Not all of Stratemeyer's properties were for children. He repackaged dime novels from his early career as fare for young adult readers. Moreover, he also functioned as a literary agent who purchased manuscripts from other writers and had them published under various house pseudonyms. A handful of his properties were written for the adult fiction market, such as a series of mysteries written by "Chester K. Steele." But children's series were the backbone of the Stratemeyer Syndicate, and their themes were wide-ranging, covering school stories, westerns, mysteries, sports, career stories, and other genres. The popularity of these books was enormous. The catalogs of Cupples & Leon and Grosset & Dunlap, two of his main publishers, were laden with Syndicate fare—although, thanks to the pseudonyms, young readers were unaware that all of the books they were devouring came from the same source.

Stratemeyer's near-monopoly of the children's series market brought him some unwelcome scrutiny. Franklin K. Mathiews, librarian for the Boy Scouts of America, published a scathing article in *Outlook* magazine in 1914, "Blowing Out the Boys' Brains." In it, Mathiews asserted that sensationalist series books, marked by rapid-fire plots, absurd coincidences, multiple cliff-hangers, and a total lack of character-development, damaged boys' imaginations by overstimulation, thus ruining them for the subtleties of better literature. There was a degree of sense in Mathiews' complaints, and educators and librarians around the country took up the cry. Stratemeyer's success, however, was never seriously compromised because children loved his books and could afford to buy them themselves. But down through the decades there always remained a strain of protest against the vapid and sensationalism of series books. The books, however, were not working in a vacuum; they were part of a general trend, catering to the same appetite for speed and superficiality that would later be exemplified by television. Despite disapproval from the more educated segments of the population, children craved this style of entertainment and the great demand called for an equally great supply.

Accordingly, the 1910s and 1920s were prolific decades for the Stratemeyer Syndicate. In the five year span between 1912 and 1917, the syndicate was producing nearly 50 distinct series, and a similar amount ten years later, from 1922-27. But in the spring of 1930 Edward Stratemeyer succumbed to pneumonia, and died at age 68. After attempting unsuccessfully to find a buyer for the syndicate, Stratemeyer's daughters, Harriet Adams and Edna Stratemeyer, assumed operation of the family business.

Stratemeyer left behind enough material to allow the syndicate to continue normally for another two years; after 1932, however, the

material was gone and the Great Depression had damaged the book market. The sisters trimmed the business down considerably, killing off nearly their whole line of series. They kept only the proven cash-cows, including Nancy Drew and the Hardy Boys, among a few others. A few new series were begun during the depression, but the syndicate remained a much more conservative and narrowly-focused business than it had been during Stratemeyer's tenure. The body of series was cut down even further when the advent of World War II required conservation of paper and the metal plates used for printing books. By the late 1940s, the syndicate was producing only half a dozen series.

In 1942 Edna Stratemeyer married and moved away, leaving Harriet Adams as the active partner. Adams' strategy for success involved maximizing the value of the syndicate's back-catalog. She resurrected old series in reprint editions with new publishers and signed deals to have her characters translated into foreign languages and other media. Former bestseller Bomba the Jungle Boy benefitted from this treatment, as he became the hero of a string of "B" movies, from 1949-52, and a reprint series of books, both of which were released in other countries as well as the United States. In 1954 Adams revitalized the Tom Swift legacy by launching the Tom Swift, Jr. series, based on the original hero's son. Guided by talented ghostwriter James Lawrence, this series became a major latter-day success for the syndicate. Other new series were attempted during the following years, but the only other substantial hit was *The Happy Hollisters* (1953-1970), written by syndicate partner Andrew Svenson.

Adams' most controversial decision came in 1959, when she launched a project to revise and rewrite all the volumes in the Hardy Boys and Nancy Drew series, as well as many of the Bobbsey Twins. Her decision was caused primarily by concerns that modern children were impatient with the now old-fashioned texts of the original books. A further motivation came from complaints the syndicate received about the insulting portrayals of ethnic characters. Not only had the syndicate historically tended to cast minorities as villains, but early ghostwriters often used ethnic stereotypes as sources of humor. Adams responded to both concerns with one remedy, gradually replacing original books with new versions that were shorter, thoroughly modern, and (relatively) stereotype-free. The revisions were mere shadows of their former glory, however, as much of the books' charm and style had been erased.

Another controversy erupted in 1979 when Adams changed publishers. Dissatisfied with the practices of Grosset and Dunlap, her primary publishers for nearly 50 years, Adams signed a contract with Simon and Schuster. Grosset sued, and the litigation put the famous syndicate series at the center of a well-publicized custody battle. The case was decided in favor of the syndicate, and Simon and Schuster brought out new versions of Nancy Drew, Tom Swift, the Hardy Boys, and the Bobbsey Twins. Harriet Adams died in 1982, and her partners sold the business to Simon and Schuster two years later. Throughout the 1980s and 1990s the publishers continued to work with their properties in much the same way the syndicate had, hiring ghostwriters and swearing them to secrecy. Despite efforts to revitalize Tom Swift and the Bobbsey Twins, both series were discontinued in the early 1990s, but Nancy Drew and the Hardy Boys continued and even expanded into a variety of spin-off series.

Simon and Schuster's greatest service to the Stratemeyer Syndicate, however, came with its donation of nearly all of the syndicate's paperwork to the New York Public Library. This collection of records, which opened to the public in September 1998, dates from the earliest years of Edward Stratemeyer's career and forms the

largest single location for research into the syndicate's history. During the 1990s an increasing number of scholars noted the massive influence of the Stratemeyer Syndicate, not only as the single largest contributor to children's popular fiction in the twentieth century, but also as a model of a publishing phenomenon. Reaching several generations of American readers, the products of the Stratemeyer Syndicate have had an incalculable effect on America's consciousness.

## Stratemeyer Syndicate

See Stratemeyer, Edward

## Stratton-Porter, Gene (1863-1924)

Gene Stratton-Porter was a popular author, photographer, and illustrator whose prolific output of romance-spiced nature writings found an enthusiastic audience with middle-class Americans in the early 1900s. Her 26 books have been through multiple editions (many of the titles still in print at the close of the century), and the most popular of these sold millions of copies in the years leading up to and encompassing World War I.

Stratton-Porter's novels have not endured on the basis of their literary merit. Even at the height of her popularity, critics were not fond of her work, which they considered to be formulaic and unrealistic. The broad appeal of Stratton-Porter's fiction lay in her unique and seemingly effortless ability to portray and foster the vicarious involvement of the reader in the vivid and detailed goings-on of natural dramas: the hatching of great moths, the breeding and nesting of birds, the gurglings and whisperings and unfoldings of swamp and woodland. Nature writing was already an established and successful genre, with authors such as John Burroughs, Ernest Thompson Seton, and John Muir. Stratton-Porter added her own twist, tempering the nature message with enough romantic fiction to engage the reader's interest.

Stratton-Porter wrote what she knew best. Born Geneva Stratton, the youngest of 12 children, in Wabash County, Indiana, she spent long unsupervised hours in fascinated contemplation of the plant and wildlife that abounded in what was as yet largely untamed wilderness. When her family moved into town in her 11th year, she took with her a collection of pet birds. Marriage, in 1886, to Charles Darwin Porter, and the birth of her only daughter, Jeannette, two years later, kept

Stratton-Porter occupied with homely concerns, but the family's move to Geneva, Indiana, in 1890 placed her adjacent to a unique natural setting—Limberlost Swamp. Here, in the kind of personal metamorphosis characteristic of her future plots, Stratton-Porter became the Bird Woman. Bored and discontented with the social boundaries of small-town housewifery, and spurred by the chance pairing of a gift camera with the need to illustrate some writing projects on bird life, Stratton-Porter took to the swamp.

The long and arduous field hours and her bird studies, at which she became increasingly proficient, provided not only the raw material for her nonfiction, but also the experiences, observations, and many of the characterizations (modeled after interactions with farmers, loggers, and other people she found in the swamp) for her fiction. Her first book, *The Song of the Cardinal* (1903), illustrated with her own photographs and detailing the life of a cardinal and its mate, was well-received, albeit by a small audience.

Stratton-Porter decided to try her hand at a second book—natural history with, this time, a human love story running through it—and *Freckles* (1904) set the stage for the rest of her career. While publishers were initially concerned about the predominating natural world in her work, Stratton-Porter's admanance that it remain, and her subsequent sales records, won the day. Those of her novels to achieve bestseller status were *Freckles*, *A Girl of the Limberlost* (1909), *Laddie* (1913), and *Michael O'Halloran* (1915). Recognizing that her fiction found better sales than her natural history works, Stratton-Porter arranged with her publishers to alternate nonfiction with the novels. *What I Have Done with Birds* (1907) and *Moths of the Limberlost* (1912) are representative of the best of her nonfiction. They tended to be lavishly produced volumes with her own photographic illustrations accompanied by text in a descriptive, informal style. This presentation, while accurate in great detail, appealed more to nature lovers than naturalists, and contributed to her recognition as a novelist rather than for the substantial contributions she made to photography and bird behavior studies.

Stratton-Porter's interests and abilities coalesced with a literary output for which an American readership lay ready and waiting. She wrote about nature when nature-writing was in vogue. She wrote overwhelmingly positive and uplifting stories—her primary theme being the overcoming of personal obstacles through faith, trust, and hard work in the atmosphere of peace bestowed by interaction with nature—at a time when Americans were not only avid consumers of fiction but were attracted to themes that would, however temporarily, divert them from the urban grind and the grim reality of World War I.

Stratton-Porter's exposure benefited from yet another popular medium with the proliferation of women's magazines. She had regularly contributed articles to publications such as *Outing* and *Recreation*, but in 1921 she was approached by *McCall's* and offered an editorial page. "Gene Stratton-Porter's Page" gave her a powerful forum for disseminating her message of positive thinking and right living. Novel serializations and poems appeared in *Good Housekeeping* as well.

Not surprisingly, Stratton-Porter's success drew the attention of Hollywood. She had moved from Indiana to California in 1920 and had initially contracted with filmmaker Thomas Inca, billing "Clean Pictures for Clean People." Dissatisfied with the results of the first project to produce *Michael O'Halloran*, and by now a very wealthy and determined woman, Stratton-Porter established her own production company. Ultimately seven of her novels were made into films.

In 1924 Stratton-Porter died in an automobile accident. At the close of the twentieth century her novels no longer are sought by

mainstream readers, but they are still on the shelves of public and academic libraries; especially *Freckles*, which remains after others have been relegated to storage. Stratton-Porter and her audience were made for each other, her work providing a gentle reflection of American mores and desires that saw drastic change in the years between the two world wars.

## Strawberry, Darryl (1962—)

Darryl Strawberry's life reads like a soap opera. This major league ballplayer was the first pick overall in the 1980 free-agent draft, selected by the New York Mets. Without a doubt, he possessed the raw talent that could have earned him a spot in the Hall of Fame, but his erratic career has been a textbook case of overindulgence resulting in underachievement.

Professionally speaking, Strawberry's best years were the late 1980s. Yet while he was entrenched as a slugger-hero for the Mets, he never blossomed into superstardom. Furthermore, he was to earn as much publicity for drinking, drugs, and marital and tax problems. By the 1990s he had evolved into an injury-prone underachiever. A low point came in 1993, when he hit a measly .140 in 32 games for the Los Angeles Dodgers. In the mid-1990s, however, an older, humbled Strawberry was resurrected by the New York Yankees. Although he did not complain that he was relegated to part-time status, he spent most of 1997 on the disabled list; near the end of the 1998 season, as the Yanks were on their way to a record-breaking 125-win campaign, he faced the biggest challenge of his life when he was diagnosed with colon cancer.

## Streaking

Streaking, the practice of running naked through a public gathering, has been around for many years, but it attained full-fledged craze status only in the 1970s when, it seemed, all manner of strange behavior was soaring into public consciousness. Some historians

A group of men streaking through the streets of New York City.

have tagged Lady Godiva as the world's first streaker, but she rode—not ran—while deliberately concealing her nudity under her long, flowing hair. Not to be confused with simple nudism, streaking is an inherently exhibitionist act and thus the perfect public gesture for an exhibitionist age.

The spring of 1974 represented the high moment of modern streaking. In March of that year, the University of Missouri endured a mass streaking by more than 600 students. The nude collegians paraded past the campus's Ionic columns as a crowd estimated at 1,500 watched and cheered. In April, hayseed comedian Ray Stevens's single "The Streak" rocketed to number one on the pop charts. "He ain't rude. He ain't rude. He's just in the mood to run in the nude," crooned Stevens of the eponymous nudist. Full national exposure came that same month. During the broadcast of the Academy Awards ceremony, streaker Robert Opal shocked the crowd of Hollywood swells by letting it fly during David Niven's introduction of Elizabeth Taylor. "The only way he could get a laugh was by showing his shortcomings," quipped an unruffled Niven. Undeterred, the 33-year-old streaker managed to extract his full fifteen minutes of fame from the situation. As a result of the Oscar publicity, he pursued a brief career as a stand-up comic and was hired as a "guest streaker" for Hollywood parties. When the streaking craze died down, Opal moved to San Francisco, where he was found murdered in 1979.

Not surprisingly, academics and opinion writers tried to explain the streaking craze. In 1974, a psychology professor at the University of South Carolina did one of the first studies on the phenomenon. After much research, he concluded that the average male streaker was “a tall Protestant male weighing 170 pounds with a B grade average [who] dated regularly, came from a town with a population less than 50,000 and a family where the father is a business or professional man and the mother is a housewife.” Female streakers, the study found, “tended to be small, 5 feet 3 inches and 117 pounds.”

Others tried a more sociological approach. At the low end, streaking was dismissed as little more than an outrageous fad on the order of swallowing goldfish or packing phone booths. At the high end, it was touted as a lifestyle choice, a non-violent form of protest, and even a type of therapy. E. Paul Bindrim, the so-called “father of nude psychotherapy,” coached more than 3000 people through their first experience of public nudity. Explaining his philosophy to the *Los Angeles Times*, Bindrim declared: “Clothing is kind of a mask. So there are reasons to think if you remove clothing, you get a freer atmosphere where people would talk more openly.”

When streaking became a national craze, Bindrim wrote an op-ed piece for the *Los Angeles Times* in which he commented more specifically on the trend: “Streaking is healthy, and I predict that it is here to stay,” he wrote. “It may change form, but its essential ingredient, the tacit sanctioning of public nudity, will remain. . . . Running is the only aspect of streaking that will die out.” Belying Bindrim’s prediction, scampering in the nude enjoyed something of a revival in the 1990’s. It even briefly gained front-page status again when it invaded the pristine world of lawn tennis. In 1996, Melissa Johnson, a 23-year-old London student, streaked across Centre Court moments before the men’s Wimbledon final. The topless woman, wearing only a tiny maid’s apron, pranced momentarily in front of finalists Richard Krajicek and MaliVai Washington as they posed near the net for photographs. She was quickly escorted off the court by two policemen as both players and most of the 14,000 fans broke into laughter.

## Streep, Meryl (1948—)

Considered by many to be “the” actress of her generation, Meryl Streep remains in a class by herself in terms of critical acclaim and career longevity. A two-time Oscar winner, she has been nominated for ten Academy Awards throughout a career which has spanned more than twenty-five films. Known primarily for her heavy dramatic roles as neurotic or obsessed characters—many of which have required her to assume an accent—Streep has also proven versatile in playing both comedy and action roles.

Ironically, Mary Louise Streep was not driven to be an actress during her affluent New Jersey childhood. More drawn to athletics, she was a swimmer who later became a cheerleader in high school. It was upon enrolling at the exclusive Vassar College that Streep became obsessed with both literature and acting—in addition to singing with a musical group and acting as vice president of her sophomore class. Besides extensive work behind the scenes in

Meryl Streep

designing lighting and costumes, one of her many leading roles was in Strindberg’s *Miss Julie*, in which she asserts she was not “any good” but did have her first moment of epiphany as an actress “where you leave everything behind” and achieve “transcendence or something.” Subsequent graduate work at Yale allowed her to play approximately forty roles, which were most often not reality-based, which she considered ironic in view of the heavy reality of the vast majority of her film work. After graduation in 1975, Streep won major roles at Joseph Papp’s Public Theater in New York and the New York Shakespeare Festival. She made her Broadway debut in *Trelawny of the Wells* and won rave reviews and a Tony nomination for her performance in Tennessee Williams’s *Twenty-Seven Wagons Full of Cotton*.

Her first film role—most of which ended up on the cutting-room floor—was with Jane Fonda and Vanessa Redgrave in *Julia* in 1977. It was followed by an Emmy-winning performance in the highly praised TV miniseries *Holocaust* and a performance opposite Robert De Niro (in the first of three films with him) in her first Oscar-nominated role in *The Deer Hunter*. Of the latter film, Streep contends that since the role was basically unwritten she was required to improvise her own lines of dialogue and interaction.

Streep made a series of high-profile films throughout the 1980s, beginning with her role in *Kramer vs. Kramer*, for which she won her

first Academy Award for best supporting actress for her portrayal of Joanna, Dustin Hoffman's neglected wife who abandons her family. She subsequently received Oscar nominations for *The French Lieutenant's Woman*, *Silkwood*, *Out of Africa*, and *A Cry in the Dark*. Her second Oscar—this time for best actress—as well as many other prestigious awards resulted from her role as a tortured Polish concentration camp survivor in 1983's *Sophie's Choice*. Streep also returned to the theater, winning an Obie award for acting, singing, and dancing the lead in a musical adaptation of *Alice in Wonderland*.

Seeking a break from a succession of heavy, character-driven roles, Streep then made a succession of comedies such as *She-Devil*, costarring reigning TV sitcom queen Roseanne; then, in a surprise move, performing her own stunts in a demanding role as a white-water rafting guide in the action thriller *The River Wild*. Her tenth Oscar-nominated performance was as a bored Italian war bride who finds love with costar and director Clint Eastwood in the highly acclaimed *The Bridges of Madison County* in 1995.

Streep has worked with nearly every important director and every leading man of note, all of whom praise her talents. Sydney Pollack, who directed her in *Out of Africa*, claimed that not only is Streep capable of becoming “a totally new human being,” but, further, is able to effectively communicate the character's struggles to the audience. Alan J. Pakula, who directed Streep in *Sophie's Choice*, once commented, “If there's a heaven for directors, it would be to direct Meryl Streep your whole life.”

Throughout her career Streep has been nominated for and received many other prestigious awards. In 1997 she received the first Bette Davis Lifetime Achievement Award to “honor an actor or actress whose career distinctly parallels the high professional standards set by the late movie legend”; the Women in Film's Crystal Award, reserved for women whose work has helped enhance the role of women within the entertainment industry; the prestigious Silver Medallion at Telluride Film Festival's 25th Anniversary Celebration; and in 1998 received her star on the Hollywood Walk of Fame to coincide with the release of her twenty-fifth feature film, *One True Thing*.

A political activist, Streep has also hosted and narrated television specials championing the rights of women and children, literacy, and ecological issues. She not only testified in congress against the use of pesticides but organized “Mothers and Others,” an anti-pesticide organization, which has grown from thirty-five members to thirty-eight thousand.

Known for avoiding Hollywood glitz, Streep is fiercely defensive of her private life in the hills of northwest Connecticut, on a secluded eighty-nine-acre estate with a forty-seven-acre private lake. Married since 1978 to sculptor Don Gummer, Streep is the mother of four children and claims “Even my decisions about what films I make are predicated on the fact that I think about how my children will view them . . . and how it will either enhance it or strafe the soul of their future.” Considering herself a mother first and a movie star second, she often takes her family with her on location, and she was once named one of the outstanding mothers of the year by the National Mother's Day Committee.

## Street and Smith

One of America's oldest publishing houses, Street and Smith helped to ensure the spread of mass literacy in the United States. Producing inexpensive books and periodicals, Street and Smith was long known for its dime novels, pulp fiction, popular magazines, and comic books. Featured prominently were the tales of Jesse James, Buffalo Bill, Nick Carter, Frank Merriwell, and the Shadow. Noteworthy authors included Edward Z. C. Judson, Horatio Alger Jr., Gilbert M. Patten, and Eugene T. Sawyer, while reprints of Rudyard Kipling, Sir Arthur Conan Doyle, Robert Louis Stevenson, and Victor Hugo abounded. In the 1850s, Street and Smith began producing dime novels, soon becoming the most successful publisher in the field, surpassing even Beadle and Adams, Munro, and Tousey. As one commentator quipped, “Munros to the left of them, Tousey to right of them, Street and Smith behind them, Onward they blood-and-thundered.” Beginning in 1859, many of Street and Smith's serialized novels appeared in the *New York Weekly*, recently purchased by Francis S. Street and Francis S. Smith.

From the mid nineteenth century onward, Street and Smith helped to shape the image of the American hero, while moving from dime novels—which frequently sold for a nickel—to pulp fiction. Real-life individuals with anti-heroic qualities, such as the outlaw Jesse James and the Western adventurer Buffalo Bill, were presented in a glorified light. Alger's *Ragged Dick*, whose protagonist was a former bootblack turned bank clerk, helped to reinforce a belief in self-reliance and individualism as America entered an era of rapid modernization. Detective Nick Carter, who first appeared in the *New York Weekly* in 1886, was a more cerebral figure: “He was a master of disguise, and could so transform himself that even old Sim (his father) could not recognize him. And his intellect, naturally keen as a razor blade, had been incredibly sharpened by the judicious cultivation of the astute old man.” In 1896, Patten offered Frank Merriwell, a genius of an athletic stripe who invariably bested his competitors—but always did so honorably—in the pages of *Tip-Top Weekly*. Thus, the Street and Smith heroes included men of the Wild West, city lads and slickers, and athletes, in a period when urbanization and industrialization were transforming the national landscape.

Street and Smith was known for its pulp fiction, which was initiated by Frank Munsey's *Argosy* at the close of the nineteenth century, supplanting dime novels and story papers. Street and Smith contributed gaudy, three-colored covers. Russell Nye contends that Street and Smith's *New Buffalo Bill Weekly*, published in 1912, was “the last genuine dime novel.” Pulp magazines, most of the general adventure variety, thrived, while Street and Smith contributed *Detective Story* (1915), *Western Story* (1919), and *Love Story* (1921). Created by a young woman, Amita Fairgrieve, *Love Story* began as a quarterly but ended up as a weekly. By 1938, *Love Story* produced a score of imitators, including *True Love Stories*, *Pocket Love*, *Romantic Range*, and *Real Love*. Selling as many as 10 million copies by the 1930s, the pulps suffered from heightened production charges during the following decade. The death-knell of pulp magazines was ushered in by radio, television, and 25 cent paperback books. Along with other publishers, Street and Smith began emphasizing publications that garnered large advertising budgets.

Street and Smith was known for far more than its pulp, producing periodicals like *Popular Magazine*, which began in 1903 as a quarterly intended “for boys and ‘Old Boys,’” but soon became an action, adventure, and outdoors semimonthly. With a circulation of

nearly a quarter of a million, *Popular Magazine* was published until 1928. Upton Sinclair contributed to the publication, as did top pulp authors such as B. M. Bower, H. H. Knibbs, and Rex Beach. Appearing in 1937, *Pic* began printing risqué photographs of young women, while posing questions such as, “Do White Men Go Berserk in the Tropics?” With World War II coming to a close, *Pic* became a more respectable men’s magazine, with its circulation surpassing the 600,000 mark; mounting costs, however, doomed it.

By the late 1940s, Street and Smith closed its last pulp and a series of comic books, opting to highlight slick periodicals like *Charm*, *Mademoiselle*, and *Living for Young Homemakers*. *Mademoiselle*, which targeted women from 17-30, had been introduced in 1935. Quentin Reynolds referred to Street and Smith as “a fiction factory,” while contending that the company had long thrived because of its diversity and readiness to discard increasingly unpopular publications. Family control of Street and Smith terminated in 1959, when the company was purchased by Condé Nast Publications, reportedly for \$4 million and stock options. Among the magazines acquired were *Charm*, *Living for Young Homemakers*, *Astounding Science Fiction*, *Air Progress*, and *Hobbies for Young Men*.

## *A Streetcar Named Desire*

According to Brooks Atkinson, the major theater critic of the mid-century, Tennessee Williams’ urban tragedy, *A Streetcar Named Desire*, was “a modern masterpiece” that “took Broadway by storm.” Considered by many to be the finest drama of America’s finest post-war playwright, *A Streetcar Named Desire* made an indelible impression on American culture. Under the muscular direction of Elia Kazan, the incendiary play, which won both the Pulitzer Prize and the Critics’ Circle Award in 1947, was the follow-up to Williams’ 1944 debut, *The Glass Menagerie*; but whereas the earlier play was primarily a meditative memory piece, *Streetcar* is rife with activity. Its melodramatic structure, however, is never allowed to eclipse the emotional and atmospheric authenticity of the play. It is particularly revered for its multi-faceted characterizations; its rich

dialogue, which is masterful in its lyricism as well as its use of working-class vernacular; and the role it played in popularizing a new, naturalistic style of American acting, known colloquially as the “The Method.”

*Streetcar* depicts domestic strife. At the start of the play, an unmarried, thirtyish, out-of-work schoolteacher, Blanche DuBois, arrives at the home of her younger sister, Stella. Since both young women were reared in the lap of luxury on a lush Mississippi homeplace called Belle Reeve, the cultivated Blanche is somewhat shocked to find Stella living in rather squalid conditions in the French Quarter of New Orleans. More troubling to Blanche is her sister’s marriage to a loutish, “common” ex-serviceman named Stanley Kowalski. For her part, Stella is dismayed to learn that Belle Reeve was forfeited to creditors under Blanche’s watch. Clearly, both sisters have lost their social and economic footing, but while Stella is perfectly content in her rough-hewn but passionate marriage, Blanche is dispossessed, one step away from poverty.

The play recounts Blanche’s efforts to adapt to her new circumstances with her dignity and sanity intact, and documents her poignant attempts to conceal her advancing age, her professional failure and her highly sexual nature from those who might judge her harshly. “A woman’s charm is fifty-percent illusion,” Blanche confides to Stella, and Stella indulges her fragile sister, encouraging Blanche’s blossoming courtship with Stanley’s gentle co-worker, Mitch. But Stanley ultimately becomes Blanche’s destroyer, tearing away her tissue of lies and insulting her fine sensibilities. “I’ve been on to you from the start,” he bellows to her at *Streetcar*’s climax. His subsequent rape of Blanche causes what scholar Harold Bloom calls “a psychic rending” that is enough to nudge Blanche into madness. In the end, bound for a state asylum, Blanche leaves the home of her merciless brother-in-law and disbelieving sister, a lovely but broken spirit in an inhumane world. Her destruction is so complete that some critics, Kenneth Tynan for one, have read the play as a comment on the decline of civilization, the trampling of man’s finer instincts by the implacable brutality of the modern world.

Several of the play’s lines have found an affectionate place in the American vocabulary. Stanley’s anguished, full-throated cry, “Stella, STELLAAAA!” has become something of a cultural touchstone, and Blanche’s lilting final line, “I have always depended on the kindness of strangers,” has endured as Blanche’s perfect motto, as it utilizes a genteel euphemism for sexual promiscuity to reconcile Blanche’s poetic frailty with her more desperate animal behavior.

Though Blanche is the role of greater complexity and sympathy, both major characters continue to live in the cultural imagination. Blanche’s mix of cultivation, hysteria, and tragedy makes her an unforgettable creation, while Stanley, “the exuberantly macho American Pole,” in Ronald Hayman’s felicitous description, has been accorded iconic status. Much of this stature is no doubt due to the role’s close identification with Marlon Brando, for rarely has an actor taken possession of a role so effectively and completely. Many actresses have triumphed as Blanche (“a relatively imperishable creature of the stage,” according to Williams), not only Jessica Tandy in the original production, but Vivien Leigh in the 1951 film version, and in the 1990s, Jessica Lange on stage and television. But as for Stanley, Brando’s remains the definitive interpretation. His Stanley is cunning, explosive, overtly sexual, and the ways in which the actor communicated character through his body language was startlingly modern to 1947 audiences, a living advertisement for the Method and

Marlon Brando and Vivian Leigh star in the film adaptation of Tennessee Williams' play *A Street Car Named Desire*.

the acting school that advanced it, Lee Strasberg's Actor's Studio. It is ironic that in early drafts of the play this emblem of machismo appeared as a considerably more androgynous figure. According to *New Republic* writer Geoffrey O'Brien, the final product in the form of Brando—grunting and sweating with exhibitionistic virility—"proposed a different way for men to be. Talking was small part of it."

After originating the role on Broadway, Brando revived his performance for the acclaimed 1951 film, which was also directed by Kazan. Original Broadway cast members Kim Hunter (Stella) and Karl Malden (Mitch) recreated their supporting roles, carrying off Academy Awards for their efforts. Oscars were also awarded to the film for Best Picture, and to Leigh as Best Actress; oddly, only Brando was passed over (he won three years later for the Kazan-directed *On the Waterfront*).

The great success of the Kazan movie adaptation has deterred any subsequent attempts to film the play as a feature. However, television producers have proven more intrepid; prior to the 1995 version that starred Jessica Lange and Alec Baldwin, Ann-Margret and Treat Williams filled the shoes of Blanche and Stanley for the

1984 TV movie, and the play continues to be performed at both the amateur and professional levels all over the world. Composer Andre Previn based an opera on the play, and debuted it at the San Francisco Opera House in 1998 (Previn's *Streetcar* was also broadcast on public television that year), further attesting to the enduring legacy of Williams' masterpiece.

—Drew Linsky

## Streisand, Barbra (1942—)

Since she first got her break on the Broadway stage in 1962, Barbra Streisand has elicited extreme reactions from her public and from critics. Either adored or detested, the Streisand persona has, almost from the beginning, been larger than life. Indeed, it has almost overshadowed her considerable talents as singer, actress, director, producer, and writer. Though she has often been confused, frightened, and angered by both the homage and the vitriol heaped upon her, she has remained a strong personality, a productive artist, and a phenomenon in the entertainment field.

Born Barbara Joan Streisand in 1942, in Brooklyn, New York, to Jewish working-class parents, Streisand's father died when she was 15 months old. Within a few years her mother had remarried. Streisand's stepfather was an emotionally abusive man, who her mother described as "allergic to children." Her mother was undemonstrative, calling her daughter "ugly" and ridiculing the young Barbara's aspirations to be an actress. Streisand, however, was not to be deterred and as a young girl she sang in the halls of her

Barbra Streisand

Flatbush apartment building, learning to appreciate the sound of her own voice as it echoed off the walls. As a teenager she began taking acting lessons and haunting the theaters and clubs of Manhattan's Greenwich Village, seeking an entrance to the stage.

She moved to the Village in 1960. Although she wanted to become an actress, friends who heard her sing encouraged her to enter talent night at a local club, and soon she embarked on a career as a cabaret singer, dropping the middle "a" from her name so that it would stand out. Her vibrant soprano soon won Streisand a loyal local audience, mostly of gay men. Working in the Village she also met the drag queens who worked the clubs and learned from them the campy flamboyance of the diva, which she used to cover her insecurity on-stage.

Her big break came in the 1962 show *I Can Get It for You Wholesale*, when she was cast as the frumpy Miss Marmelstein. Making the most of a small part, Streisand impressed critics and audience, and, when she sang her one song, she stopped the show. The following year, *The Barbra Streisand Album* was released and won the Grammy Award for Album of the Year.

In 1964, she was cast in the leading role of the new play *Funny Girl*, playing comic and singer Fanny Brice. The role could have been made for her, as Brice too was a Jewish girl, not conventionally pretty, but with a powerful talent and an intense will to succeed. The play was a success—23 curtain calls on opening night—and overnight Streisand became a star. The girl whose mother had recommended she give up the stage and seek a secure secretarial job was on the cover of *Time* and *Life* magazines, and on television. *My Name is Barbra*, the first of many Streisand television specials, won an Emmy in 1965.

Streisand's voice has always been her most dependable asset. Most comfortable singing show tunes and popular classics, she has sung everything from Christmas carols to rock 'n' roll. Since 1964, she has sold more than 60 million records. Thirty-eight of her albums have made the top 40, and at least 24 have sold one million copies, more than anyone except Elvis Presley and the Beatles. She has won eight Grammy Awards, was named a Grammy Legend in 1992, and won a Grammy Lifetime Achievement Award in 1995. But she never lost her insecurity about performing on stage, and after she received death threats before a concert in New York's Central Park in 1967, she stopped giving public concerts. It was almost 30 years later, in 1993, that she performed for an audience again, doing what she called her last concert tour.

As an actress, Streisand's work has been less universally acclaimed. After starring in the movie of *Funny Girl*, for which she won the Academy Award for best actress, Streisand went on to make many films; some successes like *The Way We Were* in 1973; and some failures, like *The Main Event* in 1977. Many, like *A Star Is Born* (1976) were critical flops, but did well at the box office, proving the loyalty of Streisand's fans.

Often accused of trying to control production in the films she appeared in, Streisand wanted to direct films herself. In 1983, she realized her dream by becoming the first woman to co-write, direct, produce, and star in a feature film. *Yentl* was the story of a Jewish girl in eighteenth-century Russia who disguised herself as a boy so that she could go to school and gain the education that was forbidden to girls. The project was close to Streisand's heart and she was hurt and angered by the mixed critical reception and the almost total snubbing of the film by the Academy of Motion Picture Arts and Sciences. She went on to direct and produce other films, but continued to be ignored by the Academy. Even when her film *Prince of Tides* was nominated

for Best Picture, she did not receive the Best Director nomination traditionally given to Best Picture nominees.

The motion picture establishment and many critics have been hard on Barbra Streisand. Even audiences have been polarized, some loving her ethnic looks and Brooklyn accent, others finding her abrasive and ugly. Her reputation in Hollywood ranges from hard-working perfectionist to neurotic narcissist. She has defended herself against accusations of egotism by citing the sexism of the Hollywood system. "A man is forceful," she has said, "a woman is pushy . . . He's assertive—she's aggressive. He strategizes—she manipulates."

As a young singer, Streisand's raw emotion, ineffectively masked by awkward brashness and affected diva mannerisms, touched a chord with audiences. They identified with her endearing insecurity, respected her refusal to change her nose or her accent, and admired her drive to succeed and be respected. Streisand's response to the adoration of her fans has been complex. Stunned and overwhelmed by her sudden popularity after *Funny Girl*, she called the crowds that mobbed the stage door "the crazies," and slipped out alternate exits to avoid them. As she has achieved the success she sought, Streisand has become more polished. Her speech has softened, and, while she has still not changed her nose, in part fearful of affecting her voice, her face and body show the effects of expensive care. She treats her fans with respect but still keeps aloof. Her fans, who have seen her progress flamboyantly through three decades of fashion and ideology, seem to welcome each transformation.

Unlike many performers who got their start before gay audiences, Streisand has never tried to distance herself from her gay fans. She has remained an icon among gay men and cheerfully acknowledges the connection, joking on-stage about being outdone by a group of Barbra drag queens, and even hiring a Barbra impersonator to fool her friends at a party. In a serious vein, she has raised money for AIDS (Acquired Immune Deficiency Syndrome) research, made a television movie about the career of lesbian coast guard officer Margarethe Cammermeyer, and spearheaded a celebrity boycott of Colorado after anti-gay legislation passed there.

Politically liberal and wealthy (in 1997, her worth was estimated at \$100 million), she created the Streisand Foundation, which donates money to such causes as civil rights, AIDS, and the environment. With the election of Bill Clinton as president, she became a frequent visitor to Washington and an active fund-raiser for the Democratic party. Though she sometimes drew ridicule for speaking about politics, she insisted on the rights of artists to free expression, and on respect for liberal traditions.

Though her career, like her persona, has often been controversial, and though she has not always lived up to the expectations of critics or fans, Barbra Streisand accomplished what she intended from the beginning—she became a star. "I always knew I would be famous. . . I was never contented. . . I wanted to prove to the world that they shouldn't make fun of me."

—Tina Gianoulis

## Strip Joints/Striptease

Strip joints feature females engaging in provocative dance and titillating disrobing for a predominantly male clientele. Some strip joints do cater to females with male strippers like the Chippendales. Antecedents of the modern striptease include the auletrides of ancient Greece, geishas of Japan, belly dancers of Arabia, and a variety of singing and dancing "strumpets" found throughout history.

Dance is a self-conscious display of personal charms for excitation. Virtually all species of animals, birds, and fishes engage in conscious display to stimulate sexual excitement and attraction. Striptease adds simultaneous disrobing to the dance. Striptease costumes often use clothing associated with the mores and taboos of society, including religious taboos (the nun's habit and crucifix), sexual taboos (the school girl uniform and anklet socks), hunting fetishes (feathers and animal skins), and socio-economic symbols

Burlesque queen Blaze Starr.

(jewels and furs). Removing clothes both flaunts mores and taboos associated with the clothes and leads to sexual arousal. The gradual revelation of nudity as the stripper's clothes are slowly removed evoke fantasies that lead to sexual arousal. The female breast has been the primary historic focus of striptease. According to Desmond Morris, *The Naked Ape*, the appeal of the breast is probably associated with the imprinting of the female breast on the male during early childhood resulting in a permanent sexual reflex behavior, in addition to the human erect posture and face-to-face copulation in which the female breast substitutes for the buttocks, which is the primary sexual stimulus of all other primates.

Modern titillation and tease was perfected in the 1860 music halls of Paris and London. After World War I, risqué nudity became commonplace in the cabarets of Berlin, reviews of Paris, and the nightclubs of the New York Bowery, where the term "striptease" was first used. With the sexual revolution, and the civil rights, woman's rights, and free speech movements of the 1960s, striptease became more mainstream and moved into the discotheques, theater districts, cinemas, and adult entertainment districts in most cities worldwide. As striptease became more widespread, it influenced popular dance by introducing sensual and erotic body movements.

In the late twentieth century, striptease evolved from titillating dance into more radical "show routines," "lap dances," "performance art exhibitions," and "sex shows." In the show routine, the striptease is continued to full nudity and to a full gynecological exhibition of the vagina, often with simulated or actual masturbation by the dancer. In the lap dance (and table dance) simulated sex acts are performed on the male observer as the dancer gyrates in extremely close proximity to the observer's body. Some criticize performance art exhibitions for seeking to exploit state and federal grants for arts funding and to avoid zoning restrictions by claiming to exhibit a more artistic and aesthetic rendition of many of the same acts performed in show routines and lap dances. In the sex show, found throughout Europe and the developing world but rarely in the United States, two or more performers engage in simulated or actual sex acts and copulation for the voyeuristic enjoyment of observers.

The strip joint, and its historic antecedents, have served a variety of social functions. The venue has maintained gender separation, providing a males-only retreat where affairs of business, politics, and sport could be conducted. This function was highly criticized by feminists who demanded access to those affairs. The strip joint also has provided an outlet for the male libido. Lewis Berg and Robert Street offer a typical warning in their 1953 marriage manual, *Sex: Methods and Manners*: "A woman should realize that all normal men are sexually responsive to the exposure of the female body. This is particularly true where strange women are concerned, since the male perpetually seeks variety. It accounts for the popularity of burlesque and girl shows in general, and for exhibitions of the strip-tease, bubble-dance, and fan-dance character. Few husbands, if any, are totally indifferent to these attractions." Thirdly, striptease has offered lucrative wages for female performers, some of whom lack the education, skills, or enthusiasm for other employment. Research has reported that many skilled and educated women abandon traditional careers for higher-paying and less demanding careers in striptease. Some strippers remain active into age 50 or 60.

Offering unconditional sexual stimulation, the striptease artist has functioned as a surrogate lover for noncompetitive men who fear rejection in the post-feminist social world. The striptease offers genuine entertainment and a ration of female companionship for males in military camps, gold fields, industrial centers, and other

isolated locations away from opportunities for social interaction with females. Despite the contributions of strip joints and strippers, they are relegated to low social status. Indeed, the strip joint is occasionally a front for prostitution, substance abuse, gambling, and other illegal activities. To limit their impact on the larger society, many communities try to restrict strip joints to certain locations safely away from schools and churches.

Striptease has been used as a symbol of both feminism and anti-feminism. While striptease represents the female right to self-expression and control of her body, it also represents the male chauvinistic exploitation of women as purely sexual objects for entertainment.

## Stuart, Marty (1958-)

Beneath a rock 'n' roll hairdo that makes donning a cowboy hat impossible, and with a collection of flamboyant jackets that would have made Liberace jealous, Marty Stuart emerged in the 1980s as a talented country instrumentalist—he plays both guitar and mandolin—songwriter, and performer. Born in Philadelphia, Mississippi, in 1958, Stuart first picked up a mandolin at the age of five. By 1972, the 13-year-old was playing the instrument with legendary bluegrass guitarist Lester Flatt. After Flatt's death in 1979, Stuart signed on as a guitarist with one of his all-time heroes, country-music great Johnny Cash and remained with Cash's band for six years before leaving in 1986 to begin a solo career. Stuart has also performed with such stars as Bill Monroe, Bob Dylan, the Everly Brothers, Willie Nelson, guitarist Doc Watson, Billy Joel, Neil Young, fiddler Vassar Clements, and Emmylou Harris. Songs penned by Stuart have been recorded by Harris as well as Wynonna Judd, George Strait, and Buck Owens.

Stuart produced his first solo album, *Busy Bee Cafe*, in 1982, while still a member of Cash's band. For this album, he enlisted the

**Marty Stuart**

help of fellow pickers like guitarists Doc Watson and Cash, Dobroist Jerry Douglas, and banjo-great Carl Jackson, catching the eye of CBS Records, which signed him on and produced *Marty Stuart* four years later. In 1990, with his first MCA effort, *Hillbilly Rock*, Stuart caught fire with country-music listeners in a big way. His “hillbilly music—with a thump!,” as he called it, had fans clamoring for more, and he served it up on the 1991 release, *Tempted*. The album allowed Stuart to focus on his own distinct style, especially in its best-known single, “Burn Me Down,” which had a long run on country radio.

*This One’s Gonna Hurt You*, Stuart’s first gold record, was driven up the charts by the momentum of *Tempted* and the celebrated “No Hats” tour he made with fellow country artist Travis Tritt. Released in 1993, *This One’s Gonna Hurt You* blends the best of bluegrass, delta blues, and 1950s rockabilly with honky-tonk swing, ringing gospel harmonies and some gutsy guitar work. One of the album’s most popular cuts, “The Whiskey Ain’t Workin’ Any-more”—sung with fellow “No-Hatter” Tritt—earned Stuart a Grammy award, his first Country Music Association Award, and three BMI songwriter awards. But Stuart’s proudest moment had already come:

in 1992 he became the 72nd performer to be honored by membership in Nashville’s Grand Ole Opry, the “high church” of country music.

The kudos heaped on *This One’s Gonna Hurt You* made it a tough act for Stuart to follow, and he postponed release of his seventh album, *Love and Luck* (1994), until he could get the mix of songs just right. Other recordings made in the 1990s, including *The Marty Party Hit Pack*, continue to provide a musical panorama of country influences that all come together under the musicianship of Stuart and his ever-changing, four-star lineup of collaborators, among them bluegrass fiddler Stuart Duncan, country vocalists Vince Gill, guitarist Ricky Skaggs, and banjoist Bela Fleck.

Throughout his career in country music, Stuart has consistently striven to keep alive the musical traditions of old-time country, traditions that continue to influence him greatly. On stage he plays country-rock pioneer Clarence White’s 1954 Fender Telecaster, and he owns several Martins that belonged to Hank Williams, Sr. and Lester Flatt. His tour bus is modeled on the one used by honky-tonker Ernest Tubb. He still likens his career to the tours he used to make with the Sullivans, a family of bluegrass gospel singers, during the

1980s. "You know, sometimes I feel like it's a crusade, or a mission, a crusade for hillbilly music," he once told an interviewer.

## Stuckey's

If you grew up in the 1950s or 1960s, chances are you might have gone on a cross-country car trip with your family. And your journey probably included a stop at Stuckey's, a turquoise-roofed building along one of America's highways. At Stuckey's you bought gas, food, and souvenirs. You also used the clean restrooms and basked in the atmosphere of air conditioning. Finally, before you left Stuckey's, you purchased some candy, probably one of their famous Pecan Log Rolls. You were ready to continue your trip.

The 1950s marked the first time in American history when families were able to travel throughout the United States. These benefits came about due to the post-World War II economic boom and the availability of leisure time afforded workers in the new American corporate structure. This freedom was also greatly enhanced by the introduction of the Interstate Highway system in 1956. Highways had a tremendous impact on American life. Average annual driving increased by 400 percent while shopping centers, suburbs, drive-in movies, gas stations, and fast food establishments entered the popular culture.

And as people began traveled cross-country on these new 41,000 miles of roads, they needed gas, restrooms, and a places to eat—that is where Stuckey's came in. Vacationing by car became the American way after the war and Stuckey's was an important part of that experience. Stuckey's were especially prevalent in the South and Western United States. In the 1950s and 1960s, they seemed to be everywhere. Stuckey's billboards lined the interstate, "Slow Down, Stuckey's 1000 feet" or "Pecan Log Rolls, 4 for \$1 with gas Fill-up."

Stuckey's opened its first store in 1934 when Bill and Ethyl Stuckey began selling their family pecan candy to motorists in Georgia. After some success, they opened other stores along busy highways in Georgia and Florida and began including gasoline pumps, restaurants, and souvenirs along with their famous Pecan Log Roll candy.

While the Pecan Log Rolls might have been Stuckey's most significant contribution to America's sweet tooth, Stuckey's also distinguished itself with other items. Souvenirs like rubber snakes, T-shirts, novelty cigarette lighters, state salt-and-pepper shakers, and more recently, anything with Elvis on it, gave Stuckey's a lasting place in the hearts and minds of traveling American's during the 1950s and 1960s.

By the mid-1960s, Stuckey's enjoyed a virtual monopoly on American highways. During the early 1970s, at its peak, there were

360 Stuckey's stores in 31 states. But monopolies do not last forever and things began to change for Stuckey's. Fast food chains like McDonald's and Dairy Queen saw a golden opportunity to increase their business with highway travelers. Soon, even those fast food giants were joined in the competition by gas station-convenience store chains like Super America. And by the late 1970s, cheap air fares made long distance traveling by car less common. New highways were also replacing some of the older routes and many Stuckey's were left on less traveled roads. Furthermore, says one business analyst, "Stuckey's image became a little tired and often synonymous with our parents and grandparents. And the need for those personal touches traditionally associated with Stuckey's and those plastic souvenirs were replaced by fast food, fast service, and extended hours." Consequently, the number of Stuckey's began to fall in the late 1970s.

In 1985, Bill Stuckey, Jr., tried to reinvigorate the store by mixing some well-known brand names with traditional Stuckey's merchandise. More recently, Stuckey's has entered into partnerships with other fast food chains like Dairy Queen and Citgo, to sell Stuckey's candies and souvenirs at those businesses. The idea is to develop a number of Stuckey's Express locations within the more successful fast food chains. Finally, Stuckey's has replaced the turquoise roof and old pecan shop look with a more contemporary facade and logo. From its peak of 361 stores, Stuckey's operated just over 50 establishments in the late 1990s.

Stuckey's no longer rules the roadsides of America. However, the chain still sells thousands of its Pecan Log Rolls and souvenir salt-and-pepper shakers. But for anyone who traveled during the 1950s and 1960s along America's roadways, Stuckey's will always be a fond memory of that experience.

## Student Demonstrations

Colleges and universities have historically been centers of political dissent. Perhaps because university students are in a rarefied state of independence, suspended between parental control and the mundane responsibilities of adult life, perhaps because the very nature of university education inspires students to form opinions and to take those opinions seriously, students have frequently been leaders in movements for social change. As early as the fourth century, Common Era, throughout the middle ages, and continuing into the modern era, university students have protested against politics and policies they find distasteful. The 1960s, shorthand for an era that began in the 1950s and continued into the 1970s, marked a time of massive social upheaval. African Americans began to organize to fight the state supported racism that oppressed them. Women

**Student protest in the 1960s.**

and gays began to question the social order that kept them subservient and invisible. There was open dissent about government policies, particularly regarding the undeclared war in Vietnam. Citizens began to mistrust the government officials they had always been told knew best. And at the core of each of these growing movements were the energetic, angry challenges of the student movements, both in the United States and around the world.

Though media representations of the student protest movements of the 1960s may be content with showing long-haired demonstrators waving flowers at police, the fact is that many complex political movements evolved in the 1960s. Some students were deeply involved in these movements, while others were simply swept up in their wake. The 1960s really began with the formation of two radical student organizations that would exemplify major waves of student activity of the era, the Student Non-Violent Coordinating Committee (SNCC, pronounced “snick”) and Students for a Democratic Society (SDS).

SNCC was formed in 1960 with the support of a major civil rights organization, the Southern Christian Leadership Conference, to give a voice to young black civil rights activists who were impatient with the careful tactics of their elders. Almost immediately, SNCC

took a more radical approach to the fight for civil rights, though it maintained a commitment to non-violence. SNCC organized demonstrations, became involved in the “Freedom Rides” campaign to desegregate Southern buses, and worked to reform voting laws. In one of its most successful demonstrations, SNCC was instrumental in organizing the Freedom Summer of 1964, when busloads of mostly white students from the north came south where they lived with black families and did extensive organizing, from teaching in the Freedom Schools to registering black voters. Besides the extraordinary accomplishment of public education and outreach, the Freedom Summer played a large part in the passage of the United States Voting Rights Act.

By 1966, impatient with continued prejudice and discrimination, the membership of SNCC grew increasingly radical. Members like Stokely Carmichael and H. Rap Brown embodied this change of attitude. New catch phrases became, “Black Power!” and “Violence is as American as cherry pie.” SNCC joined with another new organization for young black militants, the Black Panther Party, and demonstrations were no longer peaceful sit-ins, but angry, threatening near-riots. The Black Panther Party also began to look outside the

United States for support, to countries like Cuba for whom revolution was more than a symbol.

Also formed in 1960, the Students for a Democratic Society put out its famous statement of purpose, the Port Huron Statement, in 1962. Drafted at a national meeting of SDS in Port Huron, Michigan, the statement began, "We are people of this generation, bred in at least modest comfort, housed now in universities, looking uncomfortably to the world we inherit." The statement was an indictment of modern American values and called for students to demand a truly "participatory democracy," and to fight against social injustice and materialistic capitalism. In 1963, in an effort to act on this statement, SDS formed the Economic Research and Action Project to put participatory democracy into practice. In the summer of 1964, 125 SDS organizers attempted political organizing among the urban poor in various cities across the country. But it was its mobilization against the Vietnam War for which the SDS is best remembered.

By the mid-1960s, television broadcasts of wartime violence and American casualties were causing doubt among many Americans as to the rationale behind the war, and the greatest doubters of all were college students of draft age and their friends. Demonstrations against the war sprang up on college and university campuses everywhere, some at military recruiting offices, some at ROTC buildings, anywhere that held some connection to the war. On April 17, 1965, SDS organized the first of several mass demonstrations against the Vietnam War in Washington, D.C. Fifteen thousand demonstrators joined them. In November, SDS cosponsored another demonstration that drew 30,000 antiwar protesters.

Like SNCC, SDS members grew impatient with the slowness of governmental response to their impassioned protests, and the group became more militant. By the time over 700 demonstrators were arrested at an SDS protest at Columbia University in 1968, the organization was already beginning to metamorphose into the fiercely militant Weathermen. In 1969, the Weathermen organized the "Days of Rage" of violent protest and rioting at the Democratic convention in Chicago. Eventually, radical members formed the Weather Underground, which considered itself a guerrilla warfare group, and continued to be active until 1977, taking responsibility for 12 bombings, and releasing 22 political communiques and a book, *Prairie Fire*. While many radicals later disavowed their militant stands, many others, like SDS' Bernadette Dohrn, stand behind their youthful politics and continue to work on the left for social change.

Most students were not members of any group, but a large number felt strongly about the social and political issues that motivated the organizations. Raised by a generation that had been largely unquestioningly patriotic, the students of the 1960s questioned everything their parents and their government told them. They began to feel they had been lied to, that the privilege they enjoyed was tainted because it came at the expense of people of color both at home and in Vietnam. Most of all, they did not want themselves or their friends to kill or be killed in Vietnam defending the lie. Following the pattern of groups like SNCC and SDS, student demonstrations of the early 1960s were largely peaceful rallies and marches, with the occasional teach-in about the war or sit-in in a controversial building on campus.

Unfortunately, university administrations and campus police did not understand how to deal with such challenges to their authority and often responded by attempting to clamp down with tighter control, which usually resulted in greater and more violent rebellion. Along with antiwar protests, "student power" movements developed as students insisted on having a voice in the way their schools were run. The Free Speech Movement (FSM) at the University of California at

Berkeley began when the university attempted to ban student political organization on campus. When campus police tried to arrest a student distributing civil rights literature, 3,000 students sat down, immobilizing the police car, until beaten back by police with clubs. The FSM continued to protest the university policy, resulting in the occupation of Sproul Hall on campus on December 2, 1964 and the arrest of almost 800 students. Though large universities like Berkeley and Columbia are famous for dramatic student demonstrations, the wave of protest was nationwide and effected a broad spectrum of colleges. Buildings were occupied and even bombed in institutions from Washington University in Saint Louis to the College of William and Mary in Virginia. Student organizers reasoned that since they were fighting to save lives, both American and Vietnamese, damage to mere property was imminently justified.

Perhaps the most famous example of overreaction to student protest occurred at Ohio's Kent State University in May, 1970. Following an announcement by President Richard Nixon of a new escalation in the war, students across the United States rose up in a series of angry protests. The national guard was called out to control crowds of demonstrators at Kent State, not an unusual practice for frustrated administrators. With little training in handling crowds, overwrought guardsmen fired into the crowd, killing four students and setting off a fresh wave of outraged protests. Fourteen days later, a similar incident at Jackson State University in Mississippi caused the deaths of two students and wounding of nine others. Though these incidents provoked public horror, little investigation was done, and the guardsmen involved were never punished.

While American students were organizing demonstrations across the United States, around the world students in France, Japan, England, Spain, Czechoslovakia, and other countries were also rising up in protest against university or government policies. May and June of 1968, a turbulent year in the United States, saw a nationwide strike of students and workers in France. One of the differences between demonstrations in the United States and those in many other countries, especially in France, was that the European students often allied themselves with labor, protesting in conjunction with working people. In the United States, many working class people viewed protesting students with angry suspicion, as privileged brats who despised their achievements and denigrated their flag. Though some American students sought alliances with working people, others referred to them derisively as "hard-hats" and saw them as the enemy, the arms and voices of unthinking patriotism that supported the state lie and the materialistic American dream. These stereotypes—the wealthy, downwardly-mobile, foul-mouthed hippie and the "America, love it or leave it" narrow-minded hard-hat—often prevented communication between students and laborers that might have revealed their common interests.

There was some truth to the rebel stereotype. Counterculture young men did wear their hair long, both because it was fashionable and to challenge the authority that insisted they cut it. Young women wore their hair long and straight too, and eschewed makeup and bras and often did not shave their legs. Both sexes wore clothes that were casual to the point of raggedness. These styles were adopted by the youth of the 1960s, along with a direct mode of speech liberally peppered with profanity, partially as a reaction against the careful facades of propriety so important to their parents' generation, and partially to conform with the careful facade of impropriety so necessary to the rebel generation. There was a culture of protest and, along with its mandated style of dress and speech, it had its own literature and music. Radicals read Richard Wright's *Native Son*, Eldridge

Cleaver's *Fire and Ice*, and Angela Davis' speeches in the *Guardian*. They listened to rock music that was specifically political, like Buffalo Springfield's "For What It's Worth" and Country Joe and the Fish's "I'm-Fixin'-to-Die Rag," or to music filled with a raw and painful passion, like Janis Joplin and the Doors.

Student protests continue around the world, with each generation defining its style and its issues. SDS activist Tom Hayden described the achievements of his generation grandly, "We ended a war, toppled two presidents, desegregated the South, and broke other barriers of discrimination." While some former protesters of the 1960s might be more jaded as to the long-lasting effects of their efforts, there is no doubt that the idealistic energy of the youth of that period did change history. Richard Nixon later admitted that fears of heightened protest limited his escalation of the war in Vietnam. While racial discrimination clearly still exists in the United States, state-sanctioned segregation no longer does. Shortly after the dramatic demonstrations of 1968, both France and the United States lowered their voting age to 18. The Green Party in Germany continues to fight for the causes that German youth demonstrated for in the 1960s. For a period of a few years, the hippies and activists of the New Left felt sure they could change the world, and that passion is perhaps their greatest legacy.

## Students for a Democratic Society (SDS)

SDS was one of the largest and most militant organizations to oppose the Vietnam War. It grew from a small group of young socialists to an organization of over 100,000 members, with chapters on over 350 college campuses. The small Student League for Industrial Democracy became Students for a Democratic Society in 1960, and 1962 saw the publication of its Port Huron Statement, a manifesto critiquing American society and proposing student activism as a solution to the problems identified. The document was circulated widely, causing student interest in SDS to grow significantly.

In 1964, some SDS chapters organized demonstrations against the growing American involvement in Vietnam. As the war intensified, so did SDS opposition, including attacks on ROTC programs, the occupying of campus buildings, and student strikes. Media coverage of these protest activities tended to focus not only on the most disruptive and violent acts, but also on the most radical SDS spokesmen. The coverage was to the group's disadvantage—it tended to attract the most politically extreme young people (thus radicalizing SDS even further), and it gave the impression to middle-class Americans that SDS consisted entirely of violent would-be revolutionaries.

In 1968, SDS participated in the demonstrations at the Democratic National Convention in Chicago. SDS president Tom Hayden was one of the "Chicago Seven" who were later tried on federal charges of conspiracy to riot. In 1969, internal dissension caused SDS to self-destruct, leaving only a core of its most radicalized members, who soon began to call themselves the Weathermen.

## Studio 54

A legendary New York nightclub, Studio 54 was infamous for its sexual licentiousness (nudity on the dance floor, topless busboys, a unique gay/straight clientele mix) and an eclectic/elitist door policy that integrated the beautiful, the eccentric, and a vast array of celebrities (the Jagers, Andy Warhol, Liza Minelli, Michael Jackson, etc.). Studio 54 was opened in April 1977 by Steve Rubell and Ian Schrager; early in 1980, they were both sent to prison for tax evasion. The nightclub ownership then changed hands twice before it finally closed in March 1986. Immortalized, in a fictional form, in the films *54* (1998) and *The Last Days of Disco* (1998), Studio 54 has come to symbolize a historical transition point: from the freedom and hedonism of the 1970s into the yuppie elitism and self-destructiveness of the 1980s.

## Studio One

Although it had its genesis as a radio program, *Studio One* became the longest running anthology drama series of the "Golden Age of Television," with more than 500 live teleplays on CBS from 1948 through 1958, and earned a reputation as a visual innovator in broadcast storytelling. A product of television's infancy, the series disseminated drama of a high order, bringing classical works and serious "one-off" plays to a wide popular audience, and sowing the seeds for a generation of Hollywood writers and directors to learn their craft on the small screen. While other series were known for psychological realism, *Studio One*, under its first producer, Worthington Miner, explored the technical and stylistic potentials of the medium.

Worthington Miner thought with his eyes, and focused on a highly inventive, visual mode of storytelling. For him, *Studio One* existed somewhere between live drama and film. It was a "live

Inside Studio 54.

performance staged for multiple cameras.” Whereas most dramatic series efficiently relayed a live performance using a static three-camera set-up, the camera movement was an integral part of the *Studio One* performance. The actors were positioned and choreographed so they could be shot through apertures in the scenery, and flying walls were employed. Elaborate physical productions filled the studio above Grand Central Terminal, and in the first two years of the show, Miner himself created 39 of the 44 live productions, employing techniques that kept audiences constantly attentive.

In a modern dress production of William Shakespeare’s *Julius Caesar* during the first season, for example, Miner moved the camera in extremely tight for a close-up of the eyes of one of the conspirators, while the pre-recorded voice of the actor played over the live close-up. In this attempt to reveal thought, Miner jumped inside the character’s mind, using methods that both unnerved and excited the viewers. For *Battleship Bismarck* the producer featured inventive camera angles, tight groupings, and quick, live-camera cuts in place of post-production editing—he often used long, shallow sets that allowed him to shoot from sharp angles. He also employed arresting lighting techniques for outdoor scenes, as in *Macbeth* starring Charlton Heston, one of the show’s regular performers. This array of technical and stylistic devices created a specific form of visual storytelling appropriate for the infant medium.

These innovations were vital to the success of the program. Most outstanding dramatic material was already under option to Hollywood, which was not about to share it with an upstart medium that was perceived as a threat to the livelihood of the film industry. In addition, the film studios argued that kinescopes (a film of the image from the picture tube), which were broadcast later in markets other than New York, violated their rights to certain properties. Also, there were not yet seasoned television writers and television could not afford to hire established stage or screen dramatists. Consequently, Miner not only adapted plays from the great classical canon and other work in the public domain, but also drew on lesser Broadway vehicles and short stories.

In 1953 Felix Jackson became producer of *Studio One* and began his stewardship with a critically acclaimed production of George Orwell’s *1984*. He established the emphasis on original drama, most notably with Reginald Rose’s *Twelve Angry Men*, but despite these and other successes (*The Defender*) many of the works from the mid-1950s were “kitchen sink” dramas, stories of ordinary people dealing with a range of ordinary domestic and emotional problems. Larger social and political themes were largely left untouched. In spite of high ratings, sponsors and advertising agencies were generally unhappy with the quotidian locales and stories, feeling that they were sabotaging the implicit fantasies and dreams of consumerism

presented in their commercials. CBS and Westinghouse demanded that Rose's *Thunder on Sycamore Street*, based on an actual incident involving a black family moving into a white neighborhood, be altered. Fearing for the sensibilities of Southern affiliates and their white viewers, the black protagonist was changed to an ex-convict. Rose partially managed to subvert this revision by withholding this information until the very end of the show. As Erik Barnouw notes, viewers responded with their own predilections, and the sponsors and network discovered that they had unwittingly presented the type of controversy they had hoped to avoid.

Actress Betty Furness did the commercials during the first year's telecasts and continued to do so for the remainder of the program's life on the air. Her live demonstrations of Westinghouse's household appliances made her the most famous and recognized spokesperson in American television.

The shift to Hollywood and film allowed the networks and sponsors to create something more akin to the production values of feature films. Intimate, minimalist settings and the "marvelous world of the ordinary" were on their way out. Filmed productions for television had the potential for an economic after-life in syndication, while action-oriented genres, especially Westerns, could be churned out quickly on film. Sponsors were relieved of the worry of approving a new set of characters and a potentially problematic script each week—they, and their audiences, could happily identify with a few ongoing characters and personalities instead. In 1957, the amount of prime time programming originating on the West Coast jumped from 40 per cent to 71 per cent. *Studio One in Hollywood* premiered in January of 1958. It still broadcast live but was off the air by September.

## Studio System

As Herbert Hoover's oft-quoted aphorism states, the business of America is business. But what this truism fails to take into account is the powerful urge for respect, for status, that accompanies the simple aim of making a buck. Though there is no aristocracy in America, not so far as recognized by law, no one who has ever thirsted after power and influence with only money as a weapon, and then come face to face with the invisible blue-bloods arrayed before the gate, can have any faith in this homily to America's virtuous democracy. So it was with the founders of the major Hollywood studios. Immigrants or the sons of immigrants, Eastern Europeans, and Jews, of slight education and deprived backgrounds, they knew from bitter experience to what extent they would be allowed within the provinces of power: not at all. So they created an empire of their own and called it Hollywood, a domain where they could play as philosopher kings or petty tyrants while they remade America in their own image; the better to be accommodated.

It all started in New York City, where several perspicacious young Jews—independently of each other—recognized in the nascent film business the possibility of future wealth. Unlike their competition, they saw that film, far from being a passing novelty,

would ultimately have a nearly universal appeal. This fact was not lost on men like Adolph Zukor, a young Hungarian immigrant who made a small fortune in the fur business, and whose story is fairly representative. "[T]here was something in Zukor that went unsatisfied," writes Neal Gabler in *An Empire of Their Own*. "It could have been that he felt his social mobility was blocked by the fur business; no matter how much wealth he accumulated, he would still be associated with something unmistakably Jewish, as the fur trade was, and slightly declassé, as all the garment trades were." In 1903, when a cousin of Zukor came to him for a loan to open an arcade of electric novelties and "peep" machines, the usually cautious Zukor thought to himself: "A Jew could make a lot of money at this." Zukor had an advantage that the purveyors of these machines lacked: from his years in the fur business, Zukor had become adept at judging the market. At the time, films were only beginning to be shown on large screens. Their more common form was the "peep" machine, where a brief film, like *The Great Train Robbery* (1903), could be viewed for a nickel. Zukor saw the commercial potential of movie theaters, and his experience in opening one bore him out. Zukor also perceived the potential market for longer films—"canned" theater as it were, a revolutionary idea for its time—and he believed that movies could both entertain and edify. He obtained the rights for an hour and a half French film starring Sarah Bernhardt, which became an instant success.

Across America, a similar narrative was being played out among ambitious first generation Jews, in touch with the desires of their audience and willing to go out on a limb to satisfy their only half formulated desires. Nickelodeons were popular in the immigrant community, and subsequently were viewed as somewhat disreputable by established businessmen, precisely because of that popularity. The Jews, who had no such qualms, made a killing and then, in their efforts to satisfy the viewing public, began making films of their own. At the time, Thomas Edison had put together a trust of older, more established film producers and distributors, with the intent of enforcing the patent payments he held on film equipment. Incensed, the upstart film producers waged a covert war on the Edison Trust, many of them fleeing to Los Angeles, outside of the long arm of Edison. Coincidentally, the sunny, clement weather in Los Angeles was also conducive to film-making.

In the 1910s a period of consolidation occurred, resulting in several large conglomerates that both produced, distributed, and owned theaters; thus were born the major Hollywood studios. By the mid-1920s, a distinct pecking order existed in Hollywood between the smaller, poverty row studios and the powerful conglomerates such as Paramount (Zukor's company), Universal, RKO, Twentieth Century-Fox, and Metro-Goldwyn-Mayer (MGM). With the coming of sound film in the late 1920s, filmmakers had realized Zukor's ambition of "canned" theater. Paramount, MGM, Universal, Twentieth Century-Fox, and to a lesser extent, Warner Brothers and Columbia vied for supremacy in this period, each establishing a distinctive style and stable of stars that in many ways reflected the personalities and conceits of their respective heads.

With the coming of sound and with the popularity of films during the Depression, the studios found themselves shaping the entertainment of an entire nation. Many studio heads took their role as cultural arbiters seriously, and shaped their studio's pictures to fit a certain image. Zukor had a penchant for "quality" entertainment, scouring the European continent for artists and presenting his finds in lavish period pieces wholly devoid of any concern for realpolitik. Louis B. Mayer, who as a result of luck and business cunning had finessed himself into heading the conglomeration of three rival

companies, was preoccupied with family values. He perceived himself as a patriarch at the head of an enormous extended family (the studio), and by extension the viewing public. A man who had refused to allow his two daughters to go to college for fear they might acquire subversive ideas, he evinced the same concern for the viewing public as a whole. As can be expected from such a man, the pictures MGM made were wholesome things, and in the 1930s, Mickey Rooney and his Andy Hardy movies and wholesome sporting epics were examples of the good, clean fun that predominated at MGM. Universal and Twentieth Century-Fox had both made early successes in silent pictures, but were unable to adapt as readily. Universal, outside of their classic 1930s horror movies and a few lavish production pieces, merely weathered the storm. It was Columbia and Warner Brothers, both marginal upstarts, that adapted best to the changing current of American life, Warner with their fast-paced, starkly lit gangster films, and Columbia with breezy, wise-cracking screwball comedies.

Film succeeded so far beyond the studio presidents' dreams that they were soon involved in a continental search to expand the talent-pool. Agents and scouts were sent scurrying across Europe to lure directors, technicians, and actors to Hollywood. Ernst Lubitsch and Erich von Stroheim came early, impressed by the technical innovations in American films. Fritz Lang came later, a refugee from Hitler's Germany, as were an increasing number of novelists, playwrights, musicians, artists, and composers who, while playing only a marginal role, enlivened the atmosphere considerably. New York was not immune to studio agent's incursions. Throughout the 1930s, novelists and playwrights lit out west after the brass ring. Some, like F. Scott Fitzgerald and Dorothy Parker, were feted and cajoled into writing for pictures, and in turn, reacted with derision. Others, like William Faulkner and Raymond Chandler, were failed authors who relied on Hollywood to sustain them. Nathaniel West, whose books had sold as poorly as Faulkners, turned his bile into artistry, penning the caustic *Day of the Locust*, which would reign as the most venal, acerbic take on Hollywood until the much less distinguished *What Makes Sammy Run* supplanted it in 1941.

In 1939, the year *Gone with the Wind* and *The Wizard of Oz* were released, film was the nation's eleventh-largest industry, with studios turning out some five hundred new movies each year. A decade later, the major studios were losing money, and films' influence was slipping, superseded by its lilliputian rival, television. The HUAC (House Un-American Activities Committee) hearings investigating communist influences in Hollywood further reduced any lingering sensations of omnipotence among the studio heads, who were forced to blacklist some of their most notable talent. What damaged the studios most, however, was the success of an anti-trust suit in the Supreme Court in 1948. Investigations of the studios' monopolistic practices dated back to 1920, when the consolidation of production and distribution had effectively squeezed out all but a few independents, with the studios building enormous temples to themselves with their ornate theaters. Practices such as block-booking and blind selling enabled studios to cram a slew of mediocre films down the throats of theater owners to get the one film they wanted to show. By 1948, the Justice Department had finally drawn a line in the dirt. RKO was the first to cave in, followed in short order by Loew's and then the other majors. Hollywood would never recover.

The system these men created to sustain their vision, the studio system, lasted a little over a quarter century, from the mid-1910s to the early 1950s. By the mid-1950s, control of many majors had reverted to Wall Street and the pioneers were retiring or succumbing

to the stress of running a studio. Harry Cohn died of a heart attack in the mid-1950s, Louis Mayer succumbed to Leukemia, and Jack Warner lived until 1967 before dying of a stroke. Only Adolph Zukor, the grand old man of the studios, would live past his seventies, dying peacefully in his sleep at the age of one hundred and two.

For the common man—and the movies made the common man a recognizable demographic—the movies became, like the flickering images in Plato's cave, a simulacrum of reality. "A picture, all it is is an expensive dream," Harry Warner once said, and there is ample evidence to suggest that the studio heads themselves thought it so, and made their own version of America out of believing it. By recreating the world in dream form, they could supersede the accident of birth that delivered the studio heads to such a lowly station, and overcome the chance of birth that appeared to have precluded them from tasting the fruits of the high and mighty.

## Sturges, Preston (1898-1959)

After a childhood abroad, a stint in the army, and a turn as an inventor creating kiss-proof lipstick, in 1929 Chicago native Preston Sturges staged his first Broadway play. From that nearly accidental debut, he fashioned a career in Hollywood's "Golden Age" that film critic Andrew Sarris calls "one of the most brilliant and bizarre bursts of creation in the history of the American cinema." Hired as a writer in 1932, by 1940 Sturges became the first screenplay author to direct his own script when he penned and directed *Christmas in July*, *Remember the Night*, and Academy Award winner, *The Great McGinty*. By 1944 he had secured his lasting legacy with signature romantic comedies: *The Lady Eve* and *Sullivan's Travels* (both 1941), *The Palm Beach Story* (1942), and *The Miracle of Morgan's Creek* (1944). Sturges was hailed for his brilliance in studio publicity and for his movies' eccentric, visionary critiques of American society.

## Styron, William (1925—)

The novels of William Styron have won major literary awards, received tremendous popular attention, and been the subject of controversy. Styron's two best known novels, *The Confessions of Nat Turner* (1967) and *Sophie's Choice* (1979), deal respectively with an American slave rebellion and the Holocaust. *The Confessions of Nat Turner*, based on a documented revolt by slaves in Virginia's Tidewater area in 1831, won the Pulitzer Prize, yet sparked much hostile criticism from black writers and critics. Many charged Styron with historical falsification while others believed it was unconscionable for a white novelist to presume to enter the mind of a black slave. *Sophie's Choice*, set in post-World War II Brooklyn, is the story of an Auschwitz survivor who is plagued by horrible memories and caught in a turbulent love relationship. Styron has also chronicled his battle with depression in a memoir, *Darkness Visible* (1992).

## Suburbia

The development of suburbs—residential communities on the outskirts of cities—was one of the most dominant features of American life in the twentieth century. Far from being merely a way Americans organized their housing and ordered their landscape, the suburbs created an entirely new way of ordering American social life and culture. The result was a phenomenon known as “suburbia,” a term denoting not only a physical place but often a cultural and social mind-set as well. The rise of suburbia in the nineteenth and twentieth centuries had a major role in the development of American culture, extending long-cherished American beliefs in individuality and an agrarian ideal in new ways while simultaneously working to reshape both the American physical and social landscape.

While suburbia had its major impact during the twentieth century, it originated and developed in the nineteenth century. “I view large cities,” Thomas Jefferson once wrote, “as pestilential to the morals, the health, and the liberties of man.” Jefferson's anti-urban view was shared by a growing number of people in the nineteenth century. As cities became crowded with people, bringing

A suburb in south Phoenix, 1998.

increased sanitation, transportation, and crime problems, those Americans who could afford to, namely the growing middle class, began moving to larger, single-family homes on the outskirts of major American cities. This was in direct opposition to European cities, where the middle and upper classes preferred to remain in the central city, and poorer people were pushed to the outskirts. Prior to the mid-nineteenth century, work and home were closely intertwined, and cities reflected this mixture as well with residential buildings coexisting with commercial ones. As industrialization advanced, home and work became increasingly separated as men went off to work and women stayed at home. New innovations in transportation, from ferries and omnibuses to steam railroads and horse-drawn streetcars, helped make this transition possible.

These new 1840s and 1850s suburbs contributed to the monumental shift in middle-class culture in key ways. New suburban homes became a measure of success for these middle classes, a way of telling the world they had arrived. Having money and success meant that the man of the house was able to move his family out of the increasingly grimy and dangerous city to a more pastoral, Edenic place separated from the world of work and commerce. It also allowed these families to reestablish at least a symbolic connection to Jefferson's agrarian ideal, where every family owned its own piece of land and thus remained independent—a key necessity for the success

of liberty, and thus the republic. With fewer people making their living in farming as the century progressed, suburban homes with their often ornate gardens offered the closest approximation possible to this agrarian ideal. The suburbs also contributed to the development of the cult of domesticity. Separated from the world of work in their suburban enclaves, women were placed at the center of the domestic world, caring for hearth and home, husband and children, a role exalted as one of supreme importance. Women were viewed as the centers of morality and the important transmitters of this morality to their children and thus to future generations.

These ideals were not unique to the nineteenth century. The exaltation of the domestic sphere for women, the intense desire of Americans to own their own homes, the need to keep some kind of connection to the rural past in an increasingly urbanized present, the desire for social status, and the need for physical and economic security continued to find resonance within American culture throughout the twentieth century. Transportation factors again played an important role, from the development of streetcars in the late nineteenth century to the increasing dominance of the automobile after the 1920s and particularly after the development of the national highway system that began in the 1950s. Suburbs throughout the twentieth century continued to act as an increasingly attractive alternative to inner-city living for those who could afford it. Suburbs grew tremendously throughout the 1920s and 1930s, as bungalow houses and other styles sprang up one after the other on the more affluent sides of major cities around the United States. Throughout this period, suburbs remained closely tied to their urban cores, and their growth accompanied the larger process of urbanization occurring in the United States. In 1920, the number of people living in urban centers became a majority of the population (51.7 percent) for the first time.

With this increase in urban growth, developers across the country took advantage of the continuing desire for suburban living, buying up huge parcels of suburban land and developing it into neighborhoods and subdivisions. One of the most successful was J. C. Nichols of Kansas City, Missouri, whose Country Club District development played upon the deep cultural imperatives behind suburbanization. Nichols combined the lure of the new with the pastoral beauty of the past. His homes built during the 1920s had the most modern of conveniences: gas and electric service, the latest household appliances, and access to transportation connections. He set the homes amid a park-like setting, with generous set-back lines from the street, and ensured his development's success by enacting permanent deed restrictions that limited the extent to which residents could change their houses and yards. He also enacted racially restrictive covenants, ensuring that no resident sold his or her house to African Americans, Jews, or members of other minority groups. In doing so, Nichols ensured that his development remained exclusive. His homes were expensive, and both he and his buyers made sure their investments did not decline in value. More importantly, these restrictions preserved the reason many people were moving to the suburbs in the first place: to avoid the problems (and peoples) of the cities and to provide an environment in which they would not only be surrounded by the bounty of nature, but also by their own kind of people. Nichols's formula, and success, proved a powerful example to developers across the country who mimicked the restrictive covenants, design, and prestige of Nichols's Country Club District. Many similar developments sprang up across the United States during the 1920s.

The depression of the 1930s, and the collapse of the housing market, brought a temporary end to the great wave of exclusive

suburban developments, but suburbia, and the needs it served, was hardly finished. After World War II, the United States experienced its greatest wave of suburban development, one that showed little sign of abating at the end of the 1990s. The same cultural factors that had influenced suburban development in the period in the nineteenth and early twentieth centuries remained in the postwar period. One crucial difference was that as suburbia grew, it became available to a wider spectrum of Americans, reflecting the growth of the middle class during the postwar economic boom; however, it still remained largely closed to minorities. No longer were suburbs the exclusive domain of the well-to-do. Indeed, it is the 1950s that many associate with the suburbs, even though they existed long before, and continued long after, that decade. That association is the result of the vast cultural and social impact suburbia had on the United States in the postwar years.

The widening access to suburbia largely can be attributed to one man, developer William Levitt. Like his predecessor Nichols, Levitt's approach proved immensely successful and thus very popular, spawning an untold number of imitators. Levitt's idea was rather simple: he brought mass-production techniques and low prices to suburban housing just as Henry Ford had done in the automobile industry. Taking advantage of the great demand for housing, and benefiting from federal government housing policies which provided mortgage guarantees for both developers and homeowners, Levitt purchased a large parcel of rural land in suburban Long Island. There, he used mass-production techniques to construct more than ten thousand small, inexpensive homes. All were virtually identical, and all sold almost immediately. They proved immensely popular with young couples eager to raise their new families in a comfortable and safe environment. The result was an almost instant community, called Levittown. With low initial and monthly payments for houses in such communities, many families could afford to leave the cities in greater and greater numbers for the relative space, comfort, and security of the suburbs. The result was "white flight," as urban whites moved out of the inner cities to escape the growing influx of black, Hispanic, and other minority groups. This population movement eventually took jobs, tax money, and a diverse population away from America's inner cities, contributing to the decline of cities across the country.

But for those who could enjoy these new suburban developments, suburbia had a strong impact on American social life, so much so that the suburban lifestyle dominated American culture from the 1950s on. Television shows such as *Leave It to Beaver* and *Ozzie and Harriet* centered around white middle-class families in the suburbs. Their lives were idyllic ones, representing peace and harmony. The suburbs and their images on television also worked to promote a reworking of gender roles. Fathers were usually dressed in business suits and were often shown coming home from work to discover the mishaps or other plot twists that had occurred during the day. Women were portrayed as homemakers content with baking cookies, making dinner, and caring for their children and husbands. This idyllic view of suburbia was not entirely incorrect, however, as the suburbs reinforced traditional notions of family and gender that had been challenged by working women during the World War II years. With the strict division of the home from the world of work, suburbia in the 1950s and after continued trends that had begun in the mid-nineteenth century. The suburbs also contributed to what many soon labeled the "culture of conformity." New suburban developments such as Levittown were homogenous places. Not only were the houses virtually identical, but their inhabitants were as well. These new communities were quickly filled by new families, many of them headed by young veterans eager to return to a normal life after the

traumas of World War II, with similar backgrounds, experiences, needs, and ages. Group socialization and the adherence to established social norms was encouraged; individuality and isolation were not. Many found this new environment appealing, but critics soon began to criticize the social conformity demanded by the suburbs. John Keats, in his book *The Crack in the Picture Window* (1956), attacked the conformity of suburbs as a “postwar, homogenous hell” of rigid social roles that produced an environment of mediocrity. Folksinger Pete Seeger sang in “Little Boxes”: “Little boxes, on the hillside, little boxes made of ticky-tacky . . . little boxes all the same.” And not only were the houses all the same, but the people were as well, going through exactly the same experiences, living in identical social boxes that, as Seeger sang it, might well have been coffins.

In addition to its cultural impact, suburbs also had a great impact on the American landscape and environment, encouraging the development of an automobile culture and suburban sprawl. Spread out away from cities, without access to older public transportation systems such as subways and rail lines, suburbanites depended on their cars for access to jobs in the city. This development was encouraged by the 1956 Federal Highway Act which provided more than \$25 billion to construct more than forty thousand miles of highways. It was the largest public works project in the history of the United States. In a culture that was already in love with the automobile, the suburbs encouraged even greater reliance on them. The result was suburban sprawl. Instead of tightly compacted centers where most services, entertainment, and employment were easily accessible on foot, suburbs encouraged all of these functions to spread out. Thus restaurants, stores, and other facilities each occupied their own buildings with parking surrounding them. Some were clustered in strip malls or enclosed shopping malls, but like the suburbs as a whole, all were geared to the need of the automobile.

Suburbia also encouraged the unique American social phenomenon of obsession with lawns and lawn care. Among the deeper ideological bases for suburbia was the need to recreate an Edenic natural setting that was believed to be superior to the concrete jungles of city life. Preserving the image of life in a garden, however, was difficult with so many houses so close together. As a substitute, Americans began to view their lawns as each contributing to a seamless expanse of grass that created as much of a park-like setting as possible. Maintaining this lawn became an important cultural imperative, as homeowners were responsible for keeping up their portion of the “park.” Encouraged by magazines, advertising, seed companies, and often by homeowners associations’ restrictive clauses that mandated proper upkeep of lawns, lawn care became a major suburban activity. In suburban developments during the warmer months, weekends were filled with the drone of lawn mowers. Competitions were held in neighborhoods to establish the “yard of the month,” and people who refused to do their part were often shunned and occasionally sued for their noncompliance. The lawn obsession was also part of a larger cultural interest in outdoor life, and suburbs promoted such things as outdoor barbecues, swimming pools, and gardening.

While the classic 1950s image of suburbia still exists at the turn of the century, suburbs in the 1980s and 1990s were in the midst of change. The biggest shift came in the relationship between suburbs and the cities they surrounded. By the 1980s, many suburbs were beginning to evolve into self-contained communities where people not only lived, but worked. In Orange County, California (outside Los Angeles); Cobb County, Georgia (north of Atlanta); Tyson’s Corner, Virginia (outside Washington, D.C.); and in similar communities

across the country, suburbs became the locations for major office complexes that were home to thousands of workers. With their living and working needs now available in the suburbs, there was less and less need for suburbanites to travel to the downtowns of central cities. They developed into their own small cities that writer Joel Garreau labeled “edge cities.” That trend, which historian Jon Teaford called “postsuburbia,” was indicative of a new age in the history of suburbs. While still a relatively new phenomenon, this shift may also portend a change in the ability of suburbia to fill certain cultural needs. With work and home sites now close together, the role of suburbs as an idyllic retreat from the world of commerce was changing by the late 1990s, reversing a trend that began in the early nineteenth century. These developments, and the increasing concern over suburban sprawl with its often negative effects on the environment and on what many were calling a loss of community in American life, were still in their infancy by the late 1990s. The long-term effects of these changes on the historic roles suburbia has played in American social and cultural life remain to be seen.

## Suicide

While actual reasons for suicide stem from complicated and often indeterminate causes, the public is left to sort out the implications of what Primo Levi calls this “noninstinctive, unnatural choice.” In the early part of the twentieth century, suicide was a taboo subject. Popular opinion held that madness was the most plausible explanation for a person taking his or her own life. When suicides were mentioned in the 1910s and 1920s, they were characterized in terms of trends: *Literary Digest* once reported of “rashes” of childhood suicides, and again of college campus suicides. Suicide was seen as virtually a contagious disease.

The stock market crash of 1929 brought the first widespread acknowledgement of suicide in the twentieth century, with instantly legendary images of despondent former millionaires leaping to their deaths. As some news accounts of the time would have it, a person walking through New York City would have had difficulty navigating the bodies littered on Wall Street. Without question, the crash did

eventually cause a number of suicides, but as John Kenneth Galbraith reported, statistics suggest that the “suicide wave” of 1929 was largely a myth: “For several years before 1929, the suicide rate had been gradually rising. It continued to increase in that year, with a further and much sharper increase in 1930, 1931, and 1932—years when there were many things besides the stock market to cause people to conclude that life was no longer worth living.” This notwithstanding, the widely-reported millionaire suicides expanded America’s understanding of the causes of suicide to include not only madness but also great financial loss. Capitalism itself became a credible contributing factor in suicides.

For decades, suicide receded into the shadows, until the 1962 death of movie star and legendary sex symbol Marilyn Monroe. Events surrounding Monroe’s death became fodder for gossip columns and investigative reports throughout the rest of the twentieth century. Instead of repudiating her for committing suicide, the nation shared her tragedy. Her death helped spawn the growth of suicide hotlines, where people who felt suicidal were encouraged to discuss their feelings with counselors. Monroe’s later well-publicized dependence on prescription drugs fueled the opinion that the pressures of celebrity became too much for her. With the acceptance that the public might have contributed to Monroe’s final act, suicide moved from private blame into the arena of shared responsibility. Unfortunately, statistics subsequent to her suicide also lend credence to the theory that suicides can be “contagious”; according to Herbert Hendin, “Just after Marilyn Monroe’s death, the notes of a number of suicides linked their own deaths to her presumed suicide . . . A sense of sharing the tragic death or suicide of someone famous . . . enables some people to feel that their death has a meaning it would otherwise lack.”

Throughout the 1960s and into the 1990s the pressures celebrities experience were also linked to drug abuse and overdose, nowhere more than in the music industry. The deaths of rock stars Janis Joplin, Jimi Hendrix, and Elvis Presley, all of whom accidentally overdosed, were received with a sense of tragedy similar to Monroe’s death. Though these deaths were officially “accidental,” fame had surely influenced self-destructive behavior. Other high-profile victims of the deadly combination of fame and drug abuse included comedian Freddie Prinze, who shot himself in 1977 at the age of 22, comedian John Belushi, who died of a drug overdose in 1982, and “grunge” music pioneer Kurt Cobain, with a history of treatment for a heroin addiction, who shot himself in 1994.

The connection between a creative personality and suicide has seemed particularly close among writers. The most prominent instances of the twentieth century were the deaths of Ernest Hemingway in 1961, Sylvia Plath in 1963, and Anne Sexton in 1974. While Hemingway’s suicide was attributed to poor physical and mental health, it seemed in keeping with his gonzo personality. The deaths of Plath and Sexton, however, seemed more tragic because they were comparatively young and healthy. Their deaths were especially indicative of the troubled female artist. As A. Alvarez writes of Sylvia Plath, public perception perverted her death into “a myth of the poet as a sacrificial victim, offering herself up for the sake of her art.” Her suicide intimated to the public that art had the power to destroy.

Religious fervor, long attributed as a cause for insanity and suicide, also showed its powers of destruction. When 914 followers of the Reverend Jim Jones committed mass suicide in Jonestown, Guyana in 1978, suicide became inextricably linked to religious cults. Jones was seen as a charismatic brainwasher who convinced his members that their deaths were, according to him, “an act of

revolutionary suicide protesting the conditions of an inhuman world.” Subsequent cases confirmed the apocalyptic and suicidal nature of cults, most notably the Branch Davidians in Texas in 1993, and the 39 suicides of members of the Heaven’s Gate cult in California in 1997.

The early 1990s saw rock musicians Judas Priest and Ozzy Osbourne of the group Black Sabbath defend their music in separate court cases which accused that their songs influenced teens to commit suicide. In both cases, the first amendment rights of the musicians were upheld. Still, Osbourne’s song “Suicide Solution,” as well as other songs such as “Goodbye Cruel World” by Pink Floyd, books such as *Illusions* by Richard Bach, and films such as *Dead Poet’s Society* continued to draw criticism for what some saw as glorifying the act of suicide.

At the close of the twentieth century, physician-assisted suicide dominated the headlines, with purported “suicide doctor” Jack Kevorkian challenging laws across the country that made assisted suicide illegal. In 1998 he appeared on the news program *60 Minutes* which aired a tape of him assisting a suicide. Kevorkian orchestrated the publicity stunt in an effort to force a Supreme Court ruling on the constitutionality of a person’s “right to die.”

While suicide remained complex for most Americans, by the end of the twentieth century the topic had emerged from the shadows to be discussed in the light of the shared public arena.

## Sullivan, Ed (1902-1974)

Ed Sullivan, who could not sing, dance, or act, was television’s greatest showman in its early years. For twenty-three years, from 1948 to 1971, he hosted America’s premiere variety show every Sunday night on CBS, on which he introduced an eclectic array of talent that included everything from opera singers to dancing bears to Elvis Presley and the Beatles. Sullivan, a former newspaper columnist, appeared on the nation’s television screens as a most untelegenic presence. He was everything that a professional television host is not supposed to be—awkward, stiff, and prone to frequent malapropisms.

Ed Sullivan with Lucille Ball on the *Ed Sullivan Show*.

His real talent was behind the scenes, as a man who had his finger on the pulse of America's cultural tastes. He understood instinctively that a variety show should present acts that would appeal to the various demographic segments of its audience. Only on *The Ed Sullivan Show* could you see such diverse talents as Van Cliburn, Rudolf Nureyev, Robert Goulet, Richard Pryor, a plate spinner, and The Rolling Stones. With his distinctive nasal voice, Sullivan regularly promised audiences "a really big shew" and delivered by offering up virtually every form of twentieth-century entertainment.

Edward Vincent Sullivan was born on September 28, 1902, in the Harlem section of Manhattan, New York City, the son of a customs inspector. He was one of seven children (his twin brother, Daniel, died in his first year) and was raised in Port Chester, New York. Young Edward was a poor student, but a strong athlete who won ten letters in sports. Upon graduating from high school he became a newspaper sports reporter. In 1932, he joined the *New York Daily News* as a Broadway columnist and soon came into contact with many figures in the entertainment industry. While serving as emcee of the newspaper-sponsored Harvest Moon Ball dance contest in 1947, he was "discovered" by Worthington Miner, a general manager at CBS-TV, who asked Sullivan to host a planned variety series called *Toast of the Town*. The series debuted on June 20, 1948, reflecting from the beginning Sullivan's keen sense of diversity in programming. That initial episode featured Broadway's Richard Rodgers and Oscar Hammerstein, the rising comedy team of Dean Martin and Jerry Lewis in their first TV appearance, classical pianist Eugene List, ballerina Kathryn Lee, a group of singing New York City firemen, and six June Taylor dancers (called the "Toastettes"). Within that

single hour was something for everyone, from the highbrow to the most common man.

During his 23-year run on CBS, Ed Sullivan served as the cultural arbiter for much of middle America. He worked constantly to insure that his audience witnessed the very best entertainment available, as he was deeply involved in all aspects of the show. He booked all the acts himself, helped edit each performer's material, and frequently juggled the show's running order. Some claimed he was a dictatorial taskmaster, but Sullivan took full responsibility for the success or failure of each week's episode. In 1967 he revealed his show-business philosophy when he stated, "An audience will forgive a bad act but never bad taste." For a man who sought perfection in even his silliest performers, Sullivan always presented himself as a rather bumbling persona. An article in *TV Guide* once described him by writing: "Not since radio's Major Bowes have the airways been subjected to such a bumbling Barnum. Cod-eyed, cement-faced and so scaredy-cat stiff that he's been suspected of having a silver plate in his head, Sullivan has yet to complete gracefully the smallest gesture, unravel his vowels, or conquer a simple introduction." Sullivan's distinctive voice and mannerisms made him the target of many comics and impressionists, including John Byner and Will Jordan. While he may have been awkward, Sullivan knew his job was to introduce the talent and leave the stage so they could shine.

The format of Sullivan's show, which was re-titled *The Ed Sullivan Show* in 1955, changed little over its many years. It was basically a filmed vaudeville show with acts chosen to appeal to the broadest possible audience. Guests from the world of the classical arts included violinist Itzhak Perlman, dancer Margot Fonteyn, and opera star Roberta Peters. For a rare TV appearance by diva Maria Callas, Sullivan staged a full scene from *Tosca*. Guests designed to attract more middle-class audiences included Broadway and movie stars, such as Richard Burton and Julie Andrews performing a scene from *Camelot*, songs by Barbra Streisand, Dinah Shore, and Eddie Fisher, and Henry Fonda reading Lincoln's Gettysburg Address. Sullivan was very fond of comics and often invited Borscht Belt veterans like Alan King and Henny Youngman to perform. His most frequently returning comedy guests, however, were the Canadian team of Wayne and Shuster. For the youngsters in the audience, Sullivan was always sure to include a novelty act. These included acrobats, mimes, animal acts, and much more. The specialty act most associated with Sullivan was the lovable Italian mouse puppet, Topo Gigio, who frequently exclaimed, "Hey, Eddie, kees-a-me goodnight!" Occasionally, Sullivan would devote an entire show to one subject, such as honoring the works of Irving Berlin, Cole Porter, and Walt Disney.

By the mid-1950s Sullivan became aware that American popular culture was changing drastically. He helped to promote racial diversity by showcasing black performers, such as Pearl Bailey, Nat "King" Cole, George Kirby, and Leontyne Price. Other television shows refused to present African-American guests due to sponsor complaints. Furthermore, Sullivan began inviting rock and roll stars onto the show to raise its appeal to the demographically important teen audience. Elvis Presley made three memorable visits in 1956. Although cameras showed him from only the waist up on his last appearance to calm adult fears of the singer's swiveling pelvis, the fact that Presley was on the show seemed to legitimize rock to the adult audience. On February 9, 1964, an appearance by the Beatles earned Sullivan his highest rating ever. That broadcast is considered a milestone event in television history. Throughout the 1960s, more members of the counterculture appeared with Sullivan, such as Janis Joplin, Marvin Gaye, and The Rolling Stones. While he liked the

ratings they brought, he was often uncomfortable with their attitudes and material. He had heated confrontations with The Doors and Bob Dylan over his attempts to censor their songs. Younger comedians like George Carlin, Woody Allen, and Bill Cosby were also more visible in the 1960s. After 1087 episodes that presented over 10,000 performers, *The Ed Sullivan Show* left the air on June 6, 1971. Ed Sullivan died in October, 1974.

Ed Sullivan and his variety program are monuments to a form of entertainment that no longer exists. Today, the mass television audience has nearly disappeared and has been dispersed with the advent of cable and more specialized programming. *The Ed Sullivan Show* provided one of the last opportunities for the entire family to gather round the tube and be entertained by a single program. The show was immortalized by the hit Broadway musical *Bye, Bye Birdie* as the emblem of all that was good with television. For contemporary viewers it offered a rare opportunity to witness the performances of many of the twentieth century's greatest artists. As authors Harry Castleman and Walter Podrazik wrote of Sullivan in 1989, "He was good because he was a good packager of entertainment. . . . He could spot talent, knew how to balance an hour program, and didn't waste time calling attention to himself. We could use more hosts like him now." Sullivan's legacy is enshrined in the many "really big shews" that entertained a generation.

## Sullivan, John L. (1858-1918)

Bare-knuckle prizefighter John L. Sullivan became a symbol of ethnic pride and working-class masculinity to the nineteenth-century, Irish-American community from which he emerged. Because of his boisterous claims to "lick any son of a bitch in the house" and his ability to back up his claim, many Irish Americans saw in Sullivan a way to take revenge upon the unwelcoming American society. The working-class Irish took pride as Sullivan knocked out his Anglo-Protestant opponents, yet Sullivan's popularity went beyond mere ethnic and class identity; the rest of American society slowly began to accept Sullivan as well. Because of his mass appeal, Sullivan became one of the first cultural heroes and sporting celebrities of the nineteenth century. Along with his rise in popularity, boxing earned a measure of respectability as a sporting endeavor. When Sullivan began boxing, prizefights were against the law. By the time he quit, boxing matches were a cultural event attended by all segments of society.

John L. Sullivan

John Lawrence Sullivan was born into the Irish working-class community of Roxbury, Massachusetts, in 1858. Like many Irish immigrants, Sullivan's father worked as a hod carrier in the lowest-paying of the new industrial jobs. As was the norm for the youth of his community, Sullivan moved into the industrial work force quickly. He worked a variety of odd jobs but was unable to hold down steady work because of a tendency to get into fights with his fellow workers. To support himself, Sullivan began to play baseball and box semiprofessionally. He complemented his boxing with neighborhood fights in theatres and movie halls. Sullivan and his friends soon earned reputations through such street fights. It was in these theatres, the Sullivan legend later suggested, that he first stood up and made his famous boast, "I'm John L. Sullivan and I can lick any son of a bitch in the house." These claims, along with strongman demonstrations of lifting beer kegs above his head, soon earned Sullivan the nickname "Boston Strong Boy" and the reputation of an up-and-coming pugilist. On the strength of his reputation, Sullivan issued a challenge to Paddy Ryan, the reigning champion.

Prizefighting in nineteenth-century America was a working-class amusement, and fights often took place inside the ethnic saloons that dotted the working-class community. Middle-class society frowned

upon the practice of boxing, so much so that bare-knuckle prizefighting was outlawed. Champions often held a questionable position within the community. They often split their time between boxing, breaking up barroom scuffles, and brawling at the ballot box for the local political machine. Paddy Ryan was just such a champion. By 1882, however, he could ignore the young challenger from Boston no longer and agreed to a bout. In February, Ryan and Sullivan met for the first time in Mississippi City, Mississippi. Sullivan dominated the championship from the start, winning not only first fall and first blood, but knocking out Ryan after nine rounds.

Now recognized as the heavyweight champion, Sullivan did not become, like Ryan, political muscle. Instead, Sullivan issued his most famous and broad sweeping challenge. He dared anyone in the United States to last four rounds with him in a gloved match and offered a \$1,000 prize to those who could. With the offers lining up, Sullivan began a whirlwind tour of the states. His travels took on a carnivalesque atmosphere with juggling acts and vaudeville shows preceding his defeat of whoever challenged him. From 1878 to 1905, Sullivan won 31 of 35 bouts, 16 by knockout. Because of his tour and the fact that he rarely lost his bet, Sullivan's popularity soared. Irish Americans across the country flocked to see the man who fought with both the colors of the United States and Ireland in his corner. Because Sullivan fought gloved matches, his bouts were legal and could be seen by people who had not watched prizefighting before. Sullivan quickly became a cultural icon whose name and image appeared in advertisements and vaudeville shows.

Sullivan was still considered the champion of boxing and, as such, was required to defend his title in a bare-knuckle fight. He had managed to stave off most challengers with gloved matches, but by 1889, Jake Kilrain demanded a bare-knuckle bout. Kilrain had taken a path similar to Sullivan's, rising out of the Irish working class by his fists. His impressive record combined with the accumulated effect of years of Sullivan's legendary drinking made the odds even at the time of the fight. On July 8, 1889, the two men squared off in what would be the last bare-knuckle championship bout. Despite years of hard drinking and weak fights, Sullivan had trained himself back into shape. Fighting under the scorching Mississippi sun, Sullivan and Kilrain faced each other for more than two hours and 75 rounds until Kilrain was unable to start the 76th.

Although Sullivan did enjoy a great deal of popularity outside his working-class community, not every one accepted his display of masculine aggression and violence. Parts of the American middle class, especially the emergent Irish-American middle class, distanced themselves from the bruiser from Roxbury. Many cheered when "Gentleman" Jim Corbett, a man of breeding who had learned to box in a club instead of the street, knocked out Sullivan in 21 rounds in New Orleans in September 1892 to earn the U.S. world heavyweight boxing champion title.

During his career, Sullivan earned more than \$1 million, but spent it all. He became an advocate of prohibition and delivered lectures on the topic.

—S. Paul O'Hara

## Summer Camp

For over a century, summer camps have provided millions of American children with their first taste of the world outside their family and neighborhood. The first commercial camp began in 1881; at the end of the nineteenth century, a handful of camps served elite Protestant boys almost exclusively. In the early twentieth century, the industry extended and diversified its reach. At its peak in the prosperous years after World War II, about one in six children attended camp. Camp is still an important part of many children's summers: while the traditional eight week private camp is no longer as popular as once it was, in the late 1990s over eight million children and adolescents between the ages of five and seventeen attend a wide variety of camps—5500 overnight and 3000 day camps—each summer. While day camps, short-term overnight camps and specialty camps serve increasing numbers of children, many camps feature traditional activities that have varied little for generations: living in cabins with children of similar backgrounds; taking daily swims and engaging in other water and land sports, hikes and overnight trips; doing arts and crafts; singing camp songs and roasting marshmallows around campfires. The industry has reflected disparate and changing goals, but the basic premise remains the same: that camps foster community life, personal development, and skill-building, while providing retreats from the problems and dangers of the outside world.

Summer camp is a distinctly American invention, whose origins reflect the aspirations and anxieties of late nineteenth century middle and upper class life. First, as cities grew, particularly in the Northeast, industrialization and urbanization inspired some well-to-do men (and a few women) to travel to wilderness areas to experience the reinvigorating romance of nature, and its fortification for urban life. Second, concepts of child-rearing among the upper and middle class were in transition; as the birthrate among urban well-to-do families declined, parents devoted increasing resources toward providing a sheltered and longer childhood for their smaller families. Acknowledging that children had their own peer cultures, adults expressed anxiety about how best to supervise and guide them. Rural children had traditionally helped their parents on farms during the summer, but increasing numbers of urban children and upper class children had no set tasks over the long vacation. In addition, the first summer camps reflected the particular anxieties of their founders, a group of white middle- and upper-class Protestant men who worried about the effects of modernity upon elite boys' manliness. Youth leaders feared the enfeeblement of those who, they believed, ought by virtue of their class to lead the nation. Camp was to be an antidote to the "softness" of the modern work regime and vacations at resort hotels: a place where privileged boys would experience the toughening effects of outdoor life, albeit amidst the safety of select peers and adult supervision.

Given that camps claimed to be an antidote to modern urban life, it is unsurprising that they achieved their greatest popularity near the largest urban centers, particularly at lakes and mountains within a day's travel of the densely settled Northeast. While smaller camping districts—such as the Upper Midwest and the mountains of North Carolina—emerged in the early twentieth century, summer camps have always been most popular in the Northeast, where they first started. The Gunnery Camp near Milford, Connecticut (1861-1879) has long been cited as the earliest camp model. It was not a separate camp but part of the summer term of a boarding school; for two weeks each summer, the boys lived in tents by the sea and simulated the life of soldiers. Other early efforts included the North Mountain School of

Physical Culture, northeast of Wilkes-Barre, Pennsylvania, run in the late 1870s for “weakly boys,” and the first church-sponsored camp, run by the Reverend George Hinckley of Hartford, Connecticut during the summers of 1880 and 1881 near Wakefield, Rhode Island. Ernest Balch’s Camp Chocorua, which ran from 1881 to 1889 on Asquam Lake, New Hampshire, was the first commercial organized camp. Chocorua provided a model that camps of all kinds would cite for years to come, in which children with similar family backgrounds lived together away from home, sharing leisure activities, chores, camp rituals and inside jokes.

Chocorua, like later camps, lauded the wilderness but took advantage of modern innovations. The boys made their own boats and did extensive chores around the grounds, but within a few years they were living in cabins instead of tents, and the camp had inaugurated a complex financial system to teach the boys about modern commerce. In general, while many camps started small, with a few tents and a rowboat, if they were successful they sheltered children from the wilderness that they extolled, and provided comforts and improved recreational facilities as quickly as they could afford them. From the 1880s onward, innovations have run the gamut from electricity to miniature golf courses, leading to countless discussions among camping professionals about what exactly makes a camp “campy.”

At the turn of the twentieth century, the field of camping expanded to benefit the poor as well as the rich. Progressive Era reformers worried particularly about the plight of new immigrant children growing up in city tenements, where poverty and overcrowding bred malnutrition and disease. Hoping both to assert a moral control over potentially unruly new Americans, and to provide healthful and pleasurable activities in rural settings for needy youth, a variety of nonprofit and charitable organizations started their own camps. Settlement Houses, church groups, and charitable organizations all sponsored short trips to the country for poor urban children. At the same time, camping opportunities for middle class children grew as YMCAs, YMHAs and their female counterparts began to work more intensively with children and adolescents. By the 1910s, reflecting new models of athletic girlhood, increasing numbers of girls’ camps opened. New youth organizations such as the Boy Scouts, Girl Scouts, and Camp Fire Girls specifically exhorted children to camp outdoors. By the early twentieth century, boys and girls of many ethnicities and social classes were camping at their own facilities (as in other forms of commercial recreation, children of color experienced more limited camping opportunities).

As ideas about child-rearing and recreation shifted over the course of the century, so did camps’ daily routines. Most of the very early camps had a decidedly religious character. Protestants, and later Jews and Catholics, saw in camp a means to reinforce their religious communities. By the 1920s, camping had expanded to serve a variety of interest groups, all of whom saw in camping communal possibilities that transcended their individual political, religious, and social differences. Zionists, Progressive educators, hiking enthusiasts, socialists, and military types all created camps in their own image. But they also were responsive to larger trends in children’s recreation. During the First World War, many camps adopted military drill and army-style discipline. In the 1930s, influenced by the pedagogical theories of John Dewey, a countering discourse stressed creativity, social adjustment, and personality development. One enduring legacy is the place of Indian-style ritual. In the first years of the twentieth century, Ernest Thompson Seton’s youth organization, the Woodcraft League, inspired many camps to “play Indian” by making teepees and totem poles, telling Indian stories by the campfire, and wearing

moccasins and headdresses. Driven by nostalgia and desire for pre-modern “authenticity,” many camps have continued to invoke Indian pasts.

Across the country, overnight camps flourished in the postwar years, as a generation of baby boomers grew to camping age. In 1948 the national umbrella organization, the American Camping Association, finally instituted national standards for camp accreditation, after decades of debate. But the years since have been rocky ones. Since the mid 1970s, more than 2500 camps, or about one in five, have gone out of business. In the late 1960s and 1970s, camp owners found themselves competing against not only trips to Europe but also the anti-authoritarian youth culture of that era. Camps near major cities and tourist centers have fallen victim to high expenses and the temptation of high real estate prices. In response, many traditional eight-week camps have inaugurated shorter sessions to accommodate parents who are scheduling their children’s summers more tightly around competing interests, including joint custody issues and alternate family vacation plans. In addition, traditional camps now compete against newer specialty camps which focus on particular skills or provide specific experiences: computer skills, weight loss, gymnastics or soccer, and bike tours across the country. At the end of the 1990s, 75 percent of all camps were run by nonprofit groups and social service agencies, serving children of all economic classes. In other words, the popular image of the extended vacation at a private eight-week camp does not fully reflect the experience of most contemporary campers, for whom the average stay is one week at a non-profit camp. But in the popular imagination, camps represent sites for children’s adventurous “coming of age,” rather than quick trips. In films such as *Meatballs* (1979), *Little Darlings* (1980), and *Addams Family Values* (1993), camps are a place where children and adolescents embark upon voyages of self-discovery, friendship, and loneliness, pranks of all kinds, and, if they are teenagers, sexual and romantic exploration. For adults who once attended them, camps often represent a nostalgic reminder of childhood.

For over a century, disparate groups have held in common the belief that rural spaces are healthier and safer for children, and that camps in particular can be spaces of social transformation, in which adults can teach children the arts of acculturation and good (class, racial, ethnic, religious, political and gender-appropriate) citizenship before returning them to their homes. Collectively, summer camps have shown an ability to change with the times and to accommodate different and sometimes diametrically opposed groups. They provide a window into the expansion of children’s recreation in the twentieth century, and to the changes in American social order that have enabled a widening range of communities to create children’s leisure in their own image.

## Summer, Donna (1948—)

Singer Donna Summer was the first and perhaps only true luminary of the disco era. Beginning with a breakthrough 1975 hit that pigeonholed her as a libidinous electrified diva, Summer recorded several albums over the next few years that brought her international fame; for a brief time her style even seemed to be breaking down racial barriers in American pop music. She was often referred to as the "queen of disco" and by 1979 had topped the charts with *Bad Girls*, the best-selling album by a female performer that year.

Summer was born La Donna Gaines in 1948 and grew up in Boston. As a youth, she sang gospel in her church and moved to

Donna Summer

Europe before finishing high school when offered a role in the stage version of the popular hippie musical *Hair*. She spent the next several years in Germany, married an Austrian named Helmut Sommer (and kept his name after their 1974 divorce), and appeared in theater productions before beginning to work with two successful Munich producers, Giorgio Moroder and Pete Bellote, at their Musicland Studios. The duo made minor disco hits for the European dance-club scene that were quietly making their way to the underground night-clubs frequented by gays, blacks, and Latinos in New York City. Such discos grew in popularity when a downturn in the economy made such clubs—with their five-dollar cover for an evening of entertainment—a preferable alternative to concerts.

*Billboard* magazine had introduced a disco chart in early 1975 after savvy record companies realized the huge potential of the emerging dance-club scene: certain records were selling in the thousands without any radio airplay at all. Summer had two minor hits in Europe, then suggested to her producers that they record something similar to a breathy French hit from 1959, "*Je t'aime . . . moi non plus*" by Jane Birkin and Serge Gainsbourg. What they came up with was three minutes of Summer singing the words "love to love you, baby," a few other phrases, and a lot of moaning. When the track found its way to a party at the Los Angeles home of Neil Bogart, who had made a fortune in the sixties with a label that put out bubble-gum pop, his guests clamored to hear it over and over. He contacted Moroder and Bellote, asked them to make a longer version, and signed Summer to his new label, Casablanca.

Summer had a huge hit in the United States with "Love to Love You, Baby," and a debut album of the same name went gold. "It was a disc that spun day and night throughout the summer of 1975," wrote Albert Goldman in *Esquire* just two years later. "To the layman, it was just another catchy tune; to the initiate, it was the first unambiguous sign that we were in for another epidemic of the dancing sickness—that recurrent mania that sweeps over this country and Europe on an average of once every ten years. . . ." *Time* journalist Jay Cocks wrote, three years after its debut, that the song seemed to signify "disco's coming-out party," the emergence of homosexual subculture into mainstream America. Goldman termed it "the first frankly erotic album ever to achieve wide currency and airplay. Broadcasting the cries and moans of a woman enjoying intercourse may not sound like much of a breakthrough in this age of explicit sex and rampant pornography," Goldman wrote in 1977, "but it must be borne in mind that phono-recording is the most oppressively censored medium in America."

Summer became a household name. For a time she had a constant bodyguard, since fans were known to trap her in elevators. She released a number of albums over the next few years, including two in 1976, *A Love Trilogy* and *Four Seasons of Love*. A less-discofied album, *I Remember Yesterday*, had a great hit the following year with "I Feel Love." The song was notable for what came to be known as the "galloping bass line," a thumping, 140-beat-per-minute backbone of drum-machine rhythm structure that became the staple of many a disco hit. "Donna Summer snapped her choruses over booming rhythm tracks that moved the artfully tied construction boots of gay men and the teetery hetero platforms of the Saturday Night Fever disco hordes," wrote Gerri Hirshey in *Rolling Stone*. Summer's 1978 double-live album, *Live and More*, sold millions.

In 1978 Summer made her film debut in *Thank God It's Friday*, and a song she wrote and sang for it, "Last Dance" won her one of several Grammy Awards that year. The album *Bad Girls*, released in 1979, featured a blend of rock and disco—much of which she actually

wrote herself—and garnered both good reviews and, again, huge sales. Yet it would also be her last for Casablanca, and in 1980 she became the first act signed by record industry executive David Geffen on his new label. She made *The Wanderer* in 1980 but had only a few minor chart successes over the next decade.

Despite her low profile for so many years after the death of disco, Summer has long enjoyed a cult following. The resurgence of disco kitsch in the mid-1990s—which helped breathe a bit of life into the careers of the Village People and the Bee Gees—was also beneficial to her. In March of 1998 she gave a benefit concert for New York City's Gay Men's Health Crisis at Carnegie Hall. "After nearly two hours of mature ovations and controlled excitement . . . the remarkably well-behaved audience could no longer be contained," wrote Larry Flick in *Billboard*. "As she began a salacious, guitar-drenched rendition of 'Hot Stuff,' fans rushed down the red carpeted aisles toward the stage." Summer lives in Nashville and hopes to see a musical she wrote, *Ordinary Girl*, debut on Broadway in 1999.

## Sun Records

Established in Memphis by visionary Sam Phillips in 1952, Sun Records revolutionized pop music. At his Memphis Recording Service, Phillips recorded blues artists and then started Sun as a home for some of them. In 1954 Phillips recorded Elvis Presley, whose blending of musical genres had a major impact on the course of popular music. In his book on Sun, Colin Escott quotes Phillips on Elvis: "He sings Negro songs with a white voice which borrows in mood and emphasis from the country style, modified by popular music. It's a blend of all of them." After selling Elvis' contract to RCA for \$35,000, Phillips had the capital to continue work with influential artists like Carl Perkins, Johnny Cash, Jerry Lee Lewis, and Charlie Rich. In 1969, Sun was sold to recording executive Shelby Singleton who went about reissuing many of Sun's important early recordings.

## Sundance Film Festival

The Sundance Film Festival helped to revolutionize the world of American independent cinema by cultivating an audience for daring and innovative films, and often catalyzing theatrical distribution deals for such films that otherwise would not have a chance for release. In 1981, actor Robert Redford, interested and concerned about the state of film in the United States, founded the Sundance Institute, an organization devoted to the support and development of emerging screenwriters and directors. Quickly turning into a fertile ground for new artists (over 300 filmmakers benefit annually from its various film, screenwriting, and cultural programs), the Institute ballooned into the high-profile Sundance Film Festival, an annual, winter event held in the quaint village of Park City, Utah, that is attended by over 10,000 people. The festival runs over a period of ten days, and screens international films, documentaries, short films, and American independent premieres—making the festival the pre-eminent showcase for American independent films in the world. Understanding the importance of encouraging the spectrum of visions that film artists have, Redford and his Institute have helped to enhance the quality of American films, along with giving an array of talented people the opportunity to develop and refine new work. The Sundance Film Festival has also helped to launch the careers of talented, eccentric actors and actresses that mirror its hip, young aesthetic, such as Lily Taylor and Parker Posey. Because of Sundance's widely publicized success stories of past participants (Quentin Tarantino/*Reservoir Dogs*, Neil LaBute/*In the Company of Men*, and Allison Anders/*Gas, Food, Lodging*, for example), and the diverse and bold style of the films it supports, the festival has attracted a great deal of attention in and out of Hollywood, making it one of the most talked about events related to the film industry.

Studios tend to pursue more commercial scripts; stories that offer the guarantee of drawing in large audiences and funds. Scripts bought by large studios are often reworked without the original writer to match the studio's market-driven vision, and not the artist's. But with Sundance and its persistent focus on risky choices that were pleasing audiences, sleek studio executives armed with cellphones and celebrities began to flood the Sundance Film Festival, giving it sudden prestige. As American audiences began to lust after such stories, studio executives became more sycophantic towards their writers and directors. Wining and dining cutting-edge filmmakers, during the course of the festival they often foster careers that prove to be long-lasting.

Films screened at Sundance started a new trend towards dramatizing stories of a darker nature. Whether it be physical violence with an edge of black humor (Quentin Tarantino), or emotional violence (Neil LaBute), people were becoming more drawn to films that explored different terrain and did not necessarily have happy endings. Large studio films tend to offer easy entertainment. Even when they are sad, there can be excessive sentimentality that allows for an audience to have an emotional release and leave the theater satisfied after having had a good cry. But the new wave of films and

Carl Perkins, one of the original Sun Records recording artists.

filmmakers that Sundance was producing did not do that. Instead, they offered worlds with little solace or answers where characters were cruel to each other, as in Labute's film *In the Company of Men* (which premiered at Sundance in 1997, launching his independent film career), which told the story of disillusioned and bored corporate men who seduce a mute woman in their office just so they can have the satisfaction of dumping her. It is important to tell these kinds of stories, because they explore the intricate ways people relate to one another, which are often unhealthy. These films leave audiences feeling uncomfortable, and that is a new and confusing feeling, but not necessarily a bad one. There is nothing wrong with "feel-good" entertainment, but it is refreshing to have a film take chances with character, storyline, and behavior.

Sundance has even produced an "illegitimate offspring" in the form of "Slam Dance." Also in Park City, it supposedly includes films that were rejected by Sundance, as well as others, and holds its festival concurrently with Sundance's. Slam Dance, too, has caught on and now Hollywood executives have to divide their time between both festivals, always on the lookout for fresh, undiscovered talent.

Independent film's involvement with larger studios has not always been a smooth relationship. Writer/director Todd Solondz, for example, whose film debut *Welcome to the Dollhouse* hit big after premiering at Sundance in 1996 (it was the winner of the Grand Jury

Prize), was courted by a studio that wanted to back his next film, *Happiness*. But when executives balked at Solondz' delicate, dark story about a tortured suburban pedophile, Solondz would not tone it down, and was promptly dropped by that studio (another studio picked up the film, and it was released and received good reviews).

For two weeks in winter, throngs of entertainment people flock to the little town of Park City, Utah, as the world watches via entertainment programs and the news, to network and buy independent films. There is no restaurant, bar, or street corner in town that is without somebody affiliated with the film industry and ready to deal.

## Sunday, Billy (1862-1935)

A former professional baseball player with an entertainer's flair and a mastery of idiomatic language, Billy Sunday set the pace for modern evangelism. His tabernacle crusades of the early 1900s combined showmanship with Fundamentalism and produced thousands of converts. His influence on the cultural dynamics of the country is incalculable for, while many doubted the sincerity of Sunday's believers, his "Elmer Gantry" style would be copied by American evangelists throughout the twentieth century, serving to increase and cement the religious right as a significant force in society.

Born William Ashley Sunday on November 19, 1862 in a farmhouse near Ames, Iowa, Billy Sunday seemed an unlikely candidate for the ministry. While a stint in an orphanage instilled habits of honesty, Sunday was also known to fight, drink, and chase women. He held a series of odd jobs until a baseball scout noticed his athletic abilities, and in 1883 he joined the Chicago White Stockings and enjoyed the boisterous life of a professional athlete. One afternoon in 1886, while out with friends at a Chicago saloon, Sunday encountered an evangelistic group from the Pacific Garden Mission. Intrigued by their singing, he accepted an invitation to services and was soon converted, joining the Jefferson Park Presbyterian Church a short time later. He continued to play baseball, but gave up his habits of drinking and swearing, and began giving inspirational talks to young fans. Sunday left baseball in 1891 to work for the Chicago YMCA. In 1893, he joined J. Wilburn Chapman's evangelistic services as an advance man, handling technical details for the revival

Billy Sunday

services. When Chapman retired in 1895, Sunday assumed his place and began a touring ministry.

Sunday's tabernacle crusades were conducted in temporary wooden structures with sawdust covered floors. While the revival meeting was not new to America—the tradition stretched back to the Second Great Awakening of the early 1800s and the camp meetings on the frontier—Sunday added new elements to make his events successful. Careful planning went into the crusades, and teamwork was essential. A Sunday campaign resembled a vaudeville show as much as a mission; advance men promoted the coming attraction, secretaries made local arrangements, and bands and choirs were hired to provide entertainment. In 1909, Homer A. Rodeheaver, a song leader and trombone player, joined Sunday's troupe, and the tabernacle rang with music and excitement in the build-up to Sunday's explosive sermons.

Combining athletic gestures with colorful language, Sunday harangued his audiences about the need to get right with God. He defended the brevity of his visits by saying, "They tell me a revival is only temporary: so is a bath, but it does you good." He linked religion to patriotism and upright living, urging people to accept Christ as their savior and to signify their intention to convert by walking down the aisle and shaking Sunday's hand. Thousands did so. A New York campaign alone drew a million and a half people with 100,000 conversions. The weakness in his work was that he did not encourage people to join any specific church, and thus many of his converts never became committed to a particular faith.

Sunday did not avoid controversial issues or tone down his Fundamentalist message in order to court popularity. He advocated Prohibition and wholeheartedly embraced the war effort, using religion to promote the sale of war bonds during World War I. He denounced Modernism in religion, advocated the enactment of laws to ban the teaching of evolution in schools, and was a friend and advisor to conservative politicians. Unlike most evangelists, who settled down to become pastors or teachers in religious colleges, Sunday remained a fixture on the "sawdust trail." By his death on November 6, 1935, he had led over 300 campaigns and claimed to have brought 300,000 souls to Christ.

By using the modern techniques of show business and linking religion not to intricate theology, but to common language and experiences, Billy Sunday established a unique American form of evangelism. Later leaders, most notably Billy Graham, would continue his practice of large-scale campaigns aimed at emotional conversions.

## Sunday Driving

A catchphrase that made specific reference to people who broke the Sabbath by driving their automobiles, especially during church

services, Sunday driving stood as a metaphor for what many believed was a nationwide decline in morality. For many Americans, the twentieth century marked an irreversible decline in everything they held dear. Uncontrollable “outside forces” seemed to be tearing apart families, destroying tight-knit communities, and eroding the foundations of morality on which previous generations had built their lives. Ministers around the country railed against these changes and identified the accoutrements of modernity as prime culprits: telephones, radios, movies, and professional sports all received a measure of blame for corrupting the American spirit. To many people, however, nothing symbolized the degeneration of the modern era quite as well as the automobile. And to ministers facing declining church attendance, a particular cause for alarm was the increase in Sunday driving.

Ministers were not the only ones who believed that Sunday driving was cause for public concern. In a 1922 article in *Scribner's* magazine, Allen Albert claimed that “in good motoring weather I have attended Sunday-morning services from Waycross, Ga., to Manistee, Mich., and it would be hard to find any pews emptier anywhere.” Ruth Suckow also illustrated the concern that the growing popularity of Sunday driving caused in her novel, *Country People* (1924): “It was a wonder to Emma to sit on the porch on Sunday afternoons and count how many vehicles went by. But grandpa wouldn't even try to count. ‘Ach, no! no! no!’ was all that he would say. This was all so wicked on Sunday!” In Nashville, a 1923 ordinance forbade any business to sell gasoline, oil, or automobiles on Sundays, and prohibited automobile service facilities from operating as well. “Everyone wanted to enjoy a Sunday outing in the automobile,” editorialized the *Tattler* in 1929, “but realized he was taking a big chance. He might run out of gas, have a puncture or break down miles away from home. Then the whole family would have to walk back.”

Despite protests against Sunday driving, however, the practice always had many more advocates than opponents. Some people pointed out that automobiles could just as easily carry people to church as away from it. As *Motor Age* commented in 1919: “Even the farmer in the remotest rural district may wait until the last minute, jump into his car and go to church, attend services and be home in less than the time it used to take him to get there alone.” Others, such as a writer for the *Christian Advocate* in 1920, rationalized that automobiles might encourage “many immoral practices,” including “desecration of the Sabbath,” but that “all good things are liable to abuse.” Some believed the freedom and mobility of automobiles would encourage religious celebration. “He . . . would take his religion out of doors, where God smiled and spoke to burdened business men,” wrote a writer for *Christian Century* in 1928. “In serene solitude he would drive his car over smoky and smelly roads, oblivious of all but the deeper invisible realities. To the care-free accompaniment of the motor he would raise hymns of joy to the God of breeze and field.” And of course there were all of the Americans who took to the roads on Sundays, disregarding protests from those who held onto older notions of morality. For better or for worse, Sunday driving became a standard feature of American culture—more notable for its unremarkable regularity than for the emotionally charged controversy it once provoked.

## Sunset Boulevard

Axel Madsen writes of *Sunset Boulevard* (1950) that it is “a gnawing, haunting, and ruthless film with a dank smell of corrosive delusion hanging over it.” A classic film noir, *Sunset Boulevard* is a cynical and decadent tragi-comedy narrated, in true noir fashion, by a dead man. Populated by faded silent movie stars like Gloria Swanson, Erich von Stroheim, and Buster Keaton, it is the story of a weak-willed writer (William Holden) who, in trying to escape his creditors, happens upon the mansion of a wealthy, but slightly mad, silent movie star who perpetually waits for a phone call from a studio which has long since forgotten about her. The handsome writer becomes a kept man who struggles to make it in the movie business, only to fall prey to his keeper as he tries to make his escape from her obsessive love for him.

Typical of Billy Wilder's sophisticated and cynical style, *Sunset Boulevard* is a black comedy about the casualties of the Hollywood dream machine, and those obsessed by fame and success in the cruel world of the movie studios. The film is filled with stylish settings and wonderfully biting dialogue, and it has attained the status of a cult classic with quotable lines like the famous, “I'm ready for my close up now, Mr. De Mille.” There is also a Broadway musical version of the film created by Andrew Lloyd Webber.

## Super Bowl

More than any other sporting event in America, the Super Bowl has truly become a cultural phenomenon. According to 1999 National Football League figures, more than 138 million people in the United States alone watched the Super Bowl, with over 750 million total Super Bowl viewers in 187 countries. The Super Bowl has become, according to writer Michael Real (as quoted in Dona Schwartz's *Contesting the Super Bowl*), a “mythic spectacle,” that “in the classical manner of mythical beliefs and ritual activities. . . is a communal celebration of and indoctrination into specific socially dominant emotions, life-styles, and values.” The Super Bowl brings together several institutions: sports, television, advertising, and the American corporate culture. The Super Bowl serves as an end-of-the-season celebration, glorifying revenues accumulated by team owners, advertisers, media outlets, and many other businesses that share in the tremendous profits generated by professional football.

The Super Bowl itself stems from a fierce rivalry between two football leagues. In 1960, the upstart American Football League (AFL) challenged the popular and well-established National Football League (NFL). The AFL was well funded and soon began to contest the NFL in a bidding war for college players. In 1965, the AFL scored its first major coup when the New York Jets signed University of Alabama star quarterback Joe Namath. Namath's personality, media appeal, and on-field success gave the AFL an early degree of legitimacy. The AFL was also helped by a television contract. Under an exclusive deal with the American Broadcasting Company (ABC), each AFL team was paid \$150,000, money that kept the league afloat during the difficult, early years of its existence.

In 1966, the AFL decided to further assert itself by attempting to sign established, veteran NFL players. When several of its stars signed lucrative contracts, the NFL found it had little choice but to accept the situation and started working on a merger of the two leagues. In June 1966, an NFL-AFL merger was announced. The merger called for a common draft of college players and a championship game—the Super Bowl—to start in 1967. The new league would be called the National Football League with the previous rivals split into two divisions: the National Football Conference (NFC) and the American Football Conference (AFC). The full merger would take place in 1970. The Super Bowl pitted the winners of the two conferences in one game in late January, following the regular season and a series of playoff games.

During the first few years of the new National Football League, the two conferences maintained separate identities and schedules. Initially then, the Super Bowl became a contest where the upstart AFL would try to prove its mettle against more established teams. As might be expected, in the first two Super Bowls (Super Bowls I and II), the NFL Green Bay Packers easily defeated their AFL opponents. Most believed it would take years before an AFL team would actually win a Super Bowl. Then in Super Bowl III, the AFL champion New York Jets were matched against the powerful Baltimore Colts. Jets quarterback "Broadway Joe" Namath, on the eve of the contest in which the Colts were heavily favored, "guaranteed" a Jets victory. On January 12, 1969, the Jets stunned the sports world by defeating the Colts 16-7. The Jets victory finally gave the AFL its due and helped bring the two leagues together when the merger officially began the next year.

Enhancing the merger of the two leagues in 1970 was a television package from ABC. For just over \$8 million each season, ABC agreed to televise thirteen prime-time games on Monday nights. Television revenues for the NFL totaled nearly \$150 million. Overall, it meant that each of the twenty-six NFL teams in 1970 would receive about \$1.7 million. The popularity of football stemmed primarily from its television exposure. During the 1970s, television transformed football into America's premier spectator sport. Before the 1973 season, Congress lifted TV blackouts on home games that were not sold out. While some predicted that this legislation would make it hard for some small market teams to fill the stands, that did not prove to be the case. Not only did TV viewing increase, but teams actually sold more tickets. And it was TV contracts that became the meal ticket for the NFL—not single game sales. In 1978, the NFL signed the most lucrative sports TV contract ever. In January of that year, a Lou Harris poll found that 70 percent of the nation's sports fans followed football, compared to 54 percent who followed baseball.

With the help of television, over the past three decades the game on the field has become just an ancillary part of the entire Super Bowl experience. More than anything else however, the Super Bowl is

about money and corporate advertising. This January spectacle is the most lucrative sporting event in the United States and has become as much an advertising contest as a sports production. The NFL sold the broadcast rights for the 1999 Super Bowl for over \$60 million and NFL properties, the licensing arm of the league, sells approximately \$200 million in merchandise for the game. At the Super Bowl itself, logo placement, advertising angles, and television commercials have taken on more importance than the outcome of the game. In fact, television commercials slated for the Super Bowl are often shown as news items on local broadcasts days before the game. There are even postgame telecasts that examine and evaluate the quality of Super Bowl commercials.

To demonstrate the serious connection between advertising and the Super Bowl, one need look no further than Anheuser-Busch's "Bud Bowl," which has been a part of Super Bowl television broadcasts since 1989. The Bud Bowl is a fictitious football game, played out in expensive commercial spots, between animated beer bottles of Budweiser and Budweiser Light. The Bud Bowl employs real announcers and millions of dollars are spent to show these beer bottles running up and down the field attempting to score touchdowns. But the key to the Bud Bowl is Anheuser-Busch's promotions, which begin months before the game itself at hundreds of retail outlets. The beer company offers thousands of prizes that are tied into these advertising spots at the Super Bowl. Because of the advertising and prize giveaways, the final score of the Bud Bowl has become more important to the American television viewer than the results of the Super Bowl. Anheuser-Busch even set up a toll free number so potential prize winners could call and find out the final score of the Bud Bowl.

By 1999, 30-second Super Bowl advertising spots were selling for well over \$1 million. Yet the evidence indicates that those sums are well worth the price for American corporate advertisers. In 1991, the Gillette Company used the Super Bowl to introduce its new Sensor razor. Gillette spent over \$3 million on Super Bowl advertising to reach their male audience. By focusing its ads on Super Bowl Sunday, Gillette sold out its Sensor inventory through February and March following the broadcast, and the company was able to increase its market share by 35 percent in 1991. Evidence gathered by writer Phil Schaaf for his book *Sports Marketing* indicated that 66 percent of people tested recall Super Bowl commercials.

Money and corporate infiltration of the Super Bowl has also influenced the type of fans that attend the January event. In a sport that caters to the "average" fan during the regular season, few of those ordinary team boosters will ever have the opportunity to see a Super Bowl. Tickets are not sold to the general public—most go to corporate sponsors, celebrities, National Football League owners and officials, other players, and news organizations. In fact, during Super Bowl XXIX, 646 news organizations and 407 international media representatives were given Super Bowl credentials. The number of journalists working at the Super Bowl for these newsgroups totaled 2846. An actual statistical breakdown of fans who attend a Super Bowl shows the following: 35 percent attend on corporate expense accounts; 33 percent earn more than \$100,000 annually; 27 percent own their own company; 25 percent are corporate officers; and 22 percent sit on corporate boards of directors. So the look of a Super Bowl is far different from the look of a football game on a regular Sunday in October or November.

But a Super Bowl does bring in a great deal of money to a host city. It is estimated that the Phoenix metropolitan area brought in

\$187 million when it hosted the Super Bowl. In Minneapolis, Minnesota, during the 1991 Super Bowl, 2,000 jobs were created for that event. All but the first Super Bowl has been a sellout, even though the cheapest tickets at the 1999 game sold for just over \$250. Scalpers, or illegal ticket brokers, generally get four times that much for a Super Bowl ticket. Tim Green, a former professional football player, wrote in his book *The Dark Side of the Game* that, "January is when the big money really starts to drop." Green is referring to the legal and illegal betting that accompanies the Super Bowl. The game is the most gambled on sporting event in the United States. A person can lay a wager on just about any facet of the game: the first quarter score, which team will score first, which running back will get the most yards, the total score, or how many yards a particular quarterback will throw for. Between \$35 and \$60 million in legal gambling goes on for each Super Bowl game—illegal estimates are much higher.

Since television and media coverage dominates the Super Bowl, it is inevitable that politics has entered the formula. The Super Bowl is the most watched one-day event in the world. There is no worry about a rain-out and viewers represent a wide demographic range (41 percent of all American television viewers are female). The Super Bowl is also the third biggest eating day in America—behind only Christmas and Thanksgiving. In 1993, several national women's groups announced that Super Bowl Sunday was the worst day of the year for violence against women. Women's shelters claimed that hot lines were "flooded with more calls from victims [on Super Bowl Sunday] than any other day of the year." And a study was released by Old Dominion University in Norfolk, Virginia, which showed that hospital admissions of women rose after games won by the Washington Redskins. While many subsequently questioned the links between domestic violence and the Super Bowl, the women's groups had scored a public relations coup by releasing their finding just before the Super Bowl, when national and world media attention was so focused upon that event. But additional evidence showed that the Super Bowl brings out the worst in American sports fans. After Denver won its second consecutive Super Bowl in 1999, rowdy fans rioted in that city, overturning cars, breaking windows, and starting fires. One sports psychologist determined that testosterone levels of young males rose by 20 percent when their team won a big game. During the 1992 game between the Buffalo Bills and the Washington Redskins, American Indian groups used the Super Bowl media glare to call attention to what they believed were racist and demeaning use of nicknames and mascots on professional sports teams. The Redskin team nickname was considered especially egregious to the American Indian Movement (AIM) and protestors ringed the stadium on Super Bowl Sunday chanting slogans to voice their cause. Because of the media saturation in town for the Super Bowl, the American Indian Movement appeared on television and were interviewed for national and international media outlets. While nothing came of the protests, AIM was able to get their message out and even forced the National Football League to issue a statement about the team nicknames.

The Super Bowl has offered the American sports fan a plethora of heroic players and exciting teams: Joe Namath, Terry Bradshaw, Joe Montana, John Elway, the Miami Dolphins, Pittsburgh Steelers, Dallas Cowboys, and San Francisco 49ers. But player statistics and heroics have become overshadowed by economic, social, and cultural issues: Who will sing the national anthem? Who will perform at the half-time festivities? What television commercials will catch the attention of the American public? What political issues might arise this year? And, what is the betting line on the game? These issues

have turned the Super Bowl into more of a media event than a sporting contest.

## Superman

The first and most important comic book superhero, Superman looms large not only in comic books but in all of twentieth-century American popular culture. Among the few American characters instantly recognizable in virtually every corner of the globe, Superman is truly a pop culture icon. Certainly there is no purer representative of the fantastic possibilities inherent in the comic book medium.

Superman sprang from the imagination of two Jewish teenagers growing up in Cleveland during the Great Depression. Jerry Siegel and Joe Shuster were both lower-middle-class sons of immigrants who believed in the American dream. Avid readers of science fiction and pulp magazines, the two youths aspired to write and draw their own adventure comic strip. In 1934, after several try-outs in their school newspaper, Siegel and Shuster hit upon the idea that they suspected would be a salable comic strip. In his striking red-and-blue costume with flowing red cape and red "S" emblazoned on his chest, Superman was the ultimate strongman, capable of achieving almost any physical feat. He was a fantastic being from a doomed alien planet (later revealed to be Krypton), come to apply the superhuman blessings of his native home in the service of his adopted world. And perhaps most importantly, he assumed the persona of an undistinguished mild-mannered newspaper reporter named Clark Kent. Unpretentious and seeking no glory, he was a superhero who would retreat into the anonymity of American society when his spectacular deeds were accomplished. Here was the crucial point of reference for a Depression-era culture that extolled the virtues of the "common man."

Superman was a brilliant creation—ingenious in its very simplicity and instantly accessible to a mass audience. It was, of course,

### Superman

not an entirely original concept. Superheroes of various sorts had a long history in popular myth and folklore. But the Superman/Clark Kent dichotomy was original as a contemporary expression of adolescent wish-fulfillment. Siegel and Shuster, both of whom wore glasses and admitted to being shy, insecure, and unsuccessful with girls in high school, put much of themselves and their fantasies into the character. In truth, the essence of Superman's appeal was almost universal—especially to young males. Any boy or man who has felt in any way inadequate in a society of formidable male gender expectations has at times wished that he could transcend his human frailty as easily as Clark Kent removed his glasses.

Such a concept was destined to be a popular one with young people. But the middle-aged men who ran the newspaper syndicates failed to recognize Superman's appeal. After several years of failing to sell their idea to the newspapers, Siegel and Shuster reluctantly sold it to a fledgling comic book company called Detective Comics (DC), for whom they had done some freelance work. As part of the contract, the two young men would write and draw the series as long as DC allowed them to, but they also forsook all rights to the character in exchange for \$130 (\$10 per page for the 13-page story). It proved to be one of the most infamous contracts ever signed in the history of the American entertainment industry.

Superman debuted in the first issue of DC's *Action Comics*, dated June 1938. The cover of the classic issue, which now fetches prices of over \$50,000 from collectors, showed the costumed hero

lifting an automobile over his head as stupefied criminals flee in terror before him. It was an impossible image that DC's publishers feared would only confuse readers. But the audience responded positively and quickly. Only a few issues into publication, *Action Comics* became the best-selling comic book on the market, and the reason—confirmed by informal newsstand surveys—was obvious: Superman was a winning concept.

In later years Superman evolved into a character who was stoic, morally beyond reproach, and frankly rather humorless and dull. But Siegel and Shuster initially portrayed him as a feisty character who most closely resembled a super-powered "hard-boiled" detective. He was a wise guy, who took to crime fighting with an adolescent glee, routinely took time to mock and humiliate his adversaries as he thrashed them, and did not shrink from breaking the law when it stood in the way of true justice. It was a macho world into which only the glamorous Lois Lane intruded. Although she had no time for the plain Clark Kent, she was, of course, infatuated with Superman, who rarely had time for her. Siegel and Shuster cast their superhero as a populist "champion of the oppressed," who defended common Americans from the evils of big money, political corruption, and greed in all its forms. As the United States drifted into war, Superman turned his attention to foiling spies and saboteurs on the American home front, although his creators deliberately kept him away from the front so as not to upstage America's real-life heroes in uniform.

At a time when most successful comic book titles sold between 200,000 and 400,000 copies per issue, each issue of *Action Comics*—featuring only one Superman story—consistently sold around 900,000 copies. Mindful of these figures, DC featured the character in a second title, *Superman*, which established industry records by selling a staggering average of 1,300,000 copies per bimonthly issue. The Superman phenomenon was not limited to comic books either. By 1941 Superman was featured in a syndicated newspaper strip, a series of short animated films produced by Paramount, and a highly popular radio show that opened with the immortal lines: "Faster than a speeding bullet! More powerful than a locomotive! Able to leap tall buildings in a single bound! Look! Up in the sky! It's a bird! It's a plane! It's . . . Superman!" Within a few short years of his comic book debut, Superman had become a cartoon figure almost as widely recognized as Disney's Mickey Mouse.

It is difficult to overestimate the influence that Superman has had on the comic book industry. Before his appearance, comic books hardly constituted a medium distinct from newspaper comic strips. Most featured either reprinted newspaper strips or derivative variations thereof. Superman was the first original character to exploit the fantastic creative possibilities of the comic book medium—possibilities limited only by the imagination and skill of writers and artists. Images that would have been technically onerous or impossible to represent in motion pictures or radio could be easily adapted to the comic book format. Superman's improbable adventures demonstrated this, and he single-handedly gave the comic book industry a reason for being. Superman became the most widely imitated character in comic books, spawning a host of costumed superheroes from DC and its competitors. These superheroes established the comic-book industry as a viable commercial entertainment industry, and they have been the mainstay of comic books ever since.

Superman also established DC Comics as the industry's leading publisher. For a time, even his creators benefited financially from Superman's profits. But Siegel and Shuster saw diminishing returns for themselves even as their creation continued to generate massive

revenue for the publisher. In 1947 they sued DC, trying to secure the profits that they claimed Superman should have earned them over the years. The court ruled against them, claiming that under the original 1938 contract, they had no rights to the character. For the next several decades they saw no royalties from the comic book industry's most lucrative property. In the late 1970s, after the news media reported that Superman's creators were living in poverty, DC relented and paid them a yearly stipend for the remainder of their lives. A notorious tale well known to comic-book creators, the plight of Siegel and Shuster helped to rally writers and artists to push for new royalties and financial incentives, which the major publishers subsequently introduced in the 1980s.

Superman remained the most popular and best-selling comic-book character well into the 1960s. Under the close editorial direction of Mort Weisinger, Superman evolved into a character befitting his status as the elder statesman among superheroes. Abandoning all semblance of his rambunctious younger days, Superman became a staid, predictable, and paternalistic figure, always adhering to the strict letter of the law. He also gradually acquired an array of powers that made him almost invincible: flight, X-ray vision, telescopic vision, super-hearing, super-breath, the ability to move through time, the strength to move planets, and invulnerability to virtually everything except Kryptonite, the meteoric remnants of his native world Krypton. Weisinger created a fairy-tale Superman mythos that incorporated Superman's youth (as Superboy in the Midwestern town of Smallville), his friends (Lois Lane and Jimmy Olson were featured in their own comic books), villains like Lex Luthor and Brainiac, and spin-off characters like Supergirl and Krypto the Superdog. To overcome the creative limitations of the virtually omnipotent superhero, Weisinger also conceived a variety of "imaginary" stories that explored such questions as, "What if Superman had gone to another planet besides Earth?" and even "What if Superman had died?" These simple and entertaining stories were clearly aimed at children, and they sold well. Airing from 1953 to 1957, the highly successful *Adventures of Superman* television series, to which Weisinger was a consultant, kept Superman in the public consciousness and served to promote his comic books to the new generation of baby boomers. In the mid 1990s, an ABC television series called *Lois and Clark: The New Adventures of Superman* introduced the characters—played by Teri Hatcher and Dean Cain, respectively—to a new generation of viewers.

Superman's popularity among comic-book readers waned in the late 1960s. Faced by intense competition from Marvel's wave of more "human" superheroes like Spider-Man, the Hulk, and the Fantastic Four, Superman's irreproachable Boy Scout image had become a commercial liability for new generations of young people grown expectant of anti-establishment trends in youth culture. By the mid 1970s, the character's comic book sales were at an all-time low, although his image remained the most lucrative comic book licensed property for toys and other products. The pinnacle of the character's earning power came in the late 1970s and early 1980s in a series of major Warner Brothers *Superman* movies starring Christopher Reeve in the title role. Success in other media, however, did not translate into impressive comic book sales, which continued to lag well behind those of trendy morally ambivalent superheroes like the X-Men, the Punisher, and even DC's Batman, who began as a follow-up to Superman and proved to be far more adaptable to changing times.

The history of Superman in the comic books over the past several decades has largely been shaped by DC's periodic attempts to

revitalize the character by making him less "super." In 1971 Superman's powers were halved. In 1988, DC contracted popular writer/artist John Byrne to rewrite Superman's origin, hoping to spark fan interest. Surely the most blatant of these efforts came in 1992 with the much-hyped "Death of Superman." To no one's surprise, the event produced a short-term boom in Superman's sales and concluded in the "Rebirth of Superman." In 1997 Superman got a radical new costume change. While nostalgic fans disapproved, DC responded that it had little choice but to try new things to reverse Superman's steady commercial decline.

Superman will probably never be as popular as he once was. But that in no way diminishes his significance. As the archetype for the superhero genre so intrinsic to American comic books, he deserves his stature as the industry's de facto world ambassador. His presence is firmly etched into a global popular culture, encompassing motion pictures, television, advertising, music, and common language. And for the generations weaned on his adventures, Superman will forever remain the quintessential champion of truth, justice, and the American way.

## Supermodels

The word "supermodel" was first used in the 1940s, but the supermodel phenomenon belongs to the 1980s and 1990s, when a few women epitomizing glamour and opulence captured the American popular consumer's imagination. For most of the supermodel era, the pantheon included Cindy Crawford, Naomi Campbell, Kate Moss, Claudia Schiffer, Linda Evangelista, and Christy Turlington—all of them tall, architectural, and distinctive in appearance—who represented both the triumph of unadulterated image and the mass marketing of fashion.

Models had been famous before—Suzy Parker in the 1950s, Twiggy in the 1960s, Christie Brinkley in the 1970s—but the supermodels were touted for taking charge of their own careers, marketing themselves assiduously, and commanding huge fees for themselves and their agents. They cast themselves in discrete roles: Crawford was the confident sexual one, Moss the waif, Schiffer the one who looked like Brigitte Bardot. Like most models, they tended to launch their careers in Europe, where the pay was relatively low but a girl (often as young as fourteen or fifteen) could accumulate photographs and develop a distinctive "look." Once in New York, the U.S. modeling capital, a girl hoped to sign or continue a relationship with a powerful agency such as Elite and Ford, where clients in search of an

Naomi Campbell leads a group of models on the catwalk for the Versace collection in Milan, 1997.

image looked first. The supermodels were lucky to enter the American scene at the moment in which fashion designers were changing their target market from the wealthy elite to the masses. When Calvin Klein began to advertise on television, billboards, and bus shelters, the subliminal message seemed to be that even common people and their clothes could attract attention; paradoxically, perhaps, his model Brooke Shields shot to celebrity (as, later, did his muse Moss). At the same time, Hollywood actresses had de-glamorized themselves; now that they were more inclined to appear in jeans and unwashed hair rather than in evening gowns and jewels, models stepped in to feed America's hunger for opulence, harking back to the glamour of stars such as Myrna Loy and Grace Kelly. Yet, perhaps because they had no real careers beyond posing, and didn't even select the clothes or products they would wear, the supermodels were able to represent a product, an image, completely—in this regard they were forums for display, not fleshed-out characters.

The individual supermodels themselves achieved name-brand recognition. Advertisers focused on the same six (and a few slightly less enduring lights, such as Elle MacPherson, Paulina Porizkova, and Tyra Banks) in part to show they could afford to: hiring Turlington for

seventy-two hours at a cost of sixty thousand dollars was a good way for a company to display its success, confidence, and solvency. Models and supermodels alike made most of their money in advertising: Turlington's 1991 contract with Maybelline, for example, netted her eight hundred thousand dollars for twelve days' work a year. The more prestigious work, including magazine covers, was comparatively unremunerative—in 1995 *Vogue*, *Glamour*, or *Mademoiselle* might pay as little as one hundred dollars a day—though the exposure did help establish a model as a commodity. But a woman who had achieved supermodel status never had to worry: in 1995 Claudia Schiffer, modeling's biggest wage earner, made twelve million dollars from various assignments. In the eras of Reaganomics and, later, recession, such well-publicized paydayes were part of a supermodel's allure.

The wild and bratty behavior that often accompanied the models' sudden wealth was another element of their mystique; unleashed on New York, a number of them danced and drugged the nights away, and they were known for prima donna behavior such as sulkily kicking their limo drivers in the neck. Off the runway and out of the magazine, they lived larger than life, and the careers of many would-be supermodels ended in financial ruin and despair. Psychologists Vivian Diller and Jill Muir-Sukenick, both former models, explained in *Psychology Today* that many in the business suffer from a "fragile personality that makes them potentially self-destructive . . . what we call 'extreme narcissistic vulnerability.'" Without a secure sense of and liking for herself, argued Diller and Muir-Sukenick, such a young woman might easily fall prey to exploitative agents, clients, drug dealers, and others who prey on the young and attractive. Models' dissolution became a popular subject for articles, books, and movies, as audiences craved to see the girls consumed like the products they represented.

As it turned out, despite the supermodels' status, the public was interested in them as images, not as women. Though Campbell wrote a novel, and Crawford (who once referred to herself as "Cindy, Inc.") made TV specials and a movie, these attempts at establishing themselves as personalities largely failed. While some photographers and designers achieved respect and enduring fame as artists, their models, including the celestial six, were often considered merely a medium for expression. In the late 1990s, magazines started heralding "The Fall of the Supermodel," noting that reglamorized actresses were claiming many of the most prestigious modeling jobs and that consumers (in the words of superagent Katie Ford) had grown tired of "just seeing six people at the center of most magazines." Image was not enough to guarantee an enduring place in the popular imagination.

—Susann Cokal

## Surf Music

Surf music, while not always about surfing, emerged out of the subculture created by surfers in Hawaii and California in the late 1940s and 1950s. Two distinct streams of surf music developed, one primarily instrumental, the other predominately vocal, each expressing a distinctive aspect of the surfer subculture. The sound was most prominent in the early and mid-1960s, when instrumental surf music was heard accompanying television shows such as *Hawaii Five-O*, and vocal surf music by The Beach Boys was topping the sales charts.

While surfing as a form of recreation and sport developed in the nineteenth century as a Polynesian pastime, it was not until the early twentieth century that surfing caught on outside of Hawaii. Olympic swimming champion Duke Kahanamoku (1912 and 1920 Olympics) toured the mainland U.S. in the wake of his Olympic triumphs and created interest in surfing through exhibitions on both the East and West coasts. Early in the twentieth century, surfboards were made usually of solid wood, but big-wave riders increasingly preferred hollow boards after Tom Blake introduced one in 1928. Still, the lightest boards made of plywood weighed around 50 pounds, with big-wave boards weighing more than twice that. Blake introduced other design modifications, such as the addition of a tail fin, which aided in maneuvering.

World War II stalled surfing's development for the duration, then it transformed the sport as technological developments in plastic foams and resin revolutionized surfboard construction. Bob Simmons, a hydrodynamics student from Santa Monica, California, sandwiched polystyrene between two pieces of wood, wrapped the entire board in fiberglass, and sealed it with resin. The result was a lightweight, durable board that was shaped easily and could be maneuvered well with minimum experience. Postwar prosperity led to the development of local surfing communities in southern California, Hawaii, and eastern Australia. For many of these surfers, dedication to the sport required them to maintain "open" work schedules that allowed them to hit the surf whenever it was good. This often meant many of them were unemployed or worked only during low periods in the surf. This preference for surf over employment, reinforced by the traditional Hawaiian ideas of leisure, community, and nature, went against the grain of mainstream American postwar thinking, in which conformity and economic success were paramount.

Creating a counterculture of sorts, surfers not only promoted their sport but a way of life as well. This surfer lifestyle included Hawaiian "palapas," or palm-frond huts appearing on California beaches, with after-surf barbecues and campouts serving to bind this community together. *Surfer* magazine appeared in 1960 to inform the surfing community of events, products, developments, and achievements. Surfing films portrayed spectacular rides from Hawaii and Australia to California and vice versa, but these documentaries, shot on 16mm film, received little attention outside of the surfing community. Bud Browne, the pioneer of the surf documentary, presented *The Big Surf*, *Hawaiian Surfing Memories*, and *Trip to Makaha*, all in the 1950s. This subculture was too small to have an impact on mainstream culture until writer Frederick Kohner penned a 1956 novel based on some of the exploits of his daughter Kathy on a Malibu beach where she "hung out" with several prominent surfers including Mickey Dora (one of the sport's first superstars), Billy Al Bengston (aka "Moondoggie"), and Terry "Tubesteak" Tracey. Tubesteak began calling Kathy a "girl-midget" since she was around five feet tall, and the name quickly transformed into "Gidget." The

film *Gidget*, based on these stories, appeared in 1959, starring Sandra Dee and James Darren. Numerous sequels and knockoffs followed, such as *Gidget Goes Hawaiian* (1961), *Beach Party* and *Gidget Goes to Rome* (1963), *Muscle Beach Party* (1964), *Beach Blanket Bingo* and *How to Stuff a Wild Bikini* (1965).

The sound tracks for these movies were composed primarily of pop music with lyrics pertaining to the beach, but a new sounding music also made an appearance in these films, surf music. Created by Dick Dale, "King of the Surf Guitar," surf music began as a musical attempt to recreate the sensation of riding a wave. Dale's combination of cascading licks, rapid playing, and a powerful bass line served as a perfect soundtrack for surf documentaries, and occasionally turned up in Hollywood beach movies, but like films based on surfing, the music also developed along two different lines. Surf music by instrumental groups like Dick Dale and the Deltones, The Ventures, The Chantays, and the Surfaris, found a devoted audience among surfers themselves, as did classic documentaries such as Bruce Brown's *Endless Summer* (1964). Meanwhile, beach music by vocal groups like Jan and Dean and The Beach Boys flooded the mainstream airwaves and, along with beach movies, represented the surfing subculture to most other Americans.

Instrumental surf music reached its widest audience with the Ventures' theme for the television series *Hawaii Five-O*. The group also had hits with "Walk, Don't Run" and "Perfidia" (both 1960). The Surfaris (from inland Glendora, California) are best known for their 1962 song "Wipe Out," characterized by the hysterical laugh and high-pitched "wipe out" that opens the song. The Chantays reached number four on the sales charts with its classic "Pipeline," while Dick Dale and the Deltones continued their reign as the official cult band of the surf crowd with songs like "The Victor" (1964) and "Let's Go Trippin'" (1961). These instrumentals took elements of popular music and transformed them by emphasizing the bass line and using the guitar as a melodic instead of rhythmic instrument. A good example of this is found in The Ventures' "Walk, Don't Run." Written and originally recorded by jazz guitarist Johnny Smith, who was inspired by a "walk, don't run" sign in a New York subway, the song was recorded by country guitarist Chet Atkins in 1957 as a lilting ballad. By adding a driving beat and bass line, The Ventures created a version that recalled elements of Atkins' guitar work plus jazz elements such as "bending" notes and a blue tonality, all with a rock and roll beat. The song peaked at number two on the sales chart in 1960, right behind another beach-inspired song, Brian Hyland's "Itsy Bitsy Teenie Weenie Yellow Polka Dot Bikini."

Despite the popularity of instrumental surf music, or perhaps because of it, vocal surf music became the more widely disseminated form of the genre. While the music had little to do with the blazing guitars and heavy bass of Dick Dale and The Ventures, the lyrics of vocal surf music sought to capture the feel of the surfer subculture. "Surfin'" (1962), the first hit by a teen group from Hawthorne, California, called The Beach Boys, describes the dedication of surfers to their sport: "Surfin' is the only life, the only way for me." Written by non-surfer Brian Wilson and based mainly on stories from Beach Boy members and surfers Mike Love and Dennis Wilson, the songs of the Beach Boys presented an American youth market with an image of sunshine, beautiful girls, and surfing that was wholesome and superficial. In songs like "Surfin Safari" (1962), "Surfin' USA" and "Surfer Girl" (1963), "Fun, Fun, Fun" and "I Get Around" (1964), "Help Me, Rhonda" and "California Girls" (1965), "Wouldn't it Be Nice" and "Good Vibrations" (1966), the leisure pursuits of young southern Californians became a national industry. Reinforced

by other performers, such as Jan and Dean (“Surf City” 1963) and the beach movies of Frankie Avalon and Annette Funicello, the surfer subculture became a marketing tool used to sell not only entertainment, but a whole range of products as well, such as clothing. Hang Ten, founded in 1961, produced clothing with its trademark symbol of two bare feet representing the act of hanging ones toes off the front end of a surfboard. Offshoot sports also developed, like skateboarding, originally called “sidewalk surfing,” and, in the 1980s, sailboarding.

Instrumental surf music witnessed a resurgence in the 1990s with the release of compact disc compilations of surf music and its use in new films like Quentin Tarrantino’s *Pulp Fiction* (1994) and Bruce Brown’s *The Endless Summer II* (1994), a sequel to the 1964 original.

## Susann, Jacqueline (1921-1974)

Jacqueline Susann, sometimes called the Joan Crawford of novelists, wrote only three works of fiction between 1966 and 1973, but her first novel, *Valley of the Dolls*, was one of the 10 most widely distributed books of all time. While her often maligned books eventually went out of print, Susann was still remembered as the first writer to become a media celebrity through her aggressive promotional appearances on television talk shows. A mid-1990s revival saw *Dolls* back in print again, some relatively serious re-evaluations of her campy, but charismatic work, and Susann’s perhaps inevitable ascension into the pantheon of gay male pop culture icons.

Born in Philadelphia, Pennsylvania, in 1921, Susann moved to New York in 1936, a beauty contest winner anxious to crash show business. In 1939 she married Irving Mansfield, and worked as both model and actress, appearing in Broadway and road company productions, including *The Women* in 1937. Lacking the talent, luck, and angles to really hit performing big time, Susann was still addictively drawn to celebrities and their world, and her 15 years on the fringes of show business paid off in a shrewdly exploited literary career. This commenced in 1963 with the nonfiction success, *Every Night, Josephine*, about Susann’s beloved pet poodle. But Susann’s next book, the novel *Valley of the Dolls* in 1966, channeled her inside show business savvy into a best-selling combination of romance, lurid sex, and sensationalism which, as the publishing blurb used to say, ripped the lid off the entertainment industry. Susann and her press agent husband also launched the kind of hard-sell promotional campaign that had previously been exploited only by Hollywood. The first author to effectively exploit the television talk show circuit, Susann became as famous as her controversial books. In a legendary media incident she and Truman Capote traded insults during separate talk show appearances, Capote delivering his now infamous jibe that Susann reminded him of “a truck driver in drag.”

While commercially successful, Susann’s work was savaged by critics, instilling in her a longing for approval and prestige that was

never to be truly gratified. While prestigious Random House distributed Susann’s first two books, they often denied being her publisher because the titles were actually published by Bernard Geis, an outsider in the New York publishing world. James B. Twitchell observes: “. . . the modern phenomenon of celebrity-as-author was rediscovered by publishers like Bernard Geis after the collected wisdom of Art Linkletter became a best-seller. Geis realized that just as out-and-out hacks can be made into celebrities, celebrities can be made into authors”—and thus, Susann instinctively realized, authors could be made into celebrities. After Simon and Schuster published her second book of fiction, *The Love Machine* in 1969, an editor reputedly sent Susann a rose and a note saying simply “For us, once was enough,” as her third and final novel, *Once Is Not Enough*, was being published by William Morrow in 1973.

Ironically, Susann’s private life became more dramatic than any of her fiction. In 1962 she was diagnosed with breast cancer, which a mastectomy failed to alleviate, and, until her death in 1974, spent the rest of her life on painkillers. Her condition was never announced publicly. In addition, Susann and Mansfield’s only son, Guy, was autistic, a fact also concealed from the world at large. Thus while Susann pushed the envelopes of content in her fiction, in real life she adhered to what she perceived as the expectations of her era, believing the public demanded celebrities who conformed to a positive, if manufactured image, no matter what the actuality of their private lives.

*Valley of the Dolls*, a lurid, sudsy saga of three young women coping none too well with the challenges of show business, remains Susann’s key work. Aside from its delirious camp excesses, the cult status of the 1967 film version (in which Susann briefly appears) was instantly certified when Judy Garland was replaced by Susan Hayward shortly after production commenced, and retrospectively by co-star Sharon Tate’s brutal death in the Charles Manson clan multiple murder case. Leonard Maltin calls the film a “terribly written, acted, and directed BOMB”—he also cites an updated and expanded four-hour 1981 television remake as “superior to the 1967 theatrical version.” A 1971 in-name-only sequel, Russ Meyer’s equally cultish *Beyond the Valley of the Dolls* took Susann’s hyperbole into the realm of deliberate (and violent) camp.

In late 1997 Grove Press reissued the long-out-of-print *Valley of the Dolls*, peaking a mainstream Susann renaissance which had been percolating within gay culture for over a decade—the cult status of Susann among American gay men was the subject of a detailed feature article, “Pink Trash,” in no less than the usually staid *New York Times*, in July of 1997. The revival also included a New York City drag stage production of *Dolls*, the trendy popularity of gay smart-set VOD parties featuring jelly beans in the form of Susann’s famous Valium pills (or “dolls”), a 1998 television movie bio, *Scandalous Me*, and the announcement of a theatrical film of Susann’s life to star Bette Midler. But perhaps the most bizarre manifestation of 1990s Susann-mania was an “interview” with the deceased author published in *Interview* magazine in October 1997, and based on a seance involving drag performer Lypsinka and a medium named Miss Eek.

Nora Ephron comments on Susann’s work: “With the possible exception of *Cosmopolitan* magazine, no one writes about sadism in modern man and masochism in modern woman quite so horribly and accurately as Jacqueline Susann. *Valley of the Dolls* had a message that had a magnetic appeal for women readers: it describes the standard female fantasy—of going to the big city, striking it rich, meeting fabulous men—and went on to show every reader that she

was far better off than the heroines in the book. It was, essentially, a morality tale.” *Art Forum* editor Sydney Pokorny gushes: “She’s camp, she’s glam, she’s frivolous, she understood the appeal of modern celebrity better than anyone else (except maybe Andy Warhol), and on top of it all her heroines were always powerful, independent women. Jackie is a prophet of pop culture.”

Jackie herself put it this way: “People who read me can get off the subway and go home feeling better about their own crappy lives, and luckier than the people they’ve been reading about.”

## Susskind, David (1923-1987)

David Susskind was one of the few successful television producers to also star in front of the camera. He began his career in the late forties as an agent, eventually representing such stars as Jerry Lewis and Dinah Shore. After forming Talent Associates with Alfred Levy, he started to package live dramas, before becoming a full-time producer in the mid 1950s. Over the course of more than thirty years, he produced hundreds of television dramas for such series as *The DuPont Show of the Week* and *Armstrong Circle Theater*; over a dozen movies, including *Raisin in the Sun* (1961) and *Alice Doesn’t Live Here Anymore* (1974); and numerous stage plays. Aspiring to be the Cecil B. DeMille of television, Susskind especially cherished prestige specials and among his award-winners were *The Ages of Man* (1966), with John Gielgud; *Death of a Salesman* (1967), starring Lee J. Cobb; and *Eleanor and Franklin* (1976), with Edward Hermann. In 1958 he became a celebrity as host of his own talk series, *Open End*, which had unlimited time to examine an issue. The brash Susskind liked to confront his guests, exemplified by his heated exchange with Soviet Premier Nikita Khrushchev. His often-controversial series, which was trimmed to two hours in the early sixties, covered a wide range of topics, from such weighty issues as racism and organized crime to tabloid fare, including astrology and sex change operations. Retitled *The David Susskind Show* in 1967, the program continued for nineteen years until the host’s untimely death in February 1987.

## Swaggart, Jimmy (1935—)

A leading televangelist of the 1980s, Jimmy Swaggart became an American celebrity whose rise and fall were both comedy and tragedy. A self-trained piano virtuoso, whose hot Gospel stylings were barely distinguishable from the rock ‘n’ roll standards performed by his cousin, Jerry Lee Lewis, Swaggart might have become a major popular music artist. But he chose preaching, evolving a pulpit manner characterized by physical gyrations, abundant tears, and impassioned Biblical declamations. Scorning as bland sentimentality the positive thinking of other religious opinion makers, he further rejected the ecumenical spirit of Billy Graham. Swaggart chose instead to deliver fire-and-brimstone sermons, always tough on sin, especially that of a sensual nature. Though he first imitated the preaching of the tent evangelists of his Southern youth, he quickly learned the masterful use of media, first radio and later television. Often regarded as the most effective of the televangelists of the 1970s and 1980s, his blend of show-business hucksterism and old-fashioned Holy Ghost revivalism perpetuated a long tradition of American folk evangelism.

Born in 1935 near Ferriday, Louisiana, Jimmy Lee Swaggart was the son of a lay preacher in the charismatic Assemblies of God. Derisively called “holy rollers” in the early years of the century, members of this denomination moved into the middle class after World War II. Their spirit-filled devotional style began to influence the older, mainline churches, both Protestant and Catholic. Young Swaggart started preaching at age six, though he was not “born again” until two years later. Religion remained the major preoccupation of his entire youth. Offered a recording contract, about the time

Jimmy Swaggart

his cousin and best friend Jerry Lee was becoming famous, Swaggart vowed to use his own musical talents only in the service of the Lord. He even advised God to strike him with paralysis should he ever perform "the devil's music."

By the time he was 23, Swaggart was regularly traveling the gospel preaching circuit, along with his wife, Francis, who would remain a full partner throughout his ministry, and their two-year-old son, who would grow up to become his father's lieutenant. Backcountry evangelism, always as much entertainment as religion, put Swaggart's temperament and talent to good use. By 1964, despite success as a traveling preacher, he yearned for more respectability and was properly ordained by the Assemblies of God. He then took his "crusades" into cities. He also inaugurated a Gospel recording career and eventually sold more than 15 million recordings. In 1973 he added a weekly television program.

By the end of the 1980s Swaggart's telecasts and publications were addressing a regular national audience of almost two million. His outreach extended to 53 countries. Like other media preachers, Swaggart sought to anchor his operations; he chose Baton Rouge, Louisiana, as home base, where he built a Family Worship Center to seat 7,500. Perhaps in compensation for his own meager schooling, he readily followed the precedent of other celebrity preachers such as Aimee Semple McPherson and Oral Roberts by founding his own Bible college to train Christian workers for domestic and foreign service.

Politically conservative and openly judgmental, Swaggart made enemies. He could be fierce and even personal in his attacks. Among his targets were Roman Catholics, lukewarm Protestants, social "liberals," and fellow preachers with moral failings. He seemed oblivious to his own vulnerability when in early 1987 he launched the national scandal that came to be known as "Gospelgate." He accused rival televangelist Jim Bakker of adultery. Though the charges were easily substantiated, it did not take long for Swaggart's enemies to publicly expose his own predilections. They revealed that he had engaged in a series of voyeuristic acts with a prostitute in a Louisiana motel.

Owning up to his wrongdoing, labeling it "sin" rather than merely inappropriate behavior, Swaggart gave the premier performance of his life on February 21, 1988, to a capacity audience gathered at his Family Worship Center. His lips quivered as he weepingly apologized to his wife, his son, his daughter-in-law, and the Assemblies of God "which helped bring the gospel to my little beleaguered town, when my family was lost without Jesus." Finally, Swaggart apologized to Jesus Himself and asked to be renewed by His cleansing blood. So powerful was this confession that subsequent public acknowledgements of moral lapses by national figures have come to be known as "doing a Swaggart."

The Assemblies of God eventually defrocked Swaggart as later transgressions surfaced. Even without their blessing, his ministry continued throughout the 1990s, but his force was largely spent, and the impressive evangelistic compound he had built in Louisiana fell into some disrepair. With admissions of wrongdoing and investigations of financial irregularities of several televangelists, the influence of "the electronic church" went into general decline. Religious journals stopped lamenting that the seat in front of the television set was replacing the church pew. But Swaggart's career had become part of his century's unique body of religious lore, and he would be remembered in all his passion and moral ambiguity as a genuine American type.

## Swann, Lynn (1952-)

During the late 1970s, a period when professional football players were joining the ranks of U.S. pop-culture icons, wide

Lynn Swann at the University of Southern California.

receiver Lynn Swann was at the peak of his highly successful nine-year career in the National Football League. Swann played on four Super Bowl championship-winning teams for the Pittsburgh Steelers when that team was dominating NFL play. Swann's trademark was his ability to make acrobatic catches, especially at key junctures of important ballgames.

The Pittsburgh Steelers drafted Swann, a Tennessee native, in the first round of the 1974 NFL Draft following his graduation from the University of Southern California (USC), where he had been a unanimous choice for All-American honors during his senior year. While at USC he also earned a letter as a long jumper at track.

Swann was named the Most Valuable Player in Super Bowl X in 1976, as Pittsburgh defeated the Dallas Cowboys by a 21-17 score to become only the third team to win back-to-back Super Bowls. Swann caught four passes for a total of 161 receiving yards. The highlight was Swann's catch of a 64-yard touchdown pass from quarterback Terry Bradshaw for a game-deciding score. Swann also made a diving 53-yard catch during the second quarter, a feat that is considered by many to be one of the greatest in Super Bowl history.

In Super Bowl XIII, Swann caught an 18-yard touchdown pass from Bradshaw that was the decisive play in the Steelers' 35-31 victory over the Cowboys. Swann caught seven passes for 124 yards in that victory, an accomplishment made even more impressive because of doubts he would even play in that game due to a concussion he incurred in the American Football Conference (AFC) Finals against the Oakland Raiders. He had even been confined to his bed for several days prior to the Super Bowl, with doctors warning him that another hard hit could cause more extensive, and even career-threatening, damage. Despite the risks, Swann decided to play, with spectacular results.

Swann's performance in Super Bowl XIII was the culmination of his best professional season. In that year, 1979, he caught 61 passes for a total of 880 yards, and scored 11 touchdowns. During the 1979 season, Swann caught a decisive 47-yard touchdown pass from Bradshaw in the third quarter of Pittsburgh's 31-19 victory over the Los Angeles Rams, a play in which Swann leapt between two defenders to catch the ball before reaching the end zone.

Part of Swann's great success came from his being teamed with another wide receiver drafted in 1974, John Stallworth, who formed another threat at the wide-receiver position and prevented other teams from focusing all of their attention on Swann. The two men gave quarterback Terry Bradshaw an inviting choice of targets. As Swann noted in Lou Sahadi's *Super Steelers: The Making of a Dynasty*, "John [Stallworth] and I are both moving targets. It's just up to Terry to hit us. What's happened is that we developed a remarkable, almost undefinable rapport among the three of us."

Swann ranks second in receiving yards in the Super Bowl (364) and touchdowns (3) to San Francisco great Jerry Rice. During his playing career, he was named to the NFL Pro Bowl on three occasions. He has been a finalist for induction into the Professional Football Hall of Fame in Canton, Ohio, every year that he has been eligible. Regarding Swann's failure to be inducted into the Hall of Fame, his teammate Joe Greene noted "Lynn Swann didn't have the stats, but he sure as heck had an impact. . . . He didn't play a long time, but he made an impact. . . . He played a lot of big games. I'm a great Lynn Swann fan. He deserves a lot more consideration."

Following his retirement from professional football in 1982, Swann worked as a sports broadcaster for the ABC network, covering football as well as a diverse array of other sports, ranging from rugby to dog-sled racing. Swann has also been active in a wide variety of

charitable and other causes. He has served as the national spokesperson for the Big Brothers and Big Sisters of America since 1980, and on the Board of Trustees of the Pittsburgh Ballet Theater, for which he created a youth scholarship. He was named the NFL Man of the Year in 1981, and has also competed in several marathons. Swann had a cameo as a television announcer in the 1991 movie *The Last Boy Scout*.

## Swatch Watches

The Swatch watch was released in 1983 as a response by the Swiss watch industry to the encroaching Japanese influence on the market for inexpensive high tech timepieces. The first Swatch was made of slim plastic with only 51 components, allowing it to be sold cheaply. By the 1990s the Swatch had become the most successful wristwatch brand of all time. The key to the popularity of Swatch was its collectibility. By rotating designs and discontinuing popular lines at key moments, the Swatch company was able to give their watches a cult status, especially among young people.

## The Sweatshirt

The humble gray cotton sweatshirt with fleece lining was one of the last garments to come out of the gym locker into high-style fashion. The wonderfully practical sports coverup was determinedly unglamorous: it was affiliated with no one sport in particular; its heavy cotton tended to lose shape over time and, unlike jeans, move away from sexual outline to a gray blob. Technology, which around the early 1980s introduced just enough synthetic stretch (generally less than 5 percent) to maintain shape, collar, and cuffs without losing the integrity and feel of cotton, catapulted the sweatshirt out of the bottom of the locker. In 1981, Norma Kamali made a woman's jumpsuit ensemble for day or evening in gray sweatshirt material; by 1986, Emporio Armani styling showed hooded sweatshirts with sports jackets; in 1987, Quincy Jones appeared in an American Express advertisement in a short-sleeved sweatshirt. Perhaps a more influential popularizer of sweatshirts as fashionable garb was actress

Jennifer Beals, who wore cut up sweatshirts in the 1983 movie *Flashdance*. Since the 1980s, sweatshirt gray has become a popular color for diverse clothing.

## Swimming Pools

In 1988, a local dispute in East Hampton, Long Island, received national attention. An affluent couple was threatening to sue their town for refusing them a permit to build a second swimming pool at their ocean-front home. While the dispute hinged on issues of zoning restrictions and environmental protection, the story was widely reported due to its almost comical justification of Thorstein Veblen's

1899 critique of the "leisure class." If one backyard pool is an emblem of comfort and leisure, two pools at an ocean-front home exemplify conspicuous consumption run amok.

At the same time, a different sort of swimming pool controversy was raging in Greenspoint, New York. Residents of this Brooklyn neighborhood bitterly disagreed about what should be done with the crumbling remains of the McCarren Park municipal pool. Some in the community, especially the Latino and African American residents, wanted the pool restored to its former splendor. Built in 1936, this enormous pool, which could accommodate 6,800 swimmers at a time, had served as a recreation resort for locals unable to afford memberships at private pools and, according to a *New York Times* writer, had been "the hub of the working-class neighborhood's summertime social life." Other area residents, most of whom were white, wanted the pool closed permanently or rebuilt on a much smaller scale. They feared that such a large public pool would become a locus for urban crime.

These two episodes reveal the diverse and often discordant cultural meanings Americans attach to swimming pools. Private pools symbolize, sometimes in an extreme way, the "good life"—a life of material comfort and leisure. Public pools, however, evoke

A swimming pool.

very different images. Some of the residents of Greenspoint associated public pools with urban decay and social disorder, while others saw the possibility of a rejuvenated and vibrant community life. These contradictory cultural meanings date back to the first swimming pools built in America and highlight some of the successes and failures of twentieth-century American society.

Athletic clubs, colleges, and wealthy homeowners built the first private swimming pools in America during the Gilded Age. These pools were used for both sport and leisure, which at the time were the almost exclusive domain of the well-to-do. Early public swimming pools, built in and around large northern cities, served a different purpose for a different segment of society. Brookline, Massachusetts, opened the first municipal pool in 1897. Like most early public pools, it was located within a bathhouse. Progressive reformers and municipal leaders viewed these swimming pools as public health institutions and intended them to promote cleanliness among the nation's growing population of urban poor. Gradually, public pools evolved from baths to fitness institutions to, by the second decade of the twentieth century, recreation and leisure facilities.

Social and cultural conflict dominated the history of swimming pools in America during the first half of the twentieth century. The vast majority of pools during this period were public. They were intensely contested civic spaces—controversies over where pools should be built, who should be allowed to use them, and how they should be used reflected the dominant tensions in American society. These racial and class tensions, often obscured in other areas of life, appeared with striking clarity and definition at public pools because Americans perceived them to be intimate and potentially hazardous spaces. Swimming in a pool necessitated exposing one's body; it brought swimmers visually and, in a way, physically into intimate contact with one another. Swimming also exposed people to the dirt and disease of other swimmers. Consequently, the class, ethnic, and racial phobias that circumscribed and limited social interaction in general at this time became heightened at swimming pools.

In the early twentieth century, the social and cultural contests over swimming pools divided along class lines. A controversial proposal to build a swimming pool in New York's Central Park illustrates this class dynamic. John Mitchel, president of the Board of Aldermen, proposed the pool so that the city's poor, especially the children, would have a clean and cool place to bathe and play during the summer. Without such a pool, these children had no place to swim except among the rats, garbage, and sewage in the East and Hudson Rivers. The mostly middle-class New Yorkers who opposed Mitchel's proposal were determined to maintain the park in its original form. A pool would "desecrate" the park, they feared, by transforming their oasis of genteel recreation into a popular amusement center. "No Coney Island, if you please, in the park," one opponent pleaded. These critics were also determined to protect the park's social landscape. "I have never been in favor of putting a swimming pool in Central Park," affirmed Park Commissioner Charles Stover, "I should consider it disastrous if the only swimming pool belonging to the city was put there. It would attract all sorts of undesirable people." Stover suggested instead that this swimming pool for the masses be built in a more appropriate location: "under the approaches to the Manhattan bridge." By keeping the swimming pool out of Central Park, New York's middle class defended their Victorian pastimes and reinforced the physical distance between themselves and their working-class neighbors.

The late 1920s and early 1930s marked an important transition in the history of swimming pools. The number and popularity of public

pools increased dramatically. Large northern cities doubled and even tripled the number of pools they provided for their residents, while southern cities and smaller communities built municipal pools for the first time. The social contest over these pools changed as well: race replaced class as the most important distinction in determining patterns of discrimination. This racial contest, however, still occurred within a larger class context. Middle- and working-class blacks competed with working- and lower middle-class whites for the use of public pools, while wealthy whites swam at private pools.

The pattern of the racial struggle at public swimming pools was closely tied to the size of the community and the region in which the pool was located. In the South, black Americans were excluded from using public pools entirely. In large northern cities, racial discrimination took the form of segregation. Cities like New York, Chicago, and Boston largely avoided direct racial conflict and violence by providing separate pools for black residents. However, in smaller communities, black and white residents often competed over the use of a single pool. The dynamic of this struggle varied from town to town, but generally involved exclusion, protest, and violence.

Elizabeth, New Jersey, for example, opened its municipal pool in June, 1930. By August of that year, a group of black residents had filed a complaint with the city protesting their exclusion from the pool. The city's Board of Recreation Commissioners ruled that blacks should have equal access to the facility. The pool remained tenuously integrated for two summers, but in 1933, black residents stopped using it because white swimmers continually harassed and assaulted them. In 1938, black residents tried to integrate the pool again, but were once again subjected to the same abuse. Finally, the Board closed the pool. It could no longer condone the discrimination and violence, but apparently would not arrest the perpetrators.

The history of swimming pools fundamentally changed after World War II. America's rising economic tide, the increased rate of suburbanization, and racial desegregation combined to cause a dramatic increase in the number of private and residential pools. The economic prosperity of the postwar era coupled with advances in pool construction made backyard pools affordable to America's expanding middle class. In 1950, Americans owned only 2,500 private residential swimming pools; by 1970 they owned 713,000. During the same period, proliferating suburban communities often chose to build private swim clubs instead of public pools.

This general trend towards privatization was, at least partially, in response to the forced desegregation of municipal pools. During the 1940s, black Americans won several important legal victories against communities with segregated swimming pools. One such community was Montgomery, West Virginia, which built a public pool in 1940 but did not open it. The city's elected officials faced a conundrum: they did not want Montgomery's black residents swimming in the pool, but they were reluctant to defy West Virginia's anti-discrimination statutes by openly turning them away. The city eventually leased the pool to a private non-profit community association in 1946 for one dollar. The pool finally opened that summer and the now "private" administrators denied blacks admittance. The African American residents of Montgomery quickly sued the city, arguing that leasing the pool to private interests did not relieve the city of its obligation to afford black citizens equal rights. The federal courts agreed: "Justice would be blind indeed if she failed to detect the real purpose in this effort of the City of Montgomery to clothe public function with the mantle of private responsibility. 'The voice is Jacob's voice,' even though 'the hands are the hands of Esau.'" The court-ordered desegregation of Montgomery's pool, however, was a hollow victory

for the city's black residents. In response to the court's decision, Montgomery closed the pool until 1961. White residents were apparently more willing to go without a community pool than swim with their black neighbors.

Pool use continued to divide along racial lines in the 1970s and 1980s. Just as many white Americans chose to avoid living next to black Americans during this period by moving to restricted neighborhoods, they chose to avoid swimming with them by joining private swim clubs or building backyard pools. African and Latino Americans, many of whom continued to live in large cities, were left to swim at deteriorating public pools. Even most whites who remained in urban areas did not swim at public pools. As the Greenspoint controversy shows, some did not want municipal pools in their neighborhoods at all. America's history of segregated swimming pools thus became its legacy.

