brunt of a nation's homophobia. Although her admission of her sexuality was clouded by her stated discomfort with being a lesbian and her continued marriage to Larry King, Billie Jean laid the groundwork for women such as Martina Navratilova, Melissa Etheridge, and Ellen DeGeneres to come out of the closet. Now openly lesbian, King lends her outspoken advocacy to gay causes.

One of *Life* magazine's 100 Most Important Americans of the twentieth century, Billie Jean King is a heroine to countless women who saw, in her defeat of Riggs and her unqualified success as one of the first professional women athletes, hope for their own dreams. A dedicated activist and coach, King continues to lobby on behalf of the causes in which she fervently believes, from Team Tennis to Elton John's AIDS Foundation, remaining a powerful force for change and a monument to passionate persistence; indeed, she is an icon for the ages.

## King, Carole (1942—)

Carole King has had two of the most successful careers in rock history: first as a member of early rock 'n' roll's best known songwriting team, and then as the best-selling singer/songwriter of the 1970s. Along the way, she proved there was a place in rock 'n' roll for someone who wrote and sang pleasant, unpretentious songs, without stage theatrics, sexual abandon, or any other gimmicks.

Born on February 9, 1942, Carol Klein started writing songs at an early age. By the time she reached her teens she was riding the

Carole King

subway from her Brooklyn home into Manhattan, where she shopped her tunes on Tin Pan Alley (where most of the day's pop hits were cranked out in assembly line fashion). Her first recording (using her stage name Carole King) was "Oh Neil," an answer to "Oh Carol" recorded by Neil Sedaka, and she hit the Top Forty in 1962 with "It Might as Well Rain until September." But by that time she was having more success as a songwriter for others. King met lyricist Gerry Goffin in 1960; they married soon thereafter and divorced in 1967. Along the way, they wrote many of the most enduring songs in early rock 'n' roll: "Will You Love Me Tomorrow?," "Take Good Care Of My Baby," and "The Loco-Motion" (written for their babysitter, who recorded under the name Little Eva). Together with their contemporaries Burt Bacharach and Hal David, and Jerry Leiber and Mike Stoller, Goffin and King made standard pop formulas seem fresh and alive. Though they wrote in a small office around the corner from the Brill Building, their melodies and lyrics were expansive: simple but original, memorable and timeless. (Their only brush with controversy came with a 1964 dealing with domestic violence, "He Hit Me and It Felt Like a Kiss.") In 1963 John Lennon and Paul McCartney stated their ambition to be the British Goffin and King.

Ironically, it was rock groups like the Beatles who wrote their own material that ultimately ended Tin Pan Alley's dominance over the pop charts, and the couple soon found themselves unable to make hits. After divorcing Goffin, King went back to recording her own songs, first as the frontwoman for the three-piece rock group The City. Their one 1968 release failed, and King decided to go it alone. Her first solo effort, 1970's *Writer*, failed to make a splash though in retrospect it was excellent: she covered a variety of pop and rock styles with lively, accessible melodies; unassuming, gentle vocals; and for good measure she threw in one song from her Tin Pan Alley days. With few variations, she stuck to this formula during the multiplatinum years that followed.

A year later, the general public—primed by successful soft-rock singer/songwriters Crosby, Stills, Nash and Young; and James Taylor—was ready for King. *Tapestry* was an immediate smash, a seemingly endless source of AM radio hits: "I Feel The Earth Move," "So Far Away," "It's Too Late," and her own versions of "Will You Still Love Me Tomorrow," "You've Got A Friend," and "(You Make Me Feel Like) A Natural Woman." The themes were easily understood, upbeat though touched with sadness, intelligent but not intellectual—a Joni Mitchell for the masses. The record sold 15 million copies, and for a span of several years was the best selling LP of all time.

The pattern continued with *Music* and *Rhymes and Reasons*, but the backlash came against her ambitious 1973 concept album *Fantasy*. Critics didn't want to hear her view on the world's ills, though in hindsight it's a remarkably affecting, coherent piece of work. After two more huge hit singles, "Nightbird" and "Jazzman" from 1974's *Wrap Around Joy*, King watched her album sales steadily decline. However, her gentle piano-based approach could still be heard in artists from Christine McVie to lesbian icon Cris Williamson. In 1980 King resorted to an entire album of songs from Goffin and King's heyday, *Pearls*. "One Fine Day" was a hit single, but it didn't reverse the trend: New Wave and heavy metal were sweeping singer/songwriters off the pop landscape, and in the early 1980s King fared no better than Taylor, Mitchell, Carly Simon or Janis Ian. After 1983's *Speeding Time*, she virtually retired.

In 1990, Goffin and King were elected to the Rock and Roll Hall of Fame, and in 1996 the Alison Anders film *Grace of My Heart* loosely portrayed King's life. By the late 1990s, King was justly hailed as a pioneer. Her sincerity and gift for deceptively simple melody were a profound influence on artists from Mariah Carey to Alanis Morissette, and King came out of a long hiatus in 1998 with the single "Anyone At All," the theme from Nora Ephron's film *You've Got Mail*.

## King, Freddie (1934-1976)

Of the three "Kings of the Blues" (Albert and B. B. are the others), Freddie King had arguably the most influence on early rock 'n' roll. The youngest of the three unrelated guitarists, Freddie had hits as early as 1961 that had an enormous impact on the California surf music of Duane Eddy and the Ventures. He was also a key early influence on British band leader John Mayall and young guitarists Eric Clapton and Peter Green.

King came from the Texas blues tradition of T-Bone Walker and Lightnin' Hopkins, but moved to Chicago at age 16, where he fell under the spell of Eddie Taylor and Jimmy Rogers. King joined Magic Sam and others in founding the west side sound, a more percussive and up-tempo alternative to the blues played on the south side by older musicians such as Muddy Waters and Howlin' Wolf. King's initial success came on the Federal/King label in Cincinnati, where his instrumental recordings, including "Hideaway" and "The Stumble," served as a dictionary of licks for aspiring guitarists.

## King Kong

One of the classic monster movies of all time, the 1933 production of *King Kong* is best remembered for the dramatic scenes of a giant ape climbing the recently erected Empire State Building and batting away airplanes with Ann Darrow in his grasp, though she is universally remembered not with that character's name, but as the real-life actress who portrayed her, blonde scream queen Fay Wray. That image of Kong and Wray atop a New York skyscraper, along

King Kong perched atop the Empire State building in a scene from the film *King Kong*.

with Dorothy on the Yellow Brick Road and Scarlett returning to the ruins of Tara, ranks among the iconic film scenes of the pre-World War II era. A popular sensation in its day, *King Kong* failed to win a single Academy Award nomination, yet has outlived most of its contemporaries to achieve the stature of a twentieth-century myth.

A modern variation on *Beauty and the Beast*, the screenplay was credited to popular pulp writer Edgar Wallace, though *King Kong* was the brainchild of documentary film pioneer Meriam C. Cooper and his partner in adventurous filmmaking, Ernest Schoedsack. The film's effects, groundbreaking in their day, were the handiwork of stop-motion animator Willis H. O'Brien, whose efforts on the silent film version of Doyle's *The Lost World* had laid the groundwork for *King Kong*. Promising Fay Wray "the tallest, darkest leading man in Hollywood," Cooper and Schoedsack cast her as Ann Darrow, the petite object of Kong's affection. Rounding out the cast were Robert Armstrong as headstrong filmmaker, Carl Denham (modeled after Cooper), and Bruce Cabot as the rugged seaman who falls for Darrow even before Kong does. Kong himself was in actuality a small model. O'Brien's genius was that movie-goers not only believed Kong was a giant, but also that he had a soul.

Like other "jungle" movies of the period, *King Kong* delineates a clash between the "civilized" and the "primitive." Denham's "bring 'em back alive" expedition to remote Skull Island uncovers a living prehistoric world populated by local natives and—on the other side of their great wall—dinosaurs, pterodactyls, and Kong himself. The islanders kidnap Ann to offer her as a bride for the giant gorilla, prompting a struggle in which many men die in the attempt to rescue her from her fate. Eventually Kong is subdued and taken to Manhattan, where Denham exploits the great beast as "The Eighth Wonder of the World." But the love-smitten Kong escapes, rampages across Manhattan, recaptures Ann, and ends up atop the Empire State Building, only to plummet to his death in a dramatic air assault. Denham's rueful obituary: "It wasn't the airplanes—it was beauty that killed the beast."

All of this thrill-packed hokum was made convincing by O'Brien's effects, aided by skillful art direction—Skull Island was a mythical landscape straight out of Gustave Doré—the optical printing of Linwood Dunn, the sound effects of Murray Spivak and, above all, the almost wall-to-wall musical score by Max Steiner. It has been suggested that Depression-era audiences took a particularly vicarious

delight in seeing Kong lay waste to the buildings and subway trains of the cold-hearted Manhattan. *King Kong* has remained a staple of late-night television and in film festivals, chiefly because O'Brien endowed his great brute with an uncanny personality that evoked sympathy from audiences.

*King Kong* spawned a modestly budgeted, inferior sequel, *Son of Kong* (1933). O'Brien also worked on one more giant ape movie, *Mighty Joe Young* (1949), aided by his young protege, Ray Harryhausen, who went on to make many successful screen fantasies of his own, such as *The Seventh Voyage of Sinbad* (1958) and *Jason and the Argonauts* (1963), all of which carry echoes of *King Kong*. In truth, there is something of the big hairy ape in every giant-monster movie that has followed in his pawprints, from Japan's *Godzilla* (1955) to Spielberg's *Jurassic Park* (1992) and, of course, in the successful 1976 remake *King Kong*. But no other creature feature seems to have quite caught the public imagination as the original *King Kong*.

The image of Kong and his beloved atop the skyscraper has been continually copied in horror movies, parodied in cartoons, comic books, and countless television commercials. For a period in the 1980s, a pop shrine to the gorilla's memory was created when a giant inflated model of King Kong was hung near the top of the Empire State Building. Still, the original black-and-white film has lost none of its power to enthrall. Modern digital technology may have outstripped O'Brien's hands-on puppetry, but it has not replaced the charm and humanity that every great fairy tale requires and which *King Kong* displays in abundance.

## King, Larry (1933—)

One of the late twentieth century's foremost television talk show hosts, Larry King's distinctive style, at once relaxed and commanding, and his focus on issues of topical interest, elevated the talk show genre to something of national importance. Starting out as a disc jockey on local radio, King worked hard to rise in the broadcasting media, overcoming self-created reversals of fortune to become a pioneer of the modern phone-in show on both radio and television. CNN's most popular program, *Larry King Live* (1985—), has made its host one of the most sought-out interviewers in the world, a man who has proved that entertainment value need not be sacrificed in order to examine important matters.

Born Lawrence Harvey Zieger in Brooklyn, New York in 1933, the son of Russian immigrants who a year previously had been devastated by the death of their firstborn son, the young Larry was nine when his bar-owner father died of a heart attack, leaving his mother to support the boy and his younger brother on welfare. Deeply

Larry King

affected by his father's death, King stopped paying attention to his studies and crippled his chances of entering college. After graduating from high school, he immediately sought work to help support his mother and brother.

Despite his lack of academic dedication, King aspired to a career in radio. In his early twenties, while working for UPS as a delivery man, he frequented broadcasting studios around New York, but grew increasingly despondent about the prospects of getting his dream job. However, a chance meeting with a CBS staff announcer resulted in the suggestion that if he was serious about getting on the air, he should leave the world's media capital for a smaller but growing media market where more opportunities might present themselves.

This advice led King to Florida, where a lack of immediate success found him sweeping floors at the smallest station in town. He used the opportunity to learn everything he could about the radio business and, at age 23, he got his break as a morning disc jockey on a small AM Miami station. It was the station's manager who suggested he drop the "ethnic" name Zieger in favor of the more American King. By 1961, Larry King was a popular personality in the south Florida radio market. His success in the medium led him to try his hand in the emerging world of television, and in 1960 he began hosting a program on a Miami station. During this time and through the early 1970s, he maintained shows on both radio and television,

and added newspaper columns in *The Miami Herald* and *The Miami News*, which helped fuel his popularity in Florida.

King's hard-earned success shuddered to an unfortunate halt in the 1970s. During the 1960s, he overspent wildly, gambled on horses, and failed to pay his taxes. He also became involved with Lou Wolfson, a shady Florida financier who had been connected with the scandal that led to the resignation of Supreme Court Justice Abe Fortas in 1969. A scheme to bankroll New Orleans District Attorney Jim Garrison's investigation of the President Kennedy assassination was Wolfson's brainchild, one in which King became deeply enmeshed. King was the middleman in the arrangement, but skimmed some of the cash intended for Garrison as a means to help get himself out of debt. When Wolfson learned of this, he charged King with grand larceny and, although the charge was eventually dismissed, the damage was done. King left Florida radio in 1971, taking his talents and his focus to the West Coast, where he rebuilt his career by writing magazine articles and working in radio. By the mid-1970s, time had healed his reputation and image and he was welcomed back into the market where he had started: south Florida.

