Supreme Court justices are important people for any president in office. Their rulings and votes are very influential and affect law and justice in the entire country. If an important issue is at stake in a case or a vote, the justices decide the way laws are carried out, which may be at odds or in agreement with a particular president or administration. O'Connor made decisions that sometimes confused presidents who wanted to be able to depend on her to vote in a certain way. By 1990 her vote had become unpredictable. In many decisions both sides tried to win her support.

During the 1990s, O'Connor was an important figure in determining the direction of a number of freedom rulings by the Supreme Court. These rulings included an interpretation of freedom of speech (rights to speak out publicly or privately) and censorship (control over what people may see, do, read, write, or hear). She also worked on a ruling about control of the Internet and cases about freedom of religion. She voted against a state-required moment of silence in public schools.

She also was involved in other court cases that ruled on privacy issues that were very important to American people. In a 1992 case against abortion rights, *Planned Parenthood v. Casey*, O'Connor was one of the majority who voted to keep abortion legal for

women. In other words, abortion was a woman's private decision.

O'Connor also influenced the court in cases involving discrimination and harassment (or unwelcome verbal or physical contact) based on gender. She gave the deciding vote in a decision against affirmative action in *Adarand v. Peña* (1995). Affirmative action began during the presidency of Lyndon B. Johnson (1908–1973). It was a program to improve opportunities for women and minorities in education and in the workplace.

One of the most important decisions that O'Connor took part in during her second decade on the Supreme Court was the result of one of the closest presidential elections in American history. When the votes from Florida were counted from the 2000 presidential election, the results were so close that many people wanted a recount. The justices stepped in and stopped a recount. With this ruling, they decided the election and Bush became president thirty-five days after election day.

Third decade on the Supreme Court

Early in 2001, rumors were circulating that O'Connor was planning to retire from the Supreme Court. She said they were not true, and she has remained in the center of many critical issues. In July of the same year she made a prominent speech to the Minnesota Women Lawyers Association about the death penalty. O'Connor also talked about the issue of people who have been sentenced to the death penalty and then have been found innocent and set free. She questioned the court-appointed lawyers who represented some of the people sentenced to the death penalty. She said that defendants who were represented by court-appointed lawyers were more likely to be

found guilty and sentenced to the death penalty. These reversed rulings (in which convicted people go free) are based on DNA evidence, the scientific evidence based on a person's identity that is established by genetic code found in hair, blood, and so forth. She has made comments that she thinks it might be important to look more closely at the counsel (attorneys) that are assigned to these cases and the process for convictions. Many of O'Connor's decisions while on the Supreme Court have been in support of the death penalty.

In 2002 O'Connor offered a bit more insight into her complex character by publishing the memoir *Lazy B: Growing up on a Cattle Ranch in the American Southwest*. She wrote it with her brother H. Alan Day. In it, O'Connor offers a look into how her Arizona ranch roots shaped her life, career, and views.

Although her decisions have not always been popular with women's rights activists, O'Connor still is considered to be a role model for women.

GEORGIA O'KEEFFE

Born: November 15, 1887

Sun Prairie, Wisconsin

Died: March 6, 1986

Santa Fe, New Mexico

American painter

The American painter Georgia O'Keeffe (1887–1986) developed a distinctive art form that includes startling details of plant forms, bleached bones, and landscapes of the New Mexico desert—all created with natural clarity.

The young artist

Georgia O'Keeffe was born in Sun Prairie, Wisconsin, on November 15, 1887, to Francis and Ida O'Keeffe. She had six siblings, and the family lived on a farm outside of Madison, Wisconsin. Georgia attended the Sacred Heart Academy, and here she had a chance to learn about drawing and painting. She also attended Saturday art lessons. Her family moved to Williamsburg, Virginia, and she attended Chatham Episcopal Institute. Here she excelled in the school's art program.

In 1904 Georgia graduated and moved to study at the Art Institute of Chicago, Illinois (1905), and the Art Students League in New York City (1907–1908). She worked briefly as a commercial artist in Chicago, and in 1912 she became interested in the principles of Oriental design. After working as a public school art supervisor in Amarillo, Texas (1912–1914), she attended art classes conducted by Arthur Wesley Dow at Columbia University in New York City. She began to use Dow's system

of art education, based on frequent themes in Oriental art, in her teacher-training courses at West Texas State Normal College, where she served as department head (1916–1918).

Career as an artist begins

In 1916 Alfred Stieglitz (1864–1946), the well-known New York photographer and supporter of modernism (a style of art that went against established norms), exhibited some of O'Keeffe's abstract (a type of art that does not strongly represent real objects) drawings. In 1924 O'Keeffe and Stieglitz were married.

Lake George, Coat and Red (1919), a chief example of O'Keeffe's early abstract style, was a roughly brushed composition in which a twisted, mysterious form looms against a rainbow-colored sky. Early in her career she developed a personal, extremely polished style, favoring abstract subject matter such as flower details and severe architectural themes. Many of her paintings were dramatic, sharp-focus enlargements of botanical (flower or plant life) details.

Between 1926 and 1929 O'Keeffe painted a group of views of New York City. *New York Night* (1929) transformed skyscrapers into patterned, glittering structures. More architecturally characteristic were such paintings as *Lake George Barns* (1926) and *Ranchos Church, Taos* (1929). These simple buildings, further simplified in her painting, were America's anonymous folk architecture; in these forms O'Keeffe found a peace that contrasted with the frantic city environment.

New Mexico and new artistic subjects

In 1929 O'Keeffe began spending time in New Mexico; the region's dramatic mesas,

ancient Spanish architecture, vegetation, and dry terrain became the focus of her art. Her subjects were simple and basic. Even her stories of death in the desert—a sunbleached skull lying in the sand or attached to a post (as in *Cow's Skull with Red*, 1936)—were preserved. She regarded these whitened remains as symbols of the desert, nothing more. The dried animal bones and wooden crucifixes of the region that appear in her desert (*Black Cross, New Mexico*, 1929) were disturbing imaginings.

In 1945 O'Keeffe bought an old adobe house in New Mexico; she moved there after her husband's death in 1946. The house served as a frequent subject in paintings such as *Black Patio Door* (1955) and *Patio with Cloud* (1956).

Many of O'Keeffe's paintings of the 1960s, large-scale patterns of clouds and landscapes seen from the air, reflected a romanticized view of nature reminiscent of her early themes. These large paintings culminated in a twenty-four-foot mural on canvas, *Sky above Clouds IV* (1965). Her paintings of the 1970s were intense, powerful representations of a black rooster.

A portrayal of O'Keeffe, *In Cahoots with Coyote* from Terry Tempest Williams's 1994 book *An Unspoken Hunger*, painted a vivid narrative of the artist's intense interest in the beloved New Mexico she first visited in 1917. Her search for the ideal color, light, stones, and parched bones, transformed her desert country excursions into a personal closeness she felt with the perfection around her. Once, in a canyon bottom, she was so absorbed by the sight that she laid her head back Coyote-fashion and howled at the sky, terrifying her companions nearby who feared she was

Georgia O'Keeffe.

injured. "I can't help it—it's all so beautiful," was her response.

The end of a brilliant career

O'Keeffe's boldly original American works spanned a wide vision from taut city towers to deserts in such vivid hues and form "as to startle the senses," according to Williams's narrative. O'Keeffe painted until a few weeks before her death in Santa Fe, New Mexico, on March 6, 1986, at the age of ninety-eight.

Many of O'Keeffe's works found a permanent home among the adobe buildings of Santa Fe. The Georgia O'Keeffe Museum,

designed by New York architect Richard Gluckman, opened in 1997 to hold more of her pastels, drawings, paintings, and sculptures than any other museum.

LAURENCE OLIVIER

Born: May 22, 1907

Dorking, England

Died: July 11, 1989

Amhurst, England

English actor and director

Laurence Olivier, internationally popular for his acting and directing, was often regarded as one of the supreme actors of his generation.

Early start at performing

Laurence Olivier was born on May 22, 1907, in Dorking, Surrey, England, the third

child of Gerard Kerr Olivier, a minister, and Agnes Crookenden. As a child Olivier imitated the forceful sermons he saw his father give. His mother, whom he was close to, encouraged him to learn and recite dramatic speeches from plays instead. His first appearances on the stage were in schoolboy productions of plays by William Shakespeare (1564–1616). Olivier was crushed by the sudden death of his mother in 1920, and he used acting to help deal with his pain. When his school, St. Edward's in Oxford, England, was invited to put on a performance of *The Taming of the Shrew* at the Shakespeare Memorial Theatre in Stratford-upon-Avon, England, in 1922, Olivier's performance as Katharina attracted considerable attention.

To prepare for a career in acting, Olivier studied at the Central School in London, England. He found his first paying jobs in the theater during term holidays, working as an assistant stage manager and playing small roles. After a year of experience at various theaters, Olivier joined the Birmingham Repertory Company in 1926, appearing in *She Stoops to Conquer* (1927) and a modern dress production of *Macbeth* (1928). At the age of twenty he also played the title role in Anton Chekhov's (1860–1904) *Uncle Vanya* (1927).

First commercial success

In 1928 Olivier had a part in the first production of *Journey's End*, considered one of the greatest plays ever about the horrors of war. In 1929 he made his first New York City appearance in *Murder on the Second Floor* and also worked in his first film, *The Temporary Widow*. His role in *Private Lives* (1930) brought him his first real commercial success, and soon after he made his first appear-

ance in a movie made in Hollywood, California. However, his early film career was filled with disappointments, including Greta Garbo's (1905–1990) refusal to accept him as her leading man in *Queen Christina*.

Back in England in 1934 Olivier received positive reviews for his performances in *Queen of Scots* and *Theatre Royal*. He next tackled his first major Shakespearean roles on the professional stage, alternating the parts of Romeo and Mercutio with John Gielgud (1904–2000) at the New Theatre (1935). The following year Olivier starred in his first Shakespearean film, *As You Like It*. Although disappointed with the film, he used the actors and composer William Walton for future Shakespeare productions. In 1937 he joined London's Old Vic Company for a season, playing in *Hamlet*, *Henry V*, *Macbeth*, and *Twelfth Night*. Having demonstrated his range and skill in interpreting Shakespeare's works, Olivier was now recognized as a top-notch stage actor.

Film triumphs

Three major screen roles, in *Wuthering Heights* (1939, for which he was nominated, or put forward for consideration, for an Academy Award for Best Actor), *Rebecca* (1940, a second Academy Award nomination), and *Pride and Prejudice* (also 1940), firmly established Olivier's film career. Also in 1940 Olivier and Academy Award winner Vivien Leigh (1913–1967) were married. In 1941 Olivier and Leigh played the tragic lovers in *That Hamilton Woman*, regarded as one of the great romantic films of the era.

During World War II (1939–45; a war fought between the Axis powers: Germany, Italy, and Japan—and the Allies: England,

Laurence Olivier.

France, the Soviet Union, and the United States) Olivier served with the Fleet Air Arm and was released twice to act in British war films. In 1943 and 1944 he appeared in a film version of *Henry V*, originally planned as a propaganda project (the spreading of ideas or information to help a cause) for the British war effort. He won a special Academy Award for his triple triumph as director, producer, and star of the film.

Postwar work

Olivier was discharged from the service to join the Old Vic's management in rebuilding the company after the difficult war years.

He remained with the company until 1949. Some of his most memorable roles during this time were in *Arms and the Man* (1944) and *Uncle Vanya* (1945); he also played the title roles in *Richard III* (1945) and *King Lear* (1946), the latter of which he also directed. Perhaps his most demanding performance was for the double bill in which he appeared in *Oedipus Rex* and *The Critic* (1945). Returning to film direction in 1948 with his famous black-and-white version of *Hamlet*, Olivier won an Academy Award for best actor, and the film won the award for best picture. Olivier was also knighted by King George VI (1895–1952) of England.

In 1951 Olivier appeared in *Antony and Cleopatra* and *Caesar and Cleopatra* in both London and New York City. He also performed in *The Sleeping Prince* (1955), *Macbeth*, and *Titus Andronicus* during the 1954 and 1955 seasons at the Shakespeare Memorial Theatre, and in *Coriolanus* (1959), again at Stratford. He scored his first success in a modern role as the music hall comedian Archie Rice in *The Entertainer* (1957), repeating the part in the 1959 film version. He also directed and starred in *The Prince and the Showgirl* (1957) opposite Marilyn Monroe (1926–1962). In 1961 he was appointed the first director of the Chichester Festival Theatre. *Uncle Vanya*, starring Olivier and his third wife Joan Plowright (1929–), proved to be a huge success for the company's opening 1962 season.

Later years

Olivier was then named the first director of the state-supported National Theatre, a position he held until 1973. For the National's opening 1963–64 season Olivier directed

Hamlet and appeared in *Uncle Vanya* (which he also directed) and *The Recruiting Officer*. In later seasons he appeared in *Love for Love* (1965), *The Dance of Death* (1967), *The Merchant of Venice* (1970), and *A Long Day's Journey into Night* (1971). His most significant production as director was Chekhov's *The Three Sisters* in 1968. He also directed the 1970 film of the production. In 1970 Olivier was given the title Lord Olivier of Brighton—becoming the first actor to achieve such a rank. During his National years he appeared in several other filmed stage productions, and his commercial films included *Nicholas and Alexandra* (1971) and *Sleuth* (1972).

After leaving the National, Olivier appeared in twenty-nine films in thirteen years, including *Marathon Man* (1976), *A Bridge Too Far* (1977), *A Little Romance* (1979), and *The Jazz Singer* (1981). During this span he received two more Academy Award nominations, becoming the most nominated actor in history. In 1982 Olivier wrote his autobiography (the story of his own life) *Confessions of an Actor*; another book, *On Acting*, was published in 1986. In 1987 he announced to the world his retirement from motion pictures, but he promised to remain active in television. On July 11, 1989, Olivier died in Amhurst, England, of complications from a muscle disorder.

JACQUELINE KENNEDY ONASSIS

Born: July 28, 1929

Southampton, New York

Died: May 19, 1994

New York, New York

American first lady and editor

An internationally famous first lady, Jacqueline Kennedy Onassis raised her two children alone after the assassination of President John F. Kennedy (1917–1963). After a seven-year remarriage to Aristotle Onassis (c. 1900–1975), she turned to a career as a book editor.

A privileged childhood

Jacqueline Lee Bouvier was born on July 28, 1929, to Janet Lee Bouvier (1908–) and John (Jack) Vernon Bouvier III (1892–1957). Jackie was a strong and independent child. She was initially considered a discipline problem at Miss Chapin's, the fashionable school on Manhattan's East Side that she attended as a young girl. Janet and Jack had a troubled marriage, and they were divorced in 1940. Jackie lived with her mother, who in 1942 remarried Hugh Dubley Auchincloss, Jr. (1897–1976), a lawyer from a wealthy old family. The Auchinclosses were much wealthier than the Bou-

viers, and Jackie and her sister Lee lived with their mother and her new husband.

Jackie's mother's remarriage created conflict in the family. Although Jackie adored her father, she saw less and less of him, especially after her mother and stepfather moved their family to Washington, D.C. The summers were spent at the Auchincloss home, known as Hammersmith Farm, in Newport, Rhode Island. In 1944 Jackie was sent to boarding school at Miss Porter's in Farmington, Connecticut.

Jackie was a beautiful and elegant young woman. When she made her social debut, a top newspaper gossip columnist named her Debutante of 1947. Jackie began her college education at Vassar, where she seemed embarrassed by the reputation attached to her social success. She was a serious student who worked hard and made the dean's list. She spent two years at Vassar, and then studied for a year in France through a program offered by Smith College. After she returned to the United States, Jackie finished college at George Washington University in Washington, D.C. She then took a job at the *Washington Times-Herald* newspaper as a photographer.

Life as a Kennedy

In 1951 Jackie met John Fitzgerald Kennedy for the first time. The next year Kennedy was elected senator from Massachusetts and moved to Washington. The two continued to see each other, and they became engaged in June 1953. On September 12, 1953, Jacqueline Lee Bouvier married Kennedy at an enormous wedding that was the social event of the season.

Jackie Kennedy was a shy, private woman with little experience in politics or

Jacqueline Kennedy Onassis.

knowledge of politicians, but she was a help to her husband in many ways. She worked with him on his public speaking, helping him develop the charismatic (or charming) style for which he would become so famous.

In 1956 there was talk that John Kennedy would be the Democratic vice presidential nominee. Many members of the Kennedy family attended the convention, which was an exciting and exhausting one. Jackie was there to lend her support, despite the fact that she was seven months pregnant. Although John Kennedy gave a speech nominating Adlai Stevenson (1900–1965) as the Democratic candidate for president, Estes

Kefauver (1903–1963) was selected as the vice presidential candidate.

On August 23, 1956, soon after her husband had left for a short vacation, Jackie went into premature labor. The baby was stillborn, or dead at birth, and Jackie's brother-in-law Bobby Kennedy (1925–1968) comforted her and made the arrangements for the baby's burial. In 1957 Jackie suffered another loss when her father died. This was also a difficult period in the Kennedy marriage. Much was rumored at the time, and has been written since, about the various affairs that John Kennedy had both before and during his presidency. Undoubtedly, these rumors put a strain on his and Jackie's marriage.

On November 27, 1957, Caroline Bouvier Kennedy was born. Just months after Caroline's birth, her father was up for reelection as senator from Massachusetts, and Jackie was active in the 1958 senatorial campaign as well.

Jackie becomes first lady

Soon after John Kennedy was reelected senator and returned to Washington, he began to seek the presidential nomination. Jackie campaigned vigorously for her husband until she became pregnant in 1960. Even afterwards she continued to help as much as she was physically able until the birth of her son, John Jr.

As soon as John Kennedy was elected president, Jackie began working to reorganize the White House so that she could turn it into a home for her children and protect their privacy. At the same time she recognized the importance of the White House as a public institution and a national monument. She

formed the White House Historical Association to help her with the task of redecorating the building, as well as a Special Committee for White House Paintings to further advise her. She wrote an introduction to "The White House: A Historical Guide," and she also developed the idea of a filmed tour of the White House that she would conduct. The tour was broadcast on Valentine's Day 1962, and it was eventually distributed to 106 countries.

In April of 1963 the Kennedys announced that Jackie was once again pregnant. On August 7, 1963, Patrick Bouvier Kennedy was born. He died three days later. Another tragedy struck soon after. Jackie Kennedy was riding by her husband's side when he was assassinated on November 22, 1963, in Texas. In the days that followed John Kennedy's death, the image of his widow and children, and the dignity with which they conducted themselves, were very much a part of the nation's experience of mourning and loss.

After leaving the White House

In the years immediately after her husband's death, Jackie Kennedy was seen very much in the role of his widow. At the same time there was constant speculation about whether or not she would remarry. Jackie was actively involved in brother-in-law Robert Kennedy's campaign for president in 1968. After his assassination in June 1968, she was again a well-known figure at a very public funeral.

In October 1968 Jackie Kennedy married Aristotle Onassis (c. 1900–1975), a wealthy Greek businessman. He was sixty-two and she was thirty-nine. Jackie spent large portions of her time in New York to be with her children. As the years went by, the Onassis

marriage was rumored to be a difficult one, and the couple began to spend most of their time apart. Aristotle Onassis died in 1975. Widowed for a second time, Jackie returned permanently to New York. For the next two decades Jackie worked as a book editor for several large publishers in New York City.

In 1994 Jackie Kennedy told the public that she was being treated for non-Hodgkin's lymphoma (a form of cancer), and that her condition was responding well to therapy. However, the disease proved fatal on May 19, 1994, when she died in New York City. She is buried next to John F. Kennedy in Arlington National Cemetery.

In death, Jackie Kennedy remains a symbol of strength in American culture. Her courage during some of the country's darkest periods has inspired countless books about her and solidified her important role in one of the nation's favorite families.

EUGENE O'NEILL

Born: October 16, 1888

New York, New York

Died: November 27, 1953

Boston, Massachusetts

American playwright

Eugene O'Neill was among the leading dramatists of the American theater. Four of his plays were honored with the Pulitzer Prize. His main concern was with the anguish and pain experienced by sensitive (easily hurt or damaged) people.

Early life on the road

Eugene Gladstone O'Neill was born on October 16, 1888, in a New York City hotel. He was the youngest of the three children of James O'Neill, an outstanding romantic actor, and Ella Quinlan O'Neill. Eugene had two brothers, James, Jr. (born 1878), and Edmund (born 1883). Edmund's death at a young age brought deep feelings of guilt into the family. Eugene spent his first seven years on tour with his parents. Although he received a lot of exposure to the theater, he hated living in hotel rooms, and the constant traveling drove his mother to become addicted to drugs.

From the age of seven to fourteen, O'Neill was educated at Catholic schools. When he rebelled against any further Catholic education, his parents sent him to Betts Academy in Connecticut. He also began to spend time with his brother, James, a heavy drinker, who "made sin easy for him." Eugene's formal education ended in 1907

with an unfinished year at Princeton University in New Jersey. By this time his three main interests were books, alcohol, and women.

Decides to write

In 1909 O'Neill married Kathleen Jenkins before leaving for Honduras to mine for gold. A month after his return in April 1910, his son Eugene O'Neill, Jr., was born. O'Neill left later that year to work at sea. He also did odd jobs in Buenos Aires, Argentina. Back in New York in 1911, he spent several weeks drinking in bars before shipping out again to England. Almost half of his published plays show his interest in the sea. In 1912 O'Neill's marriage broke up, he tried to kill himself, and he developed tuberculosis (a disease of the lungs). By the time he was released from the hospital in June 1913, he had decided to become a dramatist.

O'Neill began to write constantly. With his father's aid, five of his one-act plays were published in 1914. O'Neill then joined George Pierce Baker's playwriting class at Harvard University in Massachusetts. O'Neill planned to return to Harvard in the fall of 1915 but ended up instead at the "Hell Hole," a hotel and bar in New York City, where he drank heavily and produced nothing. He next joined the Provincetown Players in Cape Cod, Massachusetts, whose productions of his plays about the sea, including *Bound East for Cardiff*, made him well known by 1918. Also in 1918 O'Neill married Agnes Boulton. They had a son, Shane, and a daughter, Oona.

Wins first Pulitzer Prize

In O'Neill's early writing he concentrated heavily on the one-act form. His hard work led to great success with the production of

his full-length *Beyond the Horizon* (1920), for which he won his first Pulitzer Prize. The play is similar to the one-act form in its structure, but by adding a poetic and well-spoken character, O'Neill was able to reach high dramatic moments.

O'Neill's father, mother, and brother all died within a four-year span during the 1920s. His marriage was also troubled, as he had fallen in love with Carlotta Monterey. He divorced Agnes Boulton in 1929 and soon married Carlotta. Even with these pressures, O'Neill was incredibly productive. In the fifteen years following the appearance of *Beyond the Horizon*, he wrote twenty-one plays, some brilliant successes (including *Anna Christie* and *Strange Interlude*, both Pulitzer Prize winners, as well as *Desire Under the Elms*, and *Mourning Becomes Electra*) and others total failures.

Later life

Carlotta Monterey brought a sense of order to O'Neill's life. His health worsened rapidly from 1937 on, but her care helped him remain productive. O'Neill had poor relationships with his children: Eugene Jr., who killed himself in 1950; Shane, who became addicted to drugs; and Oona, who was ignored by her father after her marriage to actor Charlie Chaplin (1889–1977). O'Neill even left Shane and Oona out of his will. When O'Neill knew that death was near, he tore up six of his unfinished plays rather than have someone else rewrite them. He died on November 27, 1953.

With the exception of *The Iceman Cometh* (1946), all of O'Neill's later works were produced after his death. *The Iceman Cometh* fascinated audiences despite its length. *Long Day's Journey into Night* (1956), an autobiographical (describing his own life) work

Eugene O'Neill.

Courtesy of the Library of Congress.

using no theatrical effects, showed O'Neill at the height of his dramatic power. It also received the Pulitzer Prize. Among all of his late plays, *A Touch of the Poet* (1958) has the strongest elements of romantic warmth.

GEORGE ORWELL

Born: June 25, 1903

Motihari, India

Died: January 21, 1950

London, England

English writer, novelist, and essayist

The English novelist and essayist, George Orwell, is best known for his satirical (using wit or sarcasm to point out and devalue sin or silliness) novels *Animal Farm* and *Nineteen Eighty-four*.

Early years

George Orwell was born Eric Arthur Blair in Motihari, Bengal, India, to Richard and Ida Mabel Blair. He had an older sister and a younger sister. His father was a minor customs official in the Indian Civil Service. When Orwell was four years old, his family returned to England, where they settled at Henley, a village near London, England. His father soon returned to India.

As a child, Orwell was shy and lacked self-confidence. He suffered from bronchitis all his life. He spent long hours reading and was especially interested in science fiction, ghost stories, William Shakespeare's (1564–

1616) plays, and fiction by Edgar Allan Poe (1809–1849), Charles Dickens (1812–1870), and Rudyard Kipling (1865–1936). When Orwell was eight years old, he was sent to a private preparatory school in Sussex, England. He later claimed that his experiences there determined his views on the English class system. From there he went by scholarship to two private secondary schools: Wellington for one term and Eton for four and a half years.

Orwell then joined the Indian Imperial Police, receiving his training in Burma, where he served from 1922 to 1927. While home on leave in England, Orwell made the important decision not to return to Burma, but to pursue writing. His resignation from the Indian Imperial Police became effective on January 1, 1928. Later evidence suggests that he had come to understand the imperialism for which he was serving, and had rejected it. Imperialism is a political and economic practice whereby a nation increases its power by gaining control or ownership of other territories.

Establishment as a writer

Shortly after making this decision Orwell stayed in Notting Hill, a poor section in London's East End, and in a working-class district of Paris, France. He wrote two novels, both lost, during his stay in Paris, and he published a few articles in French and English. After working as a kitchen porter and dishwasher, and suffering from pneumonia (a lung disease), he returned to his parents' house in Suffolk, England, toward the end of 1929.

Back in England, Orwell earned his living by teaching and by writing occasional articles, while he completed several versions of his first book, *Down and Out in London and Paris*. This

novel recorded his experiences in the East End and in Paris. Because he was earning his living as a teacher when his novel was scheduled for publication, he preferred to publish it under a pseudonym (a made-up name used by an author to disguise his or her true identity). From a list of four possible names submitted to his publisher, he chose “George Orwell.”

First novels

Orwell's *Down and Out* was issued in 1933. During the next three years he supported himself by teaching, reviewing, and clerking in a bookshop. In 1934 he published *Burmese Days*. The plot of this novel concerns personal intrigue (plotting) among an isolated group of Europeans in Burma (a country now known as Myanmar). Two more novels followed: *A Clergyman's Daughter* (1935) and *Keep the Aspidistra Flying* (1936).

In the spring of 1936 Orwell moved to Wallington, Hertfordshire, and several months later married Eileen O'Shaughnessy, a teacher and journalist. The Left Book Club authorized Orwell to write an inquiry into the lives of the poor and unemployed. *The Road to Wigan Pier* (1937) included an essay on class and socialism (a social system in which the production of goods and distribution of wealth is controlled centrally). It marked Orwell's birth as a political writer, an identity that lasted for the rest of his life.

Political commitments and essays

In July 1936 the Spanish Civil War broke out. Orwell arrived in Barcelona, Spain, at the end of autumn and joined the militia (a group of citizens who serve in the armed forces of a country). Orwell was wounded in the middle of May 1937. During his recovery,

George Orwell.

Reproduced by permission of Archive Photos, Inc.

the militia was declared illegal, and he fled into France in June. His experiences in Spain had made him into a revolutionary socialist, one who advocated change to a socialist form of society through rebellion of the people.

After Orwell returned to England, he began writing *Homage to Catalonia* (1938), which describes his disappointment with the Loyalists during the Spanish Civil War. He then wished to return to India to write a book, but he became ill with tuberculosis (a serious disease of the lungs). He was treated in a hospital until late in the summer of 1938. He spent the following winter in Morocco, where he wrote *Coming Up for Air*

(1939). After he returned to England, Orwell authored several of his best-known essays. These include the essays on Dickens and on boys' weeklies and "Inside the Whale."

After World War II (1939–1945; a war fought between the Axis: Italy, Germany, and Japan, and the Allies: England, France, the Soviet Union, and the United States) began, Orwell wanted to enlist. The army, however, rejected him as physically unfit. Later he served for a period in the home guard and as a fire watcher. The Orwells moved to London in May 1940. In early 1941 George Orwell began writing "London Letters" for *Partisan Review*, and in August he joined the British Broadcasting Corporation (BBC) as a producer in the Indian section. He remained in this position until 1943.

First masterpiece

In 1943 Orwell's mother died; he left the BBC to become literary editor of the *Tribune*; and he began reviewing books on a more regular basis. By February 1944 Orwell had completed *Animal Farm*, but several publishers rejected it on political grounds. It finally appeared in August 1945. This fable intends to enforce a useful truth, the failure of communism, through animals that speak and act like humans.

Toward the end of World War II, Orwell traveled to France, Germany, and Austria as a reporter. His wife died in March 1945. The next year he settled on Jura off the coast of Scotland, with his youngest sister as his housekeeper.

Crowning achievement

Although Orwell's health was now steadily falling apart, he started work on *Nineteen*

Eighty-four. Published in 1949, this book is an elaborate satire (a literary work that uncovers the corrupt morals of humans) on modern politics, foretelling a world in which humans are made less than human in a world where citizens are at the mercy of the state's absolute control. Orwell entered a London hospital in September 1949 and the next month married Sonia Brownell. He died in London on January 21, 1950.

Orwell's work is strongly autobiographical (based on the events of his own life) and combines elements of his own middle-class experience with his desire to cause social reform. He was critical of intellectuals whose political viewpoints struck him as superficial. His strong stand against communism (a system in which the government controls all businesses) resulted from his experience of its methods gained as a fighter in the Spanish Civil War.

OVID

Born: 43 B.C.E.
Sulmo, Italy

Died: c. 18 C.E.

Tomis (now Constanta, Romania)

Roman poet

Ovid was a Roman poet. His verse is distinguished by its easy elegance and sophistication (subtle complexity).

Early life

Ovid was born Publius Ovidius Naso on March 20, 43 B.C.E., at Sulmo (modern Sulmona), Italy, about ninety miles from Rome. His father was wealthy and intended for him to become a lawyer and an official. He gave Ovid an excellent education, including study under great rhetoricians (masters of language and speech).

Ovid preferred exercises that dealt with historical or imaginary circumstances. His orations (formal speeches) seemed like poems without meter. His ease in composition, the content of some of his poems, and the rhetorical (having to do with language skills) nature of much of his work in general all reflect his training with the rhetoricians.

Ovid also studied in Athens, Greece, toured the Near East, and lived for almost a year in Sicily. His father convinced him to return to Rome, where he served in various minor legal positions, but he disliked the work and lacked political ambitions.

Early works

After leaving legal work, Ovid moved in the best literary circles. He had attracted notice as a poet while still in school and in time came to be surrounded by a group of admirers. This period of Ovid's life seems to

have been relatively peaceful as well as productive. Of his private life we know little except that he was married three times.

Ovid's early work was almost always on the theme of love. He wrote three short books of verses known as the *Amores* (*Loves*). Most of these poems concern Ovid's love for a woman who is generally considered to be imaginary. During this time he also wrote his *Heroides*, a series of letters from mythical heroines to their absent husbands or lovers.

His exile

In 8 or 9 C.E. Ovid was banished to Tomi, a city on the Black Sea in what is now modern Romania. The reasons behind Ovid's exile have been the subject of much guessing. He himself tells us that the reason was "a poem and a mistake." The poem was clearly his *Loves*. The poem made fun of conventional (socially accepted) love poetry and offered vivid portrayals of contemporary Roman society.

This work was an immediate and overwhelming success in fashionable society, but apparently infuriated the emperor Augustus (63 B.C.E.–14 C.E.). The emperor excluded it from the public libraries of Rome along with Ovid's other works. The journey to his exile in Tomi lasted nearly a year. When he arrived, he found it a frontier post, where books and educated people were not to be found and Latin was practically unknown. Tomi was subject to attack by hostile barbarians and to bitterly cold winters.

The production of the last ten years of his life consists largely of appeals to be allowed to return to Rome, but Augustus was too bitterly offended to forgive him. The next emperor

Ovid.

Tiberius (42 B.C.E.–37 C.E.) was even more unyielding. Ovid's exile was not so unbearable as his letters indicate. He learned the native languages, and his pleasantness and friendliness made him a beloved and revered figure to the local citizens. They exempted him from taxes and treated him well.

His masterpiece

Ovid's masterpiece is generally considered to be his *Metamorphoses*. It is an epic (a long poem centered around legendary heroes), fifteen books in length, and devoted mainly to the theme of changes in shape. The first twelve books were derived from Greek

mythology, and books thirteen to fifteen devoted to Roman legends and history. The transitions between the various stories are managed with great skill. *Metamorphoses* owes its preservation to the incomparable narrative skill with which Ovid takes the old tales of a mythology and gives spirit to them with charm and freshness.

Later influence

In ancient culture the influence of Ovid on all writers who followed him was inescapable for those who were consciously attempting to return to earlier standards. His stories, particularly from *Metamorphoses*, were a major source for the illustrations of artists.

In the Middle Ages (500 through 1450), especially the High Middle Ages (1000 through 1200), when interest in Ovid's works was primarily centered on *Metamorphoses*, *Loves*, and *Heroides*, Ovid helped to fill the overpowering medieval hunger for storytelling.

During the Renaissance period (the fourteenth through sixteenth centuries), Ovid was easily the most influential of the Latin poets. Painters and sculptors used his work for themes. Writers of all ranks translated, adapted, and borrowed from him freely. In English literature alone Edmund Spenser (1552–1599), John Milton (1608–1674), and William Shakespeare (1564–1616) show a deep knowledge and use of Ovid.

After the Renaissance, Ovid's influence was most often indirect. However, many authors and artists used him directly from then until modern times, ranging from John Dryden (1631–1700), who translated *Metamorphoses*, and Pablo Picasso (1881–1973), who illustrated Dryden's work.

JESSE OWENS

Born: September 12, 1913

Oakville, Alabama

Died: March 31, 1980

Tucson, Arizona

African American track star

American track star Jesse Owens became the hero of the 1936 Olympic Games in Berlin, Germany, as his series of victories scored a moral victory for African American athletes.

A young track star

James Cleveland Owens was born in Oakville, Alabama, on September 12, 1913, the son of a sharecropper, a farmer who rents land. He was a sickly child, often too frail to help his father and brothers in the fields. The family moved to Cleveland, Ohio, in 1921,

for better work opportunities. There was little improvement in their life, but the move did enable young Owens to enter public school, where a teacher accidentally wrote down his name as “Jesse” instead of J. C. He carried the name with him for the rest of his life.

When Owens was in the fifth grade, the athletic supervisor asked him to join the track team. From a skinny boy he developed into a strong runner, and in junior high school he set a record for the 100-yard dash. In high school in 1933 he won the 100-yard dash, the 200-yard dash, and the broad jump in the National Interscholastic Championships. Owens was such a complete athlete, a coach said he seemed to float over the ground when he ran.

Record setter and Olympian

A number of universities actively recruited Owens, but he felt that college was only a dream. He felt he could not leave his struggling family and young wife when a paycheck needed to be earned. Owens finally agreed to enter Ohio State University in Columbus, Ohio, after officials found employment for his father. In addition to his studies and participation in track, Owens worked three jobs to pay his tuition. He experienced racism (the idea that one race is superior to others) while a student at Ohio State, but the incidents merely strengthened his desire to succeed. At the Big Ten Conference track and field championships at the University of Michigan in 1935, he broke three world records and tied another. His 26 foot 8 1/4-inch broad jump set a record that was not broken for twenty-five years.

Owens was a member of the 1936 U.S. Olympic team competing in Berlin, Germany.

Jesse Owens.

The African American members of the squad faced the challenges not only of competition but also of Adolph Hitler's (1889–1945) boasts of Aryan supremacy, or the domination of Hitler's ideal white, European athletes. Owens won a total of four gold medals at the Olympic games. As a stunned Hitler angrily left the stadium, German athletes embraced Owens and the spectators chanted his name. He returned to a hero's welcome in America, and was honored with a ticker tape parade in New York City. Within months, however, he was unable to find work to finance his senior year of college. Owens took a job as a playground supervisor, but was soon approached

by promoters who wanted him to race against horses and cars. With the money from these exhibitions, he was able to finish school.

In 1937 Owens lent his name to a chain of cleaning shops. They prospered until 1939, when the partners fled, leaving Owens with a bankrupt business and heavy debts. He found employment with the Office of Civilian Defense in Philadelphia (1940–1942) as national director of physical education for African Americans. From 1942 to 1946 he was director of minority employment at Ford Motor Company in Detroit, Michigan. He later became a sales executive for a Chicago sporting goods company.

Ambassador of sport

In 1951 Owens accompanied the Harlem Globetrotters basketball team to Berlin at the invitation of the U.S. High Commission and the army. He was appointed secretary of the Illinois Athletic Commission (1952–1955), and was sent on a global goodwill tour as ambassador of sport for the United States. Also in 1955, he was appointed to the Illinois Youth Commission. In 1956 he organized the Junior Olympic Games for youngsters in Chicago between the ages of twelve and seventeen. Owens and his friend, boxer Joe Louis (1914–1981), were active in helping African American youth.

Owens headed his own public relations firm in Chicago, Illinois, and for several years had a jazz program on Chicago radio. He traveled throughout the United States and overseas, lecturing youth groups. Not especially involved in the civil rights movement, which pushed for equal rights among all races, Owens admired civil rights leader Martin Luther King Jr. (1929–1968). Owens and

his childhood sweetheart, whom he had married in 1931, had three daughters.

Honors

Forty years after Owens won his gold medals, he was invited to the White House to accept a Medal of Freedom from President Gerald Ford (1913–). The following year, the Jesse Owens International Trophy for amateur athletes was established. In 1979 President Jimmy Carter (1924–) honored Owens with a Living Legend Award.

In the 1970s Owens moved his business from Chicago to Phoenix, Arizona, but as time progressed, his health deteriorated. He died of cancer on March 31, 1980, after a lengthy stay in a Phoenix hospital. He was buried in Chicago several days later.

The highest honor Owens received came a full ten years after his death. Congressman Louis Stokes from Cleveland pushed tirelessly to earn Owens a Congressional Gold Medal. President George Bush (1924–) finally gave the award to Owens's widow in 1990. During the ceremony, President Bush called Owens "an Olympic hero and an American hero every day of his life." Owens's fabled career as a runner again caught public attention in the 1996 Olympic Games—the sixtieth anniversary of his Berlin triumph—as

entrepreneurs (risk-taking businessmen) hawked everything from Jesse Owens gambling chips to commemorative (having to do with honoring someone or something) oak tree seedlings similar to the one Owens was awarded as a gold medallist in Berlin.

Racism at home had denied Owens the financial fruits of his victory after the 1936 games, but his triumph in what has been called the most important sports story of the century continued to be an inspiration for modern day Olympians like track stars Michael Johnson (1967–) and Carl Lewis (1961–). In *Jet* magazine (August 1996), Johnson credited Owens for paving the way for his and other black athletes' victories.

MOHAMMAD REZA PAHLAVI

Born: October 27, 1919

Tehran, Iran

Died: July 21, 1980

Cairo, Egypt

Iranian shah

Mohammad Reza Pahlavi was shah of Iran following his father's reign. He established many reforms to improve the country, but a revolution, led by Ayatollah Ruhollah Khomeini (1900–1989) in 1979, forced him into exile.

Crown prince at six

Mohammad Reza Pahlavi was born on October 27, 1919. His father, who was then an officer in the Persian Cossack regiment, became shah (king) of Iran as Reza Shah Pahlavi in 1926. Mohammad Reza was proclaimed crown prince at the age of six. From this time on he was carefully educated for his future role as shah by his stern father. In 1931 he was sent to Switzerland to attend Le Rosey school for boys. He was a good student but made few friends because, as a prince, he was not permitted to leave the school grounds. After returning to Iran in 1936, he entered a Tehran military school, graduating in 1938. In 1939 he married Princess Fawzia of Egypt. He developed a love for sports,

Mohammad Reza Pahlavi.

Reproduced by permission of the Corbis Corporation.

enjoying soccer and skiing, and he later became a licensed pilot.

Replaces father as shah

In the fall of 1941 Pahlavi's father was forced to step down from the throne by British and Russian forces who had taken over the country after a short struggle. On September 27, 1941, he replaced his father as Mohammad Reza Shah Pahlavi. This was a confusing and dangerous time for Iran. Not only was World War II (1939–45) being fought, but Iran was squeezed between bitter enemies Russia and Britain. In addition, the vast resources of oil in Iran were eagerly

sought by the Russians, the Americans, and the British.

Pressure on Iran from the Soviet Union came from more than one side. The young shah was caught in a struggle between the pro-Soviet Tudeh Party, which wanted social revolution without the shah, and the pro-British National Will Party, which wanted the shah but no social change. The shah himself was not satisfied with either idea. After World War II the Soviet Union refused to remove its forces from Iran as it had promised. Instead the Soviet forces stayed to help a branch of the Persian Communist Party set up a separate government in the northwest province of Azerbaijan. Iran brought this issue to the United Nations (UN). After much discussion the Soviet Union left Azerbaijan in May 1946, and the shah became very popular.

Internal conflict

Iran's problems were not over; the oil question had not been solved. The new National Front Party, formed under the leadership of Dr. Mohammad Mosaddeq, stated that since Iran had refused to give oil rights to the Soviet Union, it should take them away from the British. The country was plunged into a crisis and by 1953, communications broke down between the shah and Prime Minister Mosaddeq and also among the prime minister, his cabinet, and the parliament. The crisis, in which the Tudeh Party was gaining the upper hand, forced the shah and Sorayya (his second wife) to leave the country. Nine days later, with U.S. aid, Mosaddeq was overthrown, and the shah returned in triumph.

Pahlavi returned with a new resolve to do things his way. He started what later was

called the “White Revolution.” After distributing the land among the peasants, he put forests and water under the control of the government, established profit-sharing plans for workers, gave more freedom to women, and established civil service programs. New industries were created, and Iran became one of the most stable countries in the Middle East.

Later years

On October 27, 1967, his forty-eighth birthday, and after twenty-six years as shah, Pahlavi was crowned as His Imperial Majesty Mohammad Reza Pahlavi Aryamehr, Shahanshah of Iran. What made this crowning unique in Persian history was that his third wife, Farah, was crowned as empress, the first since the coming of Islam in the seventh century. Their six-year-old son, Reza, was declared crown prince.

During the 1970s, oil-rich countries such as Iran exercised much world power. It was also the strongest military country in the Middle East. However, the shah ruled with unlimited authority and his popularity began to decrease, especially among Muslims who were followers of Ayatollah Ruhollah Khomeini. The Ayatollah led a revolution in 1979, forcing the shah and his family into exile. Mohammed Reza Pahlavi died in Cairo, Egypt, on July 27, 1980.

ARNOLD PALMER

Born: September 10, 1929

Youngstown, Pennsylvania

American golfer

Arnold Palmer was the first person to make one million dollars playing golf. Palmer attracted legions of fans—known as “Arnie’s Army”—who hung on his every shot, celebrating his successes and suffering his failures along with him.

Early years

Arnold Daniel Palmer was born in Youngstown, Pennsylvania, the oldest of Milfred “Deacon” Palmer and Doris Palmer’s four children. He grew up in nearby Latrobe, Pennsylvania. Palmer’s father gave golf lessons at the Latrobe Country Club and gave Arnold his first set of golf clubs when the boy was three years old. Arnold began to sneak onto Latrobe’s nine-hole course at every opportunity. He began working as a caddie (one who carries a golfer’s clubs) at the age of eleven.

While playing for the Latrobe High School golf team, Palmer lost only one match in four years. During his senior year he met

Arnold Palmer.

Reproduced by permission of AP/Wide World Photos.

Bud Worsham, whose brother was a professional golfer. At Worsham's urging, Palmer accepted a golf scholarship to Wake Forest College in North Carolina. During Palmer's senior year in college, Worsham was killed in a car accident. Shaken by Worsham's death, Palmer left school and joined the Coast Guard. In 1954 he began selling painting supplies to support his participation in amateur golf. He won the National Amateur championship that year.

Begins pro career

Palmer became a professional golfer in November 1954. A month later he married

Winnie Walzer, whom he had met while playing in an amateur tournament. In 1955 Palmer won the Canadian Open, earning twenty-four hundred dollars. He captured three tournaments in 1956 and four in 1957, when his earnings of twenty-eight thousand dollars made him the number five money-winner on the tour. Palmer won three tournaments during each of the next two seasons. One of his 1958 victories was the prestigious (honored) Masters, a tournament held every year in Augusta, Georgia.

In 1960, just as golf was beginning to receive regular television coverage, Palmer's spectacular come-from-behind wins in the Masters and the U.S. Open made him a national hero. He won the British Open in 1961 and 1962 and the Masters in 1962 and 1964. Palmer became one of the nation's most famous people. He became involved with many businesses, tried acting in television and movies, and wrote a new golf book every few years. Palmer became the richest athlete in the world, with a yearly income of more than one million dollars.

Golf legend

Although Palmer continued to win tournaments through the 1960s, some believed that his businesses were distracting him from golf. Still, in 1970 the Associated Press (AP) named him Athlete of the Decade (a ten-year period). Palmer won only a few minor Professional Golfers Association (PGA) titles during the 1970s. In 1980 he entered the Senior PGA tour and won the PGA Seniors championship. He also captured the 1981 United States Golf Association (USGA) Senior Open, and he took the PGA Seniors again in 1984. His last victory on the Senior tour was in

1988. In 1994 he made his final U.S. Open appearance in Oakmont, Pennsylvania, where the cheers of his “Army” brought him to tears. A similar scene occurred at his last appearance at the British Open in 1995.

Palmer has received virtually every national award in golf. He had sixty-one wins on the PGA tour, including seven major championships, and he is a member of the World Golf Hall of Fame, the American Golf Hall of Fame, and the PGA Hall of Fame. Palmer also used his fame to benefit charities, serving as Honorary National Chairman of the March of Dimes Birth Defects Foundation for twenty years. He played a major role in raising money to build the Arnold Palmer Hospital for Children and Women in Orlando, Florida. He also established a yearly fund-raising golf event for the Latrobe Area Hospital in 1992.

Later years

Palmer underwent surgery for cancer in January 1997. After he recovered, his wife was found to be suffering from a different type of cancer. She died in 1999. Palmer continued his involvement with golf. He testified on behalf of the PGA in a lawsuit brought by golfer Casey Martin, who was suing for the right to use a golf cart to move between holes while playing because of a problem with one of his legs. Palmer and others argued that the cart would give Martin an unfair advantage over other players.

In 1999 Palmer was one of several investors who purchased the Pebble Beach golf course in California for \$820 million. In 2001 he was criticized for signing an endorsement contract (payment to a person for public support of a company's products)

to promote a golf club that fails to meet USGA regulations. In April 2002 Palmer played in his forty-eighth and final Masters tournament in Augusta.

PHILIPPUS AUREOLUS PARACELSUS

Born: November 10, 1493

Einsiedeln, Switzerland

Died: September 24, 1541

Salzburg, Austria

Swiss alchemist and doctor

Philippus Aureolus Paracelsus was a Swiss doctor and alchemist (medieval doctor) noted for founding medical chemistry. He also was the first physician to correctly describe a number of serious illnesses, including tuberculosis, a disease of the lungs.

Youth and early career

Theophrastus Bombastus von Hohenheim, later called Paracelsus, was born in Einsiedeln, Switzerland, on November 10,

Philippus Aureolus Paracelsus.

Reproduced by permission of Archive Photos, Inc.

1493. His father was a physician and instructed Theophrastus in Latin, botany, chemistry, and the history of religion. Theophrastus attended a mining school in Villach, where his father was appointed town physician. There he learned about metals, ores, and chemicals used to process them.

Theophrastus studied in Basel, Switzerland, and Italy, where he learned classical medical theory. He also studied at the University of Vienna, and then returned to Italy, where he received his doctorate in medicine from the University of Ferrara in 1515. While he was in Ferrara he took the name Paracelsus, which means “beyond Celsus.” Celsus

was a doctor of ancient Rome who was admired by Paracelsus’s fellow physicians.

Paracelsus resumed his study of metals briefly, and then began a series of travels that lasted to the end of his life. He was an army physician in Denmark from 1518 to 1521. In 1522 he joined the military forces in Venice, Italy. By 1526 he had settled briefly at Tübingen, Austria, where he gathered a small group of students. Later that year he traveled to Strasbourg, France, where he bought his citizenship and apparently intended to settle down.

New approaches to medicine

The classical theories of Aristotle (384–322 B.C.E.), a Greek philosopher, and Galen (c. 130–c. 200), a Greek physician, formed the basis of medicine at the time. Aristotle and Galen believed that the human body contained four elements (earth, air, fire, and water). These had to be balanced in order to maintain health. Paracelsus believed that diseases came from outside the body. He thought diseases could be cured by supplying the right chemical, as opposed to herbal medicines. These would restore internal balance. His successful cures served to support his theories and he acquired a reputation as a healer.

In 1526 Paracelsus went to Basel, Switzerland, to treat a patient. He stayed on and became the town physician. His responsibilities included lecturing at the university and supervising the local apothecaries (druggists). His lectures drew large audiences, but his teaching and style were unpopular with the authorities.

Paracelsus openly challenged traditional medical teachings. He preferred to lecture in

German rather than Latin, which was the traditional language of teaching. Also, he refused to prescribe the medicines of the local apothecaries. In 1528 Paracelsus had to flee to escape arrest and imprisonment.

Alchemy and philosophy

Paracelsus also wrote books about medicine, surgery, and cosmology (the nature of the universe). Paracelsus said that his outlook on the world was based on philosophy, astronomy, alchemy, and virtue. Alchemy was a medieval form of chemistry. Some people studied alchemy hoping to turn baser (lesser) metals into gold. In contrast, Paracelsus regarded alchemy as a spiritual science. He felt it required moral virtue on the part of the person who practiced it.

Paracelsus believed that for every evil there was a good that would eliminate it. Thus, he believed that there was a cure for every disease. He studied alchemy hoping to discover the means of restoring youth and prolonging life. He also thought that alchemy should not be restricted only to chemistry. He thought it was at work in all of nature. He felt strongly about relating his philosophy of nature to his religious beliefs.