The shift from public to private pools has, in some ways, transformed the quality of community life in America. Throughout much of the twentieth century, the public swimming pool served as a stage for public discourse. Community life was fostered, monitored, and disputed at these municipal institutions. The recent privatization of swimming, however, constitutes a retreat from public life. Private pools, especially residential ones, have stifled the public discourse that used to occur at community pools. Instead of swimming, chatting, and fighting with their neighbors at municipal pools, private pool owners have fenced themselves into their own backyards. The Greenspoint controversy shows that public debate at and about municipal pools has not been silenced completely; however, too many controversies in contemporary America resemble the East Hampton dispute: people fighting to get away from their community rather than fighting to be a part of it.

—Jeffrey Wiltse

## Swing Dancing

In the 1930s swing bands emerged at the forefront of American popular music, evolving from the jazz genre, which was primarily produced and listened to by blacks, into one patronized also by urban whites. Long before baseball was integrated, the big swing bands—led by Duke Ellington, Benny Goodman, and Count Basie—brought

together black and white musicians in a new social amalgam that decisively changed American culture. Musically, swing offered rhythmic flexibility. Swing music is marked by a subtle swaying, living pulse, which came from musicians playing just ahead of the beat enough to be syncopated, or dragging behind it enough to be bluesy. Swing, notes historian Lewis Erenberg, caused "a general revolution in the popular dance in the United States" as white youth took up the black dance innovations in order to banish whatever ballroom gentility remained in the Depression. After World War II, swing grew increasingly fragmented, and became less of a dance music and more of a concert music. Although bebop succeeded it as the new wave of jazz innovation, it did not stimulate a new form of social dancing.

Harlem became the cultural capital of black America in the late 1920s and it is here that swing dancing began, first appearing as the Lindy Hop. Originated among secret gangs in Harlem—which was quickly being populated by African-Americans as whites departed—the steps were refined and made famous by dancers at Harlem's Savoy Ballroom. Lindy Hop refers to Charles Lindbergh's "hop"—his historic solo flight—across the Atlantic Ocean in 1927. Observing the acrobatics of some dancers at the Savoy Ballroom, "Shorty George" Snowden, a dance enthusiast, said "Look at them kids hoppin' over there. I guess they're doin' the Lindy Hop." The swing combined steps from the shag, the Texas tommy, and vaudeville into a ballroom dance—a syncopated two-step or box step that accented the offbeat; the fundamental innovation of the dance was the "breakaway," when the partners spun away from each other and improvised a break. The acrobatic or "air steps" were judo-like variations in which partners would roll and flip each other over the back. The Lindy Hop evolved into the jitterbug—a more acrobatic and an almost "choreographed" version of the Lindy Hop. "The white jitterbug is oftener than not uncouth to look at," reported the *New York Times* according to swing historian David Stowe, "but his Negro original is quite another matter. His movements are never so exaggerated that they lack control, and there is an unmistakable dignity about his most violent figures."

Jitterbug enjoyed enormous popularity from 1936 until the end of the war. Every soda shop had a jukebox where teenagers were able to jitterbug after school. Eventually, in the late 1940s, the Lindy and jitterbug evolved into what has come to be called "East Coast swing"—which had a rotating character, the couple has no fixed relation to the room. An almost separate version of swing dancing developed on the West Coast, in which the two partners remain in a narrow slot on the dance floor. Even after swing was musically moribund, jitterbug remained the basic framework for couples dancing in the early days of rock 'n' roll. It passed from the scene only after the Twist had introduced the stand alone form of dancing in the early 1960s.

In the late 1990s, partnered social dancing began to make a comeback, with swing dancing an integral part of the revival. There has also been a renaissance of swing and big band music—typified by groups like the Royal Crown Revue and Big Bad Voodoo Daddy. Ballroom dance classes became extremely popular, particularly on college campuses. In the larger cities, ballrooms, dance clubs, and the larger dance teaching studios offer special nights of swing dancing. Contemporary social dancing reflected an extensive process of blending: for instance, hip hop dance styles have incorporated elements of the Lindy and jitterbug and new swing styles showed a strong Latin influence.

## Swinging

Of all the social phenomena of the 1970s, one of the least practiced but most discussed was swinging, sometimes called partner swapping or wife swapping. Though few couples actually indulged in this practice, there were enough who did, or who knew about someone who did, to give the phenomenon widespread awareness. When the trend lost its popular buzz, however, swinging returned to what it had always been—the casual avocation of a group of hardcore enthusiasts.

There have always been swingers throughout history. The Bible records enough incidents of men lying down with other men's handmaidens to fill the *Penthouse* letters page many times over. And informal "clubs" devoted to extramarital experimentation have been around from the early days of the Republic. But the emergence of "swinging" as a loosely organized lifestyle coincided with America's "sexual revolution" in the 1960s.

Generally conducted at poolside parties and potluck dinners, partner swapping claimed about one million adherents during its heyday in the 1970s. Sometimes swinging involved couples placing ads in adult publications or choosing other couples they might like to pair up with. At other times, the encounters were purposely made random. One popular forum for selecting partners was the "key party," in which the men tossed their car keys into a bowl and the women fished them out to determine with whom they would spend the night. The climate of sexual freedom espoused in such magazines as *Playboy* and *Penthouse* accelerated acceptance of the practice and eventually led to coverage in more mainstream publications as well.

Partner swapping even made it onto prime-time television. A 1971 episode of *All in the Family* traced the comic consequences of Edith Bunker's inadvertent reply to an ad from a pair of swingers.

Vincent Gardenia and Rue McClanahan played the bewildered couple, who met up with the old morality in the form of Archie Bunker, America's avatar of sexual counterrevolution. But such downbeat portrayals of the lifestyle were the exception rather than the rule, as more people briefly flirted with the idea that maybe this open-marriage thing had some advantages to it after all.

An even surer sign that partner swapping had hit the mainstream came in 1973, when two members of the New York Yankees pitching staff swapped wives for the long haul. Lefties Mike Kekich and Fritz Peterson announced the spouse exchange in a bizarre press conference during spring training. The unique trade was completed with the addition, not of the customary "player to be named later," but of the rest of their families: children, pets, and, residences. For the record, Kekich broke up with Marilyn Peterson soon after the switch, while Fritz Peterson remained married to the former Susan Kekich more than 25 years later. The high-profile swap briefly captured national headlines, but the fact that it did not scandalize baseball indicated just how much American sexual mores were changing.

The novelty of swinging eventually wore off, however. During the 1980s, AIDS and sexually transmitted diseases made all but its diehard believers reconsider the advantages of monogamy. With a conservative administration in Washington, promiscuity regained some of its negative stigma. Swinging once again became the private preserve of a little-publicized subculture. Still, during the 1990s, three million Americans were estimated to be swinging on a recreational basis. Facilitated by the Internet, and fueled by a reaction against the sexual moderation invoked during the AIDS era, sexual adventurousness was once again on the rise. House parties still provided a prominent medium for partner swapping, although a new wave of institutions, including affinity groups, travel agencies, and even bed and breakfasts, were catering to the burgeoning swinging lifestyle. In August of 1997, more than 4,000 people attended a convention of the North American Swing Club Association in Palm Springs, California, where seminars were offered on such topics as "Recipes for a Successful Orgy" and "Growing Up with Kinky Parents."

The prevailing ethos at swinging encounters continued to be freewheeling sexual experimentation. But there were some changes from the wild and lawless 1970s. The spread of AIDS sensitized many partner-swapping enthusiasts to the primacy of good hygiene and a more judicious choice of partners. And society's growing acceptance of homosexuality allowed more swingers to experiment with same-sex partners. There was even a mini-wave of nostalgia for the old ways subsumed in the larger national wistfulness about the 1970s, as evidenced in such films as Ang Lee's *The Ice Storm* (1998), based on Rick Moody's novel of the same name. The film, whose harrowing climax occurs during a "key party" attended by its suburban Connecticut protagonists, captured the emotional sterility that allowed swinging to spread beyond a small hedonistic cult to briefly capture the fancy of middle-class America.

## Sylvia

Since its inception in a suburban Chicago newspaper in 1978, Nicole Hollander's comic strip, *Sylvia*, has evolved to become a leading expression of postmodern feminism in satiric form. Appearing daily in newspapers coast-to-coast, Hollander's popular strip has also been reprinted in many books, including such titles as *I'm in Training to be Tall and Blonde*, and *Ma, Can I Be a Feminist and Still Like Men?*

If the title character in Cathy Guisewite's *Cathy* strip represents the relationship struggles—romantic, parental, and inter-office—of a neurotic, thirtysomething working woman, *Sylvia* portrays a somewhat older, stouter, work-at-home woman comfortable with herself but at war with the foibles of contemporary society. Actually, *Sylvia* herself does not always appear in the strip that bears her name, a sly, surrealist stream-of-consciousness in which Hollander applies her own witty touch to subjects both slight and substantial, from such comedy staples as pets and airlines to such fresher ground as gender inequality and goddess spirituality. *Sylvia* is a plump, fiftyish advice columnist who is as likely to be found conversing with her cats or a space alien as her nubile daughter, Rita, or her friend, Beth-Ann. Like many of us, *Sylvia* also talks back to the media: When a commercial on the radio announces, "Spray N'Wash gets out what America gets into," bubble-bathing *Sylvia* responds: "Send some to El Salvador!"

Nicole Hollander, the strip's creator, had also worked as an art instructor and book illustrator, but she found fame as a comic strip writer/artist when *Sylvia*, initially created for a suburban Chicago newspaper in 1978, was picked up for syndication by the Universal Press Syndicate in 1979. The increased visibility led inevitably to *Sylvia* books and a line of greeting cards; in 1981, another syndicate, Field Enterprises, bought the *Sylvia* rights and added a Sunday strip, since discontinued. For a time, Nicole Hollander incorporated herself as The *Sylvia* Syndicate and took over her own distribution. By the end of the 1990s, *Sylvia* was being distributed by the Los Angeles Times Syndicate, although Hollander retained the copyright on her daily creations. Hollander was featured prominently in a PBS documentary about contemporary female comic strip artists.

Although there are recurring themes in *Sylvia*, there are no storylines; each day's strip is self-contained. Her visual style is purposefully slapdash, in keeping with *Sylvia*'s cutting-edge humor. What distinguishes the *Sylvia* strip is its celebration of the life of the mind of its heroine. As often as not, there is nothing happening in the strip *per se* except what *Sylvia* is imagining, in the fashion of a latter-day Little Nemo in Slumberland, except that she is wide awake both physically and ideologically. The strip's innovative fancies and conceits include "Menacing Supercops of the Future" such as the "fashion cop," policing errors of taste and style, or the "love cop," seeking to break up incompatible couples or prevent them from forming; the eternally annoying "Woman Who Does Everything More Beautifully Than You"; "Alien Lovers"; "Special Goddesses"; "The Woman Who Worries About Everything"; "The Cat Who Hypnotizes His Mistress"; "From the Diary of a Woman Who Never Forgets a Slight"; "Gender-Based Differences—How to Tell if You're a Gal or a Guy"; and "The Lonely Detective," in which

Sylvia imagines herself a noirish Phillipa Marlowe-type private eye tackling contemporary societal issues.

Popular culture has always been a rich source for *Sylvia*'s satire. At times, her advice column was featured in the strip—she once addressed one of her troubled readers as “Dear disgusting wimp”—although in recent years the column is seldom referred to directly. Other gambits have included Sylvia's proposals for TV game shows, such as the one in which recently divorced couples would have tried to guess each other's most annoying habits, or her extreme take-offs from *The Three Faces of Eve*, imagined dramas about women with three-way personality splits, one of which is always a housewife, as in: “housewife, snake-handler, and educator,” or “housewife, hair stylist, and brain surgeon.” Considering that Hollander's *Sylvia* strip has always been frankly feminist, multiethnic, multispecies, and unabashedly liberal in outlook, it is not surprising that it will sometimes refer to current events, although the “ripped from the headlines” approach has never been *Sylvia*'s prime focus as it has been for strips such as *Doonesbury*. In any given year, however, *Sylvia* will manage to reflect—and have fun with—the mood of a small but hearty band of free-thinkers as they warily eye the shenanigans of the world at large.

## Syndication

Syndication refers to the sale or distribution of television programs that are offered to multiple markets for non-network exhibition. As a practice, syndication stands opposed to network broadcasting where content and schedule are determined nationally for all affiliated stations. Syndication includes a variety of program types including movies, first-run series, re-runs of network programming, talk shows, game shows, foreign programs, and children's series. While syndication may resemble network distribution in that the same programs air over many separate outlets, the timing (day of the week as well as time of day) may vary from location to location. Serving as a counterbalance to network control, syndication has developed from

the simple sale of off-network programming in the early 1950s, into a number of complex and varied business practices including off-net, first run, re-run, and barter syndication. More than just the distribution of programs, syndication regulations and practices have played a major role in the development of contemporary television. From the Federal Communication Commission's (FCC) “Prime-Time Access Rules” (PTAR) and “Financial Interests and Syndication” (Fin/Syn) rulings, to the programming of UHF, cable, and even entirely new networks, syndication has been one of the most debated—and most important—business and programmatic practices within the television industry.

During the 1950s the television networks owned and controlled most of the programming they aired. The networks were able to present re-runs of programs, or sell the rights, even if they had minimal or no investment in the actual production. Networks defended this practice by arguing that they were equally responsible for the success of a series, since they promoted, placed, and provided the exposure for the program. This left them in the enviable position of taking minimal financial risk in a show's production, while at the same time enjoying long term profit from its being broadcast (and re-broadcast). Unable to risk the capital necessary to produce a series on their own, many independent production companies disappeared during these early years, and by the 1960s, almost all programming was produced by the networks or movie studios. In an attempt to limit the networks' monopolization of television production, exhibition, and distribution, the FCC examined syndication and made sweeping changes to network practices in 1970-1971. The FCC's motivation was to re-energize local and independent production, and to accomplish this goal they adopted the Fin/Syn and PTAR rulings.

The Fin/Syn rulings effectively ended network monopolies on syndication. Following these rulings networks could not syndicate domestically and could only sell a program internationally if they had completely financed the production. Furthermore, networks were limited in the number of programs they could produce, thus creating greater dependence on outside production companies. The PTAR, on the other hand, limited prime-time network broadcasts to the 8:00 to 11:00 pm slot in the top 50 television markets. In adopting these rules the FCC hoped that they would open access to programming, and encourage affiliates to air shows that were independently or locally produced. Rather than generating a resurgence of local programming, however, the PTAR led to the development of inexpensive shows which attracted a significant audience—often in the form of game shows like *Wheel of Fortune* or *Jeopardy*. Ironically the FCC's decisions had tremendous economic ramifications which affected the television and movie industry alike. Given one year to divest themselves of their syndication services, networks sold these divisions. Such sales led to the formation of new companies like Viacom which, once a division of CBS, now owns Paramount Pictures and its own television network (UPN).

Syndication became increasingly important as television expanded and the new and independent Ultra High Frequency (UHF) television stations looked for programming. With the expansion of non-network stations syndicators found themselves in the enviable position of supplying content for a significant portion of the daily television schedule. Separated from the networks, the syndication industry became more profitable, powerful, and competitive, leading to new practices intended to make programs more economically attractive to affiliates. One such example is “barter syndication,” which was designed to meet the needs of advertisers and affiliates alike. In this form of syndication, the distributor would give the

program to affiliates free of charge in exchange for ad time on the program. By placing a program in enough markets around the country, the syndicator could then sell commercials to national advertisers and keep the revenue as their payment. During the early days of UHF, stations needing to fill their schedules were cash-poor, and barter syndication offered them a way to gain programming without expending their limited capital. Eventually, as stations became more established, syndicators would move towards a combination of cash payments and ad time for their programs.

The most common form of syndication is “off-network syndication,” which refers to programs that have already aired on network television. The cost of these programs was generally recouped during their network runs, which meant that most of the syndication revenue became profit. Anyone who grew up watching television after the 1960s is familiar with a host of programs, from *Gilligan’s Island*, *F-Troop*, or *Rockford Files*, to name a few, which were (and still are) aired in this manner. With the growth of cable, entire networks, such as TV Land, were built on the strength and popularity of off-network programming. A more recent trend has been “first run syndication,” which refers to programs that are syndicated when they are new. While there is more financial risk in this type of syndication—since the costs are not absorbed through network exhibition—these programs offered tremendous control and profit potential to the producers. Perhaps the most famous shows distributed in this fashion include *Baywatch*, *Star Trek: The Next Generation*, and a number of game shows. By the 1980s, the emergence and success of “first-run syndication” led to a new type of inexpensive programming known as “reality programming,” “trash,” or “tabloid TV.”

With the success of cable television in the 1980s, syndicators once again experienced an increased demand for programs. Following the growth of independent stations, the expanded cable market made syndication one of the most profitable businesses in television. This all began to change by the late 1980s, however, as production companies recognized the greater value of their programs, and new

networks emerged, reducing the number of independent stations. The first blow came with the formation of the Fox network, which combined a number of previously independent stations and supplied them with regular network programming. By the end of the 1980s syndicators experienced additional setbacks when the FCC eased syndication rules and policies, thus allowing networks more freedom to produce and distribute programming. This situation was then further exacerbated by the development of two new networks (WB and UPN) which committed many of the remaining independents to network programming. Nevertheless, syndication remains a viable, powerful, and profitable method of television distribution.

In addition to the economic ramifications, syndication has also created a unique cultural phenomenon: cross-generational exposure to television programming. Because of syndication, the favorite programs of one generation of television viewers may remain popular decades after they have aired. This practice appeals to a sense of nostalgia for some, and demonstrates the timelessness of television’s generic programmatic qualities to others. In either case television is somewhat unique in that series and children’s programs continue to be enjoyed for generation after generation.

# T

## Tabloid Television

---

During the 1980s, the proliferation of popular television shows focusing on sex, crime, and gossip, such as *A Current Affair*, *Hard Copy*, and *Inside Edition*, led some media critics to fear that the lines between responsible journalism and sensationalism were being blurred. These “tabloid television” shows, so designated because of their resemblance to supermarket tabloid newspapers, relied for their content on gossip, barely credible sources, an appeal to emotion, and the use of checkbook journalism, staged reenactments of events, and home video footage. These practices have had an impact on mainstream broadcast journalism, which has been charged with downplaying more serious news in order to compete for viewers and advertising revenue.

Tabloid television began in earnest in 1986 when media magnate Rupert Murdoch created *A Current Affair* and put it into syndication. The half-hour show featured anchorman Maury Povich and stories focusing on sex, crime, and sleaze. At the height of its popularity, it claimed ninety million viewers in the United States. This show spawned a series of copies, such as *Hard Copy* and *Inside Edition*, which for many uninformed people blur the distinction between responsible journalism and gossip. In the 1990s, such events as the O. J. Simpson murder trial and the death of Princess Diana offered much fodder for the purveyors of tabloid television.

The methods used by the producers of tabloid television are at odds with acceptable journalistic practice as defined by mainstream television news. Checkbook journalism is one of the most hotly contested practices. The tabloids commonly pay their sources for interviews, especially exclusive ones. Mainstream journalists argue that this encourages sources to embellish their stories in order to make more money. Likewise, the use of re-enactments of crimes or other activities blurs the line between what actually happened and a fictionalized account of what may have happened. Yet, even as mainstream journalists condemn these practices, they are increasingly using them in their own shows.

The O. J. Simpson trial offered an important case study in tabloid television. Coverage of the trial became continuous, and mainstream journalists began to compete with the tabloids, often by employing many of their methods. NBC News, for example, using computer modeling, “re-created” the murder for viewers. In another example, *Dateline NBC* rigged the gas tanks on some Ford trucks to explode as a way of dramatizing their alleged danger. Some mainstream broadcasters have also begun citing tabloid reports as “news” in their own reports, justifying it with the disclaimer that they are reporting information, though its truth or falsity could not be verified. This sort of “peeping tom” journalism—reporting on what the tabloids are saying and even criticizing it—offers to the mainstream journalists a way of carrying the same information, but with reduced risk. Yet, the continued use of this activity means that ultimately, there is little differentiation between the tabloids and the mainstream.

Author Matthew Ehrlich argues that this separation between mainstream and tabloid news has never been that concrete. In *The Journalism of Outrageousness: Tabloid Television News vs. Investigative News*, he points out that the principle characteristics of the

tabloids have always been similar to the characteristics of investigative news. For example, both take a stand on the guilt or innocence of the particular parties involved, both take a moralizing tone, and both examine crime and sex. The only difference, Ehrlich argues, is that investigative news uses this material to inform and possibly rectify the world, while the tabloids use the material merely for entertainment.

The zenith of tabloid journalism may have come with the death of Princess Diana in August 1997. In a statement made after her death, her brother, Lord Spencer, expressed his belief that the “press would kill her in the end,” a reference to the high-speed car chase involving *paparazzi* photographers in Paris. Although print tabloids were most implicated in the event, the criticism implicated tabloid television as well.

## Tabloids

---

Tabloids were originally pint-sized newspapers specializing in the sensational. Once confined to so-called “scandal sheets,” or magazine-style newspapers that many people saw only in grocery store checkout lines, during the last years of the twentieth century their subject matters of sex and scandal seeped into the mainstream press and virtually all other media, including magazines, radio, television, and the Internet. Nearly all of American journalism seemed affected by the spread of tabloid news, as coverage of the personal foibles and problems of celebrities and presidents became commonplace. The line between the splashy press and the serious journal became blurred.

Once a proprietary name for a pill or tablet, the word “tabloid” came to be almost exclusively associated with sensational journalism. Later, “tabloid” described a newspaper about half the size of most broadsheets. Tabloids popularized the news by featuring bold pictorial coverage of sex escapades, murder and gore, sports, and scandals of all sorts, but especially those relating to the lives of the rich and famous. The word tabloid also sprouted offshoot words, such as “tabloidese” for the breezy writing style of many tabloids, “tabloidesque” to connote tabloid-type publications, and “tabloidization” to mean compression of stories or literature, according to *The New Shorter Oxford English Dictionary*.

To understand the incursion of tabloids and the tabloid style into the mainstream media, it is helpful to consider three eras of journalism: the early days of the media barons, the era of young, free-spirited reporters in the anything-goes years around the "Roaring Twenties," and the electronic age when new forms of media mushroomed. Although *Vanity Fair* in its late twentieth century incarnation dubbed the 1990s the "Tabloid Decade," the last several decades of the century could be called a tabloid age when stories of murders, sex, scandal, and the once-private lives of public officials spread into every home through newspapers or the electronic media.

In the early years of U.S. journalism, power belonged to those who owned a printing press. There was no competition from radio, television, or other media in news coverage, advertising, or audience appeal. In the 1800s and early 1900s, the pulse of American journalism ticked away in New York City, where publishers found gold in what was called the "penny press," a new form of American papers that produced eye-opening stories that were long on scandal and mayhem but short on analysis or depth. Publisher Benjamin Day launched the early penny press trend with his *New York Sun* in 1833. Another New York publisher, James Gordon Bennett, followed with *The Herald* in 1835. Six years later the famed Horace Greeley edited the *Tribune* as a penny press.

But the best known promoters of mass-appeal newspapers were mogul William Randolph Hearst and his rival, Joseph Pulitzer. Hearst created an empire in New York and a dozen other cities of big-circulation newspapers, successful magazines, and a wire service (International News Service). His power extended to American foreign policy. When his headline-shouting newspapers published reports about Cuba's demands for independence from Spain, the articles helped bring on the 1898 Spanish-American War.

Hearst was in fierce combat for newspaper circulation dominance with Pulitzer, a Hungarian-born newspaperman who bought and created newspapers, including the *St. Louis Dispatch* and the *St. Louis Post*, which he formed into the *Post-Dispatch*. Later, Pulitzer entered the New York journalism wars, buying the *World* in 1883 and four years later the *Evening World*. Pulitzer and Hearst battled furiously for readers through hyped-up news accounts that gave rise to the derogatory "yellow journalism" brand. After his death, however, Pulitzer's name became associated with high journalistic standards. Through his will, he endowed Columbia University's School of Journalism and started the distinguished Pulitzer prize for news excellence. Hearst too left a legacy of newspapers, magazines, and broadcast outlets.

If Pulitzer and Hearst drove the popular press wagons, the workhorses and talent pulling them were the reporters. In the early days, they were often a rough-and-tumble bunch who had little education but shared a knack for digging up stories and dirt and spinning a good yarn. Although they were poorly paid for their efforts, some of the nation's biggest literary figures of the twentieth century, such as Ernest Hemingway, got their start in newspapering.

What they lacked in college education, many of these young reporters of the 1920s made up on the streets and in the police stations of the nation. H. L. Mencken, the great Baltimore newspaperman, writer, and all-around curmudgeon, belonged to this breed. He wrote in 1942 of his early newspaper days:

At a time when the respectable bourgeois youngsters of my generation were college freshmen, oppressed by simian sophomores and affronted with balderdash daily and hourly by chalky pedagogues, I was at large in a

wicked seaport of half a million people with a front seat at every public show, as free of the night as of the day, and getting earfuls and eyeful of instruction in a hundred giddy arcana, none of them taught in schools. I was laying in all the worldly wisdom of a police lieutenant, a bartender, a shyster lawyer, or a midwife. And it certainly would be idiotic to say that I was not happy. . . . Life was arduous but it was gay and carefree. The days chased one another like kittens chasing their tails.

If there was one work of literature that encapsulated this wild and woolly journalism, it was the highly celebrated play *The Front Page* about newspapering in Chicago written by two former Chicago newsmen, Ben Hecht and Charles MacArthur. Hecht, who later gained fame as a screenwriter and author, recalled his early days as a newspaperman fondly, much as Mencken did, in his 1963 book about reporting days, *Gaily Gaily*. Hecht wrote: "I came to Chicago at the age of sixteen and a half and went to work immediately as a newspaper reporter on the *Chicago Journal*. I write of the five merry years that followed. As sang Bliss Carman: Oh, but life went gaily, gaily . . ."

The essential trait among the memorable early newsmen, whether it was Damon Runyon, who wrote humorously of the guys and dolls of the underside of life, or sports writer and columnist Ring Lardner, it was the ability to spin a good yarn. Gene Fowler, called "the last of the troubadours," was one of the best on Park Row (the Fleet Street of New York, where many newspaper offices were located) during the early era of the 1920s. A talented writer and gifted reporter, Fowler portrayed the news scene in his 1961 book of reminiscences of the 1920s:

I still can see the incredibly fast flutter of bandit Gerald Chapman's small feet as he dies on the hangman's rope. I again can hear Queen Marie of Romania tell her lady-in-waiting 'get rid of that damned thing!' after the Dakota Indians have given Her Majesty a war bonnet. Once again I am present at Carnegie Hall as the addled Mayor Hylan makes his ghostwritten address of welcome to President Woodrow Wilson; but unthinkingly keeps his back turned to Mr. Wilson during the ceremony. I remember also the lean Irish statesman Eamon de Valera, clad in his long underwear and huge boxing gloves on his hands, as he spars with his bull-necked secretary in a sitting room at the old Waldorf.

Even as I write, there unaccountably springs to mind an occasion when I asked Henry Ford about the sleep habits of his good friend [Thomas] Edison. Was it true, as legend had it, that Mr. Edison, like Napoleon, slept but four hours? Yes, said Mr. Ford, but Mr. Edison slept twice and sometimes three times a day. . . ! Little things about big men. Or, if you will, big things about little men. . . . The stories of my day are no longer big in the public attention, or else have been chewed upon until the taste is gone.

There were scores of sensational and landmark stories in those days that were covered by the serious papers as well as tabloids, although more colorfully in the latter. There was the manslaughter trial of top comic film actor Fatty Arbuckle, who was acquitted of

brutally assaulting a young actress while he was at the peak of his career, his fame second only to that of Charlie Chaplin. There was Charles Lindbergh's historic transatlantic flight and the later trial of Bruno Hauptmann for the kidnap-murder of the Lindbergh baby. There were riveting accounts of murders and prohibition, the constitutional amendment giving women the right to vote, elections, the Depression, and World Wars I and II.

After World War II, journalism started maturing and opening up its pages to previously untouched stories as competition grew from radio and the new medium of television. In the prewar days, for example, few Americans knew that President Franklin Delano Roosevelt was crippled from infantile paralysis, or polio. An unwritten rule in the press was to protect Roosevelt from being shown, described, or referred to as confined to a wheelchair or wearing braces to stand briefly, assisted by crutches. It was not until after Roosevelt's death in 1945 that his true condition became universally known.

During the postwar era, most of the misdeeds of celebrities were still confined to gossipmongers and a magazine called *Confidential*, which exploited the private lives of movie stars. Few newspapers followed up with front-page stories on material *Confidential* dug up. Major exceptions included the sensational trial and subsequent acquittal of dashing Hollywood actor Errol Flynn on a charge of rape on a yacht.

Stories of large public scope, rather than scandal, dominated traditional newspapers and television news. There were the assassinations of President John Kennedy, Martin Luther King, and Senator Robert Kennedy; space travel; the Civil Rights Movement; the Vietnam War; the Watergate scandal; the resignation of President Richard Nixon. But then came scandals that forced themselves onto front pages by their very dramatic nature and the public stature of those involved, such as the accidental drowning of Mary Jo Kopechne, a young aide of Senator Edward Kennedy, after a car driven by Kennedy went off a small wooden bridge following a party on Chappaquiddick Island, Massachusetts in 1969.

The Chappaquiddick story was the first of a series of news reports about the exploits of Washington figures. The most powerful congressman at the time, House Ways and Means Committee Chairman Wilbur Mills, splashed his way onto front pages after his girlfriend, a striptease artist nicknamed "The Argentine Firecracker," jumped unexplainably into the Tidal Basin in the wee hours after the married and very private Mills and the woman had spent an argumentative evening together. Another powerful congressman, Wayne Hays, made news when it became known he had hired a woman with whom he had an intimate relationship to work in his office as a secretary, although she later admitted she couldn't take shorthand or type. The presidential ambitions of Senator Gary Hart ended after reporters learned the married candidate was socializing with a young woman. Especially damaging to Hart was a widely circulated photograph of him and the woman together on a Miami boat called "Monkey Business."

The scope of news coverage was revolutionized again when cable television began filling 24 hours a day with nonstop news, talk, and gossip. "Television tabloid" programs such as *Hard Copy* and *Inside Edition* delivered exposés and inside scoops on celebrities. The mainstream press started paying attention. *The Washington Post*, for example, promoted a new gossip column. The mainstay *New York Times* even started running short pieces on celebrities.

In the 1990s, scandals reported in mainstream media included Washington Mayor Marion Barry's conviction and sentencing on a drug possession charge after being caught on videotape smoking

crack cocaine in a hotel room with a woman who was not his wife during a police raid. Tales of sex and other titillating topics started cascading. The Senate confirmed Clarence Thomas, a black jurist, as an associate justice of the Supreme Court, but not before a former aide, Anita Hill, testified she was sexually harassed by him. There was John Wayne Bobbitt, whose penis was cut off by his wife, Lorena Bobbitt, and who later became a pornographic film curiosity after his organ was surgically replaced. There was the rape trial and acquittal of Senator Edward Kennedy's nephew William Kennedy Smith. But no story to date had captured the public interest as did the nationally televised "trial of the century" in 1995 of O.J. Simpson, who was accused of stabbing his wife, Nicole, and a young man, Ron Goldman, to death. The acquittal of the former professional football hero produced emotions across the nation ranging from outrage to joy. For worldwide coverage, few stories could match the 1997 death of Britain's Princess Diana, who, along with her boyfriend and driver, was killed in an automobile crash after a high-speed chase by photographers through the streets of Paris.

The proportions of the news coverage of the O.J. Simpson case and the death of "Princess Di" were surpassed in the United States when a young woman named Monica Lewinsky arrived in Washington, D.C., and nearly brought down the President of the United States. Her story of sexual intimacy with President William Jefferson Clinton in the Oval Office while she was a White House intern and President Clinton's persistent denials resulted in the House of Representatives' impeachment of Clinton on charges of perjury and obstruction of justice. After much agonizing, the Senate, in only the second impeachment trial of a president in U.S. history, acquitted Clinton of the charges, thus keeping him in office.

The story of the Clinton presidency involved scandal even before he was elected. Voters elected him despite stories he had had an affair while Arkansas governor with a night club singer named Gennifer Flowers. That story, picked up by the mainstream media, was broken by a grocery store tabloid, the *Star*, with the bold headline "My 12-Year Affair with Bill Clinton." By coincidence, it was the same publication that brought down Dick Morris, one of Clinton's top political advisers, during the 1996 Democratic convention by breaking the story that Morris had been conducting an extramarital affair with a Washington prostitute at a hotel near the White House.

Media revelations about President Clinton's extramarital affair brought out defenders who pointed out that other presidents, going back to Thomas Jefferson and including Franklin Roosevelt and John Kennedy, had also had affairs. Pundits said future presidential candidates would routinely be queried on their sexual pasts. Where journalists once left the private lives of politicians alone, it appeared the personal problems of politicians would no longer be off the record. There appeared to be no limits to the public's appetite—already stimulated by stories of sex on daytime TV soap operas and in movies and now fed by newspapers, cable TV, and the Internet—for salaciousness and sensation. The last years of the twentieth century saw the way paved for universal coverage of the foibles of the famous, profoundly changing the tone of American politics, largely because of the irresistible dynamics of tabloid journalism.

## *Tales from the Crypt*

*Tales from the Crypt* was one of the most popular and notorious horror comic books of the early 1950s. Like other titles published by EC Comics, *Crypt* featured stories that explored the depravity of human nature and the hypocrisy of middle-class society. Brutality, bloodshed, and sadism were the norm in these stories, and—much to the horror of American parents—the kids loved it.

When the series became widely imitated by competing publishers, the proliferation of horror comics provoked a public backlash that led ultimately to a 1954 U.S. Senate investigation into the comic-book industry. Chastised publishers adopted a stringent Comics Code that year which prohibited the publication of horror comic books like *Crypt*.

## Talk Radio

Credited with shaping presidential elections and blamed for creating a climate of intolerance, talk radio rose to prominence in the 1990s by offering Americans a free, unfiltered, and often national forum. Whether the issue was a pushy boss, a hapless sports team, or a downtown-parking crunch, talk radio became a sort of water-cooler for the masses. The rise also reflected the increasingly combative nature of American discourse, with on-air arguments, taunts, and racy, satiric routines often the key to a talk show's success. As ratings increased, so did the critics who believed that the radio hosts were, in part, to blame for the increasingly hostile environment that led to a series of high-profile incidents, including the terrorist bombing in Oklahoma City. Leading talk show hosts Howard Stern, G. Gordon Liddy, and Don Imus were branded "shock jocks" for their brash, obnoxious, and often controversial points of view. As Howard Kurtz notes in *Hot Air*, "When White House chief of staff Leon Panetta wanted to attack Newt Gingrich, the strongest insult he could muster was to accuse the House speaker of acting like 'an out-of-control radio talk show host.'" But whether agitator or great equalizer, talk radio offers anyone with a telephone a chance to become part of the national debate. And its influence can be felt off the dial as well, as radio jocks write best-selling books, star in films, and are spoofed on the television sketch comedy show, *Saturday Night Live*.

The emergence of talk radio came about because of technological advances as much as the need for an open forum. Commercial

Don Imus

radio had existed since the 1920s, but the toll free telephone lines and satellite hook-ups that encouraged the spread of the format were not in place for another 60 years.

In the early days of radio, before television, the best known voices were comedians making the jump from the vaudeville stage, old-style newsmen, and sportscasters. The first true talk radio host may have been celebrity interviewer Barry Gray, who began broadcasting out of New York City in the mid-1940s. But Gray's show was without one key element: the caller. Jerry Williams, who went on the air in Boston in 1957, became the first to take calls. He used two tape recorders to comply with the federal regulations requiring delays.

In addition to technical limitations, talk radio was held back by a 1949 law, the Fairness Doctrine, which required equal time for opposing views. The change began in the late 1950s when machinery made the seven second delay possible, enabling hosts to put callers on the air without fear. Talk radio received a similar boost in the 1980s with the spread of satellite and digital phone technologies, which made toll free numbers more affordable for station managers. Emboldened by the fact that these calls were being made not only to a radio station, but also in many cases a radio station in another time zone, callers embraced this new forum. They could yell at another human and risk nothing more than being cut off by the host. In addition, Ronald Reagan abolished the Fairness Doctrine in 1987.

Talk radio spread from 75 stations nationwide in 1980, to 125 by 1987, and 1,350 by 1998.

From the start, talk radio proved a strong voice for political protest. Jerry Williams brought consumer advocate Ralph Nader onto the air to criticize automobile makers in the 1960s. Twenty years later, Williams led a repeal of a law requiring the mandatory use of seat belts in Massachusetts. In 1988, Congress wanted to vote itself a 51 percent pay raise. A nationwide network of talk show hosts, led by Detroit's Roy Fox, suggested listeners send tea bags to Washington, D.C., to show their displeasure. More than 150,000 tea bags were dumped in front of the White House; Congress withdrew the pay raise. A decade later, lawmakers had not forgotten. A survey of members of Congress revealed that 46 percent of them found talk radio the most influential media source during the health care debate; 15 percent cited the *New York Times*.

As talk radio gained stature, so did the voices behind it. In many cases, these were failed disc jockeys who had tried, in vain, to fit into the more conventional music format. Larry King was a broadcasting veteran who first went on the air in 1960 in Miami, Florida, struggled later with a gambling problem and three bad marriages, and was eventually arrested for misusing \$5,000 from a business associate. In 1978, King got what just about everyone in radio gets: a second chance. From the 12th Floor Studio in Crystal City, Virginia, he launched the first nationally broadcast radio show, talking from midnight to 5:30 a.m. The success of his show proved that national talk shows could make it. King eventually left radio for his nightly interview television talk show on the Cable News Network and launched a regular column in the *USA Today*, laying the foundation for the rise of the talk star.

Rush Limbaugh, a college dropout who had failed repeatedly as a rock 'n' roll disc jockey, launched his talk show in the mid-1980s, immediately establishing himself as a conservative voice; his show went national in 1988. No matter that Limbaugh had not registered to vote for several presidential elections; he was courted by then-President George Bush as the 1992 elections approached. Seeking his on-air support, Bush invited Limbaugh to the White House and even carried the talk show host's bags. Limbaugh's influence was considered so widespread that an effort by Congress to bring back the Fairness Doctrine in the 1990s was quickly dubbed the "hush-Rush" bill by the *Wall Street Journal*.

Limbaugh's success provided ample fodder to talk radio's critics. A Times Mirror poll showed Limbaugh's audience to be 92 percent white and 56 percent male. And his on-air mistakes created a strong anti-Rush backlash. The *Flush Rush Quarterly* spurred much of it, reporting Limbaugh's errors. On the Reagan-era Iran Contra scandal, for example, Limbaugh stated: "There is not one indictment. There is not one charge." In reality, there had been 14 people indicted and 11 who had either pleaded guilty or been convicted.

Limbaugh's histrionics were mild compared to those of the freewheeling Howard Stern, the self-proclaimed "moron" of talk radio. Stern made no secret of his distaste for his profession. "Radio is a scuzzy, bastard industry that's filled with deviants, circus clown rejects, the lowest of the low," he said.

Off the air, Stern was the dedicated family man who did not go to parties and spent most of his time with his college sweetheart turned wife, Alison. On the air, he discussed his sexual fantasies, argued with his staff, belched, and complained about the size of his penis. Unlike many other talk shows, Stern attacked celebrity culture instead of celebrating it. He called Oprah Winfrey "a big dolt with an empty, oversized head" and Roseanne "a fat slob." He also promoted a

series of B-level figures, from Jessica Hahn, known for her affair with television preacher Jim Bakker, to Frank Stallone Jr., the less-famous brother of Sylvester. Stern's reporter, Stuttering John, carried out further attacks on celebrity culture. Disarmed by the stutter, expecting another *Entertainment Tonight*-styled softball interview, celebrities were shocked when confronted by John's questions. When Gennifer Flowers held a press conference to address her affair with then-Presidential candidate Bill Clinton, Stuttering John stole the show from the pack of mainstream reporters. "Gennifer," he asked, "did Governor Clinton use a condom?"

Stern also drew the wrath of the Federal Communications Commission (FCC), receiving 21 of 44 fines levied. When Alfred Sikes, chairman of the FCC, fined Stern's employer, Infinity, \$1.7 million for allegedly broadcasting obscenities, the radio host responded, on the air, by hoping that Sikes would develop cancer.

If Stern and Limbaugh were considered too controversial by many, Don Imus found a proper balance between shock radio and serious discourse. A radio star whose first career collapsed in the 1970s due to his addiction to cocaine and alcohol, Imus returned to the national airwaves in 1988. His morning show was a mix of news, racy skits, and spoof songs. Imus found himself in line with the media elite, interviewing President Clinton at one point and regularly hosting serious news veterans like Cokie Roberts, Dan Rather, and Tim Russert. He also appeared on the David Brinkley show.

It is this range—from the serious to the frivolous—that talk radio proponents say makes the medium more powerful than the generally entertainment focussed programming on television talk shows. *Talkers* magazine reports that the top five issues on talk radio between 1990 to 1995 were the O.J. Simpson case, the 1992 elections, the Persian Gulf War, the Oklahoma City Bombing, and the Los Angeles riots. But lest it be taken too seriously, *Talkers* also rated discussion of John Wayne Bobbitt, the man whose penis was surgically reattached after it had been cut off by his wife, higher than debates on Bosnia and gays in the military.

For those more interested in serious-minded talk, National Public Radio (NPR) emerged a decade before Limbaugh, Stern, and Imus. Known for lengthy reports and the breathy but understated delivery of its hosts, NPR's style is so distinctive it has also been spoofed on *Saturday Night Live*. NPR made its debut on May 3, 1971 with its first broadcast of *All Things Considered*. That first broadcast reached a few hundred thousand listeners through only 104 public radio stations. Twenty five years later, *All Things Considered* would reach 16 million Americans through NPR's 520 member stations, all the while holding faithful to the wishes of its first director, Bill Siemering, who wanted "calm conversation, analysis and explication."

By the late 1990s, NPR had long established itself as a dependable voice, but the influence of hot talkers like Limbaugh and Stern was still being debated. Limbaugh took credit for the Republican victories during the 1994 Congressional elections and made the cover of *Time* magazine, the headline posed: "Is Rush Limbaugh Good For America?" But by the end of 1996, Clinton had won a second term and the conservative movement was floundering.

Nobody debated whether talk radio would survive. It had made stars of big mouths (Stern, Imus), political impresarios (Limbaugh, G. Gordon Liddy), shrinks and sex therapists (Dr. Laura Schlesinger, Dr. Judy Kuriansky), and even discarded politicians (former New York Governor Mario Cuomo, former New York City mayor Ed Koch).

Whether we liked it or not, we had become, as Howard Kurtz wrote, “a talk show nation.”

## Talking Heads

From their earliest days, Talking Heads were a band that defied categorization. Playing in New York during the height of the mid-1970s punk scene, Talking Heads were a preppy-looking trio that became a punk band by association. Despite being musically different, Talking Heads' minimalist sound, their musical combination of energy and intelligence, and their self-conscious and unpretentious demeanor connected them to punk. Some critics tried using the term “Art Rock” to describe the band's intellectual approach to their music, but the term fell short: Talking Heads were cerebral, but they were also eminently danceable, too. Like the characters in their songs, Talking Heads' music dramatized the human predicament of the duel between head and heart.

David Byrne (vocals and guitar), Tina Weymouth (bass), and Chris Frantz (drums) began as a trio in 1975, after dropping out of the Rhode Island School of Design and relocating to New York. Their first single, “Love Goes to a Building on Fire,” was released in early 1977 and displayed the band's spare technique. That same year, the band signed to Sire Records, an independent label whose roster included the Ramones, and released *Talking Heads '77*. The album added keyboardist Jerry Harrison, a former graduate student at Harvard. Their debut appeared to often ecstatic reviews. The lyrics to “Don't Worry About the Government” celebrated civil servants and life's more mundane qualities: “My building has every convenience/ It's going to make life easy for me.” The song's simplicity was almost shocking in its honesty. Hardly a tentative songwriter, Byrne was also capable of writing tense music in “No Compassion” and “Psycho Killer.” The latter song, although not a hit single, brought the group widespread attention for the song's psychodrama: “I can't sleep 'cos my bed's on fire/Don't touch me I'm a real live wire.” The notoriety of “Psycho Killer” was fueled even further by Byrne's physical resemblance to actor Anthony Perkins, who played Norman Bates in Alfred Hitchcock's *Psycho*.

The group's 1978 release, *More Songs About Buildings and Food*, began a long collaboration with producer Brian Eno, who essentially became a fifth member of the group. The album produced a Top-40 hit, a cover of soul singer Al Green's “Take Me to the

River.” The modest hit provided a glimpse into the band's future commercial successes, as well as their developing forays into dance, funk, and international rhythms. “Take Me to the River” also vindicated the band's commercial philosophy: “It wouldn't please us to make music that's impossible to listen to,” said Byrne in *Rolling Stone*, “but we don't want to compromise for the sake of popularity. It's possible to make exciting, respectable stuff that can succeed in the marketplace.”

The opening track on 1979's *Fear of Music*, “I Zimbra,” had polyrhythmic arrangements that announced the group's new musical direction. Not everyone was paying attention. “Life During Wartime,” one of the group's best-known songs, contained the line, “This ain't no disco,” and some mistakenly thought that Talking Heads were the new standard-bearers for the anti-disco movement. The irony around “Life During Wartime” was all too real. Around the time that Talking Heads began incorporating international rhythms, rock critic Ken Tucker wrote that “seldom in pop music history has there been a larger gap between what black and white audiences are listening to than there is right now.” *Remain in Light*, which was released in 1980, was the realization of the polyrhythmic experiment in “I Zimbra.” Augmented by a host of outside musicians, *Remain in Light* had the feeling of a free-flowing jam session at first, but it was tightly structured and disciplined. The album displayed funk and African influences when many whites took the phrase “Black music” to describe several distinct musical forms, like disco, funk, soul, and rhythm and blues.

The next year found the band pursuing solo projects that continued the group's musical blends. Weymouth and Frantz's side project, *The Tom Tom Club*, contained a merger of new wave with dance music, and also rap. The self-titled album included “Genius of Love,” a song whose rhythm was used by several R & B and rap artists of the 1990s. Byrne completed a score for *The Catherine Wheel*, a dance performance by Twyla Tharp that proceeded with *Remain in Light*'s sound. In 1985, Byrne's next project was for an experimental theater piece called *Music for the Knee Plays*, which employed traditional New Orleans brass band struts and funeral marches. Byrne's skill in working with other musical forms was hitting its stride.

The band's first album in three years was 1983's *Speaking in Tongues*. Eno was no longer sharing production chores, and the band shed many of its guest musicians. Talking Heads had a hit with “Burning Down the House” and reached the peak of their popularity with the 1984 film, *Stop Making Sense*. Directed by Jonathan Demme, the film documented the Talking Heads' 1983 tour, and won the National Society of Film Critics Award for Best Documentary. The group recorded three more albums before they unofficially broke up in 1988. In 1996, at the peak of alternative music's popularity, the group decided to reform without Byrne, as the Heads, and recorded *No Talking Just Head*. Byrne sued his former bandmates and asked for an injunction against the album's release. Then, shortly before the album's release date, a settlement was reached and the album was released to generally abysmal reviews.

Talking Heads expanded the musical borders of American popular music. By the late 1980s, international musical styles were being adopted by mainstream artists, like Peter Dinklage and Paul Simon. What the mainstream considered to be acceptable was broadening. In another sense, Talking Heads extended personal musical borders as much as they were intent on stretching national ones. Ken Tucker, in his review of *Remain in Light*, summed up the climate in which the group was attempting to bridge musical gaps: “By 1978,

punk and disco had divided the pop audience. What did Talking Heads do? They recorded Al Green's 'Take Me to the River.' The gesture was a heroic one."

## Tang

Tang instant beverage entered American popular culture in the 1960s with a remarkable journey to outer space. The vitamin-fortified drink was first marketed in the late 1950s as a healthy alternative to soda pop. After being chosen by the National Aeronautic and Space Administration (NASA) to be the drink of the astronauts, Tang flew on several flights in the 1960s and soon became a drink of choice for children hoping to emulate the feats of the astronauts. Despite the introduction of new flavors in addition to the classic orange, Tang's popularity diminished in the 1980s and 1990s along with America's excitement over the space program.

## Tanning

In the late nineteenth century, high fashion dictated the maintenance of alabaster skin. Creamy white skin signified a person of privileged status, not an unfortunate sun-darkened field laborer. But as the industrial age dawned and laborers increasingly spent long hours in factories and the coal haze above city streets blocked the sun from reaching their tenement windows, the professional-managerial class, with its increased leisure time, embraced a culture of outdoor living. Furthermore, the consumer culture that emerged along with the products of the industrial age prompted a cultural shift toward an emphasis on appearance. Advertising, motion pictures, and the popular press inundated people with images of the body: images that emphasized the display of hedonism, leisure, and sexuality. A tan soon became a status symbol.

Fashion proved the greatest influence on the popularity of the suntan. Many learned about fashion through film; in the early 1920s Bela Balázs had noticed that film was a major influence in the cultural shift away from "words" and toward "visual images" that "drew attention to the appearance of the body, the clothing, demeanour, and

A sunbather gets a tan in the Florida sun.

gesture," according to Mike Featherstone in *Theory Culture and Society*. Douglas Fairbanks Sr. was among the first to popularize the suntan. In his films and publicity shots in the popular press his bronzed skin became an emblem of his vigorous pursuit of outdoor activities. While other male celebrities quickly followed his lead, women, even Douglas' wife Mary Pickford, preserved their light skin. Europe continued to dictate fashion at this time, so when fashion designer Coco Chanel returned from vacation with a deep bronze tan and began using tanned mannequins for her designs in the 1920s, tanning transformed into a cultural obsession in and of itself. Consequently, the deep cut backs of women's dresses in the 1920s and 1930s required tanned skin for the wearer to be appropriately fashionable. The more revealing fashions became adornments for bronzed skin, and by 1946, women could tan their skin publicly in as little as a bikini.

The new sun worship prompted by fashion had support from science, which had begun to report the healthful benefits of sunshine at the turn of the century. Previous warnings about the sun's harmful effects on the skin gave way to new research that had proven the sun's healing qualities on diseases like rickets and tuberculosis in the late 1800s. Articles announcing the healing benefits of heliotherapy and tanned skin proliferated. An antebellum health advisor, William A. Alcott, promoted the idea that "Not a few individuals would be gainers in point of health, especially children and females, by being slightly tanned over their surface." Dr. Edwin E. Slosson reported in *Daily Science News Bulletin* in 1923 that, instead of being harmful, "It seems that ultra-violet and violet rays may be positively beneficial," according to *Literary Digest*, which featured a photo of babies

at the beach with the caption: “Nothing is better for babies—or grown people either—than a good coat of tan, we have it on high scientific authority.” And by 1929, an American article proclaimed that “the skin of a healthy man is brown, smooth, and sleek,” according to Featherstone.

During the warm months, interest in sunbathing on beaches began in the interwar years and continued unabated into the early 1980s. But while many could sunbathe during the summer, only the well-off could afford the cost of air travel, which allowed them to spend winters in sunny locations. There were few status symbols as obvious as tanned skin during the winter. *Newsweek* reported in 1966 that in the “jet age” the tan had become a status symbol that could “be worn like Brooks Brothers clothes as a sure sign of affluence.” Tanned skin became synonymous with health, wealth, leisure, and style.

“Nothing is as transient, useless, or completely desirable as a suntan,” a pre-feminist Gloria Steinem wrote in *The Beach Book* in 1963, adding “What a tan will do is make you look good, and that justifies anything.” Steinem perfectly captured the kind of zeal that fueled many hours of sunbathing. The desire for tanned skin prompted formulas for obtaining the perfect tan to abound. People coated themselves in baby oil and red iodine believing this mixture would turn their skins a fashionable caramel brown color. Some smoothed on a purple peroxide foam which promised to speed the tanning time and bleach the body hair to enhance the depth of the tan’s color by contrast. Others restricted their diets before tanning, eating vitamins and avoiding wine and spicy foods, to increase their chances of getting a coppery glow. Some even rubbed their skin with salt to tan faster. The truly fanatical sun worshipers lay inside aluminum coffins or ringed their necks with sun reflectors to ensure themselves an even tan. The proliferation of tanning salons and tanning booths promised people of every class access to a year-round tan by the late 1970s. (Indoor tanning became one of the fastest growing industries in North America, increasing 54 percent between 1986 and 1988, according to *U.S. News and World Report*.) People willingly sought out these seemingly ridiculous activities because, according to *Newsweek*, “only the result counts.” An episode of the sitcom *Seinfeld* highlighted the folly of these tanning strategies when the character Kramer coats himself in butter as he basks in the sun, only to appear and smell like a well-roasted turkey to his hungry friend, Newman.

Any number of brands sought to capitalize on the craze for suntanned skin. The first branded suntan cream available in America was a Coppertone brand cream made mostly of cocoa butter that was introduced in 1944. By 1945 Coppertone Suntan Oil was advertised with an “Indian Head seal” and the slogan “Don’t Be a Paleface.” But Coppertone’s most enduring image—“Little Miss Coppertone”—debuted on Miami-areas billboards in 1953. The illustration of the tanned young girl whose dog is pulling down her panties to display her white-skinned bare bottom soon graced billboards, advertisements, and product labels across the country. The little girl came to represent the youthfulness associated with tanned skin. If Little Miss Coppertone represented the youthfulness of tanned skin, Ban de Soliel Orange Gelée advertisements captured the sexual appeal of the suntan. The 1970s and 1980s advertisements for the Bain de Soliel brand using the sultry and darkly tanned model, Kriss Ziemer, epitomized the glamour many hoped a tan would confer.

While the hazardous effects of a sunburn and the detrimental effects of sun bathing on fair-skinned people had long been known, worries about tanning began to reach a wider audience by the 1970s as the incidence of skin cancer had begun to rise noticeably. Between 1930 and 1986 the Skin Cancer Foundation of the American Cancer

Society figured that the incidence of melanoma had risen tenfold, from one in every 1,500 people to one in every 150. Research into the ill effects of sun bathing resulted in the proliferation of products to protect the skin from burning. The Coppertone Solar Research Center created and initiated the use of SPF factors—a standardized measurement of a sunscreen’s ability to protect the skin and prevent sunburn—in sun lotions in 1972, but SPF numbers (2, 4, 6, 8) did not appear on product labels until 1977. And not until 1980 did the Skin Care Foundation grant Coppertone Supershade 15 an acceptance seal as an “effective aid in the prevention of sun-induced skin cancer.” When research in the 1980s revealed that most exposure to the sun occurs during childhood, Little Miss Coppertone began to promote sun protection over tanned skin for children. The first offering of SPF 30 formulas appeared in 1993, and by 1998, Coppertone had joined with the American Academy of Dermatology to promote the use of sun-blocks in the “Stop the Sun, Not the Fun” campaign, the first in-school sun safety program. By 1994, Little Miss Coppertone could be seen with a hat, sunglasses, and T-shirt, when she was used to help promote the new UV Index.

The scientific authority of the 1990s condemned tanning. Doctor Darrel Rigel, professor of dermatology at New York University, Manhattan, told *FDA Consumer Magazine* contributor Alexandra Greeley that “There is no such thing as a safe tan. Why does the body tan? Because the body is being injured by ultraviolet radiation that hits it. This causes the body to make melanin, a natural sun screen. So to get tan, you must get injured first.” The American Cancer Society reported that by the late 1990s the incidence of malignant melanoma had risen to one in 75 and predicted that 44,200 people would be diagnosed with the disease in 1999, of which 9,200 would die, according to Gandee. The scientific community has linked the rise in the number of affluent young people afflicted with melanoma to air travel. Dermatologist Patricia Wexler told Gandee that the melanoma rate is higher in younger generations “because our parents didn’t go to the Delano or the Hamptons or St. Bart’s.”

Despite the overwhelming evidence of the negative effects of the suntan, tanning products companies continued to promote the benefits of a tan. The Bain de Soliel brand began to use lightly tanned women in its ads, but continued to promote products to help obtain deeply bronzed skin into the 1990s, as did many other brands. One significant change in the promotion of tanning products was the residual rhetoric about how “healthy” tanned skin looks. A 1999 radio ad for the Go Bronze sunless tanning lotion sold at the Bon Marché department store, for example, featured a woman saying that she wanted tan, healthy looking skin too.

Sunless tanning products could offer the “look” without the damage. Sunless tanning products that turned the skin a realistic tan color made the sunless tanning market more viable in the 1990s than it had been when the first sunless tanning products were introduced in 1960. These first products, including Schering-Plough Healthcare Products’ Quick Tanning lotion, the first sunless tanning lotion, offered an orange-ish tan color that was easily identified as fake. Some fashion magazines, like *Vogue*, furthered the interest in sunless tanning lotions by presenting articles about the harmful effects of the sun in the same issue that featured photos of bathing suit clad models covered in sunless tanning lotions frolicking on a sun-drenched beach.

Though by the late 1990s some continued to mimic the looks of actor George Hamilton, who *Newsweek* dubbed the “Sultan of Suntan” for the year-round tan he has maintained for three decades, there had been a steady increase in the numbers of people who Coppertone identified as “sun concerned”—a category based on

sales of products with an SPF number of 8 and over—since the early 1980s. A 1994 survey by the American Academy of Dermatology reported that one third of the respondents never sunbathe and always use a sun screen, according to Greeley. And dermatologist Dennis Gross indicated that in assessing his patients from the mid- to late 1990s, “the number of women who consider a tan desirable has gone from the majority to the minority,” according to Gandee. Aside from the medical reasons to curb suntanning, the sexual appeal of pale skin was beginning to gain followers with the admirers of public figures, including Gwyneth Paltrow, Nicole Kidman, and Uma Thurman. In addition, fashion magazines like *Elle* began to feature paler models for spring and summer issues. Future historians may well look back on the fashionable suntan as an oddity of the twentieth century.

## Tap Dancing

An indigenous American dance form that evolved as African and British dance traditions merged during the eighteenth and nineteenth centuries, tap dancing involves the production of syncopated sounds by the dancer’s feet. Tap dancing has been a mainstay of virtually every type of popular performing-arts entertainment in the United States, from minstrel shows to vaudeville, revues, extravaganzas, Broadway and Hollywood musicals, nightclubs, precision dance teams, and television variety programs. A remarkably adaptive dance form, tap has fused with and reflected the changing entertainment

sensibilities of American audiences for almost 200 years. Tap routines figure prominently in children’s dance recitals, as dance instruction is a popular enrichment activity for youngsters and many are too young for, or uninterested in, the serious discipline of ballet. Adult amateurs also find tap dancing a fun form of recreation and exercise.

Though some trace the roots of tap back to the ships that transported enslaved Africans to America (as the Africans’ dancing was observed by the Europeans, and vice versa) the significant merging of the two dance traditions began on southern plantations. When a mid-eighteenth century law forbade slaves from playing drums, they increased the use of their feet to embody rhythms in their dancing. Their observations of the articulated foot actions of Irish step dancing and other European dances practiced by their masters engendered a new hybrid dance form in which the Africans combined fancy footwork with their sophisticated rhythmic sensibilities. Oftentimes they were put into contests by their masters and won prizes for the most daring or complex dancing. This inspired individual creativity and competition, characteristics that continued to drive the development of tap dancing well into the twentieth century.

In the minstrel shows, the most popular form of American entertainment during the mid-nineteenth century, tap dancing became a codified stage dance form. Its most esteemed practitioner was William Henry Lane, known as Master Juba, a free African American who was one of the only blacks to be allowed to perform onstage with whites. The new social dances that sprang up around the turn of the twentieth century were incorporated into the developing tap dance vocabulary. By 1910 the use of metal plates attached to the bottoms of the shoes’ heels and toes became commonplace; previously, the dancers wore wooden-soled shoes or pounded nails or pennies into leather soles.

Vaudeville became the next important breeding ground for the advancement of tap dancing. Striving to earn a living in a business that depended on continuously pleasing and surprising audiences, tap dancers were constantly inventing more impressive maneuvers. Different categories of tap dancers evolved: eccentric dancers, such as Ray Bolger, sported a loose, rubbery movement style; comedy dancers, such as Bert Williams and George Walker, were duos who danced as foils to one another; flash acts, such as the Nicholas Brothers, added spectacular acrobatic tricks to their tapping; class acts, such as Charles “Honi” Coles, were elegant in their costuming and movements; and the rhythm- or jazz-tappers, such as John W. Bubbles, explored the complicated rhythms of jazz music.

By the 1930s tap dancing chorus lines had become a prominent feature of Broadway and Hollywood musicals. While such stars as Fred Astaire, Gene Kelly, Ann Miller, Eleanor Powell, Shirley Temple, and Bill “Bojangles” Robinson advanced the popularity and artistry of tap dancing, the ensembles stunted tap’s artistic growth. The art of tap dancing lies in the subtle nuances and complex rhythmic interchanges between the beat, the music, and the tapping sounds. When executed by large groups, the sounds must be simple, otherwise multiplication breeds muddiness. Precision teams, such as the Rockettes, have solidified tap dancing’s place in American popular entertainment, but have frozen it, artistically. It was at the Hoofers Club in Harlem that the art of tap flourished as the great jazz-tappers held improvisational “challenge” contests and pushed each other to further develop their skills.

During the 1950s and 1960s tap “hibernated” as its performance outlets vanished. The Hoofers Club had closed and jazz-tappers found that the crowded rhythms of be-bop, the new form of jazz music, left no space for tap sounds. Rock ‘n’ roll was too loud for

tapping. The age of movie musicals was ending, nightclubs turned to comedy and music acts, ballet had overtaken Broadway, and vaudeville had long since died.

The tap revival began when a group of old-time hoofers appeared at the Newport Jazz Festival in the early 1960s and intrigued the public with their artistry. In 1968 a series of “Tap Happenings,” held in Manhattan, provided opportunities for audiences to witness the legendary jazz-tappers. By the 1970s the rhythmic explorations of these early hoofers were recognized as an integral part of the development of jazz music. Their work, and tap dancing in general, began to be viewed with serious eyes.

The 1970s was a nostalgic decade on Broadway and re-introduced tap dancing in new musicals, such as *No, No, Nanette* (1971) and *Bubbling Brown Sugar* (1976). The release, in 1974, of Metro Goldwyn Mayer’s *That’s Entertainment!* re-acquainted audiences with the tap dance stars of old Hollywood musicals. New tap dance stars soon emerged and put a contemporary urban face on tapping. Gregory Hines appeared in the Broadway musicals *Sophisticated Ladies* (1983) and *Jelly’s Last Jam* (1991), and in the film *Tap* he pioneered an electronic form of tapping, originally engineered by Al Desio, whereby the dancer makes music through electronic transmitters built into the tap shoes. Savion Glover fused tap with hip-hop sensibilities and wowed audiences with his fierce, heavy-footed style in the Broadway revue *Bring in ’da Noise, Bring in ’da Funk* (1996). In 1989 Congress declared National Tap Dance Day to be celebrated annually on May 25, Robinson’s birthday.

Though many dancers of the 1990s approach tap as art, it is not commonly perceived as serious dance. Tap dancing has been called America’s folk dance and, as such, will probably always be most appreciated for the joy it gives to its participants—both professional and amateur—and to spectators of popular entertainment.

## Tarantino, Quentin (1963—)

Best known for writing and directing the Oscar winning film *Pulp Fiction* (1994), Quentin Tarantino is one of the most critically lauded film directors of the 1990s. In *Reservoir Dogs* (1992) he redefined the primary elements of the pulp genre—murder, drugs, sex, violence, and betrayal—by introducing self-consciously witty dialogue, formal inventiveness, and slick yet casual violence. As a result he raised what had been traditionally judged as a B movie genre to an avant-garde art form. His style has become like a brand name in the film industry. Celebrating popular culture and capitalizing on the political correctness backlash of the 1990s, Tarantino’s audiences are served a hearty dose of shallowness, ease, and familiarity combined

with as much violence and sex as an R rating can indulge. In addition to writing and directing he also acts, produces, and distributes films.

—Adrienne Russell

## Tarbell, Ida (1957-1944)

One of *McClure’s* muckrakers, Ida Tarbell changed the oil business in America. A female journalist was not common at the turn of the twentieth century, especially not one who muckraked or scandalized industry. From *McClure’s* excerpts, Tarbell published the two volume *History of Standard Oil* in 1904. In it she revealed the many unfair business practices of Standard Oil and owner John Rockefeller. Tarbell became a whistleblower on the most powerful trust in America. She earned the name the Joan of Arc of the oil region. The government broke up the Standard Oil Company in 1911.

Ida Tarbell was born in Titusville, Pennsylvania, to an oil baron father, Franklin Tarbell. Ida, the only female freshman, attended Allegheny College and gained a degree in biology in 1880, and joined the staff at *McClure’s* magazine with muckrakers Ray Stannard Baker and Lincoln Steffens. Her inquiry into Rockefeller was not all from professional interest; her father invented wooden barrels to hold oil and attained great wealth, but nearly went bankrupt when he failed to sell his business to John Rockefeller. His ultimate victory, however, would come when *The History of Standard Oil* and its revelations led to the break up of the largest corporation in America.

Ida Tarbell was also a historian. Her first major publication in 1895 was on Napoleon and Josephine Bonaparte. She wrote eight books on Abraham Lincoln, his relatives, and his family. In fact, until the release of Abraham Lincoln’s Papers in 1947 she was considered the measure of Lincoln history. Ida Tarbell made her mark in an era when women journalists were often not taken seriously.

## Tarkanian, Jerry (1930—)

Jerry Tarkanian—ever so appropriately nicknamed “Tark the Shark”—is both one of the most talented and controversial college basketball coaches in the history of the sport. His nineteen-year tenure at the University of Nevada-Las Vegas began in 1973, and was highlighted by a quartet of appearances in the Final Four, a national championship in 1990, and an overall record of 509-105. Nonetheless, throughout his UNLV career, Tarkanian constantly was in conflict with the National Collegiate Athletic Association, the governing body of college sports. In the late 1970s, the NCAA placed the Runnin’ Rebels’ hoops program on two years’ probation for recruiting violations. The school was directed to suspend its coach—an action that Tarkanian blocked with a court order. He also sued the NCAA, albeit unsuccessfully—although the case went all the way to

the Supreme Court. And yet another clash between Tark and the NCAA ended up in the Supreme Court, in which the justices rejected the coach's attempt to resurrect a Nevada state law that had shielded Tarkanian and his UNLV associates, who had been charged with breaching NCAA regulations.

Two years after UNLV won the national championship in 1990, the NCAA commenced another major investigation of Tarkanian. This time, the coach resigned under pressure—and yet again sued the NCAA, accusing the organization of trying to run him out of college basketball. The suit was settled in 1998, just before it was set to go to trial. While admitting no liability, the NCAA paid Tarkanian \$2.5 million. “They can never, ever, make up for all the pain and agony they caused me,” Tarkanian observed. “All I can say is that for 25 years they beat the hell out of me.” Tarkanian eventually signed on as the basketball coach of Fresno State, from which he had graduated in 1955. However, the conflict surrounding him did not subside. In 1997, controversy again swirled on campus when it was revealed that the Bulldogs had recruited a convicted wife abuser, and two of his players were accused of assaulting their girlfriends. The following year, two players were jailed on charges of grand theft and assault with a deadly weapon. Nonetheless, Jerry Tarkanian remains a seminal figure in the sport of college basketball, where his unconventional style combined with his phenomenal success, have left a deep and lasting impact on the game.

## Tarkington, Booth (1869-1946)

A prolific and versatile writer of mainstream fiction, (Newton) Booth Tarkington is remembered for his portrayals of middle-class life in late nineteenth- and early twentieth-century Indiana. His best known works, *The Magnificent Ambersons* (1918) and *Alice Adams* (1921), were awarded the first and the fourth Pulitzer Prizes for literature. The former was adapted for the screen by Orson Welles in 1942, and the latter is considered by critics to be Tarkington's finest accomplishment. A novelist, playwright, essayist, and briefly a politician, Tarkington produced a total of 171 short stories, 21 novels, 9 novellas, and 19 plays along with a number of movie scripts, radio dramas, and even illustrations over the course of a career that lasted from 1899 until his death in 1946. Having achieved a wide audience but not the lasting respect of critics, most agree that his finest work was done around the time of World War I.

Born in Indianapolis, Indiana, to the sort of comfortably well-established family that he later popularized in his fiction, Tarkington dictated his first short story to his sister at the age of six, and by the age of 16 had written a 14-act work on Jesse James. After graduation from Princeton, Tarkington moved to New York and labored futilely for

Booth Tarkington

five years to get his work published before turning to his own background for inspiration. Said Tarkington, “I had no real success until I struck Indiana subjects.” He later described his first book, *The Gentleman from Indiana*, as “an emotional tribute to the land of my birth.” A commercial success, it received only lukewarm comment from critics, many of whom labeled it an unrealistic romance. Thus was a general pattern set for Tarkington's career. A 1991 *Dictionary of Literary Biography* entry on Tarkington suggested that “Although he had more talent than most of his contemporaries, his work never quite achieved major significance, and he had to be content with a large rather than a discriminating audience.”

In 1902, Tarkington married Laurel Louisa Fletcher and was elected to the Indiana House of Representatives as a Republican, though he was forced to vacate his seat a year later due to an illness. The couple spent most of the next decade traveling through Europe, but Booth's happiness, as well as his writing, were disrupted by bouts of excessive drinking and finally by divorce in 1911. One year later he married Susanah Keifer and took up his literary career again full-time. In 1914 he began work on his “Penrod” stories, which recaptured boyhood life in the late nineteenth century. In the postwar years, Tarkington's career reached its zenith with two Pulitzer Prizes. His prolific output during this time was not accidental; by all accounts he was a literary workhorse sometimes putting in 18-hour days of solid

writing with little or no diversion until the task of the moment was complete. The popularity of this work made him financially comfortable, and beginning in the 1920s Tarkington settled in to what he called “the milk run”—summers at Kennebunkport, Maine, and winters in Indianapolis. Cataracts gradually diminished his sight, and in 1930 he went completely blind. Surgeries successfully returned a part of his vision a year later, but his vitality was diminished. He turned primarily to children’s stories in the final phase of his career, while also becoming a significant collector of art. He died in 1946 after an illness.

The volumes that Tarkington completed over the course of the first half of the twentieth century form a documentary testament of industrialization, urbanization, and social flux in urban middle America. Biographer James Woodress characterized his body of work as “a paradigm of growth in the Midwest.” In his fiction, Tarkington clearly expressed his distaste for the bustle and grime of urban life. *The Magnificent Ambersons* documented the incursion of the dirty streets, unkempt masses, and smoke-filled air of the industrializing metropolis into an idyllic nineteenth-century world. Part of the tragedy of the book is aesthetic as the beautiful estate of the great family is vanquished by bland, utilitarian architecture and uncultured people. Yet, ironically, Tarkington chose to spend much of his adult life in the city whose fall he lamented in his fiction. Addressing this paradox, Tarkington said, “I belong here, I am part of it, and it is part of me. I understand it and it understands me. I would be out of touch with what I know best if I did not spend at least part of each year in Indianapolis.”

In describing his style, an anonymous reviewer in the *North American Review* commented, “Mr. Tarkington is neither a realist, nor a romanticist, nor a localist, nor an impressionist, nor any special kind of literary artist, but simply a complete novelist.” Tarkington himself fought the impetus to pigeonhole his work, vehemently rejecting the label of “romanticist” that some reviewers tried to force upon him. His literary heroes were Mark Twain and especially William Dean Howells. Dickinson quoted Tarkington on his wholesome, all-American tastes: “[He] admires all those things which every decent, ordinary, simple-hearted person admires,” and “hates precisely those things hated by all honest, healthy, ‘American,’ people.” Yet, Tarkington was nonetheless criticized by some conservative contemporaries for his critique of the American fascination with wealth, superficiality, and what he often referred to as “bigness” as ends in themselves, an overriding selfishness that he saw leading society toward mental and spiritual degeneration.

Tarkington lives on through his two Pulitzer-winning novels, the “Penrod” stories, and Orson Welles’ 1942 film adaptation of *The Magnificent Ambersons*. These are remembered for their sentimental and socially conscious renderings of boyhood and middle-class life in the American Midwest around the turn of the century. Tarkington is not considered a literary genius, despite the Pulitzers. Instead, his legacy is as one of the most popular writers of the first half of the twentieth century—a period in which he sold more than five million volumes.

—Steve Burnett

## Tarzan

Edgar Rice Burroughs’ Tarzan, the world’s best-known apeman, first swung into view in the pages of a pulp fiction magazine in 1912. The Lord of the Jungle went on to conquer the media, including books, movies, comic strips, radio, comic books, and television. Burroughs was in his middle thirties and had failed in several professions—including being an instructor at a military academy, running a stationery store, and working as a salesman of pencil sharpeners—when he turned to the writing of pulp fiction in the second decade of the twentieth century. His first published work was a serial titled *Under the Moons of Mars*. It introduced his science fiction hero John Carter and started in the February 1912 issue of *All-Story* magazine. Later that same year, borrowing from the works of such writers as H. Rider Haggard and Rudyard Kipling, Burroughs invented his major character. His novel *Tarzan of the Apes*, subtitled “A Romance of the Jungle,” appeared in its entirety in the October issue of *All-Story*.

Tarzan, like Kipling’s Mowgli, was a feral child. In the case of young John Clayton, the future Lord Greystoke, the little boy was raised by apes in the wilds of Africa. His parents, Lord and Lady Greystoke, were marooned on the African coast by the mutinous crew of the ship they’d been traveling on. Tarzan’s father built a hut for himself and his pregnant wife, and it was there that the boy was born. His mother died soon after and his father was later killed by an attacking band of great apes. But a female ape named Kala, who’d just lost her own offspring, adopted and raised the child. “The apes called him Tarzan, meaning white-skin,” as the comic strip version explained. “He grew up among them. He learned to speak their language and he lived as they did, in the trees.” Somewhere along the way the wild child learned modesty and took to wearing a sort of sarong fashioned from a leopard skin. He later, after stumbling upon his family’s hut, discovered books and taught himself to read. As his knowledge increased, the boy began to suspect that he was no ordinary ape.

Burroughs was basically a fantasist and well aware that in a real life situation, his little white-skinned hero wouldn’t have made it to his first birthday. But it was more fun ignoring reality. The novice author also didn’t have much of an idea of what Africa was really like. In the pulpwood version of *Tarzan of the Apes*, Burroughs included a tiger named Sabor among his animal cast. His editor didn’t catch this, and it took a reader to write in and point out that “the tiger is not and never has been included in the fauna of the African continent.”

Eventually Tarzan encountered other humans. Initially they were natives, and the earliest interactions were far from cordial. Then

The cast of the *Tarzan* films (from left): Jane (Maureen O'Sullivan), Tarzan (Johnny Weismuller), Boy (Johnny Sheffield), and Cheetah.

another group of mutineers arrived in his stretch of wilderness. This bunch had captured a group of treasure seekers headed up by Professor Porter and included his daughter Jane and Tarzan's cousin William Cecil Clayton, the present Lord Greystoke and suitor of Jane Porter. Once Tarzan, now a full grown young man, encountered Jane, he was smitten. He proceeded to rescue her and her friends and to arrange a jungle interlude, perfectly innocent, with her. Eventually, however, she sailed back to America, leaving her Jungle Lord behind. Tarzan, with the help of a new friend, was able to establish that he was the true Lord Greystoke. But when he followed Jane to her home, he became convinced that she actually loved the other Clayton. So rather than tell her or William Clayton the truth, he delivered one of the great curtain lines in fiction—"My mother was an Ape. I don't know who my father was."

In addition to Kipling and Haggard, Burroughs was very much influenced by Victorian fiction in general. Tarzan is very much a typical Victorian hero, a fellow who is a gentleman to the core. And just as true gentlemen like *Oliver Twist* and *David Copperfield* survived in the urban jungle of nineteenth century London, Tarzan

survived in the jungles of Africa and proved that he, too, was a gentleman. A gentleman, if he's honest and right-thinking, can't be kept from rising to his true rank in society. And in the next several books John Clayton did just that, eventually winning back his title and marrying Jane. Burroughs, knowing his audience well, always made certain that there was an abundance of jungle action, lost cities, cruel villains, lovely maidens, wild savages, white goddesses, and untamed beasts in each subsequent Tarzan book.

Tarzan's conquest of the media began almost at once. In 1914, *Tarzan of the Apes* appeared as a hardcover novel. Eventually there would be two dozen novels about the apeman, the majority of them serialized in pulp magazines, such as *Argosy* and *Blue Book*, prior to publication. *Tarzan of the Apes* became a silent movie in 1918. Barrel-chested Elmo Lincoln, who'd portrayed a blacksmith in *The Birth of a Nation*, was the first screen Tarzan. He was followed in the role by such actors as Frank Merrill, James Pierce (who married Burroughs' daughter Joan) and P. Dempsey Tabler. In the talkies of the 1930s, Buster Crabbe, Bruce Bennett (under his real name of Herman Brix) and Glenn Morris all took turns at wearing the leopard

skin. But the definitive Tarzan of that decade, as well as of the 1940s, was Johnny Weissmuller. Not an actor but a record-breaking swimmer, he was in his late twenties when he first took to the trees for MGM's *Tarzan the Ape Man*. It's said that he beat out such contenders as Joel McCrea, Johnny Mack Brown, and Clark Gable for the part. W. S. Van Dyke directed the film, and Maureen O'Sullivan played Jane.

MGM's Tarzan was not the articulate gentleman of the novels. He was a rather primitive fellow not much more versed in human speech than one of his apes. "My lines read like a backward two-year-old talking to his nurse," Weissmuller once complained. The major reasons for making his screen apeman less than fluent were probably Weissmuller's slightly fluted voice and his evident inability to get conviction into any line of dialogue containing more than a half dozen words. For swimming, grappling with man and beast, rescuing Jane, and swinging from tree to tree on a vine, though, he had no equal. An assortment of others, usually athletes rather than actors, succeeded him in the role in the more than 50 films created around the Tarzan character. Of all the Tarzan films, however, the 1984 *Greystoke: The Legend of Tarzan, Lord of the Apes*, best captures Burroughs' original vision of the character.

Tarzan came to the comic pages as a daily strip in 1929, with a Sunday page added in 1931. The dailies, for several years, were anonymous adaptations of the Burroughs' novels. There were no dialogue balloons or sound effects, and the copy, set in type, ran below the pictures. Hal Foster, a seasoned advertising illustrator by then, drew the first sequences. Having little faith in comics and even less love for Tarzan, he soon dropped the project, and a less gifted artist named Rex Maxon took over drawing the daily and the Sunday. Burroughs, who had originally wanted pulp illustrator J. Allen St. John for the job, never thought much of Maxon's rendering of his hero, nor of the jungle denizens. Since United Feature Syndicate had the final say, all the author could do was write disgruntled letters to the editors there. These apparently had some effect, because Foster was eventually persuaded to come back and draw the Sunday *Tarzan* page.

Foster's pages were impressively and ambitiously drawn, and he could render ancient Egyptian civilizations surviving in contemporary Africa, Viking pirates, prehistoric monsters on the rampage, and even a foxhunt in rural England with equal ease. When he left the feature in the middle 1930s, he was replaced by Burne Hogarth. Among the subsequent artists were Bob Lubbers, Russ Manning, Gil Kane and Gray Morrow.

United Feature included reprints of *Tarzan* in the lineup of *Tip Top Comics*, launched in 1936, and subsequently also in *Comics On Parade* and *Sparkler Comics*. Dell introduced original adventures of the jungleman in 1947 with artwork by former Disney artist Jesse Marsh. In later years, both Marvel and DC Comics tried, unsuccessfully, to make a go of a comic book devoted to the character. The chief artist at DC was Joe Kubert. Tarzan's influence in the comics did not die with his strip; other comic strips used the character for comic effect, including Sam Watterson's *Calvin and Hobbes* (in 1986), Gary Larson's *The Far Side* (1991), Dan Piraro's *Bizarro* (1997), Gary Blehm's *Penmen* (1997), Wiley Miller's *Non-Sequitur* (1997), and Mike Peters' *Mother Goose and Grimm* (1998), among others. Burroughs' hero also appeared in Big Little Books, on the radio, and on television. Disney also produced a full-length animated feature.

## Taxi

At the Sunshine Cab Company on the television series *Taxi* (1978-1983), everyone comes off a little angry for putting in long hours at an unrewarding job while yearning for something better. Everyone that is except for Alex Reiger (Judd Hirsch), the only practical thinker in the entire garage who declares in the initial episode, "Me? I'm a cab driver. I'm the only cab driver in this place." Like Ralph Kramden in *The Honeymooners*, each week the characters of *Taxi* would take a new chance at success only to return to the garage defeated but still hopeful about the future.

*Taxi* was not only one of the best situation comedies of the latter 1970s, it was also one of the most awarded and critically acclaimed. It won 18 Emmys in its five year run (winning the Outstanding Comedy Series Emmy the first three of those years), and helped to launch the careers of Danny DeVito and Christopher Lloyd.

The cast of *Taxi*.

The series came into existence solely on the track record of its writer-producers, James L. Brooks, Stan Daniels, David Davis, and Ed Weinberger, who had been behind the highly successful *Mary Tyler Moore Show* and its spin-offs. The four men decided to leave MTM and form their own production unit at Paramount Studios, which they named John Charles Walters Productions after a sign Weinberger had seen in an English pub. There was no such person at the company, but the name sounded dignified.

Wanting to get away from shows about white collar women workers, James Brooks decided to revive an idea he had with David Davis about doing a show concerned with taxi drivers, an idea once considered in conjunction with Jerry Belson (co-creator of *The Odd Couple* TV series) before it was abandoned. The producers had persuaded MTM to purchase the rights to an article on cabbies by Mark Jacobson that ran in the June 21, 1976 issue of *New York* magazine. Grant Tinker of MTM agreed to sell the rights for the article to the new production company for the same amount that he had purchased them for—\$1,500.

The part of Alex Reiger was written with Judd Hirsch in mind, but after the failure of his series *Delvecchio*, Hirsch was reluctant to return to television until he read the show's first script. While Reiger would sometimes be troubled by philosophical questions when not dispensing advice to the others, Louie DePalma (DeVito), the firm's disagreeable, dishonest dispatcher never seemed to suffer from hurt feelings or a troubled conscience.

The DePalma character was originally a minor part until casting director Joel Thurm brought in Danny DeVito who walked into the office in character and quickly came to dominate the show just as he did the garage. By and large, the show resisted using gratuitous insults and wisecracks, with the exception of DePalma, who was given to saying things like, "Banta, sometimes I wish you were smarter just so you could see how dumb you are" or "Fill out this form, and I hope you fill it out better than you fill out your pants." DePalma provides the conflict and is the enemy that the other cabbies band against.

Other characters went through changes as well. Tony Danza's Tony Banta character was originally supposed to be a punch-drunk Irish heavyweight rather than an unsuccessful young boxer, while Marilu Henner's Elaine Nardo character was supposed to be a tough-minded Italian woman in her thirties rather than a young, divorced woman looking to make ends meet, but the producers altered the characters to fit the performers they selected.

The characters on the show were realistic, except for Latka Gravas (Andy Kaufman), the cheerful mechanic from a mythic foreign country, who was included because the producers had enjoyed Kaufman's stand-up act and wanted to incorporate the kind of material he did into the show. Other characters included an aspiring actor Bobby Wheeler (Jeff Conway) unable to land a part, and Reverend Jim Ignatowski (Christopher Lloyd), a former hippie burn-out and minister of the "Church of the Peaceful" who seemed off in his own world and had an infinite number of peculiarities. Rev. Jim had been written as a one-shot, and was recruited to become a regular the second season when the shy John Burns' character—played by Randall Carver—was written out of the show.

What makes the show a classic is the enormously high quality of the writing and the acting that went into the series. *Taxi*, like *M\*A\*S\*H*, found a way to bring humor to what would often be potentially tragic situations. The characters are often estranged from other family and by being co-workers become friends, forming an unlikely family of their own. Hirsch was particularly adept at picking out subtle, perceptive nuances in his performances, while Kaufman,

Carol Kane (who played Latka's wife Simka), and Christopher Lloyd were simply off-the-wall wacky and amusing. The entire cast was nominated for a Golden Globe Award in 1979.

Left alone by the network and given a good time slot, *Taxi* started off as a resounding success, finishing its first two seasons in the top twenty. However, in the third season, ABC moved the series to Wednesday night and saw the ratings fall off. When it was moved to Thursdays the following season, it did even worse, falling to 53rd place, and it was soon canceled despite its Best Comedy Series Emmy wins.

Strangely enough, Grant Tinker left MTM in 1981 to become the head of the NBC Network, where he promoted the idea of quality programming. He beat out a bid from HBO for giving the series a second chance, and *Taxi* was picked up by NBC for its fifth and final season. (DeVito recorded a promo as DePalma snarling, "Same time, better network!").

Unfortunately for the show's followers, the numbers remained low. The following September when the Academy of Television Arts and Sciences presented the series with three Emmys, Outstanding Lead Actor in a Comedy Series winner Hirsch quipped, "Don't they know we've been canceled?" In accepting his award, Hirsch declared, "If you can't get it out of your mind, if you have to keep giving laurels to us, then you should put it back on the air." However, there was to be no second reprieve, though the series proved very successful in syndication.

## *Taxi Driver*

*Taxi Driver* captured the angst felt throughout America in the post-Vietnam era. Directed by Martin Scorsese, *Taxi Driver* (1976) is a psychological drama and a tale of alienation, displaced sexuality, and life in the big city. The film stars Robert De Niro, Harvey Keitel, Cybill Sheperd, Jodie Foster, Peter Boyle, and Albert Brooks. Scorsese's male protagonists tend to be energetic, violent, and driven toward public recognition; Travis Bickle, played by De Niro, is no exception. Travis is a Vietnam-era vet who yearns to "be somebody" but only succeeds in becoming increasingly deranged and lonely as the film progresses. Scorsese's cinematography and the cast's skillful acting made *Taxi Driver* an enduring portrait of one of America's most disconcerting periods.

Set in New York City, *Taxi Driver* traces the daily habits of Travis as he drives his cab through the city, working long hours to avoid the monotony of his life. The film opens with shots of De Niro's eyes looking at the world from behind the glass windshield of his cab, calling to mind his isolation from society, which becomes magnified with time. Travis' life changes when he falls for a political campaign manager named Betsy, played by Cybill Sheperd. Betsy's rejection of

Robert De Niro as Travis Bickle in *Taxi Driver*.

Travis instigates his obsession with guns and fixation with the idea of rescuing a teen-age prostitute he meets in his cab, played by Jodie Foster.

Travis simultaneously destroys his body with drugs, alcohol, and junk food, and yearns to get himself into shape and to get his life organized. These two poles of his personality are best illustrated by an infamous scene in which Travis has a standoff with his mirror image. Travis looks at himself in the mirror and utters the most frequently quoted lines in the film: “You talking to me? You talking to me? You talking to me? . . . Well I’m the only one here.” This scene enacts the construction, rehearsal, and performance of masculinity. In the privacy of his own room, Travis practices the role of the type of man he would like to be and calls to mind the anxiety embedded in the process of striving for this masculine ideal in the American post-Vietnam era.

The score for *Taxi Driver* was written by Alfred Hitchcock’s composer, Bernard Herman, and completed the day before he died. While he collaborated with Hitchcock on many films, Herman is most famous for composing the soundtracks for *Psycho* and *Vertigo*. Like many of Hitchcock’s films, *Taxi Driver* is a film about making movies. In a direct reference to Hitchcock, Scorsese appears in a shot at the beginning of the film. He later acts in a scene in which he and De Niro gaze at the silhouette of a woman through an apartment window (calling to mind Hitchcock’s *Rear Window*). The cinematic spectator is continually addressed by shots of De Niro watching movies, films, projectors, the gazes of secret service men through photographic lenses, Travis’ mirror, and the car window through which Travis experiences much of the world.

Director Martin Scorsese grew up in an Italian-American community in Little Italy. He entered a seminary after grammar school

only to be asked to leave at the age of fourteen after falling in love with a girl. Scorsese attributes much of his cinematic fascination with issues of family loyalty, hierarchy, and spirituality to his early years in Catholic school. He made his first short film in high school and went on to study film at New York University. While most of Scorsese’s earlier body of work deals with issues pertaining to Italian-American identity, later in life, he began to turn his camera away from Little Italy with films such as *Alice Doesn’t Live Here Anymore*, *The King of Comedy*, *After Hours*, *The Last Temptation of Christ*, and *Kundun*. This is certainly not to say that Italian-American themes have not played a continual role in Scorsese’s work. His 1990s films such as *Goodfellas* and *Casino*, and standards such as *Raging Bull* and *Mean Streets* point to his continuing interest in exploring stereotypes of Italian-Americans through mafia narratives.

## Taylor, Elizabeth (1932—)

Fame and notoriety attached themselves to Elizabeth Taylor very early in her life and never left her. It is more than likely that she will forever occupy a place in both cultural and social history as twentieth-century America’s most celebrated woman—as well as one of its most beautiful—and certainly Hollywood’s last genuine star in the great tradition. Whether in good films or bad, the pull of her magnetic presence continually drew hordes of fans, mesmerized by her screen persona and her off-screen life, which took on the aura of myth.

A national institution and a living legend, Taylor became the paradigmatic exemplar of media-driven notions of celebrity, and an emblem of outrageous excess—conditions that defined her adult image. Her extraordinary, colorful and, indeed, remarkable life, made her an object of constant fascination to the public, among whom she variously evoked admiration, even worship, as well as periodically inviting derision or attracting moral outrage. However, the notoriety that has attached to her fabled marriages (seven husbands, eight weddings), her abundant wealth, her disappointments and tragedies, her many illnesses, weight problems, and battles with substance abuse, served seriously to overshadow her acting achievements to the detriment of her professional reputation.

By the time she voluntarily retired from filmmaking after a character role as Pearl Slaghoople in *The Flintstones* (1994), her 51st

**Elizabeth Taylor**

and last film, Elizabeth Taylor had the longest postwar career of any actress in Hollywood. It was largely as undistinguished as it was lengthy, her abundance of talent and intelligence too often buried, as she herself observed with her customary candor, in a welter of mediocrity. Nevertheless, among her credits, the handful of good roles in worthwhile films rightfully earned her five Academy Award nominations and two Oscars, the French Legion d'Honneur, and the American Film Institute Lifetime Achievement award; while her eloquent campaigning for causes, notably in the field of AIDS research, brought her the Academy's Jean Hersholt Humanitarian Award.

Elizabeth Rosemond Taylor was born in Hampstead, London, on February 27, 1932, the daughter of American parents. Francis Taylor was an art dealer and his wife Sara was a socially ambitious former stage actress. Thanks to their influential connections, Elizabeth and her elder brother Howard enjoyed a privileged early childhood. To escape World War II, the Taylors returned to the United States in 1939, finally settling in Beverly Hills, where Francis opened a fashionable gallery in the Beverly Hills Hotel. With child and teen stars a popular fixture of Hollywood movies at that time, Sara Taylor was determined that her pretty, violet-eyed daughter would be one of them.

A shy child who loved animals, Elizabeth had no desire to become an actress but, in the grip of an iron-willed mother, found herself at age nine auditioning for MGM, who turned her down, and Universal who took her on. She made her debut playing an objectionable brat with little to say in a poor comedy programmer called *There's One Born Every Minute* (1941), after which the studio dropped her. She lived the natural life of a child again until late the

following year when she made *Lassie Come Home* for MGM, beginning a contractual association with MGM that lasted until the early 1960s. The studio immediately lent her to Fox for a tiny role as the child who dies in *Jane Eyre* (1943), after which she was enrolled in the MGM schoolroom, and appeared (mostly in small featured roles) in a string of films that were largely forgettable. It was the death of normality. Owned by the studio and controlled by her mother, Elizabeth did as she was told, her self-image gradually shaped by her movies, her adolescence a fantasy lived through the roles she played.

In 1943, while training for her first major role—in *National Velvet*—Elizabeth fell from her horse and sustained a spinal injury, the first of several such over the course of her life. When the film was released in 1944, her performance as Velvet Brown who, disguised as a boy jockey, wins the Grand National, enchanted critics and audiences alike. Fresh, natural, and vivacious, the 12-year-old also revealed the beginnings of her great beauty that even the braces on Velvet's teeth failed to mar. Over the next few years Elizabeth was transformed from sparkling teenager to ripening, sensuous woman, with no intermediate stage. As the eponymous *Cynthia* (1947), her role sounded a perilous echo of her own life—an over-protected, over-controlled teenager battling with her mother (Mary Astor) to gain adolescent freedoms; in *A Date with Judy* (1948) she was the sophisticated, sexy, and knowing teenager who sets out successfully to catch the man (Robert Stack, aged 29) earmarked for Judy (Jane Powell).

In a radio interview with Louella Parsons just before the release of *Cynthia*, the 15-year-old rising star, who had not yet been allowed a boyfriend, said that she wanted to be a great actress, but added, with ironic prescience, "most of all, I want to snare a husband." Meanwhile, MGM sent her to England in late 1948 to play a wife—married to Robert Taylor—in *Conspirator*, a film whose only merit was to reveal the actress's burgeoning beauty, talent, and physical maturity. She was 17.

All eyes were on the young Elizabeth Taylor by 1949, a year in which she made the cover of *Time* magazine, became engaged to the wealthy and eligible William Pawley Jr. in a blaze of publicity, broke the engagement when he demanded she give up the career to which she was now totally committed, and, on loan to Paramount, began work on *A Place in the Sun*. Under the guidance of director George Stevens, her performance marked a new seriousness in what was the most significant film of her career to that date and one of the best she had ever made. Elizabeth, at her most incandescent as the young heiress ensnared in a doomed love affair, starred opposite Montgomery Clift. Offscreen, they adored one another, but it was a hopeless situation for the deeply infatuated Elizabeth, who learned to settle for a close and enduring friendship with the homosexual Clift, and fell in love with Nicky Hilton instead.

She met Hilton, heir to the hotel fortune, while filming *A Place in the Sun* and married him in May 1950. The extravagant "fairytale" wedding was glitteringly stage-managed by MGM, as was the release of her new film, rushed out to coincide with her nuptials. The resulting publicity made *Father of the Bride*, in which Elizabeth starred as the about-to-be wed daughter of Spencer Tracy and Joan Bennett, one of the studio's most profitable hits. The real-life, 18-year-old bride left on an extended European honeymoon during which she discovered that her husband was a neglectful, abusive, womanizing drunk. By December the marriage was over. Bruised and bewildered, Elizabeth went back to work, moved to her own apartment for the first time, and was squired by choreographer and director Stanley Donen. MGM

disapproved, and sent her to England in June of 1951 to play a secondary role in *Ivanhoe*.

By the time she returned, *A Place in the Sun* had placed her firmly in the upper echelon of stardom, and she was in love with Michael Wilding, the British actor who, at 38, was twice her age. Demonstrating the willful determination that became one of the hallmarks of her character, she virtually proposed to him, and they married in 1952. The couple had two sons, but their floundering marriage, doomed from the start by the inequity of age and status, was over by 1956, the release year of *Giant* in which Elizabeth gave a fine dramatic performance opposite Rock Hudson and James Dean, and the year she began making *Raintree County*.

A lavish period drama which cast Elizabeth as a Southern belle tormented in love, *Raintree County* (1957) brought the actress her first Oscar nomination but, during filming, Montgomery Clift had the car crash which famously left its mark on his beauty. Elizabeth, who had been devastated by the death of her friend James Dean in similar circumstances, was first at the scene, cradling his bloody head in her lap. She remained his closest friend, and it was reportedly at her insistence that he then seriously drug- and alcohol-addicted actor was cast in *Suddenly Last Summer* (1959)—the film which brought her an Oscar nomination for her performance as Katharine Hepburn's traumatized niece.

In 1957, Elizabeth was swept off her feet by the flamboyant producer and impresario Mike Todd (born Avrom Goldbogen), 24 years her senior. She converted to Judaism and married him in Acapulco in February 1957. The best man was Todd's great friend, crooner Eddie Fisher. August brought the premature and difficult birth of Liza Todd, and Elizabeth was warned that she could have no more children. (Three years later she adopted a German-born daughter, to be known as Maria Burton). In March 1958, Elizabeth had begun filming *Cat on a Hot Tin Roof* with Paul Newman when Todd's plane, *Lucky Liz*, crashed in a storm. A hysterical and grief-stricken Taylor emerged from sedated seclusion to complete the film, giving a performance of powerful depth as Tennessee Williams's unhappy Maggie the Cat and earning a well-deserved Oscar nomination.

Eddie Fisher provided solace in her grief. When he divorced his wife, Debbie Reynolds, to become Taylor's fourth husband, the star's sympathetic public, fueled by the tabloids, turned hostile, branding her a home-breaker. (In truth, the Fisher-Reynolds marriage had been in crisis for some time.) Eddie and Elizabeth married in a Las Vegas synagogue in May 1959, the year she was approached by Walter Wanger to play the title role in *Cleopatra*. Facetiously agreeing to consider the offer for a fee of one million dollars, Taylor was astounded when Twentieth Century-Fox agreed to this unprecedented and astonishing sum. But first she had a contractual obligation to fulfill at MGM.

The vehicle chosen for her was *Butterfield 8*, in which she played Gloria Wandrous, high-class hooker and nymphomaniac who pays for her sins by dying in the wreckage of her sports car. The moral climate and censorship rules of the time caused endless headaches in the search for compromise, resulting in a sub-standard and tacky film that, from the outset, Elizabeth was opposed to making. Despite the roller-coaster ride of her private life and her volatile temperament, she was no scarlet woman, and her eventual forced acquiescence represented a tough battle that the studio won. She co-starred with Laurence Harvey and, at her insistence, her husband Eddie Fisher. Despite the odds, Elizabeth, the throat scar from her recent surgery largely concealed, gave a convincing performance which, ironically, brought her first Oscar win, thought to have been awarded on the

sympathy vote. (Co-nominee Shirley MacLaine famously remarked, "I lost to a tracheotomy.")

In September 1960, Elizabeth Taylor arrived in London to begin work on *Cleopatra* for director Rouben Mamoulian. Her co-stars were Stephen Boyd (Antony) and Peter Finch (Caesar). By October 10, Elizabeth was ill, and by November 18, her recurring infections led to the temporary shutdown of filming. She flew to Palm Springs to recuperate and returned in January 1961 to resume work. Mamoulian had resigned and was replaced by Joseph L. Manckiewicz who set to work on script changes. At this time, the *Motion Picture Herald* top ten box-office poll was announced, with Elizabeth Taylor at number one. While work on the script dragged on, the Taylor-Fisher retinue, installed at the Dorchester Hotel, lived like royalty, with "Queen" Elizabeth exhibiting the extravagance for which she became renowned. She had her favorite foods specially flown in from several corners of America, as well as from France and Italy and, while Manckiewicz rewrote the script, she shopped. The marriage to Fisher was not turning out to be a success.

On March 4, 1961, Elizabeth became dangerously ill and was rushed to the London Clinic where emergency surgery was performed. For some days she hovered between life and death while the world (and Twentieth Century-Fox) held its anxious breath, but emerged from the clinic on March 11 having made, according to the surgeons, a miraculous recovery. Restored to favor by her adoring public, the world's most famous glamour icon departed to California for necessary rest and recuperation, and collected her *Butterfield 8* Oscar while *Cleopatra* was once again shut down and rescheduled to shoot in Rome.

The Taylor-Fisher entourage—three children, several dogs and cats, and a large staff—arrived in Rome on September 1, and took up residence at the Villa Papa, a seven-bedroom mansion set in eight acres of gardens a few minutes from the Cinecittà studios. Delays in filming had brought cast changes, and the new Mark Antony, Richard Burton, was occupying a nearby villa with his family. Filming began on September 25, fraught with the problems of a half-finished script and uncompleted sets. Amid the chaos, Elizabeth remained calm and professional—and fell head-over-heels in love with Richard Burton.

Their affair was most protracted and public adultery that the modern world had yet beheld; and the world remained at once scandalized and transfixed by the affair for the best part of 14 years in the face of the Taylor-Burton antics. The complexities of double divorce prevented the couple from marrying until March 1964, during Burton's Canadian season of *Hamlet*, by which time they had made *The VIPs* (1963) together. It was a feeble British film that cashed in shamelessly on the couple's notoriety, but worse was to follow with the risibly awful *The Sandpiper* (1964). Professionally, the liaison marked a period of decline for both of them. Their fees (never less than a million plus for Taylor) were grossly disproportionate to the quality of their joint ventures, with the shining exception of *Who's Afraid of Virginia Woolf?*; this screen adaptation of Edward Albee's play revealed a hitherto unthinkable Taylor: blowzy, loud, passionate, and vitriolic as the embittered Martha, locked in a poisonous game with her husband George. It was a *tour de force*, the finest work of her career, and her second Oscar was a fitting tribute to her committed and lacerating performance.

The Burtons, inescapably, were famous for being famous. They were also famous for their drinking binges, their rows, and their astonishing extravagances. They became a kind of traveling circus, buying an ocean-going yacht, several homes, priceless paintings and, for Elizabeth, jewelry. Burton bought his wife the Krupp diamond

(\$305,000), the historic “La Peregrina” pearl (\$37,000), the Cartier diamond (\$1.1 million), and the Shah Jahan yellow diamond (\$900,000). By 1972, the marriage was in trouble and 1973 saw the announcement of a separation and a failed attempt to reconcile. They were divorced in 1974, remarried on the banks of an African river in Botswana in 1975, and parted finally in 1976.

Between their endless travels and upheavals, Elizabeth had made numerous films, of which only *The Taming of the Shrew* with Burton and *Reflections in a Golden Eye* with Brando (both 1967) merited any real attention. At the end of 1976 she married ex-Secretary to the Navy John Warner, and settled in Virginia to play the role of the loyal politician’s wife. Her high profile campaigning helped her husband to the U.S. Senate, but she grew bored and put on weight; the couple separated in 1981. With her film career gradually petering out, Elizabeth took to the stage for the first time, playing Regina in *The Little Foxes* on Broadway and in London’s West End (1981-82). It was a brave stab at a medium for which she was totally untrained, but the public flocked to the show, and in 1983 she joined forces with Richard Burton, playing Amanda to his Elyot in Noel Coward’s *Private Lives* on Broadway. It was a risible exercise, really, but the public willingly paid inflated ticket prices to see the legendary pair.

In August 1984 Richard Burton died of a cerebral hemorrhage. Elizabeth collapsed at the news, but stayed away from the funeral for fear of causing a media stampede. She subsequently made a pilgrimage to Burton’s family in Wales and attended a memorial service in London before returning to make a TV movie (one of several during the 1980s, among them *North and South* and *Sweet Bird of Youth*). The following year brought more grief with the news that her friend Rock Hudson was ill with AIDS. Her publicized visit to Hudson’s bedside marked the beginning of her high profile campaigning for AIDS awareness and research funds, and it became her primary occupation as her acting career wound down.

Throughout the late 1980s, Elizabeth Taylor’s name was romantically linked with numerous men, among them actor George Hamilton and the multi-millionaire Malcolm Forbes. She made *Young Toscanini* (1987) in Italy for Franco Zeffirelli, which was shown at the Venice Film Festival, but was barely released. It was her last major screen appearance. Alongside her AIDS work, she launched the first of her perfumes (the aptly named “Passion”), and gave attention to her children and grandchildren. She continued, however, to be dogged with illnesses of various kinds and, increasingly, relied on pain-killing drugs. (According to biographer Donald Spoto, she suffered 73 illnesses, accidents and injuries requiring hospitalization between 1947 and 1994). Suffering the effects of drug dependency, she checked herself into the Betty Ford Clinic in 1988, where she met construction worker Larry Fortensky.

In October 1991, in a ceremony held at singer Michael Jackson’s ranch, thirty-nine-year-old Fortensky became fifty-nine-year-old Elizabeth Taylor’s seventh husband. It was a last act of personal folly, and the marriage was over by 1997, the year that she had an operation to remove a brain tumor. Once again, people the world over waited anxiously for the outcome but Elizabeth Taylor emerged, shaven-headed, to continue crusading on behalf of the less fortunate, demonstrating the truth of her own words, spoken in a 1987 interview: “I have no plans to succumb. I am a survivor.”

## Taylor, James (1948—)

Blending folk, country, and blues to create his own distinctive musical sound, James Taylor spearheaded the singer-songwriter movement in the 1970s. Born in Boston in 1948, Taylor began playing guitar at twelve and soon was performing at small folk gigs. But having struggled with depression at boarding school, at sixteen, Taylor checked himself into a mental hospital, where he graduated from high school. After moving to London in 1968, Taylor was the first outside artist signed to the Beatles’ Apple Records. Following the release of his first album, he returned to the United States in 1969, where his first single, “Carolina In My Mind” climbed the charts. In 1971, Taylor was featured on the cover of *Time* magazine as the “originator of the singer-songwriter era.” Described in *Time* as “a blend of Heathcliffian inner fire with a melancholy sorrows-of-young-Werther look,” Taylor was romantically linked to Joni Mitchell, but married singer Carly Simon in 1972, the same year he won his first Grammy. Throughout the 1970s and 1980s, Taylor continued to release critically and commercially successful albums, refining his style while maintaining his superb musical craftsmanship. Still touring to packed houses in the 1990s, Taylor’s 1997 album, *Hourglass*, rose to Number 9 on the Billboard chart and went platinum. Now in his fifties, James Taylor may be the granddaddy of singer-songwriters, but he remains a thoroughly contemporary musician and an ever-popular star.

## Taylor, Robert (1911-1969)

Typecast for most of his career as a handsome ladies man, Robert Taylor became a top box office attraction after his first major film in 1936 and continued to star in big budget movies for the next twenty years. The list of leading ladies who played opposite Taylor include some of the biggest stars of Hollywood’s Golden Age: Irene Dunne, Loretta Young, Barbara Stanwyck, Joan Crawford, Greta Garbo, Jean Harlow, Hedy Lamarr, Ava Gardner, Greer Garson,

Robert Taylor

Vivien Leigh, Norma Shearer, Katharine Hepburn, Elizabeth Taylor, and Deborah Kerr. Of his long association with MGM, Taylor said: "I stayed with one studio for twenty years, took what they gave me to do, did my work." Summarizing his treatment at the hands of movie critics, he said, "I never got raves, but neither did I get pans."

Born Spangler Arlington Brough (a name dear to trivia buffs), the son of a physician in Filley, Nebraska, Taylor initially decided on a medical career, but acting in amateur productions in college soon led him in another direction. He enrolled in a Los Angeles drama school, where a talent scout saw him in a production of *Journey's End*. After a screen test, he was signed by MGM to a seven-year contract, starting at \$35 a week. In his first film he played a supporting role to Will Rogers in *Handy Andy* (1934). A succession of low-budget pictures followed, but in 1936 he moved to number four in the box office ratings with the teary film, *Magnificent Obsession*, opposite Irene Dunne. Taylor starred in the role of a playboy who becomes a respected surgeon in order to restore the sight of a woman he had blinded in an automobile accident. After the film was released, all of the most glamorous Hollywood leading ladies wanted to play opposite the handsome young actor.

Two other important films followed in 1936—Taylor starred with Barbara Stanwyck in *His Brother's Wife* and with Joan Crawford in an historical drama, *The Gorgeous Hussy*. His sudden appeal at the box office led MGM to star him opposite Greta Garbo in *Camille*. Comparing him with the uniquely talented Garbo, critics were almost unanimous in calling the pairing one of the great mismatches of cinema history. Studio executives pointed out, however, that in the important area of ticket sales, Taylor ranked number three in 1937,

while Garbo was only number six. In 1937 Taylor played the more macho role of a secret service agent, who is ordered by President McKinley to join a gang of robbers to expose a powerful mob, in *This is My Affair*, opposite Barbara Stanwyck as a saloon-girl. Taylor and Stanwyck were married in 1939, a much-publicized Hollywood romance that lasted until 1952.

In the late 1930s, studios gave Taylor parts designed to draw more men to his pictures. He was the cocky, athletic young American in *Yank at Oxford* (1938), a boxer in *The Crowd Roars* (1938), and he even starred in a Western, *Stand Up and Fight* (1939). Taylor's own favorite film was the romantic *Waterloo Bridge* (1940), in which he played a soldier who meets a ballet dancer (Vivien Leigh) during a London air raid.

His most expensive film was *Quo Vadis* (1951), in which he essayed the role of a Roman centurion, which Gregory Peck had turned down. In the lavishly made movie, shot in Italy, Taylor falls in love with a Christian beauty (Deborah Kerr), in a plot that threatens to throw both of them to the lions. The movie grossed \$11 million, at that time the fourth biggest moneymaker in history. Other big budget spectacles followed: *Ivanhoe* (1952), *Knights of the Round Table* (1953), and *Valley of the Kings*, filmed in Egypt in 1954. In the next few years Taylor's popularity dwindled, and his contract with MGM ended, but he continued to work in minor films and in a television series called *The Detectives*. In his last movie in 1969, he and Charles Boyer played secret agents in *The Day the Hot Line Got Hot*. He died that same year after a long struggle with cancer. Fellow actor Ronald Reagan, then governor of California, said at his funeral: "He was more than a pretty boy, an image that embarrassed him because he was a man who respected his profession and was a master of it."

## Teddy Bears

Most adults carry fond, even significant memories of their own teddy bear, a possession integral to the childhood of all but the severely deprived in America and beyond. Although these days one can find stuffed toys representing every animal from an aardvark to a zebra, the figure of the bear remains the most popular choice, among children and adults alike. By the latter part of the twentieth century, teddy bears had become something of an industry in the United States and Europe.

Both the United States and Germany lay claim to the invention of the teddy bear, each for good reasons. In fact, however, the teddy bear seems to be the product of a remarkable historical coincidence occurring in 1902. One part of the story starts in Mississippi, where President Theodore Roosevelt was on a hunting trip. One of his companions captured a black bear cub, tied a rope around its neck, and brought it to Roosevelt to shoot, but the President, seeing no sport in

A young girl hugs a giant teddy bear.

killing an exhausted, bound, and defenseless animal, declined. A reporter traveling with the hunting party telegraphed the story to *The Washington Post*, which ran a front-page cartoon by Clifford Berryman the following day, showing Roosevelt refusing to shoot the bear cub with the caption “Drawing the line in Mississippi.” In Brooklyn, New York, the cartoon was seen by one Morris Michtom, the owner of a small novelty store, who had been trying unsuccessfully to sell a few stuffed toy bears made by his wife, Rose. Inspired by Berryman’s cartoon, Michtom wrote to the White House, received permission to use the presidential name, and put the toys in his shop window with a sign reading, “Teddy’s bears.” The bears sold quickly, and the demand for more was so great that Michtom soon founded the Ideal Novelty and Toy Corporation and put “Teddy’s bears” into mass production.

Meanwhile, thousands of miles away in Germany, Richard Steiff was also in the grip of a big idea. While watching some trained bears performing in a circus, Steiff had the thought that a toy bear standing upright with jointed arms and legs might be a marketable commodity. He made some drawings of his conception and took them to his aunt, Margarete Steiff, a well-known toy and doll maker. She designed a stuffed bear based on her nephew’s ideas, and exhibited them at the 1903 Leipzig Toy Fair. European stores initially expressed no interest in the new toys, but an American buyer was enthusiastic and ordered several thousand for export to the United States. Consequently, the teddy bear may be said to have two birthdays, although the name is clearly owed to its American maker and the president who inspired it.

Today, teddy bears are big business; there are an estimated 2.5 million collectors in the United States alone. So significant has this

“bear market” become, the industry now distinguishes between two kinds of teddy bears: toys and collectibles. Toy bears are distinguished by their soft stuffing, designed to make them “huggable,” while collectible teddys are characterized by jointed arms and legs, firm stuffing, and a relatively unyielding exterior. Many experts regard Gund, Inc. as the premier maker of cuddly toy bears, but to collectors, Steiff still reigns supreme, with antique Steiff bears sometimes fetching in excess of \$10,000 at auctions.

The popularity of the teddy bear soon spread beyond the United States to Britain and elsewhere, and some teddys are based on characters in universally loved children’s stories by English writers. Winnie the Pooh, the honey-loving bear created by A. A. Milne in 1926, has been a perennial favorite, as has Paddington Bear, who first appeared in the 1950s storybook *A Bear Called Paddington* by Michael Bond and Peggy Fortnum. A stuffed Smokey the Bear has been around for decades to remind bear lovers that “Only *you* can prevent forest fires.” Teddy bears have also been based on human characters, both real and fictional, several with movie connotations. Thus, we have had such creations as “Humphrey Beargart,” “Theda Beara,” and the macho “Rambear.”

Any popular collectible tends to spawn enterprises designed to feed it, and teddy bear collecting is no exception. There are mail-order catalogs devoted to bears and other bear products (such as T-shirts and posters), magazines for the teddy bear collector, bear calendars, teddy bear conventions, and innumerable internet sites devoted to commerce in stuffed bears.

## Teen Idols

As long as there are teenagers, there will be teen idols. From the vintage “Frankie” Sinatra to Elvis Presley, from the Beatles to David Cassidy, from the New Kids on the Block to ‘N Sync, the names and faces may change with the decades, but the emotions that drive the phenomenon do not. Teen idols are a rite of passage for pre-teens and early teens. They are dream mates who fuel romantic daydreams, and provide a safe release for hormonally-charged emotions. After all, unlike flesh-and-blood boyfriends or girlfriends, the teen idols make no demands.

Collectively, teen idols have long been dismissed as lightweight and flashes-in-the-pan. But, in fact, many notable performers have passed through the teen idol ranks. Before becoming one of Hollywood’s most prolific and acclaimed leading men, John Travolta was a popular pin-up, the result of his co-starring role in the 1975 TV series, *Welcome Back, Kotter*. The 1997 box office blockbuster, *Titanic*, derived much of its drawing power from the casting of teen idol, Leonardo DiCaprio. Pop-soul maestro Michael Jackson was a teen idol in the 1980s, as well as the previous decade, when he was one of the Jackson Five. The Beatles were huge teen idols in the 1960s, as

**Bobby Darin in concert.**

was Elvis Presley in the 1950s. In the 1940s, females screamed for Sinatra.

Even those teen idols who did not successfully make a transition as their fans matured continue to be regarded with affection. To their fans, they represent a special time in their lives. To the credit of these teen idols, they also left imprints on popular culture. For example, many of the icons of the 1950s—the decade in which the modern teen idol is rooted—became fixtures on the record charts. From late 1957 through 1963, the young performers were responsible for at least thirteen number one hits. They included Tab Hunter’s “Young Love” and Frankie Avalon’s “Venus.” Another twenty tunes by teen idols climbed to the top five.

Just as Presley had gone from recording studio to Hollywood, the idols made the leap to the big screen. Theirs were major names during the final years of the so-called Hollywood “star system.” Sandra Dee, who became a teen favorite with her depiction of the surfing-obsessed Gidget, went on to become a top-ten box office draw for the years 1960, 1961, 1962, and 1963—an astonishing feat, considering the list also included Doris Day, Cary Grant, Elizabeth Taylor, and Frank Sinatra. Between 1959 and 1964, Fabian appeared in no less than ten films, ranging from comedies to teen genre flicks to

a John Wayne action adventure. Tab Hunter clocked in seventeen films between 1950 and 1964.

Of course, teen idols did not originate in the 1950s. Back in the 1930s, singer-actor Rudy Vallee induced swoons from schoolgirls when he performed while clutching a megaphone. But it is Frank Sinatra who is credited as the official pioneer of the teen idol movement. At age 27, Sinatra had a skinny, vulnerable look. That look, combined with his lush romantic ballads, elicited mass hysterics and stampeding among teenage “bobby soxers” at his December 1942 performances at New York’s Paramount Theater. When Sinatra later appeared at the Boston Armory, the seats were bolted down as a security measure.

In the 1950s, the emergence of American teenage culture prompted another kind of hero worship. Before he cinched his eternal stardom with his car crash death of 1955, James Dean had come to symbolize the teenager in pain, with his angst-ridden performance in *Rebel Without a Cause*. The early Elvis Presley had his own angst-ridden performances in song, including the bravado *Heartbreak Hotel*. But Dean and Presley also summoned up a sense of looming danger. In Presley’s case, his sexy stage antics and the fact that he was a white singer who sounded “black” made him anathema to authority figures.

A much safer alternative was found in Charles Eugene Boone. Better known as Pat Boone, the young performer from Nashville, Tennessee, emerged as the flip side of the coin that bore the imprints of Dean and Presley. Considering the era's controversy over rock 'n' roll, it is significant that Boone rose to fame by singing cover versions of songs originally recorded by African-Americans. His easy-going delivery and boyish charm helped to defuse the volatility of rock 'n' roll. Furthermore, Boone did not emote sexual magnetism. It was Boone who set the stage for what transpired, following a Richter-scale shift in the world of rock 'n' roll.

Denoting that upheaval was the U.S. Army's 1958 decision to draft Elvis Presley. Other significant careers also came to a standstill. Chuck Berry faced a prison term for having transported a minor over a state line for sexual purposes. Jerry Lee Lewis was blackballed because of his marriage to his thirteen-year-old cousin. Plane and car crashes took the lives of Buddy Holly, Ritchie Valens, and Eddie Cochran.

With the music world in transition, promoters moved in to provide an antidote—a new commodity to entice the growing teenage spending power. The idea was to cater to teenage desires, but without the erratic undercurrent or explosive passion that had made Presley an infamous household name. So the new teenage idol was created. It was no coincidence that, along with the lure of their talent—some of it legitimate, some wholly manufactured—the teen idols were exceedingly clean cut and attractive. Or that the male teen idols appeared vulnerable as opposed to predatory. After all, strong masculine qualities can be off-putting to young females. Thus, over the years, many teen idols have had an androgynous look.

More than any of the others, Fabian and Frankie Avalon set the standards against which the 1950s teen idols were measured. Both young men had the engaging affability of the boy-next-door. And not coincidentally, both were managed by Philadelphia producer-promoter Bob Marcucci, who was teamed with Peter DeAngelis in Chancellor Records. The label was based in Philadelphia, a city that specialized in turning out teen idols.

Phil Spector—the legendary producer known for his work with girl groups, the Righteous Brothers, and the Beatles, and the “wall of sound” that backed their tunes—has called Philadelphia of the 1950s “the most insane, most dynamite, the most beautiful city in the history of rock 'n' roll and the world.” The city's thriving music industry included competing record labels and their respective producers, and promoters. Their collective goal was to get their performers booked on the Dick Clark-hosted *American Bandstand*. As the premiere showcase for rock 'n' roll performers, the show was essential to the careers of would-be teen idols.

When the pioneering rock 'n' roll artists had made their ascent, there were no national television shows devoted to rock 'n' roll. The performers made their reputations after months or even years of touring. Prior to his famed appearances on the *Ed Sullivan Show*, Presley was a regional star, the result of having played the hinterlands. Only after becoming known regionally did he enjoy exposure on national TV variety shows. By contrast, the teen idols could become “overnight” successes as a result of a single, carefully-promoted TV appearance. Ricky Nelson's rise as a teen idol began when he sang a single song on his family's long-running series, *The Adventures of Ozzie and Harriet*. Tommy Sands was an unknown seventeen-year-old when he appeared in the NBC telecast of *The Singing Idol*, which generated eight thousand pieces of fan mail. Avalon, Bobby Rydell, and Fabian all owed their fame to *American Bandstand*.

The rise and fall of Fabian stands as a cautionary chapter in the teen idol annals. Fabiano Forte was a 14-year-old boy literally sitting on his front porch when he was spotted by Marcucci, who was already managing Avalon. Though Fabian's father had just been taken away by ambulance after having suffered a heart attack, Marcucci was brazen enough to ask, “Say, kid, can you sing?” Fabian was not interested. After continuing to see the teenager in the neighborhood, including at the corner drug store where he worked, Marcucci returned to the family home. This time Fabian agreed to become a Marcucci protégé.

At the time, Avalon was finally enjoying success as a singer—after having bombed with a trio of singles. But unlike Avalon, who could carry a tune and was an accomplished musician, Fabian had no natural musical prowess, in fact, he had failed his high school chorus class. But Marcucci persisted, taking the youth to a series of vocal coaches and introducing him to local audiences via sock hops. He also launched a major promotional campaign touting Fabian as “The Fabulous One.” Still, despite several *American Bandstand* appearances, the teenager's initial records failed. “You gotta find this kid a hit record!” Clark told Marcucci. That hit turned out to be “I'm a Man,” which Fabian lip-synched on a December 1958 show. The single climbed the charts, and paved the way for additional hits, tours, and movie roles. But Fabian's fame and largely off-key singing also led to cruel barbs from the press, which left the teenager both hurt and bewildered.

Ironically, Fabian garnered some of his best notices when he played a psychopathic killer in a 1961 episode of the TV anthology series, *Bus Stop*. But the casting of the teen idol also generated controversy, for teen idols of the day were not expected to have dimension as artists. For that reason, they were not taken seriously by the very industry that created them. Thus, when times and tastes changed, and his teenage fan base grew older, Fabian had to grapple to survive as a performer. Of his reign as an icon, Fabian once said, “I was just a street-punk kid who got into all this because my father had a heart attack and the family needed money. I didn't know nothing. Sure I had girls—I was a healthy young man. But what all this teen idol stuff comes down to is business. Big business.”

In the 1960s, that big business was typified by the staggering success of the Beatles, and the fellow and female Britons and Americans who followed in their wake. Foremost among the latter was the fabricated-for-TV group, the Monkees. Selected from a casting call that drew more than 400 applicants, the group starred in their own series and a major movie, and had eight Top 40 hits, two of which went to number one.

Integral to the success of Monkeemania, Beatlemania, and myriad other teen idol-manias was the teen fan magazine industry, which thrived during this era. A hybrid of the “girl's” magazines which debuted in the 1940s and early rock 'n' roll magazines, some of these publications had monthly sales of more than 900,000 copies.

Reflecting the relationship between the idols and publishing, teen fan magazine pioneer Charles Laufer once related how he honed in on the appeal of 1970s teen icon, David Cassidy. It happened as he was watching an episode of TV's *Marcus Welby, M.D.* “A kid comes on, and he's got diabetes. I didn't know who he was, but he was raw-boned and vulnerable, and I thought, this kid's terrific. So I waited for the credits. The next day I came into the office and said, ‘Who the hell is David Cassidy?’” Laufer tracked down Cassidy, who was about to begin work on the 1970 TV show, *The Partridge Family*, about a family singing group. Laufer went on to publish the *Partridge Family* teen magazine, and to oversee the group's fan club. Though it was a

fictional group, in which only two of the show's cast members, Cassidy and stepmother Shirley Jones, actually sang, the Partridge Family went on to have a number one hit, with "I Think I Love You." The shag-haired Cassidy would later call the group "the last gasp of innocence in America."

In truth, there have been many more gasps of innocence within the teen idol roll call. During the 1970s the roster included Cassidy's half-brother, Shaun Cassidy, as well as Donnie and Marie Osmond, Robbie Benson, and Andy Gibb. Among 1980s names were Scott Baio, John Stamos, Menudo, and Debbie Gibson. The safe, sweet side of teen idoldom continued in the 1990s, with the actor Jonathan Taylor Thomas and singing groups such as Hanson.

But another kind of teen idol, who is less than wholesome, also managed to exist in a parallel universe. The metamorphosis began in the late 1970s, and is exemplified by Kiss, which became a potent teen idol force despite the group's shock-value tactics. According to fan magazine publishers, kids rallied to the group's larger-than-life stage theatrics, as well as to the members' comic book-like appearances. Those appearances made them seem more like fictional characters, as opposed to "real" and therefore threatening heavy metal artists. Madonna, meanwhile, was embraced as the enticing embodiment of the disobedient girl and a proud boy toy, something about which young females fantasize. In the 1990s, that naughty but cool mantle shifted to the Spice Girls and their mantra espousing "girl power!"

Of course, the Spice Girls could not have succeeded in a more modest era; by the same token, a Connie Francis would today be considered an anachronism. For teen idols are both a product and a reflection of their times. As with all product, their success/failure is indelibly linked to marketing, as well as timing. The stakes are tantalizing. According to the Recording Industry Association of America, of the 532 million albums purchased in the United States in 1996, twenty-five percent were bought by 10 to 19-year-olds. That same group comprised a significant percentage, fifty-eight and thirty, respectively, of the rap and rock markets.

Just as the teen idols of the 1950s were able to become overnight successes as a result of television, the current teen idols are able to become multi-millionaires on the basis of synergy and mass-marketing. Consider: At their height in the late 1980s, the New Kids on the Block, comprised of five rapping Boston "boys," sold eighty million albums and \$500 million worth of merchandising. Their 1990 earnings were \$1 billion.

But the power of teen idoldom is not summed up merely by dollars and cents. "When you're talking about teen idols, you're talking about being godlike," said Bobby Sherman, a leading 1970s teen idol. But there are distinctions between the teen idol types. As explained by Sherman: "See, there's an A group and a B group. The A group is like the Beatles. They create a lifestyle which changes people. Then there's the B's, like I was. I was like a number in a system that was created in a succession of molds that perform well for their time and place."

Yet when the Beatles first arrived on the scene, they were perceived by the media to be no more than a fad. To young females, they were cause to celebrate, en masse, and to release sexual energy. The group's musical evolution and staying power could not have been foreseen. The same can be said of the young performers who carry on the teen idol tradition. Some may go on to achieve greatness. If not, they will doubtless live on in the scrapbooks and the memories of the fans whose hearts and lives they touched.

## Teenage Mutant Ninja Turtles

The Teenage Mutant Ninja Turtles cartoon characters—Leonardo, Raphael, Donatello, and Michaelangelo—were one of the greatest cross-media phenomena of the 1980s and early 1990s. The Turtles, ordinary pets mutated into superheroes, began as an underground comic book created by cartoonists Peter Laird and Kevin Eastman in the mid-1980s as a spoof of such comics as the mutant X-Men and the grim, urban Daredevil. An instant smash, the Turtles soon branched out into other media, including films, an animated television series, multiple toy and merchandise tie-ins, even a live-action television program. The success came at the cost of their identity, however, as the original, funky nature of the Turtles comics became more cartoonish and child-friendly to better facilitate their mass acceptance.

## Teenagers

Initially invented as a marketing target, "teenagers" only came into existence after World War II. Possibly our most important years, our teenage years are a time of transition, a period in which we develop from children into adults. We may remember them as either the best or the worst days of our lives, but the life experiences encountered between the ages of 12 and 20 leave a lasting impression: burgeoning emotional and sexual feelings; physiological development of secondary sexual characteristics; entry into the order of

Teenagers in 1956.

society through individual and group affiliations. Since the instantiation of teenagers as a category, they subsequently may have been exploited ruthlessly as such by commercial interests, but this also has allowed (and continues to allow) the identification and interrogation of issues affecting one of the most important groups within society.

Following World War II, a sudden boom in affluence in the West produced new market forces: a growth in original consumer goods (nylon, televisions, fridge freezers) and the appearance of new groups at whom those goods could be marketed. Teenagers were one; they were initially invented as a target marketing group, a new demographic to be tapped, whose wealth came from their parents' increased financial freedom. The number of products created for and aimed at teenagers since World War II has been phenomenal, and shopping remains popular. In the 1990s, teens made 40 percent more trips to the mall than other shoppers. What is particularly interesting is what those products tell us about teenagers: what they're (supposedly) interested in and what their concerns are, plus how we think about them and how that thinking has changed over the decades. The realms of pop music, television, and cinema provide especially illuminating examples.

Pop music is seen as music for children. Passion for the predictable and disposable three-minute song is perceived as an immaturity of taste; we supposedly "grow out of" listening to pop music and

start listening to classical music, jazz, the blues, and so on. In addition, the short shelf-life of pop bands and the general transience and ephemerality of pop music is representative of the fickle tastes of changeable teenagers; it reflects the "passing phase" nature of teenage life. Elvis Presley was (and remains, even after his death in 1977) one of the most successful pop stars; unlike most pop musicians, Elvis's career spanned two decades. His meteoric rise to fame as a singer and guitarist was cashed in on with a raft of low-budget movies, often named after his song titles, including *Love Me Tender* (1956), *Jailhouse Rock* (1957), and *Blue Hawaii* (1961). At the beginning of his musical career, Elvis drew attention by dancing in a way branded as sexually lewd; he gyrated his hips while crooning, earning him the nickname "Elvis the Pelvis." Teenage girls screamed and swooned at his concerts, behavior that has become a common female reaction to male pop stars, especially boy bands.

The sexual aspect of Elvis's music was a cause for concern. A supposedly trivial form of music suddenly seemed subversive. Could the lyrics of pop music, or the antics of pop stars, pass on unwanted messages to a susceptible teenage audience? This has been a persistent worry for moral guardians and would-be censors. Teenagers are still seen as children and thus vulnerable and worthy of protection, yet in their journey toward adulthood, they are interested in adult issues such as sex and drugs. Girls also screamed, notably, at the Beatles, the

British four-piece whose enormous popularity and lengthy career challenged the status of pop music as trivial and ephemeral. Like Elvis, the Beatles also appeared in films specifically made for their teenage audience, including *A Hard Day's Night* (1964) and *Help!* (1965). In addition, as with Elvis, no marketing opportunity was too silly. It was possible, for instance, to buy Beatle "moptop" wigs. Teenagers, it seemed, would spend their money on anything, so long as it had a faint connection to their pop idols. Similarly, they would buy anything targeted directly at them; thus, in pop music, songs could be found targeted directly at teenagers and their concerns, such as "Teenage Idol," "Teenager in Love," and "Sweet Sixteen."

If longevity and/or success is achieved (which can be assisted by the possibility of cross-media synergy), the potential financial rewards for pop stars are large. This has led to the artificial manufacture of a great number of pop musicians and bands, from the Monkees in the 1960s (who also had their own television show) to the Backstreet Boys in the 1990s. The formula remains an occasionally successful one. If there has been one change in the form of pop music, it is that lyrics have become raunchier as restrictive moral codes have relaxed; the songs of teenage soul/R & B star Usher are exemplary of this fact. Generally, however, pop music remains anodyne, all sexuality being expressed in a suggestive yet naive way. Pop stars themselves may be styled to be attractive to the teenage audience, but it is an ambiguous, soft-edged, safe kind of attractiveness. It is unclear whether this is really what teenagers want, or merely what the producers and manufacturers of pop music will allow.

The invention of the teenager category coincided with the widespread introduction of the television set into American society, but, initially, television had problems programming material for teenagers; in contrast, children's programs and those for adults were clearly identifiable. Teenagers had to make do with shows with a broader appeal, such as popular family-oriented dramatic series, variety shows, and comedy programs, some of which featured teenage characters: *Little House on the Prairie*, *I Love Lucy*, *Bewitched*, *The Brady Bunch*, *The Johnny Carson Show*. This is not to say that programs for teenagers were not made; pop music shows, though usually lifeless and presented by adults, were popular, as were examples such as *The Monkees* television show. Teenagers were conceptualized by television during this period as "older children"; if they had their own interests, they were those dictated to them.

The gradual expansion of television over the decades, including the introduction of satellite and cable arenas, has produced a plethora of channels, all of which need filling with material. The 1980s and 1990s saw the production of an enormous number of programs aimed directly at teenagers, mostly comedies and drama series set in and around schools: *The Wonder Years*, *Beverly Hills 90210*, *Party of Five*, *My So-Called Life*, *Saved by the Bell*, and so on. In the 1990s, there were entire channels devoted to teenage programming. These programs projected a very different conception of teenagers than those of the 1960s. The adolescents of the 1990s were now "young adults," confronted with a raft of difficult social issues such as drug use, pregnancy, bullying, sexual identity, and homelessness. In addition, the stars of teenage television programs often appeared much like pop stars—physically attractive, yet sexually ambiguous and, therefore, safe.

Unlike television, cinema speedily capitalized on the existence of a solvent teenage audience. The 1950s was a decade in which

drive-in movies became popular with high school students, and so a range of quickly produced films, in identifiable genres, were made specifically for this audience. These included a lengthy series of beach/surf movies, a wealth of teenage gang movies, and such cheaply made horror films as *I Was a Teenage Werewolf* (1957) and *I Was a Teenage Frankenstein* (1957). Also released during this decade were films about teenagers with a broader audience appeal, such as *The Wild One* (1954) and *Rebel without a Cause* (1955). Because of the film rating system, these movies about teenagers were able to offer a corrective to television's sanitized conception; the adolescents in *Rebel without a Cause*, for instance, deal with alcohol, suicide dares, gang bullying, knife fights, and homelessness, among other factors. Films about teenagers are numerous. This may be because the tribulations of adolescence are effective (melodramatic) narrative devices; it may be because Western culture tends to associate youth with beauty. The 1980s were notable for the number of films produced about teenagers; with the recurrent presence of certain actors, a series of these became known as the Brat Pack films: *Sixteen Candles* (1984), *Pretty in Pink* (1986), *The Breakfast Club* (1985), and *Ferris Bueller's Day Off* (1986). Issues affecting the teens in these narratives included truancy, detention, dating, and drug use—issues similar to those impinging on 1950s movie teenagers.

Cinematic representations of adolescence tend to depict it as either a difficult time of angst, alienation, and loneliness, or as an idyllic period of innocence, unlimited fun, and growth through misadventure. The first set produces iconic images of rebel teens—James Dean, River Phoenix, Drew Barrymore, Natalie Wood. The second—including such films as *American Graffiti* (1973) and *Stand by Me* (1986)—serves a similar mythologizing purpose, reinforcing the cultural conception of adolescence as "the best years of your life." In the 1990s, there have been two minor developmental trends in the filmic depiction of teenagers. First, teenagers actually may be portrayed as sexually active, rather than this simply being suggested; for example, the audience sees two of the teenage characters having sex in *Inventing the Abbotts* (1997). Second, it has become possible to represent teenagers as vicious, unpleasant individuals; in *Kids* (1995), the two lead characters commit acts of racial and sexual violence without remorse.

## Tejano Music

During the 1930s and 1940s a music developed which mirrored the evolution of Hispanics in southwestern cities into Mexican Americans, a bicultural community emerging from Mexican roots within the United States. This was the first generation of Americans of Mexican descent to aspire for inclusion in Anglo-American life. Popular dance band ensembles catered to this generation's biculturalism by playing genres chosen from both the Latin and the American traditions: *bolero*, *danzón*, *guaracha*, and *rumba* alternating with boogie, swing, and fox-trot, among others. After World War II, a type of fusion of the traditions took place that developed into a distinctive sound, especially among the *orquestas* and *conjuntos* in Texas, where the largest Hispanic recording companies existed at that time. The result was a music that came to be known as Tejano.

As orchestras became more professional and ballroom dance circuits extended throughout the Southwest, the Texas recording artists became the greatest in demand and spread their new music throughout the Southwest and northern Mexico. Among the first prominent big bands were Beto Villa's from Falfurrias, Texas, whose leader is sometimes called the father of the Mexican American *orquesta*. Villa popularized a folksy, "country"-style polka; this polka, in particular, came to be known as "Tex-Mex," especially when compared with the more sophisticated urban sounds of *danzones*, *guarachas*, fox-trots, and swings. Villa's influence was so strong that many followers appeared throughout the Southwest, most noteworthy of them being singer-saxophonist Isidro López, also from Texas, who is known for adding the working-class *canción ranchera* to the Tex-Mex repertoire. Balde González of Victoria, Texas, and Pedro Bugarín of Phoenix, Arizona, smoothed out the musical deliveries and broadened the repertoire of genres included in Tex-Mex.

The peak years for the Mexican-American *orquesta* were the 1960s and 1970s, during which emerged Little Joe Hernández, one of the greatest all-time performers and popularizers of Tex-Mex. Little Joe led a band made up of family members and friends under a series of names and struggled to get studios to record his music and radio stations to play it in Texas. Finally, he had to form his own recording and distribution companies. Little Joe, in addition, fused the Tex-Mex *ranchero* sound with American jazz and rock within the same musical number to achieve a unique bi-musical sound which came to be called "La Onda Chicana" (The Chicano Wave). Little Joe's first experiment in this Chicano Wave occurred on his hugely successful 1972 LP *Para La Gente (For the People)*. Backing Joe and his brother Johnny's harmonic duet were the usual instruments of a well-organized Mexican American band of those years: two trumpets, two saxophones, a trombone, and a rhythm section of bass, electric guitar, drums, and keyboards. On the album, many of the arrangements were augmented with strings from the Dallas symphony—a novelty for Tex-Mex music—and with the interlacing of jazz riffs. Even at the turn of the century, many of the numbers included on this historic LP are standard fare among dance bands in Mexican American communities.

Texas continues to be the center for Tejano music, from whence dance bands and recording artists tour to as far north as Chicago and New York City and as far south as Mexico City. The advent of the three Spanish-language television networks further popularized the

music into the Caribbean and South America. Younger generations of Mexican Americans further infused the music with rock influences in the 1990s and took it far afield from its country roots, mirroring the overwhelming concentration of Hispanics in big cities today.

## Telephone

The telephone is a device for conducting spoken conversations across any distance beyond the range of the unaided human ear or the unamplified human voice. It works by transferring the atmospheric vibrations of human speech into a solid body, and by converting those vibrations into electrical impulses sent through a conducting medium—originally metal wires, but now optical fibers and electromagnetic microwaves as well. The word is a compound of two Greek words, "tele" ("far") and "phone" ("sound"), and the instrument is the most widely-used of all telecommunications appliances, with hundreds of millions of telephones in use all over the world. On any given

Alexander Graham Bell with his invention, the telephone.

business day, approximately two billion calls are placed, just in the United States. The telephone is also the archetypal electronic “medium,” in the sense of the word intended by Marshall McLuhan—an “extension of man”—but its social impact is grossly understudied in favor of the more readily observable “bully blow” of the television. Telephones are small and unobtrusive and their impact on our visible environment (except for the poles and wires) has not transformed our relationship to it.

Notwithstanding a host of rival claimants, the traditional account of the telephone’s invention by the Scottish-born Alexander Graham Bell (1847-1922) remains substantially the correct one. While the word “telephone” itself had been used to describe a device similar to a children’s string telephone as long ago as the seventeenth century, and although the general concepts on which the invention was based had been known for several decades, it was certainly Bell who experienced the sudden flash of insight which he immediately translated into a working model.

Bell and his assistant Thomas Watson had been trying to develop not a telephone, but something Bell called a “harmonic telegraph,” by which he hoped to expand the bottleneck throttling communications traffic and permit the transmission of more than one telegraph message over a single wire at the same time. Bell’s ideas involved a series of vibrating metal reeds (like those used in wind instruments). Of course, once he had developed that technology, his goal was, in fact, to discover a way to transmit all the sounds of the human voice via his “harmonic telegraph.” On June 2, 1875, Bell and Watson were working at opposite ends of a line and Bell heard the distinct sound of a plucked reed coming through the line. He ran to the next room and shouted to his assistant, “Watson! What did you do then? Don’t change anything!” From that moment, it took only an hour or so more of plucking the reeds and listening to the sounds they made before Bell was able to give Watson instructions on making the first “Bell telephone,” which was capable of transmitting only the sounds of the human voice, not words. Bell and Watson worked through the summer of 1875, and in September, Bell began to write the specifications for his basic patent, which was issued on March 7, 1876 (#174,465). It is, to date, the most valuable patent ever issued. (The famous “Mr. Watson, come here! I want you!” was spoken after the first patent was issued, when Bell and Watson were working on perfecting their transmitter.) Ultimately victorious, Bell had to defend his patent in over 600 separate lawsuits.

The Bell Telephone Company, first of its kind, was founded on July 9, 1877. That same July, Bell married Mabel Hubbard and sailed to England to introduce his telephone there. Well before 1900, Thomas Watson, Thomas Edison, Emil Berliner, and others had worked with Bell’s patented technology to produce what would be recognized as a telephone in the late 1990s. The telephone has consisted of the same basic components: a power source, switch hook, dialer, ringer, transmitter, and receiver.

The social impact of the telephone has been literally incalculable. Although the telegraph, patented by the painter Samuel B. Morse in 1840, enjoys pride of place as the first electric instrument to extend and greatly speed human communication, it never became a ubiquitous home appliance like the telephone—it was too complicated to use, and required too much special knowledge (codes, key technique). All a person needs to know in order to use a telephone is how to talk and to listen; it is not necessary to be literate or to have more than a

minimal mechanical aptitude. It is, moreover, next to impossible to gossip using a telegraph. Like a religion, telegraphy has its privileged class, the operators, and gossip passes most freely between equals, without going through an intermediary. Because the telephone enables two people to exchange gossip directly, though they may be on opposite sides of the Earth, the telephone has, more than any other invention, produced what Marshall McLuhan called “the global village.”

The telephone has changed war and business and the whole gamut of public activities, as well, but it has not transformed them out of recognition, the way it has altered the fundamental relationship of one individual to another and of one individual to society. Warfare is altered by the invention of a new weapon, from the metal sword to the atomic bomb; business is altered by intellectual inventions like double entry book-keeping or speculation or advertising or market capitalism. Public life has changed with the emergence of new institutions—the law, the “Republic,” democracy, dictatorship—and is now being replaced by the television camera.

But the telephone began the seismic shift in sensibility described by Martin Pawley in his book *The Private Future*: “Western societies are collapsing not from an assault on their most cherished values, but from a voluntary, almost enthusiastic abandonment of them by people who are learning to lead private lives of an unprecedented completeness with the aid of the momentum of a technology which is evolving more and more into a pattern of socially atomizing appliances.” The telephone, which has been traditionally promoted as a means of bringing people together, of connecting them, is in fact the archetype of Pawley’s “socially atomizing appliance.” The filmmaker Bill Forsyth gives a perfect example of this in his film, *Local Hero*. The character played by Peter Riegert wants to invite to dinner a girl standing less than 20 feet away from him on the other side of a glass partition—so he dials her extension. That is “the Private Future” in action.

Cordless phones, answering machines, cellular phones, “call waiting,” phones in automobiles, headset phones which free up both hands—all these seem likely to increase our dissociation from the here and now, and to hasten our withdrawal from the public sphere into “private lives of an unprecedented completeness.” The dangers inherent in the disappearance of any meaningful public life should be obvious. On the most primitive level, consider the person driving a big shiny suburban wagon, about to negotiate a tricky left turn through a busy intersection while they chat on the telephone with a friend. This person has the illusion of being in two places at once—with the friend and in traffic—but is in fact nowhere at all. The friendship, however, is not in physical danger—the other vehicles approaching that intersection, along with their passengers, are in the gravest peril. By the end of the 1990s legislation restricting the use of telephones in automobiles in the United States began to pass in several states. The whole concept of interdependence, of civic responsibility, is losing its force. The huge juggernaut of communications technology which was launched when Alexander Graham Bell burst in on Thomas Watson and shouted “Don’t change anything!” has changed everything. Whether for the better or the worse depends on the relative importance you ascribe to the social contract.

## Televangelism

Since the beginnings of commercial radio, evangelical Christians have recognized the effectiveness of the broadcast media as a vehicle for disseminating their faith. By enabling them to reach new audiences as well as committed believers, broadcasting has provided evangelists with a means of building large and widespread followings. As a result, religious broadcasters have continually taken advantage of new broadcast technologies, from local radio programs in the early 1920s to 24-hour cable television networks by the late 1970s. The use of television by evangelists as a medium for expressing their views proved to be an especially influential development during the last quarter of the twentieth century, as conflicts between religious conservatives and mainstream popular culture grew. In this context, the term “televangelism” became widely adopted to describe the use of broadcasting to promote not only evangelical Christian beliefs, but also a wide range of social and political views espoused by Christian fundamentalists.

The roots of contemporary televangelism can be traced to the 1950s, when evangelists such as Billy Graham, Rex Humbard, and Oral Roberts started to use television programs to spread their conservative Protestant beliefs. Most early examples of televangelism

adopted a traditional format, concentrating on sermons, church services, and revival meetings, and operated on fairly small budgets. Early televangelist programming was also generally restricted to Sunday mornings, and was usually broadcast over a small number of stations covering a limited geographical area. Over time, however, technological changes and increasing resources allowed televangelists to reach much larger audiences. The advent of videotape, for example, provided an inexpensive and flexible means of distributing programs, so that they did not have to be broadcast live or recorded on expensive motion picture film. And the proliferation of television stations during the 1950s and 1960s provided a broader variety of outlets for televangelism, as did the subsequent expansion of cable television.

As a result of these innovations, televangelism underwent a major period of growth during the 1970s. Organizations like Pat Robertson's Christian Broadcasting Network and Jim Bakker's Praise The Lord (PTL) Satellite Network were able to use local cable television systems, linked by satellite transmissions, to bring their programming to virtually all parts of the country, and throughout the week, not just on Sundays. To take advantage of this increase in exposure, televangelists also adopted new programming formats, such as the talk show and the news magazine, which had become staples of commercial television. The rapid growth in their operations also brought greater political influence to televangelists during the late 1970s and 1980s. With the conservative turn in American politics at this time, and the rise of the Christian right as a political force, prominent televangelists like Jerry Falwell and Pat Robertson found that broadcasting provided them with a powerful tool for publicizing their views and shaping the nation's political agenda.

Towards the end of the 1980s, however, televangelism went into a period of decline, primarily as a result of separate financial and sexual scandals involving Jim Bakker and Jimmy Swaggart, two leading religious broadcasters. Their sexual misconduct and Bakker's misappropriation of funds donated to the PTL Network exposed televangelism to increasing public criticism and suspicion. The core audience of the television evangelists did not turn away from them, but their broader influence within American society dropped, as did their television ratings. The failure of Pat Robertson to win the Republican presidential nomination in 1988 also marked a downturn in the political influence of the conservative televangelists. Christian broadcasters responded to these trends by trying to broaden the appeal of their programming, experimenting with new formats and offering an increasing number of family-oriented programs without an explicit religious or political message.

Through their successful use of broadcasting technology, televangelists have established a notable presence in American popular culture over the past several decades. Considerable disagreement exists over the size of their audiences, even before the scandals of the 1980s, and a number of studies have suggested that televangelists have had more success in reinforcing the faith of existing believers than in reaching new converts. Nonetheless, televangelism has become a persistent feature of the American broadcast media, and as such has contributed substantially to the diversity of views that constitute American popular culture.

## Television

At the same time radio began to achieve commercial viability in the 1920s, the United States and Britain began experimenting with "television," the wireless transmission of moving pictures. Although Britain was initially somewhat more successful, both countries experienced a lot of difficulty in the early stages. There were a variety of reasons for this. In America, many people whose livelihoods were tied to radio were also responsible for developing television. Accordingly, they were in no hurry to see radio, a sure money maker, usurped by the new medium. In addition, the Depression greatly slowed the development of television in the 1930s. There was also a tremendous amount of infighting between potential television manufacturers and the Federal Communications Commission (FCC) in trying to establish uniform technical standards. And finally, just as it seemed as though television was poised to enter American homes, the onset of World War II delayed its ascendancy until the war's end. However, in the late 1940s and early 1950s commercial television exploded on the American market, forever changing the way products are sold, people

A couple ponders the purchase of their first television.

are entertained, and news events are reported. In the years immediately following World War II television quickly became America's dominant medium, influencing, shaping, and recording popular culture in a way no other media has ever equaled.

Although televisions first appeared on the market in 1939, because there were virtually no stations and no established programming, it wasn't until just after World War II that TV began its meteoric rise to media dominance. As John Findling and Frank Thackeray note in *Events That Changed America in the Twentieth Century*, in 1946 only 7,000 TV sets were sold. However, as television stations began appearing in an increasing number of cities, the number of sets sold rose dramatically. In 1948 172,000 sets were sold; in 1950 there were more than 5,000,000 sets sold. By 1960 more than 90 percent of American homes had TV sets, a percentage which has only climbed since. Before television, Americans had spent their leisure time in a variety of ways. But as each new station appeared in a particular city, corresponding drops would occur in restaurant business, movie gates, book and magazine sales, and radio audiences. By the early 1960s Americans were watching over 40 hours of TV a week, a number that has remained remarkably stable ever since.

Television originally only had 12 Very High Frequency (VHF) channels—2 through 13. In the late 1940s over 100 stations were competing for transmission on VHF channels. Frequency overcrowding resulted in stations interfering with one another, which led to the FCC banning the issuance of new licenses for VHF channels for nearly four years, at the conclusion of which time stations receiving new licenses were given recently developed Ultra High Frequency (UHF) channels (14 through 88). However, most TV sets needed a special attachment to receive UHF channels, which also had a worse picture and poorer sound than VHF channels. Unfortunately, it was mostly educational, public access, and community channels that were relegated to UHF. Because of the FCC's ban, the three major networks, ABC, CBS, and NBC, were able to corner the VHF channels and dominate the television market until well into the 1980s.

From its introduction in American society, television has proven itself capable of holding its audience riveted to the screen for countless hours. As a result, people who saw television as a means through which to provide culturally uplifting programming to the American public were gravely disappointed. Instead, TV almost immediately became an unprecedentedly effective means of selling products. Most Americans weren't interested in "educational" programming, and if people don't watch advertisers don't pay for air time in which to sell their products. TV shows in the late 1940s followed the model established by the success of radio; single advertisers paid for whole shows, the most common of which were half hour genre and variety shows. But in 1950 a small lipstick company named Hazel Bishop changed forever the way companies sold their products.

When Hazel Bishop first began advertising on TV in 1950 they had only \$50,000 a year in sales. In two short years of television advertising, and at a time when only 10 percent of American homes had TV sets, that number rose to a stunning \$4.5 million. As advertisers flocked to hawk their products on TV, TV executives scrambled to find a way to accommodate as many companies as possible, which would result in astronomical profits for both the advertisers and the networks. TV executives realized that single product sponsorship was no longer effective. Instead, they devised a system of longer breaks during a show, which could be split up into 30

second "spots" and sold to a much larger number of advertisers. Although this advertising innovation led to television's greatest period of profitability, it also led to advertising dictating television programming.

In the early 1950s television advertisers realized they had a monopoly on the American public; they were competing with each other, not with other mediums, such as books or magazines. Americans watched regardless what was on. Advertisers discovered that what most people would watch was what was the least objectionable (and often the most innocuous) show in a given time slot; hence the birth of the concept of "Least Objectionable Programming." A TV show didn't have to be good, it only had to be less objectionable than the other shows in the same time slot. Although more "serious" dramatic television didn't entirely disappear, the majority of shows were tailored to create the mood advertisers thought would result in their consumers being the most amenable to their products. By the mid-1950s lightweight sitcoms dominated the American television market. The relative success and happiness of television characters became easily measurable by the products they consumed.

Prior to the twentieth century, "leisure time" was a concept realized by generally only the very wealthy. But as the American middle class grew astoundingly fast in the post World War II boom, a much larger population than ever before enjoyed leisure time, which helped contribute to television's remarkable popularity. Perhaps even more important was the rise of the concept of "disposable income," money that people could spend on their wants rather than needs. Advertisers paying for the right to influence how people might spend their disposable income largely funded television. As a result, television was ostensibly "free" prior to the late 1970s. Nevertheless, television's cost has always been high; it has played perhaps the single largest role in contributing to America's becoming a consumer culture unparalleled in world history. Countless television shows have achieved an iconic stature in American popular culture, but none have had as powerful an effect on the way American's live their day to day lives as have commercials.

By the mid-1950s it became clear that television's influence would not be confined to the screen. Other forms of media simply could not compete directly with television. As result, they had to change their markets and formats in order to secure a consistent, although generally much smaller than pre-television, audience. Perhaps the most far reaching consequence of the rise of television is that America went from being a country of readers to a country of watchers. Previously hugely popular national magazines such as *Colliers*, *Life*, and *The Saturday Evening Post* went out of business in the late 1950s. Likewise, as television, an ostensibly more exciting visual medium than radio, adapted programming previously confined to the radio, radio shows quickly lost their audience. Magazines and radio stations responded similarly. Rather than trying to compete with TV they became specialized, targeting a singular demographic audience. Simultaneously, advertisers grew more savvy in their research and development and realized that highly specific consumer markets could be reached via radio and magazine advertising. Strangely, television's rise to prominence secured the long term success of radio and magazines; their response to the threat of television eventually resulted in a much larger number of magazines and radio stations than had been available before television. In the late 1990s audiences can find a radio station or magazine that focuses on just about any subject they might want.

Perhaps the industry struck hardest by the advent of television was the American film industry. Hollywood initially considered TV

an inferior market, not worthy of its consideration. And why not, for in the late 1940s as many as 90 million people a week went to the movies. But television's convenience and easy accessibility proved much competition for Hollywood. By the mid-1950s the industry's audience had been reduced to half its former number. Hollywood never recovered as far as actual theater audiences are concerned. In fact, by the late 1990s only 15 million people a week attended the cinema, and this in a country with twice the population it had in the late 1940s. However, Hollywood, as it seemingly always does, found a way to adapt. Rather than relying exclusively on box-office receipts, Hollywood learned to use television to its advantage. Now after market profits, including the money generated from pay-per-view, cable channels, premium movie channels, and, most of all, video sales and rentals, are just as important to a film's success, if not more so, than a film's box-office take.

In addition, television's media domination has contributed greatly to blurring the lines between TV and Hollywood. Most Hollywood studios also produce TV shows on their premises. Furthermore, just as radio stars once made the jump from the airwaves to the silver screen, TV stars routinely make the jump from the small screen to the movies. As a result, many American celebrities can't be simply categorized in the way they once were. Too many stars have their feet in too many different mediums to validate singular labels. Take, for example, Oprah Winfrey, a television talk show maven who has also been involved in several successful books, promoted the literary careers of others, frequently appeared on other talk shows and news magazines as a guest, and has acted in and produced a number of both television and Hollywood films. Although hers is an extreme example, television's unequalled cultural influence has resulted in turning any number of stars who would have formerly been confined to one or two mediums into omnipresent multimedia moguls.

If radio ushered in the era of "broadcast journalism," TV helped to further define and legitimize it. In addition, television newscasts have changed the way Americans receive and perceive news. By the late 1950s TV reporters had learned to take advantage of emerging technologies and use them to cover breaking news stories live. Television broadcasts and broadcasters grew to hold sway over public opinion. For, example, public sentiment against the Vietnam War was fueled by nightly broadcasts of its seemingly senseless death and destruction. Walter Cronkite added further fuel to the growing fire of anger and resentment in 1968 when he declared on-air that he thought the war in Vietnam was a "terrible mistake." When most Americans think of the events surrounding JFK, Martin Luther King, and Bobby Kennedy's assassinations, the civil rights movement, the first moon walk, the Challenger space shuttle disaster, the Gulf War, and the 1992 riots in Los Angeles after the Rodney King trial verdict, it is the televised images that first come to mind.

Unfortunately, by the late 1990s many Americans had come to rely on television news as their main source of information. In addition to nightly news and news oriented cable networks, cheap-to-make and highly profitable "news magazines" such as *Dateline NBC*, *20/20*, and *48 Hours* have become TV's most common form of programming. Rarely do these shows feature news of much importance; instead, they rely on lurid and titillating reports that do nothing to enrich our knowledge of world events but nevertheless receive consistently high ratings, thus ensuring the continuing flow of advertising dollars. That most Americans rely on television for their information means that most Americans are underinformed; for full accounts of a particular story it is still necessary to seek out supporting

written records in newspapers, magazines, and books. The problem with relying on television for information is, as Neil Postman writes, "not that television presents us with entertaining subject matter but that all subject matter is presented as entertaining." Accordingly, it is Postman's contention that America's reliance on TV for information is dangerous, for when people "become distracted by trivia, when cultural life is redefined as a perpetual round of entertainments, when serious conversation becomes a form of baby-talk, when, in short, a people become an audience and their public business a vaudeville act, then a nation finds itself at risk."

Because of news broadcasting and the fact that television is the best way to reach the largest number of Americans, television has helped shape American politics in the second half of the twentieth century. Effective television advertising has become crucial to the success or failure of nearly any national election. Unfortunately, such advertising is rarely completely factual or issue oriented. Instead, most such advertisements are used to smear the reputation of a particular candidate's opponent. Perhaps the most famous example of such advertisements occurred in the 1988 Presidential campaign, during which Republican George Bush ran a series of slanted and inflammatory spots about his Democratic opponent, Michael Dukakis. Furthermore, the careers of several presidents have become inextricably intertwined with TV. For example, President Ronald Reagan, a former minor movie star and television product pitchman, used his television savvy so effectively that he came to be known as "the Great Communicator." Conversely, President Bill Clinton, whose initial effective use of television has reminded some of JFK's, became victim to his own marketability when in August of 1998 he admitted in a televised speech to the nation that he had lied about his affair with a young intern named Monica Lewinsky. His admission, which was meant to put the incident behind him, instead spawned a virtual television cottage industry, with literally dozens of shows devoting themselves to continual discussion about his fate, which was ultimately decided in a televised impeachment trial.

Strangely, considering the man was wary of the medium, perhaps no politician's career has been more tied to television than Richard Nixon's. As a vice presidential candidate on Dwight Eisenhower's 1952 Republican Presidential bid, Nixon came under fire for allegedly receiving illegal funding. A clamor arose to have Nixon removed from the ticket. On September 23, 1952, Nixon went on TV and delivered a denial to the accusations, which has since become known as "the Checkers speech." More than 1 million favorable letters and telegrams were sent supporting Nixon; he remained on the ticket and he and Eisenhower won in a landslide. Conversely only eight years later TV would play a role in Nixon's losing his own bid for the White House. Nixon agreed to a series of televised debates with his much more telegenic opponent, John Fitzgerald Kennedy. Nixon's pasty face and sweaty brow may have cost him the election. Many historians believe that Kennedy "won" the debates as much by his more polished appearance and manner than by anything he said. Nixon learned from his error. While again running for the Presidency in 1968, Nixon hired a public relations firm to run his campaign. The result was a much more polished, image conscious, and TV friendly Nixon; he won the election easily. In the last chapter of Nixon's political career, broadcast and print media helped spur investigations into his involvement with the Watergate affair. The hearings were broadcast live on TV, which helped to turn public

opinion against the President, who resigned from office as a result. One of the most famous images in TV history of television is that of Nixon turning and waving to the crowd as he boarded the helicopter that removed him from power forever.

Prior to World War II, baseball was widely recognized as America's national pastime. Games were often broadcast live, and the country blissfully spent its summers pursuing the on-the-field exploits of larger than life figures such as Babe Ruth. However, after the war other sports grew to prominence, largely because of television, beer, and, until 1970, cigarette advertisers, who saw in sports audiences a target market for their products. Individual sports such as golf and tennis, grew in popularity, but team sports such as hockey, basketball, and most of all, football had the greatest increases. By the late 1960s and with the advent of the Super Bowl, annually America's most viewed broadcast, football surpassed baseball as America's favorite pastime. Because of their nature, team sports have a built in drama that escalates in intensity over the duration of a season. Americans are drawn to the players in this drama, which has resulted in athletes hawking products perhaps more than any other cultural icons. In fact, as advertising revenues increasingly fund sports, athletes have become perhaps the highest paid workers in America. Michael Jordan earned a reported \$30 million to play for the Chicago Bulls in the 1997-98 season. In the Fall of 1998 pitcher Kevin Brown signed with the Los Angeles Dodgers for a seven year deal worth \$105 million. Accompanying their paychecks is a rise in media scrutiny. Elite athletes are hounded by paparazzi in a way once reserved for movie stars and royalty. Such is the price of television fame in America.

Despite the ridiculous salaries and the accompanying out-of-control egos of many athletes and owners, it could be argued that television has made sports better for most people. Seeing a game live at a venue remains thrilling, but TV, with its multiple camera angles and slow motion instant replays, is by far a better way to actually see a game. In addition to better vision, one has all the comforts of home without the hassle of inclement weather, expensive tickets, heavy traffic, and nearly impossible parking. And because of TV and its live transmission of sports, certain moments have become a part of America's collective cultural fabric in a way that never would have been possible without television. Heroes and goats achieve legendary status nearly immediately. Just as important to our culture as the televising of events of political and social importance is the broadcast of sporting events. Although not particularly significant in their contribution to human progress, because of television the images of San Francisco 49er Joe Montana's pass to Dwight Clark in the back of the endzone in the 1981 NFC championship game to beat the Dallas Cowboys or of a ground ball dribbling between Boston Red Sox first baseman Bill Buckner's legs in the sixth game of the 1986 World Series are just as much a part of American culture's visual memory as the image of Neil Armstrong walking on the moon.

As the twentieth century careens to a close and America prepares to embark on a new century, debates over television's inarguable influence continue to rage. Is TV too violent? Is television's content too sexually oriented? Has television news coverage become vacuous and reliant on the superfluous and tawdry? Is TV damaging our children and contributing to the fraying of America's social fabric? Regardless of the answers to these and countless other questions about television's influence, the inarguable fact is that television is

the most important popular culture innovation in history. Our heroes and our villains are coronated and vanquished on television. Sound bites as diverse in intent and inception as "where's the beef," "read my lips," and "just do it," have become permanently and equally ensconced in the national lexicon. Television is not without its flaws, but its accessibility and prevalence has created what never before existed: shared visual cultural touchstones. As one America mourned the death of JFK, argued about the veracity of the Clarence Thomas/ Anita Hill hearings, recoiled in horror as Reginald Denny was pulled from his truck and beaten, and cheered triumphantly as Mark McGwire hoisted his son in the air after hitting his 62nd home run. For better or for worse, in the second half of the twentieth century television dominated and influenced the American cultural landscape in an unprecedented fashion.

## Television Anchors

According to television news legend Walter Cronkite, the term "anchorman" was invented by Sig Mickelson, the first head of the television and radio news department at CBS. It was expressly coined for use at the political conventions of 1952, the first ever covered by modern television. These conventions were made coherent by one

**Walter Cronkite**

broadcaster who provided perspective on events and introduced reporters bringing news from various parts of the convention; in short, a man who anchored the broadcast. In the United States and other developed countries around the world, television news anchors have become the de facto source of news for much of the public. With fewer people reading newspapers, and more and more getting their information from television, television news anchors on national and local newscasts have become the people the public turns to with the question, “What happened today?” Television news anchors, with their individual quirks and inflections, help to put a human face on the news. The power of the anchor to slant or comment on the news has been a source of concern for conservative and liberal critics alike. In totalitarian systems, they are often seen as nothing more than the face of the government, reporting news which is patently false or propagandistic.

Walter Cronkite set the standard for anchors in the United States during the period when he was known as the “most trusted man in America.” Cronkite was even urged to run for president at various times in his career. His sign off, “And that’s the way it is,” rivaled Edward R. Murrow’s “Good night and good luck” as the most popular signature piece of any news person. Other significant news

anchors of the 1960s included Chet Huntley and David Brinkley, who brought a partnership sensibility to the job that became a template for other newscasts. Their familiar signature—“Goodnight Chet. Goodnight David”—was often invoked in both comedy and drama.

The first television news anchors were used on weather reports and national and local television newscasts. Many of the first news anchors had worked originally in radio where the news format consisted of a news “reader” announcing the news in sonorous and serious tones. This immediately translated to television, where a clock or sheet of paper were used as props to make the set design appear serious. Early local television news instituted the “anchor” as the centerpiece of the show, delivering news, sports, and weather. It was only late in the 1960s that news programs began to have separate segments for different types of news, each presented by its own reporter. During this period, the news anchor began to rise in prominence, since he (early anchors were almost exclusively male) was the person that attracted viewers to the channel. The most popular anchors were those who appeared trustworthy and serious.

In the 1970s, feminism began to lead to the installation of female co-anchors on many newscasts. Soon the serious reading of the news was supplemented with repartee and chat among co-anchors. News consultants, such as Frank Magid and Associates, helped to bring about a more “scientific” method of choosing news anchors based on demographic sensibilities and entertainment style. Men and women with telegenic looks and breezy ad libbing skills are used to attract viewers, while older news people with significant experience are usually retired or given reporting assignments in the field. Audiences seem to want reporters they can trust, but anchorpeople who entertain them.

The conflict caused by the changing role of the news anchor was probably best highlighted in *Network* (1976), Paddy Chayefsky’s vivid send-up of the news industry, which presaged the merging of news and entertainment. In the film, the news anchor, after suffering a mental breakdown, returns to the news desk only to entreat his audience to “get out of their chairs, go to the window and scream, I am as mad as hell and I’m not going to take it anymore!” The anchor’s complaint became a popular catch phrase for the universal frustration of modern life. Ted Baxter, the fictional news anchor on the *Mary Tyler Moore Show* (1970-77), perhaps best exemplified the stereotype of the modern anchorman: the vacuous, handsome man, puffed up with self-importance and barely aware of the meaning of anything he is reading on the air.

## Temple, Shirley (1928—)

Shirley Temple, Hollywood's quintessential child star during the 1930s and 1940s, became a diplomat in later years, serving as Ambassador to Ghana and Czechoslovakia and as the U.S. Ambassador to the United Nations under her married name, Shirley Temple Black. But it is the diminutive smiling moppet with golden ringlets that most older Americans remember from the Saturday afternoon matinees of their own childhoods. Her unique appeal and immense popularity were without precedent and have never been equaled by the junior members of the Hollywood acting fraternity. The child star who acted, danced, and sang her way into the hearts of millions was the sun that shone through the clouds of the depression years. In a series of box-office smashes, Little Shirley Temple dispensed sweetness and light, beguiling her adult audiences and upstaging her adult co-stars in a series of films specially concocted to capitalize on her qualities. Decades before the rise of film-product merchandising, Temple's popularity gave rise to a profitable industry in Shirley Temple products such as dolls, cut-outs, and clothes, and her name has passed into the language as a synonym for cute, smiling, curly-haired, doll-like little girls—and even as the eponym for a non-alcoholic cocktail served to children and teetotaling adults.

Shirley Temple

Shirley made her first feature film appearance in 1932. She was awarded a special Academy award "in grateful recognition of her outstanding contribution to screen entertainment during the year 1934," and was the number-one box-office attraction in the United States and Britain from 1935 to 1938. During this time her salary had risen to \$100,000 per picture, but by the end of 1939, unable to keep advancing age at bay, her career began its downward slide. She was 11 years old.

Born in Santa Monica, California, on April 23, 1928, Shirley was taken to dancing classes at age three by an ambitious stage mother who later hawked around her daughter to various film studios. The child was first chosen for a series of one-reel movies called "Baby Burlesks," a quick stepping stone to her first small roles in features. In 1934, Fox Studios, needing a tot to perform a song and dance number in *Stand Up and Cheer*, engaged her at \$150 per week. She made an immediate impact with the number, "Baby Take a Bow" and emerged with a Fox contract. Meanwhile, *Little Miss Marker*, the first film under a two-picture deal that Mrs. Temple had previously made with Paramount, was released several weeks after *Stand Up and Cheer*, and became a huge hit. Based on a story by Damon Runyon, it was this film—something of a classic and frequently remade—that catapulted the six-year-old Temple to stardom.

As little Miss Marker, little Miss Temple was paired with Adolphe Menjou, the smooth veteran of many a more sophisticated screen liaison. She played the daughter of a gambler who, in debt to his bookie, dumps his small daughter on the man as "security" and disappears. Menjou played the seemingly flint-hearted bookie who softens under the influence of the charming, loving child, reforms his ways, and embraces the role of surrogate father. With minor variations on its basic idea, *Little Miss Marker* established the formula for the subsequent string of mediocre films whose success rested on their star's tiny shoulders. Most of the stories were formulaic: a child, generally an orphan or, at the very least, motherless, is packed off by some inept or mildly villainous guardian to live with a reluctant relative. In double-quick time she melts the stony heart of whichever aunt or grandfather she has been inflicted upon, never wants to leave, is reclaimed for purposes of exploitation by the original caregiver and, after much phony but effectively plotted tension, is blissfully reunited with her loved ones.

Exploiting the success of her number in *Stand Up and Cheer*, Fox rushed her into *Baby Take a Bow* (Shirley as the daughter of an ex-con who straightens out under her sunny influence); then it was back to Paramount for *Now and Forever* with Gary Cooper and Carole Lombard (he a jewel thief, she his mistress and Shirley his motherless daughter); the year ended with *Bright Eyes*, in which an orphaned Shirley sang the hit song "On the Good Ship Lollipop." In 1935 she danced with Bill "Bojangles" Robinson in *The Little Colonel* and *The Littlest Rebel*; in *Our Little Girl* she succeeded in reuniting her two estranged parents; in *Curly Top*, a loose retelling of *Daddy Longlegs*, she sang another hit song, "Animal Crackers in My Soup" as she took control of her adoptive playboy-father's affairs, both professional and romantic.

And so it continued. Temple, remaining cute as a button, proved herself a real trouper, delivering her lines and dispensing wisdom to adults with unnerving authority and breaking effortlessly into song and dance with breathtaking ease. In *Stowaway* (1936), the eight-year-old impersonated Eddie Cantor, Al Jolson, and Ginger Rogers

dancing with a Fred Astaire doll; the film version of *Heidi* (1937) suited her to perfection and won critical plaudits; *Wee Willie Winkie* the same year shamelessly changed the original Rudyard Kipling character from a small boy to a small girl. Directed by John Ford, the tale of a child who becomes the mascot of a British army regiment in colonial India was the most expensively produced of the Temple vehicles, with sentimentality taking second place to action. *Rebecca of Sunnybrook Farm* (1938), about an orphan who becomes a radio star, reprised Shirley's career and remains an excellent introductory film for those who have never seen her.

Neither her novelty nor her popularity faded until 1939 when her ratings began to slip after *The Little Princess* and *Susannah of the Mounties*. In 1940, with her asking price now \$300,000, she starred in Maurice Maeterlinck's *The Blue Bird*, adapted by the author and filmed in color; it was the first Shirley Temple vehicle to lose money. At the end of the year, Mrs. Temple and the studio (now Twentieth Century-Fox), who had long had an uneasy relationship, agreed to terminate Shirley's contract. She returned to the screen via MGM, who did not know what to do with her and, after a feeble performance in *Kathleen* (1941), she went to United Artists and appeared in *Miss Annie Rooney* (1942). She disappeared for two years and came back in *Since You Went Away* (1944), a popular wartime family drama in which she played third fiddle to Claudette Colbert and Jennifer Jones.

The world had changed, and so had Shirley Temple, now 16. She was rejected by a disappointed public unable to accept her transformation from dream child to attractive but ordinary teenager, and ten more films between 1945 and 1949 (including *The Bachelor and the Bobby-Soxer* with Cary Grant), and marriage, at 17, to John Agar, only continued the downward slide. Two comeback attempts with television series in 1958 and 1960 failed to generate any enthusiasm and finally marked the end of her career. Divorced from Agar, she married TV executive Charles Black in 1950 and, as Shirley Temple Black, entered Republican politics during the 1960s. Her congressional bid was unsuccessful, but she was appointed a U.S. representative to the United Nations, became the American ambassador to Ghana (1974-76), then the U.S. Chief of Protocol and, finally, in 1989, ambassador to Czechoslovakia.

Described by David Thomson as not "just a child leading her life under adult shadows, but a Lilliputian moralist in ringlets, tap-dancing into your heart and then delivering the sententious message that sorts out confusion," Shirley Temple certainly had her detractors. There were those who found her unbearable, and those who noted the shortcomings in her singing and dancing. Novelist and one-time film critic Graham Greene was famously sued for a review in which he asserted that she was an adult masquerading as a child. But to most, she was the perfect antidote to reality in a difficult era, who later said of her career, "I class myself with Rin-Tin-Tin. At the end of the Depression people were perhaps looking for something to cheer themselves up. They fell in love with a dog and a little girl. It won't happen again."

—Robyn Karney

## The Temptations

While many believe the Temptations to be the favorite soul singing group of all time, this assessment of the band's accomplishments is limited considering their substantial impact upon both the look and sound of popular music. Formed in Detroit, Michigan, in 1960 at a time when AM radio was a multi-layered media format that gave access and success to a large quantity of artists from rock, pop, country, soul, blues, and rockabilly music, the Temptations set a standard for vocal performers and created a sound and style that remains distinctly their own. Built around the remnants of two previous bands, the Distant and the Primes, the Temptations were a major force in the success of Berry Gordy's Motown Records and have been referred to as the originators of the "Motown Sound." Rising to popularity with other precedent-setting Motown performers such as Marvin Gaye, Martha and the Vandellas, and the Supremes, the Temptations were at the center of a huge music explosion. Over the course of nearly 40 years the Temptations would have 19 members and earn 3 Grammy Awards. The group would place 43

The Temptations

singles in the rhythm and blues (R&B) Top 10 as well as earn 14 R&B number one hits. As pop artists, the Temptations would hit number one four times and place 15 sides in the pop Top 10.

Known for their lush harmonies, smooth on-stage choreography, and a bold sense of fashion which made them immediately recognizable, the Temptations conquered pop, rock, R&B, and the soul music market during the course of a career that remains strong. From the start, the membership of the Temptations was ever changing. The Distant, a local Detroit outfit, who recorded for the Northern label and released a single in 1959, "Come On," included Elbridge Bryant, bass singer Melvin Franklin, and baritone Otis Williams. The Primes were a trio of transplants from Alabama comprised of tenor Eddie Kendricks, Kell Osborne, and Paul Williams. It was Otis Williams who brought Kendricks and Paul Williams into the fold when the Primes broke up. Impressed by the Primes' use of choreography, Otis Williams wanted to incorporate that into the Distant's live performances. The Distant changed their name to the Temptations and by 1961 they were signed to a Motown subsidiary, Miracle. While at Miracle the Temptations released several sides with only one achieving any commercial success, "Dream Come True," in 1962. By 1963 Bryant was out of the band and was replaced in 1964 by the notable tenor voice of David Ruffin.

At this point the Temptations began working with William "Smokey" Robinson. A songwriter of immeasurable talent and a producer who would go on to achieve his own success with the Miracles, Robinson gave the Temptations their first hit, "The Way You Do the Things You Do." It would be the first of many Top 10 hits for the group. Their debut album, *Meet the Temptations*, was released in 1964. In 1965 the Temptations scored big and gave the world what would become their signature song, "My Girl." Another Robinson composition, "My Girl" was number one on both the pop and R&B charts. Crossing over as they were, in an era of racial strife and turmoil, made their accomplishments even more meaningful and paved the way for others to follow. They continued this pattern and in 1965 they release another hit from the pen of Smokey Robinson, "Get Ready." Harder and more edgy, "Get Ready" was of tremendous appeal to rock audiences. Two albums resulted from their early association with Robinson, *Sing Smokey*, in 1965 and *Gettin' Ready*, which also contained the stunning, "Ain't Too Proud to Beg," another signature tune for the Temptations.

Moving on, the Temptations began working with producers Norman Whitfield and Brian Holland and also moved Ruffin into the lead vocal position, a spot Kendricks had filled admirably for some time. Ruffin's voice soared on well known hits "Beauty's Only Skin Deep" and "(I Know) I'm Losing You." Together, Kendricks and Ruffin shared lead vocal duties on the classic romantic hit, "You're My Everything," from the 1967 album *With a Lot o' Soul*. Ruffin pushed to have his name placed in front of the band's name, a request that resulted in his firing from the Temptations. He was replaced by Dennis Edwards, a former member of another band, the Contours. Edwards' voice was a perfect fit as the Temptations took their sound into a more psychedelic direction. Edwards' arrival ushered in a time of change for the Temptations and their sound when he recorded the stinging lead vocal for "I Can't Get Next to You," the most significant cut from the Puzzle People project in 1969.

With Whitfield in full control of production, the Temptations were moving away from the smooth, soulful love songs that had made

them so successful. Tunes like "Cloud Nine," "Psychedelic Shack," and "Ball of Confusion (That's What the World is Today)" were commentary on America's drug culture and politics. Changing their sound and style to fit into the world around them, the Temptations remained current, timely, and part of the mainstream. Furthermore, their influence carried over as rock and pop acts sought to emulate not only their moves, but their material.

By 1971 Kendricks was leaving the band. His swan song with the Temptations was "Just My Imagination," a mellow, flowing tune that showed off the group's skillful harmonies. Paul Williams, who suffered from alcoholism, also left around this time. Damon Harris and Richard Street joined the Temptations. Rumors of the band's demise circulated. But, the Grammy-winning single, "Papa Was a Rolling Stone," displaying vast expanses of instrumental work and Edwards' strong vocals, was a huge crossover hit that only seemed to underscore the versatility and tenacity of the group. Their album, *All Directions*, released in 1972, put an end to the idea that the Temptations were about to disband as did a Grammy Award for their album *Masterpiece* the following year.

After more lineup changes, the Temptations recorded their final project for Motown Records in 1976. *The Temptations Do the Temptations* signaled the end of an era as the act moved to Atlantic Records. Atlantic had designs on turning the Temptations into a disco act. Unsuccessful and dissatisfied, the Temptations returned to Motown and hit the charts once again in 1979 with the single, "Power." A reunion tour and album followed in 1982. Ruffin and Kendricks joined the five current Temptations in what was a brief, but glorious moment in time that included an impressive SRO performance at Radio City Music Hall in New York City. Problems, both personal and professional, made it impossible for Ruffin and Kendricks to remain. In 1984 Ali-Ollie Woodson was on board as lead singer.

Inducted into the Rock 'n' Roll Hall of Fame in 1989 by blue-eyed soul duo Daryl Hall and John Oates, the Temptations were formally acknowledged for their contribution to popular culture and to America's music. Yet, their success was marked by tragedy all along the way. Original member Paul Williams died in 1973 of a self-inflicted gunshot wound. Later, Ruffin passed away in 1991 of a drug overdose while Kendricks succumbed to lung cancer in 1992. Another founding member, Melvin Franklin, lost his life in 1995 after a brain seizure. By the 1990s Otis Williams was the only original member left performing with the group and had spent years in court defending his right to use the Temptations' name after Edwards left and formed a rival group. Publishing his autobiography in 1988, he carried on while Motown released a number of anthologies and greatest hits packages, including *Emperors of Soul* in 1994, and the critically acclaimed *Ultimate Collection* in 1996.

A 1990s renaissance of sorts, however, caused renewed interest in the band. Romantic R&B singing acts of all racial persuasions looked to the work of the Temptations for inspiration. The Temptations' sound was found in the work of chart topping 1990s acts such as BoyzIIMen, Babyface, and the Backstreet Boys. Further interest in the group was fueled by an NBC television movie, *The Temptations*, shown in two parts in November, 1998. Based upon Williams' book, the miniseries focused upon the classic Temptations lineup, the drama of their collective rise to fame and fortune, and the individual trials and tragedies of each member. The 1998 release of a brand new CD, *Phoenix Rising*, also on Motown, refuted the idea that the Temptations were merely an oldies act resting upon their laurels. Williams,

along with tenor Ron Tyson, Barrington Henderson, Terry Weeks, and Harry McGillberry, Jr., give credence to the original member's expression, "Tems forever."

## The Ten Commandments

The annual network presentation of Cecil B. De Mille's 1956 epic film *The Ten Commandments* has been an American television standard every Easter for decades. Highlighted by Oscar-winning special effects, such as the spectacular parting of the Red Sea, *The Ten Commandments* vividly tells the Biblical story of the life of Moses, with 1950s superstar Charlton Heston in the lead role. Featuring a cast of thousands, the three-plus hour saga remains a perennial audience

favorite, proving that larger-than-life spectacle continues to be among Hollywood's principal contributions to popular culture.

One of the most important early motion picture directors, Cecil B. De Mille helped define Hollywood's early cinematic style in silent films such as the classic 1915 melodrama *The Cheat*. Primarily a comedy director in his early career, De Mille made his first epic film, *The Ten Commandments*, in 1923. In this earlier version, De Mille interwove the Biblical story with a modern-day parable of two brothers, one a saint, the other a sinner. Even though the shooting budget exceeded a million dollars, the film was a huge moneymaker for Paramount Pictures and made De Mille the top director of his day.