After building his show up in Miami, King was able to take his self-titled radio program, *The Larry King Show*, to a national audience in 1978, making it the first nationwide call-in show. King's popularity in the overnight program led to further opportunity in 1985 when the four-year-old Cable News Network (CNN) was looking to expand its programming in order to temper its image as merely a video wire service. CNN put *Larry King Live* on television as the first international live phone-in television program, where he proceeded to interview public figures across a wide spectrum that included athletes, actors, writers, politicians, and foreign dignitaries. The mix of guests and King's unique style found an immediate public response. King projected innate curiosity and intense interest onto his guests in such a manner as to provoke more honest answers than many of them were accustomed to giving before a national audience. Furthermore, by allowing the general public to ask questions, which like King's own, tended to be softballs not intended to inflame, King gave the show a friendly feel that has contributed to his reputation as "The King of Talk."

King's influence was highlighted on February 20, 1992 when billionaire Ross Perot used *Larry King Live* to announce his intention to run for the presidency. Following the attention surrounding the Perot announcement and the unique means through which it was made, other politicians chose to use King's program as a significant forum to discuss the issues of the 1992 election. The election, which is recorded in history as the first time candidates used talk shows as a major means to reach voters while circumventing traditional channels, saw King, by now dubbed "The King Maker," as the number one choice of host for the purpose. The major presidential candidates appeared on King's show 17 times in the last two weeks of the campaign alone, each of them devoting a full hour to the show during this intense time. The status of *Larry King Live* rose several more notches on November 9, 1993, when vice-president Al Gore agreed to appear on the air with Perot to have King moderate a debate on the controversial North American Free Trade Agreement (NAFTA), which was under consideration by Congress. On the road to the 1996 elections, King's influence was not forgotten: a number of potential candidates used his show to test the waters for their White House chances.

The many awards with which Larry King has been honored include the Broadcaster of the Year Award from the International Radio and Television Society and the ACE Award for Program Interviewer. He has also won the Jack Anderson Investigative Reporting Award and the George Foster Peabody Award for Excellence in Broadcasting. He is the author of a number of books, including *Larry King by Larry King* (1982), *Tell It to the King* (1988), "Mr. King, You're Having a Heart Attack" (1989), *Tell Me More* (1991), *On the Line: The New Road to the White House* (1993), *How to Talk to Anyone, Anytime, Anywhere: The Secrets of Good Conversation* (1994), the children's book *Daddy Day, Daughter Day* (1997, with daughter Chaia), and *Powerful Prayers* (1998). King also writes a weekly column for *USA Today*.

## King, Martin Luther, Jr. (1929-1968)

Dr. Martin Luther King, Jr. was, quite simply, the most popular and effective leader of the African American struggle for civil rights. His philosophy of non-violent direct-action galvanized thousands of

Martin Luther King, Jr.

Americans, both black and white, to press for the full measure of human and political rights for African-Americans. Although he was not personally responsible for mobilizing protest, he was certainly one of the greatest organizers of people the world has ever seen. Today, a national holiday is named in his honor and numerous highways, streets, schools, playgrounds, and public buildings display his name.

For a man who would capture the attention of both his country and the world, King's life seemed like a fairy tale. Born into Atlanta's black upper class in the midst of the depression, King felt very few effects of the economic crisis. As the son of a popular Baptist pastor, King was afforded the opportunity to have a childhood free from overt racial discrimination. Upon graduating from the all-black elite Morehouse College at the age of 19, he then undertook training in theology at Crozer Theological Seminary in Chester, Pennsylvania, where he received a bachelor's degree. While at Crozer, King absorbed the ideas of Christian socialism that would play a tremendous role in his life's work. King built upon these ideas of social justice as he pursued his doctorate in theology at Boston University.

Upon receiving his doctorate at the age of 26, Martin Luther King, Jr. was appointed pastor of the conservative Dexter Avenue Baptist Church in Montgomery, Alabama, where he gained notoriety by spearheading the successful Montgomery Bus Boycott under the auspices of the Montgomery Improvement Association. The leaders of the MIA chose King as leader for several reasons, but primarily since he was new to the area and the white power structure had not yet made his acquaintance. After the success of the bus boycott, King then decided to institutionalize his popularity by forming the Southern Christian Leadership Conference (SCLC). And until his death SCLC would be King's vehicle for mobilizing African Americans to protest discriminatory treatment. Largely made up of ministers, SCLC's motto would be "To Redeem the Soul of America."

After forming the SCLC King, with the help of the other civil rights organizations such as the Student Non-Violent Coordinating Committee (SNCC), the Congress of Racial Equality (CORE), and the NAACP, initiated several campaigns throughout the South in their quest for voting rights and integration. Throughout the civil rights drive King remained firmly committed to his philosophy of nonviolence. At times, both his critics and supporters failed to understand how blacks could remain nonviolent in a country that spoke the language of violence. But King was persistent in his Gandhian philosophy that nonviolent resistance was the most potent weapon available to oppressed people in their struggle for freedom.

King's popularity reached new heights at the 1963 March on Washington with his "I Have a Dream" speech. Although it was a phrase that he had used many times before, this time it struck a rich chord with both blacks and whites alike. On the heels of this dramatic speech, King then received the Nobel Peace Prize for his unwavering commitment to nonviolent social change. For King, who was the first African American to receive the award, it illustrated that the world was behind the black struggle for civil rights. Although white Southerners were defiant in their opposition to the twin goals of voting rights and integration, millions of people across the globe were in support.

With his popularity skyrocketing, King was continually in both the print and broadcast media. He immediately became an icon. He capitalized on his press coverage by cleverly articulating the goals and aims of the Civil Rights Movement to viewers and readers far away. He also published three popular books, *Strive Toward Freedom: The Montgomery Story*, *Why We Can't Wait*, and *Where Do We*

*Go from Here? Chaos or Community*, to further express his ideas on the Civil Rights Movement. Throughout the 1960s King gave an untold number of speeches and sermons as he often toured the country to speak on behalf of the cause he so ardently espoused. In nearly every city he spoke before a packed house. To some activists, a local campaign did not seem legitimate unless King gave it his blessing.

In 1965, King and other civil rights leaders saw the fruits of their labor when President Lyndon Baines Johnson signed into law the Voting Rights Act. In the words of one historian, "it was the crowning achievement of the Civil Rights movement."

Although he was successful in the South, King's popularity began to wane when he spoke out against the Vietnam War. In May of 1966, against the wishes of even some of his close confidants, King began to denounce the conflict. Many thought that he should just stick to the issue of civil rights and leave foreign policy to others. However, feeling that it was an unjust war, King decided to speak out. After voicing his opinion on the war, nearly every major U.S. newspaper came out against him. As his popularity began to decrease, King launched the Poor People's Campaign that would transcend the wide chasm of race, culture, and religion. Tragically, he was fatally wounded by an assassin's bullet on April 4, 1968 while aiding Memphis sanitation workers in their fight for better working conditions.

Few activists can ever hope to be as popular or successful as Martin Luther King, Jr. Today, mere mention of his name evokes greatness, commitment, and dedication. His name is respected throughout the world, even by his enemies. However, his life's work on behalf of the oppressed will long be the standard by which others are measured.

## King, Rodney (1965—)

An international symbol of racial violence and ongoing social injustice, the brutal police beating of Rodney King on March 3, 1991, and the subsequent acquittal of all officers involved, were the trigger events that led to the Los Angeles uprisings in April 1992.

Born in Sacramento, California, in 1965, the second of five children, the life of Rodney Glen King prior to the beating was, in many ways, typical of many African-American men. When his family moved to South Pasadena, King's father, who worked in maintenance and construction, turned more and more frequently to alcohol. Left back a grade in high school, and relegated to special education classes, King, who was only functionally literate, dropped out of school altogether in 1984. He fathered two children with two different women early on, but was unable to provide for his family with the

occasional construction jobs that he was able to secure. In marrying Crystal Waters, who had two children of her own, King took on additional responsibilities that soon overwhelmed him.

Convicted of attempted robbery in 1989, King served one year at the California Correctional Center in Susanville before being paroled and allowed to return home. More unable than ever to find construction work, King was eventually hired as a part-time laborer at Dodger Stadium.

When he wasn't working, the 6'3" man referred to as a "gentle giant" by his loved ones, could be found hanging out with old friends and drinking 40-ounce bottles of Olde English 800. On the night of March 2, he and his friends were doing just that. In fact, there was an open bottle of beer in the car when King saw the flashing lights of the California Highway Patrol. Knowing that he was violating his parole, King initially tried to get away, leading the officers on a high-speed chase. When King finally pulled off the freeway, he was in a community called Lake View Terrace. By then several Los Angeles Police Department squad cars had arrived, and there was a helicopter hovering above.

George Holliday, who was awakened by the commotion, reached for his new Sony Handycam recorder and began taping the activity below his apartment window. His nine-minute amateur videotape, which revealed some 81 seconds of King being brutally beaten by at least four police officers, was broadcast on KTLA 5, a local Los Angeles news station, the next day. In the video, viewers watched as King was stunned with Taser darts, and then pummeled repeatedly with steel batons—blows that resulted in a fractured eye socket, facial-nerve damage, 11 skull fractures, and a severe concussion, which has led to permanent brain damage. King also suffers from leg numbness and a permanent limp.

In a 1992 trial held in the predominately white community of Simi Valley, officers Stacey Koon, Theodore Briseno, Laurence

Powell, and Timothy Wind were found not guilty on charges of using excessive force. Almost immediately following their April 29th acquittal, Los Angeles erupted in a groundswell of violence. Dozens of residents were left dead, and hundreds of businesses were burned to the ground, leaving an estimated \$550 million in damage. Two days after the verdicts, King made his now famous plea for an end to the rebellion. Facing news cameras outside his attorney's Wilshire Boulevard office, a visibly shaken and tearful King spoke: "People, I just want to say . . . can we all get along? Can we get along? Can we stop making it horrible for the old people and the kids? . . . We'll get our justice. . . . Please, we can get along here."

Not all of the protest was unorganized. Unified Against Genocide, for example, was a San Francisco-based group headed by activist Angela Davis, whose members called for a retrial under California's hate crime law. Most, however, looked to the upcoming Federal trial for justice. That trial, which took place in 1993, found two of the officers—Stacey Koon and Laurence Powell—guilty of violating King's civil rights. Both men were ordered to serve 30-month prison terms.

Although King's first attorney, Steven Lerman, had initially stated that he would seek \$56 million (one million for each blow) in a civil rights suit against the Los Angeles Police Department, the amount went down to around \$9 million by the time King and his new lawyer arrived in court. On April 20, 1994, a third jury awarded King \$3.8 million in damages.

Since the infamous 1991 beating, King has spent most of his days sequestered in his Altadena home, and at the local park, watching baseball games and organizing recreation programs for local youths. He has also invested in his own music label—a rap recording outfit called Straight Alta-Pazz.

And yet, King continues to be haunted by his past. Despite having completed at least one 90-day alcohol abuse program as a

condition of his earlier parole, he has been arrested several times since 1991, on charges of both drunken driving and spousal abuse.

## King, Stephen (1948—)

Stephen King's connections with horror fiction are so compelling that for many he virtually embodies the genre; he has become, in

Stephen King

words consciously echoed by more than one commentator, the unchallenged "King of Horror." His reputation is well-deserved, resting as it does on a strongly colloquial narrative style that has proven particularly appropriate to his brand of horror, and on a prolific output that includes at least 60 novels and books of nonfiction in some 25 years, along with well over 100 published short stories, more than double that number of nonfiction articles ranging from scholarship to fan writing, in excess of two dozen theatrical and television adaptations of his works, and seemingly endless variations on audiocassettes, videocassettes, and even Broadway musicals retelling his stories. His popularity has made him a legitimate "brand name writer," as witnessed by references to him and his creations in films, television specials, sitcom episodes, syndicated newspaper cartoons, and elsewhere. As a writer, he has continuously redefined the commercial possibilities of horror fiction, beginning with his first appearance on the bestseller lists with *'Salem's Lot* in 1976. In August 1980, *Firestarter*, *The Dead Zone*, and *The Shining* appeared on the lists simultaneously, marking the first time that an American author was represented by three books. During one week in January 1986, King had five titles simultaneously on the national lists: the hardcover editions of *Skeleton Crew* and *The Bachman Books* and the mass-market and trade paperback editions of *The Talisman*, *The Bachman Books*, and *Thinner*. Since then, instance of two, three, and four titles appearing simultaneously are frequent enough not to occasion much more than passing notice: the exceptional has become the norm—for Stephen King, at least.

At the same time, King has used his facility with the conventions of horror fiction to achieve more than base titillation and terror. From the beginning, his books have been constructed not only on strong narratives and intriguing characters but also on insights into contemporary American society in the closing quarter of the twentieth century. More than any other single author in the field, King speaks for the experiences, expectations, achievements, and disappointments of the "Baby Boomer" generation, often coupling his cosmic horrors and monsters with references to the minutiae of daily life: Gypsy curses share the pages with Ding Dongs, and apocalyptic plagues with Payday bars (reformulated in a chocolate variety to bring the candy bar into line with King's description of one in *The Stand*). His novels have examined flaws in American education (*Carrie* and *Rage*), ramifications of America's love-hate relationship with the automobile (*Christine*), the failure of the American family (*The Shining*, *Roadwork*, *Christine*, *IT*, *Rose Madder*), America's obsessive consumption of energy regardless of the cost (*The Tommyknockers*), and America's potentially suicidal flirtation with devastating technology (*The Stand*). King has also reflected a distinctly political/social agenda, with what are essentially feminist tracts in *Gerald's Game* and *Dolores Claiborne* and more balanced but still socially conscious themes in *Rose Madder*, *Insomnia*, and *Bag of Bones*. In most of his novels and stories, however, he constructs an artful balance between story and commentary, rarely allowing theme to overmaster narrative. In this, if in nothing else, King has demonstrated himself a master of his art.