After 1531 Paracelsus appears to have undergone a spiritual conversion. He gave up his material possessions. It is said he became like a beggar. He went to cities in Austria and Italy, where the plague (a highly contagious disease often carried by rats) was raging, and he attended to the sick. In this new spirit that drove him, Paracelsus gave special attention to the poor and the needy. His work was guided by a more mystical view of man and especially of the physician.

In 1540 Paracelsus went to Salzburg, Austria, but he was very sick. He died there on September 24, 1541.

CHARLIE PARKER

Born: August 29, 1920

Kansas City, Kansas

Died: March 12, 1955

New York, New York

African American musician

Charlie Parker, American musician, was one of the most widely influential soloists in jazz history and one of the creators of a new style of playing called bop, or bebop.

Charlie Parker.

Reproduced by permission of the Corbis Corporation.

Early life

Charles Christopher Parker Jr. was born in Kansas City, Kansas, on August 29, 1920, the only child of Charles and Addie Parker. The family moved to Kansas City, Missouri, in 1927. His mother, who raised him by herself after his father left the family, bought him a saxophone in 1931, and he started taking lessons in school. In the following years he played with several well-known local big bands, and in 1935 he left high school to become a full-time musician. By the age of fifteen Parker, known as “Yardbird” or “Bird” because of his love of eating chicken, was married and had begun using drugs. In 1941

he became a member of pianist Jay McShann’s (1916–) band, with which he made his first commercial recordings.

Parker’s earliest records reveal that he was already developing the more complicated musical approach that was characteristic of his mature work. This approach and his harsh tone made it difficult for the casual listener to follow the logic of his choruses. Also, with major changes taking place in the rhythm section, his music sometimes met with opposition or downright confusion. Parker played with extraordinary technical skill, which allowed him to express his ideas very clearly even at the most rapid tempo (the rate of speed of a musical piece).

New style of playing

At this time Parker also met and began performing with trumpet player Dizzy Gillespie (1917–1993), widely accepted as the cofounder with Parker of the jazz style that became known as bop or bebop (featuring complicated harmonies and quick tempos). In 1945 they recorded some of the greatest titles in the new style. Although younger musicians quickly realized Parker’s genius, musicians who were older and more set in their ways did not approve of him or his playing. In 1946, as a result, Parker suffered a mental breakdown and was committed for six months to a sanitarium (an institution for rest and recovery). Upon his release he formed his own quintet (five-piece group) and performed with it for several years, mainly in the New York City area. He also toured with Norman Granz’s “Jazz at the Philharmonic” and made trips to Paris, France, in 1949 and Scandinavia in 1950.

Parker composed a number of tunes that became jazz classics, though these were usu-

ally casually assembled items based on chord sequences of popular tunes. In terms of melodic skill, his recordings of ballads such as “Embraceable You” and “How Deep Is the Ocean” are even more revealing than his songs in the bebop style. Many other musicians imitated his playing, but his own achievements were unique.

In the last five years of Parker's life he was unable to work steadily as a result of physical and mental illness. On March 4, 1955, he made his final public appearance; he died eight days later in New York City.

BLAISE PASCAL

Born: June 19, 1623
Clermont-Ferrand, France

Died: August 19, 1662

Paris, France

French mathematician, scientist, and philosopher

Blaise Pascal was an influential mathematical writer, a master of the French language, and a great religious philosopher (a person who seeks wisdom). He began making contributions to mathematics at a very young age. The computer programming language “Pascal” is named after him.

Young master of geometry

Blaise Pascal was born at Clermont-Ferrand, France, on June 19, 1623. His father, Étienne, was a civil servant and served as king's counselor. Blaise's mother, Antoinette, died in 1626. Blaise was three years old at the time and had two sisters, Gilberte and Jacqueline. In 1631 the family moved to Paris, France.

Blaise's father did not like the way school was taught at that time and instructed all three children at home himself. He placed special emphasis on learning Latin and Greek. He did not expose Blaise to geometry because he felt the topic was too enticing and attractive. Geometry is the branch of mathematics that deals with points, lines, angles, surfaces, and solids. He thought that if exposed to geometry and mathematics too soon, Blaise would abandon the study of classics.

This ban on mathematics merely served to make Blaise even more curious. On his own he experimented with geometrical figures. He invented his own names for geometrical terms because he had not been taught the standard terms. Some people believe that

Blaise Pascal.

Courtesy of the Library of Congress.

Blaise was twelve years old when he started attending meetings of a mathematical academy with his father. Other scholars think that he did not attend the meetings until he was about sixteen. Whichever was the case, he was far younger than the adults who were there.

In 1640 the Pascal family moved to Rouen, France. Blaise was still taught mainly by his father. He worked very hard, but was frequently in poor health. During this time he developed a new theorem, or mathematical formula that can be proven, in geometry. He sometimes referred to this theorem as a “mystic hexagram.” It was quite different from

geometry that dealt with measured properties of figures. It was the foundation for an important, and, at the time, almost entirely undeveloped branch of mathematics.

In 1640, at age sixteen, Pascal wrote a book, *Essay on Conics*. It deals with the geometry of cones. He gave the mystic hexagram central importance in this book. At the age of nineteen, Pascal invented a calculating machine. It was able to add and subtract by having a person move a series of gears and cylinders. This was an early form of a computer.

Jansenists and Port Royal

In 1646 Pascal’s father had an accident and was confined to his house. Some neighbors who were Jansenists came to visit him. The Jansenists were a religious group formed by Cornelius Jansen (1585–1638). Their beliefs were very different from the teachings of the Jesuits, who were the most influential group at the time. The Pascals began adopting the Jansenist beliefs. As a result, they received opposition from the local Jesuits.

After Étienne Pascal’s death in 1651, Pascal’s sister Jacqueline joined the Jansenists at their convent in Port Royal. Pascal continued to enjoy a more worldly life. He had a number of aristocratic (upper-class) and famous friends and money from his patrimony (inheritance) to support himself. In 1654, however, he completely converted to Jansenism, and joined his sister at the convent at Port Royal.

Provincial Letters

In 1655 the writer Antoine Arnauld (1612–1694) was formally condemned for

heretical teaching, a teaching that opposed the standard beliefs of the church. Pascal decided to defend Arnauld. He wrote a series of pamphlets that were supposed to look like letters between two friends, one in the city and one in the country or provinces. They came to be known as *The Provincial Letters* and poked fun at the Jesuits. They were very popular. The Jesuits tried without success to find the author. The wit, reason, eloquence, and humor of the letters made the Jesuits a laughingstock (object of ridicule).

The Pensées

When Pascal died in 1662, he left behind an unfinished theological work (relating to religious faith and practices), the *Pensées*. This was an apology, or defense, for Christianity. It was published eight years later by the Port Royal community in a thoroughly garbled and incoherent form. A reasonably authentic version first appeared in 1844. It deals with the great problems of Christian thought, faith versus reason, and free will.

The *Pensées*, unlike the *Provincial Letters*, were not highly edited and polished. The *Letters* give Pascal a place in literary history as the first of several great French writers practicing polite irony (humor in which words are used to mean the opposite of their true meaning) and satire (making fun of human faults and weakness). In contrast, some people think that the feeling of the *Pensées* makes it seem that it could almost have been written by another man. In them, reason is supposedly made to take second place to religion. Both books, however, are recognized as being among the great volumes in the history of religious thought.

Later mathematical and scientific work

Little is known of Pascal's personal life after his entry into Port Royal. Some of Pascal's scientific and mathematical works were not published until after his death. His "Treatise on the Equilibrium of Liquids," and his work on the links between theories involving liquids and gases, were enormously important in providing knowledge to develop air compressors, vacuum pumps, and hydraulic (run by the pressure created by forcing liquid through a small opening) elevators. Although he never wrote at great length on mathematics after entering Port Royal, the many short pieces that do survive are almost always concise and incisive.

The mathematical theory of probability (whether something is more likely to happen or not) made its first great step forward when Pascal and Pierre de Fermat (1601–1665) began writing to one another. They found that they both had come to similar conclusions independently. Pascal planned a treatise (a formal explanation of a theory) on the subject, but again only a fragment survived. It was published after his death. Pascal suffered increasingly from head pains after 1658. He died on August 19, 1662.

Pascal published many of his theorems without providing proofs as a challenge to other mathematicians. Solutions were found by some of the best mathematicians of the time, all rising to do their best by Pascal's leadership. The computer programming language "Pascal" is named after Blaise Pascal in honor of his early contributions to the science of computing. Thus, the influence of Blaise Pascal lives on today.

LOUIS PASTEUR

Born: December 27, 1822

Dôle, France

Died: September 28, 1895

Paris, France

French chemist and biologist

The French chemist and biologist Louis Pasteur is famous for his germ theory and for the development of vaccines. He made major contributions to chemistry, medicine, and industry. His discovery that diseases are spread by microbes, which are living organisms—bacteria and viruses—that are invisible to the eye, saved countless lives all over the world.

The tanner's son

Louis Pasteur was born on December 27, 1822, in the small town of Dôle, France. His father was a tanner, a person who prepares animal skins to be made into leather. The men in Pasteur's family had been tanners back to 1763, when his great-grandfather set up his own tanning business. Part of the tanning process relies on microbes (tiny living organisms). In tanning, microbes prepare the leather, allowing it to become soft and strong. Other common products such as beer, wine, bread, and cheese depend on microbes as well. Yet, at the time Pasteur was a child, few people knew that microbes existed.

Pasteur's parents, Jean-Joseph Pasteur and Jeanne Roqui, taught their children the values of family loyalty, respect for hard work, and financial security. Jean-Joseph, who had received little education himself, wanted his son to become a teacher at the local lycée (high school). Pasteur attended the École Primaire (primary school), and in 1831 entered the Collège d'Arboix. He was regarded as an average student, who showed some talent as an artist. Nonetheless, the headmaster encouraged Pasteur to prepare for the École Normale Supérieure, a very large training college for teachers located in Paris. With this encouragement he applied himself to his studies. He swept the school prizes during the 1837 and 1838 school year.

Pasteur went to Paris in 1838 at the age of sixteen. His goal was to study and prepare for entering the École Normale. Yet, he returned to Arboix less than a month later, overwhelmed with homesickness. In August of 1840 he received his bachelor's degree in letters from the Collège Royal de Besançon and was appointed to tutor at the Collège. In

1842, at age twenty, he received his bachelor's degree in science. He then returned to Paris, and was admitted to the *École Normale* in the autumn of 1843. His doctoral thesis (a long essay resulting from original work in college) was on crystallography, the study of forms and structures of crystals.

Investigations into crystals

In 1848, while professor of physics at the lyc ee of Tournon, the minister of education granted Pasteur special permission for a leave of absence. During this time, Pasteur studied how certain crystals affect light. He became famous for this work. The French government made him a member of the Legion of Honor and Britain's Royal Society presented him with the Copley Medal.

Studies on fermentation

In 1852 Pasteur became chairman of the chemistry department at the University of Strasbourg, in Strasbourg, France. Here he began studying fermentation, a type of chemical process in which sugars are turned into alcohol. His work resulted in tremendous improvements in the brewing of beer and the making of wine. He also married at this time.

In 1854, at the age of thirty-one, Pasteur became professor of chemistry and dean of sciences at the new University of Lille. Soon after his arrival at Lille, a producer of vinegar from beet juice requested Pasteur's help. The vinegar producer could not understand why his vinegar sometimes spoiled and wanted to know how to prevent it.

Pasteur examined the beet juice under his microscope. He discovered it contained alcohol and yeast. The yeast was causing the

Louis Pasteur.

Reproduced by permission of the Corbis Corporation.

beet juice to ferment. Pasteur then demonstrated that controlled heating of the beet juice destroyed the yeast, and prevented fermentation. This process, called "pasteurization," was eventually applied to preserve a number of foods such as cheese and milk. It also became the basis for dramatically reducing infection in the operating room.

Studies on silkworms

In 1865 Pasteur was asked to help the ailing silk industry in France. An epidemic among silkworms was ruining it. He took his microscope to the south of France and set to work. Four months later he had isolated the

microorganism causing the disease. After three years of intensive work he suggested methods for bringing it under control.

The theory of microbial disease

Pasteur's scientific triumphs coincided with personal and national tragedy. In 1865 his father died. His two daughters were lost to typhoid fever in 1866. Overworked and grief-stricken, Pasteur suffered a cerebral hemorrhage (a bleeding caused by a broken blood vessel in the brain) in 1868. Part of his left arm and leg were permanently paralyzed. Nevertheless, he pressed on.

Pasteur saw the trains of wounded men coming home from the Franco-German War (1870–71; war fought to prevent unification under German rule). He urged the military medical corps to adopt his theory that disease and infection were caused by microbes. The military medical corps unwillingly agreed to sterilize their instruments and bandages, treating them with heat to kill microbes. The results were spectacular, and in 1873 Pasteur was made a member of the French Academy of Medicine—a remarkable accomplishment for a man without a formal medical degree.

Animal studies

A particularly devastating outbreak of anthrax, a killer plague that affected cattle and sheep, broke out between 1876 and 1877. The *anthrax bacillus* (a type of microbe shaped like a rod) had already been identified by Robert Koch (1843–1910) in 1876. It had been argued that the bacillus did not carry the disease, but that a toxic (poisonous) substance associated with it did. Pasteur proved that the bacillus itself was the disease agent, or the carrier of the disease.

In 1881 Pasteur had convincing evidence that gentle heating of *anthrax bacilli* could so weaken its strength that it could be used to inoculate animals. Inoculation is a process of introducing a weakened disease agent into the body. The body gets a mild form of the disease, but becomes immunized (strengthened against) the actual disease. Pasteur inoculated one group of sheep with the vaccine and left another untreated. He then injected both groups with the *anthrax bacillus*. The untreated sheep died and the treated sheep lived.

Pasteur also used inoculation to conquer rabies. Rabies is a fatal disease of animals, particularly dogs, which is transmitted to humans through a bite. It took five years to isolate and culture the rabies virus microbe. Finally, in 1884, in collaboration with other investigators, Pasteur perfected a method of growing the virus in the tissues of rabbits. The virus could be weakened by exposing it to sterile air. A vaccine, or weakened form of the microbe, could then be prepared for injection. The success of this method was greeted with excitement all over the world.

The question soon arose as to how the rabies vaccine would act on humans. In 1885 a nine-year-old boy, Joseph Meister, was brought to Pasteur. He was suffering from fourteen bites from a rabid dog. With the agreement of the child's physician, Pasteur began his treatment with the vaccine. The injections continued over a twelve-day period, and the child recovered.

Honors from the world

In 1888 a grateful France founded the Pasteur Institute. It was destined to become one of the most productive centers of biological study in the world.

In 1892 Pasteur's seventieth birthday was the occasion of a national holiday. A huge celebration was held at the Sorbonne. Unfortunately Pasteur was too weak to speak to the delegates who had gathered from all over the world. His son read his speech, which ended: "Gentlemen, you bring me the greatest happiness that can be experienced by a man whose invincible belief is that science and peace will triumph over ignorance and war. . . . Have faith that in the long run . . . the future will belong not to the conquerors but to the saviors of mankind."

On September 28, 1895, Pasteur died in Paris. His last words were: "One must work; one must work. I have done what I could." He was buried in a crypt in the Pasteur Institute. Years later Joseph Meister, the boy Pasteur saved from rabies, worked as a guard at his tomb.

LINUS PAULING

Born: February 28, 1901
Portland, Oregon

Died: August 19, 1994

Big Sur, California

American chemist

The American chemist Linus Pauling was awarded the Nobel Prize twice. Through his research he clarified much about the structure of the smallest units of matter. His studies on sickle cell anemia (a disease that mainly affects African Americans) helped to create the field of molecular biology. He founded the science of orthomolecular medicine, which is based on the idea that diseases result from chemical imbalances and can be cured by restoring proper levels of chemical substances.

The early years

Linus Carl Pauling was born in Portland, Oregon, on February 28, 1901. He was the first of three children born to Herman Henry William Pauling, a druggist, and Lucy Isabelle Pauling. The family moved several times as Herman Pauling struggled to make a living.

Linus was a shy but curious child. He collected insects and minerals as he wandered through the woods. He read continuously. His interest in science was apparently stimulated by his friend, Lloyd Jeffress, during his grammar school years. Jeffress kept a small chemistry laboratory in a corner of his bedroom, where he performed simple experiments. Pauling was intrigued by these experiments and decided to become a chemical engineer.

Herman Pauling died in 1910, when Linus was nine. Linus did many odd jobs to help support his mother and sisters after his father died. He delivered milk, washed

Linus Pauling.
Courtesy of the Library of Congress.

dishes, and worked in a machine shop. During high school Pauling pursued his interest in chemistry, performing experiments using material he “borrowed” from an abandoned metal company, where his grandfather was a security guard.

College

In the fall of 1917 Pauling entered Oregon Agricultural College (OAC), now Oregon State University, in Corvallis, Oregon. There he studied how the physical and chemical properties of substances are related to the structure of the atoms (basic units of matter) and molecules of which they are composed.

A molecule is the smallest particle into which a substance can be divided and still have the chemical identity of the original substance.

During his senior year, Pauling met Ava Helen Miller while teaching chemistry in a home-economics class. They were married June 17, 1923, and later had four children. Pauling received his bachelor's degree from OAC on June 5, 1922. He began attending the California Institute of Technology (Cal Tech) in Pasadena the following fall. He received his doctorate, *summa cum laude* (with highest honors), in chemistry in 1925.

After college

After graduation Pauling traveled in Europe for two years, studying in the new field of quantum mechanics. The science of quantum mechanics is based on the idea that particles can sometimes behave like waves, and waves can sometimes act like particles that have no mass. In the fall of 1927 Pauling was appointed assistant professor on Cal Tech's faculty of theoretical chemistry. He was later made a full professor of chemistry. He stayed at Cal Tech until 1963. In addition, from 1937 to 1958, he headed the Gates and Crellin Chemical Laboratories.

Chemical structure

The central theme of Pauling's work was always understanding the properties of chemical substances in relation to their structure. He began by determining the structure of various inorganic (nonliving) compounds. He then tried to understand the rules that govern the structure of molecules. He went on to predict the chemical and physical properties of atoms and ions. (Ions are atoms or groups of atoms that have an electrical charge.)

In 1930 Pauling and R. B. Corey began to study the structure of amino acids and small peptides. Amino acids are the organic acids that make up proteins. Peptides are compounds made up of two or more amino acids. On April 6, 1931, Pauling published the first major paper on this topic ("The Nature of the Chemical Bond") and was awarded the American Chemical Society's Langmuir Prize for "the most noteworthy work in pure science done by a man thirty years of age or less."

In 1939 Pauling published his book *The Nature of the Chemical Bond and the Structure of Molecules and Crystals*. This book has been considered by many as one of the most important works in the history of chemistry. The ideas presented in the book and related papers are the primary basis upon which Pauling was awarded the Nobel Prize for Chemistry in 1954.

Sickle cell anemia

In the mid-1930s Pauling turned his interest to the structure of biological molecules. In 1936 he and C. D. Coryell discovered that the magnetic properties of hemoglobin (the protein in red blood cells that contains iron and carries oxygen) change upon being exposed to oxygen. These studies led to the 1949 proposal that humans may manufacture more than one kind of adult hemoglobin. Some hemoglobin tends to clump together and does not function properly when it is exposed to less oxygen. This is a disease called sickle cell anemia. This was the first documented instance of a "molecular" disorder.

World peace

The 1940s were a decade of significant change in Pauling's life. While on a 1947 trip

to Europe he decided that he would raise the issue of world peace in every speech he made in the future. In 1957 he organized a petition calling for an end to nuclear bomb testing. In January of the following year he presented this petition at the United Nations. Over eleven thousand scientists from all over the world had signed it. In 1958 he published his views on the military threat facing the world in his book *No More War!*

Pauling's views annoyed many in the scientific and political communities. He was often punished for these views. In 1952 the U.S. State Department three times denied him a passport to attend an important scientific convention in England. In 1960 he was called before the Internal Security Committee of the U.S. Senate to explain his antiwar activities. However, nothing could keep Pauling from protesting, writing, speaking, and organizing conferences against the world's continuing militarism. In recognition of these efforts, Pauling was awarded the 1963 Nobel Prize for Peace.

Vitamin C and beyond

Pauling's long association with Cal Tech ended in 1963, when he became a research professor at the Center for the Study of Democratic Institutions in Santa Barbara, California. He also went on to teach chemistry at the University of California in San Diego, California, and at Stanford University in Palo Alto, California.

In 1966 Pauling began to explore the possible effects of vitamin C in preventing colds. He summarized his views in the 1970 book *Vitamin C and The Common Cold*. His work helped establish the science of orthomolecular medicine. This field is based on

the idea that substances normally present in the body, such as vitamin C, can be used to prevent disease and illness.

In 1972 Pauling cofounded the Institute of Orthomolecular Medicine, a non-profit organization for scientific research. It was later named the Linus Pauling Institute of Science and Medicine.

In 1974 Pauling testified before the U.S. Senate Subcommittee on Health on food supplement legislation. He argued for controls over vitamins but did not want to classify them as drugs.

In 1986 he published *How To Live Longer and Feel Better*. In 1990, along with Daisaku Ikeda Seimei, he published *In Quest of the Century of Life—Science and Peace and Health*.

Pauling received many awards during his successful career. He was a member of the National Academy of Sciences and of the British Royal Society.

Pauling died of cancer on August 19, 1994, at his ranch outside Big Sur, California. Since his death, research continues on every aspect of his earlier discoveries, especially his theory about vitamin C and its effects on disease and the human body. His scientific career and work for world peace show us what a courageous imagination and approach can accomplish.

LUCIANO PAVAROTTI

Born: October 12, 1935

Modena, Italy

Italian opera singer

Luciano Pavarotti is possibly the most operatic tenor (the highest male singing voice) since Enrico Caruso (1873–1921). He is noted for combining accuracy of pitch and quality of sound production with a natural musicality.

His early years

Luciano Pavarotti was born on the outskirts of Modena in north-central Italy on October 12, 1935. He speaks fondly of his childhood, but the family had little money. Pavarotti, his parents, and his sister were crowded into a two-room apartment. His father was a baker, and his mother worked in a cigar factory. In 1943, because of World War II (1939–45; when France, Great Britain, the United States, and the Soviet Union fought against Germany, Japan, and Italy) the family had to leave the city. For the following

year they rented a single room from a farmer in the neighboring countryside.

Pavarotti's earliest musical influences were his father's recordings featuring the popular tenors of the day. At around the age of nine he began singing with his father in a small local church choir. He took a few voice lessons at the time, but he has said they were not significant. After a normal childhood with an interest in sports, especially soccer, he graduated from the Schola Magistrale and faced the dilemma of choosing a career.

Pavarotti was interested in pursuing a career as a professional soccer player, but his mother convinced him to train as a teacher. He taught in an elementary school for two years, but his interest in music finally won out. Recognizing the risk involved, his father reluctantly gave his consent. He agreed that Pavarotti would be given free room and board until age thirty. After that time, if he had not succeeded as a singer, he would earn a living by any means that he could.

The beginning of his career

Pavarotti began serious study in 1954 at the age of nineteen with Arrigo Pola, a respected teacher and professional tenor in Modena. Pola knew of the family's money problems and offered to teach Pavarotti for free. At about this time Pavarotti met Adua Veroni, whom he married in 1961.

When Pola moved to Japan two and a half years later, Pavarotti became a student of Ettore Campogalliani, who was also teaching the now well-known soprano (the highest female singing voice), Pavarotti's childhood friend Mirella Freni (1935–). During his years of study Pavarotti held part-time jobs in

Luciano Pavarotti.

Reproduced by permission of AP/Wide World Photos.

order to help sustain himself—first as an elementary school teacher and then, when he failed at that, as an insurance salesman.

The first six years of study resulted in nothing more significant than a few recitals, all in small towns, and all without pay. When a nodule (a small lump) developed on Pavarotti's vocal chords causing a "disastrous" concert in Ferrara, Italy, he decided to give up singing. After this episode, Pavarotti's voice almost immediately improved. He feels this was due to a psychological release connected with this decision. Whatever the reason, the nodule not only disappeared but, as he related in his autobiography, "Everything I

had learned came together with my natural voice to make the sound I had been struggling so hard to achieve.”

Becomes a success

Pavarotti won the Achille Peri Competition in 1961, for which the first prize was the role of Rodolfo in a production of Puccini's *La Bohème* to be given in Reggio Emilia on April 28 of that year. Although his debut was a success, a certain amount of maneuvering was necessary to secure his next few contracts. A well-known agent, Alesandro Ziliani, had been in the audience and, after hearing Pavarotti, offered to represent him. When *La Bohème* was to be produced in Lucca, Italy, Ziliani told the management that they could only have the services of a well-known singer they wanted if they took Pavarotti in a package deal.

Pavarotti's concert at Covent Garden, London, England, in the fall of 1963 also resulted from an indirect invitation. Giuseppe di Stefano had been scheduled for a series of performances, but the management was aware that he frequently canceled on short notice. They needed someone whose quality matched the rest of the production, yet who would learn the role without any assurance that he would get to sing it. Pavarotti agreed. When di Stefano canceled after one and a half performances, Pavarotti stepped in for the remainder of the series with great success.

Pavarotti's debut in 1965 at La Scala, in Milan, Italy, again as Rodolfo, came at the suggestion of Herbert von Karajan, who had been conducting *La Bohème* there for two years and had, as Pavarotti said, “run out of tenors.” Pavarotti was somewhat resentful

that the invitation did not come directly from the La Scala management. Also in 1965 Pavarotti made his American debut in Miami, Florida, as Edgardo in Donizetti's *Lucia di Lammermoor*. Illness troubled him during his New York City debut at the Metropolitan Opera in November 1968 and compelled him to cancel after the second act of the second performance.

Nineteenth-century Italian opera comprises most of Pavarotti's repertoire (group of songs that one can sing), particularly Puccini, Verdi, and Donizetti, whose music he found the most comfortable to sing. He sings few recitals, because he regards them as more strenuous than opera.

Expands his career

Very few opera singers are convincing actors and Pavarotti is not among them. However, by the mid-1980s he spent nearly as much time on practicing his acting as on his singing. In 1972 he starred in a commercial film, *Yes, Giorgio*. His solo album of Neapolitan songs, “O Sole Mio,” outsold any other record by a classical singer.

Throughout the 1980s Pavarotti strengthened his status as one of the opera world's leading figures. Televised performances of Pavarotti in many of his greatest and favorite roles helped him broaden his appeal. He was able to reach millions of viewers each time one of his opera performances or solo concerts was seen. He also began to show increasing flexibility as a recording artist. He recorded classical operas and Italian folk songs. He also recorded contemporary popular songs with composer and conductor Henry Mancini (1924–1994). He became the world's third-highest top-selling musician,

right behind Madonna (1958–) and Elton John (1947–).

By the time Pavarotti proposed and staged the first “Three Tenors” concert in Rome, he was unabashedly (boldly, without disguise) thrilled with his immense popularity. “I want to be famous everywhere,” he told *Newsweek*.

Pavarotti received his share of criticism and rejection as well. He was barred from contracts with the Lyric Opera of Chicago in 1989 because he canceled many performances due to bad health. He was sued by the British Broadcasting Company (BBC) in 1992 for selling the network a lip-synched (pretending to sing to a pre-recorded track) concert. He was booed at La Scala during a performance of *Don Carlo*. He finally canceled tours and took several months off to rest.

Pavarotti returned to the stage in 1993 with a concert before five hundred thousand people in Central Park, in New York City. Critics accused him of blatant commercialism (overly concerned with making money), but the crowds loved the performances. In 1997 the three tenors—Plácido Domingo (1941–), Jose Carreras (1947–) and Pavarotti—toured to mixed reviews, but delighted audiences who seemed unwilling to let Pavarotti even think of retiring.

In 2000 prosecutors in Bologna, Italy, tried Pavarotti on tax fraud charges. They claimed that although Pavarotti lived in Monte Carlo he still had many property holdings in Italy. Pavarotti was accused of owing almost \$5 million and could have spent as much as a year and a half in prison. In the end, he was acquitted (had charges dismissed).

In 2002 Pavarotti continued to drop hints that he would be retiring soon, but had

not given any specific date. Through his talent and his desire to reach out to audiences everywhere, Pavarotti has been an important figure in bringing the world of opera to a great variety of people.

IVAN PAVLOV

Born: September 26, 1849

Ryazan, Russia

Died: February 27, 1936

Leningrad (now St. Petersburg), Russia

Russian physiologist

Ivan Pavlov was a Russian physiologist (someone who studies the physical and chemical workings of living things) and a leader in the study of blood circulation, digestion, and conditioned reflexes (unconscious physical reactions to outside forces that are the result of repetition of those forces and reactions). He believed that he estab-

Ivan Pavlov.

Reproduced by permission of the Corbis Corporation.

lished the physiological (relating to the physical and chemical workings of living things) nature of psychological (relating to the behavior of the mind) activity.

The early years

Ivan Petrovich Pavlov was born in Ryazan, Russia, on September 26, 1849, the son of a poor parish priest, from whom Pavlov acquired a lifelong love for physical labor and for learning. He loved to work with his father in gardens and orchards and this early interest in plants lasted his entire life. At the age of nine or ten, Pavlov suffered from a fall that affected his general health and

delayed his formal education. When he was eleven he entered the second grade of the church school at Ryazan. In 1864 he went to the Theological Seminary of Ryazan, a school for training priests. There he studied religion, classical languages, and philosophy, and he developed an interest in science.

Making of a physiologist

In 1870 Pavlov was admitted to the University of St. Petersburg (Leningrad) in Russia. He studied animal physiology as his major and chemistry as his minor. At the university he studied organic chemistry (the science that studies how living things are made) and inorganic chemistry (the science that studies how nonliving things are made). In this way he learned about what makes up both nonliving things and plants and animals. He also learned the techniques of scientific investigation. Scientific investigation starts with asking a question; the scientist then gathers information about the question and creates a statement that might describe the answer; finally, the scientist tests the possible answer through observation.

After graduating from the University of St. Petersburg, Pavlov entered the Military Medical Academy in 1881. He worked there as a laboratory assistant for two years. In 1877, while still at the academy, he published his first work. It was about the regulation of the circulation of blood by reflexes (any unconscious or involuntary action of the body). Two years later he completed his course at the academy. He successfully competed in an examination that was given to the entire school. By winning this competition, Pavlov was given a scholarship to continue postgraduate study at the academy.

In 1881 Pavlov married Serafima Karchevskais. He spent the next decade at the academy. In 1883 he completed his thesis (a long essay resulting from original research in college) on the nerves of the heart. Shortly afterwards he received the degree of doctor of medicine. During the 1880s Pavlov perfected his techniques of scientific investigation. This work made his later important discoveries possible.

In 1890 Pavlov was appointed chairman of pharmacology (science of preparing medicines) at the academy. A year later he became director of the Department of Physiology of the Institute of Experimental Medicine. In 1895 he accepted the chair of physiology at the academy, which he held until 1925. For the next forty-five years Pavlov pursued his studies on the digestive glands and conditioned reflexes.

Scientific contributions

During the first phase of his scientific activity (1874–1888), Pavlov studied the circulatory system. He focused on how blood pressure changes under various conditions and how heart activity is regulated. He saw that the blood pressure of dogs in his laboratory hardly changed, whether they were fed dry food or excessive amounts of meat broth.

Pavlov observed special fibers called nerves that carry sensations and create motion throughout the body. His observations led him to state that the rhythm and the strength of the heartbeat is regulated by four specific nerve fibers. It is now generally accepted that two nerves, the vagus and sympathetic, produce the effects on the heart that Pavlov noticed.

In his second phase of scientific work (1888–1902), Pavlov concentrated on the nerves directing the digestive glands. In 1888 he discovered the nerves of the pancreas that control the flow of insulin. Insulin is a substance that regulates the digestion of starches and sugars. In 1889 Pavlov discovered the nerves controlling the gastric (stomach) glands. For this work Pavlov received the 1904 Nobel Prize in Physiology or Medicine.

The final phase of Pavlov's scientific career (1902–1936) focused on determining how conditioned reflexes affect the brain. Pavlov had observed that his laboratory dogs would secrete saliva and gastric juices before meat was actually given to them. The sight, odor, or even the footsteps of the attendant bringing the meat were enough to trigger the flow of saliva.

Pavlov realized that the dogs were responding to activity associated with their feeding. In 1901 he termed this response a "conditioned reflex." A conditioned reflex is a learned behavior, one that happens in response to something. This is different than an unconditioned reflex. An example of an unconditioned reflex is the pupil of the eye getting smaller when a person looks at a bright light. The person does not learn how to make the pupil of the eye smaller. It simply happens automatically.

Pavlov's important lectures, papers, and speeches dealing with conditioned reflexes and the brain were presented between 1923 and 1927. He discovered that conditioned responses can be wiped out—at least temporarily—if not reinforced (strengthened through being rewarded).

In 1918 Pavlov had an opportunity to study several cases of mental illness. He

described a certain type of schizophrenia, a very serious mental illness, as being caused by weakening of brain cells. He thought the illness was a means of protecting already weakened brain cells from further destruction.

Pavlov's last scientific article was written for the *Great Medical Encyclopedia* in 1934. In it he discussed his idea that there are two systems of nerve fibers. The first system receives signals or impressions of the external world through sense organs. Both humans and animals have this system. The second system deals with the signals of the first system and involves words and thoughts. Only humans have this system. Conditioned reflexes play a significant role in both nerve systems. Pavlov thought the conditioned reflex was the main way in which living things adapt to their surroundings.

Philosophy and outlook

Pavlov was opposed to extreme political positions of any kind. He did not welcome the Russian Revolution of 1917, which destroyed the old system of the czars, or Russian supreme rulers, and replaced it with a Communist system. In a Communist society, property is held by the state and the state controls the distribution of goods. Pavlov was hostile to the new Communist system. Even so, Premier Lenin (1870–1924; the leader of the Soviet Union) signed a special decree in 1921, assuring that Pavlov would have support for his scientific work. In 1930 the government built him a laboratory. By 1935 Pavlov had become reconciled to the Communist system. He declared that the “government, too, is an experimenter but in an immeasurably higher category.”

Pavlov became seriously ill in 1935 but recovered sufficiently to participate at the Fif-

teenth International Physiological Congress. Later he attended the Neurological Congress in London, England. He died on February 27, 1936.

Pavlov's work on conditioned reflexes and brain activity lives on today. It formed the basis of behaviorism. Behaviorism is an important branch of psychology that deals with observing the behaviors and habits of humans and animals.

ANNA PAVLOVA

Born: January 31, 1881

St. Petersburg, Russia

Died: January 22, 1931

The Hague, Netherlands

Russian dancer

Anna Pavlova was in her time—and is perhaps even now—the most famous dancer in the world. Pavlova carried on long, globe-covering tours, creating new ballet audiences everywhere.

Uncertain background

Anna Pavlova was born on January 31, 1881, in St. Petersburg, Russia, the daughter of Lyubov Feodorovna, a washerwoman. Her father's identity is not known. When Anna was very small, her mother married reserve soldier Matvey Pavlov, who died when Anna was two years old. She and her mother were very poor, and they spent the summers with Anna's grandmother. According to Pavlova, she wanted to be a dancer from the age of eight, when she attended a performance of *The Sleeping Beauty* at the Maryinsky Theatre. Two years later she was accepted as a student at St. Petersburg's Imperial Ballet School. This school for classical dancers offered its students lifelong material protection; the czar (the ruler of Russia) Alexander III (1845–1894) was its main supporter. In return, the school demanded complete physical dedication.

Although the young Pavlova was considered frail and not exactly beautiful, she was nevertheless very supple (able to bend and twist with ease and grace). Her talents impressed ballet master Marius Petipa, who was to become her favorite teacher. Pavlova also learned from other famous Maryinsky teachers and choreographers (those who create and arrange dance performances) such as Christian Johanssen, Pavel Gerdt, and Enrico Cecchetti, who provided her with a classical foundation based on ballet tradition. Pavlova made her company debut at the Maryinsky in September 1899. Competition among dancers was intense, but Anna Pavlova soon attracted attention with the poetic and expressive quality of her performances.

Busy touring schedule

Pavlova's first of many tours (it is estimated that she traveled over four hundred

Anna Pavlova.

Reproduced by permission of the Corbis Corporation.

thousand miles in the days before air travel and was seen by millions) was to Moscow, Russia, in 1907. In February 1910 Pavlova, performing with the brawny Moscow dancer Mikhail Mordkin (1880–1944), made her first appearance in America, at the Metropolitan Opera House. Most of the American audiences had never before seen classical ballet, and critics did not know how to describe what Pavlova did on stage, although all agreed that it was wonderful.

Although these early tours were undertaken with the czar's consent, Pavlova's final trip to Russia occurred in the summer of 1914. She was traveling through Germany on

her way to London, England, when Germany declared itself at war with her homeland in August 1914. Pavlova's protection from and obligations to the czar and his Maryinsky Theatre had come to an end.

From this point until her death, Pavlova continued to make long, exhausting tours, always with her own company—whose members came from different countries and were not always as talented as her—to support. She returned to America several times; she went to South America in 1917; in 1919 she visited Bahia and Salvador. A 1920–21 American tour represented Pavlova's fifth major tour of the United States in ten years, and in 1923 the company traveled to Japan, China, India, Burma, and Egypt. South Africa, Australia, and New Zealand were given a glimpse of Pavlova in 1926, and the years 1927 and 1928 were dedicated to a European tour.

Kept performing the classics

Although Pavlova's performances changed and were influenced by exposure to foreign cultures and new methods of dancing, she remained a somewhat conservative (not trying many new things) performer. Her company continued to perform several of the great ballet classics, such as *Giselle* and *The Sleeping Beauty*; her own popular signature pieces were the *Bacchanale*, a duet created by her former fellow-student Mikhail Fokine, and her eerily beautiful *The Swan*.

Pavlova's ability to accept her role as spokesperson for her art, often with good humor and always with devotion and poise, brought vast audiences to her and eventually to the ballet itself. She was willing to perform in different venues, from the most famous theaters of Europe to London's music halls or

even New York's gigantic Hippodrome. Pavlova's private days were spent at Ivy House in London, where she kept a large collection of birds and animals, including a pair of pet swans. Her companion, manager, and perhaps husband (Pavlova gave different accounts of the exact nature of their relationship) was Victor Dandr , a fellow native of St. Petersburg.

Pavlova died in The Hague, Netherlands, on January 22, 1931. She had performed constantly until her death; her final words were to ask for her Swan costume to be prepared and, finally, "Play that last measure softly."

I. M.
PEI

Born: April 26, 1917

Canton, China

Chinese-born American architect

Chinese American architect, I. M. Pei, directed for nearly forty years one of the most successful architectural practices in the United States. Known for his dramatic use of concrete and glass, Pei counts among his most famous buildings the East Wing of the National Gallery of Art in Washington, D.C., the John Hancock Tower in Boston, Massachusetts, and the Rock and Roll Hall of Fame Museum in Cleveland, Ohio.

Childhood

Ieoh Ming Pei was born in Canton, China, on April 26, 1917. His early childhood was spent in Canton and Hong Kong, where his father worked as director of the Bank of China. In the late 1920s, after the death of Pei's mother, the family moved to Shanghai, China, where Pei attended St. Johns Middle School. His father, who had many British banking connections, encouraged his son to attend college in England, but Pei decided to move to the United States in order to study architecture at the University of Pennsylvania. As a youth, Pei watched the growing cityscape in Shanghai, which planted the seeds for his love of architecture. Upon his arrival in 1935, however, he found that the University of Pennsylvania's course work, with its heavy emphasis on fine draftsmanship, was not well suited to his interest in structural engineering. He enrolled instead in the Massachusetts Institute of Technology (MIT) in Boston, Massachusetts.

While at MIT, Pei considered pursuing a degree in engineering, but was convinced by Dean William Emerson to stick with architecture. Pei graduated with a bachelor's degree in architecture in 1940, winning the Ameri-

I. M. Pei.

Reproduced by permission of AP/Wide World Photos.

can Institute of Architects Gold Medal and the Alpha Rho Chi (the fraternity of architects). Pei considered going to Europe or returning to China, but with both regions engulfed in war, he decided to remain in Boston and work as a research assistant at the Bemis Foundation (1940–1941).

From professor to architect

In 1942 Pei married Eileen Loo, a Chinese student recently graduated from Wellesley College. After the wedding Pei moved to Cambridge, Massachusetts, where Eileen enrolled in Harvard's Graduate School of Landscape Architecture. Through her sugges-

tion, Pei enrolled in the Harvard Graduate School of Design in the summer of 1942. There Pei was introduced to the work of Europe's leading architects. He absorbed their ideas about designing unadorned (without decorations) buildings in abstract shapes—buildings that exposed their systems of support and materials of construction.

Pei's work at Harvard was interrupted in early 1943 when he was called to serve on the National Defense Research Committee in Princeton, New Jersey. He maintained his contacts in Cambridge, however, and between 1943 and 1945 formed informal partnerships with two other students of Walter Gropius (1883–1969), E. H. Duhart and Frederick Roth. With these men, Pei designed several low-cost modern houses that were intended to be built of prefabricated (built in advance) plywood panels and “plug-in” room modules. Several of these designs were awarded recognition in *Arts and Architecture* magazine and thus served to give Pei his first national exposure.

In 1946 Pei was appointed assistant professor after obtaining his master's degree in architecture. While teaching, he worked in the Boston office of architect Hugh Stubbins from 1946 to 1948. Pei's career as a Harvard professor ended in 1948 when, at the age of thirty-one, he was hired to direct the architectural division of Webb and Knapp, a huge New York City contracting firm owned by the wealthy businessman William Zeckendorf. A bold developer with tremendous capital (money from business), Zeckendorf specialized in buying run-down urban lots and building modern high rise apartments and offices.

As architect of Webb and Knapp, Pei oversaw the design of some of the most

extensive urban development schemes in the mid-twentieth century, including the Mile High Center in Denver, Colorado, and Hyde Park Redevelopment in Chicago, Illinois (both 1954–1959). These projects gave Pei the opportunity to work on a large scale and with big budgets. Moreover, he learned how to work with community, business, and government agencies. In his words, he learned to consider “the big picture.”

His own architectural firm

By mutual agreement, Pei and his staff of some seventy designers split from Webb and Knapp in 1955 to become I. M. Pei & Associates, an independent firm, but one which still initially relied on Zeckendorf as its chief client. It was for Zeckendorf, in fact, that Pei and his partners designed some of their most ambitious works—Place Ville Marie, the commercial center of Montreal, Canada, (1956–1965); Kips Bay Plaza, the Manhattan, New York, apartment complex (1959–1963); and Society Hill, a large housing development in Philadelphia, Pennsylvania (1964).

In terms of style, Pei's work at this time was strongly influenced by Mies van der Rohe (1886–1969). Certainly the apartment towers at Kips Bay and Society Hill owe much to Mies's earlier slab-like skyscrapers sheathed in glass grids. But unlike Mies, who supported his towers with frames of steel, Pei experimented with towers of pre-cast concrete window frames laid on one another like blocks. This system proved to be quick to construct and required no added fireproof lining or exterior sheathing, making it relatively inexpensive. The concrete frames also had the aesthetic (having to do with appearance) advantage of looking “muscular” and permanent.

During the 1960s Pei continued to build “skin-and-bones” office and apartment towers, but he also began to get commissions for other types of buildings that allowed him more artistic expression. Among the first of these was the National Center for Atmospheric Research (NCAR) in Boulder, Colorado (1961–1967). Distinguished by a series of unusual hooded towers, and photogenically (having to do with photo-like qualities) situated against the backdrop of the Rocky Mountains, the NCAR complex helped to establish Pei as a designer of serious artistic intent.

Triangles and curtains of glass

Of Pei’s many museums, he became best known for the East Wing of the National Gallery in Washington, D.C. (1968–1978). Located on a distinct but oddly shaped site, Pei cleverly divided the plan into two triangular sections—one containing a series of intimate gallery spaces and the other housing administrative and research areas. He connected these sections with a dramatic sky-lit central court, bridged at various levels by free-floating passageways. Technological advances are seen on the exterior, where space-age rubber gaskets have been inserted between the blocks of marble to prevent cracks from developing in the walls.

Although Pei’s reputation was slightly tarnished in the mid-1970s when plates of glass mysteriously fell out of his John Hancock Tower in Boston, Pei was still considered a master of curtain glass construction in the 1980s. He demonstrated this again in the glass-sheathed Allied Bank Tower in Dallas (1985) and later worked on a well-publicized glass pyramid built in the courtyard of the

Louvre Museum in Paris (1987). But his magnificent work in glass would not stop there. In September of 1995, The Rock and Roll Hall of Fame Museum was dedicated in Cleveland, Ohio.

Among Pei’s numerous awards, he places personal significance on receiving the Medal of Liberty from President Ronald Reagan (1911–) at the Statue of Liberty. To him, it is a symbol of acceptance and respect from the American people. When not designing buildings, Pei enjoys gardening around his home in Katonah, New York. He has four children, two of whom work as architects in his busy office on Madison Avenue.

PELÉ

Born: October 23, 1940

Tres Coracoes, Brazil

Brazilian soccer star

Pelé, called “the Black Pearl,” was one of the greatest soccer players in the history of the game. With a career total of 1,280 games, he may have been the world’s most popular athlete in his prime.

Pelé.

Reproduced by permission of Archive Photos, Inc.

A young talent

Edson Arantes Do Nascimento, who took the name Pelé, was born on October 23, 1940, in Tres Coracoes, Brazil, the son of a minor league soccer player. Pelé grew up in an extremely poor neighborhood, where one of the only sources of entertainment for a poor boy was to play soccer, barefoot and with a makeshift ball. Many players on the Brazilian soccer fields gained nicknames that had no apparent meaning. His father was dubbed “Dondinho” and young Edson took the name “Pelé,” though he does not recall how or why he picked up the name.

Pelé was coached by his father and the hard work soon paid off, for when he was eleven Pelé played for his first soccer team, that of the town of Bauru, Brazil. He moved up in competition with outstanding play and soon was one of the best players on the team. At the age of fifteen his mentor (an advisor), former soccer star Waldemar de Brito, brought him to Sao Paulo to try out for the major league teams. Pelé was quickly rejected. De Brito then took Pelé to Santos where he earned a spot on the soccer team. There, Pelé earned nearly five thousand cruzeiros (about sixty dollars) per month to play soccer. He soon received broader exposure when he was loaned to the Vasco da Gama team in Rio de Janeiro, Brazil.

International play

In 1958 Pelé went to Stockholm, Sweden, to compete in the World Cup championship, the soccer championship that brings together all of the soccer-playing nations for one tournament. His play there helped his country win its first title as Pelé scored two goals in a dramatic 4-2 win over Sweden. He returned to Santos, and his team went on to win six Brazilian titles. In 1962 he again played on the Brazilian team that won the World Cup, but an injury forced him to sit out the contest.

Soccer is a low scoring game, but on November 19, 1969, before a crowd of one hundred thousand in Rio de Janeiro, Pelé scored his one thousandth goal. He led the Sao Paulo League in scoring for ten straight seasons. He was not only a high scorer, but a master of ball handling as well. It seemed the ball was somehow attached to his feet as he moved down the field.

In 1970 Pelé again played for Brazil's World Cup team, and in Mexico City, Mexico, they beat Italy for the championship. It was Pelé's play, both in scoring and in setting up other goals, that won them the title. When he announced that he would retire from international competition after a game to be played July 18, 1971, plans were made to televise the event throughout the world. By the time he left the game he had scored a total of 1,086 goals.

In America

After Pelé retired, he continued to play until he was signed to play for the New York Cosmos of the North American Soccer League for a reported three-year, \$7 million contract. A year later New York was at the top of their division, and in 1977 the Cosmos won the league championship. Pelé retired for good after that victory, but continued to be active in sports circles, becoming a commentator and promoter of soccer in the United States. When the World Cup was played in Detroit, Michigan, in 1994, Pelé was there, capturing the hearts of millions of fans around the world. Later that spring, he married his second wife, Assiria Seixas Lemos. In May of 1997, he was elected Minister of Sports in his home country of Brazil.

On December 11, 2001, the Federation Internationale de Football Association (FIFA) named Pelé, along with Argentina's Diego Maradona, as the men's players of the century.

WILLIAM PENN

Born: October 14, 1644

London, England

Died: July 30, 1718

Berkshire, England

English statesman and philosopher

William Penn founded Pennsylvania and played a leading role in the history of New Jersey and Delaware.

Colonial childhood

William Penn was born in London, England, on October 14, 1644. He was the first of three children of Admiral William Penn and Margaret Jasper. Admiral Penn served in the parliamentary navy during the Puritan Revolution (1647), when the royal forces of King Charles I (1600–1649) fought with those in England's parliament. Although rewarded by English statesman Oliver Cromwell (1599–1658) and given land in Ireland, he soon fell out of favor and took

William Penn.

part in the restoration of Charles II (1630–1685) as the king of Great Britain. A close friend of the Duke of York, Admiral Penn was knighted by Charles II. With so influential a father, there seemed little doubt that William's future had promise.

Nothing better demonstrates how young Penn represented his period than his early religious enthusiasm. At the age of thirteen he was deeply moved by Quaker Thomas Loe. (Quakers are a religious following who were persecuted [harassed] in the seventeenth century for their beliefs and forced to find new homes in Europe and America.) Afterward, at Oxford University in England, he came under the

influence of Puritans (English Protestants). When he refused Anglican (Church of England) practices, he was expelled (kicked out) in 1662. Afterwards, at his father's request, Penn attended the Inns of Court, gaining knowledge of the law. A portrait of this time shows him dressed in armor, with handsome, strong features, and the air of confidence of a young member of the ruling class.

Quaker advocate

Appearances, in Penn's case, were misleading. While supervising his father's Irish estates, Penn was drawn into the Quaker world. His conversion to Quakerism was inspired by the simple piety (religious devotion) of their religion and the need to provide relief for victims of persecution. At the age of twenty-two, against his father's wishes, Penn became a Quaker advocate, or supporter. His marriage in 1672 to Gulielma Maria Springett, of a well-known Quaker family, completed his religious commitment.