In the mid-1920s, the director started his own studio and his reputation reached legendary proportions. As noted in Baseline's *Encyclopedia of Film*, "By the middle of the decade De Mille, with his Germanic swagger, boots and riding crop, had come to represent the archetypal director to the moviegoing public." After movies switched to sound, De Mille remained one of Hollywood's most bankable directors throughout the 1930s and 1940s, known for his sweeping historical epics.

In 1950, the sixty-nine-year-old director reunited with his great silent star, Gloria Swanson, to make the classic *Sunset Blvd.* Two years later, he directed *The Greatest Show on Earth*, which won the Oscar for Best Picture—DeMille's first. In 1955, rumors began

Charlton Heston (right) and Yul Brynner in a scene from the film *The Ten Commandments*.

circulating Hollywood that the legendary director was planning to remake his 1923 classic, *The Ten Commandments*. Everyone wanted to audition. As actor Vincent Price, who would be cast as Baka, the Master Builder of the Pyramids, recalled, “I think all of us, Eddie Robinson, myself, Judith Anderson, we all really wanted to be in a De Mille picture. We really felt that you couldn’t call yourself a star unless you had been in a De Mille picture! So we all took these sort of small, but rather arresting parts.” Indeed, the cast was star-studded, with Charlton Heston as Moses, Yul Brynner as Ramses, and Anne Baxter as Nefretiti, and featuring Edward G. Robinson, Yvonne De Carlo, Debra Paget, Nina Foch, Judith Anderson, Vincent Price, and John Carradine. Bit players included future television stars Mike Connors and Robert Vaughn and musician Herb Alpert.

In *The Ten Commandments*, Golden Age Hollywood filmmaking meets the 1950s. As described by film critic Pauline Kael, “Charlton Heston is the highly athletic Moses; Anne Baxter is the kittenish princess who loves him; Judith Anderson is the sinister slave who knows the secret of his Jewish birth; Cedric Hardwicke is the likable old Pharaoh; Yul Brynner is the prince who beats Moses to the Egyptian throne; Edward G. Robinson is the traitor to the Jews; Debra Paget is the young slave old Robinson has got his eyes on. Stir them all together, throw in stone tablets, a whopping big Golden Calf, part the Red Sea, and you’ve got Cecil B. De Mille’s epic—3 hours and 38 minutes of it. As old-fashioned hokum, it’s palatable and rather tasty.” Filmed in VistaVision, *The Ten Commandments* was nominated for seven Academy Awards, winning for Special Effects.

Both Hollywood and Cecil B. De Mille made better films than *The Ten Commandments*, but few have remained as popular for as long. A family favorite, a good old-fashioned epic, a television tradition, *The Ten Commandments* has become a staple of American popular culture.

—Victoria Price

## Tennis

A ball, a racket, and a net. The simplicity of tennis is one reason that its origins are difficult to pinpoint. At any one point in time, variations of the game were probably played in almost every country in the world. Some historians believe the game was first invented in the Middle Ages—it is mentioned in twelfth-century manuscripts—but exactly when and where is probably lost to antiquity. The word tennis is derived from the French word “tenez,” meaning “to hold.” Certainly the French greatly enjoyed the game, and by the sixteenth

century up to 2,000 Jeu-de-Paume (the name for the ball) courts had been built in France, and it is thought that every western European country had courts at the time.

Perhaps until the nineteenth century, tennis courts were walled, and the exact rules of the game may have differed from country to country, perhaps even court to court. In 1858, however, a lawn court was constructed in England, and by 1873 an Englishman, Major Walter Clopton Wingfield, modernized and standardized the game. Calling his game Sphairistike (Greek for ball and stick), the net was set at four feet eight inches, while the court was shaped like an hourglass, narrow at the net and wider at the baseline. The game was played to 15 points. This standardization probably was the reason for an increased interest in the game. At about the same time, the game spread to the United States, and soon after, worldwide.

The early establishment of national championships in major tennis-playing countries demonstrates the fast-growing popularity of tennis during this period. In 1877, Wimbledon, the British championship, was first played. In 1881, the United States National Championship (now the U.S. Open) was held. Ten years later the French National championship (now the French Open) began, and by 1905 the national championship of Australia (now the Australian Open) was played. In addition, in 1900 the Davis Cup, a team competition between the United States and England, was first held, and the tournament has since become an annual international championship.

Over the years, various surfaces have been used to play the game, ranging from grass to clay to concrete to composition. Each is generally better suited to different aspects of the game, and rather than undermining the standardization of the game, it has added a diversity to both amateur and tournament play. For example, the French Open is played on clay while Wimbledon is on grass.

Unlike most sports, tennis had a remarkably difficult time meshing amateur and professional status into its organizational format. Although a professional tournament had been held in the United States as early as 1927, not until the 1960s did the “Open Era” of professional tennis begin.

Tennis in the twentieth century is highlighted by a litany of great players from different eras. In the 1920s, American Bill Tilden enjoyed great popularity. In the 1930s, 1940s, and 1950s, Ellsworth Vines, Fred Perry, Don Budge, Jack Kramer, Pancho Gonzales, and Lew Hoad, were, at various times, either ranked number one or regarded as such. In the 1950s and early 1960s, a host of Australian players reached the top echelon, most notably Rod Laver. Others included Hoad, Ken Rosewall, Frank Sedgman, and Neal Fraser. By the late 1960s and 1970s, players like Arthur Ashe, Stan Smith, and John Newcombe came to the forefront. By the 1980s, Bjorn Borg, Ivan Lendl, and John McEnroe were marquee names while Pete Sampras, Boris Becker, and Andre Agassi have been dominate players in the 1990s.

Women’s tennis has also had an illustrious list of notable players such as Frenchwoman Suzanne Lenglen in the 1920s, Americans Helen Wills and Helen Hull Jacobs in the 1920s and 1930s, Americans Maureen “Little Mo” Connolly and Althea Gibson, the first to break the color line in tennis, in the 1950s, Australian Margaret Court, Brazilian Maria Bueno, and American Billie Jean King in the 1960s, Australian Evonne Goolagong, American Chris Evert, and Czech Martina Navratilova in the 1970s and 1980s, and German Steffi Graf, American Monica Seles, and Swiss Martina Hingis in the 1990s.

**Pete Sampras**

In part, professional tennis has been somewhat of a battle of the sexes. The battle was perhaps best exemplified by the much ballyhooed “match of the century” held in the Houston Astrodome in 1973. The match pitted women’s star Billie Jean King against former Wimbledon champion Bobby Riggs. Months earlier Riggs, a self-appointed “king of the chauvinist pigs,” challenged all women athletes in general, but specifically the top ranked woman’s player in the world, to a tennis match. The number two ranked women’s tennis player Margaret Court accepted, and Riggs promptly beat her 6-2, 6-1 in what was called the Mother’s Day Massacre. This led to the King-Riggs Astrodome match in front of 30,000 fans and a worldwide television audience of 50 million. Although Riggs claimed to be a chauvinist, he probably did more for women’s tennis than any male player in history. In front of the large audience, King beat Riggs in three straight sets and took home the \$100,000 winner-take-all prize. The resultant publicity drew attention to the growing complaint from women professionals that their prize money should be equal to men’s, particularly since many women players felt their blend of finesse and power made women’s matches more enjoyable for spectators. The

Women’s Tennis Association, coincidentally founded the year of the King-Riggs match, has consistently worked toward greater equity in prize money and purses for women have become substantially larger, but generally remain smaller than those awarded to men.

—Lloyd Chiasson Jr.

## Tennis Shoes/Sneakers

Although a nineteenth century American lexicographer described sneakers as “shoes with canvas tops and rubber soles,” the vernacular meaning has come to include any shoe with natural or synthetic rubber soles. Uppers can be of leather, nylon, canvas, plastic, or combinations of these. Alternative names for sneakers include tennis shoes, gym shoes, plimsolls, felony shoes, cross trainers, boat shoes, and running shoes. The most popular type of shoe, sneakers accounted for just over a third of all shoes sold in 1996 according to Sporting Goods Marketing Association.

Modern sneakers have beginnings in various sports shoes. One ancestor is the expensive British upper-class footwear of the late 1800s, used for lawn tennis, cricket, croquet, and at the beach. Worn by both sexes, these canvas or leather lace-up oxfords—or high tops—had rubber soles. By the end of the nineteenth century they were priced for the average consumer. Field and track shoes are also forerunners in the industry. At the turn of the twentieth century, football and baseball players wore essentially the same shoe: leather high-topped lace-ups with leather soles and cleats. Sears sold leather shoes made specifically for runners as early as 1897.

From 1900 through the 1920s not much changed, but in the 1930s through the 1960s technical improvements that ultimately

made sneakers trendy were implemented. The quintessential sneaker—the Converse All Star—premiered in 1917. In 1922, Montgomery Ward offered high and low top sneakers—for “work, play or everyday wear”—for children and adults. Paul Sperry introduced his wavy sole for boating shoes in 1935 and other shoemakers produced non-skid soles in patterns including diamonds, feathers, and chain-links. Keds offered a variety of colored uppers, and sponge rubber, plastic foam, cushioned heels, and soles adding comfort were later introduced. In addition, it was in the 1940s and 1950s that Dassler Brothers (later split into Puma and Adidas), Converse, Spalding, and other companies were gaining reputations as sports shoemakers. Also during this time, sneakers, coupled with blue jeans, became symbols of youth. Adidas eventually made shoes with nylon uppers and velcro began to be used as a fastener in the 1960s. The 1970s pushed sneakers into the spotlight with the optimum shoe pursued by both consumers and manufacturers. Geoffery Beene, Calvin Klein, and other designers transformed sneakers into fashion.

When jogging became a popular pastime *Runner's World* printed surveys comparing the qualities of shoes. The running fad of the late 1970s propelled shoe manufacturers such as Saucony, Brooks, and Etonic to develop anti-pronation devices on their shoes so athletes would land flatfooted. Flared and elevated heels, in addition to soft molded and cantilevered soles, were some of the improvements

A pair of tennis shoes.

designers offered. One of a number of athletes turned sneaker designers, Bill Bowerman, a University of Oregon coach, created the waffle sole for added traction. With their popularity well established, by 1978 sneakers amounted to 50 percent of all shoes sold.

By the 1980s many shoe brands had become household words. The aerobic exercise trend of this time called for a new kind of shoe that Reebok pioneered. Nike joined in with a gas-filled midsole in the late 1970s, and by the 1980s added windows in the sole to display this air. Hip-hop musicians soon adopted sneakers as part of their style and referenced them in their songs. In 1986 rappers Run-DMC issued “My Adidas,” an anthem to the Super Star model they wore without laces. The same year, Reebok came out with a pump shoe for the excessive price of \$175: the strong desire to be in vogue, coupled with an inability to afford expensive sneakers, even pushed a few young people to rob, and sometimes kill, others for their costly sneakers.

From the 1980s into the 1990s, the technologically-crafted sneaker looked ready for space trekking—take, for example, L. A. Gear’s flashing lights, straps, and intricate lacing systems, along with the sculptured, multicolored soles of Puma, New Balance, and other brands. With lighter materials, shoes could afford to be bulky, resembling moon boots more than sports shoes. Still, despite the style and technology, the questionable labor practices of Southeast Asian manufacturers contracted to make shoes for brands like Nike and Reebok eventually caused consumer boycotts.

While athletic styles were similar for males and females, non-sport sneakers were distinctively for women. Keds advertised low-heeled pumps with toe bows in 1917 for “Milady.” Sequin sneakers, stitch-it-yourself needlepoint sneakers, and wedge heeled satin sneakers were all 1970s products. About this time fashion designer Betsy Johnson created high-heeled sneakers, a style that would gain popularity in the 1990s, along with sneaker clogs. Another 1990s style, homemade platform sneakers, was copied by Converse and fashion designer Donna Karan, among others.

Meanwhile, new retail venues were created to meet the demand for sneakers. Into the 1960s, sporting goods stores sold athletic shoes with their low-tech siblings available in regular shoe shops. By the early 1960s specialty stores such as The Sneaker Shop of Bridgeport, Connecticut opened. Department stores had designated athletic footwear and accessories sections. In shopping malls, the Athlete’s Foot, Foot Locker, and, exclusively for women, Lady Foot Locker, among others, sold only sneakers. By the late 1990s, super stores such as Sneaker Stadium and The Sports Authority dotted the landscape. Nike owners Phil Knight and Bill Bowman, who had retail outlets as importers for Tiger (now Asics), opened Nike Towns, selling Nike shoes, apparel, and accessories.

Athletes’ endorsements for sneakers were common after 1920. Chuck Taylor, whose signature was added to the Converse All Star in 1923, had directed basketball clinics for Converse and had been on the Akron Firestones basketball team. Northwestern University coach “Dutch” Lonborg lent his name to the 1932 Montgomery Ward basketball shoe. Jim Thorpe endorsed B. F. Goodrich’s “Chief Long Lance” brand sneakers. Female endorsers in the 1970s included Chris Evert for Converse and Virginia Wade for ProKeds. Endorsements, however, created mixed loyalties in the 1970s and 1980s. Some athletes wore favorite shoes with the logo of their endorser hiding the brand they wore. Others changed shoes during the course of a game, giving multiple endorsers equal time. But in the commodified

culture of the 1990s, endorsements by athletes like Michael Jordan for Nike propelled manufacturers into hero-selling machines.

## 10,000 Maniacs

Formed under the name Still Life in rural Jamestown, New York in February 1981, 10,000 Maniacs became noted for its melodic folk music and the wistful lyricism and distinct vocal patterns of its lead singer, Natalie Merchant. After releasing one EP and three albums, the group blossomed into prominence in the late 1980s on the strength of its single “What’s the Matter Here.” The hit put them in the Top 40 along with friends R.E.M. Following the success of its fifth album, *Blind Man’s Zoo* (1989), the band’s participation in the MTV (Music Television) Inaugural Ball for President Clinton in 1992, and its swan song performance on MTV Unplugged (1994), Merchant left to pursue a successful solo career. The remaining members of the band, guitarist Robert Buck, keyboardist Dennis Drew, and bassist Steve Gustafson, recruited an old collaborator, singer-violinist Mary Ramsey, releasing *Love Among the Ruins* (1997) to critical praise, marking a new chapter in the band’s eventful career.

—Scott Thill

## Tenuta, Judy (1951—)

Stand-up comedienne Judy Tenuta is the goddess of her own religion, Judyism, and she encourages the “pigs” in her audience to worship her. Her performances may include accordion music, sadomasochistic play with audience members, and stories of dating the Pope punctuated by her catch-phrase, “It could happen!” In 1997, she hosted an Internet talk show, *The Princess of Pop Culture*. Her comedy albums include *Buy This, Pigs!* (1987) and *In Goddess We Trust* (1995).

—Christian L. Pyle

## Terkel, Studs (1912—)

Studs Terkel was born Louis Terkel in New York City. When he was eight, his family moved to Chicago, a city of raw midwestern muscularity and deep jazz rhythms that sharply influenced his life and career. His love of acting and jazz combined with his urban working-class environment spawned his dual role as local radio personality and oral historian.

Though he graduated from college and law school at the University of Chicago, Terkel never practiced law. Instead, taking his nickname from a famous literary character of the day, Studs Lonigan, he succumbed to the lure of the stage, acting in radio and community theater productions and even in the exciting new medium of television. From 1949 until 1951, he had his own weekly show on NBC, *Studs' Place*, an innovative, improvisational situation comedy about "regular folks." Terkel took the show's loose, unscripted format from the jazz he loved.

In 1951, anticommunist fever was rising, and Terkel's television career was cut short when NBC discovered he had signed leftist petitions seeking reform on such controversial issues as rent control and segregation. With his typical stubborn conviction, Terkel refused to renounce the petitions, and his show was canceled. His next step was to approach radio station WFMT with a proposal for an hour-long interview show. The station hired him and became Terkel's home for the next 45 years, until his retirement in 1997.

During those years, Terkel interviewed hundreds of politicians, writers, artists, and "regular folks," becoming in the process the quintessential "regular folk" himself. Dressed in his trademark uniform, a red and white checked shirt, and red socks, Terkel developed an interviewing style that was homey yet incisive, respectful yet downright curious, which made many people comfortable in revealing their insights and experiences to him.

His interviews with celebrities and politicians were sensitive and probing, often undressing sides of figures in popular culture that were previously concealed. Terkel often ventured out across the United States with his show, interviewing ordinary people. Many of his fans would agree that he made his biggest contributions to society in these treks as a chronicler of the impact of historical events on everyday life.

Terkel often quoted a poem by Bertold Brecht:

When the Chinese wall was built, where'd the masons  
go for lunch?  
When Caesar conquered Gaul was there not even a cook  
in the army?  
When the Armada sank, King Philip wept.  
Were there no other tears?

It is these individuals whom history leaves out of its story who most deeply interested Terkel, and he strove to become their scribe. Beginning with *Giants of Jazz* in 1957, which extolled previously little known black musicians, Terkel produced a series of books that gave voice to the experience of the "regular folks." In 1967 he wrote *Division Street America*, the first of his oral histories, quickly followed by *Hard Times: An Oral History of the Great Depression* (1970), *Working: People Talk About What They Do All Day and How They Feel About What They Do* (1974), *American Dreams, Lost and Found* (1980), *The Good War: An Oral History of World War II* (1985), *The Great Divide: Second Thoughts on the American Dream* (1988), *Race: How Blacks and Whites Think and Feel About the American Obsession* (1992), *Coming of Age: The Story of Our*

*Century By Those Who Have Lived in It* (1995), and *My American Century* (1997).

Each book depicts a multifaceted picture of the historical period it covers and the society that lived through it. Not interested in pat answers or definitive statements, Terkel took delight in the astonishing variety of human experience, and it is that delight he passes on to his readers, like a jovial host at a huge gathering.

"Oral journalism is associated with me," Terkel has said, "and I like that, and it's true. Because it's the sound of the voice that I'd like to capture." Terkel indeed captured the sound of hundreds of voices, previously unheard, but his own voice is apparent in his books as well, often merely in what he chose to write about. He jokingly related that his red checked shirt represents his politics. Terkel's ideological beliefs as a long-time socialist and his interest in working people went hand in hand. A resister of technology, he never used an electric typewriter or drove a car, preferring to take the bus to work. His down-to-earth style perhaps contributed to his success in radio, a much less superficial and glamour-oriented medium than television. He expressed his concern over how high-tech media has affected interpersonal relations when he complained, "We are more and more into communications and less into communication."

## The Terminator

The Terminator is one of the most popular robots of film. There are actually two models of Terminator: the metal skeleton covered by human flesh (technically a cyborg) first seen in *The Terminator* (James Cameron, 1984); and the liquid metal, shape-shifting new T-1000 introduced in the sequel, *The Terminator 2: Judgment Day* (Cameron, 1991). Both were created by Stan Winston, following Cameron's designs. The older Terminator (Arnold Schwarzenegger) comes from the near future to kill Sarah, the mother of the still unborn John Connor, who will become the guerrilla leader that fights the rebellious machines in a future war. In the sequel, this evil Terminator becomes the fatherly protector of mother and son, saving them from the murderous T-1000. The *Terminator* films have appealed to the popular imagination thanks to their special effects (especially the infographics of the sequel) and the magnetic presence of Schwarzenegger in the title role.

## Terry and the Pirates

A popular and highly influential adventure strip, *Terry and the Pirates* was set in China and began in the autumn of 1934. It was written and drawn during its heyday by Milton Caniff. The cinematic layouts and the impressionistic inking style that Caniff perfected influenced a whole generation of comic strip and comic book artists.

Terry Lee was a kid of 12 when he arrived in the Orient, accompanied by an avuncular adventurer named Pat Ryan. Almost immediately the pair was tangling with an assortment of pirates on land and sea. Among them was the quintessential femme fatale, the Dragon Lady. During World War II, Caniff, who had been dealing with the Japanese invaders since the late 1930s, turned *Terry and the Pirates* into a fairly authentic chronicle of combat activities in the China-Burma-India theater. He left his strip at the end of 1946 to do

*Steve Canyon*. *Terry and the Pirates*, taken over by George Wunder, continued until early in 1973.

## Thalberg, Irving G. (1899-1936)

Irving Grant Thalberg may have been the most influential motion picture executive of his time. "The Boy Wonder," as he was called, was an expert in knowing what the public wanted and how to get it to them under budget. As head of production for Metro Golwyn Mayer (MGM) he oversaw countless productions during his tenure, including *The Big Parade* (1925) and *Mutiny on the Bounty* (1935) although *The Good Earth* (1937) was the only picture for which he ever received on-screen credit as producer.

Despite suffering from a weak heart his entire life, Thalberg was a classic workaholic. After their marriage in 1927, he personally oversaw the career of his wife, actress Norma Shearer. Thalberg was often quoted as saying, "Credit you give yourself is not worth having." The Thalberg Award, given by the Academy of Motion Picture Arts and Sciences, is named for him.

## Thanksgiving

A national holiday in the United States since 1863, Thanksgiving has come to play a number of important roles in popular culture. It was customary in Europe to hold days of thanksgiving both for successful harvests and for events such as military victories, deliverance from plagues, and royal births. The date and site of the first Thanksgiving in what is now the United States are still debated, but the most famous in pre-independence times was that held in October, 1621 in the Plymouth Colony. There, European immigrants, "the Pilgrims," and indigenous Wampanoag Indians celebrated the harvest season with feasting that included the dish that would become a

traditional part of the day: turkey. Throughout the colonial era, days of thanksgiving were common, especially in New England, but not universal or regular. Although national days of thanksgiving were proclaimed by the Continental Congress in 1777 and by President Washington in 1789, there was no great clamor for an annual festival until the nineteenth century.

Credit for the establishment of Thanksgiving Day as a nationwide holiday must go to Sarah Josepha Buell Hale, the editor of an influential women's magazine (and author of "Mary Had a Little Lamb") who lobbied legislatures and presidents from 1827 on. In 1863 Abraham Lincoln proclaimed the last Thursday of November as a day of "thanksgiving and praise to our beneficent Father who dwelleth in the Heavens," and since then it has been an annual celebration, though the date has varied. From 1939-1941 President Franklin Delano Roosevelt, in response to the complaints of businessmen that there was insufficient shopping time between Thanksgiving and Christmas, proclaimed Thanksgiving to be the third Thursday in November. This, however, created conflicts with the dating of the holiday in many states which had their own Thanksgiving legislation, so Congress in 1941 passed a joint resolution decreeing that the observance should fall on the fourth Thursday of November.

Thanksgiving, as a non-denominational harvest festival, is part of the American civic religion, able to be celebrated by people of any faith or none at all. It is marked by Pilgrim pageants, the decoration of schools, churches, and shopping malls with harvest themes, proclamations by politicians voicing gratitude for the country's prosperity, and the televising of college and professional football games. Above all, it is the day the extended family gathers for a dinner with a menu that has become stereotypical, almost invariably including turkey, stuffing, mashed potatoes, sweet potatoes, cranberries, and pumpkin pie. Americans abroad observe the day (in a way they would not trouble themselves for Memorial Day or Presidents' Day, for example) and attempt to duplicate this traditional meal as best they can in a foreign setting. The illustrator Norman Rockwell's depictions of this family feast have become American icons.

Thanksgiving, in the shorthand of popular culture, stands for family togetherness for good or ill. Motion pictures such as *Planes, Trains & Automobiles* (1987) and *Dutch* (1991) have been built around the utter necessity of returning home, whatever the obstacles, for this holiday. The final scene of *Raising Arizona* (1987) is a dream sequence in which a dysfunctional and childless couple are blessed in the future by the arrival of children and grandchildren for a Rockwell-style Thanksgiving. On the other hand, films like *The Ice Storm* (1997) and *Home for the Holidays* (1995) use the Thanksgiving setting in a claustrophobic way to emphasize the troubles of a family gone wrong.

Thanksgiving also marks the semi-official launch of another holiday: Christmas. As early as 1889 a New York newspaper claimed that "as soon as the Thanksgiving turkey is eaten the great question of buying Christmas presents begins to take the terrifying shape it has come to assume." Thanksgiving Parades, especially Macy's in New York and that on Los Angeles' Santa Claus Lane, usher in the shopping season.

## Tharp, Twyla (1941—)

A leading choreographer of modern dance and ballet, Twyla Tharp rose to prominence during "the dance boom" of the 1960s and 1970s. Tharp's choreography incorporates dance elements from roll 'n' roll, blues, and jazz, and has been set to the music of Jelly Roll Morton, Bix Biederbecke, and Fats Waller, as well as Chuck Berry, the Beach Boys, and David Byrne. In the mid-1970s, Tharp began to cross-over into ballet choreography. *Push Comes to Shove* and *Nine Sinatra Songs* were the two finest works that grew from her collaboration with Mikhail Baryshnikov and the American Ballet Theater. Other important works are *The Catherine Wheel* and *In the Upper Room*. Although her work continues to draw on modern dance, she is arguably the most important ballet choreographer since George Balanchine. Tharp's choreography can be seen in the movies, *Hair*, *Ragtime*, *Amadeus*, and *White Nights* and a Broadway version of *Singin' in the Rain*. She continues to choreograph for and tour with her own company.

## Them!

First and best of the giant insect/arachnid subgenre of horror films, *Them!* was directed by Gordon Douglas and released by Warner Brothers in 1954. Atomic bomb testing in the American Southwest causes ants to mutate, growing to great size. A scientist (Edmund Gwenn), his daughter (Joan Weldon), an FBI agent (James Arness), and a police officer (James Whitmore) lead the effort to find and destroy the migrating horde of ants before it is too late.

The film is characterized by a matter-of-fact approach. Early witnesses to the ants' existence are either semi-catatonic, like the young girl who can say only "Them!" or the pilot (Fess Parker) who is placed in a psychiatric ward after claiming to have seen giant bugs. The climax, an all-out assault on the ant colony living in the Los Angeles sewers, is moody and frightening, especially by the standards of 1950s' special effects.

Later, lesser films in this genre included *Tarantula* (1955) and the 1957 films *The Deadly Mantis*, *Beginning of the End*, and *The Black Scorpion*.

## *The Thing*

John Carpenter's *The Thing* (1982) is one of the peaks of sci-fi horror cinema, comparable only to *Alien* (1979). Its premise is simple and effective. A group of American scientists working in Antarctica are stalked by a shape-shifting alien, which kills them one by one and then assumes the victim's physical and mental identity. This extraterrestrial creature has lain dormant for centuries, buried in the Arctic ice, until a team of Norwegian scientists defrosts it. The originality of Carpenter's film, otherwise quite conventional as regards character development and plot structure, stems from the shape-shifting abilities of the alien. Suspense is consistently maintained throughout the film because the creature's nature makes it impossible for the audience to predict the shape it will take next. Intense horror is achieved by each new manifestation of the Thing, based on the truly scary designs of special effects wizard Rob Bottin.

*The Thing* is actually a double adaptation. Its main inspiration is Christian Nyby's 1951 film *The Thing (from another world)*, an

adaptation of "Who Goes There?," a short story by John W. Campbell Jr. which was also the basis of Carpenter's version. Nyby's *Thing* is one of the many monster films produced in the 1950s, a vogue fueled by terrors related to the Cold War and its feared alien—that is to say, communist—invasion of America. The first *Thing* failed to truly frighten the audience because the horrific potential of Campbell's original shape-shifting alien could not be adequately realized on the screen. Producer Howard Hawks wanted to achieve what would be achieved thirty years later by special effects artist Rick Baker and director John Landis in *An American Werewolf in London* (1982): a complete on-screen transformation of human into horrific non-human creature. The rudimentary special effects available to Nyby and his crew made this utterly impossible and they had to rely on the traditional man in a rubber suit, shaped in this case—its detractors claim—as a rather unimpressive giant carrot.

After the success of Ridley Scott's *Alien* (1979)—a story loosely based on another sci-fi pulp tale about a hostile alien fond of invading human bodies—the time seemed ripe to face the challenge Hawks had failed to meet. By 1981 special effects had progressed far from the poor 1950s standards under the guidance of make-up pioneer Dick Smith. Two of his disciples, Rick Baker and Rob Bottin, had discovered the wonders of latex foam, a new, supple material invented by George Bau, which enabled them to turn their wild flights of

From left: T. K. Carter, Kurt Russell, and Donald Moffat in a scene from the film *The Thing*.

fancy into actual sculptures and models. Baker and Bottin commenced a fierce competition for the position of king of special effects, beginning with a werewolf film on which they worked together, Joe Dante's *The Howling* (1981). Baker won the first round by reaping the first Oscar for Best Make-Up thanks to his work in *An American Werewolf in London*, but the quality of Bottin's work for Carpenter's *The Thing* certainly did not lag behind Baker's.

*The Thing* is now a cult film. Its original release, however, was badly timed, for it coincided with that of Steven Spielberg's *E.T.* Audiences charmed by Spielberg's cute, homesick alien found little to enjoy in Carpenter's grim tale, which, in addition to horrific scenes of mutation, offers one of the most pessimistic endings on record. By the late 1990s, *The Thing* had been fully vindicated by devoted fans who carved a niche for Carpenter's film in the roll call of top horror films. Its new-found popularity could be accounted for by two main factors: one, no doubt, the quality of Bottin's extraordinary work, which aged well and is hailed by many contemporary monster-makers as seminal inspiration. The scene of the post-mortem that reveals the bizarre, nightmarish shapes the alien can assume is one of the most terrifying metamorphoses ever filmed.

The other factor that contributes to the cult status of *The Thing* is the atmosphere of despair that surrounds Carpenter's doomed heroes. Unlike countless monster films which conclude with the victory of humankind and the destruction of the alien monster, the end of *The Thing* suggests that the monster is alive as one of the only two survivors—either the sensible black scientist Nauls (T. K. Carter) or McReady, the rugged white hero played by Kurt Russell. Suggesting that the monster might find its last refuge in an African American man may have come to seem provocative enough with the onset of political correctness; but even more provocative is the suggestion that it is perhaps the hero, with whom our sympathy has lain throughout the film, who is the monster. Very little hope is left for trust among human beings or for the survival of humankind. This bleak prospect awoke an echo of sympathy in the more pessimistic late 1980s and 1990s, when fears of nuclear annihilation or alien conquest were superseded by fears of more subtle invasions, such as that by the AIDS virus. Fortunately for the admirers of Carpenter's masterpiece, no trivializing sequel followed—doubtless because of its downbeat conclusion and poor box-office returns.

## *The Third Man*

Holly Martins (Joseph Cotton) arrives in postwar Vienna to visit his friend Harry Lime (Orson Welles) only to find that Harry is dead. When Major Calloway (Trevor Howard) claims that Harry was a black marketeer, Holly begins to investigate Harry's mysterious death. He discovers that Harry is still alive and is as

corrupt as Calloway claimed. Holly's conscience is torn between Calloway and the beautiful Anna Schmidt (Alida Valli), Harry's lover who urges Holly to remain loyal to his friend. *The Third Man* (1949) is remembered for its compelling tale of mystery, Anton Karas' haunting zither score, and the blend of expressionism's jagged angles and *film noir*'s shadows in Robert Krasker's Oscar-winning cinematography.

## *This Is Your Life*

A human-interest show that presented documentary-style biographies of celebrities through the recollections and testimonials of colleagues, friends, and relatives, *This Is Your Life* was one of the most popular shows on radio and television during its lengthy run. Although occasionally lesser-known but accomplished guests appeared on the program, the show is best remembered for its surprise tributes to Marilyn Monroe, Jack Benny, Bette Davis, and other Hollywood stars.

Created by perennial host Ralph Edwards for radio in the 1940s, *This Is Your Life* came to television on October 1, 1952 as a half-hour series lasting for nine seasons on NBC. On both radio and television, the show's format was the same. Edwards would appear to encounter the evening's guest by happenstance in or near the television studio. After a brief exchange of pleasantries, Edwards would announce "This is your life!" and the startled guest would be taken to the

A scene from the television show *This Is Your Life*.

show's set where his or her life story would unfold before a live studio audience. Reading from the *This Is Your Life* book, Edwards would recount the celebrity's childhood, school years, and rise to fame with a sentimental flare certain to elicit an emotional outpouring from both guest and audience. Edwards was so effective, in fact, that one show celebrating the life of educator Laurence C. Jones inspired his television audience to send \$700,000 in contributions to a Mississippi college. The show's specialty, however, seemed to be orchestrating parades of long-lost teachers and friends whose appearance was sure to trigger tears from the honored guest.

From time to time a planned show would have to be scrapped because the celebrity learned of the project in advance, but for the most part Edwards was remarkably successful in his *Candid Camera* style ruses, especially since the show was broadcast live until the 1959-1960 season. *This Is Your Life* did, however, tip off two guests: Lillian Roth, so that producers could obtain permission to discuss her successful struggle with alcoholism, and Eddie Cantor, who producers feared might experience a heart attack at too dramatic a surprise.

The show generated two spin-offs, a British version of *This Is Your Life* and, in 1953, *The Comeback Story*, which each week presented the inspiring tale of a faded star who was regaining fame and fortune. It also spun off several incarnations of itself. Edwards revived *This Is Your Life* in 1971, this time featuring the Nelson Riddle Orchestra, but the syndicated show lasted only one season. It re-emerged for another try in 1983, and over the years several *This Is Your Life* specials have appeared on NBC, with Ralph Edwards hosting until 1993. Despite its reputation for sentimentality and sensationalism, *This Is Your Life* has proven to be a resilient formula for the surprise party, whether televised or not. Not only have television producers fit it into every decade's programming, if only for an evening, but the words "This is your life!" have entered the popular imagination as a theme appropriate to almost any kind of party or celebration.

## Thomas, Clarence

See Anita Hill-Clarence Thomas Senate Hearings

## Thomas, Danny (1912-1991)

Although he later starred in the longest running situation comedy in television history and became one of TV's top producers, Danny Thomas once denounced the new medium as a "workplace for idiots." He made this comment after spending two years hosting NBC's *All-Star Revue*, rotating with comedians Jack Carson, Jimmy Durante, and Ed Wynn. He quit the show in 1952 to return to the

Danny Thomas

nightclub circuit. A year later, he was back on the small screen, well on his way to becoming one of the icons of television's Golden Age.

Born Muzyad Yakhoo in Deerfield, Michigan, the fifth of nine children of Catholic immigrants from Lebanon, Danny's first experience in show business was selling candy at a burlesque theater. At age twenty he began singing on a Detroit radio station, and six years later he started a career in nightclubs, as a standup comic and master of ceremonies. His popularity steadily increased during the 1940s, leading to a brief career in films. In his two best remembered films, he played pop composer Gus Kahn in *I'll See You in My Dreams* (1951), and the Al Jolson role in the remake of *The Jazz Singer* (1953).

In 1953, Thomas began developing a situation comedy for ABC. Discussing the project with writer Mel Shavelson, Danny explained that he wanted to stay home with his family in Los Angeles. As he wrote in his autobiography in 1990, "I was away on the road so much that they hardly knew me. They called me 'Uncle Daddy.'" Shavelson realized at once that they had a concept for a comedy show, featuring a nightclub entertainer trying to have a normal family life along with a career in show business. Danny's wife Rose Marie suggested the title, *Make Room for Daddy*. While Danny was on the road, the children took over his space in the home, and when he returned, they had to shift bedrooms and move their belongings to "make room for Daddy."

The show made its debut on ABC in September 1953, running for four seasons with its ratings near the bottom, ranking 107<sup>th</sup> of the 118 shows in that period. The low ratings came despite the fact that the show won an Emmy as Best Situation Comedy Series in 1954, the same year Danny won his Emmy for Best Actor Starring in a Regular Series. After the third season, Jean Hagen, Danny's on-screen wife,

quit the show and became the first leading character in a sitcom to die in the off-season. When the next season started, little Terry and Rusty were told, “Mommy’s gone to Heaven.”

In 1957 the renamed *Danny Thomas Show* was moved to CBS and aired on Monday night in the 9 p.m. time slot. In the first episode Danny had just married his new bride (Marjorie Lord), who arrived with a cute, precocious five-year-old stepdaughter, played by Angela Cartwright. Another popular character on the show was Danny’s Lebanese Uncle Tonoose, played by Hans Conried. Ratings immediately soared to the top ten, and the newfound audience remained loyal throughout the run of the series, which ended in 1964.

In 1967, a special, *Make More Room for Daddy*, aired on NBC. Two years later, another special entitled *Make Room for Granddaddy*, reuniting Thomas, Marjorie Lord, Angela Cartwright, Rusty Hamer, and Hans Conried, proved so popular that it became a pilot for the 1970-71 series on ABC. Danny’s “grandson,” played by Michael Hughes, was introduced on that show. Danny’s real-life children also became important in show business; son, Tony, produced such hit shows as *Golden Girls* and *Empty Nest*, and daughter, Marlo, starred in the hit series *That Girl*.

In the 1950s, Thomas had branched out into production, forming partnerships first with Sheldon Leonard and later with Aaron Spelling. He became one of the most successful television producers of the 1950s and 1960s, whose blockbuster programs included *The Andy Griffith Show*, *The Dick Van Dyke Show*, *Gomer Pyle*, and *The Mod Squad*.

In 1991 Danny Thomas made a rare guest appearance on his son Tony’s series, *Empty Nest*. A week later, his fans were stunned to learn that he had died of a heart attack. His later years were marked by his generosity in giving and raising money for his favorite charity, St. Jude’s Hospital.

## Thomas, Isiah (1961—)

National Basketball Association (NBA) legend Isiah Thomas starred for two seasons at the University of Indiana, where he won All-American honors in 1981, led the Hoosiers to a national title, and was cited as the NCAA (National Collegiate Athletics Association) tournament’s Most Valuable Player. Following that season, Thomas chose to leave school and turn pro. He was drafted in the first round by the Detroit Pistons, and went on to play 13 seasons in the NBA. The six-foot-one, 185-pound point guard became the Pistons’ captain and star, leading the team to three successive appearances in the NBA finals (from 1988 through 1990). In the latter two years, the Pistons emerged as champs. In 1990, Thomas was cited as the MVP (Most Valuable Player) of the finals. Between 1982 and 1993 he started in

12 successive NBA All-Star games, and was the contest’s MVP in 1984 and 1986.

In his time in the NBA, Thomas teamed with Joe Dumars to make up one of pro basketball’s top backcourts. Upon his retirement after the 1993-1994 season, he was the Pistons’ all-time scoring leader, with 18,822 points. He also was tops in assists with 9,061, steals with 1,861, and games played with 979. One of the keys to his success has been his mental approach to the game. “I’ve always believed no matter how many shots I miss,” Thomas once said, “I’m going to make the next one.”

Although he left college before graduation, Thomas continued his studies and in 1988 earned a degree in criminal justice. Since his retirement, he has transferred his intelligence and ambition to off-court endeavors. “If all I’m remembered for is being a good basketball player,” he declared, “then I’ve done a bad job with the rest of my life.” Thomas first became a part-owner and vice president of the NBA expansion Toronto Raptors. He hoped to take over the team, but the deal, involving majority owner Allan Slaight, fell apart, resulting in Thomas leaving the Raptors and joining NBC as a basketball analyst. He has also been involved in banking, land development, sports and amusement activities, and other business ventures in the Detroit area. Nonetheless, Isiah Thomas’s greatest glory came on the basketball court. In 1996, he was named one of the 50 Greatest Players in NBA history.

## Thomas, Lowell (1892-1981)

A best-selling author, globe-trotting adventurer, and legendary broadcaster, Lowell Thomas travelled from the arctic to the outback, covering stories ranging from World War I to Lawrence of Arabia. He came to radio in 1930 and stayed—for a variety of sponsors and two different networks—until 1976. His 15-minute nightly broadcast was rarely far from the top of the news ratings chart, and his sign-off line is well remembered: “And so long until tomorrow.”

## Thomas, Marlo (1943—)

Marlo Thomas will always be best remembered as the naively innocent and exhaustingly enthusiastic Ann Marie of the television show *That Girl* (1966-1971). One of the first series to present an unmarried female pursuing anything other than a husband, it was more traditional than it claimed. Although the show made a great deal

of the fact that she was an aspiring actress living on her own in New York City, both Ann's father and her ever-present boyfriend were just a phone call away when she found herself in one of her never-ending predicaments. Moreover, she was seldom seen auditioning and worked at only low-paying temporary jobs suitable for women of the period. Despite her inability to find a reliable source of income, she somehow managed to live in a three-room apartment in a good neighborhood in New York City and dress in the height of fashion.

After the series ended Thomas became a producer and in that capacity won Emmy Awards for her work on *Marlo and Friends in Free to Be . . . You and Me* and *The Body Human: Facts for Girls*. She won a third Emmy for her role in *Nobody's Child* (1986). She has also been a strong advocate for a variety of women's causes. In 1980, Thomas married talk-show host Phil Donahue.

## Thompson, Hunter S. (1939—)

Hunter S. Thompson represents life on the edge, the counter to culture, the man who has listed his religion as none, his politics as

Hunter S. Thompson

anarchist, and his hobby as collecting guns. He claimed membership in the American Civil Liberties Union, the National Rifle Association, and the National Organization for the Reform of Marijuana Laws, and once ran for sheriff of Aspen, Colorado. Strange as it may seem, the drug- and alcohol-abusing Thompson at one time worked for *Time* magazine, the *New York Herald Tribune*, and the *National Observer* before he went straight and started writing for the voice of the counterculture, *Rolling Stone*, and invented "gonzo journalism," or at least that's the storyline. He was even turned into a character in the comic strip *Doonesbury*.

Thompson made his first major visit to the edge in 1965, when he wrote an article for *The Nation* about the Hell's Angels entitled "The Motorcycle Gangs: Losers and Outsiders." The article led to a book contract. Thompson spent a year with the Angels as a field study for the book. He was charged with separating fact from fancy and in doing so he condemned the press for coverage that he felt misrepresented the Angels. Generally, the press merely repeated what law enforcement officials chose to say rather than learning the truth by riding with the members.

Thompson's book portrayed the Angels as drug-using and alcohol-abusing gang members who believed that women were put on earth to service them. Perhaps the lowest point of the book was Thompson's description of gang sex with one woman. And at the end, some Angels nearly stomped him to death and Thompson suddenly seemed not so fond of the motorcyclists.

The titles of Thompson's books say something about Thompson and his subject matter: *The Great Shark Hunt: Strange Tales from a Strange Time*; *Gonzo Papers, Volume One, The Curse of Lono, Generation of Swine: Tales of Shame and Degradation in the '80s*; *Gonzo Papers, Volume Two, Songs of the Doomed: More Notes on the Death of the American Dream*; *Gonzo Papers, Volume Three, The Proud Highway: The Saga of a Desperate Northern Gentleman*; *Fear and Loathing in Las Vegas: A Savage Journey to the Heart of the American Dream*, and *Fear and Loathing on the Campaign Trail '72*. "Fear and Loathing in . . ." became a trademark Thompson headline on many of his *Rolling Stone* articles.

The two *Fear* books followed *Hell's Angels* and helped establish Thompson as a writer with an attitude. The Las Vegas book was purported to be an autobiographical account of Thompson's failure to cover two events for a magazine because he spent more time on drug trips than reporting. The book includes a character named Raoul Duke, who was really Thompson, and who in Garry Trudeau's *Doonesbury* became "Uncle Duke." More than 25 years after the book was published, it was made into a movie that received some good reviews, but wasn't in the theaters very long.

*Fear and Loathing on the Campaign Trail '72*, a collection of articles Thompson wrote for *Rolling Stone*, to some extent continued to reflect Thompson's loathing of the mainstream press, while at the same time making Thompson the center of the reportage rather than the candidates. Another *Rolling Stone* writer, Timothy Crouse, wrote a book about how the press covered the 1972 presidential campaign, and he provided many of the stories about Thompson's non-journalistic antics. Crouse even claimed that, when *Rolling Stone* dispatched him and Thompson to Washington to open a bureau, Crouse was "to write the serious backup pieces, keep Thompson out of trouble, and carry the bail bond money." Thompson showed up on the campaign trail in sneakers, sunglasses, a Miami sports shirt, and a hunting

jacket; everyone else in the press corps wore coats and ties. Thompson was downright irreverent, Crouse reported, offering to share his beer, Wild Turkey, and drugs and wondering outloud if at the next campaign stop he'd have time to drop some acid. Eventually, however, many members of the press came to respect Thompson because he was able to write what they couldn't. While his colleagues were committed to objective reporting, Thompson's talent was in his ability to fill his pieces with his own opinions expressed in descriptive language.

Thompson invented "gonzo journalism" while covering the Kentucky Derby (Thompson was born in Louisville) for *Scanlan's Magazine* in 1970. He claimed later that the article did not come about through any careful plotting of storyline and subsequent revision the way most writing is born, but had been created out of necessity when Thompson, unable to write, merely ripped pages out of his notebook, numbered them and sent them on to his editor. The result was "The Kentucky Derby Is Decadent and Depraved," a hilarious account of Thompson in Louisville. Thompson's claim aside, the article worked too well to have been assembled randomly, but no one noticed, and Thompson later proclaimed himself the inventor of gonzo journalism.

Thompson continued to be published, if not in *Rolling Stone* or other magazines and newspapers, then in book collections of his journalistic pieces—namely, the "gonzo papers." Meanwhile, he continued to behave outrageously. "I'm afraid I've become addicted to my own adrenaline," he told a *Washington Post* writer in 1991. His writing style has been badly imitated but hardly duplicated. Generally, those who continued to follow him enjoyed his irreverent and rich writing, and he remained a larger-than-life example of the counterculture of the 1960s.

## Thompson, John (1941—)

Olympic and college basketball coach John Thompson, Jr. became the first African American to guide an NCAA championship

basketball team in 1984. Thompson led the Georgetown University Hoyas team from 1972-1999. Thompson turned around Georgetown's abysmal record, making it a national powerhouse in the Big East Conference that he helped to charter in 1979. Under his leadership, the team compiled 24 consecutive victorious seasons (excluding his first year there), beating its opponents in more than 70 percent of its games. Thompson's college athletes were known for their aggressive playing styles as well as for their commitment to academic achievement at their elite Catholic institution. The coach supervised both his players' scholarly progress as well as their outside friendships, rescuing some stars from the bad influence of drug dealers. Thompson's shoulder-resting trademark towel that he used on court to wipe away his perspiration symbolized his hard-driven temperament. But he also kept a deflated basketball on his desk as a symbol to Georgetown players that there should be more to their lives than the game.

—Frederick J. Augustyn, Jr.

## Thomson, Bobby (1923—)

Robert Brown "Bobby" Thomson played major league baseball from 1946 through 1960. On October 3, 1951, as a New York Giant, he belted a home run to win the National League Pennant in his team's final at-bat. That "shot heard round the world" became what many consider the most dramatic event in the history of American sports. The home run capped a thrilling pennant race between the New York Giants and their bitter rivals, the Brooklyn Dodgers. In front of a national television audience, Thomson and the Giants reveled in their victory just as New York delighted in its place at the cultural center of a thriving postwar America. But Thomson's home run retained significance well beyond the 1950s. Beginning in the 1970s, as Major League Baseball increasingly cloaked itself in the garb of nostalgia, the shot heard round the world symbolized a simpler America, where an average guy who lived with his mother on Staten Island could drive to Manhattan one autumn afternoon and return home a hero.

Bobby Thomson was born in Glasgow, Scotland, on October 23, 1923. At the age of two, he moved with his mother and five siblings to join his father James in New York. James Thomson was a cabinet-maker who had moved to America to seek a better living. The Thomsons would struggle financially throughout Bobby's youth on Staten Island.

Thomson first played professionally, without much success, in the Giants' minor league organization in 1942. He then postponed his

**Bobby Thomson**

baseball career to join the U.S. Army Air Corps. After spending three years stationed in Victorville, California, he went to a Giants training camp for returning serviceman. The Giants assigned him to their Triple-A affiliate in Jersey City where he played for one year. After an outstanding rookie season with the Giants in 1947, Thomson showed only occasional flashes of brilliance. Critics accused him of harboring a nonchalant attitude that adversely affected his play. By 1951, Thomson seemed destined for an average career on a mediocre New York Giants team.

In the early part of the 1951 season, neither Thomson nor the Giants had improved. The Giants lost 12 of their first 14 games. Over that period Thomson hit a dismal .193. Although the Giants recovered from their disheartening start, in early August they found themselves a distant second, 13 1/2 games behind the Brooklyn Dodgers. The press and most fans predicted that the championship would go to Brooklyn. But on August 11, the Giants started a 16-game winning streak fueled by Thomson's hot hitting and climbed within reach of the Dodgers. The Giants caught the Dodgers with one day left in the season, and after the season's final game, the two teams remained tied for first place. New York and Brooklyn split the first two games of a three-game playoff series. The winner of the third game would take the National League pennant.

The deciding game started inauspiciously for the Giants, as they fell behind 4 to 1, thanks in part to Thomson's poor base running. The Dodger pitcher Don Newcombe appeared indestructible until the bottom of the ninth inning. After three base hits the Giants closed the gap to 4 to 2 and had base runners on second and third. With the

winning run coming to the plate, and his pitcher clearly tiring, Brooklyn manager Charlie Dressen made a call to the bullpen for Ralph Branca. With one out, Bobby Thomson stepped into the batter's box. Thomson watched Branca's first pitch blow past him for a strike. Branca's second pitch came in hard, high, and inside. Thomson lashed out at the ball, and it shot off his bat toward the left field wall. Russ Hodges, the Giants announcer, called the action on WMCA radio: "There's a long drive . . . it's gonna be . . . I believe . . . The Giants win the pennant! The Giants win the pennant! The Giants win the pennant! The Giants win the pennant! I don't believe it! The Giants win the pennant!" Thomson claimed his feet never touched the ground as he circled the bases.

The shot heard round the world immediately gained legendary status, epitomizing New York's and America's postwar optimism. The series was the first sporting event to be telecast live from coast to coast, and its dramatic finish affirmed New York's place as the de facto capital of a thriving American culture. New York sportswriter Red Smith captured the euphoric sense of disbelief. "Now it is done," he wrote, "Now the story ends. And there is no way to tell it. The art of fiction is dead. Reality has strangled invention. Only the utterly impossible, the inexpressibly fantastic can ever be plausible again." Bobby Thomson's home run spoke for a city and a nation where the impossible had become the attainable.

Bobby Thomson played solid baseball for eight more years, but never recaptured the glory of 1951. Following the 1953 season, the Giants traded him to Milwaukee. He played briefly for several other teams before retiring in 1960. Thomson settled in New Jersey with his wife Elaine and their three children, where he worked as a paper products salesman.

In the 1970s, amid salary disputes and escalating ticket prices, Major League Baseball began to market itself through nostalgia, attempting to connect the contemporary game to a mythical past. Thomson's homer became the crowning moment of that myth. The shot heard round the world symbolized a time of innocence and purity, when players played for the love of the game, and the fans loved their players—a time when the tall, plodding, immigrant son of a cabinetmaker could swing a bat and become a hero.

## **Thorogood, George (1952—)**

George Thorogood's gritty blues-rock music earned him the title of "today's master of yesterday's rock 'n' roll" and brought a

working-class consciousness to the 1980s pop scene. Beginning as a blues guitarist in the vein of Elmore James and Hound Dog Taylor, Thorogood and his group the Destroyers crossed over to a pop/rock audience in 1978 with his cover of Hank Williams's "Move It On Over." In 1982 he released his major-label debut, *Bad to the Bone*, and its title track remains his best-known single, due in large part to its repeated exposure on MTV.

Though three subsequent albums all went gold, Thorogood's audience began to shrink. His only major success in the 1990s was the single "Haircut," a rebellion against authority figures who urged the song's protagonist to "get a haircut, and get a real job." Thorogood nevertheless continued to tour and record, releasing a "comeback" album, *Rockin' My Life Away*, in 1997.

## Thorpe, Jim (1888-1953)

Few would argue that Jim Thorpe is one of the most accomplished American athletes of the entire twentieth century. His time in the National Football League (NFL) and Football Hall of Fame enshrinement data attests to this fact. Here, it is noted that he was an "All-America halfback at Carlisle [and] 1912 Olympic decathlon champion . . . First big-name athlete to play pro football, signing with the pre-NFL Canton Bulldogs in 1915 . . . Named 'The Legend' on the all-time NFL team . . . Voted top American athlete of first half of 20th century. . . ." Additionally, Thorpe won Olympic gold in both the decathlon and pentathlon. That his medals were ingloriously stripped away because he had briefly played professional baseball is one of the less-than-honorable deeds of the International Olympic Committee.

James Francis Thorpe, a Sac and Fox Indian, was born in the Oklahoma Territory. His Indian name was Wa-tho-biuck (or "Bright Path"), and he, his twin brother Charles, mother, and rancher father resided in a one-room cabin near the small town of Bellemont. Young Jim was a natural athlete who loved and excelled in all sports. His early life, however, was laden with disappointment and tragedy. When he was eight, his brother was stricken with fever and subsequently passed away. Five years later, his mother died of blood poisoning. In 1904, at age 16, he headed east to Pennsylvania's Carlisle Indian School. His small size—he was 5 feet 5 inches tall and weighed 115 pounds—prevented him from finding a spot on the Carlisle varsity football team. This frustration, coupled with the death of his father, resulted in declining grades, alienation, and eventual sequestering in the Carlisle guardhouse.

By his late teens, Thorpe had grown five inches, adding bulk and muscle. Pop Warner, Carlisle's legendary coach, first took note of his track-and-field skills, and eventually recruited him for the football team. He started out as a kicker, became the starting halfback during the 1908 season, and his athletic career began to blossom. During that

Jim Thorpe

season, his running, punting, place-kicking, and occasional passing guided Carlisle to a 10-2-1 record; Walter Camp, America's reigning football expert, cited him as a third-team All-American.

After playing professional baseball in the Carolina League, Thorpe returned to Carlisle and solidified his legend as an all-time-great college gridiron star. In 1911, he was involved in two out of every three of Carlisle's offensive plays. His 50 and 60 yard punts soared through the sky. In the year's penultimate contest, an 18-15 victory over Harvard, he carried the ball on 40 percent of all plays and kicked four field goals. Carlisle ended the campaign with an 11-1 record; the following season, Thorpe added to his luster by leading Carlisle to a 12-1 mark. In both years, Camp cited him as a first-team All-American.

Perhaps Thorpe's greatest triumph came in the 1912 Olympics, held in Stockholm. He was set to compete in two punishing events: the pentathlon, made up of five track-and-field competitions (javelin throw, discus throw, running broad jump, 200-meter dash, and 1,500-meter race); and the decathlon, consisting of 10 events (javelin throw, discus throw, long jump, high jump, pole vault, shot-put, 400-meter run, 1,500-meter run, 100-meter dash, and 100-meter hurdles). He won gold medals in each, and King Gustav of Sweden proclaimed that Thorpe was the "greatest athlete in the world."

Thorpe returned to the United States a bona fide hero. But the cheering was to be short-lived. A journalist soon discovered that Thorpe had played professional baseball. Therefore, he could not be classified an amateur athlete; only amateurs could compete in the Olympics. In a letter to the Amateur Athletic Union, Thorpe wrote, "I did not play for the money . . . but because I like to play ball. I was not wise to the ways of the world and I did not realize this was wrong and that it would make me a professional in track sports."

Back when Thorpe was in his athletic prime, it was a common practice for college athletes to pass their summers playing pro ball to pick up a few extra bucks. They played under assumed names—so no one was the wiser—and they could retain their amateur status. Had Thorpe done so, his indiscretion would have remained a secret. When confronted with the accusation that he had played ball for money, he was honest enough to admit the truth. Nevertheless, he was divested of his medals by the International Olympic Committee. This dishonor is particularly ironic considering that, today, professionals with million-dollar salaries are allowed to compete for Olympic gold. For the "crime" of playing pro baseball, Thorpe pulled down a salary of \$25 to \$30 a week.

Thorpe was to be the Bo Jackson and Deion Sanders of his day, as he went on to play major league baseball and pro football. His debut in the majors came in 1913, when he patrolled the outfield for the New York Giants. From then through 1919 he played in 289 games, mostly for the Giants, but with brief stints in Cincinnati and Boston. In 1915, Thorpe made his pro football debut with the Canton Bulldogs. Between 1915 and 1928, he played halfback for the Bulldogs (where he spent the bulk of his career), Cleveland Indians, Oorang Indians, Rock Island Independents, New York Giants, and Chicago Cardinals. In 1916, he was the Bulldogs' starting halfback and head coach, guiding his team to an undefeated season. In 1920, he became the first president of the American Professional Football Association, the precursor of the NFL. Thorpe also was an innovator; during his pro career, he conceived the style of tackling in which the tackler attempts to halt the runner with his shoulder, rather than arm.

Jim Thorpe was 40 when he retired from football. For the next two decades he held various menial jobs—often, ironically, working under an assumed name because of the humiliation. He toiled as a B-movie actor in Hollywood. He accepted public speaking engagements in which he would be garbed in Indian gear as he discussed athletics and the plight of the American Indian. During these hard times, he also became an alcoholic.

In January 1950, the Associated Press surveyed 391 sportswriters and broadcasters to determine the greatest athletes of the first half of the twentieth century. Thorpe was cited as the top football player, and bested Babe Ruth as the finest all-around athlete. A year later, his life story was told in the Hollywood movie *Jim Thorpe—All American*, with Burt Lancaster in the title role. Thorpe died in 1953, after suffering his third heart attack. The following year, his remains were placed in a mausoleum in Mauch Chunk, a Pennsylvania town of 5,000 located at the foot of the Pocono mountains, which was summarily renamed for Thorpe.

Since his death, his honors have multiplied. In 1955, the NFL's Most Valuable Player trophy was named for Thorpe; the trophy awarded to college football's top defensive player also was named for him. In 1958, he was admitted into the National Indian Hall of Fame, and in 1961, he was chosen for the Pennsylvania Hall of Fame. By 1963, he had become a charter inductee in the Football Hall of Fame—and, when arriving at the Hall, located in Canton, one is greeted by a statue of Thorpe. Most importantly, in 1982—29 years after his death—Juan Antonio Samaranch, the new president of the International Olympic Committee, reestablished Thorpe's amateur status. The following year, his children were presented with facsimiles of his Olympic medals.

## *The Three Caballeros*

Produced with the newly formed Office of Inter-American Affairs, Walt Disney Studio's animated film *The Three Caballeros* (1945) presented stellar technical achievements, blending live action and animation in color on a scale never achieved before, and putting the film years ahead of its time. Rooted in the World War II era, the film was one of a series of features, beginning with *Saludos Amigos* (1943), attempting to celebrate diplomatic relations between the United States and Latin America by erasing the stereotyped images of Latin American culture and people common in Hollywood cinema:

the untrustworthy Mexican womanizing Latin lover “guerillero”; his female counterpart, the lascivious Latin woman; and the stupid, lazy “poncho.”

These films are also noted for being the first concerted effort to use animation as an instructional medium for popular audiences and as an effort to atone for what Eric Smoodin in *Animating Culture* describes as “the previous sins of Yankee cultural chauvinism.” Yet what started out as a lesson in geography with more balanced depictions of place and people evolved into fantastical depictions of what Smoodin notes as “geographies animated by imagination and desire.” *The Three Cabelleros* actually reveals more about the culture and ideologies of the United States than it does about the nations of Mexico and Brazil, the featured countries. Latin America is presented to the star of the film, Donald Duck, as a series of birthday presents. It constructs a tourist representation of Latin America, its peoples and culture, exotic with pleasures and fun offered for the delight of North America. This is well-illustrated by Donald Duck’s reaction to Latin American women as constructed in the text. The film renders the people of Latin America, and particularly the women, as homogeneous. The diversity of racial types on the continent is not presented, rather the women are “recognizably” Latin American. Their portrayal is linked directly to the images of Latin American women popularized by Carmen Miranda, and they are linked to hyper-sexuality, both in the male’s reaction to them and visually, as in the Carmen Molina dance sequence with phallic cacti. Though the effort to present a truer vision of Latin America is made obvious, *The Three Cabelleros* reveals an underlying set of messages of American imperialism and racism.

## Three Investigators Series

The Three Investigators series, a 43-volume set of mysteries for juvenile readers published by Random House between 1964 and 1987, featured three 13-year-old male amateur sleuths, Jupiter Jones, Pete Crenshaw, and Bob Andrews. Jupiter, a former child actor, was the group’s leader, Pete the impulsive athlete, and Bob the reserved, studious type. Although the sleuths were amateurs, they were portrayed handling themselves in a thoroughly professional manner,

including offering business cards and maintaining scrupulous files in their office, a trailer hidden in a junkyard owned by Jupiter’s aunt and uncle. The office had several secret entrances, including a tunnel which could be accessed through a loose board on the junkyard fence. The Three Investigators also used modern equipment in their investigations, including the telephone and portable tape recorders.

Film director Alfred Hitchcock served as a consultant to the Three Investigators at the beginning and end of each story. After Hitchcock’s death in 1980, the series stopped using his name as a character, replacing him with a fictitious film director, Hector Sebastian, for new titles and paperback reprints of the first thirty volumes. The early volumes (1-8, 10) were written by Robert Arthur Feder (1909-1969), who served as an editor for the *Alfred Hitchcock Magazine*, the author of many screenplays for *Alfred Hitchcock Presents*, and the compiler of several short-story collections bearing the director’s name. The title pages of the Three Investigators books identified the authors of each volume. Some of them wrote under pen names, such as “Robert Arthur” for Robert Arthur Feder, “William Arden” for Dennis Lynds, and “Marc Brandel” for Marcus Beresford; others, such as Nick West and Mary Virginia Carey, used their real names.

The Three Investigators were too young to drive, and in the early books were chauffeured around their native Rocky Beach (near Hollywood, California) in a gold-plated limousine whose services they had won in the first volume. In later books, their chauffeur returned to help the boys during his time off. This transportation complication made the Three Investigators series more believable to readers who were just a few years younger and facing the same problems. Because of the more realistic adventures experienced by the trio, librarians preferred them over the mass-market—and old-fashioned—Hardy Boys books.

After the publication of the earlier volumes, Random House issued a new series of Three Investigators Crimebusters stories, but they were discontinued after a little more than a dozen paperback volumes were published. In these stories, written by some of the same writers as the original series, Jupe, Pete, and Bob were old enough to drive and hold down part-time jobs. The Crimebusters series had a modern theme with more action and violence, erasing the innocence of the original series. The Three Investigators have proven popular in Germany and several new stories were written specifically for that market in a series known in translation as the “Three Question Marks.”

—James D. Keeline

## The Three Stooges

Although they spent more than three decades making films, it was television that turned the Three Stooges into one of the most recognizable and beloved comedy teams in the world. Specializing in unsophisticated, violent slapstick, the Three Stooges slapped, poked, and generally abused each other in more than two hundred short films between 1934 and 1958, when their shorts were released to television, to the delight of a whole new generation of Three Stooges fans.

Formed in vaudeville in 1923, the team’s original members were Moe Howard (born June 19, 1897, as Moses Horowitz; died May 4, 1975) and his brother Shemp (born March 17, 1895, as Samuel

**The Three Stooges**

Horowitz; died November 23, 1955), who acted as sidekicks to their boyhood friend, comedian Ted Healy. In its early years, the act was billed “Ted Healy and His Stooges” and sometimes “The Racketeers.” While various “stooges” moved in and out of the act, each virtually interchangeable with another, the addition of Larry Fine (born October 5, 1902, as Louis Feinberg; died January 24, 1975) in 1925 rounded out the troupe. For the next several years Healy’s Racketeers were Moe, Larry, Shemp, and Fred Sanborn. Although there was very little that was innovative about the team’s act—the physical comedy they performed was borrowed from old vaudeville slapstick—their success in vaudeville led them to Broadway in the late 1920s and to film in 1930, where this lineup supported Healy in the feature film *Soup to Nuts*. Although the film was not a hit, the Stooges found a warm audience.

In the meantime, a rift had grown between Healy and his players, as the trio resented the pay inequity by which they were paid only one-tenth of the more than one thousand dollars Healy earned weekly. Such financial disagreements were exacerbated by Healy’s problems with alcohol, which were worsening. The Stooges left Healy when he nixed a contract offered to them by Fox (to perform without Healy),

striking out on their own as “Howard, Fine and Howard” while Healy hired new stooges to do the old act. Although Healy managed to convince them to return, Shemp left the act to pursue a career in feature films and was replaced by Curly (born October 1903 as Jerome Lester Horowitz; died January 18, 1952), who soon emerged as the most popular stooge. Signed to a one-year contract with Metro-Goldwyn Mayer studios in 1933, the Stooges appeared in six feature films, including *Meet the Baron*, *Dancing Lady* (with Joan Crawford), *Fugitive Lovers*, and *Hollywood Party*. But it was short films such as *Plane Nuts* that allowed them to reproduce their vaudeville act. When their contract was up, Healy stayed with MGM, while the Three Stooges went on as a trio, signing a deal with Columbia for a series of two-reel comedies—a commitment that would end up lasting twenty-five years.

It was during the early Columbia years that Moe, Larry, and Curly developed into recognizable characters, with hairstyles that scarcely changed over the decades: Moe’s thick black mop with its evenly cut bangs was as much a fixture of the act as the two large tufts of curly hair that protruded from Larry’s balding head. Moe assumed Healy’s role as the leader (off camera as well), slapping, poking, or

punching the childlike Curly or the hapless Larry. However, it was the bald and portly Curly who usually stole the show, delighting audiences with his masterful body language, which he exercised with his feet as much as his hands, sometimes dancing or spinning on the floor. Curly's high-pitched voice was also used to great effect by singing, barking, and most of all, wise-cracking—while his occasional defiance of the bossy Moe almost always resulted in more abuse.

The films generally followed a standard plot, which of course was merely a vehicle for their slapstick set pieces and verbal gags. In most films, the group would take on occupations such as plumbers, waiters, doctors, salesmen, soldiers, or businessmen, where they would proceed to make a mess of the situation. Although the tiniest disagreements would usually result in an exchange of slaps, pokes, and insults—a formula that was usually repeated several times in each film—in the end Moe, Larry, and Curly always stuck together in their efforts to resolve whatever problem they faced.

Working under directors such as Edward Bernds, Charlie Chase, Del Lord, and Jules White, the Stooges didn't write their own scripts, but their ad-libbing frequently survived the films' final cut. Highlights of their early years with Columbia include their World War II parodies of Hitler in *You Nazy Spy* (1940) and *I'll Never Say Heil Again* (1941). Such performances had personal resonance because of the Stooges' Jewish background but were nevertheless enhanced by Moe's striking transformation into the German fuehrer. Although the trio appeared in occasional feature films, including *Start Cheering* (1938), *Time Out for Rhythm* (1941), and *Swing Parade* (1946), short subjects remained the principal format for their films.

With his health steadily deteriorating, Curly suffered a stroke while on the set of *Halfwit's Holiday* in May 1946 and was forced to retire from the act. His brother Shemp returned from a solo career as a character comedian and rejoined the group. Although it was difficult to fill the shoes of the trio's most popular member, Shemp helped to sustain the group's success for the next decade, until his unexpected death in November 1955. Despite the loss of another brother, Moe chose to continue the act with one-time burlesque star Joe Besser replacing Shemp. While the Three Stooges had starred in Columbia's top-grossing short-subject series for many years, the era of short-subject films was nevertheless coming to a close by the early 1950s. With most major studios having phased out two-reelers, the Stooges' career with Columbia ended in 1958 when the studio closed its short-subjects department.

Just as the act seemed on the verge of retiring, a new generation discovered a quarter century of face-slapping, nose-tweaking, eye-poking comedy with the release of seventy-eight Columbia shorts (featuring Curly) to television. Capitalizing on their renewed popularity, the group carried on by making numerous personal appearances (which had always been their most lucrative source of income) and launching a line of merchandise and comic books. Meanwhile, by 1959 Joe Besser had been replaced by Joe De Rita, who became known as "Curly Joe," and the trio ventured into a series of feature films aimed primarily at children, including *Have Rocket, Will Travel* (1959), *Snow White and the Three Stooges* (1961), *The Three Stooges Meet Hercules*, *The Three Stooges in Orbit* (both 1962), and *The Outlaws Is Coming* (1965). In 1965 the group produced live-action wraparounds for a series of five-minute animated cartoons.

The impact of the Three Stooges' comeback in the late 1950s and 1960s was part of a general renewal of interest in slapstick

comedy. During this period many of the works of the Marx Brothers, Laurel and Hardy, and the silent films of Charlie Chaplin were revived and found new television audiences. On the big screen, the success of high-budget feature films such as *It's a Mad, Mad, Mad, Mad World* (1963), *Those Magnificent Men in Their Flying Machines* (1965), and *The Great Race* (1965) was probably due in no small part to the Three Stooges' role in the renaissance of physical comedy. Long after the Three Stooges' demise, homage continued to be paid to Curly's antics in cartoons such as "Jabberjaw" in the 1970s.

Although they had retired by the end of the 1960s, the Three Stooges' popularity continued to grow in succeeding decades, weathering criticism from parents concerned with the group's excessive violence and from some women offended by the Stooges' objectification of women. In the 1990s the images of the "classic" Three Stooges—Moe, Larry, and Curly—endured not only in their short films, but also in television commercials and merchandise such as calendars, books, and computer screen savers.

## *Three's Company*

*Three's Company* was the definitive mindless television sex comedy, speaking to a generation ripe for the numbing. Running on ABC from 1977 to 1984, it reflected the swinging needs of the viewers, and was the vehicle through which a major Hollywood blackballing took place.

*Three's Company* starred John Ritter as the prat-falling chef Jack Tripper, Joyce DeWitt as the sensible florist Janet Wood, and Suzanne Somers as the prototypical dumb blond secretary (and minister's daughter), Chrissy (full name: Christmas) Snow. As the series opened, Janet and Chrissy needed a third roommate for their Santa Monica apartment. The morning after the going-away party for their last roommate, they found a man sleeping in their bathtub, and, upon learning that he could cook, they let him move in. Nothing sexual ever went on between the roommates, but not for Jack's lack of

The cast of *Three's Company*.

leering. While he was hitting on anything in a skirt, he had to pretend to be gay so the landlord would allow the living arrangement, which was still a new idea in the 1970s.

Usually joining the trio at the local hangout, the Regal Beagle, was Jack's sleazy best friend Larry Dallas (Richard Kline). The landlords were impotent Stanley and sex-starved Helen Roper, played by Norman Fell (who also played an uptight landlord in *The Graduate*) and Audra Lindley. Jack often had to distract Mr. Roper by coming on to him and disgusting him into leaving; though it was never given a name, Jack's faux homosexuality manifested itself in limp wrists, simpering, and hissing. The Ropers were spun off in 1979, and Jack, Janet and Chrissy's new landlord was Ralph Furley, a leisure-suited nebbish played by Don Knotts.

*Three's Company* was chock-full of pratfalls (Ritter's forte), double entendres, and misunderstandings ("I overheard Janet say she's late . . . oh my God, she must be pregnant!"). In a typical episode Jack gives someone cooking lessons, but a roommate thinks he's giving "love lessons."

The show became hugely popular, and was featured on the cover of *Newsweek* in February 1978, with a staged shot of Somers with her underwear falling off and Ritter leering over her shoulder, something that never happened on the show. Even the theme song (" . . . where the kisses are hers and hers and his . . . ") implied sex where there was none.

*Three's Company* made a celebrity out of the buxom Somers, who got her big break with a few seconds of screen time in George Lucas' *American Graffiti*, along with half a dozen other actors. In the

summer of 1980, Somers asked her *Three's Company* producers for the same amount of money the male stars of the era were bringing home—a share of the profits and a fivefold salary increase, from \$30,000 to \$150,000 per episode. The producers didn't go for it, and, making an example of her, held her to her contract for a final year. During the 1980-1981 season, Somers appeared only in one-minute inserts at the end of each show, featuring Chrissy talking on the phone to one of the characters; it was explained that Chrissy was tending to her sick mother in Fresno. The inserts were taped separately on a closed set. Soon Chrissy was written out of the show, and Hollywood closed its doors on Somers.

Somers' first replacement, in the fall of 1980, was Chrissy's cousin, the blond and clumsy Cindy Snow (Jennilee Harrison). After a year, Cindy moved out to go to UCLA Vet school, but still stopped by. In the fall of 1981, lanky nurse Terri Alden (Priscilla Barnes) moved in. In 1984, Janet got married, Terri moved to Hawaii, and Jack met his true love Vicky Bradford. Jack and Vicky spun off into *Three's a Crowd* (1985-86), where they lived together (Vicky didn't believe in marriage) above Jack's restaurant. Jack's foil this time was Vicky's disapproving father, who also owned the building.

Most of the show's stars became indelibly associated with their roles (with the exception of Knotts, who will always be remembered as Barney Fife in *The Andy Griffith Show*). Somers did make a comeback, mostly by continuing to look good as she aged, which she owed to a product she will be forever associated with, the Thighmaster (and later, the Buttmaster). Besides exercise books and videos, she also wrote and spoke out about surviving abuse.

## Thurber, James (1894-1961)

Ohio-born satirical writer James Thurber was most noted for his ability to illustrate, through the use of humor, the frailties of human beings in a world seemingly dominated by forces of their own making. His primary media, the short story and his famous pen-and-ink cartoon sketches, have served as models for later critics and observers of the social scene who write in a casual style reminiscent of the *New Yorker*, which began publication in the 1920s and for which Thurber was a regular contributor. Much of his work, including his writings and drawings of animals, especially dogs, and the unforgettable Walter Mitty have become permanent fixtures in American literary folklore.

Thurber was born in Columbus in 1894, during a time when the United States was experiencing great change due to the forces of

industrial development: explosive urban growth, immigration, labor upheavals, and the dizzying pace of technological advancement. All of these influenced Thurber's work. Thurber's poor eyesight—as a child his brother William accidentally shot him in the eye with a bow and arrow—prevented him from enjoying an active childhood and later in life rendered him legally blind. After a difficult start at Ohio State University, Thurber found his stride as editor of the school newspaper and literary magazine. While in college, he befriended future playwright and film director Elliott Nugent, with whom he would collaborate in New York in later years.

Thurber's writing career foundered from the start. He accepted a job as a reporter for the Columbus *Dispatch* after World War I, moved to Europe in the 1920s to write for overseas newspapers, then returned to the United States and wrote for the New York *Post*. While living in New York, Thurber met author E. B. White, who introduced him to the editors of the *New Yorker*, a new magazine that hoped to capitalize on the "Roaring Twenties" image of the city by developing a smart, lighthearted, and slightly irreverent literary style. Thurber was hired as an associate editor, and then later managed to get himself "demoted" to a contributing author. The marriage of the *New Yorker* and Thurber was fortuitous: his articles and sketches graced the pages of the magazine for years to come and helped set the overall tone for the publication. Thurber and White collaborated on the 1929 bestselling book *Is Sex Necessary?*, a spoof on the sex-psychology books popular during the 1920s.

Thurber's use of humor to point out human shortcomings took several forms. His cartoons often depicted people struggling with the trials and tribulations of everyday life, especially in the face of modern technology that often made things more, rather than less, troublesome. Thurber believed that humans often unnecessarily complicated their lives through an excess of "abstract reasoning" instead of being practical. Thus, he always portrayed animals in a sympathetic light, commending their reliance on instinctive wisdom instead of the fuzzy reasoning of humans. Males were especially targeted for ridicule by Thurber; his cartoons often included spineless husbands being berated by their domineering and opinionated wives. In "The Secret Life of Walter Mitty," (1939) Thurber's most famous *New Yorker* story, he created a title character who escaped his meager, workaday world by becoming a larger-than-life hero in his daydreams, a gentle symbol of humanity's loss of direction and purpose in modern times. Thurber's work also found its way to the stage, as in *The Male Animal* (1940), a Broadway collaboration with Elliott Nugent, and *A Thurber Carnival* (1960), an off-Broadway revue in which Thurber himself performed.

Beset with alcoholism, rage, and blindness, Thurber's last years were not happy ones for him or his friends, and his personal problems were reflected in his creative output. In a piece for the *New York Times Book Review*, John Updike commented that "The writer who had produced *Fables for Our Time* and *The Last Flower* out of the thirties had become, by the end of the fifties, one more indignant senior citizen penning complaints about the universal decay of virtue." Still, Thurber is considered one of the century's most prominent humorous writers, with works that took many forms over the span of his career, including novels, short stories, articles, and sketches—almost all of them containing a strain of melancholia that is distinctly modern in style. A quotation from one of his many fables perhaps best describes Thurber's attitude: A dinosaur, talking to a

human, remarked "There are worse things than being extinct, and one of them is being you." Thurber was not a hater of mankind; he was a modernist who saw the limitations of man in a conspicuously optimistic age.

—Jeffrey W. Coker

## Tierney, Gene (1920-1991)

Debuting as a teenage model and budding stage actress, Gene Tierney soon metamorphosed into one of Hollywood's most recognizable movie stars of the 1940s and 1950s. Her reputation relied on promotion of her distinctive looks and physical elegance. Twentieth Century Fox founder Darryl Zanuck famously proclaimed her, "unquestionably the most beautiful woman in movie history." With high cheekbones and unusually shaped eyes, Tierney, a New Yorker, was considered "exotic." Studios cast her in films that highlighted her mystique like *The Shanghai Gesture* (1941) and *The Egyptian* (1954). In seeming contradiction with her inscrutable features, Tierney's image also reflected her Swiss finishing school poise and sophistication, garnering her the cosmopolitan title role in the film noir classic *Laura* (1944) and that of the love-obsessed femme fatale of *Leave Her to Heaven* (1945). Offscreen, Tierney's life embraced another incongruity. The popular star suffered well publicized misfortunes and subsequent breakdowns, and her aura of graceful beauty came to signify tragedy.

## Tiffany & Company

Tiffany, a name long synonymous with elegance and style, owes its lustre to the New York firm founded by Charles Lewis Tiffany

which, since becoming Tiffany & Company in 1853, has provided the well-to-do with exquisitely crafted jewelry and home furnishings. Louis Comfort Tiffany, a brilliant and famous glass designer, founded Tiffany Studios in 1900 and succeeded his father as head of Tiffany & Company. Tiffany's place in America's popular imagination was given a boost by Truman Capote's 1958 novel *Breakfast at Tiffany's* and the 1961 film of the same title, in which Audrey Hepburn as Holly Golightly accepts from her admirer a Tiffany-engraved toy Crackerjack ring. No doubt the popularity of the girls' name Tiffany in the last decades of the twentieth century owes much to its associations with the beautiful creations of Tiffany & Company.

## Tijuana Bibles

It is surely no accident that illicit pornographic comic books, popularly known as Tijuana Bibles, thrived during the heyday of media censorship in modern America, roughly the mid-1920s to the mid-1950s. In the early decades of the century, movies, comic strips, and pulp magazines all had ample room for the naughty and risqué, but by the 1920s the pressures of social respectability were increasingly hemming in popular culture. The acceptance of the stringent Hays Code by Hollywood in 1934 was a significant turning point in this larger trend. Like girlie magazines and stag movies, Tijuana Bibles represented an escape from the puritanism of mainstream culture. As the cartoonist Harvey Kurtzman, creator of *Mad* magazine, once noted, "The obvious repression of sexual fantasy in [mainstream comic strips] brought its release in the little dirty books, or Tijuana Bibles."

Almost as ephemeral as washroom graffiti, Tijuana Bibles were anonymous in every sense imaginable. For the most part, no one knows who wrote them, who drew them, or who published them. The name "Tijuana Bible" plays off the fictitious foreign addresses that were given as the place of publication. In addition to erotic and exotic Mexico, Tijuana Bibles were said to be produced in Cuba, England, and even Canada. Some suggested that organized crime was behind these tawdry sex books. Cartoonist Will Eisner, best known for creating the masked crime fighter the Spirit, frequently has recounted the story of how as a struggling artist in the 1930s he was approached by a gangster who wanted him to draw Tijuana Bibles.

Yet, despite their obscure origin, almost one thousand separate Tijuana Bibles were published and managed to circulate throughout North America. "The distribution system was mysterious, but it worked," commented Kurtzman. Comic book historian Donald Gilmore, in the first scholarly study of the genre, noted that Tijuana Bibles were "conceived in dark attics, published in dingy garages on unnamed alleys, and distributed from the hip pockets of vendors

across the nation. . . . [but] accounted for a multi-million-dollar business in the tight economy of the Great Depression."

The earliest Tijuana Bibles of the 1920s and 1930s were comic strip parodies. Often deftly done imitations, these books featured such stars of the funny pages as Betty Boop, Popeye, Olive Oyl, Mickey Mouse, and Dick Tracy all engaging in activities forbidden in family newspapers. In positing a secret sex life for popular cultural icons, Tijuana Bibles both influenced and anticipated the work of such later cartoonists as Kurtzman, whose *Little Annie Fanny* started running in *Playboy* in the 1960s. The work of countercultural cartoonists of the late 1960s like Robert Crumb and S. Clay Wilson—who drew Disney-esque animals with earthy human appetites—also shows the influence of Tijuana Bibles.

By the early 1930s, Tijuana Bibles had expanded from their origins as cartoon parodies and started featuring Hollywood celebrities such as Laurel and Hardy, Mae West, the Marx Brothers, and Clark Gable. These Tijuana Bibles played off the rumors of "Hollywood Babylon" that flourished in the tabloid press. Hollywood was shown as a happy playground of orgies and bisexuality. Noting the large number of strips featuring celebrities, cartoonist Art Spiegelman observes that Tijuana Bibles "were not overtly political but were by their nature anti-authoritarian, a protest against what Freud called Civilization and Its Discontents. Here was a populist way to rebel against the mass media and advertising designed to titillate and manipulate, but never satisfy."

Some Tijuana Bibles that were more explicitly political in one way: they featured such world figures as Hitler, Mussolini, Stalin, Chiang Kai-shek, and even Whittaker Chambers (a Cold War spy who, a recent biography confirms, was a bisexual, just as he was portrayed in a Tijuana Bible from the late 1940s). As with the Hollywood strips, the politics of these Tijuana Bibles was implicitly anti-authoritarian, ridiculing the powerful by showing that they had base needs. Of course, there was a limit to how subversive Tijuana Bibles could be. In all these strips, the main goal was to titillate, and they replicated the racial and ethnic stereotypes found in mainstream culture.

Artistically, the quality of Tijuana Bibles varied greatly. Two talented cartoonists, "Doc" Rankin and Wesley Morse, have been identified and singled out by aficionados of the genre. Bob Adelman praised Rankin's "graceful, articulate, Deco style" and Morse's "wonderful graphic flair." (Morse went on to do *Bazooka Joe* comics in the 1950s.) Only a few other Tijuana Bible cartoonists, all of them anonymous, were as good as Rankin and Morse. The worst Tijuana Bibles were also among the worst comic books ever done: crudely drawn, illiterate, and mean-spirited.

With the decline of censorship in the mid-1950s, signaled by the emergence of *Playboy* in 1955, Tijuana Bibles lost their reason to exist. However, as with other trashy and throw-away bits of the past, Tijuana Bibles continue to have a nostalgic appeal. In the mid-1970s, the novelist John Updike wrote that the type of pornography he "most missed" was "Popeye, Olive Oyl, and Wimpy fellating and gamahuching one another, in comic books circulating in southern Pennsylvania in the late 1940s." Not surprisingly, books reprinting Tijuana Bibles continue to roll off the press.

## Time

Published weekly without interruption since March 3, 1923, *Time: The Weekly News-Magazine* (the final word is no longer hyphenated) pioneered a new genre of publication that was invented in the United States after the First World War and spawned many imitators at home and abroad. *Time* was the first mass-circulation magazine to offer a weekly digest of current events and commentary organized into departments, written in an oft-parodied breezy, idiosyncratic style. As the inaugural publication in Henry Luce's publishing empire that within little more than a decade included *Fortune*, *Life*, and *Architectural Forum*, the periodical quickly established itself as a "lengthened shadow" of its founder, who maintained close control over its content and used it to shape public opinion toward accepting his views about the role of the United States in "the American Century." As such, it frequently was thought to be a Republican-oriented publication: it published highly favorable coverage of the presidential aspirations of Herbert Hoover, Wendell Willkie, and Dwight Eisenhower—though, surprisingly, Luce voted for Alfred E. Smith, Hoover's Democratic opponent in 1928. Not surprisingly, *Time's* opinions were frequently at odds with that of Franklin D. Roosevelt, though Luce gave his wholehearted support to the administration in the interest of national unity during World War II. *Time* was one of the earliest and most vocal critics of the right-wing tactics of Senator Joseph McCarthy in the 1950s. Even though the Time-Life empire had evolved into Time-Warner by the 1990s, with Time, Inc. New Media establishing a brand-conscious presence on the World Wide Web, *Time* "the weekly newsmagazine" still maintains an important role as one of the three leading American newsweeklies along with *Newsweek* and *U.S. News and World Report*.

The genesis of *Time* magazine had its roots in the deep but often contentious friendship between two old schoolmates from Hotchkiss and Yale: Henry R. Luce and Briton Hadden. Luce was born and raised in China, the son of a Presbyterian missionary and the grandson of a Scranton, Pennsylvania grocer. Hadden was a native of Brooklyn, New York, the son of a stockbroker and the grandson of a bank president. The two had worked together on publication boards at their alma maters and served in a military-reserve unit during World War I, an experience that convinced them that the typical American was poorly informed of current events. They graduated with Yale's class of 1920, Luce winning the DeForest award for oratory with a speech that foreshadowed his later "American Century" editorial stance at *Time* and *Life* with its idealism in advocating American benevolent hegemony as "the great friend of the lame, the halt and the blind among nations, the comrade of all nations that struggle to rise to higher planes of social and political organization. . . ."

It was while working together as reporters on the *Baltimore News* in 1922 that Luce and Hadden hatched plans for their weekly magazine, which they originally wanted to call *Facts*. Earlier, while

working briefly as a reporter for the *New York World*, Luce had proposed to Hadden an idea "for a magazine that comes out every Friday with all the news condensed so you and all the other rich millionaires commuting home for the weekend can catch up on the news that they have missed. How's that?" The two men quit the *News* after three months, drew up a prospectus, convinced some wealthy friends to invest in their enterprise, and spent most of 1922 setting up editorial offices in New York and hiring a staff. Among the part-timers listed on *Time's* first masthead were two men who later became somewhat prominent poets: Stephen Vincent Benét, a book reviewer, and Archibald MacLeish, who wrote the Education section for ten dollars a week. For National Affairs editor, Luce hired Alan Rinehart, the son of novelist Mary Roberts Rinehart. In days when gender roles were somewhat stratified, men were hired as editors and reporters while women researchers were hired as "secretarial assistants."

Luce projected a first-year income of \$155,000, most of it from twenty-five thousand subscriptions at \$5 each, and the remaining \$30,000 from advertising. The fledgling publishers were disappointed when a mailing of half a million promotional pieces yielded only six thousand subscribers. Another five thousand were earmarked for newsstand distribution. The folksy tone affected in a stockholders' report just before Christmas 1922 hardly suggests that the fledgling venture would within a generation grow into one of the world's most powerful media conglomerates: "*Time* knows well that the people that will help it most are those who are best satisfied with it. For that reason it does not desire to antagonize any of its stockholders by asking to do anything that is distasteful. From time to time summary requests will be made. . . : 'Give me a letter to this potential advertiser.' 'Get me 13 subscriptions.'"

A sketch of retiring House Speaker Joseph G. Cannon graced the cover of *Time's* Volume I, No. 1 when it was published on March 3, 1923. The thirty-two-page magazine (including covers) carried a relatively steep newsstand price of fifteen cents. Half of the newsstand's allotment of five thousand copies came back unsold, for a total of about nine thousand copies circulated, far less than optimistic projections of twenty-five thousand. For the first year or so, both circulation and advertising revenue remained sluggish. When Volume I was completed, the publishers sent bound copies to charter subscribers. Among those who sent back endorsements was Franklin D. Roosevelt, the unsuccessful vice-presidential candidate in 1920, who wrote in part "I do not think the articles are too brief—they are just about right in length and they are unbiased as far as it is possible for red-blooded Americans to make them so."

There was little original reporting in *Time's* early issues, which were cobbled together from newspapers, wire-service reports, speeches, and other sources, rewritten in the inimitable *Time* style that was largely the brainchild of Briton Hadden. The first issue defined what would remain *Time's* approach over the years, with only minor variations: items organized into departments such as national news, foreign news, the arts (and their subdivisions), books, religion, education, finance, and so forth. The first issue also featured three light-humor departments: Imaginary Interviews, Point with Pride, and View with Alarm. Stories were created by teams of writers and researchers, supplemented in later years by reporters and correspondents from bureaus around the world. A brief *New York Times* notice heralding the launch of the publication was headlined "Time a New Weekly—First Issue of Magazine Devoted to Summarizing Progress." True to its mission as articulated by Luce to Hadden, the

magazine was designed to be read by busy millionaires and others in less than an hour; columns were at first restricted to seven inches. An unusual feature of the new magazine was its regular coverage of the number of lynchings in the Southern states. Robert T. Elson, in his semiofficial two-volume history *The World of Time Inc.*, quoted Luce: “We were what would be called pro civil rights for Negroes from the beginning. One of the things in which we may have been useful is the fact that we tried to report every single lynching. We tried to print the exact story, without moralizing.” *Time* was also the first publication to apply the honorific “Mr.” to both black and white subjects.

*Time*, especially in its earlier decades, is perhaps best known for the idiosyncratic style favored by Hadden, which has been variously termed “breezy,” “arch,” or “cute.” It was notable for the liberal use of word coinages, especially portmanteaus or puns, as in describing a young would-be newspaper publisher as a “Hearstling”; for its resuscitation of words and allusions from classical Greek such as “kudos” or “katabasis”; for its syntax-bending, especially through the use of inverted word order, as in “Forth from the White House followed by innumerable attendants, Mr. and Mrs. Warren G. Harding set out. . . .” (their return, not surprisingly, was termed a “katabasis”); for its historical and literary allusions; and for its pomposity-deflating identification of subjects with their middle names, as in “Walter Percy Chrysler,” or with nicknames in parentheses, as in “Bernarr (‘Body Love’) Macfadden.” *Time*’s stylists also pioneered in the stringing together of frequently alliterative adjectives, as when describing George Bernard Shaw as “mocking, mordant, misanthropic”; and in the uncanonical use of nouns as attributives, as in “Teacher Scopes.” Clearly, *Time* was being written for an educated and well-read audience: Elson suggested that Hadden’s admiration for Homeric Greek prompted him to pepper his copy with a plethora of hyphenated modifiers: “At all times Hadden had by him a carefully annotated translation of the *Iliad*. In the back cover he had listed hundreds of words, especially verbs and the compound adjectives, which had seemed to him fresh and forceful. The classic ring of this vocabulary, which he frequently reviewed, served him as a tuning fork for the language that he wanted in *Time*.” Luce is credited for the popularization of several words, such as “tycoon,” a term previously used to describe a Japanese shogun which he applied to American business moguls, and “pundit,” after the name of a Yale literary club he had joined.

As a cost-saving measure, *Time*’s editorial offices moved to Cleveland, Ohio, in 1925 but returned to New York City within three years. By the end of the 1920s, the publication had published several sixty-page-plus issues and was reporting net profits of \$125,000 on total revenues of \$1.3 million, with a circulation guarantee approaching three hundred thousand. Newsstand sales doubled in a year, to twenty-three thousand copies. In 1928, with the selection of Charles Lindbergh, *Time* initiated its notable custom of selecting a “Man of the Year”—hero or villain—which over the years has been expanded to include women, anonymous groups (such as the under-thirty generation), and even the personal computer. The Man of the Year philosophy echoed Luce’s secular-evangelical belief that history was mightily shaped by individual will, a phenomenon he saw himself embodying as the most influential publisher of his era at the time of his death in 1967.

In February of 1929, Hadden, then thirty-one, died of a streptococcal infection exacerbated by overwork, and Luce assumed

even greater day-by-day oversight of the publication, confirming his reputation as a shrewd businessman as well as a savvy journalist. In the months before the stock-market crash ushered in the Great Depression, *Time*’s tilt toward business had become quite evident. Within a month after Hadden’s death, Luce said in a speech, with characteristic flourish: “Business is, essentially, our civilization; for it is the essential characteristic of our times. . . . Business is our life. It is the life of the artist, the clergyman, the philosopher, the doctor, because it determines the conditions and problems of life with which either artist or philosopher, let alone ordinary mortals, have to deal.” It thus struck some observers as strange that Luce should have packed the editorial staff of his new publication, *Fortune* (which debuted February 1930), with such imaginative writers as Archibald MacLeish, Dwight Macdonald, and Russell Davenport. “There are men who can write poetry, and there are men who can read balance sheets,” said Luce. “The men who can read balance sheets cannot write. . . . Of necessity, we made the discovery that it is easier to turn poets into business journalists than to turn bookkeepers into writers.”

During the early 1930s, Luce enlisted the new medium of radio to expand *Time*’s reach while simultaneously shaping the way radio would present news and documentary material. Luce hired Fred Smith of a Cincinnati radio station to develop a radio program based on *Time*’s weekly content. Originally titled *News casting*, the project quickly evolved into the *News Acting*, in which short news items were dramatized with sound effects, and then into the full-blown radio program *The March of Time*, which employed leading radio performers and announcers to reenact the week’s events in a Friday night, half-hour, CBS-network program, introduced by a fanfare and the words “On a thousand fronts the history of the world moves swiftly forward. . . .” Agnes Moorehead and Orson Welles were among the graduates of the early broadcasts of *The March of Time*. Within a few years, a moving-picture-newsreel version was created, and the legend “Time Marches On” soon became a familiar sight on movie screens from coast to coast. Although, as Elson wrote, “the method of *The March of Time* is no longer acceptable as journalism . . . TV, the modern film documentary, the new school of *cinéma vérité* owe much to its pioneering methods.”

Despite the success of this and other ventures, *Time* and its sister publications suffered through the Depression years, especially when factoring in the huge start-up costs of *Life* in 1936. In the period before the United States entered World War II—*Time* coined that designation in a September 1939 issue when it confidently reported “World War II began last week at 5:20 a.m. (Polish time) Friday, September 1”—Luce had come to believe that Americans had a fateful role to play in world affairs and urged military aid to the beleaguered European allies. After Pearl Harbor, Luce committed *Time* to the cause of “absolute victory.” He also threw his support to the Nationalist Chinese forces of Chiang Kai-shek, much to the consternation of *Time*’s correspondent in China, Theodore H. White (later of *Making of the President* fame), who broke with Luce when ordered to write flattering pieces about the man White called “China’s somber tyrant.” John Heidenry complained in his *New York Times* review of a 1995 book about Luce and White that the publisher “believed that ideological distortion of the news was often preferable to objectivity, particularly where China and the Republican Party were concerned.” In the years that followed, *Time* maintained a firm anti-Communist tack, but it also was among the first publications to

challenge the demagoguery of Wisconsin Senator Joseph McCarthy. Still, *Time* during the 1950s and 1960s was perceived as having a Republican bias—at least an “Eastern establishment” Republican bias, for *Time* endorsed, for the first time, the Democratic presidential candidate in 1964, favoring Lyndon B. Johnson over Barry Goldwater. Luce had retired as editor-in-chief earlier that year, handing over the reins to Hedley Donovan. Andrew Heiskell had already taken over as chairman of the parent company. At Luce’s retirement, the firm that had started forty-some years earlier with an investment of \$86,000 had grown to a conglomerate with revenues of more than \$400 million.

In January of 1990, Time, Inc. and Warner Communication combined to form an even larger conglomerate, the largest in the United States, bringing together Luce’s company “with its rich journalistic history and its aristocratic, traditional leadership” and Warner, “with its lucrative stable of movie, entertainment and cable television properties,” in the words of the *New York Times*. During the 1980s, the management of Time, Inc. decided that it was time to deemphasize the role of its magazines as future sources of revenue and corporate viability, leading some observers, like Richard M. Clurman, to worry about the future of its journalistic integrity, as described in his 1992 book *To the End of Time: The Seduction and Conquest of a Media Empire*. Clurman’s fear of “people in Time Warner who believe and act as if the purpose of business is only business” stands ironically against Henry Luce’s declaration in 1929 that “Business is, essentially, our civilization.”

In 1998, *Time* celebrated its seventy-fifth anniversary with a gala at New York’s Radio City Music Hall to which were invited all living men and women who had appeared on the magazine’s cover, a star-studded affair with guests ranging from President Bill Clinton to Russian ex-premier Mikhail Gorbachev to Billy Graham to Sharon Stone to Toni Morrison. By century’s end, managing editor Walter Isaacson has been credited with restoring some of the old luster of *Time*’s authority and credibility in a “post-magazine” era by leading the publication into the new-media era via its Pathfinder Internet service, by increasing science and technology coverage, and by planning *The Time 100* series on CBS Television. Revenues at the publication increased 21 percent in 1997 to about \$94 million, and circulation rose slightly to 4.2 million, earning *Time* the designation “Hottest Magazine of ’97” by *Adweek*.

## Times Square

Less of a square and more like two triangles located at the intersection of Broadway and Seventh Avenue in New York City, Times Square has been associated over the years with a series of seemingly opposite combinations: both high and low culture, glitz and grime, and exciting bright lights and seedy dark corners. The history of Times Square is a direct reflection of the history of Americans’ relationship with their cities.

The origin of Times Square can be traced to the 1811 New York Commissioner of Streets and Roads’ plan, which laid out the Manhattan grid above Fourteenth Street. The significance of this plan, and many others like it across the United States prior to and after 1811, is that the future growth of the American city was partitioned off and predetermined as easy-to-develop slices of land. This not only assured efficient exploitation, but also brought about a sort of “democratization” of the city, which the older cities of Europe with their main squares, large cathedrals, and prominent town halls did not possess. By virtue of this new grid, every building was just as important as the next, at least in terms of location on the grid. And so, the nineteenth-century American city gradually filled up its preplanned grid, creating uniform streets between often not-so-uniform buildings. American city-dwellers of this time lived in cities because they wanted to; that is, because they preferred the orderly and paved conditions of the city over the often irregular and muddy conditions of the rural areas, the only other option at this time (just before the suburbanization of America).

As New York expanded north from 14th Street, the diagonal path of the former Indian trail known as “the Bloomingdale Road” (later Broadway) was so strong that it ignored the 1811 grid plan and cut right through it. As a result, at every intersection of Broadway with a north-south avenue, a “square” came into being: Union Square at Fourth (Park) Avenue, Madison Square at Fifth Avenue, Herald Square at Sixth Avenue, and Long Acre (Times) Square at Seventh Avenue.

In the 1890s, live-performance theatres (or “legitimate theatres”) began to locate themselves in and around Long Acre Square: Oscar Hammerstein’s 1895 Olympia Theatre on Broadway between 44th and 45th streets was one of the first and most famous. Others soon followed from their former locations below 23rd Street, and the area soon became known as a “theatre district.” At its peak in 1925, there were approximately 80 legitimate theatres within the vicinity of Times Square.

The story goes that because the City of New York had not yet installed street-lighting as far north as Long Acre Square, theatre owners took it upon themselves. Exploiting the new technology of electric lighting, the fronts of the new theatres became giant advertisements, spelling out the play on offer and sometimes also the main players. Later, multiple-story-high advertisements for chewing gum, soft drinks, and other products appeared. The result was that by about 1910, Broadway was dazzlingly lit up at night and became known as “The Great White Way.”

In 1904, Long Acre Square changed its name to Times Square after the completion of the *New York Times* tower at 42nd Street and Broadway. The newspaper decided to celebrate the opening of its new building by counting down the last minutes of 1904 from the top of it. Two years later, the festivities grew to include the lowering of a ball at midnight. This event soon grew into the enormous annual party held every year in Times Square.

Also in 1904, a subway shuttle was opened which linked Times Square with Grand Central Station at 42nd and Park Avenue. This was followed by an IRT line (1918) and a BMT line (1923), both with stops at 42nd Street—and thus another aspect of Times Square was born: a transportation hub, an interchange, a “Crossroads of the World.” This nickname later was strengthened by an IND line stop (1932) and the New York City Port Authority Bus Terminal (1950) at 42nd Street and Eighth Avenue, and the first Lincoln Tunnel entrance/exit (1937) at 42nd and Tenth Avenue.

The theatres (and their accompanying restaurants, bars, and hotels), the fantastic lights, and the busy transportation interchanges were all direct reflections of how the concept of “city” was portrayed in the mind of an American at the turn of the twentieth century. The city at that time was a place of energy, excitement, and culture. It was the place to be, the place where anything could happen and where most things did. The theatre represented high culture, and those who attended the performances were the elite. The lights, however, could be enjoyed by anyone, and Broadway, Times Square, and 42nd Street (it is difficult to separate them) at the turn of the twentieth century was a place to see and be seen.

With the arrival of talking movies in the late 1920s and the Depression of the 1930s, the character of the Times Square area began to change. It still remained a center for entertainment, but at that time both high and low culture were represented: live performance and musical comedy theatres on one side, and burlesque houses and “movie palaces” on the other. In addition, in that time before plane travel became commonplace, New York City was a port of call for anyone traveling between Europe and America, especially during World War II when most every American soldier passed through and spent some time at Times Square. It was a crowded and popular place, as exemplified by the estimated two million people who thronged Times Square on August 14, 1945, to read the official announcement of Japanese surrender on the *Times* building’s “zipper” (news bulletin board).

In the years following World War II, the rise of television (which brought entertainment into the home, no need to go out) and city suburbs (which were clean, spacious, and safe) further strengthened the decline of Times Square and also the American city. The area began to take on vulgar associations, and its large-scale advertisements reflected this with block-long flashing neon gin bottles and 30-foot-high heads which puffed cigarettes boasting real smoke. The

42nd Street corridor became known not only for pornographic movies, but also its easy access to prostitution, and by extension, it also became a place for illegal drug trading and street gambling.

To many city-dwellers, the new burlesque houses, movie palaces, and general gawking crowds were an insult to the city but were part of a growing trend; it was changing from being a special place where special things happened to being an ordinary, common place associated with dirt and grime, overcrowded conditions, degeneracy, and crime, and, as a result, neglect and dereliction. After World War II, the American city was not seen as a place to live. Instead, it was seen as a place to get away from—hence the growth of suburban communities which, however, paradoxically still depended upon the city as the “place to work.”

During the late 1970s and early 1980s, as foreshadowed by the 1967 replacement of the 1904 *Times* building’s original facade with blank marble panels, the Times Square area again dramatically changed. This time it was a physical, not social change: from a mixture of different-sized theatres and commercial buildings into a wasteland of overscaled and faceless skyscrapers. Many famous turn-of-the-century theatres were demolished to make way for new developments, which were carried out with the promise that they would “revitalize” Times Square, but all they really did was add to its density.

One of the reactions to this change of Times Square was the 1987 city ordinance that required new buildings to include “super” signage several stories high and with varying degrees of animation. In addition, a 1988 ruling gave “landmark” status to most remaining theatres in the area, following the general trend in New York and other American cities of building preservation by government intervention. At the same time, large-scale musical productions with hummable tunes and easy lyrics catering to a simpler audience than live theatre became successful at Times Square theatres.

Various urban planning development studies and inquiries were undertaken to ascertain if anything could be done for the area, but no consensus was reached. In 1992, the private Times Square Business Improvement District, composed of area property owners and residents, was established. This organization, similar to others set up across the United States at this time, was privately funded to undertake those duties normally associated with the city government: public safety, sanitation, community services, economic strategy, and tourism promotion.

The city ordinances concerning the aesthetics of future development, the listing of “historic” buildings, and the creation of private entities to do the city’s job all had the goal of retaining a sort of street-life status quo, but at the expense of turning Times Square into a regulated and controlled public amusement park. This last stage reflects the state of the American city at the turn of the twenty-first century: the city as a place to visit, as one might visit an amusement park. As Americans began to not only live and work in the suburbs, they also began to realize that while the suburbs might be cleaner, more spacious, and safer than the city, they were also more boring. The city, at this point, became that preserved exciting piece of the past whose purpose was to be used when one wanted that “urban experience.”

In 1996, the next logical step along this road was taken as The Disney Corporation renovated the Amsterdam Theatre (1903), once home to the Ziegfeld Follies, for its own use in staging offerings such

as *Beauty and the Beast* and *The Lion King*. Dick Clark's Rock 'n Roll New Year's Eve celebration of 1998 (his twenty-seventh), complete with its ever youthful and tanned host, was reportedly attended by half a million people and watched on television by an estimated 300 million. At that point, the only things missing were crying kids and the long lines for the rides.

## Timex Watches

The introduction of the Timex watch in 1956 revolutionized the time-keeping industry. The relatively simple design, with fewer parts than other watches, made the Timex more durable, a feature which led to one of the world's most important advertising campaigns. Capitalizing on the country's growing fascination with television, Timex hired veteran newsman John Cameron Swayze to run an elaborate series of torture tests—live on Steve Allen's popular Sunday night program. Timex watches were smashed by jackhammers, slobbered through dishwashers, and strapped to world class divers taking flops off the cliffs of Acapulco. By 1956, sales of the watch that "takes a lickin' and keeps on tickin'" surpassed the five million mark. One of the more famous commercials occurred in 1958, when Swayze strapped a Timex to an outboard motor. When the watch slipped off the propeller and disappeared into the tub of water, Swayze had to promise to try again the following week. Timex decided to end the torture tests campaign in 1977 with a staged failure: an elephant stomped and crushed a watch. "It worked," Swayze quipped to the television audience, "in rehearsal."

## Tiny Tim (1927?-1996)

"Tiny Tim" was the last and most successful of many stage names adopted by singer and ukulele player Herbert Khaury. Born in New York, Khaury was a struggling performer as Derry Dover, Larry Love, Julian Foxglove, and Sir Timothy Thames, before being given a small part in the counterculture movie *You Are What You Eat* in 1968. He became modestly well-known as Tiny Tim, the pseudonym he was currently employing, and received his first national exposure shortly afterwards on NBC's *Rowan and Martin's Laugh-In*. His odd garb, odder stage presence, and falsetto renditions of old songs quickly made Tiny Tim a celebrity. His signature song (and 1968 hit) was "Tip-Toe Thru' the Tulips with Me"; it was first recorded in 1929.

A frequent guest on *The Tonight Show*, Tiny Tim made history when he married "Miss Vicki" during the episode of December 18, 1969; the ceremony was witnessed by over 20 million viewers in America—a daughter, Tulip, was born in 1971, and the couple divorced six years later.

Both in falsetto and a quavery baritone, Tiny Tim recorded hundreds of popular songs from the nineteenth and twentieth centuries, and knew thousands more. He had probably performed a more varied repertoire of songs, in more venues, than any other singer of his generation. He died in Minneapolis, where he had moved with his third wife, "Miss Sue," on November 30, 1996.

## The Titanic

In the realm of popular culture, the *Titanic* has turned out to be more than just a ship that sank; it has become an icon of an era long past, as well as a contemporary phenomenon. It seems that each generation since the sinking has rediscovered the shipwreck in new books, movies, and even music.

When the luxury ocean liner *Titanic* left Queenstown, Ireland, on April 11, 1912, the ship's fame was far different than it would become in just a few short days. The voyage of the *Titanic* was a tremendous news event all around the world. The *Titanic* was the largest and most luxurious liner of its time. The world was thrilled with the improvements the industrial age had brought to their lives and *Titanic* seemed to be the ultimate realization of their dreams; many began to speak of conquering Mother Nature. When *Titanic* was called "unsinkable," some saw the description as proof of man's supremacy, while others saw it as a direct challenge to God.

When the *Titanic* struck an iceberg on April 14, 1912 and sank two hours later, with over 1,500 souls losing their lives, the world also

The *Titanic*

lost much of its innocence and faith in man as a superior being. If this ship, so carefully planned and built to withstand anything, could sink on its maiden voyage, on what could society depend? Was the sinking a warning from God, as some religious leaders claimed? Was it meant to warn the public against the materialism of “the Gilded Age,” as some proposed? Would it reverse the progress the age of industry was bringing? As is often the case with tragedies, many used the event to argue an ideological perspective. Religious leaders, for example, used the example of Ida Strauss, who chose to remain with her husband on the ship, as an example to argue against divorce. Among some groups, women who survived were scolded for not following Mrs. Strauss’ example and remaining with their husbands to perish. Both sides of the suffrage issue also used the *Titanic* tragedy to argue their case.

Ironically, the sinking of the *Titanic* also came to illuminate growing disparities in class around the world. In 1912, the world was marked by very distinct social classes, and it was a time when those with money were perceived as rarefied beings, somehow superior to others. Sailing on the *Titanic* were many who were of immense wealth, such as John Jacob Astor and Benjamin Guggenheim. While neither man survived, many other first class passengers did. When those numbers were compared to the number of steerage passengers rescued, an outcry was heard against the privileged. Why did they seemingly have more right to be rescued than the others? While the

industrial revolution continued, there was a backlash against progress and the wealthy. Change was in the air.

The tragedy also spawned increased efforts to launch rescue operations for those involved in water accidents. In the hope of averting a repeat of the event, the International Ice Patrol was founded by the nations of the North Atlantic. The official inquiries in America and Britain also produced changes in the laws regarding lifeboats and other safety issues. After its use on the *Titanic*, the Marconi wireless apparatus was popularized to send distress signals so that rescuers on land could receive messages regarding survivors.

In a media-saturated society, it is only appropriate that it would not take long before the *Titanic* tragedy became a popular commodity. Between 1912-1913, there were at least 100 songs about the *Titanic* published, including Leadbelly’s recording of “Down with the Old Canoe.” The first motion picture, starring survivor Dorothy Gibson and titled *Saved from the Titanic*, appeared just one month after the disaster and was filmed on the *Titanic*’s sister ship, the *Olympic*. Survivor Lawrence Beesley published his account, *The Loss of the S.S. Titanic*, six weeks after the tragedy. Additionally, articles appeared in *Scientific American* and other popular magazines of the time, and countless books were written surrounding the sinking. One such book, a 1898 novel by Morgan Robertson, was also rediscovered. *Futility* was the story of a ship so similar to the *Titanic* in every way, including its name, Titan, that many felt it had predicted the sinking of the *Titanic*.

After 1913, most of the interest in the *Titanic* died down rapidly. The great ship occasionally showed up again, mainly in motion pictures, including the British film *Atlantic* (1929) and the German film *Titanic* (1943). The German film, made during World War II, was a propaganda exercise with the only heroic person on the ship a fictional German crew member. In 1953, the United States finally produced their version of the story in true Hollywood style. Starring Barbara Stanwyck and Clifton Webb, *Titanic* was a melodrama with the shipwreck used largely as a background for the fictional story of an estranged couple who reconcile as the ship sinks.

By November 1955, the *Titanic* myth experienced its first resurgence. Walter Lord, a longtime student of *Titanic* lore, published his classic—*A Night to Remember*—retelling the story of *Titanic*’s short life. By January 1956, it had sold 60,000 copies, and has never been out of print since. Another book appeared two months after Lord’s, but *Down to Eternity* by Richard O’Connor was received poorly.

Not to be left out of the “picture,” so to speak, in March 1956, a teleplay about the *Titanic*, directed by George Roy Hill and narrated by Claude Rains, was shown on network television. By May, an episode of the popular *You Are There* series dealt with the *Titanic*. In addition, motion pictures began appearing, including *Abandon Ship* (1957) and *A Night to Remember* (1958). The latter film, produced in documentary style, is regarded as the most faithful and accurate telling to that time. Now a permanent part of popular culture, the story of the woman who was the most famous survivor of the *Titanic*, Margaret Tobin Brown, was chronicled in *The Unsinkable Molly Brown*. The story was first reproduced as a musical on Broadway with Tammy Grimes (1960) as the title character, and then in a motion picture with Debbie Reynolds (1964). Both were huge successes and proved there was continued interest in the shipwreck.

The *Titanic* again slipped to semi-obscurity in the mid-1960s. It did, however, remain a popular subject for the occasional television

show. In 1966, the premier episode of the television adventure show, *The Time Tunnel*, dealt with the disaster. A television miniseries, *S.O.S. Titanic*, starring David Janssen as John Jacob Astor, was also produced in 1979. The ship also played an important role in fictional books such as Clive Cussler's *Raise the Titanic* (1976) and *The Memory of Eva Ryker* (1978), written by Norman Hall.

On September 11, 1985, Dr. Robert Ballard of the Woods Hole Oceanographic Institute and Jean-Louis Michel of the French IFREMER Institute returned the *Titanic* to the front pages when they located the wreck of the ship. It had long been a Holy Grail of sorts to those fascinated by it, and previous expeditions had tried unsuccessfully to locate the wreckage. Dr. Ballard became an instant celebrity and a vocal critic of those who wanted to salvage items from the ship. There were even those who wanted to try to raise the *Titanic*. Articles in *National Geographic* and other magazines appeared, along with more books on the subject, including reprints of Walter Lord's book. Documentaries such as *Secrets of the Titanic* (1986) soon began to appear, and it seemed that the event was taking on a mystical quality. There was even a video game, *Search for the Titanic*, appearing in 1989, that allowed players to finance and plan an expedition to locate the wreckage.

Interest remained high over the next few years as periodic new books and television specials kept the *Titanic* visible to the public. Much debate went on about whether or not to salvage any of the ship. Those who argued to salvage the ship were concerned that time was of the essence, and felt that artifacts would soon be all that was left of the event. Those against salvaging it, championed by Ballard, felt the wreck was a memorial and should be left alone. Eventually, the pro-salvage group won, and artifacts from the ship were eventually brought to the surface.

On April 23, 1997, a new interpretation of the disaster appeared when *Titanic: A New Musical*—a big budget theater production—debuted on Broadway. In a theater season with few successes and even fewer legitimate hits, this musical was the smash of the season; it won 5 Tony awards, including one for Best Musical.

Nothing, however, could prepare the world for the coming of the James Cameron film, *Titanic*, in 1997. Amid rumor and innuendo regarding “the most expensive film ever made,” the public waited for its release and a chance to it judge for themselves. When the release date was delayed and the film went over budget, many predicted another disaster, this one of a business nature. Would it be a hit or the most expensive miss in motion picture history? It became obvious after the film's initial release that Cameron did not need to worry. *Titanic* became the largest grossing movie ever and tied previous Academy Award winner *Ben Hur* (1959) for most trophies won, with 11. The soundtrack from the movie became the best selling movie soundtrack in history; the love theme from the movie, “My Heart Will Go On” performed by Celine Dion, quickly became a number one song. And the stars of the motion picture, Leonardo DiCaprio and Kate Winslet, both relatively unknown before the film, became superstars.

The public could not get enough of the film or the ship. Using life-size models and computer generated images, the film was generally considered the most historically accurate, although some historians disagreed with liberties taken with some of the characters in the film. The Edwardian hairstyles and wardrobe depicted sparked a fashion craze, and the blue diamond necklace that was a centerpiece of the plot became a bestselling piece of costume jewelry.

In the late twentieth century, the *Titanic* continues to fascinate the public. There are faithful *Titanic* buffs who have read about and pondered the fate of the vessel for many years. Many of them are members of the Titanic Historical Society, whose headquarters are in a jewelry store in Indian Orchard, Massachusetts. Membership increases every time the *Titanic* returns to the front page of the news, but it took a blockbuster film to make the *Titanic* a true cultural phenomenon among the general public. The *Titanic* remains a commodity to be bought and sold. The sinking of the *Titanic* is a historic tragedy which will forever be a part of history and of popular culture.

## *To Kill a Mockingbird*

Harper Lee's novel *To Kill a Mockingbird* gives an accurate reflection of race relations in the Southern United States during the 1930s. The novel, set around a single-father family in small-town Alabama, contains a vast array of symbolism to intertwine the main plot with several subplots. Through her novel, Lee debunked the quaint antebellum Southern society for the realism of Southern culture. The timing of this publication, which denounced prejudicial attitudes, coordinated with the early Civil Rights Movement in the United States. This best selling novel became a classic and required reading for many American high school students.

Author Harper Lee was born in Monroeville, Alabama, in 1926. She spent four years at the University of Alabama and one year at Oxford University in England. She also attended law school, leaving six months short of finishing her coursework to pursue a writing career in New York City. There she helped author Truman Capote research *In Cold Blood*. To earn money she took a job as an airline reservation clerk. In 1960, Lee published *To Kill a Mockingbird*, and in 1961 the novel won the Pulitzer Prize. By 1962, an Academy Award-winning motion picture was produced from the novel, and, in the same year, Lee won the Paperback of the Year award given by *Bestsellers* magazine to the best selling paperback of the year.

Harper Lee, a direct descendant of General Robert E. Lee, recommended to potential authors, “Write what you know and do so thoughtfully.” She emphatically denied the her prize-winning work

Gregory Peck (standing) in a scene from the film *To Kill a Mockingbird*.

was autobiographical. The similarities it contains to her own life are striking, however. Her father, Amasa Coleman Lee, for instance, was a lawyer.

The novel's symbolism and clarity made it a literary classic. It is narrated in the voice of a white six-year-old tomboy named Jean Louise "Scout" Finch. She lives with her ten-year-old brother, Jem, and her father, Atticus Finch, in the small town of Maycomb, Alabama. The story centers on the alleged rape of the white Mayella Ewell, daughter of the wicked Bob Ewell, by the black Tom Robinson. Atticus serves as Robinson's attorney. The all-white jury finds Robinson guilty even after Atticus proves reasonable doubt of Robinson's guilt.

The novel portrays common, real-life stereotypical racist events of the time. Atticus faces taunts of "nigger lover" and "lawing for niggers." There also is the attempted lynching of Mr. Robinson. The perceived threat of blacks to white women and the salvation embodied in white males are mocked.

Throughout the novel, Lee pursues various themes like ignorance versus knowledge, cowardice versus heroism, and children versus adults. Courage versus cowardice is portrayed in Atticus's demeanor in a confrontation with Bob Ewell over Atticus's open disbelief of Mayella's accusation. The dispute also represents an old stereotype of race cohesion that Ewell believes Atticus is breaking. Lee draws parallels of ignorance in her handling of characters Boo Radley and Tom Robinson; they are both presumed guilty with no one having taken the time to get to know them. Radley is the Finch's neighbor who has an evil reputation, especially among the children, who fear him without ever having met him. Radley turns out to be a hero when he saves Scout and Jem from murder at the hands of Bob Ewell. Tom Robinson dies while trying to escape prison, representing how the racist South has endured and egalitarian measures have floundered.

Explicitly symbolic is Jem's attempt to make a snowman during a rare Alabama snowfall. As he makes the snow into a ball he rolls it to accrue more snow. While rolling the snowball it picks up dirt giving the snowman a dirty surface. The snowman signifies the superficiality of skin color.

*To Kill a Mockingbird* underscores many themes and represents a universal story from a regional perspective. The overall argument involves the obvious plea for justice while mocking the mores of Southern society. It is Lee's only major published work. Though she faded back into the obscurity of Monroeville, Alabama, her mark in literary persuasion endures.

—Scott Stabler

Lee, Harper. *To Kill a Mockingbird*. Philadelphia, Lippincott, 1960.

## *To Tell the Truth*

*To Tell the Truth* was one of the most durable and popular panel quiz shows ever to appear on television, having a run of more than twenty years in both network and syndicated form. Along with *What's My Line?* and *I've Got a Secret*, *To Tell the Truth* was one of three similar shows introduced by Mark Goodson-Bill Todman Productions in the 1950s. These shows were designed to appeal to a relatively upscale television audience and to counter the effects of

widely publicized quiz show payola scams. In the original version of *To Tell the Truth*, which ran from 1956 to 1968 on CBS, Bud Collyer was host (he also hosted *Beat the Clock*), moderating a group of celebrity panelists that included Orson Bean, Polly Bergen, Kitty Carlisle, Peggy Cass, and Tom Poston. The show ran on prime time from 1956 to 1967 and in the daytime from 1962 to 1968.

The panelists' goal was to determine which one of three players was telling the truth about an unusual event or circumstance in which they were involved. All three claimed by affidavit to be the authentic truth-teller, and each panelist was given an opportunity to question the contestants individually for a designated amount of time. After the panelists completed their questioning, the host asked, "Will the real John Doe please stand up?" The contestants were then awarded money based on their success in fooling the panel. Because the genuine contestant was not identified until the end of the question sessions, those in the home and studio audience were able to play along. After the "real John Doe" introduced himself or herself, the impostors identified themselves to the panelists. The information disclosed in these introductions was almost as entertaining as the game itself, as the impostors were often struggling actors or individuals employed in careers that could not have been more dissimilar from that of the "real" truth-teller.

*To Tell the Truth* had a second run in syndication from 1969 to 1978 with hosts Garry Moore (1969-1977) and Joe Garagiola (1977-1978). Orson Bean, Peggy Cass, and Kitty Carlisle returned as panelists and were joined by Bill Cullen. Another short-lived version ran in syndication from 1980 to 1981 with host Robin Ward and regular panelists Peggy Cass and Soupy Sales. The longevity of this show and others like it probably had much to do with its extremely low production costs. The consistent appearance of familiar panelists also added to the show's popularity, as the personal style of each of the celebrities was part of the entertainment. Kitty Carlisle could be expected to make her appearance in floor-length gown and feather boa, Peggy Cass would look erudite but down-to-earth in her horn-rimmed glasses, and Orson Bean could be counted on to ask questions that revealed a font of obscure knowledge. After the demise of the show, these personalities would continue to be remembered by the public primarily in their roles as panelists on *To Tell the Truth*, although each went on to other unrelated ventures: Peggy Cass, for example, joined the company of the popular musical *Nunsense*, and Kitty Carlisle Hart established herself as a prime mover in the arts world through her role as head of the New York State Council on the Arts.

—Sue Russell

*To Tell The Truth* Master of Ceremonies, Bud Collyer (rear) presides over a panel including (from left): Polly Bergen, Ralph Bellamy, Kitty Carlisle, and Hy Gardner.

## Today

The longest-running early-morning network television program, the *Today* show premiered on NBC on January 14, 1952, just months after the first live coast-to-coast television broadcast in the United States. Aired live from New York at 7 a.m. Mondays through Fridays, the two-hour show—the prototype of the news-magazine format—added a live Saturday program in the 1990s. By the late 1990s, nearly half a century after its origin, the *Today* show was still relying on its original format: a combination of news, interviews with leading newsmakers, features on topics such as health, personal finance, and food, and entertainment segments.

Sylvester “Pat” Weaver, who developed *Your Show of Shows* and the *Tonight* show, created the *Today* show as a type of broadcast news magazine that could be watched in segments while viewers ate breakfast or prepared to go to work or school. It premiered when television sets were a rarity and early-morning broadcasting was unknown. In 1952, daytime television was still a rarity in many parts of the United States.

After a considerable search, the man Weaver chose to host the show was Dave Garroway, a relaxed, witty conversationalist who wore professorial horn-rimmed spectacles. His early experience as a radio newscaster, plus his wide audience gained on the variety show *Garroway at Large* over WMAQ-TV in Chicago, convinced Weaver he was the performer needed to attract and hold a nationwide audience that was just out of bed. Jack Lescoulie was picked to report sports as well as the amusing stories from the day's news, and Jim Fleming read a news summary every half hour. *Today* opened in its own studio in the RCA Exhibition Hall on West 49th Street in Manhattan, outfitted with a large plate-glass window that allowed passers-by to see the show and be seen on camera. President Harry Truman, known for his morning walks, happened to lead his entourage by the *Today* window one morning when he was in New York and was stopped for a brief interview. During the show's first year, television critics complained of the show's slow pace and obsession with technological gadgets.

The show began making money in its second year, attracting larger audiences and luring thousands of children and their parents by adding J. Fred Muggs to the cast. Muggs was a strong-minded ten-month-old chimpanzee, owned by trainers Buddy Menella and Roy Waldron, and his unpredictable antics sometimes intimidated the staff but delighted the audience. Within the year J. Fred was making

personal appearance tours and meeting his adoring fans. He became more difficult to handle each year, and after five years gave way to a new chimp named Mr. Kokomo. The press release announcing his retirement said that Muggs was leaving to “extend his personal horizons.”

In 1953 Frank Blair became the show's newscaster and remained on *Today* for 23 years, longer than anyone else connected with the show. That same year the show began to feature shapely young women as “*Today* girls,” who read the temperature and a one-word description of the weather in major U.S. cities. The first of these was actress Estelle Parsons, followed by Lee Ann Meriwether (Miss America of 1955), singer Helen O'Connell, and actresses Betsy Palmer, Florence Henderson, and Maureen O'Sullivan. The only one of them to gain long-running status on the show was Barbara Walters, whose role was gradually expanded to that of co-anchor. Walters, who had appeared on the rival CBS *The Morning Show* was originally hired by *Today* as a writer. Pressed into on-camera service during the events surrounding the assassination of President John F. Kennedy, she became a regular in 1963.

In July of 1961 Dave Garroway closed the show for the last time, giving his audience a smile, a raised open palm, and his trademark “peace” signoff. He was replaced by John Chancellor, a veteran newscaster who was never comfortable in the show's format and left after 14 months. Hugh Downs replaced Chancellor in October, 1962, becoming the only television personality to have a regular position on all three of Pat Weaver's program creations, *Today*, *Tonight*, and *Home*. Downs had been Jack Paar's announcer and sidekick during the entire run of the Paar show from 1957-62. He continued to appear regularly on *ABC's 20/20*, co-anchoring the show with Barbara Walters, in the late 1990s.

Frank McGee replaced Downs in October, 1971, and Walters's growing stature on the show strained their relationship. Jim Hartz, hired with Walters's approval, replaced McGee—who died of bone cancer in 1974—and after a short stay was himself replaced by Tom Brokaw. When Walters left the show for a lucrative ABC contract in 1976, an extensive search was begun to replace her, and six candidates were tested on air: Cassie Mackin, Betty Rollin, Linda Ellerbee, Kelly Lange, Betty Furness, and Jane Pauley. Pauley, born in 1950, was only two years older than the show itself, but she won over all the contenders, and the new team of Brokaw, Pauley, and Willard Scott was able, in 1977, to bolster the show's declining ratings and maintain the show's number-one rank among morning shows. Bryant Gumbel joined the show as a sportscaster in 1980 and became a co-host in 1982. By that time, *Today* no longer was the dominant force in the early morning. *ABC's Good Morning America*, which had previously beaten *Today* in the ratings for a few weeks in 1979, now won the ratings race consistently in 1982 and 1983, and in one week in 1983, the *CBS Morning News* nudged *Today* into third place.

During the 1980s the Gumbel-Pauley-Scott team increased the show's ratings and won the race against *Good Morning America* frequently until 1989, when a well-publicized incident sent the series into another decline. In February, 1989, an intra-office memo in which Gumbel was harshly critical of Scott and Gene Shalit was leaked to the press, causing fans to express their loyalty by changing channels. The second move that proved unpopular with the viewers was the reduced role played by Jane Pauley when Deborah Norville was added to the show as newscaster. Pauley announced her departure on December 28, 1989, but continued on other NBC shows, filling in for Tom Brokaw on the *NBC Nightly News* and hosting her own prime-time series, *Real Life with Jane Pauley*.

**Bryant Gumbel interviewing Richard Nixon on the *Today* show, 1990.**

*Today's* ratings plunged 15 percent in the spring of 1990, and *Good Morning America* was atop the charts again, but in April, 1991, the popular Katie Couric was named co-host with Bryant Gumbel, and *Today* soon became dominant again. She had joined the show in June, 1990, as its first national correspondent and had served as substitute anchor since February, 1991. A native of Washington, D.C., and an honor graduate of the University of Virginia, Couric showed an intelligent, probing, but polite and friendly style in memorable segments of the show, including Hillary Rodham Clinton's first television interview as First Lady, General Colin Powell's

farewell to his position on the joint chiefs of staff, Anita Hill's first interview after the crisis with Clarence Thomas, and General Norman Schwarzkopf's first interview after the Persian Gulf War. She has also co-hosted, with Dick Enberg, NBC's morning coverage of the Summer Olympics in Barcelona (1992) and Atlanta (1996).

Matt Lauer, a native of New York City, replaced Bryant Gumbel as co-anchor of *Today* in January, 1997, and the show has continued to gain viewers. A graduate of Ohio University with a degree in communications, Lauer worked as co-anchor of *Today in New York* for the city's NBC affiliate before joining the network *Today* show's

news desk in 1994. His frequent filling in for golfing buddy Gumbel led to an outpouring of cards and letters from fans throughout the nation, and Lauer was promoted to co-anchor. Another factor in the show's continued high ratings was the moving of the show into a glass-walled, ground-floor production center in June, 1994. Just as in the early days of the show, the crowd outside the window has become a vital part of the *Today* show, and the stars frequently conduct on-the-spot interviews with visitors. In January, 1999, *Today* had national ratings nearly twice those of the next highest competitor.

The *Today* show remains a window on the world for its viewers, with live shows originating from the Orient Express streaking across Europe, as well as from China, the Soviet Union, the French Riviera, Italy, the United Kingdom and Ireland, Australia, South America, and Cuba. Other familiar faces on the 1999 *Today* show include Ann Curry, news anchor; Al Roker, weather; Gene Shalit, film critic; and Willard Scott, known for his comic remarks and his daily list of America's latest centenarians.

## Toffler, Alvin (1928—)

Alvin Toffler, the most popular futurist in America, became a celebrity in the 1960s and 1970s for his predictions and suggestions for ways people could cope with the unprecedented rate of change initiated by new technologies. With the publication of his bestseller *Future Shock* in 1970, Toffler became a household name and won many admirers in government and business. *The Third Wave* (1980) made him internationally known, and with *Powershift: Knowledge, Wealth, and Violence at the Edge of the Twenty-First Century* (1991) and *Creating a New Civilization: The Politics of the Third Wave* (1994), Toffler became a prominent political advisor. Since 1993, Toffler's wife, Heidi, has begun to share authorial credit with him, although he claims that she co-authored all of his previous books as well. Together they are known as the couple "who brought futurism to the masses," as Michael Krantz has written in *Time* magazine.

In *Future Shock*, Toffler argued that Americans were experiencing confusion and denial about the changes they were witnessing in society. He called this "future shock," a concept he derived from the anthropological concept of "culture shock," which means the inability of members of primitive cultures to adapt to a more advanced culture. Very similarly, Toffler argued, Americans were growing unable to cope with the new culture that was coming into being as technology changed the way people worked and lived. Witnessing the social upheaval of the 1960s, Toffler believed that the mass hysteria of the protests and growing divorce and crime rates were signs that

Americans were reaching a limit beyond which they could accept no more change. As remedies to future shock, Toffler argued that children should read more science fiction and that the study of the future should become a standard part of American education.

The main problem, according to Toffler, was that America was undergoing a fundamental shift from a Second Wave to a Third Wave society. The First Wave was the adoption of the agrarian way of life 10,000 years ago, the Second Wave was the urbanization and industrial revolution of the nineteenth century, and the Third Wave that began after the Second World War he called a "super-industrial revolution." This last phase of human development was fueled by the rise of technologies that were driven by knowledge rather than raw material power. In 1980 he predicted in *The Third Wave* that the personal computer would become a household item, three years before IBM (International Business Machines) introduced computers for home use. Toffler also believed that an information superhighway would become an important part of our everyday lives and that changes in our economy would effect a fundamental restructuring of our society; a "demassification" that would turn back some of the effects of centralization and standardization of the industrial era. Workers would return to the home, establishing living patterns similar in some ways to the First Wave of human development. The difference, however, is that people would be linked by new technologies that enabled them to communicate with others all over the world. And instead of having to purchase identical, mass-produced products, consumers would be presented with a growing number of choices as smaller industries became more feasible. Finally, in what became the focus of his last two books, the federal government would become less centralized as power shifted to smaller interest groups and local governments.

Toffler looked forward to the changes that would take place, arguing optimistically that a more direct democracy, more varieties of family structure and home life, greater utilization of renewable energy resources, a decentralized government, and a more accessible media would result from the Third Wave, effectively eliminating social hierarchies. He attempted to ease the fears of Americans about the rapid rate of change. In *The Third Wave* he argued that "we are the final generation of an old civilization and the first generation of a new one . . . much of our personal confusion, anguish, and disorientation can be traced directly to the conflict within us, and within our political institutions, between the dying Second Wave civilization and the emergent Third Wave civilization that is thundering to take its place." His optimism about the positive effects this shift would have on the quality of life and his urgent message that we must prepare for these changes rather than impede their progress drew many disciples, most notably Ronald Reagan and Newt Gingrich. Ted Turner even claimed to have gotten the idea for *CNN* (*Cable News Network*) from *The Third Wave*.

Alvin and Heidi Tofflers' main goal has been to prepare people for the changes ahead and to make them more comfortable with the concept of change. They want Americans to abandon their nostalgia for small-town life, the nuclear family, and employment stability of the past, and to embrace a future in which knowledge and flexibility will be the greatest assets. As Alvin Toffler told Charles Platt in *Dream Makers*, he wants to "open up the reader's mind to other ways of conceptualizing our political and social structures. I think that helps people adapt."

## Toga Parties

At the turn of the twentieth century, when the poet Ezra Pound advised writers to "make it new," he was referring to the need for a new vision that would propel artists through a new century. But as artists, intellectuals, writers, and other makers of culture turned to their crafts in order to create a new world, they found themselves looking to the past as much as they looked to the future. They looked not to the recent past, from which they wanted to free themselves, but to the ancient past of Greece and Rome. Homage to the Classical world sometimes manifested itself in the form of the toga party, which took place throughout the century and became particularly popular during the 1970s. Revising Classical culture to modern sensibilities, toga parties represented not only youthful exuberance, but an underlying desire to maintain a link to the past. (The name derives from the "toga," a simple cloth wrap worn loosely around the body in imitation of the national garment of the early Romans). Such parties played out the legendary excess of the Roman god, Bacchus, the god of wine, and his Greek precursor, Dionysus.

It is not hard to see why the figure of Dionysus had such appeal to those in the twentieth century, when more open attitudes toward sexuality began to take hold. At the beginning of the century, "modern women" announced their modernity by cropping their hair short and wearing Greek bangs, and during the 1920s, Classical style tunics became popular. One motto of the 1930s—"wine, women, and song"—was a direct call from the ancient rite of the Bacchanal, or Dionysian rites of spring. The call of the ancient Greeks and Romans was even heard at the Roosevelt White House in the early 1930s, when Eleanor Roosevelt hosted a great toga party in an attempt to poke fun at the politicians and newswriters who viewed F.D.R. as a second Caesar.

The toga was revived when the 1978 film *Animal House* featured a fraternity house toga party, prompting a new fad on college campuses. Across the United States, students wrapped themselves in bedsheets draped like togas in an attempt to imitate Greek and Roman figures and the Bacchanal. At times, John Belushi and other actors from *Animal House* would show up at such parties. Perhaps the most widely publicized, if not the largest, toga party was held at the University of Wisconsin, where 10,000 persons attended, all wearing sheets draped like togas, many of them sporting garlands of flowers in their hair. Much as rock concerts of the 1960s defined the 1960s generation, toga parties became an identifying rite of passage for the generation of the 1970s. During the 1990s, toga parties were still known to take place, although largely as a nostalgic gesture.

## Tokyo Rose

During the fight with Japan in World War II, Allied (mostly American) fighting men in the Pacific were assailed with Japanese radio propaganda broadcast from radio stations throughout the Japanese empire. Many of the broadcasters were women, and they began to be known by the term "Tokyo Rose." The American Office of War Information (OWI), based on a study of the Japanese propaganda broadcasts, concluded that none of these women referred to herself as Tokyo Rose; the OWI considered the name "Tokyo Rose" to be "strictly a GI invention."

The various "Tokyo Rose" broadcasters spread different types of propaganda. Some of the woman broadcasters taunted the Allied soldiers by implying that their wives and sweethearts back home were being unfaithful to them. Although the United States Foreign Broadcast Information Service (FBIS) did not pick up any Japanese broadcasts which predicted specific military movements, some soldiers later claimed that "Tokyo Rose" announcers would identify Allied units, predict Japanese bombing raids, warn soldiers who were about to go into battle that they would be cut to pieces, and make otherwise demoralizing remarks.

Some of the Japanese broadcasts were less blatant than this. There was one Tokyo-based program, known as *Zero Hour*, which consisted of musical numbers, readings of letters from Allied POWs, and some news. A woman DJed the musical portions of the program; the woman interspersed the music with brief, and generally innocuous, commentary. The woman DJ on "Zero Hour" was an American named Iva Toguri (later d'Aquino). Though she never referred to herself as "Tokyo Rose" in her broadcasts—her moniker was "Orphan Ann"—she ended up being assigned the role of Tokyo Rose.

Iva Toguri was born in the United States to Japanese parents. In 1941 she was in graduate school, studying to be a doctor, but she left the country for Japan to take care of a sick aunt. Although she was a native of the United States, she had problems getting a passport and had to travel without one. After Pearl Harbor, the war stranded her in Japan. While seeking work to support herself in Japan, Toguri got a part-time clerical job at NHK, the government radio service. She was noticed by Charles Cousens, a POW who had served with the Australian army and who had been ordered by his Japanese captors to make radio propaganda aimed at the Allies. Cousens—who was later cleared of treason charges by Australian authorities—claimed that he was trying to sabotage the "Zero Hour" program by making it useless as propaganda. As part of that plan, Cousens claimed, he hired Iva Toguri because she was anti-Japanese and had a bad radio voice.

While she was working for Japanese radio, Toguri helped out many Allied POWs who were interned in the Tokyo area, giving them food and expressing pro-American sentiments. At the end of the war in 1945, the newly-married Iva Toguri d'Aquino did not seem to regard herself as a traitor, and she was willing to talk to the American press about her activities.

Tokyo Rose

Following the war, two Hearst reporters looking for the famous “Tokyo Rose” were led to d’Aquino, who signed a contract with one of the reporters giving various Hearst enterprises the exclusive rights to her story. In return, d’Aquino was promised \$2,000 (which for various reasons she never got). In the contract, d’Aquino identified herself as “the one and original ‘Tokyo Rose’” and gave numerous autographs identifying herself as “Tokyo Rose.” D’Aquino was stretching the truth, and it soon led her into serious trouble.

American authorities held d’Aquino in a Japanese prison for nearly a year while investigators tried to determine whether her broadcasts on behalf of Japan amounted to treason. Released in 1946 for lack of evidence, she faced a renewed campaign to block her return to the United States in 1947. The American Legion and broadcaster Walter Winchell did not want the traitress Tokyo Rose to be a free woman in the United States, and they campaigned for a reopening of the case. In 1948, Attorney General Tom Clark directed that d’Aquino be tried for treason.

D’Aquino was brought from Japan to San Francisco, where she was tried in 1949. Of the eight charges against her, the jury found her guilty of only one charge. According to the jury, she claimed in one broadcast that the Japanese had won the battle of Leyte Gulf (which they had not) and she allegedly taunted Allied soldiers about this imagined defeat. D’Aquino received a ten-year sentence and, as a convicted traitor, she was stripped of her American citizenship. After spending eight years in prison, d’Aquino was released in 1956. The United States commenced deportation proceedings, but dropped them in 1958. D’Aquino went to work in her family’s store in Chicago, which she was still running in 1998.

Beginning around 1974, the Japanese American Citizens League (JACL) took an interest in d’Aquino’s case. The JACL believed that d’Aquino had been a loyal American who had done what she could to assist American POWs, who had taken a job as a disc jockey and made innocuous broadcasts, and who had been targeted by unscrupulous journalists and prosecutors who were trying to transform her into the mythical “Tokyo Rose.” Media reports sympathetic to d’Aquino appeared in 1976. The jury foreman at her trial told *60 Minutes* that he thought d’Aquino was innocent of all charges. Articles in the *Chicago Tribune* indicated that two of the witnesses against her had lied. (Later, documents acquired through the Freedom of Information Act indicated that the two witnesses had made statements to the FBI in identical language, raising the inference that they had been coached.)

The JACL received support from other important quarters. The California legislature, several municipal governing bodies, conductor Seiji Ozawa, and the American Veterans Committee all endorsed a pardon. Influential Japanese-American politicians joined the campaign, particularly S. I. Hayakawa, who was soon to become a republican senator from California and who had access to President Gerald Ford. In January 1977, just before his term of office came to an end, President Ford pardoned d’Aquino. The pardon restored d’Aquino’s civil rights, including her American citizenship.

## Tolkien, J. R. R. (1892-1973)

Born in South Africa in 1892 to English parents and resident of the United Kingdom from 1895 until his death in 1973, J. R. R. Tolkien is the most prominent fantasy writer of the twentieth century. He is beloved for his epic fantasy trilogy, *The Lord of the Rings* (1954-1955), and its prequel, *The Hobbit* (1937). Although exactitude is impossible, Patrick Curry estimates worldwide sales of *The Lord of the Rings* at approximately 50 million copies—“probably the biggest-selling single work of fiction this century.” *The Hobbit* has sold an estimated 35 to 40 million copies, and Tolkien’s books have been translated into more than 30 languages. A 1997 survey of some 25,000 readers in England found *The Lord of the Rings* to be the runaway winner as the most important book of the past 100 years.

Tolkien was also a prominent philologist. His academic career encompassed 39 years, dating from his appointment in 1920 as Reader in English Language at Leeds University. He became the Rawlinson and Bosworth Professor of Anglo-Saxon at Oxford University in 1925, and held the prestigious Merton Professor of English position at Oxford from 1945 until his retirement in 1959. His essay, “*Beowulf: The Monsters and the Critics*” (1936), is regarded as a landmark scholarly work, as is his examination of regional dialect in the *Canterbury Tales*, “Chaucer as a Philologist” (1949). His critical edition of *Sir Gawain and the Green Knight* (1925), developed in collaboration with E. V. Gordon, is still taught today.

“There were not two Tolkiens, one an academic and the other a writer,” asserts T. A. Shippey, “They were the same man, and the two sides of him overlapped so that they were indistinguishable—or rather they were not two sides at all, but different expressions of the same mind, the same imagination.” Tolkien’s academic research delved deeply into ancient Northern literatures, and led him to learn such languages as Finnish, Gothic, Middle English, Old English, Old Norse, and Welsh. This research in turn shaped his fiction. In the United States foreword to the Ballantine edition of *The Lord of the Rings* (1966), Tolkien avers that his trilogy is “primarily linguistic in inspiration.”

The blurring of Tolkien as an academic and a fantasy writer is no more apparent than in his essay “On Fairy-Stories,” first presented as the 1938 Andrew Lang Lecture at the University of St. Andrews and later expanded for the collection, *Tree and Leaf*, in 1964. Here, Tolkien demarcates a territory for fantasy that is distinct from stories that are framed—that is, normalized—as travellers’ tales, dreams, or beast fables. Fantasy entails an act of sub-creation, namely, a “Secondary World” that is separate from the “Primary World” of everyday life. Secondary worlds must be internally consistent, thereby structuring a sense of “credible, commanding Secondary Belief.” Central to fantasy are the elements of Recovery, Escape, and Consolation. Tolkien coined the term “Eucatastrophe,” which denotes the “sudden joyous ‘turn’” that is the hallmark of fairy-tale happy endings.

**J. R. R. Tolkien**

Tolkien applied the precepts of “On Fairy-Stories” to the secondary world that occupied much of his life: Middle-earth. The genesis of Middle-earth was a poem written by Tolkien during his student days, based on a line from the Old English Advent poem “Crist,” by Cynewulf. “Hail, Earendel, brightest of angels, over middle-earth sent to men,” sparked the imagination of Tolkien and established the basis for a cosmology that began to emerge during World War I. As a lieutenant with the Lancashire Fusiliers, Tolkien was posted to France and fought in the battle of the Somme. He later explained in a letter to his son, Christopher, that many of the early

writings about Middle-earth were composed “in grimy canteens, at lectures in cold fogs, in huts full of blasphemy and smut, or by candle lights in bell-tents, even some down in dugouts under shell fire.” These writings bore the title *The Book of Lost Tales*.

Tolkien returned to Oxford after a bout with trench fever and found sustenance in the English countryside. He was seized with the desire to create a mythology for England. Humphrey Carpenter quotes Tolkien on this point in his definitive biography, where the Oxford professor recollects how he “had a mind to make a body of more or less connected legend, ranging from the large and cosmogonic

to the level of romantic fairy-story—the larger founded on the lesser in contact with the earth, the lesser drawing splendor from the vast backcloths—which I could dedicate simply: to England; to my country.’’

A small literary circle of Christian academics—The Inklings—acted as midwife for Tolkien’s mythology. At Oxford, Tolkien regularly met with Owen Barfield, Charles Williams, and C. S. Lewis, whose *Chronicles of Narnia* would later adorn the lists of fantasy literature. The Inklings read aloud passages of their work, including a “children’s” novel that Tolkien had been writing since one fateful day in the late 1920s, when he scribbled on the page of a blank exam book, “In a hole in the ground there lived a hobbit.’’

*The Hobbit* was published in 1937 to popular and critical acclaim. Set in Middle-earth, it narrates the adventures of Bilbo Baggins, a staid halfling who embarks on a quest with the wizard Gandalf and a party of dwarves to reclaim treasure stolen by the dragon, Smaug. Along the way, Bilbo finagles a magic ring away from a twisted hobbit named Gollum. “Prediction is dangerous,’’ ventured the *Times Literary Supplement*, “but *The Hobbit* may well prove a classic.’’

Bilbo’s inheritance is at the heart of *The Lord of the Rings*, which approached completion in 1950. Frodo Baggins undertakes a perilous journey to Mount Doom in the land of Mordor, ruled by the dark lord, Sauron. There he must cast away Bilbo’s ring, revealed by Gandalf to be the One Ring of Power lost by Sauron in the distant past. Humans, dwarves, and elves aid Frodo in his quest, while the War of the Ring ignites across Middle-earth. Tolkien unsuccessfully negotiated with Collins publishing house for the joint issuing of his epic with *The Silmarillion*, a revised version of *The Book of Lost Tales*. Allen and Unwin, publishers of *The Hobbit*, eventually agreed to publish *The Lord of the Rings* in three volumes—*The Fellowship of the Ring* (1954), *The Two Towers* (1954), and *The Return of the King* (1955).

Reaction to *The Lord of the Rings* varied. If some critics waxed rhapsodic, others derided Tolkien’s work as medievalist pablum. The trilogy was received as an independent work, since *The Silmarillion* languished unpublished for over 20 years. The trilogy did not achieve widespread attention until 1966, following its publication in the United States by Ballantine Books in the wake of an unauthorized Ace Books paperback edition in 1965. It quickly vaulted to the top of the bestseller ranks and mushroomed into a full-blown cult phenomenon on college campuses during the 1960s and early 1970s.

*The Silmarillion* was finally published posthumously in 1977. Fans were perplexed by the lofty creation myth, biblical language, detailed genealogies, and the almost complete lack of characterization. Critics were equally baffled until the scope of Tolkien’s mythology was communicated via the editorship of his son, Christopher. *Unfinished Tales of Númenor and Middle-earth* appeared in 1980, followed by the 12-volume opus of textual criticism, *The History of Middle-earth* (1983-1996). Christopher Tolkien combed his father’s papers for seemingly every story fragment and draft pertaining to Middle-earth; the scale of his findings will likely occupy scholars for years.

Tolkien’s influence on fantasy and science fiction has been profound. His example of a consistent, detailed secondary world is now the norm for imaginative writing. He is furthermore credited with the rekindling of fantasy as a narrative art. Among his descendants one might include such contemporary novelists as Peter S. Beagle, Stephen R. Donaldson, Robert Jordan, and Tad Williams. Tolkien has inspired a legion of lesser imitators as well, with the result being derivative, multi-volume series boasting faux medieval Europe

settings and fit to bursting with cookie-cutter elves, inns, wizards, and megalomaniac dark lords. If Tolkienesque fantasy seems hackneyed today, few of his successors come close to rivaling the width and depth of the Middle-earth cosmos.

—Neal Baker

## Tom of Finland (1920-1991)

After 30 years of limited circulation in gay magazines and exhibitions in gay clubs, Tom of Finland’s frankly pornographic drawings have enjoyed a vast popularity since the 1970s: They have been exhibited worldwide and even mainstream publishers have produced collections of his work. Tom of Finland is now considered, in the words of his biographer, “the foremost name in gay erotic art” and the critic Nayland Blake has defined him “one of the gay world’s few authentic icons,” noting Tom’s influence on artists as different as Robert Mapplethorpe, Bruce Weber, and Rainer Werner Fassbinder. A foundation was established a few years before Tom’s death to preserve and perpetuate his work and, in the 1990s, Tom of Finland’s influence has even extended to fashion, as the name of the pornographer has become a trademark for a line of male clothes.

Tom of Finland was born Touko Laaksonen in 1920 in Kaarina, then a rural area in the southwestern part of Finland. In 1939, after graduating from high school, Laaksonen went to art school in Helsinki to study advertising, but he soon had to suspend his studies because of World War II. After the war he completed his degree and also learned to play the piano at the renowned Sibelius Institute. In these early post-war years, Laaksonen kept his “dirty drawings” (as he liked to call them) to himself and earned his living by working as a freelance advertiser during the day and playing the piano at parties and cafés in Helsinki’s bohemian districts in the evenings. It was not until 1957 that Laaksonen decided to submit some of his less graphic drawings (which he signed as Tom of Finland) for publication in *Physique Pictorial*, an American muscle magazine. The editor was so enthusiastic about them that the cover of the Spring 1957 issue of the magazine featured a drawing by Tom of Finland.

During the late 1950s and the 1960s, Tom of Finland’s drawings were published regularly in American and European magazines and sold to private publications all over the world; but homosexual art did not sell very well at the time and Tom of Finland could not give up his advertising job any earlier than 1973, the same year of his first

European exhibition. Five years later Tom of Finland went to the United States for the first American exhibition of his drawings in Los Angeles. During this trip he met Durk Dehner who was to become Tom of Finland's successful manager and co-founder of the Tom of Finland Foundation. After the death of his companion of 28 years, Veli, in 1981, Tom of Finland divided his life equally between Finland and the United States until his own death ten years later. In 1987 the anthological volume, *Tom of Finland Retrospective*, was published to such a great success that a companion volume, *Retrospective II*, was also produced. Both volumes document Tom of Finland's career from the naturalist drawings of the late 1940s to the 1987 "safe-sex" poster urging the use of condoms, passing through his mature work featuring perfect physiques, exaggerated poses, and improbable sizes.

The characters in Tom of Finland's drawings are mostly men in uniform (soldiers, policemen, sailors, lumberjacks, and bikers in leather) involved in homosexual sex of all kinds and in every (im)possible position. Their huge pectorals and muscles, their perfectly-rounded bottoms and their enormous penises point to the exaggerated maleness of Tom of Finland's men, an iconography that goes against the dominant representation of gay men as effeminate and is thus an important point of reference for the leather gay subculture. Tom of Finland's drawings counteract also the enduring stereotype of "the sad and unhappy homosexual": the men in them are clearly having a lot of fun and are proud of their sexual orientation. Tom of Finland once declared that when he started to draw, "a gay man was made to feel nothing but shame about his feelings and his sexuality. I wanted my drawings to counteract that, to show gay men being happy and positive about who they were." Even if some of Tom of Finland's drawings take place in prisons or police-stations or depict sadomasochistic situations, there is always a strong sense of play underlying them and drama never intervenes.

A complex network of looks takes place in most of Tom of Finland's drawings. As Nayland Blake has pointed out, Tom of Finland has challenged the framework of the single gaze of traditional pornography where the object presents itself passively to the eyes of the viewer. In Tom of Finland's drawings there is an interaction of looks between the different characters, which complements the gaze of the viewer. Often the two men having sex in the foreground are observed by a third man in the background. Sometimes the characters even respond to the gaze of the viewer, as in the case of Tom of Finland's re-elaboration of Michelangelo's David (commissioned by the conservative Italian film-director Franco Zeffirelli). Tom of Finland's David, much better endowed than Michelangelo's, wears a defiant look on his face and seems to be telling the viewer: "I know what you're looking at."

Tom of Finland's *oeuvre* is a lot more than just a series of "dirty drawings." As Dennis Forbes and Fred Bissonnes have pointed out, when the cultural history of the late twentieth century's Gay Liberation Movement will be written, Tom of Finland will have to be acknowledged as having created an effective iconography for part of the gay world.

—Luca Prono

## Tom Swift Series

A popular series of forty boys' novels published by Grosset & Dunlap between 1910 and 1941, the Tom Swift books were mostly published under the pen name "Victor Appleton," though they were produced by the Stratemeyer Syndicate, a book packager that created other popular juvenile literature. Attempts were made to revive the series three times over the years, once in the 1950s with the Tom Swift, Jr. books, and again in the 1980s and 1990s, but they were never as successful as the originals. The hero of the first series was Tom Swift, a young inventor, portrayed as a plucky, ingenious figure who used modern technology and American know-how to create new devices and foil his rivals. An excerpt from an advertisement written by Edward Stratemeyer (1862-1930) for the first Tom Swift books characterizes the scope of this series: "It is the purpose of these spirited tales to convey in a realistic way the wonderful advances in land and sea locomotion and to interest the boy of the present in the hope that he may be a factor in aiding the marvelous development that is coming in the future."

The Stratemeyer Syndicate, which created more than 1400 books between 1904 and 1984, devised the series concepts and hired writers to complete book-length stories from a limited outline in exchange for a flat-fee compensation (\$75.00 for the first Tom Swift book in 1910). The writer hired to become "Victor Appleton" for the majority of the Tom Swift volumes was Stratemeyer's close friend, Howard Roger Garis (1873-1962), who created the Uncle Wiggily stories and ghostwrote nearly 300 books for the Syndicate. Stratemeyer and Garis worked closely to craft a series of adventure stories with inventions inspired by the real-world work of inventors who were mentioned in magazines like *Scientific American*. Other writers involved on a limited basis for this series included W. Bert Foster and John W. Duffield.

The early Tom Swift volumes featured existing vehicles, like a motorcycle and a motorboat that Tom acquired and improved with suggestions from his father, "the aged inventor," Barton Swift. Next, Tom helped others with their inventions, the *Red Cloud*, an airship designed by John Sharp, and a submarine built by his father. By the fifth volume (all five were published in 1910), Tom built his first invention, an alkaline battery for an electric car. Later inventions of note included his sky racer (1911), a revolutionary photo telephone (1914), a coast-to-coast airline express (1926), a motor home called a "house on wheels" (1929), and a device to allow radio listeners to see the performers on a silvery screen with his "talking pictures" (1928).

In most cases, Tom Swift's vehicles were bigger and faster than their real-world counterparts, which often did not become practical until much later. A typical story involved a discussion of an exotic locale or strange event by the main characters, Tom, Barton, Tom's chum Ned Newton, and their eccentric friend, Mr. Wakefield Damon, who "blessed" more than 1,200 items and parts of his body throughout the series. Tom and friends were usually dogged by rivals, including Andy Foger, the squint-eyed redheaded bully who seemed to be on the scene no matter how remote the locale.

The Tom Swift series generated a combined sales of more than six million volumes so it is no surprise that in the early 1950s, the Stratemeyer Syndicate created a spin-off series, Tom Swift Jr., to try to reclaim part of the market share lost to the *Rick Brant* series (1948-1967), published under the "John Blaine" pseudonym. Work on the Tom Swift, Jr. series was begun in 1951 and by January 1952, a manuscript of the first volume was far enough along to receive comments by one of the Syndicate's science consultants, Robert H. Snyder. Despite this early start, the first five books in the series would not be published until 1954 after rewrites. Between 1954 and 1971, Grosset & Dunlap published thirty-three books about Tom Swift, Jr., his sister Sandra, pal Bud Barclay, and potential girlfriend, Phyllis Newton, daughter of Ned Newton from the original series. Tom Swift, Sr. makes appearances as a middle-aged man who remains active in science and invention. While the original series had titles like *Tom Swift and His Electric Rifle* (1911), the Tom Swift, Jr. series used atomic, electronic, and outer-space themes, like *Tom Swift and His Atomic Earth Blaster* (1954). For the Tom Swift, Jr. series, plot took a back seat to title in the early development of a volume. Long lists of proposed titles were considered. Once a title was selected, a story idea would be devised to match it.

"Victor Appleton II" was said to have "inherited his wonderful storytelling ability from the original Victor Appleton" in dust jacket ads for the early books. It is hard to say whether the Syndicate was referring to the ghostwriters or itself. While several writers wrote a volume or two, most of the newer series (volumes 5-7, 9-29) were written by James Duncan Lawrence (1918-1994), a Syndicate ghostwriter who also wrote for a number of different media, including screenplays for television and radio, books, and comic strips.

The Tom Swift, Jr. series was discontinued in 1971 due to declining sales, which had more to do with the aging Baby Boomers than it did with the perceived problem of Tom's achievements being surpassed by a real-world NASA. At the close of the Tom Swift, Jr. series, an anonymous memo laid the groundwork for yet another new Tom Swift series set in the far future where Tom Swift's inventions have become a reality. This new series was, indeed, set in the far future and contained science-fiction stories of interplanetary space travel with titles like *Terror on the Moons of Jupiter* (1981). Very little in the way of invention was included in the stories, and little or no reference was made to the previous two series. Part of the reason for this was that the new group of ghostwriters had published science fiction books under their own names, and because this series was published by Wanderer, a division of Simon & Schuster, which had purchased the Stratemeyer Syndicate in 1984. The third Tom Swift series was discontinued at this time.

In 1991, Simon & Schuster decided to try the venerable name of Tom Swift again in a new series published under its Archway imprint. Thirteen volumes were published of Tom Swift in a contemporary setting with inventions again being the focus, as in *Cyborg Kickboxer* (1991) and *Death Quake* (1993). This new series did not sell well and it was soon discontinued. All in all, Tom Swift appeared in ninety-nine stories in four series since the first volume was published in 1910.

## Tomlin, Lily (1939—)

Lily Tomlin, a gifted comedienne, writer, and actress, emerged on American television in the early 1970s as a featured performer on the highly innovative and successful comedy variety series *Rowan & Martin's Laugh-In*. She became noted for her gallery of memorable characters, such as Ernestine the telephone operator and the sassy, five-year-old Edith Ann, and for her ability to transform herself into many vivid personas without costume changes or make-up. Throughout the 1970s and 1980s she established herself as "America's reigning female comic genius" by appearing in a series of praised television specials, releasing a bestselling comedy album, and making a successful transition onto the movie screen. Known for her versatility, Tomlin occasionally appeared in more dramatic roles for some of Hollywood's most respected directors. In 1985, she scored her

Lily Tomlin

greatest artistic triumph by appearing in her one-woman Broadway smash *The Search for Signs of Intelligent Life in the Universe*, which presented Tomlin's attempt to summarize a generation of social history through a series of character sketches. By the 1990s, Tomlin was displaying her talents on series television, film, animation, and commercials.

Mary Jean Tomlin, born on September 1, 1939, in Detroit, Michigan, had a great interest in observing people from childhood. Raised by a factory worker and housewife who had moved north from Paducah, Kentucky, in search of jobs during the Depression, Tomlin expressed an interest in theatre while attending Wayne State University. She combined her desire to perform comedy with talents for observation and mimicry in order to find her own style as a performer. Author Jeff Sorensen comments on Tomlin's comedic evolution when he writes: "Unlike other comics who stick with one successful persona, she was determined to play as many parts as she could dream up. Characters impressions were what interested Tomlin; she had no intention of standing up and telling topical jokes on subjects." Of her comic style she has said, "My comedy is actual life with the slightest twist of exaggeration. I construct compressed accuracy, a character essence that is as true as I can get it. I don't go for laughter. I never play for a joke *per se*. If the joke gets in the character's way, I take it out."

Tomlin began her career playing in Detroit coffeehouses while still in college, eventually making her way to New York. While honing her routines at a Manhattan nightclub and in several off-Broadway productions, Tomlin's career took off after she landed a part on *Laugh-In* in 1969. Tomlin became an instant celebrity during her tenure on *Laugh-In*, which lasted from 1969 to 1973. She endeared herself to audiences by inventing characters embodying both humor and intelligence. The most recognizable of her zany characters was Ernestine the telephone operator, a nasal and overbearing woman who began her sketches with the catchphrase: "One ringy-dingy, two ringy-dingy, is this the party to whom I am speaking?" The wise-cracking Ernestine became so popular that AT&T offered Tomlin \$500,000 to do a commercial, but the comedienne refused noting it would compromise the character's comedic integrity. One of Ernestine's most famous lines was "We don't care. We don't have to. We're the Phone Company." Tomlin's next most popular character of the early 1970s was Edith Ann, an uninhibited, lisping, five-year-old who sat in an oversized rocking chair as she discussed her life. Edith Ann would conclude her observations with her trademark expression "And that's the truth." Tomlin continued to create memorable characters after she left *Laugh-In* to star in a series of comedy specials. Her most famous creations include Trudy the bag lady, Sister Boogie-Woman, and Mrs. Beasley. The great popularity of these and other characters transformed Tomlin into a national comedic phenomenon.

The comedienne's versatility continued to expand as she moved beyond television. Her film debut came in 1975 when she was cast in Robert Altman's music industry epic *Nashville*. Tomlin, in a noncomedic role, played Linnea, a devoted mother and gospel singer who had an affair with a rock star. For this performance she received an Academy Award nomination. She followed this early screen success with such acclaimed films as *The Late Show* (1977), *9 to 5* (1980), *All of Me* (1984), and *Big Business* (1988). Her career suffered its greatest setback in 1978 with the release of *Moment by Moment*, which paired her with John Travolta in a romance. Critics lambasted the film, and audiences ignored it. Tomlin bounced back in

1985 with her Broadway triumph *The Search for Signs of Intelligent Life in the Universe*. She and writer Jane Wagner produced the acclaimed feminist look at the human condition that appealed to all audiences. Tomlin continued to express her versatility into the 1990s by appearing in such diverse roles as a TV executive on the sitcom *Murphy Brown*, the teacher/bus driver on the animated educational show *The Magic School Bus*, and through many film and TV guest appearances. Two of her best characterizations of this period were as an aging hippie in the film *Flirting with Disaster* and as a murderous Christmas spirit in a 1998 episode of *The X-Files*.

## Tone, Franchot (1905-1968)

In the succinct words of David Thomson, "Tone was perhaps all that Franchot had—that and Joan Crawford," the first of his four wives. Born the son of a wealthy industrialist in Niagara, New York, and educated at Cornell, Franchot Tone had a distinguished stage career, working with the Group Theater among others. His film career, however, although long and prolific (1933 to 1965), consigned him to roles as wealthy café-society sophisticates, weak cads, or the losing end of love triangles in archetypal romances of the 1930s and 1940s. In 1935 he was Oscar-nominated for a supporting role in *Mutiny on the Bounty*, and married Crawford "after one of the most denied, affirmed, and re-denied romances Hollywood had ever witnessed," as one columnist commented. Unhappy with his film roles, he returned to Broadway, starring in Ernest Hemingway's *The Fifth Column* in 1940, but was soon back in Hollywood. Although he lacked the necessary screen charisma for leading-man stardom, he worked with many of the top directors, including John Ford, Von Sternberg, and Billy Wilder. He made several films with Crawford, and was with Jean Harlow in *Bombshell* (1933) and Bette Davis in *Dangerous* (1935), but gave his most memorable performances towards the end of his career and his life: the dying president in Otto Preminger's *Advise and Consent* (1962) and the grim Ruby Lapp in Arthur Penn's *Mickey One* (1965).

## *The Tonight Show*

NBC's venerable late-night talk show *The Tonight Show* has provided a unique window into the changing times and mores of contemporary American culture. Beginning in 1954, its four principal hosts have used the program as a pulpit for nightly commentary on events both profound and piddling. Over the decades, the show has fluctuated wildly in terms of its influence and quality. At various times it offered groundbreaking comedy, scintillating conversation, and instructions for stylish living. Even Jay Leno's tepid, non-threatening *Tonight Show* of the 1990s seemed somehow to reflect the tenor of its self-satisfied times.

The first host of *The Tonight Show* was Steve Allen, a former disc jockey who had presided over a succession of Golden Age TV offerings. During his innovative three-year run as host, Allen established the program's basic format: a monologue followed by a comedy set piece and a series of conversations with celebrity guests. Allen also inaugurated the show's long-running practice of breaking in new stand-up comics. Lenny Bruce and Mort Sahl were just two of the comedians who got their start slinging jokes at Allen's audience. In later years, such prominent entertainers as George Carlin, Richard Pryor, and Roseanne Barr would gain their initial national exposure on the program.

In 1956, NBC moved Allen onto another show and briefly retooled *The Tonight Show*. That experiment failed and the network eventually brought in Jack Paar, a garrulous game show host, as Allen's replacement. Beginning in July of 1957, Paar brought a more erudite presence to *The Tonight Show*. He eschewed comedy skits for genteel conversation, often booking guests from the political arena. Robert F. Kennedy, Richard Nixon, and labor leader George Meany were a few of the luminaries who chatted with Paar over the years.

Behind the veneer of a highbrow gabber, there was a darker side to Paar as well. He picked fights with notable figures in broadcasting, Walter Winchell and Ed Sullivan among them. On numerous occasions he threatened to quit the program, citing network interference and his own ennui with the late-night grind Paar was the first of *The Tonight Show* hosts to cut his work week down from five days to three. On February 11, 1960, Paar finally walked out on the program—literally, in the middle of a broadcast. He did return to his desk a few weeks later, but after a series of additional controversial incidents, Paar took his leave of *The Tonight Show* in March of 1962.

After a half-year interregnum, during which guest hosts filled the command chair, Johnny Carson became Paar's successor. A glib boy magician from Nebraska, Carson brought a midwestern geniality, along with a sharp wit, to the hosting chores. He also introduced America to Ed McMahon, his second banana from the game show

Frank Sinatra (left) and Johnny Carson on *The Tonight Show* in 1976.

*Who Do You Trust*, to serve as announcer and sounding board. The pair would remain together on the program for the next 30 years, with McMahon's famous introduction, "Heeeeere's Johnny!" becoming a globally recognized refrain.

For a time, Carson retained Paar's reliance on learned guests, though over the decades Hollywood glitz began to trump intelligent conversation. In a reflection of this shift, the show moved from New York to Los Angeles in 1972. Out west, *The Tonight Show* took on more of an adult urban contemporary feel. Hipsters like Burt Reynolds and Hugh Hefner replaced the stodgy Hubert Humphreys of the Paar years. *The Tonight Show* became more popular than ever, as "Johnny" reveled in his shaman of late-night status.

The show's veneer of cool began to melt away in the 1980s, as *The Tonight Show* grew old along with its audience. Once the icon of hipness, Carson now seemed a mainstream fuddy-duddy, as edgier comics like David Letterman and, later, Arsenio Hall began to steal some of his limelight. The nadir of *The Tonight Show* came with the 1983 installation of Borscht Belt fossil Joan Rivers as Carson's permanent guest host. The whining, shrewish Rivers alienated many of the show's loyal viewers—and eventually enraged her patron by jumping ship for her own, competitive late-night program. Carson replaced her with comedian Jay Leno, who took over when Carson abruptly announced his retirement as of May 1992.

Leno, who beat out the more talented Letterman for the job after a well-publicized internecine struggle, took over the day after Carson signed off. He made almost no changes to the format, apart from dropping the unnecessary second banana. A workaholic stand-up, Leno relied on his strong monologues to distract attention from his sub-par interviewing skills. He seemed on the verge of losing control of the show when Letterman fielded a competitive program on CBS, but rode back to the top of the ratings on the strength of his jokes about the O.J. Simpson murder trial. Though Leno's tame take on late-night chat offered little to differentiate it from its competitors, the equity in *The Tonight Show* franchise and the host's skill with a one-liner ensured it would remain a subject of office water cooler conversation for years to come.

## Tootsie

Named one of the top 100 American Films by the American Film Institute, *Tootsie* was released in 1982, and became the year's blockbuster romantic comedy. The 1980s saw the opening of several films featuring cross-dressing, including *Yentl*, *Victor/Victoria*, and *Torch Song Trilogy*; and yet it was *Tootsie* that garnered the most critical attention and popular acclaim. The American cultural obsession with cross-dressing surfaces in newspaper stories, television talk shows, children's tales, and movies. Anthropologists, literary critics, and historians all have paid a great deal of attention to cross-dressing, producing studies of hermaphrodites, boy actors, and the politics of camp. Cross-dressing and the treatment of cross-dressing raises, in a relatively concise if somewhat confusing fashion, questions of the

Film poster for *Tootsie*.

construction of gender and sexuality. If a man can dress up successfully as a woman, does that mean that gender itself is merely a performance, albeit a culturally dictated one? What does it mean to "become a woman?" That is, what are our culture's definitions of femininity, and, by implication, masculinity? Upon its release, *Tootsie* quickly became a focus for popular and critical debate of these questions. Both critics and popular audiences responded to the film's investigation of gender roles as well as its interrogation of what it means to be a woman and what it *could* mean to be a man.

In *Tootsie*, Dustin Hoffman plays Michael Dorsey, an out-of-work New York actor who dresses as a woman, Dorothy Michaels, in order to land a role in a very successful soap opera, *Southwest General*. His character, named Emily Kimberley, becomes a fan favorite because of his/her improvised feminist protests on the set. Off stage, Hoffman falls in love with Jessica Lange, another actress in the series, who, thinking Hoffman is a woman, becomes his/her confidante. Finally, Dorothy unmask, and the movie concludes with a stereotypically happy romantic ending and with Michael's understanding of the difficulties of being a woman. Becoming a woman for Michael means more, the movie implies, than simply shaving more often, wearing makeup, and donning pantyhose. In other words, while pretending to be Dorothy in order to make a living, Michael realizes that it's no easy game to live as a woman in our culture.

Michael Dorsey and Dorothy Michaels are both familiar figures in Hollywood's long history of representations of male-female impersonators in movies such as *Pat and Mike*, *Easy Living*, *Bringing up Baby*, and *Some Like It Hot*. In fact, Hoffman modeled Dorothy Michaels's mannerisms on Jack Lemmon's Daphne in *Some Like It Hot*. *Tootsie*'s appeal, however, lies in the way that it moves beyond the farcical transvestitism of its predecessors. *Tootsie* attempts to be social commentary, not just comedy. Dustin Hoffman's performance in the film does not resemble drag or camp, but rather presents itself as a serious comment about playing a woman in contemporary American culture (just as it is serious business for Michael Dorsey within the context of the movie).

*Tootsie* quickly became the ground from which to spring feminist critiques of women in mainstream film, including analyses of positive and negative images of women and feminism in film, as well as of the potential co-optation of feminism for enormous commercial profit. Many critics asserted that *Tootsie*'s lesson is that women are simply better than men—Dorothy Michaels, they argue, is not only more successful than Michael Dorsey, but she is more sympathetic, feeling, and observant as well. (Indeed, Hoffman's oft-repeated claims in interviews that playing Dorothy made him a better man, less prone to anger and more sensitive to others' needs, seems to attest to this interpretation.) Since Dorothy Michaels is really a man, however, others have argued that the hidden message of the film is that men are actually better than women. After all, no matter whether one thinks that *Tootsie* destabilizes gender roles or reaffirms them, a man disguised as a woman seems to be better at being a woman than a real woman (as Teri Garr's character learns, when she discovers that Dustin Hoffman has won the role of Emily over her). Many critics read the film as arguing that only a man can be tough and honest enough to express women's rights. In fact, "Tootsie" has become slang among some literary and film critics for a man who claims his identity as a feminist even while maintaining a sexist understanding of women. The image of Dustin Hoffman in a long red sequined dress operates simultaneously, it seems, as both a feminist icon and a parody of feminism.

Although *Tootsie* is all about acting, in the end it is unclear whether or not the film implies that all gender roles are performances. Do the daily rituals of becoming a woman which *Tootsie* obsessively documents—tweezing eyebrows, applying mascara, shaving legs, applying nail polish, and fixing one's hair—mean the same thing for a man dressing as a woman as they do for a woman dressing up? There does not seem to be any question, for example, that Dorothy Michaels is "really" Michael Dorsey (that is, that his masculinity is a performance). In addition, the film does not investigate the ways in which femininity is a performance that the women in the movie perform as well (or not as well) as the men. "Genuine" gender roles are reasserted at the end of the movie, suggesting that cross-dressing or the understanding of gender as performance should take place only on stage, or for limited periods. In other words, one could read *Tootsie* as a slick (some would argue exploitative) poke at gender roles, whose conclusion leaves those roles finally intact (as a film that is, in the end, not good for women). And yet, such a reading might be too simplistic, for it denies what makes the film so popular in the first place—the basic ambiguity of cross-dressing itself.

—Austin Booth

## Top 40

Top 40 is a listing of the 40 most popular single records in the nation for a given week, and is derived from radio station playlists and retail sales. The listing is based on trade magazines including *Gavin Report*, *Cashbox*, and *Billboard*. Top 40 also is an AM radio format that consists of music, trivial talk, news, and promotions including services, money, and goods given to listeners. Though Top 40 radio has undergone many changes in its 45-year history, it remains a viable format. From 1956 to the present, Top 40 has provided Americans, especially those born in the 1940s, a musical smorgasbord served up through their favorite disc jockey. Disc jockeys were chosen on the basis of their voice, excitement, and sex appeal. The Top 40 format did not leave much room for personalities, and for that reason did not appeal to some disc jockeys. At first, Top 40 was not aimed at a teenage market; instead disc jockeys, adhering to a playlist, entertained and did what was called "formula radio." But Top 40 soon became a bridge from adult-oriented music to rock 'n' roll and rhythm and blues to other styles. The youth market gravitated to Top 40, and with the evolution of rock 'n' roll contributed to its early success. By 1958, Top 40 stations had spread from the Midwest to the rest of the country.

While the Top 40 format originated in 1956, there were earlier developments in radio that helped in its formation. In 1935, *Your Hit Parade*, a program on NBC, featured live performances of the most-liked songs based on sheet music, records, and airplay. In 1941, *Lucky Lager Dance Time*, a Los Angeles radio program on KFAC, first aired playing hit records and a "Lucky Ten" countdown. By 1949, KOWH, an Omaha, Nebraska, radio station, featured a playlist of popular records. Popular disc jockey Alan Freed produced the *Moondog Rock and Roll Party* in 1951 that introduced black music to a mostly white audience. In 1953, radio still held its own against television, with 96 percent of homes and 76 percent of cars having radios. Americans listened to radio on a daily basis or at least once per week. In 1953, New Orleans radio station WDSU played the top 20. Top 40 became an expanded version of previous programs, including *Your Hit Parade* and *Lucky Lager Dance Time*, and was programmed over a full broadcast day with disc jockeys and local advertisements.

The exact origin of the Top 40 is disputed and there are several explanations of its beginning. In one instance, Top 40 began in the context of several bars in several cities, including Omaha, New Orleans, Dallas, San Antonio, and Houston. Another story credits radio programmer Bill Gavin with having invented the Top 40 chart. Most scholars of radio and disc jockey Dick Clark, however, give credence to Top 40 beginning at a bar in Omaha where in an interval of two years from 1953 to 1955, Todd Storz, operator of KOWH devised the format. The story goes that Storz and his program director, Bill Stewart, were sitting in a bar in Omaha, when they became aware that patrons played the same jukebox selections repeatedly over the course of four hours. When one of the patrons was asked why, she plainly responded, "I like 'em." Inspired by her

response, Stewart, based on the most-played records on the jukebox, developed a playlist of thirty songs. Storz implemented this playlist at KOWH and the ratings improved drastically. Yet, another etymology of Top 40 has Storz developing a radio program at his New Orleans station WTIK called *Top 40 at 1450* immediately after acquiring it in 1953. The program was in response to rival station WDSU's *The Top 20 at 1280* show. Disc jockey Bob Howard, reasoned that if a list of 20 hits was satisfactory, then 40 would be outstanding, and consequently developed a show of 40 selections called *Top 40 at 1450*. In 1955, influenced by Howard, Storz at WTIK radio in New Orleans continued the concept at an Omaha radio station. KLIF owner Gordon McLendon also initiated the Top 40 format, including goofy promotions and jingles. By 1956, Top 40 had developed into a popular format.

Several key individuals were considered pioneers of Top 40, with each bringing an innovation that became part and parcel to the format. Gordon McLendon, called "the Orson Welles of radio," was a creative talent with programming and promotional ideas that gave early Top 40 its form, vitality, and innovative jingles. In radio, jingles are the most reliable indicators for listeners remembering a station. Jingles existed before Top 40, but it was McLendon who hired a music director, who in turn employed a vocal group to record jingles designed for Top 40.

Mike Joseph and Chuck Blore were also two important programmers in early Top 40 radio. It was McLendon who employed Blore as a disc jockey and program director. Blore is credited with the concept of "Color Radio," a term inspired by color television and a format developed in 1958 at KFWB in Los Angeles. "Color Radio" had nothing to do with ethnic diversity, but rather diversity in promotions, news, music, and a strong amusement and entertainment element. Joseph, a radio consultant, kept the industry focused on playing the hits and giving listeners what they wanted—always a central mission of Top 40 radio. Bill Gavin, programmer for the *Lucky Lager Dance Time* programs heard on 48 western stations, monitored sales and combined these data with other statistics, creating the *Bill Gavin's Record Report* in 1958. This information base became the foundation on which the Top 40 playlist was created. *The Gavin Report* was an innovation in the radio business that gave statistics on various markets and was essential to the development of Top 40.

In its early years, from 1956 to around 1962, Top 40 was democracy in radio. Musical categories including pop, rock 'n' roll, country, rhythm and blues, novelty tunes, jazz, and movie soundtracks made the format and were played to a mass audience. For example, from a list of Top 40 singles, the following songs and artists were represented in the following categories in 1960: pop ("Save the Last Dance for Me," the Drifters), rock 'n' roll ("It's Now or Never," Elvis Presley), country ("He'll Have to Go," Jim Reeves), rhythm and blues ("Finger Poppin' Time," Hank Ballard & the Midnighters), novelty tune ("Itsy Bitsy Teenie Weenie Yellow Polka Dot Bikini," Brian Hyland), jazz ("Georgia on My Mind," Ray Charles), and movie soundtrack ("Theme from 'A Summer Place,'" Percy Faith). A clock, sometimes called a "hot clock" in the early days and now a computer readout with a written scenario, drives Top 40. Disc jockeys have to religiously follow the clock. Relying on its popularity, a song, could be repeated every hour or every six hours. Top 40 has not been without criticism, and while the format purported to play what people wanted to hear and espouse democratic ideals, critics, including Columbia Records, accused disc jockeys of relinquishing air time and kowtowing to teenage tastes. Obviously, during the course of its maturity, Top 40 changed in that each of the various subgenres of pop

and rhythm and blues either now has its own radio format and niche market or no radio home at all.

The disc jockey, a term coined by record executive Jack Kapp in 1940, was the heart and soul of Top 40. A good disc jockey could imbue the staid format with a personality and identity. Entertainers in their own right, disc jockeys of Top 40 radio, would introduce and build up a song by talking while playing the instrumental introduction, finishing just before the vocal would start. This practice was called "hitting the post" or the art of the talk-up. While it is questionable whether disc jockeys could accurately predict what records would become hits, Top 40 radio disc jockeys always took credit for selecting certain hits. Disc jockey Wolfman Jack takes a more conservative stance on the role of disc jockeys making hits. "As long as I can remember there've been lists," he said. "Top 40 lists in the trade magazines, and in my life since 1960 I've been going by the goddamned charts. You didn't vary too far. There's no disc jockey alive who can make a record happen. All you can do is give it exposure." Many stations featured a pick hit based on a disc jockey's recommendation that actually turned out to be a hit.

The exposure of diverse musical styles, including African American popular music, owes much to the Top 40 format. By 1957, led by Chuck Berry and Fats Domino, a number of African American styles, from calypso to rhythm and blues, made the format, including records by Harry Belafonte, the Del Vikings (the first successful interracial group in rock 'n' roll), the Drifters, Della Reese, Little Richard, the Coasters, Little Anthony and the Imperials, the Platters, Larry Williams, Roy Brown, Jimmy Reed, and Ruth Brown. The first Motown entry in the format was Barrett Strong's "Money," followed in succeeding years with records by the Supremes, and the Four Tops, among others. Some of the most enduring rock 'n' roll also debuted on the Top 40. In 1957, Jerry Lee Lewis, Buddy Holly and the Crickets, and the Everly Brothers all appeared on the Top 40.