King's centrality as a master of contemporary popular fiction is no accident; rather, it is the result not only of a native genius for storytelling but also of an extraordinary dedication to his craft. Born on September 21, 1948, King had spent about three-quarters of his life committed to storytelling by the end of the twentieth century. Beginning with derivative stories and juvenilia including self-published chapbooks such as *The Star Invader*, King had placed his first

marketable story by the age of 17; then written major portions of at least three novels, composed nearly 18 months of weekly columns for his college newspaper, and published seven short stories before graduating from the University of Maine at Orono in 1970.

A decade later, King had made his permanent home in Bangor, Maine; completed the first draft for what many consider one of his masterworks, *It*; had seen the publication of ten books, with film versions of several; and enjoyed the first of many triple-title entries in the bestseller lists. A further decade later saw King publish the original version of *The Stand*, using his unique position to restore hundreds of pages cut for its first publication and thus to re-emphasize King's mastery of his chosen genre.

And as the year 2000 approached, King confirmed his stamp on American publication with the appearance of the six-part novel, *The Green Mile* (each short paperback episode rising immediately to bestseller status); two novels published simultaneously by two "authors"—Stephen King's *Desperation* and Richard Bachman's *The Regulators*—using the same casts of characters as imagined by two distinctly different personalities and both verging on an awareness of the numinous in human life; a novel, *Needful Things*, that systematically destroys King's trademark city, Castle Rock, while at the same time asserting the reality of The White—the image of cosmic order and rightness that lies at the core of many of his novels; and the most recent episodes of a decades-long, multi-volume tale-in-progress, "The Dark Tower" series, which promises to fulfill not only King's significant promise as novelist but also his position as heir to the grand traditions of Renaissance epic, the American Western, apocalyptic fantasy, post-apocalyptic science fiction, and mythic romance.

Yet even at his most breathtakingly apocalyptic—or at his most mundanely political and social—King remains true to his roots. An outline of King's titles at the end of the 1990s suggests his wide-ranging interests and his ability to tell stories about almost every traditional monster or conventional terror associated with horror fiction, while transforming that monster into an emblem for contemporary events, problems, or concerns. *Carrie* (1974) blends narrative with pseudo-documentary to detail a naive girl's confrontation not only with menstruation but with ill-defined and partially understood psychic powers. *'Salem's Lot* (1975) revitalized the vampire tradition by emphasizing the underlying isolation and disintegration of community implicit in the figure of the Undead feeding unsuspected on the energy of the living. *The Shining* (1977), one of King's finest, most literary, and most cohesive novels, interweaves sophisticated literary layerings with a traditional ghost story, while at the same time dissecting one American family and demonstrating how fragile family bonds can become in times of social upheaval.

Also in 1977, King published the first of six pseudonymous novels, under the name "Richard Bachman." The first, *Rage* (1977), partially completed prior to King's enrolling at the University of Maine, Orono, embodies a scathing indictment of American education as King portrays a protagonist, a high school student, who murders a teacher and holds his class hostage—events perhaps startling in fiction at the time but, as King seems to foreshadow in the novel, occurring only too frequently in real life by the close of the twentieth century. Subsequent "Bachman" books included *The Long Walk* (1979), *Roadwork* (1981), *The Running Man* (1982), *Thinner* (1984), and—after a decade-long hiatus during which "Richard Bachman" surfaced primarily in in-jokes among readers and critics—*The Regulators* (1996). All except *Thinner* and *The Regulators* were early works, more recognizably mainstream than anything King

had published until *Gerald's Game* and *Dolores Claiborne*, with appropriately socially-oriented themes—the inequity and insanity of military draft in *The Long Walk*, the 1974 oil crisis in *Roadwork*, the depersonalizing effects of the media in *The Running Man*. These novels frequently suggest horrors but remain primarily psychological and evocative rather than physical and explicit, demonstrating once again that King is capable of more subdued and realistic treatments than many of his critics might allow.

In 1978, *The Stand* appeared. Although the novel was structurally deformed by editorial deletions amounting to some 400 manuscript pages (restored in the 1990 unexpurgated, revised version), this epic fable of technology-gone-mad, of wholesale death, and of the struggle to restore order from chaos remains one of King's strongest novels. The complex web of character and subplot—particularly in the restored version—gives the story unusual resonance and demonstrates King's deft hand at characterization, often with a single character, is sufficient to generate a realistic presentation. *The Stand* is also central to King's vision of the struggle between Light and Darkness, with its villainous Randall Flagg reappearing as the Magician Flagg in *The Eyes of the Dragon* (1985, 1987); as the Man in Black in *The Dark Tower: The Gunslinger* (1982); and as LeLand Gaunt in *Needful Things* (1991); with subtle echoes in *Insomnia* (1994), *Rose Madder* (1995), and *The Drawing of the Three* (1987), *The Waste Lands* (1991), and *Wizard and Glass* (1997)), in which readers discover that the world of *The Stand* may belong to an alternate reality threatened by forces surrounding the Dark Tower.

1978 also saw the publication of King's first collection of horror tales, *Night Shift*, which included not only early versions of materials treated in *'Salem's Lot* and *The Stand*, but also the inspiration for a number of subsequent films: *Graveyard Shift*, *The Boogeyman*, *Trucks*, *Sometimes They Come Back*, *The Ledge*, *The Lawnmower Man*, *Quitters, Inc.*, *Children of the Corn* (and its multiple sequels) and *The Woman in the Room*. The stories established King as a master of short fiction as well as novel, and in stories such as "Night Surf" and "I am the Doorway" give play to his occasionally surrealistic, almost poetic imagination.

*The Dead Zone* (1979), *Firestarter* (1980), and *Cujo* (1981) further demonstrate King's ability to meld horror with realism, science fiction with science, fantasy with imagination. Readable, engaging, and ultimately frightening beyond their suggestions of monsters, each attacks a manifestation of contemporary culture: insanity disguised as rationality, uncontrolled science in league with power-hungry politics, families disintegrating under the internal pressure of selfishness and the external pressures of economics and, again, politics. They also provide useful background to King's critical assessment of horror in fiction and film, *Danse Macabre* (1981), which describes the evolution of dark fantasy from 1953 through 1978. *Danse Macabre* is both entertaining and enlightening, not only defining a genre but often reflecting the autobiographical and literary impulses behind King's own fictions.

In 1982, King published *Creepshow*, a comic-book anthology of five tales, and *Different Seasons*, a collection of four novellas including "Rita Hayworth and Shawshank Redemption," the inspiration for the subsequent Academy-Award winning film (screenplay by Frank Darabont, author of the film version of *The Woman in the Room*); the starkly realistic and semi-autobiographical "The Body," translated brilliantly by Rob Reiner into the first King film-adaptation aimed toward a mainstream audience, *Stand By Me*; "A Winter's Tale," a traditional ghost story; and "Apt Pupil," a frightening

analysis of reciprocal corruption recently released as a film. The concern for adolescent trauma at the heart of “The Body” and “Apt Pupil” continues in 1983’s *Christine*, an oddly disjointed novel in which narrative stance shifts from first-person, to third, and back to first, but which nonetheless extends King’s concern for anatomizing contemporary society while at the same time providing the backdrop for a chilling ghost story.

*Cycle of the Werewolf* (1983), originally conceived as text for an illustrated calendar, is King’s first extended treatment of the werewolf, but the major novel published that year was *Pet Sematary*, a disquisition on death that remains one of King’s darkest and most powerful stories, as it directly confronts the reality of death and its effect on the human personality. The major characters must confront death and attempt a reconciliation to it. To the degree that they fail, the novel becomes a tragedy verging on desperation, culminating in what is arguably King’s most chilling conclusion.

In 1984, King published a number of experimental works. The first collection of Dark Tower stories, *The Dark Tower: The Gunslinger*, introduced an on-going quest-cycle, incorporating elements of horror but transcending them to incorporate traditional Westerns, action-adventure, romance, and alternate-universe science fiction, all blending seamlessly into what may justly claim to be a legitimate twentieth-century epic. Subsequent volumes—*The Drawing of the Three*, *The Waste Lands*, and *Wizard and Glass*—emphasize King’s ambitious format, his streamlined style, his interconnecting thematic structures, and his highly imaginative combinations of characters, settings, and plots. Similarly, *The Eyes of the Dragon*, published by King’s Philtrum Press, is unique as King’s major foray into overt fantasy. A story of a dying king, a wronged prince, and an evil magician, set in a mythical kingdom complete with dragons, *The Eyes of the Dragon* touches briefly on one of the alternate worlds of *The Dark Tower* but nevertheless stands alone as an important alternative to horror in King’s works. The same year also saw the appearance of King’s only collaborative novel to date, *The Talisman*, written with Peter Straub, one of the few writers who could then challenge King’s preeminence in contemporary horror. An epic-quest that parallels the outlines of the Dark Tower stories, while alluding to writers as disparate as Mark Twain and C. S. Lewis, *The Talisman* balances between the reality of twentieth-century America and the idyllic potentials of the Territories, and blends horror with an innocent’s journey across the face of a modern America populated by monsters both real and illusory, human and inhuman. Readers expecting a combination of King’s colloquialism and Straub’s meticulous formalism might be disappointed in a novel that is stylistically and structurally unlike anything either might write individually, yet which generates its own movement and power through the synergy of their imaginations. The fourth novel to appear in 1984 was King’s final pseudonymous work, *Thinner*, a gritty assessment of the American obsession with dieting and weight. Combining a Gypsy curse with the hypocrisy of suburban life, *Thinner* was so obviously a King story that it led several researchers to unravel the secret of the “Richard Bachman” pseudonym.

In 1985, King published his second major collection of short fiction, *Skeleton Crew*, which contains some of his best short works, including “The Mist,” “Raft,” “Gramma,” and “The Reach,” the latter among his finest and most restrained short pieces. The collection was followed in 1986 by *It*, King’s ‘magnum opus’ and the culmination of his year’s-long concentration on children, childhood, and monsters. Criticized for its scope and length (over 1,100 pages in

the American hardcover edition), it attempts a complex, multi-leveled, encyclopedic look at American culture and society between 1958 and 1985, in which seven children—and their grown-up counterparts—confront the monster in the sewers, the darkness beneath the surface of their lives. King stretches his storytelling powers to create an intricacy of text rivaled only by *The Stand* and the Dark Tower saga.

The next sequence of novels represents a shift in direction for King. *Misery* (1987), *The Tommyknockers* (1987), *The Dark Half* (1989), and “Secret Window, Secret Garden” from *Four Past Midnight* (1990), show King turning his imaginative microscope on himself—the writer as public personality and as private individual. Ranging from the ‘realism’ of *Misery*, in which the only monster is a grotesquely insane human, to the ‘horror’ of *The Dark Half*, in which the monster is a pseudonym-made-flesh (the novel is appropriately dedicated to Richard Bachman), these stories suggest the fine line between imagination and reality. Although they are unlike much of what might be considered ‘classic’ Stephen King, they have been well accepted by readers; the film version of *Misery* received the Academy Award for Best Actress and helped suggest King’s increasing mainstream appeal.

*Needful Things* (1991) departs radically from King’s earlier novels. Set in the Castle Rock, Maine, his primary fictional landscape, this novel is his version of Mark Twain’s “The Man That Corrupted Hadleyburg,” complementing themes initiated in *The Dead Zone*, *Cujo*, “The Body,” *The Dark Half*, *Christine*, *The Talisman*, and *The Tommyknockers*. When a new store opens, townspeople may find what they believe is their heart’s desire and purchase it at a bargain price, contingent on the promise of a small trick. The consequent interlocking circles of purchases and promises magnifies the worst in the human nature, leading a powerful tale of sin and redemption through trial and suffering and forgiveness. Concluding with the destruction of Castle Rock itself, *Needful Things* closes out one segment of King’s career with a complex and ultimately optimistic fable of good versus evil of the White confounding, however momentarily, the Dark.

*Gerald’s Game* (1992) and *Dolores Claiborne* (1993), *Insomnia*, *Rose Madder*, and *Bag of Bones* (1998) suggest King’s new focus. In each, theme threatens to overshadow storytelling; each indict excesses of patriarchalism, chauvinism, sexism, and/or racism, leaving little doubt that in sexual terms, males are monsters—or, as *Rose Madder* states explicitly, men are beasts. *Gerald’s Game*, a thin book for King, both in page count and in content, received strong reviews from establishment journals but less favorable responses from readers awaiting further evidence of King’s ability to combine commentary with story. In *Gerald’s Game*, commentary clearly takes precedence, since the story could effectively be told in a quarter the length. *Dolores Claiborne* continues the social commentary, linking themes and episodes directly to *Gerald’s Game*, but significantly returns in part to King’s earlier focus on story. A literary *tour de force*, the novel is a single, uninterrupted monologue of over 300 pages that exploits the multiple possibilities in the title character’s name (*Dolores* = “sorrow” + “clay-borne”). With *Insomnia*, King moves toward a balance between his desire to examine social problems—specifically spouse- and child-abuse—and his compulsion to tell his stories. In a daring move, King makes his protagonist a septuagenarian, and simultaneously commits himself to describing the tedium of an insomniac, yet ultimately the story creates its own momentum and moves itself and King’s readers, one step further toward the Dark Tower itself. By the time *Rose Madder* appeared, King was again

writing novels that created their social impact through the medium of the story. His protagonist is an abused woman—echoing the previous four novels—but her restoration to power and dignity becomes an integral part of a greater narrative, one that develops fully King's penchant for mythic themes. Much the same might be said for *Bag of Bones*, in which racism and child-abuse become elements in a story that becomes larger than the sum of its parts—ghost story side by side with social indictment, each concern echoed in the other, amplifying the other, and completing the other.