Penn's background and political connections were important resources for the persecuted Quakers. A major theme of his many writings was the unfairness of persecution. One remarkable achievement during this period was Penn's handling of the "Bushell Case." Penn managed to convince a jury not to imprison a Quaker only for his faith. When the judge demanded that the jury change its verdict (decision), Penn maintained successfully that a jury must not be influenced by the bench. This landmark case established the freedom of English juries.

Colonial proprietor

Religious persecution and colonization (settling new lands) went hand in hand as the

Quakers looked to America for a new home. Various problems with the Quaker interests in New Jersey led to Penn's heightened involvement. Penn contributed to the "Concessions and Agreements" (1677) offered to settlers, although he was not its principal author. This document gave the settlers virtual control over the colony through an elected assembly, or group of leaders. It also offered a guarantee of personal liberties (freedoms), especially religious toleration and trial by jury, which the Quakers were unable to receive in England.

The problems with New Jersey formed an introduction to the founding of Pennsylvania. Of major importance, however, was Penn's Quaker faith and devotion to religious and political freedom. This laid the foundation for his ideas that Pennsylvania would be a "Holy Experiment." In addition, Penn thought the colony could become a profitable enterprise (business) to be inherited by his family.

Founding Pennsylvania

Penn and his people were given control over the land and thorough powers of government. The grant, or document, reflected the period in which it was written: in keeping with new imperial regulations (British rule), Penn was made personally responsible for the enforcement of the Navigation Acts, a series of laws intended to increase English shipping. He also had to keep an agent in London and was required to send laws to England for royal approval.

In several ways Pennsylvania was the most successful English colony. Penn's first treaties (peace agreements) with the Indians, signed in 1683 and 1684, were based on an acceptance of Indian equality and resulted in an era of peace. Penn also wrote promotional

papers for Pennsylvania and arranged circulation of these materials overseas. The response was one of the largest and most varied migrations in the history of colonization. Moreover, Pennsylvania's economic beginnings were unusually successful. A fertile country (able to produce crops), the commercial advantages of Philadelphia, and substantial investments by Quaker businesspeople produced rapid economic growth.

Despite this success Pennsylvania was not without problems. Because of oversights in Penn's charter, an area along the southern border, including Philadelphia, was claimed by Lord Baltimore. This problem was only partly fixed when Penn secured control over what later became Delaware from the Duke of York. Just as troublesome were political controversies within the colony. Although Penn believed that the people should be offered self-government and that the rights of every citizen should be guaranteed, he did not think the colonists should have full power. In order to provide a balance in government, and partly to protect his own rights, he sought a key role in running the colony. What Penn envisioned in his famous "Frame of Government" (1682) was a system in which he would offer leadership, and the elected assembly would follow his pattern.

Almost from the start there were challenges to Penn's ideas. Controversies developed among the branches of government, with the representatives trying to restrict the authority of Penn and the council. Disputes centered on taxation, land policy, Penn's appointments, and defense. Other difficulties included Penn's identification with King James II (1633–1701), which brought him imprisonment from 1692 to 1694. No less

troublesome was his debt. Penn's financial responsibility in the founding of Pennsylvania led to his imprisonment for debt, a humiliating blow.

Final years

After England's Glorious Revolution, when James II was replaced by William III (1650–1702) and Mary II (1662–1694) as England's rulers in 1689, Penn and his family went to live in Pennsylvania. Arriving in 1699, he reestablished friendly contacts with the Indians and worked hard to heal a religious schism (separation) among the Quakers. He also fought piracy (robbing at sea) and tried to secure financial backing for colonial self-defense, demanded by the Crown but resisted by the Quakers.

Penn's major achievement was the new charter of 1701. Under its terms the council was eliminated, and Pennsylvania became the only colony governed by a single legislature of elected representatives. This system, which lasted until 1776, permitted the Delaware settlers to have their own governing body. Penn returned to England late in 1701 to fight a proposal in Parliament which would have voided all proprietary grants. He never saw Pennsylvania again.

Penn's last years were filled with disappointment. After the death of his first wife in 1694, Penn married Hannah Callowhill in 1696. Hampered by debts, colonial disaffection, and the general poor relationship with the King's ministers toward private colonies, Penn almost completed the sale of Pennsylvania to the Crown in 1712 before he suffered his first disabling stroke, a destruction of brain tissue which often leads to paralysis. He died at Ruscombe, Berkshire, on July 30, 1718.

PERICLES

Born: c. 495 B.C.E.

Athens, Greece

Died: 429 B.C.E.

Athens, Greece

Greek statesman

Pericles was the leading statesman of Athens and brought it to the height of its political power and artistic achievement. The years from 446 to 429 B.C.E. have been called the Periclean Age.

Early life and family

Pericles was the son of Xanthippus, a statesman and general of an upper class family (probably the Bouzygae), and Agariste, a niece of the famous statesman Cleisthenes, the leader of a powerful clan, the Alcmeonidae. Pericles inherited great wealth; as a young man, he put up the money for the costly production of Aeschylus's play *The Per-*

sae in 472 B.C.E. Pericles received the best education available, studying music under Damon and mathematics under Zeno of Elea. His greatest influence was a scholar named Anaxagoras, who taught him how to make speeches and was a model of the calm style that Pericles would use in politics. In his pursuit of a public career, Pericles chose to speak out in favor of a more advanced democracy.

Champion of democracy

Pericles became prominent in the Assembly, where he called for constitutional reform. He worked closely with Ephialtes, an older and more established leader of democratic views. They were both elected generals sometime before 462. In 462–461 they decided to attack Cimon, a leading conservative (one who believes in maintaining things as they are) and the most powerful of the generals in office, by accusing him of bribery. However, he was cleared of the charges. Later, Sparta's appeals to Athens for help against an uprising there were granted on the advice of Cimon and against the advice of Ephialtes. When the Athenian army under Cimon's command arrived to help, Spartan leaders changed their minds and dismissed them. This insulting treatment enraged the people of Athens and disgraced Cimon.

While Cimon and the army were off to help Sparta in 462, Ephialtes and Pericles carried out their extreme democratic reforms, stripping the Areopagus Council of all constitutional powers and making the authority of the Assembly and the Heliaea (people's courts) absolute. Athens also made alliances with Sparta's enemies, Argos and Thessaly. At this time Ephialtes was assassinated, and Pericles became the undisputed leader of Athens.

Pericles.

Reproduced by permission of Archive Photos, Inc.

Legislator of domestic affairs

Pericles passed further legislation to weaken the Areopagus Council, introduced pay for political services, and restricted Athenian citizenship to children whose mothers and fathers were both Athenian. He also changed the Delian League, a collection of city-states bound together with Athens to stand against Persia, into an Athenian Empire. He collected annual payments from the member states to maintain a fleet of ships, and the money left over was used to improve Athens. Pericles oversaw the construction of many famous and beautiful temples and public buildings in Athens, including the Parthenon.

Pericles eventually proposed the recall of Cimon, which resulted in victories over Persia and a truce with Sparta. Pericles's own operations as a military commander in western waters in 455 and 454 were successful. However, it is not known how much Pericles was involved with later wars fought on two fronts—against Sparta in Greece (resulting in neither side winning) and against Persia in Egypt (which resulted in a heavy defeat).

Problems arise

Pericles's actions on behalf of the Athenian Empire led to increased problems with Sparta. In 447–446 the storm broke within the empire, with many regions rising up: Athens's power in Boeotia collapsed, Euboea revolted, Megara broke free from Athenian occupation, and Sparta invaded Attica. Leading an Athenian army, Pericles crossed to Euboea and then rushed back to face the enemy in Attica. To everyone's amazement the Spartan king withdrew his army. Pericles was said by some to have bribed the king. Pericles hurried back to Euboea and stamped out the revolt. A peace treaty was achieved, but Athens had lost most of its gains.

Pericles's foreign policy was to stop any revolt in the Athenian Empire and to resist Sparta. He paraded the naval power of Athens with an expedition in the Black Sea (c. 437), and he advised Athens to make alliances with Corcyra (Corfu), a leading naval power in the west, in 433. A series of incidents followed that resulted in war with Sparta and its allies in 431. Pericles's strategy was an offensive by sea, avoidance of battle on land, and control of the empire. Inside the walls of Athens, an outbreak of disease struck down a third of Athens's armed forces, two

sons of Pericles among them. The people of Athens began to turn against him for the first time. He was fined but reelected general in 429 before dying later that year. The society he led followed his ideas—a love of Athens, a belief in freedom for Athenians, and a faith in the ability of man.

EVA PERÓN

Born: May 7, 1919

Los Toldos, Argentina

Died: July 26, 1952

Buenos Aires, Argentina

Argentine political leader

Eva Perón was the second wife and political partner of President Juan Perón (1895–1974) of Argentina. An important political figure in her own right, she was known for her campaign for female suffrage (the right to vote), her support of organized labor groups, and her organization of a vast social welfare program that benefited and gained the support of the lower classes.

Early years

The youngest of five children of Juan Duarte and Juana Ibarguren, María Eva Duarte was born on May 7, 1919, in the little village of Los Toldos in Buenos Aires province, Argentina. Following the death of her father, the family moved to the larger nearby town of Junín, where her mother ran a boarding house. At the age of sixteen, Evita, as she was often called, left high school after two years and went to Buenos Aires with the dream of becoming an actress. Lacking any training in the theater, she obtained a few small parts in motion pictures and on the radio. She was finally employed on a regular basis with one of the largest radio stations in Buenos Aires making 150 pesos every month. Her pay had increased to five thousand pesos every month by 1943 and jumped to thirty-five thousand pesos per month in 1944.

Eva Perón.

Partners with Perón

In 1943 Eva met Colonel Juan Perón, who had assumed the post of secretary of labor and social welfare in the military government that had recently come to power. Eva developed a close relationship with the widowed Perón, who was beginning to organize the Argentine workers in support of his own bid for the presidency. Becoming Perón's loyal political confidante (one with whom secrets are trusted) and partner, she helped him increase his support among the masses. In October 1945, after Perón was arrested and put in prison by a group of military men who did not support him, she helped to organize a mass demonstration that led to his release. A few days later, on October 21, 1945, Eva and Juan Perón were married.

Now politically stronger than ever, Perón became the government candidate in the February 1946 presidential election. Señora de Perón participated actively in the campaign, something no Argentine woman had ever done. She directed her appeal to the less privileged groups of Argentine society, whom she labeled "los descamisados" (the shirtless ones).

Influence in political affairs

Following Perón's election, Eva began to play an increasingly important role in the political affairs of the nation. During the early months of the Perón administration she

launched an active campaign for national women's suffrage, which had been one of Perón's campaign promises. Due largely to her efforts, suffrage for women became law in 1947, and in 1951 women voted for the first time in a national election.

Eva also assumed the task of gathering the support of the working classes and controlling organized labor groups. Taking over a suite of offices in the Secretariate of Labor, Perón's former center of power, she used her influence to hire and fire ministers and top officials of the General Confederation of Labor, the chief labor organization in Argentina. Although not given the official title, she acted as the secretary of labor, supporting workers' demands for higher wages and backing a number of social welfare measures.

Helped the lower classes

Because Eva came from a lower-class background, she identified with the members of the working classes and was strongly committed to improving their lives. She devoted several hours every day to meeting with poor people and visiting hospitals, orphanages, and factories. She also supervised the newly created Ministry of Health, which built many new hospitals and established a successful program to fight different diseases.

A large part of Eva's work with the poor was carried out by the María Eva Duarte de Perón Welfare Foundation, established in June 1947. Its funds came from contributions, often obtained with force, from trade unions, businesses, and industrial firms. The foundation grew into an enormous semiofficial welfare agency that distributed food, clothing, medicine, and money to needy peo-

ple throughout Argentina and on occasion to those suffering from disasters in other Latin American countries.

Enjoying great popularity among the descamisados, Eva Perón helped greatly in maintaining the loyalty of the masses to the Perón administration. On the other hand, her program of social welfare and her campaign for female suffrage led to considerable opposition among the *gente bien* (upper class), to whom Eva was unacceptable because of her humble background and earlier activities. Eva was driven by the desire to master those members of the government that had rejected her, and she could be cruel and spiteful with her enemies.

Death and place in history

In June 1951 it was announced that Eva would be the vice presidential candidate on the reelection ticket with Perón in the upcoming national election. Eva's candidacy was strongly supported by the General Confederation of Labor, but opposition within the military and her own failing health caused her to decline the nomination. Already suffering from cancer, Eva died on July 26, 1952, at the age of thirty-two. After Eva's death, which produced a huge display of public grief, Perón's political fortunes began to decline. He was finally removed from office by a military takeover in September 1955.

Eva Perón's friends and enemies agreed that she was a woman of great personal charm. Her supporters have elevated her to popular sainthood as the champion of the lower classes. The favorable portrayal of her in the play *Evita*, first staged in 1978, and in the 1997 film of the same name, brought Eva to

the forefront of the American public. By a large part of the officer corps of the military, however, she is greatly despised. There is still considerable difference of opinion regarding her true role in the Perón administration and her true place in Argentine history.

JEAN PIAGET

Born: August 9, 1896

Neuchâtel, Switzerland

Died: September 17, 1980

Geneva, Switzerland

Swiss psychologist

The Swiss psychologist and educator Jean Piaget is famous for his learning theories based on different stages in the development of children's intelligence.

Young naturalist

Jean Piaget was born on August 9, 1896, in Neuchâtel, Switzerland, the son of a histo-

rian. Much of Piaget's childhood was influenced by what he saw in his father, a man intensely dedicated to his studies and work. Because of this, at an early age Piaget began passing up recreation for studying, particularly the study of the natural sciences. When he was eleven, his notes on a rare part-albino (having extremely pale or light skin) sparrow were published, the first of hundreds of articles and over fifty books. Several times, when submitting his works to be published in various magazines, Piaget was forced to keep his young age a secret. Many editors felt that a young author had very little credibility.

Piaget's help in classifying Neuchâtel's natural-history museum collection inspired his study of mollusks (shellfish). One article, written when he was fifteen, led to a job offer at a natural history museum in Geneva, Switzerland; he declined in order to continue his education. At Neuchâtel University he finished natural science studies in 1916 and earned a doctoral degree for research on mollusks in 1918.

Early career

Piaget's godfather introduced him to philosophy (the search for knowledge). Biology (the study of living organisms) was thus merged with epistemology (the study of knowledge), both basic to his later learning theories. Work in two psychological laboratories in Zurich, Switzerland, introduced him to psychoanalysis (the study of mental processes). In Paris at the Sorbonne he studied abnormal psychology (the study of mental illness), logic, and epistemology, and in 1920 with Théodore Simon in the Binet Laboratory he developed standardized reasoning tests (universal tests). Piaget thought that

Jean Piaget.

Courtesy of the Archives of the History of America.

these quantitative (expressed as an amount) tests were too strict and saw that children's incorrect answers better revealed their qualitative thinking (quality of thinking) at various stages of development. This led to the question he would spend the rest of his life studying: How do children learn?

After 1921 Piaget was director of research, assistant director, and then codirector at the Jean Jacques Rousseau Institute, later part of Geneva University, where he was the professor of history in scientific thought (1929–1939). He also taught at universities in Paris, Lausanne, and Neuchâtel. He was chairman of the International Bureau of Edu-

cation and was a Swiss delegate to United Nations Economic and Scientific Committee (UNESCO). In 1955 he founded the Center for Genetic Epistemology in Geneva with funds from the Rockefeller Foundation, and in 1956 he founded and became director of the Institute for Educational Science in Geneva.

The study of children

Piaget found four stages of mental growth while studying children, particularly his own: a sensory-motor stage, from birth to age two, when mental structures concentrate on concrete (or real) objects; a pre-operational stage, from age two to seven, when children learn symbols in language, fantasy, play, and dreams; a concrete operational stage, from age seven to eleven, when children master classification, relationships, numbers, and ways of reasoning (arguing to a conclusion) about them; finally, a formal operational stage, from age eleven, when they begin to master independent thought and other people's thinking.

Piaget believed that children's understanding through at least the first three stages differ from those of adults and are based on actively exploring the environment (surroundings) rather than on language understanding. During these stages children learn naturally without punishment or reward. Piaget saw nature (heredity, or characteristics passed down from parents) and nurture (environment) as related and equally as important, with neither being the final answer. He found children's ideas about nature neither inherited (passed down from parents) nor learned but constructed from their mental structures and experiences. Men-

tal growth takes place by integration, or learning higher ideas by absorbing lower-level ideas, and by substitution, or replacing early explanations of an occurrence or idea with a more reasonable explanation. Children learn in stages in an upward spiral of understanding, with the same problems attacked and solved more completely at each higher level.

Harvard psychologist Jerome Bruner (1915–) and others introduced Piaget's ideas to the United States around 1956, after his books were translated into English. The goal of American education in the late 1950s, to teach children how to think, called for further interest in Piaget's ideas. His defined stages of when children's concepts change and mature came from experiments with children. These ideas are currently favored over the later developed stimulus-response theory (to excite in order to get response) of behaviorist (doctors who focus on the behaviors of their subjects) psychologists, who have studied animal learning.

Piaget's theories developed over years. Further explanations and experiments were performed, but these refinements did not alter his basic beliefs or theories.

Awards and legacy

Piaget received honorary degrees from Oxford and Harvard universities and made many impressive guest appearances at conferences concerning childhood development and learning. He remained a quiet figure, though, preferring to avoid the spotlight. This kind of lifestyle allowed him to further develop his theories.

Piaget kept himself to a strict personal schedule that filled his entire day. He awoke

every morning at four and wrote at least four publishable pages before teaching classes or attending meetings. After lunch he would take walks and ponder on his interests. "I always like to think on a problem before reading about it," he said. He read extensively in the evening before going to bed. Every summer he vacationed in the Alpine Mountains of Europe and wrote many works.

Piaget died on September 17, 1980 in Geneva, Switzerland, and was remembered by the *New York Times* as the man whose theories were "as liberating [freeing] and revolutionary as Sigmund Freud's [1856–1939] earlier insights into the stages of human emotional life. Many have hailed him as one of the country's most creative scientific thinkers."

PABLO PICASSO

Born: October 25, 1881

Malaga, Spain

Died: April 8, 1973

Mougins, France

Spanish painter, sculptor, and graphic artist

The Spanish painter, sculptor, and graphic artist Pablo Picasso was one of the most productive and revolutionary artists in the history of Western painting. As the central figure in developing cubism (an artistic style where recognizable objects are fragmented to show all sides of an object at the same time), he established the basis for abstract art (art having little or no pictorial representation).

Early years

Pablo Ruiz Picasso was born on October 25, 1881, in Malaga, Spain. He was the eldest and only son with two younger sisters, Lola and Concepción. His father, José Ruiz Blasco, was a professor in the School of Arts and Crafts. Pablo's mother was Maria Ruiz Picasso (the artist used her surname from about 1901 on). It is rumored that Picasso learned to draw before he could speak. As a child, his father frequently took him to bullfights, and one of his earlier paintings was a scene from a bullfight.

In 1891 the family moved to La Coruña, where, at the age of fourteen, Picasso began studying at the School of Fine Art. Under the academic instruction of his father, he developed his artistic talent at an extraordinary rate.

When the family moved to Barcelona, Spain, in 1896, Picasso easily gained entrance to the School of Fine Arts. A year later he was admitted as an advanced student at the Royal Academy of San Fernando in Madrid, Spain. He demonstrated his remarkable ability by completing in one day an entrance examination for which an entire month was permitted.

Picasso soon found the atmosphere at the academy stifling, and he returned to Barcelona, where he began to study historical

and contemporary art on his own. At that time Barcelona was the most vital cultural center in Spain, and Picasso quickly joined the group of poets, painters, and writers who gathered at the famous café Els Quatre Gats (The Four Cats). Between 1900 and 1903 Picasso stayed alternately in Paris, France, and Barcelona. He had his first one-man exhibition in Paris in 1901.

Paris at the turn of the twentieth century

At the turn of the twentieth century Paris was the center of the international art world. In painting it was the birthplace of the impressionists—painters who depicted the appearance of objects by means of dabs or strokes of unmixed colors in order to create the look of actual reflected light. While their works retained certain links with the visible world, they exhibited a decided tendency toward flatness and abstraction.

Picasso set up a permanent studio in Paris in 1904. His studio soon became a gathering place for the city's most modern artists, writers, and patrons.

Picasso's early work reveals a creative pattern which continued throughout his long career. Between 1900 and 1906 he worked through nearly every major style of contemporary (modern) painting. In doing so, his own work changed with extraordinary quickness.

Blue and pink periods

The years between 1901 and 1904 were known as Picasso's Blue Period. Nearly all of his works were executed in somber shades of blue and contained lean, melancholy, and introspective (concentrating on their own thoughts) figures. Two outstanding examples

of this period are the *Old Guitarist* (1903) and *Life* (1903).

In the second half of 1904 Picasso's style took a new direction. In these paintings the color became more natural, delicate, and tender in its range, with reddish and pink tones dominating the works. Thus this period was called his Pink Period. The most celebrated example of this phase is the *Family of Saltimbanques* (1905). Picasso's work between 1900 and 1905 was generally flat, emphasizing the two-dimensional character of the painting surface. Late in 1905, however, he became increasingly interested in pictorial volume. This interest seems to have been influenced by the late paintings of Paul Cézanne (1839–1906).

The face in *Portrait of Gertrude Stein* (1906) reveals still another new interest: its mask-like abstraction was inspired by Iberian sculpture, an exhibition of which Picasso had seen at the Louvre, in Paris, in the spring of 1906. This influence reached its fullest expression a year later in one of the most revolutionary pictures of Picasso's entire career, *Les Femmes d'Alger (O. J. R. Version O)* (1907).

Picasso and cubism

Les Femmes d'Alger (O. J. R. Version O) is generally regarded as the first cubist painting. The faces of the figures are seen from both front and profile positions at the same time. Between 1907 and 1911 Picasso continued to break apart the visible world into increasingly small facets of monochromatic (using one color) planes of space. In doing so, his works became more and more abstract. Representation gradually vanished from his painting, until it became an end in itself—for the first time in the history of Western art.

Pablo Picasso.
Courtesy of the Library of Congress.

The growth of this process is evident in all of Picasso's work between 1907 and 1911. Some of the most outstanding pictorial examples of the development are *Fruit Dish* (1909), *Portrait of Ambroise Vollard* (1910), and *Ma Jolie*, also known as *Woman with a Guitar* (1911–12).

Collages and further development

About 1911 Picasso and Georges Braque (1882–1963) began to introduce letters and scraps of newspapers into their cubist paintings, thus creating an entirely new medium, the cubist collage. Picasso's first, and proba-

bly his most celebrated, collage is *Still Life with Chair Caning* (1911–1912).

After Picasso experimented with the new medium of collage, he returned more intensively to painting. In his *Three Musicians* (1921), the planes became broader, more simplified, and more colorful. In its richness of feeling and balance of formal elements, the *Three Musicians* represents a classical expression of cubism.

Additional achievements

Picasso also created sculpture and prints throughout his long career, and made numerous important contributions to both media. He periodically worked in ceramics, and designed sets, curtains, and interiors for the theater.

In painting, even the development of cubism fails to define Picasso's genius. About 1915, and again in the early 1920s, he turned away from abstraction and produced drawings and paintings in a realistic and serenely beautiful classical style. One of the most famous of these works is the *Woman in White* (1923). Painted just two years after the *Three Musicians*, the quiet and unobtrusive (not calling attention to itself) elegance of this masterpiece testifies to the ease with which Picasso could express himself pictorially.

Guernica

One of Picasso's most celebrated paintings of the 1930s is *Guernica* (1937). This work had been commissioned for the Spanish Government Building at the Paris World's Fair. It depicts the destruction by bombing of the town of Guernica during the Spanish Civil War (1936–39; the military revolt

against the Spanish government). The artist's deep feelings about the work, and about the massacre (a mass killing) which inspired it, are reflected in the fact that he completed the work, that is more than 25 feet wide and 11 feet high, within six or seven weeks.

Guernica is an extraordinary monument within the history of modern art. Executed entirely in black, white, and gray, it projects an image of pain, suffering, and brutality that has few parallels. Picasso applied the pictorial language of cubism to a subject that springs directly from social and political awareness.

Picasso's politics

Picasso also declared publicly in 1947 that he was a Communist (someone who believes the national government should control all businesses and the distribution of goods). When he was asked why he was a Communist, he stated, "When I was a boy in Spain, I was very poor and aware of how poor people had to live. I learned that the Communists were for the poor people. That was enough to know. So I became for the Communists." But sometimes the Communist cause was not as keen on Picasso as Picasso was about being a Communist. A 1953 portrait he painted of Joseph Stalin (1879–1953) caused an uproar in the Communist Party's leadership. The Soviet government banished his works.

Although Picasso had been in exile from his native Spain since the 1939 victory of Generalissimo Francisco Franco (1892–1975), he gave eight hundred to nine hundred of his earliest works to the city and people of Barcelona. To display these works, the Palacio Aguilar was renamed the Picasso Museum and the works were moved inside. But because of

Franco's dislike for Picasso, Picasso's name never appeared on the museum.

Picasso was married twice, first to dancer Olga Khoklova and then to Jacqueline Roque. He had four children. He was planning an exhibit of over two hundred of his works at the Avignon Arts Festival in France when he died at his thirty-five-room hilltop villa of Notre Dame de Vie in Mougins, France, on April 8, 1973.

The discovery of cubism represents Picasso's most important achievement in the history of twentieth-century art. Throughout his life he exhibited a remarkable genius for sculpture, graphics, and ceramics, as well as painting. His is one of the most celebrated artists of the modern period.

SYLVIA PLATH

Born: October 27, 1932
Boston, Massachusetts

Died: February 11, 1963

London, England

American poet and novelist

Best known for *The Bell Jar*, poet and novelist Sylvia Plath explored the themes of death, self, and nature in works that expressed her uncertain attitude toward the universe.

Early life

Sylvia Plath was born in Boston, Massachusetts, on October 27, 1932, to Otto and Aurelia Plath. Her father, a professor of biology (the study of plant and animal life) at Boston University and a well-respected authority on bees, died when she was eight years old. She was left with feelings of grief, guilt, and anger that would haunt her for life and led her to create most of her poetry. Plath gave the appearance of being a socially well-adjusted child. She was also an excellent student who dazzled her teachers in the Winthrop, Massachusetts, public school system and earned straight A's and praise for her writing abilities. She was just eight and a half when her first poem was published in the *Boston Herald*.

Plath lived in Winthrop with her mother and younger brother, Warren, until 1942. These early years gave her a powerful awareness of the beauty and terror of nature and a strong love and fear of the ocean. In 1942 her mother found a job as a teacher and purchased a house in Wellesley, Massachusetts, a respectable, middle-class, educational community that also influenced Plath's life and values. Her first story, "And Summer Will Not Come Again," was published in *Seventeen* magazine in August 1950. In September

Sylvia Plath.

Courtesy of the Library of Congress.

1950 Plath entered Smith College in Northampton, Massachusetts, on a scholarship (money given to a gifted student to attend college). There she once again excelled in her studies academically and socially. Referred to as “the golden girl” by teachers and peers, she planned her writing career in detail. She filled notebooks with stories and poems, shaping her words carefully and winning many awards.

Out in the world

In August 1952 Plath won a fiction contest held by *Mademoiselle*, earning her a position as guest editor at the magazine in June

1953. Her experiences in New York City, were depressing and later became the basis for her novel *The Bell Jar* (1963). Upon her return home Plath, tired of her image as the All-American girl, suffered a serious mental breakdown, tried to kill herself, and was given shock treatments. In February 1953 she had recovered enough to return to Smith College. She graduated and won a Fulbright scholarship to Cambridge University in England, where she met her future husband, the poet Ted Hughes (1930–1998). They were married in June 1956 in London, England.

After Plath earned her graduate degree, she returned to America to accept a teaching position at Smith for the 1957–1958 school year. She quit after a year to devote all her time to writing. For a while she attended a poetry course given by American poet Robert Lowell (1917–1977), where she met American poet Anne Sexton (1928–1974). Sexton’s and Lowell’s influences were important to her development as a poet. Both urged her to write about very private subjects. Plath and her husband were invited as writers-in-residence to Yaddo, in Saratoga Springs, New York, where they lived and worked for two months. It was here that Plath completed many of the poems collected in *The Colossus* (1960), her first volume of poems. Her first child, Frieda, was born in 1960. Another child, Nicholas, was born two years later.

The Colossus was praised by critics for its “fine craft” and “brooding [anxious] sense of danger and lurking horror” at man’s place in the universe. But it was criticized for its absence of a personal voice. Not until “Three Women: A Monologue for Three Voices” (1962)—a radio play that was considered a key work by some critics—would Plath begin

to free her style and write more natural, less narrative (telling a story) poetry. “Three Women” is like much of Plath’s later poetry in that its structure is dramatic and expresses the highly personal themes that mark her work.

Expressing inner demons

As Plath’s poetry developed, it became more autobiographical (about her own life) and private. Almost all the poems in *Ariel* (1965), considered her finest work and written during the last few months of her life, are personal accounts of her anger, insecurity, fear, and tremendous sense of loneliness and death. She had found the voice that she had tried to express for so long. Violent and vivid in its description of suicide, death, and brutality, *Ariel* shocked critics, especially several poems that compare her father to a member of the Nazis (members of the ruling party in Germany, 1933–45, who killed six million Jewish people during World War II [1939–45], which was a war fought between Great Britain, France, the Soviet Union and the United States against Germany, Italy, and Japan).

Plath could not escape the tragedy that invaded and took over her personal life. By February 1963 her marriage had ended. She was ill and living on the edge of another breakdown while caring for two small children in a small apartment in London, England, during the coldest winter in years. On February 11 she killed herself. The last thing she did was to leave her children two mugs of milk and a plate of buttered bread.

Later works

In later poetry published after her death in *Crossing The Water* (1971) and *Winter Trees* (1971), Plath voiced her long-hidden rage

over “years of doubleness, smiles, and compromise.” A more complete look into Plath’s tortured mind was possible following the publication in 2002 of *The Unabridged Journals of Sylvia Plath, 1950–1962*.

Although Sylvia Plath is often regarded by critics as the poet of death, her final poems, which deal with the self and how it goes about living in a destructive, materialistic (focused on the acquiring of material wealth) world, clearly express her need for faith in the healing powers of art.

PLATO

Born: c. 427 B.C.E.

Athens, Greece

Died: c. 347 B.C.E.

Athens, Greece

Greek philosopher

The Greek philosopher Plato founded the Academy in Athens, one of the great philosophical schools of antiq-

Plato.

Courtesy of the Library of Congress.

uity (ancient times). His thought had enormous impact on the development of Western (having to do with American and European thought) philosophy.

Early life

Plato was born in Athens, Greece, the son of Ariston and Perictione, both of Athenian noble backgrounds. He lived his whole life in Athens, although he traveled to Sicily and southern Italy on several occasions. One story says he traveled to Egypt. Little is known of his early years, but he was given the finest education Athens had to offer noble families, and he devoted his considerable tal-

ents to politics and the writing of tragedy (works that end with death and sadness) and other forms of poetry. His acquaintance with Socrates (c. 469–c. 399 B.C.E.) altered the course of his life. The power that Socrates's methods and arguments had over the minds of the youth of Athens gripped Plato as firmly as it did many others, and he became a close associate of Socrates.

The end of the Peloponnesian War (431–04 B.C.E.), which caused the destruction of Athens by the Spartans, left Plato in a terrible position. His uncle, Critias (c. 480–403 B.C.E.), was the leader of the Thirty Tyrants (a group of ruthless Athenian rulers) who were installed in power by the victorious Spartans. One means of holding onto power was to connect as many Athenians as possible with terrible acts committed during the war. Thus Socrates, as we learn in Plato's *Apology*, was ordered to arrest a man and bring him to Athens from Salamis for execution (to be put to death). When the great teacher refused, his life was threatened, and he was probably saved only by the overthrow of the Thirty Tyrants and the reestablishment of the democracy (a system of government in which government officials are elected by the people).

Death of Socrates

Plato welcomed the restoration of the democracy, but his mistrust was deepened some four years later when Socrates was tried on false charges and sentenced to death. Plato was present at the trial, as we learn in the *Apology*, but was not present when the hemlock (poison) was given to his master, although he describes the scene in clear and touching detail in the *Phaedo*. He then turned in disgust from Athenian politics and never

took an active part in government, although through friends he did try to influence the course of political life in the Sicilian city of Syracuse.

Plato and several of his friends withdrew from Athens for a short time after Socrates's death and remained with Euclides (c. 450–373 B.C.E.) in Megara. His productive years were highlighted by three voyages to Sicily, and his writings, all of which have survived.

The first trip, to southern Italy and Syracuse, took place in 388 and 387 B.C.E., when Plato met Dionysius I (c. 430–367 B.C.E.). Dionysius was then at the height of his power in Sicily for having freed the Greeks there from the threat of Carthaginian rule. Plato became better friends with the philosopher Dion (c. 408–353 B.C.E.), however, and Dionysius grew jealous and began to treat Plato harshly.

His dialogues

When Plato returned to Athens, he began to teach in the Gymnasium Academe and soon afterward acquired property nearby and founded his famous Academy, which survived until the early sixth century C.E. At the center of the Academy stood a shrine to the Muses (gods of the arts), and at least one modern scholar suggests that the Academy may have been a type of religious brotherhood.

Plato had begun to write the dialogues (writings in the form of conversation), which came to be the basis of his philosophical (having to do with the search for knowledge and truth) teachings, some years before the founding of the Academy. To this early period Plato wrote the *Laches* which deals with

courage, *Charmides* with common sense, *Euthyphro* with piety (religious dedication), *Lysis* with friendship, *Protagoras* with the teaching of virtues, or goodness, and many others. The *Apology* and *Crito* stand somewhat apart from the other works of this group in that they deal with historical events, Socrates's trial and the period between his conviction and execution.

Plato's own great contributions begin to appear in the second group of writings, which date from the period between his first and second voyages to Sicily. The *Meno* carries on the question of the teachability of virtue first dealt with in *Protagoras* and introduces the teaching of *anamnesis* (recollection), which plays an important role in Plato's view of the human's ability to learn the truth.

The Republic

Socrates is again the main character in the *Republic*, although this work is less a dialogue than a long discussion by Socrates of justice and what it means to the individual and the city-state (independent states). Just as there are three elements to the soul, the rational, the less rational, and the impulsive irrational, so there are three classes in the state, the rulers, the guardians, and the workers. The rulers are not a family of rulers but are made up of those who have emerged from the population as a whole as the most gifted intellectually. The guardians serve society by keeping order and by handling the practical matters of government, including fighting wars, while the workers perform the labor necessary to keep the whole running smoothly. Thus the most rational elements of the city-state guide it and see that all in it are given an education equal to their abilities.

Only when the three work in harmony, with intelligence clearly in control, does the individual or state achieve the happiness and fulfillment of which it is capable. The *Republic* ends with the great myth of Er, in which the wanderings of the soul through births and rebirths are retold. One may be freed from the cycle after a time through lives of greater and greater spiritual and intellectual purity.

Last years

Plato's third and final voyage to Syracuse was made some time before 357 B.C.E., and he tried for the second time to influence the young Dionysius II. Plato was unsuccessful and was held in semicaptivity before being released. Plato's *Seventh Letter*, the only one in the collection of thirteen considered accurate, perhaps even from the hand of Plato himself, recounts his role in the events surrounding the death of Dion, who in 357 B.C.E. entered Syracuse and overthrew Dionysius. It is of more interest, however, for Plato's statement that the deepest truths may not be communicated.

Plato died in 347 B.C.E. the founder of an important philosophical school, which existed for almost one thousand years, and the most brilliant of Socrates's many pupils and followers. His system attracted many followers in the centuries after his death and resurfaced as Neoplatonism, the great rival of early Christianity.

POCAHONTAS

Born: c. 1595

Virginia

Died: 1617

Gravesend, Kent, England

Native American princess

Pocahontas was the daughter of a Native American chief in Virginia at the time when the British came to settle in the area. Her marriage to an English settler brought eight years of peace between the Indians and the British.

The "playful one"

Pocahontas's real name was Matoaka. As a child, she was also called Pocahontas, meaning "playful one," and the name stuck. Her father was Powhatan (c. 1550–1618), the chief of a group of tribes that bore his name and spoke the Native American Algonquian language.

In 1607 English colonists founded Jamestown. They had been sent by the Virginia Company, a company in London that had the English king's permission to set up a colony in the area for trade with England. As a young girl, Pocahontas often played at the Jamestown fort. She became friends with some of the boys there and charmed the settlers by turning cartwheels with the boys in the Jamestown marketplace.

Relations between the Native Americans and the settlers were not always smooth, but Pocahontas's friendship with the settlers may have helped keep peace. Captain John Smith (c. 1580–1631), who was the leader of the Jamestown colony until 1609, reported that

Pocahontas saved his life when he was captured by Powhatan's warriors in 1608. According to Smith, whose story is not believed by all historians, Pocahontas's actions kept Smith from being killed by Powhatan's men. Saving John Smith also saved the Jamestown colony.

Life with the English

Despite the incident with Smith, tensions between the Native Americans and the colonists in Virginia remained. In 1613, while Pocahontas was visiting the village of the Potomac Indians, she was taken prisoner by Samuel Argall, captain of a ship named *Treasurer*. Argall wanted to use Pocahontas as a hostage to exchange for Englishmen who were held by Powhatan's group, and for tools and supplies that the Native Americans had stolen. She was taken to Jamestown, where she was treated with respect by the governor, Sir Thomas Dale (–1619). Dale was touched by her intelligence and by her proper behavior. After being instructed in the Christian religion, she was baptized (admitted to Christianity and given a Christian name) with the name Rebecca.

John Rolfe (1585–1622), a gentleman at Jamestown, fell in love with Pocahontas and asked Dale for permission to marry her. Dale readily agreed in order to win the friendship of the Indians, even though Pocahontas may have already been married to a chief named Kocoum. Chief Powhatan also consented, and the marriage took place in June 1614 in the church at Jamestown in an Anglican service, following the Anglican branch of Christianity that had been developed in England. Both Native Americans and Englishmen apparently considered the union a bond

Pocahontas.
Courtesy of the Library of Congress.

between them. Pocahontas's marriage to Rolfe brought eight years of peaceful relations in Virginia.

A princess visits England

In 1616 the Virginia Company invited Pocahontas to visit England, thinking that her visit would aid the company in securing investments from the British. Rolfe, Pocahontas, her brother-in-law Tomocomo, and several Indian girls sailed to England. There Pocahontas was a great success. She was treated as a princess, entertained by the Anglican bishop of London, and introduced to England's King James I and Queen Anne.

Early in 1617 Pocahontas and her party prepared to return to Virginia. However, she became ill while in the village at Gravesend. Pocahontas had developed a case of smallpox, an infectious and dangerous disease caused by a virus and leading to high fever. Pocahontas died from the disease and was buried in Gravesend Church. Her only child, Thomas Rolfe, was educated in England, and later returned to Virginia.

Lasting contribution

Pocahontas was one of the first women to play an important role in what became the United States. Her friendship with the English settlers helped ensure the success of Jamestown, which became the first permanent English settlement in America.

EDGAR ALLAN POE

Born: January 19, 1809
Boston, Massachusetts

Died: October 7, 1849

Baltimore, Maryland

American poet and writer

One of America's major writers, Edgar Allan Poe was far ahead of his time in his vision of a special area of human experience—the “inner world” of dreams and the imagination. He wrote fiction, poetry, and criticism and also worked as a magazine editor.

Orphaned at three

Edgar Allan Poe was born in Boston, Massachusetts, on January 19, 1809, the son of David Poe Jr. and Elizabeth Arnold Poe, both professional actors. By the time he was three, Edgar, his older brother, and his younger sister were orphans; their father deserted the family, and then their mother died. The children were each sent to different families to live. Edgar went to the Richmond, Virginia, home of John and Frances Allan, whose name Poe was to take later as his own middle name. The Allans were wealthy, and though they never adopted Poe, they treated him like a son, made sure he was educated in private academies, and took him to England for a five-year stay. Mrs. Allan, at least, showed considerable affection toward him.

As Edgar entered his teenage years, however, bad feelings developed between him and John Allan. Allan disapproved of Edgar's ambition to become a writer, thought he was ungrateful, and seems to have decided to cut Poe out of his will. When, in 1826, Poe entered the newly opened University of Virginia, he had so little money that he turned to gambling in an attempt to make money. In eight months he lost two thousand dollars.

Allan's refusal to help him led to a final break between the two, and in March 1827 Poe went out on his own.

Enlists in the army

Poe then signed up for a five-year term in the U.S. Army. In 1827 his *Tamerlane and Other Poems* was published at his own expense, but the book failed to attract notice. By January 1829, serving under the name of Edgar A. Perry, Poe rose to the rank of sergeant major. He did not want to serve out the full five years, however, and he arranged to be discharged from the army on the condition that he would seek an appointment at West Point Academy. He thought such a move might please John Allan. That same year *Al Araaf, Tamerlane and Minor Poems* was published in Baltimore, Maryland, and it received a highly favorable notice from the novelist and critic John Neal.

Poe visited Allan in Richmond, but he left in May 1830 after he and Allan had another violent quarrel. The West Point appointment came through the next month, but, since Poe no longer had any use for it, he did not last long. Lacking Allan's permission to resign, Poe sought and received a dismissal for "gross neglect of duty" and "disobedience of orders." Poe realized that he would never receive financial help from Allan.

Marriage and editing jobs

Poe lived in Baltimore for a while with his aunt Maria Clemm and her seven-year-old daughter, Virginia. In 1831 he published *Poems by Edgar Allan Poe* and began to place short stories in magazines. In 1833 he received a prize for "Ms. Found in a Bottle," and his friend John Pendleton Kennedy, a

Edgar Allan Poe.

lawyer and writer, got him a job on the *Southern Literary Messenger*. In 1836 Poe married his cousin Virginia—now thirteen years old—and moved to Richmond with her and her mother. Although excessive drinking caused him to lose his job in 1837, he had written eighty-three reviews, six poems, four essays, and three short stories for the journal. He had also greatly increased its sales. Losing this job was extremely distressing to him, and his state of mind from then on, as one biographer put it, "was never very far from panic."

The panic increased after 1837. Poe moved with Virginia and her mother to New

York City, where he managed to publish *The Narrative of Arthur Gordon Pym* (1838), his only long work of fiction. The family then moved to Philadelphia, Pennsylvania, where Poe served as coeditor of *Burton's Gentleman's Magazine*. In two years he boosted its circulation from five thousand to twenty thousand and contributed some of his best fiction to its pages, including "The Fall of the House of Usher." In 1840 he published *Tales of the Grotesque and Arabesque*. But there was trouble at *Burton's*, and in 1841 Poe left to work as the editor of *Graham's Magazine*. It was becoming clear that two years was about as long as Poe could hold a job, and though he contributed quality fiction and criticism to the magazine, his drinking, his feuding with other writers, and his inability to get along with people caused him to leave after 1842.

Illness and crisis

"The Murders in the Rue Morgue" and "The Man That Was Used Up" emerged in 1843, and a Philadelphia newspaper offered a one-hundred-dollar prize for his story "The Gold Bug," but Poe's problems were increasing. His wife, who had been a vital source of comfort and support to him, began showing signs of the consumption (or tuberculosis, an infection of the lungs) that would eventually kill her. When his troubles became too great, Poe tried to relieve them by drinking, which made him ill. Things seemed to improve slightly in 1844; the publication of the poem "The Raven" brought him some fame, and this success was followed in 1845 by the publication of two volumes, *The Raven and Other Poems* and *Tales*. But his wife's health continued to worsen, and he was still not earning enough money to support her and Clemm.

Poe's next job was with *Godey's Lady's Book*, but he was unable to keep steady employment, and things got so bad that he and his family almost starved in the winter of 1846. Then, on January 30, 1847, Virginia Poe died. Somehow Poe continued to produce work of very high caliber. In 1848 he published the ambitious *Eureka*, and he returned to Richmond in 1849 to court a now-widowed friend of his youth, Mrs. Shelton. They were to be married, and Poe left for New York City at the end of September to bring Clemm back for the wedding. On the way he stopped off in Baltimore, Maryland. No one knows exactly what happened, but he was found unconscious on October 3, 1849, near a saloon that had been used as a polling place. He died in a hospital four days later.

It is not hard to see the connection between the nightmare of Poe's life and his work. His fictional work resembles the dreams of a troubled individual who keeps coming back, night after night, to the same pattern of dream. At times he traces out the pattern lightly, at other times in a "thoughtful" mood, but often the tone is terror. He finds himself descending, into a cellar, a wine vault, or a whirlpool, always falling. The women he meets either change form into someone else or are whisked away completely. And at last he drops off, into a pit or a river or a walled-up tomb.

SIDNEY POITIER

Born: February 20, 1924

Miami, Florida

African American actor

Actor Sidney Poitier's presence in film during the 1950s and 1960s opened up the possibility for bigger and better roles for African American performers.

Poor childhood

Born on February 20, 1924, in Miami, Florida, but raised in the Bahamas, Sidney Poitier was the son of Reginald and Evelyn Poitier. His father was a tomato farmer, and the family was very poor. Still, Poitier later told Frank Spotnitz in *American Film* that his father "had a wonderful sense of himself. Every time I took a part, from the first part, from the first day, I always said to myself, 'This must reflect well on his name.'" The family moved from the village of Cat Island to Nassau, the Bahamian capital, when Poitier was eleven years old, and it was there that he first experienced the magic of the movies. Poitier returned to Miami at age fifteen to live with his older brother Cyril.

Poitier left for New York City at age sixteen, serving briefly in the army. He then worked as a dishwasher in a restaurant. Seeing an ad for actors in a newspaper, he went to a tryout at the American Negro Theater. Theater cofounder Frederick O'Neal became impatient with Poitier's Caribbean accent and poor reading skills. "He came up on the stage, furious, and grabbed me by the scruff of my pants and my collar and marched me toward the door," Poitier told the *Los Angeles Times*. Poitier, determined to succeed, continued working in the restaurant but listened to radio broadcasts in his spare time to improve his speaking. He later returned to the theater and was hired as a janitor in exchange for acting lessons.

Acting career picks up

Poitier served as an understudy (one who learns a performer's lines in case that performer is unable to perform) for actor-singer Harry Belafonte (1927–) in a play called *Days of Our Youth*, and an appearance one night led to a small role in a production of the Greek comedy *Lysistrata*. On opening night of the latter play Poitier was so nervous that he delivered the wrong lines and ran off the stage; still, his brief appearance so impressed critics that he ended up getting more work.

Poitier made his film debut in the 1950 feature *No Way Out*, playing a doctor tormented by the racist (one who is prejudiced against other races) brother of a man whose life he could not save. Poitier worked steadily throughout the 1950s, appearing in the South African tale *Cry, the Beloved Country*, the classroom drama *The Blackboard Jungle*, and *The Defiant Ones*, in which Poitier and

Sidney Poitier.

Reproduced by permission of AP/Wide World Photos.

Tony Curtis (1925–) play prison escapees who are chained together; their struggle helps them look past their differences and learn to respect each other.

In the 1960s Poitier began to make his mark on American popular culture. After appearing in the film version of Lorraine Hansberry's play *A Raisin in the Sun*, in a role he had developed on the stage, Poitier took the part of an American serviceman in Germany in *Lilies of the Field* (1963). This role earned him an Academy Award for Best Actor, making him the first African American to earn this honor.

Breaking down barriers

In 1967 Poitier appeared in three hit movies. In *To Sir, With Love* he played a schoolteacher, while in *In the Heat of the Night* he played Virgil Tibbs, a black detective from the North who helps solve a murder in a southern town and wins the respect of the prejudiced police chief there. In the comedy *Guess Who's Coming to Dinner*, also starring Spencer Tracy (1900–1967) and Katherine Hepburn (1907–), Poitier's character is engaged to a white woman. The film was Hollywood's first love story between members of different races that did not end tragically. Reflecting on the feelings of filmmakers during this period, Poitier remarked to Susan Ellicott of the *London Times*, "I suited their need. I was clearly intelligent. I was a pretty good actor. I believed in brotherhood, in a free society. I hated racism, segregation [separation based on race]. And I was a symbol against those things."

Of course, Poitier was more than a symbol. David J. Fox reported in the *Los Angeles Times* that actor James Earl Jones (1931–), at a tribute to Poitier hosted by the American Film Institute (AFI) in 1992, remembered, "He marched on Montgomery and Memphis with Dr. Martin Luther King, Jr. [1929–1968], who said of Poitier: 'He's a man who never lost his concern for the least of God's children.'" Rosa Parks (1913–), who in 1955 became a civil rights hero simply by refusing to sit in the "negro" section of a Montgomery bus, attended the tribute and praised Poitier as "a great actor and role model."

Begins directing

In 1972 Poitier costarred with Belafonte in the western *Buck and the Preacher* for

Columbia Pictures. After an argument with the film's director, Poitier took over; though he and Belafonte urged Columbia to hire another director, a studio official saw footage Poitier had shot and encouraged him to finish the film himself. Poitier went on to direct three features starring comedian Bill Cosby (1937–) in the 1970s: *Uptown Saturday Night*, *Let's Do It Again*, and *A Piece of the Action*. They also worked together on the comedy *Ghost Dad* (1990), which was a disaster. Poitier also directed the hit comedy *Stir Crazy* (1980), as well as several other features.

Poitier took only a handful of film roles in the 1980s, but in 1991 he played Supreme Court justice Thurgood Marshall (1908–1993) in the television film *Separate but Equal*. In 1992 he returned to the big screen for the comedy-drama *Sneakers*, which costarred Robert Redford (1937–) and River Phoenix (1970–1993). The AFI tribute to Poitier also took place in 1992; in his speech he welcomed young filmmakers into the fold and urged them to “be true to yourselves and be useful to the journey,” reported *Daily Variety*.

Later years

Poitier and his wife, actress Joanna Shimkus, travel a great deal because they live in California and have children in New York. Poitier returned to television for 1995's western drama *Children of the Dust*. He continued to star in television movies with *To Sir with Love II* (1996) and the Showtime drama *Mandela and de Klerk* (1997). The latter follows the story of Nelson Mandela's (1918–) last years in prison to his election as leader of South Africa. Both received mixed reviews.