While black popular music could be heard on Top 40 by the original performers of the music, the Top 40 format often played emasculated and watered-down versions of black popular music. "Cover" records had made their debut many years before Top 40. A narrow definition of "cover" referred to a song that was successful by a black artists and then recorded by a white artist on a major label. Black bluesman Joe Turner's "Shake, Rattle and Roll" was recorded by Bill Haley and His Comets. "Sincerely" by the Moonglows, a black vocal group, was recorded by the McGuire Sisters. The covers in many instances climbed to the top of the charts while the "authentic" originals were shut out. Eventually, the black originals began to outshine the covers, as Sam Cooke's "You Send Me" did over the Teresa Brewer's version.

Top 40, according to radio consultant Guy Zapoleon, can be a format envisioned in four cycles, each lasting from seven to nine years. Each cycle has three stages: birth, extremes, and doldrums. Cycle 1 (1956-1963) encompasses pop, rock, R&B, dance, and country. Cycle 2 (1964-1973) embodies pop, rock, R&B, acid rock and soft rock, and country. Cycle 3 (1974-1983) embraces pop, rock, R&B, the disco, adult/contemporary, and country. Cycle 4 (1984-1993) includes pop, rock, R&B, rap/funk, adult/contemporary, and country. By the end of the twentieth century, rap or hip-hop, country, and hard rock have yet to penetrate the Top 40. When rap first broke into the pop charts, Casey Kasem, the originator of the countdown and *Casey's Top 40*, is credited with playing the hits, but other Top 40 stations have taken a harder line irrespective of how rap songs charted, most Top 40 stations have consistently avoided rap. Perhaps

mainstream rap artists such as Mase and Will Smith will eventually be palatable to the format.

Payola, the act of paying for air play, long suspected in the radio industry, was investigated by Congress in 1960. Representative Oren Harris and his subcommittee targeted Alan Freed, an extremely popular disc jockey who was found guilty of two counts of commercial bribery by the New York District Attorney's Office. His fine was small, but as a result he lost his job and was subsequently indicted for back income taxes. Payola scandals gained notoriety and resurfaced in 1984 and again in 1986. Despite these scandals, Zapoleon believed that Top 40 remained robust and continued to mirror the best of all types of music.

While Top 40 may have been democratic in its selection of playlists where each song was evaluated on its own merit, it was less so in terms of the diversity in race and gender of Top 40 disc jockeys. The majority of Top 40 disc jockeys were white males. No satisfactory explanation exists as to why more disc jockeys of color were not employed in Top 40 radio. In 1964, after Top 40 had been in existence for more than nine years, several black disc jockeys were hired, including Larry McCormick, reportedly the first African American disc jockey to work at KFWB in Los Angeles. In 1965, Chuck Leonard was hired for New York's WABC radio, and in 1968, Frankie Crocker was a Top 40 DJ on WMCA. Also in 1968, Walt Love was hired as a Top 40 disc jockey at Houston's KILT. In 1973, Yvonne Daniels, daughter of singer-dancer Billy Daniels, broke gender and race by becoming the first woman and first African American to be hired as a Top 40 disc jockey at WLS in Chicago.

By 1965, disc jockey and program director Bill Drake experimented with programming ideas to transform KHJ in Los Angeles to a Top 40 station, devising the concept of "Boss Radio." This Top 40 format was copied by numerous stations across the country. By 1968, the listening audience for Top 40 began to erode from competition by FM "free form" (later called "progressive" rock) radio. During most of the 1970s, Top 40 did maintain a smaller audience, even as the popularity of disco peaked in 1978. Though Top 40 regained some of its listening audience in 1983, by 1993, mainstream Top 40 disappeared as new appellations, including rock and alternative, were added to Top 40 formats. The number of radio stations identifying themselves as Top 40 also dwindled from 578 to 441. Gavin noted that the strong competition experienced by Top 40 stations brought the ratings down. In addition to competition from other radio stations, MTV (Music Television) launched in 1981, was an immediate success with young viewers. MTV essentially did what Top 40 had purported to do all along, and that was play the hits and give listeners what they wanted to hear.

In 1997, Top 40, fueled by popular artists such as the Spice Girls, made a comeback, and in its more than 45 years of existence continued to be the best format for variety in music. The Top 40 radio format was a general standard that achieved intermittent success and impacted the music industry. It was a format and system that monopolized playlists, not only dictating songs radio listeners heard, but the number of times, the order, time of day, and even to some extent the professional lives of the artists printed alongside the titles on the list. Top 40 inherently became its own worst enemy, since as listeners tended to mature, they developed preferences for certain types of music instead of the melange of popular songs on the playlists. Radio stations began emphasizing light rock, classic soul and R&B, classical, and jazz in efforts to capture a particular segment of the market. In spite of its vacillations, Top 40 has presented a diverse repertoire of songs that reflects the world of popular music.

Top 40 has remained resilient in spite of its many changes. "Through forty years, it (Top 40) had weathered one payola scandal after another, one competing format after another, one new technology after another, and all the shifts in fortune that society, culture, politics, and the economy can bring," observed noted writer and editor, Ben Fong-Torres. By the end of the twentieth century, Top 40 continued to be a viable format.

—Willie Collins

## *Tora! Tora! Tora!*

A 1970 motion picture recounting the attack on Pearl Harbor by the Japanese during World War II, *Tora! Tora! Tora!* was at the time of its release the second most expensive movie ever made, just behind *Cleopatra* in actual cost. Based on the historic novels *Tora! Tora! Tora!* by Gordon W. Prange and *The Broken Seal* by Ladislav Farago, the film recounts what happened on both the American and Japanese sides. The title refers to the Japanese code word which signaled the launch of the attack.

The idea for making the film came from Elmo Williams, who was hoping for another financial triumph along the lines of *The Longest Day*. From the beginning it was planned as a film of monumental scale that would examine the events of Pearl Harbor in precise detail. A tremendous amount of research had been done by Dr. Gordon Prang and his staff at the University of Maryland. (Prang had been appointed by General Douglas MacArthur as the official historian of the Pacific war, and had the advantage of being fluent in Japanese). In order to further enhance the authenticity of the film, Akira Kurosawa, Japan's most famous and possibly greatest director, was hired to direct the Japanese scenes.

The production faced numerous problems. For example, apart from one destroyer, nothing was left of the original Japanese fleet, requiring the filmmakers to construct a Japanese aircraft carrier and a plywood battleship and have them sent to Japan for filming. With no Japanese Zeroes available, 28 Vultee AT-6's were "stretched" six feet so that they would appear to be the same size and were then fitted with appropriate cowlings, windshields, and wheel skirts (with the result that parts were always falling off during flight).

Nor was there much left of the American fleet either, now that it had been mothballed. One floating battleship set alone cost \$1 million to construct. The Fox miniature department built models of 19 Japanese ships and ten American ships at a scale of three-quarters of an inch to the foot, thereby creating forty-foot "miniatures." They also had to build to scale the Battleship Row docks and surrounding land areas.

*Tora! Tora! Tora!* took two years to prepare under the supervision of Williams. American director Richard Fleischer was called in

A scene from the film *Tora! Tora! Tora!*

during the last six months of preparation before shooting was to begin. He met with Kurosawa and Williams in Hawaii. Williams wanted Kurosawa to cut several scenes from the script that he felt were extraneous. Kurosawa was reluctant but agreed. Kurosawa also felt it was important to depict the Japanese military as all spit and polish, formal, correct, obsessed with protocol and ceremony, while Fleischer would depict the American military as relaxed, laid-back, a bit sloppy, and casual.

Ultimately, the producers of the film spent \$25 million to reenact the attack on Pearl Harbor, more than the Japanese had spent to launch it. The attack itself was a complex sequence requiring smoke, flames, explosions, planes diving or bombing or crashing, torpedoes running; hangers, planes, and ships blowing up; anti-aircraft and machine guns firing, as well as actors in almost every shot.

The American sequences were scripted by Larry Forrester and starred Martin Balsam as Admiral Kimmel, Joseph Cotten as Secretary of War Stimson, E.G. Marshall as Lt. Colonel Bratton, James Whitmore as Admiral Halsey, and Jason Robards as General Walter C. Short. The Japanese sections were scripted by Hideo Oguni and Ryuzo Kikushima and starred Soh Yamamura as Admiral Yamamoto, Tatsuya Mihashi as Commander Genda, Takahiro Tamura as Lt. Commander Fuchida, Eijiro Tono as Admiral Nagumo, and Koreya Senda as Prince Konoye.

In Japan, Kurosawa began to resent the intrusion of five American production people sent to oversee things. He insisted on shooting interior scenes from 4:00 p.m. to midnight. He did not like the American design of the prefabricated structure sent to Toei Studios to serve as his administration building. He cast the heads of several large corporations in bit parts (in hopes that they might finance his next film), and insisted that everyone on the crew wear special *Tora! Tora! Tora!* jackets and regulation Navy caps and salute the actors whenever one passed by.

When the first day of shooting came, set inside a shrineroom on board a battleship, Kurosawa decided it was the wrong shade of white and insisted that every member of the crew work to repaint it. He became obsessed with endless minor details while overlooking a major one, despite warnings from the Americans. The plywood battleship sent over from America was being constructed facing the wrong direction.

Soon the Japanese portions were falling far behind schedule. The studio became intolerant of the delays, and Kurosawa was receiving threats from politically important people who did not want the film to be made at all. (On his way to the set, Kurosawa would lie down on the floor of the limousine to avoid assassination). As he became more abusive, his own crew started to turn against him. The story was released that illness forced him off the picture, but the truth was the

studio had finally had enough and fired him. Two commercial Japanese directors, Toshio Masuda and Kinji Fukasaku took over.

Perhaps it was because of the Japanese involvement, but the final film downplays the real reasons for the United States contemplating war with Japan before the attack. There is no mention of Japanese aggression in China or the much-publicized atrocities committed by the Japanese during their occupation. The film also fails to portray opposition to the war from within the ranks of the Japanese military.

Six servicemen were injured during the filming of the attack, and after rumors circulated of Naval carriers transporting props for the shoot, Representative John M. Murphy of New York proposed legislation to forbid the military to participate in commercial motion picture production.

The film is notable for how accurately it depicts the actual events, and it won an Academy Award for A.D. Flowers and L.B. Abbott for its spectacular battle effects. However, it did not prove to be the major league blockbuster its producers had hoped it would be, easily being eclipsed by the year's other great war epic, Franklin Schaffer's *Patton*. Many Americans did not like having to read Japanese subtitles during the Japanese portions of the film, and others feared that the Zero pilots would be made to seem heroic at the expense of American servicemen who struggled vainly to defend the base.

## Tormé, Mel (1925-1999)

One of the most versatile entertainers of all time, Mel Tormé, known as the "Velvet Fog," was one of America's most acclaimed vocalists as well as a composer-arranger, drummer, actor in films and television, and star performer on records and the live concert stage. In 1996, his 67th year in show business, he broke all records by performing for the twentieth consecutive year at both Carnegie Hall and the Hollywood Bowl. The popular holiday classic "The Christmas Song" ("Chestnuts roasting on an open fire") is his best-known composition.

Born in Chicago, Tormé began his career at age four, singing on weekly radio broadcasts with the Coon-Sanders Nighthawk Band in 1929 and with Buddy Rogers and his Band in the early 1930s. When he was six, he worked regularly with vaudeville units around Chicago, and at nine he was cast as Jimmy the newsboy on the popular NBC radio soap opera *Song of the City*. Remaining as a regular in the show

Mel Tormé

from 1934-40, Mel used his spare time to study drums and songwriting. At age fifteen he wrote his first hit song, "Lament to Love," which was recorded by Harry James in 1941. The following year he joined the Chico Marx Band in California as a drummer, singer, and arranger.

When the band broke up in July, 1943, the young singer's career began to soar. He made his debut in a feature film with Frank Sinatra in RKO's *Higher and Higher*, followed shortly by *Pardon My Rhythm* and *Let's Go Steady*, minor musicals with a high school setting. These two films featured the Mel-Tones, a singing group formed by students from Los Angeles City College, featuring Tormé as lead singer and arranger.

After serving in the army during World War II, Mel signed a contract with MGM studios. There he played in *Good News* (1947), a popular college film starring June Allison and Peter Lawford and featuring the "Varsity Drag." Mel also appeared in *Words and Music* (1948) with Mickey Rooney and Judy Garland. During the 1950s he recorded a string of hit records and toured widely on the concert stage as the leading jazz singer of the new "Cool School."

Making the transition to television in 1951, he starred with Peggy Lee on TV's *Top Tunes*, a summer replacement for *The Perry Como Show*. For the next two years he hosted a daily talk show on CBS. In 1957 he earned an Emmy nomination for best supporting actor in a *Playhouse 90* production entitled "The Comedian." During this time he was frequently featured on television variety shows.

His career as an author began in 1963 when producer George Schlatter hired Mel to write scripts for *The Judy Garland Show* on CBS. His experiences in coping with the unpredictable star of the

show led him to write *The Other Side of the Rainbow*, which was published by William Morrow and became a best seller. His later books include his autobiography, *It Wasn't All Velvet, Drummin' Men: The Heartbeat of Jazz, the Swing Years, and The World of Gene Krupa: That Legendary Drummin' Man*.

His long career includes appearances with most of America's best-known symphony orchestras. In 1983 Mel won the Grammy Award as Best Male Jazz Vocalist for the album *An Evening with George Shearing and Mel Tormé*. While performing at the White House for President and Mrs. Reagan the following year, he was told he had received a second Grammy for the album *Top Drawer*. As the aging superstar of pop music, Tormé won an even wider audience with frequent appearances as himself on the popular television comedy, *Night Court*. Tormé passed away in June of 1999.

## *Touched by an Angel*

Premiering in 1994, the television series *Touched by an Angel* chose a unique formula to achieve success. The series relied on spiritual faith, love, and redemption to send positive messages in an age of dramatic television filled with tremendous violence and negativity. The three main characters, all angels, include: Tess (Della Reese), the supervisor and mentor; Monica (Roma Downey), the new angel; and Andrew (John Dye), the angel of death. The angels assist a wide range of different characters with their personal relationships and tackle many serious issues along the way, including AIDS (Acquired Immune Deficiency Syndrome), capital punishment, and teenage pregnancy. While the series focused on spiritual thoughts and does use the word “god,” it does not assert any specific religion or religious agenda. With little fanfare at first, *Touched by An Angel* consistently gained in popularity over the late 1990s to become a top ranked and unique drama series.

## Tour de France

The Tour de France bicycle race is the world's largest annual sporting event, having been run every year since 1903 except for periods during the two World Wars. With a live television audience of 900 million viewers in 163 countries in 1998, its popularity is surpassed only by the World Cup and the Olympics. Unfolding during a three-week period every July, it covers approximately 2,500 miles and is divided into daily segments that traverse France by various routes. The race pits some 21 teams of riders against mountainous segments in the Alps and Pyrenees and flat segments in Brittany and Normandy, culminating with a spectacular symbolic finish on the Champs-Élysées in Paris. Individual riders also compete against each other in time trials. The overall leader earns the right to wear an illustrious yellow jersey. Victories by American Greg Lemond in 1986, 1989, and 1990 enhanced the event's popularity profile in the United States.

## Town Meetings

Typically held once a year, town meetings bring citizens together to vote on decisions about local affairs, including ordinances, taxes, town officers, and local improvements. Most historians associate town meetings with the region and culture of New England, especially Massachusetts and Vermont. Town meetings symbolize a strong belief in political equality and direct democracy (versus the representative democracy of America's constitution), which explains why town meetings continue today. Some historians and political scientists argue that town meetings are not truly democratic because citizens simply defer to an unspoken leadership when attending them. The meetings were re-popularized by Bill Clinton's presidential campaign in 1992.

## Toy Story

This joint venture between Pixar Animation Studios and Walt Disney Productions was the first fully computer-animated feature-length film. Pixar's John Lasseter, who won an Academy Award for Special Achievement in honor of his leadership, directed and co-wrote the film. Disney released the film on November 22, 1995, with what has become its characteristic media blitz, spawning products as diverse as toys in Burger King Kids Meals, T-shirts, shoes, hats, and *The Toy Story Animated StoryBook*. Celebrity voices abound in the film with Tom Hanks as Woody, Tim Allen as Buzz Lightyear, and Don Rickles as Mr. Potato Head. The combination of 3D computer animation, the Disney label, and star power made for a sure-fire hit that was one of the highest-grossing films of 1995. *Toy Story* has made Woody and Buzz familiar household names, and the profits led to further collaborative projects between Disney and Pixar, including a sequel, *Toy Story II*.

## Toys

Pushed out by a celebrity-driven popular culture, beloved toys of the past, including blocks, erector sets, doll houses, trains, tops, and tea sets, have almost disappeared because of media advertising that targets children not as imaginative players but as pop culture consumer imitators. Material objects, such as *Citizen Kane*'s Rosebud, Mattel's Barbie, and Hasbro's GI Joe, are reflections of society's attitudes towards children. Toys mirror cultural notions about family and childrearing values, while concomitantly resonating with a child's inner-world of play. Thus contemporary toys mimic ideas found on television rather than creative possibilities found in a child's imagination. Children today may be able to dress Barbie in a vast array of wardrobe options, but gone are the days of popular toys that allowed a previous generation of children to build, imagine, and interact with unique forms from a more diverse range of choices, choices that were not prescribed by celebrity icons on places like television, computer, and movie screens.

Although toys have been around for thousands of years, the relationship between toys, children, and culture has shifted with the passing of time. Gary Cross, in *Kid's Stuff*, notes the discovery of 5,000-year-old dolls, balls, rattles, and ancient artifacts resembling smaller versions of adult tools and weapons. Many of these early toys and miniatures were made for religious rites or for the exclusive use of adults. Wooden Noah's Arks and fashion dolls, for example, were favorite gifts of aristocratic women in the Middle Ages, while clay soldiers and knights were a source of entertainment for adult men. Eventually these "adult toys" were given to children. Brian Sutton-Smith, in his book *Toys as Culture*, explains that play and toys

became a part of children's culture in the 1600s as a result of a decreased need for child labor combined and a new and related concern with controlling children's behavior. Play and toys began to be considered by such serious thinkers as John Locke and Jean Jacques Rousseau, who held that children were different than adults and needed protection and special activities, like play, to progress.

Changes in American domestic life facilitated the introduction of toys into the home. Over the course of the nineteenth century, work was done with greater frequency away from the house and not by children, furthering the notion that children needed to be treated differently. Toys and children's books began to claim more importance in this new children's culture of the nineteenth century, for it was thought that they could provide for the moral and intellectual development of the child.

Developing industrial and technological capacities brought innovations to the making of toys; rubber, plaster, and sheet metal made toys easier to manufacture. Germany was the largest exporter of toys in the early nineteenth century, and more than any other country was responsible for the modern world of toys. Just another dry good in the United States, toys offered gender-typed play tools for boys and dolls for girls. After the Civil War, however, chain stores like Woolworth's (1879) and Sears (1887) emerged and began to sell toys as gifts. Other stores, such as Macy's, designated specific sections of their consumer spaces for the sale of toys. FAO Schwartz opened in 1870 as a specialty retailer of toys.

Notions about the amount of toys required in children's lives changed when Christmas became a legal holiday in the mid-nineteenth century, helped along by the popularization of Santa in Clement Moore's 1823 poem, "A Visit from St. Nicholas." The promise of Santa's arrival promoted an even larger children's market. Santa added a sense of mystery and a morality theme as "His List" told him who was "naughty or nice"; at the same time, this happy image of St. Nick served to disguise the crass commercialism of the Christmas spirit. Ultimately, indulging children became part of a family's status reinforced by new advertising and commercial interests.

Toys bought for boys in the early twentieth century reflected a fascination with industrialization and technology; early "industrial" toys include Lionel trains (1906), Moline Buddy trucks (1910), Gilbert Erector sets (1913), Tinker toys, and Lincoln Logs (1916). These construction toys were the antecedent of Legos (1954), the very successful Danish Toy that allows children to follow a design or build their own creations. "Theodore Roosevelt and the Spanish American War set the stage for the development of numerous male-identified toys" explains David Brody in his dissertation, *Fantasy Realized*. The famous and durable Teddy Bear (based on Teddy Roosevelt's popularity) became a favorite as well as the Daisy Air Rifle (1898), Admiral Dewey Dolls, and the very successful, yet racist, Billikens (1912) with their Orientalized physical traits. In contrast toys for girls reflected domestic life, featuring dolls and miniature kitchen appliances. Doll companies like E. I. Horsman and Effanbee and manufacturers like Schoenhut and Steiff produced the Patsy Doll (1924), Raggedy Ann, and other companion dolls.

In 1901 John Dewey wrote about the importance of toys promoting the psychological needs of the child. Dewey ushered in a whole group of child experts in the twentieth century including the psychologist Stanley G. Hall and later the author of *Baby and Child Care*, Benjamin Spock, who promoted toys that fostered imagination and creativity. Educators, psychologists, and politicians soon had a great deal to say about childrearing and family values. Beginning in 1912, Maria Montessori began making parents aware of the importance of

the objects children played with in terms of their ability to learn. Educational toys started to be promoted by a very aggressive *Parent's Magazine* (1926), whose subscribers were mainly mothers with expendable income. Urged on by such experts, parents grew interested in creating children who could navigate the more industrialized twentieth century with a greater sense of ease.

Noel Barrett, toy expert and star of PBS's *Antique Road Show*, is particularly impressed with how toys changed from what he calls "Sunday Toys with religious significance" to toys like mechanical banks, which adults could justify buying for their children since they taught thrift. Children were now considered as a special and vulnerable group in society. Toys were meant to help prepare the young for success as Playskool (1928) and Fisher-Price (1930) sold more blocks, desks, and doll houses. What was not considered by the child experts was how new developments within the realm of popular culture were impacting children's lives. As the celebrity glow of Teddy Roosevelt and Charles Lindbergh sold dolls and toy airplanes, toy makers began to look ahead to other venues for child-marketing connections.

In 1904, the Brown Shoe Company bought the exclusive rights to the popular comic strip character Buster Brown in an effort to sell more children's shoes at the World's Fair in St. Louis. It worked, and Buster also sold dolls and toys with both his and his dog's image on them. Later radio characters, like Little Orphan Annie, Tom Mix, and Jack Armstrong sold cereal and advertising premium toys. In the 1940s Captain Midnight asked children to use their Ovaltine decoder to decipher secret messages. The Dionne Quintuplets sold dolls and cutouts, as did Shirley Temple and Charlie McCarthy.

But it took a strange character, related to the rodent family, with the ears of Bing Crosby, a mouth like Martha Ray, and a high pitched squeaky voice, to really launch children's popular culture. Walt Disney understood the value of successful children's characters. Beginning in 1928, he parlayed Mickey Mouse and others like him into dolls, toys, theme parks, movies, and billions of dollars. Even before the advent of television, Disney marketed Pinocchio dolls and Snow White coloring books. When he discovered the power of TV, he produced the incredibly commercial *Mickey Mouse Club* (1955). *The Wonderful World of Disney* became the first kid's infomercial highlighting upcoming Disney toys and theme park attractions. Later films of the 1980s and 1990s such as *The Little Mermaid*, *Tarzan*, *Pocahontas*, *Mulan*, and *Lion King* all have their own dolls, puzzles, and tapes. The stories told are not just Disneyfied for dramatic reasons, but very often modified to sell more toys and are intensely self-referential, with each medium encouraging the involvement in the other. Each character becomes a brand that begs children to buy more. Indeed, the movies *Pocahontas* and *The Little Mermaid* featured irrelevant hair brushing scenes designed to make their heroines more appetizing for little girl doll play.

In the late 1940s, television replaced radio as children's predominant form of entertainment. Beginning in 1947 under the title *Puppet Playhouse*, *Howdy Doody* was the first successful children's TV show. The selling of products related to the show began in 1949 when, according to Stephen Davis author of *Say Kids What Time Is It?*, Western Printing offered a surprising royalty for a Howdy Doody Comic book. The producer thought this would be great publicity. But after 10 million comic books were sold, property rights and merchandising became the focus of the program. Howdy soon began selling cards, dolls, and toys related to the characters on the show. Scripts were modified, as children reacted in an almost Pavlovian manner to anything promoted. Princess Summer Fall Winter Spring, who was

pushed onto the stage to provide a female character, helped sell little girls untold Indian dolls and costumes. Television thus not only entertained children but shaped their consumer decisions. Sensing the power of this new media, both Hasbro, starting with Mr. Potato Head in 1951, and Mattel, with the Burp-Gun in 1955, made the decision to market on TV. As Stephen Kline points out in *Out of the Garden*, these marketing decisions revolutionized the toy industry. Up until the 1950s, yo-yos, toy tanks, Slinkys, Frisbees, play dishes, Silly putty, and cap guns held their own as companies like Marx and Ideal made their profits with efficient production techniques and little Christmas advertising. Mattel's and Hasbro's decision now tied toys to electronic images, not Santa. Toy making became a year round business, and the most highly promoted toys soon began to drive the others from the market.

Perhaps the most prominent member of this new genre of toys was Barbie, who was created by Ruth Handler, the wife and business partner of Mattel executive Elliot Handler. Ruth Handler created Barbie to fill a void in the girl's fashion doll industry. Originally discovered as a sex novelty toy in Europe, Barbie has the shape of a young woman, with long legs, large bust, and narrow waist. She reflects a teenage fantasy world, for she is beautiful and sexy, well dressed, and autonomous; Barbie has no parental ties. With her accessories and play environments she stresses the virtue of consumerism. In Barbie's world, consumerism means happiness. While not really a TV series tie-in toy, she was among the first toys to be heavily marketed by television. In the 1990s, Barbie is everywhere. Barbie's marketers use what Mattel calls a "segmentation strategy" of not one Barbie doll, but many, for different types of play. With every young girl in the country having an average of eight Barbies, she is America's most successful commercial toy.

Puppeteer Jim Henson and Joan Ganz Cooney met in 1969 and formed The Children's Television Workshop; their creations included Big Bird, Cookie Monster, Rubber Ducky, and, of course, Bert and Ernie. These amusing characters began selling letters of the alphabet, words, and pro-social values on *Sesame Street* but soon moved into dolls, toys, pajamas, and almost any other consumer good imaginable. There was even more merchandising as Henson's *Muppets* and their movies became blockbusters and Tickle Me Elmo became the most sought after Christmas toy in 1997. At a ceremony following Henson's untimely death, his daughter told a Vassar College audience that "the bond between the Muppet's characters and their ever renewing audience was the Henson's Company biggest asset."

The 1970s was the height of old time TV merchandising, as *Scooby Doo* and Hanna Barbera, with their *Jetsons* and *Flintstones*, continued the media success of children's television and licensed products. Still, the show came first and the merchandising followed. This was all to change with the 1976 release of George Lucas's *Star Wars*. From the beginning, Lucas sought to promote the interrelation between the licensed products and the movies, using the movies as a long commercial for the products and vice-versa. Using the myth-creating principles of Joseph Campbell, Lucas formed a magical universe populated by phenomenal characters like Luke Skywalker, Hans Solo, and Princess Leia. These movies and their related products remained top sellers twenty years after their introduction and promised to surge in sales with the release of the new *Star Wars* movie, *The Phantom Menace* in 1999.

By 1980 Strawberry Shortcake's creators got this licensing message and acted quickly, according to Tom Engelhardt in "The Strawberry Shortcake Strategy." American Greeting Card's surveyed young girls about the qualities they would find most appealing

in a doll and toy maker Kenner introduced her at the Toy Fair in New York City. Strawberry Shortcake was pink, soft, and spoke of her “berry” nice friends. One billion dollars in products sold quickly after she was given her own TV special. *My Little Pony* and *The Care Bears* (both 1983) followed with more programming and merchandising. The toys and lunch boxes now came first. Children’s groups were outraged by this type of activity and a sympathetic FCC spoke out about television’s obligation to children. But the deregulation of the airwaves that proceeded under the administration of President Ronald Reagan (1980-1988) brought no guidelines concerning appropriate marketing to children. As a result, the after school air waves became filled with product-driven programs like *Masters of the Universe*, *He-Man*, and other such shows. The new Fox Children’s Network and Nickelodeon began to not only impact on a child’s Saturday mornings but their after school time as well, with shows like *The Teenage Mutant Ninja Turtles* (1980s), *The Mighty Morphin Power Rangers* (1993), and *The Rugrats* (1991). Programming now became a series of infomercials where movies and live shows related to the program were promoted and every character or hideout was for sale. While networks worried about audience share during prime time, children’s television advertising revenues continued to soar as new toys needed both program time-slots and commercials to be successful.

Toy production in the 1990s was dominated by two major manufacturers: Mattel, which owned Barbie, Tyco, Hot Wheels, and Fisher-Price; and Hasbro, parent to Kenner, Milton Bradley (who created the Game of Life in 1860), Playskool, Tonka (maker of trucks and Play-Doh), Coleco (Cabbage Patch Kids), and Parker Brothers. As described in G. Wayne Miller’s book about the Hassenfeld family’s progression from pencil manufacturer to world-wide toy maker Hasbro, *Toy Wars*, Mattel and Hasbro are huge global conglomerates locked in a bitter struggle for world toy dominance; they continuously swallow up lesser manufacturers and mass produce toys that have brand and media recognition. Their on-going battle involves stock prices and options rather than children and play, as toy executives answer only to Wall Street. Controlling the brand names in toys like Mr. Potato Head, G.I. Joe, Batman, Star Wars, Etch-a-Sketch, and Monopoly is not enough. Even the huge distributors like Toys “R” Us and Target are small time compared to an omnipresent media promoting what children should buy, as program content and advertising commingle.

At the millennium a whole new set of toy manufacturing options are becoming available. The very nature of what constitutes our previous conceptions of media-based possibilities is being radically reconfigured by cyberspace and DTV. New “Toy Stories” are emerging with the advent of on-line web sites where a child’s favorite licensed characters sell toys. Children want more than a functioning toy, they want a share of the media’s emphasis on celebrity, a piece of purchasable personality. This personality represents power, glamour, money, beauty, respect, and invulnerability. Information and media mega-companies fill this need with the syndication and synergy of electronic characters. Ever-growing media corporations are now our most important children’s story tellers and the new toy makers.

## Tracy, Spencer (1900-1967)

Spencer Tracy, frequently defined by his peers as “an actor’s actor,” was the prime exemplar of understated acting in both comedy and drama. The unruffled simplicity was deceptive, for beneath the surface of that craggy face and chunky frame simmered anger, passion, compassion, or grief, as the role required. It is for his famous

Spencer Tracy

on-screen partnership with his legendary off-screen love, the redoubtable Katharine Hepburn, that Tracy remains best remembered, but his other achievements in a film career that spanned thirty-seven years and some seventy-three films were substantial.

Tracy was cast in a unique mold. He achieved leading man status of the first rank without a vestige of glamour or movie-star good looks. His strikingly natural persona, combined with many of the characters he played, became a benchmark for solid values and dependability as he worked his way through a succession of priests, fathers, judges, and down-to-earth avenging angels. Avuncular, often gruff, and sometimes irascible (a reflection of his own temper), there generally lurked an understanding heart beneath the rough exterior. Stern but kindly, often with a twinkle in his eye, Tracy was a rock of integrity who, but for graying hair and the lines of age that barely disturbed his familiar face, never essentially changed in either appearance or manner.

Born in Milwaukee, Tracy was the son of a truck salesman. He was educated at a Jesuit school and initially intended to enter the ministry, but he later found he preferred dramatics and decided to become an actor. In 1922, he enrolled in the American Academy of Dramatic Arts in New York. After graduation, he embarked on a succession of menial jobs until he eventually found work in a stock company. Gradually he made it to Broadway where, in 1930, his lead performance in a successful prison drama, *The Last Mile*, caught the attention of Hollywood director John Ford, who cast him as the lead in *Up the River*, a gangster film, that same year.

The next five years were spent under contract to Fox, where Tracy made a couple of interesting films, including *The Power and the Glory* (1933), but his best roles came among the frequent loan-outs to other studios, notably in the hard-hitting *20,000 Years in Sing Sing* (1933), made for Michael Curtiz at Warner Brothers. In this film, Tracy starred as a criminal who confesses to a murder of which he is innocent, and the actor was given ample opportunity to display toughness and humanity in equal measure. Indeed, during these early years, Tracy frequently was cast as a rough-hewn character, either made good or gone to the bad. Having married in 1923 and always a devout Catholic, a guilt-ridden Tracy courted unwelcome publicity in the early 1930s when his affair with Loretta Young was revealed in the scandal sheets. When, in 1935, he was arrested for drunkenness, Fox fired him. MGM hired him and, in time, provided fertile ground for a rich crop of roles that established Tracy as a star.

His first major success at MGM was as the man who survives an unjust lynching and seeks vengeance in Fritz Lang's powerful drama *Fury* in 1936, the same year he played the priest in *San Francisco* and earned his first Oscar nomination. He won the Oscar the following year for his role as the Portuguese sailor protecting Freddie Bartholomew in *Captains Courageous* and in 1938 became the first actor to win two in a row when he was again voted best actor as Father Flanagan in *Boys Town*—the first of his biopics.

In 1942 the Tracy-Hepburn collaboration began with *Woman of the Year*, in which his sports reporter and her politician, wonderfully ill-matched, fall in love. The film set the tone for the most successful and popular of their films together as sparring partners in the battle of the sexes, competitive, witty, sometimes acidic, but always affectionate. In Frank Capra's political comedy *State of the Union* (1948) Tracy is a presidential candidate, Hepburn his estranged wife; in George Cukor's *Adam's Rib* (1949) they are married lawyers on opposite sides of an attempted murder case; in Cukor's *Pat and Mike* (1952), she is a sporting phenomenon, he a sports promoter of dubious connections who sets out to exploit her money-making

potential. *Without Love* (1945), an uncertain romance from a failed Broadway play, sank without a trace (the only one to do so), while there were more serious but less popular excursions with Cukor's *Keeper of the Flame* (1942), Tracy impressive as a reporter destroying the reputation of a dead politician, and *Sea of Grass* (1947), a brooding drama with Tracy cast as a work-obsessed cattle tycoon.

In 1950, directed by Vincente Minnelli, Tracy played the gruff, bumbling, and put-upon *Father of the Bride* to daughter Elizabeth Taylor, a huge hit which won him an Oscar nomination and was followed by a hit sequel, *Father's Little Dividend* (1951), but quality vehicles were growing thinner and, correspondingly, so were the memorable performances. The only truly noteworthy contributions to the 1950s were his political campaigner in John Ford's *The Last Hurrah* and his one-armed, dark-suited avenger in John Sturges's *Bad Day at Black Rock* (1955). Descending on a crumbling one-horse outpost to unearth a terrible secret and seek justice, Tracy was never better than in this superb Western morality tale, unconquerable, implacable, ironic, compassionate, and heroic. It earned him a third Academy nomination, and there was a fourth for *The Old Man and The Sea* (1958).

The 1960s brought the onset of illness. During his last years, Tracy grew increasingly moody and difficult to work with, and producers shied away from using him. An exception was Stanley Kramer, and it was for him that the actor gave his impressive last three performances: a thinly disguised Clarence Darrow defending in an equally thinly disguised Scopes Trial in *Inherit the Wind* (1960), the presiding judge wrestling with the Nazi legacy in *Judgment at Nuremberg* (1961), and, in a last glorious reunion with Hepburn, another irascible, bewildered, and tender-hearted father in *Guess Who's Coming to Dinner?* Already very ill, Tracy died a few weeks after filming was completed.

## Trading Stamps

Trading stamps are small pieces of glue-backed colored paper, given in proportion to purchases made and redeemable for merchandise. They were first used in the United States in Schuster's Department Store in Milwaukee, Wisconsin, in 1890. Schuster's gave the stamps to customers paying in cash in an effort to limit credit use. The S&H Green Stamp Co. attributes their invention to their founders (the Sperry and Hutchinson of S&H) in 1896 as a way to "say thank-you" to customers and calls the trading stamps "America's first frequent shopper program and grandfather of marketing promotions such as frequent flyer miles." The first S&H redemption center opened in 1897 as a kiosk. One of the earliest items in the catalog was a Bissell

carpet sweeper; its modern counterpart was still in the catalog 100 years later.

The heyday of the trading stamp came during the 1950s and 1960s when large numbers of Americans got the stamps with their groceries and exchanged filled books (usually 1500-3000 stamps) for a variety of household goods. At the height of stamp fever, S&H distributed its catalogs free in supermarkets and operated multiple redemption centers, the size of small shops, in towns all over the United States. They claim that in 1964 its catalog was the largest single publication in the United States.

S&H Green Stamps, Top Value, King Korn, Triple S, Gold Bell, and Plaid were among the most popular nationally circulated brands of stamps. Attesting to the pop chic of trading stamps, artist Andy Warhol painted a series of S&H green stamps posters along the lines of his famous Campbell Soup works.

As consumers opted for lower prices in lieu of stamps in the 1970s and 1980s the movement waned but never disappeared. One of the last major grocery chains to carry the stamps was the Publix chain in Florida, which dropped them in favor of coupons and other promotions that were less costly to the store. A 1988 study in the *Academy of Marketing Science Journal* notes that a survey of retail stores showed that stores that gave trading stamps had significantly lower gross profit margins and net profit returns than did stores that did not.

At the end of the twentieth century, the consumer's persistent desire to be tangibly rewarded for patronage continued in other forms—frequent flier miles, the return of percentages of credit card purchases—but only a few retail establishments offered actual trading stamps. The stamp movement tried to keep pace with changes in technology. Although S&H continued to distribute stamps and offer merchandise catalogs, they began to offer “paperless green stamps” saved on an ID card and added automatically at the register. In addition to redemption for gifts in the catalog, the stamps could be used to save in the store, as coupons for entertainment, frequent flyer miles, and donations toward a charity or community project.

## Trailer Parks

Any film or television program refers to certain “stock” devices to create a chosen visual and emotional environment. A frequent image in modern culture is a tightly-packed row of homes, similar in style and each with a tiny fragment of land, which serves for parking, storage, recreation, gardening, and decoration. The homes follow the model of the tight suburb, but they are not American ranch houses. This image is dominated by rectangular trailers, most of which have removed wheels or at least concealed them with a trelice covering. During its history, the trailer, or mobile home, has been viewed as progressive, adventurous, and, finally, as the opposite of these American ideals. Today, when a director or producer incorporates the trailer park into a visual narrative, she seeks most often to depict Americans locked in—spiritually and physically—to a lower economic class by

social strictures. Some call the trailer park America's modern tenement; yet, the trailer park's existence also suggests one of the nation's most democratic achievements—home ownership available to all classes.

The enlightened thought of Thomas Jefferson helped to make personal home ownership an American ideal. As they configured capitalist thought, economic philosophers/visionaries Adam Smith and Thomas Hobbes incorporated property value into the scheme by making personal land ownership possible within enlightened societies at the end of the 1700s. The owner could then increase the value by “improving” the property so that it would be sold for a higher price. This philosophy made up the foundation for Jefferson's dream of an agrarian republic, full of small property owners who each tended (and improved) his own land. The American housing ideal has not ventured too far from these foundations over 200 years of development. Urban growth has provided alternative models—such as apartments and condos—but the ideal of the vast majority of Americans is to own their own home. Rising home prices after 1950 forced developers to construct a new version of this ideal that would involve classes previously unable to own their own property. The effort to appeal to lower and lower-middle class American urges for home ownership bred the trailer park.

The trailer grew out of Americans' early-twentieth-century impulse to travel the nation by automobile. The trailer-camper allowed complete freedom to pull over at any time and enjoy the comforts of home. This travel filled an important void when services were few, and allowed many Americans to reject the rapidity and regiment of train travel for the slow, wandering travel of the open road. Prior to the spread of hotels and following the proliferation of automobile ownership, roadside camping offered the most reliable form of comfort during travel. An autocamper's outfit was an instant hotel to which one had to add only water. “Just back off the main road,” instructs one guide, “in a little grove of white birches on the bank of a noisy brook, which will furnish water and perchance fish enough to fill the breakfast frying pan!” While tents remained the most popular implement for car camping, the trailer grew in popularity from 1920 to 1950. By tent or trailer, car camping spread from fad to institution during this era, giving form to the autocamp: an open site in which campers pooled together. A unique culture rapidly grew out of such sites, particularly the male effort to assess and rate others' camping equipment and technology. Not dissimilar from the shared space of the modern trailer park, campers interacted with others whenever they left the cover of their tent or trailer. In the autocamps, the travelers discussed other sites, the road, and equipment. Out of such ingenuity, the “gypsy-trailer form” began standardized manufacture after 1920.

Cabin camping also grew in popularity during the inter-war years; by 1935, however, the nation was most enthused with the evolving trailer technology. Between 1935 and 1937, popular articles included “Back to the Covered Wagon,” “Nation of Nomads,” “Tin-Canners,” “Nomads of the Road,” “Home of the Free,” and many other related topics. Futurists even began to predict that every American would soon live permanently in a cheap trailer. Their thinking revolved around the common sense of such mobility as well as the Depression-era thoughts of limiting waste. The trailer, after all, offered Americans the fulfillment of their most basic needs of shelter and safety, with few unnecessary frills. Modernist thinkers rallied around this model as the wave for the standardized future—the geodesic dome with wheels. Such thinkers, however, overlooked Americans' unique cultural preferences. Americans who could still afford

**A mobile home/trailer park in Wyoming.**

nicer homes would want them. But the trailer offered possibilities for those of lesser means. As developers created standardized suburbs for the middle and upper-middle class from 1950 to 1980, the same drive for conformity and ownership fueled the construction of the first trailer parks. Now, of course, the sites were not for transients who would take their trailer and leave in the morning; they were not, however, intended as end homes. The mobility behind the trailer park was economic: developers assumed young families would use them as a temporary home while saving for their suburban dream home.

Used originally as temporary housing, trailer parks became noticeable to most Americans after World War II, when they were clustered around Army posts and construction sites. Today, mobile home parks are not temporary aberrations on the landscape. More than 13 million Americans, most of them from young blue-collar families, call trailers their temporary homes. Few Americans or architectural historians are willing to consider such mobile homes dwellings. Critics stress that the trailer is not architecture; instead, it is an industrial product, mass-produced, low-cost, and disposable. Bypassing craftsmen, the trailer comes out of a midwestern factory by truck almost ready for occupancy. The attraction, of course, is the low cost of the trailer, compared even to the smallest house. Standardized suburban homes, such as the bungalow, have achieved dwelling status; but the mobile home remains without a place in our architectural lexicon. Quite literally, most communities also exclude trailer

parks from the mainstream, relegating them to the least desirable tracts of land, such as along rail lines, highways, or flood areas. Additionally, the odd transience of the trailer place it outside of taxation and even standard land ownership. The trailer park is not dissimilar from the autocamps of the early twentieth century: ordinarily, residents own their trailer but only lease or rent the plot on which it rests. The home, though, will normally remain at the site long after residents move.

At once, the trailer park represents the proliferation of American ideals of ownership to all economic classes and also a culture of exclusion and transience. The trailer park, then, clearly becomes ironic as it begins young families on the track to owning their own home while also divorcing them from enduring community connections. As the media reported the housing crisis of the 1970s, it also helped to create the enduring stereotypes of trailer parks. Townhouses and trailers were consistently presented as inadequate, makeshift substitutes for detached suburban dwellings. The new alternatives were posed as a threat to the postwar suburban ideal. Currently, between 50 and 70 percent of American communities ban mobile homes from privately owned lots in residential neighborhoods. This restricts Americans who may only be able to afford a mobile home to reside within the lowly trailer park. Over half of the nation's mobile homes are sited in parks, surrounded by high walls required by local

codes. It is likely that the trailer park, a construction of modern, industrial sensibilities, will remain “lower-class” squatter settlements into the future.

—Brian Black

## Tramps

The tramp or hobo (the tramp’s name for himself) refers to a wandering foot traveler, often a vagrant, thief, or beggar with no fixed

abode or destination. The term hobo, originally a migratory American worker hitching rides on freight trains, has disappeared as modern society increasingly controlled the outcast individuals who chose the itinerant or homeless life.

In the 1870s, American Civil War veterans and immigrants swelled the ranks of unemployed boys and men traveling from job to job, and the “tramp menace” alarmed newspaper editorialists and civic leaders concerned about the growing number of homeless vagrants descending on towns and cities. Tramps were often driven from town or sentenced to the jail or the workhouse for vagrancy; even skilled craftsmen, such as itinerant or tramp printers, were unwelcome in small towns. Allan Pinkerton, the legendary American detective, warned of the danger tramps posed in his 1878 book *Strikers, Communists and Tramps*. But tramps found in the new railroad system mobility to seek work in harvests, lumberjacking, mining, or construction projects.

Hostility to the independent tramp may be found as early as St. Benedict’s rule in 535 A.D. against the *girovagi* or wandering monks for whom religious life was but a pretense, and who led their lives

A homeless man.

without restraint or obedience to church authority. The Elizabethan Poor law of 1603 also condemned England's wandering, sturdy beggars, as did early American courts. By 1700 Boston selectmen, for example, warned migrant strangers or vagabonds to leave town and refused them public charity.

By the Victorian era the hobo had become a fixture in the American circus; perhaps the most famous hobo clown was Emmett Kelly (1898-1979), who portrayed Weary Willie the Hobo on television and in films such as *The Greatest Show on Earth* (1952). In silent movies, Charlie Chaplin's Little Tramp was his signature character in seventy films such as *The Kid* (1921) and *The Gold Rush* (1925). Another famous tramp clown was Red Skelton's television character Freddie the Freeloader in the 1950s and 1960s. In the theater of the absurd, Samuel Beckett's *Waiting for Godot* (1954) portrayed two pensive tramps on a country road musing about the nature of human existence. American literature celebrated the romantic hobo or tramp life, from Mark Twain's *Huckleberry Finn* (1884) to Beat Generation writer Jack Kerouac's *On The Road* (1957) and *Dharma Bums* (1958), as well as in folk music by the Industrial Workers of the World (the IWW or Wobblies) and troubadours like Woody Guthrie and Pete Seeger. Harry Kemp (1883-1960), the hobo poet, wrote autobiographical poems and narratives about his tramp adventures. But other works documented the grim reality of the hobo life, as in Jack London's *The Tramp* (1911) and George Orwell's *Down and Out in Paris and London* (1933).

During the Depression of the 1930s, the number of tramps increased dramatically as more than a million homeless men, women, girls, and boys rode the rails and lived in hobo jungles in search of work or adventure. By that era, reformers such as Father Edward Flanagan, who opened the Workingmen's Hotel and Boys' Town in Omaha, and Dorothy Day, who established the Catholic Worker Movement in New York, addressed serious social problems associated with tramping. By the 1980s homelessness was recognized as a major social issue in the United States when a rapid increase in people without adequate housing reached one million. Many of these contemporary tramps are young or mentally ill, unlike the older white alcoholic men found earlier in skid-row flophouse hotels.

The movies *Boxcar Bertha* (1972) and *Ironweed* (1987) celebrate female hoboes. Hollywood featured hoboes in socially conscious movies, *Wild Boys of the Road* (1933) and *Sullivan's Travels* (1941), and later in *Joe Hill* (1971), *Emperor of the North* (1973), and *Bound for Glory* (1976). Most tramp songs glorify the freedom of the open road and the autonomy of the hobo life while overlooking its chronic poverty, hunger, violence, and insecurity.

The bum, a sedentary beggar who avoids work, is a variant of the tramp or hobo. This derogatory name originated in the German word *bummeler*, or loafer. In the 1860s it meant a foraging soldier, and later to loaf, beg, or wander like a vagabond or tramp. By the 1890s it referred to a hobo hitching a ride on a freight train. In the 1920s it came to mean ejection from a saloon via the bum's rush, or inferior quality as in a bum job. By the 1960s it referred to resort habitués such as the beach bum or ski bum. Today, however, the tramp tradition survives in the annual National Hobo Convention at Britt, Iowa, and in the memory of men and women who last rode the rails in the Great Depression of the 1930s.

## Traveling Carnivals

In American culture, the traveling carnival evokes all things seamy, dubious, and lurid. In their heyday, some three hundred different traveling carnivals roamed the United States offering a glimpse of mystery and excitement, and sometimes danger. It was the rare child who did not think of joining a traveling carnival or circus to escape a stultifying small-town environment. The carnival was the poor man's entertainment. An egalitarian institution, carnivals practiced equal-opportunity speculation, and thus acquired a reputation for trickery and deceit, if not outright fraud, and as a consequence of America's developing network of train lines and highways, these carnivals were able to penetrate the most remote backwaters of the country. The carnival remains one of America's most enduring cultural institutions.

The United States, being a young country, has long had fairly primitive tastes in entertainment. For the better part of the nineteenth century, entertainment in rural America consisted of traveling circuses and burlesque troops, vaudeville and magic-lantern shows, all traversing the country by train or horse-and-buggy, offering temporary relief from the boredom of country life. The showmen were both exalted and disdained; occupants of an insular class, they were much maligned but envied for their carefree lifestyle. Cities contained a richer palette of diversions, but actors and showmen were no less scorned there. Going to dime museums exhibiting freaks of nature, magic acts, or flea circuses was a popular pastime with the people, and in the latter half of the century, resort towns located near urban centers sprang up to accommodate a growing middle class. Resort entertainment choices mirrored those of the city, with freak shows, burlesque, and primitive amusement parks relocating for the summer season. From these disparate entertainments, the traveling carnival emerged. It was an ad-hoc gathering of shows and concessions that traveled under the casual imprimatur of a manager or showman who handled the business end of things, and was responsible for hiring and firing acts.

Most histories credit the 1893 Chicago World's Fair—which brought together the largest agglomeration of showmen ever assembled up to that point—with the traveling carnival's origination. Along the Midway Plaisance, an avenue at the fair's periphery, the freak shows, games of chance, burlesque, wild west shows, and other more unsavory diversions assembled, and their close proximity led many of the showmen to compare notes on their business. "The showmen working the Midway Plaisance," writes Robert Bogdan, "not only shared the same grounds and experiences but even met to discuss common problems . . . it was in the area around Buffalo Bill's Wild West Show, that the idea for a collective amusement company was first discussed."

Otto Schmidt, a participant in these meetings, organized the Chicago Midway Plaisance Amusement Company, and he and his acts set out on a tour of the Northeast. The show featured thirteen attractions, some direct from the Midway Plaisance, but failed to make its final booking in New Orleans, folding due to poor organization and business practices. Nevertheless, it provided the model for a new type of traveling amusement—part circus, part amusement park—and several showmen from Schmidt's troupe revamped the idea with success, going on to operate some of the first traveling carnivals.

From spring to fall of 1902, seventeen carnivals toured the United States. They pitched their tents in empty fields or vacant lots, or were booked in conjunction with state and county fairs, these having become a welcome diversion for the small towns that served as the center of isolated farm communities. By 1905, there were forty-six traveling carnivals plying their trade. By 1937, an estimated three hundred different shows traversed the country.

The average carnival consisted of a circular avenue, the midway (the name derived from that of the avenue leading to the big top in a circus), ringed by the different attractions and circumscribing the rides and food vendors within a circular enclosure of colorful tents. Among the different attractions, a pre-World War II carnival would invariably include a model show, where naked (if the police could be sufficiently bribed) or scantily clad young women were exhibited behind a see-through fabric; a sex exhibit in which grift was especially common (anything even loosely associated with sex—fetuses preserved in formaldehyde, anatomical aids, or caged guinea pigs—could suffice); a palm reader; a dance pavilion; games of chance; food concessions; and, of course, the rides.

The rides were usually owned and operated by the carnivals manager, and they provided a constant draw, an insurance against the vagaries of local jurisprudence, which often prohibited many acts from performing, or made grift a difficult and hazardous endeavor. Most carnivals would also include a free act, usually some spectacular dare-devil stunt, for instance, plunging off a tower into a small pool of water. This act was performed at the peak hour of carnival business, providing a climax and focal point to the day's events. If the rides were the bread-and-butter of a carnival, games of chance were the jam. Extremely lucrative for the concessionaire, when the police would allow them, games of chance were in great part to blame for the carnival's dubious reputation, and a frequent source of animosity between the townies and the carnies. The games were almost always rigged, and the "marks" duped out of a considerable amount of cash. Where the police were vigilant, vendors laid off the "grift." Where gambling was illegal or heavily frowned upon, the games paid off in "slum," or trinkets.

Every carnival featured a freak show, often called a "ten-in-one" or "string show," consisting of a number of different acts appearing in a single tent. The freak show provided the mystery to a carnival and, although now moribund as an institution, it remains of abiding interest, with freak show paraphernalia commanding high prices by collectors. Most shows had at least one genuine *lusus naturae*—a fat woman, a living skeleton, Siamese twins—and a number of "made" acts. These ranged from outright frauds—a wild man of Borneo (or geek) who might have grown up in Brooklyn, or a mind-reader who worked his dazzling clairvoyance by means of an elaborate code—to acts that were semi-legitimate. Tattooed men, torture acts, sword-swallowers, and snake charmers were the most common sort of act, constituting a sort of middle class of the carnival

world; they ranked slightly lower than nature's aristocrat, the freak, but far above the lowly geek.

To attract an audience, a "talker," a quick-talking announcer, would gather a crowd, attracted by the talker's "pitch" as well as by the exhibitions, several of whom would appear with him on the "bally platform" giving short demonstrations. This was called "turning the tip." Once the tip had been turned, that is, lured into paying the entrance fee, they would be further induced to buy cheap merchandise—photos, pamphlets, and the like—and then to pay an additional fee to see the "blow-off," a genuine freak—a fat man or woman, a bearded lady, pin-heads, or victims of other birth defects. A good "blow-off" could underwrite the operating expenses of a ten-in-one, therefore, freaks were a highly valued commodity.

Carnival life fostered an us-and-them attitude. You were either "with it" (in the know), or a mark. There was no middle ground, and sometimes pitched battles, deemed "clems" by the carnies, would erupt. Often small-town carnival-goers were simply suspicious, and often the fights started after the games of chance had bled them dry. In small town America of 1930s, it was simply second-nature to distrust the carnies. And yet, the lurid quality of the carnival, the danger of being swindled, appears to have been part of the attraction. Carnival and carny alike were exotic, simultaneously feared and envied. The carnies rejection of the "normal" world, of proper society, was an affront, but it was also an invitation. In the midst of the Great Depression, when the traveling carnivals were at their most popular, customers could still be counted on to spend their hard-earned pennies. Perhaps it was because escape from the hardship of everyday life had assumed a monumental importance for the hard-pressed citizenry.

After World War II, the number of carnivals in operation dropped substantially. No one single reason can account for their precipitous decline. Perhaps it was that small-town audiences had become more sophisticated; perhaps changing social mores diminished the popularity of the freak show; or perhaps it was simply that society had become more regimented, and the escape carnivals represented had become anomalous. In addition, corporatism had invaded the carnival world. The result is today's pallid excuse for a carnival: no freak shows, games of chance that pay off in worthless trinkets, and not even a faint hint of danger or sex. The forbidden, as much a part of the carnival mystique as cotton candy or the smell of sawdust, had been excised from the carnival, and without the danger, the fun and excitement was simply less alluring.

But the image of the carnival remains powerfully alluring. Carnival paraphernalia—banners and promotional materials—are now much sought-after by collectors. In literature, as well, the carnival works its distinctive magic. By cleverly inverting the carnival-goer's presumption of fraud, Charles G. Finney's novel, *The Circus of Dr. Lao* (1935), wrote of a traveling circus in which all the attractions are fantastically real, yet the townies fail to see past their suspicions. Katherine Dunn's best-selling novel, *Geek Love* about a family of carnival freaks, purposefully deformed *in utero*, captured the public imagination in the late 1980s, becoming a best-seller. Since Todd Browning's 1932 masterpiece, *Freaks*, the carnival has routinely appeared in motion pictures, and its appearance is usually metaphor for subterfuge and betrayal. More recent films such as *Carny* (1980) treat the wayward carny with more affection, but one need only read David Foster Wallace's essay, "Getting Away from Being Pretty Much Away from It All," to comprehend the slightly sinister quality of the carnival and its workers.

Carnivals conjure up a host of associations in American culture. Heirs to both the showmanship of a Wild Bill Hickock and the entertaining mendacity of the snake-oil salesman, carnivals tap deeply into the American psyche: its restlessness, its love/hate relationship with conformity, its romance with all things criminal. The carnival was a non-judgmental environment where the deformed, the drifter, the loser could find a place that would accept him unconditionally; it was a metaphor for freedom from troubles, from the mundane, and into a magical world where the rule is that things aren't always what they seem.

## Travolta, John (1954—)

There are two John Travoltas. One is the late 1970s star who rose to the dizzy heights of worldwide fame thanks to his roles in *Saturday Night Fever* (1977) and *Grease* (1978). The other is the actor who was reborn from the embers of his cooling popularity thanks to Quentin Tarantino's cult mega-hit *Pulp Fiction* (1994). Other facets of John Travolta include his membership of the much-questioned Church of Scientology—seemingly the secret of his perseverance against all odds in his road towards permanent fame—and his early image as a dancing and singing idol.

Travolta's first taste of stardom came with his role as Tony Manero in John Badham's *Saturday Night Fever*. This film followed Travolta's noted appearances in the TV series *Welcome Back Kotter*, as high-school troublemaker Vinnie Barbarino (1975-6); the TV tearjerker, *The Boy in the Plastic Bubble* (1976); and in the first adaptation of a Stephen King novel, director Brian de Palma's *Carrie* (1976), in which Travolta played a sadistic classmate of the victimized heroine. *Saturday Night Fever*, the film that came to epitomize the booming disco culture of the 1970s, created a sweeping worldwide craze around Travolta—complete with countless dancing imitators vying for fame in Manero's famous cheap, white, three-piece suit. It also gave Travolta his first nomination for an Oscar as Best Actor. The second would come years later for his supporting role as Vincent Vega in *Pulp Fiction*.

Among his many admirers, actress Bette Davis remarked that although Travolta was talented, he would not last. Davis' prophetic

John Travolta in a scene from the film *Saturday Night Fever*.

words proved, if not true, at least remarkably accurate. The role of Tony Manero was followed by the very popular Danny Zuko of *Grease*, a musical Travolta knew well from his early theater days—in which he became a teenage cult icon with Olivia Newton-John—and *Urban Cowboy*'s Bud (1980). But the 1980s proved much less congenial to Travolta's supple talent and he was relegated to a string of mediocre films that did badly at the box office. The first signs of his renewed popularity came with the popular but insubstantial *Look Who's Talking* trilogy (1989, 1990, 1993), which was punctuated by Travolta's ineffectual resurrection of Tony Manero in Sylvester Stallone's *Staying Alive* (1993).

Just when Travolta seemed definitively condemned to playing uninspired roles like the James Ubriacco of *Look Who's Talking* for the rest of his acting life, Quentin Tarantino stepped in, convincing his much adored idol to play heroine fiend hit man Vincent Vega. Travolta's return was but one of the ingredients that turned *Pulp Fiction* into a massive hit, and the film placed the tarnished star back into the top list of Hollywood icons. Since 1994 Travolta has hardly had time to savor the sweet taste of his success, as he has been busy working non-stop in films of a varied range. His performances include an action villain in *Broken Arrow* (1996), a gangster-cum-producer in *Get Shorty* (1996), a mechanic turned supernatural hero in *Phenomenon* (1996), a devoted de-faced FBI agent in *Face Off* (1997), and even the contradictory roles of angel in *Michael* (1996) and the Bill Clinton-inspired character Governor Jack Stanton in *Primary Colors* (1998).

Travolta has amply displayed both his abilities as an actor and his understanding of the vagaries of show business, securing a sheltered financial position for himself that has allowed him to weather the difficult years in comfort. As a cultural phenomena, Travolta's career further begs the question: To what degree are actors shaped by the roles they play? As with Julia Roberts and *Pretty Woman*, it is unclear whether Travolta made the roles he played in

films such as *Saturday Night Live* and *Grease* unique, or whether these unique roles made him. Like all other contemporary Hollywood big names, Travolta is subjected to a system in which the individual talent of each performer is very hard to assess, as acting is but one ingredient in the complex process of filmmaking. His popularity, like that of many other major stars, results from a capricious combination of talent, adroit choosing of roles, availability, luck and the mysterious “x” factor, best defined as being in the right place at the right time. And finally, Tarantino’s idolization of Travolta, which perhaps had a touch of irony, appears to be a crucial factor, without which Travolta would not be the star he is at the end of the twentieth century.

## *The Treasure of the Sierra Madre*

Long acknowledged as a classic of Hollywood cinema, director John Huston’s 1948 film *The Treasure of the Sierra Madre* was among the first to make extensive use of on-location shooting and anticipated the themes that would come to characterize film noir: paranoia, greed, and duplicity. The virtue of the film is that it can be understood on a variety of levels—as an adventure story, as an etiology of one man’s mental disease, as a subtle critique of capitalism, or as an anthropologic study of the clash of cultures. Laced with disturbing psychological truths, it is precisely the fable-like quality of the film—the timeless and acute observation of human nature—that makes the film so remarkable. Huston won Oscars for best direction and screenplay, and his father, Walter, for best supporting actor.

In the Mexican town of Tampico, booming oil fields have attracted adventurers from every continent, lured by the scent of easy money. Fred C. Dobbs (Humphrey Bogart) is a drifter of dubious temperament who has bottomed out in Tampico but stills dreams of the big score—he covets luxury but has not the patience or perseverance to work for it. As the first scene shows, Dobbs is unscrupulous; he repeatedly panhandles from a wealthy American (played by John Huston) and then uses the money for such unnecessary luxuries as a haircut, buying lottery cards, and coffee. After teaming up with another young American, Bob Curtin (Tim Holt), and an aging prospector, Howard (Walter Huston), who has dazzled the younger men with stories of rich gold deposits in the surrounding mountains, he sets out on a quest for riches that will ultimately prove his undoing.

A book cover of *The Treasure of the Sierra Madre*.

Dobbs is the weak link in the chain. Curtin and Howard, although not paragons of virtue, are basically decent, realistic individuals. In one scene, the three discuss what they will do with their newfound wealth; Howard plans to open a business to sustain him in his old age; Curtin dreams of buying a farm. Dobbs, on the other hand, thinks only of the luxuries and women he will buy, and the people he will impress. The more gold they find, the further Dobbs descends into a delusional world—gold fever, as prospectors call it—in which his compatriots are mortal enemies. Every incident becomes proof of his partners’ duplicity. For example, Dobbs becomes convinced Curtin is hunting for his stash, when in fact, he has unwittingly stumbled upon a gila monster and is trying to drive it off. Curtin dares Dobbs to put his hand under the rock. Dobbs hesitates, and Curtin kills the reptile.

Further evidence of Dobbs’s evaporating morality is evidenced when an American, Cody, who has followed Curtin back from a trip to restock supplies wishes to join in their venture. Curtin, though unhappy, is amenable to the proposal, but Dobbs is adamantly opposed—he wants to kill the newcomer. It remains for Howard to cast his vote, and he has reluctantly sided with Dobbs when Mexican bandits—who had earlier waylaid the prospectors’ train—stumble on the encampment, claiming to be *Federales*. In the ensuing melee (the source of the famous quote “Badges? We ain’t got no badges. We

don't need no badges. I don't have to show you any stinking badges.''), Cody is killed, and the prospectors find a letter to his wife in his pocket. Curtin and Howard resolve to give a share of their gold to Cody's widow, but Dobbs abstains, saying, "You two must've been born in a revival meeting."

*The Treasure of the Sierra Madre* is a morality play, and Dobbs is its Richard III, undone by his own instability. After Howard is temporarily separated from the two younger men, the last restraint on Dobbs's behavior is removed. Dobbs attacks Curtin, who manages to disarm his attacker, but then finds himself captive to Dobbs's psychosis, keeping watch over him until he can no longer stay awake. Dobbs seizes his chance and guns Curtin down. As he sits before the fire, his face enveloped in the flames, he is consumed by his madness as the flames dance about him: "Conscience—what a thing—if you believe you got a conscience, it'll pester you to death . . . but if you don't believe ya got one . . . what can it do to ya?" Appropriately, Dobbs meets his fate at the hands of his brother in bestiality, Jefe the bandit leader, who kills him, seizing the burros and provisions, and discarding the gold, which the bandits take for sand. The gold dust scatters in the wind. "O laugh, Curtin, old boy," cries Howard, when the two men (Curtin having escaped death) find the empty bags. "It's a great joke played on us by the Lord or fate or nature or whoever you prefer . . . but whoever or whatever played it certainly had a sense of humor!"

Psychiatrist Harvey R. Greenberg has written that *The Treasure of the Sierra Madre* "is much more than a clinical vignette of a diseased personality driven mad by gold. It is, by turns, the story of a young man's coming of age, of an aging man's search for his last resting place. It is a rousing adventure tale, a subtle commentary on the capitalist mentality . . . But I am always drawn back to Dobbs himself, to this mean-spirited, vicious, yet strangely sympathetic figure." Paranoids litter the literature of western man—Richard III, Lady Macbeth, Rebekka West in Ibsen's *Rosmersholm*. It is a testament to Huston's ability as a storyteller and the breadth of his psychological insight that 50 years after its making, *The Treasure of the Sierra Madre* is still a powerful, convincing film. Dobbs has become one of the most memorable anti-heroes in film history, not because he is a villain, but because in his madness there lurks something all audience members can recognize. Dobbs is a reminder that the real villain is most often within.

## Treviño, Lee (1939—)

In 1968, Lee Treviño became the first Mexican American to win a major professional golf championship at the U.S. Open, and he became the first player in history to shoot all four rounds of the event under par. Born in Dallas, Texas, and raised by his mother, who worked as a housekeeper, and his maternal grandfather, a grave digger, Treviño got involved in golf because their four-room farmhouse overlooked the back of the Glen Lakes Country Club fairways. As a boy, Treviño studied the form of golfers on the course from his own backyard. He dropped out of school in the seventh grade and made his way into what was then an exclusively Anglo rich man's sport by working as a caddie and greenskeeper.

Treviño became a professional golfer in 1966, and by 1970 he was the leading money winner on the Professional Golfers' Association tour. In 1971, Treviño became the first player to win the U.S., British, and Canadian opens in a single year, and was the first Hispanic ever named PGA Player of the Year, Associated Press Athlete of the Year, and *Sports Illustrated* Sportsman of the Year. He won the British Open again in 1972 and the PGA again in 1974 among many other tournaments. He was awarded the Vardon Trophy for the fewest strokes per round (69.73 for 82 rounds), the lowest since Sam Snead in 1958. Treviño was struck by lightning in 1974, and the

Lee Treviño

resulting back problems and surgeries restricted his play in the early 1980s. He served as a TV sports commentator, but came back to win the PGA in 1984 and the British Masters in 1985. Treviño retired from the PGA tour in 1985, with his thirty victories and a total career earnings of more than \$3 million (third highest). Treviño has been elected to the Texas Sports, American Golf, and World Golf Halls of Fame.

## Trevor, Claire (1909—)

Born in New York City, trained at the American Academy of Dramatic Arts and Columbia University, Claire Trevor has sustained a long and prolific acting career that includes over 150 movies, 200 radio shows, 20 stage plays, and scores of television dramas. Trevor began her film career in 1933 in *Jimmy and Sally*. Playing a boozy moll in *Key Largo* (1948), she won an Oscar as best supporting actress. In 1956 she won an Emmy for best single performance by an actress for her role in the Producer's Showcase television drama, *Dodsworth*, with Frederic March. As late as 1987 she appeared in a motion picture *Breaking Home Ties*, based on Norman Rockwell images.

## Trillin, Calvin (1935—)

Calvin Trillin, journalist and storyteller of the American scene, has introduced his readers to friends in unlikely places like Horse Cave, Kentucky, exposed several small-town scandals, and revealed a great many of his own idiosyncrasies along the way. Readers know a little bit about the way he thinks and a lot about the way he eats from the pages of his self-titled "tummy trilogy," *American Fried* (1974), *Alice, Let's Eat* (1978), and *Third Helpings* (1983). We've also met his family: his wife Alice, who "has a weird predilection for limiting our family to three meals a day," and his two daughters, Abigail and Sarah, the latter of whom "refused to enter a Chinese restaurant unless she was carrying a bagel in reserve. . . 'just in case.'" (*Alice, Let's Eat*). Since many of these pieces originated as columns in the *New Yorker* and other magazines, Trillin's cast of characters has become a memorable and anxiously awaited feature for regular

readers. Trillin enthusiasts have also developed an appetite for the best barbecue in the world, available only in his hometown, Kansas City, Missouri. Trillin writes about food not as an expert nor, indeed, as a cook—we learn that Alice does the cooking at home—but as the owner of a prodigious appetite for foods that the doctor generally does not recommend.

Calvin Trillin's journalistic career began after his graduation from Yale in 1957 and a subsequent stint in the U.S. Army. From 1960 to 1963 he worked as an Atlanta correspondent for *Time*, as well as in various other departments of the magazine, until he was invited by editor William Shawn to join the *New Yorker* staff. His initial assignment for the *New Yorker* led to his first book, *An Education in Georgia* (1964), about the forced integration of the University of Georgia at Athens. Trillin continued to demonstrate his reportorial ability in his regular *New Yorker* feature, "U.S. Journal," in which he recorded the experiences of ordinary American people in times of stress. Many of these articles later appeared in book collections such as *Killings* (1984), a compilation of short pieces on wrongful deaths and suicides, and *American Stories* (1991), which includes a few more tales of crime mixed in with profiles of favorite Trillin characters like Fats Goldberg, the formerly fat pizza baron who shuttles between New York and Kansas City, Missouri, where he always stops for a chili dog at Kresge's.

Trillin is equally at home in many genres. His short satirical commentaries from *The Nation* are collected in *Uncivil Liberties* (1982) and *With All Disrespect: More Civil Liberties* (1985). He has also written fiction, including three compilations of short stories "written for Alice" and a novel entitled *Runestruck* (1977), the story of a pre-Columbian artifact discovered in a small town in Maine. Trillin has tried his hand at light verse as well in *Deadline Poet* (1995). His more ruminative side is shown in memoirs like *Remembering Denny* (1993), about a Yale friend who never lived up to his initial promise as a "golden boy" and eventually killed himself.

As a journalist, Trillin knows the value of a good lead, in both senses of the word: as story idea and as reader enticement. A few examples of the latter:

Not long ago, I ran across a man who pulls his own teeth. ("Ouch," *With All Disrespect*, 55)

Not long ago, I became preoccupied with the cost of the wristwatches worn by the New Jersey State Legislature. ("The Dark Side," *Uncivil Liberties*, 75).

In my version of a melancholy walk on the waterfront, I find myself walking through a cold Atlantic mist along the docks of some East Coast city, wearing a turned up trenchcoat, making the best approximation of footsteps echoing on the cobblestones that can be expected from a man wearing crepe-soled shoes, and ducking into a passage that turns out to be the entrance to a gourmet kitchen-supply shop called something like the Wondrous Whisk—where I soberly inspect imported French cherry pitters and antique butter molds and Swedish meat slicers.

("Weekends for Two," *Alice, Let's Eat*, 155)

Like Kansas City barbecue, Calvin Trillin's writing can be addictive.

—Sue Russell

## Trivial Pursuit

Trivial Pursuit can be credited with creating a whole new category of board games for adults as well as an entire industry of trivia games. On December 15, 1979, Canadian photographer Chris Haney and sportswriter Scott Abbott were inspired to create the game after competing against each other in a Scrabble game. They had originally planned to call their game Trivia Pursuit until Haney's wife jokingly referred to it as Trivial Pursuit, and the name stuck. The first 1,100 sets cost \$75 each to manufacture. But after selling them to retailers for \$15 a game, by early 1982 Haney and Abbott were in debt. Then the U.S. game company, Selchow and Righter, became interested after hiring a PR consultant who saw Trivial Pursuit's potential as a popular leisure-time diversion. After Selchow and Righter bought the rights to the board game, 3.5 million games had been sold by late 1983. A year later, the figure had jumped to 20 million. By the 1990s, retail sales had exceeded \$1 billion, and the game was available in 19 different languages and 33 countries. There has been a Trivial Pursuit television show, and the game is available on computer and on the Internet. Since its debut in 1982, there have been 40 variations of the game, and Trivial Pursuit has become an essential part of the universal language of popular culture.

## Trixie Belden

"Schoolgirl shamus" Trixie Belden was featured in mysteries beginning with #1 *The Secret Mansion*, published by the Whitman Company in 1948, and concluding with #39 *The Mystery of the Galloping Ghost*, issued in 1986. Julie Campbell wrote the first six volumes. Then the new publisher, Golden Press, hired ghostwriters

who used the pseudonym Kathryn Kenny. Thirteen-year-old Trixie lived in rural New York. She, her brothers, and friends, all members of the club Bob Whites of the Glen, participated in American and international adventures, usually solving thefts. Trixie appealed to teenage readers because her lifestyle and dreams were more familiar to them than those of Nancy Drew. The Trixie Belden mysteries enabled readers to explore and solve problems vicariously. Set in a wholesome country environment, the stories were often didactic, criticizing wealthy socialites while praising the virtue of domesticity and self-sacrifice and reinforcing middle- and lower-class values. In each book, Trixie heroically rescued people or property from danger. Often impulsive and impatient, Trixie was always capable and honest, and worked to earn money for such charity projects as UNICEF. Adult fans continue to collect the out-of-print books and sponsored internet sites about Trixie.

## Trout, Robert (1908—)

Robert Trout was radio broadcasting's first true anchorman. The concept was purely a practical innovation: the networks' foreign correspondents and highly paid analysts were the stars, yet someone had to introduce their reports, kill time during technical problems, or read late-breaking bulletins as they poured into the studio. Trout was hand-picked for this role as war clouds gathered over Europe in 1938, and gradually—broadcast after broadcast, day after day, crisis after crisis—he turned what had been a simple announcer's chore into a star role, creating the "broadcast news" institution that continues to this day.

Trout came out of local radio in Washington. Assigned to introduce President Roosevelt's "fireside chats," FDR was said to be so impressed with the young announcer's ad-libbing skill, he sometimes delayed the start of his talk a few seconds just to see how Trout would fill the time. The CBS network soon beckoned, even as the European situation worsened. The networks were beefing up their news operations, assigning correspondents to every major world capital; when the March 1938 German-Austrian crisis exploded, CBS brass picked Trout to sit in the studio, reading the late bulletins and introducing reports from the network's far-flung correspondents. And while the job could (and, on NBC, was) handled by any number of nameless staff announcers, Trout took the role at CBS and made it his own.

Broadcasting legend, of course, holds that the great innovation of that Austrian crisis was the invention of the "news roundup," the blending of several European correspondents' reports into a single live broadcast. Indeed, even the notion of CBS letting its own European staff speak on the air was an innovation in these pioneering days, but the idea of Trout holding the coverage together from New York, broadcast after broadcast—one steady, instantly identifiable voice speaking for the network over the long days or weeks of crisis—was equally revolutionary, and Trout seemed instinctively to understand the potential of his new role. His delivery was fast and facile, his

manner urbane but not arrogant, his voice authoritative yet not pompous. By the time Germany invaded Poland in September 1939, it was impossible to imagine coverage of a major event without Trout at the CBS microphone, smoothly steering listeners from one event to the next, juggling shortwave reports and incoming bulletins while masterfully hitting every cue and station break.

Strangely, NBC never imitated this single “Voice of Authority” idea; even Trout’s own bosses seemed not to realize what they had created. When CBS European chief Edward Murrow returned from his London posting in late 1941, the network brass sent Trout overseas—as a reporter. It was an obvious sign that they understood Trout’s star status, yet the admittedly prestigious London assignment was ill-advised at best. Trout acquitted himself adequately, but his absence from the New York studio deprived CBS of the central force that had spearheaded its crisis coverage for so long. Without him, CBS’s coverage of the attack on Pearl Harbor seemed particularly disjointed and rudderless.

Trout was back in New York by midwar, turning the London job back over to Murrow, and picking up right where he’d left off. It was Trout whose voice sounded across the nation just after 3:30 on the morning of June 6, 1944: “This means invasion!” he intoned, and America knew the D-Day landings were officially under way. It was Trout whose leaden, disbelieving tones addressed the nation upon the unexpected death of President Roosevelt in April 1945, and it was Trout (after sleeping on a cot just outside the studio for several days, so as not to miss the big moment) who told the world at 7 p.m. on August 14, 1945, “The Japanese have accepted our terms fully . . . this, ladies and gentlemen is the end of the Second World War!”

Tougher times followed. Murrow again returned to New York, this time taking a job as chief of CBS’s news operation. In 1946, Trout was given a real plum: his own nightly broadcast, a five-evening-a-week extravaganza sponsored by Campbell’s Soup. It didn’t last long. By 1948, Murrow realized he hated the executive suite, and Campbell’s jumped at the chance to return the legendary broadcaster to the air . . . alone. Trout was off the show, a pill so bitter he resigned and defected to NBC for a time before patching things up and returning to CBS in the early 1950s.

And there he stayed, reporting everything from political conventions to the 1961 Alan Shepard spaceflight to a series of war-years retrospectives in the mid-1960s. His one big television break came in 1964, when low ratings and behind-the-scenes turmoil led CBS bigwigs to oust Walter Cronkite from the anchor chair, replacing him with Trout and Roger Mudd—a combination which was a blatant effort to copy the wild success of NBC’s Huntley-Brinkley team. Trout and Mudd did no better against NBC, however, and viewer protests quickly guaranteed Cronkite’s return to center stage.

Trout continued to work on radio, reporting on the political conventions into the late 1980s (more recently for ABC). He could always be counted on to reminisce about the war years or the glory days of network radio.

## True Detective

One of the first “pulp” magazines—so named because it was printed on cheap, grainy wood-pulp paper—*True Detective* helped pioneer the American crime story genre in the 1920s. The monthly periodical, which started life as *True Detective Mysteries* in 1924, was retitled *True Detective* with the October 1939 issue. As the name suggests, the magazine devoted itself to true crime stories, making full use of the manners and language of the United States. The “hardboiled” investigators featured in its pages represented a break with the European “Great Detective” tradition. Dashiell Hammett, creator of Sam Spade, was among the crime writers whose work appeared in the pages of *True Detective*.

## True Story Magazine

In 1919 the eccentric publisher Bernarr Macfadden began publication of *True Story Magazine*. According to Macfadden the magazine was inspired by personal letters of “confession” sent to him in his capacity as the editor/founder of *Physical Culture*. Sensing a widespread interest in the changing social/sexual codes of modern America, Macfadden put out a new magazine filled with first-hand accounts of social problems such as pre-marital sex, illegitimacy, adultery, unemployment, social relations, and crime (alongside ever-so slightly risqué movie-stills of each story’s most dramatic moments—the kiss, the temptation, the horrible realization). The magazine personalized issues that were hotly debated in Jazz Age America (dancing, drinking, partying, petting) and offered a unique working-class perspective on issues that were not necessarily unique to the working class. Sensational, emotional, and controversial, *True Story* disseminated tales of sex, sin, and redemption that seemingly revealed the ubiquity of modern sexual and social “irregularity.” Most educated observers hated the magazine, figuring that it depicted the worst aspect of the “revolution in manners and morals” that occurred in the 1920s.

But workaday America loved the new confessional magazine. *True Story* became the publishing smash hit of the 1920s. In 1934 one critic offered Macfadden a back-handed complement when he noted that millions of Americans “wallow in the filth of his politely dressed confessions.” Achieving circulation figures close to the two million mark by 1929, *True Story* easily matched the sales of traditional big-sellers such as *Ladies Home Journal* and the *Saturday Evening Post*. *True Story* (along with siblings *True Romance* and *True Experience*, and competitors like *True Confessions*) would maintain a large and devoted readership right into the 1990s. However the *True Story* which can be found on back shelves in supermarkets today bears only

a slight resemblance to the popular original. Macfadden lost control of his publication during the 1940s, but even by that time the magazine had come to represent a much more muted version of the original “confessional” genre. Over time *True Story* evolved into a magazine that told mild tales of women’s sexual misadventure, tempered by strong doses of normative moral sermonizing. In the 1920s, the period in which *True Story* shocked middle-class Americans into a series of renewed (and somewhat successful) efforts at censorship, the magazine was an innovative, raunchy, working-class pulp that purveyed an eclectic range of stories designed to appeal to both a male and female audience.

The popularity of *True Story* has too often been ascribed solely to its “sex sells” credo. In fact, in the 1920s *True Story* offered the reader much more than titillating sex tales; it offered working-class Americans stories told in their own voice (the magazine offered money for reader’s personal stories). Although scholars have, and not without reason, scoffed at Macfadden’s claims that his stories were both true and written by authentic working-class Americans, there is little question that his idea that stories of everyday working-class life were important was an original one. *True Story* argued, both explicitly and implicitly, that the story of modern working-class America was drama of epic proportions. In its original guise, *True Story* told tales of how working-class men and women struggled to negotiate the changes wrought by modernity. The central premise of the magazine in those early days was the notion that “it is a new world . . . and it might be well to get ready for it.” *True Story* claimed to help its readers make sense of the “maelstrom of chaotic inconsistency” that was modern life and taught them how to safely embrace “the enthusiastic, buoyant spirit” of the Jazz Age. In short *True Story* told tales of seemingly particular modern moral downfall (drugs, crime, sex)—even if it did then offer up some patently old-fashioned and universal remedies for redemption (confess, make amends, walk a straighter path).

The importance of *True Story* lies in the ways in which it challenged the hegemony of middle-class publishing norms. Failing to apologize for the cheapness of his endeavor, Macfadden outraged middle America (even as it tempted its youth) by daring to elevate rowdy, raunchy, working-class youth into modern heroes and heroines. *True Story* not only revealed and popularized the ways in which working-class youth flouted convention; it argued that its working-class antihero/ines were the success stories of modern America. *True Story* valorized the lifestyles of the new American working class, with their extra dollars in their pockets, their love of material goods, and their desire for things previously denied. The magazine did not deny the realities of modern temptation; rather, *True Story* explicitly argued that it could teach working-class youth how to safely negotiate their path through modern life—through the vicarious (albeit entertaining) experience of stumbling, falling, and getting up again.

As the 1920s progressed *True Story* lost its radical edge. Bernarr Macfadden, influenced by new marketing credos, sought to expand his advertising and his audience base. In order to achieve greater circulation figures and larger advertising revenues, Macfadden successfully transformed his confessional magazine into a women’s magazine. He achieved this transformation by erasing most of the “men’s stories,” including advertising that targeted women, and—as a pander to conservative advertisers—toning down the content of the confessional stories. By the 1930s *True Story* was a tamer version of the original confessional concept, and a decidedly less exciting one. Although *True Story* lost its male readership along with its male confessions, the magazine did continue to offer one of the few working-class voices in the marketplace. However that voice was less

raw, more conservative, and increasingly mediated by the concerns of advertisers and editors. *True Story* would barely change its format in the following seven decades. Although the transformation of the magazine into a women’s romance magazine proved an effective survival strategy, the moment at which *True Story* was most vital, most alive, was undoubtedly during that time in the 1920s when Macfadden’s confessional stories seemed to herald (terrifyingly and excitingly) the dawn of a raunchy modern American moment.

## T-Shirts

Sex, work, and democracy together advanced the T-shirt as a clothing icon of the late twentieth century. Until the 1940s, the T-shirt was exclusively an undershirt. Sailors, however, in shipboard fraternity, worked in T-shirts. These World War II, T-shirted heroes appeared in *Life Magazine* (cover, *Life*, July 13, 1942) and cavorted in the musical *South Pacific*. The private world was now public, and the undershirt entered society, sometimes with the renegade image of Marlon Brando, other times with the innocent white shirt of James Dean. The T-shirt would not have the authority of the cut-and-sewn shirt with collar until the 1980s when Bruce Springsteen reinforced the T-shirt’s proletarian roots but also identified the T-shirt with the new 1980s masculinity of sex-object, gym-built male bodies.

## Tupperware

Perhaps no product line epitomizes post-World War II American suburbia as much as Tupperware plastic kitchen containers. Earl Tupper (1907-1983), inveterate experimenter from Harvard, Massachusetts, used his experience in 1937 working for Dupont to develop his own kind of plastic, which he used to make all types of products.

A Tupperware party.

He founded the Earl S. Tupper Company in 1938, which had some success selling gas masks and signal lamp parts to the Navy during World War II. But when he applied his flexible and durable material to civilian needs, Tupper achieved his greatest success.

In 1945 Tupper trademarked his perfected plastic, Polyethylene-Tupper, or “Poly-T,” the “material of the future.” Forever interested in women’s daily lives (he experimented with designs for garter belt hooks and brassieres, for example), Tupper used this innovative material to create an entirely new line of housewares which revolutionized the way women dealt with food and other things in their kitchens. Up until this time, plastics like Bakelite and celluloid were common materials but had limited uses—products made from them were either brittle or heavy and were not suitable for use with foods. In contrast, Tupperware was perfect in the kitchen. It came in many forms, including tumblers, bowls, pitchers, ice cube trays, butter dishes, and even cocktail shakers. Tupper’s most famous and effective innovation, in 1947, was a set of storage canisters with resealable lids that could be “burped” to let out and keep out excess air. They were light-weight, air-tight, indestructible, and waxy-textured for a good grip. These canisters proved to be great improvements over the more common glass and metal containers women had been using in the kitchen, which were heavy, not air-tight, were prone to sweating from refrigerator condensation, and broke easily.

Tupper’s plastic products were not only utilitarian, but also materially seductive. The drinking tumblers came in many colors, including lime, raspberry, lemon, plum, and orange. The bowls were attractively shaped and could even be used to display fresh-fruit centerpieces. Tupperware was such an embodiment of post-war materialism that some of its pieces became part of the Museum of Modern Art’s permanent collection in 1955, and were described as “carefully considered shapes . . . marvelously free of that vulgarity which characterizes so much household equipment.” It is ironic that Tupper, such a pioneer bringing the modernity of his translucent

plastic designs into the home, was an antiquarian at heart. He believed, nostalgically, in the traditional values of hand-craftsmanship and manual labor, and his home was filled with antiques. In contrast, the products he engineered and manufactured were truly “tomorrow’s designs with tomorrow’s materials.”

While Tupper brought new materials and new forms into the domestic sphere, his products also introduced a new kind of sociability among women through private home sales. From 1950 on, Tupperware was marketed and distributed only by direct selling, through Tupperware Parties, overseen by Tupperware Home Parties Incorporated, established in 1951 and also known as the Cinderella Company. These parties were actually commercial opportunities orchestrated as social events. A hostess would throw a party in her home, inviting friends and neighbors in order to provide first-hand demonstrations of the products (like how to “burp” the storage canisters), and to give her guests a chance to purchase Tupperware items. Here, women also played games and could win Tupperware prizes, and the hostess would try to recruit potential hostesses to give their own parties—all in exchange for Tupperware items for herself.

This method of product distribution paradoxically offered women the freedom to be entrepreneurs while it emphasized their domestic duties as wives and mothers, giving them the chance to socialize on their own, yet in a way that channeled them into their traditional gender roles. However ambiguous, Tupper’s marketing strategy—overseen by homemaker Brownie Wise until 1958—was clearly successful. In 1954 over 200,000 women were dealers, distributors, and managers. In that same year sales topped \$25 million and allowed Tupper to double the size of his Blackstone, Massachusetts, manufacturing facility. In 1958 he sold his interest in the company to Justin Dart of the Rexall Drug Company.

Tupperware and the party system both successfully entered Britain in 1961. By 1979 there were over 50,000 people selling over \$700 million worth of Tupperware. In the 1980s Tupperware was sold in over 42 countries and carried product lines fitting specific cultural needs, like the sushi saver in Japan. To bring it up to date, Morris Cousins redesigned Tupperware in the 1990s, giving it “Euro styling” with brighter colors and sleeker shapes. The company introduced “Tupperkids,” a line of children’s toys, in 1994. What is more, Tupperware is so familiar to Americans that it has become a generic word applied to all such plastic storage containers with resealable lids, and has come to symbolize the unique blend of domesticity, materialism, and superficiality that is seen to characterize life in the American suburb.

## Turner, Ike (1931—) and Tina (1938—)

Formed in 1959 in St. Louis, Missouri, the partnership of Mississippi rhythm-and-blues musician Ike Turner and a young singer from Nutbush, Tennessee, named Annie Mae Bullock would result in one of popular music's most combustible sounds. Known for their impressive live performances, Ike and Tina Turner were an immediate crossover sensation who eventually released some 29 albums on various labels. As significant as their contribution was to American black music, their 16-year union as the Ike and Tina Turner Revue also left an indelible impression upon rock and pop music the world over. Supported by a full R&B orchestra and choreographed backup singers, Ike was bandleader, arranger, and producer for the duo. With a distinctive on-stage style, the Ike and Tina Turner Revue created a whirlwind of sensation and emotion that inspired audiences and performers alike. Compatible with R&B, straight blues, Motown soul, and hard-core rock and roll, Ike and Tina Turner shared bills with many top performers including the Rolling Stones. While Ike was the competent instrumentalist and songwriter, it was Tina who created for herself an enduring place within popular culture. As both a woman and a performer of strength, grace, and spirit, Tina overcame poverty, self-doubt, and abuse in order to succeed personally and professionally.

Starting out as a piano player, Ike Turner made history early on in 1951 when he played on the Sun Studios session that produced one of the first rock and roll records ever recorded, Jackie Brenston's

Ike and Tina Turner

“Rocket 88.” Picking up the guitar shortly thereafter, Turner became a busy session player who worked with blues greats Howlin’ Wolf, Elmore James, and Otis Rush. It was at this time that he developed his distinctive stinging guitar style.

His own band, Ike Turner’s Rhythm Kings, was the toast of East St. Louis when Annie Mae Bullock (Tina), the daughter of sharecroppers, met Ike Turner for the first time. Tina joined Turner’s touring band as a backup vocalist in 1956, when she was 18. By 1958 she was the star of the show. It was her lovely growl and wild, gospel accents that set her apart from other singers at the time. The high-energy performer filled the stage with her powerful presence and made every lyric of a song come to life. As sexual as she was talented, Tina was not simply a soul singer or an R&B singer: she was something new and different, and this captured the attention of both white and black audiences.

As Ike and Tina Turner, they recorded their first single in 1959 for Sue Records, “A Fool in Love.” By 1960 this side was a No. 2 hit on the R&B charts. Following up with “I Idolize You,” “It’s Gonna Work Out Fine,” and “Poor Fool,” the Ike & Tina Turner Revue had five Top 10 hits on the R&B charts in less than 3 years. Their first album, *The Soul of Ike and Tina Turner* was released in 1964 on Sue. Working for top labels such as Warner Brothers, Liberty Records, London, Hallmark, Valiant, Sunset and United Artists, Ike and Tina released at least one project every year until their final album, *Nutbush City Limits*, was recorded in 1973. Their most successful project, in 1970, was *Workin’ Together*. Released on Liberty, this recording included Tina’s version of “Proud Mary.” Another highlight of their years together was working with producer Phil Spector, whose “Wall of Sound” production style dominated American pop music during the 1960s. This big sound complimented Tina’s vocal prowess dramatically as is evidenced on *River Deep and Mountain High*, released in 1966.

While Ike and Tina’s stage union produced spectacular results and Tina had carved a name for herself as one of the premier women of rock and pop, their personal life together was hardly satisfactory. Ike Turner was a taskmaster who insisted upon total control in everything, including his marriage. Using fear and her own youthful inexperience against her, Ike finally married Tina in Mexico. After years of mistreatment and abuse, Tina left Ike in 1975, eventually divorcing him and rebuilding her career as a solo artist. In 1984, at the age of 45, she was once more an international sensation, making the charts again with her album *Private Dancer*. In 1985 she had a starring role in the popular Mel Gibson film *Mad Max Beyond Thunderdome*, for which she also recorded the hit single “We Don’t Need Another Hero.” The 1993 film *What’s Love Got to Do With It?* chronicled Tina’s rocky career and starred Angela Bassett along with Laurence Fishburne as Ike Turner. Ike spent the 1980s battling drugs and legal problems. In 1991 Ike and Tina Turner were inducted into the Rock and Roll Hall of Fame and EMI America released *Proud Mary: The Best of Ike and Tina Turner*, a 23-track collection detailing their career from the early 1960s through the mid-1970s.

## Turner, Lana (1920-1995)

Nicknamed the “Sweater Girl,” actress Lana Turner defined feminine sexuality for a generation during the World War II era. She portrayed an archetypal character in *The Postman Always Rings Twice*, the first American film version of a James Cain novel and a seminal film noir, and helped reestablish the melodrama genre in the 1950s with her appearances in *Peyton Place* and *Imitation of Life*. But Turner’s importance is not rooted in her acting. Turner was a movie star in the old style, a product of the studio system, a glamour girl, a femme fatale.

Jean Mildred Frances Turner’s film career began when she was fifteen years old and was hired to be an extra in *A Star Is Born*. MGM gave her the name Lana, and studio publicity claimed she had been discovered by the editor of the *Hollywood Reporter* while having a strawberry soda at Schwab’s drugstore; Turner later said she was drinking a Coke at the Top Hat Café. Her first significant role came in what was only her second film, Mervyn LeRoy’s *They Won’t Forget* (1937), in which she played Mary Clay, a teenage girl who is raped and murdered twelve minutes into the film. In her most famous scene,

Lana Turner

Turner has no dialogue and simply walks across the screen wearing the tight sweater that earned her her nickname. The scene launched Turner’s career; critics wrote about “the girl in the sweater,” and filmgoers sent fan letters to MGM.

Turner went on to make fifty-three films in thirty-nine years. In most of them she played a variation on one characterization: sexy but not quite slutty, strong but vulnerable. In 1945 Turner was one of the most highly paid actresses in Hollywood, and by the time she appeared in *The Postman Always Rings Twice* in 1946, she had already been a top box office draw for several years. Still, the film provided her with her definitive role; writing in *The Films of Lana Turner*, Lou Valentino observed, “if Turner fans had to make a choice, *Postman* is the movie they would most elect to have time-capsuled.” In it, Turner plays the unhappy wife of a much older man who plots with a handsome young drifter to murder her husband. Because the Hays Code would not allow MGM to film a faithful adaptation of Cain’s overtly sexual novel, director Tay Garnett dressed Turner in white for most of the film, which, according to Garnett, “made everything she did seem less sensuous. It was also attractive as hell. And it somehow took a little of the stigma off.”

At the height of her popularity, Turner was a pervasive presence in American society. Children could buy Lana Turner paper dolls and coloring books. Her likeness was painted on airplane noses. There was a song titled “The Lana Turner Blues.” Perhaps most significantly, Turner played a major role in defining the manner in which women would be portrayed in American popular culture. In the 1940s she appeared on magazine covers almost monthly. She endorsed beauty products and made the buxom look popular—in 1948 4.5 million breast pads were sold to American women, who wanted to look like the Sweater Girl.

In the late 1950s Turner moved into melodramas. She received her only Academy Award nomination for *Peyton Place*, in which she plays a widowed woman who becomes the subject of scandal when she is forced to reveal that her teenaged daughter is illegitimate. In 1957, the signing of a sex symbol like Turner to the role of the mother made headlines. In *Imitation of Life*, Turner’s most financially successful film, she plays an actress and mother who arranges for an unemployed African American woman, Annie, and her daughter to live with her and act as her servants. As the two women’s daughters grow older, Annie’s daughter “passes” for white and grows ashamed of her mother.

Turner was married seven times, most notably to bandleader Artie Shaw and actor Lex Barker. In 1958, Turner’s daughter, Cheryl Crane, stabbed and killed Turner’s boyfriend, mobster Johnny Stompanato. Turner survived the bad publicity surrounding Stompanato’s murder and her daughter’s trial with no visible damage to her career. She made nine more motion pictures after *Imitation*, and she appeared on television and on stage in the 1970s and 1980s. Turner died of throat cancer in 1995.

## Turner, Ted (1938—)

Ted Turner, a flamboyant Southern entrepreneur and sportsman, first came to prominence in 1977 when, as the skipper of the winning yacht in the America's Cup race, he shocked the rather staid community of Newport Rhode Island with his wild celebrations and partying. Yet, this notoriety masked the fact that he was also in the process of creating television's first "superstation," a local television station that, through the power of satellite communications, could broadcast its signal to cable-equipped households across the United States and ultimately around the world. In the process, he reinvented television viewing patterns for most Americans and forced the networks to rethink their traditional broadcasting options.

His career, in fact, began very quietly in 1970 when his Turner Communications, a small family-owned and billboard-oriented advertising agency, merged with Atlanta's Rice Broadcasting and took over a controlling interest in local television station WTCG. During the first year of the Turner regime, the station's most popular show

Ted Turner

became *Georgia Championship Wrestling*. Ironically, news programming, for which Turner would later become famous, received scant attention, being broadcast only at three or four a.m. when there were few viewers. Even at that hour, serious news stories were, for the most part, treated "tongue in cheek" and more as entertainment than as a public service. To Turner, there seemed to be no such thing as good news and viewers were regarded as being much better off watching reruns of old television series instead of dreary recounts of what went on in the world.

His purchase of the television station, however, led him to a development that would turn television on its head. Turner eventually discovered the existence of a communications satellite in a geosynchronous orbit over the earth that could be used on a 24-hour basis by anyone willing to pay the rent. The technology which was then in its infancy and which relied on the National Aeronautics and Space Administration for its positioning was not highly publicized and had been, as a consequence, under-utilized by broadcasting entities, few of which saw the possibilities for global programming. Yet, to the flamboyant Turner, the idea of a small local station being able to send its signal all over the world made perfect sense.

Beginning with a tall television tower and a lone earth station microwave dish maintained by one technician, Turner proudly proclaimed his operation to be the world's first "superstation." Utilizing an eclectic blend of movies, sports, reruns of discontinued television series, and his own original programming produced by a subsidiary company, the station achieved the status of a basic cable selection on most systems around the country and, in fact, probably helped spread the growth of cable during the next decade. Under Turner's direction, the station went from a money losing operation to generating a profit of almost \$2 million within its first 18 months. It was renamed WTBS in 1979 to reflect its corporate affiliation and became the primary revenue source financing the next components of the Turner empire.

Doing a flip-flop on his anti-news stance, Turner expanded his broadcasting base the following year by creating the innovative Cable News Network (CNN), a 24-hour news service carried by satellite to cable systems around the world. He correctly noted that the proliferation of cable programming had placed its emphasis on entertainment programming, ignoring the fact that continuous newscasting would be an ideal melding with cable since public interest was high and because the traditional networks dismissed 24-hour news service as too costly. To Turner, however, the financial risk was a gamble worth taking. He put the service on the air in June 1980 by leveraging most of his holdings and routing all of the profits from WTBS and his other interests into the fledgling enterprise.

At first, the station was regarded as something of a novelty by the critics and the networks alike, who dismissed the ambitious programming as "light weight journalism" at best. Yet, the new network with news bureaus around the world began to get its reporters to breaking stories well before the established news organizations. By 1990, it surpassed the networks with its on-the-spot coverage of the Persian Gulf War and established itself as the premier television news service in the United States. As a result, by the mid-1990s, it had expanded its viewership to 140 countries around the world and had created such off-shoots as CNN Headline News and CNN International.

In 1986, Turner took another risk by purchasing the Metro Goldwyn Mayer (MGM)/United Artists motion picture studio in a complicated cash/stock transaction valued at approximately \$1.5 billion. In order to finance his portion, Turner had to break up the studio and divest himself of a number of subdivisions to keep the money coming in. He immediately sold the United Artists portion of

the studio back to financier Kirk Kerkorian, who had sold him the entire studio to begin with; he also included MGM's film and television production and distribution in the Kerkorian package. Additionally, he sold the lot itself to television production entity Lorimar-Telepictures and wound up only with MGM's large library of motion pictures, which included the pre-1948 Warner Bros. and RKO films. Turner was now the owner of perhaps the largest library of filmed entertainment in the world—sufficient programming to keep WTBS going forever, in addition to being able to market the films on video and lease them to other networks.

Turner's next move, the controversial "colorizing" of many of the black-and-white films in his new library, raised the ire of film purists aghast at the thought of seeing such classics as *Casablanca* (1941) and *Citizen Kane* (1941) broadcast with computer-enhanced artificial color. Congress even got into the act by holding hearings to determine authorship and copyright issues relating to film to see if the Southern mogul actually had the right to contradict the original artistic intent by introducing color. The issue was never resolved but it did sensitize Turner to the issues involved, and his company has subsequently played a leading role in film preservation efforts in the United States. He also established the Turner Classic Movie channel in the early 1990s to show motion pictures in their original manifestations, with a knowledgeable host to introduce each one and talk about its production history.

Turner has also played a leading role in a number of other altruistic endeavors as well. For most of his life, he has been an ardent environmentalist, but in the mid-1980s, he began to take an equally strong stand against warfare by exploring viable methods of bringing people together. In 1985, he founded the Better World Society to produce film and television documentaries to educate people about such issues as pollution, hunger, and the perils of the arms race. He followed this a year later with *The Goodwill Games*, a scaled down version of the Olympic Games in an effort to promote brotherhood and world peace. He lost \$26 million on the first games staged in Moscow in 1986, and followed that with another \$44 million shortfall in the 1991 games held in Seattle. In 1992, he created the "Turner Tomorrow Awards" to provide an incentive for writers around the world to come up with positive solutions to problems effecting the world.

With his 1991 marriage to actress and political activist Jane Fonda, he expanded his concerns to share and support his longtime interest in Native American issues. He produced a number of documentaries and fact-based feature films on his TNT channel to show the development of American history from the Native American point of view and to spotlight the contributions of indigenous Americans to the United States. In recent years, he has expanded his commitment to his social concerns by creating a list of volunteer initiatives that individuals can do to make the world a better place. The tenets include initiatives on family size, pollution, and conservation of the environment.

In 1997, with his typical flamboyance, Turner pledged a gift of \$1 billion to the United Nations to be distributed over the following decade. He emphasized, however, that the money could not be used for administrative or "housekeeping expenses." It had to be used for programs such as disease control, cleaning up landmines, UNICEF (United Nations International Children's Emergency Fund) children's programs, refugee relief, and peacekeeping.

The proposed gift to the United Nations was based on money that he received in stock shares for merging his company with Time Warner in 1997 to form the world's largest media company. Under

the terms of the deal, Time Warner gained access to Turner's interests in cable and satellite television and, importantly, the rights to the library of pre-1948 Warner Bros. films, RKO films, and the MGM collection. In effect, Time Warner reclaimed its heritage and then some. The possibilities of commercial exploitation of the Turner materials in the Warner Bros. stores, and fledgling theme parks with videos, new character licensing, and reissues of restored films is seemingly unlimited. In return, Turner became Time Warner's largest stockholder, with "clout" only surpassed by Chief Executive Officer Gerald Levin. He immediately began pressing the company to initiate an austerity program to reduce what he considered to be an untenable corporate debt approaching \$17 billion. This included selling the corporate jets and consolidating redundant departments created by the merger.

While many find the combination of unbridled ambition in the business world juxtaposed with a genuine concern for environmental and social causes in his personal life to be an odd mix, his closest associates view it as an inevitable consequence of Turner's unsettled childhood. As the son of an equally ambitious businessman, Robert Edward Turner II, who had seen his own parents lose their South Carolina home during the Great Depression, he was conscious of the value of a dollar. This was amplified, at the age of 24, by his father's suicide after losing the family billboard advertising business due to debts. Turner also suffered through his younger sister's extended illness and death from lupus erythematosus only four years earlier. The combined experiences turned him away from organized religions but left him with an equally religious fervor to cure some of the ills of the world. "One should not set goals that he cannot reach," he told *Time* magazine in 1992. "I'm not going to rest until all the world's problems have been solved. Homelessness, AIDS [Acquired Immune Deficiency Syndrome]. I'm in great shape. I mean the problems will survive me—no question about it."

Still, Ted Turner will seemingly continue to manage the contradictory feats of creating a corporate empire and also to continue to give much of it away for worthy causes as long as he is able to "wheel and deal" his way through American finance and industry.

—Steve Hanson

## TV Dinners

Introduced in the 1930s, General Foods offered the first proto-TV dinner, which was a frozen Irish stew. Successfully reaching a larger market, Swanson manufactured pot pies in 1951, and followed four years later with their mass-marketed "TV Dinners." The first TV Dinner was turkey with cornbread dressing, peas, and sweet potatoes; other varieties like Salisbury steak, ham, and chicken quickly followed.

These frozen dinners reflected changes in cultural patterns. Americans bought 70 million TV Dinners in 1955, 214 million in 1960, and 2 billion in 1994. The first meals were indeed meant to be eaten in front of the television, a relatively new technology in American homes at mid-twentieth century. To satiate larger appetites, Swanson introduced the "Hungry Man's Dinner" in 1972, and changed the generic name from "TV Dinner" to "Frozen Dinner." Producers of frozen dinners in the 1980s and 1990s reflected shifting preoccupations with foods, emphasizing low-calorie yet upscale meals—calling their products Lean Cuisine, Budget Gourmet, and Le Menu—and making cooking times even shorter by utilizing the microwave oven.

## TV Guide

In 1953, when television was still a brand-new and growing phenomenon on the American scene, the president of Philadelphia's Triangle Publishing—Walter H. Annenberg—conceived the idea of a national television magazine. Inspired by the wide circulation of a local magazine called *TV Digest*, Annenberg envisioned one central nationwide magazine with separate editions containing the different local television listings. Annenberg moved quickly, keeping the convenient digest size and adding glossy color photographs and articles. On April 3, 1953, *TV Guide* was born and remains the premier listing for television fanatics in the late twentieth century.

Beginning what was to be a tradition of exclusive reportage on television and its surrounding issues, the cover of the first issue showed one of the first photos of comedy queen Lucille Ball's new baby. The magazine was issued in 10 editions, each geared to a different locality, and it sold more than one and a half million copies. The idea had proved to be a good one, and *TV Guide* went on to become the best-selling weekly in the United States, with a circulation of more than 13 million readers. The 10 editions grew to 119 regional editions, and *TV Guide* became the name most often associated with not only television program listings but also with television journalism. Though perhaps not the most glamorous aspect of the television industry, *TV Guide* is certainly one of the most familiar.

The main office of *TV Guide* is still in Radnor, Pennsylvania, but the staff of over 1,300 is scattered in more than 20 bureaus around the country. Because *TV Guide's* competition includes the free television sections of local newspapers, the weekly had to offer viewers something special, not available in the local listings. Because of this, the editorial staff of *TV Guide* has always employed a two-pronged approach—the listings and the articles.

To maximize the value of its program listings, *TV Guide* writers are assigned to cover individual television shows. Rather than using studio press releases, these writers screen programs and even read scripts themselves to ensure that their descriptions of the shows are accurate. The National Features Department of the journal moved to New York City in 1991, to be even closer to the television industry there.

*TV Guide's* other approach to creating public demand for its product has been its articles. The pages not filled with program listings contain photographs of stars, reviews of weekly programs and television movies, and articles. Some articles are the predictable fluffy pieces highlighting the off-camera antics of sitcom casts, or light-weight interviews with current popular stars. Light though they may be, these articles are often exactly what the television viewer wants to see—alternate views of favorite shows and stars, and the critics' opinion of the shows they watch. But *TV Guide* takes itself seriously

as a television magazine as well. In the sentiments of the editorial staff, “*TV Guide*’s remarkable success stems from its ability to present not only broad, objective reporting about what is on television but also in-depth, provocative coverage about the TV industry itself and the effect television has on society.”

To accomplish this purpose, the journal employs its own staff of distinguished reviewers and commentators, and has also sought outside contributors who would draw readers. Politicians such as John F. Kennedy and Gerald Ford, and eminent writers like Joyce Carol Oates and John Cheever have been found in its pages along with names more commonly associated with the entertainment industry but no less distinguished, such as David Brinkley and Katherine Hepburn; even political activists like Gloria Steinem and Coretta Scott King have found their way into *TV Guide*. While printing the writing of such famous personalities is clever editorial policy on the part of a magazine eager to boost sales, appearing in such a popular magazine is also a smart move for a writer who wants to be widely read.

In 1988, *TV Guide* was sold to Rupert Murdoch—a flamboyant Australian entrepreneur associated with sensational journalism—who was accumulating a vast entertainment empire. *TV Guide* joined the *London Times*, the Fox television network, Twentieth Century Fox movie studio, Harper and Row publishers, and dozens of other publications and companies as part of Murdoch News Corporation. Murdoch continued and expanded the *TV Guide* tradition of entertainment coverage that is both entertaining and thoughtful. Senator Paul Simon gave the *TV Guide* report on television violence much credit for encouraging Congressional hearings about television violence, and the Public Relations Service Council also acknowledged the magazine’s role in prompting them to set ethical standards for video news releases. Along with the serious side of television reportage, Murdoch brought some of the flashy side of television to *TV Guide*. In 1998, the first annual *TV Guide Awards Show* was broadcast, with winners selected by reader vote, and the USA Network has signed a deal to produce several *TV Guide* specials.

In 1998, News Corp. sold *TV Guide* to Tele-Communication Incorporated (TCI), one of the major cable companies in the United States. Competing not only with the Sunday newspaper pull-outs but also with new print competitors like Time, Inc.’s *Entertainment Weekly* and the cable on-screen guides, the circulation of *TV Guide* began to slip. Acquisition by TCI, however, marries the venerable and highly recognized *TV Guide* name with cable. A “TV Guide Channel” runs continuously to inform viewers of programming, and an on-line *TV Guide* magazine offers readers instant links to a variety of entertainment sites. Even the familiar pocket-sized digest format will change when *TV Guide* puts out its first full-sized edition in the late 1990s, offering reviews and commentaries for the first time on theatrical release movies as well as television.

As *TV Guide* changes with the times, it also offers a link to a simpler time—the early days of television when viewers, not yet inundated with entertainment, eagerly awaited news of the week’s programs supplemented with pictures and stories about the stars. Viewers appreciated a journal that took the new medium as seriously as they did, and they devoured the magazine that was all about television—right down to the crossword puzzle. In the 1960s, Marshal McLuhan envisioned a global community with television at its center. Television has no doubt been a huge force in modern culture, but not perhaps in the way he foresaw. By the late 1990s, there are more television stations and more different kinds of programming than could have been imagined at the birth of the medium. Though

there are hundreds of channel and program guides, *TV Guide* was the first and, to many American viewers, the only “real” guide to the exciting world promised by television. A glance back through the past issues of *TV Guide* provides a good chronicle of what television has been and what it has to say for itself.

## Tweety Pie and Sylvester

When Friz Freleng directed 1947’s “Tweety Pie,” he may not have known he was making history. This, the first pairing of Sylvester the sputtering cat and Tweety (later Tweety) the wide-eyed canary, won an Academy Award and united a duo that would appear in more than 40 Warner Brothers cartoon shorts by 1962. Sylvester and Tweety earned their studio another Academy Award for 1957’s “Birds Anonymous” and several other Oscar nominations through the years. Generations of Americans have grown up watching Sylvester’s classic, ever-thwarted attempts to catch Tweety. With two of the most famous voices in cartoons, both supplied by Mel Blanc, Sylvester’s sloppy “sufferin succotash” and Tweety’s baby-voiced “I tawt I taw a puddy tat,” Sylvester and Tweety are two of the most quickly identified characters in cartoons.

A number of Warner Brothers cartoons featuring a predator unable to catch his prey appeared and gained popularity in the 1940s, including such classic pairings as Elmer Fudd and Bugs Bunny and the Road Runner and Wile E. Coyote. Other studios created similar cartoons, one of the earliest examples being MGM’s Tom and Jerry. Many of these cartoons, like Sylvester and Tweety, survived into the 1990s. Few characters, however, have attained the status Sylvester and Tweety enjoy.

Primarily responsible for uttering his tag lines (“I tawt I taw a puddy tat! I did! I did taw a puddy tat!” and “You bad old puddy tat!”) and looking cute, Tweety isn’t known for his superior wit or intelligence. Then again, that little canary is consistently able to get away from Sylvester, an animal who is both larger and faster than he is. Tweety is a popular character, both liked and disliked by audiences. Some like him because he does always get away from Sylvester, and also because he is so cute—bright yellow with big blue eyes and a baby voice. On the other hand, many people find him irritating for the same reasons. Either way, Tweety is one of the most recognized and imitated characters in cartoons.

If Tweety is not known for his superior wit and intelligence, Sylvester is known for his decided lack thereof. He generally goes barreling into situations, never considering the possibilities or consequences. When, in an effort to catch the delectable Tweety, Sylvester dresses up in a dog suit and is caught by the dog catcher, the moment he’s thrown in the back of the truck with a group of mangy mutts, he takes off his costume and shouts, “But I’m a cat!” Sylvester’s son, Junior, is so ashamed of his father, he generally walks around with a paper bag over his head. Sylvester’s only virtue may be his dogged persistence. In the face of constant failure, he continues to try. A

combination of stupidity, audacity, and sputtering temper, Sylvester defies the image of the cat as smart, cool, and collected. He continues to be, along with the likes of Bugs Bunny and Daffy Duck, one of the Warner Brothers's most popular and liked characters.

Both Sylvester and Tweety appeared in other cartoons before being paired for "Tweety Pie." Since this first pairing, Tweety has appeared almost exclusively with Sylvester. Other regular characters added spice to the Sylvester and Tweety cartoons, including Granny, Tweety's owner and protector, and a bulldog, who, in his general dislike for cats, often saves Tweety from Sylvester's schemes. Sylvester was also given a son, Junior, for 1950's "Pop 'Im Pop." Sylvester has had other adventures, appearing in cartoons with Speedy Gonzales, the world's fastest mouse, and Hippety Hopper, the baby kangaroo. Sylvester even made a cameo appearance as the Grand Duke in "The Scarlet Pumpernickel."

The Sylvester and Tweety cartoons, like their counterparts, began as "curtain-raisers" in theatres. A 1949 U.S. Supreme Court ruling that declared it illegal for studios to demand that theaters book a cartoon, newsreel, or live-action short in addition to hit films marked the beginning of the end of curtain-raisers. The advent of television and less public interest in movies made it difficult for studios to recover the costs of creating a cartoon short. Some less expensive cartooning methods came out of this time, but, ultimately, cartoon shorts had to make the move to television or perish. Sylvester and Tweety made this transition, culminating in a self-titled repackaging of their older cartoons as well as other Warner Brothers shorts which premiered on September 11, 1976 on CBS. Sylvester and Tweety shorts appear into the 1990s on various programs on network and cable stations.

Perhaps one of the most important factors in the continuing popularity of Tweety and Sylvester is Warner Brothers Studio's ability to keep the characters' faces in front of viewers. Sylvester and Tweety have been reincarnated in a new cartoon series, *Sylvester and Tweety Mysteries*, which premiered on September 9, 1995 on the WB Television Network. The duo appeared in 1996's *Space Jam* with legendary basketball player Michael Jordan. The cat and canary have been seen endorsing products such as Miracle Whip dressing and MCI long distance. On April 27, 1998, the United States Post Office honored Tweety and Sylvester with a 32 cent postage stamp. Sylvester and Tweety are on tee shirts, shorts, socks, underwear, and other articles of clothing. They appear prominently in products from clothing to cups to clocks sold at the Warner Brothers Studio Stores in malls across the United States.

Sylvester and Tweety are just two of numerous Warner Brothers cartoon characters who appeared in the first half of the 20th century and have enjoyed continuing popularity. Warner Brothers's marketing of the characters is no small part of their fame, but Sylvester and Tweety have an appeal that goes beyond marketing. Sylvester is not the cat we might expect, and Tweety certainly isn't as innocent as he appears. Their interactions are what makes great comedy. With Sylvester and Tweety, it is always the unexpected that makes audiences laugh. When people have seen the cartoons repeatedly and are still laughing, Sylvester and Tweety Pie's continuing popularity seems to be assured.

—Adrienne Furness

## Twelve-Step Programs

Addiction-recovery treatments modeled on the techniques of Alcoholics Anonymous (AA), Twelve-Step programs are manifestations of the nineteenth-century self-help and social collectivist movements. AA and similar organizations also represent a form of secularized religion, involving both Christian and Eastern philosophical principles, that became popular in the twentieth century. The Twelve Steps are a series of behavior-modification principles that appeal to a higher power, take action through personal inventories, make amends to others, and spread the message. Beginning with alcoholism, the treatment philosophy has been applied to gambling, eating disorders, drug addictions, sexual disorders, physical health problems, and a variety of other damaging compulsive behaviors, with varying degrees of success and not without some controversy.

The industrialization and resulting prosperity of mid-nineteenth-century Victorian Britain encouraged a renewed belief in restraining moral attributes such as hard work, respectable behavior, and personal responsibility. These values were not only embraced by the new, growing middle class in England, but appealed to other classes as well. Author Samuel Smiles enshrined what he called his "gospel of work" in a series of best-selling books including the 1859 *Self-Help*. This book, which was based on a series of self-improvement lectures that Smiles gave to young men, taught that financial success and personal happiness were based entirely on individual initiative and faith in God. Smiles' self-help movement spread across the Atlantic to the rapidly industrializing United States and influenced a generation of American self-help activists including physician John Harvey Kellogg. Kellogg was hired to supervise the Seventh Day Adventists' Health Reform Institute, located in Battle Creek, Michigan, in 1876. Beyond the breakfast cereal he helped invent as a health food, Kellogg became the most prominent self-help health advocate in the world until his death in 1943. He spread, popularized, and helped make nearly universal the Adventist notion that individuals are responsible for and can do something about their physical and spiritual health.

During the early twentieth century, a Protestant evangelist named Frank N. D. Buchman established the Oxford Group, a religious movement that encouraged conversion experiences through confession, restitution, and self-survey. Before the group became involved with Fascism in the late 1930s, it attracted two converts with severe drinking-related problems, New York City stockbroker William Griffith Wilson, or "Bill W." as he was known to his AA friends, and Akron, Ohio physician Robert Holbrook Smith, or "Dr. Bob." The pair adapted the principles and practices of the Oxford Group in tandem with the well-known self-help health dogma of Kellogg to the problem of controlling drinking. Previously, alcoholism had been treated as a matter for moral persuasion, institutionalization, or law enforcement. Bill W. and Dr. Bob's new program consisted of helping, talking to, or otherwise maintaining contact

with other drunkards to engage in spiritual activity. On June 10, 1935, Dr. Bob had his last drink, marking the official start of Alcoholics Anonymous.

The circles of recovering alcoholics in AA grew slowly at first. The noble experiment of Prohibition, which ended in 1933, had changed the culture of alcoholism in American society. All-male saloons died with the introduction of Prohibition in 1920, replaced by mixed-sex drinking that continued after 1933. Gone was the fraternity of men supporting each other in and out of alcoholism. Prohibition forced drinking undercover, into homes, hotel rooms, and other places where it had not been common previously. Bootleg beverages, especially beer, were often weak or reduced with other substances so that they could be consumed in greater quantities.

The end of Prohibition meant the return of alcoholic beverages to their traditional strengths, a reality to which many drinkers could not adjust. Coupled with enticing stories in the press, advertisements promoting drinking as sophisticated and glamorous, and the abundant use of alcohol in Hollywood movies, alcoholism gradually increased in the years during and after the Great Depression. There were over 100 members of AA by 1939, the same year the basic Twelve-Step program, *Alcoholics Anonymous*, or the "Big Book" as it was known in the movement, was published. A national AA service office was established in New York City in 1940 and the *Saturday Evening Post* gave the AA and the Twelve-Step program its first extensive national publicity in 1941.

Bill W. wrote The Twelve Steps in a burst of inspiration during 1938 and 1939, but they were based on debate among members and reflected the collective nature of the organization and its religious underpinnings. Though the original version was written in the stilted language of the day, subsequent editions of the "Big Book" have kept the original wording. The founders described themselves as "average Americans," but most were male, Protestant, white, and middle class. Their perspective reflected their environment, although the group had made efforts to distance itself from the earlier temperance movement that had flourished among the same social-economic class by stressing that alcohol was not in itself bad, only that some individuals were unable to drink in moderation. The first tenet of the Twelve-Step program was that members had to admit their powerlessness in their addiction. AA maintained that a person had to "hit bottom" and find him or herself in a totally powerless situation before redemption was possible. After members were introduced on the anonymous, first-name basis pioneered by AA (every member is greeted with "Hi" and their AA name), Twelve-Step meetings were built around the near-destruction testimonials of new and old members.

Next, the member had to express the crucial element of belief: adherence to a power greater than him or herself. Only with faith could the member move on to Step Three, turn his or her life over to God, Step Six, be ready to have God remove defects of character, and Step Seven, ask Him to remove shortcomings. Steps Four to Nine, including the making of a moral inventory, the admission of past wrong-doings to another person, and the listing and making of amends to people who had been wronged, were called the action Steps. The action Steps said nothing about drinking, for in AA parlance, "liquor was but a symptom." Steps Ten to Twelve continued inventory taking and wrong-doing admission, the improvement of one's knowledge of God through prayer and meditation, and the undergoing of a conversion experience. A "spiritual awakening" as the result of these Steps, which permitted the member to spread the Twelve-Step method to other addicts and practice the principles in

everyday life, was considered to represent the continuance or maintenance of the Steps. In AA's conception, helping other alcoholics was considered the best means by which to maintain an individual's own continued sobriety. It also perpetuated the AA organization and spread the Twelve-Step concept.

From its modest beginnings, AA has grown into a worldwide organization with hundreds of thousands of members. Fellowship continues to be organized on a local level with no dues payable. Contributions for expenses are accepted from those attending meetings only. Affiliation of the AA or its local groups with churches, political organizations, or other official institutions is barred by the AA Twelve Traditions, another seminal document. More than 200 other organizations have developed their own versions of the Twelve-Step program, including Al-Anon, the organization for members of the families of alcoholics founded in 1951, Narcotics Anonymous, Gamblers Anonymous, Overeaters Anonymous, Debtors Anonymous, Augustine Fellowship Sex & Love Addicts Anonymous, Survivors of Incest Anonymous, and more recently, Cocaine, Nicotine, and Co-Dependents Anonymous.

The Twelve-Step program continues to be a focus of debate. Experts argue that it is difficult to evaluate recidivism rates of Twelve-Step program participants because of their anonymity. AA's insistence that alcoholism is a disease counters more recent research that alcoholism is a behavior without physical cause. The first continuing female member of AA, Marty Mann, joined in 1937, but feminists and minorities argue that AA is oppressive through language in the Twelve Steps, which they perceive as constraining, repressive, and fostering co-dependence. They hold also that AA literature does not allow for discussion of social issues, such as discrimination and poverty, which often affect individual drinking patterns. The Twelve-Step's insistence in God or a "Higher Power" has run afoul of the doctrine of the separation of church and state, especially when the AA cooperates with law enforcement officials in mandating AA treatment for convicted offenders. And AA's Protestant Christian roots has led to criticism that it is in itself a form of religion, or at least a quasi-religious organization like Transcendental Meditation or Scientology, an allegation AA denies.

The Twelve-Step program has been borrowed by numerous, less serious behaviors such as shop and fish-o-holics. The AA meeting format, with members' accounts of desperate experiences and the "Hi, I'm so-and-so" introduction, have been the object of lampoons and parodies. In an episode of the popular 1990s television sitcom *Seinfeld*, the character George harassed a new AA member friend for failing to properly complete Step Eight, making amends to persons harmed, to the extent that the friend was driven to binge on liquor-flavored ice cream. Still, most experienced therapists agreed that any form of treatment for addictive behavior is most likely to show a higher rate of success if the patient joins Alcoholics Anonymous or another Twelve-Step Organization. In the face of the omnipresent social problem of alcoholism and its detrimental effects on children and families, the growing social acceptance of gambling and tolerance of compulsive gamblers, and an ever-increasing variety of other addictive behaviors, Twelve-Step programs provide adequate substitutes for a dependent way of life.

—Richard Digby-Junger

## The Twenties

The 1920s were a period of rapid industrial growth, economic prosperity, and cultural change. Due mainly to the automobile industry, building and road construction, the development of the radio and advertising industries, and the emergence of "the new woman," the 1920s are often seen as the first "modern" decade in which the major characteristics of the twentieth century first emerged. Tensions between ideas of modernity and accepted traditional values characterize the popular culture of the twenties.

Following American involvement in the First World War, the 1920s witnessed an emphasis on domestic concerns such as the economy and the cultural values of American society. The economic boom of the 1920s, best illustrated by Henry Ford's dominance of the automobile industry through the use of interchangeable parts in automobile production, led to a high standard of living for many Americans as wages increased while working hours decreased. This was possible mainly through the increased mechanization of industry and production on a massive scale. Ford's River Rouge plant in Michigan, in which raw materials were processed, parts fabricated and assembled all under Ford's control, illustrates the strengths of the 1920s economy. Ford produced an automobile which required little in highly paid skilled labor and could be sold at a relatively cheap price. The automobile industry, in turn, fueled growth in related industries such as construction, glass, rubber, oil, and tourism. This boom created an American economy in which industrial production, for the first time, outpaced consumer demand. In order to accommodate this increase in production, corporations turned to advertising as a way to increase demand. It was during the 1920s that businesses began advertising directly to consumers and not retailers. The purpose of the advertisements became less about the presentation of information about a product and more about creating a positive image for a corporation or product by implying various benefits resulting from the product's purchase. Employing popularized ideas about the expression of desires taken from Sigmund Freud's theories of sexual repression leading to neurosis, advertisers sought to exploit the desires of the consuming public by emphasizing the benefits of consumption.

The emphasis on expression over repression went beyond the realm of advertising and can be seen in the popular culture of the

1920s. From novels such as F. Scott Fitzgerald's *The Great Gatsby* (1925) and Sinclair Lewis' *Babbitt* (1922) to the increasingly frenetic sound of jazz music and new dances such as the Lindy Hop (named after famous flyer Charles Lindbergh), American popular culture reflected a modern sense of ethics and values focused on individual pleasure and expression. Even all-American celebrities, such as Douglas Fairbanks and Mary Pickford, were challenged by more sexually expressive personalities such as Rudolph Valentino and Greta Garbo. This more modern approach to popular culture was reinforced by modern media, such as the radio, phonographs, and sound film. Both the form and content of 1920s popular culture demonstrated a sense of modernity.

In literature, the 1920s were characterized by the writings of what Gertrude Stein called "the lost generation." Writers such as Fitzgerald, Lewis, Ernest Hemingway, John Dos Passos, T. S. Eliot, Ezra Pound, e. e. cummings, and Sherwood Anderson critiqued American society, especially the traditions and values of rural life, or in their words, "the village." These writers were disillusioned by their involvement in the First World War and this disillusionment is reflected in their writings. It was a lost generation, according to Malcolm Cowley in *Exile's Return: A Literary Odyssey of the 1920s* "because it was uprooted, schooled away, and almost wrenched away from its attachment to any region or tradition." But the "lost generation" writers were not the only significant writers during the 1920s. Women like Edna St. Vincent Millay attempted to capitalize on the less repressive atmosphere of the 1920s by flaunting sexual expression in their poetry and life, and African American writers such as poets Langston Hughes and Countee Cullen, novelists Claude McKay, Jean Toomer, Jessie Faust, and Zora Neale Hurston joined artists such as Aaron Douglas and Augusta Savage in leading the "Harlem Renaissance."

This greater mainstream acceptance of African-American culture is also reflected in the growing influence of jazz music on American popular music. The First World War was instrumental in the spread of jazz music. The military's forced closure of New Orleans' red light district, Storyville, forced many jazz musicians employed there out of Louisiana northward in search of other opportunities, and war mobilization provided greater contact between races at military installations and wartime manufacturing plants. These two factors led black musicians to adapt black blues and jazz to the expectations of a white audience. Jazz spread first among younger audiences, mainly due to its spontaneous nature and its association with chaotic dancing, and critics denounced it as unmusical, intoxicating, and immoral. Despite these objections, jazz became the most popular form of music during the 1920s, dominating the radio airwaves, record sales, and even influencing movies such as *The Jazz Singer* (1927). As jazz music became more popular, it also became more standardized, organized, and arranged. What had once been music that emphasized improvisation throughout a piece became a highly structured, formulaic genre in which improvisation was limited to specific breaks in the arrangement of jazz "riffs." What had been "hot" jazz, by musicians such as Louis Armstrong and his Hot Five, became "sweet" jazz at the hands of band leaders like Guy Lombardo and his Royal Canadians, or "symphonic" jazz in the words of Paul Whiteman. Whiteman's orchestra debuted George Gershwin's "Rhapsody in Blue," in 1924, subtitled "for jazz band and piano." The work was primarily symphonic with jazz motifs. These orchestras and large bands developed what would become Big Band swing music in the 1930s and 1940s.

Like jazz music, motion pictures also gained greater acceptance during the 1920s as they moved out of working-class storefront nickelodeons into grand movie palaces attracting a middle-class and middle-brow audience. In the various conflicts between traditional values and modernity, movies challenged accepted middle-class values. According to Robert Sklar, in his book *Movie-Made America: A Cultural History of American Movies*, “movies came to be seen as offering values distinctly different from those of middle-class culture, and providing greater opportunities for ethnic minorities than other economic sectors.” Not only was the movie industry dominated by recent immigrants, the films themselves (being silent in the early 1920s) were easily adapted to a variety of immigrant cultures and easily understood by immigrant audiences, and as the audience for movies grew, so did the respectability of movies as an art form and acceptable leisure activity. The movie industry portrayed a changing America not only through the opportunities it created for a more heterogeneous population, or the attractions it held for a mass audience, but the movies themselves presented the values of modern America at the same time as it reinforced traditional middle-class values. Two of the most popular male stars illustrate this point. Rudolph Valentino, in his short career before his sudden death in 1926, embodied the modern, passionate, and sexually expressive male of the 1920s in such films as *The Sheik* (1921) and *Blood and Sand* (1922), while Douglas Fairbanks, in *The Mark of Zorro* (1920), *Robin Hood* (1922), and *The Thief of Bagdad* (1925), embodied the traditional, robust, athletic, all-American male. Both men became celebrities and helped to cultivate the studio star system in which performers became the major commodity used in selling a movie to the public.

The 1920s witnessed the consolidation of the power of the studios, especially Paramount Studios under Adolph Zukor, which was the largest of the silent film producers. Metro-Goldwyn-Mayer was created by theater owner Marcus Loew, who bought and combined Metro Picture Company with Samuel Goldwyn’s Picture Company under the direction of Louis B. Mayer. Chafing under the influence of powerful producers and studio executives, director D. W. Griffith, and actors Charlie Chaplin, Douglas Fairbanks, and Mary Pickford formed the United Artists Corporation in 1919 to distribute individually produced films, and thereby avoid the formal structure of a studio. Each of these companies controlled several aspects of film production, distribution, and exhibition, yet the greatest change in Hollywood film occurred at the fledgling Warner Brothers Studio when they purchased and began producing films with the Vitaphone (sound-on-disc) technology in 1926. Within a few years, sound film production outpaced silent film. With the premiere of *The Jazz Singer* in 1927, the silent era ended.

In many ways, the silent era in popular culture ended earlier with the spread of radio technology in the 1920s. From amateurs broadcasting in basements and garages to fully formed and regulated networks after the Radio Act of 1927, the radio industry developed into Americans’ most utilized and trusted source of news, information, and entertainment. The 1920s were a decade of growth for the radio industry, not only in its technical aspects, but in regards to programming as well. Radio stations learned what worked well on radio and what did not. The most attractive aspect of radio for the audience was its immediacy. Broadcasts of sporting events, from boxing matches and baseball games, political conventions and election returns, live remote broadcasts from big-city ballrooms, and news reporting all became mainstays of the radio industry. Radio also

found itself the new home of variety entertainment after the decline of vaudeville. The most popular radio comedy, *Amos and Andy*, featured white vaudevillians Freeman Gosden and Charles Correll portraying two black southerners whose simple ways and common misunderstandings provided the humor for the show. The pervasive nature of radio reinforced, to a national audience, many regionally held stereotypes, especially of minorities. Many people believed what they heard on the radio, not only because it was capable of presenting news upon its occurrence, but because the radio produced a certain form of intimacy in which the listener identified with the broadcast in ways unlike other forms of media. The presence of a radio set within one’s home and the necessity of the listener to create images from the sounds presented resulted in each listener creating a very personal program, unique and individual. This transformation in communications and entertainment, through its immediacy and national appeal, reinforced the feeling that the 1920s were the start of the “modern” era.

This modern shift in social and cultural values did not take place unopposed. Several social movements can be explained as a revolt against the changes occurring in American society; as a revolt against modernity. Nativism, prohibition, and counter-evolution were all attempts to save traditional values in the face of change. Nativism came in three basic forms. All, however, expressed a deep discomfort with the changes occurring in American society and mainly with the changes occurring as a result of immigration. Anti-radicalism was a form of nativism in which people who disagreed with the government were seen as undesirable. The attacks on foreigners during and after WWI, in such notable instances as the Palmer raids and the unfair trial of anarchists Sacco and Vanzetti were all part of this fear of radicals, especially in the wake of the Bolshevik Revolution in Russia in 1917. This fear of radicals spilled over into a fear of non-Protestants, especially against Jews, but even against Catholics. Michigan and Nebraska both passed laws prohibiting parochial schools, and critics of President Woodrow Wilson called him “the puppet of the Pope.” This fear of others naturally translated into fierce support of white Anglo-Saxon Protestants. In 1921, Madison Grant wrote *The Passing of the Great Race* in which he described not only the hierarchy of races, with whites being at the top, but he also distinguished between whites by dividing Europeans into three main groups, Mediterraneans, Alpines, and Nordics, with Nordics being the superior group. This belief in the inferiority of Asians, Africans, and southern and eastern Europeans led to the passage of the National Origins Act of 1924 in which immigration quotas were designed to increase the number of nordic immigrants while decreasing all others; this also meant the complete exclusion of Asian immigrants and small quotas for southern and eastern European immigrants. The most dramatic example of nativism during the 1920s can be seen in the revival of the Ku Klux Klan (KKK). Unlike the post-Civil War era, when the purpose of the Klan was to intimidate African Americans, the 1920s Klan advocated white supremacy over not only Blacks, but also Jews, Catholics, and any immigrants who were not white Anglo-Saxon Protestants. The Klan also became modern by using expert advertisers to promote themselves and recruit new members. By 1923 over 3 million Americans were members of the Klan, with the strongest Klan organizations in the Midwest and the West.

In January of 1919 the 18th Amendment was passed, prohibiting the manufacturing, selling, or transporting of intoxicating beverages in the United States. The Volstead Act of 1919 defined intoxicating beverages as anything with more than 0.5 percent alcohol. This move towards prohibition of alcohol was yet another attempt to return

America to what many perceived as its past. The proliferation of saloons in the late nineteenth and early twentieth centuries was seen by many people as an expression of change, of encroaching foreign influence. Halting this process of change meant reinforcing and retaining traditional values.

Part of the attack on things foreign and things new was the attack on science, and especially in those areas where scientific theory and practice conflicted with deeply held religious beliefs, such as in the case of the theory of evolution and the belief in creationism. In 1925, the state of Tennessee passed a law prohibiting the teaching of evolution in public schools and colleges. In a test case in July of 1925, schoolteacher John T. Scopes was tried under this law in Dayton, Tennessee. The case became a national sensation, with two of the most prominent attorneys representing each side. The American Civil Liberties Union hired the famous trial lawyer Clarence Darrow to argue against the law, while the state got William Jennings Bryan (the populist and Democratic presidential hopeful) to argue its side. The “monkey trial,” as it was known, argued over the issue of evolution versus creationism, but in the end the judge ruled that the only thing that mattered was the fact that Scopes did teach evolution and therefore was guilty. He was fined \$100, which was suspended by the state supreme court. It was a victory for the anti-modernists, but it would be their last one. A few days after the trial ended, William Jennings Bryan died, and with him died much of the 1920s fundamentalist movement.

Each of these social movements (nativism, prohibition, and anti-evolutionism), seen in conjunction with the rapid spread of automobiles, economic prosperity, and the radio and film industries, illustrates the conflicted state of American culture during the 1920s.

## 23 Skidoo

Though commonly associated with the “roaring twenties,” the popular catch phrase, “23 Skidoo,” actually originated around the turn of the twentieth century. Its origin has been accredited to two contemporaneous sources: *The Only Way*, a Broadway adaptation of Charles Dickens’ *Tale of Two Cities*, and telegraphic code. In the last act of the aforementioned play, an old woman solemnly intones the number of victims on their way to the gallows, with special emphasis on number 23, the play’s protagonist. The cry, “23!,” was soon taken up by Broadway habitués. In telegraphic code, 23 is an abbreviation

for “Away with you!” Skidoo, a derivation of skedaddle, was soon added to “23” for the edification of those who had not seen the play or were unfamiliar with telegraphic code. For the next 20 years, the expression, or one of its variants, was commonly heard amongst students and young sophisticates, where it ordinarily meant “Get lost!,” but was frequently used without any precise meaning. By the end of the 1920s, “23 Skidoo” had fallen out of common usage, but has since proved more enduring than other catch phrases of the period.

## 20/20

With the premiere on June 6, 1978 of its program *20/20*, ABC Television launched its first ever news magazine. The youngest and the most troubled television network in the late 1970s, ABC was engaging in a major initiative to revise its news programming under the tutelage of its newly appointed president, Roone Arledge. Arledge targeted a number of ways in which ABC could improve its news division with the goal being to attract the average American viewer rather than news junkies. One result of this push was *20/20*, which was based on the success of the CBS program *60 Minutes*, which, since its premiere in 1968, had enjoyed significant popularity as a different means to present news through the use of longer segments and non-traditional news time slots.

The very first *20/20* program was hosted by *Time* magazine critic Robert Hughes and former *Esquire* editor Harold Hayes. The kick-off story featured a report on rabbit abuse at greyhound tracks, and signally failed to attract critical enthusiasm. The initial reviews ranged from “dizzily absurd” from *The New York Times* to “the trashiest stab at candycane journalism yet” from *The Washington Post*. Arledge immediately realized that the program’s concept had to be reworked if it was to succeed. He rearranged the show’s focus and introduced a new anchor, the longtime *Today* show personality Hugh Downs. Under the beloved Downs, *20/20* thrived and took on more of a consumer focus. In 1984, Arledge decided to bring on Barbara Walters, also a *Today* show alumnus but more recently a rising star within ABC. The combination of the two anchors was a hit with the viewers and, through *20/20*, Walters and Downs earned a place among the most respected journalists in television history.

*20/20* has featured countless groundbreaking and exclusive interviews with world-famous figures drawn from many different arenas of public life. Often controversial, they have ranged from politics and show business to sportsmen, and even criminals. Among the most memorable interviewees have been Cuba’s president, Fidel Castro; Bill and Hillary Clinton, appearing at the height of the Whitewater controversy; Olympic diving champion Greg Louganis, who revealed for the first time that he was stricken with AIDS and had been HIV-positive when he competed in the 1988 Olympics; and

former White House intern and presidential paramour, Monica Lewinsky. Also contributing to *20/20*'s success with viewers has been its numerous health-related stories, one of the most personal involving Downs being shadowed by a crew who filmed him during his knee procedure and subsequent recovery.

Encouraged by the strong showing of *20/20* and the continued popularity of the rival *60 Minutes*, and spurred on by NBC's competitive bid into the news magazine forum with *Dateline*, ABC has created other news magazines over the years. With NBC's *Dateline* airing up to five times per week, in 1997 ABC decided to increase *20/20* showings to several nights a week. While this proved mildly successful, the network made a more radical move for the 1998-1999 season, combining all ABC news magazines (notably *PrimeTimeLive*) under the *20/20* brand. Airing at least three times weekly, *20/20* expanded its original consumer focus to embrace the more investigative pieces and hard journalism that had marked *PrimeTimeLive*, as well as to include more features on the day's top news. Additionally, Downs and Walters were no longer the sole anchors of the expanded program, but shared responsibilities with several other top ABC journalists, notably Sam Donaldson, Diane Sawyer, Charles Gibson, and Connie Chung.

## Twiggy (1949—)

Arguably the very first “supermodel,” England’s Twiggy became an international star in the mid-1960s, bringing the world an idealized image of a youthful “Swinging London” and, for better or worse, heavily influencing popular conceptions of femininity. On the one hand, the ninety-one-pound, saucer-eyed Twiggy (born Lesley Hornby) was a positive celebration of androgyny and a radical break from the 1950s’ insistence that female sex symbols possess curvaceous figures. Conversely, some critics have argued that Twiggy’s slight physique helped push standards of thinness too far, leading many young women toward personal dissatisfaction with their bodies and, in some cases, anorexia. After saturating the pages of fashion magazines at the end of the 1960s and appearing in a handful of films in the early 1970s, notably Ken Russell’s *The Boyfriend*, Twiggy adopted the last name Lawson and largely remained out of the limelight. However, Twiggy’s influence upon the fashion industry never truly waned, as svelte boyishness recurred as a theme in female models for decades.

## The Twilight Zone

Created by the visionary writer Rod Serling, *The Twilight Zone* proved both a landmark of televised science fiction and a powerful touchstone in America’s pop cultural consciousness. The black-and-white anthology series, which ran on CBS from 1959 to 1964, generated lukewarm ratings at the time but has grown in public estimation over time. Over the course of its five-year network run, *The Twilight Zone* explored themes never before examined on television. It exposed the talents of a generation of talented character players, like Jack Klugman, William Shatner, and Robert Duvall, who would go on to become household names for subsequent portrayals. It also cemented the legacy of its creator, at the time known principally as the author of socially concerned live dramas.

Serling created *The Twilight Zone* to serve as a forum for his commentary about technology, conformity, discrimination, and a whole host of other issues. Frustrated by his inability to explore these

A scene from *The Twilight Zone* episode “Time Enough at Last.”

topics in mainstream dramas in the face of censorship by network executives and skittish advertisers, he hoped that the show’s science fiction anthology format might allow him to introduce a little liberal orthodoxy to viewers without alarming the suits. But if Serling was in it for the advocacy, the show’s other creative collaborators consistently pulled it back into the realm of traditional fantasy. This dialectic proved good for all parties concerned.

*The Twilight Zone* premiered on October 2, 1959. Its introductory episode, “Where Is Everybody,” established the tone and creative parameters of the series. In it, a young man in Air Force garb finds himself in a seemingly deserted town. After increasingly frantic attempts to locate its inhabitants, he breaks down in despair. Only at the end is it revealed that the man is an astronaut being subjected to an experiment in an isolation booth, and that the proceedings have been an hallucination. In countless subsequent installments, *The Twilight Zone* would rely on this same formula of an ordinary human being suddenly beset by extraordinary circumstances. Quite frequently, there was an unexpected twist at the denouement that cast the strange events in a new or supernatural light. To provide context and codify the cosmic significance of the events, Serling himself provided opening and closing narration, usually on camera in an immaculate Kuppenheimer suit.

To supply these dark melodramas from week to week, *The Twilight Zone* relied upon a stable of writers seasoned in the macabre arts of science fiction and fantasy. Along with Serling, short story veterans Richard Matheson and Charles Beaumont formed a creative trioka that was responsible for much of the series’ high-quality

teleplays. Matheson’s scripts tended toward more hard-science content, like the classic “Little Girl Lost,” about a child who vanishes through her bedroom wall into another dimension. Beaumont crafted some of the show’s more horrific installments, like the gothic gem “The Howling Man,” in which a traveler in Europe happens upon the devil being kept locked up in a cell in a monastery. Other important contributors to the series included George Clayton Johnson; Montgomery Pittman; Earl Hamner, Jr.; Reginald Rose; and Ray Bradbury, who eventually wrote for the show as well.

But it was the workaholic Serling who took on the bulk of the creative burden. All told, Serling would write 92 of the 156 broadcast episodes, more than one-third of the total. His influence over the show was especially keen during the first three seasons, when he personally penned some of the program’s signature installments. “Eye of the Beholder” addressed people’s perceptions of beauty, through the eyes of a bandaged and “disfigured” young woman whom viewers see revealed in a shocking climax. “Mirror Image” explored the nature of identity when a woman waiting in a bus station is suddenly confronted by her exact double. And the chilling “The Obsolete Man” touched on Cold War themes in relating the last days of a librarian of the future condemned to death for defending the utility of books.

Episodes like these allowed Serling to fulfill his vision of commenting on existential and political themes without incurring the wrath of advertisers and network executives. But the show’s social concern also emboldened Serling to write all too pontifically at times, a problem that was exacerbated by his heavy workload. Too many of his episodes seem written in a rush of sanctimony, with long, windy speechifying from the central characters on the major issues of the day. Even the many gems could not spare the program from lukewarm public interest. *The Twilight Zone* was never a hit in the ratings and was in danger of cancellation by CBS almost from the start. At the end of the third season, the network elected to expand the show to an hour in hopes that that might change its fortunes. But the quality of the scripts suffered, with many seeming interminably padded at the new running time. After a desultory fifth season, during which most of the series best creative talent left, the axe finally fell.

*The Twilight Zone* may have ended in 1964, but its influence continued to grow. Many of the show’s writers, like Richard Matheson, took their talents to the big screen. Others continued to work in television. Earl Hamner, Jr., who wrote several episodes for *The Twilight Zone* set in the rural backwoods, went on to create *The Waltons*, the long-running cornpone drama on CBS. Fittingly, Serling remained the busiest of all. He co-wrote the screenplay for *Planet of the Apes* in 1968, among other theatrical ventures. He also released a series of short story adaptations of his classic *Twilight Zone* teleplays. But Serling’s talents remained best suited for the small screen. He hosted a very *Twilight Zone*-like anthology series, *Night Gallery*, from 1970 to 1972, but network interference eventually drove him out of the medium altogether. He died following complications from open heart surgery on June 28, 1975.

Long after its network run had ended, *The Twilight Zone* remained a staple of syndicated reruns nationwide. Often aired late at night, it gave the creeps to a whole new generation of insomniacs who had not been around for the initial airings. The show’s appeal was so broad that in 1977, *Saturday Night Live* could do a parody of it (with Dan Aykroyd doing a dead-on Serling) that had the audience howling with recognition. Serling’s widow even launched a *Twilight Zone* magazine featuring new fiction in the series tradition. The time seemed ripe for a major revival of the franchise.

But all did not work out as planned. In 1982, a *Twilight Zone* movie was released to much anticipation. In keeping with the spirit of the series, producer Steven Spielberg had opted for an anthology format, comprised of three remakes of classic *Twilight Zone* installments and a fourth, all-new story. Up and coming directors Joe Dante (*The Howling*), John Landis (*An American Werewolf in London*), and George Miller (*The Road Warrior*) were brought in to helm three of the segments, with Spielberg handling the fourth. Despite all that talent, however, and the best efforts of screenwriter Richard Matheson, the result was a tepid mishmash that bombed at the box office. Each of the three remakes was markedly inferior to the original, while Landis' segment, the lone original story, was a sanctimonious misfire, dismissed by the show's aficionados as an unintentional parody of Serling. The fact that actor Vic Morrow was beheaded during filming did little to enhance the picture's public relations cachet, and embroiled Landis in a career-threatening lawsuit.

Somewhat more successful—artistically, if not commercially—was a new *Twilight Zone* television series, launched in 1985 on CBS. The new show boasted a stellar lineup of creative talent, from Ray Bradbury, Stephen King, and Harlan Ellison on the writers' side to directors like William Friedkin, Joe Dante, and John Milius. Actor Charles Aidman, who had appeared in two original *Twilight Zone* episodes, assumed Serling's post as narrator/moral contextualizer. A number of top-flight episodes were produced, like Ellison's brilliant "Paladin of the Lost Hour," that recaptured the spirit of the old series. But budget cuts, network interference, and low ratings eventually took their toll, and the series was mothballed for good in 1989.

Four decades after its network debut, *The Twilight Zone* continued to intrigue both the general public and fans of the science fiction/fantasy genre. The phrase "Twilight Zone kind of feeling" has entered the popular lexicon as a term for the series' quintessentially eerie sensation of otherworldly alienation. Marathon airings of the nearly 40-year-old episodes generated powerhouse ratings for local syndicated stations well into the 1990s, making the syndication package a prized possession within the broadcast industry. In 1996, cable's Sci-Fi Channel secured exclusive rights to air reruns of the original series—albeit in a truncated form allowing for additional commercial time, something of which Serling would most assuredly not approve. Nevertheless, its viability into a second millennium ensured that Serling and his unique vision would remain a permanent marker on America's pop cultural landscape.

## Twin Peaks

With a quirky mixture of murder mystery, soap opera, film noir, and the avant-garde, *Twin Peaks* rewrote the formula for prime-time television drama in the early 1990s. Created by American filmmaker David Lynch (*The Elephant Man*, *Blue Velvet*, *Lost Highway*), *Twin Peaks* was a character-driven show, sporting a cast of more than one

hundred, and used intricately interwoven subplots to keep viewers tuned in. This unconventional epic revolves around the murder of Laura Palmer, small-town beauty queen, and the investigating FBI agent whose dreams and quasi-Buddhist methods reveal the Black Lodge, a surreal waiting room inhabited by the personification of pure evil known only as BOB. *Twin Peaks* was canceled in 1991 after only twenty-nine episodes.

## Twister

Invented by Reyn Guyer, this game asks several players to reach over, under, and across each other to place their hands and feet on colored circles on a large vinyl game board. Named "Twister" by Milton Bradley, the game was demonstrated on the *Tonight Show* in 1966. While Eva Gabor was on her hands and knees, show host Johnny Carson stood over her and reached for another circle; the sexual innuendo and close physical contact made for controversial television and helped attract American youths to the game. Twister sold 13 million games in its first year. In 1987, at the University of Massachusetts campus in Amherst, 4150 contestants set a record for the number of simultaneous Twister players.

## 2 Live Crew

2 Live Crew, the primary progenitors of a hip-hop sub-genre called Miami Bass, will probably be better remembered for their important legal battles than their music. Their sexually explicit songs that often objectified women and which featured relatively simple bass-driven beats drew the attention of many conservative law enforcement officials from their hometown of Miami, as well as elsewhere. 2 Live Crew's legal perils during the late 1980s and early 1990s opened up debates about censorship and made them unwitting proponents of free speech.

Foreshadowing the legal battles over intellectual property that dogged the group a few years down the line, the group's first legal confrontation involved the appropriation of the name Luke Skywalker as a stage name by the group's leader (born Luther Campbell, Dec. 22, 1960). Lucasfilm, the owner of the *Star Wars* trilogy trademark,

### 2 Live Crew

promptly sued the group when they began to find aboveground exposure when 2 Live Crew's second album, *Move Somethin'* (1987), reached number 68 on the *Billboard* pop chart. As a result, Luther Campbell's stage and record company names were shortened to "Luke" and "Luke Records," respectively. The album that gained the most attention, though, was *As Nasty As They Wanna Be* (1989) which reached the pop album charts' Top Forty and spawned a hit single, "Me So Horny." Despite its many detractors, from conservative law enforcement officials, right-wing Christian groups, and music critics, *As Nasty As They Wanna Be* sold over two million copies, many of which were likely sold because of publicity drawn from criticism of the group.

Enraged by the explicit content of 2 Live Crew, a Coral Gables attorney named Jack Thompson launched an all-out war against the group, culminating in a Broward County, Florida judge deeming the album obscene under state law in March of 1990. Soon after, a record store owner in Ft. Lauderdale, Florida and another in Huntsville, Alabama were arrested by local sheriffs departments for violating obscenity laws. Around the same time, 2 Live Crew was arrested for

performing songs from *As Nasty As They Wanna Be* in a Florida nightclub and, when visiting the same town, alternative band Too Much Joy was arrested for performing songs from that album in an act of protest. These events escalated into a full scale debate within the media over free speech and first amendment protection, with radio and television talk show pundits arguing over 2 Live Crew's social and musical merits.

The two record store retailers were eventually acquitted, as were 2 Live Crew and Too Much Joy—all by juries that either criticized local authorities for wasting their time or, in one case, wanted to deliver the not guilty verdict in the form of a rap. In May 1992 the obscenity ruling was reversed by the eleventh United States Circuit Court of Appeals and an appeal was refused to be heard by the United States Supreme Court. But 2 Live Crew's legal woes were not over, as they faced another suit filed against them for the unauthorized sampling of Roy Orbison's "Oh, Pretty Woman." The owners of the song's copyright, Acuff-Rose, argued that 2 Live Crew's use of the song devalued the original's worth. After a protracted legal battle that eventually went to the United States Supreme Court, that court ruled

in 1994 that the 2 Live Crew version constituted fair use under copyright law and was therefore legal. In a time dominated by easy access to digital recording and transferring technology, this was seen as a significant ruling by legal scholars.

Riding the wave of publicity after the *As Nasty As They Wanna Be* scandal, 2 Live Crew milked another couple of minor hit albums in 1990 and 1991 (*Banned in the USA* and *Sports Weekend*, respectively). Soon after, however, the group's mainstream success fizzled and the original lineup disbanded, with Luke going on as a solo artist, periodically releasing solo albums on his own label.

—Kembrew McLeod

## 2001: A Space Odyssey

In 1964 film director Stanley Kubrick approached science fiction writer Arthur C. Clarke seeking a plot for “the proverbial good

A scene from the film *2001: A Space Odyssey*.

science fiction movie.” They worked together to craft a story inspired by Clarke’s short story “The Sentinel,” in which an astronaut discovers a mysterious pyramid on the moon. As Clarke wrote a novel derived from their script, Kubrick created a unique movie which continues to amaze and frustrate viewers, the 1968 MGM film *2001: A Space Odyssey*.

The film presents an abbreviated and speculative version of human evolution. The story opens at “The Dawn of Man” as pre-human man-apes discover a large, upright black slab. The apes are drawn to the monolith as it sings to them. After this, one ape, Moon-Watcher (Daniel Richter), discovers that a bone can be used as a club and learns how to use the club’s power to acquire food and to dominate the emerging ape society. The setting shifts in one of the most famous cuts in film history: Moon-Watcher tosses his club into the air; as it falls, the club suddenly transforms into a spaceship sliding through space. The plot now focuses on Heywood Floyd (William Sylvester), an official with the National Astronautics Council, who is traveling to the moon to investigate a mysterious black monolith discovered there. The monolith had obviously been created by intelligent extraterrestrial beings and deliberately buried in a lunar crater. When Floyd arrives at the monolith, it emits a piercing shriek.

The setting shifts again to the *Discovery*, a spaceship en route to Jupiter. The ship carrying three scientists in suspended animation is staffed by astronauts Dave Bowman (Keir Dullea) and Frank Poole (Gary Lockwood) and the HAL 9000 computer (voice of Douglas Rain). After a mysterious equipment failure, Dave and Frank become suspicious of the supposedly infallible HAL. The astronauts conspire to disconnect HAL but the all-seeing computer learns of their plot. HAL murders the sleeping scientists, sets Frank adrift in space, and traps Dave outside the ship. After he manages to reboard the *Discovery* via an airlock, Dave dismantles HAL’s memory, reducing the computer to infancy and, finally, death. As HAL’s red eye goes black, a video begins to play in which Floyd explains the *Discovery*’s secret mission. The moon monolith’s shriek had been a transmission aimed at Jupiter, and the *Discovery* had been sent in search of the signal’s destination. In the film’s final segment (“Jupiter and Beyond the Infinite”), Dave flies a pod toward a monolith floating in space near Jupiter and is transported through a stargate (depicted as a psychedelic lightshow) into a surreal, symbolic world where he ages and dies in ornate but sterile white rooms. His death seems to produce a celestial fetus, the next stage in human evolution.

The film polarized the critics; their responses tended to be either strongly positive or strongly negative. The film was daringly different from other major studios’ big-budget releases. It did not have a clear storyline or a central protagonist. There was little dialogue, and what dialogue there was was deliberately innocuous. Overall, *2001* presented a cold universe in which humans behave like passionless automatons and in which the most sympathetic character is the homicidal computer HAL. Some critics responded to *2001*’s uniqueness as a step forward in the art of filmmaking. For example, Mike Steele, reporting in *The Minneapolis Tribune*, saw *2001* as a step “closer to the purity of the film” and away from a sequential storyline imposed by literary aesthetics. Other critics found the movie to be a confusing muddle. In *The Village Voice*, Andrew Sarris called the movie a “thoroughly uninteresting failure” and the ending “an exercise in mystifying abstract fantasy in the open temple of High Art.” As *2001* found its audience, several critics who had panned it

wrote second reviews to reassess the movie's merits under a different set of criteria. Although Sarris, for his part, wrote a second review only to say that his opinion had not changed.

Despite the confusion and disfavor of many viewers, *2001* quickly gained the status of a "cult film," a movie which inspires fanatical devotion in a relatively small audience. The film continues to be a film for several cults. For science fiction fans, it is a realistic depiction of space travel. No other movie in the genre before or since has remained so true to the laws of physics. For film buffs, it presents a dazzling experiment with the elements of filmmaking. While viewers accustomed to conventional American movies may bemoan the long sequences of play with sight and sound which do not advance a linear plot, lovers of the filmmaker's art delight as a spaceship and a space station waltz to Johann Strauss' "On the Beautiful Blue Danube." For devotees of the hallucinogenic drug culture, the surreal imagery, particularly in the final segment, was "The Ultimate Trip" promised by the tagline of a 1974 re-release. *2001* remains an active part of the popular imagination and is often imitated, referenced, and parodied in various media. In the 1996 film, *Independence Day*, for example, David Levinson (played by Jeff Goldblum) opens his laptop, and HAL's red eye appears on its screen.

Kubrick succeeded in offering the "proverbial good science fiction movie" because *2001* addresses universal, eternal questions: What is the meaning of life? What is the nature of God? What is the destiny of humanity? Are we alone in the universe? What is the relationship between humans and their machines? One of the aspects of the movie that frustrates viewers is that Kubrick provides no clear answers to these questions, but the nature of the questions is that they are unanswerable. As Clarke put it, "If you understood *2001* completely, we failed. We wanted to raise more questions than we answered." The film poses ancient questions in a relatively new language, science, and in a new medium, film. The extraterrestrial monoliths seem to be guiding human evolution; thus, they serve as a metaphor for the hand of God or destiny. However, *2001* explores theological issues outside of the framework of any religion or established mythology. It forces its audience to rethink the assumptions such a framework might provide.

Perhaps the most memorable ingredient of *2001* is HAL, the fullest development of a sequence of human tools which began with the bone club. One of the major issues of science fiction has been whether a machine capable of independent thought would be "human." In *2001*, HAL is a terrifying monster, but he also seems to be more human than the humans. The audience cannot help but find the computer sympathetic as he begs for his life; we see that HAL only killed out of fear. As interaction with computers becomes increasingly a part of everyday life, HAL remains a powerful symbol of both the peril and the promise of artificial intelligence. Fans have noticed that if each letter of HAL is replaced by the next letter in the alphabet, HAL becomes IBM (Clarke denies that this was intentional). In 1997 (the year HAL was supposedly created), David Stork published a collection of essays, *Hal's Legacy: 2001's Computer as Dream and Reality*, in which scientists explore how close current technology comes to creating a HAL 9000.

## Tyler, Anne (1941—)

Anne Tyler, a novelist who has received much critical and popular acclaim, is known for her insightful, often comic depictions of family relationships and ordinary life. Her novels, the best of which include *Dinner at the Homesick Restaurant* (1982), *The Accidental Tourist* (1985), and *Breathing Lessons* (1988), have won such prestigious awards as the Pulitzer Prize and the National Book Critics Circle Award. A longtime resident of Baltimore, where she often sets her novels, Tyler is viewed by many as a Southern novelist, largely because of her concern with family, home, and place.

## Tyson, Mike (1966—)

Born in Brooklyn and educated in the pugilistic arts on the New York streets, Mike Tyson went on to become history's youngest world boxing champion at age nineteen. From the start of his professional career in 1985, Tyson displayed contradictions of character that dogged him in controversy. An efficient powerhouse of a fighter, his inability to control his anger in his personal life sidelined his career more than once. When this anger finally caused him to lose control in the ring and bite an opponent's ear, many thought the incident signaled the end of his boxing career. However, Tyson proved himself as skilled at comebacks as at knockouts. By the end of the twentieth century, 15 years after his debut in the ring, it was

**Mike Tyson**

evident that so long as promoters were able to make millions of dollars on every round he fought, “Iron Mike” Tyson would continue to be welcomed whenever he might choose to enter the ring.

Boxing has often been a controversial and paradoxical sport. Many see it as simple brutality, a gladiator-like contest where bloodthirsty audiences cheer as opponents batter each other senseless. Others claim boxing as one of the earliest refined athletic skills, a noble art requiring balletic precision, muscular power, and that indefinable yet essential quality—“heart.” Perhaps it is because of that engaging quality of heart that boxing has given rise to so many heroes who have captured the public imagination. And yet, like boxing itself, boxing heroes are often contradictory figures with whom the public has a love-hate relationship. Boxing requires many of the same fighting skills that are necessary to the survival of young men growing up in poverty on urban streets. Thus many champs have come from underprivileged backgrounds, using their skills and toughness to pursue the wealth and fame that championship boxing promises those that succeed. The rise of the ghetto-bred fighter, particularly among African Americans and other minority groups, symbolizes the American dream of rising from poverty and obscurity to wealth and fame. From Jack Dempsey to Muhammad Ali, boxing champions have become national icons, glorifying the attributes of brashness, guts and furious strength.

Mike Tyson is a paradigm example of the phenomenon. Born into a poor African-American family and raised by a single mother on welfare, he has said of his own origins, “I was born in guck, mud. Humiliation.” On his own from around age ten, Tyson was not tall, but he was powerfully built and filled with rage, and he learned early how to earn his way by mugging and purse-snatching. By the time he was 13, he had been arrested 38 eight times, finally ending up at the “bad cottage” at Tryon School for Boys in Catskill, New York. Tyson has described the reformatory with a poignant simplicity that a sociologist might envy: “Just a bunch of bad kids no one cared about

in a square box.” It was at Tryon School that ex-boxer Bobby Stewart recognized the tough youngster’s fighting talent, and introduced him to Cus D’Amato, a visionary trainer who had been behind boxing champions Floyd Patterson and Jose Torres.

D’Amato recognized Tyson’s potential and undertook his training. Tyson’s amateur career was only mildly distinguished—he competed in trials for the 1984 Olympics, and earned a place on the team as an alternate—but in 1985 he entered the professional arena like a steamroller. From 1985 until 1990, he won every fight, most with knockouts and most in the first round. By 1986, he was world heavyweight champion. Then, in 1990, displaying the inconsistency fans would later come to expect, he suffered his first professional defeat at the hands of Buster Douglas, a virtual unknown with 50-1 odds against him. In 1988, at the height of his glory days, Tyson married actress Robin Givens. The petite Givens and her “gentle giant” husband were a pair made for the media, and they received an onslaught of attention from tabloids and television. The fairy tale union did not last however, and, though it was shocking, it surprised few when Givens confessed in a television interview with Barbara Walters that Tyson abused her and that life with him was “pure hell.” The couple was divorced in 1989.

In 1992, the fighter made world headlines when he was convicted of rape and given a six-year prison sentence. Although persistently denying the charge, he served three years in a minimum-security prison where he converted to Islam, and came out declaring he was a changed man. He immediately resumed his boxing career, and by 1996 again held both the WBC and WBA heavyweight titles. Working with flamboyant boxing promoter Don King, Tyson negotiated one of the most lucrative boxing contracts in history, a \$158 million deal with the Las Vegas MGM Grand Hotel and Showtime Entertainment Television for six fights or two and a half years, whichever came first.

Tyson’s comeback success did not last. In 1997, in a rematch fight with Evander Holyfield, who had previously beaten him, “Iron Mike” lost control and bit pieces off both of Holyfield’s ears. The boxing world, as well as the larger public, reeled in shock and disgust. Ear-biting jokes became a television staple, and Tyson’s boxing license was suspended for life. However, after some 18 months of therapy and anger counseling, Tyson approached the boxing commissions in New Jersey and Nevada with assurances that he had once again mended his ways. Both commissions voted him mentally fit to box, and he made another comeback.

Tyson has continued to win matches, often within an embarrassingly short time. After his release from prison in 1995, fans who paid up to \$1500 a seat to watch him fight the hopelessly outclassed Peter McNeeley were disgruntled when the fight lasted only a few minutes. However, the fighter has continued to be plagued by the consequences of his uncontrolled rage. In 1999, he was sentenced to another year in jail for violating parole by assaulting two motorists after an automobile accident, and was facing assault charges by two women.

In over a decade of intense and dramatic career boxing, Mike Tyson has only fought 200 rounds in all, and only three of his fights have gone the distance. Out of 48 fights, he has won 45, knocking out his opponent in 39 of them. The press and the public have tended either to glorify him as the poor kid who made good, or to demonize him as a thug and a felon. In reality, Tyson is the uncomfortable sum

of many contradictory parts, and often expresses these with the simple, incisive perception of a self-educated man. Pummeling other men to the mat was the only way for a painfully poor black street kid to rise to the top of the heap, and Tyson channeled his deep anger at life into boxing. He achieved unprecedented success, but has remained isolated, distrustful and angry even during his best times. Five foot eleven and weighing in at 220 pounds, Tyson is a massive man who looks like a fighter. His voice is incongruously soft and high, hinting at a gentle core overlaid by years of depression, defensiveness, and pure rage. Perhaps it is this ambiguous combination of qualities, the suggestion of the hurt child beneath the brutal physical powerhouse, which keeps the public from giving up completely on "Iron Mike." After all, this juxtaposition is what gives boxing its appeal—the glory through the pain. Robin Givens added perhaps the

most telling dimension to the picture, "I think he's probably going to turn out to be the all-American tragedy. There's something about Michael that's dangerous."

—Tina Gianoulis

## EDITOR'S NOTE

---

Thirty some years ago Ray Browne and several of his colleagues provided a forum for the academic study of popular culture by forming first the *Journal of Popular Culture* and later the Popular Culture Association and the Center for the Study of Popular Culture at Bowling Green State University. Twenty some years ago Thomas Inge thought the field of popular culture studies well enough established to put together the first edition of his *Handbook of Popular Culture*. In the years since, scholars and educators from many disciplines have published enough books, gathered enough conferences, and gained enough institutional clout to make popular culture studies one of the richest fields of academic study at the close of the twentieth century. Thirty, twenty, in some places even ten years ago, to study popular culture was to be something of a pariah; today, the study of popular culture is accepted and even respected in departments of history, literature, communications, sociology, film studies, etc. throughout the United States and throughout the world, and not only in universities, but in increasing numbers of high schools. Thomas Inge wrote in the introduction to the second edition of his *Handbook*: “The serious and systematic study of popular culture may be the most significant and potentially useful of the trends in academic research and teaching in the last half of this century in the United States.”<sup>2</sup> It is to this thriving field of study that we hope to contribute with the *St. James Encyclopedia of Popular Culture*.

The *St. James Encyclopedia of Popular Culture* includes over 2,700 essays on all elements of popular culture in the United States in the twentieth century. But what is “popular culture?” Academics have offered a number of answers over the years. Historians Norman F. Cantor and Michael S. Werthman suggested that “popular culture may be seen as all those things man does and all those artifacts he creates for their own sake, all that diverts his mind and body from the sad business of life.”<sup>1</sup> Michael Bell argues that:

At its simplest popular culture is the culture of mass appeal. A creation is popular when it is created to respond to the experiences and values of the majority, when it is produced in such a way that the majority have easy access to it, and when it can be understood and interpreted by that majority without the aid of special knowledge or experience.<sup>3</sup>

While tremendously useful, both of these definitions tend to exclude more than they embrace. Was the hot dog created for its own sake, as a diversion? Probably not, but we’ve included an essay on it in this collection. Were the works of Sigmund Freud in any way shaped for the majority? No, but Freud’s ideas—borrowed, twisted, and reinterpreted—have shaped novels, films, and common speech in ways too diffuse to ignore. Thus we have included an essay on Freud’s impact on popular culture. Our desire to bring together the greatest number of cultural phenomena impacting American culture in this century has led us to prefer Ray Browne’s rather broader early definition of popular culture as “all the experiences in life shared by people in common, generally though not necessarily disseminated by the mass media.”<sup>4</sup>

### *Coverage*

In order to amass a list of those cultural phenomena that were widely disseminated and experienced by people in relatively unmediated form we asked a number of scholars, teachers, librarians, and archivists to serve as advisors. Each of our 20 advisors provided us with a list of over 200 topics from their field of specialty that they considered important enough to merit an essay; several of our advisors provided us with lists much longer than that. Their collective lists numbered nearly 4,000 potential essay topics, and we winnowed this list down to the number that is now gathered in this collection. We sought balance (but not equal coverage) between the major areas of popular culture: film; music; print culture; social life; sports; television and radio; and art and performance (which includes theatre, dance, stand-up comedy, and other live performance). For those interested, the breakdown of coverage is as follows: social life, 23 percent (a category which covers everything from foodways to fashion, holidays to hairstyles); music, 16 percent; print culture, 16 percent; film, 15 percent; television and radio, 14 percent; sports, 10 percent; and art and performance, 6 percent. A variety of considerations led us to skew the coverage of the book in favor of the second half of the century. The massive popularity of television and recorded music, the mass-marketing of popular fiction, and the national attention given to professional sports are historical factors contributing to the emphasis on post-World War II culture, but we have also considered the needs of high school and undergraduate users in distributing entries in this way.

### *The Entries*

The entries in this volume vary in length from brief (75 to 150-word) introductions to the topic to in-depth 3,000-word explorations. No matter the length, we have asked our contributors to do two things in each entry: to describe the topic and to analyze its

significance in and relevance to American popular culture. While we hope that users will find the basic factual information they need concerning the topic in an entry, it was even more important to us that each user gain some perspective on the cultural context in which the topic has importance. Thus the entry on MTV, for example, chronicles the channel's rise to world popularity, but also analyzes the relationship between MTV, youth culture, and consumerism. The entry on John Ford, while tracing the outlines of the film director's long career, assesses the impact Ford's films have had on the film Western and on Americans' very perceptions of the West. Given the brevity of the entries, we chose to emphasize analysis of a topic's contribution to popular culture over a full presentation of biographical/historical information. The entry on World War I, for example, offers an analysis of how the war was understood in popular film, print culture, and propaganda rather than a blow-by-blow description of the actual military conflict.

Entries are accompanied by a list of further readings. These readings are meant to provide the user with readily accessible sources that provide more information on the specific topic. As befits a multimedia age, these "further readings" come not just from books and magazines, but also from albums, liner notes, films, videos, and web sites. Users of the Internet know well the perils of trusting the information found on the World Wide Web; there are as yet few filters to help browsers sift the useful from the absurd. We cited web sites when they provided information that was unavailable in any other known form and when our reasonable efforts to determine the veracity of the information led us to believe that the information provided was valid and useful. We have occasionally provided links to "official" web sites of performers or organizations, for the same reason that we provide citations to autobiographies. All web links cited were accurate as of the date indicated in the citation.

### *Organization and Indexing*

Entries are arranged alphabetically by the name under which the topic is best known. For topics which might reasonably be sought out under differing names, we have provided in-text cross references. For example, a user seeking an entry on Huddie Ledbetter will be referred to the entry on Leadbelly, and a user seeking an entry on Larry Flynt will be referred to the entry on *Hustler* magazine. Far more powerful than the cross references, however, are the indexes provided in the fifth volume of the collection. The general index is by far the most powerful, for it leads the user searching for information on Humphrey Bogart, for example, to the entries on Lauren Bacall, *Casablanca*, *The Maltese Falcon*, *The African Queen*, and several other entries that contain substantive information about Bogie. Equally powerful is the subject index, a list of categories under which we listed all pertinent entries. Consulting the subject index listing for Sex Symbols, for example, will lead the user to entries on Marilyn Monroe, the Varga Girl, *Playboy* magazine, David Cassidy, Mae West, and a long entry on the Sex Symbol, among others. Finally, a time index, organized by decades, provides a list of the entries that concern each decade of the twentieth century. Those entries that concern nineteenth-century topics are indexed by the first decade of the twentieth century.

We encourage readers to use the indexes to discover the fascinating intertwinings that have made the development of popular culture in the twentieth century such a vital field of study. Using the indexes, it is possible to uncover the story of how the American humor that was first made popular on the vaudeville stage evolved into first the radio comedies that entertained so many Americans during the Depression and War years and later the sitcoms that have kept Americans glued to their television screens for the last 50 years. That story is here, in the entries on Vaudeville, the Sitcom, *Amos 'n' Andy*, and the many other programs and comedians that have defined this tradition. A teacher who wishes students to uncover the similarities between sitcoms of the 1950s, 1960s, 1970s, 1980s, and 1990s might well ask the students to use this collection to begin their research into such comedies. Similarly, a teacher who asks students to explore the cross-pollination between musical genres will find that the indexes reveal the mixing of "race music," rhythm and blues, gospel, soul, and rock 'n' roll. It is hoped that this collection will be of particular use to those instructors of high school and undergraduate courses who challenge their students to discover the real cultural complexity of the music, films, magazines, and television shows that they take for granted. This collection should also be of use to those more advanced scholars who are beginning new research into an area of popular culture or who are looking for some context in which to place their existing research.

### *Acknowledgments*

The *St. James Encyclopedia of Popular Culture* represents the work of hundreds of people, and we owe our thanks to all of them. We have had the privilege of working with 20 advisors whose experience, knowledge, and wisdom have truly helped shape the contents of this collection. Each of our advisors helped us to discover hidden corners of popular culture that we would not have considered on our own, and the breadth of coverage in this collection is a tribute to their collective knowledge. Several of our advisors deserve special thanks: Paul Buhle, George Carney, B. Lee Cooper, Jerome Klinkowitz, and Ron Simon all showed an extraordinary level of commitment and helpfulness.

It has been a pleasure to work with the nearly 450 contributors to this collection; we've appreciated their expertise, their professionalism, and their good humor. Several of our contributors deserve special mention for the quality of their contributions to this collection: Jacob Appel, Tim Berg, Pat Broeske, Richard Digby-Junger, Jeffrey Escoffier, Bryan Garman, Tina Gianoulis, Milton Goldin, Ian Gordon, Ron Goulart, Justin Gustainis, Preston Jones, Robyn Karney, Deborah Mix, Leonard Moore, Edward Moran, Victoria Price, Bob Schnakenberg, Steven Schneider, Charles Shindo, Robert Sickels, Wendy Woloson, and Brad Wright. Our team of copyeditors helped us bring a uniformity of presentation to the writings of this mass of contributors, and spotted and corrected innumerable small errors. Heidi Hagen, Robyn Karney, Edward Moran, and Tim Seul deserve special thanks for the quality and quantity of their work; we truly couldn't have done it without them. The contributors and copyeditors provided us with the material to build this collection, but it has been the editors' responsibility to ensure its accuracy and reliability. We welcome any corrections and comments; please write to: The Editors, *St. James Encyclopedia of Popular Culture*, St. James Press, 27500 Drake Road, Farmington Hills, MI 48331-3535.

Gathering the photos for this collection was an enormous task, and we were helped immeasurably by the knowledgeable and efficient staff at several photo agencies. We'd like to thank Marcia Schiff at AP/Wide World Photos; Eric Young at Archive Photos; and Kevin Rettig at Corbis Images. Lisa Hartjens of ImageFinders, Inc. also helped us acquire a number of photos.

We would like to thank Shelly Andrews, Anne Boyd, Melissa Doig, Tina Gianoulis, Heidi Hagen, Robyn Karney, Edward Moran, Victoria Price, Rebecca Saulsbury, Tim Seul, and Mark Swartz for their careful copyediting of the entries.

At the St. James Press, we'd like to thank Mike Tyrkus for his good humor and efficiency in helping us see this project to completion; Peter Gareffa for his usual wise and benevolent leadership; Janice Jorgensen for helping us shape this project at the beginning; the permissions department for smiling as we piled the photos on; and the staff at the St. James Press for their careful proofreading and for all their work in turning so many computer files into the volumes you see today.

Finally, we'd like to thank Lee Van Wormer for his sage management advice and our children, Conrad and Louisa, for their warm morning cuddles and for the delightful artwork that adorns our office walls.

—Tom Pendergast and Sara Pendergast,

## INTRODUCTION

---

### *The Art of Everyday Life*

Sometimes, when I'm wandering in an art museum looking at the relics of an ancient civilization, I find myself wondering how a future society would represent a defunct American culture. What objects would be chosen—or would survive—to be placed on display? Would I agree with a curator's choices? Were I to choose the items that some future American Museum of Art should exhibit to represent twentieth-century American culture, here are some I would name: an Elvis Presley record; a Currier & Ives print; a movie still from *Casablanca*. To put it a different way, my priority would *not* be to exhibit fragments of an urban cathedral, a painted landscape, or a formal costume. I wouldn't deny such objects could be important artifacts of American culture, or that they belong in a gallery. But in my avowedly biased opinion, the most vivid documents of American life—the documents that embody its possibilities and limits—are typically found in its popular culture.

Popular culture, of course, is not an American invention, and it has a vibrant life in many contemporary societies. But in few, if any, of those societies has it been as central to a notion of national character at home as well as abroad. For better or worse, it is through icons like McDonald's (the quintessential American cuisine), the Western (a uniquely American narrative genre), and Oprah Winfrey (a classic late-twentieth century embodiment of the American Dream) that this society is known—and is likely to be remembered.

It has sometimes been remarked that unlike nations whose identities are rooted in geography, religion, language, blood, or history, the United States was founded on a democratic ideal—a notion of life, liberty, and the pursuit of happiness elaborated in the Declaration of Independence. That ideal has been notoriously difficult to realize, and one need only take a cursory look at many aspects of American life—its justice system, electoral politics, residential patterns, labor force, et. al.—to see how far short it has fallen.

American popular culture is a special case. To be sure, it evinces plenty of the defects apparent in other areas of our national life, among them blatant racism and crass commercialism. If nothing else, such flaws can be taken as evidence of just how truly representative it is. There is nevertheless an openness and vitality about pop culture—its appeal across demographic lines; its interplay of individual voices and shared communal experience; the relatively low access barriers for people otherwise marginalized in U.S. society—that give it real legitimacy as the art of democracy. Like it or hate it, few dispute its centrality.

This sense of openness and inclusion—as well as the affection and scorn it generated—has been apparent from the very beginning. In the prologue of the 1787 play *The Contrast* (whose title referred to the disparity between sturdy republican ideals and effete monarchical dissipation), American playwright Royall Tyler invoked a cultural sensibility where “proud titles of ‘My Lord! Your Grace/To the humble ‘Mr.’ and plain ‘Sir’ give place.” Tyler, a Harvard graduate, Revolutionary War officer, and Chief Justice of the Vermont Supreme Court, was in some sense an unlikely prophet of popular culture. But the sensibility he voiced—notably in his beloved character Jonathon, a prototype for characters from Davy Crockett to John Wayne—proved durable for centuries to come.

For much of early American history, however, artists and critics continued to define aesthetic success on European terms, typically invoking elite ideals of order, balance, and civilization. It was largely taken for granted that the most talented practitioners of fine arts, such as painters Benjamin West and John Singleton Copley, would have to go abroad to train, produce, and exhibit their most important work. To the extent that newer cultural forms—like the novel, whose very name suggests its place in late eighteenth- and early nineteenth-century western civilization—were noted at all, it was usually in disparaging terms. This was especially true of novels written and read by women, such as Susanna Rowson's widely read *Charlotte Temple* (1791). Sermons against novels were common; Harvard devoted its principal commencement address in 1803 to the dangers of fiction.

The industrialization of the United States has long been considered a watershed development in many realms of American life, and popular culture is no exception. Indeed, its importance is suggested in the very definition of popular culture coined by cultural historian Lawrence Levine: “the folklore of industrial society.” Industrialization allowed the mass-reproduction and dissemination of formerly local traditions, stories, and art forms across the continent, greatly intensifying the spread—and development—of culture by, for, and of the people. At a time when North America remained geographically and politically fragmented, magazines, sheet music, dime novels, lithographs, and other print media stitched it together.