Perhaps the most conspicuous of all contemporary horror writers, certainly the most recognizable of them, Stephen King has been the subject of scores of books—scholarly, academic, biographical, bibliographical, documentary, and fannish; of hundreds of articles ranging from intense analysis to popular appreciation; of conferences and symposia; of scornful mainstream reviews and fan responses verging on idolatry; and of more media attention than perhaps any other living writer. He has altered the face of modern horror, and—working along with a handful of other writers of equal stature—has come closer than ever before to making this once-denigrated genre an accepted branch of literature. As he passes his fiftieth year and approaches the end of the millennium, King has more firmly than ever established himself as the “King of Horror” and as the master of an intricate and complex trade.

## Kingston, Maxine Hong (1940—)

Novelist Maxine Hong Kingston was born in the United States to Chinese immigrant parents. Her writing centers on the experience of Chinese-American culture and is part of a multiculturalist critique that challenges images which represent the culture of the United States as homogenous. Her first book, *The Woman Warrior: Memoirs of a Girlhood among Ghosts* (1976), is an autobiography that details her own journey to integrate the Chinese and American elements in her life, interweaving them with a feminist perspective. In her books, the traditions of narrative are undermined, just as she undermines any one view of culture or history.

## The Kingston Trio

Formed in 1957 in San Francisco, the folk group called the Kingston Trio took the country by storm with its three-part harmonies and energetic, humorous approach to folk music. Courting a pop

audience and sporting striped shirts, neatly pressed chinos, and an upbeat, *Sing-Out!* attitude, the group originally consisted of guitarists Bob Shane and Nick Reynolds and banjoist Dave Guard (he was replaced by songwriter/rock artist John Stewart in 1961). Backed by Guard's five-string banjo, an acoustic guitar, and congas, the Trio's first big hit was "The Ballad of Tom Dooley," a harmonized saga of a condemned man awaiting execution, based on an old song of the Civil War era. The recording sold three million copies and won the Kingston Trio its first Grammy. Among its numerous albums, several of which now count among the best selling records of the 1950s and 1960s, five of its first six would make it to the Number One spot.

The Kingston Trio began as a casual association between Shane, Reynolds, and Guard. After working up their repertoire at local bars, the trio got its first major gig: a one-week stint at the Purple Onion, a favorite nightspot of San Francisco's college crowd during the late 1950s (Guard was a student at Stanford University when the group formed). Quickly signed to Capitol Records, the group released its first record in early 1958 and went on to release 29 other recordings, including a 1962 tribute to the presidency of John F. Kennedy titled *New Frontier*. The Kingston Trio's appearance at the groundbreaking 1959 Newport Folk Festival was documented in its album, *Live at Newport*. Until the British Invasion in the 1960s, the Trio was a mainstay of the U.S. pop charts. In addition to being the first musical group to have sales of LP records outnumber singles, 14 of the Kingston Trio's albums made it to the Top Ten spot, with five of those reaching Number One and seven charting for 12 months or more.

Punctuated by the twang of the banjo, the music of the Kingston Trio had a danceable feel that captured the hearts of pop fans and turned the band into one of the first crossover groups to bridge the folk and pop genres. Because it made three-part harmony and acoustic guitar look so simple, the Trio sparked a wave of interest in folk music across the country and have been credited with helping usher in the American Folk Revival of the 1960s. As strong as its fan-base was, the Kingston Trio also had its detractors. The group's overt commercialism stood in direct contrast to the back-to-the-earth values associated with folk music and embodied by groups like the Weavers, and the group was reviled in many folk-music circles. "I don't think we ever took ourselves seriously enough to think that we belonged to folk music," Stewart told an interviewer in 1966. Rather than stick to the traditional musical interpretations extolled by purists, the Trio intentionally sought new input for its music, adapting such diverse ethnic music traditions as Appalachian Mountain melodies and Calypso into its own clean-cut, upbeat style.

*Children of the Morning* (1966) was the last album recorded by the Kingston Trio. The times indeed were a-changing, and the rock-folk synthesis the Trio catalyzed in the 1950s was, by the late 1960s, the province of groups like Simon and Garfunkel, the Mamas and the Papas, and the Association. Although the band officially broke up in 1967, Shane continued to tour with musicians Jim Connor and Pat Horine as the New Kingston Trio into the 1990s. By the end of that decade, Shane, Nick Reynolds, and George Grove were being listed as members of the group. Stewart went on to record with Stevie Hicks and Lindsey Buckingham of the rock group Fleetwood Mac. Guard, who had left due to personality clashes with Shane and Reynolds, formed the Whiskeyhill Singers in the early 1960s.

## Kinison, Sam (1953-1992)

Sam Kinison is remembered as the innovator of "rage comedy," a style defined by the punctuation of a comedy routine with seemingly out-of-control fits of screaming and howling. Kinison began his "performance" career as a Pentecostal minister, but soon drifted into comedy clubs where he caught the attention of Rodney Dangerfield. Dangerfield provided Kinison with showcase bookings in his own nightclub and a role in his movie *Back to School* (1986). The comedian also appeared on *Saturday Night Live*, an HBO special, and the short-lived TV sitcom *Charlie Hoover*. Ironically, Kinison had recently completed successful treatment for his well-documented substance abuse when he was accidentally killed by a teenage drunk driver who professed to having been one of his fans.

## Kinsey, Dr. Alfred C. (1894-1956)

Although he was in many ways the very model of the "egg-head" scientist, complete with crew-cut and bow tie, few academic researchers have had such a widespread impact on American culture as Dr. Alfred C. Kinsey, the founder of the Institute for Sex Research (later renamed for Kinsey) at Indiana University. Kinsey and his colleagues revolutionized the study and understanding of human sexuality through the publication of the two famous *Kinsey Reports*, more accurately entitled *Sexual Behavior in the Human Male* (1948) and *Sexual Behavior in the Human Female* (1952). Instant bestsellers and cultural touchstones that few people actually read, the reports explicitly divorced moral judgment from the study of sexuality and opened sexual inquiry to professional disciplines beyond the medical sciences. While the aim of Kinsey's work was explicitly to collect quantifiable data, its cultural repercussions can be felt in the ways sexual topics are taught, discussed, and debated in American society throughout the latter half of the twentieth century.

Raised in a strict home and trained in zoology and entomology at Harvard, Kinsey began his scientific career by becoming the world's expert on gall wasps, which he collected by the thousands; among other things, Kinsey discovered that they exhibited odd reproductive

**Dr. Alfred C. Kinsey**

habits. After being hired by Indiana University in 1920 and asked to coordinate an undergraduate course on marriage, Kinsey discovered how little reliable scientific research was available on human sexuality. He and his colleagues (most notably Wardell Pomeroy, Clyde Martin, and Paul Gebhard) then initiated an elaborate project to collect data, which eventually involved almost 18,000 personal interviews and the accumulation of a vast archive of erotic as well as scientific materials. Though linked to a state university, the institute relied upon independent funding and donations in order to counter regular misperceptions that Indiana taxpayers might be supporting a pornography collection: early on, to demonstrate his techniques, Kinsey even collected the sexual histories of his sponsors at the Rockefeller Foundation and National Research Council. Adopting a radically empirical stance, Kinsey's institute categorized and cross-indexed sexual information in minute detail, while carefully avoiding the moralizing perspectives that had hampered previous discussions of sexual behavior and expression. In the institute's neutral vision, pornography might be as valuable for research as anthropology. For the first time in American culture, the practice of masturbation was simply taken for granted, though its multiple variations were carefully catalogued. By all accounts, Kinsey and his team were masterful in their ability to put their interviewees at ease while they revealed their most intimate activities and fantasies. The public response to those interviews was, on the other hand, a mixture of shock and fascination that also turned the research scientist into a national celebrity.

Undoubtedly the first report's most controversial revelation, especially in the historical context of ex-servicemen returning to civilian life, was that homosexual activity was common to many

American men: 37 percent of Kinsey's sample had experienced at least one homosexual encounter leading to orgasm. Adopting a scale from 0 to 6, ranging from exclusive heterosexuality to exclusive homosexuality, Kinsey challenged stereotypes linking homosexuality and effeminate behavior and defined homosexuality as behavioral rather than constitutional. According to Kinsey's statistical summary, about four percent of American men were exclusively homosexual. Although Kinsey's statistics have been the subject of extensive criticism and confusion (he is commonly misquoted as claiming that 10 percent of American men are homosexual), reexaminations of his figures have also frequently affirmed the validity of his findings. Overall, Kinsey's research argued that homosexuals as a group, and homosexuality as an activity, were much more typical and, therefore, less statistically "deviant" than previously assumed.

The report on female sexuality was equally controversial, though the press and public downplayed its discovery that, while only three percent of Kinsey's sample were exclusively homosexual, the women in the study tended to be better educated than their male counterparts. Instead, attention focused on Kinsey's detailed analysis of the female orgasm and his revealing that almost half of the women interviewed had experienced premarital intercourse, while around 26 percent had enjoyed extramarital sexual relations. Clearly, Kinsey's data challenged beliefs about the prevailing female behavior, which turned out to largely be ideals rather than reality.

Half a century after the publication of his reports, Kinsey remained a controversial figure, though the most heated debates about his work have generally moved back into the academy where they began. Periodically Kinsey's objectivity and statistical findings are challenged, and often they are reconfirmed. James H. Jones's biography revealed many surprising details of Kinsey's own complex sexual life—married and the father of four children, Kinsey was also homosexually active. For cultural historians, the recurrence of such debates itself provides evidence of Kinsey's ongoing role in American life. Many have credited Kinsey with making once taboo topics—masturbation, homosexuality, female orgasm—frequent discussion topics in the media and in the home.

## Kirby, Jack (1917-1994)

One of the most prolific and influential comic-book creators, Jack Kirby is deservedly known as “the king of comics.” Kirby, born Jacob Kurtzberg, grew up on New York’s tough Lower East Side. The brawls and colorful characters of his youth influenced his work, from the explosive fight scenes to the numerous kid-gangs he created (Newsboy Legion, Boy Commandos, among others). In 1940, Kirby teamed with Joe Simon, and they created scores of comic books, including the first romance comic. In March 1941, their most famous creation, Captain America, debuted in *Captain America Adventures*. Over the next 20 years, Kirby virtually created the visual language of super-hero comics. His panels were crammed with dynamic action and visual excitement. Perhaps Kirby’s best work was in the 1960s when he and writer-editor Stan Lee transformed faltering Atlas Comics into pop culture powerhouse Marvel Comics, with characters such as the Fantastic Four and the X-Men.

## KISS

After more than 20 years in the business and sales of nearly 80 million albums, KISS can legitimately be placed in the pantheon of the world’s great rock and roll bands. Their best known songs, such as “Rock ‘n’ Roll All Nite,” “Shout it Out Loud,” and “Detroit Rock City” stand as some of the greatest rock anthems of all time. The band might also be credited with inventing the radio-friendly power ballad (“Beth”), even though it took nearly 10 years before other hard rock bands made such an addition to an album mandatory. Their chart successes notwithstanding, KISS’s greatest contribution to rock and roll may be their pioneer efforts on the stage. Their outrageous make-up and a commitment to over-the-top theatrics radically expanded rock fans’ expectations for showmanship.

KISS was formed in New York City in 1972 by bass player Gene Simmons and vocalist/guitarist Paul Stanley after their band Wicked Lester was dumped by Epic Records. Stanley and Simmons recruited guitarist Ace Frehley and drummer Peter Criss, both of whom who had advertised their availability in music magazines. With the lineup in place, the group devised an ingenious strategy to market their act to fans and record labels. Drawing on precedents set by glam rock acts like the New York Dolls and shock rocker Alice Cooper, the members of KISS reinvented themselves as four larger-than-life stage characters, by means of elaborate costumes and Japanese Kabuki make-up. Gene Simmons played a blood-spitting, fire-breathing demon; Paul Stanley masqueraded as a bare-chested, hyper-macho Casanova; lead guitarist Ace Frehley became an outer space guitar wizard; and Peter Criss played the role of a prowling cat-man. To intensify the effect, the quartet did not permit themselves to be seen or photographed in public without their make-up.

In addition to their clever use of theatrical disguise, KISS also developed an elaborately choreographed performance that, along with their aggressive self-promotional releases, attracted the attention of television producer Bill Aucoin, who helped the band to a contract with Casablanca Records. Their first three albums, released in quick succession in 1974 and 1975, sold modestly, and the band was lambasted by critics everywhere. Nevertheless, KISS quickly built an impressive audience through constant touring. Certainly, much of their in-concert appeal rested on their groundbreaking use of pyrotechnics, set design, and stage lighting. They also greatly expanded their audience because they were more willing than most bands to schedule dates in smaller market cities and geographically isolated places.