In 2000 Poitier received the Screen Actors Guild Lifetime Achievement Award. In

April of that year, *The Measure of a Man: A Spiritual Autobiography* (the story of his own life) was published. In February 2001 Poitier won a Grammy award for best spoken-word album for his reading of the book. Poitier was presented with the NAACP's (National Association for the Advancement of Colored People) Hall of Fame Award in March 2001. In March 2002 Poitier was awarded an honorary Academy Award for his long, dignified career. The award was especially meaningful because it came on the same night that African Americans won both the Best Actor (Denzel Washington) and Best Actress (Halle Berry) awards.

atic Kampuchéa (DK) from 1976 to 1979. He directed the mass killing of intellectuals, professional people, and city dwellers—over a million of his own people.

Early life

Pol Pot was born Saloth Sar on May 19, 1928, near Anlong Veng, Cambodia, the second son of a successful landowner. Pol Pot's father had political connections at the royal court at the Cambodian capital of Phnom Penh, some seventy miles from Prek Sbau, the small hamlet in Kompong Thom province where Pol Pot was born. Visits by court officials and even by Cambodian king Sisowath

Monivong himself to Pol Pot's father's home appear to have been common. Pol Pot often denied that he was Saloth Sar, probably to protect his family. He adopted his new name by 1963, and even after he had become premier, people were unsure of his actual identity.

Pol Pot was a poor student. He was educated by Buddhists and at a private Catholic institution in Phnom Penh, and then enrolled at a technical school (a place where mechanical or scientific subjects are taught) in the town of Kompong Cham to learn carpentry. He later obtained a government scholarship to study radio and electrical technology in Paris. However, in France Pol Pot began to spend less time studying and more time becoming involved with the Communist Party. (Communists believe in revolution to create a society in which the means of production—land, factories, and mines—are owned by the people as a whole rather than by individuals.)

Communist activity

After returning to Cambodia in 1953, Pol Pot drifted into the Vietnamese-influenced "United Khmer Issarak (Freedom) Front" of Cambodian Communists. The Front was one of many Cambodian groups that opposed French control of Cambodia as well as the government of Prince Norodom Sihanouk. After Cambodia won its independence from the French in 1954 Pol Pot became involved with the Khmer People's Revolutionary Party (KPRP), the first Cambodian Communist party. His hatred for intellectuals (people who think, study, and understand) and politicians grew during this time. He was influenced by Tou Samouth, a former Front president who was interested in making the

KPRP a genuinely Cambodian organization that could rally members of different groups against Sihanouk. The KPRP had conflicts with the Vietnamese, who wanted to control the anti-Sihanouk Cambodian resistance.

In September 1960 Pol Pot and a handful of followers met secretly at the Phnom Penh railroad station to found the “Workers Party of Kampuchéa” (WPK). Samouth was named secretary general. By 1963 Pol Pot had replaced Samouth as party secretary, and Samouth later disappeared under mysterious circumstances. For the next thirteen years Pol Pot and other WPK members disappeared from public view and set up their party organization in a remote forest area. During this period Pol Pot worked to strengthen his leadership position in the WPK and to hold down Vietnamese elements in the anti-Sihanouk movement. However, he carefully avoided a feud with the Vietnamese Communists, who were increasing their hold on parts of Cambodian territory. He also traveled to Beijing, China, to receive organizational training. Upon his return to Cambodia in 1966, the WPK changed its name to the Communist Party of Kampuchéa (CPK).

The CPK led many demonstrations against the Sihanouk administration, which caused Sihanouk to order the execution of dozens of CPK members, whom he referred to as the Khmer Rouge (“Red Khmers”). In December 1969 and January 1970 Pol Pot and other CPK leaders prepared to take down Sihanouk. But the military in Phnom Penh beat them to it, overthrowing Sihanouk in March 1970 and bringing Lon Nol to the Cambodian presidency. In 1971 Pol Pot was reelected as CPK secretary general and as commander of its “Revolutionary Army.” The

Vietnamese became angry when the CPK refused their request to begin talks with Lon Nol and the United States as Vietnamese-U.S. discussions took place in Paris. By terms of the Paris Accords, the Vietnamese pulled some of their troops out of Cambodia in early 1973. CPK “Revolutionary Army” units quickly took their place, and clashes between Lon Nol’s and Pol Pot’s forces continued.

Killing his own people

In April 1975 Phnom Penh fell to several Communist Cambodian and pro-Sihanouk groups. For nearly a year Pol Pot and other Cambodian Communists, as well as Sihanouk, struggled for power in the new state of “Democratic Kampuchéa.” Another CPK party congress in January 1976 led to Pol Pot’s reelection as secretary general, but also revealed differences of opinion between Pol Pot and other members of the party. Relations with Vietnam also continued to worsen. In April 1976, after the decision by Sihanouk to step down as head of state, a new Democratic Kampuchéa (DK) government was proclaimed, and Pol Pot became premier. However, his authority was challenged by Vietnam-influenced party leaders. Beginning in November 1976 Pol Pot began to remove many of his rivals, including cabinet ministers and other top party leaders.

Meanwhile, Pol Pot’s reform policies drove many people from major cities and forced tens of thousands into labor. The Cambodians were denied food and medical care, and mass killings of all suspected opponents—especially intellectuals or those with political experience—took place. Pol Pot was responsible for the deaths of over one million Cambodians—nearly 20 percent of the coun-

try's total population. Although opposition to Pol Pot was growing among party members, his visits to China and North Korea in September and October 1977 increased his standing among other Asian Communist leaders, even as fighting with Vietnamese border forces grew worse.

The fall of a dictator

Continued Vietnamese attacks on DK territory left Pol Pot with a shaky hold on power, and finally he and other DK leaders were forced to flee Phnom Penh in January 1979. They regrouped and established an underground government in western Cambodia and in the Cardamom mountain range. In July 1979 Pol Pot was sentenced to death in absentia (without him being present) for the murder of his own people. The sentence was issued by the new government of the "People's Republic of Kampuchéa," installed with the help of Vietnamese forces. With world attention focused on Cambodia, Pol Pot stepped down as DK prime minister in December 1979. However, he remained as party secretary general and as head of the CPK's military commission, making him the overall commander of the DK's thirty-thousand-man force battling the Vietnamese in Cambodia.

Little was known of Pol Pot's activities after that. In September 1985 the DK announced that Pol Pot had retired as commander of the DK's "National Army" and had been appointed to be "Director of the Higher Institute for National Defense." After several years of living underground, Pol Pot was finally captured in June 1997. The Khmer Rouge had suffered from internal conflicts in recent years and finally split into opposing forces, the largest of which joined with the government of Cambo-

dia under Sihanouk and hunted down their former leader. Pol Pot was sentenced to life in prison. While under house arrest, he died of heart failure on April 15, 1998.

MARCO POLO

Born: c. 1254

Venice

Died: January 8, 1324

Venice

Venetian explorer and writer

The traveler and writer Marco Polo left Venice for Cathay (now China) in 1271, spent seventeen years in Kublai Khan's (1215–1294) empire, and returned to Venice in 1295. His account of his experiences is one of the most important travel documents ever written.

Family business

Born into a noble family of Venetian merchants, Marco Polo began his long expe-

rience with Cathay through the adventures of his father, Niccolo, and his uncle, Maffeo Polo, partners in a trading operation at a time when Venice was the world leader in foreign commerce. The Polos had left Venice to travel all the way to Peking, China, and back when Marco was only six years old. During their nine-year absence, Marco was raised by his mother and other members of his extended family. He became a tough, loyal, observant young man, eager to please and interested in adventure.

Marco Polo's father and uncle were well received in China by the Mongol prince Kublai Khan in 1266. The Polos impressed Kublai Khan with their intelligence and their knowledge of the world. For these reasons he kept them around for several years. In 1269 he sent them to Rome as his messengers with a request that the pope send one hundred Europeans to share their knowledge with him. Although the pope did not grant the request, the Polo brothers, in search of further profit and adventure, set out to return to China in 1271. Since his mother had died recently, Marco Polo was taken along on the trip, marking his debut, or first appearance, as a world traveler at age seventeen. The return to China, over land and sea, desert and mountain, took slightly more than three years.

Despite their failure to bring back the one hundred Europeans from Rome, Kublai Khan welcomed the Polos back and again took them into his service. He became increasingly impressed with Marco Polo, who, like his father and uncle, demonstrated not only his ability to travel but also his knowledge of the Mongol language and his remarkable powers of observation.

Marco Polo.

Courtesy of the Library of Congress.

Years in China

With the approval of Kublai Khan, the Polos began widespread trading ventures within his empire. While on these business trips around the empire, Marco Polo demonstrated his quick mind and his ability to relate what he saw in clear, understandable terms. His reports, which formed the basis of his famous account of his travels, contained information on local customs, business conditions, and events. It was in these reports that he displayed his talent as an objective and accurate observer. Kublai Khan read and used these reports to keep informed of developments within his empire.

All three of the European visitors were kept on as messengers and advisers. The younger Polo was used on several extended missions that sent him traveling over much of China and even beyond. By his own account he came near the edge of Tibet and northern Burma. This relationship between the Polos and Kublai Khan lasted more than sixteen years, during which Marco served as Kublai Khan's personal representative in the city of Yangchow, China.

Leaving the khan

Although the Polos enjoyed the profits of their enterprise, they longed to return to Venice to enjoy their wealth. They were prevented from returning for a time because Kublai Khan was unwilling to release them from his service. Their chance to return to Europe came in 1292, when they were sent on a mission to Persia and then to Rome. The assignment represented Kublai Khan's way of releasing them from their obligations to him. In Persia they were to arrange a marriage between one of Kublai Khan's regional rulers and a Mongol princess. They were forced to remain in Persia for nearly a year when the man who was supposed to be married died and a new groom had to be found. From the Persian court, the Venetians continued their journey home, arriving in 1295 after an absence of nearly twenty-five years.

Marco Polo did not return to Asia again. He entered the service of Venice in its war against the rival city-state of Genoa. In 1298 Marco served as a gentleman-commander of a ship in the Venetian navy. In September 1298 he was captured and imprisoned in Genoa. He was famous for his adventures, and as a result he was

treated with unusual courtesy for a prisoner and released within a year. Little is known of Marco Polo's life after his return to Venice. He apparently returned to private life and business until his death in 1324.

Record of his travels

While imprisoned in Genoa, Marco Polo related the story of his travels to a fellow prisoner named Rusticiano, a man from Pisa, Italy, who wrote in the romantic style of thirteenth-century literature. A combination of Marco Polo's gift of observation and the writing style of Rusticiano emerged in the final version of Marco Polo's travels. The book included Polo's personal remembrances as well as stories related to him by others.

In his book, which was translated into many languages, Polo left a wealth of information. The information contained in his maps has proved remarkably accurate when tested by modern methods. His observations about customs and local characteristics have also been proven true by research.

JUAN PONCE DE LEÓN

Born: c. 1460

San Servas, Spain

Died: July 1521

Havana, Cuba

Spanish explorer and conqueror

The Spanish conqueror and explorer Juan Ponce de León conquered the island of Puerto Rico and explored the coastline of Florida, which he claimed for the Spanish crown.

Early life

Juan Ponce de León was born in San Servas, Spain. Although born into a noble family, he was poor, and like many in similar situations, he sought fame and fortune as a soldier. He received an education in fighting skills, manners, and religion while serving a knight named Pedro Nunez de Guzman, and later helped in the ten-year conquest of the Muslim kingdom of Granada in southern Spain.

Afterward, Ponce de León heard stories of Christopher Columbus's (c. 1451–1506) discovery of a new world and volunteered to go along on a return trip. In September 1493 he was one of twelve hundred men who set out for the island of Hispaniola (modern Dominican Republic and Haiti). Ponce de León survived disease, bad weather, and a shortage of food and drink to help colonize the new lands by forcing the Indians into slavery.

Conquering and governing

Ponce de León spent most of the early 1500s in Hispaniola, establishing farms, dis-

tributing land rights, helping construct buildings to aid in defense, and working to set up an island economy (system of production, distribution, and use of goods and services). He also married and fathered four children. He was named deputy governor of Hispaniola by Governor Nicolas de Ovando after helping put down an Indian uprising in the eastern province of the island in 1504.

The Indians told Ponce de León that he would find gold on a neighboring island to the east, called Boriquien (Puerto Rico). Four years later he crossed over and conquered the island. During the conquest he shared the honors with a famous greyhound dog named Bercerillo. It was said that the Indians were more afraid of ten Spaniards with the dog than one hundred without him. Ponce de León was appointed governor of Puerto Rico by King Ferdinand of Spain (1452–1516). The island became popular with other settlers because it was well run by Ponce de León and it had a large number of slaves and many natural resources. Ponce de León was also noted for his nonviolent treatment of the Indians, which was rare for the time.

Stripped of his title as governor by King Ferdinand in 1512 after a political conflict, Ponce de León obtained permission from the king to discover and settle the island of Bimini, which was believed to lie somewhere to the northwest. He was also interested in locating a famous body of water that was said to have the power to restore youth to the aged. This myth, repeated to Ponce de León by the Indians, was of European origin. According to the legend, the spring was in the Garden of Eden, which was located somewhere in Asia (the early Spaniards believed America to be Asia).

Juan Ponce de León.
Courtesy of the Library of Congress.

Important discoveries

In March 1513 Ponce de León sailed from Puerto Rico and a month later anchored near the mouth of the St. Johns River on the northeast coast of Florida. Impressed with its many beautiful flowers, and having landed on Easter day, he named the land Florida, from the Spanish *Pascua florida*, or “flowery Easter.” While traveling southward he encountered the strong current of the Gulf Stream as it poured through a channel. He had discovered the Bahama Channel, which later became the route of the treasure ships on their return voyage to Spain. He continued exploring the East Coast and then sailed up the Gulf Coast to

Pensacola Bay. During his return voyage to Puerto Rico he sighted several small islands crowded with tortoises and named the islands the Tortugas, or “tortoises.”

In 1514 Ponce de León returned to Spain where he received another grant, to establish colonies in the “Island of Florida” at his own expense. In February 1521 the colonizing expedition landed on the Florida coast near Charlotte Harbor. A fierce attack by Native Americans caused the settlement to be left abandoned. Ponce de León, wounded in the battle, died a few days after returning to Cuba. He was buried in Puerto Rico; the words on his gravestone read, “Here rest the bones of a valiant LION [León], mightier in deeds than in name.”

ALEXANDER POPE

Born: May 21, 1688

London, England

Died: May 30, 1744

London, England

English poet

The English poet Alexander Pope is regarded as one of the finest poets and satirists (people who use wit or sarcasm to point out and devalue sin or silliness) of the Augustan (mid-seventeenth to mid-eighteenth century English literature) period and one of the major influences on English literature in this time and after.

Early years

Alexander Pope was born on May 21, 1688, in London, England, to Alexander and Edith Pope. His Roman Catholic father was a linen merchant. His family moved out of London and settled in Binfield in Windsor Forest around 1700. Pope had little formal schooling. He educated himself through extensive studying and reading, especially poetry.

Although Pope was healthy and plump in his infancy, he became severely ill later in his childhood, which resulted in a slightly disfigured body—he never grew taller than 4 feet 6 inches. He suffered from curvature of the spine, which required him to wear a stiff canvas brace. He had constant headaches. His physical appearance, frequently ridiculed by his enemies, undoubtedly gave an edge to Pope's satire (humor aimed at human weaknesses), but he was always warmhearted and generous in his affection for his many friends.

Early poems

Pope was precocious (showed the characteristics of an older person at a young age) as a child and attracted the notice of a noted bookseller who published his *Pastorals* (1709). By this time Pope was already at

Alexander Pope.
Courtesy of the Library of Congress.

work on his more ambitious *Essay on Criticism* (1711) designed to create a rebirth of the contemporary literary scene.

The Rape of the Lock (1712) immediately made Pope famous as a poet. It was a long humorous poem in the classical style (likeness to ancient Greek and Roman writing). Instead of treating the subject of heroic deeds, though, the poem was about the attempt of a young man to get a lock of hair from his beloved's head. It was based on a true event that happened to people he knew. Several other poems were published by 1717, the date of the first collected edition of Pope's works.

Translations of Homer

Pope also engaged in poetic imitations and translations. His *Messiah* (1712) was an imitation of Virgil (70–19 B.C.E.). He also did a version of Geoffrey Chaucer's (1342–1400) poetry in the English of Pope's day. But it was Pope's versions of Homer (c. 700 B.C.E.) that were his greatest achievement as a translator.

Pope undertook the translation of Homer's *Iliad* because he needed money. The interest earned from his father's annuities (money from investments) had dropped sharply. The translation occupied him until 1720. It was a great financial success, making Pope independent of the customary forms of literary patronage (support from wealthy people), and it was highly praised by critics.

From the time parts of *Iliad* began to appear, Pope became the victim of numerous pamphlet attacks on his person, politics, and religion. In 1716 an increased land tax on Roman Catholics forced the Popes to sell their place at Binfield and to settle at Chiswick. The next year Pope's father died, and in 1719 the poet's increased wealth enabled him to move with his mother to Twickenham.

From 1725 to 1726 Pope was engaged in a version of *Odyssey*. He worked with two other translators, William Broome and Elijah Fenton. They completed half of the translation between them. It was Pope's name, however, that sold the work, and he naturally received the lion's share (biggest part) of the profits.

Editorial work

Pope also undertook several editorial projects. Parnell's *Poems* (1721) was followed by an edition of the late Duke of Bucking-

ham's *Works* (1723). Then, in 1725, Pope's six volumes on the works of William Shakespeare (1564–1616) were published. Pope's edits and explanatory notes were notoriously capricious (impulsive and not scholarly). His edition was attacked by Lewis Theobald in *Shakespeare Restored* (1726), a work that revealed a superior knowledge of editorial technique. This upset Pope, who then made Theobald the original hero of *Dunciad*.

The Dunciad

In 1726 and 1727 the writer Jonathan Swift (1667–1745) was in England and a guest of Pope. Together they published three volumes of poetry. Renewed contact with Swift must have given a driving force to Pope's poem on "Dulness," which appeared as the three-book *Dunciad* (1728). Theobald was the prime dunce, and the next year the poem was enlarged by a burlesque (broad comedy) on commentators and textual critics.

Clearly Pope used *Dunciad* as personal satire to pay off many old scores. But it was also prompted by his distaste for that whole process by which worthless writers gained undeserved literary prominence (fame). The parody (comic imitation) of the classical epic (heroic poem) was accompanied by further mock-heroic elements, including the intervention of a goddess, the epic games of the second book, and the visit to the underworld and the vision of future "glories." Indeed, despite its devastating satire, *Dunciad* was essentially a phantasmagoric (created by the imagination) treatment by a great comic genius. In 1742 Pope published a fourth book to *Dunciad* separately, and his last published work was the four-volume *Dunciad* in 1743.

An Essay on Man

Pope's friendship with the former statesman Henry St. John Bolingbroke, who had settled a few miles from Twickenham, stimulated his interest in philosophy and led to the composition of *An Essay on Man*. Some ideas expressed in it were probably suggested by Bolingbroke. For example, the notion that earthly happiness is enough to justify the ways of God to man was consistent with Bolingbroke's thinking.

In essence, the *Essay* is not philosophy (the study of knowledge) but a poet's belief of unity despite differences, of an order embracing the whole multifaceted (many-sided) creation. Pope's sources were ideas that had a long history in Western thought. The most central of these was the doctrine of plenitude, which Pope expressed through the metaphors (a figure of speech in which words or phrases are used to find similarities in things that are not comparable) of a "chain" or "scale" of being. He also asserted that the discordant (not harmonious) parts of life are bound harmoniously together.

Later years

Pope wrote *Imitations of Horace* from 1733 to 1738. (Horace was a Roman poet who lived from 65 to 8 B.C.E.) He also wrote many "epistles" (letters to friends) and defenses of his use of personal and political satire. As Pope grew older he became more ill. He described his life as a "long disease," and asthma increased his sufferings in his later years. At times during the last month of his life he became delirious. Pope died on May 30, 1744, and was buried in Twickenham Church.

Alexander Pope used language with genuine inventiveness. His qualities of imagination are seen in the originality with which he handled traditional forms, in his satiric vision of the contemporary world, and in his inspired use of classical models.

COLE PORTER

Born: June 9, 1891

Peru, Indiana

Died: October 15, 1964

Santa Monica, California

American composer

American composer Cole Porter wrote songs—both words and music—for more than thirty stage and film musicals. His best work set standards of sophistication (appealing to good taste) and wit seldom matched in the popular musical theater.

Early life and education

Cole Albert Porter was born in Peru, Indiana, on June 9, 1891, the son of a phar-

Cole Porter.

Reproduced by permission of Archive Photos, Inc.

macist. His mother was determined that her only son become a creative artist, while his wealthy Midwestern pioneer (someone who settles new land) grandfather was determined that he enter business or farming. Cole's mother's influence proved stronger, and Porter received considerable musical training as a child. He began playing violin and piano at age six. He learned circus acrobatics watching the Hagenbeck and Wallace circus, which spent its winters nearby. By 1901 he had composed a one-song "operetta" (a short opera) entitled *The Song of the Birds*, and a piano piece, "The Bobolink Waltz," which his mother published in Chicago, Illinois.

Porter attended Worcester Academy in Massachusetts, where he composed the class song of 1909. At Yale (1909–1913) he wrote music and collaborated (worked with others) on lyrics for the scores of several amateur shows presented by his fraternity (social club at colleges and universities) and the Yale Dramatic Association.

Porter then entered Harvard Law School. Almost at once, however, he changed his course of study to music. Before leaving Harvard he collaborated on a comic operetta, *See America First* (1916), which became his first show produced on Broadway. It was a complete disaster.

Becomes a success

In 1917 Porter was in France, and for some months during 1918 and 1919 he served in the French Foreign Legion. After this he studied composition (music writing) briefly with the composer Vincent d'Indy in Paris, France. Returning to New York, he contributed songs to the Broadway production *Hitchy-Koo* of 1919, his first success. Also in 1919 he married the wealthy socialite (someone who keeps company with well-respected people) Linda Lee Thomas. The Porters began a lifetime of traveling on a grand scale and became famous for their lavish parties and the circle of celebrities in which they moved.

Porter contributed songs to various stage shows and films and in 1923 composed a ballet, *Within the Quota*, which was performed in Paris and New York. Songs such as "Let's Do It" (1928), "What Is This Thing Called Love" (1929), "You Do Something to Me" (1929), and "Love for Sale" (1930) established him as a creator of worldly, witty, occa-

sionally risqué (off-color) lyrics with unusual melodic lines to match.

In the 1930s and 1940s Porter provided full scores for a number of bright Broadway and Hollywood productions, among them *Anything Goes* (1934), *Jubilee* (1935), *Rosalie* (1937), *Panama Hattie* (1940), and *Kiss Me Kate* (1948). These scores and others of the period abound with his characteristic songs: "Night and Day," "I Get a Kick out of You," "You're the Top," "Anything Goes," "Begin the Beguine," "Just One of Those Things," "Don't Fence Me In," "In the Still of the Night," and "So in Love."

Later years

Serious injuries from a riding accident in 1937 plagued Porter for the remainder of his life. A series of operations led to the amputation (cutting off) of his right leg in 1958. In his last years he produced one big Broadway success (*Can-Can*; 1953). Cole Porter died on October 15, 1964, in Santa Monica, California.

Porter's songs show an elegance of expression (wording) and a cool detachment that are a perfect example of the kind of sophistication unique to the 1930s. He was also a truly talented creator of original melodies. Like George Gershwin (1898–1937), he frequently disregarded the accepted formulas of the conventional popular song and turned out pieces of charm and distinction.

KATHERINE ANNE PORTER

Born: May 15, 1890

Indian Creek, Texas

Died: September 18, 1980

Silver Spring, Maryland

American author

American writer Katherine Anne Porter, winner of a Pulitzer Prize in 1966, was known for her delicate observations and precise descriptions.

Early life

Katherine Anne Porter was born on May 15, 1890, in Indian Creek, Texas, the fourth of five children of Harrison Boone Porter and Mary Alice Jones. She was a descendant of Jonathan Boone, brother of the famous explorer Daniel Boone (1734–1820), and her father, a farmer, was a second cousin of the writer O. Henry (Sidney Porter) (1862–1910). After her mother died in 1892, Porter and her siblings went to live with their grandmother. After her grandmother died in 1901, Porter was sent to several convent (an establishment of nuns) schools in Texas and Louisiana. In

Katherine Ann Porter.

Reproduced by permission of AP/Wide World Photos.

1906 Porter ran away from school and got married; she was divorced three years later. In 1914 she went to Chicago, Illinois, to pursue an acting career. She returned to Texas later that year and worked briefly as a singer.

From early childhood Porter had been writing stories, an activity she described as the passion of her life. In 1917 she joined the staff of the *Critic*, a Fort Worth, Texas, weekly newspaper, and in 1918 and 1919 she worked for the *Rocky Mountain News* in Denver, Colorado, writing mostly book reviews and political articles. She then moved to New York City, where she continued to write. During the 1920s she traveled often to Mexico,

wrote articles about the country, and studied art. She also worked on a biography of minister and author Cotton Mather (1663–1728) and wrote some book reviews.

Published works

Porter's first volume of stories, *Flowering Judas* (1930), impressed critics, although it did not sell very well. It won a Guggenheim fellowship (an award with a cash prize intended to be used for study or research) that allowed her to study abroad, and after a brief stay in Mexico she sailed in 1932 to Bremerhaven, Germany (which provided the setting for her only novel, *Ship of Fools*). A second volume of stories, *Hacienda* (1934), and a short novel, *Noon Wine* (1937), followed her marriage in 1933 to Eugene Pressly, a member of the U.S. Foreign Service in Paris, France. After divorcing Pressly, she married Albert Russell Erskine Jr., whom she divorced in 1942.

Pale Horse, Pale Rider (1942) consists of three short novels, including *Noon Wine*. The title work is a bitter, tragic tale of a young woman's love for a soldier who dies of influenza (the flu). The title story of *The Leaning Tower and Other Stories* (1944), set in Berlin, Germany, deals with the menace of Nazism (a German political movement that scorned democracy and attempted to wipe out other races of people, such as the Jews, who were considered inferior to the Germans). *The Days Before* (1952) is a collection of essays. *Ship of Fools* (1962) was a best seller but drew mixed reviews. Based on Sebastian Brant's (c. 1458–1521) fifteenth-century novel *Das Narrenschiff*, it examines the lives of an international group of voyagers, whose human folly alters their personal lives and blinds them to the growth of Nazism.

Porter was for many years more popular everywhere else in the country but her home state of Texas, where stories of cowboys and the old west were more popular than anything else. Her unhappiness with the social injustice and lack of rights for women in the state was one of the factors that led her to leave, and she often addressed these issues in her writings. Still, Porter came to be considered the best author who ever hailed from Texas. She won a Texas Institute of Letters fiction award for *Ship of Fools* and a Pulitzer Prize for her *Collected Stories* in 1966.

Later years

Porter chose the University of Maryland, from which she had received a honorary degree (a degree achieved without meeting the usual requirements) in 1966, as the site of her personal library, begun with donations of some personal papers. In Texas, her childhood home in Kyle was turned into a museum. In addition, the Southwestern Writers Collection at Southwest Texas State University contains her typewritten recipe for a “genuine Mole Poblana,” Mexico’s “National Dish,” she wrote, with chili and chocolate (*Texas Monthly*, January 1997). Apparently learned during two years living in Mexico, it was a tribute to her exciting life after her abandonment of her early, strict religious upbringing.

Katherine Anne Porter died on September 18, 1980, in Silver Spring, Maryland. Her ashes were buried at Indian Creek beside her mother’s grave. However, her writing continued to live on. The *Letters of Katherine Anne Porter* were published after her death.

EMILY POST

Born: October 3, 1873

Baltimore, Maryland

Died: September 25, 1960

New York, New York

American author

For many years a leading authority on socially correct behavior, Emily Post provided solutions to social problems. With a name that became linked with proper manners in the minds of many, she was a successful author, newspaper columnist, and radio broadcaster.

Privileged childhood

Born into a wealthy family in Baltimore, Maryland, Emily Price’s birth date is variously reported as October 3, 27, or 30, 1873. She was the only child of Bruce Price, an architect, and Josephine Lee Price. Growing up in an era of servants and chaperones (older people who accompany younger peo-

Emily Post.

Courtesy of the Library of Congress.

ple to social gatherings to make sure they behave), Emily was educated at home and attended a finishing school (a school that prepares girls for social life) in New York, New York, where her family had moved. She also traveled to Canada, France, and Italy with her father, often going with him to check on the progress of the buildings he had designed. She married Edwin Main Post, a banker, in 1892, and they had two sons.

Begins writing

Emily Post and her husband drifted apart, and his cheating caused the marriage to end in a divorce in 1905. She asked for no

money from him since he had lost almost everything in a stock market crash. To add to her small income and support herself and her sons, Post began writing short stories that were published in the popular fiction magazines *Ainslie's* and *Everybody's*. She also produced wrote several novels. The first, *The Flight of a Moth* (1904), was about a young American widow attracted to a crooked Russian nobleman.

As a successful writer and a woman of social position, Post was encouraged by an editor at the Funk and Wagnalls publishing company to write a book on etiquette (proper social behavior). *Etiquette—The Blue Book of Social Usage*, first published in 1922, quickly became a best-seller, bringing her fame and fortune.

Etiquette expert

Post's guiding belief was that good manners began with consideration for the feelings of others and included good form in speech, knowledge of proper social graces, and charm. She believed that the best way to do almost anything was the way that pleased the greatest number of people and offended the fewest. Before her book had been out a month, readers bombarded her with questions the book had not addressed, and these formed the basis of later versions of the book.

Etiquette was originally written for the newly rich who wanted to live, entertain, and speak like the wealthy. The focus of later versions of the book, however, was the character of "Mrs. Three-In-One," a wonder woman who acted as cook, waitress, and charming hostess at small dinner parties. Post also started a column of questions and answers that

appeared in 150 newspapers and received as many as twenty-six thousand letters a year at her New York office and more at newspapers in other cities. During the 1930s she appeared three times a week on her own radio program, which continued for eight years.

Although Post's advice on social behavior changed over the years, even in later versions of the book she refused to give up the idea of the chaperone. She also maintained an earlier belief that it was improper for a woman to visit a man alone in his apartment or to go on overnight automobile trips. Her "Blue Book," which was the American standard of etiquette for years, was reported to be second only to the Bible as the book most often stolen from libraries.

Later years

Emily Post maintained her social position, traveled in Europe, and always spent the summer months away from New York City at a home in Tuxedo Park, New York (designed and built by her father), and later in life at Edgartown, Martha's Vineyard, Massachusetts. She wrote other books besides her writings on etiquette, including: *The Emily Post Cook Book* (1951); *The Personality of a House* (1930), partly based on her experiences rebuilding and remodeling her summer home at Martha's Vineyard; and *Children Are People* (1940), much of which came from hours time she spent with her grandson. In 1946 she formed the Emily Post Institute, headed by her son Edwin, to study problems the issues of gracious living.

Emily Post remained active throughout her life, awakening early, but remaining in bed to devote time to letters and her daily column. She always made her first appear-

ance of the day at lunch, which was served promptly at one o'clock. The expert on American etiquette, whose name became a household word, died in her New York apartment on September 25, 1960, at the age of eighty-six.

COLIN POWELL

Born: April 5, 1937

New York, New York

*African American soldier, military official,
and secretary of state*

During Colin Powell's long and impressive military and government career, he has served in some of the country's highest positions, including chairman of the Joint Chiefs of Staff. When President George W. Bush (1946–) chose Powell for the job of secretary of state, he became the first African American to ever serve in this position.

A young soldier

Colin Luther Powell was born in the Harlem neighborhood of New York, New

Colin Powell.

Reproduced by permission of AP/Wide World Photos.

York, on April 5, 1937. His parents were immigrants from Jamaica. He spent most of his childhood in the South Bronx neighborhood of New York City, which was then regarded as a step up from Harlem. The neighborhood included white, African American, and Puerto Rican residents. Powell has said that he never thought of himself as a “minority” while a child.

Despite his parents’ urgings that he should “strive for a good education” in order to “make something” of his life, Powell remained an ordinary student throughout high school. At City College of New York, however, Powell discovered his leadership

skills after joining the army’s Reserve Officers’ Training Corps (ROTC). He graduated from the program in 1958 and was made a second lieutenant (an army officer who is below all other officers) in the U.S. Army. He was then assigned to duty in West Germany. In 1962 he met and married Alma Vivian Johnson, with whom he eventually had three children.

Powell’s next overseas assignment was in South Vietnam. At the time the United States was involved in the Vietnam War (1955–75; a civil war in which anti-Communist forces in South Vietnam, supported by the United States, were fighting against a takeover by Communist forces in North Vietnam). During his first tour of duty in Vietnam (1962–63), Powell was wounded in action. He returned for a second tour (1968–69) and received the Soldier’s Medal for pulling several men from a burning helicopter.

Working in Washington

After his second tour in Vietnam, Powell returned to the United States and studied for a master’s degree in business administration at George Washington University in Washington, D.C. He received the degree in 1971, then went to work at the Pentagon, the headquarters of the U.S. Department of Defense and military services. He then moved on to a position in the Office of Management and Budget under the director, Caspar Weinberger (1917–), and his deputy, Frank Carlucci (1930–). These two men were to have a major influence on Powell’s career.

In the late 1970s, Powell attained the rank of major general (an army officer who is above a brigadier general) and held positions in the Pentagon and Department of Energy. In 1983 he became a military assistant to

Weinberger, who was then the secretary of defense under President Ronald Reagan (1911–). While Powell was assisting Weinberger, his advice was sought by the National Security Council (NSC), the agency within the executive branch that advises the president on affairs relating to national security. The NSC wanted to make a secret sale of weapons to Iran in the belief that it would help to free American hostages that were being held in Lebanon by terrorist groups supporting Iran. Powell advised the NSC that the sale was illegal. His opposition helped to establish a reputation for having strong moral character that later served him well and that kept him from being harmed when the NSC's illegal arms deal was eventually exposed.

In 1986 Powell was asked by President Reagan to become Frank Carlucci's deputy on the NSC. He replaced Carlucci as national security adviser (head of the NSC) in 1987 and held the post for the rest of the Reagan administration. Arms control and attempts to overthrow the socialist government of Nicaragua were high priorities for Powell and other policy-makers during this period.

Heading the Joint Chiefs of Staff

When President-elect George Bush (1924–) told Powell that he wished to name a new national security adviser, Powell could have chosen to leave the army to earn a substantial income giving lectures or consulting in the business world. However, Powell did not retire. Instead, having been promoted to full general (an army officer who is above a lieutenant general), he took over the army's Forces Command. In this position he was responsible for overseeing the readiness of over a million regular, reserve, and National

Guard personnel in the United States. Powell took on more responsibility when he was nominated by President Bush in 1989 to become chairman of the Joint Chiefs of Staff (JCS; the group that is responsible for giving military information and advice to the president, the secretary of defense, and the National Security Council). Powell was the first black officer to hold this post.

As chairman of the JCS, Powell played a key role in the December 1989 American military invasion of Panama to unseat that country's military leader, Manuel Noriega (1938–). Earlier in 1989, Noriega, who had been in control of the Panamanian government since 1983, had cancelled presidential elections. Noriega was also involved in the buying and selling of illegal drugs and other unlawful activities. The U.S. government overthrew Noriega in an effort to bring the leader to the United States to be tried on drug charges, to protect Americans, and to give the Panamanian people back their freedom. Television appearances in which Powell explained the purpose of the operation brought him to the favorable attention of the American public.

Powell was also highly visible during Operation Desert Shield. This was a joint effort by the United States and several other nations to pressure Saddam Hussein (1937–), the president of the Middle Eastern nation Iraq, into removing his forces from the neighboring country of Kuwait. Iraq had occupied Kuwait in August 1990. It soon became apparent that this operation, unlike the one in Panama, would take months to decide and involved the risk of high casualties (deaths of soldiers) if war broke out between the Iraqis and the international forces.

Operation Desert Shield turned into Operation Desert Storm on January 16, 1991, beginning the six-week conflict that was known as the Persian Gulf War. Powell again demonstrated his leadership during this time, and the Iraqi army was swiftly crushed. For his part in this war, Powell was awarded a Congressional gold medal.

Secretary of State

After Powell retired from the military in 1993, he was often mentioned as a potential candidate for president. While many hoped that he would run for president in 1996, he announced in 1995 that he would not do so. Instead, Powell supported George W. Bush in the campaign that led to Bush's election in 2000. On December 16, 2000, Bush announced that he would name Powell as his secretary of state, the nation's top foreign policy position. Powell was the first African American named to this post.

On September 11, 2001, anti-American terrorists crashed jet planes into the Pentagon and into the two towers of the World Trade Center in New York City. The attack killed thousands and led Bush to declare that the United States would pursue a "war on terrorism." The Bush administration's efforts concentrated initially on targets in Afghanistan, and Powell's greatest challenge was to build support for the American "war" among Arab and Muslim governments. As the effort to stamp out terrorism continued, Powell was perceived as a force for moderation in the Bush government, pushing for the building of alliances and for restraint when others argued for more aggressive military action.

DITH PRAN

Born: September 27, 1942

Siem Reap, Cambodia

Cambodian journalist, photographer, and activist

Dith Pran was a Cambodian journalist who suffered four years of abusive treatment after the Communist Khmer Rouge forces took over his country in 1975. Pran eventually escaped and became a crusader for justice in Cambodia. His story was portrayed in the 1984 movie *The Killing Fields*.

Early years

Dith Pran was born on September 27, 1942, in the town of Siem Reap, Cambodia. At that time, the Japanese army occupied

Cambodia, which belonged to French Indochina, but Pran's home was far from the center of power. Pran grew up in a middle-class family near the ruins of ancient temples called Angkor Wat with his two sisters and three brothers. His father, Dith Proeung, was a public-works official who supervised the building of roads. Pran attended local schools, where he learned French. He learned English on his own, and after finishing high school in 1960, he went to work as an interpreter (a person who translates from one language into another) for the U.S. Military Assistance Command in Cambodia.

The war next door

After World War II (1939–45) Communist rebels in neighboring Vietnam fought against French attempts to take over their country. (Communists believe in revolution to achieve a society in which the means of production—land, factories, and mines—are owned by the people as a whole rather than by individuals.) The Communists drove the French forces out, gained control over North Vietnam, and began fighting anti-Communist forces in the south, which were supported by the United States. Although Cambodia remained fairly peaceful, Vietnamese troops from both sides began using the country as a place of refuge. In 1965 Cambodia's government ended its relations with the United States, charging that U.S. troops had entered the country's borders to pursue their enemies.

After the U.S. withdrawal, Pran found work with a British film crew and at a hotel near Angkor Wat. In 1970 a U.S.-backed leader, Lon Nol, seized power in the Cambodian capital of Phnom Penh. War broke out between Lon Nol's forces and those of the

Dith Pran.

Khmer Rouge, or “Red Cambodians,” another Communist group. The Khmer Rouge wanted Cambodia to return to farming to meet its citizens' needs and to destroy anything linked to the West. Pran moved his family to Phnom Penh and was hired as a guide and interpreter for *New York Times* reporters in the area, including Sydney Schanberg, who had come to Phnom Penh in 1972. The two became close friends, and by 1973 Pran worked only with Schanberg.

As the war continued, the Khmer Rouge seemed to become stronger. Meanwhile the United States had pulled its troops out of Vietnam, which was then overtaken by Com-

munist forces. In April 1975 American personnel left Phnom Penh as well. Knowing that the Khmer Rouge was about to win, thousands of Cambodians scrambled to escape. Pran helped his wife and their four children escape on a U.S. military truck, but he stayed to help Schanberg report the story of the Khmer Rouge takeover. Both men hoped that with the takeover complete, things would eventually calm down. But the Khmer Rouge soldiers entering the city soon displayed their true intentions.

“Year Zero” begins

What followed were attacks on shops, looting, and killings. Soldiers opened fire on people in the streets. Many were slaughtered in these first attacks, and many more were killed as almost three million Cambodians were forced out of the city. Pran, Schanberg, and two other reporters went to a hospital to see how many were dead or injured and were met by a group of armed Khmer Rouge soldiers. Pran talked the soldiers out of killing Schanberg and the others, saving their lives. Schanberg soon returned to the United States, where he looked after Pran’s wife and children in New York, New York.

Pran, meanwhile, was stuck in the new Cambodia, or “Kampuchéa” as the Khmer Rouge had renamed it. He dressed like a peasant and pretended to be a simple villager. It was a wise decision. The Khmer Rouge had orders to execute anyone who wore eyeglasses, perfume, makeup, watches, or other evidence of Western influence. As a symbol of the fact that Cambodia was starting over, 1975 was referred to as “Year Zero.” Pran made his way to a village twenty miles from Siem Reap, where he and other villagers were

forced to harvest rice while receiving political instruction at night. The workers were allowed to eat just one spoonful of rice per day. Pran and the other starving villagers ate anything they could find: bark, snakes, snails, rats, and even the flesh of dead bodies. One night Pran dared to sneak out to try to eat some raw rice. For this the guards ordered his fellow villagers to beat him and leave him outside in a rainstorm.

Nearly two million Cambodians were killed by the Khmer Rouge, but the rest of the world remained silent. Having withdrawn from Southeast Asia, the United States had turned its attention to other issues, and there were few protests of the Khmer Rouge killings. But Sydney Schanberg did not forget. He had received a Pulitzer Prize in 1976 for his Cambodia reporting, and he continued to search for his friend Pran. In January 1979, the Vietnamese invaded Cambodia and finally overthrew the Khmer Rouge. Pran returned to his hometown and found that over fifty members of his family had been killed. Wells were filled with skulls and bones, and the land was covered with graves. Nicknamed “killing fields,” these were distinguished from the nearby ground by the fact that the grass was greenest over them.

Death and life

The Vietnamese made Pran a village administrative chief. When a group of Eastern European reporters visited, he managed to get a message to Schanberg through a member of the East German media. But once the Vietnamese learned that Pran had been a reporter, he decided to escape before they could question him. In July 1979 Pran and

ELVIS PRESLEY

several others set out on a sixty-mile journey past land mines and the forces of the Vietnamese and Khmer Rouge. He arrived at the Thai border and entered a refugee camp there in October. He asked an American relief officer to contact Schanberg, who met him a week later. Schanberg helped Pran move to the United States, where he was reunited with his family. *The New York Times* gave him a job as a reporter, and Pran became a U.S. citizen in 1986.

Pran began to devote his spare time to helping fellow Cambodians who had suffered under the Khmer Rouge. He took several trips back to Cambodia and attempted to bring the Khmer Rouge to justice before the World Court. He and his wife operate the Dith Pran Holocaust Awareness Project, which maintains a photographic record on the Internet to assist Cambodians in finding missing family members. Pran interviewed twenty-nine people who had suffered during the takeover and published the results in 1997 as *Children of Cambodia's Killing Fields: Memoirs by Survivors*. For Pran, the ghosts of Cambodia remain, and the memories are "Still alive to me day and night," he said in an online interview at *The Site*. "It's unbelievable what [the Khmer Rouge] did to the Cambodian people."

Born: August 8, 1935

Tupelo, Mississippi

Died: August 16, 1977

Memphis, Tennessee

American singer

Elvis Presley, the "King of Rock 'n' Roll," was the leading American singer for two decades and the most popular singer of the entire early rock 'n' roll era.

Young Elvis and Sun Records

Elvis Aron Presley was born in Tupelo, Mississippi, on January 8, 1935, to Gladys and Vernon Presley. His twin brother, Jesse Garon Presley, died shortly after birth. His father worked as a carpenter, farmer, and factory worker to support the family but was not successful in any of his jobs. Raised in a poor and religious environment, Elvis grew especially close to his mother. Elvis's singing ability was discovered when he was an elementary school student in Tupelo, and he first started singing with the choir of his local church. He received his first guitar as a birthday present when he was about twelve and taught himself how to play, although he could not read music. He went on to participate in numerous talent contests in Tupelo and in Memphis, Tennessee, where the family moved when Elvis was thirteen.

In 1953, after Elvis graduated from L. C. Humes High School in Memphis, he began working as a truck driver to pay his way into the Memphis Recording Services studio to

Elvis Presley.

Reproduced by permission of the Corbis Corporation.

cut his own records. Less than a year later he recorded “That’s All Right Mama” for Sun Records. It became his first commercial release, selling twenty thousand copies.

The birth of rock ‘n’ roll

Elvis reached the top of the country charts with “Mystery Train” in 1955. His first number one song on the so-called “Hot 100” was “Heartbreak Hotel” (1956), which held that position for seven of the twenty-seven weeks it was on the chart. This song also reached the top of the country charts, and it became a symbol of his ability to combine country singing with rhythm-and-blues, as

well as with the new rage that had grown out of rhythm-and-blues: rock ‘n’ roll. The rest of the 1950s brought Elvis “living legend” status with records that included “Hound Dog” (1956), “Don’t Be Cruel” (1956), “Blue Suede Shoes” (1956), “Love Me Tender” (1956), “All Shook Up” (1957), and “Jailhouse Rock” (1957). He started the 1960s in similar fashion with “It’s Now or Never” (1960) and “Are You Lonesome Tonight?” (1960).

Elvis was universally dubbed the “King of Rock ‘n’ Roll” and led the new music from its beginnings in the 1950s to its peak in the 1960s and on to its permanent place in the music of the 1970s and the 1980s. His impact on American popular culture was tremendous, as he seemed to affect manner of dress, hairstyles, and even behavior. John Lennon (1940–1980) would later note Elvis as one of the most important influences on the Beatles. Even his spinning hip movements became legendary as he continued his rock ‘n’ roll conquest to the extent of 136 gold records (500,000 sold) and 10 platinum records (1 million sold). Ultimately he had the most records to make the rating charts and was the top recording artist for two straight decades, the 1950s and the 1960s.

Elvis in the movies

Elvis was an instant success in television and movies as well. Millions watched his television appearances on *The Steve Allen Show*, *The Milton Berle Show*, *The Toast of the Town*, and a controversial (open to dispute) appearance on the *The Ed Sullivan Show*, in which cameras were instructed to stay above the hips of “Elvis the Pelvis.” He was an even bigger box office smash, beginning with *Love Me Tender* in 1956. Thirty-two movies later, Elvis

had become the top box-office draw for two decades, with ticket sales over \$150 million.

Although few of Elvis's motion pictures were well-received by the critics, they showcased his music and extended his image and fame. His movies included *Jailhouse Rock* (1957), *King Creole* (1958), *G. I. Blues* (1960), *Blue Hawaii* (1961), *Girls! Girls! Girls!* (1962), *Viva Las Vegas* (1964), and *Spinout* (1966). *Wild in the Country* (1961), based on the J. R. Salamanca novel *The Lost Country*, marked his debut in a straight dramatic role.

Controversy

Elvis began a well-publicized stint in the army in 1958. That year, while he was stationed in Fort Hood, Texas, his mother died. The remainder of his military service was spent stationed in Germany, until his discharge (release) in 1960. It was in Germany that he met Priscilla Beaulieu (1945–), his future wife.

Elvis's success in the entertainment industry was accompanied by numerous failures in his personal life. He arranged to have Priscilla, still a teenager, live at his new Memphis home, Graceland Mansion, while she finished high school there. He married her in 1967, and she bore him his only child, Lisa Marie Presley, in 1968. In 1973 he and Priscilla were divorced. During this time, and for his entire career, his personal manager, Tom Parker, controlled his finances. As Elvis's millions grew, so too did the mismanagement of Parker, a known gambler. Parker was later prosecuted for his financial dealings, but he was acquitted (proven innocent). Elvis made an estimated \$4.3 billion in earnings during his lifetime, but he never acquired a concept of financial responsibility. This caused fre-

quent legal battles during and after his lifetime among his management people and several record companies. Elvis had similar luck with his friendships, and frequently surrounded himself with a gang of thugs to shield him from an adoring public.

Beginning of the end

A weight problem became evident in the late 1960s, and in private Elvis became increasingly dependent on drugs, particularly amphetamines and sedatives. His personal doctor, George Nichopoulos, would later be prosecuted, but acquitted, for prescribing and dispensing thousands of pills and narcotics (illegal drugs) to him.

Though Elvis's weight and drug dependency were increasing, Elvis continued a steady flow of concert performances in sold-out arenas well into the 1970s. On August 16, 1977, the day before another concert tour was about to begin, Elvis was found dead in Graceland Mansion by his fiancée, Ginger Alden. The official cause of death was heart disease, although information revealed after his death about his drug dependency created a media event. His death caused worldwide scenes of mourning.

Elvis continues to be celebrated as superstar and legend as much in death as he was in life. Graceland Mansion, which he had purchased in 1957 for \$102,500, is the top tourist attraction in Memphis and has attracted millions of visitors from both America and around the world.

Presley became the first-ever inductee into three music halls of fame when it was announced that he would be inducted into the Gospel Music Hall of Fame on November

27, 2001, in Nashville, Tennessee. He was already a member of the Rock and Roll Hall of Fame and Country Hall of Fame.

youngest child of a wealthy Jewish family. His father, Jacob, was a respected attorney, as well as an accomplished amateur pianist. Music was an important part of family life, and young André, wanting to participate, asked for lessons. After testing revealed that he had perfect pitch, he was enrolled in the Berlin Conservatory of Music at the age of six. As the threat of World War II (1939–45; a war in which German-led forces were crushed by those led by Britain, France, the Soviet Union, and, later, the United States) loomed, life under Nazi (the National Socialist German Workers' Party, which, under the control of Adolf Hitler [1889–1945], took control of Germany in 1933) rule became increasingly difficult, and in 1938 the family fled to Paris, France. Previn studied at the Paris Conservatory of Music until the family moved to the United States.

Life in Los Angeles, California, was different from life in Berlin and Paris in almost every way possible—from the climate and architecture to the language spoken and career opportunities available. Upon arrival to the United States, none of the family spoke English, including Previn's father, which made practicing law impossible. To make ends meet, he gave music lessons at home—yet nothing stood in the way of young Previn's musical education. He studied piano, theory, and composition from the best instructors available, Joseph Achron and Mario Castelnuovo-Tedesco.