This culture had a characteristic pattern. Alexis de Tocqueville devoted 11 chapters of his classic 1835-40 masterpiece *Democracy in America* to the art, literature, and language of the United States, arguing that they reflected a democratic ethos that required new standards of evaluation. “The inhabitants of the United States have, at present, properly speaking, no literature,” he wrote. This judgment, he made clear, arose from a definition of literature that came from aristocratic societies like his own. In its stead, he explained, Americans sought books “which may be easily procured, quickly read, and which require no learned researches to be understood. They ask for beauties self-proffered and easily enjoyed; above all they must have what is unexpected and new.” As in so many other ways, this description of American literature, which paralleled what Tocqueville saw in other arts, proved not only vivid but prophetic.

The paradox of American democracy, of course, is that the freedom Euro-Americans endlessly celebrated co-existed with—some might say depended on—the enslavement of African Americans. It is therefore one of the great ironies of popular culture that the contributions of black culture (a term here meant to encompass African, American, and amalgamations between the two) proved so decisive. In another sense, however, it seems entirely appropriate that popular culture, which has always skewed its orientation toward the lower end of a demographic spectrum, would draw on the most marginalized groups in American society. It is, in any event, difficult to imagine that U.S. popular culture would have had anywhere near the vitality and influence it has without slave stories, song, and dance. To cite merely one example: every American musical idiom from country music to rap has drawn on, if not actually *rested* upon, African-American cultural foundations, whether in its use of the banjo (originally an African instrument) or its emphasis on the beat (drumming was an important form of slave communication). This heritage has often been overlooked, disparaged, and even satirized. The most notable example of such racism was the minstrel show, a wildly popular nineteenth century form of theater in which white actors blackened their faces with burnt cork and mocked slave life. Yet even the most savage parodies could not help but reveal an engagement with, and even a secret admiration for, the cultural world the African Americans made in conditions of severe adversity, whether on plantations, tenant farms, or in ghettos.

Meanwhile, the accelerating pace of technological innovation began having a dramatic impact on the form as well as the content of popular culture. The first major landmark was the development of photography in the mid-nineteenth century. At first a mechanically complex and thus inaccessible medium, it quickly captured American imaginations, particularly by capturing the drama and horror of the Civil War. The subsequent proliferation of family portraits, postcards, and pictures in metropolitan newspapers began a process of orienting popular culture around visual imagery that continues unabated to this day.

In the closing decades of the nineteenth century, sound recording, radio transmission, and motion pictures were all developed in rapid succession. But it would not be until well after 1900 that their potential as popular cultural media would be fully exploited and recognizable in a modern sense (radio, for example, was originally developed and valued for its nautical and military applications). Still, even if it was not entirely clear how, many people at the time believed these new media would have a tremendous impact on American life, and they were embraced with unusual ardor by those Americans, particularly immigrants, who were able to appreciate the pleasures and possibilities afforded by movies, records, and radio.

Many of the patterns established during the advent of these media repeated themselves as new ones evolved. The Internet, for example, was also first developed for its military applications, and for all the rapidity of its development in the 1990s, it remains unclear just how its use will be structured. Though the World Wide Web has shown tremendous promise as a commercial enterprise, it still lacks the kind of programming—like *Amos 'n' Andy* in radio, or *I Love Lucy* in television—that transformed both into truly mass media of art and entertainment. Television, for its part, has long been the medium of a rising middle class of immigrants and their children, in terms of the figures who have exploited its possibilities (from RCA executive David Sarnoff to stars like Jackie Gleason); the new genres it created (from the miniseries to the situation-comedy); and the audiences (from urban Jews to suburban Irish Catholics) who adopted them with enthusiasm.

For much of this century, the mass appeal of popular culture has been viewed as a problem. “What is the jass [*sic*] music, and therefore the jass band?” asked an irritated New Orleans writer in 1918. “As well as ask why the dime novel or the grease-dripping doughnut. All are manifestations of a low stream in man’s taste that has not come out in civilization’s wash.” However one may feel about this contemptuous dismissal of jazz, now viewed as one of the great achievements of American civilization, this writer was clearly correct to suggest the demographic, technological, and cultural links between the “lower” sorts of people in American life, the media they used, and forms of expression that were often presumed guilty until proven innocent.

Indeed, because education and research have traditionally been considered the province of the “higher” sorts of people in American life, popular culture was not considered a subject that should even be discussed, much less studied. Nevertheless, there have always been those willing to continue what might be termed the “Tocquevillian” tradition of treating popular culture with intellectual

seriousness and respect (if not always approval). In his 1924 book *The Seven Lively Arts* and in much of his journalism, critic Gilbert Seldes found in silent movies, cartoons, and pop music themes and motifs fully worthy of sustained exploration. Amid the worldwide crisis of the 1930s and 1940s, folklorist Constance Rourke limned the origins of an indigenous popular culture in books like *American Humor* (1931) and *The Roots of American Culture* (1942). And with the rise of the Cold War underlining the differences between democratic and totalitarian societies, sociologists David Riesman and Reuel Denny evaluated the social currents animating popular culture in Denny's *The Astonished Muse* (1957), for which Riesman, who showed a particular interest in popular music, wrote the introduction.

European scholars were also pivotal in shaping the field. Johan Huizinga's *Homo Ludens* (1938), Roland Barthes's *Mythologies* (1957), and Antonio Gramsci's prison letters (written in the 1920s and 1930s but not published until the 1970s) have proved among the most influential works in defining the boundaries, strategies, and meanings of popular culture. While none of these works focused on American popular culture specifically, their focus on the jetsam and flotsam of daily life since the medieval period proved enormously suggestive in an American context.

It has only been at the end of the twentieth century, however, that the study of popular culture has come into its own in its own right. To a great extent, this development is a legacy of the 1960s. The end of a formal system of racial segregation; the impact of affirmative action and government-funded financial aid; and the end of single-sex education at many long-established universities dramatically transformed the composition of student bodies and faculties. These developments in turn, began having an impact on the nature and parameters of academic study. While one should not exaggerate the impact of these developments—either in terms of their numbers or their effect on an academy that in some ways has simply replaced older forms of insularity and complacency with new ones—it nevertheless seems fair to say that a bona fide democratization of higher education occurred in the last third of the twentieth century, paving the way for the creation of a formal scholarly infrastructure for popular culture.

Once again, it was foreign scholars who were pivotal in the elaboration of this infrastructure. The work of Raymond Williams, Stuart Hall, and others at Britain's Centre for Contemporary Cultural Studies in the 1950s and 1960s drew on Marxist and psychoanalytic ideas to explain, and in many cases justify, the importance of popular culture. Though not always specifically concerned with popular culture, a panoply of French theorists—particularly Jacques Derrida, Louis Althusser, and Michel Foucault—also proved highly influential. At its best, this scholarship illuminated unexamined assumptions and highly revealing (and in many cases, damning) patterns in the most seemingly ordinary documents. At its worst, it lapsed into an arcane jargon that belied the directness of popular culture and suggested an elitist disdain toward the audiences it presumably sought to understand.

Like their European counterparts, American scholars of popular culture have come from a variety of disciplines. Many were trained in literature, among them Henry Nash Smith, whose *Virgin Land* (1950) pioneered the study of the Western, and Leslie Fiedler, who applied critical talents first developed to study classic American literature to popular fiction like *Gone with the Wind*. But much important work in the field has also been done by historians, particularly social historians who began their careers by focusing on labor history but became increasingly interested in the ways American workers spent their free time. Following the tradition of the great British historian E. P. Thompson, scholars such as Herbert Gutman and Lawrence Levine have uncovered and described the art and leisure practices of African Americans in particular with flair and insight. Feminist scholars of a variety of stripes (and sexual orientations) have supplied a great deal of the intellectual energy in the study of popular culture, among them Ann Douglas, Carroll Smith-Rosenberg, and Jane Tompkins. Indeed, the strongly interdisciplinary flavor of popular culture scholarship—along with the rise of institutions like the Popular Press and the Popular Culture Association, both based at Bowling Green University—suggests the way the field has been at the forefront of an ongoing process of redrawing disciplinary boundaries in the humanities.

By the 1980s, the stream of scholarship on popular culture had become a flood. In the 1990s, the field became less of a quixotic enterprise than a growing presence in the educational curriculum as a whole. Courses devoted to the subject, whether housed in communications programs or in traditional academic departments, have become increasingly common in colleges and universities—and, perhaps more importantly, have become integrated into the fabric of basic surveys of history, literature, and other fields. Political scientists, librarians, and curators have begun to consider it part of their domain.

For most of us, though, popular culture is not something we have to self-consciously seek out or think about. Indeed, its very omnipresence makes it easy to take for granted as transparent (and permanent). That's why trips to museums—or encyclopedias like this one—are so useful and important. In pausing to think about the art of everyday life, we can begin to see just how unusual, and valuable, it really is.

—Jim Cullen

# U

## Uecker, Bob (1935—)

---

No baseball player ever built more around a lifetime batting average of .200 than sportscaster/humorist Bob Uecker. The former catcher for three National League teams parlayed his limited on-field abilities into a lucrative second career, becoming visible through his play-by-play commentary, roles in sitcoms and movies, and a series of commercial endorsements. “Anybody with ability can play in the big leagues,” he once remarked. “But to be able to trick people year in and year out the way I did, I think that’s a much greater feat.”

A Milwaukee native, Uecker was signed by the hometown Braves (National League pennant winners in 1957 and 1958) for \$3,000. “That bothered my dad at the time,” Uecker later joked, “because he didn’t have that kind of money to pay out.” Contrary to his public persona, Uecker actually hit very well in the Braves’ minor league system, batting over .300 in three different seasons. He eventually joined the parent Braves in 1962, where he was used for his defensive skills.

During the 1964 season Uecker was traded to the St. Louis Cardinals, and was part of a World Series team. “I made a major contribution to the Cardinals’ pennant drive,” he told Johnny Carson. “I came down with hepatitis. The trainer injected me with it.” Before the first game of the World Series, Uecker stole a tuba from a Dixieland band and caught outfield flies with it during batting practice. Teammate Tim McCarver later credited Uecker’s infectious humor with the Cardinals’ upset win over the Yankees in the Series: “If Bob Uecker had not been on the Cardinals, then it’s questionable whether we could have beaten the Yankees.” He practiced doing play-by-play by broadcasting into beer cups in the Cardinals’ bullpen (“Beer cups don’t criticize,” he later observed). While Uecker’s offensive skills were weak, he had his greatest batting success, ironically, off the top pitcher of his generation, Sandy Koufax. Uecker was traded to the Philadelphia Phillies in 1966, retiring a year later.

In 1971 Uecker was hired to do play-by-play for the new Milwaukee Brewers team in the American League, and quickly became a fan favorite for his self-deprecating humor as well as his observant commentary. In 1976 he was picked to announce games for ABC’s *Monday Night Baseball* program, where he was paired with the ubiquitous Howard Cosell. Cosell, who possessed a large vocabulary and a thinly-veiled contempt for baseball, was a worthy companion for the unpretentious Uecker. When Cosell asked Uecker to use the word “truculent” in a sentence, Uecker quickly replied, “If you had a truck and I borrowed it, that would be a truck-you-lent.” Uecker also became a favorite guest on Johnny Carson’s *The Tonight Show*.

Uecker enjoyed popularity as a commercial spokesman for Miller Lite beer in the 1970s and 1980s, poking fun at his athletic inability. In the most famous spot, Uecker was shown in the stands touting Miller Lite while waiting for his complimentary tickets from the team management (“I must be in the front row!”). As the commercial faded to black, Uecker was seen in his free seats—in the uppermost part of the upper deck.

Uecker wrote a bestselling autobiography in 1982 titled *Catcher in the Wry*. From 1985 to 1990 he costarred on the popular ABC situation comedy *Mr. Belvedere*, where his irreverent sportswriter character proved a perfect foil for Christopher Hewitt’s title role of a

stuffy, English-born butler. In 1989 he enjoyed his greatest success as Harry Doyle, the comical announcer for the woebegone Cleveland Indians in *Major League*, a surprise movie comedy hit. Uecker’s ironic play-by-play—when Charlie Sheen’s pitches land ten rows up in the grandstand, Uecker remarks, “Jussst a bit outside”—chronicled the Indians’ improbable rise to clinch the American League pennant.

Uecker returned to network baseball coverage in 1997, joining Bob Costas and Joe Morgan on NBC’s broadcasts of playoff and World Series games. Again, Uecker’s self-effacement played well off the erudition of both his colleagues. When asked to describe his greatest moment as a player, Uecker said with pride, “Driving home the winning run by walking with the bases loaded.”

—Andrew Milner

## UFOs (Unidentified Flying Objects)

---

The concept of the Unidentified Flying Object (UFO), ostensibly the vehicle of choice for alien visitors from outer space, originated in the United States in the 1940s and, over the course of five decades, has attracted a sizable cult of adherents stimulated by the phenomenon’s embodiment of both antigovernment social protest and romantic secular humanism.

The first mass sightings of UFOs in the United States came in 1896, when a number of people from California to the Midwest reported seeing mysterious aircraft. According to reports, these dirigible-like machines were cigar-shaped and featured a host of intense colored lights. Another wave of UFO sightings were reported in 1909 and 1910, and, during World War II, several Allied pilots claimed to have spotted glowing objects that paced their airplanes. A Gallup Poll taken in 1947, though, indicated that few Americans associated flying disks with extraterrestrial spaceships; by and large, people attributed the reported sightings to optical illusions, misinterpreted or unknown natural phenomena, or top-secret military vehicles not known to the public.

A rash of sightings between 1947 and 1949 radically recast public perceptions of UFOs. A celebrated incident in which pilot Kenneth Arnold allegedly intercepted nine saucer-like objects flying at incredible speeds over Mt. Rainier in Washington landed UFOs on the front pages of newspapers across the nation. A landmark *True* magazine article by Donald Keyhoe entitled “The Flying Saucers Are Real” postulated that UFOs, such as those encountered by Arnold, were actually extraterrestrial spaceships. Pulp magazines and Hollywood producers seized upon this image, and, not long after the

article's publication in 1949, the UFO as an alien vehicle became the dominant public interpretation of these phenomena. The shift in public perception was accompanied by a massive increase in the number of UFO sightings.

The government quickly became involved in this cultural phenomenon, inaugurating committees to investigate the sightings. The air force's Project Sign, which began its work in 1948, concluded that UFOs were real, but were easily explained and not extraordinary. UFOs, the committee concluded, were not extraterrestrial spaceships, but rather astronomical objects and weather balloons. Amid the growing public obsession with UFOs, a second project, Grudge, published similar findings, but engendered little public belief. The CIA-sponsored Robertson panel, named after H. P. Robertson, a director in the office of the Secretary of Defense, convened in January of 1953 and drastically changed the nature of the air force's involvement in the UFO controversy. Heretofore, the government had sought the cause of sightings. The Robertson panel charged the air force with keeping sighting reports at a minimum. The air force would never again conduct a program of thorough investigations with regard to UFOs; the main thrust of their efforts would be in the field of public relations. Government officials thus embarked on a series of educational programs aimed at reducing the gullibility of the public on matters related to UFOs. This policy has remained largely unchanged for the past 40 years.

Much to the government's consternation, adherents to the extraterrestrial theory formed a host of organizations that disseminated the beliefs of the UFO community through newsletters and journals; among these groups were the Civilian Saucer Committee, the Cosmic

Brotherhood Association, and the Citizens Against UFO Secrecy. Some of the larger organizations funded UFO studies and coordinated lobbying efforts to convince Congress to declassify UFO-related government documents. In the eyes of many UFO fanatics, government officials were conspiring to shield information on extraterrestrial UFOs for fear of mass panic, as in the case of Orson Welles's famed *War of the Worlds* broadcast. The government conspiracy theory took many forms, from the belief in secret underground areas—most notably the mythical Area 51 in Nevada where alien bodies recovered from UFO crashes allegedly were preserved—to the concept of “men in black,” government officials who silenced those who had come in contact with UFOs and aliens.

The UFO craze continued throughout the latter decades of the twentieth century. Numbers of sightings increased steadily, and, as of the late 1990s, almost half of Americans believed that UFOs were in fact extraterrestrial spaceships. A host of reputable citizens, among them Georgia Governor Jimmy Carter of Georgia, later U.S. president, stepped forward to say that they had witnessed extraterrestrial aircraft hurtling through the sky. UFOs and aliens also had become an indelible part of popular culture. Movies from *The Day the Earth Stood Still* (1951) to *Close Encounters of the Third Kind* (1977) portrayed extraterrestrial visitations via spaceships, while television series such as *The X-Files* and *Unsolved Mysteries* capitalized on public interest with weekly narratives on encounters with aliens and UFOs.

The form of the UFO myth changed shape somewhat in the 1980s and 1990s, as individuals began to claim that they not only had seen UFOs, but that they actually had been on board the spacecraft, as aliens had abducted them and performed experiments on them before returning them to Earth. One “abducted” 18-year-old claimed to have had sex with an extraterrestrial, while most others offered distinct remembrances of having sperm and eggs removed from their bodies by alien doctors, ostensibly so that human reproduction could be studied in extraterrestrial laboratories. By 1997, nearly 20 percent of adult Americans believed in alien abduction theories, and abduction came to supersede sightings of “lights in the sky” as the dominant image associated with UFOs.

Scholars believe that the UFO myth contains religious-like elements that do much to explain its massive appeal. In postulating the existence of superhuman beings, by promising deliverance through travel to a better planet, and by creating a community fellowship engaged in ritualized activities such as the various UFO conventions popular with believers, the UFO myth embodies much of popular religious belief. At the same time, the UFO myth, with its government conspiracy dimensions, resonates with an American public increasingly distrustful of its government. UFO “flaps,” periods of high numbers of UFO sightings, have corresponded to a number of broadly defined crises in government faith, among them the McCarthy hearings, the Vietnam War, and Watergate.

The public fascination with UFOs has shown no signs of abating in the 1990s. In 1997, the fiftieth anniversary of the Roswell incident, in which the government purportedly covered up the existence of a crashed UFO, nearly 40 thousand people flocked to Roswell, New Mexico, to pay homage to the alleged crash site. A number of Hollywood's biggest blockbusters were standard UFO and alien fare; these films included the box-office smashes *Independence Day* (1996), *Contact* (1997), and *Men in Black* (1997). Most tragically, the

Heaven's Gate UFO cult committed mass suicide in 1997 as part of an effort to gain the attention of a UFO they believed to be associated with the Hale-Bopp comet. Like other believers in UFOs, the Heaven's Gate cult located its hopes and fears about the world in the idea of disk-shaped alien spaceships, but, as scholar Curtis Peebles has aptly noted, "We watch the skies seeking meaning. In the end, what we find is ourselves."

—Scott Tribble

## Ulcers

Peptic ulcers are painful open sores or lesions in either the stomach (gastric ulcers) or duodenal lining (duodenal ulcers). Ulcers affect more than four million people each year and account for approximately 40,000 surgeries and six thousand deaths. With 10 percent of the population suffering from ulcers, they are responsible for an estimated three to five million doctor's office visits and two million prescriptions each year. Until the early 1980s, ulcers were believed to be caused primarily by such factors as stress and spicy foods, but a new link was found in 1982 that has changed attitudes about the causes of this common and painful condition. With the discovery of a bacterium called *Helicobacter Pylori* (H. Pylori), researchers have found increasing evidence that the majority of ulcers may be caused by this bacteria, and research suggests these ulcers can be treated with antibiotics.

Duodenal ulcers occur in the first section of the intestine after the stomach. The first occurrence of these ulcers is usually between the ages of 30 and 50, and is more common in men than in women. Gastric ulcers occur in the stomach itself, and are more common in those over 60, and affect more women than men. Ulcer symptoms may be mild, severe, or nonexistent and include weight loss, heartburn, loss of appetite, bloating, fatigue, burping, nausea, vomiting, and pain. The pain associated with ulcers is often an intermittent dull or gnawing pain, usually occurring two to three hours following a meal or when the stomach is empty, and is often relieved by food intake. While most of these symptoms require only a visit to the doctor, others require immediate medical attention. These symptoms include sharp, sudden pain; bloody or black stools; or bloody vomit sometimes resembling coffee grounds. Any or all of these symptoms

could signal a perforation, bleeding, or an obstruction in the gastrointestinal tract. H. Pylori is now considered a major contributing factor in both gastric and duodenal ulcers, with the remainder of the cases caused by damage from nonsteroidal anti-inflammatory drugs such as aspirin and ibuprofen.

Ulcers are diagnosed by such methods as an upper gastrointestinal (Upper GI) series or an endoscopy. Doctors who suspect an ulcer is caused by H. Pylori will often perform blood, breath, and stomach tissue tests after one of these procedures detects the presence of an ulcer. Since the discovery of H. Pylori, doctors try to determine if the ulcer is caused by this bacterium or if other factors such as the use of NSAIDs have contributed to the formation of the ulcer. Until the 1980s, medical professionals believed ulcers were caused mainly by stress, spicy foods, alcohol consumption, and excess stomach acids, and treated most ulcers with bland diets, antacids, and rest or reduced stress levels. In the early years of the twentieth century, physicians and psychologists considered overwork the cause of most ulcers. It was in the 1970s that researchers caused a stir with the idea that ulcers are caused by stress, creating a new buzzword in both the medical and business worlds. This theory led to an emphasis on stress management in the 1980s, and experts in every field from psychology to the New Age movement began to advance new theories on the causes and treatment of ulcers.

In 1982, when the H. Pylori bacterium was discovered, medical researchers began to think differently about the causes and treatment of ulcers. A pathologist in Perth, Australia, found that a significant number of ulcer patients were infected with the same unknown bacterium, later named H. Pylori. Research has found that the spiral-shaped H. Pylori bacteria are able to survive corrosive stomach acids because of their acid neutralizing properties. The bacteria work by weakening the mucous coating of the stomach or duodenum and allowing stomach acid to attack the more sensitive stomach or duodenal lining, leading to the formation of an ulcer. Possible causes of infection by H. Pylori include intake of contaminated food or water or possibly through saliva.

Many researchers in the late 1990s believe H. Pylori causes the majority of ulcers, with an estimated 80 percent of stomach ulcers and 90 percent of duodenal ulcers caused by the bacteria. Research suggests that 20 percent of Americans under 40 and 50 percent of Americans over 60 are infected with it. Further research has shown that 90 percent of ulcers traced to H. Pylori have been healed by the use of antibiotics and do not recur when treated with them.

Despite a statement by the National Institute of Health that most ulcers may be caused by H. Pylori, the issue remains a controversial one. By the final years of the 1990s, the Food and Drug Administration had not officially sanctioned the use of antibiotics to treat ulcers believed to be caused by H. Pylori. The predominant treatment of ulcers remains the use of medication such as antacids and drugs like Zantac, Tagamet, or Pepcid that inhibit the production of stomach acid, and lifestyle changes. If H. Pylori is indicated as a cause of ulcers, doctors often use a combination of drugs including antibiotics, H2 blockers such as ranitidine, proton pump inhibitors such as omeprazole, and stomach lining protectors.

While research continues to examine the causes and treatment of ulcers, doctors and patients have a wider range of treatments than ever before for ulcers, as well as related conditions such as heartburn and acid-reflux disease. The last two decades of the twentieth century

have afforded a greater understanding of the formation of ulcers and provided a promising outlook in identifying a cure for this common and potentially dangerous disease.

## Underground Comics

Underground Comics (or "Comix," with the X understood to signify X-rated material) include strips and books heavily dosed with obscenity, graphic sex, gory violence, glorification of drug use, and general defiance of convention and authority. All are either self-published or produced by very small companies which choose not to follow the mainstream Comics Code. Some undergrounds are political, carrying eco-awareness, anti-establishment messages, and general revolutionary overtones. Others are just meant for nasty, subversive fun. All have elements of sensation and satire. The origins of underground comics can be traced to the so-called "Tijuana Bibles" of the 1930s and 1940s: illegally produced 8-page mini-comics that depicted mainstream comic strip characters getting drunk and having sex (Popeye, Mickey Mouse, Dick Tracy, etc.). The legacy of underground comics are the Alternative and Independent of the 1980s and 1990s.

Underground comics truly came into their own during the 1960s, thanks to the talents of artist/writers such as Robert ("R.") Crumb, Gilbert Shelton, and S. Clay Wilson. The first underground strips appeared in underground papers such as New York's *East Village Other*, Berkeley's *Barb*, the Los Angeles *Free Press*, and the Detroit *Fifth Estate*. The first recognizable underground comic book is *God Nose (Snot Reel)* put out by Jack ("Jaxon") Jackson in 1963. Undergrounds proliferated in the mid and late 1960s, with printing and distribution by companies such as San Francisco's Rip-Off Press, Milwaukee's Kitchen Sink Enterprises (a.k.a. Krupp), and Berkeley's Print Mint. These companies sold their books not through newsstands but through Head Shops.

The first issues of R. Crumb's *Zap* (1967) were a milestone in underground comics. *Zap* featured the catchy Keep On Truckin' image and introduced characters such as the hedonistic guru Mr. Natural and the outwardly proud but inwardly repressed Whiteman. Crumb's intense and imaginative artwork, strange and often shocking images, unsparing satires, and unflattering self-confessions still remain perhaps the most impressive work in the history of underground comics. Crumb's very popular comics and illustrations have become widely available in compilations, anthologies, and even coffee table

books. Crumb's life and work are the subject of the excellent 1995 documentary film, *Crumb*.

Gilbert Shelton found his greatest success with his *Fabulous Furry Freak Brothers* comic, more than a dozen issues of which have been infrequently published since #1 in 1968. The Freaks include Phineas, Freewheelin Franklin, and Fat Freddy (the most popular of the three): fun-loving hippy buddies out looking for sex, drugs, and rock n' roll—especially drugs. The comic also features the adventures of Fat Freddy's cat, who must sometimes fight off suicidal cockroaches in Freddy's apartment. Shelton also writes and draws the superhero parody strip "Wonder Wart-Hog."

S. Clay Wilson holds the distinction of being the most perverse and most disgusting of any underground comic artist. His work is filled with orgies and brawls, molestations and mutilations. His characters are usually pirates, lesbians, motorcycle gangs, or horned demonic monsters. All his characters are drawn in anatomically correct detail, complete with warts, nosehair, sweat, saliva, and wet rubbery genitalia. Comics featuring his work include *Zap* and *Yellow Dog*.

Other important and popular underground artist/writers include: Kim Deitch whose playful and humorous work appeared (among elsewhere) in the *East Village Other* and *Gothic Blimp Works*; Greg Irons whose frightening bony faces and horror stories appeared in *Skull*; Rick Griffin whose psychedelic-organic art appeared in *Zap*, countless posters, and some of the more famous Grateful Dead album covers; Victor Moscoso whose space/time distortions show the influence of M.C. Escher; George Metzger who was the most important sci-fi/fantasy underground artist with his dreamy *Moondog* book; and Richard Corben (later famous for the Den series in *Heavy Metal*), whose fleshy, muscular, scantily-clad men and women appeared under the pseudonym "Gore" in *Slow Death* and *Death Rattle*. Mainstream artists who got their start with early undergrounds include Bill Griffith (*Zippy*) and Art Spiegelman (*Maus*, covers for *The New Yorker*). There have been few women in underground comics, but notable exceptions include Trina Robbins and Lee Marrs, both of whom worked as artists, writers, and editors. Robbins edited *It Ain't Me Babe Comix*—the first all-women comic—in the early 1970s.

In the 1960s and 1970s, the most popular underground sex comics included *Snatch Comics*, *Jiz Comics*, *Big Ass Comics*, *Gay Comics*, *Young Lust*, and *Bizarre Sex*. Popular pro-drug comics included *Freak Brothers*, *Dope Comix*, and *Uneeda Comix*. Popular political compilations included the anti-pollution *Slow Death* and the anti-government *Anarchy Comics*. Small print-runs and low distributions kept most of these comics away from the eyes of civil and political authorities. But there were some notable legal battles, the biggest of which erupted in 1969 over *Zap Comics* #4, which featured Crumb's infamous "Joe Blow" story about an incestuous S&M family orgy. A New York State judge ruled the comic obscene and therefore illegal, holding publisher Print Mint liable for fines.

When Head Shops died out in the early 1970s, many underground comics vanished entirely, the survivors becoming available only through mail order. But with the dawn of comic speciality shops in the early 1980s, undergrounds once again had a place on the shelves. In the 1990s, reprints and compilations of early undergrounds are found alongside conventional mainstream books.

The influence of underground comic books and the openness of comic specialty shops helped make possible the so-called Alternative or Independent comics that flourished in the 1980s and continue to reach wide audiences through the late 1990s. Some of the most

popular Alternatives are the Hernandez brothers' *Love and Rockets*, Chester Brown's *Yummy Fur*, Roberta Gregory's *Bitchy Bitch*, Peter Bagge's *Hate*, Dave Sim's *Cerebus*, Dan Clowes's *Eightball*, Charles Burns' *Black Hole*, and compilations *Weirdo*, *Raw*, and *Drawn & Quarterly*. Like the early undergrounds, these new books are uncompromising in their treatment of sex and violence, and often hold skeptical and subversive undertones. Most Alternatives avoid the extremism of their 1960s and 1970s predecessors, but without these earlier books, the widely-read and widely-praised Alternative books would not have been possible.

## *Unforgiven*

Of his 1992 film *Unforgiven*, director and star Clint Eastwood said "the movie summarized everything I feel about the Western." Despite this, the film sparked considerable debate about exactly what it had to say about the Western. Some critics have argued for the film as an anti-Western, tearing down the icons of the genre, while others have insisted that it is simply a continuation of the genre, but with slight variation. Whatever deeper meanings the film may have intended, it meant for many, including the filmmakers, a restoration. Not only did the film give a needed career boost to actors like Eastwood, Gene Hackman, Morgan Freeman, and Richard Harris, but it also was credited with revitalizing the Western genre. Interestingly, the film was also touted by some critics as the final word on the Western. Indeed, none of the Westerns released in *Unforgiven's* wake have matched the impact of Eastwood's dark, brooding film. Certainly, none matched *Unforgiven's* critical and commercial success. It broke box office records, not only for a Western, but for an August

Gene Hackman (left) and Clint Eastwood in a scene from the film *Unforgiven*.

release, and won four Academy Awards: Best Picture, Best Director, Best Supporting Actor (for Hackman), and Best Editing.

These accomplishments were all the more remarkable given the state of the genre. Within the film industry, the Western was largely considered dead and gone, and earlier attempts to resuscitate it had been tepidly received, with the exception of Kevin Costner's 1990 Western-of-a-sort, *Dances with Wolves*. David Webb Peoples penned the *Unforgiven* script (originally entitled "The Cut-Whore Killings") in 1976, but it had attracted only slight interest. Francis Ford Coppola had optioned the script but allowed the option to lapse. Eventually it was picked up by Eastwood, who sat on the script for some time, claiming that he needed to age into the lead role of William Munny.

At the beginning of the film, Munny is a struggling hog farmer raising two young children. A prologue scrolling across the screen tells of a less domestic Munny, a drunk, an outlaw, and a killer, now reformed, according to Munny, by his dead wife. But Munny's reputation brings to the ranch the Schofield Kid (Jaimz Woolvett), who lures Munny away in pursuit of a bounty on two cowboys involved in the mutilation of a prostitute. Munny, in turn, recruits his partner from the old days, Ned Logan (Freeman). What follows is the story of their search for the cowboys and their conflict with the law of the Wyoming town, Big Whisky, and a brutal sheriff named Little Bill Daggett (Hackman). The killings of the cowboys are pivotal. The first is that of Davey Boy, whose crime is largely to have been on the scene at the time of the attack on the prostitute. This is a drawn out and painful scene in which Munny shoots the cowboy from a distance. Rather than dropping to a quick death, the cowboy's life slowly ebbs while he calls out to his friends for water. Logan is left too rattled by the murder to continue in pursuit of the other cowboy. The Schofield Kid, finally living up to his bravado, kills the second cowboy, who is squatting in an outhouse at the time. The Kid is consequently reduced to trembling and tears by the gravity of what he has done, realizing that he isn't the Billy the Kid figure he has pretended to be.

The final scene is one that critics have found more troubling. It is a scene that might well be out of the penny dreadfuls of the Old West. Munny confronts Daggett and his deputies, single handedly killing five armed men. Munny's attack is motivated by vengeance against those who killed his friend, and this, combined with the incredible odds, turns Munny into a kind of mythological force for vengeance, despite the film's earlier attempts to reduce Munny to a very human and fallible man. Still, it can be argued that the final scene doesn't come off quite the way it might in another Western. Given the unpleasantness of the earlier killings, this scene is tainted, polluted with the knowledge that, as Munny puts it, "It's a hell of a thing killing a man."

Certainly, *Unforgiven* employs many of the genre's clichés while simultaneously undercutting the comfort that comes with such clichés. This had been done before, particularly in spaghetti Westerns, but whereas these presented a parody of the Western myth with almost cartoonish violence, the violence in *Unforgiven* is decidedly more realistic. Moreover, whereas many earlier Westerns were brightly lit, the action in *Unforgiven* is often shrouded in darkness and haze.

Eastwood dedicated the film to Sergio Leone and Don Siegel, suggesting a nod to his mentors and influences. *Unforgiven* is certainly in the tradition of Leone's spaghetti Westerns, but Eastwood carried the tradition to a new level. Putting his own spin on the genre, he created a new standard, a Western for an era in which the invented heroics of the past seem less convincing than they may have in the heyday of the genre. *Unforgiven* reflects the skepticism of its time, wherein the old John Ford adage "When the legend becomes fact,

print the legend" doesn't quite hold up any more. Eastwood's film suggests that the legend is a frail thing and that perhaps truer things have a way of showing though.

## Unidentified Flying Objects

See UFOs (Unidentified Flying Objects)

## Unitas, Johnny (1933—)

The gaudiest names on the gridiron often are quarterbacks. In the 1990s, such glamour boys as Joe Montana and Steve Young, Dan Marino and John Elway and Bret Favre have earned the bulk of National Football League fame. However, none of these superstar signal callers have anything on Johnny Unitas, otherwise known as "Mr. Quarterback," "The Golden Arm," and simply "Johnny U.," who played for the Baltimore Colts between 1956 and 1972. In his prime, Unitas was the league's most renowned, respected, and feared quarterback. As noted in his enshrinee data at the Football Hall of Fame, he was a "legendary hero," and an "exceptional field leader [who] thrived on pressure."

Johnny U.'s career is defined by a combination of luck, persistence, and hard work. He was born John Constantine Unitas in Pittsburgh, and began his quarterbacking career as a sophomore at St. Justin's High School when the first-string signal caller busted his ankle. He had a scant seven days to master his team's complete offense. As he neared graduation, the lanky six-footer with the signature crew cut hoped to be offered a scholarship to Notre Dame, but was denied his wish as the school determined that he probably would not add weight to his 138-pound frame. Instead, he attended the University of Louisville, from which he graduated in 1955.

While no college gridiron luminary, Unitas had impressed people enough to be drafted in the ninth round by the Pittsburgh Steelers. Unfortunately, the team was overloaded with signal callers—and its coach believed Unitas was "not intelligent enough to be a quarterback"—and so he was denied a slot on the Steelers' roster. Unable to hook up with another NFL team, he settled for work on a construction gang and a spot on the semi-pro Bloomfield Rams, where he earned \$3 per game. Fortunately, the Baltimore Colts called him in early 1956 and invited him to a try out the following season. He was signed to a \$7,000 contract, and played for the Colts for the next 17 years before finishing his career in 1973 with the San Diego Chargers.

Unitas was the Babe Ruth, Michael Jordan, and Wayne Gretzky of quarterbacks. Upon his retirement, he held the NFL records for making 5,186 pass attempts and 2,830 completions, throwing for 40,239 total yards and 290 touchdowns, tossing touchdown passes in 47 consecutive games, and having 26 300-yard games. He also threw for 3,000 yards or more in three seasons, and piloted his team to three

**Baltimore Colts quarterback Johnny Unitas (right) passes against the Green Bay Packers, 1964.**

NFL championships (in 1958, 1959, and 1968) and one Super Bowl title (in 1971). Unitas was one of the stars of what is arguably the greatest game in NFL history: the Colts' 1958 title victory over the New York Giants, a 23-17 overtime win in which he completed 26 of 40 passes for 349 yards. Down 17-14 in the final minutes of the fourth quarter, he marched the Colts 85 yards; with seven seconds remaining on the clock, Steve Myhra booted a 20-yard, game-tying field goal. Then in overtime, Unitas spearheaded his team to 80 yards on thirteen plays, with Alan Ameche rushing for the game-winning touchdown.

Unitas was a five-time All-NFL selection, a three-time NFL Player of the Year, a ten-time Pro Bowl pick—and a three-time Pro Bowl MVP. He was named “Player of the Decade” for the 1960s, and was cited as the “Greatest Player in the First 50 Years of Pro Football.” He was one of four quarterbacks—the others are Otto Graham, Sammy Baugh, and Joe Montana—named to the NFL’s 75th Anniversary Team. He was inducted into the Football Hall of Fame in 1979.

In retirement, Unitas sported a crooked index finger on his passing hand: a souvenir of his playing career. He was fiercely proud of his reputation as a hard-nosed competitor who once declared, “You’re not an NFL quarterback until you can tell your coach to go to

hell!” He also has noted that playing in the NFL of the 1990s would be “a piece of cake. The talent’s not as good as it once was. . . . [Defensive backs] used to be able to come up and knock you down at the line of scrimmage. If you tried to get up, they’d knock you down again, then sit on you and dare you to get up.”

And he has been quick to declare that he should not be censured for his team’s shocking 16-7 loss to Joe Namath and the underdog New York Jets in Superbowl III—the game that established the upstart American Football League as a rival of the NFL. For most of the 1968 season, Unitas had been plagued by a sore elbow. Earl Morrall, who had replaced Unitas in training camp and was the league MVP, started the game for the Colts. In the first half, the Jets’ secondary intercepted three of his passes. Unitas, the aging, injured veteran of the football wars, heroically came off the bench in the fourth quarter to complete 11 of 24 passes, for 110 yards. Unfortunately, the Colts could muster only a single touchdown.

“I always tell people to blame [Colts coach Don] Shula for that,” he once observed, “because if he had started me in the second half, I’d have got it.”

—Rob Edelman

## United Artists

Founded in 1919 by Douglas Fairbanks, Charlie Chaplin, Mary Pickford, and D.W. Griffith, United Artists (UA) began as a distributor and financier of independent films and their producers; it was not a studio and never had stars under contract. UA was a unique entity in the early history of Hollywood, never losing sight of its goal—to make and distribute quality work.

The idea for United Artists began when Fairbanks, Chaplin, Pickford, and cowboy star William S. Hart were traveling around the country selling Liberty bonds to help the World War I effort in 1918. The four began to discuss the possibility of forming their own company to protect them from rumored studio mergers and the loss of control and salary this might cause. Hart eventually bowed out, but was soon replaced with the world's premier director, D. W. Griffith. When the company was officially formed in February of 1919, many felt that "the idiots had taken over the asylum."

The company was an immediate success. UA brought audiences hits such as Pickford in *Pollyanna* (1920), Griffith's *Broken Blossoms* (1919), Fairbanks as *Robin Hood* (1923), and Chaplin's masterpiece, *The Gold Rush* (1925). With such quality work, UA's only problem in the early years was providing enough product to meet the demand of the audiences.

UA began courting other stars to have their work distributed through the company. While many declined, some of the top stars of silent films agreed, including Gloria Swanson, Norma Talmadge, and Buster Keaton. The company also brought in Joseph Schenck as a partner and chairman of the board in 1924. He secured producers like Samuel Goldwyn, Walt Disney, and Howard Hughes, all of whom added to the roster of successful films released through UA.

UA was temporarily hurt by the advent of "talking pictures." While initially there were hits such as *Coquette* (1929), for which Mary Pickford won an Academy Award, as "talkies" became more the rule than the exception, the company found its product in less demand. One notable exception was *Hell's Angels* (1930), produced by Howard Hughes. After silent screen star Greta Nissen had to be replaced, Hughes introduced to the screen the sex symbol of the 1930s, Jean Harlow. The result made *Hell's Angels* one of UA's biggest hits.

But UA was beginning to lose some of its creative talent as Griffith, Disney, Schenck, and others left. The company managed, however, to stay afloat with hits such as *The Scarlet Pimpernel* (1935), *Dodsworth* (1936), and *Algiers* (1938). The star founders of UA had all but faded by this time. Griffith was gone, Fairbanks was dead, and Pickford's career was over, although she was still a stockholder in the company. Charlie Chaplin continued to be successful, however, particularly with *Modern Times* in 1936.

UA fell on hard times in the 1940s. The hits were fewer and more creative forces such as David O. Selznick and Alexander Korda left

the company. In 1950 a syndicate led by Arthur Krim and Robert Benjamin took over operations. As the old studio system died, Hollywood changed and the independents, including UA, had the upper hand. The old production code and puritanical limits to motion picture making were also disappearing. One of the first and biggest reasons for this was Otto Preminger's *The Moon is Blue* (1953). UA released the film without the seal of approval from the Production Code Administration. Despite, or perhaps because of this, the film was a box office and critical success. The 1950s, however, marked the end of an era at UA for another reason. By 1956 founders Chaplin and Pickford gave in to pressure and sold their shares in the company. UA then had a public stock offering in 1957.

Following the public sale of UA, *The Apartment* (1960) was released and won five Academy Awards, signaling a prosperous time for the studio. In 1961 UA announced what turned out to be a brilliant decision: the company was going to release seven James Bond films, all of which went on to be big hits. The spy series proved to be one of the most successful in motion picture history.

If a motion picture company is to stay afloat, it must, in some way, reflect changes in society. Things were clearly changing with the Vietnam War, the generation gap, and the beginning of the sexual revolution. UA continued its success with violent and controversial hits like *The Dirty Dozen* (1967) and *The Wild Bunch* (1969). In the late 1960s, UA experienced the first of many shakeups in ownership when in 1967 Transamerica took over the company. By 1969, millionaire Kirk Kerkorian was the largest shareholder. While UA continued to have hits such as *One Flew Over the Cuckoo's Nest* (1975), many were not happy with the way the company was being run. In 1978 several executives, including Krim and Benjamin, resigned from the company to form Orion Pictures.

In November of 1980, UA released a film that has become known as the biggest box office disaster in motion picture history—*Heaven's Gate*—which lost \$40 million. In 1981 MGM (Metro-Goldwyn-Mayer) bought UA and it became MGM/UA. The company continued to be sold and resold throughout the 1980s, and in the 1990s it no longer existed in its original form.

Nevertheless, United Artists will be remembered for its part in changing the face of Hollywood, for offering more control to the creative forces of motion pictures and less to the businessmen. In addition to producing many hit films throughout the years, UA is also largely responsible for the way in which the motion picture industry evolved as the studio system began to fade.

—Jill A. Gregg

## Unser, Al (1939—)

Al Unser, Sr., one of the foremost names in the sport of auto racing, is known primarily for his remarkable success at the Indianapolis 500. He is the second of three generations of racecar drivers, and it is arguable that no other family has left such an indelible mark on a sport as the Unser family has done on auto racing. Al's uncle, Louie Unser, attempted qualification at the Indianapolis 500 in 1940;

Al Unser

his brother Jerry was national stock car champion in 1956 but was killed in 1959 while on a practice lap at Indianapolis. The two surviving brothers, Al and Bobby Unser, went on to win a total of seven Indianapolis 500 races, while Al's son, Al Unser, Jr., is successful in his own right, having twice won at Indianapolis by the late 1990s. Johnny Unser (Jerry's son) and Robby Unser (Bobby's son) are also third generation drivers at Indianapolis.

Al Unser, Sr. was born in Albuquerque, New Mexico, on May 29, 1939. At age 18 he began competitive auto racing with modified roadsters before progressing to Midgets, Sprints, Stock Cars, Sports Cars, Formula 5000, Championship Dirt Cars, and Indy Cars. His dominance in the sport is seen in the fact that he placed third in the national standings in 1968, second in 1969, 1977, and 1978, first in 1970, and fourth in 1976. He is one of the few drivers who can boast of a career that spans five decades.

Most drivers of Unser's generation are, however, judged by their success at Indianapolis, where Unser ranks first in points earned and second in miles driven and total money won. He is tied for second in a total number of 500 starts and is ranked fourth in money earned

leading the race. Although A. J. Foyt was the first driver to win four times at Indianapolis, Unser matched that feat in 1987, with Rick Mears the only other driver to do so subsequently. In 1988, Unser surpassed the long-standing record for the most laps led during a career at the 500, having achieved a staggering laps total of 644.

In addition to winning Indianapolis four times (1970, 1971, 1978, and 1987), Unser won the Pocono 500 and the Ontario 500 twice each. When he won at Indianapolis, Pocono, and Ontario all in the same year (1978) he achieved the unique distinction of sweeping this "Triple Crown" of Indy car racing. The 1970 season was perhaps his most remarkable of all, with 10 wins on ovals, road courses, and dirt tracks to capture the national championship. Al Unser also won the prestigious "Hoosier Hundred" four years in a row, making him a dirt-car champion, and had his share in the Unser family dominance of the Pikes Peak Hill Climb, taking back-to-back victories in 1964 and 1965.

Even as Unser approached the end of his career, he was still able to win two more national championships, in 1983 and in 1985. His main competitor in 1985 was his own son, who lost to his father by

only one point. Thus, at the age of 46, Al Unser enjoyed the distinction of becoming the oldest Indy Car champion.

Al Unser, Sr., an avid snowmobile enthusiast, retired to his home in New Mexico. Thanks to the particular popularity of Unser and his family within a sport of generally popular practitioners, everything from diecast racecars to CD-ROM computer games have been marketed with the Unser name.

—James H. Lloyd

## Unser, Bobby (1934—)

The Unser family has produced many superb race-car drivers, amongst them Bobby Unser, who recorded 35 Indy car victories and two United States Auto Club (USAC) national driving championships over his 32-year career.

Robert William Unser was born in Albuquerque, New Mexico, on February 20, 1934 and began racing at the age of fifteen. The dream of most race-car drivers at the time was to drive in the Indianapolis 500; Unser won at Indianapolis in 1968, 1975, and 1981. In addition to Indy cars, he claimed victories in sprint cars, stock cars, and midget racers. After retirement he won USAC's Fast Masters Tournament for drivers over the age of 50.

During the height of his career, race cars and other toys were marketed with his name. In the 1990s, Unser worked for ABC Sports and was one of the most respected color commentators for the sport of motor racing.

## Updike, John (1932—)

Considered by critics to be one of the most significant American writers of the latter half of the twentieth century, John Updike is best

known for his tetralogy of Rabbit novels (*Rabbit, Run*, 1960; *Rabbit Redux*, 1971; *Rabbit is Rich*, 1981; and *Rabbit at Rest*, 1990), which chronicles four decades of American culture through the eyes of Everyman protagonist Harry Angstrom. His depictions of everyday middle-class life and the stifling atmosphere of marriage have, in the minds of many readers, vividly captured the emptiness of middle America. Prolific and versatile, Updike has published 50 volumes, including novels, short stories, essays, reviews, poems, memoirs, and drama.

Updike was born in Reading, Pennsylvania, on March 18, 1932 and grew up in the small town of Shillington. He later lived on a family farm in nearby Plowville. Through early academic success, Updike earned a scholarship to Harvard, where he continued the writing and drawing he had begun as a child. Following graduation from Harvard, Updike spent a year in Oxford, England, studying drawing on a fellowship, and two years in New York City working as a staff writer for *The New Yorker*.

In 1957 Updike and his young family, which would grow to four children by 1960, left New York City and moved to the small town of Ipswich, Massachusetts. Big-city life had proved too distracting, expensive, and overwhelming. By returning to a small town, not so unlike the Shillington of his youth, Updike found an atmosphere conducive to writing that would allow him to experience firsthand the middle-class everyday life that would become the great subject of his work.

In Ipswich, Updike began publishing books, beginning with a volume of poetry, *The Carpentered Hen* (1958); a first novel, *The Poorhouse Fair* (1959); and a collection of stories, *The Same Door* (1959). Most of Updike's early work, written between the early 1950s and mid-1960s, depicts and lyrically celebrates a mythically endowed Pennsylvania that the author knew intimately from childhood. His most famous novel, *Rabbit, Run* (1960), depicting the angst and entrapment of early married life, appeared in 1960 and would go on to sell more than 2.5 million copies. Before he turned 30, Updike had established himself as one of his generation's foremost writers.

Updike's break with his early work came in 1968 with the publication of the novel *Couples*, set in a small New England town, that dealt with the adulterous interactions of a circle of 10 couples. The novel, the author's first and only number-one best-seller, landed Updike on the cover of *Time* magazine (he would appear there again in 1982) and greatly enlarged his readership. Over the subsequent decade Updike became America's best-known chronicler of marriage and adultery, producing such works as *A Month of Sundays* (1975), *Marry Me* (1976), and *Too Far to Go* (1979). During this same period, Updike divorced his first wife of 20 years and remarried.

The next phase of Updike's writing was signaled by the publication of *The Coup* (1978), one of the most radical departures of his career. Set in a fictional African country and told from the perspective of a black African leader in exile, *The Coup* was a breakthrough novel, demonstrating that Updike could extend his vision beyond suburban adultery or a Pennsylvania boyhood.

Updike went on to write some of his finest and most exuberant fiction during the late 1970s and early 1980s, including *Problems and Other Stories* (1979), *Rabbit is Rich* (1981), and *The Witches of Eastwick* (1984). In addition, he emerged as one of America's finest and most prolific literary critics through the publication of his award-winning critical tome *Hugging the Shore* (1983).

In his later novels, such as *Roger's Version* (1986), an intellectually demanding novel about a divinity professor and his battle with a computer scientist, *Rabbit at Rest* (1990), and *Toward the End of*

*Time* (1997), Updike has revealed his concerns with aging and displayed a bleakness and detachment that stand in contrast to the lyrical celebration of much of his early work. *Roger's Version* also signaled the increasing use of research in Updike's writing, to the extent that he began appending bibliographies to his novels. More heavily intertextual and loaded with information, these novels reveal a more erudite author.

Despite his large following, Updike has had his share of critics. Some have argued that while he may be a brilliant verbal performer, he allows himself to be carried away by his prose, to the point that his language becomes excessive in description and detail. In addition, some have found his graphic depictions of human sexuality to be gratuitous, and several feminist critics have accused him of misogyny.

Updike is considered by many to be America's greatest poetic novelist—a master of metaphor, scene, description, and image. With his verbal gifts, his eye for detail, and his lyric love of the surface world, Updike has created moments and scenes of extraordinary beauty and freshness. Like Walt Whitman, the great nineteenth-century poet, Updike has attempted to celebrate and sing America, delighting in its textures and surfaces, its objects and gestures. His subject, in his own words, is “the whole mass of middling, hidden, troubled America,” and the purpose of his books, which together form “a continental *magnum opus*,” has been “the hymning of this great roughly rectangular country.”

## *Upstairs, Downstairs*

*Upstairs, Downstairs*, a popular British-import television program about servants and their masters in an early twentieth-century London household, has been watched by an estimated one billion people in 40 countries since it was first broadcast on *Masterpiece Theatre* during the 1974 season. Produced by London Weekend Television, its 68 episodes follow the wealthy Bellamy family (“upstairs”) and their servants (“downstairs”) from 1903 until the stock market crash of 1929. Rigorous period detail, distinguished acting, and the equal time given to lower-class characters are hallmarks of the series. In depicting the erosion of the British class system during and after the Edwardian era, *Upstairs, Downstairs* bolstered the reputation of British television around the globe. The show won eight Emmy Awards and garnered high ratings for the Public Broadcasting

System in the United States, besides helping assure the success of *Masterpiece Theatre* as a PBS showcase synonymous with quality programming.

## U.S. One

Running from Fort Kent, Maine, to Key West, Florida, U.S. One has served as the site and symbol for East Coast travel for much of the twentieth century. Stretching 2,377 miles, Route One got its name in 1925—when federal highway numbering began—as a recognition of the road's history as the primary conduit for passengers, commerce, information, and culture along the Atlantic seaboard. Much like Route 66, Route One became a popular site for exploring “local color” and roadside excursions. In 1938, the Federal Writers' Project published a popular guidebook highlighting distinctive landmarks, historical sites, and even local foods found along the route. Although still in active use by the late 1990s, U.S. One has lost much of its traffic to newer Interstates that allow travel at faster speeds.

## *USA Today*

Debuting during an era when most newspapers saw sharp circulation declines, *USA Today* became the first successful national daily general-interest newspaper in the 1980s. Its stylish innovations, originally lampooned and mocked, were eventually adopted by most of the newspaper industry.

*USA Today* was the brainchild of Allen H. Neuharth, who became chairman of the Gannett newspaper chain during the 1970s. He began his publishing career in 1952 by starting a statewide sports newspaper in his native South Dakota, and joined Gannett in the 1960s by creating a statewide daily in Florida. He helped lead Gannett from its initial holdings in small upstate New York newspapers to a more national base. During his tenure at Gannett, the company bought the Louis Harris and Associates polling organization. Upon being named chairman of Gannett in 1978, he began developing the idea of a national daily newspaper; in December 1980, Gannett began a satellite information system, which would allow publishing plants on the East and West coasts to simultaneously publish the same information from one satellite. Neuharth insisted that there was also a

growing market for a national newspaper—by the early 1980s, the rise of business travel meant that millions of people on business trips would tire of reading out-of-town newspapers, and want a standard newspaper from one city to another. A Neuharth associate said, “When (a traveler) wakes up in the morning his first thought is, ‘What city am I in?’ . . . The local newspaper doesn’t mean a thing to him.”

Neuharth oversaw the development of the newspaper, which was introduced in select markets on September 15, 1982 (it did not saturate the entire country until late 1983). *USA Today*’s staff had a dilemma as the deadline for the first edition neared, when three breaking news stories jockeyed for top coverage—Lebanese president-elect Bashir Gemayel was assassinated, a plane crash in Spain killed 55, and Princess Grace of Monaco had died in an automobile accident at age 53. The newspaper’s editors spent much of September 14 on the streets and in offices in suburban Washington, D.C., determining that the public was most interested in Princess Grace’s death; as Grace Kelly, she had been a major American film star during the 1950s. As a result, *USA Today*’s inaugural front page trumpeted the death of “America’s Princess,” relegating Gemayel’s death to one paragraph on page one. Significantly, the coverage of the plane crash emphasized the “miracle” of 327 surviving passengers, not the 55 dead. The new paper was roundly castigated by media critics and competing newspapers for focusing on celebrity over international politics. In 1997, a subsequent *USA Today* editor, David Mazzarella, admitted that he would have led with the plane crash, featured a larger story on the assassination, and merely played Kelly’s death as a small page one feature.

Criticism of *USA Today* began almost immediately. “A national daily newspaper seems like a way to lose a lot of money in a hurry,” media analyst John Morton wrote upon *USA Today*’s debut. Complaints started with the newspaper’s very look. It was sold in vending machines designed to resemble television sets, leading critics to accuse the newspaper of coverage as shallow as television (unlike established newspapers, *USA Today* used flashy national commercials in its first years, with celebrities from Willard Scott to Willie Mays and Mickey Mantle promoting the newspaper). Many derisively compared *USA Today* to fast food, calling it “McPaper.” The newspaper ran full-color photographs on the front pages of each of its four sections at a time when color photography was prohibitively expensive for many newspapers, and seen as too garish by many editors. The *New York Times*, for example, was known as “The Gray Lady” for its steadfast black-and-white pages. The back of the news section was a full-page, full-color weather map, while most of its rivals printed a small, black-and-white map of the weather on an inside page. Each section—“News,” “Money,” “Sports,” and “Life”—had only one story jump from the first page to the inside. Neuharth and his editors made a conscious decision to replace long newspaper stories with shorter pieces, accompanied by sidebars, and a greater use of charts and tables, and the paper’s motto became, “An economy of words. A wealth of information.” Each section also published polls every day, and invariably referred to “America” in its news stories as “the USA.”

In an editorial mission statement in *USA Today*’s first issue, Neuharth wrote that he wanted his newspaper “to serve as a forum for better understanding and unity to help make the USA truly one nation.” Each section of his paper was a deliberate attempt to fulfill this belief. The news section featured a state-by-state breakdown of top news stories, giving readers a cross-section of news events from across the country. The daily editorial was frequently accompanied

by a differing viewpoint (“Another View”) from a guest writer (in its early years, *USA Today* would include four editorials from various regional writers alongside its main editorial). The newspaper also developed a middle-of-the-road op-ed section, with regular national commentary from veteran journalists Richard Benedetto and Walter Shapiro. More politically pointed opinion makers (such as conservative writer Cal Thomas) tended to fare less successfully, as the newspaper adopted a populist, rather than elitist, approach. One 1998 editorial, published after the Modern Library’s list of the top 100 American novels of the twentieth century, maintained that the truly great novels were the most commercially successful ones, not the most critically or intellectually acclaimed works.

*USA Today*’s “Money” section (symbolized by a green title), introduced a regular feature, “Ad Watch,” where popular television commercial campaigns were analyzed not by ad executives, but by focus groups of average American viewers. Eventually, *USA Today* ran “Ad Watch” features to judge commercials produced for the Super Bowl. The newspaper also began annual telephone public services during preparations for filing IRS (Internal Revenue Service) forms, as well as during college admissions and financial aid seasons, where money experts could provide free advice for readers.

*USA Today*’s sports section had the most impact upon the newspaper industry. It published daily notes on all professional sports (during football season, for example, it ran daily notes on each National Football League team), and introduced a top 25 ranking for college sports (the Associated Press and UPI lists had previously gone only to 20), as well as top 25 lists for high school sports. Their major league baseball coverage featured expanded boxscores, offering play-by-play accounts on how every run in each major league baseball game was scored, and extensive, week-by-week, team-by-team statistical charts. The expanded sports coverage was welcomed by Rotisserie league team owners, who rated their teams on how the players they “owned” performed day by day. In 1991, *USA Today* introduced a successful weekly spin-off devoted to baseball. In both incarnations, *USA Today* successfully challenged *The Sporting News*, which since 1886 had provided weekly coverage of baseball and other major sports. Significantly, the only major national daily newspaper formed after *USA Today*’s debut was a sports newspaper. *The National*, edited by former *Sports Illustrated* senior writer Frank Deford, debuted in 1989. Despite a roster of nationally-known columnists and a series of high-profile scoops, *The National* lost its investment and folded within two years.

The sports section also supplied *USA Today* with its greatest professional controversy. In 1992, *USA Today* sportswriters learned that tennis great/political activist Arthur Ashe was suffering from AIDS (Acquired Immune Deficiency Syndrome)—the result of a tainted blood transfusion in 1988—a fact he had told only family and close friends. The reporters contacted Ashe and told him they were planning a story on his health. Ashe responded by holding an emotional press conference, where he made his AIDS status public. *USA Today* came under intense criticism from inside and outside the journalism community. Many observers felt that the newspaper had violated Ashe’s privacy and had engaged in emotional blackmail, while others (such as Phil Mushnick) maintained that Ashe’s health was a legitimate news story, and that by Ashe coming forward and admitting he had AIDS—rather than staying silent—he was able to raise both awareness and financial support for the disease, which he would die from in early 1993.

*USA Today*’s “Life” section included a weekly column by radio and television talk show host Larry King, written much in the style of

legendary gossip columnist Walter Winchell. King recommended movies and books, while also making occasional political commentary and noting events in his personal life, most memorably his heart surgery, frequent marriages, and the birth of his son in 1999, when King was 65. The Life section featured annual high school and collegiate “Academic All-Stars,” honoring the brightest students in the nation. *USA Today*’s television coverage included nightly listings for national cable channels, several years before more traditional newspapers acknowledged cable’s growing presence. The newspaper initiated the weekly list of top ten films at the box office, which was widely imitated by other venues, and provided complete Nielsen ratings for all prime-time television series. The Life section also developed one of the most respected book review sections in the country, with lengthy book reviews from freelancers and a bestseller list (eventually listing the top 150 books) drawn from national bookstore chains. This was in opposition to the *New York Times* bestseller list, which listed only the top 15 books, and kept its listing methodology secret.

Cynicism towards the press grew during the 1980s and 1990s, fueled by political scandals, perceived ideological and cultural bias, and paparazzi reporting tactics (including those implicated in Princess Diana’s 1997 death). Neuharth saw his newspaper’s role as helping to alleviate the cynicism. The idiosyncratic Neuharth—whose autobiography, *Confessions of an S.O.B.*, included commentary from his two ex-wives—embarked on a cross-country “BusCapade” during 1987, writing a regular column from each of the 50 states to celebrate the bicentennial of the Constitution. Neuharth celebrated the down-home common sense of average Americans from the heartland, as opposed to out-of-touch politicians and academics from the East and West Coasts. Some dismissed Neuharth’s trek as a mere publicity stunt, but others appreciated his willingness to meet with his readers.

After a decade of losing money, *USA Today* finally turned a profit in 1993. The management spent their newfound prosperity on emphasizing its editorial content over its presentation. Executive editor Bob Dubill acknowledged that *USA Today*’s editors were “following TV. . . . Now, we’re trying to lead TV.” Within a 15 month span in 1996-1997, *USA Today* added an additional 25 reporting and editing slots for an editorial staff of 440. Publisher Tom Curley added, with pride, that many seasoned editors had returned to reporting beats. “We’ve taken some from the back room and put them on the street.” Having begun in 1982 with no international bureaus and only two domestic bureaus, by the late 1990s, *USA Today* was also starting four domestic bureaus and several foreign bureaus—coinciding with the closing of domestic and international news bureaus by the major television networks.

By the mid-1990s, much of the early criticism of *USA Today* had abated. Media critic Ben Bagdikian (author of *The Media Monopoly*), who in 1982 called *USA Today* a “mediocre piece of journalism (presenting) a flawed picture of the world every day,” recanted 15 years later. “It has become a much more serious newspaper . . . I don’t think it’s a joke anymore.” Veteran Washington reporter David Broder said, “*USA Today* has become a pretty damn good newspaper. They are spending money, and it is making a difference. And they are

everywhere.” John Morton, who had initially criticized Neuharth’s venture, said in 1997, “There is no question that they are a success. . . . You are less likely to find a front page article on some silly topic than on more serious issues. They have made it a more serious vehicle than it ever has been.” Thomas Frank of *The Baffler*, while attacking the daily’s middlebrow mindset, readily conceded that “*USA Today* is arguably the nation’s most carefully edited and highly polished newspaper,” concluding that it “has charted the course that almost every paper in the country is presently following.” In 1997, even *The Gray Lady*, the *New York Times*, began running color photographs in every section of its daily editions (*The Washington Post* followed suit two years later).

While the circulation of most daily newspapers declined in the 1980s and 1990s (as New York, Philadelphia, Dallas, and Los Angeles all lost papers), *USA Today* enjoyed the second highest circulation of any paper in the country, with 1.62 million readers as of March 31, 1997. Analysts hailed *USA Today*’s strategies to keep its circulation base by appealing to common demographic interests. Some, however, lamented that *USA Today* simply pandered to its readership’s pre-existing tastes, rather than helping its audience cultivate new ones; performance artist Jello Biafra dismissed the newspaper as providing “happy news for happy people with happy problems.” Others maintained that *USA Today* treated its readers as consumers, not public citizens, and were upset that Neuharth denied any professional obligation, as a newspaper publisher, to call for sustained political and social change.

Neuharth retired from Gannett in 1989 upon his 65th birthday, and helped found the Freedom Forum, a media think-tank which produces a quarterly magazine—*Media Studies Journal*. Neuharth wrote that the Forum’s principles were based upon “free press, free speech and free spirit.” In 1996, the Forum opened the Newseum, directly across the street from *USA Today*’s Arlington, Virginia, headquarters. The Newseum hosts seminars and is the backdrop for the Cable News Network (CNN) media analysis program “Reliable Sources,” and features many interactive media displays, allowing visitors to generate their own news broadcast, or select from newspapers across the country. Among the Newseum’s archival documents is one of only three surviving rough drafts of the Declaration of Independence, which includes Thomas Jefferson’s meticulous editing marks. Over 800,000 visitors toured the Newseum within its first two years, and in 1999, the Newseum began a coast-to-coast tour which, like the BusCapade, will visit each of America’s 50 states.

# V

## Valdez, Luis (1940—)

Luis Valdez is considered to be the father of Chicano theater. He is the instigator of the contemporary Chicano theatrical movement and its most outstanding playwright. Valdez has distinguished himself as an actor, director, playwright, and film maker. However, it was in his role as the founding director of El Teatro Campesino, a theater of farm workers in California, that his efforts inspired young Chicano activists across the country to use theater as a means of organizing students, communities, and labor unions.

Luis Valdez was born on June 26, 1940, into a family of migrant farm workers in Delano, California. The second of ten children, he began to work the fields at the age of six and to follow the crops. Although Valdez's education was constantly interrupted, he nevertheless finished high school and went on to San Jose State College, where he majored in English and pursued his interest in theater. While there he won a playwriting contest with his one-act *The Theft* (1961). In 1963 the Drama Department produced his play *The Shrunken Head of Pancho Villa*. After graduating from college in 1964, Valdez joined the San Francisco Mime Troupe and learned the techniques of agitprop (agitation and propaganda) theater and Italian *commedia dell'arte* (comedy of art), both of which influenced Valdez's development of the basic format of Chicano theater: the one-act presentational *acto* or "act." In 1965 Valdez enlisted in César Chávez's mission to organize farm workers in Delano into a union. It was there that Valdez brought together farm workers and students into El Teatro Campesino to dramatize the plight of the farm workers. The publicity and success gained by the troupe led to the spontaneous appearance of a national Chicano theater movement.

In 1967 Valdez and El Teatro Campesino left the unionizing effort to expand their theater beyond agitprop and farm worker concerns. From then on, Valdez and the theater have explored most of the theatrical genres that have been important to Mexicans in the United States, including religious pageants, vaudeville with the down-and-out *pelado* or underdog figure, and dramatized *corridos*, or ballads. The new type of socially engaged theater that El Teatro Campesino pioneered led to the creation of a full-blown theatrical movement in fields and barrios across the country. For more than three decades, El Teatro Campesino and Luis Valdez have dramatized the political and cultural concerns of Hispanics, initially among workers and their supporters and later among students in universities and the general public through stage, television, and film. In establishing the canon of what *teatro chicano* should be, Valdez and El Teatro Campesino published their *actos* (short one-act agitprop pieces) in 1971 with a preface in which Valdez outlined their theatrical principals: (1) Chicanos must be seen as a nation with geographic, religious, cultural, and racial roots in the Southwest; teatros must further the idea of nationalism and create a national theater based on identification with the Amerindian past; (2) the organizational support of the national theater must be from within and totally independent; (3) "Teatros must never get away from La Raza. . . . If the Raza will not come to the theater, then the theater

must go to the Raza. This, in the long run, will determine the shape, style, content, spirit and form of *el teatro chicano*." Valdez and his theater did expand by taking Chicano theater to Broadway and more commercial venues and by moving into commercial cinema and television.

During the late 1960s and the 1970s, El Teatro Campesino produced many of Valdez's plays, including *Los vendidos* (1967, *The Sell-Outs*), *The Shrunken Head of Pancho Villa* (1968), *Bernabé* (1970), *Dark Root of a Scream* (1971), *La Carpa de los Rascuachis* (1974), and *El Fin del Mundo* (1976). In 1978, Valdez broke into mainstream theater in Los Angeles with the Mark Taper Forum's production of his *Zoot Suit* and, in 1979, with the Broadway production of the same play. In 1986 he had a successful run of his play *I Don't Have to Show You No Stinking Badges* at the Los Angeles Theater Center.

In *Bernabé*, one of Valdez's most poetic plays, a young village idiot is transformed into a natural man by his marriage to La Tierra (The Earth) and his subsequent death. Employing Aztec mythology and symbols in a tale about contemporary barrio characters, the play explores the pre-Columbian heritage of Chicano society. The Mayan theme of "death is life, and life is death" was developed here and continued to appear in Valdez's later works. The writing of *Bernabé* marked the beginning of Valdez's search for the meaning of Aztec and Mayan legends, history, and philosophy, but also revealed the influence of Spanish playwright Federico García Lorca, who also strove to elevate the country folk to heroic and mythic stature.

Valdez's screenwriting career began with early film and television versions of Corky González's poem "I Am Joaquín" (1969) and with his own "Los Vendidos." Later, he wrote a film adaptation of *Zoot Suit* (1982). However, his real incursion into major Hollywood productions and success came with his writing and directing of *La Bamba*, the screen biography of Chicano rock 'n' roll star Ritchie Valens. Other screen plays include *Corridos* (1987) and the successful television movies *La Pastorela* (1991) and *The Cisco Kid* (1993). Valdez's plays, essays, and poems have been widely anthologized. He published two collections of plays: *Luis Valdez—The Early Works* (1990) and *Zoot Suit and Other Plays* (1992). Valdez's awards include an Obie (1968), Los Angeles Drama Critics Awards (1969, 1972 and 1978), a special Emmy Award (1973), the San Francisco Bay Critics Circle for Best Musical (1983), and honorary doctorates from San Jose State University, Columbia College, and the California Institute of the Arts.

## Valens, Ritchie (1941-1959)

The Latino teen rock sensation had a brief but brilliant career. Most famous for his song “La Bamba,” a rock ’n’ roll version of a traditional Mexican ballad, Ritchie Valens fused different kinds of music together to form his own remarkable style. Influenced by some of the biggest names in rock ’n’ roll, including Elvis Presley, Bo Diddley, and Little Richard, he earned himself the nickname “The Little Richard of San Fernando.” Although his career was cut short by a fatal plane crash, Ritchie wrote and recorded songs that would influence future generations of rock musicians, including the Beatles and Led Zepellin.

Born Richard Steve Valenzuela in the San Fernando Valley suburb of Pacoima, California, Ritchie received a good Catholic upbringing from his parents despite money being tight. As a child, Ritchie made himself a guitar out of a cigar box and a broom handle and strung it with household string. His home life gave him a grounding in traditional Mexican mariachi music played by his relatives, and the radio exposed him to the rhythm and blues sound. In 1956 Ritchie joined a band called The Silhouettes who performed at “hops” around the San Fernando Valley area. The Silhouettes were a multiracial band featuring two African Americans, a Japanese American, and Ritchie, a Mexican American. After various reshuffles in the band, Ritchie sang lead vocals and played the guitar.

Ritchie was discovered at the tender age of 16 by Bob Keane of Del-fi Records at one of the San Fernando garage hops. Once Keane saw how audiences responded to the band’s charismatic lead singer he gave him a recording contract. Keane changed his name to Ritchie Valens: a catchier, rockier, and Anglicized version of his real name. Ritchie’s first hit was a rock ’n’ roll number “Come On Let’s Go,” which he wrote himself. It reached number 42 on the U.S. charts. In October 1958, Del-fi released “La Bamba” with a lovesong entitled “Donna” on the other side. This lovesong was written by Ritchie about his high school sweetheart, who was forbidden by her father to go out with “that Mexican.” It turned out to be the more successful track, selling over a million copies and reaching number two on the U.S. charts. “La Bamba” only climbed as high as number 22.

Keane found Ritchie an unorthodox musician to work with; Ritchie would make up songs and then forget them, or he would base a whole song on just eight guitar chords and two lines of lyrics. The pair successfully recorded a large number of songs in Keane’s basement studio at his home in Silverlake, California. Keane wanted to get Ritchie out on the road on tour since his major talent was in performing. He assessed that Ritchie “could rock like a rough street kid while simultaneously exuding a shy, appealing vulnerability,” a combination that dazzled his teenage audiences.

Ritchie’s final tour was called “The Winter Dance Party.” He headlined with Buddy Holly and the Big Bopper. Ritchie, with the success of “Donna” under his belt, was not obliged to play low profile concerts in the Midwest but reportedly did so out of loyalty to his fans. The weather was bitterly cold and the heating had broken on their tour bus. Buddy Holly chartered a plane with space for himself, his guitarist, and the Big Bopper. Ritchie could not cope with the sub-zero temperature levels and talked Buddy’s guitarist into tossing a coin for the last seat. Ritchie won the toss. The plane crashed shortly after takeoff in a field outside of Fargo, North Dakota. All passengers were killed. The occasion was dubbed by the press as “The Day the Music Died.”

Had he lived longer, Ritchie would have likely become one of the most significant musicians of the 1960s. The cultural critic George Lipsitz wrote that “Valens’ tragic death at the age of seventeen deprived the Los Angeles Chicano community of its biggest star, and it cut short the career of one of rock and roll’s most eclectic synthesizers.” Ritchie’s talent lay in his ability to mix radically different types of music: black rhythm and blues, white folk music, and Mexican mariachi songs—the sounds that surrounded him as he grew up in postwar California. Despite being the only musician of Mexican ancestry to make it in the mainstream pop scene, Ritchie regarded himself as first and foremost American. He did not speak Spanish and had to be coached for singing the Spanish lyrics of “La Bamba.” In 1987 a biopic called *La Bamba*, made by the Chicano film director Luis Valdez was released, regenerating interest in Ritchie’s music, demonstrating how Ritchie’s music continued to touch young people. Ritchie’s music didn’t die with him.

## Valentine’s Day

Valentine’s Day, February 14, is a day consecrated by custom to the celebration of romantic love. The observance dates back to medieval times but, in twentieth-century America, Valentine’s Day—like other occasions that are linked to sentiment, such as Mother’s Day—has become a ritual appendage of consumer culture. Attempts to link Valentine’s Day and its emphasis on worldly love to an early martyr (or pair of martyrs) of the Christian church have been discredited, and historians have come to attribute the connection between romance and February 14 to Geoffrey Chaucer (1340?-1400), the English poet and author of *The Canterbury Tales*.

In his work *The Parliament of Fowles*, Chaucer wrote: “For this was Seynt Valentyne’s Day. When every foul cometh ther to choose his mate.” Throughout the late Middle Ages and the early modern period, Valentine’s Day was an occasion for declaring one’s affections or using divination to determine the identity of one’s lover or future spouse. Sleeping on a pillow to which five bay leaves were pinned, for example, would produce a dream in which a lover would be revealed. Observances of the day could be elegant and courtly or a raucous and vulgar charivari (mock serenade, usually of newlyweds). The first Valentine’s day cards were hand-made, but by the early nineteenth century in England printed cards were common. When this fashion was exported to the United States in the 1840s a veritable Valentine mania broke out.

The industrialized world of the early 1800s suffered from a shortage of holidays. Where once the feasting and fasting days of the

Christian year had provided the occasion for a host of holidays, festivals, and fairs, the Enlightenment and the Industrial Revolution had, in the names of efficiency and the economy, produced a calendar almost empty of special days. (In 1761 there were 47 bank holidays in England; by 1834 there were only four.) By popularizing and commercializing Valentine's Day in the United States the merchant class reshaped, romanticized, and tamed the day for their own purposes. Valentine's Day (and slightly later, Christmas) demonstrates how business could profit from creating new meaning for an old holiday.

Printing companies were not the only ones to profit from the new popularity of the day as other business interests rapidly attached themselves to the successful annual marketing of romance. Confectioners sold candies and chocolates in great quantities, while florists, jewelers, photographers, and makers of pens, pins, and knick-knacks of all kinds found they could increase sales by linking their product to Valentine's Day. Women and children were prime targets for this commercialization of sentiment.

In the twentieth century the Valentine's Day industry grew even more vast. By the 1990s, sales of candy for the occasion had risen to over \$600 million; 70 million roses are given on the day; restaurants are filled with couples seeking romantic dining; over a billion cards are exchanged every year in the United States alone, with school children leading the way. Hallmark Cards, the largest American manufacturer, produces over 2,000 different designs, which are changed annually. Most of these cards are plainer than they once were, shorn of the peacock feathers, real lace, and jewels that once adorned those of the nineteenth century. It is interesting to note that Valentine cards were not always necessarily sent as straightforward declarations of love. A widespread custom was the anonymous sending of insulting or sarcastic cards, often aimed at women to keep them in their place, and comic or satirical, even vulgar, cards were still bought and sent in the late twentieth century.

Valentine's Day is celebrated in song and film as synonymous with romantic love. It is a day for dances and gala balls, the advertising of "honeymoon suites" for married couples whose ardor may have waned over the years, and for decorating public places with heart shapes pierced by the arrow of an often visible and cherubic Cupid. Over the years the holiday has spread beyond England and America to Europe, Asia, and other English-speaking countries such as South Africa and Australia, and production and sales of Valentine cards have become a world-wide phenomenon.

## Valentino, Rudolph (1895-1926)

"The Great Lover" was the nickname given to Rudolph Valentino when he became a motion picture star in 1919. While the nickname is

still synonymous with Valentino, his last name is sufficient to evoke the same picture, that of a handsome, suave man who is irresistible to women. His female fans copied styles from his movies, and some men copied his hairstyles. During his brief stardom, he was often the butt of criticism from men. Despite this, women of the era literally fainted at the sight of him and worshipped him at the altar of their local movie theater.

For someone who had such a profound effect on popular culture during his lifetime, Valentino came from rather humble beginnings. He was born in Castellaneta, Italy, with the impossible name of Rudolpho Alfonzo Ralfaelo Pierre Filibert Guglielmi di Valentina d'Antonguolla. Ironically, the year of his birth, 1895, is also generally looked on as the year motion pictures were born. His father, Giovanni, was a veterinarian who died of malaria in 1906. While the young Valentino longed to become a cavalry officer, his family felt that after the death of his father he needed a better paying career to help take care of the family. His mother was finally persuaded to allow him to apply to the Royal Naval Academy, but he failed the physical. Eventually he attended the Royal Academy of Agriculture, where he graduated with honors. He planned to become a gentleman farmer, but fate had other plans.

After graduation, he went on a trip outside Italy and proceeded to lose all his money gambling. To ease the family's embarrassment, Rudolpho was sent to America on the U.S.S. *Cleveland* in 1913. After some difficult times in New York, Valentino began to find work as a taxi dancer. Shortly thereafter, he got a job with the millionaire Cornelius Bliss as a gardener. Unfortunately, he was soon fired when he wrecked a motorcycle owned by his employer.

Unemployed again, Valentino received help from a friend who was the head waiter at Maxim's Restaurant. He was hired for a position as a dancer there. He later met and signed as a partner to dancer Bonnie Glass who was replacing her current partner, Clifton Webb (soon to be an actor). After Glass retired, he danced with another partner, Joan Sawyer, on the vaudeville circuit. Valentino soon grew tired of touring and resolved to give up dancing and become a farmer in California. To get there, he took a part in a play called *The Masked Model* that was to tour the West Coast. Unfortunately the play closed in Utah, but he was paid with a ticket to San Francisco.

Once there, he met Norman Kerry, Mary Pickford's leading man, who persuaded him to try his luck in Hollywood. By 1917, he made his first screen appearance as an extra in *Alimony* and had played several villains in other films. A chance meeting with screen star Mae Murray resulted in work on two of her films. It was this exposure that led to more work.

While working on *Once to Every Woman* in 1919, he impulsively married actress Jean Acker. Jean locked him out of her apartment that night, and they separated with the marriage never being consummated. This was to be a source of embarrassment to studio executives when Valentino became a sex symbol. Despite their brief marriage, Valentino and Acker remained good friends to the end of his life.

Valentino made an important fan with his next project, *The Eyes of Youth*, with Clara Kimball Young, released in 1919. He impressed the head Scenarist for Metro Studios, June Mathis. Currently working on the project, *The Four Horsemen of the Apocalypse*, based on the novel by Blasco-Ibanez, she was convinced she had found the perfect actor for the part of Julio. Studio executives, however, were not as impressed. But after much lobbying, both by Mathis and Valentino

Rudolph Valentino (right) in a scene from the film *The Four Horsemen of the Apocalypse*.

himself, he was given the part. He so impressed Mathis and director Rex Ingram during early footage that they expanded his part, and a star was born. From his first appearance in the film, when he tangoed with Beatrice Dominguez, he enthralled the audience. Details of the film were copied by fans. The tango became a dance craze, men copied his slicked back hair, and women copied the bolero costume he wore.

If Valentino had expected the studio heads to now give him better parts and pay him accordingly, he was wrong. He appeared in several more films, such as *Camille* and *The Conquering Power*. The executives refused his demand for a raise, and then declined to renew his contract when it expired. A new contract, however, was eventually signed with the Famous Players-Lasky Paramount Studio, and Valentino began filming *The Sheik* with Agnes Ayres; this film cemented his stardom. During this time, his friend and supporter, June Mathis, had also left Metro and joined Famous Players studio. It would be almost impossible to imagine the kind of hysteria that greeted him after this film was released in 1921. Audiences were much less sophisticated and blasé in the early days of film than in the late twentieth century, and pandemonium reigned whenever he made an appearance.

Valentino experienced a good year in 1922 with the release of the original *Blood and Sand* and *The Young Rajah*. After the latter film was released, women began wearing their hair in turban style.

That year, Valentino was also granted an interlocutory divorce from Jean Acker. Unfortunately, he neglected to wait a year before marrying Natacha Rambova (Winifred Hudnut) in Mexico. When he returned to California, he was arrested and jailed for bigamy. He was fined \$10,000 and released. The resulting scandal actually increased Valentino's popularity instead of ruining him. He and Rambova remarried in 1923 after waiting the required year.

In 1924, he filmed several pictures, including *Monsieur Beaucaire* and *The Eagle*. For the film *The Hooded Falcon*, he grew a beard that not only infuriated his fans, but also the Barbers of America Organization, which threatened to boycott his films; needless to say, he shaved the beard. Unfortunately, Rambova had tremendous influence over Valentino's career, but did not have the best taste in selecting projects for him. His image began to tarnish, at least among the male half of the audience. Rambova bought him a slave bracelet that he wore constantly, and began choosing projects for him that made his androgynous qualities appear more feminine; she was eventually barred from working in any capacity on his films. Shortly thereafter, Rambova left him and they eventually divorced.

In 1926, he filmed *Son of the Sheik*, supposedly a sequel to his earlier hit film. The film was not as successful, although his female fans were steadfast. His most steady date in this, the last year of his life, was eccentric Polish actress, Pola Negri. She saw him off on a

train to New York for the East Coast premiere of *Son of the Sheik*. On August 15, however, he became seriously ill and was taken to the hospital. Diagnosed with a perforated ulcer, surgery was performed on him. The surgery went well and Valentino appeared to be doing well, but peritonitis set in and the infection spread throughout his body; he died on August 23, 1926.

The events surrounding the viewing of the body and the funeral took on a circus-like atmosphere—it probably was the first such celebrity funeral that had so much chaos surrounding it. There were riots in the street near the Campbell's Funeral Parlour; approximately 100,000 people viewed his body and it took three days for everyone in line to pass by the coffin. Rumors also began circulating about Valentino's death, the most persistent being that he was murdered, either by the Black Hand gang or by a jealous husband.

The funeral service in New York was conducted at St. Malachi's Church, with over 6,000 people in attendance. His body was then transported by train back to California, and crowds of people gathered as the train passed through each town. The service in California was at the Church of the Good Shepherd in Hollywood, and only 300 people attended his second funeral. Pola Negri, never one to give up an opportunity for publicity, threw herself on the coffin and then fainted. Although she had no proof of it, she claimed that she and Valentino were engaged. The day following the funeral, 5,000 people visited the mausoleum.

Valentino was buried in a crypt borrowed from June Mathis. When she died two years later, her husband, Sylvano Balboni, solved the problem of what to do with Valentino's body when he sold his adjoining crypt to the Valentino family. Valentino was then moved to his final resting place above June Mathis' mother.

In 1927, a commemorative service was attended by faithful fans and the tradition continued for many years—even in the late 1990s there were Valentino fan clubs. Another tradition that helped keep Valentino's name alive for so many years after his death was the annual appearances of the so-called "Lady in Black." For many years (over 50) she appeared, dressed in black with a veil covering her face and carrying red roses to his grave on the anniversary of his death. Speculation on the identity of the woman varied from a publicity stunt with various women playing the part, to a brokenhearted lover who could not forget him. The truth of the story was never established, and the lady finally disappeared.

For women of the Jazz Age of the Roaring Twenties, Valentino was the first sex symbol of the dangerous kind. He represented all that was enticing to repressed women, who had only recently started to make gains in emancipation by getting the vote. Despite his short life, he represented something they had not dared long for in the Victorian and Edwardian eras. In spite of rumors which surfaced many years after his death regarding his sexual orientation and that of his ex-wives, the effect Valentino had on the 1920s cannot be minimized or overlooked.

## Valenzuela, Fernando (1960—)

Few baseball players have captured the popular imagination as Fernando Valenzuela did in the summer of 1981, when the word "Fernandomania" came into the English lexicon, as the young lefthander with the incredible screwball astounded the baseball world by tossing five shutouts during an eight game winning streak to start the season. In a career that lasted from 1980 to 1996, Valenzuela was known almost as much for his burly physique and unorthodox windup as for his effectiveness and durability.

Fernando Valenzuela was born in Etchohaquila, in the Mexican state of Sonora, about 350 miles south of the Arizona border. The youngest of twelve children, by the age of sixteen Fernando was earning \$80 a month as a pitcher in the Mexican leagues. Beating out the Yankees by half a step, the Los Angeles Dodgers bought the lefthander's contract from Puebla for \$120,000 in 1979. The following year, Valenzuela made his debut with the Dodgers, pitching eighteen scoreless innings during the season's final weeks.

In 1981, twenty-year-old rookie Fernando Valenzuela exploded on the baseball scene. Fernandomania began in Los Angeles soon after the screwball-throwing lefthander started the season with a shutout, and it spread across the North American continent as Valenzuela managed to notch seven more victories (including four more shutouts) before registering his first loss. Although the league caught up with him in the second half of a strike-torn season, Valenzuela nevertheless finished the year as baseball's strikeout king, while also boasting the league's second-highest win total (13) and an impressive 2.48 ERA. In his first full season in the major leagues, the boy from Mexico had led his team to a World Series championship, while being recognized as both the National League's Rookie of the Year and its Cy Young Award winner.

Valenzuela's face appeared on the covers of numerous sports magazines in the summer of 1981, while he charmed the sports world with his modesty, his eyes-to-the-sky windup, and his virtual ignorance of English. His age also kept people guessing, as many observers supposed that he was significantly older than his twenty years. Although Valenzuela went on to have a successful career with the Dodgers, Fernandomania faded by season's end; afterwards he was just a very good pitcher. But good enough to win 19 games in 1982 and register a league leading 21 victories in 1986. Along the way he received baseball's first million-dollar salary arbitration award in 1983.

Valenzuela pitched for the Dodgers for eleven seasons, during which he won 141 games while losing 116. One of his most appealing features was his durability, as he led the league in complete games in three seasons and twice in innings pitched. During the 1980s he was also one of the league's most consistent strikeout pitchers, finishing among the top five for seven years in a row. During the late 1980s, his

**Fernando Valenzuela**

career began to be hobbled by shoulder soreness—an ailment no doubt caused by a decade of subjecting his arm to the strain of throwing his famed screwball. In addition to being a star hurler during his years with the Dodgers, Valenzuela was also recognized for his excellent defense and a dangerous bat.

His years with the Dodgers were capped by a no-hitter on June 26, 1990, but his career was thrown into doubt after the Dodgers released him the following spring. For the next seven years Valenzuela bounced from team to team, including a stint in the Mexican leagues in 1992. Although his comebacks always seemed to draw a fair amount of attention, they were rarely successful (a 13-8 record in San Diego in 1996 being the only exception), as Valenzuela managed to compile a meager record of only 32 wins and 35 losses during his post-Dodger career.

With 173 career victories, Valenzuela retired as the leading Mexican-born pitcher in Major League history. Despite his considerable achievements with the Dodgers, he is nevertheless best remembered for setting the baseball world on its ear during the spring and summer of 1981.

## Valium

Little over a decade after its 1963 debut on the prescription-drug market in the United States, Valium had become a widely prescribed tranquilizer and began attracting media attention for what was seen as its rampant abuse. Reports found that many prescriptions for diazepam, Valium's generic name, were written by general practitioners, not mental-health professionals, and that a disproportionate number were given to women over 30 to control so-called "free-floating" anxiety.

Valium, taken from the Latin word meaning "to be strong and well" and classified as an anxiolytic, or anxiety-dissolving drug, was developed in the New Jersey labs of pharmaceutical giant Hoffman-LaRoche by Dr. Leo Sternbach, who had also synthesized the compound that came on the market as Librium in 1960. Librium had been developed to compete with a rival company's popular tranquilizer, Miltown. All of these new drugs were targeted at middle-class Americans, many of whom were unlikely to visit a psychologist or psychiatrist for non-threatening depression or anxiety disorders because of the stigma attached to "mental illness." Valium, stronger than Librium and less bitter in taste, acted on the limbic system, the part of the brain that regulates emotional response and reaction. Because it was so potent, it could be formulated into much smaller doses than Librium, and unlike other tranquilizers, soothed without inducing drowsiness.

"Some Roche executives did not expect much of it," wrote Gilbert Cant of the *New York Times Magazine* about Sternbach's synthesizing of diazepam, "but a couple of them tried it on postmenopausal mothers-in-law whom they found insufferable, and were delighted by its calming effects." Valium came on the market in the United States in 1963. Users were cautioned not to operate heavy machinery or drive a car while taking it, and warnings about mixing it with alcohol were also blatant—the effects of both substances on the central nervous system were doubled when ingested together. Part of Valium's appeal lay in the belief that it was nonaddictive, and unlike other tranquilizers, almost impossible to be taken in a lethal dose by a suicidal person.

By 1974, 59.3 million Valium prescriptions were being written by doctors, and this figure, taken in conjunction with Hoffman-LaRoche's patent on diazepam, meant that Sternbach's employer had cornered 81 percent of the tranquilizer market in the country. The following year, a *Vogue* article entitled "Danger Ahead! Valium—The Pill You Love Can Turn on You," quoted extensively from Dr.

Marie Nyswander, a New York City psychiatrist, who warned of its addictive properties. “Probably it would be very hard to find any group of middle-class women in which some aren’t regularly on Valium,” Nyswander declared. “Valiumania,” as a 1976 piece authored by Cant in the *New York Times Magazine* was titled, termed it the most profitable drug in history, and questioned whether it had been “overmarketed” by Hoffman-LaRoche. Tellingly, only about 10 percent of prescriptions for Valium written in 1974 came from mental health professionals; 60 to 70 percent of Valium prescriptions came from the family doctor, gynecologists, or even more alarmingly, pediatricians. “Women, mostly those over 30, outnumber male users of Valium by 2-1/2 to one,” Cant pointed out.

Valium also began to appear as an illegal “street” drug around 1975, the same year overall tranquilizer usage in the United States peaked. In 1978, it was estimated that about 20 percent of American women were taking Valium; nearly 2.3 billion of the pills were prescribed that year alone. The drug was so pervasive—and still considered relatively harmless—that it began to enter the vernacular. It was jokingly referred to as “Executive Excedrin,” and made its way into comic scenes in movies such as *Starting Over*, as well as Woody Allen films and Neil Simon plays. An autopsy report found it in Elvis Presley’s system when he died in 1977.

A 1979 bestseller, *I’m Dancing as Fast as I Can*, did much to alert the public to Valium’s dangers. Its author, Barbara Gordon, was a successful, educated Manhattan career woman who became hooked on the drug over a nine-year period, and had to be hospitalized for her withdrawal symptoms. Reports of “rebound insomnia” from even light Valium usage began to appear in the press, and Senate subcommittee hearings later that year received widespread media coverage. Dr. Joseph Pursch—who, as head of the drug and rehabilitation program at Long Beach (California) Naval Regional Medical Center had treated former First Lady Betty Ford for her substance abuse problems—testified on the dangers of Valium. Physicians publicly confessed they had become addicted to the free samples mailed to them by Hoffman-LaRoche. An executive at the company defended the drug before the Senate committee, and asserted that its abuse was not Hoffman-LaRoche’s fault, but lay rather at the feet of the doctors who overprescribed it and in the percentage of patients who became addicted to almost any substance. A physician also spoke on behalf of Hoffman-LaRoche, and asserted with complete seriousness that “to imply that the medicine is dangerous or highly addictive is not only incorrect, but it is a great disservice to millions of people whose lives are already troubled,” *Time* quoted Dr. Michael Halberstam as saying.

As a compromise, the Food and Drug Administration forced Hoffman-LaRoche to include the caveat in its medical-journal advertisements for Valium as well as in the information provided to physicians stating that “anxiety or tension associated with the stress of everyday life usually does not require treatment with an anxiolytic drug.” This warning went into effect in the summer of 1980, but a 1981 report on the possible link between Valium use and the rapid growth of cancer cells probably spelled a far worse death knell for the drug’s popularity with the general public. The author of the study, Dr. David Horrobin, claimed he was forced out of a job at the University of Montreal because of his findings and his attempt to make them public. By 1982, the most prescribed medication in America was Tagamet, the anti-ulcer drug.

## Vallee, Rudy (1901-1986)

One of the most popular American singers in the 1920s and 1930s, Rudy Vallee became a sought-after supporting actor in Hollywood films, an important pioneer in radio variety shows, and much later a musical comedy star on Broadway.

Born Hubert Prior Vallée in Island Pond, Vermont, he was a self-taught drummer in his high school band. In 1919 he began a self-study

Rudy Vallee

of the clarinet and saxophone, frequently spending six to eight hours a day practicing, and within a year was performing publicly at the Strand Theater in Portland, Maine. After a year at the University of Maine, he transferred to Yale in the fall of 1922, where he earned tuition by playing his sax at country clubs and college dances. While playing with the Yale Collegians he began using a hand-held megaphone to amplify his crooning, light-tone voice. The megaphone—similar to the ones used by cheerleaders—became his trademark and was soon copied by other vocalists.

In 1924 Vallee dropped out of Yale and went to London, where he played sax at the Savoy Hotel with Vincent Lopez and the Savoy Havana Band. Returning to Yale, he continued his studies and graduated with a Bachelor of Philosophy degree in 1925. Moving to New York City, Rudy formed a small band called The Connecticut Yankees, consisting of two violins, two saxophones, and a piano. The primary purpose of the orchestra was to accompany their leader's suave, but somewhat nasal vocals. An engagement at the Heigh-Ho Club in Manhattan in 1928 brought Vallee his first real fame. He was soon broadcasting on radio as many as 25 times a week, beginning each one with "Heigh-ho everyone, this is Rudy Vallee." His sudden success brought him engagements at New York's Paramount and Palace Theaters.

Rudy and the Connecticut Yankees went to Hollywood to film *Vagabond Lover* in 1929, returning immediately to New York for more radio work and regular appearances at Villa Vallee, a nightclub Rudy owned. He soon evolved a busy routine, starting with daily shows at the Paramount and other theaters, then nightly shows at the Villa Vallee, and three broadcasts, along with recording sessions and filming musical short subjects.

In 1929 Rudy also began broadcasting a weekly one-hour variety show on NBC radio. Stars such as Fred Allen, Jack Benny, Edgar Bergen, and Kate Smith made their debuts on *Vallee's Fleischmann Hour* and later became radio stars themselves. Other outstanding guests included George Gershwin, George Burns and Gracie Allen, Eddie Cantor, Red Skelton, and Fannie Brice. Vallee also invited black performers, rarely used on network shows, to appear, including Bill "Bojangles" Robinson, Maxine Sullivan, and Fats Waller. At its peak, the show featured America's top stars. On December 13, 1934, for example, Vallee broadcast from the Radio City Music Hall, featuring announcer Jimmy Wallington, guests Henry Fonda and June Walker playing a scene from *The Farmer Takes a Wife*, and interviews with Cole Porter, Buck and Bubbles, William S. Hart, and Bea Lillie.

After ten years, Vallee ended his popular radio show. In 1942, he played the bumbling millionaire in one of director Preston Sturges' best films, *Palm Beach Story*, starring Claudette Colbert. When World War II began, Vallee joined the U.S. Coast Guard Service and led a forty-piece band on an extensive tour. He then returned to radio in 1944, broadcasting for two years with co-star Monty Woolley. Hollywood beckoned in 1947, and Vallee played light comedy and character roles in such films as *Bachelor and the Bobby-Soxer*, with Cary Grant and Myrna Loy; *I Remember Mama*, with Irene Dunne; *Unforgettably Yours*, with Rex Harrison; and *The Beautiful Blonde from Bashful Bend*, with Betty Grable. From 1961-64, he played in the Broadway musical, *How to Succeed in Business Without Really Trying*, and his final film was the Hollywood version of that show in 1967.

## Vampires

No creature haunting Western society's collective imagination has proven more enduring, more compelling, or more alluring than the vampire. But it was only with his transformation from emaciated, plague-carrying "nosferatu" (literally, "not dead") to suave, sexually appealing anti-hero that the vampire's status as pop cultural icon was assured. Authors and poets ranging from Byron, Goethe, Baudelaire, and Le Fanu to Poe, Wells, King, and Rice have made contributions to vampire lore. Dracula, the best-known and most resilient vampire, has appeared in more films than any other fictional character save perhaps for Sherlock Holmes. On television, vampires have starred in dramas (*The Kindred*, 1996), sitcoms (*The Munsters*, 1964-1966), soaps (*Dark Shadows*, 1966-1971), and countless made-for-television movies. On the radio, Orson Welles' portrayal of Dracula for *The Mercury Theatre* in 1938 became an instant classic. In addition, vampires have been made the subject of such cultural castoffs as stamps, comic books, lunchboxes, breakfast cereals, cartoons, role-playing games, and do-it-yourself makeup kits—in short, just about anything capable of sustaining an image or supporting a narrative.

In pre-Christian times, the vampire was a regular in Middle European folklore. Typically portrayed as an unkempt peasant with terrible breath and a craving for the blood of farm animals, his taste underwent a profound change in the seventeenth century—instead of sheep and oxen, he began turning to members of his own family in search of nourishment. This shift in sensibility most likely occurred because distraught villagers needed a face to attach to the deadly plague infecting their neighbors.

The vampire entered the literary realm by way of German gothicism: in Ossenfelder's "The Vampire" (1748), Bürger's *Lenore* (1773), and Goethe's *The Bride of Corinth* (1797) the once-shy bloodsucker slowly made the transition to sexual predator. But the first truly modern vampire appeared in John Polidori's extended revision of a fragment written by the English poet Lord Byron in 1816; amazingly, it was during the same session of story-telling at a villa near Geneva that Mary Shelley conceived the plot of *Frankenstein*. In Polidori's *The Vampyre* (1819), the dashing Lord Ruthven quenches his thirst with the blood of attractive young women. To cash in on Ruthven's surprising popularity, a number of plays, burlesques, and operas were quickly brought to stage in France, Germany, and England.

With the publication of James Malcolm Rymer's 868 page penny-dreadful, *Varney the Vampire, or the Feast of Blood* in 1847, the vampire became a pop culture phenomenon. Many elements of Varney's comic-book adventures were appropriated by Bram Stoker

Christopher Lee as the vampire Dracula in a scene from the film *Horror of Dracula*.

for use in his celebrated gothic novel, *Dracula* (1897). Female vampires also came into their own around this time; Sheridan Le Fanu's novella *Carmilla* (1871) recounts a destructive lesbian affair, a theme exploited years later in such films as *Dracula's Daughter* (1936) and *The Velvet Vampire* (1971), as well as in the homoerotic vampire fantasies of novelist Anne Rice.

In preparation for his novel, Stoker read everything he could find on vampires at the British Museum. He was fascinated by stories of Vlad the Impaler, a fifteenth century Romanian prince with a penchant for staking his victims. This real-life Dracula (Vlad's father was a member of the paramilitary group, "Dracul") provided Stoker with a historical basis for his monster. *Dracula* effectively synthesized the vampire legend's major motifs (including shape-shifting, mind control, avoidance of daylight, lack of reflection, and talismans such as garlic and crosses), and moved the Count out of his castle and into a bustling urban locale. Stoker's rendition of the vampire as a sexual oppressor roaming the streets of London tapped into the public's fear of serial killers such as Jack the Ripper, who not 10 years earlier murdered six women in the city's East End.

In 1922, German director F.W. Murnau brought the folkloric vampire back to life with his silent expressionist masterpiece, *Nosferatu: A Symphony of Horror*. Max Schreck stars as Count Orlock, a gaunt, bald, rat-like vampire who bears almost no resemblance to Bela Lugosi's suave, aristocratic Count Dracula. Four years before gracing the silver screen in Tod Browning's 1931 classic, *Dracula*, the Hungarian-born Lugosi established his reputation as the world's leading vampire by starring in a Broadway production of Stoker's tale (a half-century later, Frank Langella would play the Count in a successful New York revival). Lugosi's exotic accent, distinctive mannerisms, and sinister charm captivated audiences, and Universal Studios contracted him to reprise his role in a slew of horror films.

Celluloid vampires suffered from burnout until 1958, when Christopher Lee reprised the role of the Count in Hammer Films' elegant bloodfest, *Horror of Dracula*. Numerous sequels, also starring Lee, soon followed. Other notable vampire pictures include Carl Dreyer's *Vampyre* (1931), Roman Polanski's *Fearless Vampire Killers* (1969), a 1972 blaxploitation film entitled *Blacula*, Werner Herzog's remake of *Nosferatu* (1979), campy satires by Mel Brooks

and Andy Warhol, a porno (*Dracula Sucks*, 1979), Coppola's big-budget rendition of *Bram Stoker's Dracula* (1992), and a 1994 adaptation of Rice's *Interview with the Vampire*. Vampires even turned up in such unlikely genres as science fiction (*Lifeforce*, 1985) and Westerns (*Billy the Kid vs. Dracula*, 1966).

Vampire iconography has exerted a powerful influence on communal style and behavior. A whole "Gothic" youth culture, complete with all-black clothing, somber music, and atmospheric nightclubs, arose as an offshoot of punk in the 1970s, and an underground cult of real-life blood drinkers has steadily increased in numbers. The socially-revealing image of vampire as obsessive blood-junkie has been thematized in such films as *Deathdream* (1972), *Martin* (1978), and *The Addiction* (1995).

There are many reasons for the vampire's enduring popularity. While most monsters are portrayed as ugly, even grotesque, vampires are often handsome or beautiful. They are surrounded by large and arcane bodies of knowledge concerning their origins, powers, and weaknesses. Foreign, well-traveled, aristocratic, charming, even magnetic, they possess an undeniable erotic appeal. What is more, they are subversive, challenging traditional ideas about death, religion, science, sexual mores, and patriarchy. And lest we forget, they have what we all want: money, power, sexual attractiveness, and, above all, eternal youth.

## Van Dine, S. S. (1888-1939)

The "Golden Age" of the detective novel is generally considered to have been the years between World Wars I and II. S. S. Van Dine's first Philo Vance detective novel, *The Benson Murder Case* (1926), is often cited as the book that began this era. Although there were only 12 Vance novels and his popularity fell as quickly as it rose, Vance was by far the bestselling mystery character of his time. Born Willard Huntington Wright in Charlottesville, Virginia, Van Dine

first became known as an editor and literary critic for the *Los Angeles Times* and then for *Smart Set* magazine. By the 1930s Van Dine's following as a mystery writer was already beginning to fade. He began writing for motion pictures and contributed a chapter to *The President's Mystery Story*, published by Franklin D. Roosevelt in 1935.

## Van Dyke, Dick (1925—)

Dick Van Dyke is best remembered as a television comedian in the 1960s and 1970s, but this performer's career has included everything from Broadway to motion pictures to drama, in which he has excelled portraying likeable and sensible characters. His most successful role was as the star of *The Dick Van Dyke Show*, an Emmy-award-winning sitcom that appeared on the CBS-TV network from 1961 to 1966; he played the role of Rob Petrie, the head writer for the

Dick Van Dyke

fictional “*Alan Brady Show*” who lives with his wife (played by Mary Tyler Moore) and son in suburban New Rochelle, New York. The show was unusual for a sitcom of the period in that it allowed its star to portray a “TV Dad” both at home and at work while offering an insightful, behind-the-scenes glimpse of a television sitcom from the inside out.

Van Dyke was born in West Plains, Missouri, on December 13, 1925, the son of a trucking agent. His younger brother, Jerry, also became a comedian. It was while he was serving in the U.S. Air Force during World War II that Van Dyke began performing in shows; one of his buddies, Byron Paul, later became his personal manager. After a failed attempt, with a friend, to start an advertising agency after the war, Van Dyke formed a comedy pantomime act, *The Merry Mutes*, with his friend Philip Erickson. “Eric and Van” broke up in 1953 and Van Dyke continued to appear solo in nightclubs around the country until he became emcee of two daytime programs for an Atlanta television station: *The Merry Mutes Show* and *The Music Shop*. In 1955, he originated a variety program he called *The Dick Van Dyke Show* for a New Orleans television station, and went to New York as emcee for CBS’s *The Morning Show*, following in the footsteps of Walter Cronkite and Jack Paar. He was emcee of *CBS Cartoon Theater* in 1956 and NBC’s *Laugh Line* in 1959.

Disappointed with CBS’s refusal to offer him a daily show, Van Dyke appeared as a guest performer on a variety of television shows, including *The United States Steel Hour*, but it was on Broadway that he had his first major starring role. From April 1960 to September 1961, he attracted much critical and popular attention and won a Tony award for the role of Albert Peterson in the musical comedy *Bye Bye Birdie*. A month after leaving that cast, he debuted as TV writer Rob Petrie in his own weekly TV sitcom, *The Dick Van Dyke Show*, which premiered on October 3, 1961 with Van Dyke and Mary Tyler Moore as the leads, and Rose Marie, Morey Amsterdam, and Richard Deacon playing the supporting roles. The episode, titled “Head of the Family” was the title of the pilot episode that writer-producer Carl Reiner had earlier made with himself in the leading role—Johnny Carson was also briefly considered for the part—until he agreed that Van Dyke was a better choice. Reiner, who appeared on the show in the role of Alan Brady, based many of the episodes on his own experience as a writer for the 1950s comedy series *Your Show of Shows*. *The Dick Van Dyke Show* was also a vehicle for the relatively unknown Mary Tyler Moore, who had appeared mostly in commercials before assuming the role of Rob Petrie’s wife.

*The Dick Van Dyke Show* stands as an icon to the times, a mirror for the world of television in the early 1960s and for the suburban lifestyle that was then somewhat more idyllic than it would become in later years. It was popular largely because of Van Dyke’s ability to play both light, sophisticated, domestic comedy and engage in clownish, farcical pratfalls. The stories endure because they present believable characters in unusual but ultimately explainable situations. The producers and cast deliberately ended production after just five seasons, and so the quality of this series remains consistently high throughout; it won fifteen Emmys in five consecutive years.

Beginning in the 1960s Van Dyke starred in a number of memorable films. He reprised his Broadway role in a film adaptation of *Bye, Bye, Birdie* (1963), then played the Chimney Sweep alongside Julie Andrews in *Mary Poppins* (1965). He next starred in *Lt. Robin Crusoe U.S.N.* (1966) and *Divorce American Style* (1967), and played

an eccentric inventor in *Chitty Chitty Bang Bang* (1968). In 1971, he tried a different type of role in the satire *Cold Turkey*, that of a minister in a town undergoing withdrawal symptoms as it tries to give up smoking for a month to win a bounty from a tobacco company.

Carl Reiner and Dick Van Dyke were reunited in *The New Dick Van Dyke Show* in 1971 by a CBS network anxious to try to recapture the viewers and quality of their first sitcom a decade earlier. By this time *The Mary Tyler Moore Show* had become a hit, and the trend was toward the sophisticated, more adult comedies, like the original *Dick Van Dyke Show* had been. In *The New Dick Van Dyke Show*, Van Dyke was cast in the role of Dick Preston, the host of a local talk show in Phoenix, Arizona, and a happily married family man with loving young daughter and college-age son. For the final twenty-four episodes, the scene shifted to Hollywood as Dick Preston accepted a major role in a daytime soap opera. This venue seemed a more deliberate attempt to duplicate the earlier show, with its faster pace and more emphasis on behind-the-scenes banter among the performers, writers, and producer.

Despite these devices, *The New Dick Van Dyke Show* was not overly popular with audiences and it was almost canceled by the network until a flap over one episode in which the Prestons’ teenaged daughter accidentally walked in on them while they were having sex. Though the bedroom scene was not shown on camera, the network refused to air the episode as it was filmed and Reiner quit. It was after his departure that the show’s setting moved to Hollywood, and the show’s new soap-opera situation, plus publicity over the earlier flap, helped raise its ratings somewhat. By 1974 Van Dyke decided not to continue the show, which still won an Emmy. He returned later in the 1970s with a briefly-running variety show called *Dick Van Dyke and Co.* that won another Emmy for him.

Following this show, Van Dyke continued to make occasional movies and is perhaps best known for a series of public-service announcements aimed at fire safety for children that advised them to: “Stop, Drop and Roll.” He, along with Pearl Bailey and Hermione Gingold, supplied voices for the British-made children’s movie *Tubby the Tuba* (1977), and he appeared as the star of *The Runner Stumbles* (1979) and in the supporting cast of *Dick Tracy* (1990). In the early 1990s Van Dyke reappeared before television audiences as the “Chairman” of *Nick-at-Nite*, the cable network program that shows reruns of classic TV shows including his own 1960s series. Around this time, he also appeared in episodes of the show *Jake and the Fatman* and in several television movies. His most notable role in this period was that of Dr. Mark Sloan in the hour-long CBS-TV dramatic series *Diagnosis Murder*. In this show, Dr. Sloan is portrayed as a Los Angeles crime-solving physician with a police detective son, played by Van Dyke’s real-life son, Barry. This show captured a strong following and benefited from a new writing team that allowed it to grow and expand. Despite its serious subject, the show was directed with a playful and human feel that reflected Van Dyke’s combination of sophistication and humor. In early 1999, he was cast as Ted Danson’s father in a “Becker the Elder” episode of another CBS-TV series, *Becker*.

## Van Halen

The rock quartet Van Halen exploded into the American mainstream in 1978 with an eponymously titled debut album that soon went platinum, thanks to its blend of musical experimentation and an old-fashioned rock 'n' roll aesthetic. Named for Eddie Van Halen, the group's guitar virtuoso, the band's image promoted a hedonistic lifestyle and immediately captured the imagination of many young fans. Drawing from traditions of Southern blues, European baroque, and 1980s America, the band, over the next two decades, weathered major lineup changes and stylistic reinvention to remain one of the nation's most innovative musical groups.

Van Halen came together in Pasadena, California, in the mid-1970s, one of the first of the new wave of West Coast hard rock and heavy metal bands that had grown up on and would eventually replace British acts like Black Sabbath and Led Zeppelin. The band's first incarnation centered on Alex and Eddie Van Halen, sons of an accomplished Dutch musician. The boys' intense classical training helped them produce distinctive and innovative music in an era when many metal bands were surrendering to formula. The band added Michael Anthony as bass player and David Lee Roth as vocalist and gigged locally under the name Mammoth before choosing to call itself Van Halen.

Van Halen paid its dues in the highly competitive Los Angeles music scene, where it was discovered first by Gene Simmons of the band KISS and later by a Warner Brothers executive. Its debut album, with Roth's lewd, growling vocals on songs like “Dance the Night Away” and “Runnin' With the Devil” grounded the band firmly in blues and heavy metal traditions, while Eddie Van Halen's creative guitar work, showcased on the extended pseudo-classical solo “Eruption,” appealed to other traditionalists.

The band's next five albums all went multi-platinum, even when the band experimented with organs, synthesizers, saxophone, and a capella crooning, as on 1982's *Diver Down* and 1984's *1984*. The latter album showed the band's more lighthearted, pop-friendly approach, as with the single “Jump” and its video that took advantage of David Lee Roth's high-kicking manic stage presence. In 1985,

at the height of the band's popularity, David Lee Roth left the group to pursue a moderately successful solo career. Van Halen continued with new lead vocalist Sammy Hagar, already well-known from his work with Montrose and as a solo performer. The band released three hugely successful albums with Hagar at the helm, maintaining its exuberance while adding a nuance of socially meaningful music, as with “Right Here Right Now,” a powerful song and carefully crafted video about taking care of one's own life in the midst of problems abroad. In 1996, Hagar himself left and Van Halen responded by releasing live and greatest-hits albums and attempting a reunion with David Lee Roth at the 1996 MTV Music Video Awards. Van Halen resurfaced in 1998 with new lead vocalist Gary Cherone; “Without You,” the first single with this new lineup, debuted at #1 on the Billboard charts.

Still, it is Eddie Van Halen who has been recognized as the force behind most of Van Halen's music. From the beginning, his technical mastery and innovation set new parameters for the iconic Guitar Hero. In his unending quest for superb sound, he rewired amps, assembled guitars backwards, converted arias and concertos into searing solos, and tapped the fret board of his instrument with both hands at once. His solo on Michael Jackson's smash hit “Beat It” gave the song a hard edge, a certain legitimacy in a decade where dance and heavy metal fought for control of the airwaves. Eddie Van Halen, who had married teen idol Valerie Bertinelli, spent the 1990s overcoming substance-abuse problems, but he is remembered for having provided the blueprint for rock idols of his era—beautiful, long-haired, positive, and talented.

## Van Vechten, Carl (1880-1964)

Carl Van Vechten was, in the course of his lifetime, a music, dance, and literary critic, a novelist, and a photographer. He was an early aficionado of ragtime and jazz and during the Harlem Renaissance of the 1920s wrote numerous articles in support of the movement. In his fifth and best-known novel, *Nigger Heaven* (1926), he meant to portray the life of Harlem in a realistic and sympathetic fashion. Though controversial, the book was generally praised by white critics; it was condemned and dismissed by black critics

Van Halen: (from left) Michael Anthony, Eddie Van Halen, Alex Van Halen, and Sammy Hagar, 1987.

because of its ill-chosen title. Van Vechten sought to ensure that the African American contribution to American culture would be recognized and appreciated in perpetuity by founding, in 1941, the James Weldon Johnson Collection at Yale University.

## Vance, Vivian (1909-1979)

In the early days of television when millions of Americans viewed small screen stars as personal friends, Vivian Vance became

the nation's most celebrated neighbor. Vance, a Broadway veteran with credits for *Voice of the Turtle* and Jerome Kern's *Music in the Air*, rocketed to stardom as Lucille Ball's landlady and confidante on the immensely popular *I Love Lucy* show. Her character, Ethel Mertz, by nature homespun and pragmatic, wavers just enough in her resolve to be cajoled into participating in the hair-brained schemes of Ball's antic Lucy Ricardo. She also struggles to pump life into her happy but conventional existence with husband Fred (William Frawley). Vance proved to be Ball's ideal foil; their interaction helped make the sitcom the country's number one show from 1951 to 1957.

Vance's perennial good cheer on screen masked her personal frustrations and several bouts with mental illness. She resented the ease with which the public accepted her as Ethel Mertz. "Ethel is a frump," she lamented. "She's frowsy, she's blowsy, and talks like a man." Vance also grew increasingly dissatisfied with co-star Frawley; he was twenty-five years her senior and she complained, "He should be playing my father." Remarkably, the public remained entirely ignorant of the backstage feud between Frawley and Vance. Even after the secret leaked during the 1960s, an increasingly suburban

Vivian Vance and Desi Arnaz

America continued to view Fred and Ethel as representatives of a bygone era of neighborliness. Ironically, Vance's efforts on the *I Love Lucy* show helped popularize television, then a fledgling medium, and went a long way toward breaking down the traditional social patterns which Fred and Ethel Mertz represented.

## Vanilla Ice (1968—)

White rapper Vanilla Ice burst on the music scene in 1990 with his hit single "Ice Ice Baby," a danceable tune with a bass line lifted from the David Bowie/Queen collaboration "Under Pressure." The single, from the album *To the Extreme*, became the first rap song to reach number one on the pop singles chart, where it stayed for sixteen weeks. Critics slammed Vanilla Ice (whose real name is Robert Van Winkle) for his rip-off of black culture, but apologists credited him

with bringing rap to a larger audience. Vanilla Ice's popularity lasted just a few months—long enough to earn him a starring role in the movie *Cool As Ice* but not long enough to propel sales of his subsequent albums beyond a small core of dedicated fans.

## Vanity Fair

The original *Vanity Fair*, superbly edited by the inimitable Frank Crowninshield from 1914 to 1936, was the epitome of elan during the teens and twenties. A unique amalgam of art, literature, humor, fashion, and social commentary, *Vanity Fair* attracted a loyal audience and became the model of sophisticated success in the publishing industry, even after it was felled by the Depression. Revitalized in the early 1980s, the *Vanity Fair* of the late twentieth century is a slick, celebrity-driven monthly that has become the last word on American popular culture among the upwardly mobile. Amidst the celebrity mania of the late twentieth century, *Vanity Fair* is the bible of the stars.

*Vanity Fair's* emergence during the teens, as a "smart magazine" aimed at an urban leisure class, was the direct result of a number of changes in America in general and in the publishing business in specific. Following the Civil War, America underwent many sweeping metamorphoses, among which was a gradual shift from a rural society to an urban one. As the population became gentrified during the second half of the nineteenth century, as rural communities diminished and the cities grew, as Americans began to conceive of themselves as a cultured nation, and as the upper middle classes swelled and reveled in their new wealth, smart magazines began to appear. According to George H. Douglas, "smart magazines were written and edited for the leisured classes (although not necessarily the very rich)—for sophisticated urbanites, the kind of person who was well traveled, well read, well acquainted; for people who wanted to be entertained, but on an exalted plane." These magazines, he added, were "general magazines intended for the entertainment of cultural elites . . . rooted in . . . contrivances of humor, of gaiety, of urbanity, of high style and fashion. The rich, it seemed, were not usually interested in 'uplift,' in the birth pangs of reform and good works; as often as not they enjoyed the demimonde, even low life; they wanted to hear about the lives of actors, poets, of theatre people, pugilists, polo players. They loved gossip and scandal."

Major changes in the printing process during the 1880s and 1890s made faster typesetting and printing possible, allowing for more publications of higher quality. After the halftone process, chromolithography, and rotogravure printing were invented, magazines took on a new glossy format, filled with full-page color illustrations and advertisements. The vast changes in advertising, which metamorphosed from simple classified-type ads to colorful images and slogans thought out by prestigious firms, contributed to the evolution of a whole new kind of magazine, leading to an era which Douglas calls "a renaissance or high-water mark of the

**Vanilla Ice**

American magazine with many new giants entering the field, and many older ones becoming bigger and more affluent than they would have dreamed possible before . . . By the 1890s magazines had become big business.”

Into a field that included the *Saturday Evening Post*, *Ladies' Home Journal*, and *Harper's Monthly* entered the first of these smart magazines, aptly called *The Smart Set* and subtitled “A Magazine of Cleverness.” A huge success during the first decade of the twentieth century, this literary and artistic monthly catering to cosmopolitan café society became a model periodical, featuring the writing of such brilliant young literary bucks as H. L. Mencken and George Jean Nathan, who later became its joint editors. *The Smart Set* set the tone for all the smart magazines that followed.

*Vanity Fair*, the quintessential smart magazine, however, came into being by a rather circuitous route. In the 1890s a publication by the same name had a limited success in New York as a “peekaboo magazine” of dubious quality. In 1913, Condé Nast, a successful entrepreneur who had made his first success in the publishing field with *Vogue*, a high-tone, women's fashion magazine, bought another fashion rag called *Dress*. He then purchased the rights to the name *Vanity Fair* and, in 1913, put out the first issue of *Dress and Vanity Fair* to limited success. It stumbled around for a year, without finding its niche, until Nast brought in his friend Frank Crowninshield as

editor. In March 1914, Frank Crowninshield's *Vanity Fair* found its way to the newsstands where it made a very big splash.

In his first editorial, Crowninshield wrote, “*Vanity Fair* has but two major articles in its editorial creed: first, to believe in the progress and promise of American life, and, second, to chronicle that progress cheerfully, truthfully, and entertainingly . . . At no time in our history has the wonder and variety of American life been more inspiring, and, probably as a result of this, young men and young women, full of courage, originality, and genius are everywhere to be met with.” With these young people as both audience and contributors, Crowninshield set about to create a magazine that would chronicle the cutting edge in art, literature, drama, sport, film, and dance.

Crowninshield himself was in his early forties, raised and educated in Europe, of aristocratic background, but a working man who had been the editor of a number of top magazines. He was also a devotee of modern art—one of the organizers of the Armory Show, Crowninshield had a superb art collection himself. Thus, he knew how to appeal to the upper classes, the intelligentsia, and the avant-garde. Under Crowninshield, *Vanity Fair* contained the writing of such diverse young talents as Edna St. Vincent Millay, Edmund Wilson, P. G. Wodehouse, e. e. cummings, and Aldous Huxley, as well as more established writers such as F. Scott Fitzgerald, art by Picasso, Matisse, and Jacob Epstein, and photography by Edward Steichen. As Cleveland Amory wrote in his introduction to an anthology of the magazine, “*Vanity Fair* was a pioneer in so many areas that it can be said to be a significant yardstick of American culture. Not only did it publish many pieces by first-rate writers and artists before—and after—they became known, but it set a new standard for photography and picture journalism. Another thing it did ‘first’ was to give due recognition to Negro personalities and artists.”

Although *Vanity Fair* never had more than 100,000 annual subscribers, it succeeded largely by being unique. Charming, witty, insouciant, aesthetically appealing, *Vanity Fair* was the genuine article and thus attracted a loyal following. For young writers it was the place to work, even if it paid less than other magazines. Dorothy Parker, Robert Benchley, Robert E. Sherwood, and Edmund Wilson all found their start at *Vanity Fair*. A conversation piece among the Smart Set, *Vanity Fair* was the place to find out who was who and what was what, from articles on silent movie stars and dashing polo players to photographs of French poets and English royalty. There were essays by D. H. Lawrence and Harry Houdini, poems by Theodore Dreiser and Amy Lowell, paintings by Raoul Dufy and August Renoir, and, of course, Miguel Covarrubias's wonderful caricatures. Regular features included the yearly Hall of Fame, a popular section on men's fashion, humorous sketches, and theatre reviews.

Throughout the Roaring Twenties, *Vanity Fair* was the most successful of the smart magazines, but when the Depression hit in 1929, it began to slip from favor. As Americans struggled to make ends meet, advertisements were withdrawn, and fewer and fewer people wanted to read about café society. By 1936, Condé Nast decided to merge *Vanity Fair* into *Vogue*, calling it a “heartbreaking decision.” For more than forty-five years, all that remained of the magazine was a memory.

In 1982, two years into the glamorous excess of the Reagan years, Condé Nast Publications decided to reissue *Vanity Fair* as an upscale publication for the elite of the eighties. The new *Vanity Fair* hoped to follow the format of the original smart magazines. Initially, however, it floundered, and many believed the magazine would never be able to live up to the verve, wit, and genuine charm of its forebear.

In 1984, Tina Brown, the young Oxford graduate who had resurrected London's *Tatler*, was brought in to punch up the publication. Brown immediately put her mark on *Vanity Fair*, bringing in top writers from around the world by paying them unheard-of six-figure contracts. She turned her staff into stars and the magazine into a money earner. Under Brown, the second incarnation of *Vanity Fair* became a slick publication with a celebrity buzz. Its approach, however, was formulaic. Filled with seductive advertisements for luxury products, photographs of movie stars, articles about the rich, the famous, or the bizarre, the new *Vanity Fair*'s audience purported to be the Eighties Smart Set. In fact, the magazine became a mass-market publication aimed at the entire upwardly mobile population of the United States.

During the late eighties and early nineties, the covers of *Vanity Fair* seemed to feature many of the same actors in various poses—Demi Moore in multiple states of nudity, Tom Cruise with a sly smirk or a toothy grin, Arnold Schwarzenegger clothed or unclothed, all shot with Annie Leibowitz's unerring lens. But by the mid-nineties, with Brown departed for the *New Yorker*, *Vanity Fair* began to compete with more cutting-edge magazines, such as *Interview*, by featuring cover stories about young Hollywood. Where once *Vanity Fair* signaled mainstream success, the magazine has now become a star maker, as cover stories about Matthew McConaughey, Matt Damon, and Renee Zellweger brought these young actors to the attention of the mainstream and boosted their status in Hollywood.

If the original *Vanity Fair* set a sophisticated standard for American culture, its second incarnation is the quintessence of late-twentieth-century popular culture—slick, global, and all about money and fame.

## Vardon, Harry (1870-1937)

Golf's first international celebrity, Harry Vardon may be best remembered for something he popularized but did not invent: the overlap golf grip that bears his name. Vardon's name, however, was well-known long before he became famous for the grip. Not only was he the first Englishman to win the British Open, he claimed the title six times, winning in 1896, 1898, 1899, 1903, 1911, and 1914. In 1900 Vardon added the United States Open to his list of major championships, and was arguably the most famous golfer in the world at the time. Although a bout with tuberculosis in 1903 affected his health, his game was still strong enough to earn him second place in

the 1920 United States Open. Vardon's legacy is tied to the Vardon Trophy, emblematic of the lowest scoring average each year on the Professional Golfers' Association tour.

## Varga Girl

During World War II, the Varga Girl pinup, with her long legs, narrow waist, and "sumptuous" figure, was a major military morale booster. As Jamie Malanowski notes, her image "hung in billets and on bulkheads, was unfolded in foxholes, and was lovingly imitated on fuselages throughout Europe and the Pacific." Above all, the "Varga Girl" was timely. Her success derived from the confluence of a World War, the coming of age of "mass culture," and changing sexual mores. Drawn by Alberto Vargas, she was part of a new set of myths, which Leo Lowenthal of the Frankfurt School called a byproduct of twentieth century capitalism. Mass culture, according to Lowenthal, was manufactured in assembly line style by agents of mass media communication and was widely distributed.

Thousands of servicemen treasured the Varga Girl pinup. They were the pleased consumers of a product ingeniously distributed by *Esquire* magazine, which along with *Life* and *Reader's Digest* had been designated as wartime "morale boosters." The upbeat image of the Varga Girl provided a counter to the unpleasantness of the war and the loneliness of the trenches. One letter written to the pinup's artist Alberto Vargas by a serviceman suggested that regardless of what "the girl back home" looked like, "we can see her in each of your drawings." As Kurt Vonnegut once observed, "The American male's capacity to make do with imaginary women gave our military forces a logistical advantage I have never seen acknowledged anywhere."

The Varga Girl and her predecessor, the Petty Girl, evolved from the more modestly clad Gibson Girl. Both "girls" were also directly related to the women drawn by Raphael Kirchner for the turn-of-the-century avant-garde publication, *Le Parisienne*. The airbrush technique used by George Petty and Vargas allowed the impression of flawless women, suggestively clad and sultry-looking. In 1940, after Petty objected to the high-handed manner of *Esquire*'s publisher David Smart, he was replaced by Vargas. The Varga Girl (a name suggested as more "euphonious" by Smart) became a monthly staple in *Esquire* and in the popular "Varga Calendar" and other spin-off products.

Although appreciated by a significant portion of the U.S. male population, the pinup stirred up controversy in the areas of sexuality, gender exploitation, cultural representation, mass (popular) culture,

and consumerism. According to Jeanne Meyerowitz, “The proliferation in the mass media of sexual representations of women is arguably among the most important developments in twentieth century popular culture.” Meyerowitz further notes that the genres of “cheesecake” (suggestive) and “borderline” (more than suggestive) material “arose in the confluence of rising consumerism, burgeoning mass production, and changing sexual mores.” There was strong resistance to these cultural changes. In 1943, the U.S. Post Office brought charges of obscenity against *Esquire*, specifically citing a number of Varga Girl illustrations. At the trial, one female witness asserted that the pinups and other cartoons in the magazine exploited and demeaned women, while another female witness argued that the Varga images “beautifully portrayed” the female form. *Esquire* won the suit and a lot of free publicity. Into the late 1990s, the debate about whether erotic representations of women celebrate or degrade women is part of the discourse of feminists, lesbians, sexual libertarians, and anti-pornography and free speech advocates.

The Varga Girl was the work of Peruvian-born illustrator Alberto Vargas (1896-1982). Educated in Europe, Vargas was influenced by the work of Ingres and Kirchner. When he arrived in New York in 1916, Vargas was struck by the confident, vivacious women he saw. For a time he worked for producer Florenz Ziegfeld and once said that from Ziegfeld he learned the difference between “nudes and lewds.” He later worked as an illustrator and set designer for several major Hollywood studios. In 1939, after Vargas walked out in solidarity with union advocates at Warner Brothers, he was blacklisted. A year later, David Smart hired Vargas for a pittance, and without the right to royalties for his own work. Like Petty, Vargas was eventually driven to sue Smart. Vargas lost on appeal (he maintained that the judge was bribed), and he was enjoined from using the trademark name “Varga.”

In the mid-1950s, Hugh Hefner hired Vargas to resurrect the Varga Girl under the artist’s own name. The Vargas Girl appeared in *Playboy* on a monthly basis into the 1970s, until it was eclipsed by more prurient fare. *Playboy* pushed the envelope by using photography to convey a new image of the desirable woman. According to writer Hugh Merrill, whereas *Esquire*’s images had been “grounded” in burlesque shows patronized by the upper classes, *Playboy* had its cultural roots in the movies, an art form accessible to the masses. Photos of actress Marylyn Monroe graced the first issue *Playboy*. Eventually Vargas’ idealized depictions gave way to centerfold photography that left nothing to the imagination. Yet according to Merrill, Vargas’ work had helped set the stage for this change. In the 1940s the center of glamour had moved from New York City (the stage) to Hollywood (the movies). The “new cinematic standard of beauty of the 1950s did not come from nowhere. It was a real-life extension of the imaginary women in the Vargas paintings of the 1940s.” Some of these paintings had even been showcased in the film, *Dubarry Was a Lady*.

Personally, Vargas was quite different from the sexually heady atmosphere he worked in. He was an unassuming, courtly gentleman, born during the Victorian era, who was devoted to his wife, Anna Mae. His primary (some say, naive) desire was to “immortalize the American girl.” In his time, he succeeded. One admirer described his monthly pinup calendar as “an icon of popular culture,” while another described him as “the finest watercolorist of the female form.” Vargas’ girls remain embedded in the collective psyche of the

generations of the 1940s and 1950s, and they also remain as one of the cultural signifiers of those eras.

## Variety

A weekly trade newspaper focusing on theater and film, *Variety* has been a bible of the entertainment industry since the turn of the century. Founded in 1905 by Sime Silverman, a former vaudeville critic for a New York newspaper, *Variety*’s origins can be traced to a dispute between Silverman and a former editor, who asked the critic to soften a scathing review. Silverman promptly quit, and set about launching *Variety*, whose distinctive, trademark “V” was designed by his wife on a nightclub tablecloth.

From its earliest days, *Variety* became embroiled in a feud with the powerful Keith-Albee theater chain over what the paper considered its stranglehold over vaudeville entertainment in the United States. The newspaper supported protests by a group of actors called the White Rats of America, a fledgling performers’ union modeled after the Water Rats, a similar organization in London. Keith-Albee replied by forbidding its actors and agents to read or advertise in the publication, and warned music publishers to withdraw their advertisements or face a blacklist of their songs in Keith-Albee theaters. A famous editorial on March 28, 1913 established Silverman as a crusading editor in the tradition of “Dana, Pulitzer, and Bennett,” wrote one show-business historian. *Variety*’s support for these unionization activities laid the groundwork for what would become today’s Actors Equity Association.

*Variety* reached its peak of popularity during the golden age of vaudeville in the 1920s and 1930s. “There were only two media” at that time, noted Syd Silverman, who was once heir apparent to his father’s dynasty. “Legit theater and vaudeville.” Long known as the industry paper of record, along with its primary competitor, *The Hollywood Reporter*, established in 1930, *Variety* specialized in coverage of Broadway and off-Broadway theater in New York, and was, for many years, the only trade publication to provide crucial data in the form of weekly box-office reports for stage productions.

Although they share the same roots, *Variety* is not to be confused with the more West Coast-oriented *Daily Variety*, founded by the elder Silverman in 1933, whose readership has traditionally been vastly different. *Daily Variety*’s subscribers are generally comprised of a select demographic of upper-income entertainment executives residing almost exclusively in Los Angeles. *Variety*’s readership, in

The Cover of Variety, 1929.

contrast, has been scattered throughout the UNITED STATES, Europe, and the world.

During its heyday in the 1920s and 1930s, *Variety* affected a light and breezy style with its own slang and locutions that gave it a distinctive voice, not unlike the "Guys and Dolls" patter of Damon Runyon and other Broadway denizens. Two of its most famous headlines during the period are considered journalistic classics of wit and brevity: on October 30, 1929, the day after the stock-market crash, *Variety's* banner headline read: "Wall Street Lays an Egg," after the slang term for a failed theatrical production; on July 17, 1935, a front-page report on the unpopularity of vapid films in small Midwestern towns was headlined, "Sticks Nix Hick Pix." *Variety* peppered its prose with hundreds of examples of theatrical argot and invented terms, like "boff" for hit show, "cleffer" for songwriter, "deejay" for disk jockey, "strawhat" for summer-stock company, and "whodunit" for mystery show. *Variety* rarely used the term "talkies" to describe motion pictures with sound, instead preferring its own term "talkers," and referred to television in its early days as "video." *Variety* also popularized the term "Tin Pan Alley" to describe New York City's songwriting district.

The popularity of new media took its toll on *Variety* in later years, and its theater coverage began to seem increasingly less relevant in a world dominated by motion pictures, television, and

video. In 1987, Syd Silverman made a difficult decision. After 82 years of family ownership, he resolved to sell his father's publication (along with *Daily Variety*) to Cahners Publishing Company, a subsidiary of the British-based Reed International. The sale was valued at approximately \$56.5 million, and Cahners, which already published some 52 trade magazines, quickly set about making massive internal changes to resuscitate the paper.

Following the sale, Silverman announced that the publication's day-to-day editorial responsibilities would be handed over to Roger Watkins, a former general manager of *Variety* in London. The magazine, it soon became clear, was about to be ushered into a new technological era of corporate media. Within months, *Variety's* staff was moved from the cramped, theater-district offices they had inhabited since 1919 to sparkling new cubicles on Park Avenue South. One editor even noted that some *Variety* reporters had still been "banging out stories" on vintage Underwood manual typewriters. All this would change under the Cahners management, which advised staff members of new dress codes—coats and ties only for men—to go with the publication's spiffy corporate look. Other changes included a consolidation of staff members in the East and West Coast offices of *Variety* and *Daily Variety*, a move that ruffled more than a few feathers; the sister publications were long known for harboring bitter rivalries and jealousies over story assignments and advertising accounts. Despite these changes, at least one *Variety* institution remained unchanged: columnist Army Archerd, who had written the "Just for Variety" column since the 1950s, and described as "a throwback to Walter Winchell, without the ego" and the paper's "most treasured asset" by Liz Smith.

Perhaps the most controversial shift came about with the 1989 hiring of Peter Bart as editor of the weekly *Variety*—he became editorial director of both *Variety* and *Daily Variety* in 1991. Because Bart had been a studio executive as well as a *New York Times* correspondent for two decades prior to joining *Variety*, there was much speculation as to whether or not he could maintain an objective critical stance toward the industry that had long provided his bread and butter (and caviar). Even the *New York Times* and the *Washington Post* got in on the debate, asking in one headline if Peter Bart was simply "too solicitous of the industry he covers." The *Post* highlighted what became known as the "Patriot Games" incident as an especially egregious example of Bart's lack of journalistic boundaries. The incident occurred following *Variety's* acerbic review of the film *Patriot Games*, written by 18-year veteran critic, Joseph McBride. Not only did Bart dash off an apologetic letter to Martin Davis, chairman of Paramount studios, following the review, he also demoted McBride, who resigned soon afterward, to reviewing children's movies. Bart's supporters countered that *Variety* was, after all, a trade paper, with some eighty percent of its subscriber base and fifty percent of its ads coming from studios. It was no secret, they maintained, that the publication was mutually dependent upon, and accountable to, the entertainment industry. In 1991, Steve West was named executive editor of *Daily Variety*.

In the 1990s, the entertainment industry continued to share a cozy relationship with its chief trade publications, *Variety* and *Daily Variety*. Buoyed by increasing revenues and profits, *Variety* established several new ventures. In October 1997, it began publishing *Variety Junior*, a five-time-a-year paper covering the children's entertainment business; in November it reintroduced *On Production*, a paper about the making of film, television, and commercials; and in January 1998, it opened its *variety.com* website. In May of that year, *Daily Variety* started putting out a five-day-a-week New York edition

known as *Daily Variety Gotham*. The paper carried news about Broadway and the publishing and entertainment business while continuing its heavy coverage of the Hollywood film industry. Peter Bart said that *Variety* hoped to attract another 14,000 subscribers with the new edition. In 1997, the *New York Times* reported that *Daily Variety* had advertising revenues of \$27 million, up from \$12 million in 1992, with profits increasing from \$2 to \$20 million between it and *Variety* itself.

## Vaudeville

Vaudeville, a collection of disparate acts (comedians, jugglers, and dancers) marketed mainly to a family audience, emerged in the 1880s and quickly became a national industry controlled by a few businessmen, with chains of theaters extending across the country. The term vaudeville originates either from the French Val de Vire (also Vau de Vire), the valley of the Vire River in Normandy, known as the location of ballads and comic songs, or from the French name for urban folk songs, "voix de ville" or "voice of the city." By the late nineteenth century, entertainment entrepreneurs adopted the exotic title of "vaudeville" to describe their refined variety performances. Whereas variety shows had a working class, masculine and somewhat illicit reputation in the nineteenth century, early vaudeville innovators eliminated blue material from performances, remodeled their theaters, and encouraged polite behavior in their auditoriums to attract middle-class women and their children in particular. This pioneering process of expansion and uplift laid the foundation for the establishment of a national audience for mass-produced American culture.

It is difficult to define the content of vaudeville entertainment because it was so eclectic. The average vaudeville bill, which usually included between nine and twelve acts, offered something for everyone. Indeed, vaudeville primarily provided an institutional setting for attractions from other show business and sports venues of the day. Circus acrobats, burlesque dancers, actors from the legitimate dramatic stage, opera singers, stars from musical comedies, baseball

players and famous boxers all made regular appearances on vaudeville bills. Vaudeville bills also featured motion pictures as standard acts around the turn of the century, providing one of the key sites for the exhibition of early films.

Despite the diversity and cultural borrowing at the heart of vaudeville, this industry had its own aesthetic, standard acts, and stars. It featured a rapid pace, quick changes, and emotional and physical intensity; the personality of individual performers was paramount. Vaudeville demanded affective immediacy (performers tried to draw an outward response from the audience very quickly), as opposed to the more reserved, intellectual response advocated in the legitimate theater. On the vaudeville stage, the elevation of spectacle over narrative and the direct performer/audience relationship contrasted with legitimate drama's emphasis on extended plot and character development and the indirect (or largely unacknowledged) relationship between performers and the audience. And players retained creative authority in vaudeville acts, often writing their own routines, initiating innovations in the acts, and maintaining their own sets, while directors were gaining power over productions in the legitimate theater.

Standard acts included the male/female comedy team, in which the woman usually played the straight role and the man delivered the punch lines. One such pair, Thomas J. Ryan and his partner (and wife) Mary Richfield, starred in a series of sketches about the foibles of Irish immigrant Mike Haggerty and his daughter Mag. Many women, such as Nora Bayes and Elsie Janis, rose to stardom in vaudeville as singing comediennes. Perhaps the most famous singing comedienne was Eva Tanguay. Famous for her chunky physique, her frizzy, unkempt hair and her two left feet, she earned huge salaries for her sensual, frenetic, and often insolent performances. Her hit songs included "I Don't Care" and "I Want Someone to Go Wild with Me." W. C. Fields and Nat Wills were among the many tramp comedians who became headliners in vaudeville and Julian Eltinge, a man who excelled in his portrayal of glamorous women, led the field of female impersonators in vaudeville.

Between approximately 1880 and 1905 most vaudeville bills included at least one and as many as three acts of rough ethnic comedy. Joe Weber and Lew Fields, well-known German (also called Dutch) comedians, spoke with thick accents and fought each other vigorously on stage, while Julian Rose succeeded in vaudeville with his comic monologues about a Jewish immigrant's mishaps. Kate Elinore joined the male-dominated ranks of slapstick ethnic comedy with her portrayal of uncouth Irish immigrant women. Along with being a showcase for ethnic stereotypes, vaudeville also was the main outlet for blackface comedy following the decline of the minstrel show. But it was not only white performers who donned the black mask; black comedians like the well-known Bert Williams also blacked up to fit the caricature of a "shiftless ducky."

Vaudeville's styles and standards were embedded in the social and political changes of the era. Bold women like Eva Tanguay reflected (and energized) women's increasing rejection of Victorian codes of conduct around the turn of the century. Women on stage, who sometimes championed divorce and women's suffrage, and women who flocked to the exciting environment of vaudeville theaters participated in the expansion of public roles for women. Ethnic themes and caricatures in comedy sketches provided a crude code of identification in cities that were becoming more diverse as immigration increased in late nineteenth century. Vaudeville's ethnic comedy addressed anxieties about immigration, including the xenophobia of native-born Americans as well as tensions surrounding

An exterior view of the Automatic Vaudeville and Crystal Hall Theater on Broadway in New York City.

upward mobility and assimilation within immigrant families. Although many vaudeville performances were titillating and impertinent, the emphasis on propriety and respectability in the major vaudeville circuits was, according to Robert Allen, “another chapter in the history of the consolidation of the American bourgeoisie.” Administrators such as B. F. Keith emphasized the opulence of their theaters, their well-mannered patrons, and the clean, even educational acts on stage: their mixed audience seemed to be led by the middle classes.

Vaudeville entrepreneurs drew most of the raw material for their entertainment from nineteenth century popular theater, namely the heterogeneous offerings in the minstrel show, concert saloon, the variety theater, and the dime museum. In fact, vaudeville theater managers often remodeled concert saloons and dime museums into new vaudeville establishments. Concert saloons and variety theaters (terms often used interchangeably) combined bars with cheap (or free) amusements in connected rooms or auditoriums. These largely disreputable institutions were smoky, noisy and crowded; patrons were likely to be drunk; and waitresses, jostling among the men, were often willing to sell sex along with liquor. After running one of the few respectable concert saloons on the Bowery (a street in New York City well-known for its tawdry amusements), Tony Pastor opened a “variety” theater. He eliminated the smoking, drinking and lewd

performances that had previously characterized variety entertainment within the setting of the concert saloon. Pastor’s variety theater, one of the most successful and famous establishments of its kind between 1880 and 1890, was a pivotal establishment in the early history of vaudeville because other entrepreneurs copied Pastor’s reform efforts to popularize variety as “vaudeville.”

Benjamin Franklin Keith, the most powerful vaudeville innovator, adopted Pastor’s philosophy in his efforts to make dime museums in Boston into respectable vaudeville establishments. Whereas Pastor operated only one theater, Keith eventually mass produced vaudeville for a nation. Born on January 6, 1846, Benjamin Franklin Keith began his career in popular entertainment as a circus performer and promoter in the 1870s and then opened a dime museum in Boston in 1883. Many dime museums, a combination of pseudo-scientific displays and stage entertainment, were housed in storefronts in inexpensive urban entertainment areas and attracted working-class and lower-middle class audiences. Keith, with his colleague Edward F. Albee (also previously a circus performer) worked to remove the working-class reputation of the dime museum. At the museum they displayed circus “freaks” for an admission charge of ten cents, and they soon opened a second-floor theater where they presented a series of singers and animal acts—their first vaudeville bill. He touted his clean variety and dramatic stage productions, such as a burlesque of Gilbert and

Sullivan's *HMS Pinafore*, to draw more middle-class patrons to his theaters. After combining light opera with variety acts in the late 1880s and early 1890s, Keith eventually offered exclusively vaudeville after 1894.

Vaudeville theaters, depending on whether they were classified as "big time" or "small time," served different clientele. With expensive interior designs and stars who demanded high salaries, big time theaters had higher production costs and, consequently, more expensive admission prices than small-time vaudeville did. Big-time theaters were also more attractive to performers because these theaters offered two shows a day and maintained one bill for a full week. Small-time theaters, on the other hand, demanded a more grueling schedule from performers who had to offer three to six shows a day and only stayed in town for three or four days, as small-time theaters maintained a single bill for only half a week. For performers, according to Robert Snyder, "small-time was vaudeville's version of the baseball's minor leagues." Small-time theaters catered primarily to working-class or immigrant audiences, drawing particularly from the local neighborhoods, rather than attracting middle-class shoppers and suburbanites who would frequently arrive at big-time theaters via trolleys and subway lines. One of the leaders of small-time vaudeville was Marcus Loew, who began to offer a combination of films and live performances in run-down theaters in 1905. Over the next decade he improved his existing theaters and acquired new ones, establishing a circuit of 112 theaters in the United States and Canada by 1918.

Whereas before 1900 vaudeville theaters were owned independently or were part of small chains, after 1907 the control of vaudeville rested in the hands of a few vaudeville magnates, including B. F. Keith. In 1923 there were 34 big-time vaudeville theaters on the Keith Circuit, 23 owned by Keith and eleven others leased by Keith. F. F. Proctor and Sylvester Poli each controlled chains of theaters in the East, and Percy G. Williams and Martin Beck, the head of the Orpheum circuit, had extensive vaudeville interests in the West. Another vaudeville organization, the Theater Owners' Booking Association (TOBA), catered to black audiences in the South and employed black performers, including the great blues queens Ma Rainey and Bessie Smith.

During the first decade of the twentieth century, big-time vaudeville in the United States was consolidated under the guidance of Keith largely because of his extensive control of booking arrangements. In 1906 Keith established a central booking office, the United Booking Office (UBO), to match performers and theaters more efficiently. Performers and theater managers subsequently worked through the UBO to arrange bookings and routes. The UBO had tremendous leverage over performers because it was the sole entryway to the most prestigious circuit in the country: if performers rejected a UBO salary, failed to appear for a UBO date, or played for UBO competition, they could be blacklisted from performing on the Keith circuit in the future. When *Equity*, a trade publication for actors, surveyed the history of vaudeville in 1923, it emphasized the power of central booking agencies, including the UBO (the most prominent booking firm): "It is in the booking office that vaudeville is run, actors are made or broken, theaters nourished or starved. It is the concentration of power in the hands of small groups of men who control the booking offices which has made possible the trustification of vaudeville."

Vaudeville performers tried to challenge the centralized authority of vaudeville through the establishment of the White Rats in 1900. Initially a fraternal order and later a labor union affiliated with the American Federation of Labor, the White Rats staged two major

strikes, the first in 1901 and the last in 1917. The White Rats never won any lasting concessions from vaudeville theater owners and managers and the union was defunct by the early 1920s.

The leaders of vaudeville organized theaters into national chains, developed centralized bureaucracies for arranging national tours and monitoring the success of acts across the country, and increasingly focused on formulas for popular bills that would please audiences beyond a single city or neighborhood. In these ways, vaudeville was an integral part of the growth of mass culture around the turn of the century. After approximately 1880 a mass culture took shape in which national bureaucracies replaced local leisure entrepreneurs, mass markets superseded local markets, and new mass media (namely magazines, motion pictures and radio) targeted large, diverse audiences.

Vaudeville began to decline in the late 1920s, falling victim to cultural developments, like the movies, that it had initially helped promote. There were a few reports of declining ticket sales (mainly outside of New York City) and lackluster shows in 1922 and 1923 but vaudeville's troubles multiplied rapidly after 1926. Around this time, many vaudeville theaters announced that they would begin to advertise motion pictures as the main attractions, not the live acts on their bills; by 1926 there were only fifteen big time theaters offering straight vaudeville in the United States. The intensification of vaudeville's decline in the late 1920s coincides with the introduction of sound to motion pictures. Beginning with *The Jazz Singer* in 1927, the innovation of sound proved to be a financial success for the film industry.

In 1928 Joseph P. Kennedy, head of the political dynasty, bought a large share of stock in the Keith-Orpheum circuit, the largest organization of big-time theaters in the country. Kennedy planned to use the chain of theaters as outlets for the films he booked through his Film Booking Office (FBO) which he administered in cooperation with Radio Corporation of America (RCA). Two years later Kennedy merged Keith-Orpheum interests with RCA and FBO and formed Radio-Keith-Orpheum (RKO). Keith-Orpheum thus provided the theaters for the films that were made and distributed by RCA and FBO. The bureaucratic vaudeville circuits had worked to standardize live acts and subsume local groups into a national audience but vaudeville did not have the technology necessary to develop a mass-production enterprise fully. As Robert Snyder concludes in *The Voice of the City*, "A major force in the American media had risen out of the ashes of vaudeville."

Vaudeville was also facing greater competition from full length revues, such as the Ziegfeld Follies. While vaudeville bills often included spectacular revues as a single act on the bill, full-length revues increased in popularity after 1915, employing vaudevillians and stealing many of vaudeville's middle-class customers along the way. Between 1907 and 1931, for example, there were twenty-one editions of the Follies. Such productions, actually reviewed as vaudeville shows through the early twentieth century, used thin narratives (like a trip through New York City) to give players the opportunity to do a comic bit or song and dance routine, borrowing the chain of intense performances from the structure of a vaudeville bill.

Just as the revue borrowed vaudeville performers and expanded on spectacles that had been popular as part of a vaudeville bill, the motion picture industry also incorporated elements of the vaudeville aesthetic. Vaudeville performers such as Eddie Cantor, the Marx Brothers, Bert Wheeler, Robert Woolsey and Winnie Lightner took leading roles in film comedies of the 1920s and early 1930s. They brought some of vaudeville's vigor, nonsense, and rebelliousness with them to the movies. Motion pictures, therefore, drew on the

traditional acts of vaudeville and, with the aid of technology, perfected vaudeville's early efforts at mass marketing commercial leisure. Vaudeville had helped create a world that made it obsolete.

Vaudeville helped recast the social and cultural landscape of the United States at the turn of the century. From a scattered array of commercial amusements, vaudeville helped build a national system of entertainment. From a realm of raunchy, male-dominated popular entertainment, vaudeville crafted a respectable culture that catered to the female consumer. From a fragmented theatrical world, this entertainment industry forged a mass audience, a heterogeneous crowd of white men and women of different classes and ethnic groups. Vaudeville was thus a key institution in the transition from a marginalized sphere of popular entertainment, largely associated with vice and masculinity, to a consolidated network of commercial leisure, in which the female consumer was not only welcomed but pampered.

## Vaughan, Sarah (1924-1990)

Sarah Vaughan is one of a handful of legendary jazz singers who brought the same level of creativity and musicianship to the vocal line that her colleagues brought to sax, bass, and drums. Vaughan was one of the first singers to be associated with the progressive sounds of bebop in its earliest incarnation. "It's Magic," "Make Yourself Comfortable," "Broken-Hearted Melody," "Misty," and "Send in the Clowns" are among her best-known songs.

Sarah Vaughan

Vaughan was born in Newark, New Jersey in 1924. Both of her parents were musical. Her father played guitar, and her mother sang in the choir of their Baptist church. Vaughan was a serious student of piano as a young girl, and she often served as organist for the church. She maintained these skills throughout her career, along with her love for sacred music. But she also took an early interest in that "sinful" music called jazz. As a teenager, she would sneak out with a girlfriend into the burgeoning music scene in Newark and New York City. After watching her friend take a prize as runner-up in the talent contest at Harlem's Apollo Theater, Vaughan decided to give the contest a try. Her rendition of "Body and Soul" took first place and launched her musical career.

Soon thereafter, on the recommendation of singer Billy Eckstine, one of her earliest admirers and a lifelong friend, she took her first professional singing job with the Earl Hines big band in 1943 and went on to perform and record with the major innovators of the day, including Charlie "Bird" Parker and Dizzy Gillespie. During her early days in the music business, Vaughan was known for her shyness and lack of physical glamour. With her very dark skin, her unspectacular figure, and her pronounced overbite, she lacked the beauty-queen allure of Lena Horne, but she quickly earned the respect of her musical colleagues. It was clear from the start that her talent and

inventiveness would make it possible for them to do their best work. If any one jazz singer personified the capacity of the human voice to behave like a horn, Vaughan was it. Carl Schroeder, one of Vaughan's pianists in the sixties and seventies, said to Gourse, "She could walk the line between the melody and improvisation exactly the way a great saxophone player could."

Vaughan was grateful for the camaraderie of the boys in the band. Their good times together softened some of the difficulties of life on the road for black musicians in an era where racial segregation and bias remained the norm. She was less fortunate in matters of romance. She was often drawn to flashy, aggressive men who ultimately "did her wrong," both personally and professionally. Showing no interest in the business side of her career, she would always tell her associates, "I sing. I just sing." She liked to have a manager with her on the road to take care of all the incidentals of bookings and hiring of personnel, and, to her way of thinking, no better person could do the job than the one who shared her bed. On several occasions, her lack of interest in practical matters lost her a great deal of money when the romance had also gone.

Vaughan maintained an active career on the road and in clubs like New York's famous Café Society from the 1940s through the 1960s. During these years, she recorded many of her landmark albums, often using potentially commercial pop songs to offset the commercial riskiness of straight-ahead jazz. The album *Sarah Vaughan and Count Basie* (Roulette, 1960) was named one of the 101 best jazz albums by critic Len Lyons. Like many jazz musicians, she suffered through rock's encroachment on the commercial music scene but kept a loyal cadre of fans. In her later years, her venues moved from the club to the concert stage, where she performed as guest soloist with several major symphony orchestras, developing an artistic relationship with conductor Michael Tilson Thomas of which she was particularly proud.

According to jazz historian Martin Williams, "Sarah Vaughan has an exceptional range (roughly of soprano through baritone) . . . a variety of vocal textures, and superb and highly personal vocal control. Her ear and sense of pitch are just about perfect, and there are no 'difficult' intervals for Sarah Vaughan." The same abilities that many have found praiseworthy, however, could be problematic to others. Vaughan was frequently taken to task by critics for allowing her facility for vocal pyrotechnics to obscure the lyrics of the great American popular standards in her repertoire. This criticism may have been exacerbated by the nature of the competition. Sarah Vaughan carried on most of her musical career in the shadow of Ella Fitzgerald, whose supreme gift among many was a precise and natural diction that made her the ideal singer for the sophisticated and witty lyrics of Ira Gershwin, Cole Porter, and Larry Hart, among others. But where Ella offered an almost childlike clarity, Sarah offered dramatic highlights and greater emotional depth.

Vaughan often joked with friends that she was born in "Excess" (as opposed to "Essex") County, New Jersey. She was in fact prone to excess in many areas of her life: she smoked two packs of cigarettes a day (to the astonishment of fellow singers), loved a good cognac, and dabbled in cocaine. Nevertheless, she kept up a rigorous schedule of performances and recording dates well into her sixties, when she was diagnosed with an advanced stage of lung cancer and died a few months later. Leontyne Price sent a message of sympathy to the First Mount Zion Baptist Church in Newark, New Jersey, where the funeral

was held. Rosemary Clooney and Joni Mitchell were among those who attended a memorial service at Forest Lawn on the West Coast. Carmen McRae released the album *A Tribute to Sarah* in 1991.

## Vaughan, Stevie Ray (1954-1990)

The most influential guitarist of his generation, Stevie Ray Vaughan's power and soul brought blues into mainstream rock and helped spark the blues revival of the 1980s. He combined the power of Albert King with the flamboyance of Jimi Hendrix to create a style easily accessible to a generation of young fans and copycat guitar players.

Vaughan was born in Dallas, Texas, into a family that included brother Jimmie, three and a half years his senior. Jimmie, who would later gain fame as the founder and guitarist of the Fabulous Thunderbirds, was Stevie Ray's earliest influence through his record collection. The brothers soaked up Albert, B. B., and Freddie King; Kenny Burrell; Albert Collins; Lonnie Mack; and Jimmy Reed. By the age of eight, Stevie Ray was playing hand-me-down guitars from his brother.

As a teenager, Vaughan fell under the spell of Jimi Hendrix. Vaughan would later take his 1960s psychedelic twist on blues and reinterpret it for the youth of the 1980s. Vaughan's cover of the Hendrix song "Voodoo Chile (Slight Return)" became a high point of his live shows.

After playing in several Dallas bands, Vaughan dropped out of school and moved to Austin in 1972, where a large blues scene was developing. Vaughan continued to play in various bands until forming his own group, Double Trouble, named for an Otis Rush song, in 1979. The original lineup included singer Lou Ann Barton, but as Vaughan gained confidence, the group was pared down to a power trio including Tommy Shannon on bass and Chris Layton on drums. Double Trouble quickly rose to the top of the Austin music scene.

Vaughan's reputation spread to R & B producer Jerry Wexler, who viewed a performance in 1982. Wexler, considerably impressed, used his pull to get Vaughan booked at the Montreux Jazz Festival in Switzerland, a feat almost unheard of for an unsigned artist. One member of the Montreux audience was British rocker David Bowie, who asked Vaughan to play on his *Let's Dance* album and join his 1983 world tour. Vaughan added some stunning Albert King-tinged licks to the album, but pulled out of the tour due to money and other disputes. Vaughan returned to Austin and resumed playing the club circuit.

**Stevie Ray Vaughan**

Another audience member at Montreux was Jackson Browne, who offered the use of his studio for the band to record a demo tape. The tape eventually found its way to John Hammond, Sr., the legendary talent scout and producer who had discovered Bob Dylan, Bruce Springsteen, Aretha Franklin, and Billie Holiday.

“He brought back a style that had died, and he brought it back at exactly the right time,” Hammond said in *Stevie Ray Vaughan: Caught in the Crossfire*. “The young ears hadn’t heard anything with this kind of sound.”

Hammond produced the band’s first album, *Texas Flood*, released by Epic Records in 1983. Although only peaking at No. 38 on the *Billboard* album charts, the record went gold with over 500,000 copies sold. Vaughan’s 1984 follow up, *Couldn’t Stand the Weather*, sold over one million copies and spent 38 weeks on the *Billboard* top 200 album chart. Organist Reese Wynans joined Double Trouble for the 1985 release *Soul to Soul*.

Vaughan had always boosted his performances by using cocaine and alcohol, but his newfound success exacerbated the problem. “Whereas his cocaine habit had always previously been kept in check by his bank account, that constraint vanished with sold-out concerts,” Joe Nick Patoski and Bill Crawford said in their biography *Stevie Ray Vaughan: Caught in the Crossfire*. “He was rock royalty, a gentleman of privilege, who could have anything he wanted, before, during

and after a show, as long as he gave the customers their money’s worth.” In 1986, all-night mixing sessions for the *Live Alive* double live album coupled with constant touring pushed Vaughan’s drug abuse over the edge. After collapsing on stage during a London concert in October, it seemed Vaughan was headed for an early death like his idol, Jimi Hendrix.

Vaughan was determined to survive his addictions, entering a rehabilitation clinic and joining Alcoholics Anonymous. After four months of treatment, Vaughan emerged a new man. Double Trouble’s 1989 album *In Step* was the band’s most focused and critically acclaimed release, selling over one million copies and winning a Grammy Award for Best Contemporary Blues Album. Days after winning the award, Vaughan appeared on MTV’s *Unplugged* program, showcasing his acoustic guitar mastery.

Vaughan’s live performances were infused with a new vigor, and he was at the top of his game. His next project was an album with his older brother, Jimmie, called *Family Style*, recorded during the summer of 1990. The brothers planned to tour together in support of the album. Before the release of *Family Style*, Vaughan began a tour with Eric Clapton and Robert Cray. Buddy Guy, Bonnie Raitt, Jeff Healey, and brother Jimmie joined in for an appearance at Alpine Valley Music Theater in East Troy, Wisconsin, on August 25 and 26. The concert on the 26th concluded with Stevie Ray, Jimmie, Clapton,

and Guy dazzling the crowd of 35,000 with “Sweet Home Chicago.” Afterwards, a helicopter carrying Vaughan and three members of Clapton’s entourage to Chicago crashed into a fog-shrouded hillside near the theater. All aboard were killed. The accident was blamed on pilot error.

*Family Style* was released on September 25 and broke the top ten on *Billboard*’s album chart. The album was a departure for Vaughan, who showed more restraint than on his solo efforts. Vaughan’s career appeared to be moving into a more mature phase, demonstrated in songs like “Tick Tock,” which showcased Vaughan’s vocals rather than his guitar. *Family Style* won a Grammy Award for Best Contemporary Blues Album, and the instrumental “D/FW” won for Best Rock Instrumental.

Vaughan’s death sparked interest in his earlier albums as well, and each quickly shot over one million in sales. *The Sky is Crying*, an album of previously unreleased out-takes and masters, was released in 1991 and won two more Grammy Awards. Several live recordings of varying quality were released in later years, proving Vaughan’s enduring legacy.

## Velez, Lupe (1908-1944)

Lupe Velez was “the Mexican Spitfire” in a series of successful films in the late 1930s and early 1940s with RKO Studios. Despite her screen charisma and gift for comedy, Velez is best remembered for her tumultuous love life. She had turbulent and often violent relationships with actor Gary Cooper and the movies’ most famous Tarzan, Johnny Weissmuller, to whom she was married for five years. A former nightclub performer, her first appearance in a full-length film was opposite Douglas Fairbanks, Sr. in *The Gaucho* (1927). By the 1940s moviegoers’ tastes had begun to change and Velez’s star began to fade. She became pregnant by bit player Harald Raymond who would not marry her. A devout Catholic, Velez would not have an abortion and Hollywood of that era would not tolerate an unwed mother. She took what she felt was the only way out and committed suicide in 1944.

## Velveeta Cheese

Introduced by Kraft Foods in 1928, this cheese food product is a blend of Colby and cheddar cheeses with emulsifiers and salt. The ingredients are heated until liquefied, squirted into aluminum foil packaging, and then allowed to cool into half-pound, one-pound, or two-pound bricks. Velveeta is part of a uniquely American group of highly processed foods, including such favorites as Spam and Jell-O, that have become the building blocks for a remarkably inexpensive though nutritionally dubious popular cuisine. Revered for its plastic-like meltability, it is a favored topping for macaroni, omelettes, and grilled sandwiches, though some prefer to eat it sliced. The single most popular brand of processed cheese, Velveeta controls some 20 percent of the \$300 billion United States processed-cheese market (as well as another three percent with its “Lite” brand). Some of the most requested Velveeta recipes developed by Kraft include those for Cheese Fudge and Cheesy Broccoli Soup. In the 1980s, several pre-flavored Velveetas were introduced, including Mexican Salsa and Italian.

—David Marc

## The Velvet Underground

In an oft-repeated declaration, Roxy Music co-founder Brian Eno once said that the Velvet Underground only sold a few records, but everyone who bought their albums started their own band. While Eno’s claim most certainly is hyperbole, the avant-garde guitar stylings the Velvet Underground developed during their period of activity in the second half of the 1960s was extremely influential. Their music shaped the sound and attitude of the New York Dolls, the Modern Lovers, REM, Suicide, Television, David Bowie, Patti Smith, Sonic Youth, Galaxie 500, Yo La Tengo, and countless other post-punk and indie-rock bands. Each of Velvet Underground’s periods—their innovative noise, beautifully sparse neo-folk, and straightforward rock phases—laid the blueprint for a number of entire sub-genres of rock ’n’ roll. And while the Velvet Underground did not sell many records by most commercial standards (for instance, their third album had only sold 50,000 copies over 20 years after it was released), their influence has been widespread enough to secure their entry in the Rock and Roll Hall of Fame.

In the early-to-mid 1960s, rhythm guitarist Lou Reed met lead guitarist Sterling Morrison and bassist/violist John Cale, and the three of them—along with original percussionist Angus MacLise—began playing at Lower Manhattan poetry readings and happenings under the various names of the Warlocks, Falling Spikes, and the Primitives. As the Primitives, the group recorded a number of commercial dance-oriented singles for Pickwick Records, the company for which Reed was a staff songwriter. When Lou Reed met John Cale, Cale was playing in an avant-garde group founded by famed minimalist La Monte Young, and the two became intrigued by the idea of bringing Cale’s avant-garde concepts to a rock ’n’ roll format. In 1965, MacLise left to be replaced by Maureen Tucker, who became known for her peculiar standup style of primitive drumming.

The Velvet Underground soon began playing a regular gig at Greenwich Village’s Cafe Bizarre—an engagement that abruptly ended when they played their screeching “Black Angel’s Death Song” immediately after being told by the management never to play

**The Velvet Underground:** (from left) Sterling Morrison, Maureen Tucker, Lou Reed, and John Cale.

it again. Before the group was fired, they impressed Pop art svengali Andy Warhol, who invited them to play at a series of his film screenings called “Cinematique Uptight,” and later in a multimedia spectacle called “The Exploding Plastic Inevitable.” During this time, Warhol arranged for European chauntresse/aspiring movie star Nico to sing with the Velvet Underground for the Exploding Plastic Inevitable, something that caused a certain amount of resentment among members of the band.

In 1966, Andy Warhol took them into the studio to have them recorded—a series of sessions that resulted in two singles and the entirety of their first album, *The Velvet Underground and Nico*, which sported an Andy Warhol-designed peelable banana album cover. The album featured three songs sung by Nico, as well as Reed’s infamous drug song, “Heroin.” The Teutonic, monotone voice of Nico, and Reed’s equally monotone voice, combined with lyrics about sadomasochism, hard drugs, and death made this album extremely uncommercial, particularly during a time dominated by the positive vibes of hippy flower-power.

Rather than going a more commercial route, the group instead followed their muse (and the path that was driven by taking an extreme amount of amphetamines) by making *White Light/White Heat*, their second album. This uncompromisingly noisy album whose lyrics dealt with prostitutes, sailors, and other sundry topics

(and which culminated in a 17 minute noise-jam called “Sister Ray”) was too dissonant to be heavy metal and too heavy to be psychedelic.

After a long-time power struggle with Reed, Cale quit the group and was replaced by Doug Yule, who only filled Cale’s bass duties—the group never had another violist. After recording what would be called their great “lost” album, Reed radically changed the group’s direction with their self-titled third album, which featured almost uniformly pretty, quiet songs like “Pale Blue Eyes” and “Candy Says.” Their last studio album, *Loaded*, contained the oft-covered classics “Rock and Roll” and “Sweet Jane,” and was the first to be recorded for Atlantic Records (after a commercially unsuccessful three-album stint at Verve Records). *Loaded* was their most conventional rock-oriented album, which was partially caused by Maureen Tucker’s absence from most of the recording sessions due to pregnancy (Doug Yule’s little brother, Billy Yule, filled in on drums). Reed quit the group before the album was mixed, and Reed claims that two songs—“Sweet Jane” and “New Age”—were significantly changed by Doug Yule and the rest of the group. (Reed’s original vision was later restored on the 1995 Velvet Underground box set, *Peel Slowly and See*).

The group continued to tour without Reed, with Morrison and Tucker eventually quitting, before Doug Yule put the name to rest in 1973 after releasing what amounted to a Yule solo album, *Squeeze*.

Morrison went on to teach English at the University of Texas and drive a tugboat in his spare time. Tucker raised a family and released a number of critically praised solo albums. Cale also released numerous solo albums and produced important albums by Jonathan Richman's Modern Lovers, Patti Smith, the Stooges, Squeeze, and Nico (the Cale-produced Nico solo albums, *Desert Shore* and *Marble Index*, are considered classics). While all the members of the Velvet Underground have maintained a substantial cult following, it is Reed who has occasionally had the highest profile, as well as the only hit, with 1972's "Walk on the Wild Side." (Reed even made the mainstream, playing at the White House in front of President Clinton and a number of foreign dignitaries in 1998). In 1993, the group finally patched up their differences to do a brief tour of Europe in 1993 (sans Nico, who died in a bike accident in 1989), which resulted in the live recording *Live MCMXCIII*. But their egos soon clashed and they went their separate ways again; the group dissolved before they recorded a planned studio album. Sterling Morrison died in 1995, putting an end to speculation that the group might again record under the Velvet Underground moniker.

## Ventura, Jesse (1951—)

With his surprise election as Governor of Minnesota in 1998, former professional wrestler Jesse "The Body" Ventura (whose real name is James Janos) captured the attention of the nation. Representing the Reform Party, Ventura parlayed his gift for gab, his celebrity status, and public disgust with "politics as normal" to become an instant icon. Within days of his election, Ventura was the talk of the nation—appearing on countless talk shows (where he announced that he should now be dubbed "The Mind"), becoming the subject of both serious news analyses and numerous jokes, and morphing into a *Doonesbury* character. The A&E cable channel quickly put together an episode of *Biography*, two networks started work on TV movies, and Ventura found time to pen a political autobiography called *Ain't Got Time to Bleed*.

Ventura's diverse resume includes time as a Navy Seal, TV broadcaster, radio talk show host, and a very successful stint in professional wrestling. Ventura was named the "The Body" due to his impressive physique, but when a blood clot forced his early retirement from the ring, it was his ability behind the microphone as a color commentator, coupled with a penchant for boas and outrageous costumes, which earned him an impressive fan base and won notice by Hollywood producers. Ventura acted respectably in roles in *Predator* (1987), *The Running Man* (1987), and *Batman & Robin*

Jesse "The Body" Ventura

(1997). As typifies late twentieth century American popular culture, the road to politics was only a step away.

## Versace, Gianni (1946-1997)

As a boy, Versace observed his mother's dressmaking studio in Reggio Calabria, Italy; as a man, Versace moved to Milan to design for other companies from 1972 to 1977 and established his own company in 1977. A consummate dressmaker, Versace rocked the world of fashion by other principles: featuring hot models; packing

runway shows with celebrities; dressing famous men and women from Elton John to Princess Diana to model Elizabeth Hurley; and creating body-conscious clothing for the most self-confident clients. His body-exposing black safety-pin dress worn by Hurley to a London movie premiere was the most photographed dress of 1994. Leather and metal-mesh dresses from his last collection in 1997 referred to Byzantine art, but clung to the body. In sensibility and life, Versace was flamboyant and larger-than-life. He realized fashion as media and created Cinderella fantasies for the 1980s and 1990s. He was murdered on the steps of his Miami mansion in July 1997.

## Vertigo

Released in 1958, *Vertigo* is often singled out as Alfred Hitchcock's most important film. The film combined a complex storyline with equally complex cinematography. *Vertigo* debuted Hitchcock's now famous combination of forward zoom and reverse tracking. His unique zoom and tracking method along with other

James Stewart and Kim Novak in a scene from the film *Vertigo*.

creative and technical complexities of the film exerted a tremendous influence on an entire generation of filmmakers, especially the French New Wave. *Vertigo*'s presence is felt in films as diverse as *Jules et Jim* (1961), *High Anxiety* (1977), *Body Double* (1984), and *Twelve Monkeys* (1995). *Vertigo* was unavailable for decades because its rights, along with those of four other films, were left by Hitchcock as a legacy to his daughter. *Vertigo* and the other four films were re-released in 1984 to much popular and critical acclaim. Because the films are so popular as well as creatively and technically complex, Hitchcock's films complicate the distinction between high and low art.

*Vertigo* is a complex psychological thriller—it opens with San Francisco police detective Scottie Ferguson's letting a fellow officer fall to his death during a rooftop chase of a suspect. After the accident, Ferguson is hired by an old friend to investigate the friend's wife, Madeleine, who believes herself to be the reincarnation of a turn-of-the-century belle, Carlotta. Madeleine reenacts Carlotta's suicide by jumping off a mission bell tower while Scottie stands by helplessly, paralyzed by his vertigo. The remainder of the film details Scottie's nervous breakdown and his discovery of a woman named Judy who uncannily resembles Madeleine. Scottie recreates Madeleine in Judy, forcing Judy to adopt Madeleine's makeup, clothing, hairstyle, and speech. When Scottie realizes he has been the dupe of a complex murder plot he attempts to cure himself of his vertigo by revisiting the scene of Madeleine's death. Able to conquer his vertigo, Scottie is nevertheless unable to save Judy, who falls to her death.

The overwhelming critical and popular response to *Vertigo*'s re-release raises the question of why the film is such a vital text for film criticism and theory. The film itself has been interpreted in a variety of ways: as an allegorical tale of man's descent into the underworld in search of a lost love; as a psychological parable of guilt, obsession, and repression; and as an experiment in generic collage, drawing on the generic conventions of realism, fantasy, and the women's film. Together with *Rear Window*, *Vertigo* has often been discussed as a document of late 1950s culture, as a portrayal of the alienation and rootlessness of the 1950s, as well as of the constructions of 1950s femininity. It is these latter issues—the representation of women and the relationships among power, sexuality, and gender—which have garnered the most critical attention.

Hitchcock is frequently understood as a misogynist whose films entice audiences to participate in sadistic fantasies about women (such as Scottie's efforts to make over Judy into Madeleine, despite Judy's plea that he love her the way she is). Certainly Hitchcock's films are both fascinated by and horrified by women's (potential) power. Hitchcock's films can also be read, however, as exposures of the mechanisms of patriarchy—*Vertigo* can be read, for example, as a critique of the ways in which femininity in our culture is largely a masquerade and a male construct.

Hitchcock's films are central to film theory and feminist criticism because they are all about scopophilia—voyeurism, fetishism, and the interrelated questions of epistemology, identification, and spectatorship. One of the most important essays of feminist film criticism, Laura Mulvey's 1974 essay "Visual Pleasure and the Narrative Cinema," uses readings of Hitchcock's *Rear Window* and *Vertigo* to argue that classic Hollywood movies inevitably transform women into passive objects of male voyeurism and sadism. Mulvey's essay also claims that Hitchcock's female characters both represent and assuage male spectators' anxieties and desires, while female spectators are trapped into a masochistic identification with the female victims on screen. Later feminist film critics also turned to *Vertigo* as a central text. Tania Modleski, for example, uses *Vertigo* to

elaborate upon the notion of the female spectator. She argues that identification is a more complex mechanism than heretofore considered and suggests that the female spectator is implicated in a split position, identifying with both the passive female object and the active male subject. Hitchcock himself seems to suggest this position, when, in a pivotal scene in the movie, we see things from Judy's point of view as well as Scottie's. Indeed, it is *Vertigo's* multiple points of view, and hence of knowledge and of identification, that suggests that the movie's appeal lies in its very ambivalence toward women and their potential to upset the male spectator's position.

## Viagra

Viagra, a little blue pill made by the pharmaceutical company Pfizer Inc., became the first oral medicine approved for male impotence by the U.S. Food and Drug Administration. Its approval in March 1998 set off a worldwide demand and sent Pfizer stock soaring. Hardly a day went by when newspapers, radio, and television did not have stories of the Viagra craze. The pill, which sold by prescription for about \$10 apiece retail, was taken by men with sexual problems about an hour before they expected to have sexual activity. Their performance during the sex act improved dramatically. The drug, chemically named sildenafil, had been used unsuccessfully as a medicine for heart problems. When some heart patients reported to doctors they were getting erections after taking the pill, it was developed to treat sexual impotence.

Clinical studies of about 4,000 men with erectile dysfunction showed that up to 72 percent reported they had successful intercourse after using Viagra, against 23 percent of men who took a placebo. Viagra works by improving the blood flow to the penis. More specifically, it inhibits the effects of an enzyme that acts to reverse erections after sex. Before Viagra came along, men with erectile problems had to forego sex, rely on mechanical devices such as a small pump to produce an erection, have surgical penile implants, or inject medicines directly into the penis.

Once the Viagra craze spread, so did reports of problems associated with taking the pill. Some men reported problems with their vision, seeing green or blue. There were stories of dizziness and headaches or upset stomachs. Men with heart problems who took nitroglycerin or nitrates were warned not to use Viagra because it could act to reduce blood pressure. By late 1998, the Food and Drug Administration issued warnings that Viagra could be hazardous to some men with heart ailments, and that using the pill could lead to

heart attacks or strokes. The drug watchdog agency said that although Viagra was still considered safe and effective, it posed potential problems for men with very high or very low blood pressure, so that patients should get careful examinations before taking the pill. The FDA also said that 130 reported deaths of men who had taken Viagra could not be attributed directly to the drug. The average age of those who died was 64 and many of the men who died had had serious health problems aggravated by sexual activity, which ended in heart attacks or strokes. "The people who died had underlying cardiovascular problems," Dr. Lisa Rarick, director of an FDA division, told reporters during late 1998. She added that men with heart problems should ask their doctors, "Is sex good for me?" Many of the men who died had impotence problems because of their medical conditions. By the time of the warning some six million prescriptions had been written for about three million men.

The underlying demand for Viagra could be linked to a major study, released in 1999 by the *Journal of the American Medical Association*, of the sexual habits of nearly 5,000 people, the largest such study since the report of biologist Alfred Kinsey some 50 years earlier. The new research revealed that sexual problems were widespread in the United States. On the basis of personal interviews with 1,749 women and 1,410 men, the research showed that about two out of five women and one out of three men had some forms of sexual dysfunction.

The clamor for Viagra in other countries spurred some swindlers to peddle pills made to look like Viagra. But cashing in on demands for a silver bullet to cure sex problems was not new. The search for a magic potion that could produce erections on demand has gone on for centuries, encouraging charlatans who sold bogus remedies to unwitting, desperate men. Among the miracle cures thus ballyhooed to have been miracle cures have been underwear electrified to stimulate the penis, rhinoceros horns pounded into powder, and tiger penises made into soups.

## Victoria's Secret

Perhaps given a boost by the openness of the Sexual Revolution, the Victoria's Secret retail chain almost single-handedly redefined America's conception of lingerie beginning in the early 1980s. Despite the secrecy promised in the franchise's moniker, each of its stores replaced the modest, tucked-away, department-store displays of women's underwear with an openly luxurious atmosphere that recreated a nineteenth-century boudoir. At the same time, Victoria's Secret decidedly built its image with a fairly conservative, middle-class shopper in mind and avoided any connotations of sleaziness which lingerie might carry. While some critics have contested the sometimes reactionary portrait of femininity developed in the store's

Models display the latest fashions from Victoria's Secret, 1997.

designs and advertising campaigns, Victoria's Secret helped women of all shapes and sizes, if not tax brackets, feel that sensuality need not be limited to models and celebrities.

Victoria's Secret was launched through the personal vision of entrepreneur Roy Raymond, an ambitious graduate of Stanford University who found himself dissatisfied working in the lower rungs of large corporations. Raymond's brainchild came to him in the mid-1970s as the result of his own experiences of buying lingerie for his wife. A shy man by nature, Raymond found himself made uncomfortable by the probing glances of lingerie salespeople in department stores and moreover thought the wares of such stores to be either excessively frilly or blandly conservative. Believing that many men and women alike shared in his desire for a middle ground between these two poles, Raymond decided to embark on the risky venture of creating his own boutiques. In 1977, he borrowed a total of eighty thousand dollars—half of it from his parents—and opened the doors of the first Victoria's Secret in a shopping center in the southern outskirts of San Francisco. Decorated to resemble a popularized Victorian bedroom, the premiere outlet was furnished with opulent Oriental rugs and period vanities whose drawers housed fittingly plush bras and panties made by upscale designers such as Vanity Fair

and Warner's. Although subsequent stores were less customized than Raymond's prototype, this balance of seduction and "classy" charm continued to rule the sensibilities of Victoria's Secret.

In its first year of business, the San Francisco store had amassed sales of an impressive half a million dollars, allowing Raymond to expand Victoria's Secret into four new locations, in addition to a headquarters and warehouse. Raymond's creative vision was not equaled by financial mastery, however, and in 1982 he was forced to sell Victoria's Secret to the Columbus, Ohio-based conglomerate The Limited for the relatively slight sum of four million dollars. Although it was already a nationally known fashion enterprise, The Limited kept the personalized image of Victoria's Secret intact, albeit in a mass-produced, cost-efficient manner. Rapidly expanding into the terrain of America's malls throughout the 1980s, Victoria's Secret blossomed from a handful of stores to more than four hundred and solidified its exclusive image by appending its own label to all of its offerings as a brand name. In addition to volume growth, the company was able to vend a widened range of products with the aid of a popular mail catalog issued eight times annually. While corsets, teddies, and silk pajamas remained at the hub of the Victoria's Secret wheel, home shoppers could buy shoes, evening wear, and perfumes—such as Wild English Gardens and Heather's Embrace—all under a single banner promising both middle-class refinement and daring sexuality.