Recognizing that their musical energy was somewhat lost in the studio setting, KISS released a concert album. Peaking at number nine on the charts, *Alive* (1975) catapulted the band into the upper echelons of the rock world and relieved them of nagging debt and royalty problems. The next studio album, *Destroyer* (1976), marked an important shift in sound and image as KISS abandoned its simplistic, almost silly, straight-ahead guitar rock for a more polished and radio friendly sound. By broadening their sound, the band built a more diverse fan base. The KISS Army, as the band’s fan club is known, once peopled almost exclusively by teenage males, began to include not only teenage females, but a lucrative pre-teen audience as well. Perhaps most important in their transition was the release of the pop single “Beth,” a ballad penned by Criss as a tribute to his wife. “Beth” reached the top ten, and became the band’s best-selling single. Their biggest year was 1977, which saw several of their

albums on the charts simultaneously, leading them to end the year as *Billboard*'s number two album artist, second only to Fleetwood Mac.

Capitalizing on their multi-platinum successes, the group further expanded their multimedia approach to rock. Taking a leaf out of the Beatlemania book, KISS made everything from black light posters to lunch boxes to costumed action figures available to their adoring fans. In 1977, Marvel comics published a KISS comic book, purportedly printed with ink mixed with blood drawn from the band. The next year the band was featured in a movie called *KISS Meets the Phantom of the Park*. First released in late October, the timing was appropriate, since dressing up like a KISS character had become a favorite Halloween costume for kids across America. It was rumored that the band even bought 200 acres near Cincinnati in order to build a theme park that never materialized. KISS's widespread popularity and Gene Simmons' demonic stage character prompted concern by parents groups and the nascent Religious Right—several youths, trying to copy Simmons' fire-breathing stage act, were badly burnt—and objectors suggested that KISS was really an acronym for Knights in Satan's Service, a charge flatly rejected by the band. The KISS logo also raised concern in Germany because its last two letters resembled the swastika worn by Nazi-era military officers.

As the more conservative 1980s approached, KISS and their exaggerated excesses began to seem dated. Beginning with their four "solo" albums released in 1978, the band hit a slump that would last through the early 1980s. Among the ill-fated releases of this era were the *Dynasty* album (1979), which featured the peculiar disco-ish single, "I Was Made for Loving You," a song that alienated many long-term fans. They departed even further from their basic formula of teen-friendly pop-rock when they recorded *The Elder* (1981), a concept album that was partially co-written by Lou Reed. Neither album sold well by the standards set a few years earlier.

During the 1980s, KISS underwent several lineup changes. Peter Criss and Ace Frehley left the band and were replaced by Eric Carr and Vinnie Vincent respectively. Subsequently, Vincent was replaced by Mark St. John who, in turn, was replaced by Bruce Kulick. After nearly a decade, Eric Singer replaced Carr, who was terminally ill with cancer. In 1983, KISS abandoned their make-up and entered headlong into the emerging pop metal arena, competing with the likes of Def Leppard and Bon Jovi instead of Grand Funk and Led Zeppelin. As metal mania reached its fever pitch in the 1980s and early 1990s, KISS enjoyed a significant resurgence, again reaching platinum status with albums such as *Lick it Up* (1983) and *Animalize* (1984). Though their albums were selling well, they never regained their former momentum, and members of the band ventured into other non-musical projects. (Both Stanley and Simmons, for example, tried their hand at acting).

As the 1990s rolled around, KISS had very little left to prove. The legion of fans they established in the 1970s spawned many dozens of aspiring musicians. Dozens of outright tribute bands were on the road in the 1980s and 1990s, albeit without the elaborate stage sets, and KISS was paid the high honor of a tribute album recorded in 1994. Entitled *KISS My Ass*, the album stood as a sarcastic rebuke to all the critics who had scorned the band over the years, and featured KISS covers from artists as diverse as Garth Brooks and Lenny Kravitz. Perhaps far greater tribute was the number of bands clearly influenced by KISS. Though no band actually copied their stage routine or dress, a number of very popular 1980s metal bands, including Faster Pussycat, Mötley Crüe, Ratt, DIO and Twisted Sister, showed overt signs of the KISS influence on their visual and sonic characteristics. That influence can also be felt, if not heard, in

the so-called grunge rock of bands like Nirvana and Soundgarden, who approached the business of song-writing and rock stardom with a clearly tongue-in-cheek attitude and the playful absurdity of KISS close to their hearts.

Interest in KISS was revitalized substantially in the mid-1990s when the original line-up reunited for a few numbers for MTV's *Unplugged* program. Reaction from fans was so favorable that a reunion tour was scheduled, replete with make-up, blood spitting, and pyrotechnics. The tour drew huge crowds and brought the band's peculiar brand of entertainment live to a new generation of fans.

## Kitsch

The word "kitsch" is perhaps one of the oldest, crudest, and most unclear terms used to describe the popular art of modern societies, though it is also a term which is almost universally understood. First appearing in the writings of cultural and social critics of the late nineteenth century to describe the effects of early industrialism on the common culture of Western nations, the term has evolved and taken on a variety of sometimes quite contradictory meanings throughout the century or so of its use. The precise etymology of kitsch is uncertain: some attribute kitsch to the Russian "keetchetsya," meaning "to be haughty and puffed up," though a more widely accepted view attributes its origins to the Munich art markets of the 1860s, where "kitsch" was used to describe inexpensive paintings or "sketches" (the English word mispronounced by Germans, or elided with the German verb *verkitschen*, to "make cheap"). Kitsch artworks appealed to the naive tastes of the emerging, newly monied Munich bourgeoisie who, in typical *nouveau riche* fashion, desired objects they thought to be typical of "high taste," without knowing exactly what high taste was. Like "pornography," "art" or other slippery terms, kitsch is easier to demonstrate by example than it is to clarify by definition: kitsch tends to apply most easily to ornamental statuary, chachkas of different kinds, manufactured sentimental nicknacks, souvenirs, and decorative objects reflecting a childlike simplicity—things that are simply meant to make us feel good about ourselves and the world. What makes kitsch kitsch, however, is not simply the fact of its being decorative, but that kitsch artificially inflates the comfort of decoration into a uniquely fake aesthetic statement.

Thus, there are two sides of kitsch which have to be explained: kitsch is a unique aesthetic style, but it is also the effect of specific social and historical changes. As an effect of historical changes, kitsch is caused by industrialization, urbanization, and the rise of a new middle class. As an aesthetic quality, kitsch combines an

**An example of kitsch: baby dolls displayed in a store window.**

emulation of high art forms and styles with a dependence on comfort and very direct expressions of aesthetic pleasure. In what follows these two aspects of kitsch, its historical causes and its aesthetic dimensions will be considered in turn.

By the mid-nineteenth century, improvements in mechanized manufacture, distribution, and commercial retail, together with a trend toward urbanization made it possible for mass-produced cultural goods to reach vast numbers of people. In Europe and North America, clerical and lower-level management positions opened up by these economic changes created a new, largely urban middle class. Peasants and traditional workers who had previously been content with regional, rural, and traditional forms of culture found themselves buying mass-produced trinkets, decorations, and ornaments for the home. With disposable income and leisure time to kill, this new class of urban professionals sought distractions and amusements, but most importantly it sought to carve out a status for itself as “cultured” and “sophisticated” by exhibiting its taste for “fine things.” These petty professionals swarmed over the new luxury items that were being churned out in mass volume, gravitating especially to the knock-off imitation luxury products, “fine art” items crudely and glibly manufactured to resemble the posh and high art objects of the old

aristocracy: gilded furniture, glass-beaded jewelry, highly ornate candelabras, imitation oil paintings, miniature ceramic copies of ancient statues and other household ornaments meant to produce maximum effect without too much bother or cost. As societies industrialized and more and more people gained access to mass-produced cultural goods, kitsch emerged as the lowest common cultural denominator of modern society, cutting across old class distinctions through the techniques of the new “mass consumption.” For this reason the rise of kitsch has been widely blamed for the erosion of elite “high culture” and the uprooting of regional “folk cultures,” and the wider “dumbing down” of modern societies.

The influx of kitsch objects gradually brought with it an overall change in attitudes toward the definition of beauty itself. Unlike the traditional elite classes who exercised refinement and cultivation in their appreciation for the subtleties of true artistic expression, the new classes lacked any taste for subtlety, preferring art that was loud, direct, and excessive. Where true art required strenuous interpretation, a cultivated sensibility, and presented the viewer with personal and ethical challenges, the kitsch of mass-produced art sought to make itself available to the maximum number of people. It took the shortest, easiest, and most direct route, always preferring more intense aesthetic expression through added features and exaggerated effects. On the question of beauty, the purveyor of kitsch reasons according to the principle, more is better: Why have a chandelier hung only with cut glass baubles when you can afford one with cherubs and electric candles? Why be content with a plaster reproduction of the Venus in the foyer when it can be lit from behind, producing a more “dramatic” effect. Why settle for a simple oil seascape when you can have one with crashing waves, sea gulls, and a partially obscured full moon shining right through the towering curl of a cresting wave? The mass-produced art of the new classes simply declares the effect it intends: “beauty!” “exotica!” “sentiment!” The familiar earmarks of kitsch: exploding fields of flowers, the faces of cute children, etc., deliver aesthetic response with greater intensity and in a more direct manner because of its use of overstatement. However, even while kitsch maximizes aesthetic effect, it remains faithful to its vision of high art: kitsch believes itself to be sincere, graceful, even profound—like high art itself. Thus, this quality of maximized effect in the form of high culture defines an important aspect of kitsch.

But that is not all: more than simply graceless and overstated, what makes kitsch kitsch is its dependence on expressions of comfort, “happiness,” and an artificial sense of well-being. Kitsch expresses a pleasurable experience of everyday comfort, coziness, and easy solace, an artificially simplified and synthetically comfortable image of the world, allowing an easy and gratuitous sense of bliss. Kitsch achieves this in many ways: in Norman Rockwell’s paintings of small town America, for example, kitsch expresses a contrived sense of wonderment at the innocence and folly of everyday people and things, especially children, animals, and old people whose everydayness is raised up to the level of an important human virtue. In Rockwell’s paintings there is little ambiguity about the people he represents: they are cute, and this fact hits the viewer with immediate and unmistakable force. Kitsch aims for the easiest responses it can get, preferring rather to deliver us back to the comfort of familiar feelings than to challenge us with new ones. For this reason, kitsch appeals to sentimentality, as demonstrated in the work of Margaret Keane, the notorious painter of teary eyed clowns and children with enormous almond-shaped eyes. The sappy figures in Keane’s work squeeze out a response before we know what has hit us, and this response is a simple, obvious, and direct joy in what is simply and obviously joyful:

cute little children. However, for both Rockwell and Keane, there is a pretentious aspect to their work: though their subject matter is comfortable and accessible it is not simply decorative. These are sincere, human expressions of a fundamental human quality, calling for the same respect and admiration we reserve for the humanity alone. In this way, cute kitsch makes the same appeal to the higher values of human beauty as does high art. And, more importantly for kitsch, the fawning sentimental reactions these images demand from its viewers are made to seem somehow virtuous, profound, and universally human. The viewer is flattered into feeling that the cuteness of one of Rockwell's everyday folks expresses the same essential value of human life that Michaelangelo gave to the David. All of this expresses the value of familiarity and comfort itself, raised up to the level of a true artistic statement, amplified through exaggerated effects so as to be easy and accessible to all. In short, kitsch tries to stimulate us in a direct and accessible fashion, passing off comfort and sentimentality as expressions of profound human significance, or deep personal meaning. Kitsch prefers to show us what we already know so as to save us the discomfort of experiencing something for the first time.

Kitsch, however, is a very volatile, flexible, and vague term, infinitely adaptable to the specific historical conditions of its use, conditions where popular culture is thought to be getting out of hand. Comparing a few of the most important uses of the term, we see how some uses of kitsch emphasize its aesthetic and others the historical and social dimensions.

The Austrian writer Hermann Broch has discussed kitsch's development in the nineteenth century, and its connection with romanticism: both kitsch and romanticism promised a uniquely modern flight from reality into a world that was sheltered from the tension and uncertainty of modern life. His essay, *Notes on the Problem of Kitsch*, points out how kitsch expresses that escape as a dreamy experience of happiness, tranquillity, and sugary harmony, and a flight into comfort. Broch's article goes to the heart of that comfort as the product of these historical changes: kitsch comfort has its origins in the rising middle class that invented kitsch. This taste for domestic comfort, Broch writes, became the badge of bourgeois identity, or the marker of their status as a legitimate class, rivaling the elite aspirations of aristocratic art. In this way, the middle-class valuation of comfort was inflated to the pretentious status of high art, as it was learned to masquerade as art.