Previn became an American citizen at the age of fourteen, about the same time he became obsessed by the most American of all musical forms—jazz. Previn began splitting time between his classical studies and jazz, and word of his talent spread. As a teenager

ANDRÉ PREVIN

Born: April 6, 1929

Berlin, Germany

German-born American composer, musician, and music director/conductor

German-born American composer André Previn has received acclaim in every musical venue explored during his exceptional career that has spanned more than six decades.

The gift

Born Andreas Ludwig Priwin in Berlin, Germany, on April 6, 1929, Previn was the

Previn practiced piano up to six hours a day. Eager to help his family financially, he quickly followed up when he heard that the movie studio Metro-Goldwyn Mayer (MGM) needed someone to compose a jazz arrangement (a musical score). This led to writing more arrangements, at first sporadically and then more regularly, several times a week after school. Seduced by Hollywood's glamour, he signed a contract with MGM when he turned eighteen. He also made his first recording on the Sunset label while still in his teens.

Virtuoso

Previn's career flourished in the late 1950s and early 1960s with musical hits that he adapted from the theatrical stage for films, and original scores he composed and conducted for other musicals and dramas. He became musical director at MGM, was nominated for sixteen Academy Awards, and won four.

Another part of Previn's musical talent was calling, however. According to his own account in *No Minor Chords, My Days in Hollywood*, he longed to be part of the inner circle of what he regarded as the legitimate world of classical music. Hollywood was not the place to write and perform serious music. In 1965 he began recording with the London Symphony Orchestra, and from 1967 to 1970, he was conductor-in-chief of the Houston Symphony Orchestra.

In 1969, while Previn was married to his second wife Dory Langdon, he began to be seen with actress Mia Farrow, ex-wife of popular singer Frank Sinatra (1915–1998). She gave birth to their twin sons, Matthew and Sascha in early 1970. The scandal resulted in Previn leaving the Houston Symphony Orchestra. Langdon and Previn divorced,

André Previn.

Reproduced by permission of AP/Wide World Photos.

and he married Farrow shortly thereafter. Due to career conflicts, they divorced in the late 1970s.

The Maestro

Life changed gradually until Previn accepted the appointment of principal conductor with the London Symphony Orchestra in 1969. In London he became a popular personality, appearing frequently on television to talk about music. He also toured throughout Europe and the United States with the London Symphony, and became especially well known for his interpretations of British and Russian symphonic works.

Throughout Previn's active conducting career—with the Pittsburgh Symphony Orchestra (1976–1984), the Los Angeles Philharmonic (1985–1989), and the Royal Philharmonic (music director, 1985–1988; principal conductor, 1988–1991), and as Conductor Laureate of the London Symphony (since 1993)—he continued to compose. Compositions included a *Symphony for Strings*; “Four Outings,” for brass quintet; a piano concerto, commissioned by Vladimir Ashkenzy; a cello sonata, written for Yo-Yo Ma; a song cycle, written for Dame Janet Baker; a music drama, *Every Good Boy Deserves Favour*, written in collaboration with playwright Tom Stoppard; and an opera based on Tennessee Williams's (1911–1983) *A Streetcar Named Desire*, commissioned by the San Francisco Opera in 1998.

In 1982 Previn married Heather Hales and they had one child. In the early 1990s he returned to one of his first loves—jazz. He resumed recording, and formed the Andre Previn Jazz Trio, which toured Japan, North America, and Europe in 1992 and 1993. In 1998 Previn was honored with an award for his career as a conductor and composer at the Kennedy Center Honors ceremony in Washington, D.C.

LEONTYNE PRICE

Born: February 10, 1927

Laurel, Mississippi

African American opera singer

Leontyne Price was a prima donna soprano (the lead female singer in an opera) and considered in most many circles as one of the finest opera singers of the twentieth century.

Early life and career

Mary Leontyne Price was born in Laurel, Mississippi, on February 10, 1927. Her parents were especially encouraging in developing their daughter's love of music. As a young girl, Price played piano and sang in her church choir. Nine-year-old Price was especially influenced when she saw American opera singer Marian Anderson (1897–1993) perform in Jackson, Mississippi. She claims this experience as the moment she knew she wanted to be an opera singer.

Educated in public schools in Laurel, Price then attended Central State College in Wilberforce, Ohio, where she received her bachelor of arts degree in 1948. Her particular interest was singing in the glee club at Central State, where she displayed an abundance of musical talent, and she decided to make a career of singing.

After Central State College, Price entered New York's Juilliard School of Music where she studied until 1952. At the same time she took private lessons under Florence Page Kimball. Price was the first African American singer to gain international star-

dom in opera, an art form previously reserved for the upper-class white society. Her success signified not only a monumental stride for her own generation, but for those that came before and after her.

Rising star

While still at Juilliard, Price exhibited her soprano (highest operatic voice) ability at various concerts and in her appearance as Mistress Ford in Giuseppe Verdi's (1813–1901) *Falstaff*. Virgil Thomson took notice of her performance and provided her with her Broadway stage debut in the Broadway revival of his *Four Saints in Three Acts*. Her ability then earned her the role of Bess in George Gershwin's (1898–1937) *Porgy and Bess* in a touring company that met with great successes in London, England; Paris, France; Berlin, Germany; and Moscow, Russia. She also played Bess when the company performed *Porgy and Bess* on Broadway. During the tour she married William Warfield, who sang the role of Porgy. Other composers took note of Price's ability, and in 1953 she sang premieres of works by Henri Sauget, Lou Harrison, John La Montaine, and Igor Stravinsky (188–1971), among others.

Price received overwhelming critical praise for her 1954 Town Hall concert in New York City and followed that with her first performance in grand opera (an opera where all of the text is sung), in 1955, as Floria in Giacomo Puccini's (1858–1924) *Tosca* on network television with the National Broadcasting Company (NBC) Opera. She made her first opera stage appearance in 1957 as Madame Lidoine in Francis Poulenc's *Dialogues of the Carmelites* with the San Francisco Opera Company. Price also toured Italy

Leontyne Price.

Reproduced by permission of AP/Wide World Photos.

successfully that year and sang *Aida* at La Scala in Milan. She continued to sing with the San Francisco Opera, as well as with the Lyric Opera of Chicago and other major opera houses in North America.

In 1960 Price portrayed Donna Anna in *Don Giovanni* at the Salzburg Festival in Austria. On January 27, 1961, she made her debut in New York's famous Metropolitan Opera as Leonora in *Il Trovatore*, which earned her thunderous applause and moved opera critics to regard her as one of the greats of the twentieth century. She also sang the title role at the Metropolitan Opera in *Madame Butterfly* and the role of Minnie in *La*

Franciulla del West (The Girl of the Golden West). Price appeared in 118 Metropolitan productions between 1961 and 1969. In 1965 she was awarded the Presidential Medal of Freedom by President Lyndon Johnson (1908–1973), who said, “Her singing has brought light to her land.”

One of Price’s greatest triumphs was her creation of the role of Cleopatra in Samuel Barber’s *Antony and Cleopatra*. Its premiere opened the 1966 Metropolitan Opera season as well as the beautiful new Metropolitan Opera House in Lincoln Center. Her best and favorite performances were as Verdi heroines Elvira in *Ernani*, Leonora in *Il Trovatore*, Amelia in *The Masked Ball*, and especially as Aida.

Later career

Price made other worldwide tours that included Australia and Argentina’s Teatro Colon in Buenos Aires in 1969. In the 1970s Price drastically cut the number of opera appearances, preferring to focus instead on her first love, recitals (solo performances), in which she enjoyed the challenge of creating several characters on stage in succession. In 1985, Price gave her final performance at New York’s Lincoln Center in the title role of Verdi’s *Aida*. She was fifty-seven years old.

Price made numerous recordings of music outside of opera and was awarded honorary degrees from Dartmouth College, Howard University, and Fordham University, among others. Music critics universally lavished praise on her voice and her portrayals. Divorced from Warfield in 1972, she lives in her homes in Rome, Italy, and New York.

In October of 2001, Price briefly came out of retirement to give her rendition of

“America the Beautiful” to a capacity crowd at Carnegie Hall. The performance opened a special ceremony dedicated to the memory of those who died in the terrorists attacks of September 11, 2001, when thousands died in New York City after two planes crashed into the World Trade Center.

E. ANNIE PROULX

Born: August 22, 1935

Norwich, Connecticut

American writer

E. Annie Proulx won the 1993 PEN/Faulkner Award for her novel *Postcards* and a Pulitzer Prize in 1994 for her next novel, *The Shipping News*.

Early life and education

Edna Annie Proulx was born on August 22, 1935, in Norwich, Connecticut, the

first of George Napoleon Proulx and Lois Nelly Gill Proulx's five children. Proulx's father was the vice president of a textile company. His family had come to the United States from Quebec, Canada. The family often moved to different places in New England and North Carolina because of her father's job. Her mother, a painter, encouraged her to notice everything around her. She was taught to observe the activities of ants and to notice every detail, the feeling of fabrics, and the unique parts of people's faces.

Proulx attended Colby College in Maine briefly in the 1950s but left to work different jobs, including waiting tables and working at the post office. She received a bachelor's degree in history from the University of Vermont in 1969 and a master's degree from Sir George Williams University in Montreal, Canada, in 1973. She then began working toward her Ph.D. (an advanced degree beyond a master's degree), but in 1975 she abandoned the idea, thinking she would not be able to find a teaching job. Proulx told *Contemporary Authors* that she was "wild" during those years. Her third marriage broke up at around the same time. As a result, Proulx became a single parent to her three sons.

Writing career

In tiny towns in Vermont, Proulx spent her time fishing, hunting, and canoeing, and began working as a freelance (not under contract) journalist. She wrote articles for magazines on many different topics. Her work appeared in publications such as *Country Journal*, *Organic Gardening*; and *Yankee*. In the early 1980s Proulx produced a series of

E. Annie Proulx.

Reproduced by permission of Mr. Jerry Bauer.

"how-to" books, including *Sweet & Hard Cider: Making It, Using It, and Enjoying It*; *The Fine Art of Salad Gardening*; and *Plan and Make Your Own Fences and Gates, Walkways, Walls and Drives*. She also created her own newspaper, the *Vershire Behind the Times*, which existed from 1984 to 1986. She also found time to average two short stories a year, nearly all of which were published.

In 1983 Proulx's career as a fiction writer was boosted by a notice in *Best American Short Stories*, an honor that was repeated in 1987. Proulx published her first book, *Heart Songs and Other Stories*, in 1988.

Against the beautiful backdrop of the New England countryside, her stories involve the struggles of people trying to cope with their complicated lives. Proulx illustrates the stories with sharp descriptions, such as a man who eats a fish “as he would a slice of watermelon” or a woman who is as “thin as a folded dollar bill, her hand as narrow and cold as a trout.”

Successful novels

Editors that worked with Proulx on her short stories suggested that she try to write a novel. She came up with *Postcards* (1992), the story of a man from New England who flees the family farm after accidentally killing his bride-to-be. The passages involving the man’s wanderings across the country come from Proulx’s own trip across America while doing research. The book was a professional and personal success. Proulx became the first woman to receive the PEN/Faulkner Award for fiction, which came with a fifteen thousand dollar bonus.

The very next year, Proulx capped this success by writing *The Shipping News*. A dark but comic tale set in Newfoundland, it is the story of an unlucky newspaper reporter named Quoye. It is packed with details, all drawn in a vibrant (full of life) lively style. The book resulted in a steady stream of awards: first, the Heartland Prize from the *Chicago Tribune*, followed by the Irish Times International Award, and the National Book Award. These honors were all topped by the 1994 Pulitzer Prize for fiction.

Later works

After becoming famous, Proulx found that she had less time to research and write.

In 1994 she had short stories published in *Atlantic Monthly* and *Esquire*. She bought a second home in Newfoundland, and by the spring of 1995 she had moved to Wyoming. In researching her next novel, Proulx became an expert on accordion music. She studied not how to play the instrument, but how to take one apart and then rebuild it. *Accordion Crimes*, released in 1996, is about the music of immigrants and particularly about different kinds of accordion music.

In 1999 Proulx released *Close Range: Wyoming Stories*, which won a book award from *The New Yorker* for best work of fiction. In 2001 *The Shipping News* was released as a film.

MARCEL PROUST

Born: July 10, 1871

Auteuil, France

Died: November 18, 1922

Paris, France

French author

French novelist Marcel Proust was one of the greatest writers of the twentieth century. His books abandoned plot

and dramatic action in favor of the narrator's descriptions of his experiences in the world.

Early years and education

Marcel Proust was born on July 10, 1871, in Auteuil, a suburb of Paris, France. His parents, Dr. Adrien Proust and Jeanne Weil, were wealthy. Proust was a nervous and frail child. When he was nine years old, his first attack of asthma (a breathing disorder) nearly killed him. In 1882 Proust enrolled in the Lycée Condorcet. Only during his last two years of study there did he distinguish himself as a student. After a year of military service, Proust studied law and then philosophy (the study of the world and man's place in it). Proust became known as a brilliant conversationalist with the ability to mimic others, although some considered him a snob and social climber.

Marcel Proust.

First works

In 1892 and 1893 Proust wrote criticism, sketches, and short stories for the journal *Le Banquet* and to *La Revue blanche*. His first work, *Les Plaisirs et les jours* (Pleasures and Days), a collection of short stories and short verse descriptions of artists and musicians, was published in 1896. Proust had made an attempt at a major work in 1895, but he was unsure of himself and abandoned it in 1899. It appeared in 1952 under the title of *Jean Santeuil*; from thousands of pages, Bernard de Fallois had organized the novel according to a sketchy plan he found among them. Parts of the novel make little sense, and many passages are from Proust's other works. Some, however, are beautifully written. *Jean Santeuil* is the biography of a made-up character who struggles to follow his artistic calling.

After abandoning *Jean Santeuil*, Proust returned to his studies, reading widely in other literatures. During 1899 he became interested in the works of the English critic John Ruskin (1819–1900), and after Ruskin's death the next year, Proust published an article that established him as a Ruskin scholar. Proust wrote several more articles on Ruskin, and with the help of an English-speaking friend, Marie Nordlinger, and his mother, Proust translated into French Ruskin's *The Bible of Amiens* (1904) and *Sesame and Lilies* (1906). Reading Ruskin's ideas on art helped him form his own ideas and move beyond the problems of *Jean Santeuil*.

In 1903 Proust's father died. The death of his mother two years later forced Proust into a sanatorium (an institution for rest and recovery), but he stayed less than two months. He emerged once again into society and into print after two years with a series of articles published in *Le Figaro* during 1907 and 1908. By November 1908 Proust was planning his *Contre Sainte-Beuve* (published in 1954; On Art and Literature). He finished it during the summer of 1909 and immediately started work on his great novel.

Remembrance of Things Past

Although Proust had by 1909 gathered most of the material that became *À la recherche du temps perdu* (Remembrance of Things Past), he still felt unable to structure the material. In January 1909 the combination of flavors in a cup of tea and toast brought him sensations that reminded him of his youth in his grandfather's garden. These feelings revealed the hidden self that Proust had spoken of in *Contre Sainte-Beuve*, and he felt that the process of artistic rebirth was the theme his novel required. In *À la recherche du temps perdu* Proust was mainly concerned with describing not real life but his narrator Marcel's view of it. Marcel traces his growth through a number of remembered experiences and realizes that these experiences reflect his inner life more truly than does his outer life.

Proust began his novel in 1909 and worked on it until his death. In 1913 he found a publisher who would produce, at the author's expense, the first of three projected volumes *Du Côté de chez Swann* (Swann's Way). French writer André Gide (1869–1951) in 1916 obtained the rights to publish the rest of the volumes. *À l'ombre des jeunes filles en*

fleur (Within a Budding Grove), originally a chapter title, appeared in 1918 as the second volume and won the Goncourt Prize. As other volumes appeared, Proust expanded his material, adding long sections just before publication. Feeling his end approaching, Proust finished drafting his novel and began revising and correcting proofs. On November 18, 1922, Proust died of bronchitis and pneumonia (diseases of the lungs) contracted after a series of asthma attacks. The final volumes of his novel appeared under the direction of his brother Robert.

PTOLEMY I

Born: c. 366 B.C.E.

Macedonia

Died: 283 B.C.E.

Macedonian military leader, general, and ruler

Ptolemy I (c. 366–283 B.C.E.) was a Macedonian general under Alexander the Great (356–323 B.C.E.) and

founder of the Ptolemaic dynasty of Egypt, a family of fifteen kings—all of whom were named Ptolemy—who reigned over Egypt for more than three hundred years.

Early life

Born in the upper Macedonian region of Eordaia to the Macedonian nobleman Lagos and Arsinoë, Ptolemy grew up in the royal court at Pella. Little is known about Ptolemy's childhood. In 343 B.C.E. he joined Alexander at Mieza where he studied for three years with the Greek philosopher Aristotle (384–322 B.C.E.).

Ptolemy returned to Pella with Alexander by 340 B.C.E. and supported his younger friend's quarrel with his father, Philip, the King of Macedonia. In 337 B.C.E. Alexander left Macedonia with his mother Olympias, Ptolemy, and his close friends for Epirus and Illyria but soon returned to Macedonia. Alexander's relationship with Philip remained sour, and the king forced Ptolemy from the court because he considered him a dangerous adviser to his son.

Alexander's adviser and general

In 336 B.C.E. when Philip was assassinated by a group of nobles, Ptolemy returned to the court and supported Alexander's claim to the throne. Alexander, in turn, appointed Ptolemy companion, lifeguard, and seneschal, an office in charge of the household and servants. Ptolemy accompanied Alexander on his military campaigns to regions in the Danube in 336 B.C.E. and to crush rebellion in Corinth and to destroy Thebes in 335 B.C.E.

Ptolemy stood beside Alexander, helping the young king expand his empire. Ptolemy encouraged and aided Alexander's invasion of

Ptolemy I.

Asia Minor to free the eastern Greeks from the Persian Empire of Darius III (died 330 B.C.E.) and to invade Syria and conquer Persia. Ptolemy fought at Issos in 333 B.C.E. and, riding beside Alexander, pursued Darius into the hills. He then accompanied Alexander through Phoenicia and in the conquering of Tyre in 332 B.C.E. and marched through Jerusalem to Egypt. In Egypt, Ptolemy aided Alexander's peaceful conquest of the country and the founding of the city of Alexandria, and probably accompanied his king to the temple of Zeus Ammon, in Siwa. Ptolemy quickly realized the immense value of Egypt, and he developed keen interests in the region.

From Egypt, Ptolemy accompanied Alexander to northern Mesopotamia for the third and final major conflict with Darius's armies, at Gaugamela in 331 B.C.E. During the next six years Ptolemy campaigned with Alexander through western India and along the Indus Valley. Ptolemy recognized Alexander's claim to the Persian throne without hesitation and revealed to Alexander the plot of the royal pages (messengers) to assassinate him. In India, Ptolemy fought beside Alexander and in one battle saved his king's life.

At Susa in 324 B.C.E., when Alexander asked his companions to marry Persians, Ptolemy agreed and married Artacama, the daughter of the Persian nobleman Artabazos. But after Alexander's death Ptolemy quickly divorced her.

Ruler of Egypt

With Alexander's death in Babylon on June 13, 323 B.C.E., Ptolemy's political and military ambitions were freed. He quickly recognized the problems of co-rulership with Alexander's half brother Arrhidaeios—who suffered from mental and physical disabilities—and his son Alexander, who was born shortly after Alexander the Great's death. Ptolemy immediately claimed Egypt as his satrapy, meaning that he became governor of the province. Ptolemy also stood strongly opposed to Perdikkas, to whom Alexander had given his signet ring (a ring engraved with a seal) and the regency (governing power) of the empire.

Ptolemy brought Alexander's body for burial to Memphis in Egypt, though Alexander had wished to be buried at Siwa. Ptolemy built an altar there for Alexander but kept the body at Memphis until a suitable mau-

soleum, or tomb, could be built in Ptolemy's new Egyptian capital, Alexandria.

Perdikkas's regency rapidly fell to violent warfare among Ptolemy, Lysimachos who held Thrace, Antigonos (382–301 B.C.E.) the "One-Eyed" in Greater Phrygia, and Seleucus who desired power in Syria. Until 281 B.C.E. the "successors" fought bitterly. In 306 B.C.E. Antigonos assumed the title of king and claimed all of Alexander's empire. In opposition, Ptolemy declared Egypt's independence, proclaimed himself king of Egypt, and established a powerful dynasty (a line of rulers from the same family) that would last until Cleopatra's (51–30 B.C.E.) suicide in 30 B.C.E.

After Ptolemy I divorced Artacama, he married the Macedonian noblewoman Eurydice. Unhappy with this political alliance, Ptolemy put her aside, and by 317 B.C.E. had married his widowed half-sister and lover, Berenice. The girl, a niece of Eurydice, was almost twenty-seven years younger than Ptolemy. Berenice gave birth to two children, Arsinoë (II) and Ptolemy (II).

Maintaining rule

In Upper Egypt, Ptolemy I founded the city Ptolemais. As satrap of Egypt, he clashed violently with Cleomenes of Naucrates, whom Alexander in 332 B.C.E. had appointed financial manager of Egypt and chief of the eastern delta (lands east of the Nile River) and had entrusted with the completion of Alexandria. Cleomenes, however, had assumed the satrapship, but Alexander had relieved him from duty. In 321 B.C.E. Ptolemy charged Cleomenes with embezzlement of funds (stealing money) and executed him, thereby removing a political rival.

Between 306 B.C.E. and 286 B.C.E. Ptolemy concentrated on the development of his empire. He gained control of Cyrene and conquered Palestine, coastal Syria, and Cyprus. In 286 B.C.E. he became protector of the southern Cycladic islands and their center at Delos. Throughout his empire he established the well-constructed Ptolemaic administration; he built the legal and military organizations and the military settlements, raised foreign armies, and raised native money for the military. Using Alexander's daily journal and other official materials, Ptolemy wrote an excellent history of Alexander and his campaigns. Greek historian Arrian's *Anabasis* (second century C.E.) preserved much of Ptolemy's study.

In 285 B.C.E. Ptolemy stepped down from his throne in favor of his twenty-two-year-old son, Ptolemy II. Two years later Ptolemy I died and was deified (given god-like status) by the young king in 279 B.C.E. and given the title Theos Soter, "God and Savior."

JOSEPH PULITZER

Born: April 10, 1847

Mako, Hungary

Died: October 29, 1911

Charleston, South Carolina

Hungarian-born American publisher and editor

Joseph Pulitzer, Hungarian-born editor and publisher, was important in the development of the modern newspaper in the United States.

Early years

Joseph Pulitzer was born in Mako, Hungary, on April 10, 1847, the son of Philip Pulitzer, a well-to-do grain dealer, and Louise Berger. Pulitzer was educated by private tutors, from whom he learned to speak German and French. Thin, with poor vision and weak lungs, he tried to enlist in the army in Europe but was turned down. In 1864 he left Hungary for the United States and became a soldier in the Union army during the Civil War (1861–65), when Northern and Southern American states fought mainly over the issue of slavery. After the war, the tall, red-bearded youth had no job and settled in St. Louis, Missouri, where there was a large German population. Pulitzer worked as a waiter, taxi driver, and a caretaker of mules before getting a job as a reporter on a newspaper called the *Westliche Post*.

A short time after joining the *Post*, Pulitzer was nominated (his name was put forward for consideration) for the state legislature by the Republican Party. His campaign was considered a long shot because he was nominated in a Democratic district. Pulitzer, however, ran seriously and won. In the legislature he fought graft (illegal gain) and corruption (improper conduct by elected officials). In one wild dispute he shot a man in the leg for saying that he had written an untrue story in the newspaper. Pulitzer escaped punishment with a fine that his friends paid.

Joseph Pulitzer.

Reproduced by permission of Archive Photos, Inc.

Newspaper acquisitions

Pulitzer was hard-working and ambitious. He bought the *St. Louis Post* for about three thousand dollars in 1872. He also bought a German paper and sold it at a twenty thousand dollar profit. These profits helped pay for his political activities and for law school. In 1876 Pulitzer was allowed to practice law in Missouri. He started a law practice, but he gave it up in 1878 after purchasing the troubled *St. Louis Dispatch* at a sheriff's sale for twenty-seven hundred dollars and combining it with the *Post*. Aided by his brilliant editor in chief, John A. Cockerill,

Pulitzer launched crusades against lotteries, gambling, and tax dodging; led drives to have streets cleaned and repaired; and sought to make St. Louis more civic-minded. The *Post-Dispatch* became a success.

In 1883 Pulitzer, then thirty-six, purchased the *New York World* for \$346,000 from businessman Jay Gould (1836–1892), who was losing forty thousand dollars a year on the paper. Pulitzer made the down payment (a portion of the total price paid at the beginning of a loan) from *Post-Dispatch* profits and made all later payments out of profits from the *World*. Even as Pulitzer's eyes began to fail in the 1880s (he went blind in 1889), he carried on a battle for readers with William Randolph Hearst (1863–1951), publisher of the *New York Journal*. In New York, New York, he promised that the *World* would “expose all fraud and sham, fight all public evils and abuses” and “battle for the people with earnest sincerity.” He concentrated on human-interest stories, scandal (behavior that causes loss of faith in a person), and sensational material. Pulitzer's *World* was a strong supporter of the common man. It often supported unions during strikes.

Later life

Pulitzer in the early part of his career opposed large headlines and art. Later, as his fight with Hearst increased in the 1890s, the two giants went to ever larger headline type and more fantastic art and engaged in questionable practices until Pulitzer decided things had gone too far and cut back. Pulitzer defended his methods, though, saying that people had to know about crime in order to fight it. He once told a critic, “I want to talk to a nation, not a select committee.”

Pulitzer died aboard his yacht in the harbor at Charleston, South Carolina, on October 29, 1911. In his will he provided two million dollars for the establishment of a school of journalism at Columbia University in New York City. Also, by the terms of his will, the prizes bearing his name were established in 1915. Pulitzer Prizes are awarded every year to honor achievements in journalism, literature, and music.

GEORGE PULLMAN

Born: March 3, 1831

Brocton, New York

Died: October 19, 1897

Chicago, Illinois

American industrialist

George Pullman was an American industrial businessman who developed the railroad sleeping car and

built a big business with it. He was one of the last industrialists (someone who owns and operates a large-scale business) to operate a company town.

Childhood and early career

George Mortimer Pullman was born on March 3, 1831, in Brocton, New York, but his parents soon moved to Portland, New York. After attending public schools, his formal education ended at the age of fourteen, shortly after the death of his father. Pullman then went to work in a general store and became the main source of income for his family. In 1848 Pullman joined his older brother in Albion, New York, where he worked as a cabinetmaker.

In 1853 Pullman became a general contractor and helped move several buildings that stood in the way of a project to widen the Erie Canal. (The Erie Canal is a key waterway in Lake Erie that connects the Great Lakes and opened the region to shipping.) Upon completion of that work in 1855 he moved to Chicago, where he entered the business of raising buildings onto higher foundations to avoid flooding—a problem caused by much of Chicago's land area being only a few feet above the level of Lake Michigan.

Railroads cars

The idea of a sleeping car for railroads was not new, and various efforts had been made to construct and operate such cars before Pullman joined the field. He formed a partnership with Benjamin Field, who had the rights to operate “sleepers” on the Chicago and Alton and the Galena and Union railroads. Pullman remodeled two

George Pullman.

Courtesy of the Library of Congress.

passenger cars into sleepers, using the structure of an upper bed hinged to the side of the car and supported by two jointed arms. Business grew slowly but steadily until the Civil War (1861–65), when Confederate (the South) and Union (the North) forces clashed over several issues, mainly secession, or the Confederacy's desire to leave the Union. In 1862 Pullman went to the Colorado gold fields, where he operated a trading store and in his spare time continued to develop his sleeping car.

Returning to Chicago, Pullman and Field constructed the "Pioneer" sleeping car, which became a classic in rail history. Its

first trip brought Abraham Lincoln's (1809–1865) widow from Washington, to Springfield, Illinois, shortly after the president's assassination. Other railroads began to use the Pullman car. In 1867, the year of Pullman's marriage, the Illinois legislature (governing body) began to regularly use the Pullman Palace Car Company, which eventually became the world's largest such building concern. At first, Pullman contracted for his cars (hired other companies to build them); in 1870 he began construction in Detroit, Michigan, although the headquarters remained in Chicago. The Pullman company always rented sleeping cars; it never sold them.

By 1880 Pullman owned the rights to land in the Calumet region of Chicago, where he constructed a new factory and a company town—a town where the chief employment for the town's residents comes from one company. Deeply disturbed by depressing city conditions, he believed his town could be a model of efficiency and healthfulness, though it was planned to return a 6 percent profit. The town cost over \$5 million to build, and a serious strike in 1894 marked the beginning of the separation of factory and town. Pullman died in Chicago on October 19, 1897.

ALEKSANDR PUSHKIN

Born: May 26, 1799

Moscow, Russia

Died: January 29, 1837

St. Petersburg, Russia

Russian author

Aleksandr Pushkin is ranked as one of Russia's greatest poets. He not only brought Russian poetry to its highest excellence, but also had a great influence on all Russian literature in the nineteenth and twentieth centuries.

Early years

Aleksandr Sergeevich Pushkin was born to Sergei and Nadezhda Pushkin on May 26, 1799. On his father's side he was a descendant of Russian nobility. On his mother's side he was related to an African lord. But by the time Aleksandr was born, the family had gradually lost most of their wealth and influence, and they were lowered to the position of minor nobility. Aleksandr's family life was far from ideal. His father was domineering and easily irritated, and his mother often left the young child alone in pursuit of her social ambitions.

Between 1811 and 1817 Pushkin attended a special school for privileged children of the nobility. Pushkin was not a very good student in most subjects, but he performed brilliantly in French and Russian literature.

Early works, 1814–1820

After finishing school, Pushkin led a wild and undisciplined life. He wrote about 130 poems between 1814 and 1817, while still at school. Most of his works written between 1817 and 1820 were not published because his topics were considered inappropriate.

In 1820 Pushkin completed his first narrative poem, *Ruslan and Ludmilla*. It is a romance composed of fantastic adventures but told with the humor of the previous century. However, even before *Ruslan and Ludmilla* was published in June 1820, Pushkin was exiled to the south of Russia because of the political humor he had expressed in his earlier poems. Pushkin left St. Petersburg on May 6, and he would not return for more than six years.

South of Russia

Pushkin spent the years from 1820 to 1823 in various places in the southern part of Russia, including the Caucasus and in the Crimea. He was happy there at first, but later, he felt bored by the life in small towns and took up again a life of gambling and drinking. He was always short of money. He worked as a civil servant (government worker), but did not make much money and his family refused to support him.

Pushkin began to earn money with his poetic works, but not enough to keep up with

Aleksandr Pushkin.

Reproduced by permission of the Corbis Corporation.

his wealthy friends. In 1823 he was transferred to Odessa, a larger city more to his liking. Then he moved to Mikhailovskoye, an estate owned by his family.

Mikhailovskoye, 1824–1826

When Pushkin arrived at Mikhailovskoye, his relations with his parents were not good. His father was angry at him. The family left the estate about mid-November, and Pushkin found himself alone with the family nurse. He lived alone for much of the next two years, occasionally visiting a neighboring town and infrequently entertaining old Petersburg friends. At this time the nurse told Pushkin

many folk tales, and it is believed that she gave him a feeling for folk life that showed itself in many of his poems.

Pushkin's two years at Mikhailovskoye were extremely rich in poetic output. Among other works, he wrote the first three chapters of *Eugene Onegin*, and composed the tragedy *Boris Godunov*. In addition, he composed many important lyrics (poetic dramas set to music) and a humorous tale in verse entitled *Count Nulin*.

His maturity

Pushkin was eventually forgiven by the new czar (Russian ruler), Nicholas I (1796–1855). The czar promised Pushkin that all of his works would be censored (edited for approval) by the czar himself. Pushkin promised to publish nothing that would harm the government. After some time this type of censorship became a burden for Pushkin.

Pushkin continued to live a wild life for awhile, but wanted to settle down. He proposed to Nathalie Goncharova in 1830. He asked his future in-laws for money and convinced them to provide him with land and a house. He continued to work on *Eugene Onegin*, wrote a number of excellent lyrics, and worked on, but did not finish a novel.

Eugene Onegin was begun in 1824 and finished in August 1831. This is a novel in verse (poetry) and most regard it as Pushkin's most famous work. It is a "novel" about life at that time, constructed in order to permit digressions (the moving away from the main subject in literary works) and a variety of incidents and tones. The heart of the tale concerns the life of Eugene Onegin, a bored

nobleman who rejects the advances of a young girl, Tatiana. He meets her later, when she is greatly changed and now sophisticated. He falls in love with her. He is in turn rejected by her because, although she loves him, she is married.

Marriage, duel, and death

After 1830 Pushkin wrote less and less poetry. He married Nathalie Goncharova in 1831. She bore him three children, but the couple were not happy together. His new wife had many other admirers. He challenged one of her admirers to a duel that took place on January 26, 1837. Pushkin was wounded and died on January 29. There was great mourning at his death.

Many of Pushkin's works provided the basis for operas by Russian composers. They include *Ruslan and Ludmilla* by Mikhail Glinka (1804–1857), *Eugene Onegin* and *The Queen of Spades* by Peter Ilyich Tchaikovsky (1840–1893), *Boris Godunov* by Modest Mussorgsky (1839–1881), and *The Golden Cockerel* by Nicolai Rimsky-Korsakov (1844–1908).

VLADIMIR PUTIN

Born: October 1, 1952

Leningrad, Russia

Russian president

When Vladimir Putin was appointed prime minister of Russia, very little was known about his background. This former Soviet intelligence agent entered politics in the early 1990s and rose rapidly. By August of 1999, ailing President Boris Yeltsin (1931–) appointed him prime minister. When Yeltsin stepped down in December of 1999, Putin became the acting president of Russia, and he was elected president to serve a full term on March 26, 2000.

Early life and education

Vladimir Putin was born on October 1, 1952, in Leningrad (now St. Petersburg), Russia. An only child, his father was a foreman in a metal factory and his mother was a homemaker. Putin lived with his parents in an apartment with two other families. Though religion was not permitted in the Soviet Union, the former country which was made up of Russia and other smaller states, his mother secretly had him baptized as an Orthodox Christian.

Though a small child, Putin could hold

his own in fights thanks to martial arts classes. By the age of sixteen he was a top-ranked expert at sambo, a Russian combination of judo and wrestling. By the time he was a teenager Putin had begun to display the ambition that he later became known for, and he attended a respected high school, School 281, which only accepted students with near-perfect grades. The institution was the only one in Russia to stress chemistry, which was Putin's interest. However, he soon moved toward liberal arts and biology. Putin played handball and worked at the school radio station, where he played music by the Beatles and other Western rock bands. Fascinated

with spy movies as a teen, he aspired to work for the KGB, the Russian secret service.

Work in the KGB

At Leningrad State University, Putin graduated from the law department in 1975 but instead of entering the law field right out of school, Putin landed a job with the KGB, the only one in his class of one hundred to be chosen. The branch he was assigned to was responsible for recruiting foreigners who would work to gather information for KGB intelligence.

In the early 1980s Putin met and married his wife, Lyudmila, a former teacher of French and English. In 1985 the KGB sent him to Dresden, East Germany, where he lived undercover as Mr. Adamov, the director of the Soviet-German House of Friendship, a social and cultural club. Putin appeared to genuinely enjoy spending time with Germans, unlike many other KGB agents, and respected the German culture.

Around the time Putin went to East Germany, Soviet leader Mikhail Gorbachev (1931–) was beginning to introduce economic and social reforms (improvements). Putin was apparently a firm believer in the changes. In 1989 the Berlin Wall, which stood for nearly forty years separating East from West Germany, was torn down and the two united. Though Putin supposedly had known that this was going to happen, he was disappointed that it occurred amid chaos and that the Soviet leadership had not managed it better.

Russian politics

In 1990 Putin returned to Leningrad and continued his undercover intelligence work

for the KGB. In 1991, just as the Soviet Union was beginning to fall apart, Putin left the KGB with the rank of colonel, in order to get involved in politics. Putin went to work for Anatoly Sobchak, the mayor of St. Petersburg, as an aide and in 1994 became deputy mayor.

During Putin's time in city government, he reportedly helped the city build highways, telecommunications, and hotels, all to support foreign investment. Although St. Petersburg never grew to become the financial powerhouse that many had hoped, its fortunes improved as many foreign investors moved in, such as Coca-Cola and Japanese electronics firm NEC.

On to the Kremlin

In 1996, when Sobchak lost his mayoral campaign, Putin was offered a job with the victor, but declined out of loyalty. The next year, he was asked to join President Boris Yeltsin's "inner circle" as deputy chief administrator of the Kremlin, the building that houses the Russian government. In March of 1999, he was named secretary of the Security Council, a body that advises the president on matters of foreign policy, national security, and military and law enforcement.

In August of 1999, after Yeltsin had gone through five prime ministers in seventeen months, he appointed Putin, who many thought was not worthy of succeeding the ill president. For one thing, he had little political experience; for another, his appearance and personality seemed boring. However, Putin increased his appeal among citizens for his role in pursuing the war in Chechnya. In addition to blaming various bombings in Moscow and elsewhere on Chechen terror-

ists, he also used harsh words in criticizing his enemies. Soon, Putin's popularity ratings began to soar.

Acting president of Russia

In December of 1999, Russia held elections for the 450-seat Duma, the lower house of Russia's parliament (governing body). Putin's newly-formed Unity Party came in a close second to the Communists in a stunning showing. Though Putin was not a candidate in this election, he became the obvious front-runner in the upcoming presidential race scheduled for June of 2000.

On New Year's Eve in 1999, Yeltsin unexpectedly stepped down as president, naming Putin as acting president. Immediately, Western news media and the U.S. government scrambled to create a profile of the new Russian leader. Due to Putin's secretive background as a KGB agent, there was little information. His history as a spy caused many Westerners and some Russians as well to question whether he should be feared as an enemy of the free world.

In Putin's first speech as acting president, he promised, "Freedom of speech, freedom of conscience, freedom of the press, the right to private property—these basic principles of a civilized society will be protected," according to a *Newsweek* report. In addition, Putin removed several of Yeltsin's loyalists and relatives from his cabinet.

Elected President

On March 26, 2000, Russians elected Putin out of a field of eleven candidates. After his election, Putin's first legislative move was to win approval of the Start II arms reduction

treaty from the Duma. The deal, which was negotiated seven years earlier, involved decreasing both the Russian and American nuclear buildup by half. Putin's move on this issue was seen as a positive step in his willingness to develop a better relationship with the United States. In addition, one of Putin's earliest moves involved working with a team of economists to develop a plan to improve the country's economy. On May 7, 2000, Putin was officially sworn in as Russia's second president and its first in a free transfer of power in the nation's eleven-hundred-year history.

Putin, a soft-spoken and stone-faced man, keeps his personal life very private. In early 2000, an American publishing company announced that in May it would release an English-language translation of his memoirs, *First Person*, which was banned from publication in Russia until after the March 26 presidential election.

Putin has made great efforts to improve relations with the remaining world powers. In July 2001, Putin met with Chinese President Jiang Zemin (1926–) and the two signed a “friendship treaty” which called for improving trade between China and Russia and improving relations concerning U.S. plans for a missile defense system. Four months later, Putin visited Washington, D.C. to meet with President George W. Bush (1946–) over the defense system. Although they failed to reach a definite agreement, the two leaders did agree to drastically cut the number of nuclear arms in each country. Early in 2002, Putin traveled to Poland and became the first Russian president since 1993 to make this trip. Representatives of the two countries signed agreements involving business, trade, and transportation.

PYTHAGORAS

Born: c. 575 B.C.E.

Samos, Greece

Died: c. 495 B.C.E.

Metapontum

Greek philosopher, scientist, and religious scholar

The Greek philosopher, scientist, and religious teacher Pythagoras developed a school of thought that accepted the passage of the soul into another body and established many influential mathematical and philosophical theories.

Early life

Born on the island of Samos, off Greece, in the Mediterranean Sea, Pythagoras was the son of Mnesarchus. Little is known about his early life. After studying in Greece, he fled to southern Italy to escape the harsh rule of Polycrates (died c. 522 B.C.E.), who came to power about 538 B.C.E. Pythagoras is said to have traveled to Egypt and Babylon during this time.

Pythagoras and his followers became politically powerful in Croton in southern Italy, where Pythagoras had established a school for his newly formed sect, or group of followers. It is probable that the Pythagore-

ans took positions in the local government in order to lead men to the pure life that was directed by their teachings. Eventually, however, a rival group launched an attack on the Pythagoreans at a gathering of the sect, and the group was almost completely destroyed. Pythagoras either had been forced to leave Croton or had left voluntarily shortly before this attack. He died in Metapontum early in the fifth century B.C.E.

Religious teachings

Pythagoras and his followers were important for their contributions to both religion and science. His religious teachings were based on the doctrine (teaching) of metempsychosis, which teaches that the soul never dies and is destined to a cycle of rebirths until it is able to free itself from the cycle through the purity of its life.

Pythagoreanism differed from the other philosophical systems of its time in being not merely an intellectual search for truth but a whole way of life which would lead to salvation, or to be delivered from sin. An important part of Pythagoreanism was the relationship of all life. A universal life spirit was thought to be present in animal and vegetable life, although there is no evidence to show that Pythagoras believed that the soul could be born in the form of a plant. It could be born, however, in the body of an animal, and Pythagoras claimed to have heard the voice of a dead friend in the howl of a dog being beaten.

Mathematical teachings

The Pythagoreans presented as fact the dualism (that life is controlled by opposite forces) between Limited and Unlimited. It

Pythagoras.

Reproduced by permission of the Corbis Corporation.

was probably Pythagoras who declared that numbers could uncover the secrets of the universe, limiting and giving shape to matter (anything that takes up space). His study of musical intervals, leading to the discovery that the chief intervals can be expressed in numerical ratios (relationships between numbers) between the first four integers (positive whole numbers), also led to the theory that the number ten, the sum of the first four integers, embraced the whole nature of number.

So great was the Pythagoreans' respect for the "Tetractys of the Decad" (the sum of $1 + 2$

+ 3 + 4) that they swore their oaths (promises) by it rather than by the gods, as was normal during his day. Pythagoras may have discovered the theorem which still bears his name (in right triangles [triangle with one angle equal to 90 degrees], the square on the hypotenuse equals the sum of the squares on the other sides), although this proposal has been discovered on a writing stone dating from the time of the Babylonian king Hammurabi (died c. 1750 B.C.E.). Regardless of their sources, the Pythagoreans did important work in extending the body of mathematical knowledge.

As a more general outline, the Pythagoreans presented the two contraries (opposites), Limited and Unlimited, as ultimate principles, or truths. Numerical oddness and evenness are equated with Limited and Unlimited, as are one and plurality (many), right and left, male and female, motionlessness and movement, straight and crooked, light and darkness, and good and bad. It is not clear whether an ultimate One, or Monad, was presented as the cause of the two categories.

Cosmological views

The Pythagoreans, as a result of their religious beliefs and careful study of mathematics, developed a cosmology (dealing with

the structures of the universe) which differed in some important respects from the world views at the time, the most important of which was their view of the Earth as a sphere which circled the center of the universe. It is not known how much of this theory was credited to Pythagoras himself.

The mathematical knowledge carried out by Pythagoras and his followers would have been enough to make him an important figure in the history of Western thought. However, his religious sect and the self-discipline and dedication which he taught, embracing as it did a vast number of ancient beliefs, make him one of the great teachers of religion in the ancient Greek world.

MU‘AMMAR AL-QADHAFI

Born: 1942

Surt, Libya

Libyan revolutionary, dictator, and army officer

Mu‘ammar al-Qadhafi led the revolution that set up the Libyan republic in 1969. His dream was to unite all Arab lands and create a system of “government by the masses.” However, by encouraging and helping provide funds for terrorist activities (the activities of people who use violence to try to get what they want) against Israel and its allies, he became

an enemy of many countries throughout the world.

Early life and influences

Mu‘ammar al-Qadhafi (also written as Qaddafi, Gheddafi, and Khadafi, among others) was born in 1942 in the desert region of Libya bordering the Mediterranean Sea along the Gulf of Sirte. His parents barely made a living herding sheep and goats. He was the last child and only son. Qadhafi was an intelligent boy, and his family made many sacrifices so that he could receive an education. While in school he became inspired by the ideas of Gamal Abdel Nasser (1918–1970), one of the strongest voices calling for Arab independence and unity and a man who had

Mu'ammār al-Qadhafī.

Reproduced by permission of AP/Wide World Photos.

helped overthrow King Farouk (1920–1965) of Egypt in 1952.

Qadhafi began to organize student protests against Israel, which had been at war with several Arab nations after gaining its independence in 1948. He was expelled as a result and moved to the city of Misurata, Libya, where he completed his high-school education between 1961 and 1963. At the same time he began to organize a movement to overthrow King Idris (1890–1983), who had become Libya's first head of state when the country won its independence from Italy in 1951. Qadhafi felt that King Idris allowed Western powers such as Britain and the

United States to have too much say in Libyan affairs. After joining the army in October 1963, Qadhafi found more supporters to help his cause.

Kingdom to republic

On September 1, 1969, when King Idris was out of the country for health reasons, Qadhafi put his plan into effect. He and his young officers easily took over government and military offices and proclaimed Libya an Arab republic. Qadhafi became president of the Revolutionary Command Council (RCC) and had total control over the new republic. Following the example of his hero, Nasser, Qadhafi called for the removal of American and British military bases from Libya. This action was completed in June 1970. Many reforms were begun, including the nationalizing (giving control or ownership to the national government) of Libya's foreign-owned banks and oil fields. Qadhafi spoke out in favor of Arab unity and strongly criticized Israel. He also urged Libyans to follow the strict teachings of the Islamic faith, such as those that ban smoking, drinking alcohol, and gambling.

Qadhafi announced the People's Revolution in a speech in April 1973. He claimed that he wanted to involve the people as much as possible in the exercising of political power by creating "elected people's committees." On March 2, 1977, the Socialist People's Libyan Arab Jamahiriyya (a term meaning "government by the masses") was proclaimed. Qadhafi called for the creation of "revolutionary committees" that did not have clearly defined powers but were called upon to "defend the Revolution." Some were worried about what Qadhafi's motives were. As a

result, there were many attempts, by both Libyans and the agents of foreign governments, to overthrow or kill Qadhafi in the early 1980s. He survived and remained the unquestioned leader of the republic, even though as part of the *Jamahiriyya* he had given up all formal titles.

Qadhafi was very active in foreign affairs, visiting many foreign countries and almost all Arab lands. He thought it was important to stress his opposition to Israel and his desire for Arab unity. However, his search for political agreements with other countries such as Sudan, Egypt, Tunisia, and Syria achieved only limited results and led to a great deal of mistrust. Qadhafi's opposition to Western interference with Libyan business also led to bad feelings between Libya and the United States. Moreover, the United States accused Libya of supporting armed opposition and terrorist movements in other countries.

Qadhafi claimed that his political concept, the Third Universal Theory, came from the principles of the Koran (the Islamic holy book) and was therefore in harmony with Islam. The publication of the three-part Green Book attempted to explain his ideas. It criticized representative democracies (the systems of government in which people elect representatives to make laws) as being dishonest. The book also claimed that political problems could be solved only by the direct participation of the masses in government, as laid down in the *Jamahiriyya*. Qadhafi also intended to create a business structure under which workers would become "partners, not employees." The Green Book also placed great emphasis on the role of the family. Himself married and the father of three children, Qadhafi lived simply, rejecting all luxuries and vices.

Supporter of terrorism

As acts of international terrorism became more frequent in the 1980s, Qadhafi drew increased attention as the source of training and funding for such activities. On December 27, 1985, Palestinian terrorists attacked airports in Rome, Italy, and Vienna, Austria. U.S. president Ronald Reagan (1911–) accused Libya of being behind the attacks, but Qadhafi denied involvement. On January 1, 1986, President Reagan ordered all U.S. citizens to leave Libya, and on April 14 the United States bombed the country. Nearly one hundred people were killed in the attack. Qadhafi was injured, and his infant daughter was killed.

After two Libyan men were accused of blowing up a Pan American jet over Lockerbie, Scotland, in 1988, killing 270 people, Qadhafi was ordered to turn over the suspects for trial. His refusal led the United Nations (UN) to impose sanctions (business or military measures adopted against a country to get that country to obey international law) against Libya. These sanctions were lifted in 1999 when the two men were finally brought to trial for the bombing. (One man was convicted.) However, a court in France ruled in 2000 that Qadhafi could be brought to trial in France for his role in another bombing in 1989. In that incident, 171 people were killed when a bomb exploded in a French airplane over the African country of Niger. Qadhafi continued to deny that he was a supporter of terrorism and refused demands that he make payments to families of victims.

Although U.S. sanctions against Libya remained in place, the removal of those imposed by the United Nations led to new efforts by Qadhafi to improve relations with other African and European countries. At a

July 2001 meeting of the Organization of African Unity, African leaders agreed to reorganize the group, to change its name to the African Union, and to work toward greater unity among all member nations. Qadhafi was the leader in the creation of this plan and spent \$1 million to support it. He also announced changes in Libya's government, including the dismissal of the prime minister and foreign minister. These changes, along with the executions of suspected spies and opponents of his policies, led many to believe that Qadhafi, remembering how he had come to power, was becoming more and more afraid of being overthrown himself.

WALTER RALEIGH

Born: c. 1552

Devonshire, England

Died: October 29, 1618

London, England

English explorer, statesman, and courtier

The English statesman Sir Walter Raleigh was also a soldier, explorer, and a man of letters (a distinguished writer). As a champion of overseas expansion into the New World, Raleigh was a victim of mistrust and Spanish hatred.

Early life

Born into a wealthy family, Walter Raleigh (or Ralegh) was the son of a farmer who earned a great deal of money in shipping ventures. Through his father, Raleigh gained an interest in seafaring. Raleigh spent time at Oriel College, Oxford, England, before leaving to join the Huguenot (Protestant) army in the French religious war in 1569. Five years in France saw him safely through two major battles and the massacre of St. Bartholomew's Day, where beginning August 24, 1572, more than seventy thousand French protestants were killed. By 1576 he was in London as a lodger at the Middle Temple and saw his poems in print. His favorite poetic theme, the temporary state of all earthly things, was

Walter Raleigh.

popular with other poets of the Renaissance, a time of great cultural change led by the works of great artists and writers.