By the early 1990s, Victoria's Secret had become the largest American lingerie outfitters, easily surpassing both the even higher-priced Cacique chain and the racier Frederick's of Hollywood. However, despite the fact that the company had topped the billion dollar mark, its growth showed signs of stagnation. In 1993, Grace Nichols took over the executive helm from former president Howard Gross and immediately addressed allegations that the quality of Victoria's Secret's merchandise did not match its elevated price tags. In addition, Nichols placed added emphasis upon an older age group as the company's target concern. Nevertheless, while Nichols stressed that thirty- to forty-year-old women need not feel out of place in sexy underwear, the company's advertising campaigns continued to exclusively portray younger models with svelte, busty figures. Indeed, some critics saw the Victoria's Secret formula of femininity as a limitation to the majority of American women and argued that the company's image (highlighted in design series such as their English Lace line) implicitly promoted an overly bourgeois conception of "good taste." Whatever class and gender ramifications Victoria's Secret might have entailed, the company grew once again under Nichols's care throughout the 1990s, as millions of women—and men—continued to fill out their fantasies with the satin-lined aid of offerings such as the Angels bra series and, perhaps Victoria's Secret's single biggest contribution to the public imagination, the uplifting Miracle Bra.

## Vidal, Gore (1925—)

Thanks to the broadcast media, which continually gives public platform to the curmudgeonly wit and iconoclastic political observations of Gore Vidal, he has become one of those rare authors who is as famous for what he says as for what he writes. Considered to be one of the most promising members of the generation of writers emerging from World War II (a group which included his arch-rival and eventual sparring partner, Norman Mailer), Vidal first made his mark with a fairly well received novel based on his army experiences, *Williwaw*, in 1946, then followed up with two more books, the second of which, *The City and the Pillar* (1948), stirred waves of controversy because of its frank treatment of homosexuality. “Not until that third book,” Vidal has recalled, “did I begin to get bored with playing safe.” Ever since, “playing safe” is a charge which has never been leveled against Vidal, by himself or by anyone else. With his literary career in a slump, he supported himself by writing television plays, finding in that infant medium great success which he soon was able to transpose to Broadway. This in turn led to screenwriting assignments, and in due time Vidal was able to return, with mixed success, to novel writing. His most notorious book was 1968’s story of transsexuality, *Myra Breckinridge*, a personal favorite of the author’s. While penning historical novels and essays, Vidal has also kept himself in the public eye through appearances on TV interviews and talk shows, and even an occasional acting stint on film. In his TV appearances, Vidal’s gadfly manner and contentious political views have entertained and, some would say, enlightened the public in a forum denied to most other scribblers. Vidal has even run for public office and, though never elected, was one of those unsuccessful candidates—Barry Goldwater, Vidal’s political opposite, was another—whose views have nonetheless had an influence upon the electorate.

The man who would later christen himself Gore Vidal was born Eugene Luther Vidal at West Point, New York, on October 3, 1925. A greater influence on his childhood than his parents, who soon divorced, was the boy’s blind grandfather, Thomas Pryor Gore, Oklahoma’s first senator. Young Vidal read to his grandfather the Congressional Record and constitutional history, a formative experience that instilled political ambitions in the lad. As a young man, Vidal decided to forgo Harvard in favor of the military, a decision he claims never to have regretted. The army at least provided fodder for Vidal’s first novel and also his most successful teleplay, the satirical *Visit to a Small Planet*, which concerns the misadventures of an alien from outer space who wants to start a war because, he says, “it’s the one thing you people down here do *really* well.” *Planet* made a successful transition from TV to stage, as did Vidal’s trenchant melodrama about rivalry between would-be presidential candidates at their party’s convention, *The Best Man*. The latter play also made for a fine film starring Henry Fonda, but Vidal was so displeased with the rewriting and the miscasting of Jerry Lewis in the film version of *Planet* that he has disowned the movie. (Subsequently, Vidal would be equally displeased with the film version of *Myra Breckinridge*; he would also sue to have his name removed from Bob Guccione’s infamous production of *Caligula*). Vidal was responsible for the screenplay of his friend Tennessee Williams’s play *Suddenly, Last Summer* and made some major, although uncredited, contributions to the script of *Ben-Hur*. (To the continued annoyance and denials of Charlton Heston, Vidal insists that he persuaded director William Wyler to insert a homo-erotic subtext into the film’s key relationship between Judah Ben-Hur and his boyhood friend, Messala.)

Vidal, who once criticized the United States as “the land of the dull and the home of the literal,” nevertheless always wanted to be its president. He campaigned for representative in 1960 and senator in 1982, losing both battles but nevertheless winning many converts to his somewhat extreme positions (such as his proposal to tax church income).

Although he dabbled with science fiction in one of his novels (*Messiah*, 1954), most of his latter-day books have been such historical novels as *Julian* (1964), *Burr* (1973), and *Lincoln* (1984). *The Smithsonian Institution* (1998) manages to combine both the science fictional and the historical.

There was a time in Vidal’s own history when his public spats with other literary figures, such as Truman Capote and William F. Buckley, Jr., led to much-publicized lawsuits. In the case of his feud with Norman Mailer, it even led to flung drinks and fisticuffs. (Covering the 1968 Democratic Convention for ABC-TV, the unlikely team of Vidal and Buckley ended up calling each other, respectively, “crypto-Nazi” and “queer.”) Vidal in his later years, however, can hardly be said to have mellowed. “There is no warm loveable person inside,” he proclaims, “beneath my cold exterior, once you break the ice, you find cold water.”

## Video Games

When the basic “electronic tennis” game, Pong, first appeared in American bars in 1972 it created a sensation that has only since been replicated by the 1990s Karaoke boom in Japan. In relative terms, of course, Pong was as fun and innovative in the 1970s as any video game now, but the basic principles of video gaming have always, in any case, remained the same—score the points, beat the enemy, come back for more. The term “video game” could only really be applied when Atari and Nintendo introduced game consoles into the home throughout the 1970s; the idea being that you would slot your Pong cartridges into the console and play the games through your television set—hence video rather than computer games. But the term has come to cover the main aspect of the medium, playing sight-and-sound games through any convenient screen.

In some sense, the arcade boom that began in 1978 took the group appeal out of video gaming. School children were still taking part in a mass fad, perhaps, but they were also cutting themselves off from others, with the distinction that while Pong required a human opponent, battling against pixellated aliens just pitched the player

A boy playing the arcade video game Q\*bert.

against the machine. Of course, after the release of George Lucas's blockbuster movie *Star Wars* in 1977, battling aliens became the rage in the first popular coin-operated machines, such as *Space Invaders*, *Asteroids*, and *Galaxians*. *Breakout* may have introduced a puzzle element and *Pac Man* offered a maze race, but video games have essentially always been based on the same principle: "your" pixels blasting, avoiding, or racing against "their" pixels. Technological developments, however, have made the experience of playing these games more visually and aurally realistic, to such an extent that you will not notice that you are only rearranging pixels.

With the introduction of *Donkey Kong* in 1981, there was an attempt to make a "story" as attractive as the "action." Hence the player now had a character to portray, in this case that of a boy rescuing a princess from an ape monster, as opposed to the previous standard of the player as "thing"—a tennis racquet, a spaceship, or a pac man. It is because of this sort of narrative appeal that Nintendo was able to dominate the console market throughout the 1980s. Their 8-bit Nintendo Entertainment System (NES), released in 1983, took away the market from the Atari 2600, even managing to compete with the personal computer boom—in fact, it is estimated that, by 1990, a third of American homes owned Nintendo consoles. Part of the success of Nintendo in the 1980s was not only their 8-bit monopoly but also the blanket marketing of their games. Again, part of the

"humanizing" factor was to bring in a character as appealing as Mickey Mouse or Ronald McDonald, hence the introduction of Mario, the cute Italian-American plumber who would go on to save the world in as many imaginative variations on the platform game formula as possible. First appearing in the *Mario Bros.* coin-op in 1983, the NES *Super Mario Bros.* became the "greatest video game" of its generation in 1984, only to be surpassed by *Super Mario 3* in 1988.

Following advances in video gaming is just a matter of tracing developments in the game consoles themselves (bearing in mind that, throughout the 1980s and 1990s, arcade machines and personal computers were also advancing the cause). When Sega introduced their 16-bit Mega Drive in 1989, Nintendo was caught off-guard in the "next generation" of console wars. Sega began the 1990s with the christening of a new hero, *Sonic the Hedgehog*, but Nintendo released their own 16-bit machine, the Super NES in 1990 and was able to win ground with the "greatest video game" of this next generation, *Super Mario World*. Such were the advances in technology, however, that the mid-1990s came to be characterized by the 32-bit wars, Nintendo seemingly missing out in 1994 when Sega introduced their Saturn and Sony entered the market with the Playstation. And it is the Playstation which came to dominate the market in America, Japan, and Europe, making games "trendy," fun, violent, and often intelligent enough to appeal to "children" of all ages, from three to 33.

For every quick-fire arcade variant, the Playstation also managed to follow the PC (Personal Computer) route into adventure gaming; and altogether combining both speed and strategy with "filmic" production values. Between 1994 and 1998, titles like *Doom* and *Wipeout 2097* became instant classics, and for the growing number of Playstation fans, the *Tomb Raider* and *Final Fantasy* series became ways of life. Although missing out on the 32-bit market, Nintendo headed the next "next generation" war with their Nintendo 64 in 1996. With 64-bits to play with, Nintendo's flagship title, *Super Mario 64*, took Mario out of the 2-dimensional platform world and into a whole new 3-dimensional environment. That games were becoming more like movies was demonstrated by one of the most successful film tie-ins ever, the intelligent and action-packed James Bond spy simulation, *Goldeneye* (1997); and that Nintendo could corner the same adult market as the Playstation was demonstrated by the glorious prehistoric gore of *Turok 2: Seeds of Evil* (1998).

Clearly, the basic generic patterns of video gaming have been set—shoot-em-ups, sport, and simulations—but the presentation of video games, sound, graphics, and game play has become nothing short of spectacular. In 1998, Sega launched their Dreamcast, and in 1999 the Playstation 2 completes the 64-bit circuit. With the next 128-bit cycle, however, players will want whole rooms full of equipment in order to experience completely the sights, sounds, and total immersive capacity of these games, the hardware finally expanding to match the immense virtual horizons of the software itself.

## Videos

By late 1987, over one-half of American households owned a videocassette recorder (VCR). With unprecedented speed, the small device had entered the home and taken up its place alongside the television as the premiere electronic consumer item. As with many other consumer products, videocassette recording technology had a long development period, and one that dovetailed with the development of other forms of media. Necessary innovations came in the first half of the twentieth century. Dr. Fritz Pfeumer received a 1928 German patent for the deposition of magnetic powders on paper or plastic backing media. The German companies, Allgemeines Elektrizitäts-Gesellschaft (AEG) and BASF, produced quantities of magnetic tape between 1934 and 1944 exclusively for the German radio broadcasting stations. In 1944, the American 3M corporation began its own experiments with magnetic coatings, but it was not until after World War II that John T. Mullin, a United States electronic specialist, went to Germany and returned home with four "Magnetophon" recorders. These audiotape recorders were scrutinized, re-wired with parts from the United States, and finally demonstrated to the Institute of Radio Engineers in 1946. Mullin joined the Ampex Electric Corporation in 1948, which later that year introduced the first successful American audiotape recorder. Although other American companies, including RCA, experimented with videotape recording during the late 1940s and early 1950s, Ampex, due largely to its advanced research in audiotape recording, was able to develop the first feasible professional videotape recorder—the VR-1000, which premiered in 1956, weighing 900 pounds and sporting a price tag of \$75,000 a unit.

The vast majority of these recorders were purchased by stations and studios affiliated with one of the three major television broadcasting companies—ABC, NBC, and CBS—who employed them in the retransmission, delay, and temporary archiving of programming. Technological innovations during the 1950s largely served the ends of professional engineers and included enhancements in mobility, advanced editing capability, and the addition of color recording. CBS was the first to broadcast from videotape, presenting *Douglas Edwards and News* in 1956 using Ampex recorders. Quickly, the technique diminished the need for "live" broadcasting. Stations could now provide uniform "clock-times" for shows coast-to-coast, functionally eliminating differences introduced by time zones and the erratic adoption of Daylight Savings Time in some regions. Videotape recording also freed performers from the anxiety of "live" performances. Errors could be corrected and re-taped as in film production, and the possibility of the "re-run" was created. Recording technology allowed the networks to concentrate on technical quality and the consolidation of viewing markets. Little attention was yet paid to the development of a viable consumer videotape recorder, although videotape's impact on television viewing was already being felt.

The 1960s marked the beginning of "consumer" videotape recording. The high cost of the Ampex VR-1000 provoked Japanese manufacturing into developing a domestic alternative. Research had begun at Sony as early as 1953, but no significant gains were made

until the Japanese company Toshiba developed a helical-scanning recording head in 1959. Helical-scanning technology, the basis of today's VCR, wound its tape around a spinning, drum-like recording head, a novel method which avoided restrictions imposed by Ampex's numerous patents. In 1961, the Victor Company of Japan (JVC) introduced an improved dual, helical-scan head. These innovations allowed for an increased recording quality with a slower tape transport, resulting in decreased tape use and cost savings. Yet, these early units were inferior in image quality and unacceptable for broadcast use.

In 1959, the Society of Motion Picture and Television Engineers (SMPTE) adopted standards for the manufacture of videotape recorders, thus potentially allowing any manufacturer to enter the marketplace. The early 1960s also saw the use of transistorized electronic components, resulting in more compact recorders and potential portability. Nevertheless, the 1963 Nieman Marcus Christmas catalog offered the gigantic \$30,000 Ampex VR-1500 videotape recorder / "entertainment center." In 1965, Sony introduced the helical-scan, black-and-white, reel-to-reel, CV-2000 which used an extremely compact 1/2" tape (as compared to the 2" tape of the older Ampex VR-1000). Briefly offered as a consumer model, marketers later emphasized its sale to broadcast and industrial markets. By 1967, Ampex claimed to have sold 500 recorders for "home-use," and by 1968, a number of consumer machines were available in the \$800 to \$4,000 price range. Most of these, however, such as Cartrivision, failed to capture a significant home market due to either high price or technical shortcomings.

Significant inroads were finally made in the 1970s when Sony introduced the 3/4" tape U-Matic VCR to the American market in 1972. The development of the video-cassette served as a significant leap beyond older reel-to-reel tape formats and completely removed the need for a skilled engineer/operator. Although consumers still resisted the notion of a home videocassette recorder, broadcast engineers began to utilize the Sony U-Matic for news reportage, an area still dominated by film recording. The 1968 Mexico City Olympics games had been covered by at least one older-generation Ampex videotape recorder, and in 1974, a U-Matic was used to document Nixon's historic trip to Moscow. Sony followed in 1975 with the 1/2" Betamax recorder/television combination (\$2,300) and the 1976 Betamax stand-alone model (\$1,300), each capable of recording one hour of programming. Whereas the U-Matic tape had been the size of a large hardcover book, the Betamax cassette was now that of a paperback. Coupled with improvements in tape media and recording method (Beta being a term in Japanese for a calligraphic stroke so rich that completely covers the material below; in this case, where the video signal completely saturates the tape), Betamax was strongly poised to enter a market already cluttered with competitors. The result was revolutionary.

Betamax launched its United States marketing program in fall of 1975. The pitch was simple: "any time is prime time." This was a "time-shift machine," one capable of recording a single program while you watched another, and could begin a pre-set recording even when the user was not at home. A total of 55,000 home VCRs were sold by the end of 1976, 160,000 by the end of 1977, and over 400,000 by the close of 1978. According to a trade magazine poll in January 1977, 40 percent of Americans knew what a Betamax was. Yet, according to a 1979 Nielsen poll, the total number of households in the United States owning VCRs was only 475,000, a mere one-half of one percent of the total homes owning televisions. Although other polls placed the number at closer to 800,000, the situation was not yet considered threatening by the majority of the commercial broadcast

executives. Sales of prerecorded videocassettes hovered at approximately one tape for every two VCRs. Sales of blank videocassettes continued to climb sharply, prompting some in the industry to ask to what use these tapes were being put.

In 1977, RCA had introduced the Video Home System (VHS) VCR, capable of recording two hours of programming on its slightly larger tape cassette. This increase in allowable recording time was followed by a two-hour Betamax recorder in 1977. RCA responded with a four-hour VHS in 1977, and again in 1979 with a six-hour model. Stiff competition erupted between the two incompatible formats although sales of prerecorded material continued to stagnate. By the end of 1979, VHS had captured 55 percent of the VCR market, a share which would only increase over the next seven years when production of the Betamax recorder was discontinued. Although JVC and other manufacturers rushed to augment their models with features such as "stop-action" and "pause," it was not until Sony's introduction of the Betascan in 1979 that the VCR threatened to severely alter the viewing patterns of American households. By allowing the viewer of recorded broadcast material to "scan" across the tape while simultaneously viewing it, Betascan users could easily skip commercial advertisements. This feature was rapidly incorporated into JVC's VHS model released in 1979.

In 1984, a major Nielsen survey stated that 36 of the respondents used the "stop" or "pause" feature of their VCR to delete commercials from shows they where both watching and taping. Nearly half said that they "frequently" used the "fast-forward" capability to skip taped commercials. Debate raged over what this meant for the future of commercial viewing. Some analysts adopted an almost apocalyptic tone, saying that the VCR would mean the end of viable commercial broadcasting. Others adopted the more modest stance that while VCRs increased the difficulties of directing commercials at specific target audiences (children, female homemakers, etc.), they had potentially opened an entirely new group of viewers for their programming. While television viewing did decrease on Friday and Saturday evenings as viewers turned to other prerecorded materials or shows taped earlier in the week, the overall time spent viewing television increased from six hours and 10 minutes in 1977 to seven hours and seven minutes in 1986.

The sales of prerecorded materials got off to a slow start. Andre Blay founded the Video Club of America in 1977, offering a slim catalog of 50 films on video mostly licensed from Twentieth Century Fox; none of the titles were more recent than 1973, and all had been sold to television. Nevertheless, Blay's Club was the first serious offering of prerecorded feature films at a time when adult films comprised the vast majority of videocassettes publicly available. Warner Home Video began releasing prerecorded videotapes of Hollywood films in 1980. Starting with a very modest 25 titles, this number increased as consumer demand climbed. Warner Brothers, like other film producing companies, had originally expected that consumers would purchase these recordings outright. Yet, much to their chagrin, stores had sprouted up which offered to rent titles to viewers. These "middlemen" were perceived as a potential threat, much like television production companies had considered the VCR itself. Copyright was, for them, the right to completely dominate and control the marketing and distribution of their programming and films. MCA/Universal Studios and Walt Disney Production had attempted to sue Sony beginning in 1975, just after the release of the Betamax recorder in the United States. The case had wound its way through the Federal court system until the Supreme Court decided in

January 1985 that "neither the consumers who tape television programs for their own use nor companies that make and sell video recorders violate Federal copyright law." In light of the "Betamax case," film companies opted for the creation of licensing agreements over expensive litigation which, in turn, paved the way for a widespread increase in available titles.

Tom Shales wrote in the Washington Post in 1985: "The Thing of the Year: the videocassette, which in the past twelve months has had a tremendous effect on American television viewing and American family life. We have gone from being a television nation to being a video nation. . . . By 1955, you felt naked if you didn't own a TV set. By 1965, you felt a tad underdressed if you haven't gone to color. In 1975, it began feeling a little nippy if you didn't have cable TV. And 1985 was the year you felt positively indecent unless you had a VCR." In the 1980s, video made itself felt in other ways. The cable station Music Television (MTV) was launched in August 1981 with the appropriately titled "Video Killed the Radio Star" by The Buggles. It soon became a market force in the music industry and a serious creator of youth culture. Performers, once content with the studio/radio/tour mode of production and promotion, now had to consider visual elements often unrelated to the music itself. In 1983, Sony introduced the Betamovie camera, the first camcorder. Although Sony had introduced the bulky "PortaPack" several years earlier, the Betamovie was the first truly portable video camera. Largely due to the public's penchant for creating documentary "home movies," camcorder sales increased throughout the 1980s, eventually displacing the traditional 8mm film camera in that role. Although never ubiquitous as the VCR, the video camera enjoyed a higher profile in the late 1980s and 1990s. Through television shows, such as *America's Funniest Home Videos*, and the increasing use of "amateur" footage in news broadcasts, the videotaped events became common viewing. Their importance would perhaps become most clear as the public witnessed the tapes of the Rodney King beating and the Los Angeles riots of 1992.

## Vidor, King (1894-1982)

In a 40 year career, Texan-born pioneer film director King Vidor necessarily adapted to commercial considerations, but his personal vision, and his concern with the problems of society and the individuals within it, resulted in two silent masterpieces (both his wives, Florence Vidor and Eleanor Boardman, were leading silent stars) and

a handful of significant sound films. He established his reputation with a powerful anti-war statement, *The Big Parade* (1925), and secured it with *The Crowd* (1928). This profoundly realistic examination of struggle and alienation in the big city revealed a virtuoso use of the camera. Vidor's eclectic tastes and wide interests informed the watershed all-black musical *Hallelujah* (1929), the huge hit *The Champ* (1931), and the Depression drama *Our Daily Bread* (1934). Later work ranged from *Stella Dallas* (1937) and *The Fountainhead* (1949), to Westerns *Duel in the Sun* (1947) and *Man Without a Star* (1955) and the epic *War and Peace* (1956). A five-time Academy nominee, he retired in 1959 and received an honorary Oscar in 1979 for "incomparable achievements as a cinematic creator and innovator."

## Vietnam

American involvement in Vietnam began in the mid-1950s, as the French, defeated on the battlefield by the communist Viet Minh, began to withdraw all military forces out of their former colony. Fearing a vacuum that the communists might soon fill, the United States helped establish the Republic of Vietnam in the southern half of the country. In the face of North Vietnam's determination to unite all of Vietnam under its control, a series of U.S. administrations provided support to the South Vietnamese government—first with economic and military aid under President Dwight D. Eisenhower, then military advisors under President John F. Kennedy, then combat troops under President Lyndon Johnson, and finally by invading Cambodia under President Richard Nixon.

As the commitment to Vietnam grew, so did protest at home. Many Americans (often, but not always, college students) opposed the war on moral grounds, frequently extending their opposition to the Selective Service system whereby young men were "drafted" into military service. Other (often older) Americans, motivated by patriotism, anti-communism, or the conviction that "our leaders know best," supported the war effort and often disdained those who protested. The nation was thus polarized as it had not been since the Civil War a century earlier. Eventually, U.S. combat casualties and the lack of significant military progress eroded much of the support for the war. President Richard Nixon gradually disengaged and withdrew most American troops. Under his "Vietnamization" policy, all fighting was gradually turned over to the South Vietnamese army, which, Nixon said, was fully capable of achieving victory. South Vietnam fell to the communists in April 1975.

Vietnam first entered American popular culture through articulation of what became known as the "domino theory." At a press conference in April 1954, President Dwight Eisenhower was asked by a reporter to assess the importance of French Indochina for American

An American soldier in Vietnam.

national security. Eisenhower replied, "You have a row of dominos set up, you knock over the first one, and what will happen to the last one is the certainty that it will go over very quickly. So you could have the beginning of a disintegration that would have the most profound influences."

The image of falling dominos as a metaphor for the consequences of a communist victory in Vietnam was a compelling one, and many leaders who followed Eisenhower made use of it in policy discussions. It was endorsed by Presidents Kennedy, Johnson, and Nixon, as well as their surrogates and spokesmen. Scholars and pundits debated the domino theory's merits in print and in person, and it even showed up in an episode of the popular late-1960s television show, *The Monkees*: the boys have an arrangement of dominos set up on a table. One of them says, "Look, Southeast Asia," and pushes the first domino over, with predictable results for the others.

One of the earliest literary discussions of Vietnam also appeared during Eisenhower's time with William Lederer and Eugene Burdick's 1959 book *The Ugly American*. Less a novel than a collection of loosely-related stories, it is a stinging indictment of U.S. diplomacy throughout Asia—especially in the fictional country of Sarkhan, a thinly-disguised Vietnam. The book depicts U.S. diplomats throughout the region as ignorant, incompetent political hacks, who spend their time at embassy cocktail parties while the communist agents

move among the people, speaking their language, respecting their culture, and gaining their allegiance. Several scholars claim that *The Ugly American* inspired President John F. Kennedy (who had read and endorsed the book when it first appeared) to create the Peace Corps; others contend that reading it led Kennedy to transform a small, neglected U.S. Army unit called the Special Forces into those fabled champions of counterinsurgency, the Green Berets.

That elite commando force is also the subject of one of the few fictional works about Vietnam written while the U.S. was militarily engaged there: Robin Moore's *The Green Berets* (1965). Although the book was published during the Johnson Administration, it was Kennedy who gave Moore permission to accompany a Special Forces "A" team to Vietnam—provided the author first went through Special Forces training himself. The resulting book was hugely popular, inspiring both a song and a motion picture.

The film, John Wayne's 1968 production *The Green Berets*, was blatant propaganda on behalf of the war and against its critics. Wayne, whose right-wing sympathies were well known, starred, directed, and installed his own son as producer. The Pentagon, on President Johnson's orders, loaned Wayne immense amounts of military equipment and charged him cut rates for its use. In return, the Defense Department had approval rights on the script, and it was not displeased with the result. The film glorifies the Special Forces, vilifies the Viet Cong, and portrays the war's American opponents as uninformed and misguided.

The music that accompanies the film's opening credits is a choral version of Barry Sadler's "The Ballad of the Green Berets." Sadler, a Special Forces NCO, wrote the song while serving in Vietnam and later saw his recording of it reach number one on the singles chart.

In addition to using Wayne's film to influence public opinion on the war, the Johnson Administration also produced a film of its own. *Why Vietnam?* was released in 1965 by the Defense Department and a copy was made available for loan to any school, club, or civic organization that was interested in screening it. The 40-minute documentary was done in the melodramatic, end-of-the-world style of Frank Capra's *Why We Fight* films that was effective in the 1940s. But 1960s audiences often found the approach hokey. In addition, the historical perspective that the film gave of the reasons for U.S. involvement in Vietnam was not only one-sided but at times simply untrue—as when the film's narrator claimed that the planned 1954 national plebiscite that would have united Vietnam was sabotaged by the communists in the North (South Vietnam was actually responsible, with U.S. concurrence).

A very different documentary was released in 1974, just as the war was nearing its end. *Hearts and Minds*, directed by Peter Davis, was an uncompromising indictment of American involvement in Vietnam. The winner of an Academy Award for Best Feature-length Documentary, the film uses juxtaposition—for example, Nixon justifying his "Christmas bombing" of 1972 followed by footage of a Hanoi hospital destroyed in that bombing—and interviews with Vietnamese peasants to show the devastating damage that the United States inflicted on Vietnam.

News coverage, especially on television, was of vital concern to the several U.S. administrations that waged war in Vietnam. It was believed, not without reason, that the focus and tone of the news might well have an effect on public support for the war. Consequently, both civilian and military officials tried to influence the coverage—they emphasized some aspects of the war, downplayed others, withheld

some and lied about more than a few. These efforts at news management were fairly successful for several years; many journalists, both print and electronic, produced stories that were generally favorable to both the American goals in Vietnam and the ways those goals were pursued.

The Tet Offensive changed everything. At 3:00 a.m. Saigon time on January 30, 1968, the traditional Lunar New Year truce was broken when Viet Cong and North Vietnamese Army units simultaneously attacked targets all across South Vietnam. A number of images arising out of this campaign found their way into America's living rooms, and they did not help the Johnson Administration's cause: dead Viet Cong on the grounds of the U.S. embassy in Saigon, the walls of which had never before been breached; the head of the South Vietnamese National Police, General Loan, drawing his pistol and shooting a bound Viet Cong prisoner in the head; a U.S. army Major, explaining the devastation of a hamlet called Ben Tre by saying, "We had to destroy the village in order to save it."

Tet marked a turning point in media coverage of the war. Reporters, who had listened for months to the claims of American officials that the Viet Cong were defunct, now grew cynical in the face of clear evidence to the contrary. News stories began to be more critical of the "official" version of events. CBS News anchorman Walter Cronkite, who polls showed to be the most trusted man in America, said on television that he thought the war to be hopelessly stalemated and that the United States should negotiate with the communists.

Meanwhile, U.S. antiwar protesters were receiving media coverage, too; much of it was unsympathetic. News reports tended to focus on the most dramatic or shocking aspects of antiwar activity—if 500 people demonstrated peacefully and three others burned a U.S. flag, then the latter group would almost certainly be featured on the evening news. Further, as antiwar protests became more common, many journalists declined even to cover them, unless they involved large numbers of people or were likely to turn violent. Astute demonstrators thus learned how to draw media attention through destructive or shocking behavior—but the very acts that brought news coverage also alienated most of the middle-class audience watching or reading at home.

Although many popular musicians of the period appeared oblivious to the war, there were some who became known for their antiwar material: Joan Baez, Pete Seeger, Phil Ochs, and Barbara Dane were prominent among these. Other individuals and bands recorded a song or two critical of the war effort, including Country Joe McDonald's "Feel Like I'm Fixin' To Die Rag," The Animals' "We Gotta Get Out of This Place," Buffalo Springfield's "For What It's Worth," The Association's "Requiem for the Masses," Barry McGuire's "Eve of Destruction," The Doors' "Unknown Soldier," and Crosby, Stills, Nash and Young's "Ohio."

But there was reaction against protest, even on the radio. Some country artists, in particular, whose fan base tended to be more conservative than that of rock musicians, recorded songs that were supportive of the war, or critical of protesters, or both. These included two Merle Haggard records, "Okie from Muskogee" and "The Fightin' Side of Me," as well as Maybelle Carter's "I Told Them What You're Fightin' For," Johnny Wright's "Hello, Vietnam," and Dave Dudley's "Vietnam Blues."

Although the war's end in 1975 also brought a halt to the musical battle being waged over the airwaves, most other aspects of American popular culture continued to find the Vietnam conflict a worthy subject. One of these manifestations involved memoirs: a number of

veterans published personal accounts of their experiences in the war, including Tim O'Brien's *If I Die in a Combat Zone* (1973), Ron Kovic's *Born on the Fourth of July* (1976), Michael Herr's *Dispatches* (1977), and William Broyles' *Brothers in Arms* (1986). A number of "oral histories" from veterans were also collected and published, such as Al Santoli's *Everything We Had* (1981) and *To Bear Any Burden* (1986), Wallace Terry's *Bloods: An Oral History of the Vietnam War by Black Veterans* (1984), and Kathryn Marshall's *In the Combat Zone: An Oral History of American Women in Vietnam* (1984).

The postwar period also saw no shortage of novels about the conflict in Vietnam. Some of the most important are Tim O'Brien's books *Going after Cacciato* (1978) and *The Things They Carried* (1990), James Webb's *Fields of Fire* (1978), Winston Groom's *Better Times than These* (1978), John DeVecchio's *The Thirteenth Valley* (1982), and Philip Caputo's *Indian Country* (1987).

The dearth of war-related motion pictures made while the conflict was in progress was more than made up afterwards. Ted Post directed 1978's *Go Tell the Spartans*, a bleak look at the early days of American "advisors" in Vietnam that suggests the seeds of American defeat were planted early in the struggle. The same year, Michael Cimino's *The Deer Hunter* won the Best Picture Oscar for its story of three friends whose service in Vietnam changes them in markedly different ways. A year later, Francis Ford Coppola's *Apocalypse Now* premiered, a near-epic film injected with a heavy dose of surrealism. Surrealism also permeates the second half of Stanley Kubrick's 1987 film *Full Metal Jacket*, which follows a group of young men from the brutality of Marine Corps boot camp to the terrors of their deployment in Vietnam. Two other important films, Oliver Stone's *Platoon* (1986) and John Irvin's *Hamburger Hill* (1987) take a more realistic approach, emphasizing the individual tragedies of young men's lives wasted in a war they do not understand.

In addition to the differing film depictions of the actual fighting in the Vietnam War, two sub-genres of Vietnam War films emerged. One focuses on the figure of the Vietnam veteran, made crazy by the war, who brings his deadly skills home and directs them against his countrymen. Though many cheap exploitation films were based on this premise, using it as an excuse to revel in blood and explosions, two more complex treatments appeared. Martin Scorsese's *Taxi Driver* (1976), in which Robert De Niro offers a compelling portrait of the psychologically disintegrating Travis Bickle, and Ted Kotcheff's *First Blood* (1982), in which a former Green Beret is pushed beyond endurance by a brutal police chief who pays a high price for his callousness, offer interesting insights into the lasting wounds war inflicts on soldiers.

The second sub-genre of Vietnam War films posited that some Americans remained prisoners in Vietnam after the end of the war and required rescue. The Rambo character so prominent in this sub-genre was first seen in *First Blood* with Sylvester Stallone's first portrayal of John Rambo. The first of these films, 1983's *Uncommon Valor*, stars Gene Hackman and downplays the exploitative aspects of its premise. But other films flaunted the same premise, most notably the Chuck Norris vehicle *Missing in Action* (1984) and its two sequels, *Missing in Action II: The Beginning* (1985) and *Braddock: Missing in Action III* (1988). The most lurid example of this sub-genre is Stallone's *Rambo: First Blood Part II* (1985). Stallone's crazed ex-Green Beret character is released from prison to undertake a rescue mission of Americans held prisoner in Vietnam. Despite being betrayed, captured, and tortured, he manages to free the captive

GIs and mow down scores of Vietnamese soldiers and their Russian "advisors," thus symbolically "winning" the Vietnam War for America.

In addition to films, television shows and made-for-TV movies about the struggle in Vietnam appeared in the postwar era. *The A-Team*, which premiered in 1983, was based on the notion that a group of Special Forces troopers (hence the "A-team" designation), while serving in Vietnam were framed for a bank robbery and sent to prison. They escaped en masse and became fugitives. In order to pay the bills while on the run, they hired themselves out as mercenaries—but only, of course, in a good cause. The show's scripts were generally as improbable as its premise, but George Peppard (who played the leader of the team, which included the impressively muscled but diction-challenged Mr. T as "B.A. Baracus") led his group of virtuous vigilantes through four seasons of mayhem before cancellation of the show in 1987.

As *The A-Team* left television, a more serious drama about an Army platoon in Vietnam during the late 1960s called *Tour of Duty* debuted. Although the show had an ensemble cast, its prominent character was Sergeant Zeke Anderson (Terence Knox), an experienced combat leader who often took up the slack left by the unit's "green" Lieutenant. Although sometimes prone to clichés, the show dealt with the Vietnam experience fairly realistically, given the limitations of TV drama. It lasted three seasons and was canceled in 1990. Another serious show about combat in Southeast Asia also began in 1987. *Vietnam War Story* was an anthology show, with a new cast of characters each week—not unlike the previous decade's programs *Police Story* and *Medical Story*. The plots were supposedly based upon real incidents and many of the scripts were penned by actual Vietnam veterans. However, despite these efforts at verisimilitude, the show lasted only one season.

*China Beach* (which aired from 1988 to 1991) may be the best television series about the Vietnam War produced by the end of the twentieth century. Its setting was a military hospital complex in Danang during the period 1967-69. The ensemble cast of characters was large, including doctors and nurses, soldiers and Marines, USO singers and prostitutes. But the show's main character and moral center was Army nurse Coleen McMurphy (Dana Delaney). McMurphy volunteered for both the Army and Vietnam, and, although horrified by the realities of combat casualties, did her best as both a nurse and a human being. Mixing comedy and drama, the show explored the relationships between the people of the China Beach facility, and showed how such relationships can be created, changed, or destroyed by a war.

A large number of made-for-TV movies have been made about various facets of the Vietnam War. A few of the more interesting productions include *The Forgotten Man* (1971), in which Dennis Weaver plays a Vietnam veteran, presumed dead for years but actually a prisoner of war (POW), who returns home to find his wife remarried, his job gone, and his old life irrevocably lost. *When Hell Was in Session* (1979) tells the harrowing true story of Commander Jeremiah Denton's seven-year imprisonment as a POW in Hanoi. A similar tale is told in *In Love and War* (1987), about the captivity of Commander James Stockdale and his wife's efforts to have him released. *Friendly Fire* (1979) tells the story of a couple whose son is killed in Vietnam under mysterious circumstances. Their efforts to determine how he died bring them up against a wall of bureaucratic indifference. *The Children of An Loc* (1980) tells the true story of an American actress (Ina Balin, who plays herself) struggling to evacuate 217 children from a Vietnamese orphanage during the fall of

Saigon in 1975. One of the most affecting efforts was the HBO production *Dear America: Letters Home from Vietnam* (1987), based on Bernard Edelman's book of the same name. It combines the reading of actual letters with news footage and music of the period to tell the tale of the Vietnam War from the perspective of the men and women who lived it.

## Villella, Edward (1936—)

A critically acclaimed principal dancer with the New York City Ballet company during the 1960s and 1970s, Edward Villella brought a virile athleticism to the classical ballet stage that challenged the stereotype of the effeminate male dancer and popularized ballet and its male stars among the general public. His passionate energy and exceptional technique inspired the great neo-classical choreographer George Balanchine to create many ballets and roles for Villella, including *Tarantella* (1964) and the "Rubies" section of *Jewels* (1967). Committed to increasing Americans' awareness of ballet, Villella also danced in Broadway musicals, performed at President John F. Kennedy's inauguration, and appeared frequently on television, in variety and arts programs and once, as himself, in an episode of the situation-comedy *The Odd Couple*. Injuries had forced Villella to stop performing by 1986 when he became founder and artistic director of the Miami City Ballet.

## Vitamin B17

See Laetrile

## Vitamins

Apart from their actual health benefits, vitamins have played an important role in the American consciousness as the arena for a struggle between competing systems of knowledge: the positivist

authority of "normal science" with its controlled experiments and research protocols versus the anecdotal evidence and personal experiences of ordinary consumers. Since antiquity, it has been commonly known that there is a connection between diet and health, but it was not until the early 1900s that specific vitamins were isolated and accepted by the public as essential to our well-being. What began as an exercise in public health became big business: by the end of the century, retail sales of vitamins in America exceeded \$3.5 billion, with surveys showing more than 40 percent of Americans using vitamins on a regular basis. The story of vitamins demonstrates, in the words of social historian Rima Apple, that "Science is not above commerce or politics; it is a part of both."

The term "vitamins" (originally spelled "vitamines") was coined shortly before World War I by Casimir Funk, a Polish-American biochemist who was among the first to investigate the role of these substances in combatting deficiency diseases such as rickets. By the middle of the 1920s, three vitamins had been identified (vitamin A, vitamin C, and vitamin D), as had the vitamin B complex. Even then, manufacturers were quick to seize on the public's interest in vitamins as an angle for promoting their own products. Red Heart trumpeted the vitamin D content of its dog biscuits; Kitchen Craft declared that since its Waterless Cooker cooked foods in their own juices, none of the "vital mineral salts and vitamin elements . . . are washed out and poured away with the waste water." Particularly compelling were the appeals to "scientific mothering" in ads for such products as Squibb's cod-liver oil ("the X-RAY shows tiny bones and teeth developing imperfectly"), its competitor H. A. Metz's Oscodal tablets ("children need the vital element which scientists call vitamin D"), Cream of Wheat, Quaker Oats, and Hygeia Strained Vegetables. Pharmaceutical firms likewise targeted mothers in periodicals such as *Good Housekeeping* and *Parents'* magazine, with the publishers' blessings: "An advertiser's best friend is a mother; a mother's best friend is 'The Parents' Magazine,'" proclaimed its advertising department, while the director of the Good Housekeeping Bureau generously promised clients that all products advertised in the magazine, "whether or not they are within our testing scope, are guaranteed by us on the basis of the claims made for them."

Harry Steenbock, a researcher at the University of Wisconsin, discovered in 1924 that ultraviolet irradiation of certain foods boosted their vitamin D content, thus providing an alternative source to wholesome but distasteful cod-liver oil. The Wisconsin Alumni Research Foundation was created to protect his patents and to license his process to manufacturers. (Ironically, it would be Wisconsin's Senator William Proxmire who, exactly half a century later, would spearhead a congressional campaign which resulted in the Food and Drug Administration's reclassifying most vitamins as food rather than drugs.)

The scientific reasons advanced for taking a particular vitamin were often compelling. In the late 1700s, fresh fruit, rich in vitamin C, had been dramatically shown to be a preventive for scurvy, the cause of many shipboard deaths on long sea voyages: Captain James Cook added citrus to the diet of his crew on his three-year circumnavigation of the globe, during which only one of his seamen died. (Cook's limes, which became a staple of shipboard diet throughout the British navy, gave rise to the slang term "limeys" for Englishmen.) But widespread consumption of a vitamin for its original purpose sometimes created partisans for its benign effects in another area, as when Nobel laureate Linus Pauling advocated high dosages of vitamin C in the 1970s as a therapy for the common cold, and subsequently proposed that it could even play a role in curing cancer.

The appeal to scientific authority helped to legitimate vitamin consumption, but as vitamins became popular science and demand grew, other marketers became eager players, and from the 1930s on there was increasing competition between health professionals (physicians and pharmacists) on the one hand, and grocers on the other. Trade journals for the druggists repeatedly stressed the profitability in vitamins and the desirability of keeping consumers coming back to the drugstore for their supplies (and discouraging them from buying vitamins in the general marketplace). The grocers (and later the health food stores) and their public wanted to keep vitamins readily available and affordable. And there were skeptics as well, including the FDA, whose own claim to scientific legitimacy had the force of law, and which attempted to regulate vitamin marketing in order to prevent what it often saw as fraudulent claims and medical quackery.

Often, however, when the FDA frustrated the demand for dietary supplements with its regulatory impediments, it aroused an endemic populist distrust of big government and fierce resentment of a professional pharmaceutical and medical establishment seen as monolithic or even conspiratorial. In the late decades of the century, the public found a willing ally in Congress, which received no fewer than 100,000 phone calls during debate on the Hatch-Richardson "Health Freedom" proposal of 1994 (it reduced the FDA's "significant scientific agreement" standard to "significant scientific evidence" for labeling claims, so long as they were "truthful and non-misleading," and shortened the lead time for putting new products on the market); with 65 cosponsors in the Senate and 249 in the House, the bill passed handily.

## Vogue

The first illustrated fashion magazine grew out of a weekly society paper that began in 1892. *Vogue* magazine's inauspicious start as a failing journal did not preview the success that it would become. In 1909, a young publisher, Condé Nast, bought the paper and transformed it into a leading magazine that signaled a new approach to women's magazines. In 1910, the once small publication changed to a bi-monthly format, eventually blossoming into an international

phenomenon with nine editions in nine countries: America, Australia, Brazil, Britain, France, Germany, Italy, Mexico, and Spain.

Following the vision of Condé Nast, *Vogue* has continued to present cultural information, portraits of artists, musicians, writers, and other influential people as well as the current fashion trends. Since its inception, the magazine has striven to portray the elite and serve as an example of proper etiquette, beauty, and composure. *Vogue* not only contributes to the acceptance of trends in the fashion and beauty industry, but additionally has become a record of the changes in cultural thinking, actions, and dress. Glancing through *Vogue* from years past documents the changing roles of women, as well as the influences of politics and cultural ideas throughout the twentieth century.

The power that *Vogue* has had over many generations of women has spawned a plethora of other women's magazines—such as *Cosmopolitan*, *Glamour*, and *Mademoiselle*—which have sought to claim part of the growing market of interest. Despite the abundance of women's magazines, no other publication has been able to achieve the lasting influence and success of *Vogue*.

By incorporating photography in 1913, and under the direction of Edna Woolman Chase (Editor-in-Chief from 1914 to 1951) and Art Director Dr. Mehemed Gehmy Agha, *Vogue* reinvented its image several times. With the occurrence of the Depression and later, World War II, readership soared. Readers looked to the magazine to escape from the reality of the hardships in their lives. In the midst of the Depression fashions reflected the glamour of Hollywood; then came movies with their enormous influence on the ideas of fashion and beauty. Photographers Edward Steichen, Cecil Beaton, and Baron de Meyer emphasized this glamour by presenting their models in elaborate settings. Additionally, *Vogue* began focusing on more affordable, ready-to-wear clothing collections. During the war, images of fashions within the magazine emulated the practicality of the era. Different, more durable and affordable fabrics, and simple designs became prominent. The magazine demonstrated that even in difficult circumstances, women still strove for the consistency of caring for everyday concerns regarding fashion and beauty. Balancing the lighter features, ex-*Vogue* model and photographer Lee Miller's images of the liberation of Europe also provided a somber and intellectual view of the war. This element of the magazine kept readers involved and informed of the realities of the war.

Under the supervision of Jessica Daves (Editor-in-Chief 1952-1962) and Russian émigré Alexander Liberman (Art Director 1943-December 1963, Editorial Director of Condé Nast Publications, Inc. 1963—), simplicity of design in *Vogue* prevailed after World War II. One main component of the re-formatting undertaken by Daves and Liberman was the hiring of photographer Irving Penn in 1943, who, along with Richard Avedon, modernized fashion photography by simplifying it. Penn used natural lighting and stripped out all superfluous elements; his images focused purely on the fashions. Penn and other photographers also contributed portraits of notable people, travel essays, and ethnographic features to the magazine. Thoughtful coverage on the issues of the day, in addition to the variety of these stories and supplementary columns—including "People Are Talking About," an editorial consisting of news regarding art, film, theater, and celebrities' lives—counterbalanced the fashion spreads which showcased the seasonal couture collections. *Vogue* magazine became multi-faceted, appealing to readers across several economic and social stratus.

Diana Vreeland (Editor-in-Chief, 1963 to June 1971), with her theatrical style, brought to the magazine a cutting-edge, exciting

quality. Vreeland, famous for coining the term “Youthquake,” focused on the changing ideas of fashion in the 1960s. Under her hand, *Vogue* became even more fashion oriented, with many more pages devoted to clothing and accessories. Imagination and fantasy were the ideals to portray within the pages of the magazine. Clothes were colorful, bright, revealing, and filled with geometric shapes that played with the elements of sex and fun. Additionally, during this era, models no longer became merely mannequins but personalities. The photographs depicted the models in action-filled poses, often outside of a studio setting. The women became identifiable; Suzy Parker, Penelope Tree, Twiggy, and Verushka became household names and paved the way for Cindy, Claudia, Christy, and Naomi, the supermodels of the 1980s and 1990s.

Collaborating with photographers such as Helmut Newton, Sarah Moon, and Deborah Tuberville, Grace Mirabella (Editor-in-Chief, July 1971 to October 1988) also brought a sensual quality to the magazine; the blatant sexualized images from the 1960s became more understated, although no less potent. Tinged with erotic and sometimes violent imagery, the fashion layouts featured clothing with less of an exhibitionist quality; apparel became more practical. Filling the fashion pages were blue denim garments and easy to wear attire. Mirabella, in keeping with this practicality, adapted the magazine to a monthly publication. At this time, *Vogue* also shrank in cut size to conform to postal codes. As a result, each page became packed with information; *Vogue* became a magazine formulated for a society filled with working women on the go.

The tradition of *Vogue* as a publication that covers all aspects of each generation continues. Under the guidance of Anna Wintour (Editor-in-Chief, November 1988—) the magazine has expanded beyond only reporting cultural and political issues and presenting fashion trends, and is now considered to validate new designs and designers. *Vogue* continually seeks out, presents, and promotes new ideas regarding clothing, accessories, and beauty products, and as a magazine entertains, educates, and guides millions of women.

## Volkswagen Beetle

The phenomenal success of Volkswagen’s diminutive two-door sedan in the American automobile market in the 1950s and 1960s was a classic example of conventional wisdom proven false. Detroit’s car manufacturers and their advertising agencies marketed large, comfortable cars with futuristic styling and plenty of extra gadgets. Futuristic rocket fins were in, and the more headlights and tail lights, the better. “Planned obsolescence” was built in: the look and feel of each year’s models were to be significantly different from those of the previous year. But throughout the 1950s, there was a persistent niche market in foreign cars, particularly among better-educated drivers

who thought that Detroit’s cars looked vulgar and silly, and who were appalled by their low mileage. Most European imports got well over 20 miles per gallon to an American automobile’s eight. The German manufacturers of the Volkswagen claimed that their “people’s car” got 32 miles per gallon at 50 miles an hour. Moreover, it was virtually impossible to tell a 1957 VW from a 1956 one—or indeed, from the 1949 model, of which just two had been imported, by way of Holland. (The first “Transporter” microbus sold in America arrived in 1950.)

To be sure, VW’s sedan looked odd—rather like a scarab, which is why it was soon dubbed the “Beetle”—but it worked. Its rear-mounted, air-cooled, four-cylinder 1200-cc engine proved extremely durable, with some owners reporting life spans in the high hundreds of thousands of miles. The cars had been designed so that they could be maintained by the owner, and many of them were, particularly by young owners who bought them used. And the microbus, with the same engine as the Beetle and a body only slightly longer, could hold an entire rock band and its instruments and still climb mountains. (It became so closely associated with the hippie movement that when the leader of the Grateful Dead died, VW ran an ad showing a microbus with a tear falling from its headlight and the headline “Jerry Garcia. 1942-1995.”)

Developed by Dr. Ferdinand Porsche, the car had been ordered by German citizens for the first time in 1938 under the name “KdF-Wagen” (KdF stood for “Kraft durch Freude,” “strength through joy.”), but war had broken out the following year, and the factory at Wolfsburg switched over, for the duration, to making a military version, the Kübelwagen (“bucketmobile”), and its amphibious sibling, the Schwimmwagen, until Allied planes bombed operations to a standstill. After the war, VW rebuilt its factory and resumed production, first under the British occupying forces, and subsequently under Heinrich Nordhoff, VW’s CEO until his death in 1969.

From their modest beginnings, sales of imported VWs in America grew steadily. In 1955, the company incorporated in the United States as Volkswagen of America. In 1959, it hired a sassy new advertising agency, DDB Needham, which had already raised eyebrows with its “You Don’t Have to Be Jewish to Love Levy’s Jewish Rye” campaign. DDB’s first ad was three columns of dense type explaining the advantages of buying the VW sedan, broken up only by three photos—all of the car.

It soon became apparent that people already knew what the Beetle looked like, and had looked like for 10 years, that it got great mileage, and that it cost less than anything from Detroit (\$1545 new in 1959, still only \$2000 in 1964). What they needed was a reason to identify with a nonconformist automobile. So DDB switched to ads containing very little copy, a picture of the car, a very short, startling headline in sans-serif type, and a lot of white space. One DDB headline was “Ugly is only skin-deep.” Another simply read “Lemon.” A third, turning one of Madison Avenue’s favorite catchphrases of the day on its head, said “Think Small.” Indeed, almost all of DDB’s VW ads were the conspicuous antithesis of conventional auto advertising. “Where are they now?” showed 1949 models of six cars, five by companies which had gone out of business in the subsequent decade. In the 1960s, the focus of the campaign shifted to true stories of satisfied customers with unusual angles: the rural couple who bought a VW after the mule died, the priest whose North Dakota mission had a total of 30 Beetles, the Alabama police department which got a VW sedan for its meter patrol.

Although VW lost some of its market share in the 1970s once Detroit, spurred by the 1973 OPEC oil embargo, began concentrating

A Volkswagen Beetle.

on cars that were less ostentatious and got better mileage, the company continued to make Beetles until the end of the decade, when anti-pollution standards were passed which neither the sedan nor the microbus could meet. Although production of Beetles in Germany and the United States ceased in 1978, they still continued to be turned out elsewhere, notably in Mexico, where in 1983 VWs amounted to 30 percent of all motor vehicles made in that country. Meanwhile, restored Beetles in the United States continued to command prices up to \$7,000 (still a bargain compared to \$15,000 for the cheapest new cars from Detroit) in the early 1990s.

When VW introduced a “concept car” at the Detroit Motor Show looking suspiciously like the old Beetle, response was so enthusiastic that the company went ahead and put its “Concept 1” into production at the same Mexican plant as the VW Golf (and powered by the same water-cooled engine, now under the front hood). The first new Beetles arrived in the United States in 1998 to nostalgic advertising produced by Arnold Communications in Boston in a reprise of the DDB style, but with even less body copy: a picture of the sedan above headlines such as “Roundest car in its class” and “Zero to sixty. Yes.” One ad read simply “Think small. Again.”

## von Sternberg, Josef (1894-1969)

Although there are other achievements for which to salute film director (and screenwriter, producer, and occasional cinematographer) Josef von Sternberg, his reputation has come to rest indissolubly on his most famous creation, Marlene Dietrich. After making *Underworld* (1927) and *The Docks of New York* (1928), two near-masterpieces of the late silent era, von Sternberg was invited to Berlin to film *The Blue Angel* (1930). There he found Dietrich and cast her as the predatory Lola-Lola. He brought her to Hollywood and turned her into an international screen goddess of mystical allure in six exotic romances, beginning with *Morocco* (1930) and ending with *The Devil Is a Woman* (1935). In this last and most baroque of Sternberg’s films, his sensual imagery and atmospheric play of light and shadow on fabulous costumes and inventive sets found its fullest expression. Once parted from Paramount and his star he endured a slow decline, but at the height of his success this Viennese-born son of poor immigrant Jews (the “von” was acquired), who had served a ten-year apprenticeship as an editor, was acknowledged as Hollywood’s outstanding visual stylist and undisputed master technician.

## Vonnegut, Kurt, Jr. (1922—)

Having come to prominence only with his sixth novel, *Slaughterhouse-Five* (1969), Kurt Vonnegut, Jr. is a rare example of an author who has been equally important to popular audiences and avant-garde critics. His fiction and public spokespersonship spans all five of the decades since World War II and engages most social, political, and philosophical issues of these times. It is Vonnegut's manner of expression that makes him both popular and perplexing, for his humorous approach to serious topics confounds critical expectations while delighting readers who themselves may be fed up with expert opinion.

November 11, 1922, is the date of Kurt Vonnegut's birth, a birthday he considers significant for its coincidence with Armistice Day celebrations noting the end of World War I. From his upbringing in Indianapolis, Indiana among a culturally prominent family descended from German immigrant Free-Thinkers of the 1850s, the young author-to-be developed attitudes that would see him through the coming century of radical change. Pacifism was one such attitude; another was civic responsibility; a third was the value of large extended families in meeting the needs of nurture for both children

Kurt Vonnegut, Jr.

and adults. The first test of these attitudes came in the 1930s, when during the Great Depression his father's work as an architect came to an end (for lack of commissions) and his mother's inherited wealth was depleted. These circumstances forced Kurt into the public school system, where, unlike his privately educated older brother and sister, he was able to form close childhood friendships with working-class students, an experience he says meant the world to him. Sent off to college with his father's instruction to "learn something useful," Vonnegut joined what would have been the class of 1944 at Cornell University as a dual major in biology and chemistry with an eye toward becoming a biochemist. Most of his time, however, was spent writing for and eventually becoming a managing editor of the independent student owned daily newspaper, the *Cornell Sun*.

World War II interrupted Kurt Vonnegut's education, but for awhile it continued in different form. In 1943, he avoided the inevitable draft by enlisting in the United States Army's Advanced Specialist Training Program, which made him a member of the armed services but allowed him to study mechanical engineering at the Carnegie Technical Institute and the University of Tennessee. In 1944, this one-of-a-kind program was canceled when Allied Commander Dwight D. Eisenhower made an immediate request for 50,000 additional men. Prepared as a rear-echelon artillery engineer, Vonnegut was thrown into combat as an advanced infantry scout, and was promptly captured by the Germans during the Battle of the Bulge. Interned as a prisoner of war at Dresden, he was one of the few survivors of that city's firestorm destruction by British and American air forces on the night of February 13, 1945, the event that becomes the unspoken center of *Slaughterhouse-Five*, named after the underground meatlocker where the author took shelter. Following his repatriation in May of 1945, Kurt Vonnegut married Jane Cox and began graduate study in anthropology at the University of Chicago.

During these immediately postwar years he also worked as a reporter for the City News Bureau, a pool service for Chicago's four daily newspapers. Unable to have his thesis topics accepted and with his first child ready to be born, Vonnegut left Chicago without a degree and began work as a publicist for the General Electric (GE) Research Laboratory in Schenectady, New York. Here, where his older brother Bernard was a distinguished atmospheric physicist, Kurt drew on his talents as a journalist and student of science in order to promote the exciting new world where, as GE's slogan put it, "Progress Is Our Most Important Product." Yet this brave new world of technology rubbed the humanitarian in Vonnegut the wrong way, and soon he was writing dystopian satires of a bleakly comic future in which humankind's relentless desire to tinker with things makes life immensely worse. When enough of these short stories had been accepted by *Collier's* magazine so that he could bank a year's salary, Kurt Vonnegut quit GE. Moving to Cape Cod, Massachusetts, in 1950, he thenceforth survived as a full time fiction writer, taking only the occasional odd job to tide things over when sales to publishers were slow.

Throughout the 1950s and into the early 1960s, Vonnegut published 44 such stories in *Collier's*, *The Saturday Evening Post*, and other family-oriented magazines, sending material to the lower-paying science fiction markets only after mainstream journals had rejected it. Consistently denying that he is or ever was a science fiction writer, the author instead used science as one of many elements in common middle class American life of the times. When his most representative stories were collected in 1968 as *Welcome to the Monkey House*, it became apparent that Vonnegut was as interested in high school bandmasters and small town tradesman as he was in

rocket scientists and inventors of cyberspace; indeed, in such stories as “Epicac” and “Unready to Wear,” the latter behave like the former, with the most familiar of human weaknesses overriding the brainiest of intellectual concerns.

Kurt Vonnegut’s novelist career began as a sidelight to his short story work, low sales, and weak critical notice for these books, making them far less remunerative than placing stories in such high-paying venues as *Cosmopolitan* and the *Post*. It was only when television replaced the family weeklies as prime entertainment that he had to make novels, essays, lectures, and book reviews his primary source of income, and until 1969, these earnings were no better than any of Vonnegut’s humdrum middle class characters could expect. When *Slaughterhouse-Five* became a bestseller, however, all this earlier work was available for reprinting, allowing Vonnegut’s new publisher (Seymour Lawrence, who had an independent line with Dell Publishing) to mine this valuable resource and further extend this long-overlooked new writer’s fame.

It is in his novels that Vonnegut makes his mark as a radical restylist of both culture and language. *Player Piano* (1952) rewrites General Electric’s view of the future in pessimistic yet hilarious terms, in which a revolution against technology takes a similar form to that of the ill-fated Ghost Dance movement among Plains Indians at the nineteenth century’s end (one of the author’s interests as an anthropology scholar). *The Sirens of Titan* (1959) is a satire of space opera, its genius coming from the narrative’s use of perspective—for example, the greatest monuments of human endeavor, such as the Great Wall of China and the Palace of the League of Nations, are shown to be nothing more than banal messages to a flying saucer pilot stranded on a moon of Saturn, whiling away the time as his own extraterrestrial culture works its determinations on earthy events. *Mother Night* (1961) inverts the form of a spy-thriller to indict all nations for their cruel manipulations of individual integrity, while *Cat’s Cradle* (1963) forecasts the world’s end not as a bang but as a grimly humorous practical joke played upon those who would be creators. *With God Bless You, Mr. Rosewater* (1965) Vonnegut projects his bleakest view of life, centered as the novel is on money and how even the most philanthropical attempts to do good with it do great harm.

By 1965, Kurt Vonnegut was out of money, and to replace his lost short story income and supplement his meager earnings from novels, he began writing feature journalism in earnest (collected in 1974 as *Wampeter* and *Foma & Granfalloon*) and speaking at university literature festivals, climaxing with a two-year appointment as a fiction instructor at the University of Iowa. Here, in the company of the famous Writers Workshop, he felt free to experiment, the result being (in an age renowned for its cultural experimentation) his first bestseller, *Slaughterhouse-Five*. Ostensibly the story of Billy Pilgrim, an American P.O.W. (Prisoner of War) survivor of the Dresden firebombing, the novel in fact fragments six decades of experience so that past, present, and future can appear all at once. Using the fictive excuse of “time travel” as practiced by the same outer space aliens who played havoc with human events in *The Sirens of Titan*, Vonnegut in fact recasts perception in multidimensional forms, his narrative skipping in various directions so that no consecutive accrual of information can build—instead, the reader’s comprehension is held in suspension until the very end, when the totality of understanding coincides with the reality of this actual author finishing his book at a

recognizable point in time (the day in June, 1968 when news of Robert Kennedy’s death is broadcast to the world). *Slaughterhouse-Five* is thus less about the Dresden firebombing than it is a replication of the author’s struggle to write about this unspeakable event and the reader’s attempt to comprehend it.

The 1970s and 1980s saw Vonnegut persevere as a now famous author. His novels become less metaphorical and more given to direct spokespersonship, with protagonists more likely to be leaders than followers. *Breakfast of Champions* (1973) grants fame to a similarly unknown writer, Kilgore Trout, with the result that the mind of a reader (Dwayne Hoover) is undone. *Slapstick* (1976) envisions a new American society developed by a United States president who replaces government machinery with the structure of extended families. *Jailbird* (1979) tests economic idealism of the 1930s in the harsher climate of post-Watergate America, while *Deadeye Dick* (1982) reexamines the consequences of a lost childhood and the deterioration of the arts into aestheticism. Critics at the time noted an apparent decline in his work, attributable to the author’s change in circumstance: whereas he had for the first two decades of his career written in welcome obscurity, his sudden fame as a spokesperson for countercultural notions of the late 1960s proved vexing, especially as Vonnegut himself felt that his beliefs were firmly rooted in American egalitarianism preceding the 1960s by several generations. *Galápagos* (1985) reverses the self-conscious trend by using the author’s understanding of both biology and anthropology to propose an interesting reverse evolution of human intelligence into less threatening forms. *Bluebeard* (1997) and *Hocus Pocus* (1990) confirm this readjustment by celebrating protagonists like the abstract expressionist Rabo Karabekian and the Vietnam veteran instructor Gene Hartke who articulate America’s artistic and socioeconomic heritage from a position of quiet anonymity.

That Kurt Vonnegut remains a great innovator in both subject matter and style is evident from his later, better developed essay collections, *Palm Sunday* (1981) and *Fates Worse Than Death* (1991), and his most radically inventive work so far, *Timequake* (1997), which salvages parts of an unsuccessful fictive work and combines them with discursive commentary to become a compellingly effective autobiography of a novel. His model in both novel writing and spokespersonship remains Mark Twain, whose vernacular style remains Vonnegut’s own test of authenticity. As he says in *Palm Sunday*, “I myself find that I trust my own writing most, and others seem to trust it most, too, when I sound like a person from Indianapolis, which is what I am.”

## Wagner, Honus (1874-1955)

---

In 1936, Honus Wagner, “The Flying Dutchman,” became one of the first five players to be inducted into the Baseball Hall of Fame. When the Pittsburgh Pirates’ shortstop retired in 1917, he had accumulated more stolen bases, total bases, RBIs, hits, and runs than any player to that point. He also hit over .300 for seventeen consecutive seasons, while winning the National League batting title eight times. In 1910, Wagner, a nonsmoker, asked for his American Tobacco Company baseball card to be recalled because he objected to being associated with tobacco promotion; the recalled card sold for \$451,000 during a 1991 auction. He died in Carnegie, Pennsylvania, at the age of 81.

## Wagon Train

---

One of television’s most illustrious westerns, *Wagon Train* wedded the cowboy genre to the anthology show format. Premiering

Honus Wagner

in 1957, when the western first conquered prime time, *Wagon Train* told a different story each week about travelers making the long journey from St. Joseph, Missouri, to California during the post-Civil War era. Such guest stars as Ernest Borgnine and Shelley Winters interacted with series regulars: the wagonmaster (first played by Ward Bond, then after his death, by John McIntire); the frontier scout (first Robert Horton, then Scott Miller and Robert Fuller); and the lead wagon driver (Frank McGrath). Inspired by John Ford’s *The Wagonmaster*, the hour-long series (expanded to 90 minutes during the 1963-64 season) was shot on location in the San Fernando Valley and produced by MCA, giving the episodes a cinematic sheen. For three years *Wagon Train* placed a close second to *Bonanza* before becoming the most popular series in the nation during the 1961-62 season. The show left the air in 1965 after 284 episodes.

## Waits, Tom (1949—)

---

The music and lyrics of Tom Waits evinced nostalgic pathos for the archetypal neighborhood barfly at a time when much of America was listening to soft rock or gearing up for punk. Like a time-warped beatnik, Waits debuted in 1973 with *Closing Time* and followed with several acoustic jazz/folk albums throughout the 1970s. His gravelly, bygone, bittersweet voice became one of the most distinctive in popular music. Later Waits revved up his stage persona and electrified his music for a semiautobiographical stage cabaret, album, and feature-length video, *Big Time* (1988). Tom Waits is also a regular contributor to film soundtracks and has appeared in movies as well, typically playing a gruff, gin-soaked palooka as in *The Outsiders* (1983), *Down by Law* (1986), *Ironweed* (1987), and *Short Cuts* (1992).

—Tony Brewer

Humphries, Patrick. *Small Change: A Life of Tom Waits*. New York, St. Martin’s Press, 1990.

## Walker, Aaron “T-Bone” (1910-1975)

---

Jazz and blues streams have flowed side by side with occasional cross currents in the evolution of black music. The musical crosscurrents of Aaron “T-Bone” Walker bridge these two streams; he was equally

**T-Bone Walker**

at home in both jazz and blues. He performed with jazz musicians such as Johnny Hodges, Lester Young, Dizzy Gillespie, and Count Basie, among others. Walker and Charlie Christian, in their teens, both contemporaneously developed the guitar in blues and jazz, respectively. Walker linked the older rural country blues—à la Blind Lemon Jefferson—and the so-called city classic blues singers such as Ida Cox and Bessie Smith of the 1920s, to the jazz-influenced urban blues of the 1940s; he also linked the older rural folk blues to the virtuoso blues. Walker has no antecedent or successor in blues—he was the father of electric blues and one of the first to record electric blues and to further define, refine, and provide the musical language employed by successive guitarists. His showmanship—playing the guitar behind his back or performing a sideway split while never missing a beat or note—influenced Elvis Presley’s act. Walker clearly influenced scores of musicians such as Chuck Berry, Freddie & Albert King, Mike Bloomfield, and Johnny Winter. “In a very real sense the modern blues is largely his creation . . . among blues artists he is nonpareil: no one has contributed as much, as long, or as variously to the blues as he has,” noted the late Pete Welding in a Blue Note reissue of his work.

Aaron Thibeaux Walker (T-Bone is a probable mispronunciation of Thibeaux) was born on May 10, 1910 in rural Linden, Texas, but his mother moved to Dallas in 1912. His musical apprenticeship was varied and provided rich opportunities that prepared him for his role as showman and consummate artist. Walker was a self-taught singer, songwriter, banjoist, guitarist, pianist, and dancer. His mother, Movelia, was a musician, and her place served as a hangout for

itinerant musicians. Her second husband, Marco Washington, was a multi-instrumentalist who led a string band and provided young Walker the opportunity to lead the band in street parades while dancing and collecting tips. At the age of eight, Walker escorted the legendary Blind Lemon Jefferson around the streets of Dallas, and at the age of 14, he performed in Dr. Breeding’s Big B Medicine show. He returned home only to leave again with city blues singer Ida Cox. While in school, Walker played banjo with the school’s 16-piece band. In 1929, he won first prize in a talent show which provided the opportunity to travel for a week with Cab Calloway’s band. But it was during his engagement with Count Bulaski’s white band that Walker fortuitously met Chuck Richardson, a music teacher who tutored Walker and Charlie Christian. Walker began earnestly honing his guitar techniques, and at times, also jammed with Christian. Unfortunately, he could not escape the pitfalls of “street life” during his musical apprenticeship and began gambling and drinking; he would later become a womanizer. In his teens, he contracted stomach ulcers, which continually plagued him throughout his career.

Walker first recorded for Columbia Records in 1929 as Oak Cliff T-Bone. The two sides were entitled “Witchita Falls” and “Trinity River Blues.” By 1934, Walker had met and married Vida Lee; they were together until his death. Walker and Vida Lee moved to Los Angeles, where Walker played several clubs as a singer, guitarist, dancer, and emcee. His enormous popularity quickly secured him a firm place in the Hollywood club scene. When he complained to the management that his black audience could not come to see him, the management integrated the club. His big break came with Les Hite’s Band, with whom he recorded “T-Bone Blues” in 1939-1940 and appeared on both East and West coasts. Ironically, Walker was not playing guitar on this recording but only sang. From 1945 to 1960, he recorded for a number of labels and became one of the principal architects of the California Blues. Some of his songs that have become classics of the blues repertoire are “Call it Stormy Monday,” “T-Bone Shuffle,” “Bobby Sox Blues,” “Long Skirt Baby Blues,” and “Mean Old World.”

Walker was a musician’s musician; his musicality was impeccable. His phrasing, balance, melodic inventions, and improvisations carried the blues to a higher aesthetic level than had been attained before. He serenaded mostly women with his songs of unrequited love, and the lyrics often gave a clue to the paradox of his own existence, as evidenced in “Mean Old World”: “I drink to keep from worrying and Mama I smile to keep from crying / That’s to keep the public from knowing just what I have on my mind.”

Because Walker’s recordings were made prior to the coming of rock ‘n’ roll, he missed out on the blues revival that Joe Turner and other blues artists enjoyed. His records never crossed over into the popular market, and his audience was primarily African American. While the Allman Brothers recording of his song “Call It Stormy Monday” sold millions, his version was allowed to go out of print. From the mid-1950s to the early 1970s, the balance of his career was played out in small West Coast clubs as one-nighters. Although he did tour Europe in the 1960s and was a sensation in Paris, there were few opportunities to record. Walker suffered a stroke in 1974, and on March 16, 1975, he died. More than 1,000 mourners came out to grieve the loss of this great musician.

—Willie Collins

## Walker, Aida Overton (1880-1914)

Aida Overton Walker dazzled early-twentieth-century theater audiences with her original dance routines, her enchanting singing voice, and her penchant for elegant costumes. One of the premiere African American women artists of the turn of the century, she popularized the cakewalk and introduced it to English society. In addition to her attractive stage persona and highly acclaimed performances, she won the hearts of black entertainers for numerous benefit performances near the end of her tragically short career and for her cultivation of younger women performers. She was, in the words of the *New York Age*'s Lester Walton, the exponent of "clean, refined artistic entertainment."

Born in 1880 in Richmond, Virginia, Aida Overton grew up in New York City, where her family moved when she was young and where she gained an education and considerable musical training. At the tender age of fifteen, she joined John Isham's Octoroons, one of the most influential black touring groups of the 1890s, and the following year she became a member of the Black Patti Troubadours. Although the show consisted of dozens of performers, Overton emerged as one of the most promising soubrettes of her day. In 1898, she joined the company of the famous comedy team Bert Williams and George Walker, and appeared in all of their shows—*The Policy Players* (1899), *The Sons of Ham* (1900), *In Dahomey* (1902), *Abyssinia* (1905), and *Bandanna Land* (1907). Within about a year of their meeting, George Walker and Overton married and before long became one of the most admired and elegant African American couples on stage.

While George Walker supplied most of the ideas for the musical comedies and Bert Williams enjoyed fame as the "funniest man in America," Aida quickly became an indispensable member of the Williams and Walker Company. In *The Sons of Ham*, for example, her rendition of *Hannah from Savannah* won praise for combining superb vocal control with acting skill that together presented a positive, strong image of black womanhood. Indeed, onstage Aida refused to comply with the plantation image of black women as plump mammies, happy to serve; like her husband, she viewed the representation of refined African American types on the stage as important political work. A talented dancer, Aida improvised original routines that her husband eagerly introduced in the shows; when *In Dahomey* was moved to England, Aida proved to be one of the strongest attractions. Society women invited her to their homes for private lessons in the exotic cakewalk that the Walkers had included in the show. After two seasons in England, the company returned to the United States in 1904, and it was Aida who was featured in a *New York Herald* interview about their tour. At times Walker asked his wife to interpret dances made famous by other performers—one example being the "Salome" dance that took Broadway by storm in the early 1900s— which she did with uneven success.

After a decade of nearly continuous success with the Williams and Walker Company, Aida's career took an unexpected turn when her husband collapsed on tour with *Bandanna Land*. Initially Walker

returned to his boyhood home of Lawrence, Kansas, where his mother took care of him. In his absence, Aida took over many of his songs and dances to keep the company together. In early 1909, however, *Bandanna Land* was forced to close, and Aida temporarily retired from stage work to care for her husband, now clearly seriously ill. No doubt recognizing that he likely would not recover and that she alone could support the family, she returned to the stage in Bob Cole and J. Rosamond Johnson's *Red Moon* in autumn 1909, and she joined the Smart Set Company in 1910. Aida also began touring the vaudeville circuit as a solo act. Less than two weeks after Walker's death in January 1911, Aida signed a two-year contract to appear as a co-star with S. H. Dudley in another all-black traveling show.

Although still a relatively young woman in the early 1910s, Aida began to develop medical problems that limited her capacity for constant touring and stage performance. As early as 1908, she had begun organizing benefits to aid such institutions as the Industrial Home for Colored Working Girls, and after her contract with S. H. Dudley expired, she devoted more of her energy to such projects, which allowed her to remain in New York. She also took an interest in developing the talents of younger women in the profession, hoping to pass along her vision of black performance as refined and elegant. She produced shows for two such female groups in 1913 and 1914—the Porto Rico Girls and the Happy Girls. She encouraged them to work up original dance numbers and insisted that they don stylish costumes on stage.

When Aida Overton Walker died suddenly of kidney failure on October 11, 1914, the African American entertainment community in New York went into deep mourning. The *New York Age* featured a lengthy obituary on its front page, and hundreds of shocked entertainers descended on her residence to confirm a story they hoped was untrue. Walker left behind a legacy of polished performance and model professionalism. Her demand for respect and her generosity made her a beloved figure in African American theater circles.

## Walker, Alice (1944—)

Alice Walker won the Pulitzer Prize and the American Book Award for her 1982 novel *The Color Purple*. By that time she was already a well-established and published writer, but it was the Pulitzer that catapulted her into international recognition. Her books have since been translated into more than two dozen languages, and it was Steven Spielberg's 1985 film adaptation of the novel that brought her to the widespread attention of mainstream audiences. Both the book and the film were controversial, and Walker's fame was accompanied by severe criticism. In *The Same River Twice: Honoring the Difficult* (1996), a book containing essays, journal entries, letters, and her original, never-used screenplay for the film, Walker addresses the criticism that the film was not true to her book: "Though *The Color*

*Purple* is not what many wished, it is more than many hoped, or had seen on a movie screen before.” She acknowledges that most hurtful were the accusations that she hated black men and had portrayed them in stereotypical and demeaning ways. Although Walker openly advocates black sisterhood, she also openly and adamantly advocates the spiritual survival of all black people, men and women. It is this preoccupation, to use her own term, that properly describes her life and her life’s work of writing and activism.

Writing became important to Walker at an early age as a survival mechanism. Born Alice Malsenior Walker on February 9, 1944, in Eatonton, Georgia, she was the eighth child of Willie Lee and Minnie Lou Grant, southern sharecroppers. Walker has described the houses in which her family lived while she was growing up as “shabby” and “crowded,” and she therefore spent a great deal of time out of doors; her writing is partly rooted in her need for space. When she was just eight years old, one of her brothers accidentally shot her in the eye with a BB gun, which blinded her in that eye and left her physically and emotionally scarred. She writes poignantly in “Beauty: When the Other Dancer Is the Self,” of how years later, her young daughter Rebecca helped her to see herself as “beautiful, whole and free.” She also describes how fear of losing sight in the other eye enabled her to imagine life with all its injustices and all its beauty. As she put it, she “dashed about the world madly . . . storing up images against the fading light.”

The dual themes of beauty and injustice permeate Walker’s work and can explain the interrelationship of her writing and activism, as well as her popularity. Although critics have focused on the homosexuality and violence in *The Color Purple*, Walker juxtaposes images of rape, incest, and other examples of physical and emotional abuse with love, loyalty, pleasurable and empowering sex, parental joy, and the communal bonding of men and women. It was the characters’ stories of joy and sorrow, rather than the negative depictions of black men, that helped keep *The Color Purple* on the *New York Times* Bestseller List for over a year. Similarly, in *Possessing the Secret of Joy*, another of her bestselling novels, Walker attacks the practice of female genital mutilation as she simultaneously depicts the beauty of love and sex between the young African woman Tashi and her American husband, Adam, who both appeared in *The Color Purple*.

Although it largely explores the oppressions and triumphs of black women, her collection of essays *In Search of Our Mothers’ Gardens* (1983) holds interest for anyone who, like Walker, thinks black women are “fascinating creatures.” Both black and white women have praised its significant contribution to their own feminist enterprises. With these essays, Walker articulates the silences of generations of women whose stories were told through their everyday work such as quilting, gardening, and cooking. At the outset, she defines the term “womanish” and suggests that it may be useful in helping black women talk about their feminism in culturally specific ways. Still, throughout the various essays she provides a space for white feminists to discover the commonalities of women’s oppression by emphasizing her belief that we are all part of one larger life story. Her 1976 novel *Meridian* is another example of her determination to revise the zero image of black women. In it she explores the important roles they played in the civil-rights movement of the 1960s, the success of which has historically been attributed to men. It is also partly because of Walker’s dedication to the spiritual survival of her people generally and black women specifically that the life and work of Zora Neale Hurston have been recovered. Hurston was a black woman writer and anthropologist who participated significantly in the Harlem Renaissance. In making a personal sojourn to Florida to find

and mark Hurston’s grave site, Walker has also helped restore dignity to a woman whose contributions to African American literature and culture are manifold but who died in poverty and obscurity.

Walker continues to be a prolific writer. She has authored six novels, as well as numerous collections of poetry, essays, short stories, and several children’s books. She also continues to write about controversial issues, regardless of criticism, and remains popular because the issues are most often those that affect everyday people—ranging from the Million Man March and O. J. Simpson to repressed female sexuality and the need for struggle. She has said that she writes about controversial issues out of love, not hate, a reflection of her belief, as she expresses it in the Preface to *The Same River Twice*, that “Art is the mirror, perhaps the only one, in which we can see our true collective face. We must honor its sacred function. We must let art help us.”

## Walker, George (1873-1911)

George Walker won fame at the turn of the twentieth century as the comedy half of the African American team of Williams and Walker. Up-to-date costuming, quick urban wit, and the character of the strutting dandy became the trademarks of his onstage persona. Walker’s collaboration with Bert Williams resulted in one of the most popular black comedy teams to appear in successful musical comedy productions in the early 1900s. Beyond his personal fame, Walker also devoted great energy to the professionalization of black theater and performance. He served as a model to younger performers, and his efforts to form black professional organizations helped establish and maintain artistic and ethical standards for those working on the stage. Moreover, Walker’s ambitious productions demanded scores of singers and dancers who gained employment and valuable stage experience.

Walker’s humble beginnings did not predict the central role he would play in the black acting fraternity of the early twentieth century. Born in Lawrence, Kansas, in 1873, Walker began his career as part of a medicine show using the moniker “Nash” Walker. The show made its way westward to San Francisco, where in 1893, Walker met and teamed up with Bert Williams. The two formed a vaudeville act, toured with a succession of minstrel troupes, medicine shows, and traveling vaudeville shows, and found themselves stranded and unemployed in Chicago in the mid-1890s.

By this time, the pair had polished an act in which Williams played the straight man and Walker supplied the comic punch lines,

so they continued from Chicago on to New York. There they made a splash in a bit sketch in Victor Herbert's otherwise unsuccessful *Gold Bug* (1896) and attracted the attention of producers of other comedy revues. They joined prominent white acts like McIntyre & Heath and Helena Mora in the Hyde Show, but left it in 1897 to join an all-black company in Will Marion Cook's *Clorindy*. Although the show did not succeed, their experience convinced them to seek the services of a professional management team. After reaching an agreement with Hurtig & Seamon, Williams and Walker starred in a string of musical comedies that put them at the center of the New York entertainment scene.

Under Hurtig & Seamon's management, Walker and Williams appeared in a variety show, *A Lucky Coon*, and three musical comedies that featured fuller plots, opportunities to act as well as sing and dance, and double-edged comedy that appealed to black and white audiences alike. In 1899, Walker married a talented singer and dancer, Aida Overton, who had joined the company a year earlier. His wife became a featured player in all the subsequent Williams and Walker musical comedies. While *The Policy Players* (1899) and *The Sons of Ham* (1900) enjoyed considerable success, it was Williams and Walker's *In Dahomey* (1902) that brought them national and international fame. The opening of this show on February 18, 1903 marked the first time a full-length African American musical comedy in three acts appeared on a Broadway stage. Following a run of 53 performances, the show traveled to England, where it remained for two seasons. A successful command performance at Buckingham Palace assured the show's success in London. Upon returning to the United States, the Williams and Walker company took *In Dahomey* on tour in this country for the 1904-1905 season.

Disagreements with their managers led to a break, and the two comedians signed with Melville B. Raymond and organized the extravagant production, *Abyssinia*, in 1905. Although Bert Williams was a more popular and perhaps more talented performer, George Walker supplied the main ideas for this production, which featured avant garde lighting effects, elaborate props, and elegant costumes for the entire cast. In their final show, *Bandanna Land* (1907), George Walker fell ill and was forced to retire from show business in the middle of the 1908-1909 season. He died in 1911.

Shortly before his retirement, Walker helped found an organization for African American professional entertainers. Like the more famous white actor's social club, the Lambs, the Frogs intended to promote "social intercourse between the representative members of the Negro theatrical profession." Under Walker's leadership, the Frogs maintained club rooms in Harlem, organized occasional events like the "Frolic of the Frogs" that featured prominent black acts, dining, and dancing, and represented a standard of excellence in stage work to which younger entertainers were encouraged to aspire. Having devoted the last years of his career to this organization, Walker was remembered at his death as a "dominating force in the theatrical world more because of the service he rendered the colored members of the profession because of the opportunities he created than for the types he has originated." Although adored for his famous stage smile, his insistence on fashionable costuming, and his practiced—and oft-imitated—dandy strutting on stage, George Walker set his sights higher than personal fame in Jim Crow America of the early 1900s. His chief aim, according to his friend Lester Walton, was "to elevate the colored theatrical profession, and the race as well . . .

to give as elaborate productions as the white shows and play in the best theatres." To an extent, he realized this dream, but his death also marked the beginning of the rapid decline of black musical comedy in pre-World War I America.

## Junior Walker and the All-Stars

Junior Walker and the All-Stars were a rhythm-and-blues band that produced several smash hits for the Motown label in the 1960s with an untutored, earthy sound that went against type for Motown, but that provided the first of a new kind of hit for the recording industry giant.

The group's leader, Junior Walker, whose real name was Autry DeWalt II (1931-1995), was born in Blythesville, Arkansas. As a young man he lived around South Bend, Indiana, where he met guitarist Willie Woods. During the early 1950s the two performed in a group called the Jumping Jacks. Walker, only a fair singer, was soon regarded as one of the best saxophonists of his generation.

By the mid-1950s, Walker and Woods had moved to Battle Creek, Michigan, and linked up with organist Vic Thomas and drummer James Graves. Those four called themselves the All-Stars, supposedly after a fan yelled out that every player was a star in this band. There was considerable truth in that statement, both because all four men were consummate R&B musicians, and because their relaxed, jam-session approach gave each player a chance to show his stuff. Years later, Grateful Dead guitarist Jerry Garcia would specifically cite "Cleo's Mood," the 1966 instrumental tune penned by Willie Woods, as an inspiration for the Dead's give-and-take jams.

The All-Stars became very popular in Michigan clubs around 1960. In 1962, while they were performing at El Grotto, they were discovered by Johnny Bristol, at that time a recording artist for Tri-Phi Records in Detroit. Bristol strongly suggested that the group meet Tri-Phi president Harvey Fuqua. Fuqua himself was a former R&B performer; as one of the Moonglows, he had released a number of hits during the 1950s for Chicago's Chess Records. By 1962 he was president of both the Tri-Phi and the Harvey labels in Detroit; his wife owned Anna Records, and his brother-in-law, Berry Gordy, was the head of Motown, among the very few black-owned record labels of any size in the country. Fuqua quickly signed Junior Walker and the All-Stars to his Harvey label. Over the next year the band released three singles (but no hits), including "Twistlackawanna" and "Good

**Junior Walker and the All-Stars**

Rockin' Tonight," the latter a cover of Elvis Presley's 1954 Sun label single (itself a cover of the Wynonie Harris version from 1948).

Harvey Fuqua's money troubles led him to fold his two companies and become a producer and talent scout for Berry Gordy. Although Junior Walker and the All-Stars did not automatically receive a contract with Motown, they did soon afterwards thanks to Fuqua's recommendation. Gordy used the All-Stars to launch his new, more R&B-oriented label, Soul.

In 1964 the band released "Monkey Jim," a song that sank without a trace, but its March 1965 single, "Shotgun," exceeded everyone's expectations. "Shotgun" started off literally with a bang: a gunshot that got its listeners' full attention right away. The song was a classic R&B tune that quickly went to #1 on the R&B charts; more surprisingly, it also spent several weeks in the pop Top Ten, peaking at #4. This performance was never surpassed by later All-Star releases. Most of their fifteen hit records would do significantly better on the R&B charts, because that is what they were. Two of these fifteen hits went to #1, and nine more singles reached the Top Ten. Junior Walker and the All-Stars had a dozen hits on the *Billboard* pop

charts though only two ever made it to the Top Ten. Unlike the typical middle of the road Motown product, Junior Walker's singles were unabashedly rough and tough.

The All-Stars' strongest pop singles, after "Shotgun," were "(I'm a) Road-Runner," written and produced by Holland, Dozier, and Holland, the trio most responsible for the Supremes' hits; "How Sweet It Is (To Be Loved By You)," from the same team; and "What Does It Take (To Win Your Love)," a ballad produced and co-written by the band's old associates Johnny Bristol and Harvey Fuqua, by that time colleagues in Motown's production department. "What Does It Take" was a different sort of song for the All-Stars, slow and dreamy by comparison with their usual output, but it was their only record to equal "Shotgun" on the charts. "Shotgun" itself was written by Autry DeWalt II; when the All-Stars performed, he was Junior Walker, but when he copyrighted his creations, he kept his original DeWalt name.

The All-Stars had a reasonably successful career by Motown standards, releasing fifteen charted singles (and several albums) over a seven-year period but, also typically, not making much money for

that label. The band had no further charted singles after 1971, but continued to tour on Motown-sponsored revues. Junior Walker moved to southern California about the time Motown relocated there in the 1970s, but moved back to the Battle Creek area after a few years. He remained active as a performer, playing with a variety of sidemen; in 1988 Walker appeared in the comedy film, *Tape Heads*. In the 1990s, his son Autry DeWalt III was a frequent drummer with the band.

Much of the All-Stars' music was underappreciated by the audiences of their day, and some of it was not heard at all. Among professional musicians, though, the band is held in higher esteem than many with greater popular reputations. Junior Walker died of cancer in Battle Creek on November 23, 1995, one of the great musicians of his generation.

## Walker, Madame C. J. (1867-1919)

In the field of black hair care, Madame C. J. Walker employed groundbreaking entrepreneurial, organizational, and marketing strategies to revolutionize the industry. At her death in 1919 Walker had amassed a fortune, making her the first African-American female millionaire.

Born Sarah Breedlove in 1867 in Delta, Louisiana, Walker moved to St. Louis twenty years later in search of better social and economic opportunities. Widowed, with a two-year-old daughter, she struggled financially but was determined not to spend her entire life as a domestic. After moving to Denver in 1905 Walker's hair began to fall out and she experimented with several formulas until she stopped her hair loss. This encouraged her to develop and market her own product, the "Walker hair-grower," to black women throughout the Denver area. "My hair was coming in faster that it had ever fallen out. I tried it on my friends; it helped them. I made up my mind that I would begin to sell it." After much success with the product in Denver, Walker and her new husband, Charles Joseph Walker, began to market the product throughout the United States, South America, and the Caribbean. She soon developed an entire array of black hair care products that became simply known as the "Walker System," which included a shampoo, the "hair-grower," and a hot iron. Her method turned coarse hair into a straight and silky European-like hair.

To sell her products Walker hired black women (known as "Walker agents,") who went door-to-door dressed in white blouses and black skirts. This canvassing was supplemented by an intense advertising campaign in black newspapers and magazines across the

Madame C. J. Walker

country. Readers could hardly miss her ads which, like her products, carried her portrait. Later she established beauty parlors and beauty schools to acquaint people with her products and she also built factories and laboratories that manufactured her goods. This business approach enabled her to become the first black female millionaire.

In spite of her superb business acumen Walker was often criticized in the black community for trying to make black women look like white females. But she insisted that her products were not "straighteners," but rather a formula for a healthy scalp and manageable hair. After opening a second headquarters in Pittsburgh, Walker moved her company to Indianapolis in 1910, and then to New York City four years later as her gross revenues began to exceed \$1 million annually. With her fortune Walker lived extravagantly, with massive real-estate investments in and around New York City. In spite of this extravagance, Walker was consistent in supporting a large number of black philanthropic endeavors, including the NAACP.

Walker's significance lies in the fact that she revolutionized and pioneered the black hair care industry which would eventually become a multi-billion dollar business. Hair care companies that had ignored the African-American consumer now began to develop and market products akin to Walker's. Walker died at the age of 51 after a brief illness.

## Walkman

The Walkman became one of the most successful audio products of the postwar period, and like the Victrola before it, any personal portable cassette player was called a "walkman," regardless of manufacturer. The portable personal stereo was the most important electronics product of the 1980s. Bought by millions of people worldwide, it dramatically changed the way people listened to music. Its convenience and small size dictated the shape and function of the next generation of digital technology. Manufacturer Sony's hunch was right: Americans did buy them in the millions, and the walkman became one of those products that everybody owned, like a television, radio, or VCR.

The introduction of the Phillips compact tape cassette in 1963 was an important technological step in the reduction of size of talking machines. The machines that played them used transistorized, solid-state amplifiers that took up far less room than vacuum tubes. The size of the cassette tape recorder was continually reduced in the 1960s to about the size of a paperback book. This was considered small enough for a portable unit.

Masuru Ibuka of Sony wanted an even smaller stereo unit for his personal use, one that he could put in his coat pocket. The company he cofounded had made a profitable practice of reducing the size of electronic consumer goods; starting with reel-to-reel tape recorders, radios, and then televisions, Sony had managed to find an unexpectedly large market for scaled down versions of appliances that most families already owned. Sony's engineers took the path of a battery-operated cassette player that used highly efficient earphones instead of a loudspeaker. All the parts of the player were improved and reduced in size. Ibuka and his partner Akio Morita were the leading proponents of the miniature tape player within Sony, where there was considerable resistance to the idea. Why would anyone want to own a tape player that was just slightly larger than the cassette tape it played? Ignoring the advice of their marketing department, the leaders of Sony took a chance with a product that the experts expected would never sell.

In 1979 Sony introduced its Soundabout cassette player, which was later called the Walkman. Although the innovative elements of the Soundabout system were praised, it was initially treated as something of a novelty in the audio industry. Priced at \$200, it could not realistically be considered as a product for the mass market. Although it sold very well in Japan, where people were used to listening to music on headphones, sales in the United States were not encouraging. Sony's engineers reduced the size and cost of the machine and introduced the Walkman II in 1981. It was 25 percent smaller than the original version and had 50 percent fewer moving

parts. Even more enticing to consumers was that its price dropped considerably. The Walkman opened up a huge market for tape players that nobody knew existed. Americans were enjoying a more active lifestyle and embraced the concept of portable music, even if they had to sacrifice sound quality for portability. But as Sony developed the product, especially the earphone speakers, its fidelity and stereo reproduction improved drastically. It took about two years for Sony's Japanese competitors, including Matsushita, Toshiba, and Aiwa, to bring out portable personal stereos. Sony remained ahead of the competition by constant innovation: Dolby noise reduction circuits were added in 1982, and a rechargeable battery feature was introduced in 1985. The machine grew smaller and smaller until it was hardly larger than the audio cassette it played.

In the ten years following the introduction of the Walkman, Sony sold 50 million units, including 25 million in the United States. Its competitors sold millions more. They were manufactured all over the Far East and came in a broad range of sizes and prices, with the cheapest model selling for around \$20. By the 1990s the market for personal stereos in the United States was around 20 to 30 million units a year. Those who doubted the appeal of a personal tape recorder were silenced by the variety of uses that only a walkman could provide. Waterproofed walkmen were marketed to those who enjoyed watersports, and there were special durable models for tennis players and runners. While sitting in a crowded subway car or jogging through a park one could enjoy high fidelity recorded sound.

Although a tribute to the semiconductor and the ingenuity of Japanese engineering, the walkman is not purely significant in the way it works but also in what it represents. It is an evolutionary step in a process that began about a hundred years earlier when pioneers of recorded sound began to reduce the size and cost of their machines. It is a significant product of portability resulting from the demands of an on-the-move, industrial society. It established a one-on-one relationship between people and their machines that changed the way that we hear recorded sound, having a noticeable effect on the way that people listen to music. The sound from the headphones of a portable player is intimate and immediate compared to the sound coming from the loudspeaker of a home stereo. Recording studios even began to mix the balance of their master recordings to suit the reproduction characteristics of walkman headphones.

## Wall Drug

A rest stop at Wall Drug in South Dakota is a passport to a truly egalitarian social setting. It is a place that not only relieves highway

Wall Drug, South Dakota.

tedium but enables friendly interaction with other people from all walks of life, none of which could have been foreseen in its humble origins. For summer travelers driving endless hot hours across the Great Plains, an offer of free ice water cannot possibly be ignored. This simple but effective advertising gimmick was the savior of a small shop threatened with extinction by the hard times of the Depression. It was the brainchild of Ted and Dorothy Hustead, who had owned the establishment for five years without seeing much in the way of profit. In 1936, they put up some signs along the highway, and visitors started pouring in. They were still arriving in droves by the end of the twentieth century, and the tiny drug store located off Interstate-90 in downtown Wall, South Dakota, has expanded, evolving into several blocks of representational Wild West architecture, where shaded arcades of shops share space with motel and restaurant facilities. And yes, you can still get that free ice water.

## *The Wall Street Journal*

Someone glancing at the front page of *The Wall Street Journal* for the first time might be deceived. Unlike other newspapers, the

*Journal* does not have, with one exception, multiple-column headlines or any photographs. It does not look like most newspapers. One might get the impression that the *Journal* is a conservative newspaper, and on one hand, the observer would be correct. The *Journal* became the United States’ first national newspaper in the twentieth century and was a leader both in innovative writing styles as well as espousing politically conservative opinions. On top of that, it had the highest circulation of any daily newspaper in the United States. Clearly, it would be wrong to pigeonhole a publication that began as a handwritten sheet of business news and a century later was a three-section highly regarded newspaper that could claim more than thirty Pulitzer Prizes.

The newspaper that a twentieth-century president (Harry Truman) referred to as “the Republican bible” was founded in 1882 by Charles H. Dow and Edward D. Jones as part of Dow Jones & Company. In fact, for at least the first fifty years of its existence, the *Journal* played second fiddle to the company’s profitable business news ticker. In that first half century, it was not uncommon for *Journal* reporters to trade in stocks they also wrote about, a conflict of interest that William Henry Grimes ended when he became the managing editor in 1934. Grimes, who would win the *Journal*’s first Pulitzer Prize in 1947, established the paper as independent of its sources rather than beholden to them, which enabled it to report more freely and confidently on business news and to be more trusted by readers.

The man who ultimately shaped the modern *Wall Street Journal* was Barney “Bernard” Kilgore, who replaced Grimes in 1941. At the time, the *Journal* published two editions, the second of which was called the Pacific Coast edition. It was Kilgore’s goal to make the paper national, meaning a reader in Los Angeles would get the same paper as readers in Miami, St. Paul, Houston, and New York City.

Folding the Pacific Coast edition into the regular edition was one of Kilgore's first steps in that direction. Kilgore was ahead of his time as far as technology was concerned. Although one could argue that because it was not delivered on the same day nationally, the *Journal* was not technically a national newspaper, Kilgore's vision paid off when satellites eventually made it easier for the newspaper to be distributed to regional printing plants for home delivery around the United States. The use of satellite delivery from a central location to regional plants became a model that other newspapers such as *USA Today* and *The New York Times* later followed.

Many of Kilgore's changes remain part of the newspaper. He had a great impact on the paper's writing style, for example. He told reporters to write for the readers, not for bankers. He had been a highly regarded writer, and when reporters once complained to President Franklin Roosevelt that they could not understand the federal budget, FDR replied: "Read Kilgore in *The Wall Street Journal*; he understands it." Kilgore's axiom that reporters should write for the readers, not the people being written about, became conventional wisdom throughout the newspaper industry.

Kilgore also decreed that not all stories had to be written in the inverted pyramid style, that is with the most important information at the beginning of the story and the least important at the end. Instead, he not only encouraged reporters to produce in-depth stories that did not have a peg to yesterday's news, but also broadened the topics that reporters could write about. In his mind, just about any story could fit under the rubric of business and economics. Reporters produced not only company profiles but also stories on social trends and stories that some editors would view as whimsical or off the wall. It was Kilgore who ended the use of photographs on the front page and it was Kilgore who moved the *Journal* out from under the shadow of the Dow Jones news ticker. Under his watch, the *Journal* began building circulation and making money.

In reality, *The Wall Street Journal* is more than just one newspaper. It encompasses several other business-related newspapers and magazines, both in print and on line. Among them are *The Asian Wall Street Journal*, *The Asian Wall Street Journal Weekly Edition*, *National Business Employment Weekly*, *The Wall Street Journal Americas*, *The Wall Street Journal Europe*, *Barron's*, *Dow Jones Financial Publishing*, and *SmartMoney*. One offshoot not listed is the *National Observer*, which Kilgore created in 1962 and which lasted until 1977. It was, in effect, the *Journal's* Sunday paper or weekly magazine and it was filled with analysis and features. It was such a different paper that among its early staff writers were non-traditionalists such as Tom Wolfe, later a force in the New Journalism movement, and Hunter S. Thompson, whose first major success was *Hell's Angels*, based on an article he had written about the infamous motorcycle gang. Perhaps if Kilgore had lived longer, the *National Observer* would have succeeded. But he died within five years of its founding, after working for the *Journal* for 38 years. While the *Observer* survived for another 10 years it was without its founder's guiding hand.

As the *Journal* began its second century, it became more known for its archly conservative editorials than for its news coverage. This is somewhat surprising, since the bulk of the paper's Pulitzer Prizes have been awarded for its reporting, not its editorials, although that dichotomy reveals much about the paper. The *Journal*, of course, has always been conservative on its editorial page, but the page gained

notoriety because of the perception that its voice had changed from conservative to ideologue and had lost its independence.

Politics aside, the *Journal* ranks as a pacesetter in journalism, not just business journalism. Its large circulation and national audience speak to the wisdom of men like William Grimes and Barney Kilgore.

## Wallace, Sippie (1898-1986)

Born Beulah Thomas in Texas, Sippie Wallace began her professional singing career as a teenager. After moving to Chicago in 1923 with her husband and brothers (with whom she wrote and performed), she won a recording contract with Okeh Records. Known for her risqué lyrics ("I'm a Mighty Tight Woman"), black-and woman-centered subjects ("Women, Be Wise"), and rough phrasing, Wallace recorded much of her best music for Okeh between 1923 and 1927. Her music, like much of the blues of the 1920s and 1930s, articulated the experience of being female, black, and poor, offering not only entertainment but also understanding and recognition to black listeners (though, ironically, these differences were often exploited in marketing aimed at whites). She disappeared from the blues scene for nearly 40 years, but made a comeback during the 1960s blues revival, recording several new albums between 1966 and 1986. As one of the blues most stirring voices, Wallace helped to write, sing, and shape twentieth-century American popular culture. She especially influenced singer songwriter Bonnie Raitt, who has recorded many of Wallace's songs.

## Wal-Mart

With nearly 2,500 stores spread across the land, Wal-Mart has become an instantly recognizable and ubiquitous component of American popular culture. There are few places in this country anymore that are beyond a short drive to a Wal-Mart. With upwards of 50,000 different items on the shelves and racks of a typical store, Wal-Mart has literally changed the way Americans shop.

The phenomenal success of Wal-Mart has been the direct result of the vision and energy of its late founder, Sam Walton. His motivation and charisma alone shaped a company which helped to establish discount merchandising as the major form of retail operation in this country. His highly personal management style and folksy, down-home demeanor were instrumental in assembling a fiercely loyal work force and maintaining high employee morale.

Samuel Moore Walton (1918-1992) was born near Kingfisher, Oklahoma, into a farm family. He grew up in Missouri and graduated

in 1940 from the University of Missouri with a degree in economics. After a short stint making 85 dollars a month as a manager trainee for the J.C. Penney Company, Walton served in the Army during World War II and attained the rank of captain. He launched his illustrious career in retailing with the purchase of a Ben Franklin variety store franchise in Newport, Arkansas, where he began his practice of high-volume, discount merchandising. From there, he moved to bigger stores in several locations, calling his newly formed chain "Walton's Five & Dime." He depended on regular newspaper advertising and special sales promotions, and began to experiment with self-service shopping, stationing clerks only at check-out counters. His stores became larger and more numerous, and with his brother "Bud" as a partner in the business, "Walton's Family Centers" by 1962 was the largest independently operated chain of variety stores in the country.

A key strategy in the rapid expansion of Walton's stores was one that would be repeated successfully throughout the later Wal-Mart boom: placing new stores in small towns, based on the realization that the consumer power, represented by relatively small but concentrated populations, was more than adequate to support a large variety store. Walton formed early his notion that a big store in a small town would be lucrative, and would intercept the flow of shoppers traveling to larger cities for major purchases. By establishing initial occupation of these smaller market niches, any threat of subsequent competition

A Wal-Mart store in Williston, Vermont.

would be stifled. Although ready and willing to actively test his idea, Walton failed to find interested investors or franchise affiliation, and so went heavily into debt to finance the establishment of the first Wal-Mart in Rogers, Arkansas, which opened on July 2, 1962. The business prospered during the 1960s, first with several new stores opening in other locations in Arkansas, and then further extension into neighboring states. By the end of the decade, however, the need for expansion capital coaxed Walton into incorporation and sale of public stock.

Walton set a course for rapid enlargement of his new Wal-Mart venture, fearing that if he did not crack the market offered by small towns, some other discount store would beat him to it. From 38 stores in 1971, the chain grew to 276 outlets by 1980, most within a 300 mile radius of the firm's Bentonville, Arkansas headquarters. But the greatest growth was yet to come. In the early 1980s, Walton acquired several other retail chains, and transforming these stores into Wal-Marts allowed for quick saturation of new territory, particularly in the Deep South. At mid-decade, there were nearly 1,000 Wal-Marts in 22 states. For new construction, the prevailing expansion plan never wavered from the proven small town location strategy, although a clever ploy of capturing an increasing market share of large cities came about by setting up stores in nearby suburban areas. Overall, the growth and expansion of Wal-Mart has occurred in three phases. Initially, up until the mid-1970s, stores were tightly clustered around the northwest Arkansas operational hub. The second phase, through 1980, witnessed regional expansion into neighboring states, while in the third phase, Wal-Marts seemed to be springing up everywhere.

Sam Walton once described his management style as "MBWA"—management by walking around. He maintained a rigorous schedule of unannounced store visits, which always included Sam's own cheerleading drill and time for chatting with employees at every level. He acknowledged that human resources were the key to Wal-Mart's success, and Walton maintained a people orientation from the beginning that never wavered or waned. Hard work was always rewarded, with bonuses given for good ideas, and stock options and profit-sharing incentives offered to all personnel. Walton himself worked 16-hour days and expected his corporate executives to do likewise. The egalitarian tone of upper management was legendary, and was symbolized by the lack of assigned parking at corporate headquarters, even for Sam's old pick-up truck. The company nurtured several programs aimed at giving back to the community. There were college scholarships for employees' children, as well as local high school students. With the stated purpose of stemming the tide of jobs leaving the country, there was the much touted "Buy American" campaign (though as critics pointed out, Wal-Mart purchased domestically only if that was the cheapest price available). His recipe for prosperity evidently worked, for by the late 1980s, *Forbes* magazine had placed Sam Walton at the top of their list of the richest people in America for three years running.

By 1987, Wal-Mart ranked fourth among general retail chains, trailing Sears, Kmart, and J.C. Penney's, and in that year alone, the company opened 121 new stores. Its board of directors included the then-first lady of Arkansas—Hilary Rodham Clinton. In 1988, Sam Walton stepped down as CEO (Chief Executive Officer), though he still maintained an active voice in corporate plans and operations. The company he built was now a national icon. As one account opined, "By the end of the 1980s, for its personnel and for the public it served,

the firm had evolved into more than just a job or a store. In the eyes of its growing legion of admirers, Wal-Mart had become a cultural phenomenon." The new decade promised continued success and further expansion, and on one day alone, January 30, 1991, Wal-Mart opened 36 new stores. Later that year, Wal-Mart passed both Sears and Kmart to become the nation's leading retailer. Sad news for the company soon followed, for on April 5, 1992, Sam Walton died. But the retailing spectacle he engineered remained firmly entrenched in American culture.

Wal-Mart instituted a number of important and far-reaching technical innovations that serve as exemplars of retail trade management techniques in this country. In 1977, a company-wide computer system was installed that has grown in sophistication and applications to where its database is second only to the federal government's. Wal-Mart pioneered the use of UPC bar code scanning, not only at the check-out counter, but also at the backroom receiving area, which allowed for quick and accurate inventory data analysis. A satellite-based network, which initially cost \$20 million and has now become the largest privately owned system in the country, allows for regular and instantaneous communications among staff at all stores and management personnel at headquarters.

Another way that Wal-Mart gained an edge on competition was to vertically integrate the processes of wholesale purchasing and distribution of merchandise. Walton set up a series of centrally located distribution centers that received bulk shipments in very large quantities from vendors and suppliers, often by rail. Through a process known as "cross-docking," the goods were then loaded on a fleet of company-owned trucks bound for individual stores, usually the same day. These distribution centers, full of automatic conveyor belts and often as large as 25 acres in area, did not actually function as warehouses, but rather facilitated rapid transfer of products from a wholesale to a retail mode. They now serve the growing network of retail locations at an approximate ratio of one distribution center per 100 stores. The company also assumed control of all departments within stores, including the jewelry, pharmaceutical, and automobile service sections which previously had belonged to outside contractors leasing floor space.

The success of Wal-Mart has been emblematic of changing retail trends in the United States, and has paralleled the rise of discount merchandising. The economies of scale involved with bigger and more numerous stores, bulk purchasing directly from manufacturers, and high volume sales enabled rapid growth and soaring profits even as individual item mark-ups were reduced and the savings passed on to the customer. The public was quick to respond. As traditional department stores declined in consumer appeal, the large variety outlet promising low prices took over. The year Wal-Mart opened its first store—1962—was the same year Kmart, Woolco, and Target first opened stores. But it was Wal-Mart that most successfully negotiated the transition from shopping center and mall-based retailing to one-stop shopping. Sales and service were guided by a pair of slogans which were displayed prominently in every store—"We sell for Less" and "Satisfaction guaranteed." Not only does management strive to uphold those maxims, but a well-trained staff at all locations exudes helpfulness and attention to customers' needs. The "store greeter," often a senior citizen, is a fixture at the entrance to every store.

The amazing spread of Wal-Mart across the American landscape has not been without controversy. Several locations have actually

welcomed the new neighbor, finding that their own business community has prospered from the increased consumer traffic. But much more commonly, local communities perceive the giant store on the edge of town as a threat to main street merchants unable to compete with the bulk purchasing power of a national chain that prides itself on passing its savings on to the consumer. Charges of unfair labor practices have not fazed the infamously non-union shop. For all its self-congratulatory stance on promoting ecology issues and being green, the company has also been criticized for its use of veiled threats and other heavy-handed tactics in dealing with local zoning laws and environmental regulations. On-going opposition by local communities to Wal-Mart's expansion plans will most likely continue. There may come a time when the company feels it has largely saturated the market for its discount retailing operation. Increasing popularity of electronic catalogs and Internet-based shopping may begin to dent the fortunes of this giant, but so far there appears no sign of slowing down, and for now anyway, that big Wal-Mart store is here to stay.

—Robert Kuhlken

## Walters, Barbara (1931—)

About her career as a television newswoman and interviewer, first lady of the news Barbara Walters has said, "I was the kind nobody thought could make it. I had a funny Boston accent. I couldn't pronounce my Rs. I wasn't a beauty." Walters did make it, even in the often superficial, looks-obsessed world of network television. Partially as a result of attempting to make it at the right time in history—the feminist movement of the early 1970s was gaining strength—Walters not only made a place for herself in television news, but also changed the way the news was presented on television.

Barbara Walters was born, however unwillingly, into show business. Her father, Lou, was a nightclub owner who ran the Latin Quarter, a chain of popular clubs in New York, Boston, and Florida. Though celebrities were a part of her everyday life growing up, the

Barbara Walters

girl who was to become a nightly visitor in the homes of millions of Americans wanted nothing more than to be "normal." But that was denied her when her father suddenly went bankrupt and suffered a heart attack. In her yearbook from Sarah Lawrence College, Walters is pictured in a cartoon as an ostrich with its head stuck in the sand, but she was forced to face the world early. To help her parents and developmentally disabled sister out of their financial troubles, she went to work, first as a secretary, then as a writer on such television shows as *Jack Paar* and *The Dick Van Dyke Show*. In 1961, she got a job as a writer/researcher for the *Today Show*, and in 1964 she moved in front of the camera when she was promoted to "Today girl," a title reflecting the sexist atmosphere prevailing in television at the time. But sexism notwithstanding, Walters was on her way to being a serious television journalist. In 1972, when President Nixon changed U.S. policy and paid an official visit to the People's Republic of China for the first time since their revolution, Barbara Walters was the only woman to cover that trip.

She continued to make history and created a buzz of controversy in 1976 when ABC signed her to a five-year contract for \$1 million per year. She was given the job of co-anchor on the nightly news, sitting at the desk with longtime television news man Harry Reasoner. The industry and the country were shocked at the idea of a woman receiving so much money—twice the salary of venerable CBS news

legend Walter Cronkite. When Walters went to work as the first woman to anchor the evening news, she encountered ridicule, dismissive attitudes, and outright hostility. Reasoner himself was not happy to be working with her and let it show. *Time* magazine dubbed Walters the “Most Appalling Argument for Feminism.” Even when she proved her journalistic skills by hosting the first joint interview with President Anwar Sadat of Egypt and Prime Minister Menachem Begin of Israel, viewers just did not seem to respond to her. The flagging ABC news ratings did not rise, and Walters was removed from the news desk in 1979 and given a new job—correspondent on the news magazine show *20/20*.

Walters soon rose to co-host *20/20* with Hugh Downs, and the show expanded from Friday nights to air editions on Wednesday and Sunday nights as well. Sunday nights she co-hosted with Diane Sawyer, another pioneering woman television journalist. In an industry that is more likely to capitalize on competition among women for high-visibility positions, the pairing of the two female anchors was unusual and refreshing.

Though her credentials as a newswoman are impressive, it is as an interviewer that Walters will be remembered. She has created more than sixty “Barbara Walters Specials” and “Most Fascinating People” shows, which aired at prime audience-grabbing times, such as following the Academy Awards show and on New Year’s Eve. In each special she interviews several celebrities and over the years has delved into the personal lives of political figures, timeless icons of entertainment, and “flashes in the pan.” Her interviews have become such a television standard that it is not clear whether Barbara Walters interviews those who have “made it,” or whether one has not really “made it” until one has been interviewed by Walters. The interviews are incisive and revealing. Bill Geddie, producer of the Walters specials, says of her, “She has a way that has matured over the years of getting people to say things on the air that they never thought they were going to say.” Walters herself attributes much of her success as an interviewer to her devotion to her disabled sister, Jacqueline. Growing up so close to the difficulties her sister faced gave her an empathy and compassion she was able to use throughout her career.

In 1997, Walters branched out into another television standard—the talk show. Following her introduction “I’ve always wanted to do a show with women who have very different views. . . .” *The View* introduced a new format—the multi-host talk show. Co-hosts journalist Meredith Vieira, lawyer Star Jones, comic Joy Behar, and model Debbie Matenopoulos are occasionally joined by Walters for the usual talk show fare: a few celebrities, a few writers of self-help books, and some lightweight chat about current newsmaking events. *The View* is advertised by Walters as “Four women, lots of opinions, and me—Barbara Walters.” Though one suspects that Walters’s separation of herself from the “four women” is not accidental, on *The View* she is looser and more relaxed—called “B.W.” by her colleagues and allowing herself to be teased and, occasionally, put on the spot.

Walters’s distinctive style has often been parodied with a ruthlessness that indicates what an icon she herself has become. Probably the most famous send-up was performed by the late Gilda Radner on the early *Saturday Night Live* show. With stiffly flipped hair and exaggerated lisp, Radner’s “Barbara Wawa” became almost as familiar to viewers as Walters herself. Later *SNL* crews also have parodied Walters’s *The View*. Though hurt by the mockery at first,

Walters soon learned that it was a measure of her own popularity, and she even invited the *SNL* cast to perform their parody on an April Fool’s edition of *The View*.

While satire is a tribute on one hand, Walters does have her critics. She has been called aggressive and overbearing, common criticisms of women successful in male-dominated businesses, and some have questioned her tactics for getting interviews. Many have criticized her for confusing news and entertainment. A standing joke in the industry revolves around her “touchy-feely” interviewing style, falsely attributing to her the question “If you were a tree, what kind of tree would you be?” In 1981, during an interview with actress Katharine Hepburn, Hepburn herself stated that at that point in her life she felt like a tree. Following her thought, Walters asked, “What kind of tree are you?” Hepburn responded that she felt like an oak, and the question moved forever into the archive of jokes about Walters.

Barbara Walters will be remembered for many “firsts” and “onlys.” Her critics blame her for bringing too much entertainment into the news, but, for better or worse, she has been pivotal in creating the face of television news in the 1990s, a blend of fact, entertainment, and personality. There is no doubt that every woman in television news owes a debt to the girl whose college yearbook pictured her as an ostrich but who could not keep her head in the sand. Walters does not glamorize herself or her contributions, “I was frustrated and tenacious,” she says, “and that’s a powerful combination.”

—Tina Gianoulis

## Walton, Bill (1952—)

Despite an injury-plagued career, in his brief peak Bill Walton was compared with some of the greatest centers in National Basketball Association (NBA) history. In addition to his on-court contributions, which include leading the Portland Trailblazers to an NBA Championship in 1977 and serving as a key reserve during the Boston Celtics’ 1986 Championship season, Walton’s outspoken political views and colorful personal life have kept him in the spotlight.

Walton began his career playing for the University of California at Los Angeles (UCLA) in the early 1970s, where he won three consecutive College Player of the Year Awards. In the 1973 National Collegiate Athletic Association (NCAA) Championship game against Memphis State, Walton hit an unbelievable 21 out of 22 shots. During

The Trailblazers' Bill Walton (right) drives against the Celtics' Dave Cowens.

Walton's career, UCLA won 86 of 90 games and two national championships, one in 1972 and another in 1973. For his career, Walton holds the record for highest field goal percentage in NCAA tournament play, having hit almost 69 percent of the shots he attempted between 1972 and 1974.

While his play on the court was outstanding during his college career, Walton also began to attract attention for his political views at UCLA. He was arrested during his junior year at an anti-Vietnam War rally, and issued a public statement criticizing President Richard Nixon and the Federal Bureau of Investigation. Walton was also an avid fan of the rock group the Grateful Dead, frequently attending their concerts.

Although Walton's long history of injuries had already reared its head during his high school and college careers—he suffered a broken ankle and leg and underwent knee surgery while playing at Helix High School in La Mesa, California—he was nonetheless chosen as the first player in the 1974 NBA draft by the Portland Trailblazers. While Walton played impressively during his first two seasons, injuries limited him to approximately half of the possible games he could have played in during that time.

It was during the 1976-1977 season, however, that Walton really came into his own, scoring nearly 19 points per game and leading the

league in rebounding and blocked shots. The Trailblazers reached the NBA Finals against Philadelphia that season, but lost the first two games of the best-of-seven series, a situation which only one team in NBA history had overcome. Largely due to Walton's spectacular play, however, the Blazers won the next four games, capturing the NBA Championship in six games. Walton was named the Most Valuable Player (MVP) of the series, setting NBA finals single-game records for defensive rebounds and blocked shots.

The following season, 1977-1978, Walton played even more impressively, earning the league's MVP award as the Blazers won 50 of their first 60 games. Injuries, however, kept him out of the final 24 regular season games. Walton attempted to come back in the playoffs, but it was discovered that the navicular bone in his left foot was broken. Without Walton, the Blazers lost in the playoffs to the Seattle SuperSonics.

Walton was traded to the then-San Diego Clippers following the 1977-1978 season, after an extremely acrimonious parting with the Trailblazers, whom he accused of providing him with poor medical advice. Walton missed most of his first two seasons with the Clippers, drawing criticism from his teammates and fans, who felt the team had erred in signing Walton to a lucrative long-term contract. Although Walton's health improved and he was able to play fairly extensively in the 1983-1984 and 1984-1985 seasons, the Clippers never rose above mediocrity, and Walton never had the chance to repeat his playoff successes with Portland.

After his contract with the Clippers ran out, Walton contacted several of the League's top teams, seeking to find out if they needed a reserve center. Fortunately for Walton, the Boston Celtics, a championship contender, needed a quality big man of Walton's caliber to provide them with greater depth. Walton joined the team for the 1985-1986 season. The pickup paid incredible dividends for the Celtics, as Walton played in all but two of the team's 82 regular season games and every playoff game. While Walton's numbers were modest, he made a major contribution to the team's 67-15 record, as he provided scoring, rebounding, passing, defense, and high energy during his time on the court. Walton received the league's Sixth Man Award, given to the top reserve player in the league. The Celtics, with Walton backing up frontcourt legends Kevin McHale and Robert Parish, breezed through the playoffs that season, defeating the Houston Rockets in six games. The following season, however, injuries limited Walton to only 10 games, after which he retired.

Walton became a television announcer in 1991 for the National Broadcasting Network (NBC), and has served as an analyst for basketball, volleyball, and other sports. He was named to the Naismith Memorial Basketball Hall of Fame in 1993, and in 1996 was named one of the 50 greatest players in NBA history. Walton, who studied law at Stanford University during his breaks from basketball, lives with his four sons in San Diego.

## The Waltons

From 1972 to 1981, the Depression Era returned to America through the popular television series, *The Waltons*. For nearly a decade, American viewers embraced *The Waltons* into popular culture as a symbol of past family values that were largely absent in American television programs.

Earl Hamner, Jr., creator of *The Waltons*, grew up an aspiring writer in the Blue Ridge Mountains of Schuyler, Virginia. His early novel, *The Homecoming*, was a literary recollection of his own Depression Era childhood, of which he speaks fondly: “We were in a depression, but we weren’t depressed. We were poor, but nobody ever bothered to tell us that. To a skinny, awkward, red headed kid who secretly yearned to be a writer . . . each of those days seemed filled with wonder.” In 1970, Lorimar Productions approached Hamner to create a one-hour television special based on *The Homecoming*, and hence, the Walton family made its television debut. Against the advice of reviewers and network executives who had little faith in the appeal of family programming, CBS took a chance and placed *The Waltons* in a Thursday night prime-time slot. To the surprise of many, the series not only held its own, but maintained a number eight position in the ratings for years to follow.

(Left to right) Ralph Waite, Richard Thomas, and Michael Learned.

For viewers concerned with the growing number of television shows whose content often included violence or sexually oriented themes, the Walton family offered a refreshing option. Representative of Hamner’s own family, members of the large Walton clan were richly endowed with a common thread of love, pride, and responsibility, yet each uniquely contributed to the depiction of rural America from the Depression era to World War II. This ideal family was headed by proud patriarch and millwright John Sr. (Ralph Waite), his wife, Olivia, a loving and devout Christian mother (Michael Learned), and the prolific writer and boy-next-door, John-Boy (Richard Thomas). There was Mary-Ellen, the headstrong nurse (Judy Norton), the musically talented Ben (Jon Walmsley), the lovely Erin (Mary McDonough), and Ben, the budding entrepreneur (Eric Scott). Along with these eight were aspiring aviator Jim Bob (David W. Harper), Elizabeth (Kami Cotler), the youngest Walton, and the grandparents—Grandpa Zeb, the beloved woodsman (Will Geer), and tenacious Grandma Ester (Ellen Corby). Added to this numerous collection of distinctive individuals was a large cast of vibrantly colorful and richly developed supporting characters.

While critics of *The Waltons* have accused the show of being “sugarcoated” and unrealistic, a glance at some of the thematic content might prove otherwise. Among the issues and events that were dealt with in the series were rural poverty, bigotry, the *Hindenburg* disaster, the bombing of Pearl Harbor, the death of a family member, draft evasion and, of course, the human cost of war. Richard Thomas, reflecting on this popular misconception in a 1995 interview said, “One of the common errors in describing the show is that it was all so nice, everyone was nice. It’s just not true. Everyone in the show could be foolish, everyone was hotheaded. John-Boy was always confronting people . . . It was not this very sweet little family.”

The family’s unifying force, however, and perhaps the focal point of the show’s broad demographic appeal, was that family members always maintained a high level of respect for one other, finding genuine joy in living while nevertheless working out the internal and external conflicts that defined their daily lives on Walton’s Mountain. Perhaps, too, *The Waltons* fulfilled a desire in post-1960s America to return to a simpler time when families still ate supper together at the kitchen table, the General Merchandise was the social and economic hub of a community, and, at the end of a hard but honest day, familiar voices in the darkness of a white clapboard farmhouse could be heard to say, “Good night, John-Boy.”

## War Bonds

War bonds are a method of financing war that reduces demand for goods and services by taking money out of circulation through

A War Bonds poster.

investment in the bonds. This provides funds to underwrite the war. Modern warfare is an expensive business and must be financed carefully, else a government risks triggering inflation by increasing demand for goods. One method of avoiding this outcome is to raise taxes to finance the war, but such methods risk making a war unpopular. Through the more popular method of selling war bonds, citizens, in effect, invest in the war effort of their government just as they might invest in stocks. Selling war bonds lessens the need for tax increases.

During World War I, the U.S. government raised \$5 billion through the sale of Liberty Bonds. Mass rallies to sell the bonds featured celebrities such as Douglas Fairbanks, Sr. Nonetheless, when most Americans talk about war bonds they are generally referring to the bonds sold during World War II. In part this is because the efforts of World War I involved a good deal of compulsion rather than persuasion. During that war school children were badgered, courts imposed illegal fines on those not owning bonds, and the houses of non-purchasers were painted yellow. But World War II bonds are probably better remembered simply because, by then, mass media had expanded considerably and the scale of the media campaign was greater.

War bonds were but one of the means at the government's disposal to regulate the wartime economy. During World War II, the cost of living in the United States increased by about thirty-three percent. Most of this increase occurred before 1943, when the government put strict price controls in place through the Office of Price Administration. The Revenue Act of 1942 established the

modern American tax structure, which saw the tax base increase four-fold and introduced tax withholding. Through these measures, the government raised about fifty percent of its costs during the war. This was a considerable accomplishment compared to the thirty percent raised during World War I and twenty-three percent during the Civil War. During World War II, war bonds raised approximately \$150 billion, or a quarter of the government's costs.

According to historian John Blum, the Secretary of the Treasury, Henry Morgenthau, said he wanted "to use bonds to sell the war, rather than vice versa." Morgenthau believed that there were quicker and easier ways for the government to raise money than through bond issues, but that it would increase people's stake in the war effort if they bought bonds. Many businesses promoted war bond purchases. Entertainment industry figures lent their celebrity to bond drives. Singer Kate Smith sold \$40 million worth of bonds in a sixteen-hour radio session on September 21, 1943. Hollywood starlet Loretta Young sold bonds at a Kiwanis meeting and pin-up girl Betty Grable auctioned off her stockings. Comic book publishers DC and Marvel carried advertisements and columns urging their readers to tell their parents to buy bonds and to purchase 10-cent defense stamps themselves. Covers of Batman and Superman comics appealed to readers to buy war bonds to "Keep Those Bullets Flying" and "Slap a Jap."

War bonds were a relatively effective measure in reducing inflation and financing the war. Moreover they served as a means of popularizing the war by giving non-combatants a direct stake in its outcome. As sound fiscal policy, the measure of their worth can be judged by the inflationary pressures unleashed by President Lyndon Johnson's decision to finance the Vietnam War, which cost \$150 billion, by printing more money rather than raising taxes or selling bonds.

## War Movies

As long as films have been made, war movies have been a significant genre, with thousands of documentaries, propaganda films, comedies, satires, or dramas reminding moviegoers of the deep human emotion and violence of the combat experience. Throughout the twentieth century, war movies have both reflected and manipulated changing popular attitudes toward war. Some of the films, especially those created during wartime, were created as propaganda, showing the patriotism and heroism of soldiers and the glory attained

Troops storm the beach in a scene from the film *The Longest Day*.

in battle. Still others take on the subject of war only to criticize it, usually via a graphic depiction of the cost of war in terms of human lives.

War has interested filmmakers from the first days of cinematic technology. J. Stuart Blackton's 1898 film, "Tearing Down the Spanish Flag," is considered not only the first fictional American war movie, but also the first propaganda film. Set on an anonymous rooftop in Cuba during the Spanish-American War, this short film depicts a uniformed American soldier (played by Blackton himself) removing the Spanish flag and replacing it with an American one, then cuts to a title card stating, "Remember the Maine." Blackton's film was quickly followed by reenactments of the sinking of the Maine and other battles of the Spanish-American War. Even though the film is only a few minutes long, it managed to capture the contemporary popular imagination and established the foundation for war movies in the twentieth century.

Most American films made during World War I consisted of propaganda films either encouraging or, after 1917, supporting American involvement in the European conflict. Most of these films

romanticized the war, showing enlistment as a glorious, patriotic duty and emphasizing the power and importance of male bonding. Early World War I films often dealt with American citizens volunteering for the French, British, or Canadian armies. Later films showed American troops as the deciding factor in the European victory.

D. W. Griffith directed many of the key World War I propaganda films. Film historians credit Griffith with inventing many modern film techniques, and his impact on the history of the war movie is even more direct. For example, in his 1915 Civil War epic *Birth of a Nation*, Griffith used cross-cutting techniques within battle scenes to shift from large-scale images of fighting to more intimate moments focusing on the film's main characters. Such techniques allowed future filmmakers to develop individual characters within a larger historical context of the war. Griffith's key World War I film was *Hearts of the World* (1918), shot partially under war conditions in France. In this polemical prowar film, Erich Von Stroheim was cast as an evil and lustful German officer (a role he would repeat in numerous later films) who attempts to rape and brutally beat Marie (Lillian Gish). The film's anti-German sentiment is so strong that Gish's

boyfriend is willing to kill her in order save her from such a violation at the hands of the enemy. This depiction of Germans as unrepentantly evil would influence not only later World War I films, but World War II films as well.

Few war movies appeared in the years immediately following the 1918 armistice. The propaganda of the wartime films was no longer necessary, and the American public seemed inclined to focus on domestic affairs. However, three movies in the 1920s brought about a resurgence of interest in World War I. *The Big Parade* (King Vidor, 1925) is credited with reviving the war film genre as well as being the first to realistically depict the war experiences of American soldiers. The plot, which follows a group of men from their enlistment through the conflict, would become standard in the later World War II films.

The following year, the comedy drama *What Price Glory?* (Raoul Walsh, 1926), based on the Laurence Stallings and Maxwell Anderson stage play, follows two marines, Captain Flagg and Sergeant Quirt, as they engage in their own personal rivalry over the same woman while fighting in France. Though the film version does temper the antiwar sentiment of the original play, the film's comedy is sharply contrasted with its graphic and shocking depictions of battle scenes. Later war movies would often capitalize on what Jeanine Basinger in *The World War II Combat Film* would call the "Quirt/Flagg relationship" by focusing on two adversarial characters serving in the same platoon.

*Wings* (William Wellman, 1927), which won the first Academy Award for Best Picture, introduced a new subgenre of war films: the air drama. Director Wellman used his war experiences as a pilot for the Lafayette Flying Corps and the Army Air Service to create realistic aerial scenes that were accomplished by mounting cameras on the fighting planes and by using cameramen in other aircraft, instead of using rear projection effects. The realism and excitement of these scenes would be surpassed later in *Hell's Angels* (Howard Hughes, 1930), a film that cost over \$4 million and that took over three years to make some of the most spectacular flying scenes ever filmed. Unlike *The Big Parade*, these latter two films do not make a profound statement about the war, and their popularity was based primarily on sheer spectacle and excitement. John Monk Saunders, a veteran pilot and the original writer of *Wings*, would later write air dramas, such as *Ace of Aces* (J. Walter Ruben, 1933), *The Dawn Patrol* (Howard Hawks, 1930; remade by Edmund Goulding, 1938), and *The Eagle and the Hawk* (Stuart Walker, 1933), that openly criticized the senseless waste of the war and starkly represented the mental strain suffered by pilots, yet still remained true to the adventurous nature of the subgenre.

The strongest antiwar statement made following World War I came in Lewis Milestone's 1930 adaptation of Erich Maria Remarque's novel *All Quiet on the Western Front*. This film begins with young German men enthusiastically volunteering to fight for their country. However, they quickly learn that this war has nothing to do with honor and glory, and the mental breakdown and violent death of these soldiers is depicted in graphic detail. The realism of the battle scenes, including the image of two disembodied hands clutching a barbed wire, accounts for this film's continued status as one of the great war films of the century. The final shot of Paul Baumer (played by Lew Ayres) dying as he reaches for a butterfly just outside his trench remains one of the most haunting and effective images in any war

film. Even after World War II, the Great War served as the setting for profound antiwar commentary, including Stanley Kubrick's *Paths of Glory* (1957) and Dalton Trumbo's *Johnny Got His Gun* (1971).

As America entered World War II, however, Hollywood needed to reverse this antiwar sentiment by creating films that demonstrated American heroism and success in the earlier war. In *Sergeant York* (Howard Hawks, 1941), Gary Cooper's Alvin York, who went from devout pacifist to America's greatest war hero, provides a counter-image to the one created in such films as *All Quiet on the Western Front*. The film also showed the potential for individual heroic achievement and served as significant propaganda for the American war effort.

World War II films have a clearly defined sense of good and evil. As in the previous war, the enemies were presented not as complex human beings but as two-dimensional caricatures, designed to generate hate and loathing in the audience. Most films created during the war years focused on the adventure and glory of warfare, as well as the strength of both the U. S. military and the American spirit. In addition, most World War II films had a romantic subplot. The female love interests were either sweethearts pining away at the homefront; nurses, AWACs, or reporters serving some military duty; or European, usually French, women whom the G.I.'s meet while on leave. Often, the films followed soldiers from enlistment or training to combat. These formulas were sometimes mixed in with several variables, such as military branches or European or Pacific locales, to create a variety of successful films.

Surprisingly, most of the early World War II combat films made in 1942 and 1943, such as *Wake Island* (John Farrow, 1942) and *Bataan* (Tay Garnett, 1943), focused more on catastrophic American defeats than on the victories. *Wake Island*, the first large-scale combat film of World War II, closely followed a group of soldiers until they were all killed in the ensuing battle. Both films received the support of the U.S. government, and despite showing terrible defeats, these films mobilized popular support for the war and proved to be useful propaganda tools.

Few figures are more synonymous with the war movie than John Wayne. Just as in his Westerns, John Wayne represented the ideal of American masculinity in a persona that exemplified the hard, determined, yet compassionate soldier. Such a persona is evident in such wartime films as *Flying Tigers* (1942), *The Fighting Seabees* (1944), *They Were Expendable* (1945), and *Back to Bataan* (1945), and in postwar films like *The Sands of Iwo Jima* (1949), *Flying Leathernecks* (1951), and *In Harm's Way* (1965). These films follow the basic formulas of World War II movies, and Wayne repeated the same basic character in each. Although Wayne was criticized in later years for such repetitive, formulaic performances, he created an iconic hero, and his films were tremendous successes and morale boosters.

As the Second World War came to a close, movies like *The Story of G. I. Joe* (William Wellman, 1945) and *A Walk in the Sun* (Lewis Milestone, 1946) moved away from the patriotism and heroics of films made in the previous years of the war and toward a more realistic depiction of American soldiers in battle that emphasized the human cost of war over the glory of victory. Wellman continued to demythologize warfare in the 1949 film *Battleground*, which received an Academy Award nomination for Best Picture. These three films follow similar episodic plots focusing on a group of American soldiers, many of whom are killed through the course of the film. In

the opening of *A Walk in the Sun*, Burgess Meredith (who also stars as famed war correspondent Ernie Pyle in *The Story of G. I. Joe*) describes the ethnic, class, and cultural diversity of his platoon:

There was Tyne, who never had much urge to travel. Providence, Rhode Island may not be much as cities go, but it was all he wanted, a one town man; Rivera, Italian American, likes opera and would like a wife and kid, plenty of kids; Friedman, lathe operator and amateur boxing champ, New York City; Windy, minister's son, Canton, Ohio, used to take long walks alone and just think; . . . Sergeant Ward, a farmer who knows his soil, a good farmer; McWilliams, first aid man, slow, Southern, dependable; Archenbeau, platoon scout and prophet, talks a lot but he's all right; Porter, Sergeant Porter, . . . he has a lot on his mind . . . ; Tranella speaks two languages: Italian and Brooklyn.

This conventional Hollywood platoon became a stereotype in the American war movie with an ensemble cast, but in these early examples, this broad demographic representation was used to emphasize the impact of the war on America as a whole.

Following the war, Hollywood war films began to examine the complexities of warfare, exposing the fallibility and brutality of military authority by addressing the mental strain inflicted on war's participants and by showing the enemy as complex, human, and sympathetic. Gregory Peck in *12 O'Clock High* (Henry King, 1949) is shown to be a vulnerable hero suffering a mental breakdown during the war. In *From Here to Eternity* (Fred Zinnemann, 1953), the enemy is not the Axis powers, but the bullying, violent, murderous military authorities such as Ernest Borgnine's Fatso. In *The Caine Mutiny* (Edward Dmytryk, 1954), Humphrey Bogart's emotionally unstable Captain Queeg proves to be more of a danger to his men than any enemy is. In *The Bridge on the River Kwai* (David Lean, 1957), the Japanese prison camp commander is portrayed as a man caught between his sense of duty and honor for his country and his sympathy and respect for the prisoners. This is not to say that the tradition of heroic war movies did not continue. Films like *To Hell and Back* (Jesse Hibbs, 1955), the story of Audie Murphy (played by himself), America's most decorated war hero, as well as *The Great Escape* (John Sturges, 1963) and *The Dirty Dozen* (Robert Aldrich, 1967), continued to show the more adventurous and exciting side of the conflict. But into the 1960s and 1970s, in films like *The Longest Day* (Ken Annakin, et al, 1962) and *Patton* (Franklin J. Schaffner, 1970), Hollywood filmmakers increasingly delved into a critical examination of American militarism, reflecting the general disillusion of Americans as the Vietnam conflict escalated.

In 1998, the release of two World War II movies, *Saving Private Ryan* and *The Thin Red Line* raised the level of realistic violence depicted in the war movie to a new level. Steven Spielberg's *Saving Private Ryan* follows a fairly standard plot of a small group of soldiers sent on a mission to find one man lost in France during the Normandy invasion. The first thirty minutes of the movie, showing the mass slaughter that occurred in the opening minutes of the invasion of Omaha Beach, contain the most graphically violent and disturbing combat scenes presented in a fictional film. Terence Malik's *The Thin Red Line* is equally violent, but this film about the invasion of

Guadalcanal focuses more on the contrast between combat and the introspective moments available to soldiers during the lulls in battle. Both films rely on new developments in special effects and camera technology that allow for even more graphic and realistic depictions of military violence.

Of the more than 50 films made about the Korean War between 1951 and 1963, most presented the enemy as one-sided villains, and few moved beyond the standard clichés of the Hollywood World War II films. Two exceptions appeared early in the war. Samuel Fuller's *Steel Helmet* and *Fixed Bayonets*, both released in 1951, take a harsh, uncompromising, and realistic look at the stress suffered by soldiers while keeping to the standard plot that follows a diverse platoon through the conflict. The characters in Fuller's films are often plagued with doubts and fears, and they are more concerned with the struggle to survive than with any potential acts of heroism.

The controversy surrounding the Vietnam conflict caused Hollywood to shy away from it as a subject for war films while the conflict was ongoing. The only exception is John Wayne's 1968 directorial debut, *The Green Berets*. This film largely consists of Cold War propaganda justifying America's presence in Vietnam. Wayne transferred his World War II movie persona to this film, a persona that was clearly the product of another time. While the film was a box office success, it stands out as an anomaly in the development of the Vietnam War movie, which, in the late 1970s and 1980s, would approach the war much more critically. *The Deer Hunter* (Michael Cimino, 1978) and *Apocalypse Now* (Francis Ford Coppola, 1979) were among the first films to criticize the Vietnam War from a combat perspective. Both films contain graphic images of the most horrifying, and often surreal, aspects of the war. The Russian roulette scenes in *The Deer Hunter* show the extremes of mental and physical torture suffered by American prisoners of war, and the scene in *Apocalypse Now* where Colonel Kilgore orders a helicopter raid on a Viet Cong village so his men can surf on a nearby beach illustrates the extreme level of absurdity in this war. The absurdity of the Vietnam War would be addressed later in Stanley Kubrick's *Full Metal Jacket* (1987), a film that ends with a platoon spontaneously singing the Mickey Mouse Club theme in unison.

One of the most successful Vietnam War films was Oliver Stone's 1986 Academy Award winner, *Platoon*. While this film does have a strong antiwar message, it follows a fairly standard war-movie plot, following the experiences of a naïve young volunteer (played by Charlie Sheen) as he becomes increasingly disillusioned by the fighting. The film also follows a clear good-vs.-evil binary, but instead of America representing good and the Viet Cong representing evil, these moral forces are represented by two American sergeants. Tom Berenger's Barnes brutally terrorizes a native village early in the film, while Willem Dafoe's Elias strongly resists this descent into barbarism and tries to maintain high moral standards in an immoral environment. The success of *Platoon* resulted in a spate of Vietnam War films in the late 1980s, but their numbers never reached the level and density that occurred during World War II and the Korean War. In addition, all Vietnam War films made after 1978 engage in some level of criticism of the war, and none present themselves as the straightforward adventures that appeared in films about the earlier wars.

In general, films made during wartime emphasize glory, honor, and patriotic values, and it is only in the years following the wars that these values are analyzed and criticized. As filmmaking technology

has changed and improved throughout the century, American filmmakers have achieved greater levels of realism in war movies, and these films collectively have enhanced and influenced Americans' awareness of the conditions of war.

—Andrew J. Kunka

## War of the Worlds

Broadcast on October 30, 1938, Orson Welles' Mercury Theatre radio dramatization of H.G. Wells' *War of the Worlds* engendered a mass panic in which millions of Americans believed they were being invaded by Martians; in so doing, the broadcast dramatically demonstrated the nascent power of mass media in American culture.

The Mercury Theatre group, headed by the 23-year-old Welles, had built a small national audience with its weekly radio adaptations of literary classics such as Joseph Conrad's *Heart of Darkness*. Welles, his partner John Houseman, and writer Howard Koch collaborated on the hour-long scripts. The trio nearly scrapped their *War of the Worlds* adaptation, as Koch's faithful approximation of the novel did not translate well in rehearsals. The group decided to stick with the project after re-working the script to mirror a news broadcast. Nevertheless, as group members and even Welles himself later recalled, the feeling in the studio on the day of the broadcast was that *War of the Worlds* would not be a successful production.

The show commenced at 8 p.m. that Halloween eve, following an introduction by a CBS announcer which presented Wells' novel as the subject of the forthcoming dramatization. In the first 10 minutes of the broadcast, Welles masterfully built dramatic tension by juxtaposing fireside chat-styled meditations on renewed American prosperity with increasingly frequent news bulletins on atmospheric disturbances detected by astronomers across the United States. Just as

Cover of *The War of the Worlds*, by H.G. Wells.

thousands of listeners switched over from the more popular Charlie McCarthy show (a less-than-compelling singer had just been introduced), Welles' group delivered a frantic news report from the small town of Grovers Mill, New Jersey, where Martians had landed and wiped out an entire United States military force: "A humped shape is rising out of the pit. I can make out a small beam of light against a mirror. What's that? There's a jet of flame springing from that mirror, and it leaps right at the advancing men. It strikes them head on! Good Lord! They're turning into flame!" As the broadcast followed the progress of the Martians up the East Coast, the reports became even more dire. "People are falling like flies," Welles reported. "No more defense. Our army wiped out . . . artillery, air force, everything wiped out. This may be the last broadcast." An actor portraying the Secretary of the Interior informed listeners that President Franklin Delano Roosevelt had declared a national emergency.

As the dramatization continued, thousands of Americans panicked. In New York City, hundreds of people jammed railroad and bus stations to escape the menace. In Birmingham, Alabama, sorority women at a local college lined up at campus telephones to speak to parents and loved ones for the last time. In Pittsburgh, a man found his wife in the bathroom, clutching a poison bottle and yelling "I'd rather

die this way than that.” And, in a favorite story of Welles’, actor John Barrymore, upon hearing the broadcast, drunkenly took to his backyard, where he unleashed his Great Danes from their doghouse with the admonition: “Fend for yourselves!” It has been estimated that 12 percent of the radio audience heard the broadcast and more than half that number took it seriously; by sociologist Hadley Cantril’s account, which was published in a landmark contemporary study sponsored by the Rockefeller foundation, more than a million people were frightened by Welles’ broadcast. Cantril’s demographic survey placed the strongest currents of fear among less-educated people and poor Southern folk.

Welles concluded his broadcast with a re-statement of the fictionality of the presentation (“The Mercury Theatre’s own radio version of dressing up in a sheet and saying ‘Boo!’” as Welles put it), but the hysteria continued well into the night. CBS was inundated with calls; newspaper switchboards were jammed, and mobs continued to crowd the streets of New York and northern New Jersey. When the truth became apparent, public hysteria turned into ire directed at CBS. Hundreds threatened lawsuits against the network, not the least of which was from H.G. Wells himself; the Federal Communications Commission promised a full-fledged inquiry, and the New York City police, for a time, even contemplated arresting Welles. As calmer heads prevailed, the public furor died down, and Welles became an overnight sensation; many of his biographers claim that without the celebrity engendered by the *War of the Worlds* broadcast, Welles might never have been able to bring his craft to Hollywood, where he became a celebrated director with films such as *Citizen Kane* (1941) and *The Magnificent Ambersons* (1942).

The *War of the Worlds* episode highlighted the emerging power of mass media over the American public. It demonstrated the power of the media to form and shape opinion in American culture, and also the passive willingness on the part of the public to place its faith in the legitimacy of sound and image. Ironically, *War of the Worlds* represented one of radio’s final assertions of power within the media sphere; by the 1950s, television had replaced radio as the dominant force in mass culture.

Scholars assert that Welles’ broadcast was so widely believed because it struck a particular chord with Americans in the years before World War II. The show aired just after the Munich crisis, to which Welles alluded at the outset of the broadcast, and the recent international conflict may have influenced some to believe that the reported invasion was not extraterrestrial at all. Sociologists have also located the show’s resonance in the latent anxiety of the general population, engendered by years of economic depression. “On the surface, the broadcast was implausible and contradictory, but that didn’t matter,” asserts Joel Cooper. “In that one instance, people had an immediate explanation for all the unease and disquiet they had been feeling. And suddenly, they could do something. They could gather their families. They could run.”

*War of the Worlds* remained a vibrant part of American popular culture in the second half of the twentieth century. In 1953, Byron Haskin produced a Hollywood film about the broadcast and, from 1988-1990, a television series inspired by Welles’ take on *War of the Worlds* enjoyed a successful run. In 1988, the fiftieth anniversary of the broadcast, public radio stations across America aired an ambitious remake of *War of the Worlds* starring Jason Robards and featuring the Oscar-winning sound effects of Randy Thom; the citizens of Grovers

Mill commemorated their town’s role in the historic broadcast with a four-day festival that culminated with the unveiling of a bronze statue of Welles at a microphone and a rapt family gathered around its radio.

Up until his death in 1985, Welles would never reveal whether he had anticipated the massive misinterpretation of his radio drama. Whether intended as a hoax or not, however, the landmark *War of the Worlds* broadcast demonstrated the American public’s preference for reading media’s sound—and later its images—as truth rather than fiction.

## Warhol, Andy (1928-1987)

Andy Warhol was the most renowned Pop artist in the 1960s and, more generally, one of the most important artists of the twentieth century. His boundless and apparently effortless creativity expressed itself in many forms. He was a commercial designer, painter, printmaker, filmmaker, and publisher.

Although Warhol was intentionally obscure about his background, he was born Andrew Warhola, the son of a Czech Roman Catholic emigrant miner, in remote Forest City, Pennsylvania. After his father’s early death, Warhol enrolled in Pittsburgh’s Carnegie Institute of Technology as an art student in 1946. At this time he worked as a window decorator in a Pittsburgh department store. By 1950 he had shortened his name to Andy Warhol, and had moved to New York where his reputation as a designer quickly blossomed. Besides doing graphic work for magazines such as *Vogue* and *Harper’s Bazaar*, he won awards for his advertising designs, particularly those for I. Miller shoes. It is clear that had he never become a fine artist, he would nevertheless have been one of the most important designers in the postwar period. It was during these years Warhol dyed his hair the signature silver color that he would maintain for the rest of his life.

In 1960, the year Warhol began to paint, he made some of the earliest works that could be called Pop Art. His large paintings of Dick Tracy could be seen in Lord and Taylor’s store windows on Fifth

*Campbell's Soup I*, screenprint by Andy Warhol.

Avenue. Warhol's position as the leading Pop artist was consolidated in 1962 at the seminal "New Realists" exhibition at the Sidney Janis Gallery in New York. After 1964, Warhol was represented by the New York dealer Leo Castelli, who also handled most of the other Pop artists.

Warhol quickly became notorious for his paintings of Campbell's Soup cans, which were first exhibited at Los Angeles' Ferus Gallery in 1962. These paintings were straightforward renderings of row upon row of soup cans. Not just publicity gambits, these were important avant-garde works, signaling a major change in the nature of art. They were a cool reaction to the passionate—and to the Pop artists' minds, excessive—art of the Abstract Expressionists, which then dominated the art scene. The soup cans were painted in the same spirit as Marcel Duchamp's "readymades" (objects designated as artworks merely by the artist's choice and recontextualization). Warhol was forced to defend the paintings as legitimate artworks when the Campbell Soup Company sued him for copyright infringement. The corporation later decided that the paintings were good advertising. In 1963, inspired by the objects he had seen in supermarkets, Warhol precisely imitated Brillo soap-pad boxes. He had one-hundred wooden boxes constructed by a carpenter and stenciled the sides with exact imitations of the Brillo graphic. For sale at three hundred dollars each, these created great excitement when

they were exhibited at Manhattan's Stable Gallery the following year. When they were to be shown in a Toronto art gallery, their status as art was ignored. Warhol's dealer had to pay "merchandise duty" to have them delivered.

With works like these Warhol had abandoned painting by hand for other more anonymous techniques (such as photo-silkscreen). "I want to be a machine," he said in 1962, subverting the idea of the artist as an expressive medium who creates unique, handmade works. Warhol used Marilyn Monroe as a motif in several silk-screened works in the 1960s (as in *Gold Marilyn Monroe* [1962, The Museum of Modern Art, New York]). Rendered in the cheap-looking, off-register style of trashy reproduction, these artworks suggested that Marilyn's manufactured persona had overwhelmed her identity as a person. Celebrities became a major theme in Warhol's works. Throughout the next two decades he made images of athletes, politicians, and entertainers such as Elvis Presley, Troy Donahue, Jackie Kennedy Onassis, Elizabeth Taylor, and Chairman Mao. As in the Marilyn images, the colors were often garish and silk-screened off-register. A series from this period is entitled *Ten Portraits of Jews of the Twentieth Century*. Warhol's fascination with stars was reflected in the gossipy celebrity magazine he founded in 1969 entitled *Inter/View*, then *Andy Warhol's Interview*, and later simply *Interview*.

In response to the civic strife of the 1960s, Warhol created his *Disaster* series. Such works as *Car Crash*, *Race Riot*, and *Electric Chair* involve the stark appropriation of newspaper photographs saturated with color and often repeated within the same frame. Warhol suggested that in these works he wished to demonstrate how the callous repetition of the media's coverage of traumatic events creates a numbing apathy in viewers.

In 1964 Warhol established his "Factory," a rented attic that became a large mass-production studio in New York where assistants made works serially. It was responsible for turning out thousands of Warhol's works. Often, Warhol would clip photos from magazines and newspapers and have them silk-screened by his assistants. The very name "factory" challenged the notion of an artist's studio as a place of inspiration, a place where unique and precious pieces are made. In this spirit, Warhol once said that anybody "should be able to do all my paintings for me." The Factory became nearly as notorious for its denizens as the art that was produced there. Robert Hughes described its silver-papered walls as a place where "cultural space-debris, drifting fragments from a variety of Sixties subcultures (transvestite, drug, S & M, rock, Poor Little Rich, criminal, street, and all the permutations) orbiting in smeary ellipses around their unmoved mover." Shy and inhibited himself, Warhol became a voyeur of a subculture of his own creation. In his role as funky entrepreneur Warhol opened a nightclub with the thoroughly 1960s-sounding name "The Exploding Plastic Inevitable," whose house-band was The Velvet Underground. Its leader, Lou Reed, is now regarded as a soulful guru of heroine culture and musically a pioneer of Punk and New Wave.

In a decade racked by assassinations, Warhol himself was shot on June 3, 1968, by Valerie Solanis, a former Factory groupie turned militant feminist. The only member of S.C.U.M. ("The Society for Cutting Up Men"), Solanis later claimed that she did so because the artist "had too much control over her life." The scars of several bullet wounds to Warhol's chest are depicted in Alice Neel's well known portrait of the artist. Ominously, a woman had shot at one of Warhol's portraits of Marilyn Monroe four years earlier.

At the time of his first solo exhibition in 1965, at the Institute of Contemporary Art in Philadelphia, it was announced that Warhol had given up painting to concentrate on filmmaking. Throughout the 1960s the artist made several movies which have become classics of film history and of Minimalist cinema. Typically, they are outrageously boring and amateurish—qualities for which they are admired—and register the spontaneous exhibitionism of his Factory “actors.” *Eat* (1964) showed artist Robert Indiana eating a mushroom. *Empire* (1964) was comprised of an eight-hour shot of one side of the Empire State Building in New York (the changing light is its only action). In 1964 *Film Culture* magazine awarded him their Independent Film Award. In all, Warhol collaborated on more than seventy-five films. His highly-regarded *The Chelsea Girls* (1966) was the first underground film to be shown at a conventional commercial theater. On a split screen viewers watched a quirky kind of documentary: the comings and goings of Warholian “superstars” in two different hotel rooms. *Four Stars* (1966-67) ran for more than twenty-four hours and was shown using three projectors simultaneously on one screen. The films *My Hustler* (1965), *Bike Boy*, and *Lonesome Cowboys* (both 1967) all dealt with homosexual themes. Paul Morrissey, a production assistant and occasional cameraman in the Factory, participated significantly in many of Warhol’s films. He was enlisted to give them a greater sense of structure and professionalism, and to make them more appealing to a popular audience, as in *Andy Warhol’s Frankenstein* (1974). Starting in 1980, Warhol was briefly interested in video; he worked to establish a private cable television station called “Andy Warhol TV.”

As his works indicate, Warhol was genuinely obsessed with celebrity, and particularly Hollywood fame. In the 1970s and 1980s he seems to have given himself over to the popular media. He was often seen at Studio 54, and at nearly every opening and award ceremony. He appeared almost nightly on *Entertainment Tonight* escorting Brooke Shields, Bianca Jagger, Elizabeth Taylor, or the designer Halston. Not only attracted by the celebrity of entertainers, Warhol also courted rising young artists such as the graffiti artists Keith Haring (1958-1990) and Jean-Michel Basquiat (1960-1988). In the film *Basquiat* (directed by Julian Schnabel, 1997), rock star David Bowie plays a convincing Warhol in a vivid depiction of the 1980s New York art scene. In line with other artists of the 1980s who “appropriated” imagery from art history, Warhol made a series of paintings based on famous works by Botticelli and Leonardo da Vinci.

Like his films, Warhol’s untimely death seemed anticlimactic, even banal. He died of complications after a fairly routine operation on February 22, 1987. The auction of his possessions, in itself a cultural event, revealed that Warhol had always been an impassioned collector. His extensive collection of folk art had been exhibited in 1977 at the Museum of Modern Art. His influence as an arbiter of taste continued even after his death. The sale of his possessions, including his collections of all manner of kitschy art and furnishings, influenced the retro styles of the late 1980s and 1990s. Today the Estate of Andy Warhol handles his artworks and their reproduction.

The meaning of Warhol’s art has been endlessly debated and alternately seen to be tremendously deep or mind-numbingly superficial. The artist often mystified interviewers by affecting a profound detachment—often to the point of boredom. In one early interview the artist explained, “If you want to know all about Andy Warhol, just look at the surface of my paintings and films and me, and there I am.

There’s nothing behind it.” Warhol will always be associated with those aspects of 1960s popular culture that involve outrageous behavior, a sensationalist media, and the art world as glitzy big business. His most famous pronouncement, “in the future *everybody*, will be famous for fifteen minutes,” seems an accurate observation about the media’s insatiable appetite for creating quickly consumable media targets.

## Washington, Denzel (1954—)

A handsome, intelligent, and stylish actor, Denzel Washington is the natural heir, with a modern edge, to Sidney Poitier, the first film star to have demonstrated that an African American could become a heartthrob and a top box-office draw in the United States. Born in Mount Vernon, New York, Washington holds a B.A. in journalism from Fordham, studied acting at San Francisco’s American Conservatory Theater, and worked on stage and in television (he was an ongoing character in the popular hospital series, *St. Elsewhere*) before Hollywood beckoned. He made his screen debut as white George Segal’s black illegitimate son in *Carbon Copy* (1982). Five years later, his portrayal of South African political activist Steve Biko in *Cry Freedom* (1987) brought him stardom and an Oscar nomination for Best Supporting Actor. He won that award, and a Golden Globe, for his embittered but courageous runaway slave in *Glory* (1989). He has made several other films dealing with the issue of race; from the comedic (*Heart Condition*, 1990) through the romantic (*Mississippi Masala*, 1991) to the overtly political, as the title character in Spike Lee’s *Malcolm X* (1993). He has, however, established his versatility in a broad range of work, notably including Shakespeare—on screen in Kenneth Branagh’s *Much Ado About Nothing* (1993), and as *Richard III* on stage in New York’s Central Park in 1990.

## Washington Monument

The Washington Monument's tall, slender obelisk towers above the Mall in the nation's capitol, dominating the skyline. A grateful public constructed it in the nineteenth century to commemorate George Washington. Federal architect Robert Mills won a competition in 1845 with his proposal for a 600-foot obelisk and circular temple at the base. The monument was completed in 1884 without the temple and 45 feet shorter than Mills's design. Unlike the capitol's other presidential monuments, the Washington Monument is abstract, with no images or words; its power comes from the simple beauty of

its form. It has been largely uncontroversial, which is unique for a political monument. And unlike the nearby Lincoln Memorial, the Washington Monument has not been the site of any significant political events. Instead, it has stood for over 100 years in quiet solemnity as a proud testament to "the Father of our country."

## The Washington Post

The story of the *Washington Post* is really the story of three family members and one outsider who, over a period of four decades, took a somnolent and bankrupt newspaper in the capital of the United States and turned it into an icon of good journalism. The four people are Eugene Meyer, his son-in-law, Philip Graham, Meyer's daughter and Graham's wife, Katharine, and the man Katharine hired to be the executive editor, Ben Bradlee. It is also the tale of two Pulitzer Prizes, the yin and yang of the *Post's* rise to fame.

The *Washington Post*, born in 1877, was undistinguished as a journalistic organ for a good part of its first century of life. Eugene Meyer bought the bankrupt paper in 1933 for \$825,000 at an auction, a time when there were four other more substantial dailies in Washington and the premier paper was the *Star*. In fact, the *Post's* early history under Meyer does not suggest that anything but disaster was in the cards because the paper continued to lose money, upwards of a million dollars a year. But Meyer, who was independently wealthy, stuck with the paper through thick and thin, saying: "In the pursuit of truth, the newspaper shall be prepared to make sacrifices of its material fortunes, if such course be necessary for the public good." His daughter one day would show the same resolve for the good of truth and to the paper's benefit.

The daughter, however, did not start out to become a newspaper publisher. When Katharine Meyer graduated from the University of Chicago in 1938, she went to work as a reporter for the *San Francisco Examiner*. But within a year, her father ordered her home to work at the *Post*, although not with the intention that she would be groomed as his successor. She eventually married Philip Graham, who became publisher in 1947; he was 31 and Katharine was 29. Katharine immediately took on the role of dutiful wife.

Her husband, in the meantime, following in his father-in-law's footsteps, got very involved in politics, and became something of a king maker, which creates complications for reporters who are trying to cover all sides of a story, not just the boss's side. Shortly after Graham took over, a young reporter named Ben Bradlee resigned

From left: Dustin Hoffman, Carl Bernstein and Bob Woodward of the *Washington Post*, and Robert Redford.

from the *Post* and joined the Washington bureau of *Newsweek*. The *Post* continued to prosper, and Meyer bought out and shut down another daily in Washington, reducing the number of dailies to three. In 1961, the *Post* purchased *Newsweek*.

Two years later, Philip Graham killed himself—he was a manic depressive—and Katharine Graham was thrust into the role of publisher of her late father’s newspaper. She was a quick study. Realizing she needed to put her own team in place, she hired Bradlee and put him on the fast track to become executive editor. The *Post* was on its way.

The *Post* lived in the shadow of *The New York Times*, which had a much longer tradition of journalistic greatness. The *Times*, a paper that covered the federal government thoroughly, was a direct competitor for the *Post*, and it showed that one day in 1971 when it started to publish a series of stories about a top secret report that became popularly known as “The Pentagon Papers,” in effect, scooping the *Post* in its own backyard. The *Post* rose to the occasion, got its own copy of the papers, and published parts unavailable to the *Times*, thereby regaining its dignity, and also showing a measure of journalistic skill not seen before. When the federal government, through the courts, enjoined both papers from publishing, the papers united to fight in the Supreme Court for the right to publish and to maintain a sacred constitutional principle that the government does not have the right to censor. The newspapers won.

The *Post* reached national stature on its own a year later when it began almost exclusive coverage of a break-in at Democratic National Committee in a building called “The Watergate.” Essentially, it was a local cops beat story that took on added importance when the *Post* discovered that some of the Watergate burglars had worked for CREEP—the Committee to Re-Elect the President. Not only was it a great story, but the *Post*’s methodical unraveling of the machinations

of President Nixon’s henchmen set high standards for reporting. Two young reporters, Bob Woodward and Carl Bernstein, sometimes aided by an unidentified source in the executive branch who became known as “Deep Throat,” dug through records and interviewed hundreds of people to produce a series of stories that helped lead to Richard Nixon’s resignation as president and to the *Post*’s winning a Pulitzer Prize. The *Post* endured tremendous pressure to back off the story (its material fortunes were threatened), but Katharine Graham stood by her embattled newsroom and was eventually vindicated.

It has become part of the lore that Woodward and Bernstein brought down a president, but that overlooks all that was going on around President Nixon at the time. For example, one Watergate burglar, threatened by a judge with a long jail sentence, in effect, turned state’s evidence on his friends. Then there was a Senate committee investigating what went on, and eventually, the House Judiciary Committee approved articles of impeachment. There was also the revelation that Nixon had taped many of his Oval Office conversations, and when the Supreme Court ruled that Nixon had to yield the tapes, he resigned. The *Post* did not single-handedly bring down the president, but if it had ignored the break-in story, the other facilitators might not have assumed their important roles.

As happens with so many on the way up, the *Post* became a victim of its own hubris when it published in 1981 a story about an 8-year-old boy named Jimmy, who supposedly used heroin. It was a dramatic story, written by a young reporter named Janet Cooke and published on the front page. The story created a controversy not because the *Post* had published it, but because it had not tried to help the boy; there was also churning inside the *Post* because the story had been published on the word of the reporter—no one asked for her sources and there was none of the double-checking that had made the Watergate reporting an exemplary effort. It was only after the reporter

won a Pulitzer Prize that other journalists started to check her credentials and discovered that she had lied about her education and her degrees. And in her story, “Jimmy” was a fictional character, not a real person. The *Post* returned the Pulitzer, and Cooke resigned.

The *Post*, however, has continued to be a great newspaper. It made its mark with Watergate and stubbed its toe with Janet Cooke, but its owners and editors knew which way they wanted the paper to go and kept it on that track. Ironically, none of the newspapers that circulated in Washington when Eugene Meyer purchased the bankrupt *Post* survived beyond 1981. The *Post* had proved itself.

## Watergate

On the evening of June 16, 1972, a security guard at the Watergate Hotel in Washington, D.C., discovered a piece of tape on the lock of the door that led to the National Democratic Headquarters and set off a chain of events that would, ultimately, bring down the presidency of Richard Milhous Nixon. Afterwards, Americans would wonder why Nixon and the Republican party risked so much on such a minor event when Nixon was leading in the election polls, and the Democratic party was in disarray. Indeed, Nixon would go on to win the presidency by a landslide, with 520 electoral votes. Only 270 electoral votes are needed to win the presidency.

The break-in at the Watergate was only part of a larger campaign designed by Nixon supporters to rattle Democratic candidates and tarnish the reputation of the whole party. This campaign included harassment of Democratic candidates, negative campaign ads, two separate break-ins at the National Democratic Headquarters, and an additional break-in at Daniel Ellsberg’s psychiatrist’s office. Ellsberg was the individual who offered up the “Pentagon Papers” for public consumption, detailing the strategy—or lack of it—for the United States’ position in Vietnam.

Theodore H. White, chronicler of presidents from Dwight Eisenhower to Ronald Reagan, points out in *Breach of Faith* that the Watergate break-in was riddled with mistakes. G. Gordon Liddy, advisor to Richard Nixon, had been given \$83,000 from Nixon’s Committee to Re-Elect the President (CREEP) to provide the necessary equipment. When the tape was placed over the lock, it was placed

**Richard Nixon leaving the White House after resigning the presidency following the Watergate scandal.**

horizontally rather than vertically, which made it more noticeable. The tape had been spotted earlier in the day and removed by a security guard. It was replaced in the same position. Since only outside personnel were used for the break-in, they were easy to spot as not belonging in the Watergate. The electronic surveillance equipment purchased by Liddy was inferior and had no cut-off between those conducting the actual break-in and those listening in another hotel across the street. When the break-in was discovered, the police were led to Howard Hunt and Liddy in a hotel across the street. Furthermore, all participants had retained their own identification papers.

Instead of being honest with the American public and taking his advisors to task, Richard Nixon immediately became embroiled in a cover-up that would slowly unravel over the next two years—leading to Nixon’s resignation in August 1974. As the facts surrounding the break-in were made known, it was revealed that the Nixon presidency had been involved in serious manipulation and abuse of power for years. It seemed that millions of dollars coming from Nixon supporters had been used to pay hush money in an ill-advised attempt to hide the truth from Congress and the American people. Richard Nixon, it was discovered, truly lived up to his nickname of “Tricky Dick.”

During the investigation, the names of Richard Nixon’s advisors would become as well known to the American people as those of Hollywood celebrities or sports heroes. Chief among these new celebrities were close friends of the President: John Ehrlichman and Bob Haldeman. Ehrlichman served as the President and Chief of the Domestic Council while Haldeman acted as Chief of Staff. Both

would be fired in a desperate attempt to save the presidency. Another major player was John Dean, the young and ambitious Counsel to the President. John Mitchell, the Attorney General, and his wife Martha provided color for the developing story. Rosemary Woods, the president's personal secretary, stood loyally by as investigators kept demanding answers to two questions: "What did the president know?" and "When did he know it?" The answers to the two questions provided the crux of the investigation. If it had been proved that Nixon was the victim of over-enthusiastic supporters rather than a chief player in the entire scenario, his presidency would have survived. When Nixon learned of the break-in was integral to understanding his part, if any, in the subsequent cover-up.

An investigation revealed that Nixon knew about the break-in from the beginning and that he was involved in the cover-up as it progressed. When the Nixon presidency was over, James David Barber, political scientist and author of *The Presidential Character*, detailed its crimes: "Making secret war; Developing secret agreements to sell weapons to enemy nations; Supporting terroristic governments; Helping to overthrow progressive governments; Receiving bribes; Selling high political offices; Recruiting secret White House police force; Impounding sums of money appropriated by Congress; Subverting the electoral, judicial, legal, tax, and free speech systems; and Lying to just about everyone."

In the early days of the Watergate investigation, most forms of media reported the break-in as a minor story with little national significance. However, two aggressive young reporters who worked for *The Washington Post* began to dig deeper into the background surrounding the actual crime. Aided by an informant, who would be identified only as "Deep Throat," Carl Bernstein and Bob Woodward uncovered one of the major stories of the twentieth century and became instrumental in forcing the first presidential resignation in American history.

As Congress began to hold congressional hearings, Alexander Butterfield, a Nixon presidential aide, revealed that a complex taping system was in place, including in the Oval Office, Camp David, the Cabinet rooms, and Nixon's hideaway office. Nixon's distrust of others would prove to be his own undoing. He fought to maintain control over the tapes and went so far as to fire a number of White House officials in what became known as the "Saturday Night Massacre." The Supreme Court did not accept Nixon's argument that the tapes contained only private conversations between the president and his advisors and, as such, were protected by executive privilege. From the time in 1974 that the Court in *U.S. v. Nixon* ordered the president to release the tapes, it was widely accepted that Nixon had lost the presidency.

The tapes released in the 1970s contained 18 minutes of silence that have never been explained. In 1996 the lawsuit of historian Stanley I. Kutler and the advocacy group Public Citizen resulted in the release of over 200 additional hours of tape. In *Abuse of Power: The New Nixon Tapes*, Kutler writes that the new information reveals that Nixon was intimately involved both before and after Watergate in abuses of power. A taped conversation on June 23, 1972, proved that Nixon and Haldeman talked about using the CIA to thwart the FBI investigation into the cover-up. When the *New York Times* published the "Pentagon Papers," Nixon told his advisors: "We're up against an enemy conspiracy. They're using any means. We're going to use any means." This conversation goes a long way in illustrating

Nixon's paranoia and his adversarial relationship with the American citizenry. It also points out his belief in his own invincibility.

In mid-1974, after Nixon had been named an unindicted co-conspirator in the Watergate affair, the House of Representatives approved the following articles of impeachment: Article I: Obstruction of justice; Article II: Abuse of power; and Article III: Defiance of committee subpoena. These charges arose from months of listening to those involved in the Nixon presidency and the Watergate cover-up explain the machinations of the Nixon administration. In order to save themselves from serving time in prison, most Nixon cohorts were willing to implicate higher-ups. Ultimately, Howard Hunt, G. Gordon Liddy, James McCord, and four Cuban flunkies were convicted and served time in jail.

Until the final days of his presidency, Richard Nixon insisted that he would survive. When he recognized that it was over and that he had lost, he went into seclusion. Reportedly, Alexander Haig, his Chief of Staff, oversaw the dismantling of the presidency. On August 8, 1974, wearing a blue suit with a blue tie and a flag pin in his lapel, Richard Nixon announced to the world that he no longer had a political base strong enough to support his remaining time in office and resigned the presidency. The following day, Vice President Gerald Ford was sworn in as president of the United States.

Although it was a bitter and disillusioning time for the American people, Watergate proved that democracy continues to work—and that not even the president is above the law and the United States Constitution.

—Elizabeth Purdy

## Waters, Ethel (1900-1977)

Born in turn-of-the-century Chester, Pennsylvania, black singer-actor-entertainer Ethel Waters presided for nearly fifty years as one of

**Ethel Waters**

America's most celebrated performers. She began her career as a singer in 1917 at the Lincoln Theatre in Baltimore, Maryland. Billed as "Sweet Mama Stringbean" during her early years as a "shimmy dancer" and robust singer of heart-rending songs, her work traversed stage, movie screen, radio, and television. Her memorable credits include numerous Broadway reviews, the stage and screen versions of *Cabin the Sky* (1943) and *Member of the Wedding* (1952), the 1949 film classic *Pinky*, and the title role in the *Beulah* television series (1950-52).

## Waters, John (1946—)

Director John Waters earned the title "King of Bad Taste" in 1972 for *Pink Flamingos*, a raunchy film that makes a laughing matter

of most every type of perversion. The film ushered in a new era for popular culture, in which the shocking and bizarre would attract growing audiences and profits, penetrating every medium from mainstream newspapers to day-time television talk shows. Waters refined his obsession with "good bad taste"—a term he coined—over several decades, creating a new movie genre of the bizarre, according to director David Lynch.

Waters identifies himself as a writer foremost, but he is an example of an entrepreneur who uses many channels effectively. His witty essays have been collected in two volumes, *Shock Value* (1981) and *Crackpot: The Obsessions of John Waters* (1983); collections of his screenplays and photographs also have been published. He has made a handful of cameo appearances in films and television programs, including the voice for a cartoon character in an Emmy-nominated episode of *The Simpsons*. In the 1990s, he mounted an traveling exhibit of movie stills. A charming talk-show guest, Waters is in demand as a speaker at college campuses, film schools, and festivals.

The director's opus may be grouped into two periods. Following *Pink Flamingos*, his movies *Female Trouble* (1975), *Desperate Living* (1977), and *Polyester* (1981) have been described as "vulgar and cheerful nihilism," "blasphemous," "sophomoric," and "whimsical." Foul language and scatological visual and verbal references made these works unappealing to middle America. Critics and audiences either hated his films or loved them, hailing him as an iconoclastic artist. His themes often presage cultural trends by decades. For example, in *Female Trouble*, the crazed heroine believes death in the electric chair for a life of crime is the equivalent of an Academy Award. Water's loopy characterization antedated by nearly 20 years Oliver Stone's controversial treatment of warped lovers who go on a killing rampage to achieve media notoriety in *Natural Born Killers* (1994).

In the 1990s, Waters graduated from cult and midnight-movie houses to suburban multiplexes with such films as *Hairspray* (1988), *Cry-Baby* (1990), *Serial Mom* (1994), and *Pecker* (1998). Waters' second period continues his biting satire of American culture but without reference to such perversions as incest, coprophagy, castration, necrophilia, and the gross visual images of the earlier films. A unifying theme of both periods is his focus on characters who are "insane but believe they are sane," Waters told National Public Radio interviewer Terry Gross in 1998. His films turn normative American values upside-down and champion outsiders.

Raised in an upper middle class family in Baltimore, Waters, like many creative people, knew what he wanted to do early in life. He got his first subscription to *Variety* at age 12 and haunted the seedier movie theaters favoring horror films and B movies, especially admiring Russ Meyers. After he was dismissed from New York University's film school for smoking marijuana, he persuaded his father that financing a series of low-budget films would be cheaper than paying for his education. These early efforts include *Hag in a Black Leather Jacket* (1964); *The Diane Linkletter Story* (1966), a 10-minute exercise in bad taste about the LSD suicide of the daughter of a famous Hollywood entertainer; *Roman Candles* (1966), during which three short features are screened simultaneously on side-by-side screens; *Eat Your Make Up!* (1968), satirizing the modelling industry; *Mondo Trasho* (1969), a spoof of then-popular documentaries of the bizarre and pornographic around the world; and *Multiple Maniacs*

**John Waters**

(1971), which ends with the heroine being raped by a giant lobster. Most did not make it out of the church halls he rented for hometown showings.

*Pink Flamingos* brought Waters to the attention of the avant-garde artistic community. Andy Warhol—whose small budget films such as *Sleep* convinced Waters that he, too, could make movies on a shoestring—reportedly advised Federico Fellini to see *Pink Flamingos*. Waters' work has been compared to that of the Italian master. One critic suggested that Waters had created a "Theater of Nausea," comparable to Antonin Artaud's "Theater of Cruelty" and Charles Ludlam's "Theater of the Ridiculous." *New York* magazine hailed *Pink Flamingos* as an American version of the Luis Bunuel/Salvador Dali classic, *Andalusian Dogs*. *Pink Flamingos* was a commercial as well as an artistic success. Made for \$12,000, it earned at least \$2 million during the first few years after its release. His next movies were made with incrementally larger budgets and found growing audiences.

In the early films, Waters often took people on the margins of society and transformed them into "glamorous movie stars." He told the *Baltimore Sun* in 1978, "To me all those outrageous-looking people are beautiful. Because to me beauty is looks that you can never forget." It has been his life's work to ridicule the conventions of a society that ostracizes people who do not fit within its narrow

standards of perfection and to exploit the potential of film to bring them the fame and success which, in his eyes, they deserve.

The greatest of his on-screen creations was the metamorphosis of his friend Glenn Milstead into Divine, a 300-pound transvestite who vamped it up in the skin-tight gowns of Hollywood movie queens, with exaggerated make-up—including eyebrows that soared up his half-shaved head—and heavily bleached and teased blond hair. A charismatic performer, Divine took viewers by storm as the matriarch of a family of perverted criminals vying for the title of "Filthiest Family Alive" in *Pink Flamingos*. Mink Stole, a screen persona created for Waters' friend Nancy Stoll, played Divine's rival for the title, Connie Marble. Connie and her husband Raymond (the late David Lochary) kidnapped and impregnated young women, chaining them in the basement of their suburban house of horrors, then sold the babies to lesbian couples. In a scene that may never be topped for grossness, Divine eats dog feces from the pavement to secure the title.

*Hairspray*, with Divine in a supporting role, marked Waters' transition into shopping mall theaters. The only shocking thing left for him to do, Waters had concluded, was to make a mainstream film. *Hairspray* is a light-hearted musical treatment of a serious issue—integration. The story is based on Baltimore's *Buddy Deane Show*, a teen dance showcase that was driven off the air in 1964 by the NAACP for segregating African-American dancers to one program a month. In *Hairspray*, teenagers defeat their parents' resistance to integration, and everybody dances together in the film's happy ending. The story reflects the director's egalitarian sentiments. He praises Baltimore as the appropriate setting for his films because it is an "unholy mix" of old money and new immigrants, black and white poor, and a dirty industrial Eastern seaport with the Southern charm of the first city south of the Mason-Dixon line. When it comes to night life, Waters told Richard Gorelick, "I want to go somewhere where everyone is mixed—that's my ideal: rich, poor, black, white, gay, and straight, all together."

With the death of the irreplaceable Divine soon after the release of *Hairspray*, Waters' transition to the mainstream was virtually assured. *Cry-Baby*, an edgy *Bye-Bye Birdie* (1963), tells the story of a middle-class girl who longs to "go bad" and her romance with the leader of the "drapes," a rock-n-rolling, motorcycle riding, black-leather jacketed gang of juvenile delinquents. The freedom-loving "drapes" prevail against the repressed and repressive clean-cut clique of upper-middle-class suburban kids. "My movies are very moral," Waters told Pat Aufderheide. "The underdogs always win. The bitter people are punished, and people who are happy with themselves win. They're all about wars between two groups of people, usually involving fashion, which signifies morals. It's part of a lifelong campaign against people telling you what to do with your own business."

Johnny Depp as the title character with a tattooed tear-drop under one eye guaranteed the film's box office success. Waters turned to star power again in his next film, featuring Kathleen Turner as *Serial Mom*, a perfect suburban mother who just happens to be a serial killer. A prolific consumer of newspapers and magazines—he subscribes to over 80—Waters frequently pulls his inspiration from the headlines. *Pecker* pits the innocence of a young blue-collar Baltimore photographer who finds beauty everywhere against the exploitative glamour of the Manhattan art world. It features rising talents Edward Furlong, Lili Taylor, and Christina Ricci.

Waters' success owes much to his abilities as a promoter. Working from the trunk of his car in the early days, he persuaded East Coast theater owners to do midnight showings of *Pink Flamingos*, thus making money during hours when they normally would be closed. Through this stroke of marketing genius, he became an architect of the midnight cult movie showing.

Adapting his writing to yet another medium, Waters created a photography exhibit, "Director's Cut," that toured galleries in the 1990s, using frames isolated from others' films to author original storyboards. This technique illustrates the cultural phenomenon that Europeans call "bricolage," the art of recycling culture to create new works of art. Aufderheide sees the technique in Waters' films, commenting: "John Waters is the bard of a culture that creates itself out of commercial trash; he's a visionary of sorts, someone who discovers the bizarre in the everyday and the everyday in the bizarre."

It is the ultimate accolade to Waters' cultural influence that he helped make the unspeakable acceptable, by making people laugh about the strange and sometimes repulsive truths of everyday existence. People who were marginalized as "freaks" during the early 1970s now routinely appear as guests on television talk shows. Jokes about flatulence and other bodily functions were taken up in films by such well-known humorists as Carl Reiner and the Monty Python troupe. In an article entitled "Mr. Bad Taste Goes Respectable," *U.S. News & World Report* noted that it was increasingly difficult for Waters to retain his title when comedian Jim Carrey told "butt jokes" during a televised presentation of the Academy Awards.

Waters, who still lives in Baltimore and sets all of his movies there, is a local hero because his success brought the city's picturesque locales to the attention of other film crews and made the city a site for East Coast film making. After such Hollywood luminaries as Alan Alda and Al Pacino arrived in town to make movies, the mayor established the city's Film Commission in 1980 to serve as a liaison for movie makers seeking Baltimore locations. During the late 1960s and early 1970s, the group of self-styled "juvenile delinquents" and eccentrics that Waters gathered around himself evolved into Dreamland Studio, an ensemble production company. Waters was still working with many of the same people in front of the camera and behind the scenes by the end of the 1990s. Reconciled with his family after years of rebellion, a proud home owner who holds backyard barbecues for the Dreamland survivors, Waters told Aufderheide, "It's hilarious that in some ways I've become part of the establishment."

To his credit, Waters has never tried to top the vulgarity of *Pink Flamingos*, instead honing his talent to mock social intolerance, transvalue society's standards, and take every bizarre reality to its extreme. Long before radio "Shock Jock" Howard Stern came along, John Waters was simultaneously offending people and making them laugh.

## Waters, Muddy (1915-1983)

Muddy Waters' affirmation, in the title of his composition "The Blues Had a Baby and They Called It Rock and Roll," is somewhat autobiographical, striking both at home and abroad. For rock 'n' roll, Waters was a mentor whose musical style was widely emulated, directly linking the blues to rock 'n' roll; he was the musical father of post-war Chicago blues.

Born McKinley Morganfield, the vocalist, guitarist, and songwriter played a major role in the evolution of rock 'n' roll, influencing scores of rock and blues musicians such as Mick Jagger, the Beatles, Mike Bloomfield, Paul Butterfield, Bob Dylan, James Cotton, and Johnny Winter. His 1950 composition, "Rolling Stone," inspired the name for Jagger's rock group. In 1949, Waters transformed the "down-home" country Mississippi Delta style to an urbanized raw and uncompromising Chicago style blues. His band attracted some of the finest Chicago musicians, many of whom later formed their own bands. Waters' impact on the conventional blues aesthetic, Chicago blues, and rock 'n' roll music is unparalleled.