By the twentieth century, kitsch was given a new set of meanings by the critics of "mass culture," particularly American Left intellectuals who used kitsch to criticize the culture of the new "consumer society" or mass society. With Dwight MacDonal, Irving Howe, and others, kitsch was no longer blamed for the erosion of elite or regional culture, but for the manipulation of the consciousness of the masses, controlling their thoughts and cultural outlooks through a kitsch bombardment of comic books, radio, TV shows, and movies expressing manufactured emotional, aesthetic, and social outlooks. Reducing adults to children, the new kitsch made masses easier to manipulate by reducing their cultural needs to the easy gratification offered by Disney cartoons, pulp literature, and romance novels. Macdonald wrote: "The Lords of kitsch, in short, exploit the cultural needs of the masses in order to make a profit and/or to maintain their class rule." To these commentators of the 1950s, writing at the heyday of the mass culture theory, it seemed as if the same propaganda tactics that had worked so well for fascists and communists were operative in the kitsch of American capitalism and mass culture,

draining the minds of consumers and ultimately cultivating a subordination to authority. So barbarous was the effect of kitsch that one commentator was inclined to compare the manic and violent behavior of Donald Duck to the sadism of the S.S. soldier. Kitsch also proved useful for advocates of avant-garde culture, most notably Clement Greenberg, whose classic essay *Avant-Garde and Kitsch* stands as one of the best known pieces on the topic. Greenberg, bent on marking a distinction between the avant-garde and the popular culture of the masses, trashed kitsch for its parasitic quality, drawing its life-blood from the creative sweat of "real artists," and keeping the masses in a state of cultural imbecility and confusion. For Greenberg, kitsch represented "the epitome of all that is spurious in the life of our times."

Taken together, all these arguments hinge on the assumption of an objective standard of taste of one sort or another: one cannot call something kitsch without assuming that there is, somewhere, a universal standard of beauty against which an object can be judged and condemned as kitsch. By the end of the twentieth century, with an increasing emphasis on cultural diversity, and a "post modern" acknowledgment of the relative standards of beauty in different societies, this objective standard of taste was not so easy to argue. In a climate of multiculturalism and cultural relativism, "kitsch," as a term describing an inherently inferior variety of art and culture seemed to have no ground left to stand on. In fact, the tables had turned: in much cultural criticism of the late twentieth century, kitsch had fallen out of use. Particularly in the late 1990s, when the charm of camp (an ironic appreciation of kitsch, quite distinct from kitsch itself) defined so much of contemporary taste in popular culture, classical uses of the term kitsch seemed more and more difficult to justify. The "cultural studies" approach to popular culture had largely abandoned the term, at least in the morally charged, pejorative usage given it by nineteenth century and mass culture theorists.

Nonetheless, kitsch has refused to go away, and has appeared in some highly innovative commentaries. The closed, artificial world of kitsch, and the dreamy sense of pleasantness and well being it promises still puzzled cultural analysts, even when it was not tied to a strong judgment on the value of aesthetic content or on the control of the masses. Two commentaries on kitsch stand out: Milan Kundera's *The Unbearable Lightness of Being* discusses the kitsch of communist society, which trumpets an artificial joy in the spontaneous exuberance of socialist life and the strained comfort of the company of one's comrades. A darker side of kitsch is revealed by Saul Friedlander in his *Reflections of Nazism: an Essay on Kitsch and Death*. Friedlander discloses the ways in which Nazi kitsch, in a manner quite different from standard forms of capitalist "entertainment" kitsch, excites a morbid fascination with death, particularly in the melodramatic image of the tragic death of the soldier. In fact, freed from its elitist underpinnings, kitsch has proven more effective a term for describing the strange euphoria of the synthetic that characterized much of consumer culture at the end of the twentieth century.

## Kiwanis

In the words of its mission statement, the Kiwanis Club is an international organization dedicated to "service" and the "advancement of individual, community, and national welfare. . . ." It promotes a strong spiritual life for its members, a high standard of living, and the idea of citizens' civic obligations to others. The organization was founded on January 21, 1915, in Detroit, Michigan, by Allen Simpson Browne, a Moose Lodge organizer, and Joseph Prancela, a tailor. The name drew from a Native American phrase which can be interpreted differently to mean "we have a good time," "we trade," or "we advertise." By the late 1990s the organization had 300,000 members in more than 8,000 clubs in 82 countries. Made up predominantly of business people and professional men and women, the organization gives approximately \$70 million a year to charitable organizations and individuals as well as seven million hours of direct community service. Perhaps best known for widely posted signs that feature a circled K, the Kiwanis Club symbolizes a commitment to the biblical Golden Rule—doing unto others as you would have them do unto you.

Drawing its membership largely from American business persons (the organization began as something of a networking club for local merchants and salesmen to make contacts with prospective clients), it came to symbolize certain features of modern middle-class life. Cultural critics of the 1920s poked fun at its conformist, self-congratulatory, and boosterist elements. Spurred on by H. L. Mencken's antagonism to the "booboisie," Sinclair Lewis drew up a scathing portrait of small-town businessmen in his novel *Babbitt*. Lewis mocked his central character's membership in local civic organizations that seemed more concerned with providing stability and making connections than with actually doing good works. In response, *Kiwanis* magazine called for continued "boosting" against the negativism of critics like Lewis. Nonetheless, Lewis's portrait of simplistic spirituality wedded to pragmatic materialism remained a popular image of the Kiwanis.

The Kiwanis Club grew out of a variety of voluntary organizations that Alexis de Tocqueville discussed in *Democracy in America*, his classic analysis of nineteenth-century American culture. In fact, many early members of the Kiwanis Club were originally Moose and

Elk lodge members. The Kiwanis Club became part of a modern set of mainstream service organizations, including the Rotary and Lions clubs. Fostering the belief that citizens can solve social problems through local and voluntary activity, the Kiwanis provide opportunity for and examples of middle-class philanthropy and service for societal good. As Jeffrey Charles argued in his book *Service Clubs in American Society*, the Kiwanis have tried to bring together traditional values of community and compassion with the modern system of corporate profit and competitive individualism.

The emphasis on voluntarism, some may argue, symbolizes the more conservative element of the Kiwanis. This voluntary spirit became identified with Herbert Hoover's distrust of the federal government during the early years of the Great Depression. The Kiwanis then became closely associated with anticommunist campaigns during the 1950s and conformist culture that social critics mocked in books like William Whyte's *Organization Man* and C. Wright Mills's *White Collar*. Not surprisingly, it was during the 1950s that the Kiwanis spread internationally in larger numbers, building upon America's rise as a world super power.

Like other civic organizations, the Kiwanis have experienced a decline in American membership during the mid to late 1990s. Reporting on these general losses of voluntary group membership, Robert Putnam, a political scientist at Harvard University, argued that this trend reflects a wider loss of civic engagement in America and the passing of Tocqueville's ideal of America as a voluntarist republic. Nonetheless, the Kiwanis Club has had a great impact on the civic and social identity of many middle-class Americans, and, for better or worse, has played a significant role in American culture.

## Klein, Calvin (1942—)

More than any other designer, Bronx-born Calvin Klein has rendered fashion as popular culture. Long an elite and "trickle-down" phenomenon from most privileged clothes to least, fashion is wholly democratic for Klein beginning with his success in Calvin Klein jeans in the 1970s, continued through massive advertising, and sustained in such forms as designer underwear. He is now the designer fashion students aspire to emulate; the designer whose name appears on innumerable T-shirts and underwear waistbands. He was the first designer to invade and conquer popular culture. Since Brooke Shields seductively uttered "nothing comes between me and my

Calvins” in a memorable advertising campaign in 1980, Klein’s edgy ads have been the forefront of contemporary visual culture defining sexual limits, the spirit of the young, and cultural provocation. In design sensibility, austere, reductive, and modern, Klein’s ubiquitous name is synonymous with fashion as media and mass culture.

## Klein, Robert (1942—)

One of the leading lights of stand-up comedy in the 1970s was New York-born monologist Robert Klein. Although often compared to scatological trailblazer Lenny Bruce, Klein perfected a gentler, more observational form of humor in the same vein as his contemporaries David Brenner and Woody Allen. After making his initial splash as a stage actor, Klein became the darling of the comedy club circuit after the 1973 release of his album *Child of the Fifties*. A series of one-man shows followed, which he eventually parlayed into a successful second career as a character actor. In the 1990s, Klein focused almost exclusively on ensemble performance, appearing on stage to positive reviews opposite Jane Alexander in Wendy Wasserstein’s *The Sisters Rosenzweig* (1992), and on film for his old friend Mike Nichols in *Primary Colors* (1998).

## Kmart

Once the nation’s largest retailer, Kmart was an early leader in the discount merchandising game. An offshoot of the venerable S. S. Kresge variety store chain, Kmart came to epitomize the familiar, everyday shopping experience of the late twentieth century: a massive parking lot on the edge of town and the large boxlike, single story structure with a bewildering selection of reasonably priced goods. The spontaneous in-store advertising gimmick of a moveable cart with its revolving beacon has made “blue light special” part of American society’s shared language. Often the object of ridicule and disparaging comments (the *New York Times* characterized the store as “a caricature of strip mall culture”), it nevertheless played host to the consumer purchasing power of some 70 million customers. Along with Wal-Mart and Target, Kmart changed the way Americans buy what they need.

The very first Kmart opened in a suburb outside of Detroit (Garden City, Michigan) in 1962, which happened to be a watershed year for retailing in this country, as it also witnessed openings for the first Target and the first Wal-Mart. While many observers were captivated by the charismatic personality of the late Sam Walton and focused on the phenomenal growth of his Wal-Mart empire, it should be remembered that Kmart was the first of the discount chains to

aspire to a national presence and the first to successfully challenge the department store giants for retail supremacy. It was also the first retail firm to accurately cater to the new suburban lifestyle by offering the type and variety of consumer items that were increasingly in demand. By 1970 the company had built over 400 stores and was the undisputed discount store sales leader with more than a billion dollars in sales annually. During the next two decades Kmart grew enormously, and by 1989 the firm had surpassed Sears to become the nation's leading retailer. It turned out to be but a brief stint at the top, however, for the following year Wal-Mart caught up and took over the lead position, which it retained throughout the 1990s. Many analysts felt that it was simply a matter of age and beauty, as most Kmart stores were both older and smaller than the more recently built Wal-Mart stores. Different locality strategies may have played a role also, with Kmart avoiding the smaller towns where its fierce competitor seemed to thrive best. Looking for an edge, the Kmart corporation took an ill-advised leap into diversification, acquiring several specialty outlets, such as Builders Square and Walden Books, which did not perform as expected. During the late 1990s, under the watchful eye of former Target executive Floyd Hall, Kmart embarked on an aggressive program of store renewal.

Acting to rectify public perception of poorly stocked, dark, and dirty stores, Kmart executives launched a modernization program to remodel and replace aging facilities with brighter, wider aisles and more sophisticated displays and replicated the computerized warehousing and inventory techniques pioneered by arch rival Wal-Mart. Adopting a strategy of "lifestyle merchandising," the company sought to capitalize on celebrity sponsorship of select collections of specialty clothing and housewares, contracting with Kathy Ireland, Jaclyn Smith, and Martha Stewart to push a more upscale product line. In something of a radical departure in terms of both market and store design, the company opened a four-level outlet in the heart of Manhattan. With innovative on-line internet shopping matched with realtime returns to any of its 2,000 store locations across the country, the company poised itself to capture a larger market share of the discount retail world. While the store was long regarded as simply a cheap and convenient place to buy necessities (a larger version of its ancestral five-and-dime), Kmart management strove to change that image during the late 1990s. As the firm's own mission statement audaciously professed, "Kmart is a symbol to Americans—the place which helps them attain the quality of life guaranteed in the American dream." Barring any radical shifts in popular culture, it is likely the familiar loudspeaker announcement "Attention Kmart Shoppers!" may yet ring in the ears of American shoppers for years to come.

## Kniewel, Evel (1938—)

A familiar sight on television in the late 1960s and 1970s, colorful motorcycle stuntman Evel Kniewel thrilled and delighted record crowds across the country and the world. With reckless abandon, Kniewel attempted monumental motorcycle stunts that almost always ended with broken bones and serious injuries.

Robert Craig Kniewel was born in Butte, Montana, on October 17, 1938. At age eight, Kniewel witnessed the stunt show of Joey Chitwood's Auto Daredevils and a dream was born. It was also at this early age that Kniewel began a sordid series of entanglements with the law that would continue for many years. An incredible athlete, Kniewel won the Northern Rocky Mountain Ski Association Class A state ski jumping championship in 1957 and played professional ice hockey in North Carolina before starting, managing, and playing for his own semiprofessional ice hockey team, the Butte Bombers.

In the early 1960s, Kniewel worked for a while as a hunting guide with his own Sur-Kill Guide Service. After he discovered that elk were being senselessly slaughtered in Yellowstone National Park, he hitchhiked to Washington, D.C. to save them, and his efforts helped stopped this needless killing. After a motorcycle accident, insurance sales became the next career for Kniewel; in just one week, he sold a record 271 policies. This didn't last long, however, and soon Kniewel was back on the wrong side of the law—this time as safecracker and con man. Kniewel finally left this life of crime and opened a Honda dealership in Washington.

Kniewel's road to national stardom began in 1965, with the creation of Evel Kniewel's Motorcycle Daredevils. Members of the team began slowly leaving until it was finally just Evel. He continued going it alone, supervising every aspect of the stunt show, until he made the big time in 1968, on New Year's Day, leaping over the fountains in front of Caesar's Palace in Las Vegas, a distance of 141 feet. Though the jump was successful, the landing was not, and Kniewel spent 30 days in a coma. He followed this with other record-breaking jumps—at the Los Angeles Coliseum and the ill-fated attempt at jumping the Snake River Canyon in 1974 in Idaho on his "Skycycle." In 1975, Kniewel took his show overseas to Wembley Stadium in London, where he broke his pelvis in an attempt to leap 13 double decker buses in front of a crowd of 90,000. Not to be outdone, his next leap took place at King's Island in Ohio in 1975, where he jumped 14 greyhound buses on ABC's *Wide World of Sports*. His last jump was a total disaster, and he was seriously injured as he tried to leap a tank of live sharks in the Chicago Amphitheater in 1976.