After two years in obscurity, Raleigh accompanied his half brother, Sir Humphrey Gilbert, on a voyage apparently in search of a Northwest Passage to the Orient (Eastern Asia). The voyage quickly developed into a privateering mission against the Spanish, where Raleigh hired out his ship to attack the Spanish. On their return in 1579, Raleigh and Gilbert faced the displeasure of the Privy Council, the advisors to the King. Raleigh's behavior did little to please the council, and he was imprisoned twice in six months for

disturbing the peace. Once out of jail, and at the head of a company of soldiers, he sailed to serve in the Irish wars.

Progress at court

Extravagant in dress and behavior, handsome, and superbly self-confident, Raleigh rose rapidly at court, which consisted of the royal family and its advisors. His opinion of Ireland was accepted by Queen Elizabeth (1558–1603), and she kept him home as an adviser. He received royal favor as well, including a house in London and two estates in Oxford.

Raleigh was knighted (given the honorary distinction of knighthood) in 1584 and the next year became the chief officer of the stannaries (or mines) in Devon and Cornwall, lord lieutenant of Cornwall, and vice admiral of the West. Although he was hated for his arrogance, his reforms (improvements) of the mining codes made him very popular. He sat for Devonshire in the Parliaments (meetings of the governing body of England) of 1584 and 1586 and then went on to succeed Sir Christopher Hatton as captain of the Queen's Guard—his highest office at court.

Overseas

By 1582 Humphrey Gilbert had organized a company to settle English Catholics in the Americas. Although forbidden by Elizabeth to accompany his half brother, Raleigh invested money and a ship of his own design to the mission. After Gilbert's death on the return from Newfoundland, a region that is now a province of eastern Canada, Raleigh was given a charter (authority from the queen) to "occupy and enjoy" new lands. Raleigh sailed as soon as he had his charter and reached the

Carolina shore of America, claiming the land for himself.

At the same time, Raleigh sought to persuade Elizabeth into a more active role in his proposed colonizing venture, which would settle lands newly discovered in America. Although unconvinced, she reluctantly gave a ship and some funds. Raleigh remained at court and devoted his energies to financing the operation. The first settlers were transported by Raleigh's cousin Sir Richard Grenville (1542–1591). Fights, lack of discipline, and hostile Indians led the colonists to return to England with Francis Drake (c.1543–1596) in 1586, bringing with them potatoes and tobacco—two things unknown in Europe until that time.

John White (died c.1593) led a second expedition the next year. The coming of the Spanish Armada (a large fleet of warships) delayed the sending of supplies for more than two years. When the relief ships reached the colony in 1591, it had vanished. Raleigh sent other expeditions to the Virginia coast but failed to establish a permanent settlement there. His charter would eventually be withdrawn by James I (1566–1625) in 1603.

Retirement from court

In 1591 Raleigh was to have gone to sea in search of the Spanish fleet, but Elizabeth refused permission. Instead, Grenville was sent and soon trapped by Spanish forces. Raleigh raised a new fleet to avenge his cousin. Upon his return Raleigh was imprisoned for a short time in the Tower of London because the queen had discovered his relationship with Elizabeth Throgmorton, one of her own maids of honor. (Raleigh later married Elizabeth Throgmorton.)

In 1596 Raleigh and his court rival, Robert Devereux (1566–1601), led a brilliantly successful raid on Cadiz, Spain, and he seemed to have finally satisfied Elizabeth. He was readmitted to court, continued to serve in Parliament, held more naval commands, and became governor of the island of Jersey. With Devereux's execution for treason (crimes against one's country), Raleigh's place as Elizabeth's favorite seemed secure. But the queen herself was near death, and Raleigh's enemies lost no time in poisoning the mind of James Stuart (1566–1625), her successor, against him.

His imprisonment

After James I took the throne, Raleigh was dismissed from his posts and forced out of his London house. Soon after, he was falsely connected to a plot against the king and was once again sentenced to the Tower, where he attempted to kill himself. Raleigh was sentenced to death, a sentence that would later be dropped. He was imprisoned for thirteen years.

Raleigh attracted the sympathy and friendship of James's eldest son, Henry, who sought his advice on matters of shipbuilding and naval defense. Raleigh dedicated his monumental "History of the World," written during this period of imprisonment, to the prince. Henry protested Raleigh's continued imprisonment but died before he could effect his release.

Last voyage

Freed early in 1616, Raleigh invested most of his remaining funds in the projected voyage to search for gold mines in South America. The expedition, which sailed in June of the follow-

ing year, was a disastrous failure. No treasure or mines were found, and Raleigh's men violated James's strict instructions to avoid fighting with Spanish colonists in the area. Still worse, during the battle with the Spaniards, Raleigh's eldest son, Walter, was killed.

Upon his return Raleigh was arrested once again. James and Sarmiento, the Spanish ambassador, wanted him tried on a charge of piracy, but since he was already under a sentence of death, a new trial was not possible. His execution would have to proceed from the charge of treason of 1603. James agreed to this course, and Raleigh was beheaded on October 29, 1618.

SRI

RAMAKRISHNA

Born: February 18, 1833

Kamapur, India

Died: August 16, 1886

Calcutta, India

Indian religious leader and mystic

Sri Ramakrishna was an Indian mystic (one whose religious beliefs are based on spirituality and practices outside of traditional religion), reformer, and saint who, in his own lifetime, came to be hailed by people of all classes as a spiritual embodiment (taking on the physical form) of God.

Childhood

Born in a rural Bengal village in India, Sri Ramakrishna was the fourth of five children. His parents were simple but traditional Brahmins (Hindu religion) deeply committed to the maintenance of traditional religious piety, or religious devotion. Legend has it that when Ramakrishna's father, Khudiram, made a pilgrimage (religious journey) to the holy place of Gaya, he had a vision of the Hindu god Vishnu, who told Khudiram he would be reincarnated (take the form) of his next son. Likewise, Ramakrishna's mother, Chandra Devi, had visions that her next born would be a divine (god-like) child. Shortly afterwards, Chandra Devi gave birth to Sri Ramakrishna.

As a child, Ramakrishna did not like routine schoolwork and never learned to read or write. Instead, he began to demonstrate spiritual qualities well beyond his years, which included experiencing intensely joyful experiences, long periods of thought, and spiritual absorption in the sacred (holy) and traditional Indian plays, especially with the roles of the gods Shiva and Krishna. During his formal initiation ceremony into the Brahmin caste (an Indian social class), he shocked his high-caste relatives by openly accepting a ritual meal cooked by a woman of low caste.

Though Ramakrishna resisted traditional priestly studies, at the age of sixteen he went to Calcutta, India, to assist his brother, who

was serving as a priest for a number of local families. He was disturbed by the gross business practices and inhumanity of the city environment. However, when his brother was asked to become a priest at a large temple complex at Dakshineswar near the Ganges River outside Calcutta, Ramakrishna found a new and ultimately permanent environment for his spiritual growth and teaching.

Spiritual struggles

That temple complex—one of the most impressive in the area—had been built by a wealthy widow of low caste whose spiritual ideal (standard) was the mother goddess Kali. This great deity (god) traditionally combines the terror of death and destruction with universal motherly security and is often represented in a statue of ferocious appearance. She represents an immense variety of religious and human emotions, from the most primitive to the highest forms, and therefore has a symbolic universality not easily contained within traditional religious forms.

Ramakrishna was selected to serve as priest in the Kali temple, and it was here that he had a series of important religious experiences in which he felt that Kali was calling him to a universal spiritual mission for India and all mankind. His untraditional and often bizarre behavior during this period of spiritual transformation was interpreted by many as a sign of madness. However, it clearly represented his struggles to free himself from routine religious patterns and to achieve a new and deeper spirituality. He imitated the actions of the god-monkey Hanuman (a sign of humility and service); he fed animals from the same food prepared for Kali (a disrespect to the traditionalists); he cleaned an outcaste's hovel (the shack

Sri Ramakrishna.

of a person expelled from his or her caste) with his hair, a terrible insult for a Brahmin; he sang and danced wildly when the spirit moved; and he rejected his Brahminical status, believing that caste superiority lowered the character of his spirituality. All of these acts symbolized his inward spiritual transformation.

Spiritual maturity

When Ramakrishna was twenty-eight his emotional confusion eased, and he began to study a wide variety of traditional religious teachings. His teachers were impressed with his ability to learn, his amazing memory, and his remarkable talent for spiritual skill. He was openly hailed as a supreme sage, one who

is regarded for his wisdom and experience. At the age of thirty-three he began to study Muslim tradition, and after a short period of instruction he had a vision of a “radiant figure”—interpreted as the founder of Islam Mohammed (c. 570–632) himself, which solidified his universal religious calling.

In 1868 Ramakrishna undertook an extensive pilgrimage; but despite the honors given to him he was saddened by the poverty (extremely poor conditions) of the masses and began living with outcaste groups to bring awareness to their situation, insisting that his rich patrons (supporters) make formal efforts to improve their condition. He was always a man of the people: simple, full of warmth, and without snobbishness or religious dogma (system of beliefs).

World mission

By now Ramakrishna had a wide following from all classes and groups. He was not merely a great teacher; he was regarded as a physical form of the sacred source of Indian religious tradition and of the universal ideals toward which all men strive. His spiritual energies and attractive personality were combined with a sharp sense of humor—often aimed at himself or his disciples (followers) when the hazards of pride and self-satisfaction seemed impossible to avoid.

During the last decade of his life, one of the most important events was the conversion of his disciple Vivekananda (1863–1902), who was destined to organize and promote Ramakrishna’s teachings throughout India, Europe, and the United States. In 1886, when Ramakrishna was near death, he formally designated Vivekananda his spiritual heir, or one who takes over his teachings.

Ramakrishna’s teachings do not appear in any clear form. He wrote nothing. His disciples recorded his words only in the context of the spiritual force of his personality, and therefore in collected form these sayings have the character of a gospel—a message of salvation centered in the spiritual teachings of his own life. He rejected all efforts to worship him personally; rather, he suggested that his presentation of man’s spiritual potential serve as a guide and inspiration to others. Above all, Ramakrishna had a “grass-roots” appeal equaled by few others in any religious tradition, marked by his love of all men and his enthusiasm for all forms of spirituality.

**A. PHILIP
RANDOLPH**

Born: April 15, 1889
Crescent City, Florida

Died: May 16, 1979

New York, New York

*African American civil rights leader
and trade unionist*

The American labor and civil rights leader A. Philip Randolph, considered the most prominent of all African American trade unionists, was one of the major figures in the struggle for civil rights and racial equality.

Early life and education

Asa Philip Randolph was born in Crescent City, Florida, on April 15, 1889, the second of two sons of James and Elizabeth Randolph. His father was a traveling minister of the African Methodist Episcopal Church and his mother was also devoted to the church. Both of his parents were strong supporters of equal rights for African Americans. The young Randolph had a close relationship with his older brother, William. The brothers' early childhood games included role playing in which they worked for African American rights. The family moved to Jacksonville, Florida, in 1891. Asa attended local primary schools and later went on to the Cookman Institute in Jacksonville, Florida.

In the spring of 1911 Randolph left Florida for New York City, where he studied at the City College of New York while working as an elevator operator, a porter, and a waiter. While taking classes at the City College, Randolph discovered great works of literature, especially those of English playwright William Shakespeare (1564–1616), and he also began to sharpen his public speaking skills.

Beginning the fight

Following his marriage in 1914 to Lucille E. Green, he helped organize the Shakespearean Society in Harlem and played the roles of Hamlet, Othello, and Romeo, among others. At the age of twenty-one Randolph joined the Socialist Party of Eugene V. Debs (1855–1926). (The Socialist Party is a political party that believes the producers, or working class, should have the political power and ability to distribute goods.) In 1917 Randolph and Chandler Owen founded the *Messenger*, a radical publication now regarded by scholars as among the most brilliantly edited work in African American journalism.

Randolph's belief that the African American can never be politically free until he was economically secure led him to become the foremost supporter of the full integration of black workers into the American trade union movement (bringing blacks into the ranks of trade unions, which fight for the rights of workers). In 1925 he undertook the leadership of the campaign to organize the Brotherhood of Sleeping Car Porters (BSCP), which would become the first African American union in the country. The uphill battle, marked by fierce resistance from the Pullman Company (who was then the largest employers of African Americans in the country), was finally won in 1937 and made possible the first contract ever signed by a white employer with an African American labor leader. Later, Randolph served as president emeritus (honorary president) of the BSCP and a vice-president of the American Federation of Labor and Congress of Industrial Organizations.

A. Philip Randolph.

Making changes

In the 1940s Randolph developed the strategy of mass protest to win two major executive orders, or orders from the government. In 1941, with America's entrance into World War II (1939–45), he developed the idea of a massive march on Washington, D.C., to protest the exclusion (to keep out) of African American workers from jobs in the industries that were producing war supplies. He agreed to call off the march only after President Franklin Roosevelt (1882–1945) issued Executive Order 8802, which banned discrimination (selection based on race) in defense plants and established the nation's

first Fair Employment Practice Committee. In 1948 Randolph warned President Harry Truman (1884–1972) that if segregation (separation based on race) in the armed forces was not abolished (to put an end to), masses of African Americans would refuse entering the armed forces. Soon Executive Order 9981 was issued to comply with his demands.

In 1957 Randolph organized the Prayer Pilgrimage to Washington to support civil rights efforts in the South, and in 1957 and 1958 he organized a Youth March for Integrated Schools. In August 1963, Randolph organized the March on Washington, D.C., fighting for jobs and freedom. This was the site of Martin Luther King Jr.'s (1929–1968) famed "I Have a Dream," speech, and a quarter million people went in support. Randolph was called "the chief" by King. And in 1966, at the White House conference "To Fulfill These Rights," he proposed a ten-year program called a "Freedom Budget" which would eliminate poverty for all Americans regardless of race.

Legacy

The story of Randolph's career reads like a history of the struggles for unionization (creating trade unions) and civil rights in this century. He lent his voice to each struggle and enhanced the development of democracy (government by the people) and equality in America. Randolph always said that his inspiration came from his father. "We never felt that we were inferior to any white boys," Randolph said. "We were told constantly and continuously that 'you are as able,' 'you are as competent,' and 'you have as much intellectuality as any individual.'" Randolph died on May 16, 1979.

However, Randolph's message lived on. Seventeen years after his death, Randolph's civil

HARUN AL-RASHID

rights leadership and labor activism became the subject of a 1996 Public Broadcasting Service (PBS) documentary, "A. Philip Randolph: For Jobs and Freedom." The tribute that took him from "obscurity" to a force that "moved presidents," was presented during Black History Month, in February, telling his story through reenactments, film footage, and photos.

Included were powerful images of the quest, including the formation of the National Association for the Promotion of Labor Unionism Among Negroes in 1919 and the twelve-year battle to organize porters in spite of the Pullman Company's use of spies and firings to stop it.

Throughout Randolph's years as a labor and civil rights leader, he rocked the foundations of racial segregation, pressuring presidents and corporations alike to recognize the need to fix the injustices heaped on African Americans. Embracing a nonviolent, forward-looking activism, Randolph will be remembered as both a radical activist and "Saint Philip."

Born: c. 766

Reyy, Persia

Died: c. 809

Tus, Persia

Persian caliph

Harun al-Rashid became the fifth caliph (religious and political leader of an Islamic state) of the Abbasid dynasty (ruling family) in September 786 at the age of twenty. During his reign the power and prosperity of the dynasty was at its height, though it has also been argued that its decline began at that time.

Early life

Harun al-Rashid was born at Reyy near Tehran, Iran, in 766. He was the third son of the third Abbasid caliph, Mohammed al-Mahdi and his wife Khayzurán, a former slave from Yemen. Harun was raised as a prince in the court at Baghdad, Iran. At the age of sixteen he was named second heir after his older brother, Musa al-Hadi.

Rashid's instructor and aide during his early youth was Yahya ibn Khalid the Barmakid (a powerful Persian family). Yahya continued to advise Rashid when he was named the leader of military expeditions against the Byzantines at age fourteen. The Byzantines were inhabitants of Byzantium, the seat of the Christian Empire. Rashid was rewarded for the success of these campaigns by being named governor of Ifriqiyah (Tunisia), Egypt, Syria, Armenia, and Azerbaijan Province in Iran. The honorific, or title, of al-Rashid (the Upright) was added to his name.

Harun al-Rashid.

Tony Stone Impressions.*

Rashid's father died in 785 and his brother al-Hadi assumed the throne. Al-Hadi, however, died mysteriously in September 786. His death was said to have been the result of a court conspiracy or plot. Rashid was proclaimed caliph. He at once appointed Yahya as his vizier, or primary minister.

His reign

Rashid, for the first seventeen years of his reign, relied to a great extent on his vizier and two of the vizier's sons, al-Fadl and Jafar. Yahya appears to have been an exceptionally

good administrator. He is known for showing great wisdom in selecting and training his staff. His two sons had similar qualities. However, they fell from favor suddenly on the night of January 28, 803, when they were imprisoned and had their lands taken from them. The basic reason for this action was that the Barmakid family had become too powerful.

By this time Rashid was finding it difficult to hold his vast empire together. There was an almost constant series of local uprisings. An independent territory was established in Morocco by the Idrisid dynasty in 789. The following year, a semi-independent territory was established in Tunisia by the Aghlabid dynasty. These events marked a significant loss of power by Rashid's central government.

The danger of breaking up the government was further increased by Rashid's unwise arrangement for succession. One son, al-Amin, was to become caliph and another son, al-Mamun, was to have control of certain provinces and of a section of the army.

The seat of the Christian Empire was Byzantium (Constantinople). Rashid took a personal interest in the campaigns against the Byzantines. He led expeditions against them in 797, 803, and 806. In 797 the Byzantine empress Irene made peace and agreed to pay a large sum of money. Her successor, the emperor Nicephorus, later denounced this treaty. In 806 he was forced to make an even more humiliating treaty, which required paying annual tribute to Baghdad.

Though it is not mentioned in Arabic sources, there seem to have been diplomatic contacts between Rashid and Charlemagne

(c. 742–814), the most famous European ruler of the Middle Ages. Rashid recognized Charlemagne as protector of Christian pilgrims to Jerusalem.

Rashid died at Tus in eastern Persia in 809, during an expedition to restore order there.

The view of history

The poet Alfred, Lord Tennyson, thinking of some of the stories of the *Arabian Nights*, spoke of “the good Haroun Alraschid.” However, the scholar R. A. Nicholson thought he was an “irascible [irritable; readily angered] tyrant, whose fitful amiability [good-naturedness] and real taste for music and letters hardly entitle him to be described either as a great monarch or a good man.”

Despite all its violence and cruelty and its readiness to have human beings executed and tortured, the court of Harun al-Rashid undoubtedly had something which later ages admire. It was far from being without a conscience, and in the quality of its living there were elements of grandeur and a nobility of style; and the tone of this life was set by Rashid and the Barmakids.

RONALD REAGAN

Born: February 6, 1911

Tampico, Illinois

American president, actor, and governor

Beginning as a radio sports announcer, Ronald Reagan enjoyed success as a movie actor and television personality before beginning a political career. After two terms as governor of California (1967–1975), he defeated Democrat Jimmy Carter (1924–) for the presidency in 1980 and was re-elected in 1984.

Illinois youth

Born on February 6, 1911, in Tampico, Illinois, Ronald Wilson Reagan was the second son of John Edward (“Jack”) and Nelle Wilson Reagan. His parents were relatively poor, and Jack Reagan moved the family to a number of small Illinois towns trying to establish himself in business. When Ronald was nine the family moved to Dixon, Illinois, where he grew to adulthood.

Nicknamed “Dutch,” young Reagan liked solitude but was popular. He enjoyed nature, reading, and especially sports. His father’s alcoholism caused problems at home, but his mother was a powerful force for stability. As a teenager and young man, Reagan gained fame for his accomplishments as a lifeguard, rescuing seventy-seven people during the summers of 1926 to 1933, while working in a park along Illinois’s Rock River. (Reagan also dove into the river to “save” one swimmer’s dentures from the river bottom—for which he received a ten-dollar tip.) Rea-

gan graduated from Dixon High School in 1928 and enrolled the following fall at Eureka College, a small Illinois school affiliated with his mother's church. He graduated from Eureka in 1932.

On the air and screen

Graduating in the middle of the national and world economic crisis known as the Great Depression (1929-39), Reagan eventually found a job in Davenport, Iowa, as a sports announcer for a radio station. His skill soon earned him a position at WHO in Des Moines, Iowa. At the station one of his chief duties was to reconstruct Chicago Cubs baseball game broadcasts from reports sent by telegraph (a communication device that uses coded signals to send messages). In 1937 Reagan persuaded WHO to send him to cover the Cubs' spring training games in California. However, his real motive was to try to launch an acting career in Hollywood, and he was soon appearing in the movies.

As an actor Reagan received decent reviews, but not especially good roles. In 1940, however, he landed a role that made him famous, playing college football star George Gipp in the movie *Knute Rockne—All American*. In January 1940 he married actress Jane Wyman (1914–), with whom he had a daughter and adopted a son, although another infant born to them died in June 1947. The marriage began to fail shortly thereafter, and Reagan and Wyman divorced in June of 1948.

Part of the cause for the divorce was apparently Reagan's near-obsession in the late 1940s with the business of the Screen Actors Guild. He was president of the guild, which is the labor union for movie actors, from

1947 to 1952, and again in 1959. During this time he also became well known for his strong anticommunist views. Meanwhile, his own acting career began to falter, as he was offered a limited range of roles. Personally, however, he achieved happiness with his marriage in March 1952 to actress Nancy Davis (1921–). The couple had two children.

Disappointed by his diminishing movie opportunities and financially pressed, Reagan soon turned to television. Signed by the General Electric (G.E.) company in 1954 as the host of the company's weekly half-hour dramatic series, *General Electric Theater*, Reagan was a TV success. Taking advantage of Reagan's popularity, G.E. insisted that he go on personal appearance tours, speaking at G.E. factories. Within a few years, he perfected "the speech": a salute to private enterprise with an "anticollectivist" (anticommunist) message, combined with a sales pitch for G.E. products.

Governor and candidate

In 1962 Reagan formally registered as a member of the Republican Party. He began to plunge full time into political activities. He captured national attention with a speech supporting Republican presidential candidate Barry Goldwater in 1964.

By early 1965 a group of prominent California conservatives (people who resist change and prefer to keep traditions) decided Reagan should run for governor of their state. Benefiting from massive financial support, shrewd campaigning, and a strong conservative trend among California's voters, Reagan easily won the Republican primary. Running against Democratic governor Edmund G. (Pat) Brown (1905–1996) in the general election, he won with 58 percent of the vote in 1966.

Reagan took immediate, dramatic action as governor, approving sweeping cuts in the state's budget and a freeze on additional hiring for state agencies. He also raised state income-tax rates. Reelected in 1970, he established a reputation for sound financial management and pressed for reform of the state welfare system, tightening the requirements applicants needed to meet in order to receive aid from the state.

During his first term Reagan made an energetic run for the 1968 Republican presidential nomination. He did not win the nomination, but his campaign established him as a future presidential possibility. In 1976 he gave Republican president Gerald Ford (1913–) a hard but unsuccessful race for his party's nomination. Reagan then became his party's leading candidate for the 1980 Republican nomination.

Early White House years

After announcing his candidacy once again in late 1979, Reagan campaigned aggressively as a strong conservative. His masterful performance in a televised debate with President Jimmy Carter (1924–) sealed his victory. In November 1980 Reagan became the nation's fortieth president. His election was viewed by many as a “new beginning,” as the Republicans also won control of the Senate.

As chief executive Reagan maintained generally high ratings in public-opinion polls. He was wounded in March 1981 when John Hinckley attempted to assassinate him, an event that boosted public support still further. Although he irritated his most conservative supporters when, in 1981, he appointed the first female Supreme Court justice, San-

Ronald Reagan.
Courtesy of the Library of Congress.

dra Day O'Connor (1930–), he kept most of his conservative following by sticking to his goal of reducing taxes and increasing defense spending while also reducing spending for social programs. In 1981 Reagan persuaded Congress to pass a large, three-year reduction in income-tax rates, even though federal deficits were more than \$100 billion per year. The issue of deficits—spending that exceeds revenue—continued to trouble the Reagan presidency.

The “Great Communicator”

Reagan's skill in handling the media earned him the nickname the “Great Commu-

nicator” and allowed him to become the spokesman and symbol of the political movement that elected him. However, his actions as president were not always as aggressive as his words. Although he darkly referred to the Soviet Union as “evil,” he ended the Carter-imposed halt on grain shipments to that country. He committed a large number of U.S. Marines to help keep peace during the civil war in the Middle East nation of Lebanon, but he removed them after an attack against them led to 240 American deaths.

Reagan's second term

By 1984 Reagan appeared difficult to beat for re-election. In the November polling, he defeated Democratic challenger Walter Mondale (1928–) easily, with 58 percent of the popular vote. After winning re-election, Reagan continued to talk tough concerning the Soviet Union, but he also worked to pursue an agreement with the country to limit weapons. Meetings with Soviet leader Mikhail Gorbachev (1931–) in 1985 and 1986 accomplished little toward that goal, however, and Reagan pressed ahead with an aggressive program of national defense.

Meanwhile, economic problems at home did not improve, as the deficit continued at record-high levels and the nation continued to import more than it exported. In addition, in late 1986 Reagan ran into serious problems due to the “Iran-contra” scandal. This scandal involved a secret sale of arms to Iran, apparently to gain the release of American hostages held by terrorists in Lebanon who supported Iran. The profits of the sale were directed towards aid to the “contras”—forces struggling to overthrow a socialist government in Nicaragua. Congress, however, had

banned such aid. Congressional hearings on the scandal captured headlines throughout 1987, revealing significant misstatements by Reagan and apparent misuse of power by some in his administration.

As Reagan's second term drew to a close, it was clear that he had not accomplished the conservative “revolution” predicted in 1980. However, an important part of his legacy was the increased conservatism of the Supreme Court. Reagan's appointment to the court of justices O'Connor, Antonin Scalia (1936–), and Anthony Kennedy (1936–), along with the promotion of William Rehnquist (1924–) to the position of Chief Justice, had moved the court strongly to the right.

Struggle with Alzheimer's

After his return to private citizenship in 1989, Reagan continued to be a popular and active public figure. By the mid-1990s, however, Reagan had been diagnosed with Alzheimer's disease, an ultimately fatal degeneration, or breaking down, of the central nervous system. As his condition deteriorated, Reagan withdrew from public appearances.

Throughout his presidency, Reagan maintained a hold on the public's affection unequalled since the presidency of Dwight Eisenhower (1890–1969). Many would agree that Ronald Reagan, however history might judge his presidency, possessed a gift for inspiring the American people with his speaking style and personality.

CHRISTOPHER REEVE

Born: September 25, 1952
New York, New York
American actor and activist

Best known for the lead role in *Superman*, Christopher Reeve has dedicated his life to those with disabilities ever since he suffered an injury that left him paralyzed from the neck down.

Rise to stardom

Christopher Reeve was born September 25, 1952, the oldest of two sons born to

Franklin D. Reeve, a novelist, translator, and university professor, and Barbara Pitney Lamb Johnson, a journalist. Reeve's parents were divorced when he was about four years old, and he moved with his mother and brother to Princeton, New Jersey. Although he enjoyed a privileged childhood following his mother's remarriage to a stockbroker, he nevertheless had to cope with the anger and tension that characterized his parents' relationship.

Reeve would often pass the time during his youth playing the piano, swimming, sailing, or engaging in some other similar activity. While he was still just a child around ten or so the stage began to call. His very first role was in a Princeton theater company's production of Gilbert and Sullivan's *The Yeoman of the Guard*, and after that experience, Reeve was hooked. Later, as a gawky teenager lacking in self-confidence, he found that acting helped him overcome his feelings of clumsiness and insecurity. Reeve starred in virtually every stage production at his exclusive private high school and also spent the summer months immersed in the theater, either as a student or an actor. By the time he was sixteen, he was a true professional with an Actors' Equity Association membership card and an agent.

After graduating from high school in 1970, Reeve attended Cornell University, where he earned a bachelor's degree in English and music theory in 1974. Meanwhile, he continued his drama education, serving as a backstage observer at both the Old Vic in London, England, and the Comedie-Francaise in Paris, France, before enrolling in the Juilliard School for Drama in New York City to pursue graduate studies.

Christopher Reeve.

Reproduced by permission of Archive Photos, Inc.

Reeve's first major acting assignment came shortly after his graduation from Cornell when he joined the cast of the television soap opera *Love of Life*. He remained with the program for two years, during which time he also performed on stage in the evenings with various New York City theater companies, including the Manhattan Theater Club and the Circle Repertory Company. In 1975 Reeve headed to California and won his first movie role, a bit part in a 1978 nuclear submarine disaster movie titled *Gray Lady Down*. But when no other work was forthcoming, he returned to New York City and appeared in an off-Broadway play that opened in January 1977.

Superman

Then, to Reeve's surprise, Hollywood came calling with an offer to try out for the role of Superman in an upcoming film of the same title. At first, Reeve thought the idea was downright silly and very untheatrical, but when he read the script, he loved it. When *Superman* premiered in December 1978, it met with almost universal critical praise and box-office success. Suddenly, Reeve was a megastar with all of the baggage that entailed, including countless demands on his time, a total loss of privacy, and the danger of being offered only similar roles to the "Man of Steel."

Superman II, which Reeve had agreed to do when he signed on for the first film, was spectacularly successful upon its debut in mid-1981. The critics also liked it, with some even saying that it was better than the first movie. Throughout the 1980s and early 1990s, Reeve enjoyed an increasingly busy film career. Besides reprising his most famous role in *Superman III* (1983) and *Superman IV: The Quest for Peace* (1987), which he also helped write, Reeve appeared in about a dozen other pictures, including *Deathtrap* (1982), *Noises Off* (1992), *The Remains of the Day* (1993), and *Village of the Damned* (1995).

Tragedy strikes the Man of Steel

On May 27, 1995, Reeve's world was shattered in a matter of seconds when he was thrown from his horse head first during an equestrian competition in Virginia. The impact smashed the two upper vertebrae in his spine, leaving him completely paralyzed from the neck down and able to breathe only with assistance from a ventilator. Reeve remained in intensive care for five weeks as

he fought off sickness, underwent surgery to fuse the broken vertebrae in his neck, and weathered several other life-threatening complications of his injury.

With Reeve's characteristic grit and determination, he set about the task of putting his life in order. He mastered the art of talking between breaths of his ventilator. He learned how to use his specialized wheelchair, which he commands by blowing puffs of air into a straw-like control device. Always hungry for the smallest sign of progress, he did countless exercises, competing against himself to improve and grow stronger.

Reeve astounded his friends and admirers by making his first public appearance on October 16, 1995, less than six months after his accident. The occasion was an awards dinner held by the Creative Coalition, an actors' advocacy organization he had helped establish. Reeve joked with the audience about what had happened to him and immediately put everyone at ease, then introduced his old friend Robin Williams (1952–), who was being honored for the work he had done on behalf of the group.

Facing the future

The awards dinner was just the beginning for Reeve, who has since channeled his considerable energies into a wide variety of endeavors. Before his accident, Reeve was an activist on behalf of children's issues, human rights, the environment, and the National Endowment for the Arts (NEA). He has since assumed the role of national spokesman for the disabled, especially those people who, like him, have suffered spinal-cord injuries. He is also the founder of the Christopher Reeve Paralysis Foundation, which raises funds for

biomedical research and acts as a champion for the disabled, and serves as chairman of the American Paralysis Association.

Meanwhile, Reeve continues to cope with the daily trials and occasional triumphs related to his quadriplegia, or being paralyzed from the neck down. "You don't want the condition to define you," he once commented, "and yet it occupies your every thought." While he may never be completely free of his respirator (a device to help one breathe), he does manage to go without it for several hours at a time. He can move his head and shrug his shoulders, and he reports some movement and sensation in his hands and feet.

Reeve is determined to walk again; one of his fondest dreams has been to stand up on his fiftieth birthday in 2002 and offer a toast to all of the people who helped him get to that point. "When John Kennedy promised that by the end of the 1960s we would put a man on the moon," Reeve told *Time* magazine, "everybody, including the scientists, shook their heads in dismay. But we did it. We can cure spinal-cord injuries too, if there's the will. What was possible in outer space is possible in inner space."

Christopher Reeve, husband to Dana Morisini since 1992, is the father of three children. He continues to be an inspiration to many, frequently traveling across the world to speak and to support various groups and organizations.

ERICH MARIA REMARQUE

Born: July 22, 1898

Osnabrück, Germany

Died: September 25, 1970

Locarno, Switzerland

German-born American author

The German-born American author Erich Maria Remarque was a popular novelist whose *All Quiet on the Western Front*, describing the soldier's life in World War I (1914–18; a war involving Germany, Austria-Hungary, and Turkey on one side, and Great Britain, France, Russia, Italy, Japan, and the United States on the other), was a best-seller.

Early life

Erich Maria Remarque, whose real name was Erich Paul Remark, was born on July 22, 1898, in Osnabrück, Germany, the only son among Peter Franz Remark and Anna Maria Remark's three children. His father worked as a bookbinder. The family was poor and moved at least eleven times during Remarque's childhood. He began writing at age sixteen or seventeen.

Remarque attended the University of Münster and was planning for a career as an

elementary school teacher. Toward the end of World War I, which Germany had entered in support of Austria-Hungary, he was drafted into the army. While recovering in a German hospital from wounds suffered during the war, Remarque worked on *Die Traumbude* (*The Dream Room*), his first novel, which was published in 1920. Around this time he switched to the original French spelling of his last name. After the war he worked as a press reader, teacher, salesman, and racing driver, among other professions.

Popular success

The immense success of *Im Westen nichts Neues* (1929; *All Quiet on the Western Front*) established Remarque as an author. This novel falls into a class of antiwar and antimilitary fiction that grew rapidly in Germany in the later 1920s—Arnold Zweig's (1887–1968) *Sergeant Grischa* is another famous example. These books are characterized by a matter-of-fact, often conversational style similar to that of a newspaper or magazine report.

Although Remarque conceals little of the horror and bloodiness of life in the trenches, at the same time there is a sentimental streak in the book that is maintained strongly right through to the last pages, in which, following the death of his friend, the hero himself dies two weeks before the end of the war, on a day when all is reported quiet at the front. *All Quiet on the Western Front* was translated into some twenty-five languages and sold over thirty million copies. The 1930 film version of the book was a huge box-office hit and won several Academy Awards.

Blacklisted in Germany

Remarque's next book was also a war novel, *Der Weg zurück* (1931; *The Road Back*). *Drei Kameraden* (1937; *Three Comrades*) deals with life in postwar Germany and is also a tragic love story. By 1929 Remarque had left Germany and lived in Switzerland. The pacifism (opposition to war or violence) in his works and their strong sense of sadness and suffering made them very unpopular with the Nazi government (the controlling party in Germany beginning in the 1930s that scorned democracy and considered all non-Germans, and especially Jewish people, as inferior). In 1938, in fact, Remarque was stripped of his German citizenship.

In 1939 Remarque arrived in the United States, and he became an American citizen in 1947. His next novel, *Liebe deinen Nächsten* (1940), was published in America under the title *Flotsam*. After World War II (1939–45), in which Germany, Japan, and Italy were defeated by the Allies (including the United States, Great Britain, France, and the Soviet Union, among others), Remarque's productivity increased, and he turned more and more to the study of personal relationships set against a background of war and social destruction. *Arc de Triomphe* (1946), the story of a German refugee (someone who is forced to live outside of his or her own country) doctor in Paris, France, just before World War II, returned Remarque's name to the best-seller lists.

Later years

Remarque's later works include *Zeit zu leben und Zeit zu sterben* (1954; *A Time to Love and a Time to Die*), *Der schwarze Obelisk*

Erich Maria Remarque.

Reproduced by permission of Mr. Jerry Bauer.

(1956; *The Black Obelisk*), *Der Funke Leben* (1957; *Spark of Life*), *Der Himmel kennt keine Günstlinge* (1961; *Heaven Has No Favorites*), and *Die Nacht von Lissabon* (1962; *The Night in Lisbon*). All these novels are gripping and skillful stories of personal crisis, escape, and adventure. Remarque also had one play produced, *Die letzte Station* (1956; *The Last Station*). Erich Maria Remarque died in Locarno, Switzerland, on September 25, 1970.

REMBRANDT

Born: July 15, 1606

Leiden, Netherlands

Died: October 4, 1669

Netherlands

Dutch artist

Rembrandt was one of the most important artists of the great age of Dutch painting. In range, originality, and expressive power, his large production of paintings, drawings, and etchings has never been surpassed.

Childhood

Rembrandt Harmensz van Rijn was born in Leiden, Netherlands, on July 15, 1606, next to the last of the nine or more children of a miller, Harmen Gerritsz van Rijn, and a baker's daughter, Cornelia Neeltgen Willemsdr. van Zuytbroeck. For seven years Rembrandt was a student at the Latin school, and then, in 1620, he enrolled at Leiden University at the age of thirteen. After only a few months, however, he left to pursue his true passion—painting. He was an apprentice (a person working to learn a skill) for three years to the painter Jacob Isaacsz van Swanenburgh, who had studied in Italy.

In 1624 Rembrandt went to Amsterdam to work with Pieter Lastman, a painter of bib-

lical, mythological, and historical scenes. After Lastman's death in 1633, Rembrandt continued to use his teacher's subjects and motifs (dominant themes). It was Lastman's ability to tell a story visually that impressed his youthful pupil. The earliest known works by Rembrandt, beginning with the *Stoning of St. Stephen* (1625), show an only partially successful imitation of Lastman's style, applied to scenes in which a number of figures are involved in a dramatic action.

By 1625 Rembrandt was working independently in Leiden. He was closely associated at this time with Jan Lievens (1607–1674), also a student of Lastman's. The two young men worked so similarly that even in their own lifetime there was doubt as to which of them was responsible for a particular painting. They used the same models and even worked on each other's pictures.

By 1631 Rembrandt was ready to compete with the accomplished portrait painters of Amsterdam. His portrait of the Amsterdam merchant Nicolaes Ruts (1631) is an amazing likeness executed with a degree of assurance that makes it clear why its author was in demand as a portraitist (an artist who draws or paints a person, usually the head and shoulders).

Early Amsterdam years

Around 1631 or 1632 Rembrandt moved to Amsterdam, where he had already achieved some recognition as a portraitist. Both his career and his personal life prospered. After an engagement of more than a year, he married a well-to-do young woman, Saskia van Uijlenburgh. In 1639 the young couple set themselves up in a fine house in the Breestraat, now maintained as a museum, the Rembrandthuis. Like many wealthy men

of his time, Rembrandt soon began to collect works of art, armor, costumes, and curiosities (unusual trinkets) from far places. He used some of these objects as props in his paintings and etchings (images that are the result of transferring an image off a metal plate onto paper with the use of chemicals).

Rembrandt's works of the mid-1630s were his most baroque, an elaborate style developed in the sixteenth century; indeed he seemed to be purposefully challenging the enormous reputation of painter Peter Paul Rubens (1577–1640). This is most expressed in the scenes from the *Passion of Christ* (1633–1639). The etching *Angel Appearing to the Shepherds* (1634) shows how the same drama and excitement, the combination of fine detail with a grand new sweep based largely on bringing together the composition through light and shadow, and the choice of the crucial moment—all characteristic of Rembrandt's baroque style—showed in his graphic works as well as his paintings in this period.

Middle period

One of Rembrandt's largest and most famous paintings is the group portrait known since the mid-eighteenth century as the *Night Watch*. This is, in fact, not a night scene at all, and it is correctly titled the *Militia Company of Captain Frans Banning Cocq*. The painting was unfortunately cut down in the eighteenth century. There is no foundation at all for the legend that Captain Cocq and his company were unhappy with their painting and that this failure began a decline in Rembrandt's fortunes that lasted until the end of his life. In fact, there is considerable evidence that the picture was highly praised from the start.

Rembrandt.

Reproduced by permission of AP/Wide World Photos.

Such difficulties as Rembrandt had were not caused by any rejection of his work.

Having had three children who died in infancy, Saskia gave birth to a fourth child, Titus, in September 1641. In June 1642 Saskia died. Geertge Dirx then entered Rembrandt's household in order to take care of Titus. Hendrickje Stoffels, who is first mentioned in connection with Rembrandt in 1649, remained with him until her death in 1663. She left a daughter, Cornelia, who had been born to them in 1654.

About 1640 Rembrandt developed a new interest in landscape which lasted through the next two decades. A series of

drawings and etchings show keen observation of nature, great originality in composing, and marvelous economy. The etched *View of Amsterdam* (c.1640) influenced the landscape paintings of Jacob van Ruisdael (c.1628–1682). The tiny painting *Winter Landscape* (1646) has all the earmarks of having been painted from life, on the spot. This would be a rare case in seventeenth-century Dutch landscape, which usually was painted in the studio from sketches.

Later years

The first Anglo-Dutch War (1652–54; when England battled the Dutch Republic) may have played a part in Rembrandt's financial difficulties, of which there is evidence from 1653 on. All of his prized possessions were sold at auction, beginning in December 1657, and three years later Rembrandt, Titus, and Hendrickje moved to a smaller house.

In 1652 a Sicilian nobleman who was a discerning (selective and shrewd) collector commissioned a painting from Rembrandt. If the painting was satisfactory, two more were to be ordered. *Aristotle Contemplating a Bust of Homer* was completed in 1653 and shipped off to Sicily, and the two additional pictures were sent in 1661. The meaning of the *Aristotle* is not yet fully understood, but its quality is unquestionable.

Rembrandt's *Self-Portrait* (1658) shows the aging artist seated squarely before us, meeting our eyes with forthright gaze, and wearing a fantastic costume whose sharp horizontals and verticals stress the composition based on right angles that best represents this period. A number of admirable etched portraits also date from this time, as well as etchings of religious subjects, such as the impres-

sive *Ecce homo* (1655), which reflects an engraving made in 1510 by the great Dutch graphic artist Lucas van Leyden (1494–1533).

Later years

In 1660 and 1661 Rembrandt painted an enormous canvas for the splendid new town hall in Amsterdam. It was the *Conspiracy of the Batavians*, or the *Oath of Julius Civilis*, known to us through the remaining fragment and a pen-and-wash drawing of the entire composition.

Hendrickje died in 1663. In September 1668 Titus died as well. The lonely Rembrandt continued to paint. His last *Self-Portrait* is dated 1669. When he died in Amsterdam, on October 4, 1669, a painting, *Simeon with the Christ Child in the Temple*, was left unfinished on his easel.

JANET
RENO

Born: July 21, 1938
Miami, Florida
American attorney general

Janet Reno was the seventy-fifth attorney general of the United States and the first woman ever to serve as attorney general, the nation's top law-enforcement job. She sought new frontiers for the Justice Department, which is led by the attorney general and is a powerful force for creating social change.

A Florida family

Reno was born on July 21, 1938, in Miami, Florida. The first of four children of journalists Henry and Jane Reno, she grew up in South Dade County, Florida. Her father, a Danish immigrant, wrote for the *Miami Herald* for forty-three years. As a police reporter, covering news of the police department and local crime, he became friends with judges and law enforcement personnel. This world became familiar to Reno at an early age. Her mother, a reporter for the *Miami News*, is remembered as an offbeat intellectual who wrestled alligators, read poetry, and befriended the Seminole Indians. She built with her own hands the Reno family home on the edge of Florida's swampy Everglades region.

Growing up near the Everglades, Reno developed a love of the outdoors. She was fond of canoeing, camping, and athletics. She imagined she might become a baseball player, a doctor, or a marine biologist. As an adult, however, her ambitions turned toward matters of justice and law.

Becoming a lawyer

After graduating from high school, Reno attended Cornell University, earning a degree in chemistry in 1960. Following Cornell she enrolled at Harvard University Law School, becoming one of only sixteen women in a class of five hundred. The legal profession

was full of obstacles for women in those times, and in 1962 Reno was denied a summer job at a well-known Miami law firm "because she was a woman." The next year, however, she entered the legal profession with her law degree in hand.

From 1963 to 1971 Reno worked as a lawyer for two Miami law firms. In 1971 she gained political experience when she joined the staff of the Judiciary Committee of the Florida House of Representatives. In the spring of 1973 she provided legal assistance to the Florida Senate on a project to revise the state's system of rules and regulations for criminal procedures. These experiences were followed by a job as assistant state attorney for the Eleventh Judiciary Circuit of Florida. She worked for the Judiciary Circuit (the term refers to state court activities within a particular district) from 1973 to 1976.

In 1978 Reno was appointed as state attorney for Dade County. This made her the first woman ever named to the position of top prosecutor for a county in Florida. Reno held the position for fifteen years until she was nominated as U.S. attorney general by President Bill Clinton (1946–) in 1993.

Dade County's top lawyer

As Dade County prosecutor, Reno was the top lawyer responsible for prosecuting and winning cases on behalf of the county and its people. She was criticized for early failures, but later her successes in prosecuting violent crimes, and her fearlessness in dealing with Miami's crime problem, helped win her a reputation as a tough prosecutor.

During this time, Reno made juvenile justice a focus of her work. She became

Janet Reno.

Reproduced by permission of the Corbis Corporation.

known for her attempts to find alternatives to the imprisonment of young people. She also tried to find ways that the state could deal with troubled youth at the earliest possible age. She stressed the links between children experiencing care and love and the prevention of crime. She looked for opportunities to fight crime by building resources for children and education.

National agenda

On March 12, 1993, Reno was confirmed as U.S. attorney general by the U.S. Senate. In this position she saw to the enforcement of national policies on crime,

race relations, immigration, corruption, and other legal issues affecting many aspects of American life. In the area of crime and law enforcement, she focused on broad programs involving efforts to help criminals reform and to provide treatment for drug offenders as a means of stopping crime. She also supported gun control and the hiring of additional police. In addition, Reno argued for broad reforms to provide ordinary citizens with greater access to the courts and justice system. She stressed the importance of addressing the root causes of crime and violence.

The heart of Reno's agenda involved programs for children. As attorney general she pushed for reforms that would provide assistance to troubled youths as early as possible, believing in the possibilities for turning children away from careers in crime. Reno's other concerns included aggressive civil rights enforcement, ending discrimination (unequal treatment) based on sexual preferences, and tougher enforcement of environmental laws. The basic challenge she faced in her work involved translating these broad social goals into real and effective changes in law enforcement and the justice system.

A controversial figure

Reno's commitment was admired by many during her term as attorney general. However, she was also a controversial figure. Reno was severely criticized for the Justice Department's actions during a crisis in Waco, Texas, in 1993, when an extreme religious sect called the Branch Davidians became involved in a standoff with law enforcement officials. After negotiations between the two sides broke down, federal agents stormed the grounds and building in which the Branch

Davidians were housed, and dozens of the sect's members died after setting the building on fire. Reno also became a target of Republicans in Congress who accused her of failing to investigate vigorously when members of the Clinton administration were charged with illegal practices. At the same time, some members of the Clinton administration felt that Reno was too quick to cave in to Republican demands. Although President Clinton reappointed Reno to a second term in 1996, it was reported that he did so reluctantly.

In 2000 Reno again drew fire over her handling of the case of Elian Gonzalez Brotons, a six-year-old refugee who was living with relatives in Miami after his mother drowned while bringing him by boat to Florida from Cuba. After months of negotiations and efforts to resolve his case in court, Reno ordered federal agents to seize the boy from his relatives' home and return him to his father, who was living in Cuba. Many Cuban Americans, especially in Miami, were outraged by Reno's order.

Despite this controversy, Reno returned to Florida with political ambitions in 2001, when her term as attorney general ended. In September 2001 she announced that she would run as a Democrat for governor of the state, but she lost in a close primary race to attorney Bill McBride on September 10, 2002.

Battling Parkinson's

Reno suffers from Parkinson's disease, an illness that attacks the nervous system. As a highly visible and active public figure combating a severe illness, she has inspired others who live with Parkinson's and other serious diseases. Her achievements as a woman in the male-dominated legal field were also honored

when she was inducted into the National Women's Hall of Fame in October 2000.

PIERRE AUGUSTE RENOIR

Born: February 25, 1841

Limoges, France

Died: December 3, 1919

Cagnes-sur-Mer, France

French painter

The French painter Pierre Auguste Renoir was one of the central figures of the impressionist movement (a French art movement of the second half of the nineteenth century whose members sought in their works to represent the first impression of an object upon the viewer). His work is characterized by a richness of feeling and a warmth of response to the world and to the people in it.

Early life

Pierre Auguste Renoir was born in Limoges, France, on February 25, 1841, the sixth of Léonard Renoir and Marguerite Merlet's seven children. His father was a tailor, and his mother was a dressmaker. His family moved to Paris,

Pierre Auguste Renoir.

Reproduced by permission of the Corbis Corporation.

France, in 1844. Because he showed a remarkable talent for drawing, Renoir became an apprentice (one who works for someone in order to learn his or her trade) in a porcelain factory, where he painted plates. Later, after the factory had gone out of business, he worked for his older brother, decorating fans. Throughout these early years Renoir made frequent visits to the Louvre (the world's largest and most famous art museum, located in Paris), where he studied the art of earlier French masters, particularly those of the eighteenth century—Antoine Watteau (1684–1721), François Boucher (1703–1770), and Jean Honoré Fragonard (1732–1806). His deep respect for these artists influenced his own painting throughout his career.

Early career

In 1862 Renoir decided to study painting seriously and entered the studio of the painter Charles Gleyre, where he met other artists such as Claude Monet (1840–1926), Alfred Sisley (1839–1899), and Jean Frédéric Bazille (1841–1870). During the next six years Renoir's art showed the influence of Gustave Courbet (1819–1877) and Édouard Manet (1832–1883), the two most innovative (doing things in a new way) painters of the 1850s and 1860s. Courbet's influence is especially evident in the bold *Diane Chasseresse* (1867), while Manet's influence can be seen in the flat tones of *Alfred Sisley and His Wife* (1868). Still, both paintings reveal a sense of intimacy (closeness) that is characteristic of Renoir's personal style.