Muddy Waters

The basis for Waters' Chicago style was centered in the Mississippi Delta. He was born on April 4, 1915 in Rolling Fork, Mississippi. His father was a farmer and part-time musician. When his mother died, Waters moved to Clarksdale to live with his grandmother. His early musical experiences consisted of singing in the church choir and playing blues in juke joints and at suppers, picnics, and parties. When Waters was nine, his father taught him to play the harmonica and the guitar—he otherwise was largely self-taught. He earned the world-famous nickname Muddy Waters by often performing “in the dirt” in and around the Delta.

Black patrons' taste for the blues in the juke joints in the Mississippi Delta changed when they moved to Chicago. Likewise, when Waters decided to move to Chicago in 1943, he made changes in his music to appeal to this changing musical taste. The music became louder, with amplified instruments, more forceful rhythms, and the accompaniment now enhanced by five musicians. Before starting his own band, Waters was a sideman with John Lee “Sonny Boy” Williamson at the Plantation Club.

It was as a sideman for Sunnyland Slim that Waters got his first commercial recording break. Alan Lomax had initially recorded Waters in 1941 for the Library of Congress's archives on the Stovall plantation in Mississippi. In 1948, at the end of a recording session in the Aristocrat (later Chess) recording studio, some free time was allotted to Waters and he recorded his first single, “Gypsy Woman.” The record was successful enough to provide an opportunity for another recording session. Subsequent recordings of “(I Feel Like) Going Home,” “Rollin' Stone,” “I Can't Be Satisfied,” and “Man-nish Boy” established the archetype for the post-war Chicago blues style.

While various musicians worked for him over the years, Waters in 1953 assembled one of the best-ever Chicago blues bands consisting of harmonica player Little Walter Jacobs, pianist Otis Spann, guitarist Jimmy Rodgers, and drummer Elgin Evans. With various personnel, Waters' band toured the South, the rest of the United States, and eventually Europe. Willie Dixon, a celebrated singer, bassist, and composer in his own right, wrote a number of songs specifically for Waters that were successful, including “Hoochie Coochie Man” and “Same Thing.” By 1958, Waters had scored 14 hits in the top ten rhythm and blues charts. In the same year, he toured with Otis Spann in the United Kingdom; reviews were mixed because the British audience's perception of the blues was misguided, having been accustomed to the acoustic performances of artists such as Big Bill Broonzy and Sonny Terry and Brownie McGhee.

Waters' vocal approach drew from the congregational song style of the black church. He often moaned (hummed) the ends of phrases. He also made extensive use of a recitative style, bending and sliding upward on syllables with shouts, vocal punches, and occasional use of the upper falsetto register. His guitar style made extensive use of the slide or bottleneck technique, the use of repetitive guitar phrases in response to his vocal line in typical call and response fashion, and an uncompromising rough musical texture.

As soul music gained favor among blacks in the 1960s, there was a decreasing interest in the blues. Waters' popularity among black patrons consequently began to wane. Fortunately, the blues revival was taking place in the United States and United Kingdom, and musicians were emulating American blues. As groups began to acknowledge Waters' influence, renewed attention to his music

occurred. This, along with his performance and recording at the 1960 Newport Jazz Festival, and Johnny Winter serving as producer for several successful collaborations with Waters in the 1970s, fueled a rediscovery of his music by a largely white audience. Waters was at the center of a revival of interest in the blues and the genre's influence on rock.

Waters continued to hit his artistic stride, gaining financial success. His band won the Downbeat Critics Poll for rhythm and blues group in 1968, and a Grammy for Best Ethnic/Traditional recording—*They Call Me Muddy Waters*—in 1971. In an interview, Waters defined the music he played as follows: “I think it's about tellin' a beautiful story . . . something about the hard times you've had.” Waters died quietly in his sleep at his home in the Chicago suburb of Westmont on April 30, 1983.

## Watson, Tom (1949—)

Dominating golf in the late 1970s and early 1980s, Tom Watson is one of the greatest golfers of modern times. Watson is second only to Harry Vardon in British Open Championships with five wins. Performances overseas led to his immense popularity with citizens of the British Isles. His two Masters, along with his dramatic victory in the 1982 United States Open at Pebble Beach give him a total of 8 major championship victories. His fiery duels with Jack Nicklaus in the late 1970s made for excellent television, and in this, Watson contributed to the spread and popularity of golf. Watson was named Player of the Year for four consecutive years, and won the Vardon trophy for lowest scoring average three times.

## The Wayans Family

Continuing to make strong contributions to the American comedy scene, the Wayans family has been one of the most successful and

influential African-American families in show business. Of four actor/producer/comedian brothers, the eldest, Keenen Ivory Wayans, and his groundbreaking television show *In Living Color* got his siblings a start in show business. Damon has appeared on *Saturday Night Live* and a number of other television shows while maintaining a successful stand-up comedy career. Youngest brother Marlon appeared in a number of films in the late 1990s, and starred with brother Shawn on the television sitcom *The Wayans Brothers*. Sister Kim has appeared on *In Living Color* and many other television programs.

## Wayne, John (1907-1979)

To millions of people around the world, John Wayne has come to be more than just the single most recognizable screen actor in the history of film: John Wayne is America. From the late 1920s to the mid-1970s John Wayne played a cavalcade of heroes on screen. The characters Wayne usually played after his rise to stardom were not always likable. They were practically never what at the millennium has come to be known as “politically correct”; they rarely had any sensitivity for the plight of those who opposed them, and they were often characterized by an overt jingoism. Nevertheless, they uniformly had one thing in common: they were stereotypically American. As a result of this unifying trait, Wayne himself became, in the world’s eye, synonymous with the mythical American values of rugged individualism, bravery, loyalty, integrity, and courage. However, even though he played a wide variety of characters, including soldiers, detectives, sailors, and football players, it is for his Western heroes that he is best remembered. As Garry Wills writes in *John Wayne’s America*, “the strength of Wayne was that he embodied our deepest myth—that of the frontier.”

John Wayne was born Marion Michael Morrison in Winterset, Iowa, on May 26, 1907. His mother, Mary (Molly) Brown Morrison, struggled to keep the family afloat in light of the shiftlessness of Wayne’s father, Clyde Morrison. After a failed career as a druggist, Clyde made a decision that was ultimately good for Wayne, but very bad for himself: in 1913 he decided to migrate to California to be a farmer. In 1914 his wife and two sons joined him. In addition to his having had no previous experience as a farmer, Clyde made the misbegotten choice of Lancaster, which sits in the Antelope Valley, as his place of residence. The land’s aridity, in addition to his inexperience, virtually assured Clyde’s failure. It was here that most Wayne historians believe he first developed his ironic lifelong dislike of horses, which appears to have stemmed from his having to ride one daily from his father’s farm to the school in Lancaster.

After Clyde’s inevitable failure as a farmer, he once again began working in a pharmacy, this time in the Los Angeles suburb of Glendale, where the family moved in 1916. It was here that Wayne first began to blossom. His family life was relatively unstable—he lived in four different homes in his nine years in Glendale and his parents habitually fought, which resulted in their divorcing shortly after Wayne finished high school. Nevertheless, by most accounts Wayne enjoyed his time in Glendale, especially his four years (1921-1925) at Glendale High, where he was immensely popular with his peers. Wayne joined a number of social groups and was class vice president his sophomore and junior years, and class president his senior year. In addition, he wrote for the school paper, participated as an actor and stage hand in school productions, served on many social committees, and was a star guard on the football team. His football ability, in combination with his high grades, earned him a scholarship to play football at University of Southern California (USC) under legendary coach Howard Jones. In the fall of 1925, full of high hopes and promise, Wayne left Glendale for good, ostensibly headed towards a career as a football hero and then, after law school, a successful lawyer.

When Wayne first arrived at USC, things went well for him. To augment his scholarship, he worked in the fraternities for extra money. He loved fraternity life and pledged Sigma Chi. He earned his letter on the freshman team and was poised to join the varsity squad at the start of his sophomore year. It is at this point that things began to go awry. Wayne’s size, six feet four inches, made him a formidable and intimidating high school football player. However, in the college game, sheer size and strength are not enough to secure a position on the team. Just as important is speed, of which Wayne possessed none. After his sophomore year of college Wayne lost his scholarship, thus ending his days at USC. In later years Wayne would claim it was injury that cut short a promising career. With his scholarship lost, Wayne began working at Fox studios in 1927. Although he occasionally appeared as an extra when needed and even had speaking roles in John Ford’s *Salute* (1929) and *Men without Women* (1930), his main responsibilities consisted of using his enormous strength to move props and equipment from set to set. However, in 1929 Wayne was spotted doing manual labor by Raoul Walsh, who didn’t notice a lack of speed so much as he did a grace and fluidity of motion. Walsh immediately decided to make Wayne a star; from these inauspicious circumstances began the most culturally influential career in screen acting history.

Walsh’s first, and perhaps most important, suggestion to Wayne was that he change his name. With that suggestion, Marion Morrison became John “Duke” Wayne. Although Ford is generally credited with “discovering” John Wayne, he did not, nor was he initially responsible for Wayne’s becoming a major star. Wayne did not become larger than life all at once, but cumulatively, after a long series of fits and starts. And more important perhaps than even *Stagecoach* (1939) was his long apprenticeship as a leading man in 1930s “B” Westerns, which began with his appearance in Walsh’s epic *The Big Trail* in 1930. For *The Big Trail* Wayne underwent a Hollywood makeover that would pervade his on-screen persona for the remainder of his life. He was taught to communicate with Indians via hand signals, wear the garb of a cowboy, and, perhaps most importantly, to properly ride a horse; Walsh transformed Wayne into a Western hero. In the early 1990s the Museum of Modern Art restored *The Big Trail* to its original form, which resulted in contemporary critics raising it to its rightful place in the pantheon of Hollywood’s Western classics. However, at the time of its release *The*

John Wayne on horseback in a scene from the film *The Searchers*.

*Big Trail* was a financial failure. This was disastrous for Fox Studios, which had gambled its survival on the film's anticipated box-office success. Fox went into receivership and Wayne was denied the studio buildup he otherwise would have received. Instead of becoming a major star, Wayne was forced to scramble to find work at seven different studios over the next eight years. Nevertheless, the film convinced Hollywood that Wayne had potential as a Western hero.

From 1930 to 1939 Wayne appeared as the hero in some 80 films, the vast majority of which were Westerns. Although he was

languishing financially, Wayne was nevertheless honing his craft, perfecting his famous walk, his economy of speech and movement, and learning, in his own words, to re-act rather than act—"How many times do I gotta tell you, I don't act at all, I *re-act*." Also important during this time was his relationship with Yakima Canutt, the famous Hollywood stunt man who profoundly influenced Wayne's career. Canutt was not only the toughest man on whatever set he happened to be working, he was also the most professional. Both traits rubbed off on Wayne. Many critics have poked fun at Wayne's sometimes stiff

on-screen persona, especially during his later years when his work often seemed to unintentionally border on self-parody, but the fact of the matter is that under Canutt's influence in the 1930s Wayne became a consummate student of film, which he remained until the end of his life. Despite his off-screen ribaldry, on the set Wayne was always sober, prepared, intense, and by most accounts a generous actor. That Wayne survived the Depression as an actor is itself no small accomplishment, but he was nevertheless still a minor figure in the landscape of Hollywood cinema. And then came 1939 and John Ford's *Stagecoach*, the film that would begin to change John Wayne's career.

Although John Wayne was a firmly established "B" Western Movie star in 1939, literally hundreds of actors were better known than he. But *Stagecoach* changed all that. Walter Wanger, the film's producer, urged Ford to cast Gary Cooper and Marlene Dietrich as the Ringo Kid and Dallas, but according to Tag Gallagher, Ford, didn't want established stars and instead convinced Wanger that John Wayne and Claire Trevor were right for the parts. He did so because the casting of Cooper and Dietrich would have meant that audiences would automatically have brought preconceived notions to the film. They were not only stars, but "personalities" as well (especially Dietrich). In casting relative unknowns Ford was able to ensure that audiences would be enthralled with the story and not the visual presence of big stars. For Wayne it was the film that began his climb towards cultural immortality. However, even though *Stagecoach's* success helped him in Hollywood, Wayne was still not quite the larger than life figure that he has since become. The final piece of that puzzle would not come until the release of Howard Hawks's *Red River* in 1948.

Howard Hawks saw in Wayne a man capable of better acting than had previously been required of him and cast him as Tom Dunson, a hard driving authoritarian cattleman who was an older, darker, and much less sympathetic character than Wayne had previously played. Wayne's performance was brilliant and other directors—the most important of whom was John Ford—took note. Once it was discovered that Wayne not only looked the part of a hero, but that he was a good actor as well, his career skyrocketed; John Wayne became a major Hollywood star at the age of forty. From this point on Wayne predominantly played the kinds of roles for which he is best remembered, what Garry Wills call "the authority figure, the guide for younger men, the melancholy person weighed down with responsibility." Perhaps the blueprint for the iconic Wayne character is his Sergeant Stryker from *The Sands of Iwo Jima* (1949), who to this day is still an enduring symbol for right-wing America. Stryker's cry of "Lock and Load" has been used as a battle cry by many, including Oliver North, Pat Buchanan, and, more ironically, by Sergeant Barnes, the villain of Oliver Stone's anti-war film *Platoon* (1986).

John Wayne's on-screen persona became perhaps the only one in movie history that is hated or revered because of its perceived politics. A lot of people love John Wayne simply because they love his movies, but seemingly just as many either like or dislike his films on the basis of the right-wing politics with which they have become inextricably associated. Clearly, not all of Wayne's characters fit the right-wing stereotype with which they have been identified. However, beginning in the 1950s Wayne himself became increasingly political, which in turn affected the way people thought of his movies. Just as his on-screen persona came to be seen as representing American values, so too did he publicly begin to project the image of a super patriotic ultra-American defender of the Old Guard. During the height of the McCarthy era he helped form the Motion Picture

Alliance for the Preservation of American Ideals, over which he eventually presided as president. That he had this public persona apparently never struck Wayne as ironic, even though in his personal life he was both an active womanizer who married three times and a famously heavy drinker. In 1960 he directed and starred in *The Alamo*, which, despite some fine moments, is generally recognized as a mess. However, in the story of the siege of the Alamo, Wayne thought he saw a metaphor for all that was good in American character. Furthermore, Wayne was a fundamentalist hawk who made the Vietnam War a personal crusade, which ultimately resulted in his both starring in and co-directing the excruciatingly propagandistic *The Green Berets* (1969). In the face of the seemingly senseless deaths of so many American youths in Vietnam, this film rubbed many the wrong way, especially in light of the fact that the varied reasons the pro-military Wayne offered for his never having served in the armed forces himself were hazy at best.

Despite his success in other genres, Wayne was still the quintessential Western hero. After *Red River* the primary reason for the perpetuation of Wayne's work in Westerns was a renewed working relationship with John Ford, who saw in Wayne for perhaps the first time an actor capable of exuding the strength, confidence, and staunch independence typical of so many of Ford's heroes. Ford saw Wayne as emblematic of the kind of hero he wanted in his films, and he was also able to get better work out of Wayne than did any other director (with the notable exception of Hawks's *Red River* and *Rio Bravo* [1959]). But this is perhaps because in films after *Stagecoach* Ford cast Wayne in roles that were tailored to suit Wayne's particular talents. The result was a series of classic films, including the Cavalry Trilogy—*Fort Apache* (1948), *She Wore a Yellow Ribbon* (1949), and *Rio Grande* (1950)—and *The Quiet Man*, an Irish love story that is perhaps both Wayne and Ford's best-loved film. In Ford's later films, he cannily chipped away at the veneer of Wayne's Western hero image. In films such as *The Searchers* (1956) and *The Man Who Shot Liberty Valance* (1962), Ford played on Wayne's cinematic iconography and increasing chronological age to recreate him as a far more complex, embittered figure than he was in Ford's earlier work.

After his work as Tom Doniphon in Ford's last masterpiece, *The Man Who Shot Liberty Valance*, Wayne starred in films that capitalized on his iconic stature as the quintessential Western hero. He repeatedly played individualistic tough guys with a strong personal code of morality. Although films like *The Sons of Katy Elder* (1965), *Chisum* (1970), and *Big Jake* (1971) lacked the artistry of his earlier work with Ford and Hawks, they were nevertheless successful at the box-office. In 1969 Hollywood finally awarded Wayne a long overdue Oscar, which he received for his performance as Rooster Cogburn, *True Grit's* hard drinking, eye-patch wearing, Western marshal. Off-screen, Wayne had survived cancer in 1963, at which time he had a lung removed. Wayne said he had "Licked the Big C," but such was ultimately not the case.

In 1976 Wayne starred in *The Shootist*, the last of some 250 films and one which had haunting parallels with Wayne's real-life situation. In it Wayne plays J. B. Brooks, a reformed killer dying of cancer who is trying to live out his final days in peace. The film was not the celebratory cash cow that so much of his later work had been. Instead, it is a much more accurate depiction of the death of the West. It also contained an eerily prescient emotional resonance in its reflection of Wayne's off-screen battle with cancer. After its completion, Wayne underwent open-heart surgery in 1978. He then had his stomach removed in 1979. After a courageous battle, Wayne's cancer finally

got the better of him. John Wayne died in Los Angeles on June 11, 1979. During his lifetime Wayne was Hollywood's biggest star, making the top ten in distributors' lists of stars with commercial appeal in all but one year from 1949 to 1974. Remarkably, death hasn't dimmed his stardom. In 1993 pollsters asked Americans "Who is your favorite star?" John Wayne came in second to Clint Eastwood, the same place he earned one year later when the poll was conducted again. In 1995, Wayne finished first. Even in death Wayne's cultural presence seems only to become more pervasive, continuing to flourish even in the late 1990s, an era in which most movie stars' time on top seems to be more accurately measured in minutes than in years. Why does Wayne's popularity continue to grow? Perhaps Joan Didion said it best when she wrote that John Wayne "determined forever the shape of certain of our dreams."

Early on in *Stagecoach* there is a moment in which the stage encounters the Ringo Kid (John Wayne), standing on the roadside, looking magnificent with his saddle slung over his left shoulder, and his rifle, which he spins with graceful aplomb, in his right hand. As contemporary viewers we can't help but think of Wayne, regardless of the particular character he is playing, as "The Duke." As historian Anne Butler writes, "more than any other medium, film is responsible for the image of the West as a place locked in the nineteenth century and defined by stark encounters between whites and Indians, law and disorder. Although social trends have altered the content of Western films, the strong, silent man of action—epitomized by John Wayne—remains the central figure." John Wayne has come to stand for a particular kind of American, one who takes no guff and fights for what he knows is right, which often appears to be what is best for America as well, for no other reason than we cannot imagine John Wayne, who in his personal life was far from an angel, as leading us down the wrong the path. For better or worse, the perception of John Wayne as the defining human symbol of America has become firmly ensconced in the collective global psyche.

—Robert C. Sickels

## Wayne's World

The release of *Wayne's World* in 1992 marked the dawn of a new era of deliberately "dumb" comedies, and insured the production, if not the success, of a slew of other movies based on popular characters from the television show *Saturday Night Live*. *Wayne's World* was significant not only for its surprising popularity—it grossed over \$180 million worldwide—but also because its witty, self-conscious script and deliberately ludicrous jargon set a new standard for comedies aimed at a youth market in the 1990s.

*Wayne's World* was the first skit to be expanded from *Saturday Night Live* into a full-length feature since the very successful cult film *Blues Brothers* was released in 1980, and became something of a cult film itself. Like *Blues Brothers*, the chemistry in *Wayne's World* lay in the rapport between two characters, Wayne Campbell and Garth Algar, played by *Saturday Night Live* alumni Mike Myers and Dana Carvey. Myers developed the original characters, and shared writing credits with Bonnie Turner for the final movie script, with *Saturday Night Live* producer Lorne Michaels retaining his duties for the film. A less likely member of the production team was director Penelope Spheeris who, although well-respected, had built her reputation via a rather different take on youth culture with underground hits such as the dark *Suburbia* (1983) and *The Decline of Western Civilization Part II: The Metal Years* (1988), a documentary on the rise of heavy metal bands in the early 1980s.

Beyond the good-natured simplicity of its plot, *Wayne's World* influenced the marketing strategies of future comedies. The promotional team took the unprecedented step of pouring the majority of their relatively small budget into buying advertising time on the youth-oriented cable music channel, MTV, including sponsorship of an hour-long special on the film, and the bet paid off with huge box-office sales to the targeted youth audience. Cannily, the films had recognized that teenagers in the 1990s were increasingly cynical about exactly such marketing, and the plot of the film depicted a naive Wayne and Garth tempted by an unscrupulous television producer to include key products in their popular public access TV show. In a memorable scene, Wayne and Garth balk at the suggestion that they "sell out"; standing in front of a loaded buffet table, the producer (played by Rob Lowe) tells them they have no choice. With a grin that lets audiences in on the spoof, Wayne responds by picking up a Pepsi and replying that, in fact, he does have a choice—and it is "the choice of a New Generation," Pepsi's current tag-line. Similar overt references to other products are found throughout the movie, including spoofs on the campaigns for Doritos and Grey Poupon mustard.

In an ironic gesture befitting the movie, *Wayne's World* spun off a galaxy of commercial tie-ins, including a VCR board game, a Nintendo game, a book (*Wayne's World: Extreme Close Up*) co-written by Myers and his then-girlfriend, actress Robin Ruzan, as well as the usual coffee mugs, t-shirts, and action figures. Perhaps the most unusual tie-in was a planned *Wayne's World*-themed amusement park, to be opened in April of 1994 at Paramount King's Dominion in Virginia, where patrons could ride "The Hurler" rollercoaster and pose next to Garth's "Mirthmobile," a powder blue Pacer. The popularity of *Wayne's World* guaranteed a sequel, *Wayne's World II*, released in 1993. Although both Myers and Carvey returned and the film was a commercial success, it received mediocre reviews. Regardless, the *Wayne's World* movies are widely credited for leading the way for a new wave of comedy features starring television comics,

Mike Myers (left) and Dana Carvey in a scene from the film *Wayne's World*.

such as Jim Carrey's *Ace Ventura: Pet Detective* (1993), Adam Sandler's *Billy Madison* (1994), and Chris Farley's *Tommy Boy* (1995).

## The Weathermen

Their avowed goal to bring about a violent Communist revolution in the United States, perhaps the Weathermen's greatest significance lay in their exploitation by the Nixon administration, which characterized them as typical protestors. These few hundred extremists were used to represent the thousands comprising the antiwar movement, a strategy that allowed President Nixon to offer the

"silent majority" a clear choice: either his plan of gradual disengagement from the war (called "Vietnamization") or the violent revolution supposedly espoused by all of the war's opponents.

The Weathermen arose from the ashes of the Students for a Democratic Society (SDS), which self-destructed at its 1969 convention in a power struggle between the Progressive Labor Coalition, whose adherents were older, socialist, and principally interested in organizing workers to bring about social change, and the Radical Youth Movement, younger, Communist-oriented revolutionaries who saw armed struggle as the only viable political option. RYM's manifesto, distributed at the conference, was titled after a Bob Dylan lyric: "You don't need a weatherman to know which way the wind blows." The crisis came when Bernadine Dohrn, a leader of RYM and one of SDS's three national secretaries, gave a blistering speech which ended with her announcing the expulsion of PL from SDS. Many other members, adherents of neither faction, quit in disgust, leaving behind only the most radicalized element, RYM, which initially retained SDS's name but soon became known as Weatherman, the Weather Underground, or, more commonly, the Weathermen.

The new organization was small, so recruitment was deemed necessary before meaningful political activity could take place. The Weathermen believed that working-class white youths offered the best prospects for new members—these young people were already

alienated from the system, it was reasoned, and would thus be eager recruits for the revolution. The effort was not a success. Some Weathermen tried to impress urban street kids with their toughness by challenging them to fight. Brawls were easy to find, recruits less so. Other members invaded high schools in working-class areas, shouting “Jailbreak!” and disrupting classes, but most students were uninterested in the Weathermen’s call to rise up against their teachers and the state.

More dramatic action to garner attention and interest seemed called for, and the Weathermen’s solution was the Days of Rage, a planned four-day series of demonstrations in Chicago in November 1969. The Weathermen chose Chicago partly in the hope of exacting revenge on the city’s police, who had brutalized demonstrators during the 1968 Democratic National Convention, and partly because the leaders of those demonstrations, the so-called Chicago 7, were facing trial on conspiracy charges there. The Weathermen wanted to protest the trial and also take advantage of the presence of the national news media, which would be covering the proceedings. Although the organizers of the Days of Rage predicted the attendance of thousands of protesters, only about seven hundred showed up. Over three days they demonstrated, rampaged through affluent downtown areas, and fought with the police. Many were arrested, with both police and protesters suffering injuries of varying severity. On balance, the Days of Rage were a failure. Chicago’s working-class youth did not rally to the Weathermen’s cause. Further, other organizations in the antiwar movement denounced the Weathermen’s actions as counterproductive and cut off all ties with them. Even the Black Panthers, a militant group known for its defiant confrontations with authority, were critical of the Days of Rage.

The leaders of the Weathermen decided on a change of strategy. The most committed among them would drop out of public view, “go underground” in small groups, and strike out at the state with a coordinated program of bombings. The bombing went on for the next eleven months. The targets chosen were all politically symbolic, and the bombs were usually planted in retaliation for some action that the Weathermen perceived as oppressive: a bomb was set at the home of a New York City judge who was presiding over a trial of some Black Panthers; another went off in a Pentagon lavatory after President Nixon ordered increased bombing of North Vietnam; still another bomb exploded at the office of the New York State Department of Corrections after the brutal suppression of the Attica prison riot. Despite their reputation, as well as their violent-sounding rhetoric, the Weathermen were always careful to call in a bomb threat at least an hour before their bombs were timed to detonate. This allowed the target buildings to be evacuated, so no people were hurt in the blasts. The only fatalities due to the Weathermen’s bombs were three of their own members. On March 8, 1970, a townhouse in New York’s Greenwich Village blew up. The owner, James Wilkerson, was away; he had allowed his daughter Kathy to stay there, little suspecting that she had joined the Weathermen, or that the place would be used as a bomb factory. Diana Oughten, Ted Gold, and Terry Robbins were killed in the blast.

The deaths of their comrades sobered the surviving Weathermen. They called off the bombing campaign and began to adopt more mainstream methods of persuasion. While still underground, they put out a number of publications espousing their political views and also gave interviews to counterculture publications such as *The Berkeley Tribe*. The Weathermen leaders, including Bernadine Dohrn, even cooperated with director Emile DeAntonio in the making of a documentary called *Underground*.

But by 1975, the Communist victory in Vietnam made the Weathermen passe. Internal squabbling soon put a finish to the organization, and its leaders eventually abandoned their fugitive lifestyle and rejoined the society they had claimed to so despise.

## Weaver, Sigourney (1949—)

Sigourney Weaver achieved fame battling bug-like monsters as Ellen Ripley in *Alien* (1979), a role she reprised in *Aliens* (1986), *Alien 3* (1992), and *Alien Resurrection* (1997). In these action films, Weaver impressed audiences and critics by demonstrating that a woman can be a fierce warrior without sacrificing her femininity. In her other work, Weaver has proven herself in genres ranging from comedies such as *Ghostbusters* (1984) and *Working Girl* (1988) to intensely dramatic roles such as *Gorillas in the Mist* (1988) and *Death and the Maiden* (1994).

## The Weavers

Formed in 1948 by folksinger and banjoist Pete Seeger, the Weavers were considered the quintessential U.S. folk music group of its era, popularizing such classic tunes as “On Top of Old Smokey” and “Goodnight Irene” before falling under the shadow of McCarthyism in the 1950s. When they began performing, the four members of the group had collectively amassed a repertoire exceeding 700 traditional ballads and folk songs; before disbanding in 1963, the Weavers had recorded many of these on popular albums, successfully bringing American folk music to the attention of a mass audience. Though their smooth, polished sound ruffled the feathers of a few folk-music purists, the Weavers have been credited for fueling the careers of the numerous young performers who followed them, prompting the formation of the Newport Folk Festival series in the late 1950s and what would later be known as the American Folk Revival.

Unlike most popular folk-music performers of the mid-twentieth century, which included the Kingston Trio, Peter, Paul & Mary, Bob Dylan, Joan Baez, the Clancy Brothers & Tommy Makem, and Canada’s husband-and-wife team Ian & Sylvia, the members of the

**The Weavers at their 25<sup>th</sup> Anniversary Reunion Concert: (from left) Pete Seeger, Lee Hays, Ronnie Gilbert, and Fred Hellerman.**

Weavers were significantly older than their fans (Seeger was born in 1919). Rather than their youth, it was their enthusiasm and their folk-music credentials that earned the Weavers their legions of fans. Seeger, in particular, had ties to many folk performers of earlier decades, including the legendary Woody Guthrie, with whom he had performed as part of the Almanac Singers during the early 1940s.

The Weavers—Seeger, Lee Hays, Fred Hellerman, and female vocalist Ronnie Gilbert—debuted at New York City’s Village Vanguard folk club in 1948. The Manhattan-born Seeger had abandoned a promising Harvard education to learn to play the long-necked banjo and to hitchhike across the United States for the purpose of collecting the nation’s folk songs. His growing expertise later earned him a position as folk archivist for the Library of Congress. By contrast, Hays, with his deep, rumbling voice, had begun his career singing in the rural churches of his native Arkansas. The two younger members of the group, guitarist Hellerman and vocalist Gilbert, had become friends upon recognizing their common interest in folk music while working as summer-camp counselors in New Jersey.

The four musicians met during folk-music hootenannies in Greenwich Village during the mid-1940s, and quickly decided that their combined vocals, backed by Seeger’s banjo and recorder and

Hellerman’s acoustic guitar, made for a good mix. Sponsored by the Socialist-leaning People’s Songs, the foursome also received encouragement from folk-music fans wherever they performed. A six-month gig at the Village Vanguard, where such folkies as Burl Ives and Richard Dyer-Bennett had gotten their starts, earned the group \$100 a week for its musical mix of everything from work-gang songs from the Old South to Indonesian lullabies.

Eventually the Weavers sparked the interest of Decca Records, which recorded two of the group’s favorite songs: “Goodnight, Irene,” by bluesman Leadbelly, and the Israeli hora “Tzena, Tzena, Tzena.” Both tunes were timely: Leadbelly had died only a year before, while the nation of Israel had only just come into being. Within a year, both songs made the hit parade, with record sales to the college crowd cresting the million mark. The Weavers moved to Manhattan’s Blue Angel nightclub, and from there to Broadway’s Strand Theater, where its take-home pay rose to \$2,250 a week. The group was soon on its way to national prominence, with offers for bookings from venues in 30 U.S. cities.

The Weavers’ meteoric rise to national prominence abruptly ended in 1952, when Seeger’s leftist leanings caused the group to fall under the shadow of the “Red Scare” that was fueled by Senator

The Chick Webb Band with Ella Fitzgerald on vocals.

Joseph McCarthy and by the House Un-American Activities Committee (HUAC). Included among those entertainers suspected of pro-communist sentiments, the group was blacklisted by theatre owners and radio and television stations. Forced to return to the smaller folk clubs and coffeehouses where they had got their start, the Weavers continued their career in the folk community for another ten years before finally disbanding in 1963. During this period, the Weavers recorded several albums for both Decca and Vanguard, among them *Weavers Almanac*, *Weavers on Tour* (1958), *Travelling with the Weavers* (1958), and *The Weavers at Carnegie Hall* (1955), the last considered the group's finest album. Many of their songs continue to be available on album reissues.

While Seeger's political convictions may have ultimately ended the career of the Weavers—he was cited for contempt of Congress in 1961, although his conviction was ultimately overturned—he eventually emerged undaunted, and has continued to entertain generations of Americans with songs that have become modern-day folk classics, as well as composing “If I Had a Hammer” and “We Shall Overcome,” both of which became anthems of the civil rights movement of the 1960s.

## Webb, Chick (1902-1939)

With precise ensemble playing rather than standout soloists, drummer Chick Webb's orchestra regularly won big band jazz contests in the mid-1930s. Born in Baltimore, Webb moved to New York City, and in 1926 started a band that included star sax men Benny Carter and Johnny Hodges. Despite his diminutive stature, aggravated by a curved spine, Webb was a virtuoso drummer, anchoring his band's beat with impeccable taste. From 1933, Edgar Sampson arranged such landmark numbers as “Stompin’ at the Savoy.” When Webb discovered the teenaged Ella Fitzgerald in 1935, her singing led the band to new heights, with hit records for Decca and regular appearances at the Savoy Ballroom in Harlem broadcast nationally. After Webb died of spinal tuberculosis in 1939, Fitzgerald led the band for two years.

## Webb, Jack (1920-1982)

Jack Webb's most famous public persona, Sgt. Joe Friday of the Los Angeles Police Department, seemed to be a man with virtually no

personality. Yet, paradoxically, this amazingly versatile actor-director-writer-producer-editor-executive was one of the most influential personalities to work in television during the 1950s and 1960s—the heyday of the Big Three networks and the formative period of the Media Age. He did so by speaking directly to the hitherto unexploited American appetite for unemotional professionalism. He was, as Norman Mailer said of the astronaut Neil Armstrong, “apparently in communion with some string in the universe others did not think to play.” His not-so-secret weapon was an intense and exclusive focus on surface reality, a focus summed up in the most famous (and endlessly lampooned) line from his television series, *Dragnet*: “Just the facts, ma’am.”

Born April 2, 1920, in Santa Monica, California, Jack Webb was educated at Belmont High School and served in the Army Air Force during World War II (1942-1945). After his discharge, he joined the broadcast industry as a radio announcer in San Francisco. By the time he made his debut as a film actor—playing, significantly, a police detective in the superb film noir thriller, *He Walked by Night* (1948)—Webb was well-established lead in the radio dramas *Pat Novak for Hire* (1946) and *Johnny Modero, Pier 23* (1947). In 1949, he created the police series, *Dragnet*. Although continuing to produce the radio version until 1955, he took the series to television in 1951, where it became the most highly rated police drama in broadcast history. He continued to act in other people’s motion pictures though 1951, most memorably in Billy Wilder’s *Sunset Boulevard* and in Fred Zinneman’s *The Men*, both in 1950. After 1951, he only acted in movies he directed: *Dragnet* (1954), *Pete Kelly’s Blues* (1955), *The D.I.* (1957), *-30-* (1959), and *The Last Time I Saw Archie* (1961). As a filmmaker, Webb was a genuine auteur, his directing style an extension of his television techniques.

Although Webb’s movies rarely enjoyed much critical or popular success, they were nevertheless individually quite enjoyable—especially *Pete Kelly’s Blues*, with its meticulous reconstruction of 1920s New Orleans and its shining performance by the jazz singer Peggy Lee; *The D.I.*, about an unyielding Drill Instructor at the Marine Corps’s Paris Island; and *-30-*, an exciting melodrama of a big city newspaper. Judging his work by the exaggerated standards of Hollywood, the critic Andrew Sarris said that Webb’s “style was too controlled for the little he had to say”—a clever formulation, and accurate enough to be worth repeating, but too dismissive. Nevertheless, Jack Webb’s impact on the American cinema was negligible, except that his 1954 film of *Dragnet* was one of the first motion pictures based on a television series.

His impact on television is another matter. New episodes of *Dragnet* were produced from December 16, 1951 to September 6, 1959 and again from January 12, 1967 through September 10, 1970. By the time it finally went into syndication, *Dragnet* had become a significant presence in modern American folklore. Particularly striking were Walter Schumann’s title theme; Webb’s laconic, understated narration (“This is the city. Los Angeles, California. I work here. I’m a cop.”); the epilogue detailing the punishments imposed upon the evening’s criminals (“Arthur Schnitzler was tried on fifteen counts of indecent exposure in the Superior Court of Los Angeles County. . .”); the sweaty, muscular forearms which chiseled the logo “Mark VII” (Webb’s production company) into granite at the end of the program; and, of course, the quick, staccato, emotionless dialogue—an effect Webb sought deliberately, and achieved by having his actors read their lines cold, from cue cards. Webb not only starred as Joe Friday, but also produced all the episodes, wrote and directed

Jack Webb

most of them, and provided the voice-over narration. Before each script of *Dragnet* was filmed, it was submitted to the Los Angeles Police Department for approval and possible changes.

Beginning in 1968, Webb created several other series, the most notable being *Adam 12* (1968-1970), about two LAPD officers in a patrol car, and *Emergency!* (1971-1975), which concerned the adventures of a mobile rescue unit. Though he did not appear in any of his other projects, each bore Webb’s trademarks: they were about the lives of public service professionals, and the exclusive emphasis was on the characters’ professional—not private—lives. Furthermore, the stories were told in Webb’s patented low-key, obsessively factual, style—as if he were an engineer and making a television program was a dirty job but somebody had to do it.

Although he would undoubtedly have been horrified at the suggestion, Webb’s laconic style was a kind of cool, which is why it worked so well on the “cool” medium of television. He understood instinctively that histrionics and violent spectacle did not go over very well on television and could even be off-putting. What did go over well were close-ups of people talking to each other, and a scrupulous, admiring record of people doing their jobs. His tremendous success was based upon his sure knowledge that, at any given moment in history, the squares outnumber the hipsters by about 500,000 to 1. Joe Friday was an archetypal stiff, and proud of it; his moral code was as simple and clear-cut as his conception of his job as a cop: things were either right or wrong, as an act was either legal or illegal. It should not surprise anyone that Americans found this appealing—that Webb was able to reintroduce *Dragnet* at the height of the chaotic 1960s and to keep it on the air, highly rated, through four complete seasons. Indeed,

the people who welcomed *Dragnet* back on television in 1967 were the same people who elected Richard Nixon as president in 1968.

## Wedding Dress

The wedding dress is a costume or single-purpose article of clothing worn by a bride during the marriage ceremony. From antiquity, weddings have been highly regarded occasions. The clothing worn by the bride for her wedding has usually been distinguished from that of her daily wear. Symbolism may be attached to the dress, such as white for purity, and may be attached to items worn with the dress, such as something blue for luck. The symbolism associated with the wedding dress may have cultural, traditional, or personal significance.

Colonial immigrants kept the marriage traditions of their homelands. Brides in the English Jamestown settlement likely wore the costumes of young country brides of the mid-Elizabethan period. Although records of the first American weddings do not describe clothing, it is known that English brides of this era wore dresses of russet, a woolen fabric of natural wool color or dyed a reddish brown with tree bark. They wore simple, fitted white caps on the head. Dresses and caps made for weddings were usually adorned with fine embroidery.

American wedding dresses evolved into more festive or elaborate versions of the usual dress worn by women of each subsequent era. The dress was considered a best dress to be worn for special occasions after the wedding. The dress was usually new, although laces and trimmings might be old and handed down from a family member. Beginning in the mid-1800s, wearing a mother's wedding dress became an acceptable sentimental option.

As America prospered, brides marked the occasion of their wedding by bedecking themselves in the finest and most becoming dresses of their day. They were influenced by the styles of Europe and news of royal marriages. Although white had been worn for Roman weddings, all colors were used for early American wedding attire. Though other colors were occasionally seen, white settled into vogue as the preferred choice of color after the immensely popular Queen Victoria of England wed in 1840 clad in white satin.

A typical wedding dress.

Since the Victorian era's hooped creations, the wedding dress has known countless variations on the style of the day. While some early dresses displayed a slight trail of fabric behind, the wedding dress with train came into vogue in the mid-1870s, as did the use of the flowing veil.

Elaborate fabrics, embroideries, laces, braids, and trimmings were used whenever possible. The laces Aloncon, Venice, Honitan, and Chantilly were commonplace for wedding trims. The evolution of styles included the tubular skirts of the 1870s, the corset waists of the 1880s, the leg-o-mutton sleeves of the 1890s, the bustles of the early 1900s, the ankle-length Gibson girl silhouette of the 1910s, and the short-skirted flapper look with accompanying long, full veil of the 1920s.

In the 1930s the wedding dress became known as the wedding gown, as the term gown denoted a luxurious dress worn in Depression-era America. Over the years hemlines varied in the daily style of dress, but beginning in the 1930s, the majority of wedding dresses were designed floor length.

The 1940s war years' wedding gowns show an absence of elaborate laces and trims, but an attention to tailoring detail with padded shoulders and belted waistlines. The prosperous 1950s ushered in a new era of extravagant wedding gowns with yards of gathered skirting, laces, sweetheart and off-the-shoulder necklines,

and peter pan collars. Since it had become traditional for the groom to present his bride a gift of a single strand of pearls, much emphasis was placed on the neckline design to show off this gift.

During the 1960s, the prominence of traditional styles of wedding dresses decreased in favor of contemporary dress styles. Many brides wore floor length flowered print dresses that were not significantly more elaborate than their usual mode of dress. By the late 1960s and early 1970s, the hippie bride marrying in a meadow gave way to the miniskirted bride repeating vows before a justice of the peace.

As the 1970s progressed, the traditional wedding gowns enjoyed a resurgence. Early baby-boomers found meaning in unpacking, refitting, and wearing their mother's gowns of the 1940s and 1950s. For those not fortunate enough to have a gown from these periods, the bridal apparel industry was ready with fresh designs in polyester fabrics. Elaborate gowns of finer materials were still produced, and by the 1980s it had become customary for at least the dress bodice to be covered in beading and laces.

The 1990s wedding dress and its symbolism was a matter of individual taste. While many wedding dresses resurrected styles of the past, other styles continued evolving, such as the mermaid dress, a creation form-fitted to the knees with a flared skirt. Dresses were designed with a skirted train, a detachable train, or a veil trailing beyond the hem of the dress simulating a train. Examples of wedding dresses with fine construction and beadwork continued to be made and preserved for wear by the next generation of brides. The majority of wedding dresses not designed for repeat wear might have had beading and trims glued to the dress instead of hand-sewn. These dresses were often boxed and kept for sentimental reasons. The practical bride may choose to rent a wedding dress.

The modern wedding dress is steeped in tradition and history. The elaborateness of the design and the association of any cultural significance or traditional symbolism to the dress or to items worn with the dress is the choice of the bride.

—Taylor Shaw

## Weekend

In contemporary American culture, the weekend generally signifies the end of the traditional work week, or the period from Friday night to Monday morning, a popular time for organized or unorganized leisure activities and for religious observances. Historically, the weekend was synonymous with the Sabbath which, among European cultures, was marked on Sunday by Christians and on Saturday by

Jews. To understand the weekend, some background on the origin of the week itself is helpful. Human time was first measured by nature's cycles, seasonal for longer units, and celestial for shorter ones (i.e., the rising and setting of the sun, and the phases of the moon). Today this influence persists in that the names of the days are derived from the ancient astrological seven-day planetary week: "Monday," a corruption of the word "Moonday," which in turn evolved from European derivations of the Latin word for moon, and "Sunday," the day long considered the first of the week until gradually being perceived as the last day of the weekend. The first calendar was devised by the Egyptians, who bequeathed it to ensuing civilizations. Egypt divided the years into three seasons, based on the cycles of the river Nile, and twelve months. The Egyptians' 24-hour days were also grouped into week-like ten-day periods (called "decades"). The Mesopotamian calendar was similar, but its months were divided by a special day, *shabattu*, perhaps the first manifestation of recurring intervals of time regularly punctuated by a special day devoted to leisure or celebration. The Roman calendar also established special days within its 30 or 31-day months, such as the Kalends, the Nones, and the Ides. The Ides fell on the thirteenth or the fifteenth day of the month, and became part of the English language via Shakespeare's famous warning in *Julius Caesar*: "Beware the Ides of March."

In addition to the ancient Jewish Sabbath (and the Christian Sunday that evolved out of it), a later precursor of the modern weekend was the eighteenth-century European custom of Saint Monday, a weekly day of leisure. Saint Monday was gradually replaced by the Saturday holiday, first observed in Europe in the 1870s. In Britain and Ireland, shops often closed at midday on Wednesday, a custom observed in some American small towns until the 1950s. The custom of working half a day on Saturday took hold in the U.S. in the 1920s, with a full two-day "weekend off" soon following. During the earlier era of the six-day work week, conflict had frequently arisen between the Jewish Sabbath and the Christian Sunday, especially with the shifts in European immigration patterns in the early 1900s, and the five-day work week offered a convenient solution. In 1926 Henry Ford closed his factories all day on Saturdays, and in 1929 the Amalgamated Clothing Workers of America, composed primarily of Jewish employees, became the first union to propose a five-day week. While initially denounced in some quarters as both bad economics and worse religion, the five-day Monday through Friday workweek soon became standard.

As the structure of the week/weekend cycle solidified over the years, new cultural and capitalistic venues evolved with it. With the concept of personal leisure came a new "business of leisure," boosted by new advertising venues, that soon began to promote leisure and the weekend not only as a pleasurable pastime, but as an integral element of a thriving capitalistic society. The first "Sunday paper," the *London Observer*, appeared in 1791; while a Sunday edition first appeared in Baltimore in 1796, the American Sunday paper did not really catch on until the Civil War era. The prototype U.S. Sunday newspaper was established by Joseph Pulitzer, whose *Sunday World* pioneered leisure-oriented articles geared to every member of the family: book and entertainment reviews, travel essays, women's and children's pages, and color comics and supplements. Prolific department store advertising helped make the *World* a money-making success as well, and voluminous ad inserts remain a major part of most Sunday editions. In addition to Sunday papers, the magazine, a product designed specifically for pleasure, first appeared in Georgian England, where the more substantial and time-consuming novel was also introduced in the 1740s.

The first use of the term “week-end” appeared in England in an 1879 issue of the magazine, *Notes and Queries*. British practice also laid the groundwork for most of the public leisure pursuits that would grow into the entertainment industries of today. Among these was commercial theater, with its playhouses for both affluent and general audiences. While most of today’s modern theaters perform throughout the week, weekends remain peak box-office periods that sometimes command higher ticket prices, and community theaters often perform only on weekends. Public concerts were given in London as early as 1672, and commercial musical venues developed in tandem with theater. Sports ran parallel in popularity, and hand in hand with betting. Thus, with only a few innovations, public entertainments born in eighteenth-century England flourished into the twentieth century. The music-hall, a popular Saturday night diversion in England, found its American counterpart in the vaudeville circuits that spread across the United States in the late 1800s.

The emergence of the cheap nickelodeon in turn-of-the-century America soon established “going to the movies” as the preeminent American pastime—one that soon spread to Europe and beyond. The first storefront nickelodeons appeared in the major metropolitan areas of the East coast and evolved into the movie palaces of the 1920s where patrons could see a feature film, a variety of short subjects, and a spectacular live stage show with an orchestra or some other form of live music. Movies and the weekend developed independently, but were soon reinforcing each other. Filmgoing became a major form of national recreation, and Saturday night soon became a favorite time for an excursion to the movies—Saturday afternoon matinees were generally reserved for the children. “Going out on the town” for dancing or partying also became a popular Saturday night ritual that, with ironic connotations, was graphically explored in the popular 1977 film, *Saturday Night Fever*, which also produced one of the bestselling soundtrack albums of the hedonistic disco scene in the 1970s. Even household routines had a particular weekend flavor: in the earlier part of the century, New Englanders traditionally sat down to a supper of baked beans on Saturday night. For others, especially in areas where water supplies were limited, the “Saturday night bath” became a familiar routine.

Sunday was long considered a “day of rest” in Western Europe and America, after the account of creation in Genesis in which God rested on the seventh day. In Catholic Europe, church law prohibited “servile work” on Sunday, unless the work was necessary to the glory of God, as a priest celebrating Mass, or the relief of one’s neighbor, as in tending to the sick. In the British Isles, Scotland especially, Sunday was a day of solemnity and restraint in which families were expected to be at church morning and evening, and to engage in edifying pursuits during the day, like Bible reading, hymn singing, or innocent pastimes like music or word games. In some rural areas during the nineteenth century, zealous Sabbath observers tried to pass legislation prohibiting steam trains from operating on Sunday because they brought secularized passengers from the cities to disturb the holiness of the day with holiday frivolities. In some of the American colonies, especially Puritan New England and Pennsylvania, strict “blue laws” prohibited engaging in trade, dancing, playing games, or drinking on Sunday, laws that still survive in a number of places. It was not until the early 1970s, for example, that New York City boutiques and department stores were permitted to open on Sunday; many smaller jurisdictions still had old laws on the books that prohibited shopping on the Sabbath, except for small items like essential groceries, newspapers, or toiletries.

School schedules in the industrialized world followed this same Monday-to-Friday regimen. As Eviatar Zerubavel noted: “Much of the attractiveness of the weekend can be attributed to the suspension of work-related—or, for the young, school-related obligations.” While clearly not a part of the actual weekend—after all, it is still a day on which one still goes to work or school—Friday is nevertheless considered by many their favorite day of the week, because it promises the anticipation of the weekend, leading to the popular expression, “T.G.I.F.,” for “Thank goodness (or God) it’s Friday.”

Transportation innovations also revolutionized weekend possibilities. Prior to the introduction of railroads in the 1830s methods of travel had been essentially unchanged since ancient times. The time, as well as the expense involved, made travel a luxury reserved for the moneyed classes. Cheap rail excursions began around the 1840s in England, and soon achieved mass acceptance, especially among the working classes who for the first time in history could avail themselves of quick and inexpensive travel. In the twentieth century, the automobile and recreational vehicle would do the same thing, but even on a broader scale. Weekend excursions to the seashore, the mountains, or to new leisure and gambling boomtowns like Las Vegas and Atlantic City, soon revolutionized the tourist industry.

Post-World War II affluence brought significant changes to the structure and content of the American weekend. Zerubavel added that “while the dominant motif of the weekdays is production, that of the weekend is, in a complementary fashion, consumption. Middle-class Protestant youngsters of the late 1940s and early 1950s could (with the family) attend a movie on Friday evening and fall asleep blissfully secure in the knowledge that two full days of freedom and media-supplied diversion lay ahead. Saturday morning might be spent with a radio, where traditional shows such as *No School Today* or *Let’s Pretend*, were followed by such futuristic 1950s innovations as *Space Patrol*.”

A movie matinee might be on the agenda after lunch, and if this happened to be at a first-run downtown theater, the afternoon might also be taken up with exploring nearby five-and-dime and department stores, where treasures such as comic books and movie magazines could be had for as little as a dime or fifteen cents. Saturday evening might have found the family again attending a movie, probably at one of the less expensive second-run neighborhood houses, or at one of the popular new “drive-in” theaters. Sunday continued with the same “special occasion” mood, but with an euphoria now tempered by the bittersweet awareness that this period of freedom was predestined to come to an end that evening. After religious obligations were honored on Sunday morning—observant Jews of course attended synagogue or temple on Friday evening or Saturday morning—many families indulged in a special midday Sunday dinner, either at home or at a restaurant (perhaps a Howard Johnson’s with its famous twenty-eight flavors of ice cream). Afternoons might be taken up with a Sunday drive or excursion, to the country or an amusement park, or to nowhere in particular. Radio could also occupy much of the afternoon and evening, and a light evening meal was sometimes enjoyed in the living room around the family radio. From the 1950s, when the concept of the frozen “TV dinner” entered the American culinary consciousness, television reserved its key programming for Sunday evenings.

As malls, suburbs, and automobiles became pervasive facts of American life in the 1950s and beyond, the status of the American “downtown” began to decline as a focus of weekend activities. The weekly Friday evening excursion on foot to the modest neighborhood grocery store, brief enough to be followed by a trip to the movies, was

now replaced with an automobile excursion for a full evening at the shopping center or mall. Eventually movie theaters were added to the mall mix, hastening the decay of “downtown” as a space for social interaction. The combination of television and antitrust suits in the 1950s caused movie chains to close their downtown outlets for good, further changing the American experience of the weekend as a time for leisure activity “downtown.” Still, by the 1990s, weekend box-office takes for films had escalated to record highs. Likewise, professional sports events have become more important to the American weekend, and January’s “Superbowl Weekend” has mushroomed into an event of national social and economic significance.

Analyzing the modern concept of the weekend, Witold Rybczynski wrote: “. . . the weekend has imposed a rigid schedule on our free time. The weekly rush to the cottage is hardly leisurely, nor is the compression of various recreational activities into the two-day break. The freedom to do something has become the obligation to do something.” He concludes that “every culture chooses a different structure for its work and leisure, and in doing so makes a profound statement about itself.” The weekend “reflects the many unresolved contradictions in modern attitudes towards leisure. We want the freedom to be leisurely, but we want it regularly, every week, like clockwork. There is something mechanical about this oscillation, which creates a sense of obligation that interferes with leisure. Do we work for leisure, or the other way around? Unsure of the answer we have decided to keep the two separate.”

An interesting comment on the American view of weekend escape can be found in one of Walt Disney’s Goofy cartoons, *Father’s Weekend* (1953). After an exhausting weekend of battling crowded beaches and harrowing amusement parks, coping with screaming, tireless offspring, and fighting massive traffic gridlock at the end of it all, Goofy is finally seen blissfully setting off for work on Monday morning as voiceover narration declares, with obvious irony, that the harried Everyman may now finally relax again and rest up for another strenuous weekend of leisure.

## Weird Tales

J. C. Henneberger founded the American pulp magazine to cover the field of “Poe-Machen Shudders” in 1923. It followed the success of titles by Rural Publications, which appeared in a variety of genres, notably *College Humour* and *Magazine of Fun*. *Weird Tales* was in

publication until 1954 and was most successful during the 1930s under the editorship of Farnsworth Wright. During this period it published fiction by influential fantasy and horror writers, H. P. Lovecraft, Robert Howard, Clark Ashton Smith, C. L. Moore, Edmond Hamilton, Robert Bloch, Manly Wade Wellman, and August Derleth.

Henneberger identified that there were quality writers who were unable to place their stories in the mixed-genre magazines of the early 1920s and presumed that there was an audience for stories that were weird and macabre. He established the character of the magazine through a policy of reprinting “weird” classics, such as Bulwer Lytton’s “The Haunted and the Haunters,” Edgar Allan Poe’s “The Murders in the Rue Morgue,” and a later series of Mary Shelley’s *Frankenstein*.

*Weird Tales* did not immediately attract a regular readership. In its first year Henneberger employed Harry Houdini as a writer, which resulted in the column “Ask Houdini” and the publication of stories (ghost-written by H. P. Lovecraft) about supposed occurrences in Houdini’s life. These adventures further established a fascination with Egypt, magic, and the supernatural. The oriental tales by Frank Owen and Seabury Quinn’s long-running psychic detective series “Jules de Grandin” even furthered the magazine’s popularity. Although it is notable that right from the first issue some of the bizarre events of the horror stories were explained in a rational scientific manner, the magazine achieved notoriety early on in its publishing history as it was allegedly banned from bookstalls in 1924 because it carried C. M. Eddy’s “The Loved Dead” with its overtones of necrophilia.

After Farnsworth Wright and the Popular Fiction Publishing Co. took over from Henneberger in 1924, the magazine offered stories in the range of weird scientific, horror, sword and sorcery, exotic adventure, and fantasy, and it maintained an audience even during the Great Depression. The magazine was especially congenial for new writers. Robert E. Howard published his first story in *Weird Tales* in 1925 and went on to publish the “Conan the Barbarian” series between 1932 and 1936. H. P. Lovecraft first appeared in the readers’ letters column, “The Eyrie,” commenting on stories from previous issues. He published most of his major works, especially those developing the Cthulhu Mythos, in *Weird Tales*. Other writers who were particularly influenced by Lovecraft also wrote for the magazine. These included Robert Bloch, who would go on to write *Psycho* in 1959; Henry Kuttner, who with his wife C. L. Moore would become prominent fantasy writers in the 1940s; and August Derleth, who, as well as being a writer, became an influential anthologist and founded the publishing company Arkham House.

Some of the fiction published in *Weird Tales* was known for its relatively sophisticated sexual themes. C. L. Moore’s first short story, “Shambleau,” is a good example. She also published a fantasy series with the heroine “Jirel of Joiry” with the magazine. Along with Clark Ashton Smith, Moore contributed to the magazine’s fascination with a medieval setting and sword and sorcery theme, as well as its acceptance of interplanetary locations.

The magazine’s horror fiction tended to portray science as being out of control and subject to various representations of the mad scientist. It provided a niche for developing science fiction writers such as Edmond Hamilton, who was influential in the development of “space opera.” His series “Interstellar Patrol” was published in *Weird Tales* from 1928 to 1930.

In the late 1930s the magazine changed its overall style with the deaths of Howard (1936) and Lovecraft (1937), the retirement of Ashton Smith in 1936, and Farnsworth’s relinquishment of the

editorship in 1939 (he had been struggling with Parkinson's disease since 1921). The editorship was then taken over by Dorothy McIlwriath, an established magazine editor who stayed with *Weird Tales* until the publishing company went bankrupt in September 1954. Her editorial policy focused on supernatural fiction, especially occult detection such as Manly Wade Wellman's "Judge Pursuivant" series published between 1938 and 1941. She also featured the work of Ray Bradbury and Fritz Leiber, but during this time *Weird Tales* was competing with a larger number of available outlets for fantasy writing. However, the pulp magazine's 31 years in publication and 279 issues were very significant in supporting the careers of many initially underrated popular fiction writers.

## Weissmuller, Johnny (1904?-1984)

Although he first achieved fame as a free-style swimmer who won five Olympic gold medals and set 67 world records, Johnny Weissmuller is best known for his film role as Tarzan, King of the Jungle, who had been abandoned in the African wild as an orphaned infant and raised by apes. Weissmuller starred in twelve *Tarzan* films between 1932 and 1948.

The *Tarzan* series, written by Edgar Rice Burroughs, became widely popular from the first book, *Tarzan of the Apes* (1914). More than 25 million copies of Burroughs' books sold worldwide as the public embraced the stories of an English nobleman's son who grew up to be the King of the Jungle. Weissmuller added to the popularity—and added to his own wealth—when his first *Tarzan* movie, *Tarzan of the Apes*, was released, leading to spinoffs such as *Tarzan* radio programs and comic strips. The films co-starred Maureen O'Sullivan as Jane and featured a combination of naive love interest with plenty of action, interspersed with the comic relief supplied by Cheetah the chimp.

The facts concerning Weissmuller's birth are the subject of some dispute. Official Olympics sources say he was born in Windber, Pennsylvania, on June 2, 1904, but there is credible evidence that he was born at Freidorf, near Timisoara, Romania, and emigrated with his parents to the United States as a young child. It is believed by biographer David Fury and others that Weissmuller's parents later switched his identity with that of his American-born brother in order to qualify him for the U.S. Olympic team. He attended school in Chicago through the eighth grade. His ability as an athlete led to his being trained in swimming as a teenager by the Illinois Athletic Club in Chicago. In the 1920s Weissmuller participated as a member of several of the club's championship teams in relay and water polo events. He won 26 national championships in individual freestyle swimming in the 1920s in various events, including the 100 meters,

Johnny Weissmuller as Tarzan.

200 meters, 400 meters, and 800 meters, where he demonstrated his speed as well as stamina. At the 1924 Olympic Games in Paris he broke three world records while winning three gold medals in the 100-meter and 400-meter freestyle and in the 800-meter relay. In the Olympic Games in Amsterdam in 1928 he added two more gold medals for the 100-meter freestyle and the 800-meter relay. When he turned professional in 1929, Weissmuller was unchallenged as the world's finest swimmer. His sports fame led to the production of several short films showing his aquatic prowess, bringing him to the attention of MGM, the studio that offered him the *Tarzan* role.

More than a dozen actors had played the part of *Tarzan* in silent films as well as talkies, including Buster Crabbe, Glen Morris, Lex Barker, Gordon Scott, and Jock Mahoney, but the public considered them mere pretenders. No one else possessed the athleticism to skim through the alligator-filled rivers doing the Australian Crawl or swing on a vine through the trees yelling his high-pitched, chest-thumping call. Of the twelve *Tarzan* films Weissmuller starred in, the most popular were the ones that included Maureen O'Sullivan as Jane. After making a hit in *Tarzan of the Apes* (1932), the couple continued to win fans in *Tarzan and His Mate* (1934), considered by many to be the best of the series; *Tarzan Escapes* (1936); *Tarzan Finds a Son* (1939); *Tarzan's Secret Treasure* (1941); and *Tarzan's New York Adventure* (1942).

In the late 1940s and 1950s Weissmuller moved over to Columbia Pictures for a series of movies with African settings in which he played Jungle Jim. These films were shot with low budgets as the lesser ends of double features. A British film critic, writing in *The Monthly Film Bulletin* about the film *Jungle Moon Men*, was

incensed: "This is a preposterous and in some respects a rather distasteful film, which insults the intelligence of the most tolerant spectator."

Weissmuller was married and divorced five times. His third wife (from 1933 to 1938) was Lupe Velez, a star of silent films who played in "B" movies and in early talkies as a tempestuous character known as "the Mexican Spitfire." After his retirement from his swimming and film careers, Weissmuller returned to Chicago, where he opened a swimming pool company. He moved to Florida in the 1960s, serving as the curator of the Swimming Pool Hall of Fame in Fort Lauderdale. In 1973, he became a "greeter" for Caesar's Palace Hotel in Las Vegas; a few years later he was hospitalized due to a stroke and died in 1984.

## Welcome Back, Kotter

A popular ABC-TV sitcom from 1975 to 1979, *Welcome Back, Kotter* featured Gabriel Kaplan in the title role of Gabriel Kotter, a teacher who returns to his alma mater, Brooklyn's fictional James Buchanan High School, to instruct a bunch of remedial students known as the Sweathogs. Kaplan, who created the show with Alan Sacks, based *Welcome Back, Kotter* on his own real-life experiences in the Bensonhurst section of Brooklyn, where he had himself been branded an "unteachable" student until inspired by a teacher named Miss Shepherd. Comedienne Janeane Garofalo once expressed relief that *Welcome Back, Kotter* was the fashion arbiter in her youth instead of *Beverly Hills 90210* with its designer duds, because it was easier to live up to *Kotter's* image of frizzy-haired students dressed in flared jeans and army jackets.

The Sweathogs were tough and streetwise, although their worst insult amounted to "Up your nose with a rubber hose!" Kotter was hip to all of their tricks, having pulled them all himself a decade earlier. Yet, he was also still a rebel, flouting conventions and using humor in order to get his struggling students to learn something. Kaplan, a standup comedian with a bushy mustache and a perpetual smirk, incorporated some of his material, sometimes awkwardly, into the beginning and end of the episodes, but seemed a little less at ease as an actor carrying a sitcom. Luckily the Sweathogs picked up the slack.

The four main Sweathogs were Freddie "Boom Boom" Washington (Lawrence Hilton-Jacobs), a smooth African American who

John Travolta listens to Gabe Kaplan in a scene from *Welcome Back, Kotter*.

called his teacher "Mr. Kot-TAIR"; Juan Epstein (Robert Hegyes), a Puerto Rican Jew who was always bringing in fake excuse notes from home and signing them "Epstein's mother," and whose delivery resembled that of Chico Marx; Arnold Horshack (Ron Palillo), a braying geek who screamed "Oh! Oh Oh!" when he raised his hand and snorted when he laughed; and Vinnie Barbarino (John Travolta), the hunky dim-witted leader of the group. Other regulars included Kotter's wife Julie (Marcia Strassman), who had twins Robin and Rachel in 1977, and Kotter's nemesis, snotty vice-principal Mr. Woodman (John Sylvester White).

A typical plot from early in the series: Washington, whose signature phrase was an ultra-slick "Hi there," makes the varsity basketball team and decides he doesn't need to study anymore. Mr. Kotter confronts the class and the basketball coach, and threatens to fail Washington. In the end, Kotter teaches everyone about the importance of balancing education and sports.

Vinnie Barbarino proved the breakout role for Travolta, who soon launched his film career with *Saturday Night Fever*, in 1977 and *Grease* in 1978. By that year, he was rarely seen on *Kotter*, and was billed as a "special guest star." The year 1979 marked the final season for *Welcome Back, Kotter*. That year, Kaplan chose to sit out many of the episodes due to creative differences with ABC, and he

was rarely seen on television after that. The fact that Travolta was also making fewer appearances prompted the network to move the show around to less desirable time slots, and to promote the show less vigorously. A slick southerner, Beau De Labarre, played by Stephen Shortridge, was brought in to replace the hunk void left by Travolta. Other character changes included the arrival—and quick departure—of Angie, the first female Sweathog, and the promotion of Kotter to vice principal and Woodman to principal.

*Welcome Back, Kotter* was used as a launching pad for other performers besides Travolta, though he is the only one for whom it really worked. A spinoff was attempted for the Horshack character and his family, but was soon aborted. There was also the short-lived *Mr. T. & Tina*, based on another original *Kotter* character, which starred Pat Morita as a madcap Japanese inventor who moves his family from Tokyo to Chicago.

The show's hit theme song, "Welcome Back," was composed and performed by John Sebastian, late performer of the Lovin' Spoonful. An FM radio staple in the 1970s, the song was later used to sell cold cuts and fast food. *Welcome Back, Kotter* enjoyed a revival on *Nick at Nite* in the mid-1990s.

## Welk, Lawrence (1903-1992)

For three decades, Saturday night belonged to Lawrence Welk. The bandleader's program debuted on ABC in 1955 and quickly became an even more wholesome alternative to *The Ed Sullivan Show*. Despite breaking little artistic ground, *The Lawrence Welk Show* remained on the air for 27 years, making it the longest-running prime-time music program in television history. Welk's program highlighted conservative American values and was decidedly anti-hip, but retained a following into the 1990s, when reruns of the show made it one of PBS's most popular programs.

Though he would one day become the country's second most wealthy performer behind Bob Hope, Welk never forgot his poor beginnings in North Dakota as one of Ludwig and Christina Welk's eight children. His family's pre-Depression struggles were always with him and were partly responsible for his fierce loyalty to his band. His refusal to tip at restaurants could also be traced to his early struggles; instead of leaving money Welk would hand out penknives inscribed with his name. Work is what Welk knew, dropping out of school by the fourth grade to put time in on the family farm.

He learned to play music, starting on violin and graduating to his father's accordion. At 21, Welk left home to make his way in the

music business. He had a brush with jazz history when, on an early recording session, he worked in the studio being shared by Louis Armstrong. But Welk never recorded hot jazz or the innovative big band style of Duke Ellington or Count Basie. He stumbled through much of the 1930s. One night in Dallas, South Dakota, his band even walked out on him, believing Welk would never make it as a leader. But by 1951, TV KTLA Channel 5 in Santa Monica began to broadcast Welk's band. Four years later, not long after his 52nd birthday, ABC added the show to its lineup. Welk's signature phrases—"ah-one and ah-two" and "wunnerful, wunnerful"—took hold.

Welk's successful formula called for short, tight musical and dance numbers and for songs people knew. Welk insisted that his show would "Keep it simple, so the audience can feel like they can do it too." In addition to Welk's band and the regular singers and dancers, *The Lawrence Welk Show* had many headliners: the Lennon Sisters, Joe Feeney, Norma Zimmer. But no star was bigger than the bandleader, whose Eastern European accent and humble nature endeared him to millions. Even though he had recorded for years, Welk rarely played on the show. Instead, his band featured a better accordionist, Myren Floren.

Welk's program maintained the clean-cut stability of the Eisenhower era even as the popularity of rock 'n' roll ruined many big bands in the 1950s and the country churned with the turmoil of the 1960s. As musical styles and tastes changed, Welk remained loyal to soft standards, or champagne jazz. He justified his decision by noting that "Champagne music puts the girl back in the boy's arms—where she belongs." Welk also refused to incorporate the new styles associated with the beatnik poets or play any jazz or rock 'n' roll, even when the network and his band members made suggestions. Welk didn't apologize for his tastes or opinions. He didn't like rock 'n' roll and didn't relate to the hippie culture. "It was always hard for me, for example, to understand the fad for patched-up jeans," he wrote in *Ah-One, Ah-Two*. "When I was a boy I had to wear them, much to my shame and embarrassment, and one of my earliest ambitions was to own a brand-new suit of clothes all my own." Because of Welk's clear vision of his show, *The Lawrence Welk Show* remained a snapshot of a happy, booming Middle America, frozen in a waltz and a smile.

Welk positioned himself as the conservative patriarch of his musical family. Women of all ages were his "girls," the players his "kids." Welk could be unforgiving when it came to his "kids." In 1959, at a time when Hugh Hefner's *Playboy* magazine was bringing sex into the forefront of mainstream culture, Welk fired Alice Lon, one of the popular Champagne ladies, when she flashed too much skin on camera. A few years later, in response to letters of protest, Welk gave the Lennon Sisters an earful after they wore one-piece bathing suits for a scene taped by a swimming pool and forbade the girls from wearing such things again on camera. For the band members, Welk's familial philosophy worked both ways. Welk felt he couldn't let his band down and retire when, at 68, ABC canceled his show; but he didn't believe his crew should be paid any more than minimum union scale, though they were able to participate in his profit-sharing plan.

*The Lawrence Welk Show* was popular through the 1960s, but in 1971, ABC dropped it, concerned that a program sponsored by Geritol and Somnifex couldn't appeal to the young, advertiser-friendly audience craved by marketing executives. Nearing 70, Welk took the news hard, as if he had failed his first audition. "I felt just about as bad as a man can feel," he noted in 1974's *Ah-One, Ah-Two!* Initially deciding to put away his baton, Welk reconsidered when letters of

A musical moment from the *Lawrence Welk Show*.

support poured into his office, more than a million in the end, enough to convince Welk to syndicate the show himself. Eventually more than 250 stations picked up the show, giving the program air-time on more channels than during its ABC years. When Welk brought his show back to the air, he did it his way. In the first show back, Welk made it clear that the bad experience wouldn't effect his style; he wasn't about to pander to that younger audience. The broadcast featured "No, No, Nanette," "Tea for Two," and a group tap dance.

Welk retired in 1982 and last played with his band in 1989, three years before his death. By that time, he had amassed a business empire: a music library which includes all of Jerome Kern's work, resorts in Escondido, California, and Branson, Missouri, and the Welk Group, which includes several record labels. But for all his financial successes, Welk's greatest pleasure seemed to be pleasing an audience. In a 1978 interview with *The Los Angeles Times*, Welk talked of playing an impromptu show at a school in Macksville, Kansas. "That was the biggest applaud I ever had," he said. "I stayed for a half an hour and played the accordion. That was the highlight of my life."

During the 1990s, the lounge movement embraced everything square: martinis, hipster lingo, and the cocktail jazz of Les Baxter, Juan Garcia Esquivel, and Henry Mancini. The revival didn't include

Welk, however. Unlike these other figures, who were trapped in a particular time and embraced for irony's sake, Welk didn't need to make a comeback. Lawrence Welk never left.

—Geoff Edgers

## Welles, Orson (1915-1985)

Considered by many to be the most influential and innovative filmmaker of the twentieth century, Orson Welles made movies that were ambitious, original, and epic. This alone would qualify him as a popular culture icon. But add to his genius his notorious life history, and Welles becomes a singular legend. Child prodigy at seven, Broadway's boy wonder at 22, radio's enfant terrible at 23, Hollywood's hottest director at 25, husband of sex symbol Rita Hayworth, Hollywood failure at 30, and 40 more years of attempted comebacks, obesity, and maverick films, the life of Orson Welles uniquely embodied the modern era.

Born on May 6, 1915, George Orson Welles, the second son of a successful inventor and his pianist wife, spent his first six years in provincial Kenosha, Wisconsin, before moving to Chicago. Shortly thereafter, his parents separated and Orson's older brother, Richard, was sent to boarding school, leaving Orson alone with his mother Beatrice, who soon commanded one of the city's most popular artistic and literary salons. Surrounded by actors, artists, and musicians and taken to the theatre, symphony, and opera, the boy responded to this cultural deluge by becoming a child prodigy. He learned Shakespeare soliloquies at seven, studied classical piano, and by eight had begun to

write plays. But when his mother died shortly after his ninth birthday, Welles' life drastically changed.

Welles spent two difficult years living with his alcoholic father, who in turn exposed his son to his working-class artist and journalist friends. It was a relief when the 11-year-old was sent to the Todd School for Boys, a rigorous college preparatory academy. There his precocious talents flourished. Welles wrote, directed, and starred in school theatricals and studied painting. During Welles' summer vacations, father and son often traveled together, once taking a steamship as far as Shanghai. But when Dick Welles died suddenly a few months before Orson's 16th birthday, the boy was both distraught and relieved to no longer have to take care of his alcoholic parent.

Six months after his father's death, the gifted 16-year-old graduated from Todd and left for Ireland, planning to study painting. But after drifting around the country for a few months, he arrived in Dublin, where he began to haunt the local theatres. On his first visit to the experimental Gate Theatre, Welles decided to audition, touting himself as one of America's top young actors. Not surprisingly, the young self-promoter was hired and spent the next year learning his craft in the company of some of Ireland's cutting-edge actors and directors.

When he returned to America in 1932, Welles hoped to take Broadway by storm. But New York was singularly unimpressed, and

Orson Welles (center) in the title role of his film *Citizen Kane*.

the 17-year-old sheepishly returned to Chicago. Over the course of the next year and a half, Welles wrote plays, traveled to North Africa, and directed small productions before being hired by theatrical legends Katherine Cornell and Guthrie McClintic to join their Broadway company.

Welles made his Broadway debut at 18, playing Shakespeare and Shaw. A year later, he met the man who would orchestrate his stardom, 33-year-old director/producer John Houseman. Driven by the same high-flown theatrical goals, Houseman and Welles took part in the government-sponsored WPA (Work Projects Administration) Federal Theatre Project, where Welles directed an all-black, voodoo *Macbeth* to rave reviews. The two men soon formed their own repertory company, the Mercury Theatre, and, in 1937, they took Broadway by storm with their production of *Julius Caesar* set in fascist Italy. By age 22, Orson Welles was world famous as Broadway's boy wonder.

The Mercury Theatre soon branched out into hour-long radio broadcasts, the most notorious of which was certainly Welles' 1938 Halloween broadcast of H.G. Wells' *War of the Worlds*, which terrified a nation into truly believing that New Jersey was being invaded by Martians. Hollywood soon came to call. Hoping to exploit the hype around the brilliant enfant terrible, RKO offered Welles \$225,000 to produce, direct, write, and act in two films. With total creative freedom and a percentage of the profits built into the contract, it was an offer Welles could not refuse.

Welles came out to Hollywood with the idea of filming Joseph Conrad's *Heart of Darkness*, but difficulties arose and he decided to work with veteran screenwriter Herman J. Mankiewicz. Together they wrote a brilliant screenplay about an aging media tycoon dying in his Florida mansion. A thinly disguised biography of newspaper magnate William Randolph Hearst, *Citizen Kane* depicted Kane/Hearst as a tyrant who has alienated everyone who loved him. The film tells Kane's story from five different points of view. With 25-year-old Welles directing, producing, and starring in the title role, *Citizen Kane* broke new cinematic ground. As described in Baseline's *Encyclopedia of Film*, its innovations included, "1. composition in depth: the use of extreme deep focus cinematography to connect distant figures in space; 2. complex mise-en-scène, in which the frame overflowed with action and detail; 3. low angle shots that revealed ceilings and made characters, especially Kane, seem simultaneously dominant and trapped; 4. long takes; 5. a fluid, moving camera that expanded the action beyond the frame and increased the importance of off-screen space; and 6. the creative use of sound as a transition device . . . and to create visual metaphors." The film featured a superb cast, which included Joseph Cotten and George Coulouris from the Mercury Theatre as well as Agnes Moorehead, Ruth Warrick, and Everett Sloane.

*Citizen Kane* was lauded by the critics, but ran into trouble at the box office when Hearst refused to carry advertisements for the film in his newspapers and launched a smear campaign. Nominated for nine Academy Awards, Welles' masterpiece was snubbed by the Academy and only won one Oscar—Best Screenplay, shared by Mankiewicz and Welles. *Citizen Kane* has nonetheless come to be regarded as the greatest film ever made, ranking number one on the American Film Institute list of the top 100 movies of all time.

Welles' next film was an adaptation of the Booth Tarkington novel, *The Magnificent Ambersons*. A somewhat more conventional film than *Citizen Kane*, *The Magnificent Ambersons* utilized many of the same experimental techniques to depict turn-of-the-twentieth-century America, but when Welles left the country, RKO edited more

than 40 minutes out of the film. The film proved another commercial failure, losing more than half a million dollars, and Welles would never again be regarded as a bankable director.

Welles married World War II cinematic sex symbol, Rita Hayworth, but despite harnessing her star power to his marvelous 1948 film noir, *The Lady from Shanghai*, his directorial career was on the decline. When his experimental movie of Shakespeare's *Macbeth* failed at the box office a year later, the nails were all but in Welles' Hollywood coffin. He left Hollywood for a self-imposed 10-year exile, returning in 1958 to direct and act in the classic *Touch of Evil* with his frequent co-star Joseph Cotten.

Monica Sullivan has written, "Orson Welles' early years were so spectacular that movie cultists might have preferred that he'd lived fast, died young and left a good-looking corpse." Indeed, although Welles returned to direct a few cinematic gems, it can only be said that his film career was uneven. As he grew older, he also gained weight, becoming a very obese man. Although he appeared on wine commercials and the occasional talk show, Welles became a somewhat tragic figure even as his status as filmmaking legend grew. His final film, *The Other Side of the Wind*, a quasi-autobiographical tale of a famous filmmaker struggling to get his picture financed, remained unfinished. As noted in Baseline's *Encyclopedia of Film*, "As an unseen fragment, it was a sad and ironic end for a filmmaking maverick who set the standards for the modern narrative film and the man who was, in the words of Martin Scorsese, 'responsible for inspiring more people to be film directors than anyone else in the history of the cinema.'" Troubled though the life of Orson Welles may have been—his potential as a director perhaps unfulfilled—his place in the pantheon of popular culture is assured.

## Wells, Kitty (1919—)

Kitty Wells was a demure housewife with three children when she recorded "It Wasn't God Who Made Honky-Tonk Angels," the

**Kitty Wells**

first in a series of records she released during the 1950s that made her country music's first female superstar. Her success demonstrated to the conservative country establishment that women could profitably perform honky-tonk songs about controversial subjects such as infidelity and divorce. Wells became known as "the Queen of Country Music," and the songs she popularized gave listeners a woman's perspective on classic country themes. Her sharp nasal twang blazed a trail that would be followed by other "girl singers," as female country artists were known, including Patsy Cline and Loretta Lynn.

A native of Nashville, Tennessee, Wells was born Muriel Ellen Deason on August 30, 1919, into a family of singers and musicians. As a child, she learned to play the guitar and sang gospel hymns with the church choir. While in her teens, she and her cousin performed on Nashville's WSIX as the Deason Sisters. Wells remembers that the song they chose for their radio debut, "Jealous Hearted Me" by the Carter Family, contained a line that made the station's managers uncomfortable: "It takes the man I love to satisfy my soul." Fearing that the audience might be offended, the girls were cut off in mid-song. Listeners complained, however, and the Deason Sisters were given a short early-morning program.

In 1937, Wells married Johnnie Wright, a cabinetmaker and musician. With Wright's sister Louise, the newlyweds performed on WSIX as Johnnie Wright and the Harmony Girls. By 1939, Wright and his friend Jack Anglin had a new act, Johnnie and Jack and the Tennessee Mountain Boys, while Wells occupied herself with the care of their first child. She made occasional appearances with her husband's group, using a stage name he gave her that came from an old folk song titled "Kitty Wells." World War II dissolved the band,

interrupting their progress for a few years, but by 1947, Johnnie and Jack had reunited and appeared for a brief time on WSM's *Grand Ole Opry*. The following year, they joined a new hillbilly program, *Louisiana Hayride*, on Shreveport's KWKH. By this time, Wells was a permanent part of their show, the girl singer who performed gospel and sentimental folk songs.

Wells had the opportunity to record some of these songs for RCA Victor in 1949, after the label signed Johnnie and Jack. While their records made it onto the *Billboard* charts, with some reaching the Top Ten, hers were barely noticed. Wells remarked, "I think the record distributors were leery of taking them and trying to do anything with them." RCA let her go, and she withdrew from the music industry to focus attention on her family. In the spring of 1952, Paul Cohen of Decca Records suggested she record an answer song—one that responds to or continues the story of a previously released hit record—inspired by Hank Thompson's recent single "The Wild Side of Life." Wells was unenthusiastic about the song, but she agreed to return to the studio. Two months later, "It Wasn't God Who Made Honky-Tonk Angels" was heading for the top of the country charts, and Kitty Wells was poised for stardom.

While "The Wild Side of Life" attacks "honky-tonk angels," implying that women are solely responsible for leading men astray, Wells's song proclaims, "It's a shame that all the blame is on us women," noting that "married men [who] think they're still single" are also at fault. Though written by a man, the song offers a woman's point of view on "cheatin'," a common topic for country songwriters that had heretofore been strictly male territory. Initially, the song's controversial subject matter caused it to be banned by NBC radio and the Opry for being "suggestive." However, fans embraced the record, and it remained on the charts for four months.

Wells's Decca debut was followed by other popular answer songs, as well as songs that became country classics, such as "Release Me" (1954) and "Makin' Believe" (1955). According to Mary A. Bufwack and Robert K. Oermann, authors of *Finding Her Voice: The Saga of Women in Country Music*, Wells's body of work from the 1950s "essentially defin[ed] the postwar female style" in country music. After she achieved success, Wells continued to work package tours with her husband, who was told by Opry veteran Roy Acuff, "Don't ever headline a show with a woman. It won't ever work, because people just don't go for women." Most group shows during this era featured a single female performer, since promoters assumed that audiences would not tolerate more. Despite the prevalence of such prejudice throughout the music industry, Wright broke the rules and gave his wife top billing when they toured together. He also played an important role in her career, serving as her business manager, writing or choosing songs for her to record, and finding musicians for her recording sessions.

Two years after Wells's breakthrough single, the governor of Tennessee paid tribute to her music and her homemaking, calling her "an outstanding wife and mother, in keeping with the finest traditions of Southern womanhood." Although she married Wright shortly after she began her career, she was commonly introduced as "Miss Kitty Wells." As she sang of heartache and sin in a restrained voice, she put forth the public image of a devoted, well-behaved wife in gingham. Wells's popularity may have been largely due to the fact that she personally conformed to the mores of the 1950s, allowing her to dramatize unwholesome situations in her songs.

Wells won numerous awards during the first two decades of her career, and she continued recording into the 1970s. In the early 1980s, she and her husband began operating their own museum outside Nashville, and they continued performing into the late 1990s. Wells is a member of the Country Music Hall of Fame, and she received a Grammy for Lifetime Achievement in 1991.

## Wells, Mary (1943-1992)

Known as the “First Lady of Motown,” singer and songwriter Mary Wells launched Motown into the black with a succession of hits. As a teenager, Wells was the first Motown artist to have a Top Ten and Number One single for the label. She was teamed with songwriter/producer Smokey Robinson, and their synergy produced the right combination of material and approach to show off Wells’s talent to the fullest. During Wells’s tenure with Motown, she had nine hit songs in the R&B category and six more in the pop category.

Mary Esther Wells was born on May 13, 1943 in Detroit and grew up singing gospel music at her uncle’s Baptist church with aspirations to become a songwriter. While in high school, she penned the gospel-inspired “Bye Bye Baby” with singer Jackie Wilson in mind. Songwriter Berry Gordy had written several hits for Wilson and Wells sought out Gordy to listen to her new song. After hearing it, Gordy was convinced that the song wasn’t for Wilson but instead for Wells herself. Gordy signed the seventeen-year-old Wells to his fledgling Motown label. “Bye Bye Baby” climbed to number eight on the *Billboard* R&B chart. Following another hit single, “I Don’t Want to Take a Chance,” Motown placed Wells in the artistic care of Smokey Robinson. Robinson and Wells represented Motown’s first successful teaming of a songwriter/producer with an artist. Robinson encouraged Wells to veer away from the blues- and gospel-inspired songs in favor of the sweet girlish pop style, a natural for her innocent, sincere, and convincing voice.

“You Beat Me to the Punch,” released in September of 1962, quickly climbed to number one on *Billboard*’s R&B chart and crossed over to number nine on the pop chart. Wells was destined to ride the R&B as well as pop charts, and after several more hits including “The One Who Really Loves You” and “Two Lovers,” she recorded “My Guy.” This, her greatest hit, shot to number one on the pop chart. It also was her last big pop hit. She also recorded the duet “What’s the Matter with You Baby” with Marvin Gaye.

When Wells reached twenty-one, she was unsuccessful in renegotiating her contract with Motown and sued the company.

Reportedly, Motown had manipulated her contract so that she received the full percentage of royalties from neither her performances nor her songwriting. Prodded by her husband, former Motown artist Herman Griffin, Wells left Motown and succeeded in getting her contract declared null and void. This proved to be a disastrous move for her career, since she never was able to regain the success she had enjoyed with Motown and songwriter/producer Robinson. Wells signed with 20th Century-Fox Records, which was a profitable arrangement, then with Atlantic/Atco, Jubilee, Reprise, and Epic.

Wells’s professional career as well as her personal life seemed to slowly disintegrate. Her marriage to Griffin ended in divorce and she married Cecil Womack, a relationship that also ended in divorce. Wells then shocked many by marrying Cecil’s brother Curtis. She continued to perform her old hits until she was diagnosed with throat cancer in 1991. With no medical insurance, evicted from her residence, and placed in a charity ward, Wells was destitute. The Rhythm and Blues Foundation came to her assistance by setting up a Mary Wells Fund. Several well-known artists contributed to the fund, including Bruce Springsteen, Rod Stewart, Mary Wilson, as well as Motown entrepreneur Berry Gordy. Wells had a choice to have a laryngectomy or radiation. She chose the latter, but the treatment was unsuccessful. Wells died on July 26, 1992.

## Wertham, Fredric (1895-1981)

Although Fredric Wertham is remembered primarily as the author of *Seduction of the Innocent* (1954), an incisive, blistering attack on the violence and horror purveyed by the comic book industry, his research took him through this era of crime comics to the culture that violent movies and television created. In 1966 Wertham wrote: “Television represents one of the greatest technological advances and is an entirely new, potent method of communication. Unfortunately as it is presently used, it does have something in common with crime comic books: the devotion to violence. In the School for Violence, television represents the classic course.” The climate of violence developing since this observation has, if anything, increased with the emergence of new technologies, like the Internet and videos, and become more noxious in the late 1990s. Competition for audience share, demand for advertising revenue, and misguided applications of constitutional rights have all encouraged aggressive displays of violent behavior to be broadcast. Though originally derided, Wertham’s observations that the grammar of violence and its impact on the culture constitutes a public health issue have been sustained by the research of Leonard Eron, George Gerbner, and Albert Bandura. Nevertheless, Wertham was not a Luddite, opposed to technological advances, but a physician of wide and deeply humane interests, an advocate of social reform, and a defender of civil liberties.

Born 20 March 1895 in Nuremberg, Germany, Fredric Wertham was one of five children of Sigmund and Mathilde Wertheimer, non-religious, assimilated middle-class Jews. As a young man on the eve of the World War I, Wertham spent several summers in England where he found the environment there open and relaxed, a stark contrast to the rigid, disciplined, and intellectually pedantic German culture at home. During this period he explored Fabian socialism, the writings of Karl Marx, and, more importantly, became an avid reader of Charles Dickens' writings on social reform. When war broke out in 1914, Wertham, pursuing medical studies at King's College, London University, found himself stranded in England and, as a German national, was for a short time interned in a prison camp near Wakefield, then paroled. An admirer of British society, Wertham remained in England during the war, reading medicine and literature. After the war he continued his studies at the Universities of Erlangen and Munich, obtaining his M.D. degree from the University of Wurzburg in 1921. Paris and Vienna were additional venues of postgraduate study before he joined Emile Kraepelin's clinic in Munich.

Wertham left Germany in 1922 to work with Kraepelin's protege Alfred Meyer at the Phipps Psychiatric Clinic at Johns Hopkins in Baltimore. During his years at Johns Hopkins, Wertham established a friendship with H. L. Mencken and worked with Clarence Darrow, becoming one of the first psychiatrists willing to testify on behalf of indigent black defendants. It was also during this period that he met and married Florence Hesketh, an artist doing biological research as a Charleton Fellow in Medicine at Johns Hopkins. Hesketh drew all the cell plate illustrations for *The Brain as an Organ: Its Postmortem Study and Interpretation* (1934), for which Wertham received the first psychiatric grant made by the National Research Council. In addition, Wertham published the first study on the effects of mescaline and did pioneer work on insulin use in psychotherapy. He developed the mosaic test in which a patient manipulated small multicolored pieces of wood into a freely chosen design, which was evaluated for what it revealed about the patient's ego. Wertham's diagnostic technique was often used in conjunction with paintings by patients, such as the watercolors done by Zelda Fitzgerald when she was under treatment at the Phipps Clinic.

During the 1930s Wertham's expertise as a forensic psychiatrist became known to the general public. His involvement in a number of spectacular murder cases, which he discussed in *Dark Legend: A Study in Murder* (1941) and *The Show of Violence* (1948), led him to advocate the duty of a psychiatrist to bring the psychiatric background of murder into the relationship with the law and the society it represents. Wertham's support for an intelligent use of the McNaughton's rule determining legal insanity, his understanding of how environmental forces shape individual responses, and his argument that violence and murder are diseases of society all persuaded him that violence is not innate, and so could be prevented.

*Dark Legend* investigates the story of Gino, a seventeen-year-old Italian-American who, commanded by the ghost of his dead father, murdered his promiscuous mother. Wertham's compelling narrative of his patient draws upon the myth of Orestes and the legend of Hamlet to explore matricide. The incisive analysis of matricide set out in *Dark Legend* prompted Ernest Jones to remark, "Freud and I both underestimated the importance of the mother problem in Hamlet. You have made a real contribution." *Dark Legend* is significant because it ties an actual murder case to important psychological types

in literature and supports a shift in an understanding of patriarchy among American psychiatrists.

In *The Show of Violence* Wertham explains for the layman his theory of the Catathymic Crisis, where "a violent act—against another person or against oneself—provides the only solution to profound emotional conflict whose real nature remains below the threshold of the consciousness of the patient." He discusses his own role in several celebrated murder cases, including the pathetic Madeline, a young mother who killed her two children and then failed in her suicide attempt; the notorious child-murderer Albert Fish; the "mad sculptor" Robert Irwin; and the professional gunman Martin Lavin. In each case Wertham probes the social background, the medical history, the political implications, and the legal response to uncover the effect societal forces had in the creation of the impulse to murder.

In 1932 Wertham moved to New York City where he became a senior psychiatrist at Bellevue and organized for the Court of General Sessions the nation's first clinic providing a psychiatric screening for every convicted felon. Wertham became director of psychiatric services at Queens Hospital Center in 1940 and pioneered a clinic for sex offenders, The Quaker Emergency Service Readjustment Center, in 1947. With the encouragement of Earl Brown, Paul Robeson, Richard Wright, and Ralph Ellison, Wertham enlisted a multi-racial, volunteer staff to establish in Harlem in 1946 a clinic dedicated to alleviating the "free-floating hostility" afflicting many in that community, and to understanding the realities of black life in America. Named in memory of Karl Marx's son-in-law, Dr. Paul Lefargue, the Lafargue Clinic became one of the most noteworthy institutions to serve poor Americans and to promote the cause of civil rights.

In order to prepare for discrimination cases in Delaware, attorneys Louis Redding, Jack Greenberg, and Thurgood Marshall needed medical testimony on the harm segregation caused children. Wertham's studies showed that the practice of racial separation "creates a mental health problem in many Negro children with a resulting impediment in their educational progress." Wertham's testimony was significant because his research was the first to examine both black and white children attending segregated schools. The evidence revealed the possibility that white children, too, may be harmed by school segregation. The Delaware cases became part of the legal argument used in the landmark school desegregation case, *Brown v. Board of Education of Topeka* (1954).

In addition to bringing psychotherapy to a neglected community, Wertham's work at the Lafargue Clinic led to the developments of his later ideas on the contribution horror and crime comic books made to a climate of juvenile violence. In 1948 Wertham organized the first symposium dealing with media violence at the New York Academy of Medicine. Not only did Wertham identify media-induced violence as a public health issue, but he also challenged "psychotherapy to overcome its own claustrophilia and take an interest in the social forces that bear on an individual." This research attracted widespread national attention, opening additional *fora* for Wertham to publicize his studies on the enigma of preventable violence. The quest to understand and prevent violence—the core of Wertham's psychiatric practice—shaped his thinking on how the mass media create a climate that both encourages and legitimizes violent anti-social acts.

In the 1950s America faced two primary fears: communism and juvenile delinquency. The axis on which these two met found Wertham, whose studies probed the social dynamics that permitted

the development of these fears and the underlying violence that inflamed their intensity. Attorney Emanuel Bloch believed that Wertham might be willing to appear for the defense in the espionage trial of Ethel Rosenberg and her husband Julius. Convicted as members of a conspiracy to send stolen atomic-bomb secrets to Russia, the Rosenbergs nevertheless maintained their innocence and averred that they were victims of a United States government frame-up. Political passions, fears of the “Red Menace,” and charges of treason and betrayal swirled at the time against a backdrop the Korean War and Soviet activity in Eastern Europe. Such circumstances persuaded many prominent individuals to keep a low profile in order not to be tainted by helping the Rosenbergs.

Although the court absolutely refused to allow Wertham direct access to Ethel Rosenberg, it gave him permission to testify in federal court under oath about her mental condition. Not only did this order deny Rosenberg due process, it created the paradoxical situation of permitting Wertham to testify about the mental condition of a patient whom he was not allowed to examine. Using Bloch as an intermediary and relying on second-hand information, Wertham not only accepted these limitations, but also braved a vicious and often improper cross-examination. Nevertheless, his understanding of the condition “prison psychosis” and his humanitarian concern for Rosenberg’s health made his testimony compelling. Within a few days Washington reversed itself and moved Julius Rosenberg to Sing Sing where husband and wife would be allowed to visit each other regularly. Moreover, Wertham was brought in to deal with the Rosenberg children, Michael and Robert, whom he advised and whose adoption by the Meeropol family he helped to make successful.

It was precisely Wertham’s reputation for fearlessness and integrity that encouraged Senator Estes Kefauver to appoint him sole psychiatric consultant to the Senate Subcommittee for the Study of Organized Crime (1950). Not only did Wertham bring his expertise as a forensic psychiatrist to Kefauver’s committee, but his experience in dealing with New York crime and governmental institutions made his observations particularly trenchant. The role organized crime played in American society was one that engendered fear, revulsion, cynicism, respect, and even admiration, especially for the way in which violent crime could be of service to politics. These televised hearings drew national attention, revealing the influence television had in shaping public opinion, and set the stage for the Senate Subcommittee to Investigate Juvenile Delinquency (1953-1956), which explored how juvenile delinquency led to adult crime.

A major theme of the investigation into juvenile delinquency was the impact the mass media exerted on youth and on a separate emerging youth culture. Wertham, who had published a series of articles and given lectures describing his research on the unhealthful effects of mass media violence, decided his work merited a book-length study aimed at the general public. In *Seduction of the Innocent* (1954) Wertham sets out his argument on the connection between the rise of juvenile delinquency and the role of crime comic books in promoting violent activity. The brutal and sadistic activity in these comics created a culture of violence and a coarsening of society. Such comic books routinely featured mutilation, gore, branding, blinding—so prominent as to receive its own classification of “eye-motif”—racism, bigotry, and especially, crude, sexual exploitation of women. Wertham testified that these comics, so attractive and easily available to children, exploited them and harmed their development; he concluded that access to violent comics for children under

fourteen years of age must be controlled. Although Wertham was maligned as a censor—a charge he vigorously denied—his work did stimulate the comic book industry to adopt a code labeling the suitability of each comic book published (The Code of the Comics Magazine Association of America, October 26, 1954).

Wertham’s studies on juvenile delinquency led him to probe deeper into the role various media play in creating, perpetuating, and distorting the social problems of teenagers. Not only comic books but also mass news publications, television, and the movies influenced behavior and distorted perceptions of teenagers and different ethnic groups. In *The Circle of Guilt* (1956) Wertham discovers the truth behind the death of “model boy” Billy Blankenship, murdered allegedly without provocation by Puerto Rican “hoodlum” Frank Santana in a New York City street fight. The paradigm of fear, racism, distrust, and prejudice many New Yorkers held conveniently fit Santana. Wertham, whose intuition told him that the case presented by the press reflected cultural prejudice rather than an understanding of the violent circumstances, agreed to investigate. He discovered that Blankenship was active in teenage gang activities and that Santana had an undeveloped personality, one lacking in hostility, anger, or resentment. Despite Wertham’s testimony, the court handed down a harsh sentence of 25 years to life for second degree murder. His outrage at this sentence and at the prevailing climate of violence and prejudice compelled Wertham to write *The Circle of Guilt*, which exposes both failure and hypocrisy on the part of the legal system in complicity with the social service establishment. More importantly, this book reflects the violence afflicting society and the refusal to confront its own insidious cultural stereotyping.

In 1966 Wertham published his major study on human violence, *A Sign for Cain: An Exploration of Human Violence*. To answer the paradoxical question: “Can we abolish violence without violence?” Wertham probed “why violence is becoming more entrenched in our society” than many believe, and argued that if we are willing, it is within our capacity “to conquer and to abolish it.” Essentially a sociological history of violence in Western culture, *A Sign for Cain* focuses on the effects of mass media exposure on the virulence of political tyrannies in this century, on the emergence of the legal and medical legitimization of violence, and on the willing acceptance of the value of violence.

Wertham’s thinking on the nature of violence provokes controversy among social theorists who interpret scientific data in ways to explain away anti-social behavior. Although such theorists admit the existence of cultural shaping, they argue that an instinctive drive for aggression is present at birth. The widespread acceptance of this idea of “an inborn biologically fixed instinct of violence in man,” Wertham argues is “a theory that creates an entirely false and nihilistic destructive image of man.” Violence may be the result of “negative factors in the personality and in the social medium where the growth of personality takes place.” Indeed, Wertham avers that “the primary natural tendency [of man is] to maintain and care for the intactness and integrity of others. Man does not have an ‘instinct’ of violence; he has the *capacity* and the physiological apparatus for violence.” To Wertham, man has survived as a species not because of an instinct for violence but because people value cooperation.

His interest in youth and how communication by the young shapes the culture led Wertham to publish his last book, *The World of Fanzines: A Special Form of Communication* (1973). Arguing that

fanzines—magazines created by fans of fantasy and science fiction—are a revealing form of communication because they are “free from outside interference, without control or manipulation from above, without *censorship*, visible or invisible,” Wertham sees them as not just a product of our society but a reaction to it. Fanzines show the capacity of the individual fan to reshape violent material in a socially useful way. The paraculture that is the world of fanzines contains patterns of fantasy, art, and literature manifesting healthy creativity, independence, and social responsibility. The fan-produced magazine expresses a genuine voice wanting to be heard, defying the overpowering roar of the mass media. Since fanzine artists and writers stress the role of heroes who have “cleared their minds of cant,” Wertham sees in the integrity of heroes and super-heroes “a message for our unheroic age.”

The last years of Fredric Wertham’s life were spent at his beloved Blue Hills, a former Pennsylvania Dutch farm near the Hawk Mountain Bird Sanctuary at Kempton. He died November 18, 1981.

## West, Jerry (1938—)

One of the greatest guards ever to play in the National Basketball Association, Jerry West (“Mr. Clutch”) was an All-Star player during his NBA career in the 1960s and early 1970s and later served as head coach and general manager of the Los Angeles Lakers, one of

Jerry West, in mid-air.

the predominant cage teams of the 1980s. West’s likeness has since become an icon to basketball fans and the general public as the silhouetted figure in the NBA’s logo.

West might be described as an atypical basketball player. He weighed 185 pounds, and his 39-inch arms prompted some observers to comment on his ostrich-like appearance, but his competitive intensity and knack for sinking the last-second shot helped him overcome these deficiencies, earning for him his lifelong nickname, Mr. Clutch. A two-time All-American at the University of West Virginia, West later won a gold medal with the 1960 U.S. Olympic basketball team. He joined the Los Angeles Lakers the same year that another dynamic guard, Oscar Robertson, entered the NBA with the Milwaukee Bucks. During the 1960s the two men would emerge as the best shooters in basketball.

West averaged 27 points per game and made the All-Star team every year he played. Four times he averaged more than 30 points a season. He saved his best work for the post-season, averaging 29.1 points in 153 playoff contests and winning or tying numerous games with critical buzzer-beating baskets. Yet, the man who came to symbolize his sport spent much of his career beating back a reputation as a hard-luck player. Six times, West led the Lakers to the NBA finals, only to lose to the Boston Celtics. Finally, in 1972, the team broke through, defeating the New York Knicks in the championship round. “The albatross around my neck,” as West called the title drought, was lifted.

A pulled stomach muscle forced West to cut short his playing career in 1974. After a brief and unhappy retirement, he returned to

the arena as Lakers head coach from 1976 to 1979. Despite some success, he clashed repeatedly with team owner Jack Kent Cooke and stepped out from behind the bench forever. New owner Jerry Buss convinced him to assume the post of general manager in 1982.

At the time, the Lakers were one of the NBA's premier teams. Star players Earvin "Magic" Johnson and Kareem Abdul-Jabbar led a potent offense, and head coach Pat Riley lent a Hollywood sheen to the proceedings with his slicked-back hair and expensive suits. Celebrities and swells flocked to the \$350 courtside seats at the Lakers' home gym, dubbed "The Fabulous Forum." As general manager, West developed a reputation as the league's most astute evaluator of talent. On numerous occasions, he selected unheralded prospects from obscure colleges who quickly blossomed into productive NBA players. As one longtime friend of West's observed, "He's the only guy I know who went into oil for a tax loss and struck a gusher."

Under West, the Lakers grew into an NBA powerhouse. They won championships for him in 1982, 1985, 1987, and 1988, and challenged for league supremacy every other year in the decade. The team's up-tempo style of play, dubbed "Showtime," proved an enormously popular marketing angle for the NBA worldwide. While the rivalry between the Boston Celtics' Larry Bird and the Lakers' own Magic Johnson has been widely credited with reviving public interest in professional basketball, it would be no exaggeration to say that Jerry West's careful nurturing of the Laker dynasty also contributed to that resurgence.

## West, Mae (1893-1980)

Writer, stage performer, screen actress, and nightclub entertainer Mae West emerged, a ray of light during the Great Depression, as a uniquely independent, outspoken, flamboyant, and humorously erotic woman. She achieved legendary status in American show business folklore and won a wide international following. Rarely has a show business personality left so indelible a mark on American popular culture, influencing the laws of film censorship, and bequeathing a series of outrageous ripostes and innuendoes to the language—most famously, "Come up and see me sometime"—that were still used at the end of the twentieth century. During World War II, allied troops honored her hourglass figure by calling their inflatable life jackets "Mae Wests." Learning of this new meaning to her name, she commented: "I've been in Who's Who, and I know what's what, but it's the first time I've been in a Dictionary."

She began her stage career early, making her debut with Hal Clarendon's theatrical company in her home town of Brooklyn in 1901. There she played such well-known juvenile roles as Little Eva, Little Willie, and even Little Lord Fauntleroy. By 1907, at the age of

Mae West

14, she was a performer on the national vaudeville circuits with Frank Wallace, and in 1911 appeared as an acrobatic dancer and singer in the Broadway revue *A la Broadway and Hello, Paris*. She then began writing, producing, directing, and starring in her own plays on Broadway. Her first play, *Sex* (1926), starred Mae as Margie La Monte, a golden-hearted prostitute who wanders the wharves. The play ran for 37 performances and ended when Mae was jailed for ten days for obscenity and corruption of public morals. The publicity made her a national figure and added to the box-office success of her later plays, *Diamond Lil* (1928) and *The Constant Sinner* (1931).

A buxom blonde with a feline purr, imported to Hollywood from Broadway, Mae's film career flourished from 1932 to 1940. She wrote the screenplays for all but the first of her nine films during this period, and delivered her suggestive, sex-parodying lines to a variety of leading men from Cary Grant to W.C. Fields. Paramount offered her the unheard-of sum of \$5,000 for a minor role in her debut film, *Night After Night* (1932), and Mae, with her vampy posturing and sexual innuendo, stole the show. The film's star, George Raft, said later, "In this picture, Mae West stole everything but the camera." Her entrance in this first of her films featured one of her most oft-repeated witticisms: when a hat-check girl, admiring Mae's bejeweled splendor, gushes, "Goodness, what beautiful diamonds!" the star responds with "Goodness had nothing to do with it, dearie." The joke was, of course, her own.

Paramount offered her a contract, and she agreed on condition that her next picture was a film version of *Diamond Lil*. That film, released as *She Done Him Wrong* (1933) and co-starring Cary Grant,

unveiled her trademark line, “Come up and see me sometime.” The film broke attendance records all over the world, and producer William Le Baron told exhibitors that “*She Done Him Wrong* must be credited with having saved Paramount when that studio was considering selling out to MGM, and when Paramount theaters—1700 of them—thought of closing their doors and converting into office buildings.” She made *I’m No Angel*, again with Grant, the same year, by the end of which she was ranked as the eighth biggest box-office draw of 1933. By 1935, her combination of glamour, vulgarity, and self-parody had made Mae West the highest paid woman in the United States.

Her success, however, based as it was on the risqué, brought a strong reaction from the puritanical wing. The Hays Office, charged with keeping movies wholesome in the wake of a succession of Hollywood sex scandals, was forced to bring in their new production code—the Hays Code—in 1934, expressly to deal with the Mae West problem. Her next film had the working title of *It Ain’t No Sin*, but the Hays Office decreed that it be designated less provocatively as *Belle of the Nineties* (1934). Mae reached the peak of her popularity as a Salvation Army worker in *Klondike Annie* (1936), co-starring Victor McLaglen. Posters for the movie announced, “She made the Frozen North Red Hot!” Another slogan used to publicize her movies was “Here’s Mae West. When she’s good, she’s very good. When she’s bad, she’s better.”

She co-starred with W.C. Fields in 1940 in the comic Western *My Little Chickadee*, each of them writing their own lines, but with disappointing results. When she failed to persuade Paramount to let her play Catherine the Great, she took her script about the controversial Russian empress to Broadway in the mid-1940s, where it was staged as a revue called *Catherine Was Great*. Her success led to a tour of England with her play *Diamond Lil* in 1947-48, and she took the play on a long tour of the United States for the next four years. With her film career over, she appeared in nightclubs and on television in an act with a group of young muscle men. During the 1960s, one of her few public appearances was in the 1964 TV series *Mister Ed*, but she made two last, disastrous screen appearances in the 1970s. She made a comeback as a Hollywood agent in the grotesque film version of Gore Vidal’s sex-change comedy, *Myra Breckinridge* (1970), but despite the opprobrium heaped on the film (which starred Raquel Welch), Mae got most of the publicity, \$350,000 for ten days’ work and her own dialogue, and a tumultuous reception at the premiere from a new generation of fans. Then, aged 86, the indomitable Mae starred in the lascivious and highly embarrassing *Sextette* (1978), adapted from her own play. Surrounded by a bevy of men, who included old-timers George Raft, Walter Pidgeon, Tony Curtis, George Hamilton, and Ringo Starr, it was an ignominious exit, but the legend lives on.

## *West Side Story*

When the curtain rose for the Broadway opening of the musical *West Side Story* on September 26, 1957, audiences were stunned and shaken by something new in American theater. Using a dynamic combination of classical theme and modern vernacular in script, music, and dance, the creators of *West Side Story* presented 1950s audiences with a disturbing, funny, and tragic look at what was happening in American society. Borrowing its plot from Shakespeare’s *Romeo and Juliet*, *West Side Story* replaces the rival families with rival street gangs and augments the theme of love defeated by a conflict-torn environment. The play ran for 732 performances on Broadway, and, in 1961, was made into an award-winning film.

The plot of *West Side Story* is simple and familiar. Maria, newly arrived in New York from Puerto Rico, is expected to marry Chino, a nice Puerto Rican boy, but instead meets Polish-American Tony at a dance and they fall in love at first sight. But other forces are at work to keep them apart. Tony is one of the founders of the Jets, a street gang of white boys, and though he has drifted away from the gang and even gotten a job, he is still loyal to his “brothers” in the Jets. A new gang of Puerto Rican boys, the Sharks, led by Maria’s brother Bernardo, is threatening the Jets supremacy on the streets, and the Jets are determined to hold on to their territory at all costs. The Sharks are equally determined to carve out a place for themselves in their new city, and the gangs scuffle regularly. Finally, Tony ends up involved in a rumble where his best friend is knifed, and in the ensuing melee, Tony accidentally kills Bernardo. Though grief-stricken, Maria forgives him and they plan to leave the city and run together to somewhere peaceful and safe. Before they can escape, however, Maria’s spurned boyfriend Chino finds Tony and kills him. Devastated, Maria accuses both the Sharks and Jets of killing Bernardo and Tony and, united for a moment at least, the rival gang members carry Tony’s body away.

*West Side Story* was the brainchild of theatrical great Jerome Robbins. Robbins, often considered one of the greatest American choreographers as well as a producer and director, got the idea for the musical when a friend was cast to play Romeo in a production of the Shakespeare play. While trying to help his friend get a grasp on Romeo’s character, Robbins began to envision Romeo in modern times, dealing with modern issues. The idea stuck with him, and he eventually gathered a distinguished group of artists to help him create a modern day *Romeo and Juliet* that would speak to the dilemmas of 1950s America. Famed composer Leonard Bernstein was recruited to write the score, with then-newcomer Stephen Sondheim for the lyrics. The book was to be written by Arthur Laurents. Robbins’ original name for the piece was “East Side Story,” and the star-crossed lovers were to be a Jew and a Catholic from New York’s lower east side. Robbins, however, was looking for a new perspective and he felt the conflict between Jews and Catholics had been documented in theater in plays such as *Abie’s Irish Rose*. Taking note of the increased numbers of Puerto Rican immigrants to New York following World War II, he moved his play to the upper west side of Manhattan and staged his conflict between a gang of Puerto Rican boys and a gang of “American” boys, the sons of less recent immigrants.

While critics were somewhat bemused by the comic-tragic darkness of *West Side Story*, audiences were captivated. To a society

Natalie Wood and Richard Beymer in a scene from the film *West Side Story*.

striving to be “normal” while seething with angry undercurrents, *West Side Story* spoke with a hip, rebellious authority. The morality play plot fits well within an accepted 1950s genre that included films like *Rebel without a Cause*, but what made *West Side Story* different was its marriage of the classical and the hip. Bernstein’s almost operatic score accentuates the incisive hard edged lyrics of Sondheim, and Robbins’s balletic choreography stretches tautly over the angry grace of youth with nothing to lose. With words like “juvenile delinquent” and “street gang” beginning to pop up in the news media, *West Side Story* gave the delinquent a voice, a cool, powerful archetype of a voice.

Some have criticized the play for glamorizing gangs, and others have called its portrayal of Puerto Ricans racist. Indeed, both the Broadway play and movie were flawed by a lack of authentic Latin casting. Of the major cast members, only Chita Rivera in the play and Rita Moreno in the movie (both, coincidentally, playing Bernardo’s girlfriend Anita) were Latina. In spite of these weak points, it remains one of the strongest popular statements about troubled youth and the devastating effects of poverty and racism. In the song “Gee, Officer Krupke!,” the Jets stage a mock scenario where a delinquent is shunted from police to judge to psychiatrist to social worker, coming to the dismal conclusion that juvenile delinquency is an ailment of society and, “No one wants a fella with a social disease!” The song is

as explicit as a sociological treatise about the causes of many of the problems of urban youth, and its acute goofiness easily transcends decades of at-risk teenagers.

The Shark’s counterpoint to “Officer Krupke” is the song “America,” sung by the Puerto Ricans about their new homeland. It is a bitter condemnation of the lie behind the “land of opportunity” couched in a rousing Latin rhythm and framed as an argument (in the play it is a debate among the girls; in the movie it is between the boys and the girls). “Here you are free and you have pride!” one side crows. “As long as you stay on your own side,” the other counters. “Free to do anything you choose.” “Free to wait tables and shine shoes.” The song is a lively dance, showing the triumph of the spirit over the obstacles often faced by immigrants.

In contrast to the jubilantly angry mood of songs like “Officer Krupke” and “America,” the song “Cool,” sung by the leader of the Jets, seems to be ushering in a new age. Displacing the hotheaded cocky swagger of the 1950s, “Cool” (“Boy, boy, crazy boy, stay cool boy / Take it slow cause, daddy-o, you can live it up and die in bed”) seems to point the way to the beatnik era of the 1960s, where rebellion takes a more passively resistant form.

On the cusp of the 1960s, American society, still recovering from the enormous upheaval of World War II, was seeking stability and control. American youth, particularly poor urban youth, rebelled

against the falseness of this new American dream. *West Side Story* gave complacent 1950s audiences a taste of the bitter life on the streets, where working class youth had little opportunity in their future, and “owning the streets,” or controlling activity in their gang’s territory, was their only way of claiming power. Since life for disadvantaged youth has changed little, the musical still speaks to audiences. Since its long Broadway run and its acclaimed film release, *West Side Story* has been widely revived as a play in theater companies across the United States and in many other countries. The soundtrack albums for both the play and movie rode the Billboard 200 chart for lengthy periods. There have been Japanese and Chinese versions of the Sharks and Jets. In the mid-1980s, a recording of the score was released featuring world renowned opera singers, and in the mid-1990s, one was released featuring current pop stars. Though *Romeo and Juliet* has been reprised many times, few productions have managed as well as *West Side Story* to so capture a moment in history, as well as the universality of the hopes of youth tangled in the violence of society.

—Tina Gianoulis

## The Western

Over the course of the twentieth century, the cultural significance of the Western has overwhelmed the borders of a simple film genre. The Western film’s many incarnations remain the most obvious and popular frame for the mythos of the American frontier, but the Western itself is usefully conceptualized as a widely transitory aesthetic mode comprised of recognizable conventions and icons that have spread across the face of international culture. From early-nineteenth-century examples like wild west shows, wilderness paintings, and dime novels to the legions of celluloid cowboys and Indians that ruled American movie houses from the 1930s through the 1960s, the full scope and majesty of the Western also made substantial contributions to radio dramas, television series, comic books, advertisements, rodeos, musicals, and novels. As the Western’s various forms continue to coat our cultural landscape, its apparently simple images have acquired a prolific range of meanings. Today, the Western constitutes a truly international entity, but its visual and ideological roots retain a distinctly American sense of rugged individualism and entrepreneurship. At the heart of its mythology of cowboys, Indians, horses, and six-guns, the Western can be read as a potent allegory for American society. All the hopes, triumphs, failures, and anxieties of American cultural identity are subtly written into the Western’s landscape.

The primary colors of the Western palette are simple but bold. First, the Western can never be Eastern; its aesthetic foundations are consistently grounded in the South, West, or Northwest portion of the American continents. Some Westerns like *The Treasure of the Sierra*

*Madre* (1948) or *Butch Cassidy and the Sundance Kid* (1969) migrate as far as South America. The Lone Ranger enjoyed a brief sojourn fighting pirates on the Barbary Coast, and *Midnight Cowboy’s* (1969) Texan Hustler, Joe Buck, even emigrates to New York City. In every case, the Westerner always operates in a distinctly obvious fashion that effectively brings the West into foreign and exotic locales. Jim Kitses and Edward Buscombe suggest that the Western mode is essentially a fusion of American history, myth, and art into

a series of structuring tensions: between the individual and the community, between nature and culture, freedom and restriction, agrarianism and industrialism. All are physically separated by the frontier between the West and the East. These differences may be manifested in conflicts between gunfighters and townspeople, between ranchers and farmers, Indians and settlers, outlaws and sheriffs. But such are the complexities and richness of the material that the precise placing of any group or individual within these oppositions can never be pre-determined. Indians may well signify savagery; but sometimes they stand for what is positive in the idea of “nature.” Outlaws may be hostile to civilization; but Jesse James often represents the struggle of agrarian values against encroaching industrialization.

A man with a gun is usually at the center of these continually shifting situations and conflicts. In any medium, from advertising to radio, the Western drama is rarely resolved without some use of, or reference to, masculine violence. The Western’s “game” of binary conflicts also relies on an easily recognized hierarchy of standardized pawns. These “stock” characters comprise a profoundly limited cast of expressive icons headed by principal Westerners like the cowboy, the gunslinger, the sheriff, the cavalry man, the outlaw, the rancher, and the farmer. These are often accompanied by feminine companions and minor bourgeois players like the frontier wife, the saloon tart, the town drunk, the doctor, the mayor, the merchant, the gambler, the barber, the prospector, and the undertaker. Minorities like Mexicans, Indians, and half-breeds tend to exist on the periphery as obvious antagonists, “faithful companions,” or ambiguous alien influences. Whatever their arrangement, this specialized cast populates a decidedly wild, moral universe that codifies the ethical complexities of a century that seeks order and peace through nostalgic backward glances at the untamed west. The form’s continual preoccupation with the ghosts of the Civil War, the threat of Indian miscegenation, and the disappearance of the open plains all emphasize our wish to simplify or assuage a problem in American society through Western pageantry. Phil Hardy carefully delineates the cultural significance of the Western’s therapeutic charms:

In short, at a time when frustratingly complex issues like the Bomb, the Cold War, the House Un-American Activities Committee and Suez, were being raised, the Western remained a simple, unchanging, clear cut world in which notions of Good and Evil could be balanced against each other in an easily recognizable fashion.

This is not to say that Good always triumphs or that Good ever appears as constant and clear cut as the authors of Westerns might

John Wayne (left) with Montgomery Clift in a scene from the film *Red River*.

have wished. On the contrary, the evolution of the Western exhibits a tendency towards both pious optimism and depressed cynicism. For all the vibrant Americana celebrated in John Ford's *My Darling Clementine* (1946), Westerns like William Wellman's *Ox-Bow Incident* (1943), Sam Fuller's *Run of the Arrow* (1957), and Robert Altman's *McCabe and Mrs. Miller* (1971) depict a decidedly pessimistic American milieu that turns on ruthless physical, racial, and economic violence like lynching, massacres, and prostitution.

The majority of Western art obsesses over the stature of the "Westerner," the white male hero in arms. Often expressed through the pedagogic interactions of men and children in films like *Red River* (1948), *Shane* (1953), and *High Noon* (1952), boys, sons, and orphans idealize the resolute father figures that teach them how to think, work, and fight. In radio drama, most Western heroes had young apprentices like the Lone Ranger's Dan Reed and Red Ryder's Little Beaver. Some Westerns like *Duel in the Sun* (1946), *The Searchers* (1956), *Broken Lance* (1954), and *The Shootist* (1979) would complicate this patriarchal formula with Oedipal and fraternal rebellions, but these conflicts usually result in an improvement or re-evaluation of the original pedagogical perpetuation of male control.

Although women and minorities often play crucial roles in the development of white western identity, these groups are consistently relegated to marginal status. Forward, sensual Western women like

*My Darling Clementine*'s Chihuahua, *Duel in the Sun*'s Pearl, and *Destry Rides Again*'s (1939) Frenchy usually pay a deadly price for their sexual candor. A sexualized female only finds comfort in a Western scenario when humble heroes like *Stagecoach*'s (1939) Ringo Kid decide to ignore the tainted past of painted women like Dallas or when Ransom Stoddard shuttles the illiterate Hallie back East in *The Man Who Shot Liberty Valance* (1962). Jane Russell's infamous portrayal of Rio in *The Outlaw* (1943) remains one of the more celebrated exceptions to this otherwise deadly standard. The tough but modest frontier wives like *Shane*'s Marion Starrett and *High Noon*'s Quaker bride, Amy Kane, refrain from blatant action until their husbands require such activity. Male and female Mexicans and mulattos walk a grotesque line between hapless clowns à la *Stagecoach* and *The Magnificent Seven* (1960) or monstrous despots like the Rojos of *A Fistful of Dollars* (1964) and General Mapache in *The Wild Bunch* (1969). Native Americans generally signify the ethnic foil to white male order. This contrast can manifest itself as ravaging hordes in *Stagecoach* and *The Searchers*, as predictable savages in *Red River* and *The Naked Spur* (1953), or as noble alternatives to white hegemony in the Lone Ranger's Tonto, *Cheyenne Autumn* (1964), and *Dances with Wolves* (1990). Some revisionist Westerns like *Soldier Blue* (1970), *Little Big Man* (1970), and *A Man Called Horse* (1970) exhibit a morbid fascination with the

cultural conflicts between white and “red” men, but the majority of Western art continues to produce a very ambiguous mystification of Native American culture.

Founded on a mixture of nineteenth-century American history, the melodramatic frontier fiction of James Fenimore Cooper and James Oliver Curwood, and the Western visions of Frederic Remington, Charles Russell, and Jules Tavernier, the Hollywood Western film has become the most prevalent of all modern wild west shows. In many ways, the Western and the movies have grown up together. Some of the earliest silent films like *Kit Carson* and *The Great Train Robbery* (1903) or *The Squaw Man* (1907) clearly echo Western themes, although they were probably likened to contemporary crime thrillers at the time of their production. As silent film matured into an art form in the 1910s and 1920s, early cowboy heroes like Broncho Billy Anderson, William S. Hart, Hoot Gibson, Harry Carey, Tom Mix, Buck Jones, and Tim McCoy initiated various flavors of Western entertainment. While Anderson, Hart, and McCoy created what Buscombe calls the realistic “good badman” whose natural roughness also includes a heart of gold, Tom Mix and others opted to formulate a more fantastic Jazz Age cowboy whose rope tricks, fancy duds, and horseback stunts revived the Wild West Carnival aesthetics of Buffalo Bill Cody and Annie Oakley. Later Western stars like John Wayne and Gary Cooper would epitomize the rough benevolence of the good badman, until Clint Eastwood’s cool “Man with No Name” popularized the professional gunfighter in the mid-1960s. In later films like *The Magnificent Seven*, *The Wild Bunch*, and *The Long Riders* (1980), the gunfighter and the outlaw face a moral war between killing as a vocation and settling down on the frontier. Such films detail a world of lonely, desperate mercenaries and criminals whose worst enemy is the double-edged sword of their own profession.

Almost from the beginning, studios began to distinguish between prestigious “A” Westerns and the run-of-the-mill “B”-grade horse opera. Early studios like Biograph and Bison churned out silent serial Westerns whose standardized melodramas became the basis for the sub-genre of “B”-grade cowboy movies that would remain relatively unaltered well into the 1950s. By the mid-1930s, these series Westerns, produced predominantly by Herbert Yates’ amalgamated Republic Pictures, had become an easily appreciated prefab package:

There would be a fist fight within the first few minutes, a chase soon after, and, inevitably, a shoot-out at the end. Plots were usually motivated by some straightforward villainy which could be exposed and decisively defeated by the hero . . . it was also common for footage to be reused. Costly scenes of Indian attacks or stampedes would re-appear, more or less happily satisfying the demands of continuity in subsequent productions.

For all their apparent poverty and simplicity, these assembly line dramas prepared both the talent and the audience that would eventually propel the “A” Western into its own. Some prestige epics like *The Big Trail* (1930), *The Covered Wagon* (1923), and the Oscar-winning best picture of 1930, *Cimarron*, clearly invoked Western forms, but Westerns for the most part were considered second-tier kiddy shows until the unprecedented success of John Ford’s *Stagecoach* in 1939. *Stagecoach*’s microcosm of American society—complete with a

hypocritical banker, an arrogant debutante, a Southern gentleman, and the fiery youth of a suddenly famous John Wayne—proved that Western scenarios could yield serious entertainment. Soon after, Hollywood’s production of Westerns rose rapidly as both “A” and “B” Westerns thrived in the hands of the most talented Hollywood actors and auteurs. Reaching its zenith in 1950, when 34 percent of all Hollywood films involved a Western scenario, the genre had developed a new energy and scope surrounding “A”- and “B”-level personalities like John Wayne, Henry Fonda, James Stewart, Audie Murphy, Roy Rogers, Gary Cooper, Randolph Scott, Ward Bond, and Joel McCrea. Amid the host of Western formula pictures, Phil Hardy notes the exciting innovations of Western auteur directors like Boetticher, Ford, Mann, Daves, Dwan, Fuller, Hawks, Lang, Penn, Ray, Sturges, Tourneur, and Walsh, who produced individual masterpieces through their manipulation of popular narrative forms.

Throughout the 1940s and 1950s, cinema remained the dominant showcase for Western drama, but other lesser Western media were also inundating American culture. While horses galloped across the silver screen, the roar of six guns also glugged the air waves as radio and TV shows brought the West into countless American living rooms. Between 1952 and 1970 no less than 11 Western TV series were on the air in any single year. The Lone Ranger, Matt Dillon, Hopalong Cassidy and their lesser known associates like Straight Arrow, the Six-Shooter (played by Jimmy Stewart), and Curly Burly, the Singing Marshall offered a generation of children almost daily doses of Western idealism. Often, these heroes became highly merchandised icons, moving from pulp magazines into commercial radio, matinee serials, TV series, and comic books. Thus, *Gunsmoke*’s Matt Dillon and *Have Gun, Will Travel*’s Paladin became product-driven Cowboy myths. Every TV series like *Rawhide*, *Gunsmoke*, *Bonanza*, *Maverick*, *The Big Valley*, and *The Wild, Wild West* had its own tie-in comic book that lingered in young hands during the many hours between broadcasts. The Lone Ranger himself appeared in over 10 different comic series, the last appearing as late as 1994. The 10-cent comic market could even bear separate series for Western Sidekicks like Tonto and Little Beaver. For almost eight years, Dell comics exclusively devoted an entire series to the Lone Ranger’s faithful stallion, Silver. Major Western stars like John Wayne, Tim Holt, Gabby Hayes, Andy Devine, Roy Rogers, Dale Evans, and Hopalong Cassidy also bolstered their popularity through four-color dime comics, accentuating their already firm star image through the mass market pantheon of Western characters like the Ghost Rider, the Rawhide Kid, and Jonah Hex.

From the 1940s through the 1960s, while Anthony Mann twisted the genre with cynical stories of desperate and introspective Westerners and John Ford began a series of bitter re-examinations of his earlier frontier optimism, another form of self-conscious aestheticized Western had emerged—the musical. Clearly indebted to early singing cowboys like Gene Autry and Roy Rogers, the new singing Western fused song and dance spectacle with honky-tonk themes and images. Songs like Cole Porter’s “Don’t Fence Me In” and Livingston and Evans’ Oscar-winning “Buttons and Bows” allowed popular vocalists a chance to dress up in silk bandannas, cow hide vests, and sequined Stetsons. Groups like the Sons of the Pioneers and the Riders of the Purple Sage celebrated trendy Cowboy fashions while Hollywood’s *Oklahoma!* (1955), *Red Garters* (1954), *Annie Get Your Gun* (1950), *Paint Your Wagon* (1969), and *Seven Brides for Seven*

*Brothers* (1954) promoted melodious western set pieces. Even the down-to-earth satirist Will Rogers' rope-tricking, cowboy persona lent a humble quality to his jibes between numbers in the Ziegfeld Follies. Comedies and parodies also proliferated. Early Western clowning included Charles Laughton in *Ruggles of Red Gap* (1935) and Bob Hope in the *Paleface* films of 1948 and 1952. Among the most important later moments in Western comedy are Lee Marvin's Oscar-winning self-parody of a drunken gunfighter in *Cat Ballou* (1965), James Garner's send-up of *My Darling Clementine* in *Support Your Local Sheriff* (1969), and Mel Brooks's hugely successful black cowboy feature, *Blazing Saddles* (1973).

In the 1960s and 1970s, the traditionally conservative ideology of Western films fell prey to several new influences. The "International Western" reconfigured traditionally American material with an exaggerated European accent. The Italian-produced "Spaghetti Westerns" of Sergio Leone starring Clint Eastwood as the shrewd, silent nameless mercenary rejuvenated a genre that had become fairly exhausted in American hands. Leone revised tired gun fight scenarios through slow tension-building showdowns comprised of excruciatingly tight close-ups and split-second gun battles. Ennio Morricone's now famous parodic scores also lent Leone's gory duels and forbidding scenery a fascinating, surreal atmosphere. Leone's psychedelically violent images played alongside the American revisionist Westerns of Sam Peckinpah, Robert Altman, and Arthur Penn. As *Pat Garrett and Billy the Kid* (1973), *Buffalo Bill and the Indians* (1976), *McCabe and Mrs. Miller* (1971), and *Little Big Man* (1970) deconstructed long-established Western hierarchies, Dennis Hopper's *Easy Rider* (1969) subtly defiled the Cowboy image as his Buffalo Billy sold drugs, dropped acid, and toured America on a Harley. During the cultural upheaval of the 1960s, this trend towards the deconstruction of Western myths signified a popular cultural need to interrogate and explode previously accepted signs and images. For all their gratuitous revision, however the grim tales of drunks, swindlers, and psychopaths that dominate late 1960s and 1970s Westerns contributed a much-needed update to the general credibility and appreciation of Western forms. Of all these self-conscious filmmakers, only Clint Eastwood continued as a popular Western actor and director; his *Outlaw Josey Wales* (1976), *Pale Rider* (1985), and *Unforgiven* (1992) represent intense eulogies to older visions of the American West.

The postmodern Western of the eighties and nineties has sprouted into several fairly distinct branches. On the one hand, films like *Silverado* (1985), *The Quick and The Dead* (1995), *Maverick* (1994), *The Wild Wild West* (1999), *Young Guns* (1988), *Bad Girls* (1994), *Tombstone* (1993), and *Posse* (1993) utilize Western aesthetics as appropriated dramatic frames that emphasize their stars. More obviously expensive Western epics like *Dances with Wolves*, *Wyatt Earp* (1994), and *Lonesome Dove* (1989) attempt to recreate the spectacle of the great open plains. Along with these comprehensive Westerns, a noticeable Cowboy strain has leaked into blockbuster franchises like *Back to the Future III* (1990), unpopular "punk" odysseys like *Straight to Hell* (1987) and *Dudes* (1987), Neo-Noir Westerns like *Flesh and Bone* (1993) and *Red Rock West* (1993), and pastiche "cult" odysseys like *Buckaroo Banzai in the Eighth Dimension* (1984). Even the *The Muppet Movie* (1979) appropriates an old fashioned Western showdown. The 1990s have also seen a revival of the contemporary Western. Art house films like *Western* (1998), *The Hi-Lo Country* (1999), *Lone Star* (1996), and *The Last Picture Show*

(1971) find their roots in the well-named Hollywood epic, *Giant* (1956), and its quieter companions like *Hud* (1963), *The Lusty Men* (1952), *Bronco Billy* (1980), and *The Electric Horseman* (1979). These films are more concerned with describing the life of the modern west and the plight of the twentieth-century Westerner than in revising the myths of the old frontier. At same time however, each film offers sharp insight into how completely the Western and its heroes have shaped the popular appreciation of America's past.

## Wharton, Edith (1862-1937)

Edith Wharton, one of the most successful American novelists of her time, wrote twenty-five novels and novellas as well as eighty-six short stories. Her *Age of Innocence* (1920), about Old New York society, won a Pulitzer prize, and she was the first woman to receive either the honorary Doctor of Letters from Yale University or the Gold Medal of the National Institute of Arts and Letters. Though critics have often over-emphasized Henry James's influence upon her, she has impacted American narrative in many ways, perhaps most notably in her treatment of gender issues and the supernatural.

## What Would Jesus Do?

See WWJD? (What Would Jesus Do?)

## What's My Line?

The television panel game *What's My Line?* became an American favorite in the course of its 17-year-long run. Aired on CBS from February 2, 1950 through September 3, 1967, it remains the longest-running show of its type in prime-time television history, having seduced viewers with a premise both rudimentary and clever. Contestants with uncommon occupations first signed their names on a blackboard, and then whispered their "lines," or professions, to master of ceremonies John Daly and the viewers at home. Next, four panelists queried the contestants in order to ascertain their professions. Questions could be answered only with a simple "yes" or "no." For each "no" response, a contestant earned \$5; after ten negatives, the game ended with the contestant pocketing \$50. One participant each week was a "mystery guest," an easily identifiable celebrity. Here, out of necessity, the panelists donned masks, with the contestants responding to questions in distorted voices.

The show, a Mark Goodson-Bill Todman production, exuded a civilized, urbane Park Avenue/Fifth Avenue Manhattan air. John Daly, the likable moderator, whose background was in journalism,

*What's My Line* moderator John Daly (center) is surrounded by regular panelists (from left) Arlene Francis, Bennett Cerf, and Dorothy Kilgallen.

established this ambience throughout its 17 years on the air until syndication. He bowed out on the syndicated version, produced between 1968 and 1975 and hosted by Wally Bruner and Larry Blyden. In the early years of the show, Daly concurrently enjoyed a high profile at rival networks, anchoring the ABC evening news between 1953 and 1960, while hosting *What's My Line?* for CBS.

The panelists on the debut broadcast were syndicated gossip columnist Dorothy Kilgallen (who stayed until her death in 1965), poet-critic Louis Untermeyer, former New Jersey governor Harold Hoffman, and Dr. Richard Hoffman, a psychiatrist. The following week, actress Arlene Francis came on board, and remained for the show's duration. Other regular panelists during the 1950s were television personality Steve Allen, comedian Fred Allen, and joke writer Hal Block. By the end of the decade, the group most often consisted of the set trio of Francis, Kilgallen, and writer, raconteur and co-founder of Random House publishers, Bennett Cerf, who joined the panel in 1951 and remained until the show went off the air. These three were supplemented with a celebrity guest panelist.

While watching *What's My Line?* and hearing the amusing and sophisticated banter of its panelists, one might have been eavesdropping on a chic and exclusive party whose guests included New York's wittiest intellectuals, peppered with celebrities from the world of entertainment, sports, and politics. The panelists in fact were personalities who exuded New York Upper East Side style, and donned their masks as if preparing for a society costume ball.

The contestants on *What's My Line?* were awesome in their variety. Over the years they included oddball inventors, tugboat captains, pet cemetery grave diggers, pitters of prunes and dates, thumbtack makers, pigeon trainers, female baseball stitchers, gas station attendants, and even a purveyor of fried chicken, who turned out to be none other than Colonel Harlan Sanders. As for the "mystery guests," writer/show business habitué Max Wilk has noted that, "it would be far more simple to list the names of the celebrities who have *not* appeared on the show over all these years than it would be to list those who did." Among them were athletes (Phil Rizzuto, who was the first *What's My Line?* mystery guest, and Ty Cobb), poets (Carl Sandburg), politicians (Eleanor Roosevelt, Estes Kefauver, Everett Dirksen), and numerous movie and television personalities from Gracie Allen to Warren Beatty, Ed Wynn, Ed McMahon, Harold Lloyd, and Howdy Doody.

The panelists on the final network telecast of *What's My Line?* were Arlene Francis, her actor husband Martin Gabel, Bennett Cerf, and Steve Allen. The mystery guest, appropriately enough, was John Daly!

## Wheel of Fortune

In 1998, America's most popular television game show, *Wheel of Fortune*, celebrated its fifteenth year in syndication by broadcasting for the 3000th time. In the ubiquitous game created by executive

producer Merv Griffin, popular co-hosts Pat Sajak and Vanna White have awarded contestants over \$98 million in cash and prizes for guessing the blank letters of mystery phrases, with the winning amounts determined by spins of a giant wheel. While the wheel spins, it is traditional for contestants to scream “Big money!” and join Vanna in clapping hands. In fact, Miss White is listed in the *Guinness Book of World Records* as television’s most frequent hand-clapper, averaging 720 claps per show and 28,000 per season.

The original *Wheel of Fortune* aired on NBC as a daytime game show on January 6, 1975, with hosts Chuck Woolery and Susan Stafford. Pat Sajak made his debut on the show in December 1981, with Stafford continuing as co-host. Vanna replaced Stafford in December 1982, and the show moved from the network to syndication in 1983, placing it in prime-time slots and greatly increasing the audience.

Pat Sajak likes to say, “I must have been born with broadcasting genes.” He remembers sneaking out of bed at age eleven to watch Jack Paar host *The Tonight Show*. Even then he aspired to host his own television show some day. Sajak attended Columbia College in his native Chicago, majoring in broadcasting, before landing his first professional job as a newscaster on radio station WDDC in his hometown. The Vietnam War interrupted his career in 1968, and the 21-year-old Sajak was assigned as morning disc jockey with Armed Forces Radio in Saigon. During his eighteen months in that post, Sajak opened his show as Robin Williams did in the movie *Good Morning, Vietnam*, with the words, “Gooood morrhning, Vietnaaam!”

After his army discharge in 1972, Sajak worked briefly as a radio disc jockey in Kentucky and Washington, D.C., before landing his first television job as local weatherman on WSM-TV in Nashville, Tennessee. His relaxed style and sharp wit brought him additional assignments as host of a public affairs program as well as a talk show. In 1977 he was brought to Los Angeles to host KNBC’s weekend public affairs program and to serve as their local weatherman. Four years later he was selected by Merv Griffin to host *Wheel of Fortune*, a match made in television heaven. He went on to star in many network and syndicated specials, briefly hosted a late night talk show in 1989, and appeared as a guest star on dozens of comedy, drama, and talk shows. He has won two Emmy Awards, a People’s Choice Award, and a star on the Hollywood Walk of Fame. He lives in Los Angeles with his wife, Lesly, and their two children.

Vanna White, born in North Myrtle Beach, South Carolina, in 1957, attended the Atlanta School of Fashion design and became a top model in that area before moving to Los Angeles to pursue an acting career. In 1982, she auditioned for the job as Sajak’s co-host on America’s favorite game show and was selected from a field of more than 400 letter-turning hopefuls. Although she has been called the Wheel’s “silent star,” her weekly fan mail numbers in the thousands, and she is a frequent guest on talk shows. Her autobiography, *Vanna Speaks*, was a national bestseller. Her fans enjoy her habit of making a different fashion statement for every show and, at last count in 1998, she had worn 5,750 outfits in her career. Vanna is also seen in commercials, a nutritional video, and as the star of an NBC made-for-television movie, *Goddess of Love*, as well as cameos in various Hollywood movies. She lives in Beverly Hills with her husband, George, and two children, Nicholas and Giovanna.

One of the secrets of the ongoing success of *Wheel of Fortune* has been adding new features to the show’s familiar format. High

technology has been employed to update Vanna’s puzzle board. Instead of turning letters, she activates the touch-sensitive membrane switches on a bank of 52 high-resolution Sony monitors. Interest in the show is heightened by special weeks in which the contestants are soap opera stars, best friends, celebrities and their moms, college students, and professional football players. The show has been renewed with a long-term contract through 2002.

## Whisky a Go Go

Infused with the neon energy of the Sunset Strip, the Whisky a Go Go stands as Los Angeles’s (L.A.) richest repository of rock ’n’ roll history. With the affluence of Beverly Hills and Malibu to its west, the fantasy of Hollywood to its east, West Hollywood’s gay and lesbian influence directly south, and “the hills,” home to the world’s rich and famous, above it, the Whisky finds itself at the heart of a city in which anything can happen—and often does. As its decades at the corner of Clark Drive and the famed Sunset Boulevard have proven, the Whisky’s roster of rock performers chronicles the evolution of L.A.’s highly influential music industry and its impact on popular culture at large.

Older than neighboring rock ’n’ roll haunts such as the Roxy and the Rainbow, the Whisky emerged onto L.A.’s music scene in January of 1964. Owners Elmer Valentine and Mario Maglieri transformed an old, three-story bank building into a Parisian-inspired discotheque complete with female DJs (Disc Jockeys) dancing in cages suspended above the stage. Hence, the term go-go girl was born.

The Whisky quickly became a breeding ground for the most influential musical talent of the mid-to-late 1960s. Opening night featured Johnny Rivers, whose blues-inspired pop album titled *Johnny Rivers at the Whisky a Go Go* took him to the top of the charts. Johnny Carson, Rita Hayworth, Lana Turner, and Steve McQueen were just a few of the personalities who turned out to revel in Rivers’s performance.

As the turbulent socio-political energy of the late 1960s gained momentum, so too did the influence of the Whisky. Bands such as The Doors and Buffalo Springfield brought revolutionary sounds to the music world, and attracted the likes of John Belushi and Charles Manson to the venue. Guitar legend Jimi Hendrix dropped in on several occasions to jam with the Whisky’s house bands, and rock’s raspy leading lady, Janis Joplin, downed her last bottle of Southern Comfort at the Whisky before her death in 1970.

While the Whisky name is associated with some of the most significant performers of every rock era since the club’s opening, it is the explosive decadence of the late 1960s that has most decisively defined the Whisky’s place in the popular imagination. In his vivid film evocation of the period, *The Doors* (1991), Oliver Stone used simulated live footage of one of The Doors’ early performances on the

Dancers at the Whisky a Go Go.

Whisky stage to recreate the spirit of that era's radical, drug-fueled excess. The film, and other similar representations of the 1960s, affirm the Whisky's status as a potent emblem of the rebellious energy of a particular moment in music and pop culture history.

Despite its indisputable "hot spot" status during the 1960s, the Whisky's popularity waned in the early 1970s as a softer, more folk-inspired sound penetrated live music in Los Angeles. The Whisky nearly burned to the ground in 1971, and the club was forced to close for several months before re-opening as a discotheque. With the buzz of its formative decade behind it, the club's producers sought out more economical performance ideas for the space, and operating a dance club appeared to be a cheaper, less troublesome, alternative to the live music format. The venue also hosted minor theatrical performances such as *The Rocky Horror Picture Show* during this period, but no attempt to transform the Whisky attracted the kind of talent or intensity that the club had cultivated during the 1960s.

The rebirth of the Whisky as a rock club occurred in the late 1970s, when the embers of a punk scene in L.A. began to smolder. The influence of punk bands from both London (the Sex Pistols, the

Damned) and New York (Patti Smith, the Ramones) inspired L.A. groups like the Runaways and the Quick to bring a brash, do-it-yourself approach to music and to the Whisky. Kim Fowley, son of actor Douglas Fowley, hosted a "New Wave Rock 'N' Roll Weekend" at the Whisky in 1977 and introduced the likes of the Germs and the Weirdos to the Sunset Strip scene. Shortly thereafter, the legendary Elvis Costello played his first L.A. gig at the club.

By the early 1980s, rock once again ruled the L.A. music scene—and the Whisky—although this time in a much less lucrative fashion. No longer did the Whisky pay its bands for an evening's performance. Rather, upon reopening as a live venue—around the time that music mogul Lou Adler bought into the club—the musical acts themselves paid the Whisky for the opportunity to perform on its coveted stage. This new "pay to play" approach not only demonstrated how valuable the Whisky's reputation had become to up-and-coming talent, but also confirmed the fact that the music business itself was changing. The tremendous popularity of rock music yielded a surplus of bands, which shifted the market in favor of clubs and promoters. Groups had to compete for stage space and ultimately

finance (or hope that a record company would pay for) their own publicity.

Against this new economic backdrop, a number of hard rock and metal bands—including mega-stars Van Halen, Guns N’Roses, and Metallica—rose to prominence in the 1980s. While these glam bad boys went on to fill tens of thousands of seats in arenas all over the world, they could all point to the Whisky’s stage as the site of some of their earliest live performances.

In the early 1990s, the Whisky hosted a number of Seattle-based musicians who would later be dubbed “the godfathers of grunge.” Bands such as Soundgarden, Nirvana, Mudhoney, The Melvins, and 7 Year Bitch brought their guitar-laden, punk-loyal sound to Los Angeles in a very large, very loud way. Grunge maintained an anti-aesthetic which scoffed at the glam-rock past of the 1980s, and seemed, if only briefly, to speak to the fears of a generation of teenagers ravaged by divorce and a distinctly postmodern sort of uncertainty. Throughout this time, the Whisky continued to act as a touchstone for local and indie bands and as a familiar haunt for the occasional celebrity rocker. Though the club’s influence as a ground zero for cutting edge trends in the music industry—and youth culture in general—has diminished considerably since its heyday, the Whisky remains an important L.A. landmark and offers a revealing window into some of the most crucial figures and movement’s of rock’s relatively brief history.

## *Whistler’s Mother*

James Abbott McNeill Whistler’s 1871 portrait of his mother, Anna Matilda McNeill, has crossed over from the realm of fine art to that of popular culture. Whistler (1834-1903), an expatriate American painter active in London and Paris, was one of a number of late nineteenth-century artists who downplayed subject matter and emphasized abstract values. People often refer to the painting as “Whistler’s mother,” but Whistler himself preferred to call it *Arrangement in Gray and Black*. Ironically, the painting is famous largely because of its subject. Recognized as a universal symbol of motherhood, Whistler’s mother was featured, in 1934, on a United States postage stamp honoring Mother’s Day. However, she has not always been treated so reverently. The somber, seated figure, a familiar reference point in many countries, has been widely lampooned in the popular performing, as well as visual, arts.

Barry White

## White, Barry (1944—)

Barry White’s immediately recognizable husky bass-inflected voice that obsessed over making love was a staple on black radio during the 1970s. Songs such as “Your Sweetness Is My Weakness,” “Can’t Get Enough of Your Love, Babe,” and the appropriately titled “Love Makin’ Music” made this heavy-set man a sex symbol, and were probably responsible for conceiving quite a few babies as well. And while his star did not shine as brightly through the 1980s and 1990s, White evolved into a oft-referred-to popular culture icon—appearing as himself on television shows like *The Simpsons* singing parodies of his own songs (which were already almost self-parodies).

Born in Galveston, Texas, White would work primarily out of Los Angeles and New York as an adult. White began his career in the music business at age 11, when he played piano on Jesse Belvin’s hit single “Goodnight My Love.” He recorded as a vocalist for a number of different labels in the early to mid-1960s, then went on to work as an A&R man for a small record label named Mustang. In 1969, White formed both a female trio called Love Unlimited, and a 40-piece instrumental group dubbed Love Unlimited Orchestra, the latter of which produced a number one Pop single in 1973, “Love’s Theme.”

The period of 1973-1974 was his commercial highpoint, with White performing on or producing a number of albums and singles

James Abbott McNeill Whistler's "No. 1: Portrait of the Artist's Mother."

that grossed a total of \$16 million. Among his top ten Pop singles were: "I'm Gonna Love You Just a Little More Baby," "Never, Never Gonna Give Ya Up," "You're the First, The Last, My Everything," "What Am I Gonna Do With You," and the number one 1974 smash, "Can't Get Enough of Your Love, Babe," as well as a handful of hits by Love Unlimited and Love Unlimited Orchestra.

While all of his up-tempo dance numbers and down-tempo slow jams tend to blend together, White was neither generic nor unoriginal. He had his own distinct style that can best be summed up lyrically in the following few lines from his song "Love Serenade": "Take it off / Baby, take it aaaaaallllllllll off / I want you the way you came into the world / I don't wanna feel no clothes / I don't wanna see no panties / Take off that brassiere, my dear." White's spoken word delivery arguably influenced future rappers, and the drum breaks on songs like

"I'm Gonna Love You Just Little More Baby" were sampled often by Hip-Hop artists.

Throughout the 1980s and 1990s, Barry White's chart presence almost seemed contingent on collaborating with other artists. For instance, his 1990 hit "The Secret Garden" (Sweet Seduction Suite) featured Al B. Sure!, James Ingram, Quincy Jones, and El DeBarge, and he also appeared on Big Daddy Kane's 1991 rhythm and blues hit "All of Me," Lisa Stansfield's cover of "Never, Never Gonna Give You Up," and Edie Brickell's "Good Times" (one of the strangest pairings of the 1990s). White also enjoyed some exposure from the sitcom *Ally McBeal*, in which the character John Cage sings and dances to White's "You're the First, the Last, My Everything" to prepare himself for a date.

## White, Betty (1922—)

Betty White was one of the first women to form her own television production company, and she also became one of TV's best-loved performers, whether her character was sweetly innocent or a harridan. Her early roles ranged from girl-next-door (*Life with Elizabeth*, 1952-1955) to screwball wife (*Date with the Angels*, 1957-1958), but it was as a man-crazy schemer on *The Mary Tyler Moore Show* from 1973 to 1977 that White won her first major popularity. For her portrayal of the predatory Sue Ann Nivens, White won back-to-back best supporting actress Emmys (1975/1976), even though she appeared in less than half the episodes in any given season. After *The Mary Tyler Moore Show* ended, White briefly hosted a game show called *Just Men!* and became the only female to win an Emmy as best game-show host (1983). Two years later White returned to episodic television in the phenomenal hit *The Golden Girls* (1985-1992), in which she portrayed naive Rose Nyland, who never quite had the same conversation as those to whom she was talking and who often added seemingly unrelated comments dealing with life in her rural hometown, St. Olaf. A comedy that often placed the women in outlandish situations, the series showed that older women could have active lives, and it helped to weaken the "ageism" that had been a hallmark of American culture. In 1994 White became the tenth woman to be inducted into the Television Hall of Fame.

## White Castle

White Castle was the world's original fast-food restaurant chain. From humble beginnings in Wichita, Kansas, White Castle grew into a large-scale multi-state operation that was copied by innumerable competitors. It all began when Walter Anderson, a short-order cook, developed a process in 1916 for making the lowly regarded hamburger more palatable to a distrusting public. He soon had a growing business of three shops. In 1921, Anderson took on a partner, Edward Ingram, a real estate and insurance salesman. Ingram coined the name and image of "White Castle," based on the theory that "'White' signifies purity and 'Castle' represents strength, permanence and stability." By 1931 there were 115 standardized outlets in ten states. Previously, only grocery or variety stores had used the chain system. By providing inexpensive food in a clean environment at uniform

locations over a wide territory, White Castle helped shape the fast-food industry that would dominate the lives and landscape of America at the end of the twentieth century.

## White, E. B. (1899-1985)

*Charlotte's Web* author E. B. White has delighted people of all ages with his essays, poems, and classic children's stories since the 1920s. He was one of the early *New Yorker* writers and helped set the tone that established it as the magazine of elegant writing that it continued to be for decades.

Elwyn Brooks White graduated from Cornell University, where he was the editor of the *Cornell Sun*. He worked as a journalist and a copywriter in an advertising agency before joining the infant *New Yorker* in 1926. (Katharine Angell, who hired him, later became his wife.) From 1938-43, White contributed the monthly column "One Man's Meat" to *Harper's* magazine.

White's elegant yet informal, humorous, and humanitarian writing covered diverse subjects. Following the premature death of a pig in 1947 at the Whites' rural home in Maine, White said he wrote an essay "in grief, as a man who failed to raise his pig." This same writing style is apparent in White's three classic children's books: *Stuart Little* (1945), about a mouse born to a human family and his adventures while searching for his best friend, a beautiful bird; *Charlotte's Web* (1952), in which a spider named Charlotte cleverly saves Wilbur the pig from death; and *The Trumpet of the Swan* (1970), in which a mute trumpeter swan tries to win the affection of the beautiful swan Serena.

In 1957 White published an essay praising his former Cornell English professor, William Strunk Jr., for his forty-three-page handbook on grammar—"the little book." White praised Strunk's attempt "to cut the vast tangle of English rhetoric down to size and write its rules and principles on the head of a pin." A publisher coaxed the ever-modest White into reviving and revising *The Elements of Style* (1959), known among its users as "Strunk and White," which has remained a fundamental text. White bolstered the original with an essay titled "An Approach to Style," which remains a timeless reflection of the virtues of good writing.

## White Flight

White flight refers to the residential movement of whites to avoid self-determined, unacceptable levels of racial integration. Scholars disagree on how much race acts as a singular factor in white migratory decisions, many preferring a natural process called “ecological succession” in which older and less desirable housing stock filters down to lower status classes. The great episodes of neighborhood turnover in the United States after World War II, however, prompted social scientists to focus specifically on race as a “tipping point” that stimulated white exodus to suburbs and newer suburban areas.

White flight was principally a twentieth-century urban phenomenon. Before 1900, ninety percent of African Americans lived in the South. The few black populations in northern cities were small and highly centralized. Occasionally, upper-class blacks intermingled with whites and other ethnic groups. Deteriorating social and economic conditions in the South, including lynchings, led to a mass exodus of African Americans to northern cities starting around the time of World War I. These migrations increased the populations of African Americans in cities such as Chicago from as little as 2 percent in 1910 to more than 30 percent by 1970.

At first, newer ethnic groups were the most affected. Jewish residents felt compelled to move from Chicago's Maxwell Street neighborhood and New York's Harlem area by increasing numbers of blacks around 1920. The latter process contributed directly to the Harlem arts and cultural renaissance. Threatened by the social and cultural disruptions portended by African American mobility with time, native-born whites responded as well. They lobbied politicians, bankers, and real estate agents to restrict blacks informally to designated black neighborhoods, usually comprised of older housing stock. The Baltimore city council enacted an ordinance forbidding any black person from moving into a block where a majority of the residents were white in 1910, and a dozen other cities followed suit, even though the United States Supreme Court declared residential segregation unconstitutional in 1917. The all-white apartment house of Ralph and Alice Kramden as portrayed in the 1950s television series *The Honeymooners* personified inner-city racial exclusion. When legal or extra-legal exclusionary tactics failed, whites resorted to out-migration, turning over a neighborhood to their former adversaries. Residential homogeneity could be based on factors such as class, religion, or ethnicity, but white flight came to be the term for relocation related to racial differences.

Housing demand, restricted by the Depression and the exigencies of World War II, exploded in the decades following the war. New developments appeared almost overnight in outer-city and suburban areas, yet existing social standards continued to dictate settlement patterns based on racial considerations. The attractions of new suburbs, available only to middle and upper class whites, and the growing housing needs of African Americans produced an era of unprecedented racial turnover in cities as neighborhoods, sometimes triggered by blockbusting—the intentional placing of an African American in a previously all-white neighborhood to create panic selling for profit—changed their racial characteristics in short periods of time. Legal challenges to the status quo, judicial and legislative, contributed to the out-migration of whites from older urban areas. Although the white flight expanded areas for African Americans, it preserved traditional patterns of racial segregation. All-white suburbs were personified in television programs such as *Ozzie and Harriet*, *Leave It to Beaver*, and *The Dick Van Dyke Show*.

White flight became a particular problem in the wake of school desegregation decisions in the 1970s. Mandatory busing programs in cities such as Norfolk, Virginia, and Boston, Massachusetts, were given special examination, especially as to whether they were being counterproductive in achieving desegregation. While some used the trends to argue against forced busing, others maintained that metropolitan solutions were the only remedy for white flight. To a great extent, the debate over racial factors in changing school demographics mirrored the older debate about race and residence, with the same divergent results.

The last third of the twentieth century saw a replication of urban white settlement patterns as middle-class African Americans began to suburbanize. In part, the out-migration involved aging inner-ring suburbs which experienced the same type of ecological succession as inner-city neighborhoods did before and after World War II. But enhanced personal incomes and job expectations, improved infrastructure, and cheap gasoline prices allowed increasing numbers of blacks to become suburban home owners, a trend reflected in the 1980s television program *The Cosby Show*. In some cases, suburban white flight was matched by equally affluent blacks interested in the same personal safety, good schools, and aesthetics. Overall, the percentages of suburban blacks remained below urban averages, but African Americans became more of a factor in the suburbs than they ever had before.

Demographic studies in the 1990s have revealed a slower pace of racial turnover in metropolitan areas as some whites return to the cities in a process known as gentrification. The trends induced some observers to speculate that the radical racial changes of the postwar decades may have been temporary, especially in the older and larger northeastern and midwestern cities. Others theorize that small rural towns are benefitting from a new form of white flight as whites from large cities and their surrounding suburbs create a new rural renaissance. Los Angeles and New York City lost over one million domestic migrants (many replaced by foreign immigrants, not black) each in the 1990s while the greatest domestic migration gains during the decade occurred in predominately white, non-metropolitan areas such as the Mountain states, south Atlantic states, Texas, and the Ozarks. If the patterns continue, these scholars predict the traditional city-suburb model of white flight may have to be replaced by a urban-rural dichotomy. “The Ozzies and Harriets of the 1990s are bypassing the suburbs or big cities in favor of more livable, homogenous small towns and rural areas,” according to University of Michigan

demographer William H. Frey. Perhaps they aspire to another all-white 1960s television program, *The Andy Griffith Show*.

## White, Stanford (1853-1906)

On July 25, 1906, Harry Thaw walked into the fashionable cabaret restaurant—the Roof Garden at Madison Square Garden—and shot and killed the architect Stanford White, who was dining with his lover, Mrs. Evelyn Nesbit Thaw. Thaw claimed that he had been driven to the murder by the knowledge that White had "ruined" his wife, a 22-year-old "Floradora" girl who had been involved in a sexual relationship with White since she was 16. After two sensational trials, Thaw (an heir to old Pittsburgh railroad money as well as a wife-beater) was acquitted by a jury who agreed that the cuckolded husband's murderous jealousy was justified. The sensational story of the fatal Nesbit/White/Thaw triangle was dramatized in a 1955 movie entitled *The Girl in the Red Velvet Swing*. White kept the infamous swing in his studio to use in his well-orchestrated and numerous seductions. According to his family, it was White who coined and popularized the sexual-innuendo-laden invitation "come up and see my etchings."

## White Supremacists

In a country of immigrants, white supremacy has been a curious and lasting preoccupation. Not just African Americans, but Catholics, Eastern Europeans, Italians, Jews, and all races not of Western European origin have been singled out as inferior at one time or another in United States history. But where did such behavior come from, and why do so many continue to cling to such a backward creed? The simplest answer is that racism and racist organizations provide a comprehensive world view in times of social turmoil, a way to interpret changes in social mores and often mystifying economic setbacks. But this is not enough. In virtually every country, bigotry exists, but in ostensibly classless, egalitarian America, it remains one of the most paradoxical features of our social landscape.

Until recently, white supremacy was very much the norm. At the turn of the twentieth century, most labor unions were overtly racist, as were many social activists of a radical stripe. The author Jack London was both a socialist and white supremacist, preaching the brotherhood of workers, provided they were lily white. It was London who first coined the term "great white hope" in articles beseeching a challenger to step forward against Jack Johnson, the black heavyweight boxing champion. In London's view—and he was regarded as a progressive—African Americans and Chinese ranked as hardly human. For the more conventional, the truth of racism was hardly given a second thought; it was self-evident.

Like religious mania or consumer habits, white supremacy is not a constant, but is inherently tied to historical conditions. It is a consolation in times of trouble, and a rationale in times of prosperity. In the 1920s, it was tied to the growing antipathy between city and country; during the Depression, it became inextricably linked to anti-Communism and opposition to Roosevelt's New Deal. Father Coughlin, a virulent anti-Communist radio personality, and William Pelley, leader of the fascist Silver Shirts, were both vocal enemies of the New Deal, and each embraced racist nationalism to explain the country's ills.

The world-wide Jewish conspiracy theory imported by Henry Ford in his *Dearborn Independent* had been integrated into supremacist beliefs during the 1920s. The next development was a theological justification for their beliefs. Soon after the conclusion of World War II, California preacher and Klansman Wesley Swift latched onto a racist Christian theology known as British Israelism. Swift renamed the theology Christian Identity. Exponents of British Israelism believe that the lost tribe of Israel immigrated to Britain; hence, Anglo Saxons were inherently superior, and were in fact God's chosen people. Christian Identity proved to be a popular idea, and under Swift's tutelage, the belief spread to Idaho, Michigan, and the South. Almost every supremacist group after World War II has in some way been influenced by Christian Identity, with Swift followers forming the Aryan Nation, Posse Comitatus, and the Minutemen, the most committed among the later waves of white supremacists.

By the 1960s, white supremacy was a vigorous movement. Lurking behind the Goldwater far right, white supremacists wielded enormous influence and political power. Frightened by a world that appeared out of control, many Americans found solace in the strident rhetoric of the American Nazi Party or the Minutemen. The publications of the Liberty Lobby and the John Birchers clearly explicated this dissatisfaction. The Ku Klux Klan mobilized visibly, and sometimes violently, against desegregation activists white and black alike; militia-like cells organized in the Midwest, and the John Birch Society, while professing no racist sentiment, actively supported the

supremacist ideology through their political activities. As manifested in the 1964 presidential campaign of Arizona Senator Barry Goldwater, the openly racist platform of Governor George Wallace in his 1968 and 1972 primary campaigns, and Ronald Reagan's 1968 gubernatorial race, white supremacy was a force to be reckoned with.

Political positions and economic conditions go hand in hand, as any student of Hitler's rise to power will attest. In 1970s America, a rash of bank foreclosures and declining agricultural prices sent tremors of fear across the heartland. In many places thus stricken, groups like the Posse Comitatus, an organization vocally opposed to the Federal government, often organized to combat what was perceived as unfair bank practices by rigging auctions and seizing land and equipment, sometimes provoking gun battles between law enforcement and farmers. In the declining industrial areas, the loss of lucrative union jobs swelled the ranks of the unemployed, mobilizing soldiers in a new racial movement; they called it the Fifth Era. Groups like WAR (White Aryan Resistance) mobilized around white unrest, often reaping a tidy profit with marketing schemes and paraphernalia. Complete segregation was the goal most frequently advocated, and terrorism and paramilitary training the preferred method to attain it. Many groups published detailed maps that limited minorities to gerrymandered homelands. In Idaho, the quasi-military group The Order took a more direct approach, pulling off several profitable armed robberies (dispensing the proceeds among many supremacist groups) and murdering Denver talk-show host Alan Berg. The group was finally eradicated by the FBI, but not before they had distributed much of their illicit bounty, and there is evidence that their crimes have financed several campaigns and training camps.

Meanwhile, a new generation of disenchanting, working-class youth, having seen their parents lose a farm or well-paid factory job, had adopted the skinhead style and rhetoric of British youth, compensating for their helplessness with acts of racially motivated violence. For a time, skinhead gangs enjoyed a high visibility, and just as quickly, they learned the disadvantages of that conspicuity. Harassment by the police was a constant, and by the 1990s, skinhead leaders were urging their dome-headed minions to grow their hair and recede quietly.

It is easy to picture white supremacy as a marginal ideology. This would be a mistake. White supremacy is hydra-headed, springing up in unexpected places. Many supremacists, like David Duke, for example, have tempered their rhetoric sufficiently to win public office. Other groups cloak their agendas under neutral-sounding names like the League of Conservative Citizens, who made headlines in 1998 after Republican Senator Trent Lott addressed the group on several occasions and then was forced to disassociate from the group and their openly racist agenda. While the constant splintering off of the many organizations makes it difficult to ascertain how many active supremacists there are or how much political clout they wield, it can be safely asserted that White supremacy has become a permanent feature of the socio-political terrain.

—Michael Baers

## Whiteman, Paul (1890-1967)

Denver-born bandleader Paul Whiteman is inseparable in American musical culture from George Gershwin's enduring classic, *Rhapsody in Blue*, which he famously commissioned, conducted at its sensational 1924 New York premiere, and recorded the same year. The most popular of all bandleaders prior to the Big Band era, Whiteman was called The King of Jazz, but this was not strictly accurate, despite the jazz-based *Rhapsody in Blue*, his association with several jazz musicians and vocalists, and his discovery and continued espousal of legendary trumpeter Bix Beiderbecke. Whiteman's disciplined arrangements left true jazz musicians little chance for improvisation and, as Wilder Hobson wrote, he "drew very little from the jazz language except for some of its simpler rhythmic patterns." A former violin and viola player with the Denver and San Francisco Symphony orchestras, Whiteman formed his band in 1919 with pianist/arranger Ferde Grofe and trumpeter Henry Busse, and over the next couple of decades unrolled a prodigious and unprecedented number of hits, well over 200 by 1936. The band appeared in Broadway shows and five films, of which the first, *King of Jazz* (1930), featuring *Rhapsody in Blue*, was a creative landmark in the early history of the Hollywood musical. He hosted several radio shows, including his own, during the 1930s, and a television series as late as the 1950s. By 1954, he was ranked second only to Bing Crosby (with whom he worked and recorded) as a best-selling recording artist. Eventually superseded by big band jazz artists such as Fletcher Henderson, Paul Whiteman's Beiderbecke compilations, along with his Gershwin and Crosby recordings, remain his lasting memorial.

## Whiting, Margaret (1924—)

Margaret Whiting, born in 1924, was a child of show business twice over. Her father was songwriter Richard Whiting ("Too

Marvelous for Words,” “On the Good Ship Lollipop”), and after Whiting died when Margaret was still a teenager, songwriter Johnny Mercer became her mentor. Signed to Mercer’s Capitol label in the early 1940s, she had 12 gold records before the rock ‘n’ roll era, including Mercer’s “My Ideal” and her signature song, “Moonlight in Vermont.” One of the first singers to cross Nashville over into Tin Pan Alley, she hit Number One with “Slippin’ Around,” a duet with country star Jimmy Wakely.

A cabaret revival in the 1970s and 1980s gave Whiting a new career as one of New York’s most beloved cabaret performers, on her own and as part of a revue, *4 Girls 4*, with Rosemary Clooney, Rose Marie, and Helen O’Connell. She also starred in a tribute to Johnny Mercer staged by her longtime companion, former gay porn star Jack Wrangler.

—Tad Richards

Whiting, Margaret, and Will Holt. *It Might As Well Be Spring: A Musical Autobiography*. New York, William Morrow, 1987.

## The Who

Still regarded in the late 1990s as one of the greatest rock bands of all time, the Who were bold innovators who changed the face of popular music forever. Having planted the seeds of heavy metal, art rock, punk, and electronica, the Who are almost without peer in their range of influence upon subsequent music. The Who boasted a dynamic singer and stage presence in Roger Daltrey, a powerful virtuoso bassist in John Entwistle, and one of the world’s greatest drummers in the frenetic Keith Moon. But the guiding genius of the Who was guitarist and songwriter Pete Townshend, who wrote and arranged each song, and recorded the guitar, bass, drums, and vocals onto a demo before presenting it to the band to learn and perform.

Born in West London in 1945, Townshend attended Ealing Art school, where he learned about Pop Art and the merging realms of high and low culture. When he formed the Who, he found a suitable audience for this background among a youth subculture called the Mods, who wore Pop Art clothing and sought out stylish new music and amphetamine-driven dance styles. The Who’s manager, Kit Lambert, encouraged the band to adopt the Mod look and write significant songs that would appeal to Mods. Their early hit, “Can’t Explain” (1964) expressed adolescent frustration, followed by the angst-ridden “My Generation” (1965), one of the great rock anthems of the period.

The Who were most famous for outrageous stage performances. Townshend specialized in “windmill” power chords, in which he would swiftly swing his arm 360 degrees before striking a chord. The Who often smashed their instruments at the end of a show, with Townshend shoving his guitar through the amplifier and Moon smashing through the drumskins and kicking over the entire drum set. Despite their commercial success, the Who remained in debt until 1969 because of this expensive habit.

The Who released their first album, *The Who Sing My Generation* in 1965. Their next album, *A Quick One* (1967; renamed *Happy Jack* in America) featured a miniature “rock opera” on side two, a series of five songs narrating a tale of suburban infidelity. *The Who*

*Sell Out* (1968) satirized commercials, again revealing their interest in Pop Art. *Magic Bus* (1968) was the best album of their early period but offered no hint of the grandeur of their next project, a full-scale rock opera. The double album *Tommy* (1969) told the story of a deaf, dumb, and blind boy who, after a miracle cure, becomes a cult leader. The album was influenced by Townshend’s involvement with his guru, Meher Baba. If spirituality was an unexpected theme from the author of teen frustration and masturbation, the music was an equally bold advance, establishing Townshend as a versatile guitarist and ambitious composer. Nevertheless, responses to *Tommy* were mixed, partly due to the difficulty of following the story. Charges of pretentiousness were frequent. The artistic audacity of *Tommy* left the Who with a formidable dilemma—where do you go from here?

The Who followed up the rock opera with the raunchy, visceral *Live at Leeds* (1970), but soon Townshend grew ambitious again, formulating another opera, *Lifehouse*. Eventually the concept was abandoned, and the better half of the songs written for the project were released as *Who’s Next* (1971), which many regard as the greatest rock album ever made. Among its highlights are “Behind Blue Eyes,” “Teenage Wasteland,” and one of the greatest rock songs of all time, “Won’t Get Fooled Again,” a masterpiece of overwhelming power, featuring incredible performances by each band member. *Who’s Next* made innovative use of synthesizers and sequencers, anticipating electronic music, and it established the Who as a major creative power in rock. The following year, Townshend released a solo album, *Who Came First*, devoted to Meher Baba.

Townshend then embarked upon yet another opera, based on the raw passions of youth rather than philosophical ideas. *Quadrophenia* (1973) told the story of the Mods and their rival subculture, the Rockers. The story was simpler than *Tommy* but still rather confusing. However, the Who had grown musically since their first opera. Townshend was a more sophisticated arranger and made greater use of piano (played by himself) and horns (played by Entwistle). *Quadrophenia* was regarded as Townshend’s masterpiece, the definitive expression of adolescent angst, combining the ambitions of *Tommy* with the virtuosity and emotional power of *Who’s Next*. Both *Tommy* and *Quadrophenia* were made into movies, the former an awkward musical starring Daltrey, the latter a gritty drama which helps to explain the album’s plotline, as well as the cultural milieu in which the Who developed. For most Americans, the movie version of *Quadrophenia* is a prerequisite for understanding the album.

The triumph of *Quadrophenia* left the Who in the same quandary that *Tommy* had: where do you go from here? They avoided the question with *Odds & Sods* (1974), a mixture of singles, B-sides, and leftovers from the *Lifehouse* project. For a hodgepodge, it was a fine album. *The Who by Numbers* (1975) was quieter, with thoughtful, introspective lyrics. *Who Are You* (1978) found the Who delivering up-tempo rock again. The lengthy title song was a worthy follow-up to “Won’t Get Fooled Again.” The entire album was reminiscent of *Who’s Next*, packed with powerful songs, and again featuring innovative use of synthesizers. Unfortunately, Keith Moon died shortly afterwards from an overdose of anti-alcoholic medication.

Following this tragedy, Townshend withdrew to record the fascinating *Empty Glass* (1981), his finest solo album. Moon was replaced by Kenny Jones of the Small Faces, and the Who recorded two albums, *Face Dances* (1981) and *It’s Hard* (1982), before breaking up. Then came countless collections of rarities, outtakes, B-sides, demo tapes, etc., testifying to the Who’s enduring popularity, although respect for the group was compromised by the weakness of

Members of the Who (l-r) John Entwistle, Roger Daltry, Pete Townshend, and Keith Moon

the post-Moon albums and by various anticlimactic reunions in the 1980s and 1990s. Townshend remained prolific as a solo artist but tended to rely overmuch on concept albums. He published a book of short stories, *Horse's Neck*, in 1985.

## *The Whole Earth Catalogue*

First published in 1968 by Stewart Brand, *The Whole Earth Catalogue* introduced Americans to green consumerism and quickly became the unofficial handbook of the 1960s counter-culture. Winner of the National Book Award and a national best-seller, *TWEC* contained philosophical ideas based in science, holistic living, and metaphysics as well as listings of products that functioned within

these confines. As many Americans sought to turn their backs on America's culture of consumption, *TWEC* offered an alternative paradigm based in values extending across the counterculture.

*TWEC* combined the best qualities of the *Farmer's Almanac* and a Sears catalog, merging wisdom and consumption with environmental activism and expression. The first page declared that "the establishment" had failed and that *TWEC* aimed to supply tools to help an individual "conduct his own education, find his own inspiration, shape his own environment, and share his adventure with whoever is interested." The text offered advice about organic gardening, massage, meditation, or do-it-yourself burial: "Human bodies are an organic part of the whole earth and at death must return to the ongoing stream of life." Many Americans found the resources and rationale within *TWEC* to live as rebels against the American establishment.

Interestingly, Brand did not urge readers to reject consumption altogether. *TWEC* helped to create the consumptive niche known as green consumerism, which seeks to resist products contributing to or deriving from waste or abuse of resources, applications of intrusive technologies, or use of non-natural raw materials. *TWEC* sought to appeal to this niche by offering products such as recycled paper and the rationale for its use. As the trend-setting publication of green

consumption, *TWEC* is viewed by many Americans as having started the movement toward whole grains, healthy living, and the environmentally friendly products that continue to make up a significant portion of all consumer goods. Entire national chains have based themselves around the sale of such goods.

Even though green culture has infiltrated society, Whole Earth continues in the late 1990s as a network of experts who gather information and tools in order to live a better life and, for some, to construct “practical utopias.” *The Millennium Whole Earth Catalog*, for instance, claims to integrate the best ideas of the past twenty-five years with the best for the next, based on *TWEC* standards such as environmental restoration, community-building, whole systems thinking, and medical self-care.

## *Wide World of Sports*

“The thrill of victory and the agony of defeat” became one of the most familiar slogans on television for the American Broadcast Company (ABC) sports show that lived up to its title. Beginning as a summer replacement in 1961, *Wide World of Sports* endured into the 1990s, making a household name of original host Jim McKay and launching the domination of ABC in sports and the rise of future ABC Sports and News president Boone Arledge.

Arledge came up with the concept of packaging various sports under this umbrella title and sent Jim McKay to anchor live coverage of two venerable track meets—the Drake Relays from Des Moines, Iowa, and the Penn Relays from Philadelphia—for the inaugural broadcast of the program, on April 29, 1961. *Wide World of Sports* survived its initial 13 weeks and returned every year as a 90-minute program on Saturday afternoons beginning in January, and often expanding to Sundays as well. The opening narration became famous: “Spanning the world to give you the constant variety of sports. The thrill of victory and the agony of defeat, the human drama of athletic competition. This is ABC’s *Wide World of Sports*.”

Early on, *Wide World of Sports* covered many sports that later became separate live broadcast institutions—tennis’s Wimbledon, golf’s British Open, soccer’s World Cup. But *Wide World* made its name with “nontraditional” sports, such as auto racing, boxing, swimming, diving, track and field, gymnastics, and figure skating. The particularly daring and unusual sports drew the most fans: surfing, bodybuilding, World’s Strongest Man competitions, lumberjack contests, cliff divers from Acapulco, the Calgary Stampede rodeo, and most notably, stunt motorcyclist Evel Knievel. Knievel dominated shows of the early 1970s jumping barrels, cars, and busses and nearly making it across the Snake River Canyon on his motorcycle (and by rocket), breaking numerous bones in the process.

The program provided ABC Sports with sports coverage experience that it utilized to cover the Olympics. *Wide World* truly traveled the globe, covering events in Europe and Asia, even Cuba and China. Many of the events were carried live via satellite. The program also developed the style that made Americans sit still and watch unfamiliar

sports and foreign performers such as Russian gymnast Olga Korbut, Brazilian soccer star Pele, or Russian weightlifter Vasily Alekseev. The “up close and personal” features emphasizing the life stories of the athletes grew out *Wide World of Sports* and revolutionized sports coverage. After *Wide World*, sports coverage became storytelling rather than simply showing games and scores. The success of the Olympics propelled ABC out of its low ratings status into a respectable television network and Boone Arledge into a position as the head of ABC Sports and ABC News.

During the 1970s, *Wide World of Sports* became a brand name, and its most famous image was set: the “agony of defeat.” While the “thrill of victory” changed almost every year, “the agony of defeat” was forever symbolized by hapless Yugoslavian ski jumper, Vinko Bogataj, whose spectacular wipeout was taped in 1970.

By the end of the 1980s, *Wide World of Sports* lost its prominence, as cable network ESPN became a superior ratings grabber as the ultimate sports show—24 hours a day of the type of sports coverage that *Wide World* pioneered. ESPN’s rise was ironic, as it was partly owned by ABC.

In the 1990s, McKay left the role of studio host to a succession of other ABC Sports personalities including Al Michaels and Julie Moran. On January 3, 1998, McKay declared that *Wide World of Sports* was canceled; the hour-and-a-half of all sorts of sports was replaced by a studio host introducing single event broadcasts such as the Indy 500, horse racing’s Triple Crown, and the national and world championships in figure skating.

## *The Wild Bunch*

*The Wild Bunch* (1969) was the definitive film, and only true epic, by one of Hollywood’s greatest directors, Sam Peckinpah; and when it came to movie violence, it set the bar higher than it had ever been set before. Earlier Westerns had good guys and bad guys as clearly demarcated as the sides in World War II, but *The Wild Bunch* came out during the Vietnam War, and it better reflected that war in both its complexity and carnage. Arthur Penn’s *Bonnie and Clyde* (1967), which ended with its two protagonists being riddled by bullets, was the first major Hollywood film to show graphic violence—to suggest that shooting someone had consequences, that it was messy and painful—but nothing could have prepared 1960s audiences for the hundreds of deaths, the wave after wave of unrelenting carnage—shown in slow motion and freeze-frame sequences—that climaxed *The Wild Bunch*. Seven years before the film premiered, Peckinpah was deer hunting when he shot a buck and was struck by the fact that the bullet going in was the size of a dime, yet the blood on the snow was the size of a bowling ball. He concluded that was the

way violence and death were, and that was what he wanted to put on film. During filming, Peckinpah had the technicians lay thin slices of raw steak across the bags of stage blood, so when they exploded it looked like the bullets were ripping out of bodies mixed with blood and chunks of flesh. “Listen,” Peckinpah said, “killing is no fun. I was trying to show what the hell it’s like to get shot.” He believed people would shun violence if he showed what violence was really like.

But violence in movies without flesh-and-blood characters (see almost any slasher film) is meaningless. Fortunately, Peckinpah had great characters, played by superb actors, in a strong story, acted out before beautiful vistas gorgeously photographed. As the movie opens, the audience sees a tiny band of soldiers riding into a small town, then walking into the local railroad office, as scruffy, armed men flit back and forth on the rooftops overhead. It looks as though the bad guys are about to ambush the good guys, though the reverse is true. The railroad office manager asks the lead soldier, Bishop Pike (William Holden), “May I help you?” and Pike grabs the manager, pulls him out of his chair, shoves him and another against the wall, and tells the other soldiers, “If they move . . . kill ‘em!” These aren’t really soldiers at all, but the Wild Bunch in disguise, and the men on the roof are bounty hunters, there to ambush the outlaws and collect the prices

on their heads. Leading the bounty hunters is former Wild Bunch member Deke Thornton (Robert Ryan)—whose feud with Pike stems from the time they were busted by Pinkerton agents, with Thornton being shot and captured and Pike running away. Realizing they’re about to be ambushed, the Wild Bunch times its departure to coincide with the passing of a parade of temperance marchers, and the resulting carnage is fairly intense.

The gang escapes to Mexico with the bounty hunters in hot pursuit. In the town of Agua Verde they cross paths with Mapache, a ruthless general at war with revolutionary Pancho Villa who has been oppressing the local natives, even murdering the father and stealing the fiancée of the Wild Bunch’s one Mexican member, Angel. The gang agrees to rob a military supply train loaded with munitions for Mapache in exchange for gold, and the robbery itself is a slickly done caper, a Western *Topkapi!* Worried about helping Mapache get more guns, Angel agrees to participate if, instead of gold, he can take one case of guns for the revolutionaries. But Mapache finds out, and when the gang returns to Agua Verde to trade the arms for the gold, Mapache keeps Angel. At the end, the remaining outlaws decide to rescue Angel, and their fight against the soldiers provides the climactic bloodshed.

A scene from the film *The Wild Bunch*, with (l to r) Ben Johnson, Warren Oates, William Holden, and Ernest Borgnine.