Kniewel's stunt career propelled him to celebrity status enjoyed usually by only movie stars and mainstream athletes. The Evel Kniewel Stuntcycle became a popular toy, and other products with his likeness and name sold in the millions. He appeared on an episode of the *Bionic Woman* (1976) as himself and starred in *Viva Kniewel* (1977), again as himself. George Hamilton starred in a motion picture about Kniewel, entitled *Evel Kniewel* (1971). Kniewel provided excitement and escape for the country at a troubling time in the early 1970s, on the heels of Watergate and the Vietnam War. His red, white, and blue jumpsuit was an obvious play for patriotism, as he captivated the minds of old and young alike. He managed to thrill and excite, providing a form of entertainment to take the nation's mind of its woes, thus endearing himself to Americans as a courageous folk hero.

## **Knight, Bobby (1940—)**

Perhaps no coach in all of sports has been reprimanded and disciplined as much as Indiana University head basketball coach Bobby Knight. Much to his displeasure, Knight's sideline and press conference antics have at times overshadowed his team's remarkable championship play. With his incredible personality and passion, Knight is one of a rare breed in the world of sports who transcends his game and becomes an icon in other worlds. Just the name Bobby

Knight conjures images of thrown chairs and tirades at officials, even for the most casual of college basketball fans. These tantrums and erratic behavior sometimes shield the love Knight has for not only the game of basketball but his players as well.

As a child in Orrville, Ohio, young Bobby Knight played a number of sports growing up. His favorite, unquestionably, was baseball, and his idol was Mickey Mantle. He graduated from high school in 1956, earning letters in baseball, basketball, and football. After graduation, Knight entered Ohio State University to play basketball. There, Knight teamed with Jerry Lucas and John Havlicek to win one national championship in 1960 and make trips to the final game three times. While not a star on the court, Knight was a competent player. He took advantage of his position to learn everything Ohio State coach Fred Taylor had to offer. Knight graduated in 1962 and took an assistant coaching position in Cuyahoga Falls High School in Ohio while deciding his future.

Knight's close friend Bates Locke offered him an assistant coaching position at West Point in 1963. When Locke resigned, Knight took over the reigns and developed the West Point basketball

**Bobby Knight**

team into a formidable one, winning 102 games and earning four trips to the National Invitational Tournament finals. It was at the U.S. Military Academy, where Knight's harsh discipline and coaching style evolved. He believed that discipline and hard work would bring out talent.

After six years at West Point, in 1971 Knight was offered the Big Ten coaching job he always wanted, at Indiana University. He achieved success during his early years there, leading the Hoosiers to the Final Four in 1973. After a Coach of the Year award in 1975, he led the Hoosiers to an undefeated season, a National Championship and a Coach of the Year award for himself in 1976. Knight won another national Championship in 1981, then again in 1987 with yet another Coach of the Year award. He led a talented team to earning the 1979 Pan American Games Gold Medal and coached the Olympic Gold Medal winners in the 1984 summer games in Los Angeles. With over 700 career coaching victories, Knight was inducted into the Basketball Hall of Fame in 1991.

Bobby Knight remains one of the most respected and revered basketball coaches in the nation. His fiery attitude and refusal to lose have at times jeopardized his career and his team's success. He stresses not only discipline in the game, but in life as well. Graduation rates for his basketball players consistently rank as the best in the nation. Bobby Knight developed Indiana basketball into a national

powerhouse and, in the process, made himself into one of the most recognizable figures in American sports.

## *Knots Landing*

The second longest running prime time drama—after *Gunsmoke*—in television history, *Knots Landing's* (1979-1993) 14-season tenure is even more prestigious because it survived both the competition of glitzier prime time soaps (such as *Dynasty*) and the advent of cable television. Prophetically, series co-creator David Jacobs told his cast at the outset, “We’re not going to get any attention. We won’t win any awards. But we’re going to go on forever.”

Ironically, this spin-off of the phenomenally popular *Dallas* was created prior to its predecessor. Creators David Jacobs and Michael Filerman envisioned a television series modeled after Ingmar Bergman’s 1973 Swedish mini-series (later edited into an Oscar-nominated film) *Scenes From a Marriage*. The concept involved a study of neighboring married couples—in various states of contentment—living in a cul-de-sac in Southern California. Though CBS liked the pilot, they wanted something more glamorous and on a larger scale, resulting in Jacobs and Filerman pitching *Dallas*.

Once *Dallas* became a hit, the producers wove in the story of Gary Ewing (Ted Shackelford), the alcoholic and weak-willed younger brother of both J. R. (Larry Hagman) and Bobby (Patrick Duffy). A ne'er-do-well, the teenage Gary had married Valene Clemmons and fathered their child, Lucy. Though circumstances had separated them for sixteen years, on a special of *Dallas* on December 13, 1979, Gary Ewing and Valene Clements Ewing (Joan Van Ark)—who had found each other again—remarried and moved to a California town named Knots Landing. The original idea was that if the couple could get on their feet in a place far away from Gary’s powerful relatives, they could then send for Lucy and be reunited as a family. But as luck—and the vicissitudes of television drama would have it—this reunion never took place.

Though *Knots Landing* received only mediocre ratings its first short season (only thirteen episodes), the producers made three major changes in the second season which caused ratings to escalate. First, they shifted the format of the show from self-contained episodes to serialization, introducing plotlines which could span the entire season. Second, they create plotlines which would allow for visits from *Dallas* characters to boost ratings. And third, and perhaps most important, they cast television and film actress Donna Mills—known primarily for, as she puts it, “victim roles”—as sultry vixen Abbie Cunningham, Sid Fairgate’s sister who is obsessed with both money and power. Thus, upon meeting Gary Ewing and learning of his wealthy family, Abbie sets her sights on him, and her destructive efforts become the most central conflict in the series run as “true lovers” Gary and Val break-up and then struggle to reunite through a succession of lovers and spouses.

Ted Shackelford and Donna Mills of *Knots Landing*.

As seasons passed, *Knots Landing* continued to hold its own in its Thursday night time slot against stiff competition from the popular *Hill Street Blues* and then *L. A. Law*. Despite the increasing influx of more melodramatic plotlines (such as Valene's twin infants being stolen and then sold by a nefarious baby doctor), the producers of *Knots Landing* contended that the secret of their longevity was the emphasis on middle-class characters and relationships which, to some extent, mirrored the experiences of their audience. Scenes often depicted characters involved in everyday situations such as preparing meals and taking out the trash. These sentiments were confirmed by *USA Today*, which contended, "KNOTS always shone as the least guilty of TV's guilty pleasures," giving "nighttime soap fans middle-class characters and backyard barbecues as an alternative to the flowing champagnes and life-styles of the rich and famous of other shows." In addition, the show was often praised by critics for taking on such serious subjects as alcoholism, prescription drug abuse, teen drug abuse, mental illness, child abuse, divorce, and bereavement; issues with which its campier rivals refused to deal.

While former Broadway star Michelle Lee proved the show's anchor, appearing in every episode in the run as Valene's neighbor and best friend Karen Fairgate McKenzie, throughout the course of its run *Knots Landing* also featured a series of appearances by veteran Hollywood stars such as Ava Gardner, Howard Duff, Ruth Roman,

and Julie Harris, who actually became a cast member for several seasons as Valene's mother, receiving an Emmy nomination for her work. But the show could also prove a star-making vehicle, as evidenced by the rise of Alec Baldwin, who later starred in major Hollywood films such as *The Hunt for Red October* and *The Edge*. Originally introduced as mild-mannered Joshua Rush, Valene's half brother, Baldwin performs a virtuoso transformation over the ensuing season as this humble preacher's son becomes first a televangelist then a raving megalomaniac who marries and then batters his wife, Cathy Geary (played by singer Lisa Hartman).

As the plotlines grew more outlandish (Michelle Lee's Karen suddenly becomes a talk show host and is stalked by a crazed fan), ratings slipped dramatically in the thirteenth season. In addition, annual contract renewals of the increasingly large cast rendered the show too costly to produce despite the producer's reducing the number of appearances by regular cast members, and even writing out the show's long-running characters. As a result, the producers willingly canceled the show in 1993, David Jacobs commenting, "I think we all felt rather than continue to amputate limbs, which is really what we were doing, that it was just time to stop."

In 1997, the majority of the cast members reunited for a four hour miniseries, *Knots Landing: Back to the Cul-de-sac*, which suffered from contrivance and silliness, resulting in its low ratings. In its wake, creator David Jacobs went on to create other short-lived series, scoring another hit with *Lois and Clark*. Both Michelle Lee and Donna Mills have formed their own production companies. In addition, fans of the show have developed a number of *Knots Landing* internet sites where they can continue the show by writing their own episodes.

## Kodak

Kodak is the American corporate photo giant whose film and imaging products are recognized worldwide. Headquartered in Rochester, New York, the Eastman Kodak Company (Kodak, for short) was incorporated in 1901 as the successor to the small dry-plate business founded in Rochester in 1880 by George Eastman (1854-1932). From its modest beginnings in a rented loft space, the original Eastman Dry Plate Company (which became the Eastman Dry Plate and Film Company and then simply the Eastman Company) expanded rapidly, largely because of Eastman's inventive and marketing genius. By 1900, distribution outlets were established in France, Germany, Italy, and other European countries. By the end of the twentieth century, Kodak, one of industry's most readily identifiable trademarks, had operations in Canada, Mexico, Brazil, the United Kingdom, France, Germany, and Australia, and Kodak products were marketed by subsidiary companies to people in more than 150 countries.

An amateur photographer with little formal education, Eastman recognized the technological possibilities of the newly discovered dry plate method of photography, which, by substituting a dry coat of

gelatin emulsion containing silver salts for the wet collodion then in use, allowed plates to be prepared well in advance and developed long after exposure. For three years Eastman worked as a bank clerk and experimented at night in his mother's kitchen. By 1880, having developed both a successful formula for creating gelatin emulsions and a patent for a machine to mass produce the pre-coated dry plates for sale to other photographers, he began commercial distribution. Devoted unconditionally to the quality of his product, he once recalled and replaced a batch of defective plates already in the hands of dealers. "Making good on those plates took our last dollar," he said; "but what we had was more important—reputation."

As manager of all phases of the new company's operations, Eastman—assisted by a full-time research scientist—continued pursuing ways to simplify the photographic process. One result was American film (1884), a three-layered strippable negative that eliminated the burdensome glass plate and became the forerunner of all modern film. By 1888, the Kodak camera, the first camera uncomplicated, affordable, and portable enough to be used by large numbers of amateur photographers, was introduced with the slogan "You Push the Button, We Do the Rest"; after use, the camera was mailed back to Rochester for film processing and reloading. The new camera also marked the initial appearance of "Kodak," a name coined by Eastman himself. Noting the "strength" and "incisiveness" of his favorite letter "K" (the first letter of his mother's maiden name, Kilbourn), Eastman had played with it in various combinations. The resulting word "Kodak," trademarked in 1888 and today one of the company's most valued assets, was, according to Eastman, "short" and "[in]capable of mispronunciation," and it would not be "associated with anything . . . except the Kodak [camera]."

Other photographic innovations followed, including the first commercial transparent roll film, which made possible Thomas Edison's developments in motion pictures; the pocket (1895) and folding pocket (1898) Kodak cameras, which are considered the ancestors of all modern roll-film cameras; and the inexpensive but revolutionary Brownie camera (1900), which sold for \$1.00 plus 15 cents for film. Each time a new possibility for the photographic medium arose, Eastman seized the opportunity: for instance, he entered into an agreement to supply plates and paper for Wilhelm Roentgen's newly discovered x-ray process and produced the first film especially coated for motion pictures. (Today, over 90% of all motion pictures are shot on Kodak film.)

Yet Eastman was more than a brilliant inventor; he was also a remarkably shrewd and progressive businessman who followed four very modern principles: mass production, low product pricing, foreign and domestic distribution, and extensive advertising. So strong was Eastman's belief in the last principle that he promoted his company's products in the leading papers and periodicals of the day, often writing the ads himself. He inaugurated the use of the "Kodak Girl" to pitch his cameras; instructed his advertising department to embark on ambitious campaigns, like the installation of 6,000 road signs ("Picture this! Kodak as you go") on American highways in the early 1920s; linked the marketing of the Brownie to Palmer Cox's familiar cartoon characters; and tied in products to particular audiences and events—e.g., Boy Scout Brownie Cameras (1932), New York World's Fair Baby Brownies (1939), and Kodak Coquette Cameras, with matching lipstick holders and compacts (1930).

Believing that employees deserved more than just a good wage, Eastman implemented benefit, accident, and pension funds, as well as company reward programs, like the "Wage Dividend" program, in which workers benefitted above their wages in proportion to the

yearly dividend on the company stock. Eastman's social philosophy also extended to his personal life: a noted philanthropist who often posed as "Mr. Smith," he contributed generously to educational and cultural institutions and to other charities, especially those that supported improved children's welfare. On one day alone in 1924, he gave \$30 million to MIT (Massachusetts Institute of Technology), from which he recruited some of his best scientists and engineers; the University of Rochester; the Hampton Institute; and the Tuskegee Institute. In 1932, moments after bequeathing the bulk of his estate to the University of Rochester, an ailing Eastman took his own life. His suicide note was simple and direct: "My work is done. Why wait?"