The 1860s were difficult years for Renoir. At times he was too poor to buy paints or canvas, and the Salons (exhibitions, or displays) of 1866 and 1867 rejected his works. The following year the Salon accepted his painting *Lise*, a portrait (picture of a person, especially their face) of his girlfriend, Lise Tréhot. He continued to develop his work and to study the paintings of other artists of the day—not only Courbet and Manet, but Camille Corot (1796–1875) and Eugène Delacroix (1798–1863) as well. Renoir's debt to Delacroix is apparent in the lush (appealing to the senses) *Odalisque* (1870).

Renoir and impressionism

A revolution was beginning in French painting. A number of young painters began to rebel against the traditions of Western painting and went directly to nature for their inspiration and into the actual society of which they were a part. As a result, their works revealed a look of freshness that in

many ways departed from the look of Old Master painting. The new art displayed bright light and color instead of the solemn browns and blacks of previous painting. These qualities, among others, signaled the beginning of impressionist art.

In 1869 Renoir and Monet worked together at La Grenouillère, a bathing spot on the river Seine. Both artists became interested in painting light and water. According to Phoebe Pool (1967), this was a key moment in the development of impressionism, for it “was there that Renoir and Monet made their discovery that shadows are not brown or black but are coloured by their surroundings, and that the ‘local colour’ of an object is modified by the light in which it is seen, by reflections from other objects and by contrast with juxtaposed [placed side by side] colours.”

The styles of Renoir and Monet were almost identical at this time, a sign of the dedication with which they pursued and shared their new discoveries. During the 1870s they continued to work together at times, although their styles generally developed in more personal directions. In 1874 Renoir participated in the first impressionist exhibition; his works included the *Opera Box*. Of all the impressionists, Renoir most thoroughly adapted the new style to the great tradition of figure painting.

Although the impressionist exhibitions were the targets of much public scorn during the 1870s, Renoir’s popularity gradually increased during this time. He became a friend of Caillebotte, one of the first supporters of the impressionists, and he was also backed by several art dealers and collectors. The artist’s connection with these individuals is documented by a number of handsome

portraits, for instance, *Madame Charpentier and Her Children* (1878). In the 1870s Renoir also produced some of his most celebrated impressionist scenes, including the *Swing* and the *Moulin de la Galette* (both 1876). These works show men and women together, openly and casually enjoying a society bathed in warm sunlight. Figures blend softly into one another and into their surrounding space. These paintings are pleasurable and full of human feeling.

Renoir’s “dry” period

During the 1880s Renoir began to separate himself from the impressionists, largely because he became unhappy with the direction the new style was taking in his own hands. In paintings like the *Luncheon of the Boating Party* (1880–81), he felt that his style was becoming too loose and that forms were becoming less distinct. As a result, he looked to the past for a fresh inspiration. In 1881 he traveled to Italy and was particularly impressed by the art of Raphael (1483–1520).

During the next six years Renoir’s paintings became increasingly dry: he began to draw in a tight, classical manner, carefully outlining his figures in an effort to give them increased clarity. The works from this period, such as the *Umbrellas* (1883) and the *Grandes baigneuses* (1884–87), are generally considered the least successful of Renoir’s mature expressions.

Late career

By the end of the 1880s Renoir had passed through his dry period. His late work is truly remarkable: a glorious outpouring of nude figures, beautiful young girls, and lush landscapes. Examples of this style include the *Music Lesson* (1891), *Young Girl Reading* (1892), and *Sleeping*

Bather (1897). In many ways, the generosity of feeling in these paintings expands on the achievements of his great work in the 1870s.

Renoir's health declined severely in his later years. In 1903 he suffered his first attack of arthritis (a painful swelling of the joints) and settled for the winter at Cagnes-sur-Mer, France. The arthritis made painting painful and often impossible. Still, he continued to work, at times with a brush tied to his crippled hand. Renoir died at Cagnes-sur-Mer on December 3, 1919, but not before an experience of supreme triumph: the state had purchased his portrait *Madame Georges Charpentier* (1877), and he traveled to Paris in August to see it hanging in the Louvre.

PAUL REVERE

Born: January 1, 1735

Boston, Massachusetts

Died: May 10, 1818

Boston, Massachusetts

American patriot, silversmith, and engraver

Paul Revere is remembered for his ride to warn fellow American patriots of a planned British attack before the Revolutionary War (1775–83), the war fought by Americans to gain independence from England. He was also a fine silversmith (a person who makes objects out of silver) and a master engraver (a person who cuts designs onto things such as metal or wood).

Learning a trade

Paul Revere was born on January 1, 1735, in Boston, Massachusetts. He was the son of Apollos De Revoire, a French Huguenot (member of the Protestant faith) who had come to Boston at the age of thirteen to apprentice (a person who works for another to learn a trade) in the shop of a silversmith. Once Revoire had established his own business, he changed his name to the English spelling Revere.

Paul Revere was the third of twelve children and the oldest of his father's sons to survive into adulthood. As a young man, he studied at the North Writing School in Boston. As a teenager, he learned the art of gold and silversmithing from his father. With help from his mother, he began running the Revere family silver shop at age nineteen, after his father died. On August 17, 1757, he married Sarah Orne and eventually fathered eight children.

As early as 1765, Revere began to experiment with engraving on copper and produced several portraits and a songbook. He was popular as a source for engraved items such as bookplates, seals (stamps with raised designs that could make a print on another substance), and coats of arms (designs that indicated a family line).

Revere also began to fashion engravings that were anti-British. In 1768 he made one of the most famous pieces of silver of the American colonial era—a bowl created at the request of the fifteen Sons of Liberty. The Sons of Liberty were organizations formed in order to protest the 1765 Stamp Act, a taxation on printed materials imposed by the British that the Americans considered unjust. The bowl that Revere created was engraved to honor the “glorious Ninety-two Members of the Honorable House of Representatives of the Massachusetts Bay” who had refused to withdraw a letter they had sent to the other colonies protesting the Townshend Acts (another measure imposed by the British). Revere’s extraordinary skill also extended to his carving picture frames for the painter John Singleton Copley (1738–1815). Copley painted a famous portrait of Revere, shown in shirt sleeves and holding a silver teapot.

Paul Revere.

Revere’s ride

Revere became a trusted messenger for the Massachusetts Committee of Safety, an organization set up to resist the British. He foresaw an attack by the British troops against the location of military supplies in Concord, Massachusetts, and arranged a signal to warn the patriots in Charlestown, Massachusetts. During the late evening of April 18, 1775, the chairman of the Committee of Safety told him that the British were going to march to Concord. Revere signaled by hanging two lanterns in the tower of Boston’s North Church. This showed that the British were approaching “by sea,” that is, by way of the Charles River. He crossed the river, borrowed a horse in Charlestown, and started for Concord. Arriving in Lexington, Massachusetts, at midnight, he awakened American rebels John Hancock (1737–1793) and Samuel

Adams (1722–1803), allowing the two men to flee to safety.

Revere was captured that night by the British, but he persuaded his captors that the whole countryside was aroused to fight, and they freed him. He returned to Lexington, where he saw the first shot fired in the first battle of the Revolutionary War (1776). This ride and series of events were made legendary by Henry Wadsworth Longfellow (1807–1882) in the poem “Paul Revere’s Ride.”

A master craftsman

After the Revolutionary War Revere remained in Boston, where he created

objects in silver for distinguished members of local society. He died in Boston on May 10, 1818. Today, he is still remembered as a craftsman in silver, as well as a master of engraving. An on-the-spot reporter, he recorded the events leading up to and during the revolution with great accuracy. He engraved what he saw on metal plates, which were then used to create prints on paper that were highly popular with the people of Boston.

reader's guide

U•X•L Encyclopedia of World Biography features 750 biographies of notable historic and contemporary figures from around the world. Chosen from American history, world history, literature, science and math, arts and entertainment, and the social sciences, the entries focus on the people studied most often in middle school and high school, as identified by teachers and media specialists.

The biographies are arranged alphabetically across ten volumes. The two- to four-page entries cover the early lives, influences, and careers of notable men and women of diverse fields and ethnic groups. Each essay includes birth and death information in the header and concludes with a list of sources

for further information. A contents section lists biographees by their nationality. Nearly 750 photographs and illustrations are featured, and a general index provides quick access to the people and subjects discussed throughout *U•X•L Encyclopedia of World Biography*.

Special thanks

Much appreciation goes to Mary Alice Anderson, media specialist at Winona Middle School in Winona, Minnesota, and Nina Levine, library media specialist at Blue Mountain Middle School in Cortlandt Manor, New York, for their assistance in developing the entry list. Many thanks also go to the following people for their important editorial contri-

butions: Taryn Benbow-Pfalzgraf (proofreading), Jodi Essey-Stapleton (copyediting and proofing), Margaret Haerens (proofreading), Courtney Mroch (copyediting), and Theresa Murray (copyediting and indexing). Special gratitude goes to Linda Mahoney at LM Design for her excellent typesetting work and her flexible attitude.

Comments and suggestions

We welcome your comments on the *U•X•L Encyclopedia of World Biography*. Please write: Editors, *U•X•L Encyclopedia of World Biography*, U•X•L, 27500 Drake Road, Farmington Hills, MI 48331-3535; call toll-free: 1-800-877-4253; fax to 248-699-8097; or send e-mail via www.gale.com.

CECIL RHODES

Born: July 5, 1853

Bishop's Stortford, England

Died: March 26, 1902

Muizenberg, South Africa

English businessman and imperialist

The English businessman and financier Cecil Rhodes founded the modern diamond industry and controlled the British South Africa Company, which acquired Rhodesia and Zambia as British territories. He was also a noted philanthropist (working for charity) and founded the Rhodes scholarships.

Early life

Cecil John Rhodes was born on July 5, 1853, at Bishop's Stortford, England, one of nine sons of the parish vicar (priest). While his brothers were sent off to attend better schools, Cecil's poor health forced him to stay at home and attend the local grammar school. Instead of attending college, sixteen-year-old Cecil was sent to South Africa to work on a cotton farm. Arriving in October 1870, he grew cotton with his brother Herbert in Natal, South Africa, a harsh environment. Soon the brothers learned that growing cotton was no way to build a fortune and by 1871 "diamond fever" was sweeping the region with promises of fame and fortune. The two brothers soon left Natal for the newly developed diamond

Cecil Rhodes.

field at Kimberley, South Africa, an even less inviting environment.

In the 1870s Rhodes laid the foundation for his later massive fortune by working an open-pit mine where he personally supervised his workers and even sorted diamonds himself. The hard work would pay off as Rhodes developed a moderate fortune by investing in diamond claims, initiating mining techniques, and in 1880 forming the De Beers Mining Company.

In 1873 Rhodes returned to England to attend Oxford University. During his education, Rhodes split his time between South

Africa and Oxford, where he did not fit in socially but finally earned a bachelor of arts degree in 1881.

Birth of an empire

During the mid-1870s, Rhodes spent six months alone, wandering the unsettled plains of Transvaal, South Africa. There, he developed his philosophies on British Imperialism, where the British Empire rules over its foreign colonies. These philosophies consisted of a “dream” where a brotherhood of elite Anglo-Saxons (whites) would occupy all of Africa, the Holy Land in the Middle East, and other parts of the world. After a serious heart attack in 1877, Rhodes revealed his ideas of British Imperialism when he made his first will. In it, Rhodes called for the settlement of his as-yet-uneared fortune to found a secret society that would extend British rule throughout the world and colonize most parts of it with British settlers, leading to the “ultimate recovery of the United States of America” by the British Empire.

From 1880 to 1895 Rhodes’s star rose steadily. Basic to this rise was his successful struggle to take control of the rival diamond interests of Barnie Barnato, with whom he partnered in 1888 to form De Beers Consolidated Mines, a company whose extraordinary powers led to acquiring lands for the purpose of extending the British Empire. With his brother Frank he also formed Goldfields of South Africa, with several large mines in the Transvaal.

Entering politics

During this same time Rhodes built a career in politics. He was elected to the Cape Parliament in 1880, the governing body of

South Africa. In Parliament, Rhodes succeeded in focusing attention on the Transvaal and German expansion so as to secure British control of Bechuanaland by 1885. In 1888 Rhodes secured mining grants from Lobengula, King of the Ndebele, which by highly stretched interpretations gave Rhodes a claim to what became Rhodesia. In 1889 Rhodes persuaded the British government to grant a charter (authority from the British throne) to form the British South Africa Company, which in 1890 put white settlers into Lobengula's territories and founded Salisbury and other towns. This sparked conflict with the Ndebele, but they were crushed by British forces in the war of 1893.

By this time Rhodes controlled the politics of Britain's Cape Colony. In July 1890 he became premier of the Cape with the support of the English-speaking white and nonwhite voters and the Afrikaners (descendants of the Dutch settlers of South Africa). Rhodes won their support by creating a "Bond" where some twenty-five thousand shares of the British South Africa Company were distributed among them. His policy was to aim for the creation of a South African federation (union of states) under the British flag, and he gained the trust of the Afrikaners by restricting the Africans' educational and property qualifications in 1892 and setting up a new system of "native administration" in 1894.

Later career

At the end of 1895 Rhodes's fortunes took a disastrous turn. In poor health and anxious to hurry his dream of a South African federation, he organized a plot against the Boer government of the Transvaal, which was run by the Dutch settlers. Through his min-

ing company, arms and ammunition were smuggled into Johannesburg, South Africa, to be used for a revolution by "outlanders," mainly British. A strip of land on the borders of the Transvaal was awarded to the chartered company by Joseph Chamberlain (1836–1914), the British colonial secretary. Leander Jameson, administrator of Rhodesia, was stationed there with company troops. The Johannesburg plotters did not rebel but Jameson, however, rode in on December 27, 1895, and was captured. As a result, Rhodes had to resign his premiership in January 1896. Thereafter he concentrated on developing Rhodesia and especially in extending the railway, which he dreamed would one day reach Cairo, Egypt.

When the Anglo-Boer War broke out in October 1899, Rhodes hurried to Kimberley, which the Boers surrounded a few days later. It was not relieved until February 16, 1900, during which time Rhodes had been active in organizing defense and sanitation. His health was worsened by the takeover, and after traveling in Europe he returned to the Cape in February 1902, where he died at Muizenberg, South Africa, on March 26.

In death, Rhodes's fortune allowed him to leave behind a legacy that is still relevant today. Rhodes left six million pounds, most of which went to Oxford University to establish the Rhodes scholarships to provide places at Oxford for students from the United States, the British colonies, and Germany. Land was also left to eventually provide for a university in Rhodesia.

CONDOLEEZZA RICE

Born: November 14, 1954

Birmingham, Alabama

*African American national security advisor
and educator*

Condoleezza Rice is a leading expert on the politics and military of Eastern Europe, the former Soviet Union, and other areas of the world. In 2001 President George W. Bush (1946–) named Rice his national security advisor, a key advisor and player in foreign affairs. She became the first African American and the first woman ever to hold the position.

Childhood talents

Condoleezza Rice was born in Birmingham, Alabama, on November 14, 1954. Condi, as she was known to her friends, was born into a family of educators. Both of her parents were teachers. In fact, Rice traces her career choice to her family's political discussions when she was growing up. Her parents also encouraged academic achievement, telling her she could "do and be whatever

[she] wanted," Rice told *Ebony* magazine. She succeeded in many activities from an early age. She took piano lessons at three years old and was playing Bach and Beethoven before her feet reached the pedals. She studied figure skating, French, and Spanish. She entered the eighth grade at only eleven years of age, and graduated from high school at age fifteen.

Rice then entered the University of Denver, first studying piano but later switching to political science when she realized she would never be a great pianist. She graduated with high honors when she was nineteen. Later, she returned to the University of Denver to study international studies in graduate school, earning a doctorate degree.

Beginning an impressive career

In 1981 Rice started teaching political science at Stanford University in California. She focused on the politics of the Soviet Union and Eastern Europe, publishing articles and addressing audiences on these subjects. Through her writing, teaching, and public speaking, she became well known as an expert on the politics of the Soviet Union. With Alexander Dallin, she wrote *Uncertain Allegiance: The Soviet Union and the Czechoslovak Army* (1984). With Phillip Zelikow, she wrote *The Gorbachev Era* (1986). In 1986 she also served as special assistant to the Joint Chiefs of Staff, a group of leaders in the U.S. military who advise the president in matters of war. The following year she traveled to Bulgaria to speak to Soviet representatives about controlling the spread of weapons.

In 1989 Rice was named director of Soviet and East European affairs on the National Security Council. In this position,

she analyzed and explained to President George Bush (1924–) the events of international importance occurring in the region. She helped Bush prepare for summit meetings with then-Soviet president Mikhail Gorbachev (1931–) and other top officials.

The purpose of the meetings was to create a plan for peace around the world. Much of the talk was about controlling the spread of weapons. The leaders also discussed expanding trade and the independence movements in many of the Soviet Union republics. As an advisor for Bush, Rice had important knowledge to provide about the politics and military abilities in that region. This work was exciting but challenging for her. In an interview with *San Francisco: The Magazine*, she said that the hardest part was remaining objective and “keeping the analyst in me separate from my political views.”

Rice told *Ebony* magazine it was a “truly amazing time to be working in the White House,” because so much was changing in the Eastern-bloc countries. The Berlin Wall, which was erected between East and West Berlin by the Communist government of East Germany in 1961, had come down, allowing citizens of the East to move freely to the West. Shortly thereafter, the world witnessed the fall of the Soviet Union.

Return to Stanford

In 1991 Rice left Washington to return to academic life at Stanford University in California. Her expertise had been sought and her presence felt by many. At one point, the governor of California suggested that she run for a Senate seat in that state, but she declined. The *New York Times* frequently sought her opinion and commentary on for-

Condoleezza Rice.

Reproduced by permission of AP/Wide World Photos.

eign affairs. She also contributed editorials and work to *Time* magazine and newspapers such as the *Los Angeles Times*. She continues to publish her scholarly work.

In 1991 the thirty-seven-year-old Rice was appointed by the governor of California to a special committee to draw new state legislative and congressional districts in the state. She was the youngest member chosen. The governor told the *Los Angeles Times* that all the members shared certain characteristics. “All are distinguished scholars. All are leaders in their fields, known for [fairness] and devoted to the truth.” Other people agreed with this opinion of Rice. In 1991 two

major companies elected Rice to their boards of directors. She was named provost of Stanford, a very high-ranking position.

Trusted advisor in peace and war

After many years back in university life, Rice was asked to help George W. Bush run for president in 2000. When he was elected, he named her national security advisor. She was chosen for her vast experience and expertise but also because she was a trusted friend of George W. Bush. This combination of expertise and exceptional trust became especially important during the fall of 2001.

Following the attacks of September 11, 2001, Rice became more important at the national and international levels. In the war in Afghanistan, Rice was a strong supporter of President Bush's actions and a trusted advisor in the conflict. In press conferences and on television news programs, she denounced the actions of the Taliban, Osama bin Laden (1957–), and the terrorist group al-Qaida. In Washington on November 8, she said, "What we are engaged in now is an act of self-defense to try to root out al-Qaida, to try to deny them safe harbor." She also has spoken forcefully about the U.S. military action and policies to fight the War on Terror.

Life as a successful minority

Rice has been fortunate, but she has also encountered her share of racism (a dislike or disrespect of someone solely because of the color of his or her skin). In high school she took difficult classes and had high grades. Her counselor, though, told her she was not suited for college. Rice told *Ebony* magazine that she did not do very well on an SAT

exam, which is used for applying to colleges. However, she also recalled, "I remember thinking that the odd thing about it was that [the counselor] had not bothered to check my record. I was a straight-A student in all advanced courses. . . . I was a figure skater and a piano student. That none of that occurred to her I think was a [quiet] form of racism. It was the problem of low expectations [for African Americans]."

In 1990 an unfortunate public incident occurred at the San Francisco airport. Rice was with a group of representatives from the Soviet Union. She was wearing the correct White House identification, yet a security person ordered her to stand behind the security lines. When she tried to explain that she was with the group, he shoved her. Newspapers made a big deal of the event. They wondered if the security person was being racist. Rice, however, told *Ebony* magazine that she did not feel any racial anger from him, "just that he was rude."

Rice has also come across her share of sexism (a dislike or disrespect of someone solely because of his or her gender). When people say sexist things to her, she has said she sometimes responds by talking about other powerful women. "Haven't they heard of [former prime minister of England] Margaret Thatcher, [former prime minister of India] Indira Gandhi, or Cleopatra [the Queen of Egypt] for that matter?" she said to *Jet* magazine. She told *Ebony* magazine that sexism "usually comes in the line of 'How'd you end up doing this?'" Rice's most successful weapon against racism and sexism has been her own intelligence and ability.

ARMAND-JEAN DU PLESSIS DE RICHELIEU

Born: September 9, 1585

Paris, France

Died: December 4, 1642

Paris, France

French cardinal and statesman

Cardinal Richelieu devoted himself to securing French leadership in Europe and increasing King Louis XIII's (1601–1643) power within France.

Early life

Armand-Jean du Plessis de Richelieu was born on September 9, 1585, in Paris, fourth of the five children of François du Plessis, the lord of Richelieu, and Suzanne de La Porte. His father was the head of King Henry III's (1551–1589) central administration and also served Henry IV (1553–1610) before dying in 1590 of a fever. His mother was forced to move the family to the home of her mother-in-law. Armand, who throughout his life suf-

fered from different illnesses, returned to Paris to study at the College de Navarre, from which he went on to a military academy. The family planned for his brother Alphonse to become bishop of Luçon, France, but Alphonse decided to become a monk. Because it would help the family, Armand volunteered to take his brother's place, and in 1603 he began studying religion. He went to Rome in 1607 and was named a bishop by the pope. He returned to Paris and obtained his degree in theology (religious studies).

Career as bishop

In 1608 Richelieu arrived in Luçon and began his duties as bishop. In 1614 he was elected as a representative of religion in the Estates General (the legislature). At the suggestion of Maria de' Medici (1573–1642), who was the head of a council that was ruling on behalf of her young son Louis XIII, Richelieu was chosen to speak at the last session of the Estates. He then went back to Luçon, but a year later returned to Paris and was appointed secretary of state for foreign affairs and war. He held the post for only five months before Louis XIII seized power in April 1617 and dismissed his mother's staff members. In 1618 Richelieu was ordered into exile in the city of Avignon, France.

Some of Louis XIII's advisers believed that Richelieu would be a calming influence on the king's mother, so the king recalled him in March 1619 and ordered him to resume serving her. Richelieu helped settle several disputes between the king and his mother. The queen mother wanted the king to help Richelieu become a cardinal; she hoped to control royal policy through the influence Richelieu would have as a member of the

Cardinal Richelieu.

Courtesy of the Library of Congress.

king's council. The resistance of the king and his ministers gradually crumbled; in September 1622 the pope appointed Richelieu a cardinal, and in April 1624 the king called Richelieu to his council.

Position as minister

Richelieu remained the king's principal minister until his death, and he was made a duke in 1631. He gradually built up in the council a group of men, his "creatures," who were loyal to him as well as to the king. These men kept him informed of possible threats against the king, giving him time to foil any takeover attempts. He also relied on his fam-

ily, which he extended by carefully arranging marriages of his nieces and cousins into great families. He made it clear that he was loyal to the king.

Many Catholics, including the queen mother, regarded Huguenots (French Protestants, who opposed many decisions made by the pope and placed less emphasis on ceremonies than Catholics did) as the enemy and insisted that they be dealt with. Richelieu agreed with them up to a point, taking over the Huguenot city of La Rochelle, France, and cooperating on a program of reforms. But he allowed the Huguenots to continue practicing their religion as long as they stayed loyal to the king, and his advice to Louis XIII on other matters caused the queen mother to finally break with Richelieu in 1630. The king then removed her people from his court.

Foreign policy

Richelieu wanted France to become the leading power in Europe. He knew that the country would eventually have to go to war with Spain, which at the time was a part of the Hapsburg empire (an empire that was made up of parts of the present-day countries of Austria, the Czech Republic, Hungary, Croatia, and others). While he reorganized the French army and established a navy, Richelieu encouraged German resistance to the Hapsburg emperor in Vienna, figuring this would buy the French some time while the Hapsburg king in Spain focused his attention on controlling Germany. He also gave money to the Dutch Republic and the Swedish warrior king Gustavus Adolphus (Gustavus II; 1594–1632) to help them in their fight against the Hapsburgs. Eventually France was drawn into war, which was still

going on when Richelieu died on December 4, 1642, having served his country to the best of his ability.

professor of political science and her mother was a counselor. Her parents encouraged Sally and her younger sister Karen to study hard and do their best, but allowed the children the freedom to develop at their own pace. In 1983 *Newsweek* quoted Dale B. Ride as saying, "We might have encouraged, but mostly we just let them explore."

Ride showed natural athletic ability as a youngster, often playing baseball and football with the neighborhood children. Although she liked all sports, tennis was her favorite. She had developed her tennis skills since the age of ten. Ride eventually ranked eighteenth on the national junior tennis circuit.

Student sets own agenda

Ride's tennis ability won her a partial scholarship to Westlake School for Girls, a prep school in Los Angeles. From her earliest years in school, Ride had gotten straight A grades. She did a lot of reading, often science fiction. However, sometimes she did not apply herself to her studies. In her junior year of high school she became interested in the study of physics, through the influence of her science teacher, Elizabeth Mommaerts.

After graduating from high school in 1968, Ride enrolled in the physics program at Swarthmore College, in Swarthmore, Pennsylvania. However, she continued to devote a large amount of time and energy to tennis and soon left college to work on her game full time. Tennis pro Billie Jean King (1943–) told Ride she had the talent to pursue a professional career in tennis.

Ride eventually decided not to pursue tennis. Instead, she returned to California as an undergraduate student at Stanford Univer-

SALLY RIDE

Born: May 26, 1951

Los Angeles, California

American astronaut and physicist

Sally Ride is best known as the first American woman sent into outer space, and she is also the youngest person ever sent into orbit. She has received numerous medals and honors for her work as an astronaut, and for her commitment to educating the young.

Early life

Sally Kristen Ride is the older of two daughters of Dale B. Ride and Carol Joyce (Anderson) Ride of Encino, California. She was born May 26, 1951. Her father was a

Sally Ride.

Courtesy of the U.S. National Aeronautics and Space Administration.

sity. She received a bachelor's degree in both physics and English literature in 1973. She also received her master's degree from Stanford in 1975. She continued work toward her doctoral degree in physics, astronomy, and astrophysics (the study of the physical elements that make up the universe) at Stanford and submitted her dissertation (a long essay written by a candidate for a doctoral degree) in 1978.

Into the wild blue yonder

At about the same time National Aeronautics and Space Administration (NASA) was looking for young scientists to be “mis-

sion specialists” on space flights. Ride applied and was selected for space flight training in 1978. She was one of only thirty-five chosen from eight thousand applicants. As part of her training, Ride had to study basic science and math, meteorology (weather and climate), guidance, navigation, and computers. She trained for flying on a T-38 jet trainer and other simulators (devices that are modeled after real crafts to create similar sensations for training pilots).

Ride was selected as part of the ground-support crew for the second (November, 1981) and third (March, 1982) shuttle flights. Her duties included the role of “cap-com,” or capsule communicator. The “cap-com” relays commands from the ground to the shuttle crew. These experiences prepared her to be an astronaut.

Before Ride's first shuttle flight, George W.S. Abbey, NASA's director of flight operations, described her as an ideal choice for the crew. He noted that she had “an unusual flair for solving difficult engineering problems” and that she was a “team player.” On the seventh mission of the space shuttle *Challenger* (June 18 to June 24, 1983), Ride served as flight engineer. With John M. Fabian she launched communications satellites for Canada and Indonesia. They also conducted the first successful satellite deployment and retrieval in space using the shuttle's remote manipulator arm.

In this way, at thirty-one, Ride became the youngest person sent into orbit as well as the first American woman in space. Ride points to her fellow female astronauts with pride. She feels that since these women were chosen for training, Ride's own experience could not be dismissed as insignificant. That

had been the unfortunate fate of the first woman in orbit, the Soviet Union's Valentina Tereshkova.

Ride was also chosen for another *Challenger* flight led by Captain Crippen, October 5 through October 13, 1984. This time, the robot arm was used in some unusual ways. She performed "ice-busting" on the shuttle's exterior and readjusted a radar antenna. With this flight, Ride became the first American woman to make two space flights.

Response to the Challenger tragedy

Ride had been chosen for a third scheduled flight. Sadly, training was cut short in January 1986, when the space shuttle *Challenger* exploded in midair shortly after take-off. The twelve-foot rubber O-rings that serve as washers between steel segments of the rocket boosters failed under stress. The entire crew of seven was killed.

Ride was chosen for President Ronald Reagan's Rogers Commission, which investigated the explosion. Perhaps the most important recommendation the commission made was to include astronauts at management levels in NASA.

As leader of a task force on the future of the space program, Ride wrote *Leadership and America's Future in Space* in 1987. In her report she said that NASA should take environmental and international research goals into consideration. Ride said NASA has a duty to inform the public and capture the interest of youngsters. She cited a 1986 work that described the lack of math and science skills among American high school graduates. A mere 6 percent are fluent in these fields, compared to up to 90 percent in other nations.

Ride left NASA in 1987 to join Stanford's Center for International Security and Arms Control. Two years later she became physics professor at the University of California in San Diego (UCSD) and director of the California Space Institute. In the summer of 1999 Ride joined the board of Directors of Space.com, an Internet site devoted to news and information on the cosmos. She left that position a year later, to spend more time in science education.

Top priority: educating children

Ride has followed through on her commitment to science education. In her own high school years, she discovered how important it was to have a mentor (advisor). She felt so strongly about the positive influence Mommaerts had on her that she dedicated her first children's book to her former teacher. Ride coauthored two children's books, *To Space and Back*, and *Voyager*.

In 1998 Ride developed EarthKAM, an innovative project for studying natural phenomena (occurrences). This is a unique program for students in middle school through college. Students research a natural phenomenon on Earth and take pictures of it with digital cameras mounted in the crew cabins of NASA space shuttles. The pictures are then downloaded from the Internet into the classroom. Over ten thousand students from all over the United States participate in EarthKAM.

In 2001 Ride formed Imaginary Lines, a company dedicated to encouraging young women interested in the sciences. Through the Sally Ride Science Club, young women in the fourth through eighth grades will be able to network and hook up with mentors. To quote UCSD chancellor Robert Dynes in the

Los Angeles Times, August 29, 1999: "Sally's a hero at bringing the excitement of science into the classroom. Many children today never experience a full-blast spirit of discovery. Sally teaches kids to go for it. Flat out. That's the magic."

Early career as a dancer and actress

Helene Berta Amalie Riefenstahl was born in Berlin, Germany, on August 22, 1902. Her father, Alfred Riefenstahl, who owned a plumbing firm, and her only brother, Heinz, died in World War II (1939–45; a war fought between the Axis powers: Germany, Italy, and Japan—and the Allies: England, France, the Soviet Union, and the United States). As a child she enjoyed reading, painting, and dancing. Early on she decided to become a dancer and received thorough training, both in traditional Russian ballet and in modern dance with Mary Wigman (1886–1973). By 1920 Riefenstahl was a successful dancer touring cities such as Munich, Dresden, and Frankfurt, Germany; Prague, Czechoslovakia; and Zurich, Switzerland.

By 1924 Riefenstahl's dance career was over after she suffered a serious knee injury. It was during her recovery period that her life would change forever when she saw one of the popular mountain films of Arnold Fanck. With characteristic determination and energy she set out to meet Fanck and talk him into offering her an acting role in his *Der heilige Berg* (*The Holy Mountain*, 1926). The film was well-received, and Riefenstahl made up her mind to stay with the relatively new medium of motion pictures. Over the next seven years she made five more films with Fanck. In Fanck's films Riefenstahl was often the only woman in a crew of rugged men who were devoted to adding the beauty and dangers of the still untouched high mountains onto their action-filled adventure films. Not only did she learn to climb and ski well, she also absorbed all she could about camera work, directing, and editing.

LENI RIEFENSTAHL

Born: August 22, 1902

Berlin, Germany

German film director

The German film director Leni Riefenstahl achieved fame and notoriety for her film *Triumph of the Will*, which critics believed to be propaganda, or material created to spread beliefs, of Adolf Hitler's (1889–1945) army, the Third Reich.

Eventually Riefenstahl dreamed up a different kind of mountain film, more romantic and mystical, in which a woman, played by herself, would be the central character and which she herself would direct. *Das blaue Licht* (*The Blue Light*, 1932) was based on a mountain legend and was shot in remote parts of the Tessin and the Dolomite mountains in northern Italy. It demanded—and received—a great deal of dedication from those involved, many of whom were former associates of Fanck's who continued to work with Riefenstahl on other films. *The Blue Light* won praise overseas, where it received the silver medal at the 1932 Biennale in Venice, Italy, and at home, where it also attracted the attention of Adolf Hitler.

Films for the Third Reich

When Adolf Hitler came to power in 1933 he asked Riefenstahl to film that year's Nazi Party (Hitler's political party) rally in Nuremberg, Germany. *Sieg des Glaubens* (*Victory of Faith*, 1933) has been lost; presumably it was destroyed because it showed party members who were soon afterwards killed by Hitler. Hitler then invited Riefenstahl to do the 1934 rally as well, a task she claimed to have accepted only after a second "invitation" and the promise of total artistic freedom.

Triumph des Willens (*Triumph of the Will*, 1935) is considered by many to be the propaganda film of all times. (Later, Riefenstahl maintained she intended the movie to be a documentary.) Carefully edited from over sixty hours of film by herself, with concern for rhythm and variety rather than chronological (order of time) accuracy, it empha-

Leni Riefenstahl.

Reproduced by permission of the Kobal Collection.

sized the fellowship of the Nazi Party, the unity of the German people, and the greatness of their leader who, through composition, cutting, and special camera angles, was given mythical dimensions.

Triumph of the Will made a powerful appeal to the irrational, emotional side of the viewer, particularly in Germany at the time. Not surprisingly, the film was awarded the German Film Prize for 1935. But it was also given the International Grand Prix at the 1937 Paris World Exhibition, albeit over the protest of French workers.

Riefenstahl's next film, the short *Tag der Freiheit: Unsere Wehrmacht* (*Day of Freedom: Our Armed Forces*, 1935) was in a way a sequel, shot to please the German Armed Forces, who were not at all pleased about having received little attention in *Triumph of the Will*.

The Olympic Games

Another major assignment from Hitler followed: to shoot the 1936 Olympic Games held in Germany. *Olympia, Part 1: Fest der Völker* (*Festival of Nations*) and *Part 2: Fest der Schönheit* (*Festival of Beauty*) premiered in 1938, again to great German and also international praise. Careful preparation, technical inventiveness, and eighteen months of editing helped Riefenstahl elevate sports photography—until then a matter for newsreels only—to a level of art rarely achieved. From the naked dancers in the opening sequence and the emphasis upon the African American athlete Jesse Owens (1913–1980) to the striking diving and steeplechase scenes, the film celebrated the beauty of the human form in motion through feats of strength and endurance.

Immediately after completing *The Blue Light* Riefenstahl had made plans to film *Tiefland* (*Lowlands*), a project interrupted by illness, Hitler's assignments, and World War II (1939–45). The film was finally finished in 1954. Many of Riefenstahl's other projects, most notably her plan to do a film on Penthisilea, the Amazon queen, were never completed at all. This was due partly to the fact that she was a woman in a man's profession but mostly to the war and the choices she made under the Nazis. Ultimately, all her work, in spite of the great talent and dedica-

tion it so clearly demonstrates, is tainted by the readiness and skill with which she put her art at the service of the Third Reich, whether it was from loyalty, political blindness, ambition, or, most likely, a combination of all three.

Later career

When Riefenstahl's film career came to a halt, her focus switched to still photography. She visited Africa many times in hopes of making a film, but eventually these trips resulted in two books of photography (*The Last of the Nubu*, in 1974, and *The People of Kau*, in 1976). Once again her work was praised for its beauty and criticized for its political leanings. When she was seventy, Reinstahl learned to scuba dive and concentrated her photography on underwater coral life, resulting in a new book *Coral Garden* (1976).

In 1993, when Riefenstahl was ninety-one years old, German director Ray Mueller made a film biography, *The Wonderful, Horrible Life of Leni Riefenstahl*. It was released along with the English translation of her autobiography, *Leni Riefenstahl: A Biography*. In both the film and the book, Riefenstahl proclaimed her innocence and mistreatment, never having realized the effect her films had on promoting the Nazi cause.

CAL RIPKEN JR.

Born: August 24, 1960

Havre de Grace, Maryland

American baseball player

Cal Ripken Jr. holds many records in professional baseball, but it is his breaking of Lou Gehrig's (1903–1941) record of 2,131 consecutive games played that gained him so many admirers, who call him the “Iron Man” of baseball. The perseverance, endurance, and everyday work ethic that Ripken exhibited throughout his twenty-one seasons with the Baltimore Orioles made him one of the most popular professional athletes in all of sports.

Growing up with the Orioles

Calvin Edwin Ripken Jr. was born on August 24, 1960, in the small Maryland town of Havre de Grace, to Calvin Sr. and Viola Ripkin. His father had been with the Baltimore Orioles baseball team as a minor league catcher since 1957. After a shoulder injury dashed his hopes of a major league career, the elder Ripken stayed on with the club as a coach and manager at both the minor and major league level. During the summers, the family would leave Aberdeen, Maryland, about thirty miles north of Baltimore, and travel with Cal Sr. during the baseball season. Even with all of the traveling alongside his father, Cal Jr. never saw much of him because of the long hours he put in at the ball park. He soon came to the conclusion that the only way he would be able to see his father was if he played baseball.

In 1976, Ripken's father was promoted to a coaching position with the Orioles in Baltimore. Cal Jr. was a constant presence, pitching and hitting during batting practices, retrieving balls, getting advice from major league stars like Brooks Robinson (1937–), and dreaming of becoming a Baltimore Oriole.

In high school Ripken made the varsity (a school's main team which is usually made up of upperclassmen) baseball team as a freshman. Ripken played in the Mickey Mantle World Series in Texas in 1977 and won the Harford County batting title with an amazing .492 batting average (the percent of time a baseball player gets a hit) his senior year. His high school team was crowned state Class A champions in 1978 and, soon after, Ripken was selected by the Orioles in the second round of the annual baseball draft. His dream was complete, as he was now a member of the Baltimore Orioles organization.

Begins play for the Orioles

Ripken was employed by Baltimore's minor league team in Bluefield, West Virginia, where he was assigned the shortstop position instead of pitcher. His first season with Bluefield was not a great success. He had a .264 batting average and led the league in errors with thirty-three. Soon after, he was moved to the Orioles's Florida Instructional League team in Miami and improved to a .303 batting average.

By the next season Ripken's play greatly improved. He was named the Southern League's all-star and was soon moved up the ladder again, this time to the Orioles's AAA team (the minor league team one step below the major league team) in Rochester, New York, in 1981. He continued to develop in

Cal Ripken Jr.

Rochester, with a batting average of .288 and twenty-three home runs, before being called up to the major leagues in August of 1981.

Ripken had a batting average of only .128 in thirty-nine at-bats during his first season with the Orioles, but his second season would prove to be a turning point. Ripken's performance in his second season improved to a .264 batting average with twenty-eight home runs. He was selected as the American League's Rookie of the Year.

In 1983, with Ripken firmly in place and comfortable, he helped the Orioles win the World Series against the Philadelphia Phillies. For his efforts he was voted the

American League's Most Valuable Player for the series and the *Sporting News* player of the year.

"Iron Man"

By the 1989 season, Ripken was slowly taking over as the team's leader. Despite losing the divisional title to the Toronto Blue Jays, Ripken committed only eight errors and hit twenty-one home runs. This made him the first shortstop to have eight 20-homer seasons. On June 12, 1990, Ripken moved into second place for the record of most consecutive games played as he appeared in his one thousand three hundredth consecutive game, surpassing Everett Scott's mark. He also set a shortstop record by playing ninety-five games without committing an error.

On September 6, 1995, Ripken became baseball's "Iron Man" as he surpassed Lou Gehrig's all-time consecutive games played record of 2,130. He had not missed a game since May 30, 1982, and when the game became official in the fifth inning, the capacity crowd at Baltimore's Camden Yards roared its approval. During a speech after the milestone game, Ripken underplayed his achievement and showed the humility (the state of not being arrogant) that had become his trademark. "Tonight I stand here, overwhelmed, as my name is linked with the great and courageous Lou Gehrig," he told the crowd. "I'm truly humbled to have our names spoken in the same breath."

On September 20, 1998, Ripken took a day off work, leaving his streak of most consecutive games played at an astounding two 2,632, undoubtedly one of the safest records in all of sports. In July of 2001, Ripken played in his last All-Star game, winning the

Most Valuable Player award. At the end of that season, Ripken walked away from the game for good. In retirement he holds nearly every Oriole offensive batting record, including most hits, doubles, home runs, and runs batted in.

DIEGO RIVERA

Born: December 8, 1886
Guanajuato, Mexico
Died: November 25, 1957
Mexico City, Mexico
Mexican painter

Diego Rivera was one of Mexico's most famous painters. He rebelled against the traditional school of painting and developed a style that combined historical, social, and political ideas. His great body of work reflects cultural changes taking place in Mexico and around the world during the turbulent twentieth century.

The young artist

Diego Maria Rivera and his twin brother Carlos were born in Guanajuato, Guanajuato State, Mexico, on December 8, 1886. Less than two years later his twin died. Diego's parents were Diego Rivera and Maria Barrientos de Rivera. His father worked as a teacher, an editor for a newspaper, and a health inspector. His mother was a doctor. Diego began drawing when he was only three years old. His father soon built him a studio with canvas-covered walls and art supplies to keep the young artist from drawing on the walls and furniture in the house. As a child, Rivera was interested in trains and machines and was nicknamed "the engineer." The Rivera family moved to Mexico City, Mexico, in 1892.

In 1897 Diego began studying painting at the San Carlos Academy of Fine Arts in Mexico City. His instructors included Andrés Ríos Félix Para (1845–1919), Santiago Rebull (1829–1902), and José María Velasco (1840–1912). Para showed Rivera Mexican art that was different from the European art that he was used to. Rebull taught him that a good drawing was the basis of a good painting. Velasco taught Rivera how to produce three-dimensional effects. He was also influenced by the work of José Guadalupe Posada (1852–1913), who produced scenes of everyday Mexican life engraved on metal.

Diego Rivera.

Reproduced by permission of AP/Wide World Photos.

In 1902 Rivera was expelled from the academy for leading a student protest when Porfirio Díaz (1830–1915) was reelected president of Mexico. Under Díaz's leadership, those who disagreed with government policies faced harassment, imprisonment, and even death. Many of Mexico's citizens lived in poverty, and there were no laws to protect the rights of workers. After Rivera was expelled, he traveled throughout Mexico painting and drawing.

Art in Europe

Although Rivera continued to work on his art in Mexico, he dreamed of studying in

Europe. Finally, Teodora A. Dehesa, the governor of Veracruz, Mexico, who was known for funding artists, heard about Rivera's talent and agreed to pay for his studies in Europe. In 1907 Rivera went to Madrid, Spain, and worked in the studio of Eduardo Chicharro. Then in 1909 he moved to Paris, France. In Paris he was influenced by impressionist painters, particularly Pierre-Auguste Renoir (1841–1919). Later he worked in a postimpressionist style inspired by Paul Cézanne (1839–1906), Paul Gauguin (1848–1903), Georges Seurat (1859–1891), Henri Matisse (1869–1954), Raoul Dufy (1877–1953), and Amedeo Modigliani (1884–1920).

As Rivera continued his travels in Europe, he experimented more with his techniques and styles of painting. The series of works he produced between 1913 and 1917 are cubist (a type of abstract art usually based on shapes or objects rather than pictures or scenes) in style. Some of the pieces have Mexican themes, such as the *Guerrillero* (1915). By 1918 he was producing pencil sketches of the highest quality, an example of which is his self-portrait. He continued his studies in Europe, traveling throughout Italy learning techniques of fresco (in which paint is applied to wet plaster) and mural painting before returning to Mexico in 1921.

Murals and frescoes

Rivera believed that all people (not just people who could buy art or go to museums) should be able to view the art that he was creating. He began painting large murals on walls in public buildings. Rivera's first mural, the *Creation* (1922), in the Bolívar Amphitheater at the University of Mexico, was the first important mural of the twentieth century.

The mural was painted using the encaustic method (a process where a color mixed with other materials is heated after it is applied). Rivera had a great sense of color and an enormous talent for structuring his works. In his later works he used historical, social, and political themes to show the history and the life of the Mexican people.

Between 1923 and 1926 Rivera created frescoes in the Ministry of Education Building in Mexico City. The frescoes in the Auditorium of the National School of Agriculture in Chapingo (1927) are considered his masterpiece. The oneness of the work and the quality of each of the different parts, particularly the feminine nudes, show off the height of his creative power. The general theme of the frescoes is human biological and social development. The murals in the Palace of Cortés in Cuernavaca (1929-1930) depict the fight against the Spanish conquerors.

Marriage, art, and controversy in the United States

In 1929 Rivera married the artist Frida Kahlo (1907–1954). The couple traveled in the United States, where Rivera produced many works of art, between 1930 and 1933. In San Francisco he painted murals for the Stock Exchange Luncheon Club and the California School of Fine Arts. Two years later he had an exhibition at the Museum of Modern Art in New York City. One of his most important works is the fresco in the Detroit Institute of Arts (1933), which depicts industrial life in the United States. Rivera returned to New York and began painting a mural for Rockefeller Center (1933). He was forced to stop work on the mural because it included a picture of

Vladimir Lenin (1870–1924), the founder of the Russian Communist Party and the first leader of the Soviet Union. Many people in the United States disagreed with communism (a political and economic system in which property and goods are owned by the government and are supposed to be given to people based on their need) and Lenin and the mural was later destroyed. Rivera was a member of the Mexican Communist Party and many of his works included representations of his political beliefs. In New York Rivera also did a series of frescoes on movable panels depicting a portrait of America for the Independent Labor Institute before returning to Mexico in 1933.

Back to Mexico

After Rivera and Kahlo returned to Mexico, he painted a mural for the Palace of Fine Arts in Mexico City (1934). This was a copy of the project that he had started in Rockefeller Center. In 1935 Rivera completed frescoes, which he had left unfinished in 1930, on the stairway in the National Palace. The frescoes show the history of Mexico from pre-Columbian times to the present and end with an image representing Karl Marx (1818–1883), the German philosopher and economist whose ideas became known as Marxism. These frescoes show Rivera's political beliefs and his support of Marxism. The four movable panels he worked on for the Hotel Reforma (1936) were removed from the building because they depicted a representation of his views against Mexican political figures. During this period he painted portraits of Lupe Marín and Ruth Rivera and two easel paintings, *Dancing Girl in Repose* and the *Dance of the Earth*.

In 1940 Rivera returned to San Francisco to paint a mural for a junior college on the general theme of culture in the future. Rivera believed that the culture of the future would be a combination of the artistic genius of South America and the industrial genius of North America. His two murals in the National Institute of Cardiology in Mexico City (1944) show the development of cardiology (the study of the heart) and include portraits of the outstanding physicians in that field. In 1947 he painted a mural for the Hotel del Prado, *A Dream in the Alameda*.

A celebration of fifty years of art

In 1951 an exhibition honoring fifty years of Rivera's art took place in the Palace of Fine Arts. His last works were mosaics for the stadium of the National University and for the Insurgents' Theater, and a fresco in the Social Security Hospital No. 1. Frida Kahlo died on July 13, 1954. Diego Rivera died in Mexico City on November 25, 1957.

PAUL ROBESON

Born: April 9, 1898

Princeton, New Jersey

Died: January 23, 1976

Philadelphia, Pennsylvania

African American singer, actor, and political activist

Paul Robeson was an African American singer, actor, and political activist. He crusaded for equality and justice for African Americans.

Early life and distinguished scholar

Paul Leroy Robeson was born the last of eight children in the Robeson family, on April 9, 1898, in Princeton, New Jersey. His father, William Drew Robeson, was a runaway slave who fought for the North in the Civil War (1861–65), when Northern forces clashed with those of the South over secession, or the South's desire to leave the Union. His father put himself through Lincoln University, received a degree in divinity, and was pastor at a Presbyterian church in Princeton. Paul's mother, Anna Louisa Robeson, was a member of the distinguished Bustill family of Philadelphia, which included patriots in the Revolutionary War (1775–83), when the American colonies fought for independence from Great Britain. She also helped found the Free African Society, and maintained agents in the Underground Railroad, a secret system to help runaway slaves.

Paul's mother died when he was six and his father moved the remaining family to Sommerville, New Jersey. There, young Paul spent his childhood under his father's influ-

ence, regularly working with him after school and also singing in his father's church. From his father Robeson learned to work hard, pursue valuable goals, fight for his beliefs, and to help his people's cause.

At seventeen Robeson won a scholarship to Rutgers University in New Brunswick, New Jersey. Although he was only the third African American student in the school's history, Robeson was immensely popular and was considered an athlete "without equal." He won an amazing twelve major letters (varsity spots on sports teams) in four years. His academic record was also brilliant. He won first prize (for four consecutive years) in every speaking competition the at the college for which he was eligible, and he was elected to Phi Beta Kappa, a scholarship honor society. In addition, he engaged in social work in the local black community and delivered his senior class graduation speech. Rutgers subsequently honored him as the "perfect type of college man."

Turns to entertainment

Robeson graduated from the Columbia University Law School in 1923 and took a job with a New York City law firm. In 1921 he married Eslanda Goode Cardozo; they had one child. Robeson's career as a lawyer ended abruptly when others within the firm turned on him because he was African American. He then turned to acting as a career, playing the lead in *All God's Chillun Got Wings* (1924) and *The Emperor Jones* (1925). He added to his acting by singing spirituals. He was the first to give an entire program of exclusively African American songs in concert, and he was one of the most popular concert singers of his time.

Robeson starred in such stage presentations as *Show Boat* (1928), *Othello*, in Lon-

don, England (1930), *Toussaint L'Ouverture* (1934), and *Stevedore* (1935). His *Othello* (1943–44) ran for 296 performances—a remarkable run for a Shakespearean play on Broadway. While playing opposite white actress Mary Ure, he became the first black actor ever to do the role in England's Shakespeare Memorial Theater.