More complex than it first appears, *The Wild Bunch* is ultimately about redemption. Early in the film, Pike tells a gang member who wants to kill another, “We’re gonna stick together, just like it used to be. When you side with a man you stay with him, and if you can’t do that you’re like some animal, you’re finished!—we’re finished!—all of us!” Yet Pike betrays this code again and again. During the original railroad office job, when Crazy Lee (Bo Hopkins) tells Pike he’ll hold the hostages until Pike says different, Pike just leaves him behind to die. This is brought home when Pike’s oldest friend, Sykes (Edmund O’Brien), tells Pike that Crazy Lee is his grandson. When another gang member is wounded and might slow them down, Pike shoots him; even Sykes himself is expendable when he becomes wounded. At first, Angel is abandoned to Mapache and his men, but Pike has finally had enough, and, against impossible odds, he and the rest of the Wild Bunch decide to redeem themselves. They go down in a blaze of glory—and, joining the revolutionaries, the one remaining gang member and the one remaining bounty hunter ride off to fight the good fight.

## Wild Kingdom

The first television program to help Americans visualize distant life and consider ways they might help, *Wild Kingdom* became a crucial tool in the formation of America’s environmental consciousness and particularly in the movement’s shift toward global concerns. Mutual of Omaha’s *Wild Kingdom* has served as Americans’ window to the exotic species of the natural world since the 1960s. In the tradition of *National Geographic*, host Marlon Perkins traveled throughout the world sending back images of danger and intrigue. Perkins’s pursuit of animals in their natural surroundings contributed to the interest in “eco tourism” in which the very wealthy now travel to various portions of the world not to shoot big game but only to view it. *Wild Kingdom* continues production and has spawned an entire genre of television, particularly for young viewers.

—Brian Black

## The Wild One

The camera looks down a stretch of straight country highway, then in bold, white letters appears the following: “This is a shocking story. It could never take place in most American towns—but it did in

Marlon Brando in *The Wild One*.

this one. It is a public challenge not to let it happen again.” The words fade away to be replaced by Marlon Brando’s voice speaking in a southern drawl. “It begins for me on this road,” he says. “How the whole mess happened I don’t know, but I know it couldn’t happen again in a million years. Maybe I coulda stopped it early, but once the trouble was on its way, I was just going with it.” A crowd of leather-clad motorcyclists roar past the camera, and with the confident declaration that what follows is an aberration, Stanley Kramer launched *The Wild One* in 1954. The truth of the matter is somewhat more complicated, for not only did the film incite a rash of copy-cat behavior, but may have had an affect on the Hell’s Angels’ delectations a decade later.

*The Wild One* derives from a real riot, following a large motorcycle rally in the Northern California town of Hollister. According to witnesses, six to eight thousand participants drag-raced up and down the streets of Hollister; fist-fights, lewd behavior, and vandalism were the norm, but the event was eventually dispatched by 29 policemen and it ended without a single loss of life. The coverage in the July 1947 issue of *Life* magazine was sufficiently lurid and alarmist, and it inspired Frank Rooney to turn the incident into a short story, “The Cyclists’ Raid.” Rooney told the story from the point of view of Joel Bleeker, a hotel manager (and significantly, a World War II veteran) who witnesses his daughter’s death at the hands of the cyclists. Bleeker views the motorcyclists as inhuman quasi-fascists, but in its transition from story to film, sympathies were switched. The hero became Johnny (Marlon Brando), leader of the Black Rebels Motorcycle Club, who is sullen and incommunicative, but also reserved and possessing a degree of chivalry lacking in his compatriots.

The rioting itself is transformed in typical Hollywood fashion into a Manichean contest between Johnny and his dissipated rival, Chino (Lee Marvin), who, to make matters perfectly clear, wears a horizontal striped sweatshirt closely resembling prison garb. After gratuitously interfering in a local motorcycle race, the bikers proceed to the nearby town of Carbondale where they cause all manner of havoc, prompted in part by the local saloon owner, who all but rubs his hands in excitement at the prospect of a bar full of hard-drinking motorcyclists. The tension between locals and bikers, already tense after a notoriously bad driver hits one of the bikers, is further exacerbated by the arrival of Chino and his cohorts. As the motorcyclists begin to run genuinely amuck, the town's craven police officer cowers in his office while his daughter, Kathy, is accosted by the bikers, rescued by Johnny who drives off with her, and is thus absent from the ensuing carnage. Nonetheless, as the leader he is blamed by the townspeople, locked up, and when he escapes, knocked off his motorcycle as he flees, accidentally killing an elderly man, and then is unjustly accused of the killing.

Despite the rather thin story line—the *New Yorker* magazine called it “a picture that tries to grasp an idea even though the reach falls short”—*The Wild One* was an instant hit with young audiences. Theater owners throughout the country reported that teenage boys had taken to dressing in leather jackets and boots like Marlon Brando and accosting passersby. The pioneering members of the Hell's Angels (most of the group that later came to notoriety were children at the time) identified deeply with Brando. “Whatta ya got?” was Brando's insouciant reply to the famous question, “Hey Johnny, what are you rebelling against?” and it echoed in the real-life outlaws inchoate dissatisfaction. “We went up to the Fox Theater on Market Street,” a founding member told journalist Hunter S. Thompson. “There were about fifty of us, with jugs of wine and our black leather jackets . . . We sat up there in the balcony and smoked cigars and drank wine and cheered like bastards. We could all see ourselves right there on the screen. We were all Marlon Brando.”

Much of the lasting allure of *The Wild One* stems from Brando's lionization by not only the Hell's Angels, but by countless teenagers. In “The Cyclists' Raid,” Rooney had written: “They were all alike. They were standardized figurines, seeking in each other a willful loss of identity, dividing themselves equally among one another until there was only a single mythical figure, unspeakably sterile and furnishing the norm for hundreds of others.” In light of the Hell's Angels' response to *The Wild One* as quoted above, and considering the way Marlon Brando's image was disseminated on posters, in books, and turned into an archetype, it is no wonder many blamed *The Wild One* for the Hell's Angels' excesses a decade later. Hollywood gossip columnist Hedda Hopper blamed Kramer entirely for the whole outlaw phenomenon, and Frank Rooney might well have identified Marlon Brando as that “single mythical figure furnishing the norm for hundreds of others.”

It would be simplistic to blame the filmmaker and leading man for a real life contagion, but the suspicion remains to this day. Perhaps Hunter S. Thompson put it best when he wrote that the film “told a story that was only beginning to happen and which was inevitably influenced by the film. It gave the outlaws a lasting, romance-glazed image of themselves, a coherent reflection that only a very few had been able to find in a mirror, and it quickly became the bike-rider's answer to *The Sun Also Rises*.”

## Wilder, Billy (1906—)

Born Samuel Wilder in an Austrian village, this six-time Academy Award winning director, screenwriter, and producer was dubbed Billy after Buffalo Bill of the 1880s traveling western show. That American nickname apparently foretold, in the wake of the Nazi rise to power, his 1934 emigration to Hollywood where he joined fellow European exiles, learned English, and cultivated a legendary career that indelibly marked American movie history. With partner Charles Brackett, he co-wrote acclaimed comedies like *Ball of Fire* (1941), then scripted, directed, and produced a string of hugely popular films, including the quintessential film noir *Double Indemnity* (1944), and *The Lost Weekend* (1945). Their alliance culminated with the savage portrayal of Hollywood in *Sunset Boulevard* (1950). With I.A.L. Diamond, Wilder created *Some Like it Hot* (1959) and *The Apartment* (1960). His self-produced works more flagrantly expressed his cynicism and penchant for vulgarity with *Ace in the Hole* (1951), betraying a jaded sensibility ahead of its times.

## Wilder, Laura Ingalls (1867-1957)

One of the best-known children's authors, Laura Ingalls Wilder wrote the popular, autobiographical “Little House” novels about her

late-nineteenth-century childhood on the American frontier. Published in the 1930s and 1940s, these eight books were considered classics of children's literature by the 1950s and have appealed to every succeeding generation of readers who thirsted for nostalgia.

The second of four daughters of Charles and Caroline Ingalls, a post-Civil War American pioneering family, Wilder began writing in childhood. Laura and her sisters penned poetry and compositions in the many homes the Ingalls family built in the wilderness. Her writing permitted her to have a voice, public and private, denied to many nineteenth-century women and provided a way to release her frustrations, disappointments, and enthusiasms during her life as pioneer, teacher, wife, mother, farmer, businesswoman, and author. Wilder continued her writing after she married her husband Almanzo in 1885. Keeping a travel diary of their 1894 trip to Mansfield, Missouri, Wilder submitted it for publication to the *De Smet News*, where both of her younger sisters worked as journalists. Distracted by farm duties and volunteer work in her community, Wilder did not write seriously until 1911 when she began preparing essays about farm life for the *Missouri Ruralist*.

The fictional Laura was adventurous and inquisitive yet compliant to the culture she lived in, obediently silencing herself and being still to please her Pa. She was predictable, providing steadiness to her readers. The real Laura craved such stability. Accustomed to economic and physical hardships, Wilder persevered despite her son's death, her husband's disability from disease, conflicts with her strong-willed daughter, crop failures and debt, and the misogyny and anti-intellectualism of her patriarchal community. Ambitious and intelligent, she ensured that the couple's farm, Rocky Ridge, survived while asserting her individuality. Known as Bessie to her family, she became Laura Ingalls Wilder only in the last part of her life. This pen name represented a professional woman whom few people actually knew. The author Laura Ingalls Wilder answered fan mail, received awards, and signed books, while Bessie Wilder was an ordinary woman who performed her daily chores, read her Bible, attended club meetings, supported the local library, visited with friends, and cared for her ailing husband.

Wilder's daughter, Rose, an accomplished writer, encouraged her to write about her family's adventures on the frontier. Wilder completed her first attempt, *Pioneer Girl*, in 1930. In this novel, Laura narrated her story from childhood to marriage, but no publisher was interested. With Rose's help, Wilder rewrote her manuscript to meet literary expectations, dividing the novel into eight stories and presenting it in third person. Her publisher suggested that she make her characters two years older than they really were to appeal to adolescent readers. Although the books were presented as what Laura remembered, the early stories about events during her infancy were actually her parents' memories. Originally titled *When Grandma Was a Little Girl*, Wilder's first book, *Little House in the Big Woods*, was published in 1932 and was followed by *Farmer Boy* (1933), *Little House on the Prairie* (1935), *On the Banks of Plum Creek* (1937), *By the Shores of Silver Lake* (1939), *The Long Winter* (1940), *Little Town on the Prairie* (1941), and *These Happy Golden Years* (1943). (A manuscript for a story of Wilder's early years of marriage was found after her death. Edited by Roger Lea MacBride, *The First Four Years* was published in 1971.) Critics and readers immediately accepted her books, and the volumes sold well despite the Depression. The values of home, love, and personal courage formed an image of rural serenity

that fulfilled readers' need for comfort and a connection to a past that they believed was simpler and happier than contemporary times.

Scholars noted the books' archetypes: Pa was the dreamer and provider, while Ma was the civilizer and stabilizer. Laura was a blend of her parents. The Ingalls were praised for being spiritual, hard working, and resourceful, enduring tragedy while constantly moving in their covered wagon and homesteading virgin land. Aspects of nineteenth-century American culture were provided through the songs Pa sang, the items they purchased in stores, and the books and magazines the women read. Scholars have criticized the patriarchal, domestic, and materialistic messages of Wilder's books and denounced the characters' racism toward Native Americans and minorities. The women were often isolated and confined to homes, while men were active participants with the outside world. Laura faced conflicts between her need for individual freedom and expression, and self-sacrifice and obedience for the good of her family.

Wilder stressed that she wrote her stories to provide history lessons for new generations of children who no longer could experience the frontier and disappearing prairie that metaphorically offered hope, prosperity, and renewal. In so doing, she sparked a cultural phenomenon. Fans have dressed as Little House characters, collected memorabilia, and visited Laura Ingalls Wilder heritage sites. The Laura Ingalls Wilder-Rose Wilder Lane Home and Museum in Mansfield, Missouri, houses many items, such as Pa's fiddle, which are featured in the books. Bookstores sell adaptations of Wilder's stories, including series about Ma's and Roses's childhoods. The commercialization of Laura Ingalls Wilder has meant that fans can buy Little House dolls, T-shirts, cookbooks, videos, diaries, and calendars. Wilder's books never have been out of print, and edited versions of her periodical writing and letters are also available. Foreign readers have also identified with Wilder's universal themes; her books have been published in 40 languages, and Internet sites connect Wilder fans around the globe.

The American Library Association initiated the Laura Ingalls Wilder Medal for accomplishments in children's literature in 1954. A television series, *Little House on the Prairie* (1974-1983), unrealistically portrayed Wilder's life but was popular during an era when the Bicentennial and Alex Haley's book *Roots* revived Americans' interest in the past. A Broadway musical, *Prairie*, ran in 1982, and a Little House movie was in production in 1998.

## Wilder, Thornton (1897-1975)

Thornton Wilder, with an enthusiasm for experimentation and keen observation of human experience, enlivened the American literary scene in the middle years of the twentieth century. He received numerous awards, including the first Presidential Medal of Freedom, and two Pulitzer Prizes for drama—*Our Town* (1938) and *The Skin of Our Teeth* (1943). In 1927 he received his first Pulitzer Prize for his novel, *The Bridge of San Luis Rey* (1923), which established his reputation as a leading novelist. One of his most popular plays—*The Matchmaker* (1956)—became the mega-musical *Hello, Dolly*, an international box office success. Gertrude Stein became a close friend and influence during his last 12 years of major work. In 1997, one hundred years after his birth, cultural festivals throughout America celebrated the enormous talent of a man whose command of the classics was so great he was nicknamed, “The Library.”

—Joan Gajadhar

## Will, George F. (1941—)

Political commentator, columnist, and amateur baseball historian, George F. Will is known for the way he imparts a conservative spin to his opinions about the intersection of American culture and politics in the closing years of the twentieth century. Best known for his syndicated column in the *Washington Post* and for his regular contributions to *Newsweek*, Will is also a frequent panelist on televised political commentary programs, such as ABC's *This Week with David Brinkley*. As R. Emmett Tyrell Jr. wrote in his review of *The Leveling Wind: Politics, the Culture, and Other News, 1990-1994*, “George F. Will has always been a sober, civilized man with serious political principles buttressed by wise historical thoughts.”

Born in Champaign, Illinois, in 1941, George F. Will was educated at Trinity College (B.A. 1962), Magdalene College of Oxford University (B.A. 1964), and Princeton University (M.A., Ph.D. 1967). Several collections of Will's newspaper and magazine columns have been published including: *Suddenly: The American Idea Abroad and at Home, 1986-1990*; *The Morning After: American Successes and Excesses, 1981-1986*; *The Pursuit of Virtue and Other Tory Notions*; and *The Pursuit of Happiness, and Other Sobering Thoughts*. One of Will's biggest crusades has been against big government, notably as a supporter for term limitations for U.S. Senators and Representatives. Reflective of public frustration with the American political system during the 1980s and 1990s, Will consistently pushed for term limits believing, as Peter Knupfer notes

George F. Will

in the *Journal of American History*, these limits will “restore democratic institutions to deliberative processes and to leadership by public-spirited amateurs” who are more interested in the public good than in political careers. Will's writings on term limits are found in numerous columns and in one book, *Restoration: Congress, Term Limits, and the Recovery of Deliberative Democracy*.

Although he generally adopts a conservative position, he is by no means a typical Republican looking to either weaken government or weaken the Democratic Party. As a self-styled conservative, Will reshaped the way people viewed the spectrum of American political thought by insisting that conservatives move away from narrow self-interest toward an interest in the public good. Will's thought urges conservatives to reconsider their assumptions and adopt ideas steeped in the “tradition of U.S. socio-political thought: the relation of individuals to the larger community, the ways of nurturing a dynamic democracy and the proper role of government,” in the words of Marilyn Thie in *America*. From this position, Will wrote many columns on what he saw as wasteful government spending, government inefficiency, and political gridlock. Will came to believe one of the biggest problems for American culture was the public's heavy reliance on—and demands on—its government. If the government is misfiring in itself, then its ability to serve the public is highly problematic, Will believed.

Beyond his primary focus on politics and American culture, Will also wrote on a range of subjects that included pornography, journalistic ethics, advertising, the environment, and especially the game of baseball. Relating the myths of American life, such as the American

dream and the great American pastime, to the realities of contemporary American life remains one of Will's contributions to cultural discourse. Besides several columns for a variety of periodicals, his book publications on the myths of American baseball include *Bunts: Curt Flood, Camden Yards, Pete Rose, and Other Reflections on Baseball* (1998) and *Men at Work: The Craft of Baseball* (1990).

## Williams, Andy (1930—)

One of the great middle-of-the-road singers of the mid-twentieth century, Andy Williams is among the very few whose popularity survived the onset of rock 'n' roll in the 1950s. Howard Andrew Williams was born in the small town of Wall Lake, Iowa, the last of a set of four brothers. The Williams Brothers formed a singing group while Andy was still a child, and were regularly employed on radio from 1938. The family relocated several times to facilitate the

Williams Brothers' obtaining new radio contracts. At various times they lived in Des Moines, Chicago, Cincinnati, and southern California. The two older brothers were drafted in the last days of World War Two, and Andy Williams spent a comparatively calm period finishing high school in Los Angeles.

In 1947 the foursome regrouped, joining with a new partner, Kay Thompson. They played a wide variety of clubs over the next several years, including a tour of Europe, before disbanding in 1953; the brothers went their separate ways professionally. Andy Williams landed a regular job on Steve Allen's *Tonight Show* from 1954 to 1957, singing and taking part in Allen's manic clowning, five nights a week. The year 1957 saw Williams hosting a summer replacement television program on NBC; he also had summer shows on ABC in 1958 and on CBS the following year. From 1962 to 1967, and again from 1969 to 1971, Williams had his own highly successful series on NBC. At various times his supporting cast included Dick Van Dyke, Jonathan Winters, Ray Stevens, and the Osmond Brothers. His program was noteworthy in that Williams was always willing to have competing singers—major personalities such as Bobby Darin or Robert Goulet—make guest appearances on his show.

Williams' recording career, benefitting from his national exposure on the *Tonight Show*, was a hit from the start. He recorded for the Cadence label until 1962, when he switched to the larger Columbia Records. His recording career had actually started much earlier, however, in 1944, when he was picked to sing "Swingin' on a Star" with Bing Crosby. Williams had several million-selling singles in the 1950s, including "The Village of St. Bernadette," "Canadian Sunset," and "The Hawaiian Wedding Song." His version of "Butterfly" was the number-one record in America for three weeks in the spring of 1957.

The song most closely identified with Williams, 1961's "Moon River," was never a hit for him. However, it so perfectly suited his smooth voice and mellow delivery that it became his signature song, and served as his television theme from 1962 onwards. His popularization of the Henry Mancini-written "Moon River" (from *Breakfast at Tiffany's*) was not lost on the composer; Andy Williams was invited to sing the theme for the 1963 film *Days of Wine and Roses*, another important Mancini work. Williams' LP of the same name was one of the six top-selling albums of 1963. Major hits were rare for Williams after that year, his last being the theme from *Love Story* in 1971. His albums, television work, and live concerts all remained quite successful.

Williams became a noted collector of art in the late 1950s. He has built a well-regarded private collection of Impressionist and modern paintings, located in his Manhattan home. In 1961 he married a nineteen-year-old Folies-Bergère showgirl, Claudine Longet, whom he met during her show's stay in Las Vegas. Longet unsuccessfully pursued careers in music and acting for years. The two separated in 1970, divorcing in 1975. The following year she fatally shot her long-time lover, professional skier Spider Sabich, in their Colorado home. Williams, who remained close to his ex-wife after the breakup of their marriage, was publicly supportive of Longet throughout her trial and the attendant media circus.

In addition to his highly rated variety program, which he ended in 1971, Williams is known for hosting numerous seasonal television specials. He is an avid golfer, and the host of the annual Andy Williams Open golf tournament. In 1992 he opened his own theater in Branson, Missouri, considered the second city of country music after Nashville. Andy Williams' Moon River Theatre there is one of the

Andy Williams and Ann Sothern (foreground) dancing during a rehearsal for the *Andy Williams Show*.

more popular attractions, providing live music shows for many of the millions of tourists who visit Branson each year.

## Williams, Bert (1874-1922)

Known during his lifetime as “the funniest man in America,” Egbert Austin “Bert” Williams enjoyed fame as the straight man and ballad singer of the African American comedy team of Williams and

Walker. Williams met his partner, George Walker, in San Francisco in 1893, when he began performing in order to finance his studies at Stanford University. They worked their way to New York, where in 1896 they appeared in Victor Herbert’s *Gold Bug*. The two performed in such musical comedy hits as *The Sons of Ham* (1900), *In Dahomey* (1902), *Abyssinia* (1905), and *Bandanna Land* (1907). When Walker retired, Williams starred in *Mr. Lode of Koal* (1909) then performed with Florenz Ziegfeld’s *Follies* from 1910 to 1919. In 1920 Williams joined Eddie Cantor in *Broadway Brevities*. Williams was admired for impeccable comedic timing and pantomimes. He died in 1922 after opening in *Under the Bamboo Tree*.

## Williams, Hank, Jr. (1949—)

Perhaps no one has ever been simultaneously such a major star and so much in the shadow of his father as Hank Williams, Jr. As an eight-year-old, Williams began his career as an imitator of his deceased father, then still the biggest name in country music. Ultimately trading on the fact that his name made it impossible for the country establishment to reject him, he was to become perhaps the most significant force in bringing rock music into country.

In an industry that has never been ashamed of exploitation, young Williams was shamelessly exploited. Between the ages of eight and fourteen, he played fifty shows a year, singing his father's songs. By the time he was in his mid-teens, he was signed to MGM Records, his father's old label, and he was recording overdubbed duets with his father; he even overdubbed the singing for George Hamilton in *Your Cheatin' Heart*, a movie biography of Hank, Sr.

By the time he was in his late teens, Williams was drinking heavily; he felt utterly trapped inside a musical world that was making less and less sense to him. He was listening to the rock and roll of his generation—Chuck Berry, Fats Domino, and Elvis Presley—and thinking about the kind of music he really wanted to play. At 23, with his first marriage breaking up, Williams attempted suicide.

Hank Williams, Jr.

As part of his recovery, he left Nashville and moved to Alabama. He began to work seriously on developing his own music. In August 1975, after finishing work on what was to be a landmark country rock album, *Hank Williams, Jr. and Friends*, he took a vacation in Montana, and suffered a devastating accident: a near-fatal fall down a mountain virtually tore his face off.

After extensive physical therapy and plastic surgery to reconstruct his face, Williams returned to music with an absolute determination to create his own, rock-oriented kind of sound. A new country audience—one that had opened up to the “outlaw” sounds of Willie Nelson and Waylon Jennings—was ready for him. After a few modest successes, the highest-charting being his cover version of Bobby Fuller’s “I Fought the Law,” he reached his stride in 1979 with a song that looked back at the past at the same time it snarled with the beat and attitude of rock. The song was “Family Tradition,” and it was highly autobiographical. In it Williams was asked, “Why do you drink, and why do you roll smoke, and why do you live out the songs that Hank wrote?” Williams responded that he was simply carrying on a family tradition.

This proved to be a winning formula for Williams. Many of his subsequent hits were autobiographical. In one, he asks an operator to put him through to Cloud Number Nine so he can talk to his father. In “All My Rowdy Friends Have Settled Down,” he remembers the wildness of Nashville in the 1970s. Established as a major star in his own right by the mid-1980s, he was able to use his preoccupation with his father and his family history to successful record Hank Williams, Sr., hits like “Honky Tonkin’.” In 1987, he even performed a duet with his father on a newly discovered, never released recording of a song called “There’s a Tear in My Beer.” Williams also released a video duet, in which his image is inserted into an old kinescope of his father. Since Williams, Sr. had never performed “There’s a Tear in My Beer” for the cameras, a film was used in which he sings “Hey, Good Lookin’” with his mouth electronically doctored to lip-synch the words of the other song.

At the same time, Williams continued to be a major force in bringing rock into country, and making it an important part of the new country sound. In his semi-anthem 1988 hit, “Young Country,” he reminds his listeners that “We [the new generation of country performers] like old Waylon, and we like Van Halen.” At the time, this was still a significant statement, and one that it took a child of traditional country like Williams to make. A few years later, the rockers themselves had become the country music establishment, with megastars like Garth Brooks modeling himself on arena rockers like Journey.

As Williams himself settled into the role of middle-aged country establishment figure in the 1990s, he remained solidly in the public eye with his theme song for *Monday Night Football*.

## Williams, Hank, Sr. (1923-1953)

Widely acknowledged as the father of contemporary country music, Hank Williams, Sr., was a superstar at the age of 25 and dead at

**Hank Williams, Sr.**

29. Like Jimmie Rodgers, Williams had a short but highly influential career in country music. Though he never learned to read or write music, during his years of greatest commercial success, Williams wrote and recorded over 100 polished, unique, and lasting songs, releasing at least half a dozen hit records every year from 1949 until 1953. His direct, sincere, and emotional lyrics (“Your cheatin’ heart / Will make you weep / You’ll cry and cry / And try to sleep”) set the stage for much of the country music that followed, and many of his songs, including “Cold, Cold Heart” and “Your Cheatin’ Heart,” have become classics.

His ability to transfix his audiences is the stuff of legend. Chet Hagan’s *Grand Ole Opry* offers the following assessments: Little Jimmy Dickens said that “You could hear a pin drop when Hank was working. He just seemed to hypnotize those people. It was simplicity I guess. He brought his people with him. He put himself on their level.” Minnie Pearl said, “He had a real animal magnetism. He destroyed the women in the audience. And he was just as authentic as rain.” And according to Mitch Miller (a Columbia Records executive), “He had a way of reaching your guts and your head at the same time.” Williams had the unique ability to connect with his audiences, comprised primarily of poor, white Southerners like himself, and, particularly in the early days, fist-fights often broke out among his female fans.

Born and raised in Alabama, Williams got a guitar at the age of eight and learned to play and sing from a local blues street performer known as “Tee Tot.” This early exposure to African-American blues styles shaped his own musical character, forming a key element of Williams’s trademark honky-tonk, country-blues sound. When he

was 12 years old, Williams won 15 dollars in a songwriting contest with his “WPA Blues.” At the age of 14, Williams had organized his own band and had begun playing locally for hoedowns, square dances, and the like. In 1941, Williams and his band, the Drifting Cowboys, began performing at a local radio station, most often covering the songs of other country artists, including Williams’s hero, Roy Acuff. Despite attempts to make a name for himself and his band, Williams’s musical career stayed in a holding pattern for several years.

In 1946, Williams went to Nashville with his wife and manager, Audrey, where a music publishing executive for Acuff-Rose Publishing set up a recording session for Williams with Sterling Records. The two singles he recorded then, “Never Again” (released in late 1946) and “Honky Tonkin” (released in early 1947) were quite successful, rising to the top of the country music charts and breaking Williams’s career out of its holding pattern. Williams signed the first exclusive songwriter’s contract issued by Acuff-Rose Publishing, and he began a long and productive songwriting partnership with Fred Rose, with Williams writing the songs and Rose editing them.

In 1947, Williams won a contract with Metro Goldwyn Mayer (MGM) Records. “Move It On Over,” Williams’s first MGM single, was a big hit, and Williams and the Drifting Cowboys began appearing regularly on KWKH Louisiana Hayride, a popular radio program. Several other releases followed, and Williams became a huge country music star. Already earning a reputation as a hard-drinking, womanizing man, he had trouble being accepted by the country music establishment, and Ernest Tubb’s attempts to get the Grand Ole Opry to sign him on were initially rebuffed for fear that he would be too much trouble. He was finally asked to join the Opry in 1949, and earned an unprecedented six encores after singing the old country-blues standard “Lovesick Blues” at a 1949 Opry performance. Strings of hit singles in 1949 and 1950 (including “Lovesick Blues,” “Mind Your Own Business,” and “Wedding Bells” in 1949, and “Long Gone Lonesome Blues,” “Moaning the Blues,” and “Why Don’t You Love Me” in 1950) led to sell-out shows for Williams and the reorganized Drifting Cowboys, earning Williams and the band over \$1,000 per performance. From 1949 through 1953, Williams scored 27 top ten hits. During this period, Williams began recording religious material (both music and recitations) under the name Luke the Drifter, and he managed to keep his drinking and womanizing in check.

In 1951, Tony Bennett had a hit single with a cover of Williams’s “Cold, Cold Heart,” and other singers began recording (and having hits) with Williams’s songs: Jo Stafford recorded “Jambalaya,” Rosemary Clooney sang “Half As Much,” and both Frankie Laine and Jo Stafford covered “Hey Good Lookin’.” As a result, Williams began to enjoy crossover success on the popular music charts, appearing on the Perry Como television show, and touring as part of a package group that included Bob Hope, Jack Benny, and Minnie Pearl. Though not all of his hit records were his own compositions, many of his best known works are ones he wrote, and many of them seem to have an autobiographical bent.

Williams’s professional success, however, began to take a toll on his private life. His long-time tendency to drink to excess became full-blown alcoholism. Williams began showing up at concerts drunk and abusive. As a result, he was fired from the Grand Ole Opry and told to return when he was sober. Rather than taking the Opry’s action as a wake-up call, Williams drank even more heavily. An accident rekindled an old back injury, and Williams began abusing the morphine he was prescribed to deal with back pain. His marriage fell apart, in part due to his drinking and drug abuse, and in part due to his increasingly frequent dalliances with other women. In 1952, after

divorcing his first wife, Audrey, he quickly married a 19-year-old divorcee named Billie Jean, selling tickets to what was billed as a matinee “wedding rehearsal” and “actual wedding” that evening (both were frauds; Billie Jean and Williams had been legally married the previous day). Williams also came under the spell of a man calling himself “Doctor” Toby Marshall (actually a paroled forger), who often supplied him with prescriptions and shots for the sedative chloral hydrate, which Marshall claimed was a pain reliever.

In December of 1952, Williams suffered a heart attack brought on by “alcoholic cardiomyopathy” (heart disease due to excessive drinking); found in the back seat of his car, he was rushed to the hospital but was pronounced dead on January 1, 1953. His funeral, held at a city auditorium in Montgomery, Alabama, was attended by over 25,000 weeping fans. After his death, his record company continued to issue a number of singles he had previously recorded, including what is probably his most famous song, “Your Cheatin’ Heart.” These singles earned a great deal of money for his record company and his estate, and artists as diverse as Johnny Cash and Elvis Costello have made their own recordings of Williams’ songs in recent years. Many of those associated with Williams attempted to trade on his reputation after his death. Both of his wives went on tour, performing as “Mrs. Hank Williams.” A supposedly biographical film, *Your Cheatin’ Heart*, also exploited Williams’ fame and untimely death. Williams’ children, Jett and Hank, Jr., went into country music and have enjoyed some success (particularly Hank “Bocephus” Williams, Jr.). But it is Hank, Sr., who left his mark on country music. Along with Jimmie Rodgers and Fred Rose, he was one of the first inductees into Nashville’s Country Music Hall of Fame, elected in 1961.

## Williams, Robin (1952—)

With his manic versatility, comedic genius Robin Williams has defined comedy for the last three decades of the twentieth century. Whether expressing himself as a stand-up comic or an animated genie or a cross-dressing nanny, he is without equal in the field of American comedy. Much more than a comedian, however, some of his finest work has been in dramatic film roles to which he has brought humanity and warmth to a cast of characters ranging from a crazed widower in *The Fisher King* (1991) to a sad but optimistic psychiatrist in 1997’s *Good Will Hunting*, which garnered an Academy Award for Best Supporting Actor.

Williams was born July 21, 1952, in Chicago, Illinois, to a father who was a Ford company executive and a mother who was a former model engaged in charity work. While both parents had sons by previous marriages, Williams essentially grew up as an only child. In interviews, he has described his childhood as lonely and himself as

**Robin Williams**

shy and chubby. His father was stern and distant, and his mother was charming and busy. While Williams was close to his mother, she was often absent, leaving him to roam their forty-room home for diversion. He turned to humor as a way to attract attention. His interest in comedy was aroused by hours spent in front of the television, and he was particularly enthralled by late-night shows where he discovered his idol, Jonathan Winters, another comic who consistently pushes the envelope.

In 1967 Williams’s family moved to Tiburon, an affluent suburb of San Francisco. In the less inhibited atmosphere in California, Williams blossomed. When his father steered him toward a career in business, Williams rebelled. His innate comedic skills were honed in college, but he chose to leave two schools without finishing. He then entered the prestigious Juilliard School in New York on a scholarship, where he roomed with actor Christopher Reeve, who remains a close friend. While the other students found Williams’s off-the-wall antics hilarious, his professors were unsure of how to handle such frenetic humor. Leaving Juilliard without graduating, Williams returned to California and appeared in comedy clubs such as the Improv and the Comedy Store.

By the mid-1970s, Williams had guest-starred on several television shows including *Saturday Night Live*, *Laugh-In*, and *The Richard Pryor Show*. In 1977, a guest appearance on *Happy Days* as the alien Mork from the planet Ork propelled him to stardom. Williams reportedly won the role of Mork by showing up at his audition in rainbow suspenders and standing on his head when asked to sit like an alien. The appearance was so successful that the character of Mork was given his own show, *Mork and Mindy* (1978-1982), which

costarred Pam Dawber as the earthling who took in the stranded alien. In retrospect, it is inconceivable that anyone else could have played Mork with his zany innocence. Each week, the television audience discovered their own planet through Mork's reports to Ork leader Orson at show's end. Even though the characters of Mork and Mindy predictably fell in love and married, the birth of their first child was anything but predictable: Jonathan Winters as Mearth, who aged backward, was the surprising result of this intergalactic coupling. Even though Williams had so much control over the content of the show that it became known informally as "The Robin Williams Show," he often felt stifled by the confines of network television as a medium. Williams said in a 1998 *TV Guide* interview that he found salvation in his HBO specials that aired without censorship, giving him freedom to expand as a comic and solidify his position as a top-notch performer.

In 1980 Williams lent his talent to the big screen with *Popeye*, based on the heavily muscled, spinach-eating sailor from the comic strip of the same name. It was a disappointing debut. His performance in *The World According to Garp* in 1982 was better received, but it was evident that Williams's vast talents were not being properly utilized outside of television. He managed to hit his stride with *Moscow on the Hudson* in 1984, playing a Russian defector. Perhaps the character who came closest to his own personality was that of an outrageous disc jockey in 1987's *Good Morning, Vietnam*, a role which earned him his first Academy Award nomination for Best Actor.

Drawing on his cross-generational appeal, Williams has appeared in a series of films aimed at family audiences, such as the role of Peter Pan in *Hook* in 1991. Although it was criticized by certain reviewers, the role allowed Williams to display his own split personality—that of the child who never quite grew up in the body of an adult burdened by the everyday cares of his world. Williams followed *Hook* with a delightful performance as the voice of Batty Koda in the animated environmental film *FernGully . . . The Last Rain Forest*, but nowhere was the enormity of Williams's comedic range more evident than in Disney's *Aladdin* in 1992. As Genie, he managed to steal the show. Refusing to be confined by his large-chested blue blob of a body, Williams's Genie metamorphosed by turns into a Scotsman, a dog, Arnold Schwarzenegger, Ed Sullivan, Groucho Marx, a waiter, a rabbit, a dinosaur, William F. Buckley Jr., Robert De Niro, a stewardess, a sheep, Pinocchio, Sebastian from *The Little Mermaid*, Arsenio Hall, Walter Brennan, Ethel Merman, Rodney Dangerfield, Jack Nicholson, and a one-man band. There was talk of an unheard-of Academy Award nomination for Best Actor for the portrayal of an animated character. Williams did, in fact, win a special Golden Globe award for his vocal work in *Aladdin*.

Even though *Toys* (1992) received little attention, Williams followed it up with the blockbuster *Mrs. Doubtfire*, in which he played the estranged husband of Sally Field and cross-dressed as a nanny in order to remain close to his three children. *Jumanji* (1995), a saga of characters trapped inside a board game, demonstrated a darker side to Williams. He finally came to terms with Disney and reprised the role of the genie in the straight-to-video *Aladdin and the King of Thieves* in 1996. Williams's zany side was again much in evidence in 1997's *Flubber*, a remake of the Disney classic *The Absent Minded Professor*. Before *Flubber*, Williams had returned to adult comedy with his uproarious portrayal of a gay father whose son is about to be married in *The Birdcage* (1996).

While comedy is the milieu in which Williams excels, his dramatic abilities have also won critical acclaim. He was nominated

for an Academy Award for his portrayal of John Keating, a teacher at a conservative prep school who attempts to open the eyes of his students to the world of poetry and dreams in *Dead Poet's Society* in 1989. The role of Parry in *The Fisher King* (1991) introduced a side to Williams that stunned audiences and critics alike. After Parry's wife is murdered in a random shooting at a restaurant, he descends into insanity from which he only occasionally emerges to search for his personal holy grail with the help of co-star Jeff Bridges. The role of Dr. Malcolm Sayer, a dedicated physician who temporarily restores life to catatonic patients, in *Awakenings* again demonstrated Williams's enormous versatility. In 1997, Williams won his Academy Award for Best Supporting Actor in the Matt Damon/Ben Affleck film *Good Will Hunting*, leading Damon's Will Hunting to awkward acceptance of his own reality and mathematical genius. Williams followed that success with back-to-back roles in *What Dreams May Come* and *Patch Adams* in 1998. Afterward, he expressed a desire to modify his busy schedule and perhaps return to a weekly series.

Personally, Williams has had highs and lows. As a young performer, he was well-known for his heavy consumption of drugs and alcohol. He was forced to reexamine his life when his friend and fellow comic John Belushi died after spending an evening with Williams in the pursuit of nirvana. Another setback occurred when his first marriage fell apart amid tabloid reports that he had left his wife for his son Zachery's nanny. Williams insisted that the marriage was over before he became involved with Marsha Gracos, whom he subsequently married. Their wedding rings are engraved with wolves to signify their intention to mate for life; they have two children: Zelda and Cody. Along with friends Billy Crystal and Whoopi Goldberg, Williams has labored diligently for "Comic Relief," an annual benefit for the homeless.

## Williams, Ted (1918—)

Ted Williams, "The Splendid Splinter," was one of the best hitters of all time and is the last baseball player to hit over .400. His scientific view of hitting changed the dynamics of the game forever. But he was also probably the least celebrated modern-day baseball hero. While he had the makings of stardom, he was unable to cultivate the followings enjoyed by less talented but more amiable players, such as his contemporary Joe DiMaggio.

On August 30, 1918, Theodore Samuel Williams was born in San Diego, California, into a lower-middle class family. His parents

### Ted Williams

worked constantly, leaving him plenty of time to play baseball. When he was seventeen he signed with the hometown San Diego Padres. But after only one year, he was sold to the Boston Red Sox.

Ted Williams proved himself immediately when he started for the Red Sox in 1939. He led the league with 143 RBIs, the first rookie to do so. In 1941, his batting average topped .400. Going into the last day of the season, Williams' average had been .39955, which in baseball terms is a .400 batting average. Manager Joe Cronin gave his star the option to sit out of the doubleheader, but he decided to play and went six-for-eight, raising his batting average to an incredible .406. His 1942 campaign earned him his first Triple Crown by hitting .356, 137 RBIs, and 36 home runs. But even though he won the Triple Crown, Williams did not win the MVP.

Williams interrupted his baseball career in 1943 to join World War II, and he spent the next three years stateside as a pilot. When he returned to baseball in 1946, the Red Sox had a talented postwar team and Williams had another outstanding season, winning his first MVP.

Baseball also encountered "The Williams Shift" in 1946. Cleveland manager Lou Boudreau pushed the infielders to the right side of the field, trying to force the left-handed Williams to hit the ball the opposite way, which he refused to do. That year Williams also led Boston to their only World Series during his career, but the Red Sox lost and Williams' hitting was criticized by the media.

Williams' relationship with the media, always tumultuous, turned ugly after the 1946 season. The Boston press and many fans often felt disenchanted with the temperamental superstar. Williams often went public with his anger, liked to spit, never tipped his cap to the fans or came out for curtain calls after home runs, and was candid about his dislike of the Boston sports writers, who in turn criticized him in print.

Williams rebounded after the World Series, and in 1947 he won his second Triple Crown but lost the MVP to Joe DiMaggio. He closed the decade by winning the batting title in 1948 and winning his second MVP in 1949, while leading the league in runs, walks, RBIs, and hitting.

The 1950s were less kind to Williams. In 1950, he missed half the season with a broken arm. In 1952 Williams was recalled to fight in the Korean War, in which he survived a fiery plane crash. He came back to baseball in 1954 and received two more batting titles in 1957 and in 1958, making him the oldest player in baseball history to do so. A pinched nerve in his neck caused Williams to hit a career low .254 in 1959 and made fans and Red Sox owner Tom Yawkey push for his retirement. But Williams came back to finish his career in 1960, hitting .316 with 29 home runs, including one in his final at-bat.

Williams finished his baseball career with a .344 lifetime batting average, the highest on-base percentage in history at .483, 521 home runs, and the second highest slugging average at .634. *The Sporting*

*News* named Ted Williams its “Player of the Decade” for the 1950s. He was inducted into the Baseball Hall of Fame in 1966.

Ted Williams had the stuff heroes were made of, even though his contemporaries believed otherwise. He served his country in two wars and was the most prolific hitter of his era. Williams changed the face of baseball with his scientific approach to hitting and forcing opposing managers to move their fielders. And today when any player chases .400, Williams is the man to beat. In his autobiography, *My Turn at Bat*, Williams states that when he walked down the street he dreamed people would say, “There goes Ted Williams, the greatest hitter who ever lived.” While a case could be made for such a claim, Williams is less remembered than other more charismatic players. But he did receive some belated recognition when the Ted Williams Museum and Hitters Hall of Fame opened in Hernando, Florida, in 1994.

Tennessee Williams

## Williams, Tennessee (1911-1983)

An American playwright and screenwriter, Tennessee Williams was regarded in his literary prime with an equal measure of esteem and notoriety. After Eugene O’Neill, Williams was the first playwright to gain international respect for the emerging American dramatic genre. Williams excelled at creating richly realized characters peppered with humor and poignancy. The ever-shifting autobiography of Williams is equally renowned—always casual with fact, the playwright shone in an era that adored celebrity and encouraged excess.

Tennessee Williams was born Thomas Lanier Williams on March 26, 1911 in Columbus, Mississippi. His father, Cornelius Coffin Williams, was a rough man with a fine Southern pedigree. Absent for long periods of time, Cornelius moved his family from town to town throughout Williams’ childhood. His mother, Edwina Dakin Williams, imagined herself to be a Southern belle in her youth; born in Ohio, Edwina insisted that her sickly young son focus on Shakespeare over sports, and a writer was born.

The plays of Tennessee Williams deeply resonated with the performing arts community of the 1940s. The complex characterization and difficult subject matter of young Williams’ plays appealed to a new generation of actors. The 1949 Broadway production of *A Streetcar Named Desire* featured then-unknown actors Marlon Brando, Jessica Tandy, and Karl Malden, trained in “Method Acting,” a new model of acting experientially to project character psychology. Actors trained in the Method technique quickly discovered Williams was writing plays that stripped bare an American culture of repression and denial. A close-knit circle of performers, directors, and writers immediately surrounded the temperamental Southern playwright. Williams preferred certain personalities to be involved with his

projects, including actors Montgomery Clift and Maureen Stapleton, directors Elia Kazan and Stella Adler, and a cheerfully competitive group of writers including Truman Capote, Gore Vidal, and William Inge.

The 1950 film version of *A Streetcar Named Desire* brought Williams and the actors instant fame. Lines from the film have entered into the popular lexicon, from Blanche’s pitiful ironies (“I have always depended on the kindness of strangers”) to Stanley’s scream in the New Orleans night (“Stella!”). More than any other of Williams’ screenplays, *A Streetcar Named Desire*’s lines resurface today in the most unlikely places, from advertisements to television sitcoms; the public often recognizes these phrases without having seen the production at all.

Pairing misfortune and loneliness with gracefully lyrical speech, Williams wrestles in his works with a repressed culture emerging from Victorian mores. Social commentary is present in most works, but the focus for Williams is the poetry of human interaction, with its composite failings, hopes, and eccentricities. Early works were bluntly political in nature, as in *Me, Vashya!*, whose villain is a tyrannical munitions maker. After *The Glass Menagerie*, however, Williams found he had a talent for creating real, vivid characters. Often, figures in his plays struggle for identity and an awakened sense of sensuality with little to show for the effort. Roles of victim and victimizer are exchanged between intertwined couples, as with Alexandra and Chance in *Sweet Bird of Youth*. The paralyzing fear of mortality, so often an issue for his characters, plagues Mrs. Goforth of *The Milk Train Doesn’t Stop here Anymore*. Most significantly, perhaps, characters like Shannon of *The Night of the Iguana*, one of

Williams' late plays, sometimes find peace of spirit after they can lose little else. Arthur Miller once declared Williams' most enduring theme to be "the romance of the lost yet sacred misfits, who exist in order to remind us of our trampled instincts, our forsaken tenderness, the holiness of the spirit of man."

The relationship between Williams' work and popular culture is long and varied. Many of his plays—*The Glass Menagerie*, *A Streetcar Named Desire*, *Cat on a Hot Tin Roof*, *Sweet Bird of Youth*, and *Night of the Iguana*—became major films of the 1950s and 1960s. Williams' films were immediately popular with mainstream audiences despite their focus on the darker elements of American society, including pedophilia, venereal disease, domestic violence, and rape. Williams was one of the first American dramatists to introduce problematic and challenging content on a broad level. Some of the playwright's subplots border on sensationalism, with scenes of implied cannibalism and castration. Consequently, Tennessee Williams had the curious distinction of being one of the most-censored writers of the 1960s; *Baby Doll*, *Suddenly Last Summer*, and other films were thoroughly revised by producers before general release. The modern paradigm of film studios, celebrating fame while editing content, can be seen in the choices made with Williams' work, as Metro Goldwyn Mayer produced his films and at the same time feared his subject matter to be too provocative for audiences.

Tennessee Williams nurtured a public persona that gradually shifted from shy to flamboyantly homosexual in an era reluctant to accept gay men. Williams' fears of audience backlash against his personal life gradually proved groundless. Even late in life, however, Williams was reluctant to assume the political agenda of others. *Gay Sunshine* magazine declared in 1976 that the playwright had never dealt openly with the politics of gay liberation, and Williams—always adept with the press—immediately responded: "People so wish to latch onto something didactic; I do not deal with the didactic, ever . . . I wish to have a broad audience because the major thrust of my work is not sexual orientation, it's social. I'm not about to limit myself to writing about gay people." As is so often the case with Williams, the statement is both true and untrue—his great, mid-career plays focus upon relationships rather than politics, but the figure of the gay male appears in characters explicit (Charlus in *Camino Real*) and implicit (Brick in *Cat on a Hot Tin Roof*) throughout his works.

As is noted in *American Writers*, Williams took a casual approach toward the hard facts of his life. In the early period of his fame, Williams intrigued audiences by implying that characters like Tom (read Thomas Lanier) in *The Glass Menagerie* represented his own experiences. Elia Kazan, a director whose success was often linked to Williams, promoted the Williams myth once by declaring that "everything in [Williams'] life is in his plays, and everything in his plays is in his life." Tennessee Williams' connection with the outside world was often one of gentrified deceit, beginning early as the Williams family sought to hide his sister's schizophrenia and eventual lobotomy. In the closest blend of reality and art, the playwright's attachment to his sister, Rose Williams, has been well documented by Lyle Leverich and others. The connection between Rose and Tennessee Williams was profound, and images of her mental illness and sexual abuse often surface in Williams' most poignant characters. The rose rises as a complex symbol in his plays, a flower indicative alternately of strength, passion, and fragility.

The 1970s saw a gradual decline in Tennessee Williams' artistic skill, but he continued to tinker with the older plays and write new works until his death. Williams was highly prolific, crafting over 40 plays, 30 screenplay adaptations of his work, eight collections of

fiction, and various books of poetry and essays. He won the Pulitzer Prize twice, once in 1948 for *A Streetcar Named Desire*, and again in 1955 for *Cat on a Hot Tin Roof*. His work continues to command considerable social relevance—in 1998, a play on prison abuses, *Not About Nightingales*, was staged in London for the first time.

## Willis, Bruce (1955—)

Bruce Willis first came to prominence as David Addison in the mid-1980s television show *Moonlighting*. With its appealingly eccentric mix of throwaway detective plots and screwball romantic comedy, the show was an ideal showcase for Willis's often bemused and often in control, wise-cracking action man. It seemed with his first two films, *Blind Date* (1987) and *Sunset* (1988), both directed by Blake Edwards, that Willis was going to follow the comedy route, but after *Die Hard* (1988) Willis became instead one of the leading action stars of the 1990s. Early attempts to break free of the John McClane character and action man image met with failure and it is only since *Pulp Fiction* (1994), perhaps, that Willis has been able to extend his range, now alternating action with the occasional touch of character. It is, however, easy to see why the *Die Hard* films succeeded, and how Willis's image was established through them.

Expertly directed by John McTiernan, the first *Die Hard* gave a new boost to action films, the rough and ready American hero fighting international terrorists in a disaster movie scenario leading to two sequels, numerous imitations, and bringing stylish action and violence to the genre. And for his part, Willis seemed to embody a new sort of action hero; in contrast to Rambo and the Terminator, John McClane was a vulnerable family man. Up against high-tech criminals with nothing but his wits and a gun, he is brutally beaten and his spirit is wearing thin. Of course, McClane wins the day, dispatching the terrorist mastermind with his cowboy catchphrase, "Yippy kay yay, mother fucker," but he still has a few problems to face. The skyscraper dynamics that recalled the film *Towering Inferno* were followed up by the brutal airport action of *Die Hard 2: Die Harder*

Bruce Willis

(1990). Another dose of realism is added to *Die Hard with a Vengeance* (1995) in which McClane is divorced, alcoholic, and out of shape.

An attempt in the early 1990s to extend his range in such films as the Vietnam elegy, *In Country* (1989), did not altogether meet with favorable reviews—in particular, playing the “English journalist” in Brian De Palma’s misguided adaptation of Thomas Wolfe’s *The Bonfire of the Vanities* (1990), then starring in his own expensive box-office flop, *Hudson Hawk* (1991). Tony Scott’s *The Last Boy Scout* (1991) only returned Willis to a more violent cop role; Robert Zemeckis’s *Death Becomes Her* (1992) was an unfunny special effects comedy; and *Striking Distance* (1993) was a minor action film. In order to focus more attention on his acting rather than his movie star status, Willis took on some quite interesting cameo roles: as Dustin Hoffman’s gangster rival in *Billy Bathgate* (1991); alongside his wife Demi Moore in *Mortal Thoughts* (1991); admirably sending up his action man image in Robert Altman’s *The Player* (1992); starring alongside Paul Newman in *Nobody’s Fool* (1994); and acting as a comedy bunny in Rob Reiner’s otherwise uninteresting family film, *North* (1994).

By all accounts, the so-called erotic thriller, *Color of Night* (1994), is Willis’s worst film, but in the same year he was to launch a more mature phase in his career as the boxer, Butch, in Quentin

Tarantino’s *Pulp Fiction*. Taking his place amongst an ensemble cast and latching onto Tarantino’s hip dialogue, Willis pared down his usual smirks and steely stares, resulting in a notably different performance that was all internal rage and insecurity. Terry Gilliam managed to get an even more vulnerable performance out of Willis as the confused time traveller in *12 Monkeys* (1995); Walter Hill’s *Last Man Standing* (1996) showcased Willis’s pared-down brutality, and for their part *The Fifth Element* (1996) and *Armageddon* (1998) ranged from glossy *Die Hard* action in the former to Willis saving the world from pre-millennial excess in the latter. In between his big action projects, however, Willis still managed to choose roles in such small and unsatisfactory action films as *The Jackal* (1997) and *Mercury Rising* (1998). Of the three owners of the Planet Hollywood restaurant chain, however, Willis has clearly managed to become the most accessible action hero of the 1990s, taking over from the previous might of Sylvester Stallone and Arnold Schwarzenegger and cultivating an altogether more easygoing screen appeal.

## Bob Willis and his Texas Playboys

Bob Willis pioneered “western swing,” an upbeat style of country music that had a lasting impact on the industry. Willis, who grew up in the cotton fields of northern Texas during the World War I era, combined the blues of black sharecroppers with southern “hill-billy” music. In the mid-1930s, Willis formed the Texas Playboys, a band using experienced swing and Dixieland jazz musicians, who toured throughout the southwest to packed houses. Western swing became a national phenomenon after their 1940 hit “New San Antonio Rose,” and Willis was inducted into the Country Music Hall of Fame in 1968.

## Wilson, Flip (1933-1998)

In the early 1970s, comedian Flip Wilson secured a place in television history as the first African American to headline a successful network variety series. Previous attempts by other black performers, such as Nat “King” Cole, Leslie Uggams, and Sammy Davis, Jr.,

Flip Wilson (left) with Richard Pryor on *The Flip Wilson Show*.

had all been ratings failures. From 1970 to 1974 *The Flip Wilson Show* presented comedy skits, musical performances, and top Hollywood guest stars. The main attraction, however, was always Wilson himself. He possessed a sharp and non-confrontational sense of humor that appealed to a diverse audience. During its first two seasons, his show was the second most popular program on television, second only to *All in the Family* in the ratings. The most popular aspect of the show was the large stable of stock characters portrayed by Wilson each week. His most famous creation was the sassy and liberated Geraldine Jones, who introduced the catch phrase “What you see is what you get” into the American lexicon. Flip Wilson proved that the mainstream American television audience could accept a performer of color.

Clerow Wilson was born on December 8, 1933, in Jersey City, New Jersey, and raised in extreme poverty as one of 18 children. He grew up in a series of foster homes and left school at 16. During a four-year hitch in the Air Force he traveled around the Pacific and entertained his fellow enlisted men. Wilson acquired the nickname “Flip” from the troops, who appreciated his flippant sense of humor. Upon being discharged from the service in 1954, he spent the next decade touring across America, honing his act in small nightclubs. His big break came during a 1965 appearance on *The Tonight Show Starring Johnny Carson*, which led to frequent guest spots on *The Ed Sullivan Show*, *Laugh-In*, and *Love, American Style*. In 1969, NBC signed the comedian to host an hour-long variety show.

The debut episode of *The Flip Wilson Show* premiered on September 17, 1970. Unlike other programs of the variety genre, it did

not feature chorus girls and large production numbers, but rather was presented in a nightclub-like setting on a round stage surrounded by an audience. Wilson welcomed established entertainment stars such as John Wayne, Bing Crosby, Dean Martin, and Lucille Ball to the show and introduced audiences to musical guests like Issac Hayes, James Brown, and the Temptations. He continued the variety format tradition of portraying several recurring characters on the program. Among his most noteworthy personas were: Freddy the Playboy, Sonny the White House janitor, Reverend LeRoy of the Church of What’s Happening Now, and, of course, Geraldine Jones. Geraldine, whom Wilson played in drag, became a national sensation as she made wisecracks about her unseen, and very jealous, boyfriend named “Killer.” Wilson commented on the miniskirted character’s popularity, “The secret of my success with Geraldine is that she’s not a putdown of women. She’s smart, she’s trustful, she’s loyal, she’s sassy. Most drag impersonations are a drag. But women can like Geraldine, men can like Geraldine, everyone can like Geraldine.” Along with Geraldine’s trademark line “What you see is what you get,” Wilson popularized the phrases “The devil made me do it!” and “When you’re hot, you’re hot (and when you’re not, you’re not!).” Although Wilson based many of his routines on ethnic humor and black stereotypes, his humor was rarely overtly political. In 1971, *The Flip Wilson Show* won Emmy Awards for Best Variety Series and Best Writing for a Variety Series. The show was canceled in 1974 due to strong competition from the CBS Depression-era drama *The Waltons*.

The second half of Wilson’s career was marked by a much reduced public profile. He appeared in a few films, including *Uptown Saturday Night* and *The Fish That Saved Pittsburgh*, and made several television guest appearances. In the mid-1980s he returned to television with two short-lived series: *People Are Funny* (1984), a quiz show; and *Charlie & Company* (1985), a pale sitcom imitation of *The Cosby Show*, in which singer Gladys Knight played his wife. Wilson then retired from show business to raise his family. By the late 1990s, Wilson had again resurfaced due to the reruns of his 1970s series on the TVLand cable network. Flip Wilson died on November 25, 1998, of liver cancer.

Like Bill Cosby on the television drama *I Spy* and Diahann Carroll on the situation comedy *Julia*, Flip Wilson is regarded as a breakthrough performer who helped destroy the color line on network television in the late 1960s and early 1970s. He proved that white audiences would accept a black comedian and embrace his humor. His ability to employ racial humor without demeaning its targets gave him the opportunity to reach the masses and provide network television with a too-rare black perspective. In a *TV Guide* tribute shortly after the comic’s death, Jay Leno wrote, “Flip was hip, but he made sure everybody could understand him and laugh. That’s the sign of a great performer.”

## Wimbledon

The world-renowned British tennis tournament, Wimbledon, has become more than tradition, according to British journalist and author John Barrett: more than “just the world’s most important and historic tennis tournament,” having come to symbolize “all that is best about sport, royal patronage, and social occasion that the British do so well, a subtle blend that the rest of the world finds irresistible.” Held in late June and early July, Wimbledon is the only one of four Grand Slam tennis events still played on natural grass.

The event started in 1877 as an amateur tournament called the Lawn Tennis Championships hosted at the England Croquet and Lawn Tennis Club (later renamed the All England Lawn Tennis Club). The only event was men’s singles. Twenty-two players participated, and Spencer Gore won the final match, which spectators paid one shilling to watch. The women’s singles event was instituted in 1884. Maud Watson claimed victory over a field of thirteen. Previously played at Oxford, the men’s doubles event was brought to Wimbledon in 1883. Over the years, Wimbledon’s popularity continued to grow steadily. By the mid-1880s, permanent stands were in place for the crowds who were part of what Wimbledon historians refer to as the “Renshaw Rush,” coming to see the British twins Ernest and William Renshaw win 13 titles between them in both singles and doubles between 1881 and 1889.

By the turn of the century, Wimbledon had become an international tournament. American May Sutton won the women’s singles title in 1905 to become Wimbledon’s first overseas champion. About this time, the royal family began its long association with Wimbledon when the Prince of Wales and Princess Mary attended the 1907 tournament, and the Prince was named president of the club. In 1969, the Duke of Kent assumed the duty of presenting the winning trophy.

Play at Wimbledon was suspended during World War I, but the club survived on private donations. Tournament play resumed in 1919, with Suzanne Lenglen winning the women’s and Gerald Patterson the men’s titles. In 1920, the club purchased property on Church Road and built a 14,000-capacity stadium, which Wimbledon historians credit with playing a critical role in popularizing the event. World War II suspended play again, but the club remained open to serve various war-related functions such as a decontamination unit and fire and ambulance services. In 1940, a bomb struck Centre Court, demolishing 1,200 seats. Although the tournament’s grounds were not fully restored until 1949, play resumed in 1946, producing men’s champion Yvon Petra and women’s champion Pauline Betz.

The expansion of air travel in the 1950s brought even more international players to Wimbledon. This period also saw the domination of American players at the tournament, with such champions as Jack Kramer, Ted Schroeder, Tony Trabert, Louise Brough, Maureen Connolly, and Althea Gibson (the first African-American winner). Australian players Lew Hoad, Neale Fraser, Rod Laver, Roy Emerson, and John Newcombe then dominated the men’s singles title from 1956 through the early 1970s.

In 1959, the club began considering a change in its amateur-only policy in light of the increasing number of players receiving financial assistance in excess of the limits set by the International Tennis Federation. It was not until 1967, however, that the Lawn Tennis Association voted to officially open the championship to both professionals and amateurs. At the first open tournament in 1968, Rod Laver and Billie Jean King won the men’s and women’s singles titles, respectively.

In 1977, Wimbledon celebrated its centenary anniversary. In honor of the occasion, the Wimbledon Lawn Tennis Museum was opened at Wimbledon. 1984 marked the centenary of the women’s singles event. The tournament now has five main events: men’s and women’s singles, men’s and women’s doubles, and mixed doubles. It also sponsors four events for juniors (18 and under) and invitation events for former players. Each of the five main championships has a special trophy. The women’s singles trophy, first presented by the All England Club in 1886, is a silver parcel gilt tray made by Elkington and Company in 1864. The men’s singles trophy is a silver gilt cup and cover inscribed “The All England Lawn Tennis Club Single Handed Champion of the World,” and was first presented by the All England Club in 1887. The men’s doubles trophy is a silver challenge cup, first presented in 1884. The women’s doubles trophy is a silver cup and cover, known as “The Duchess of Kent Challenge Cup,” and was first presented in 1949 by Her Royal Highness the Princess Marina, then president of the All England Club.

Roughly 500 players currently compete at Wimbledon. To participate, players have to submit an entry six weeks prior to the tournament. A Committee of Management and a referee rank the entries and place players into three categories: accepted, need to qualify, and rejected. The committee then decides which “wild cards” to include in the draw. Wild cards are players who do not have a high enough international ranking to make the draw, but are included by the committee on the basis of past performance at Wimbledon or popularity with British spectators. A qualifying tournament takes place a week before the championships at the Bank of England Sports Club in Roehampton, and the winners in the finals of this tournament qualify to play at Wimbledon. An exception is players who, although they lose in the final round of the qualifying tournament, are still selected to play. Dubbed the “lucky losers” by tournament organizers, these players are chosen in order of their international ranking to fill any vacancies that occur after the first round of the draw.

To date, the youngest-ever male champion is Boris Becker of Germany. In 1985, the 17-year-old won the men’s singles championship. In 1996, Swedish player Martina Hingis became the youngest ever female champion at age 15. Other notable records include American Martina Navratilova’s unprecedented six-year reign on Centre Court as women’s singles champion, and her overall all-time record of nine singles titles. Two men have won the men’s singles tournament five consecutive times, although a century apart: Bjorn Borg of Sweden (1976-1980), and William Renshaw (1881-1886) of Britain.

## Winchell, Walter (1897-1972)

For almost 40 years during the mid-twentieth century, Walter Winchell was thought to be the most powerful man in America. A Jewish former vaudevillian, Winchell's power came not from money, family connections, or politics—Winchell was a gossip columnist. Indeed, it has even been said that Winchell invented gossip. Although this is clearly hyperbolic—gossip has always existed in some form—certainly Winchell was the first member of the modern media to both understand its power and know how to wield it. At the height of his influence, more than 50 million Americans, or two thirds of the adult population of the country, either read his daily column or listened to his weekly radio program. His grasp of the potent uses to which gossip could be put changed the face of American culture, and ultimately led to the overweening power held by the media at the turn of the millennium.

The future Walter Winchell was born Walter Winschel on April 7, 1897, in Harlem, New York City. His grandfather was a Russian émigré who had come to America hoping for literary fame. His son, Walter's father, was similarly a man of high expectations and low achievement—a silk salesman who devoted much of his time to his mistresses. Because Walter received little attention at home, he sought it across the street at a local movie theater where he and two

other boys, one of whom was George Jessel, sang songs between movies for money. When they were spotted by a vaudeville talent scout, 13-year-old Walter left home to join the troupe, saying, "I knew what I didn't want . . . I didn't want to be hungry, homeless, or anonymous."

Walter spent his teenage years in vaudeville and when he outgrew the boys act, he joined forces with another young vaudevillian, Rita Greene, with whom he had fallen in love. Winchell (as he now called himself) and Greene continued to travel the country, performing their vaudeville act to surprising success. Booked to a two-year contract, in his free time Walter Winchell began producing a vaudeville newsletter and sending in articles to *Billboard*. But after marrying Rita Greene, Winchell realized that his wife wanted to get out of show business, and so the couple moved back to New York City, where Winchell landed a job writing for *The Vaudeville News*. As Neal Gabler writes, "The twenty-three-year-old Winchell was columnist, office boy, deputy editor, part-time photographer, salesman, and general factotum. And he loved it, throwing himself into the job with desperate energy. Days he spent racing down Broadway, mingling, glad-handing, joking, collecting items for the column, making himself known. Nights he spent at the National Vaudeville Association Club on Forty-sixth Street, working the grill-room, campaigning for himself as a Broadway figure."

Walter Winchell

Although Winchell's breakneck pace ultimately led to the dissolution of his marriage, it earned him a reputation as Broadway's man-about-town. And so, in 1924, when the young columnist heard that a new tabloid newspaper was being launched, he easily won the position of Broadway columnist and drama critic on the New York *Evening Graphic*.

Winchell's column in the *Evening Graphic* was composed of Broadway news, jokes, and puns, and it was written in a catchy slang of Winchell's own invention. His unique linguistic twists captured the public's attention, but it was his brazen use of rumor, gossip, and innuendo in his column that made him famous. He saw himself as a maverick, who had broken the cardinal rule of journalism by using unverified sources. He looked behind closed doors and reported what he saw—affairs, abortions, children out of wedlock; nothing was taboo to Winchell.

The public loved it, sensing that the formerly impenetrable walls between the powerful and the common man were being torn down by one of their own. Walter Winchell, born into a lower-middle class Jewish family, was daring to put the private lives of the rich and famous in print. And the rich and famous were duly shocked and alarmed. As Gabler has observed, "Winchell understood that gossip was a weapon that empowered his readers. Invading the lives of the famous and revealing their secrets brought them to heel, humanized them, and in humanizing them demonstrated that they were no better than we and in many cases worse."

By 1928, Walter Winchell's column was syndicated throughout the country and the 31-year-old was already one of the most influential public figures in America. By the early 1930s, when he began his weekly radio broadcast, he wielded as much power with his pen as most politicians and public figures did with money and political clout. As Winchell himself put it, "Democracy is where everybody can kick everybody else's ass, but you can't kick Winchell's."

Throughout the 1930s, Winchell's power continued to grow, extending beyond show business to politics and big business. Gabler writes, "When Depression America was venting its own anger against economic royalists, Winchell was not only revealing the transgressions of the elites but needling industrialists and exposing bureaucratic cruelties so much that he became, in the words of one paper, a 'people's champion.'" Recognizing the extent of Winchell's influence, President Franklin D. Roosevelt invited the columnist to the White House not long after his first inauguration, thus initiating a relationship that would prove mutually beneficial to both men.

As Adolf Hitler's power grew in Germany during the mid-1930s, Winchell turned his attention to the international front, becoming one of the Führer's most ardent and outspoken foes in America. In this task he had the full support of the Roosevelt administration, which grew to rely on Winchell's influence in encouraging the United States to enter the war. For Winchell, this foray into international politics was intoxicating. The former vaudevillian became a dedicated patriot, and once the United States entered the war, he devoted himself to supporting Roosevelt's wartime policies and keeping up the spirits of our boys overseas.

Winchell was at the height of his power. As Gabler writes, "If Winchell's career had ended then, he might have been regarded as the greatest journalistic phenomenon of the age: a colossus who straddled newspapers and radio, show business and politics. He almost certainly would have been remembered as a prime force in the public relations battle to boost America's home-front morale during World War II and as a defender of press freedom." Following the war, however, Winchell's infatuation with politics led him to become

involved in the McCarthy witch hunt, as Communism became the new target of his ire. The intellectual elites, who had tolerated Winchell as long as he was espousing liberal causes, were enraged and they sought to bring him down. When the columnist became involved in a scandal involving African American singer Josephine Baker, who was not served at Winchell's favorite watering hole—the Stork Club—while the famed columnist was in attendance, the left turned on Winchell, accusing him of racism.

In the ensuing battle between the liberal media and the now right-wing Winchell, the gossipmonger ultimately lost. Over the course of the next two decades, Walter Winchell would fall from his position as one of the most powerful men on the planet and become a relic of a distant era. As television became the main conduit for media, the man whom Winchell had once helped find a job, Ed Sullivan, would become an icon, while Walter Winchell would fade into obscurity, eventually dying in Arizona in 1972.

Although it is perhaps now difficult to imagine the power once wielded by this man who gave rise to contemporary celebrity culture, Walter Winchell was indeed once among the most influential men on the planet. But although his authority ultimately languished, he left the world a vastly changed place. By legitimizing the use of gossip in the mainstream media, Winchell both paved the way for the extreme power now held by the media at the millennium, as well as laid the foundation for contemporary celebrity society.

—Victoria Price

## The Windy City

One of Chicago's most enduring nicknames, "The Windy City" originally had nothing to do with the Illinois city's sometimes formidable atmospheric conditions, but was coined by a nineteenth-century New Yorker to describe the city's loud, "windy" boosterism. For chilled Chicago Bears football fans at lakefront Soldier Field, or holiday shoppers on Michigan Avenue's famed Magnificent Mile, however, the nickname has had little to do with political opportunism.

Also known as the "Second City" because of its historical status as America's second largest city behind New York, throughout much of the nineteenth century Chicago business promoters roamed up and down the East Coast loudly praising the city's cosmopolitan character and excellent investment opportunities in an effort to lure capital needed for growth and expansion. Trying to debunk the popular image of their city as a cultural backwater and a "cow-town," the boosters painted a picture of a Midwestern mecca where there was boundless money to be made. Detractors claimed that these boosters

were full of hot air, and tension between backers of various cities came to its zenith in the race to obtain the 1893 World's Columbian Exposition in celebration of the four-hundredth anniversary of Columbus's landing (one year late). Having arisen from a swamp in just more than 60 years, reversed the flow of the Chicago River, and made a stunning rebound from the Great Fire of 1871, city leaders in the early 1890s felt Chicago to be an obvious choice to demonstrate American enterprise and ingenuity to the rest of the world, not to mention establishing Chicago's status as a world-class city. They therefore organized a company to generate the necessary funds to underwrite the exposition. However, when Illinois Senator Shelby M. Cullom introduced a bill into the United States Congress in favor of federal support for the exposition, he neglected to specify that Chicago would play host. Immediately, a vicious contest arose to obtain the event, with Chicago, New York, Washington, D.C., and St. Louis (which would host a similar affair only 10 years later) emerging as the major players. Charles A. Dana, editor of the *New York Sun*, wrote an editorial in his paper snobbishly discounting the "nonsensical claims of that windy city. Its people could not build a world's fair even if they won it." According to most accounts, it is this editorial that popularized the "Windy City" nickname on a national basis.

After New York was able to match Chicago's original five-million-dollar bid, Chicago doubled it, and in April of 1890, President Benjamin Harrison announced that the blustering and confident Midwestern city had won the exposition lottery. Three years later, the famous "white city" opened its gates, and, according to a contemporary city booster, "The Columbian Exposition was the most stupendous, interesting and significant show ever spread out for the public." With its imperial architecture, famous "midway," giant Ferris wheel, and exhibits of technology and science, the exposition continues to be remembered as one of the great defining moments in Chicago's history.

Though the Dana quotation was soon forgotten, the nickname stuck, having struck a nerve deeper than the rhetoric of boosterism. Over the course of the early twentieth century, the "windy city" appellation came more and more to refer to Chicago's often severe weather. Chicago ranks fourteenth for wind velocity among United States cities, and breezes coming off the lake can sometimes make it feel a lot cooler than the reported temperature. This is especially the case in late autumn and winter. Local weather reporters often talk of the "lake effect" in regard to conditions near Lake Michigan, where the water temperature and wind tone down summer's extremes and intensify winter chills. With 29 miles of shoreline, and with many of the city's business, cultural, and residential centers located along the coast, the lake effect truly can influence the city as a whole. Moreover, Chicago's downtown "Loop" streets long have been known as wind-swept corridors nestled among some of the world's oldest and tallest skyscrapers. It is this wind "having no regard for living things," not the blustering political rhetoric of nineteenth-century boosters, which Edgar Lee Masters credited in 1933 with giving the name of the Windy City to Chicago in the first pages of his city portrait. Technically, consensus opinion holds Masters to be incorrect, but his error does demonstrate that by the third decade of the twentieth century at least, the original and the contemporary meaning of the nickname had diverged. As originally noted by Masters, winter winds coming off of Lake Michigan are blocked by Michigan Avenue's wall of buildings, "swirl down from the towers of the great city," and are diverted down the Loop's long, straight thoroughfares, making the second city a very windy city indeed.

—Steve Burnett

## Winfrey, Oprah (1954—)

Oprah Winfrey, who began her career as a Midwest talk show host in 1985, wielded such clout in the entertainment field at the end

Oprah Winfrey

of the twentieth century that her participation in a project guaranteed its success. Her strong identification with her audience could be witnessed again and again; when she did something as simple as starting a diet, or as complex as taking a stand against social injustice, millions of people across the United States followed suit. Yet, her considerable influence was neither happenstance nor opportunism. Her social and political views came from a lifetime of struggle that has imbued her with a missionary zeal to get her message across.

The television persona of "Oprah" is virtually inseparable from the person herself. She was born into poverty in 1954 in rural Mississippi and then spent many of her formative years living in a Milwaukee ghetto with her divorced mother. As a teenager, her life began a downward spiral marked by sexual abuse and early signs of delinquency that were only interrupted by the reappearance of her father, a Nashville barber. He took custody of her, brought her to Tennessee and placed her in a local high school where she developed an interest in oratory. This experience led her to a student internship at a black radio station that sparked her interest in a career in journalism.

After graduation, she matriculated at Tennessee State University where she garnered more experience in broadcast journalism but also competed for and won the "Miss Black Nashville" and "Miss Black Tennessee" titles. Despite her later, pro-feminist stands on various issues, she harbored no regrets for cashing in on her physical beauty saying that she won on "poise and talent." "I was raised to believe that the lighter your skin, the better you were," she later admitted. "I wasn't light skinned, so I decided to be the best and the smartest." Her experience and poise also positioned her for a job as a "street reporter" at the CBS-TV affiliate in Nashville.

She then parlayed this job into a co-anchor position at Baltimore's ABC outlet where she ran into her first setback as a broadcaster. Her journalistic skills were undermined by her tendency to become emotional when hosting unpleasant stories and questions were raised about her professional objectivity. ABC management thus decided to try her out on a morning talk program where her emotionalism and penchant for becoming personally involved with her subject matter actually became a bonus.

After six years in Baltimore, Winfrey was hired in January 1984 to take over a faltering morning program on WLS-TV's *AM Chicago* which had employed a succession of hosts only to finish dead last among the competition for the 9 a.m. ratings slot. Not the least of the show's problems was the fact that it was scheduled opposite *The Phil Donahue Show* (1970-1996), hosted by Chicago's favorite son and national ratings champ. Yet, in Winfrey, WLS-TV found an engaging personable host who had a "common touch" not possessed by the somewhat patrician-appearing Donahue. Her formula was simple: working with a studio audience and a number of guests in a classic town meeting format, she rose above the traditional moderator role by injecting both her persona and her life experiences into debates on failed relationships, sexual abuse, and weight loss plans. Although her manner of interjecting her audience into the discussions by walking quickly through the crowd and jabbing the microphone into someone's face to get their point into play did not differ terribly much from Donahue's, she allowed herself to almost become part of her own audience in a way that her male counterpart did not.

By 1985, the show had displaced *The Phil Donahue Show* at the top of the Chicago ratings, prompting the station management to extend the show to one hour and to take advantage of Winfrey's growing stardom by renaming it *The Oprah Winfrey Show* in 1986. But when film composer Quincy Jones happened to turn on the show while on a visit to Chicago, he was so impressed that he mentioned

Winfrey to director Steven Spielberg, who was beginning to cast roles for his film *The Color Purple*. Her performance as Sophia earned her an Academy Award nomination for "Best Supporting Actress" and transformed her into a household name. Within 18 months, Winfrey had become a star in one medium and was standing on the threshold in another.

In 1986, WLS-TV began to syndicate the show nationally through King World, making Winfrey the first black woman to host her own show and become a millionaire by the age of 32. At the same time, she formed her own production company, Harpo (her name spelled backwards), and began to take a more active role in the creation of the show. Within its first five months, the show ranked number one among talk shows in 192 cities, forcing competitor Phil Donahue to move his home base from Chicago to New York in an attempt to stay competitive.

When her contract expired in 1988, she threatened to leave in order to pursue other opportunities in film and television. This forced ABC, King World, and WLS-TV to guarantee her complete control of the show in return for her promise to stay on until 1993. Industry estimates at that time figured that Winfrey's company would garner more than \$50 million for the 1988-89 season alone. This assured her position as the richest and most powerful woman on television and also freed her to pursue her own agenda without network interference.

Under her guidance, Harpo became a major player in prime-time dramatic programming with a miniseries *The Women of Brewster Place* in 1989 and a spin-off sitcom *Brewster Place*, the following year. The company was also active in the TV documentary field during the early 1990s with a number of special programs on social issues particularly dealing with the topics of abused children and women's issues.

By the time Oprah reached her 40th birthday in 1994, *The Oprah Winfrey Show* was available in 54 countries and was reaching 15 million viewers a day in the United States alone, becoming the highest rated show in syndication history and enhancing its host's personal fortune to \$250 million dollars. In 1996, Winfrey realized one of her long held goals "to get America reading" by founding a book club segment on her show. Beginning with first-time novelist Jacquelyn Mitchard's *The Deep End of the Ocean*, considered by many to be strictly a woman's romance, Winfrey got it discussed in a serious vein on her show and generated enough sales to make it the number one national bestseller within four months of its publication, with sales of more than 850,000 hardcover copies. The phenomenon continued with the talk show host's next selection Toni Morrison's 16-year-old *Song of Solomon*, which was being re-released in paperback. Between October 1996 and January 1997, the publisher reported more than 830,000 copies sold due to Winfrey's influence alone.

The key to Winfrey's selection of projects, whether books or television, is the personal impact that the source material has made on her. If she likes a book, she will champion it; if she sees audience potential in it she will produce it as a television program or a feature film. Under the banner *Oprah Winfrey Presents*, Harpo Productions has produced three television movies *The Wedding*, based on a book by Dorothy West; *David and Lisa* (a remake of the 1962 film), which portrayed two teens in a mental home; and *Before Women Had Wings*, which addressed the tragedy of domestic violence and child abuse. Winfrey also made a return to acting in 1998 with a film version of Toni Morrison's *Beloved*, which while it didn't do terribly well at the box-office spoke to several of her deeply held feelings about racism, slavery, and the power of a mother's love. "I look for projects that show individuals being responsible for themselves," she says. "It's

all about seeing human beings as active creators of their lives rather than as passive victims.”

She carries this philosophy over to her personal life, as well. In 1997, she launched *The Angel Network*, an ongoing campaign to spur her viewers into doing good works such as helping to build new houses for needy families. She also organized “Better Chance,” a Boston-based organization that helps minority students receive a better education as well as a number of individual scholarships at various institutions including her alma mater Tennessee State University and Morehouse College.

Yet, it is the continuing success of *The Oprah Winfrey Show* that makes all of these endeavors possible. In 1997, *Variety* reported that the show had also supplanted *Saturday Night Live* as the best spot on television to generate music sales. The show thus became the first stop for mainstream artists to promote their latest releases. Performers such as Madonna, Rod Stewart, and Whitney Houston saw their albums experience significant sales gains following an appearance on *The Oprah Winfrey Show*. Stewart, for example, watched as his CD *If We Fall in Love Tonight* jumped 25 places on the sales charts within two days of his appearance with sales of 40,000 units. This achievement extended Winfrey’s clout to virtually all forms of media.

The far-reaching impact of the show was also demonstrated the same year when Winfrey expressed her personal opinion on eating beef in a discussion of England’s “Mad Cow Disease.” Predictably, beef sales fell off a bit and a cattleman’s association in Texas hauled her into court for defamation. After a two-month trial, she was vindicated but no one would ever again doubt the pervasive influence of her show.

The show has earned 32 Emmy awards, including seven for its star. But the awards have not made Winfrey complacent; she has continued to incorporate new items of interest into her show. In September, 1998, for example, Winfrey took singing lessons and began to sing the theme song herself. She also created a segment called “Change Your Life TV,” which assists viewers in taking steps to reorder their bankbooks, their family life, and the clutter of their lives. After one show, she told her viewers, “The opportunity to have a voice and speak to the world every day is a gift.” She then sang a few bars from an old spiritual that summed up her outlook on life. “I believe I’ll run on, see what the end will be. I believe I’ll work on, see what the end will be.” Yet, for Winfrey, there appears to be no end in sight, just new horizons and new worlds to conquer.

## Winnie-the-Pooh

From learning videos to silk boxer shorts, from hatboxes to wristwatches, Winnie-the-Pooh has become as synonymous with Disney as Mickey Mouse. The Bear of Very Little Brain enjoyed a renaissance in popularity in the 1990s, and has parlayed his endearing befuddlement into a multi-million dollar franchise. “Pooh” and his companions from the Hundred Acre Wood are icons of a gentler, simpler childhood, a childhood without games like *Mortal Kombat* and *Duke Nukem*.

Alan Alexander Milne found inspiration for the Winnie-the-Pooh characters while watching his son Christopher Robin Milne at play; Pooh is based on a stuffed bear that Christopher received on his first birthday. Originally named Edward Bear, he was soon christened Winnie-the-Pooh. Winnie-the-Pooh is derived from Christopher’s favorite bear in the London Zoo (named either Winnifred or Winnipeg, depending on the source) and a swan named Pooh. The stuffed menagerie grew to include a stuffed tiger, pig, and donkey. Milne introduced us to Pooh, Rabbit, Piglet, Eeyore, Owl, Tigger, Kanga, and Roo in his 1924 collection of verses *When We Were Very Young*. *Winnie-the-Pooh* was published in 1926, followed by *Now We Are Six* in 1927, and *The House at Pooh Corner* in 1928. All four volumes were enchantingly illustrated by Ernest H. Shepard.

The Pooh stories enjoyed early success on both sides of the Atlantic (and have since been translated into over 25 languages). Winnie-the-Pooh became a favorite of Walt Disney’s daughters, and he decided to bring Pooh to the American movie screens. Originally conceived as a feature length film, Disney felt that featurettes would slowly introduce the beloved bear and establish Pooh’s recognition with American audiences. The first of the three featurettes, *Winnie-the-Pooh and the Honey Tree*, was released in 1966. The three shorts were connected and reissued as *The Many Adventures of Winnie-the-Pooh*, Disney’s twenty-second feature length film, in 1977. It was re-released in 1996 to celebrate the thirtieth anniversary of the original Pooh release. In 1997, *Pooh’s Grand Adventure* resumed where the first film left off.

Thanks to renewed popularity based on video sales and rentals of the re-released movies, Disney found someone to rival Mickey Mouse as the face of Disney. Pooh and friends can be found on an animated cartoon series on ABC, interactive stories and learning games for computers, and learning videos, not to mention products such as pewter earrings and assorted neckties, which are targeted toward adult consumers.

Demand for Pooh merchandise stops just short of mania. When Disney stores released a limited edition Beanie Pooh on November 27, 1998, merchants found customers lining up as early as four o’clock in the morning in order to improve their chances of purchasing the bear. These limited edition bears were sold out nationally in a matter of hours. What makes Pooh marketing such a cultural phenomenon is Pooh’s broad appeal to all ages. Specifically, marketing is directed at two of the largest segments of society: the Baby Boomers and their children, Generation X.

These two distinct markets have created a split in Pooh's persona. For the comparatively more affluent Boomers, there is a merchandising renaissance of the original Pooh as illustrated by Shepard. The Gund company markets stuffed versions modeled on the original ink and watercolor pictures found in the books; but these stuffed animals are not priced as items you would let a one-year-old drool on and play with. Shepard-inspired products also include decorative lamps, bookends, hatboxes, and charms—all valuable and collectible. These products are often found in larger, more upscale department stores, such as Dillard's and Macy's. In contrast, Generation X is targeted with the "Disney-fied" Pooh. It is the round, yellow bear that is found on everything from watches and nightshirts to neckties and boxer shorts. While many such products are available only at Disney Stores, far more are readily available (and affordable) at stores like Target and Wal-Mart. These products include many items directed at children: books, puzzles, games, educational toys, and durable stuffed animals. Pooh's appearance, and significance, is in the eye of the beholder.

For both Gen Xers and their parents, Pooh represents a childhood sense of safety and comfort. Pooh muddles through a world inevitably made more complex than necessary by his good friends Rabbit and Owl. Eventually, the bear whose head is "stuffed with fluff" figures out a simpler, and often gentler, way of solving the various problems of the Hundred Acre Wood. Not only does Pooh's gentleness of spirit triumph, but his other endearing attribute is the special bond of love and constancy between himself and Christopher Robin. In a world of high-tech, high-speed, and high-violence, Pooh and company provide a haven from the breakneck lunacy of everyday life. Pooh wonders where he will find his next smackeral of honey, not whether his 401K will roll over. Pooh does not stab anyone's back while climbing the honey tree—honey trees are not corporate ladders. Pooh does not abandon Piglet who, as a Small and Timid Animal, fails to be an adequate partner for material success. In the Hundred Acre Wood, the concerns of daily life are no longer the priority issues; instead, love, loyalty, curiosity, generosity, companionship, and the celebration of the human spirit are Really Important Things.

## Winnie Winkle the Breadwinner

The comic strip *Winnie Winkle the Breadwinner* first appeared in newspapers on September 21, 1920. Created by former vaudevillian Martin Branner (1888-1970), it was the first of a genre of working girl strips that later inspired imitators such as *Tillie the Toiler* (1921-1959). A "new woman" of the 1920s, Winnie worked in an office

and provided for her parents and adopted brother Perry. As the strip evolved Branner focussed on Winnie's search for a husband, the strip's central running theme until she married William Wright in 1937. By 1955—with Mr. Wright killed in a mine accident in 1950 after several near mishaps during World War II—Winnie became the chief executive of a fashion house. Branner's strip criticized the feminization of culture through the consumption of goods and services and the use of celebrity endorsements, and lamented the passing of vaudeville and its replacement by Hollywood movies. The last episode appeared July 28, 1956.

## Winston, George (1949—)

One of the parents of a new style of instrumental pop music called "new age," George Winston is known for his passion for the traditional and the ability to synthesize the elements of very different types of American music into his own style of "rural folk piano." Though some might sneer at his music as "easy listening," many welcome it as a deeply felt musical reminder of a simpler time, when life was led to the primal rhythm of the seasons.

George Winston

As a child growing up in Montana, Mississippi, and Florida, Winston spent hours listening to pop music on the radio. He especially loved the instrumentals and made sure to tune in each hour for the short piece of instrumental music that preceded the news. The bands he heard in those formative pop music years of the 1950s and 1960s, the Ventures, Booker T. and the MGs, the Mar-Keys, Floyd Cramer, and the like, were his first musical inspirations. Winston began playing music himself after he graduated from high school in 1967. He began with the electric piano and organ, but by 1971 he was listening to the swing piano of such musicians as Fats Waller and Teddy Wilson, and Winston switched to the acoustic piano, where he has remained at home ever since, with occasional forays into guitar and harmonica.

Also in the early 1970s, Winston met another musician who became one of his mentors, guitarist John Fahey. Fahey was responsible for developing the “American primitive” style of guitar, and he and Winston shared a passion for nurturing and evolving traditional styles of music. In 1972, Winston released his first album, *Ballads and Blues*, on Fahey’s Takoma label, but the album did not sell well, and Winston went back to doing odd jobs for his living.

In 1979, Winston was introduced to the music of 1940s and 1950s progenitors of rhythm and blues such as Professor Longhair and James Booker. This music, especially Professor Longhair’s “Rock ’n Roll Gumbo,” inspired Winston anew. Able to find the common thread of earthy emotion in rural and urban traditional music, folk, jazz, and rhythm and blues, Winston created his own style: crystal clear, rhythmic, and sincere. In the materialistic atmosphere of the 1980s there arose a subculture seeking spirituality and a return to roots, and with these seekers Winston’s mellow music struck a chord. Those who sought more peaceful and traditional alternatives to a high-tech, fast-paced, hedonistic lifestyle turned to Eastern and other indigenous spiritual traditions for inspiration. They called their movement “new age,” and they welcomed Winston’s spare, gentle music as a part of its soundtrack.

Winston began to record again on Dancing Cat Records and became one of the anchors of William Ackerman’s budding new age label, Windham Hill. This time there was no question of going back to odd jobs. Fans loved Winston’s seasonal meditations with names such as *Autumn* (1980), *December* (1982), and *Winter into Spring* (1982). He also wrote and performed soundtracks for several animated children’s videos, notably *The Velveteen Rabbit* (1984) and *This is America, Charlie Brown* (1988). Winston maintains an intensive concert schedule, playing more than 110 live concerts a year. Most are in the United States, though he is beginning to gain an international following as well and is especially popular in Japan and Korea.

Winston has continued to seek inspiration in traditional and vintage music, and he has never ceased his attempts to bring those kinds of music to the public attention. In his 1996 work *Linus and Lucy: The Music of Vince Guaraldi*, he highlights the music of the little-known composer of such famous pieces as 1960’s classic “Cast Your Fate to the Wind” and many of the *Peanuts* television specials. Most recently, he has worked to bring attention to the traditional Hawaiian slack key guitar, a folk guitar style which originated in Hawaii in the early 1800s and inspired modern steel guitar. An accomplished steel guitar player himself, Winston has devoted much energy to recording the masters of the Hawaiian guitar in an effort to preserve the quickly dying traditional art.

## Winters, Jonathan (1925—)

An improvisational comedian who brought a new kind of comedy to American television and films, Jonathan Winters challenged his audiences by allowing humor to happen spontaneously. He created such characters as Maude Frickert, Chester Honeyhugger, and Elwood P. Suggins, placing them in hilarious situations suggested by impromptu cues. The unpredictable comic appeared often on NBC’s *Tonight Show*, starring Jack Paar, who gave Winters free rein to extemporize and called him “pound for pound the funniest man on earth.” His genius for mimicry allowed him to assume the character of anyone from a small lisping child to a large, wisecracking grandmother.

Born in Dayton, Ohio, to an affluent family, Jonathan demonstrated early his talent for imitating sounds as he played with his toy automobiles and stuffed animals. When he was seven, his parents divorced and his paternal grandfather—owner of the Winters National Bank—became the dominant male figure in his life. According to

Jonathan Winters

Winters, his grandfather was an irrepressible extrovert whose behavior was a strong influence on his grandson's comic talents.

In school he majored in being the class clown and told an interviewer, "I used to drive some of my teachers crazy." At 17 he quit school and joined the U.S. Marine Corps, serving in combat in the Pacific during World War II. In his spare time he entertained his buddies with sidesplitting imitations of the officers. After the war he returned to finish high school and then drift around the country, taking odd jobs picking apricots or working in factories, always adding to his store of interesting material that would find its way into comic routines. He decided on a career as a cartoonist and studied at the Dayton Art Institute for two and a half years, which he credits for increasing his power of observation as he later focused his wit on humorous characters and situations.

His future wife, a fellow art student, was entranced by Winter's talents as a comic improviser and encouraged him to enter a local contest for amateur entertainers, which he won. A Dayton radio station, impressed with his talents, hired him as an early-morning disc jockey. As Jonathan told interviewer Alan Gill, "I couldn't entice one guest on the program that whole year. So I made up characters myself, drawing from the characters I'd observed over the years—the hip rubes, the Babbits, the pseudointellectuals, the little politicians." In 1950 he moved to a larger radio station in Columbus, Ohio, honing his talents there until 1953, when he left for New York City.

Arriving in Manhattan with \$55.46, Winters began performing at the Blue Angel nightclub, where he met and impressed television personalities Arthur Godfrey, Jack Paar, and Mike Wallace. All three found spots for him on their shows, and his career was launched. Particularly enthusiastic was Jack Paar, who gave him a network audience on *The Morning Show*, which Paar emceed for CBS at that time. In the late 1950s Winters was a frequent guest on Paar's *The Tonight Show* (renamed *The Jack Paar Show* in 1958). He also filled in for the star, drawing rave reviews in newspapers all over the United States.

The comedian suffered a mental breakdown in May of 1959, bursting into tears onstage in a San Francisco nightclub; a few days later, policemen took him in custody for climbing the rigging of an old sailing ship docked at Fisherman's Wharf. His wife transferred him to a private sanatorium, and after a month in analysis, Winters modified his work habits and life style. He explained to Joe Hymans in an interview in the *New York Herald Tribune*, "I had a compulsion to entertain. Now I've found the button. I can push it, sit back, and let people come to me instead of going to them, as do most clowns like me who are victims of hypertension."

In the early 1960s Winters worked almost exclusively in television, playing dramatic roles on Shirley Temple's children's programs and comedy on variety shows hosted by Garry Moore and Paar. In May of 1964 he signed an exclusive long-term contract with NBC calling for six television specials a season. He was already scheduled for a special with Art Carney called *A Wild Winter's Night* early in 1964, and the show disappointed both his fans and the critics, who found it too rigid in format for the freewheeling comedian. When Jonathan made an attempt to correct this problem in his six specials called *The Jonathan Winters Show*, critics found the shows too loose. Dennis Braithwaite of the *Toronto Globe and Mail* believed he was better as an intruder on other people's shows as "a mocking corporeal wraith who comes ambling out of nowhere to delight and shock us awake and then retires to his tree." After one ill-fated season of the specials, Winters's appearances on NBC were limited sporadic guest

appearances. In the 1980s, he performed with Robin Williams as the baby in the *Mork and Mindy* series.

One of Winters's major goals in the 1960s was to work in motion pictures. The most important films he appeared in were *It's a Mad, Mad, Mad, Mad World*, *The Loved One*, and *The Russians Are Coming*. He also starred in another medium: audio albums for Verve-MGM, including *The Wonderful World of Jonathan Winters*, *Down to Earth with Jonathan Winters*, and *Whistle-Stopping with Jonathan Winters*, a satire on politicians of all stripes. Making use of his artistic talents, he created both the drawings and captions in the book *Mouth Breath, Conformity, and Other Social Ills*, published by Bobbs-Merrill in 1965.

Winters is an entertainer with a rare and bountiful combination of talents. Director Stanley Kramer, who directed Winters in *It's a Mad, Mad, Mad, Mad World*, called him "the only genius I know."

—Benjamin Griffith

## Wire Services

At the end of the twentieth century, news was readily available from a variety of competing sources: newspapers and magazines, radio, television, and the Internet. Yet a given story, no matter where it ran, often would contain much of the same material, word for word, owing to the heavy dependence of all news media on wire services, which collected reporters' stories and pictures, edited them to a standard style, and distributed them to individual broadcast stations and print media.

Organizations such as the Associated Press and Reuters are called *wire services* because of their early connection with the telegraph. In fact, Reuters was originally a bird service: In 1849 Paul Julius Reuter, a former bookseller, saw an opportunity to exploit a gap in the telegraph lines between Aachen and Brussels and used carrier pigeons to transmit stock quotes until the telegraph finally connected the two cities in 1850. Reuter then moved the company to London, where it opened in 1851 and used the new Dover-Calais cable to communicate between the British and French stock markets. Reuters later expanded its content to include general news as well, and scooped other news bureaus with the first European reports of Abraham Lincoln's assassination in 1865.

New York had had a news agency, the Association of Morning Newspapers, since as early as 1820, its main purpose being to coordinate the reporting of incoming news from Europe; and there were other small local agencies as well. The Associated Press was formed in 1848, largely in response to the new technology of the

telegraph, by a group of ten newspaper editors who had come to realize that pooling news-gathering made more sense than competing for transmittal over wires already crowded with messages (multiplexing would not be invented—by General George Owen Squier, founder of Muzak—for another six decades). Included in the original consortium were the *Journal of Commerce* and New York's biggest dailies, the *Sun*, *Herald*, and *Tribune*. The first major story to be covered and distributed through AP was the 1848 presidential election (Zachary Taylor won on the Whig ticket).

When Reuters and AP were first started, any exchange of news between Europe and America was dependent on dispatches carried by ships. One of the first joint ventures by the AP newspapers was a small, fast steamboat based in Halifax, Nova Scotia, whose crew would race out to meet passing vessels en route to the major East Coast seaports, then speed back to harbor and telegraph whatever news reports they carried, often beating by a day or more the reporters accustomed to waiting on the piers of Boston or New York for the transatlantic ships to arrive in port. On the other side of the ocean, as a boat from the United States came in sight of the British Isles, at Crookhaven on the Irish coast, a Reuters launch came out to retrieve a hermetically sealed container thrown from the larger ship as it sailed past; once back ashore, the wire service crew opened the box, retrieved the dispatches inside, and cabled their contents to London eight hours before the ship from America would dock.

This system remained in effect until the transatlantic cable came into permanent operation in 1865—for though the first cable had been laid in 1857, it soon snapped, probably as a result of undersea earthquakes. (It had, however, functioned long enough to bring the United States a report of the suppression of the Sepoy uprising in India. The telegram's succinct 42 words summarized five separate stories from the British press).

The expense and time of telegraphic transmission tended to force brevity on reporters, but the wire services in their earliest days did not necessarily sacrifice accuracy to terseness: AP correspondent Joseph L. Gilbert's on-the-spot transcription of Lincoln's Gettysburg address almost immediately was accepted as authoritative, and other reporters' variants soon forgotten. "My business is to communicate facts," wrote another veteran AP newsman, Lawrence A. Gobright; but readers had to plunge 200 words—about five column-inches—into his front-page story on the Lincoln assassination before reaching the statement that the president had been shot. It was not until the 1880s that AP mandated the so-called "inverted pyramid" structure for news stories familiar today, with the most important facts at the top and successive layers of elaboration down at the bottom.

The effect of standardized newspaper style on popular culture has been subtle but far-reaching. Apart from the business correspondence and departmental memos encountered on the job, newspapers are often the most-read news sources in the course of the average day, and it is not uncommon for people to consume an hour or more of leisure time reading the Sunday edition of their local daily. Moreover, many writers whose later works have attained the status of canonical literature (four from the turn of the twentieth century, for example, were Stephen Crane, Mark Twain, Jack London, and Ambrose Bierce) served their apprenticeship in journalism.

Wire-service style manuals continue to play an important role in shaping other types of writing. AP's libel guidelines—a prominent section of their stylebook as a whole—also serve as the standard reference by which American journalists stay on the right side of the law, or at least flout the rules at their peril. Ian Macdowall, a 33-year Reuters veteran, summed up the goal of news copywriting in the

introduction to that company's manual as "simple, direct language which can be assimilated quickly, which goes straight to the heart of the matter, and in which, as a general rule, facts are marshalled in logical sequence according to their relative importance." This ideal fairly matched the aspirations of many twentieth-century writers in English—journalists, historians, novelists, essayists, even scientists—who wanted their words to be bought and their ideas assimilated by the ordinary reader. Such authors in turn helped to mold the public's taste towards expectation of clarity, brevity, and pertinence in the popular press.

Another way in which the wire services have made a lasting contribution to mass consciousness is in photographs. Starting with AP's first photos in 1927 (wirephotos would be introduced in 1935, at the then astronomical research-and-development cost of \$5 million), on-the-scene photographers have captured news events with images that have become cultural icons in their own right, integral elements of the American collective visual consciousness: the raising of Old Glory atop Mount Suribachi on Iwo Jima, caught on film by Joe Rosenthal in 1945, when American troops stormed the Pacific island in the final days of World War II and won it from its Japanese occupiers; a little girl, Phan Thi Kim Phuc, running naked, scorched, and screaming in terror towards photographer Huynh Cong ("Nick") Ut with the smoke of her burning village behind her, during the height of the Vietnam War in 1972; Murray Becker's stark and terrible photo of the dirigible airship *Hindenberg* burning after it exploded while landing in New Jersey in 1937; Harry Truman snapped by Byron Rollins on election night in 1948 as the newly reelected president gleefully held aloft a newspaper with the premature and erroneous headline "Dewey Defeats Truman."

Rarely has so great a mistake as the Truman headline had so lasting a place in the public mind, but the need to make deadlines, however fragmentary the information available by press time, has sometimes led to educated guesses by editors who were proven horribly wrong by subsequent information. Initial reports of the sinking of the *Titanic* in 1909 reported that most if not all passengers had been rescued; only later was it learned that many passengers had in fact been lost, and it was several days before the full extent of the catastrophe was known and printed. But though accuracy and speed of publication often work at cross purposes, the wire services have attempted to reconcile the conflict throughout their history by enthusiastically embracing new technology, from Marconi's "wireless telegraphy" introduced in 1899 (its inventor held for a time a monopoly on radio news service to Europe), the teletype (1915), and the tape-fed teletypewriter machine (late 1940s) to communications satellites and computerized typesetting (1960s), computer-driven presses (late 1970s), fiber-optic cable networks (1980s), and reporters with laptop computers filing stories by modem (1990s).

In wartime, at least, a second problem with accuracy in reporting has been military censorship, compounded by the need for the wire services to maintain a credible arm's-length relationship with government while remaining on friendly enough terms with officialdom to get the news at all. At the beginning of World War II the head of Reuters, Sir Roderick Jones, received an ominously enigmatic letter directing that the company and its officers "will at all times bear in mind any suggestion made to them on behalf of His Majesty's government as to the development or orientation of their news service or as to the topics or events which from time to time may require particular attention," a directive sufficiently vague that the wire service spent the duration of the war interpreting it as creatively as it dared.

During the Vietnam War, on the other hand, the American military simply lied, with the Johnson cabinet's connivance, pulling the wool over the eyes of Congress and press alike (the Gulf of Tonkin resolution; the falsified count of enemy troops in the field which allowed U.S. forces to be blindsided by the Tet offensive of 1968). Though the wire services for a time dutifully printed what they were given, the gap grew between official reports and the observations of reporters in the field, who began compiling reports that were increasingly skeptical. An additional spur may have been the small upstart Liberation News Service, run by young leftists in America and feeding to a burgeoning alternative press—the LNS story on the 1967 protest march and police action at the Pentagon was carried by 100 such newspapers—with information often more accurate than anything in a government press release. The American government fought back by attempting to discredit the press; AP's Peter Arnett, reporting from South Vietnam's capital, Saigon, was subjected to a smear campaign by the Federal Bureau of Investigation. But in the end the public sided with the wire services, whose photographs, film clips, and live reports flowing from the southeast Asia war zone home to newspaper readers and television viewers in the United States played a crucial role in turning American popular sentiment against the war.

Although wire services have sometimes been criticized as exploiters of human suffering, especially when it comes to war coverage, such news is vital to investors and fascinating to most ordinary readers, as when the Reuters report of Napoleon III's speech in February of 1859 ran in the London *Times*, giving Britons clear warning of France's impending entry into the Austro-Prussian war. On such occasions an effective monopoly on news seems a blessing to subscribers, if a bane to the competition. In fact, three years earlier, in 1856, Reuters had signed a contract to share stock price news with Germany's Continental Telegraphien Compagnie (also known as the Wolff agency, it had been founded in 1849, the same year Reuter's pigeons took wing) and the news company of Charles-Louis Havas in France (founded in 1835, later called Agence France-Presse, and still a key player in world news at the end of the twentieth century). In 1870, the three companies followed up with an agreement to carve up the world into exclusive news territories for each, in much the same manner as the spheres-of-influence diplomacy then fashionable among the major imperial powers; as a result Reuters, Havas, and Wolff dominated international news-gathering up until the first World War.

Ironically, it was World War I that brought the first serious competition in the Western Hemisphere to bear on the Associated Press, at that time available only to its members and subscribers, who typically blocked rival dailies in their circulation areas from joining. In fact, AP had managed to coerce even its subscriber newspapers not to do business with rival news bureaus, until a court decision put a stop to the practice in 1915. In response to such tactics, several powerful newspaper companies formed their own agencies, such as William Randolph Hearst's International News Service and the Scripps Howard chain's United Press Association (whose name was later changed to United Press International when INS merged with it in 1958.) When World War I broke out, newspapers in Argentina, frustrated in their attempts to reach an agreement with either AP or Havas, turned to UPI, which soon came to dominate the South American news market as a result, an edge it held for most of the century.

Unfortunately for UPI, an anti-trust suit was successfully brought in the 1940s to force AP to let anyone subscribe who paid the fee. This

did not have much effect on UPI's domestic market share at the time, since many newspapers in the postwar boom years subscribed to more than one wire service. But a generation later, several factors combined to weaken UPI's position: the phenomenal growth of television news, whose evening programs provided stiff competition for afternoon dailies, forcing them to close or to be transformed into morning editions, plus the creation of news services by some of the larger chains such as Knight-Ridder, Hearst, and, ironically, UPI's former owners, Scripps Howard, which had prudently divested itself of the wire service in 1982. These new bureaus offered well-written supplemental news stories to fill in the gaps around AP's coverage, and did so at much cheaper rates than UPI could offer. A series of bad managers also helped to cripple UPI and it ceased to be a significant player by 1990, leaving AP much as it had been at the beginning of the century: the dominant source for print news in America, and one of a handful of major players across the globe.

Even as UPI was failing, Reuters was enjoying unprecedented prosperity: In 1989, when UPI's staff had dwindled to 650 reporters and 30 photographers, for the first time more major dailies in America were now carrying Reuters than UPI. Reuters had never lost sight of its roots in the stock market, and although it had also prudently diversified into television in 1985 by acquiring an international TV agency, Visnews (renamed Reuters Television), and had successfully broken into the Internet by supplying news to nearly 200 web sites by the end of the 1990s, it remained a robust source of financial news, obtaining quotes from over 250 stock and commodities exchanges, disseminating financial data via a large cable network and its own synchronous-orbit communications satellites, and employing a staff of over 16,000.

Still, for most Americans, AP remained the quintessential wire service. In *Flash! The Associated Press Covers the World*, an anthology of its photographers' work published in 1998, Peter Arnett proudly wrote that AP copy that year comprised as much as 65 percent of the news content of some American newspapers, that 99 percent of American dailies and 6,000 broadcasters carried AP stories, that the wire service employed over 3,500 people in 236 bureaus, turning out millions of words of copy every day and hundreds of pictures, that its employees had won 43 Pulitzer prizes—and on a more somber note, that nearly two dozen AP correspondents and photographers had died in the line of duty in the century and a half since the organization was founded, ranging from reporter Mark Kellogg, who perished while covering Custer's Last Stand at the Little Bighorn River in June of 1876, to photographer Huynh Thanh My, killed by the Viet Cong in October of 1965. Wire service reporters, Arnett argued, are ubiquitous; that's their job. Thus when Mahatma Gandhi was discharged by the British viceregal government in India after serving one of numerous jail terms for civil disobedience in the 1930s, he was driven to a remote village and let go—and came face to face with AP reporter Jim Mills, who had gotten wind of where the illustrious prisoner was to be released and wanted to be on the spot to interview him. With wry amusement Gandhi declared, "I suppose when I go to the Hereafter and stand at the Golden Gate, the first person I shall meet will be a representative of the Associated Press!"

## Wister, Owen (1860-1938)

Owen Wister was one of a long line of lawyer-writers in American literary history. This Pennsylvania-born, Harvard-educated patrician became one of America's first and most prominent writers of the Western genre. Popular in his own time, Wister developed his reputation as a short story writer. He began to publish his Western stories in 1895 and was acclaimed by many, including Rudyard Kipling. In 1902 he wrote his most famous novel, one that is said by many to define the Western genre: *The Virginian: A Horseman of the Plains*. Loren D. Estleman wrote in the *Dictionary of Literary Biography* that: "Most if not all of the staples associated with the western genre—fast-draw contests, the Arthurian code, and such immortal lines as "This town ain't big enough for both of us" and "When you call me that—smile!"—first appeared in this groundbreaking novel about one man's championship of justice in the wilderness. Wister's interpretation of the West as a place where few of the civilized concepts of social conduct apply separated his stories from the sensational accounts then popular."

Wister was the only child of Sarah Butler and Owen Jones Wister. His father was an intellectual, his mother the daughter of a 19th-century actress, Fanny Kemble. Her family had many literary and musical connections in Europe. Wister, known as "Dan" to friends and family, went to a private school near his home and then to Harvard. There he continued a literary bent shown in earlier years by writing for the college paper, the *Crimson*, and dabbling in light opera. Although his mother encouraged his musical talents, she never

seemed happy with his writing work. A review of Wister's correspondence reveals that neither parent ever seemed fully pleased with this capable, well-rounded Harvard Phi Beta Kappa.

After his 1882 graduation, Wister studied music in Europe and his piano virtuosity was touted by no less than Franz Liszt. His father opposed the young man's love of music and pushed his own desire to see him established in a business career in Boston. Ever the obedient son, he returned to the United States. While the talented young Wister languished in his position at the Union Safe Deposit Vaults of Boston, he wrote a novel with a cousin but did not submit it for publication.

Although Wister formed many literary-minded friendships and enjoyed the men's clubs in Boston, his health began to deteriorate. Following the orders of his doctor, in 1885 Wister summered in Wyoming. The clean air revived his physical powers and ignited a love of the West that would guide his future career. It was on the frontier that he found his *métier*, both creatively and spiritually. Wister once wrote: "One must come to the West to realize what one may have most probably believed all one's life long—that it is a very much bigger place than the East and the future of America is just bubbling and seething in bare legs and pinafores here—I don't wonder a man never comes back (East) after he has been here a few years."

According to biographer Darwin Payne, "Wister's deep sense of the antithesis between the civilized East and the untamed West was constant." He did return East to study and then practice law, but ever after he regularly vacationed in the West. Law school gave Wister a chance to renew old Harvard friendships: he corresponded with Robert Louis Stevenson and became close friends with Oliver Wendell Holmes. But none of his letters from that period seem to indicate any real interest in law, even after he began his practice as member of the Pennsylvania bar in Philadelphia in 1890. The law seemed only something to do in between trips to the West.

In 1891, after an evening with friends lamenting that the American West was known in the East only through rough "dime" novels, Wister said that he regretted the lack of an American Rudyard Kipling to chronicle what he called "our sagebrush country." As they spoke Wister suddenly decided to take action himself and become that sage. He completed his first story that very night. Soon after he sent "How Lin McLean Went West" and "Hank's Woman" to *Harper's* magazine. "Hank's Woman" is the story of an Austrian servant girl who, fired in a visit to Yellowstone Park, marries a worthless man and is then driven to murder. The story of McLean describes a cowboy's return to Massachusetts, where his mean-spirited brother finds him an embarrassment. Both were published and found instant popular and critical acclaim.

These tales used the same style and formula that would characterize all of his Western works. The stories were based on anecdotes he had heard, used vernacular language in dialogue-based actual speech (which Wister painstakingly recorded in his own notebooks), and were full of descriptions of the West. Others had already written Western tales but it was Wister who defined the heroic, Arthurian character of the Western hero and gave him substance.

Wister's popularity and Western topics brought him into collaboration with Frederick Remington. The two worked together on a story for an 1895 issue of *Harper's*, about the evolution of the cow puncher. Their friendship and collaboration was a "natural," since many critics both past and present felt that Remington expressed in bronze and with paint the same feeling about the West that Wister evoked with words. Harvard chum Theodore Roosevelt labeled Wister an "American Kipling" and arranged for him to meet Kipling,

then a Vermont resident, in the spring of 1895. Upon meeting Wister, Kipling blurted out, "I approve of you thoroughly!" His approbation was great balm for Wister, who suffered much of his life without the approval of his parents—despite the fact that he now had a national reputation.

Not long after his father's death in 1896, Wister began to date a second cousin, Mary Channing "Molly" Wister. A practical young woman, Molly had a career in education underway when they married on April 28, 1898, the same day the United States declared war on Spain. For their honeymoon the Wisters toured the United States, making a long visit to Charleston, South Carolina, where Wister's grandfather had signed the U.S. Constitution, and trekking to the state of Washington so that Molly could see her "Dan" in his beloved West. Molly was supportive of his writing and he supported her activities in education. Wister's writing flourished and their family grew—they had three boys and three girls.

Wister soon decided to write a longer work and he began to study the art of the novel. In 1902, Wister published *The Virginian*, with its nameless hero, his schoolteacher sweetheart Molly, and the villain, Trampas. Payne reports that the *New York Times Saturday Review of Books*, in its review of *The Virginian* claimed: "Owen Wister has come pretty near to writing the American Novel." Henry James wrote enthusiastically about the novel, which Wister had dedicated to his friend, Theodore Roosevelt. *The Virginian* was a financial, critical, and popular success. Wister himself turned it into play and it continued to be popular long after his death. According to Estleman, "If the importance of a work is evaluated by the number of people it reaches, *The Virginian* stands among the three or four important books this century has produced. By 1952, fifty years after its first publication, eighteen million copies had been sold, and it had been read by more Americans than any other book."

Four movies were made of the book during the century, in 1914 (with a screenplay by D. W. Griffith), 1923, 1929, and 1946. Of the four movie versions, the best known was the 1929 version starring Gary Cooper in the title role and directed by Victor Fleming. Cooper seemed best to capture the near-mythic nature of Wister's hero. The nameless Virginian is an American knight—a soft-spoken gentleman who is ready and able to survive and even tame the travails and splendid chaos of the West. Wister's novel defined our mythic Western hero as a quiet but volcanic strong man who plays by the rules. The story was also adapted for the small screen in a television series that ran from 1962 to 1966. *The Virginian* was thus one of the few stories that shaped Americans' understanding of the American West and of the place of individuals within it.

Most of his later fiction deals with the conflict between the good and the bad within the West. According to Jane Tompkins in *West of Everything*, his work is realistic in setting, situation, and characters—more so than rival fiction of the period—but still tending toward the sentimental and melodramatic. Wister tried to expand his writing style by writing his own "novel of manners," modeled on Flaubert's *Madame Bovary* but set in genteel Charleston, South Carolina. The novel, *Lady Baltimore*, was not critically acclaimed and had moderate sales in its time. In 1913, his wife died and he no longer wrote fiction. He began several projects and then took the path of political and non-fiction writing in the era just before World War I.

His major post-*Virginian* achievement was a biography of his old friend, Theodore Roosevelt, and many articles about his past acquaintances and friendships. At the end of his life Wister was no longer remembered as a great literary figure. He died on July 21, 1938, just seven days after his 78th birthday. His reputation was

resuscitated late in the century by the Western Writers of America, which named a major award after Wister, and by an increasing number of scholars willing to take his work seriously.

## *The Wizard of Oz*

The 1939 Metro Goldwyn Mayer (MGM) film *The Wizard of Oz*, based on L. Frank Baum's 1900 book was hugely influential. Its simple message—that there is no place like home, and that you have the power to achieve what you most desire—had a general appeal to the American public. Starting in 1956, a new generation of American children was annually entranced by the television showing of Dorothy's journey down the Yellow Brick Road.

In the film, after a cyclone carries her to Oz, Dorothy meets the Scarecrow, the Tin Woodman, and the Cowardly Lion, and they set off together for the Emerald City in search of what they most desire: for Dorothy, a home; for the Scarecrow, a brain; for the Tin Woodman, a heart; and for the Cowardly Lion, courage. When they kill the Wicked Witch of the West and go to the Wizard for their promised reward, they discover he is nothing but a humbug. Nevertheless, he supplies them with the symbols of what they already possess—a degree for the Scarecrow, a ticking heart-shaped clock for the Tin Woodman, and a medal for the Cowardly Lion. Glinda the Good Witch helps Dorothy use the magic in the ruby slippers she has been wearing all along to whisk her back to Kansas.

The film was made during the heyday of the studio system and the golden era of MGM. Directed by Victor Fleming (among others), it starred Judy Garland, Ray Bolger, Jack Haley, Bert Lahr, Frank Morgan, and Margaret Hamilton. From the beginning, it was a production beset by trouble: cast changes, director changes, injuries, and script rewrites kept cast and crew busy for 23 weeks, the longest shoot in MGM history.

The opening and closing Kansas scenes were filmed in black-and-white, while the Oz scenes were done in sumptuous (and expensive) Technicolor. Dorothy's amazement at entering the world of

A scene from the film *The Wizard of Oz*, with Judy Garland as Dorothy.

color mirrored audiences' feelings about the new technology. The importance of wonder did not stop there: Jack Haley (the Tin Woodman) created the breathless, slightly stilted way he and Ray Bolger (as the Scarecrow) would speak to Dorothy. Haley told Victor Fleming, "I want to talk the way I talk when I'm telling a story to my five-year-old son," and Bolger agreed, saying later "I tried to get a sound in my voice that was complete wonderment." Haley, Bolger, and Lahr (the Cowardly Lion) came out of the vaudeville tradition and filled the movie with the kind of jokes and physical humor with which stage audiences were already familiar.

Frank Morgan, as the Wizard, perfectly embodied the harmless-trickster aspects of his character. Margaret Hamilton, as the Wicked Witch of the West, scared many youngsters with her bright green skin and high-pitched cackle. L. Frank Baum, the original author of the story, had wanted to create a fairy tale that eliminated "all the horrible and blood-curdling incidents" of fairy tales, one that "aspires to being a modernized fairy tale, in which the wonderment and joy are retained and the heart-aches and nightmares are left out." The Wicked Witch, however, terrorized children in the audience—the scene where Dorothy watches Aunt Em in the crystal ball dissolve into the Witch has been interpreted by psychologists to symbolize the unpleasant fusion of good and bad mother figures.

The film was released in 1939 to receptive audiences, but was overshadowed by the epic *Gone with the Wind* and did not start to turn a real profit until CBS bought it for television in 1956. From then on, it was shown annually, and by the year 2000 held seven of the places in a list of the top 25 highest-rated movies on network television (no other film held more than one spot.) The aggregate audience from 1956 until the year 2000 was more than one billion people. In 1998, *The Wizard of Oz* was re-released on the big-screen.

The songs, by Harold Arlen and E.Y. Harburg, were hugely popular from the start. "Somewhere Over the Rainbow"—Judy Garland's plaintive song of a place where "the dreams that you dare to dream really do come true"—became a jazz standard in the United States and an anthem of hope in England during World War II. Garland's version remains the most famous, but pop artists as diverse as Willie Nelson, Tori Amos, and Stevie Ray Vaughan recorded covers. After gay icon Garland's death, the rainbow in her song became a gay coat-of-arms.

*The Wizard of Oz* spawned numerous remakes and sequels, including animated cartoons, a Broadway show, "Oz on Ice," and *The Wiz*, an all-black, urban revision of the original film, starring Diana Ross as Dorothy and Michael Jackson as the Scarecrow. Many films, including *Star Wars*, David Lynch's *Wild at Heart*, and John Boorman's *Zardoz*, contain major allusions to *The Wizard of Oz*—minor references to it are pervasive in American movies. In literature, dark revisionist fantasies, including Geoff Ryman's *Was*, a bleak Oz story that incorporates AIDS (Acquired Immune Deficiency Syndrome), child abuse, and Judy Garland's childhood, and Gregory Maguire's *Wicked*, an Oz prequel written from the witch's point of view, owe great debts to the film. It was also influential in popular music—Elton John titled an album *Goodbye Yellow Brick Road*, Ozzie Osbourne titled one *Blizzard of Oz*, and Electric Light Orchestra's *Eldorado* album cover showed a pair of green hands reaching for Dorothy's ruby slippers, with no explanation required.

*The Wizard of Oz* film seeped into the everyday life of Americans in countless ways. Dunkin' Donuts named its donut-hole creations "Munchkins" after the little-people inhabitants of Munchkinland, where Dorothy's house lands in Oz. Quotes from the movie—"Toto, I've a feeling we're not in Kansas anymore"; "Lions, and tigers, and

bears, oh my"; "Pay no attention to that man behind the curtain"—were emblazoned on t-shirts. A 25-cent postage stamp depicting Dorothy and Toto was released in 1989 as part of the United States Postal Service "Classic Films" series. References to the film showed up in political cartoons, advertisements, and greeting cards. There was an Oz theme park, an Oz fan club, and a series of Oz conventions. During the Watergate scandal, Nixon was compared more than once to the humbug Wizard. The plot of the first episode of the 1970s television program *H.R. Pufnstuf* was unmistakably borrowed from *The Wizard of Oz*. And in the 1980s and 1990s, self-help gurus used the Yellow Brick Road as a metaphor for the quest for self-knowledge.

Popular myths also sprung up about the film, such as its supposed synchronicity with Pink Floyd's *Dark Side of the Moon* album, and exaggerated stories of the Munchkin actors' bad behavior on the set. A myth about a Munchkin suicide visible in the back of one scene persists despite being debunked numerous times.

When the film was originally released, with the tagline "The Greatest Picture in the History of Entertainment," MGM launched an aggressive merchandising campaign; objects from this campaign now fetch high prices as collectors' items. Memorabilia from the film is also extremely valuable: one pair of Judy Garland's ruby slippers is on permanent display at the Smithsonian Institution in Washington, D.C., at the National Museum of American History; another pair was auctioned at Christie's for \$165,000 in 1988.

Film critic Roger Ebert attempts to explain the movie's popularity, saying: "The Wizard of Oz fills such a large space in our imagination. It somehow seems real and important in a way most movies don't. Is that because we see it first when we're young? Or simply because it is a wonderful movie? Or because it sounds some buried universal note, some archetype or deeply felt myth?" Ebert leans toward the last possibility, and indeed, Baum deliberately set out in 1900 to create a uniquely American fairy tale, one with timeless appeal to all the "young in heart." The film—and all that followed—made his dream come true.

## WKRP in Cincinnati

The sitcom *WKRP in Cincinnati* mirrored late-1970s American culture through the lives and antics of the employees of a small AM

radio station. In its four-year run on CBS from 1978 to 1982, *WKRP* developed one of the best ensemble casts on television and produced some of the more memorable scenes from the period. The show's ability to build contemporary issues into many of the stories makes it a time capsule for the period, as it dealt with issues such as alcoholism, urban renewal, drugs, infidelity, crime, guns, gangs, elections, and even other television shows. In a classic episode about a Thanksgiving promotion gone bad, Les Nesman's report—a dead-on take from the Hindenburg disaster—and Arthur Carlson's trailing words—"As God is my witness I thought turkeys could fly"—crackle with the show's characteristic intelligence and humor.

## Wobblies

A radical labor union committed to empowering all workers, especially the nonskilled laborers excluded from the American Federation of Labor (AFL), the so-called Wobblies, members of the Industrial Workers of the World (IWW), played a pivotal role in America's labor history. Believing that the nation's most exploited and poorest workers deserved a voice, the Wobblies called for "One Big Union" that would challenge the capitalist system first in the United States and later worldwide.

In 1905 a group of two hundred radical labor activists met in Chicago and formed the IWW. The group was overwhelmingly leftist and called for the ultimate overthrow of capitalism worldwide. Immediately feared by most and despised by AFL leader Samuel Gompers, the Wobblies challenged the status quo and fought for the rights of America's working poor. The Wobblies planned to do what no union had tried before: unite blacks, immigrants, and assembly-line workers into one powerful force.

IWW leaders included some of the most famous names in American labor history, such as Big Bill Haywood, head of the Western Federation of Miners; Mary "Mother" Jones; and Eugene Debs, the leader of the Socialist Party. Initially, the ranks of the IWW were filled with western miners under Haywood's control. These individuals became increasingly militant as they were marginalized by the AFL. Traveling hobo-like by train, IWW organizers fanned out across the nation. Wobbly songwriters like Joe Hill immortalized the union through humorous folk songs. The simple call for an inclusive union representing all workers took hold. At its peak, 1912-1917, IWW membership approached 150,000, although only 5,000 to 10,000 were full-time members.

Long before the rise of the Bolsheviks in Russia, the courageous and militant Wobblies were calling for a socialist revolution and

began organizing strikes around the nation as a prelude to a general worldwide strike among the working class. The strikes often turned bloody, but the Wobblies continued to fight. They were attacked by the newspapers, the courts, the police, and goon squads formed to protect the interests of corporations. The IWW led important strikes at Lawrence, Massachusetts (1912); Paterson, New Jersey (1913); and Akron, Ohio (1913). As the Wobblies battled for free speech and higher wages across the nation, a legendary folklore developed regarding the union because of the violence and mayhem that seemed to follow them everywhere. The Wobblies became the scourge of middle-class America, especially in the highly charged atmosphere of World War I and the postwar Red Scare. The IWW, according to labor historian Melvyn Dubofsky in *We Shall Be All*, became "romanticized and mythologized." The reality was that the Wobblies mixed Marxism and Darwinism with American ideals to produce a unique brand of radicalism.

As the Wobbly "menace" became more influential, American leaders took action to limit the union's power. World War I provided the diversion the government needed to crush the IWW once and for all. Anti-labor forces labeled the IWW subversive allies of both Germany and Bolshevik Russia; one senator called the group "Imperial Wilhelm's Warriors." President Woodrow Wilson and his attorney general believed the Wobblies should be suppressed. On September 5, 1917, justice department agents raided every IWW headquarters in the country, seizing five tons of written material. By the end of September nearly two hundred Wobbly leaders had been arrested on sedition and espionage charges. In April 1918, 101 IWW activists went on trial, which lasted five months and was the nation's longest criminal trial to date. All the defendants were found guilty, and fifteen were sentenced to twenty years in prison, including Haywood, who jumped bail and fled to the Soviet Union where he died a decade later.

The lasting importance of the IWW was bringing unskilled workers into labor's mainstream. After the demise of the Wobblies, the AFL gradually became more inclusive and political. The Congress of Industrial Organizations, founded in 1935 by another mining leader, John L. Lewis, successfully organized unskilled workers. In 1955 the AFL and CIO merged to form the AFL-CIO, America's leading trade union throughout the second half of the century.

The heyday of the IWW lasted less than twenty years, but in that short span it took hold of the nation's conscience. Nearly forgotten today, the Wobbly spirit still can be found in novels by John Dos Passos and Wallace Stegner, as well as numerous plays and movies. By the 1950s and 1960s, IWW songs, collected in the famous *Little Red Song Book*, were rediscovered by a new generation of activists fighting for civil rights and an end to the Vietnam War.

## Wodehouse, P. G. (1881-1975)

P. G. Wodehouse's best known creations are upper-class incompetent Bertie Wooster, and his capable servant, Jeeves, who first appeared in the story "Extricating Young Gussie" in 1917. His satirical view of the Jazz Age is both affectionate and incisive; he pokes fun at such emblems of the inter-war period as flappers, gangsters, the fascist "Black Shirts," and the dreaded moralizing aunt. Born Pelham Grenville Wodehouse in Guildford, Surrey, and educated at Dulwich College in London, he took United States citizenship in 1955, having lived there from 1909. A journalist and writer of over ninety books, Wodehouse also worked as a lyricist and writer with such luminaries as Jerome Kern and George Gershwin. Aged ninety-three, newly knighted, and with a waxwork of himself in Madame Tussaud's in London, he declared himself satisfied. He died the same year.

## Wolfe, Nero

See Stout, Rex

## Wolfe, Tom (1931—)

Since the 1960s, American journalist Tom Wolfe has been one of the chief chroniclers of the times. Known for analyzing trends and exposing inherent cultural absurdities, Wolfe has coined terminology such as "radical chic" and "the Me decade." He has the knack for pinpointing an age, wrapping it up in vivid and readable prose, and presenting it back to society as a kind of mirror. Wolfe was one of the first in a cadre of writers—among them, Jimmy Breslin, Truman Capote, Hunter Thompson, and Gay Talese—to adopt a style called the New Journalism, the practice of writing nonfiction with many of the traditional storytelling elements of fiction. In addition, Wolfe distinguished himself by his frequent use of unorthodox punctuation and spelling and by peppering his text with interjections and onomatopoeia. Some of his most famous works include *The Kandy-Kolored Tangerine-Flake Streamlined Baby* (1965), *The Electric Kool-Aid Acid Test* (1968), and *Radical Chic and Mau-Mauing the Flak Catchers* (1970). He was also applauded for his 1979 portrait of the early era of the American space program, *The Right Stuff*, and for his first, and so far only, novel, 1987's social satire *Bonfire of the Vanities*. Over a decade later, in late 1998, Wolfe again won warm critical reception with his second novel, *A Man in Full*, which shot to the top of the best-seller lists.

Thomas Kennerly Wolfe, Jr. was born on March 2, 1931, in Richmond, Virginia. In high school, Wolfe was the editor of his student newspaper, and he went on to serve as sports editor of the

campus paper at Washington and Lee University in Lexington, Virginia, where he also cofounded the literary quarterly *Shenandoah*. He received his bachelor's degree in English in 1951. After that, he went on to obtain a doctoral degree in American studies at Yale University in 1957. Meanwhile, eager to begin a professional writing career, he sent out one hundred letters to publications, but received just three responses—two of them negative. He thus went to work at the *Springfield Union* in Massachusetts from 1956 to 1959, then moved to the *Washington Post* in June of 1959, where he won awards for reporting and humor.

In 1962 Wolfe began working at the New York *Herald Tribune*. There, he had the opportunity to contribute to its Sunday supplement, *New York*, which later became an independent magazine. During a newspaper strike, Wolfe landed an assignment for *Esquire* writing about the custom car craze in California. Though he was enamored of his subject matter—the chrome-laden, supercharged vehicles and their young enthusiasts—Wolfe told his editor that he could not manage to construct a story. He was told to type up his notes and send them in so that another writer could do the job. The editor was so struck with Wolfe's lengthy stream-of-consciousness descriptions and musings that he ran it unaltered. This became "There Goes (Varoom! Varoom!) That Kandy-Kolored Tangerine-Flake Streamline Baby," which Wolfe later included in his 1965 collection of essays, *The Kandy-Kolored Tangerine-Flake Streamlined Baby*. The article's fertile detail, hip language, and unusual punctuation became Wolfe's trademarks.

Early on, Wolfe's style was characterized as gimmicky, but also applauded as the best way to approach some of the wacky topics he covered for his pieces. How better to record the rise in LSD and growth of the hippies than to use the language of the people about whom he wrote? Indeed, Wolfe eloquently outlined the 1960s drug era in *The Electric Kool-Aid Acid Test* in documenting the antics of novelist Ken Kesey and his "Merry Pranksters," a group of LSD users on the West Coast who personified hippie culture. Subsequently, Wolfe delighted some and angered others in *Radical Chic and Mau-Mauing the Flak Catchers*, actually two separate long essays. *Radical Chic* was his biting humorous depiction of a fundraising party given by the white bourgeois in support of the Black Panthers. His satiric observations cut too close to the bone for some white liberals and black activists; still others were appalled by his seemingly cruel mimicry. However, many critics praised his sharp eye and sociological approach.

Wolfe toned down his style somewhat to pen *The Right Stuff* in 1979, a best-seller explaining the rise of NASA and the birth of the program to send an American into space. Much of the book's focus was on the people involved, from Chuck Yeager, the Air Force pilot who first broke the sound barrier, to the Apollo Seven astronauts and their families. It gave a personal, behind-the-scenes look at the lives affected by the space program, painting the men not only as heroes with the requisite "stuff" needed to fulfill such a duty, but as regular humans with failings and feelings as well. Wolfe's nonfiction throughout his career was as gripping as fiction due to his use of the genre's devices: dialogue, a shifting point-of-view, character development, and intensive descriptions of setting and other physical qualities in a scene. He finally tried his hand at a novel in 1987, publishing the widely praised *Bonfire of the Vanities*, a keen and darkly witty profile of 1980s Americana, from the bottom social strata to the top. His second novel, *A Man in Full* (1998), dealt with similar themes of race and class in late-twentieth-century America, but took place in the up-and-coming metropolis of Atlanta, Georgia. *A Man in Full* was

trademark Wolfe, featuring encyclopedic knowledge of a variety of subcultures and incisive observations about each. It, too, was a popular and critical success.

Being one of the most visible purveyors of the art known as New Journalism, Wolfe co-edited and contributed to an anthology titled *The New Journalism* in 1973. A staple in some college journalism courses, the volume expertly collects some of the finest examples of the practice from top names in the field and explained the constructs involved. Wolfe has also served as a contributing editor of *Esquire* magazine since 1977. Though his novel was considered a fine achievement, his contribution to the field of literature generally rests on his nonfiction sociocultural examinations.

## The Wolfman

The Wolfman—a bipedal, cinematic version of the werewolf archetype—dramatically embodies the Jekyll/Hyde (superego/id) dichotomy present in us all. The Wolfman first took center stage in Universal's *Werewolf of London* (1935), starring Henry Hull in a role reprised decades later by Jack Nicholson (*Wolf*, 1994). Soon after, Curt Siodmak (*Donovan's Brain*) finished the screenplay for Universal's latest horror classic, *The Wolf Man* (1941), directed by George Waggner. Lon Chaney, Jr. starred as Lawrence Talbot, an American-educated Welshman who wants nothing more than to be cured of his irrepressible lycanthropy. Make-up king Jack Pierce devised an elaborate yak-hair costume for Chaney that would come to serve as the template for countless Halloween masks. Siodmak's story differed from previous werewolf tales in emphasizing the repressed sexual energy symbolically motivating Talbot's full-moon transformations. Four more Chaney-driven Wolfman films came out in the 1940s; numerous imitators, updates, and spoofs have since followed.

## Wolfman Jack (1938-1995)

With his trademark gravelly voice and howl, disc jockey Wolfman Jack became a cultural icon over the airwaves during the 1960s and was integral in popularizing rock music. The first radio personality to introduce rhythm-and-blues music to a mainstream audience, he opened the doors for African American artists to reach widespread success in the music world. The Wolfman did more than announce songs over the radio; his unique personality lent a context to the sound of a new generation and made him the undisputed voice of rock and roll.

Wolfman Jack was born Robert Weston Smith in Brooklyn, New York, on January 21, 1938 and grew up in a middle-class environment. Always fond of music, as a teenager he would pretend he was a disc jockey using his own stereo equipment. After some odd jobs selling encyclopedias and Fuller brushes, Wolfman Jack attended the National Academy of Broadcasting in Washington, D.C. He got his professional start in 1960 at WYOU in Newport News, Virginia, a station that catered to a mostly black audience. There, the Wolfman began experimenting with on-air characters, and off the air, hosted dance parties. In 1962, he crossed the border to begin airing a show on

### Wolfman Jack

Mexican radio's XERF, which held an extremely powerful 250,000-watt signal that reached across much of the continent. At this job, Bob Smith developed his Wolfman Jack persona.

Wolfman Jack's raspy voice and on-air howls and commands to "get nekkid" caught the attention of young music fans across the country. Unfortunately, the Federal Trade Commission was interested in his advertisements for an array of products over his show, including drug paraphernalia and sugar pills that supposedly helped with sexual arousal, which led to the demise of the station's profits. Meanwhile, however, the Wolfman became known for playing a range of black artists such as Ray Charles, Wilson Pickett, Clarence Carter, and more, leading to the crossover of African American artists into white culture. Though record company executives were pleased to see their markets broadening, not everyone was thrilled with the development, since integration was still a new concept. Later, when Wolfman Jack moved back to Louisiana and hosted racially mixed dances, the Ku Klux Klan burned crosses on his lawn. Subsequently, Bob Smith kept Wolfman Jack within the confines of the studio to avoid hostility.

Later, Wolfman Jack moved to Minneapolis, Minnesota, where he ran a small local station and sent taped shows down to XERF. Wishing to resume live on-air performances, in 1966 he and a partner opened their own station on Sunset Strip in Los Angeles, which flourished until 1971. After that folded, Wolfman Jack accepted a humble salary at KDAY and also began hosting the television show *Midnight Special* on NBC, airing from 1972 to 1981. He appeared in most of the episodes. He also had a part as himself in the hit George Lucas film *American Graffiti*, a nostalgia movie about a group of teenagers in the early 1960s. The appearance finally put a face to the name for fans, who were reassured to discover that the Wolfman looked every bit the part, with bulging eyes and a bushy beard, sideburns, and hairstyle. Wolfman Jack used this publicity to land jobs on commercials and appearing at concerts and conventions. He was also a guest on *Hollywood Squares*, and began working on WNBC in New York City hosting a radio show. In addition, he lent his voice to the rock song "Clap for the Wolfman" by the Guess Who.

In the early 1990s, Wolfman Jack flew from his home in North Carolina to Washington, D.C. each Friday to host the syndicated radio

oldies program *Live from Planet Hollywood* on WXTR-FM. In 1995, he published his autobiography, which related the ups and downs of his career, from hobnobbing with other celebrities to his battle with a cocaine addiction. Shortly after completing a 20-day tour to promote the book, he died of a heart attack at his home in Belvidere, North Carolina, on July 1, 1995. He was survived by his wife of 34 years, Elizabeth “Lou” Lamb Smith, and his two children, Todd Weston Smith and Joy Renee Smith.

## Woman’s Day

Begun during the 1930s depression, *Woman’s Day* magazine “like the supermarket. . . helped to change the habits of the American family,” according to Helen Woodward in *The Lady Persuaders*. *Woman’s Day* began as a giveaway menu leaflet, the “A&P Menu Sheet,” published and distributed to its customers by the Great Atlantic & Pacific Tea Company. The sheet “told the housewife how to get the most for her food dollar, then how to use the food purchased to provide her family with appetizing and nourishing meals,” James Playsted Wood reported in *Magazines in the Twentieth Century*. It included suggested menus for families with adequate as well as for those with meager and less-than-meager budgets. The first issue in 1934 offered menus for a family of four ranging from eleven to thirteen dollars a week to five to six dollars a week. The April 30, 1934, sheet contained “menus especially adapted to the needs of children.”

The menu sheet was so successful and so expensive to produce that two A&P executives, Frank Wheeler and Donald P. Hanson, developed plans to make a women’s service magazine of it. A subsidiary was founded, and in October 1937 the first 815,000 copies of *Woman’s Day* were ready for sale for three cents in A&P grocery stores. Six of the 32 pages were devoted to recipes and menus. Other pages included advertising for products chiefly found in the A&P, an article that told “What to Do about Worry,” and another that asked, “Is Football Worthwhile?” From its beginning, the magazine contained how-to-do-it articles, expanded in 1947 to a complete how-to section, “How to Make It—How to Do It—How to Fix It.” By 1940 the magazine was able to guarantee advertisers a circulation of 1.5 million.

In 1943, Mabel Hill Souvaine began her fifteen-year tenure as editor, and under her management the magazine grew in circulation to nearly five million. By 1952, *Woman’s Day* was distributed in 4,500 A&P stores and, like its arch rival, *Family Circle*, was, as reported in *Business Week*, “hard on the heels of the big women’s service magazines.” In the 1950s, *Woman’s Day* told stores which dress patterns it would feature and then told readers which stores stocked fabrics appropriate for those patterns. In 1958, after a federal judge dismissed a suit brought by several food companies that alleged the magazine engaged in discriminatory practices that guaranteed it advertising revenues, A&P sold *Woman’s Day* to the Fawcett Company.

Of the many store-distributed magazines founded in the 1930s, *Woman’s Day* and *Family Circle* emerged as the hardiest and most prosperous. With a readership of nearly 20 million in the late 1980s, *Woman’s Day* was a close competitor to the “world’s largest women’s magazine,” *Family Circle*, which boasted a readership of more than 21 million. By the 1990s, *Woman’s Day* continued to be one of the most popular sources of information designed specifically for women and their daily life.

## Wonder, Stevie (1950—)

In the 1970s, as pop music fractured into a thousand competing subgenres, Stevie Wonder blended pop, jazz, soul, rock, funk, and reggae without trivializing or pastiching. As he grew from child prodigy to music’s foremost ambassador, he topped the charts while winning three consecutive Album of the Year Grammy awards. A producer, arranger, composer, singer, and master of numerous instruments, Wonder also did more than anyone to tame the synthesizer, transforming it from special effect to musical instrument. Lyrically, he addressed everything from social inequity to romance and heart-break, from Plant Rights to the birth of his daughter; and topped it all off with unrelenting good humor.

Born prematurely on May 13, 1950, Stevland Judkins (later Stevland Morris) lost his sight while in a hospital incubator. From his earliest years he demonstrated an aptitude for music, banging on anything he could get his hands near until his family managed, despite their poverty, to acquire some instruments for him to play. When he was ten years old, a family friend introduced the boy to Motown founder Berry Gordy, who promptly signed the youth he soon renamed “Little Stevie Wonder.” In addition to performing and recording, Wonder also took music lessons from Motown’s legendary studio band, the Funk Brothers. Though two early singles flopped, the boy’s exuberance and showmanship came through on a 1963 live recording, “Fingertips Part Two,” that soon became a number one single; the album, *Recorded Live—The Twelve Year Old Genius*, also rose to number one, a first for Motown.

A couple of lean years followed before Wonder displayed an ability to write his own songs: his 1965 composition “Uptight” became a major hit and Gordy, who usually discouraged artists from writing their own material, assigned songwriters to help the budding genius. Over the next few years, hits included “For Once in My Life,” “I Was Made to Love Her,” and a cover of Bob Dylan’s “Blowin’ in the Wind” which marked Wonder’s (and Motown’s) first take on social themes. Wonder’s “My Cherie Amour” was recorded in 1966 but only saw release in 1969 as a “B” side; it proved

### Stevie Wonder

Motown's Quality Control department wrong when it soared up the charts. As he grew, Wonder became increasingly disenchanted with Motown's assembly line approach to hit-making, though he had more freedom than most of the label's artists. He was allowed to start producing some of his own music starting in 1968, and in 1970 won a Best R&B (rhythm and blues) Producer Grammy for *Signed, Sealed & Delivered*.

But in 1971, when he reached the age of majority and received a ten-year backlog of royalties, he did not re-sign with the company. Instead, he invested much of his fortune in new synthesizers and devoted himself to recording at Electric Lady Studios, designed by fellow sonic explorer Jimi Hendrix. Shocked that Wonder would consider abandoning the Motown family, Gordy negotiated a new contract that gave the artist unprecedented artistic freedom, including his own music publishing company. Wonder responded with a run of the most innovative, popular, and critically praised albums in Motown history, starting with two albums in 1972: *Music of My Mind* and *Talking Book*, which spawned two number one singles, the ballad "You Are the Sunshine of My Life" and the funk tune "Superstition." The astonishing diversity of the material and the ear-opening range of synthesized sounds (programmed by associate producers

Robert Margouleff and Malcolm Cecil) were to become trademarks of Wonder's adult career. The following three albums, *Innervisions*, *Fulfillingness' First Finale*, and the double album *Songs in the Key of Life* each won Album of the Year Grammys, and contained hit singles like "Livin' for the City," "You Haven't Done Nothin'," "I Wish," and "Sir Duke." The combination of trenchant political lyrics set to breathtaking melodies, unorthodox harmonies, and satisfying rhythms set a high-water mark for pop music; his positive, engaging manner kept the material from dragging the listener down.

Wonder was the foremost contributor to a trend in 1970s soul music (also upheld by Earth, Wind & Fire, the Isley Brothers, and War, among others) that shined a bright light on social problems but always with spirituality, a constructive attitude, and musical innovation. His do-it-yourself approach inspired a generation of artists who wrote and produced their own material (Prince being the most prominent example), and his unwillingness to take the easy way out has resulted in a book of compositions frequently played and recorded by top jazz musicians. Wonder's easy good cheer refuted the stereotype of the troubled, harassed superstar.

After *Songs*, however, his fame began to fade. A 1979 soundtrack to the film version of the bestselling non-fiction book *The Secret Life*

of *Plants*, received mixed reviews from critics and record buyers alike, and Wonder rushed out *Hotter Than July* in 1980 to reassure confused fans that he had not lost his mind. The new album focused on more traditional political issues, with “Happy Birthday” kicking off Wonder’s ultimately successful campaign to make Martin Luther King Jr.’s birthday a national holiday. While his next album was in the works, a duet written by and performed with Paul McCartney, “Ebony and Ivory,” kept Wonder in the public eye. Then in 1984, “I Just Called to Say I Love You” (from the movie *The Woman in Red*) became Wonder’s bestselling single ever, but had lasting negative consequences: the syrupy tune alienated many music critics and Wonder became pigeonholed as a sappy balladeer. That opinion was bolstered by *In Square Circle* (1985) and its hit “Part Time Lover,” which marked an end to Wonder’s dominance of the pop charts. The 1987 follow-up, *Characters*, which sold relatively poorly, led off with the single “Skeletons,” a hard funk groove with lyrics obliquely addressing the Iran-contra affair. Despite the feel-good fundraising of mid-1980s events like “We Are the World” and “That’s What Friends Are For” (Wonder participated in both), social criticism with any sharpness had fallen out of favor in pop music. The 1991 soundtrack to Spike Lee’s *Jungle Fever* also sank without an impact, though it contained some fine work.

But even as styles changed, Wonder’s influence could still be heard all over the airwaves, as his distinctive vocal style inspired New Jack Swing and soul artists like Boyz II Men, Mint Condition, and Jodeci. Later, in the mid-1990s, British retro outfit Jamiroquai rose to multiplatinum success by directly copying Wonder’s landmark 1970s sound. In 1996, Wonder won a Lifetime Achievement Award and two Grammys for the new album *Conversation Peace*; he seems secure in his role as a living legend whose best work may be behind him, but who can still, on occasion, work his melodic magic.

## Wonder Woman

As America prepared to enter World War II and American women prepared to take on the roles of men at home, Wonder Woman became the first female superhero in the male-dominated world of comic books. Wonder Woman originally appeared in a nine-page spread in the December 1941 issue of DC Comics’ popular *All Star Comics*. Her story was so well received that she was given a spot in DC’s *Sensation Comics* in January 1942 and her own self-titled series that debuted in the summer. Strong, agile, intelligent, and brave, Wonder Woman challenged gender stereotypes, demonstrating that women, too, could rescue people from imminent danger and fight for justice. Wonder Woman, however, differed from her male counterparts in an important aspect: when she pursued her enemies—who were typically villains threatening America or seeking to subvert peace—she did so with an eye for reform rather than vengeance.

Equipped with her golden lasso, bullet-deflecting bracelets, and Amazonian agility, rather than guns or a propensity for violence, Wonder Woman was made into a role model for young women, encouraging them to compete and win in a man’s world without ever surrendering their femininity.

Dreamed up by William Moulton Marston, who wrote under the pen name Charles Moulton, Wonder Woman was created to fill a void in the comic book market. Marston, then employed as an educational consultant for Detective Comics, Inc. (now DC Comics), was the first to notice that the world of superheroes ignored an important demographic: girls. While young boys could pretend to be Batman, Superman, or the Green Lantern, young girls had to swap genders in order to participate in the role-playing, a practice Marston perceived as damaging to their self-esteem. So, with the go ahead from Max Gaines, then head of DC Comics, Marston began work on the female superhero who was to become an American icon.

Marston’s Wonder Woman was a kinder, gentler superhero than those who had come before her. Originally known as Princess Diana, she was raised as part of a hidden colony of Amazons who had fled Greece and Rome to escape male domination. From infancy, all of the Amazons had been trained in Grecian contests of agility, dexterity, speed, and strength, enabling them to attain greater speed than Mercury and greater strength than Hercules. In addition, each possessed the wisdom of Athena and Aphrodite’s ability to inspire love. The Amazons inhabited the tiny Paradise Island, located in the Bermuda Triangle and surrounded by magnetic thought fields that prevented its detection. But when Major Steve Trevor of American Intelligence crash-landed his plane there, the Amazons’ lives changed. Diana found him and stayed by his side until he was well, falling in love with him in the process. When Major Trevor was well enough to be returned to the United States, Diana won permission to follow him and aid him in his battle for truth, justice, and the American way. Thus, Wonder Woman was born.

From the beginning, Wonder Woman’s mission was one of peace, justice, and equality. While she did set out to capture criminals, she was never violent, nor did she use excessive force unless necessary. She did not carry a weapon, but instead relied upon her intelligence and agility to outwit and outmaneuver her opponents. Frequently, she encircled villains in her magic lasso, forcing them to reveal all of their evil secrets, and then delivered them to Transformation Island, a rehabilitation facility created by the Amazons of her native land. Many of her early foes were successfully reformed in this manner.

In addition to being a peaceful superhero, it is also notable that Wonder Woman was a self-made one. Although changes made to the series in the 1950s and 1960s described Wonder Woman’s powers as a gift from the Gods, the original storyline attributed her superhero qualities to years of rigorous training and self-discipline. This concept, which was finally restored to the series in the late 1980s, suggested that young readers who worked hard enough could also achieve greatness. Or, as Wonder Woman herself said in one of her early comic strips in the 1940s, “Girls who realize woman’s true powers can do greater things than I have done.” In a time when millions of men were about to become heroes in World War II, Wonder Woman provided an ideal to which young girls could aspire, and a vehicle through which they could find their own strength.

While her comic continued to appeal to readers into the 1990s, Wonder Woman is also remembered for her television program. Between 1975 and 1979, Wonder Woman, played by Lynda Carter, charmed audiences in one season on ABC in a show set in the 1940s

and faithful to the comic book of that time, and then for two more seasons on CBS in a show set in modern times.

—Belinda S. Ray

## Wong, Anna May (1905-1961)

Anna May Wong was the first Asian American actress to achieve Hollywood film star status and an early outspoken critic of Hollywood's racist attitudes. Born Wong Liu Tsong in Los Angeles, she was third-generation Chinese-American. Her first role was as an extra in *The Red Lantern* (1919), and her first lead was in the first Technicolor film, *Toll of The Sea* (1922). Her most memorable part was in *Shanghai Express* (1932), which starred Marlene Dietrich. Although she won critical acclaim for her acting in *The Thief of Bagdad* (1924), Wong grew tired of stereotyped casting and emigrated to Europe, where her stage and film work were well received. A gifted linguist, she played roles in several languages. After she returned to the United States, she declined, on principle, to consider playing the role of the concubine in *The Good Earth*. In the early 1950s, she starred in a short-lived television series. Her last film was *Portrait in Black* (1960).

## Wood, Ed (1924-1978)

The director of some of filmdom's campiest flicks during the Tarnished Age of the "B" movie, the cross-dressing Edward D. Wood, Jr. is remembered by a loyal cult following as the "worst director of all time" for such unforgettable creations as the transvestite epic *Glen or Glenda* (1953) and the mock-serious science-fiction drama *Plan 9 from Outer Space* (1958). Replete with bad dialogue, moralistic narration, infamously cheap special effects, and starring an eclectic group of Hollywood outcasts, including an aging Bela Lugosi, Wood's films rank among the most dreadful spectacles in cinematic history. His films mouldered in relative obscurity for decades, known only to "B" film buffs, until the 1994 biographical comedy *Ed Wood* triggered a resurgence of interest in his work. This film showed how, in the words of *Boston Herald* film critic James Verniere, sometimes "a dream can take you further than talent."

Born in 1924, Wood spent his formative years in New Jersey, cultivating his love of both Hollywood and angora sweaters. Although he was always a heterosexual, he admitted finding comfort in women's clothing. As a marine in World War II, Wood feared being injured in battle lest medics discover the bra and panties underneath his combat fatigues. In 1946, fresh from the service, Wood arrived in Hollywood with nothing but his unbreakable optimism and a change of lingerie. He spent a few years on the backlot of back lots, paying his dues, producing some short films, and planning his first major feature. The opportunity finally came in 1953 when Wood released *Glen or Glenda*, in which he himself starred as a cross-dressing businessman also known as Danal Davis. It was during the filming that Wood met Lugosi, at that time an aging, drug-addicted actor desperate for the dignity of regular work. Enamoured to have crossed paths with the star of *Dracula*, the 1931 horror classic, and desperate for publicity, Wood immediately invented a part for Lugosi. In the final scene of *Glen or Glenda*, when Wood's character divulges his obvious secret to his girlfriend, and she dramatically hands him her prized angora sweater, Lugosi appears as an obviously out-of-place supreme being, inexplicably chanting "pull the string."

Over the next few years, Wood refined his unique style of moviemaking by working on several short films, including the high-camp horror flick *Bride of the Monster* (1956). With neither studio connections nor talented talent, Wood was forced to work entirely outside the Hollywood system, accepting financial backing from any willing sponsor and collecting old stock footage to fill screen time. He also assembled his own unusual Hollywood "family," including future wife Loretta King, the morphine-addicted Lugosi, Criswell, a fake television psychic who once predicted an outbreak of cannibalism, Bunny Breckenridge, a drag queen, and Tor Johnson, a 300-pound Swedish wrestler turned actor. Despite the lack of production values, experienced actors or quality scripts, Wood truly believed his pictures could make a difference, often relying on blatant narration to illustrate his point. Ever the optimist, Wood never once did a second take, because in each instance, he truly believed the first take was perfect.

In 1955, Wood released his most renowned film, *Plan 9 from Outer Space*, about aliens who transform the dead into killer zombies to teach the warmongers of Earth a lesson. Originally entitled *Grave Robbers from Outer Space*, Wood was forced to rename the film after his unlikely sponsors, the First Baptist Church of Beverly Hills, opposed the original title for religious reasons. Lugosi died shortly after filming began, but rather than remove the only remotely marketable name from the marquee, Wood substituted his wife's chiropractor—who was a full foot taller—for Lugosi in the rest of the scenes. Ed Wood "fans" have practically made an industry of ridiculing *Plan 9 from Outer Space* for the cheap sets, simplistic dialogue, and especially the laughable special effects, like the UFOs, which were nothing more than spinning hubcaps dangling from very visible strings. The film is Wood's true "masterpiece," a perpetual candidate for the worst film of all time.

Wood went on to direct several more movies, including *Violent Years* (1956), a tale of the "untamed girls of the pack gang" which nonetheless preaches a return to family values, and *Night of the Ghouls* (1959), a film that announced that it was "so astounding that some of you might faint." As low-budget as they were, Wood's films rarely made a cent. By the late 1960s, Wood was broke and resorted to making soft-core pornography films and writing a few "adult books" including *Death of a Transvestite*. Wood himself descended into alcoholism and died in 1978 at the age of 54.

A few months after his death, Wood was chosen the “worst director of all-time” by the Golden Turkey Awards. Over the next decade, his films appeared in “B” movie festivals around the world and gained a small cult following, which included director Tim Burton. In 1994, Burton released *Ed Wood*, a comedic tribute in which Johnny Depp was cast as the starry-eyed Wood. The film details Wood’s life between 1952 and 1955, focusing on his relationship with Bela Lugosi. Although it did not last long in theatres, the film drew considerable critical acclaim, making many critics’ top-ten lists for 1994. Rather than patronizing the obviously untalented director, Burton presents Wood as a naive and charismatic man with true affection for Lugosi and the rest of his coterie of “misfits and dope fiends.” Martin Landau won the Oscar for Best Supporting Actor for his mesmerizing portrayal of the drug-addicted Lugosi, bitter at the Hollywood world that had cast him aside. In the words of film critic Phillip Wuntch of the *Dallas Morning News*, Ed Wood “succeeds as a salute to filmmaking and, on a personal level, as a valentine to the uncrushed human spirit.”

Thanks to the 1994 film, the public gained some respect for the “worst director of all-time.” Many of his films became available on video, and Wood has become the center of a small but devoted cult following.

## Wood, Natalie (1938-1981)

Natalie Wood will always be remembered as the beautiful, sad little girl who learned to believe in Santa Claus in *The Miracle on 34th Street* (1947). In that movie, she was flanked by such outstanding talents as Edmund Gwenn and Maureen O’Hara, yet she held her own. Later, Wood proved her talents as an adult, starring in such notable films as *Rebel without a Cause*, *West Side Story*, and *Splendor in the Grass*.

Born Natasha Virapaeff on July 20, 1938, to poor Russian immigrants, Wood was destined to become a star. Her mother was a classic stage mother, aggressive, obstinate, insistent, and convinced that others should recognize her daughter’s beauty and talent. Although five-year-old Natalie failed to impress at her first screen test, her mother nevertheless convinced producer Irving Pichel to give her a part in his 1943 film *Happy Land*. In 1946 she had a small part in *Tomorrow Is Forever*, with veteran stars Claudette Colbert, Orson Welles, and George Brent, and one year later she starred in *Miracle on 34th Street*, launching her legendary career.

Quickly becoming a seasoned performer, Wood made several films each year throughout her childhood. With *Rebel without a Cause*, she showed audiences that she was also capable of more complex roles in an Academy Award-nominated performance, and

Natalie Wood

this promise was borne out in *Splendor in the Grass* (1961) in which she played a young woman whose parents’ attempts to suppress her burgeoning sexuality result in her madness. It was also in 1961 that she starred in the hugely successful *West Side Story*, completing her transition from child star to hardworking adult actress. Critics consider her performance in *Love with the Proper Stranger* (1963) her finest.

Although her career was successful, Wood’s personal life was frequently troubled. She married Wagner for the first time in 1957, but the couple divorced only five years later. In her search for love and stability, she engaged in a number of high-profile romances with such stars as James Dean, Elvis Presley, Dennis Hopper, and most notably, Warren Beatty. Her title role in the movie *Inside Daisy Clover* (1965) is considered to be somewhat autobiographical, with its portrayal of a young girl pushed so hard by her mother into becoming a singer that she loses control and blows up her own house. Daisy Clover’s attempt at suicide is comical, but Natalie Wood’s was not. After a failed marriage and a number of failed romances, she decided to end her life. Fortunately, her attempt failed.

Wood continued working, but her career after 1963 was less distinguished. She tried her hand at comedy, most notably in the 1969 sex farce *Bob and Carol and Ted and Alice*, and later worked in

television. In 1972, she remarried Wagner, and as the decade progressed, the couple came to symbolize that rare phenomenon, a truly successful Hollywood marriage. One of the many tragedies of the entertainment industry is that Natalie Wood died so soon after finding the stability and love for which she had searched her whole life. On Thanksgiving weekend 1981, Wood was killed while sailing with her husband and actor Christopher Walken, with whom she was making a film. The boat had been purchased after the remarriage and named the *Splendour* to commemorate their love and happiness. The coroner's report states that she was accidentally drowned while attempting to either enter a dinghy tied to the boat or to stop the dinghy from banging against the bigger boat. She was dressed in a nightgown, a down jacket, and slippers. Reports indicated that Wood, Wagner, and Walken had been drinking, as had the boat's skipper, but the actual circumstances surrounding the event remain unclear.

## Wooden, John (1910—)

John Wooden coached the UCLA Bruins basketball team for 23 years, ten of those years ending with the NCAA championship. Wooden won his first title in 1964, then again in 1965. After a year out of the winner's circle, Wooden's team achieved seven consecutive national titles (1967-73). In 1975, "The Wizard of Westwood" (a nickname Wooden despised) won his last title.

Wooden finished his 23-year career with a .804 winning percentage, fourth all-time behind Jerry Tarkanian, Clair Bee, and Adolph Rupp. Included among his many accomplishments are an 88-game winning streak, 38 straight NCAA Tournament wins, and 19 conference championships. As a coach, as Curry Kirkpatrick noted in a 1998 *Sport* article, he was considered "the best who ever coached, any time, any sport."

Wooden coached some of the best college players of their time, including Lew Alcindor (who later would be known as Kareem Abdul-Jabbar), Bill Walton, Sidney Wicks, and Walt Hazzard, as well as *Hill Street Blues* star Mike Warren.

Wooden's life started in the Midwest, in Martinsville, Indiana. It was there he met his beloved wife, Nellie, who died in 1985 after 53 years of marriage, leaving John Wooden despondent for quite a while. He dedicated *They Call Me Coach* to her, writing, "Her love, faith, and loyalty through all our years together are primarily responsible for what I am." Later in the book, reminiscing about Nellie again, he called her death "the ultimate tragedy."

Wooden was considered one of the greatest Indiana schoolboy players in history, quite an accomplishment considering the long history of great high school basketball in the Hoosier state. He had a brilliant athletic career as a guard at Purdue University, and he has been called at times the "Michael Jordan of his day" because of his accomplishments as a Boilermaker.

Wooden decided to retire after 1975 upon recognizing that his professional responsibilities in addition to coaching, such as acting as

John Wooden

liaison with athletic boosters, began to wear on him. He noted in his first book, *They Call Me Coach*, "As the years passed, . . . the pressure of the crowds at our regular season games and especially at our championship tournaments began to disturb me greatly. I found myself getting very uncomfortable and anxious to get away from it all."

His name has not been forgotten after his retirement. An annual event entitled the John Wooden Classic was established to ensure that Wooden's legacy would not be forgotten as time passed and that he would "not become a footnote in American sports history." The strength of his talent in basketball was recognized again when he became the first man elected to the Basketball Hall of Fame as a player and as a coach. In addition, each year since 1977 the top college basketball player has been presented the John R. Wooden award by the U.S. Basketball Writers Association. (One critical factor that Wooden demanded before he agreed to attach his name to the award was that the recipient be a good student, stressing that the primary reason athletes are in school is to earn an education.)

By the end of 1990s, Wooden remained active in basketball camps, which he has enjoyed since his retirement in 1975. He took particular pleasure in teaching kids the fundamentals of basketball. In *They Call Me Coach*, Wooden noted that during his camps scrimmages are "the least important part of what we teach." Instead, they emphasize complete attention to the fundamentals of the game. In Wooden's second book, *Wooden: A Lifetime of Observations On and Off the Court*, former UCLA player and assistant coach and current Louisville basketball coach Denny Crum commented, "Coach Wooden was first of all a teacher. I believe he takes more pleasure from teaching than from all the recognition he amassed during his illustrious career."

Wooden's simple style and unique expressions have become well known in the sports world. Some "Woodenisms" include, as listed in *Wooden*: "What is right is more important than who is right;" "Don't let making a living prevent you from making a life;"

“Much can be accomplished by teamwork when no one is concerned about who gets credit;” “It is what you learn after you know it all that counts;” and “Discipline yourself and others won’t need to.”

## Woods, Tiger (1975—)

Prepared by his father for golf stardom from an early age, Eldrick “Tiger” Woods is off to a solid start in reaching his father’s goals. Even before he turned professional in 1996 after two years at Stanford University, Woods (the “Eldrick” officially disappeared when he was 21) became the first amateur ever to win three consecutive U.S. amateur titles. By the end of 1998, Woods had won one major tournament, the 1997 Masters (becoming the first person of color to do so), and several other tournaments, while racking up

Tiger Woods

millions of dollars both on the course as well as from advertisers such as Titleist, Nike, and American Express. In 1997, he won the PGA Tour money title by winning just more than two million dollars.

For many years, golf was mostly a white man’s sport (through 1961, the PGA of America constitution actually contained a “Caucasian clause”), mostly elitist in nature. In addition to his solid play on the course, many people believe that Woods’s success has opened up the game of golf to minorities, with many blacks specifically picking up golf because of him. Woods himself has grappled with his race, however. With his mother a Thailand native, Woods considers himself Cablinasian—Caucasian, black, Indian, and Asian—because of his racially diverse background. Throughout his short career, he has at times shunned the African-American label, though he does not deny his father’s African-American roots. When Woods turned professional, discussing whether or not he would be a role model for minorities, he said in a 1996 *Newsweek* article, “I don’t see myself as the Great Black Hope. I’m just a golfer who happens to be black and Asian. It doesn’t matter whether they’re white, black, brown or green. All that matters is I touch kids the way I can through clinics and they benefit from them.”

Earl Woods started teaching his only child the finer points of golf almost from the beginning. Tiger watched his father take practice swings when he was only six months old, and he was mesmerized watching his father swing the club. Four months later, Woods took swings of his own before he even took his first steps, and he also was on the practice green before his first birthday. When Woods was five years old, he appeared on the television show *That’s Incredible!* and was featured in *Golf Digest*. Often, Woods’s punishment would result in no golf, a good way to encourage him to stay out of trouble. He also could not practice golf until his homework was complete. Not only did Earl and Kultida encourage their son toward the golf course, but they also ingrained in him trust and respect. During Woods’s preteen and teen years, his father used his military training to help toughen up his son for the rigors of golf. For example, Earl would intentionally distract his son when he was preparing a shot.

At age 15, Woods was the youngest golfer ever to win the U.S. Junior Amateur title, the first of three consecutive titles at that level. He went on to win three consecutive U.S. Men’s Amateur titles, the only player in U.S. history to have won both the Junior and Amateur titles. In 1996, he became the NCAA champion. However, Woods became bored with the college game, looking toward the day he would turn professional and start playing for money.

Shortly after that third amateur title, Woods did turn professional. Playing at the Greater Milwaukee Open in September 1996, he finished a respectable sixteenth place, with a seven-under-par score. He won \$2,544 for his efforts. A few weeks later, Woods won his first tournament in Las Vegas, which assured him of a spot on the PGA Tour for 1997, when he led the tour in prize money. In only eight tournaments, Woods earned almost eight hundred thousand dollars. After his fantastic start, *Sports Illustrated* named him “Sportsman of the Year.”

Woods’s biggest accomplishment, however, came in April 1997 when he shattered the Masters record for largest margin of victory. After nine holes on Thursday, Woods found himself four over par. According to Earl, his son made a subtle adjustment to his swing. On the next 63 holes, Woods put on a show the likes of which the famed Augusta National Golf Club had never seen. He eventually finished at 18 under par, winning by 12 strokes, both of which were new records. In total, Woods broke 20 records with his performance and tied six others. Woods became the youngest Masters champ in history (at 21,

he was two years younger than 1980 champ Severiano Ballesteros). Unfortunately, Woods's smashing win was somewhat overshadowed by some racially insensitive comments made by fellow golfer Fuzzy Zoeller. Zoeller immediately apologized for his remarks, but the story did not die as soon as it might have. Some people blamed Woods for that fact, because he was less than forgiving toward Zoeller—not returning Zoeller's repeated phone calls. Woods won the tournament almost 50 years to the day after Jackie Robinson broke baseball's color barrier.

After his Masters win, Woods had trouble fulfilling the extremely high expectations of his fans. In the three following majors, he finished no better than seventeenth. Part of his problem may have been his extremely strenuous schedule, which included several overseas trips and also lengthy commercial shoots. In 1999, however, Woods came out on top again with a 22-under-par win at the Buick Invitational in February and a 15-under-par win at the Deutsche Bank Open in May.

## Woodstock

In the 1960s, the small town of Woodstock, New York, 40 miles north of New York City, nourished a small but growing community of folk musicians including Bob Dylan, the Band, Tim Hardin, and John Sebastian. In 1969, Michael Lang, a young entrepreneur who had promoted the Miami Pop Festival the previous year, decided to open a recording studio for the burgeoning music community of Woodstock, which would double as a woodland retreat for recording artists from New York City. Lang pitched his idea to Artie Kornfeld, a young executive at Capitol Records, and Joel Rosenman and John Roberts, two young entrepreneurs interested in unconventional business propositions. Together they formed a corporation, Woodstock Ventures, to create the studio/retreat. They also decided to organize a Woodstock Music and Arts Fair to promote the opening of the studio.

As their festival plans grew in ambition, they realized that the small town of Woodstock could not accommodate such a festival, and

a site in Wallkill, in the neighboring county, was chosen for the three-day weekend event. Throughout the summer of 1969 the project snowballed as more and more artists were signed to perform. It was decided that day one would feature folk-rock artists, day two would spotlight the burgeoning San Francisco scene, and day three would be saved for the hottest acts. By the time Jimi Hendrix was signed for \$50,000, most of the major American bands were involved in Woodstock, as well as major British groups like the Who and Ten Years After. The music soon eclipsed all other aspects of the festival, such as the arts fair (which is almost forgotten) and the recording studio (which never materialized).

Woodstock Ventures spared no expense to cultivate a hip, counterculture image for their three days of peace and music. They advertised the event through the underground press—which was rapidly mushrooming into a national network of anti-establishment groups—to put the word out on the street that this was the happening event of the summer. The Wallkill site was chosen for its rustic scenery and laid-back atmosphere, but the name Woodstock was retained to convey the bucolic theme of the event. A pastoral craze of "getting back to nature" had been growing in 1968 and 1969, reflected in the country-rock movement spearheaded by Bob Dylan, the Band, and others. The lure of nature was celebrated in films like *Easy Rider* (1968), which depicted hippies cruising across the country, living off the land (more or less), and visiting communes. Woodstock Ventures hired the Hog Farm, a New Mexico hippie commune, to prepare the festival campgrounds and maintain a free kitchen for those who could not afford to buy food. The Hog Farm also set up a bad trip shelter called the Big Pink for the inevitable freakouts that were expected. A group of Indian artists were flown in from Arizona to sell handicrafts. An impromptu organization called Food for Love was hired to run concession booths. Wes Pomeroy was enlisted as Security Chief. Pomeroy was renowned for his enlightened attitude towards youth and crowd control. He had witnessed the riots of the 1968 Chicago Democratic Convention, and had developed theories about peaceful crowd control. For Woodstock he organized a non-aggressive, non-uniformed, unarmed security team, the "Peace Service Corps," to unobtrusively dissuade undesirable behavior such as riots, vandalism, and theft, while overlooking non-violent activities such as drugs, sex, and nudity. New York City police officers were recruited, and had to undergo intensive screening to demonstrate their ability to understand and peacefully cope with young, hedonistic, anti-authoritarian crowds. Unfortunately, almost all these groups eventually betrayed Woodstock Ventures. The town of Wallkill voted to drive out the festival a month before the scheduled weekend, and a new site was found in Bethel, New York (although some townsfolk offered resistance there, too). The Hog Farm turned out to be opportunistic and irresponsible, stealing watches and wallets from the Woodstock staff and clashing with anyone whom they perceived as establishmentarian, including the medical staff. The radical activist and showman Abbie Hoffman, a self-styled "cultural revolutionary" who was charged with inciting riots at the Chicago Democratic Convention, threatened to sabotage the festival with his influence over the underground press if Woodstock Ventures did not pay him \$50,000. He claimed that the promoters were growing rich off the people, and he felt that Woodstock should return the money to "the people" by financing his own political mission, including his mounting legal debts from the Chicago Seven Trial. Hoffman also threatened to put acid in the water. The Woodstock promoters knew that Hoffman had the audacity and the influence to arouse anti-establishment animosity toward the festival, and they paid him \$10,000 to

appease him. But such was the reactionary nature of the times that many radical papers nevertheless portrayed Woodstock as a capitalist venture promoted by “straights” trying to profit from “the people.”

Betrayals grew more frequent as the festival grew nearer. The day before the festival, the New York City Police Commissioner refused his officers permission to work at Woodstock. The officers then offered their services anonymously under their own conditions, and for extortionary wages. Food for Love threatened to quit during the festival, renegeing on their prepaid \$75,000 contract. A rumor soon arose that Woodstock Ventures was bankrupt, and during the festival many bands demanded that they be paid in cash before performing. Even the Grateful Dead, the most anti-commercial band on the scene, made this demand (two years earlier they had played for free outside the Monterey Pop Festival). In the end even Mother Nature renegeed her clemency, and assailed her hippie worshippers with two rainstorms, steeping the throng of 500,000 in mud.

Many remember Woodstock primarily as a disaster, as it was officially pronounced, a monument to faulty planning, a testament to the limitations and hypocrisies of hippie idealism, a nightmare of absurdities, ironies, and incongruities. Over a million tickets were sold, but since the gates weren't built in time, droves of kids began streaming in days before the show, and by Friday the promoters, having no way to collect tickets, had to declare Woodstock a free

concert. Acres of land that had been rented for parking remained empty as cars, vans, delivery vehicles, and an estimated one million kids clogged several miles of the New York State Thruway. State troopers arrested hippies on their way to the show, then danced naked on their patrol cars after drinking water laced with acid. Tons of supplies, and even some musicians, were stuck in the traffic jam and never made it to the site. At the festival itself, a 40-foot trailer full of hot dogs rotted when refrigeration fuel ran out, and thousands of people endured the stench of rancid food while they went hungry. The revolving stage, designed to eliminate intermissions between acts, was the biggest and most expensive ever built, but once the equipment was loaded onto it, it wouldn't revolve (the only time it budged was when the mudslide moved it six inches). Out in the campgrounds, a “pharmacy district” developed in the middle of the woods, where one could shop for sundry drugs. Bethel residents witnessed outrageous acts of bohemianism. One neighbor awoke to find a shirtless girl riding his cow. Another found a couple having sex on his front porch. Meanwhile, thousands of disoriented hippies showed up in the quiet town of Woodstock, New York, looking for the Festival which was a county away.

Bad press, bad weather, bad trips, technical problems, human error, divine intervention—none of these pressures was enough to snuff the spirit of the crowd that had assembled for three days of peace

A crowd shot at Woodstock, 1969.

and music. The most common feeling among all parties—producers, musicians, audience, town, and nation—was the sense of history in the making. It was the largest group of young people ever gathered, and the greatest roster of musicians ever assembled, and it became the defining moment of a generation. Initial media response tended toward panic, reporting the disastrous aspects of the event. But when riots failed to flare up, the media recanted, reporting that Woodstock was a peaceful event, a mass epiphany of good will and communal sharing. On Sunday, Max Yasgur, the dairy farmer who rented his 600 acres to the festival, took the stage and complimented the crowd, observing how the festival proved that “half a million kids can get together and have three days of fun and music, and have nothing BUT fun and music.” Of course, most of these kids were having a lot more than that, but the conspicuous absence Yasgur alluded to was violence. Rock festivals had become increasingly frequent since Monterey Pop in 1967, and each one was bigger and more riotous than the last. The assassinations of Martin Luther King, Jr. and Robert Kennedy also added a feeling of dread to any large gathering. When Woodstock promised nothing but disaster, then passed without a single act of violence, the relief that swept over the watching nation was almost intoxicating; it seemed like a miracle. The relief among the public and the evanescent bliss of the kids led to fanatical pronouncements of the dawning of the Age of Aquarius.

However, many commentators have since claimed that peace and good will arose not in spite of disaster but because of it. The hunger, rain, mud, and unserviced toilets conspired to create an adversity against which people could unite and bond. In “The Woodstock Wars,” Hal Aspen observed that the communal spirit of Woodstock was typical of the group psychology of disasters: “What takes hold at the time is a humbling sense of togetherness . . . with those who shared the experience. What takes hold later is a privileged sense of apartness . . . from those who didn’t.” Aspen explained that the memory of Woodstock led a generation to arrogate “an epic and heroic youth culture” that subsequent generations could not match. Those who were once simply called baby boomers now dubbed themselves “Woodstock Nation,” an independent and enlightened subculture. Abbie Hoffman wrote a book of editorials called *Woodstock Nation* immediately after the event, contrasting the newly united masses with the “Pig Nation” of mainstream America. He even contrasted Woodstock with the moon landing of July 20, less than a month before the festival, calling Woodstock “the first attempt to land a man on the earth.” The closeness of the two milestone events in one summer invited such ironic comparisons. Ayn Rand used Nietzsche’s dichotomy of Apollo and Dionysus to contrast the two events. She observed that the moon landing represented the culmination of the Apollonian, or civilized, aspect of man, which is governed by reason, while Woodstock expressed the Dionysian, or primeval, aspect of man, which is ruled by hedonism. The name of the moonlanding mission, Apollo, made this interpretation all the more compelling. But such was the sheer physical magnitude of the Woodstock Festival that it afforded enough complexity to accommodate many interpretations. The moonwalk analogies tended to view Woodstock as a moment of separation from the establishment, but it was also possible to view it as reconciliation. It wasn’t just the audience of hippies who bonded together in the face of disaster. Community and nation also rushed to their aid. The Red Cross, Girl Scouts, and Boy Scouts all donated food and supplies to the starving hoards. Even local townspeople pardoned the havoc wrought upon their town and made sandwiches for the infiltrators. The youths who had fled from their parents in pursuit of utopian visions ended up

welcoming assistance from the very establishment that Woodstock symbolically rejected. They were led to appreciate that these groups had maintained efficiency to get them out of their jam. Someone, they realized, had to stay sober. Many Bethel residents, for their part, commented with surprise on the hippies’ politeness and peaceful behavior. Mainstream America saw Max Yasgur’s observation born out, that rock and violence were not inseparable, and that perhaps the peace the hippies advocated wasn’t such a pipedream after all. In 1972 Woodstock Nation repaid the compliment by nominating Yasgur for president.

When the initial euphoria wore off it became common to view Woodstock not as the beginning of a new era but as an ending, the high-water mark of the 1960s, when hippie freakdom reached critical mass and dissipated into mainstream, and the establishment coopted the diluted attitudes and fashions into a commodity. Much of the pride and idealism of Woodstock Nation crumbled as the following years brought devastating casualties to their culture. Someone was stabbed at the Rolling Stones’ free concert at Altamont in December of 1969; 1970 brought the student massacres at Kent State University, the breakup of the Beatles, and the deaths of Jimi Hendrix and Janis Joplin later that year. The following year, 1971, brought the death of Jim Morrison, the closing of the Fillmore Concert Halls, and the reelection of Nixon. Such defeats hastened the trend toward escapism, exemplified by rock’s detour into country music and apolitical singer/songwriters, sinking into the quagmire of narcissistic spiritual odysseys in the “Me Decade.”

In the wake of disillusion many claimed that the music was the most significant aspect of Woodstock, the only legacy successfully preserved. The documentary, *Woodstock: Three Days of Peace and Music* (1970), provided vicarious excitement for the millions who couldn’t be there, and was enormously popular. It made innovative use of split-screen techniques to simulate the excitement of a live-performance, and won an Oscar for Best Documentary. The three-album soundtrack, *Woodstock: Music from the Original Soundtrack and More*, also awoke nostalgia for the swiftly vanishing epoch. However, the arrangement was jumbled, and many performers were omitted. A two-album sequel, *Woodstock Two*, provided more songs by the artists already favored, but there were still notable absences. For some people, the albums proved what they felt all along, that the music was only a minor part of what was really a spiritual event that couldn’t be captured on vinyl. Janis Joplin and the Grateful Dead, who seemed to epitomize the youth culture that had sprouted in San Francisco, reportedly delivered lackluster performances, while then-unknown acts such as Santana and Joe Cocker proved to be among the highlights of the festival. A privileged few recall Joan Baez’s performance at the free stage as the highlight. The free stage had been built outside the festival fence so that those who did not have tickets could be entertained by amateur bands and open mic. But even after the festival was declared free and the fence was torn down, the ever-valiant Joan Baez, surveying the crowd of a half-million people, perceived that the free stage would still be useful for entertaining those who could not get close to the main stage, and she played to a fringe audience for 40 minutes until her manager summoned her to her scheduled gig at the main stage. This touching moment was not captured on film or record.

The 25th anniversary of Woodstock in 1994 brought a 4-CD box set which represented most of the performers and preserved the chronological order (although many performers, such as Ravi Shankar and the Incredible String Band, have yet to appear on any Woodstock

recording). The documentary was rereleased on video as a “Director’s Cut” package offering 40 minutes of additional footage of Hendrix, Joplin, and Jefferson Airplane. A CD-ROM was also released, boasting music, film clips, lyrics, hypertext biographies, and other features.

The most spectacular product of the 25th anniversary was the Woodstock Two festival in Saugerties, New York. As early as 1970 there were plans for sequels, but the original producers were in such legal and emotional disarray that it was impossible. For the tenth anniversary there had been an unspectacular sequel in New York City in 1979 with many of the original players, but nostalgia for 1960s flower-power was at low ebb at that time. But by the late 1980s and 1990s, nostalgia became almost clockwork, and in 1994 the sons and daughters of Woodstock Nation were ready to prove that they could party like their parents. Woodstock Two was a three-day concert with a ticket price of \$135 (the original Woodstock tickets had been \$18). It, too, generated a movie and soundtrack, and was broadcast on pay-per-view television. Woodstock Two featured mostly popular 1990s bands such as the Cranberries and Green Day, but also included older bands like Aerosmith, while Bob Dylan, the Woodstock, New York, resident who had missed the original festival, finally performed. Original Woodstock alumni included Joe Cocker and Crosby, Stills, and Nash. However, CSN’s presence did little to add enhance the sequel’s image. In 1969 CSN epitomized the 1960s spirit of togetherness with their angelic harmonies and intricate interplay of guitars. By 1994, they had sold “Teach Your Children” to a diaper commercial and consequently sold their respect. Woodstock Two also mixed rock and advertising, charging corporations a million dollars per billboard space. Pearl Jam, Neil Young, and others refused to participate for this reason. On the other hand, the promoters refused to accept alcohol and tobacco sponsors—a far cry from the pharmaceutical anarchy of the original Woodstock. The advertising slogan for the pay-per-view option was one of the worst ever conceived: “All you have to do to change the world is change the channel.” The slogan alluded to John Lennon’s line, “We all want to change the world,” from the Beatles song, “Revolution” (1968), which was very typical of the political preoccupations of late 1960s music. The idiotic Woodstock Two slogan reflected the apathy and passive consumption often associated with Generation X.