With the introduction of products such as Kodachrome color film (1935), cartridge-loaded Instamatic still and movie cameras (1960s), the disc camera series (first marketed in 1982), digital and single-use cameras, and with various advances in optics (established as a Kodak department as early as 1912) and imaging technologies, the company that George Eastman founded remains on the cutting edge of professional and amateur photography.

## *Kojak*

The popular TV series *Kojak* took its name from the character of Lieutenant Theo Kojak, the iconoclastic commander of a detective squad at the Manhattan South precinct in New York City and one of the more memorable characters to appear on 1970s television. With his habitual consumption of lollypops and his trademark line, "Who loves ya, baby?," Lt. Kojak earned a loyal TV following that ultimately led to cult status as one of the small screen's most endearing law enforcers.

At first Telly Savalas, the actor who brought Lt. Kojak to life, might have seemed an unlikely candidate for a television hero. The fortyish Greek-American actor, with his shaven head, substantial nose, and unconventional looks, had generally played villains throughout his career. Among his many portraits of evil, he had depicted Pontius Pilate (*The Greatest Story Ever Told*), James Bond's nemesis Ernest Stavro Blofeld (*On Her Majesty's Secret Service*), and redneck psychopath Archer Maggot (*The Dirty Dozen*). But Savalas turned out to be an inspired choice for the role of the tough-but-tender detective. *Kojak's* first appearance was in the made-for-TV movie *The Marcus-Nelson Murders*, broadcast in the spring of 1973. Widely regarded as one of the best television films ever made, the two-hour special won two Emmy Awards (for writing and directing) and generated network interest in a series, which premiered in the fall of 1973 and ran five seasons, airing a total of 112 hour-long episodes.

An advertising campaign for the television show *Kojak*.

Although the opening title sequence included footage of Kojak firing a pistol, the character rarely engaged in violent action during the weekly episodes. Kojak usually solved crimes by interpreting evidence, persuading reluctant witnesses, playing department politics when necessary, and directing his squad of detectives while conducting an investigation. As an urban crime drama, *Kojak* did not lack for incidents of violence—but these were typically played out either by criminals or by Kojak's detectives while engaged in apprehending the criminals. As such, the principal enforcer on Kojak's squad was Detective Bobby Crocker (played by Kevin Dobson). Other regular cast members included Kojak's boss, Captain McNeil (Dan Frazier), Detective Saperstein (Mark Russell), and Detective Stavros (played by Savalas' brother George, but billed in the cast as "Demosthenes").

Although the show was cancelled in 1978, the character of Kojak was revived several times during the next decade. He was the protagonist in two made-for-TV movies: *The Belarus File* (1985) and *The Price of Justice* (1987). Then, in 1989, Savalas agreed to portray Kojak in a series of two-hour shows to be part of a "wheel" program, *The ABC Saturday Mystery*. As such, the adventures of Kojak alternated with three other detective shows, including the popular *Columbo*, starring Peter Falk. The new show, which lasted only one season, promoted Kojak to Inspector and surrounded him with a new supporting cast—including Andre Braugher, who would later go on to acclaim and an Emmy Award for his work on another cop show, *Homicide: Life on the Streets*. Telly Savalas died in 1994.

## Koontz, Dean R. (1945—)

Few writers have labored as long and as hard as Dean R. Koontz has to achieve his reputation as a writer of high quality commercial suspense fiction. Not only has he produced quality works in a variety of genres, but Koontz has also become a leading advocate for quality writing and creativity, producing two guides for would-be writers of fiction. Clearly one of the more significant trend-setters of the twentieth century when it comes to maintaining integrity in the highly commercialized fiction market, Koontz's reputation is well deserved.

Born an only child in Everett, Pennsylvania, in 1945, Dean Ray Koontz married his high school sweetheart, Gerda Cerra, in 1966. That same year he published his first story, "Kittens," in *Atlantic Monthly*, an auspicious beginning for a young writer. Taking a job as a teacher-counselor in the Appalachian Poverty Program, Koontz published his first stories as a professional writer, "Soft Come the Dragons" and "Behold the Sun," both of which appeared in *The Magazine of Fantasy and Science Fiction*. A year later, Koontz worked as a high school English teacher in Harrisburg, Pennsylvania, writing after the school day was done. By 1969 he had sold 20 short stories and three short novels, all works of science fiction. That year, he left his job as a teacher to write full-time. In quick succession, more science fiction stories and novels came into print, with his novella *Beastchild* receiving a 1971 Hugo nomination.

In 1972, Koontz's prolific output and perception by the public as a writer of science fiction forced him to adopt the first of several successful pseudonyms. His goal, as he made clear in various interviews, was to break out of the claustrophobic shell imposed by commercial category fiction. Under the watchful eye of Random House editor Lee Wright, Koontz adopted the *nom de plume* of K. R. Dwyer and wrote his first thriller, *Chase*. Throughout the 1970s and 1980s, alongside fiction that continued to appear under his own name, Koontz wrote thrillers, mysteries, romance novels, horror tales, and even science fiction as Brian Coffey, Anthony North, Richard Paige, Aaron Wolfe, John Hill, David Axton, Leigh Nichols, and Owen West. Only in the early 1990s did Koontz give up his various guises, republishing several of his pseudonymous works under his own name.

Koontz's success can largely be summed up by the attention he consciously has paid to his craft. Unlike many of his commercial peers, Koontz recognized right away that to use a formula for writing commercial fiction meant caring deeply about that formula. For evidence of this heartfelt belief, one only needs to look at his nonfiction work. In 1972, owing to his early success, Koontz was tapped by the publishers of *Writer's Digest* to author *Writing Popular Fiction*, a how-to guide for beginning writers of popular fiction. Nine years later, he revisited the topic in *How to Write Best-Selling Fiction*, also published by *Writer's Digest*. In the first guide, the still novice writer emphasized the profitability of category fiction, offering basic advice about the various genres in which he had written. In the latter guide, his earlier suggestions were turned on their head as the seasoned writer admonished would-be writers to avoid all forms of category fiction, providing instead pointers for the creation of high quality cross-genre suspense fiction. According to Koontz, between

the words “Popular” and “Best-selling” lie all the differences between two approaches to writing, a reflection of his decision in 1973 (a year after publishing *Writing Popular Fiction*) to leave the narrow field of science fiction.

Signs of Koontz’s early success as a writer came first with contracts he had landed at major publishers like Random House, Atheneum, and Bobbs-Merrill. His novels *Demon Seed* (Bantam, 1973) and *Shattered* (Random House, 1973) proved especially auspicious, receiving film treatments by Metro Goldwyn Mayer and Warner Brothers respectively, in 1978. Film versions of *Watchers* and other thrillers from the 1980s, however, eventually convinced Koontz to give up on selling movie rights to his work unless he could retain authorial control of the screenplay. His dissatisfaction with film treatments of his work and strong sense of ownership towards it explain in large part why there have been far fewer Koontz novels filmed than those of his counterpart, Stephen King. This proprietary sensibility has even been extended to the published editions of his early work. As a result, Koontz has retrieved the copyright for all of his early and out-of-print science fiction, with the avowed intent of either republishing certain works in rewritten form (as in the case of his 1973 novel *Invasion*, written as Aaron Wolfe, which appeared completely reworked in 1994 as *Winter Moon*) or keeping them out-of-print as long as copyright law permits.

Koontz’s critical reception has always been, and continues to be, positive. Reviewers recognize that his fiction is no more and no less than high-standard commercial fiction and, as a consequence, have scored him well in that regard. Few of his novels have achieved the level of artfulness of contemporaries like Stephen King and Clive Barker, or lesser-known fiction writers like Ramsey Campbell and T. E. D. Klein. Koontz does not like to experiment, barring such rarities as *The Voice of the Night* and *The Vision*. Certain patterns clearly emerge in most of his mature, later fiction: there is always a love interest; major and important minor characters generally come from dysfunctional families and broken homes (based in part on Koontz’s own); an oddball sense of humor infiltrates the occasional banter between characters; and his politics, when revealed at all, incline towards a libertarian, anti-gun control stance with a strong dose of pro-civil rights liberalism thrown in. Finally, despite his abdication of the genre, science fiction—based premises run throughout the later major fiction: *Watchers*, *Shadowfires*, and *Midnight* focus on the threat of genetic engineering; *Night Chills* offers a disturbing portrait of mind control; the story of *Lightning* is driven by time travel; and *Dragon Tears*, *The Vision*, *The Bad Place*, and *Cold Fire* depend upon the psychokinetic abilities of their protagonists and antagonists.

Because he cares about his craft in a way that few commercial writers do, Koontz has risen to the top of bestseller lists; he has demonstrated how much he cares by keeping his lesser works out of print and his major works from the corrupting influence of television and film producers. Popular fiction is meant to give readers pleasure, and Koontz does not fail in his mission. In *The Dean Koontz Companion*, horror-fiction writer Charles de Lint summed up Koontz’s contributions to fiction like this: “Dedication to his craft, an optimistic belief in the inherent goodness of humankind, a loving partner, and business acumen . . . these have all combined in Koontz to give us an author capable of bringing a reader to tears and laughter, sometimes on the same page, in a manner that no other author has been able to duplicate.”

## David Koresh and the Branch Davidians

The 1993 stand-off between federal agents and people inside the Branch Davidian compound at Waco, Texas, resulted in the deaths of approximately 80 Branch Davidians, including leader David Koresh. The tragedy upset Americans in varying degrees. Widespread dismay over the deaths of at least 20 children contrasted with those who used the tragedy at Waco to stoke their anti-government fervor. Blame abounded, as federal decision-making came under question, and Koresh was condemned for putting children in harm’s way.

The compound, named Mount Carmel, was referred to by news accounts as “Ranch Apocalypse.” Prior to the stand-off, an investigation of the Davidians produced evidence of a large illegal weapons stockpile. Reports surfaced that Koresh was molesting children on the compound, to which a 14-year-old girl later testified at a Congressional hearing. Of greater concern was the possibility that Koresh, a self-proclaimed apocalyptic visionary, planned to lead his followers into mass suicide.

Koresh’s apocalyptic visions, reported *U.S. News and World Report*, were broadcast on the radio in exchange for the release of 37 members: “My father, my god who sits on the throne in heaven, has given me a book of seven seals . . . If America could learn these seals they would respect me. I’m the anointed one . . . It’s the fulfillment of prophecy.” Following the broadcast, Koresh turned recalcitrant, unwilling to exchange his “messianic” status in the compound for prison life. Koresh expressed fears of being raped by other inmates, conscious of the fate that child molesters faced in prison.

On February 28, 1993, an initial raid produced a gun battle that killed five Branch Davidians and four ATF (Bureau of Alcohol, Tobacco, and Firearms) agents. It was the worst loss of life for federal law-enforcement agents in the twentieth century. The stand-off that ensued lasted 51 days. FBI plans for a tear-gas assault circulated in March and were presented to the new United States Attorney General Janet Reno. The plan was to “ease” the residents out of the compound by injecting tear gas, or CS gas, into the compound. Reno withheld approval until assurances were made that the gas would not harm the children, knowing that the gas masks on the compound would not fit their faces. According to Dick Reavis, a civilian expert from the Army research center in Maryland told Reno that “although there had been no laboratory tests performed on children relative to the effects of the gas, anecdotal evidence was convincing that there would be no permanent injury.” Reno approved the plan on April 17.

As if the situation in the barren prairie was not surreal enough, the FBI employed a bizarre tactic, using loudspeakers to blast Tibetan monk chants and the rantings of Koresh into the compound. An

estimated 720 lawmen converged on Waco, including 250 FBI agents and 150 ATF agents. Many suffered the strain of the lengthy standoff. Waco had a 90 percent occupancy rate, making living quarters scarce; agents were scheduled to shifts that lasted weeks at a time. Koresh's tendency to switch gears during negotiations further exacerbated the strain on agents.

The FBI tank and tear gas assault took place on the morning of April 19. News reports placed the death toll between 75 and 95 people, including over 20 children; all were Branch Davidians. Most died from smoke inhalation, but two dozen were killed by gunshot, either by suicide or by another member in the compound.

At 6:02 a.m., CEVs—combat engineering vehicles—punched holes in the compound walls to pump CS gas into the building. The wall openings allowed much of the gas to escape, and made the FBI's assumption—that the gas would prompt an evacuation—invalid. Around 11:40 a.m., the building began to burn, fanned by 30 mile-per-hour prairie winds. Survivors from the compound said the tanks crushed a pressurized tank filled with liquid propane, starting the fire. The FBI maintained they saw flames erupt in several places, indicating the fire was set deliberately by members of the compound.

Survivor Marjorie Thomas, who suffered third-degree burns over 50 percent of her body, described the assault from the inside in Reavis' *The Ashes of Waco*: "The whole entire building felt warm all

at once, and then after the warmth, then a thick, black smoke, and the place became dark. I could hear—I couldn't see anything. I could hear people moving and screaming, and I still was sitting down while this was happening."

The incident at Waco became a self-fulfilling prophecy for the Branch Davidians. The more Koresh sized up the stand-off for its apocalyptic message, the more the FBI viewed Koresh as engaging in stalling tactics. When the FBI responded with pressure to get Koresh to comply, it only confirmed for Koresh that the end was near, and the cycle repeated itself. Congress, which questioned the wisdom of the plan, would conclude that the FBI had not acted illegally.