Robeson's most significant films were *Emperor Jones* (1933), *Show Boat*, *Song of Freedom* (both 1936), and *Proud Valley* (1939). Charles Gilpin and Robeson, as the first African American men to play serious roles on the American stage, opened up this aspect

of the theater for African Americans. Robeson used his talents not only to entertain but to gain appreciation for the cultural differences among men.

International affairs

During the 1930s Robeson entertained throughout Europe and the United States. In 1934 he made the first of several trips to the Soviet Union. He spoke out against the Nazis, Adolf Hitler's (1889–1945) radical German army, and sang to Loyalist troops during the Spanish Civil War (1936–39), when battles erupted between Spain's traditionalists and reigning Second Spanish Republic. In addition he raised money to fight the Italian invasion of Ethiopia, supported the Committee to Aid China, and became chairman of the Council on African Affairs (which he helped establish in 1937). A spokesman for cultural black nationalism (a radical movement that called for African Americans to set up their own self-governing nation), Robeson also continued to fight racial discrimination (forced separation people based on race). During World War II (1939–45), when the Allies—the United States, England, France, and the Soviet Union—battled German-led Axis forces, he supported the American effort by entertaining soldiers in camps and laborers in war industries.

After the war, Robeson worked full-time campaigning for the rights of African Americans around the world. In a period of great paranoia within the nation, the American government and many citizens felt threatened by Robeson's crusade for peace and on behalf of minorities. The fact that for over fifteen years he was America's most popular African American did not prevent Robeson

from being banned from American concert and meeting halls and being denied a passport to travel overseas.

Awards and legacy

During the 1950s Robeson performed in black churches and for trade unions. After eight years of denial, he won his passport, gave a concert in Carnegie Hall, and published *Here I Stand* in 1958. He went abroad on concert, television, and theater engagements. He received numerous honors and awards: the National Association for the Advancement of Colored People's (NAACP) Spingarn Medal, several honorary degrees from colleges, the Diction Award from the American Academy of Arts and Letters, numerous awards from labor unions and civic organizations, and the Stalin Peace Prize.

Robeson had used an “unshakable dignity and courage” learned from his father to break stereotypes (generalizations of a person or group) and limitations throughout his life. He added fifteen spoken languages, a law degree, an international career as singer and actor, and civil rights activist to his long list of accomplishments in his effort to be “the leader of the black race in America.”

Robeson returned to America in 1963 in poor health and soon retired from public life. Slowly deteriorating and living in seclusion, Robeson died on January 23, 1976, in Philadelphia, Pennsylvania, after suffering a stroke.

Honored after death

It took Robeson seventy-seven years to win the respect of the college sports world.

During his outstanding, four-year football career at Rutgers University, Robeson was named All-American in 1917 and 1918, the first African American to do so. In 1995, after his race and politics no longer took away from his legacy and the awards were based more on accomplishments, he was inducted posthumously (after his death) into the College Football Hall of Fame at the new fourteen million dollar museum's grand opening in South Bend, Indiana. *Sports Illustrated* called it a "long-overdue step toward atonement [setting things right]."

In an article in *Jet* magazine, Robeson's son, Paul Jr., who accepted the honor, talked about his father's influence on African American men and his dedication to causes. "He felt it was a job he had to do for his people and the world as a whole," said the younger Robeson. His songs, such as his trademark *Ol' Man River*, and acting have remained available in videos and new releases of his vintage recordings.

MAXIMILIEN DE ROBESPIERRE

Born: May 6, 1758

Arras, France

Died: July 28, 1794

Paris, France

French political leader and lawyer

Maximilien de Robespierre was the leading voice of the government that ruled France during the French Revolution. He was largely responsible for the Reign of Terror, in which thousands of suspected French traitors were executed.

Early life

Maximilien François Marie Isidore de Robespierre was born on May 6, 1758, in Arras, France. His mother died when he was only six and his father, a lawyer, abandoned the family soon afterward. Robespierre received a law degree from the Collège Louis-le-Grand in Paris, France, and practiced law in Arras. He began to assume a public role as a voice calling for political change and wrote articles detailing his opinions. At age thirty he was elected to the Estates General, the French legislature.

Role in early revolution

During the first period of the French Revolution (1789–91), in which the Estates General became the National Assembly, Robespierre made many speeches. His ideas were seen as extreme: his belief in civil liberty and equality, his refusal to compromise, and his anger toward all authority won him little

Maximilien de Robespierre.
Courtesy of the Library of Congress.

support in the legislature. He favored giving the vote to all men, not just property owners, and he opposed slavery in the colonies. Robespierre was more popular at meetings of a Paris club called the Jacobins, whose members admired him and referred to him as “the Incorruptible” because of his honesty and firm sense of right and wrong.

When Robespierre’s term as a legislator ended in September 1791, Robespierre remained in Paris, spending time at the Jacobins and publishing a weekly political journal. During this period he was a critic of King Louis XVI (1754–1793) and those who supported a limited, constitutional monarchy

(rule by a single person). Robespierre, deeply suspicious of the king, spoke and wrote in opposition to the course of events until August 1792, when the monarchy was overthrown and the First French Republic was established.

Period in power

A group of representatives was quickly elected to draft a constitution and to govern the country in the meantime, and Robespierre was elected to attend. As a spokesman for the Jacobins in the National Convention, he was a harsh critic of the king, who was finally placed on trial, convicted, and executed in January 1793. In the months that followed Robespierre turned his anger on a group of moderates (those who prefer less abrupt change) called the Girondins, leading the effort to have their members removed from the convention, arrested, and executed.

In July 1793 Robespierre was elected to the Committee of Public Safety, which acted to protect the republic during the dual problems of foreign war (most of Europe was fighting against the Revolutionary government in France) and civil war (which threatened to bring down that government). It executed people who were suspected of supporting the king or making plans to take over the government. Thousands were put to death with a quick trial or no trial at all. This became known as the Reign of Terror.

Robespierre faced increased opposition on both sides. Included among these were the Hébertists, a group that controlled the Paris city government and was upset with wartime shortages and increased prices, and the Indulgents, moderate Jacobins who felt that the Reign of Terror should be relaxed

since the war had ended. Robespierre had leaders of both groups rounded up and executed, including Georges Jacques Danton (1759–1794), who had once been a close associate of his. Robespierre and his supporters claimed that they wanted to create a Republic of Virtue in which citizens would live honest, moral lives and serve the community.

Downfall and execution

Opposition to Robespierre continued to grow. More and more of the public, now that the military crisis was over, wanted a relaxation, not an increase, of the terror. In July 1794 Robespierre spoke for the need of the Committee of Public Safety to continue its activities. His opponents took a stand against him and on July 27 they voted for his arrest. He and his followers were quickly released, however, and they gathered to plan a rising of their own. But the opposition leaders rallied their forces; Robespierre and his supporters were captured that night and executed the next day. The period of the Thermidorian Reaction, during which the Terror was ended and France returned to a more moderate government, began with the deaths of Robespierre and his supporters.

SMOKEY ROBINSON

Born: February 19, 1940

Detroit, Michigan

African American singer, songwriter, and producer

Hailed by some as the greatest living American songwriter, Motown star Smokey Robinson has been composing and singing rhythm and blues hits for more than three decades.

Growing up a “Miracle”

William “Smokey” Robinson Jr. was born on February 19, 1940, in Detroit, Michigan, in the rough Brewster ghetto, a poor and generally dangerous neighborhood. Young Smokey grew up listening to his mother’s records, including the works of B. B. King (1925–), Muddy Waters (1915–1983), John Lee Hooker (1917–2001), Sarah Vaughan (1924–1990), and Billy Eckstine (1914–1993). These black artists, he commented in *Rolling Stone*, were “the first inspirational thing I had.” When Robinson was ten, his mother died, and his sister Geraldine took him in, raising him along with her ten children. The family was poor but close-knit, and Robinson spent his youth writing songs and singing in local bands.

Robinson would not consider a professional career until he graduated from high

Smokey Robinson.

school, and even then he tried barber school and courses in dentistry before giving his full attention to music. In 1954 he formed a rhythm and blues (a form of music combining jazz, blues, and other musical styles) group called the Matadors; the name was changed to the Miracles three years later when a female singer, Claudette Rogers, joined the group. Rogers married Robinson in 1959. At first the members of the Miracles—who were each paid five dollars per week by their agent, Berry Gordy (1929–)—found the music business difficult.

Robinson was lucky to have encountered Berry Gordy during an audition for another

agent; Gordy, then a fledgling (just starting out) music producer on a limited budget, was equally fortunate to have found Robinson. Gordy began to produce the Miracles' singles in 1958, collaborating with Robinson on lyrics and tunes. Their first release, "Got a Job"—an answer to the Silhouettes' number one hit "Get a Job"—hit number 93 on the nationwide Billboard Top 100 chart. The debut was encouraging, but nothing prepared Gordy and Robinson for the limelight they would gain in 1960. Late that year they released an upbeat single, "Shop Around," that became a chart-topping million-seller. The Miracles became a national phenomenon, and Gordy was able to launch Motown Records, a landmark production company that introduced such talents as Diana Ross (1944–) and the Supremes, Stevie Wonder (1950–), Marvin Gaye (1939–1984), and the Temptations.

Became a sought-after songwriter

Robinson and the Miracles were Gordy's first star-quality group, and they continued their association with Motown as the company grew. Indeed, Robinson wrote hit songs not only for his group but for other Motown headliners as well.

Throughout the 1960s, especially in the latter half of the decade, the Motown sound competed with the music of the British invasion (the sudden appearance of extremely popular British bands, led by the Beatles and Rolling Stones) for popularity among America's youth. Robinson and the Miracles were favorites among the Motown personnel, earning more than six gold records (five hundred thousand or more records sold) containing such hits as "The Tracks of My Tears," "You've Really Got a Hold on Me," "I Second That

Emotion,” and “Ooo Baby Baby.” Still, Robinson was on the verge of leaving the group in 1968 when his son Berry was born. He reconsidered almost immediately, however, when the Miracles single, “Tears of a Clown,” became a number one hit, first in England and then in the United States. Robinson left the Miracles in 1972; the band went on without him until the late 1970s.

For a time after leaving the Miracles, Robinson concentrated on his business duties as vice president of Motown Records. He soon returned to recording, however, this time as a solo artist. His solo albums are, on the whole, more thoughtful and mellow than his work with the Miracles.

Inducted into the Rock and Roll Hall of Fame

Robinson's records of the late 1980s, when he was well into his third decade in the music business, continued to gain popularity and the approval of critics. A *People* magazine reviewer found that on his 1986 album *Smoke Signals*, for example, the singer “remains a uniquely resilient performer.” His 1987 album entitled *One Heartbeat* was termed “another winning package of sharp, sophisticated soul” by a reviewer from *Rolling Stone*. Robinson hits like “Cruisin’,” “Just to See Her”—a Grammy Award winner—and “Being With You” became both rhythm and blues and pop hits. Coupled with his success with the Miracles and as a major Motown songwriter, Robinson's solo achievements in the music industry led to his 1986 induction into the Rock and Roll Hall of Fame, and in 1989 he was named a Grammy Living Legend.

Coping with such enormous fame has not always been easy for Robinson. He wrote

of his personal struggles in his 1989 collaboration with David Ritz, *Smokey: Inside My Life*. *Musician* writer Jon Young remarked that the autobiography (a story that recounts one's own life) “documents everything from [Robinson's] family history and the early days of the Miracles to his extramarital affairs and, most striking, a graphic account of two years in the [depths] of cocaine addiction in the mid-'80s.” When asked why he chose to provide such candid details about his drug addiction, Robinson responded to Young, “I wrote it because it was God's will. . . . I was saved from drugs in 1986 when my pastor prayed for me. I never went to rehab or to a doctor. It was a miracle healing from God, so that I could carry the message about the perils of drugs. At the time I was saved, I was already dead. You are now speaking to Lazarus.”

Left Motown for SBK Records

With the onset of the 1990s, Robinson's contract with Motown Records expired and after a long and productive career with the record company, he moved to SBK Records. With SBK, Robinson released a well-received album he coproduced and recorded in less than six weeks, 1991's *Double Good Everything*.

Also in 1991 Robinson ventured into previously uncharted areas of the music world, considering an album of country-western tunes and penning the score for a Broadway musical titled *Hoops*, which presented the history of the Harlem Globetrotters basketball team.

Musical productivity and recognition for his accomplishments have not slowed for Smokey Robinson. In 1999 he released the well-received *Intimate* album. Two years later

Smokey Robinson and the Miracles were inducted into the Vocal Group Hall of Fame & Museum, which is dedicated to “honor the greatest vocal groups in the world.”

JOHN D. ROCKEFELLER

Born: July 8, 1839

Richford, New York

Died: May 23, 1937

Ormond, Florida

American industrialist and philanthropist

John D. Rockefeller, an American industrialist (a person who owns or oversees an industrial corporation) and philanthropist (a person who works to help mankind), founded the Standard Oil Company, the University of Chicago, and the Rockefeller Foundation.

Childhood

John Davison Rockefeller was born on July 8, 1839, in Richford, New York, the second of six children. His father owned farm property and traded in many goods, including lumber and patent medicines. His

mother, who was quite the opposite of his father’s fun-loving ways, brought up her large family very strictly. After living in Oswego, New York, for several years, the family moved to Cleveland, Ohio, in 1853, when it was beginning to grow into a city. John graduated from high school there and excelled in mathematics.

After graduation Rockefeller attended a commercial college for three months, after which he found his first job at the age of sixteen as a produce clerk. In 1859, at age nineteen, he started his first company, Clark and Rockefeller, with a young Englishman. They grossed (money earned before expenses) four hundred fifty thousand dollars in the first year of trading. Clark did the fieldwork while Rockefeller controlled office management, bookkeeping, and relationships with bankers.

Expanding businesses

From the start Rockefeller showed a genius for organization and method. The firm prospered during the Civil War (1861–65), when Confederate (Southern) forces clashed with those of the Union (North). With the Pennsylvania oil strike (1859) and the building of a railroad to Cleveland, they branched out into oil refining (purifying) with Samuel Andrews, who had technical knowledge of the field. Within two years Rockefeller became senior partner; Clark was bought out, and the firm Rockefeller and Andrews became Cleveland’s largest refinery.

With financial help from S. V. Harkness and from a new partner, H. M. Flagler (1830–1913), who also secured favorable railroad freight rebates, Rockefeller survived the bitter competition in the oil industry. The

Standard Oil Company, started in Ohio in 1870 by Rockefeller, his brother William, Flagler, Harkness, and Andrews, had a worth of one million dollars and paid a profit of 40 percent a year later. While Standard Oil controlled one-tenth of American refining, the competition remained.

Rockefeller still hoped to control the oil industry. He bought out most of the Cleveland refineries as well as others in New York, Pittsburgh, and Philadelphia. He turned to new transportation methods, including the railroad tank car and the pipeline. By 1879 he was refining 90 percent of American oil, and Standard used its own tank car fleet, ships, docking facilities, barrel-making plants, depots, and warehouses.

Rockefeller came through the Panic of 1873, a severe financial crisis, still urging organization of the refiners. As his control approached near-monopoly (unfair control over an industry), he fought a war with the Pennsylvania Railroad in 1877 which created a refining company to try to break Rockefeller's control. But bloody railroad strikes (workers' protests) that year forced them to surrender to Standard Oil. Rockefeller's dream of order was near completion.

America's first trust

By 1883, after winning control of the pipeline industry, Standard's monopoly was at a peak. Rockefeller created America's first great "trust" in 1882. Ever since 1872, Standard had placed its gains outside Ohio in the hands of Flagler as "trustee" because laws denied one company's ownership of another's stock. All profits went to the Ohio company while the outside businesses remained independent. Nine trustees of the

*John D. Rockefeller.
Courtesy of the Library of Congress.*

Standard Oil Trust received the stock of forty businesses and gave the various shareholders trust certificates in return. The trust had a worth of about seventy million dollars, making it the world's largest and richest industrial organization.

In the 1880s the nature of Rockefeller's business began to change. He moved beyond refining oil into producing crude oil itself and moved his wells westward with the new fields opening up. Standard also entered foreign markets in Europe, Asia, and Latin America. From 1885 a committee system of management was developed to control Standard Oil's enormous empire.

Attacking the trust

Public opposition to Standard Oil grew with the emergence of the muckraking journalists (journalists who expose corruption), in particular, Henry Demarest Lloyd (1847–1903) and Ida Tarbell (1857–1944) who published harsh stories of the oil empire. Rockefeller was criticized for various practices: railroad rebates (a system he did not invent and which many refiners used); price fixing; and bribery (exchanging money for favors); crushing smaller firms by unfair competition, such as cutting off their crude oil supplies or restricting their transportation outlets. Standard Oil was investigated by the New York State Senate and by the U.S. House of Representatives in 1888. Two years later the Ohio Supreme Court invalidated Standard's original trust agreement. Rockefeller formally disbanded the organization and in 1899 Standard was recreated legally under a new form as a "holding company," (this merger was dissolved by the U.S. Supreme Court in 1911, long after Rockefeller himself had retired from active control in 1897).

Perhaps Rockefeller's most famous excursion outside the oil industry began in 1893, when he helped develop the Mesabi iron ore range of Minnesota. By 1896 his Consolidated Iron Mines owned a great fleet of ore boats and virtually controlled Great Lakes shipping. Rockefeller now had the power to control the steel industry, and he made an alliance with the steel king, Andrew Carnegie (1835–1919), in 1896. Rockefeller agreed not to enter steelmaking and Carnegie agreed not to touch transportation. In 1901 Rockefeller sold his ore holdings to the vast new merger created by Carnegie and J. P. Morgan (1837–1913), U.S. Steel. In that year

his fortune passed the \$200 million mark for the first time.

Philanthropic endeavors

Rockefeller, from his first employment as a clerk, sought to give away one-tenth of his earnings to charity. His donations grew with his fortune, and he also gave time and energy to philanthropic (charity-related) causes. At first he depended on the Baptist Church for advice. The Church wanted its own university, and in 1892, the University of Chicago opened. The university was Rockefeller's first major philanthropic creation, and he gave it over \$80 million during his lifetime. Rockefeller chose New York City for his Rockefeller Institute of Medical Research (now Rockefeller University), chartered in 1901. In 1902 he established the General Education Board.

The total of Rockefeller's lifetime philanthropies has been estimated at about \$550 million. Eventually the amounts involved became so huge (his fortune reached \$900 million by 1913) that he developed a staff of specialists to help him. Out of this came the Rockefeller Foundation, chartered in 1913, "to promote the well-being of mankind throughout the world." He died on May 23, 1937, in Ormond, Florida.

Rockefeller's personal life was fairly simple. He was a man of few passions who lived for his work, and his great talent was his organizing genius and drive for order, pursued with great single-mindedness and concentration. His life was absorbed by business and family (wife Laura and four children), and later by organized giving. He created order, efficiency, and planning with extraordinary success and sweeping vision.

NORMAN ROCKWELL

Born: February 3, 1894

New York, New York

Died: November 8, 1978

Stockbridge, Massachusetts

American illustrator

Norman Rockwell's heartwarming illustrations of American life appeared on covers of the *Saturday Evening Post* magazine for many years. When people use the expression "as American as

apple pie," they could just as well say "as American as a Norman Rockwell painting."

Early years

Norman Perceval Rockwell was born on February 3, 1894, in New York City, the first of Jarvis Waring Rockwell and Nancy Hill's two sons. His father worked for a textile firm, starting as office boy and eventually moving up to manager of the New York office. His parents were very religious, and the young Rockwell sang in the church choir. Until he was about ten years old the family spent its summers at farms in the country. Rockwell recalled in his autobiography (the story of his own life) *My Adventures as an Illustrator*, "I have no bad memories of my summers in the country." He believed that these summers "had a lot to do with what I painted later on."

Rockwell enjoyed drawing at an early age and soon decided he wanted to be an artist. During his freshman year in high school, he also attended the Chase School on Saturdays to study art. Later that year he attended Chase twice a week. Halfway through his sophomore year, he quit high school and went full time to art school.

Started at bottom in art school

Rockwell enrolled first in the National Academy School and then attended the Art Students League. Because he was so serious when working on his art, he was nicknamed "The Deacon" by the other students. In his first class with a live model (a person modeling without clothing), the model was lying on her side and because all Rockwell could see were her feet and buttocks—that was all he drew. Rockwell noted that, as Donald Walton wrote in his book *A Rockwell Portrait*, "he

Norman Rockwell.

Courtesy of the Library of Congress.

started his career in figure drawing from the bottom up.”

At the Art Students League, Rockwell was strongly influenced by his teachers George Bridgeman, who helped him excel in his drawing skills, and Thomas Fogarty, who passed on his enthusiasm for illustration to Rockwell. While Rockwell was still at the school, Fogarty sent him to a publisher, where he got a job illustrating a children's book. He next received an assignment from *Boys' Life* magazine. The editor liked his work and continued to give him assignments. Eventually Rockwell was made art director of the magazine. He worked regularly on other

children's magazines as well. “The kind of work I did seemed to be what the magazines wanted,” he remarked in his autobiography.

Paintings made the Post

In March 1916 Rockwell traveled to Philadelphia, Pennsylvania, to see George Horace Lorimer, editor of the *Saturday Evening Post*. It was Rockwell's dream to do a *Post* cover. Since he did not have an appointment, he showed his work to the art editor, who then showed it to Lorimer. The editor accepted Rockwell's two finished paintings for covers as well as three sketches for future covers. Rockwell's success with the *Post* made him more attractive to other magazines, and he began selling paintings and drawings to *Life*, *Judge*, and *Leslie's*. Also in 1916 he married Irene O'Connor, a schoolteacher.

In 1917, shortly after the United States entered World War I (1914–18; a war fought between German-led Central Powers and the Allies: England, the United States, Italy, and other nations), Rockwell joined the navy and was assigned to the camp newspaper. Meanwhile, he continued painting for the *Post* and other publications. After the war Rockwell started doing advertising illustration, working for Jell-O, Willys cars, and Orange Crush soft drinks, among others. In 1920 he was hired to paint a picture for the Boy Scout calendar. (He would continue to provide a picture for the popular calendar for over fifty years.) During the 1920s Rockwell's income soared. In 1929 he was divorced from his wife Irene, and in 1930 he married Mary Barstow, with whom he had three sons. In 1939 the family moved to a sixty-acre farm in Arlington, Vermont. In 1941 the Milwaukee Art Institute gave Rockwell his first one-man show in a major museum.

Wide variety of work

After President Franklin Roosevelt (1882–1945) made a speech to Congress in 1941 describing the “four essential human freedoms,” Rockwell created paintings of the four freedoms: Freedom of Speech, Freedom of Worship, Freedom from Want, and Freedom from Fear. He completed the paintings in six months in 1942, and they were published in the *Post* in 1943. The pictures became greatly popular, and many other publications asked the *Post* for permission to reprint them. The federal government also took the original paintings on a national tour to sell war bonds. As Ben Hibbs, editor of the *Post*, noted in Rockwell’s autobiography, “They were viewed by 1,222,000 people in 16 leading cities and were instrumental in selling \$132,992,539 worth of bonds.”

In 1943 Rockwell’s studio burned to the ground. He lost some original paintings and drawings as well as his large collection of costumes. He and his family then settled in nearby West Arlington, Vermont. Rockwell worked on special stamps for the Postal Service as well as posters for the Treasury Department, the military, and Hollywood movies. He also did illustrations for Sears mail-order catalogs, Hallmark greeting cards, and books such as *The Adventures of Tom Sawyer* and *The Adventures of Huckleberry Finn*. In 1953 Rockwell and his family moved to Stockbridge, Massachusetts. In the summer of 1959, his wife Mary suffered a heart attack and died. In 1961 he married Molly Punderson, a retired schoolteacher.

Also in 1961 Rockwell received an honorary (obtained without meeting the usual requirements) Doctor of Fine Arts degree from the University of Massachusetts as well

as the Interfaith Award of the National Conference of Christians and Jews for his *Post* cover painting of the Golden Rule. Rockwell’s last *Post* cover (he did three hundred seventeen in all) appeared in December 1963. The magazine’s circulation was shrinking at that time, and new management decided to switch to a new format. Rockwell continued painting news pictures for *Look* and contributing to *McCall’s*.

People’s choice

In 1969 Rockwell had a one-man show in New York City. Critics were usually unkind toward Rockwell’s work or ignored it completely, but the public loved his paintings, and many were purchased for prices averaging around \$20,000. Thomas Buechner wrote in *Life*, “It is difficult for the art world to take the people’s choice very seriously.” In 1975, at the age of eighty-one, Rockwell completed his fifty-sixth Boy Scout calendar. In 1976 the city of Stockbridge celebrated a Norman Rockwell Day. On November 8, 1978, Rockwell died in his home.

In 1993 a new Rockwell museum was opened near Stockbridge. Museum director Laurie Norton Moffatt listed all of Rockwell’s works in a two-volume book; according to Landrum Bolling of the *Saturday Evening Post*, the total exceeded four thousand original works. In November 1999 an exhibit of Rockwell’s work entitled “Norman Rockwell: Pictures for the American People” opened at the High Museum of Art in Atlanta, Georgia.

RICHARD RODGERS

Born: June 28, 1902

Long Island, New York

Died: December 30, 1979

New York, New York

American composer

Richard Rodgers, American composer, wrote the music for over fifty stage and film musicals and helped make the American musical a legitimate art form.

Childhood years

Richard Charles Rodgers was born near Arverne, Long Island, New York, on June 28, 1902. His father was a successful physician and his mother, a well-trained amateur musician. Rodgers heard music in his home from earliest childhood and was regularly taken to the theater. He was especially delighted by

the operettas (short operas) of Victor Herbert and other popular composers. A little later he was inspired by the musicals of Jerome Kern, whose influence, Rodgers said, was “a deep and lasting one.”

By the age of six Rodgers was playing the piano by ear and had begun receiving piano lessons. He attended secondary schools in New York. By the age of fourteen he had written two popular songs. Before he entered Columbia University in 1919, he had already written music for two amateur shows and had met Lorenz (Larry) Hart (1895–1943), a literate, amusing, somewhat driven creator of verse, with whom Rodgers would collaborate for the next twenty-four years. Their first published song was “Any Old Place with You” (1919), and hundreds followed. Rodgers left Columbia at the end of his second year to devote himself full time to musical studies at the Institute of Musical Art, where he spent another two years.

Collaboration with Hart

After working on amateur shows and on a few unsuccessful professional attempts, Rodgers and Hart won acclaim for their review *Garrick Gaities* in 1925. Also in 1925, Rodgers, Hart, and Dorothy Fields (1905–1974) collaborated on *Dearest Enemy*, “an American musical play” (as they called it), contributing respectively music, lyrics, and book, adding something new to the theatrical scene. Not only was the material original, charming, and witty, but the form and subject of the entertainment were distinctly unusual. Here was a play based on American history with unpredictable and pertinent musical sections.

During the next decade Rodgers and Hart wrote three shows for the London stage and a

number of Broadway musicals and Hollywood films. Though not all of them were successful, they were distinguished by a number of fine romantic ballads such as “My Heart Stood Still” (1927), “With a Song in My Heart” (1929), “Dancing on the Ceiling” (1930), and “Lover” (1932). Hart’s lyrics always managed to avoid too much sentimentality, and Rodgers matched them with tunes of grace and skill.

Among the nine stage shows written between 1935 and 1942 were several of Rodgers and Hart’s most famous: *Jumbo* (1935); *On Your Toes* (1936), for which the distinguished Russian-born choreographer George Balanchine (1904–1983) created the ballet; *Slaughter on Tenth Avenue*; *Babes in Arms* (1937); *The Boys from Syracuse* (1938); and *Pal Joey* (1940). A number of the songs written during this time are among Rodgers and Hart’s most durable: “There’s a Small Hotel,” “Where or When,” “My Funny Valentine,” “This Can’t Be Love,” and “The Lady Is a Tramp.”

Richard Rodgers.
Courtesy of the Library of Congress.

Collaboration with Hammerstein

After Hart died in 1943, Rodgers entered a period of unprecedented (having never occurred before) success with lyricist Oscar Hammerstein II (1895–1960). Of their ten musicals, five were among the longest-running and biggest-grossing shows ever created for Broadway: *Oklahoma!* (1943), *Carousel* (1945), *South Pacific* (1949), *The King and I* (1951), and *The Sound of Music* (1959).

The best work of Rodgers and Hart was marked by a considerable measure of wit and sophistication. In contrast, the style of the Rodgers and Hammerstein collaboration was dominated by a basic, almost folklike, simplicity. In many songs both music and words

seem stripped to the barest essentials. Romantic sentiment is a major ingredient.

Through touring productions, film versions, and recordings, the Rodgers and Hammerstein shows have become known around the world. Songs that have become popular standards include “Oh, What a Beautiful Morning,” “People Will Say We’re in Love,” “If I Loved You,” “You’ll Never Walk Alone,” “Some Enchanted Evening,” “Hello, Young Lovers,” and “Climb Every Mountain.”

After Hammerstein’s death in 1960 Rodgers for the first time served as his own lyricist for the score of *No Strings* (1962).

Contribution to musical theater

Rodgers's long association with the popular musical theater was an important one. His best projects were aimed at giving the musical play an ever more natural American expression. *Oklahoma!*, especially, brought an engaging simplicity and earthiness to the form. On many occasions Rodgers's choice of subject matter was unconventional (different from the norm), involving characters, situations, and themes of a seriousness seldom encountered previously in musical comedy. His work enriched and broadened a genre once regarded as little more than frivolous (not serious) entertainment and helped make it into an authentic American art form.

Rodgers's death on December 30, 1979, did not stop the popularity of his musical works, which enjoyed numerous revivals. Vintage original cast reissues and contemporary recordings, movies and videos, Broadway and community playhouse productions, and even illustrated books abound. They became the avenue through which the timeless works credited with launching the twentieth century musical continued to exist. Neither did Rodgers's shows lose dramatic impact. Their stories remained vividly current, such as *South Pacific*, which encompasses the uncertainties of its World War II (1939–45; when Great Britain, the United States, the Soviet Union, and France fought against Germany, Italy, and Japan) setting, and *The King and I*, which deals with racism and absolute authority.

Rodgers's work continues

Since music had to be hand-copied during most of Rodgers's lifetime, the musical scores from different productions did not

always agree. Although there are some early recordings to follow for authenticity (similarity to the original), it still left room for changes in interpretation or even omission (leaving out) of particular numbers during performances.

The original shows were showered with honors, from an Academy Award for best song ("It Might as Well be Spring" from *State Fair* won this award in 1945) to another one ten years later for best score for *Oklahoma!* Three shows won Tony Awards for Best Musical—*South Pacific* (1949), *The King and I* (1951), and *The Sound of Music* (1959).

Later performances continued to bring fame and additional awards as top stars such as Julie Andrews (1935–) and Patti LuPone (1949–) recorded Rodgers's songs and acted in revivals. A revival of *Oklahoma!* was presented in London in 2001. It was shown on Broadway in 2002 to critical praise.

One of the biggest breakthroughs in carrying on Rodgers's work was the transfer to videotape of a superior 1954 original movie of *Oklahoma!* It surpassed a same-cast, second filming of poorer quality and performance that had circulated for years. It took until 1994, when equipment finally was developed to transfer the "original edition" onto video for mass distribution.

Rodgers is remembered not only for his beautiful melodies, but also for the advancements he made for the American musical theater through his work with Hart and, especially, with Hammerstein.

AUGUSTE RODIN

Born: November 12, 1840

Paris, France

Died: November 17, 1917

Meudon, France

French sculptor

The French sculptor Auguste Rodin created his sculptures largely as volumes existing in space, as materials to be controlled for a variety of surface effects. By doing this he anticipated the aims of many twentieth-century sculptors.

Childhood

François Auguste Rodin, the son of a police inspector, was born in Paris, France, on November 12, 1840. A shy child, Rodin showed little interest in anything besides drawing, and by the time he turned thirteen he had decided to dedicate his life to becoming an artist.

Rodin studied drawing under Horace Lecoq de Boisbaudran and modeling under the sculptor Jean Baptiste Carpeaux at the School of Decorative Arts in Paris (1854–1857). At the same time Rodin studied literature and history at the Collège de France. Rejected three times by a well-known art school, he supported himself by doing decorative work for ornamentalists and set designers.

In 1864 Rodin began to live with the young seamstress Rose Beuret, whom he married the last year of his life. Also in 1864 he completed his *Man with a Broken Nose*, a bust of an old street porter, which the Salon (French art gallery) rejected. That year he entered the studio of Carrier-Belleuse, a sculptor who worked in the light rococo, or elaborate, mode of the previous century. Rodin remained with Carrier-Belleuse for six years and always spoke warmly of him. In 1870 he and his teacher went to Brussels, Belgium, where they began the sculptural decoration of the Bourse.

The human figure

In 1875 Rodin went to Italy, where he was deeply inspired by the work of Donatello (c. 1386–1466) and of Michelangelo (1475–1564), whose sculpture he characterized as being marked by both “violence and constraint.” Back in Paris in 1876, Rodin made a bronze statue of a standing man raising his arms toward his head in such a way as to project an air of uncertainty. Rodin originally entitled the piece the *Vanquished*, then called it the *Age of Bronze*. When he submitted it to the Salon, it caused an immediate controversy, for it was so lifelike that it was believed to have been cast from the living

Auguste Rodin.

Reproduced by permission of the Corbis Corporation.

model. The piece was unusual for the time in that it had no literary or historical meaning.

In 1878 Rodin began work on the *St. John the Baptist Preaching* and various related works, including the *Walking Man*. Influenced partially by some of Donatello's late works, it was based on numerous poses of the model in constant motion. Rodin raised the very act of walking into a subject worthy of concentrated study.

By 1880 Rodin's fame had become international, and that year the French government hired him to design a doorway for the proposed Museum of Decorative Arts. The project, called the *Gates of Hell* after

Dante's (1265–1321) *Inferno*, occupied Rodin for the rest of his life, and particularly in the next decade, but it was never finished. The gates were cast in their incomplete state in the late 1920s.

The Gates of Hell was conceived in the tradition of the great portals (gateways) of Western art, such as Lorenzo Ghiberti's (1378–1455) *Gates of Paradise* in Florence, Italy. Rodin was unable to plan the gates as a complete organized design and they remained a loose collection of groups. Yet certain of the isolated figures or groups of figures, when enlarged and executed separately, became some of Rodin's finest pieces: *Three Shades* (1880), *Crouching Woman* (1885), the *Old Courtesan* (1885), the *Kiss* (1886), and the *Thinker* (1888).

Portrait busts

From the late 1880s Rodin received many commissions from private individuals for portrait busts and from the state for monuments recognizing well-known people. Among Rodin's portrait busts are those of playwright George Bernard Shaw (1856–1950), writer Henri Rochefort (1830–1913), and poet Charles Baudelaire (1821–1867).

In the *Head of Baudelaire* (1892), as in his other portraits, Rodin went beyond mere realism to catch the inner spirit. Baudelaire's face looks ahead with strict attention, and the eyes seem to be transfixed (concentrated) upon something invisible.

Rodin matured slowly, and his first principal work, the *Age of Bronze*, was not made until he was past thirty-five, yet he achieved fame in his lifetime. After 1900 he knew inti-

mately many of the great men of his time, and his apprentices included Antoine Bourdelle (1861–1929) and Charles Despiau (1874–1946). In 1916 Rodin left his works to the state. He died in Meudon, France, on November 17, 1917.

WILL ROGERS

Born: September 5, 1879

Oologah, Oklahoma

Died: August 15, 1935

Point Barrow, Alaska

American journalist, humorist, and performing artist

One of the most celebrated humorists (writers of clever humor) and public figures of his day, Will Rogers offered dry, whimsical commentaries on a variety of political, social, and economic issues, and he became the voice of the “average” citizen.

Childhood as a cowboy

Will Rogers was born on September 5, 1879, to Clement and Mary Rogers. The

youngest of eight children, Will was raised in a wealthy and privileged family on a ranch near Claremore, Oklahoma, which was then Indian Territory. His father, Clement, a rancher and farmer, was also a sharp businessman and an influential politician. Although Rogers loved his father, their strong personalities often led to conflict. His relationship with his mother was loving and affectionate, and when she passed away, ten-year-old Rogers was devastated.

Rogers was one-quarter Cherokee and liked to boast that this heritage, combined with his early experience as a cowboy, made him the ideal example of the American citizen. His early adult years were spent between working on the family ranch and traveling the world, and it was in South Africa that Rogers began his performing career with a Wild West show as a trick rider. He later joined a circus, then back in the United States, he worked in another Wild West show, which eventually led to a job in vaudeville, a theater style that used a variety of acts. In vaudeville he added to his performances with off beat lectures on the art of roping. Rogers’s humorous chatter, casual delivery, and southwestern drawl proved a popular combination, resulting in an invitation to join the popular Ziegfeld Follies on Broadway. He delighted audiences with his homely philosophy (the study of knowledge) and sharp remarks, becoming a renowned humorist and interpreter of the news.

Rogers and his wife and children moved to California, where he acted in a number of films, beginning with *Laughing Bill Hyde* (1918). Rogers’s two-year contract was terminated, however, when the studio changed hands. He then began his own film produc-

Will Rogers.

tion company, but when this failed he was forced to return to New York City and the Ziegfield Follies.

The cowboy philosopher

Three years later the first two collections of Rogers's humor appeared—*The Cowboy Philosopher on the Peace Conference* and *The Cowboy Philosopher on Prohibition*, both published in 1919. *The Cowboy Philosopher on the Peace Conference* poked fun at the political activities surrounding the Versailles Treaty (signed in 1919, the treaty helped settle matters following World War I [1914–18]). The second volume ridiculed the Eighteenth

Amendment to the U.S. Constitution, passed in 1919, which outlawed the sale and consumption of alcohol.

Rogers posed as the cowboy philosopher, a rural American gaping wide-eyed at the shenanigans of a modern world run by crooked businessmen and dishonest politicians. Yet although Rogers's brand of popular humor appealed to the average citizen, he himself became a part of the establishment he made fun of. He befriended members of Congress as well as business leaders and at one time publicly supported the Fascist regime of Italian dictator Benito Mussolini (1883–1945), who ruled Italy with a cruel and iron fist. Rogers, as quoted by James Feibleman in *In Praise of Comedy: A Study in Its Theory and Practice*, once stated that he wished his gravestone to read, "I joked about every prominent man of my time, but I have never met a man I didn't like."

Rogers began a secondary career as an after-dinner speaker, and his success led in 1922 to a syndicated weekly newspaper column. The first two years of these columns were collected in the 1924 book *The Illiterate Digest*. The columns showcase the cutting criticisms Rogers aimed at government, the influence of big business, and the then-popular topic of world disarmament (to reduce weapons) in the aftermath of World War I (1914–18).

The cowboy in Europe

Rogers next moved onto the international stage of political humor. The *Saturday Evening Post* sent him abroad and his columns from Europe were collected in *Letters of a Self-Made Diplomat to His President*, published in 1926. The articles were published in the

magazine in the form of fictional letters to then-president Calvin Coolidge (1872–1933) and were full of humorous advice to the chief executive from Rogers's European observations. The next leg of the journey for the *Post* took Rogers to the Soviet Union, the former country that today is made up of Russia and several smaller nations, and his columns about this experience appeared in *There's Not a Bathing Suit in Russia*. This 1927 volume chronicles his trip to the world's first Communist government, a political system where the goods and services are owned and distributed by a controlling central government.

During this period Rogers further expanded into another media—the growing field of radio. He gave his first broadcast over the airwaves in 1926 and by 1930 had his own weekly slot. Like each of his speeches and syndicated columns, the radio speeches centered on a topic of current interest and were filled with Rogers's stories and sharp commentary on the issue. By the end of the 1920s Rogers was using his position in the spotlight to campaign for humanitarian causes (causes that improve the life of others). During devastating flooding along the Mississippi River in 1927, he visited the ravaged areas, gave special performances and donated the proceeds to flood victims, and testified before Congress supporting increased disaster aid to the area.

The year 1929 dealt a severe blow to the American frame of mind—in October the stock market crashed and the country was plunged into a deep economic depression, putting millions out of work. Rogers continued in his role as the foremost humorist of the nation's "little people" in his radio broadcasts and journalistic essays. In one piece, quoted

by E. Paul Alworth in *Will Rogers*, he wrote: "Now everybody has got a scheme to relieve unemployment, but there is just one way to do it and that's for everybody to go to work. 'Where?' Why right where you are, look around and you see lots of things to do, weeds to be cut, fences to be fixed, lawns to be mowed, filling stations to be robbed, gangsters to be catered to. . . ." Rogers supported the radical transformations President Franklin D. Roosevelt (1882–1945) began under the New Deal beginning in 1933. The celebrity spoke out in favor of lending a helping hand to those affected the most by the economic situation and again gave benefit performances.

He continued to star in films and indulged in his passion for airplanes. In August of 1935 a small plane carrying Rogers and a pilot friend, on their way to survey air routes from the United States to the Soviet Union, crashed over Point Barrow, Alaska, killing the entertainer. Rogers was fifty-five. His death was an occasion of national mourning. Newspapers and radio commentators praised him, a memorial was dedicated near his Oklahoma birthplace, and several volumes of his speeches, essays, broadcasts, and sayings appeared in print. Will Rogers is remembered as one of the best-loved celebrities of his era and one of the twentieth century's best-known humorists. Forty years after his death, collections of his essays and quips were still appearing in bookstores.

ROLLING STONES

English rock and roll band

Often billed as “the world’s greatest rock and roll band,” the English rock group the Rolling Stones has outlasted nearly all of its 1960s peers and continues to belt out hits well into the group’s collective middle age.

Birth of a legend

The Rolling Stones were formed as early as 1949 when the two main members of the group, guitarist Keith Richards and singer Mick Jagger, went to school together. Richards (surname sometimes listed as Richard, born December 18, 1943, in Dartford, Kent, England) was the only child of Bert and Doris Richards, a working-class couple. His father was a foreman in a General Electric factory. Jagger (Michael Philip Jagger, born July 26, 1943, in Dartford, Kent, England) was one of Joe and Eva Jagger’s two sons. His father was a physical education instructor. Both Richards and Jagger were

fans of American musicians such as Chuck Berry (1926–) and Bo Diddley (1928–).

Eleven years later the two crossed paths again. At the time, Jagger was attending London’s School of Economics, while Richards was struggling at Sidcup Art College. They found out about a local musician named Alexis Korner who held blues jams at the Ealing Club. After Jagger began to sing for Korner’s Blues Incorporated, he decided to join a group that Richards was putting together. Other members included pianist Ian Stewart, bass player Dick Taylor, drummer Tony Chapman, and a guitar player named Brian Jones (Lewis Brian Hopkins-Jones, born February 28, 1942, in Cheltenham, Gloucestershire, England, died July 3, 1969). Jones, although only one year older than Jagger and Richards, had already fathered two children by the time he was sixteen. And while Richards was more influenced by the playing of Chuck Berry, Jones was a pure blues player.

Charlie Watts (Charles Robert Watts, born June 2, 1941, in Islington, England) was drumming for a jazz group when he was asked to replace Tony Chapman. The oldest member, bassist Bill Wyman (William Perks, born October 24, 1936 [some sources say 1941]), replaced Dick Taylor and completed the group. Manager Andrew Loog Oldham got them work at the Marquee Club in London, England, in 1963, billed as “Brian Jones and The Rollin’ Stones” (after a song by Muddy Waters [1915–1983]). With hair longer than any other group and a bad-boy attitude, the Stones became known as “the group parents love to hate.” Their public image was constantly fueled by Oldham, who also decided that pianist Stewart did not fit in and pushed him to the background.

Oldham got the Stones a contract with Decca Records, and in June 1963 they released their first single, a version of Chuck Berry's "Come On" backed with "I Want to Be Loved." Reaction was good, and it would only take another six months for the group to make it big. Continuing their eight-month residence at the Crawdaddy Club in Richmond, England, they released their version of the Beatles's "I Wanna Be Your Man" followed by Buddy Holly's (1936–1959) "Not Fade Away." Their fourth single, "It's All Over Now" by Bobby Womack, would climb all the way to number one (reflecting highest sales and radio play) in their homeland. Their next hit, "Little Red Rooster," also reached number one but was banned in the United States.

"Satisfaction"

The Rolling Stones already had two albums out in England by the time they broke the U.S. Top 10 with "The Last Time," written by Jagger and Richards. In the summer of 1965 they had a worldwide number one hit with "Satisfaction." Allan Klein then took over as manager, and in 1966 the band released *Aftermath*, its first album of all original songs. In 1967 the Stones recorded *Their Satanic Majesties Request*, noted mainly for being the last album that Brian Jones, who had become heavily involved with drugs, truly worked on. After 1968's *Beggars Banquet*, Jones finally quit (or was kicked out of) the band in June 1969. Less than one month later he drowned in a swimming pool; the official cause of death was listed as "death by misadventure."

Two days later the Stones hired Mick Taylor (born January 17, 1948, in Hertfordshire, England), former guitarist for John Mayall's Bluesbreakers, as Jones's replacement. Their

*The Rolling Stones.
Courtesy of the Library of Congress.*

first album after he joined, *Let It Bleed*, contained two haunting tunes, "Midnight Rambler" and "Gimme Shelter." The latter became the title of the movie documenting the Stones' free concert at Altamont, California, at which members of the Hell's Angels motorcycle gang (who had been hired as security guards) stabbed a man to death right in front of the stage. The group also released a live album from that tour, *Get Yer Ya Ya's Out*.

Experimentation and change

In 1971 The Stones formed their own label, Rolling Stones Records, and they began to experiment with different kinds of music.

Sticky Fingers contained songs with touches of jazz and country. *Exile on Main Street* has come to be regarded as their finest recording. Its country influence was stronger than ever, but the album also contains gospel, blues, and all-out rock. Their next two albums, *Goat's Head Soup* and *It's Only Rock and Roll*, were viewed as so-so efforts. In 1975 Taylor decided to walk away from the band. "I really got off on playing with them, but it wasn't enough of a challenge," he told *Rolling Stone* magazine.

Guitarist Ron Wood (born June 1, 1947, in London, England), who played with the Faces, fit the Stones mold perfectly, with the same musical roots and a look that was almost a carbon copy of Richard. Wood took Taylor's place on a 1975 tour of America, bounding back and forth with the Faces before finally joining the Stones full time. The first full album he contributed to was *Black and Blue* in 1976. The group's future was in doubt in 1977 when Richards was arrested in Toronto, Canada, for drug dealing, but his sentence did not include any jail time. "Drugs were never a problem," he told Edna Gundersen. "Police-men were a problem." After 1978's classic *Some Girls*, the later Stones records are hard to tell apart. Only the 1981 hit "Start Me Up" stands out from this period.

During the 1980s it was often rumored that the Rolling Stones would break up. Richards was not happy when Jagger took time off to work on his first solo album. Jagger then refused to tour to support the Stones' *Dirty Work*, instead hitting the road to promote his own *She's The Boss*. Richards, who had himself toured with Wood's New Barbarians in 1979, was outraged that Jagger would make the Stones a second choice. Richards released his own solo album, *Talk Is Cheap*.

Big-money tours

Although other solo albums and side projects followed, rumors of the band's breakup were put on hold in 1989, when the Stones announced plans for a new album and a world tour. *Steel Wheels* quickly sold over two million copies, and the accompanying tour, which earned over one hundred forty million dollars, was a hit with music reviewers and fans. However, *Steel Wheels* was to be Bill Wyman's last album and tour with the Stones—he announced his retirement in 1993. With Darryl Jones replacing Wyman, the Stones next released *Voodoo Lounge*, an album that in many ways was meant to recreate the classic Stones sound of the early 1970s. The album would go on to sell four million copies, and the supporting tour went on to become the highest grossing tour of all time.

Rumors of a Rolling Stones breakup eventually stopped. The band settled into the routine of producing a new album and going on tour every few years. Although they came under fire for the high prices of tickets (as high as three hundred dollars a seat on their 1999 tour), interest in their concerts remained high. In their free time, each member kept busy in his own way: Jagger worked on films and released other solo albums, including *Goddess in the Doorway*; Richards made solo albums and guest appearances on albums by blues artists such as Hubert Sumlin; Ron Wood, after receiving treatment for alcohol abuse, opened the Harrington Club in London, a private club devoted to healthy living (its restaurant serves only organic vegetables); Charlie Watts, with the help of drummer and producer Jim Keltner, released *The Charlie Watts/Jim Keltner Project*, a solo drum album; Bill Wyman also remained busy

(while insisting he did not regret leaving the band), writing books and recording music.

In 2001 Jagger and Richard appeared at Paul McCartney's (1942–) Concert for New York City to raise money for victims of the September 11 terrorist attacks on the United States. In 2002 the Rolling Stones announced another tour, which led to more grumbling about high ticket prices. Still, there seemed to be no decrease in the number of people willing to pay any price to see the legendary band.

ELEANOR ROOSEVELT

Born: October 11, 1884

New York, New York

Died: November 6, 1962

New York, New York

American first lady, international diplomat, writer, and philanthropist

Eleanor Roosevelt was the wife of Franklin Delano Roosevelt (1882–1945), the thirty-second president of the United States. She was a well-known philanthropist (a person who works to aid others through charity). She was also an author, a world diplomat, and a tireless champion of social causes.

A lonely girlhood

Anna Eleanor Roosevelt was born in New York, New York, on October 11, 1884. Her family was financially comfortable but troubled. Her father was Elliott Roosevelt, the younger brother of Theodore Roosevelt (1858–1919), who served as president of the United States. Although handsome and charming, Elliott suffered from frequent mental depression and alcoholism. Eleanor's mother was preoccupied with the family's image in upper-class society and embarrassed by Eleanor's appearance—which was not considered pretty.

Although Eleanor's father was often absent, she regarded him as a glamorous and exciting parent. When Eleanor was a child, her father entered an institution for alcoholics. It was one of many early losses for the young girl, whose mother died when she was just eight years old. After her mother's death, Eleanor and her two younger brothers went to live with their maternal grandmother in New York. Shortly thereafter the older brother died, and when Eleanor was not yet ten, she learned that her father had died. Her grandmother sheltered her from all outside contact except for family acquaintances.

Eleanor Roosevelt began discovering a world beyond her family after entering a

Eleanor Roosevelt.

school for young women at South Fields, England, at age fifteen. The school's headmistress (female principal) taught her students a sense of service and responsibility to society. Eleanor began to act upon this teaching after her return to New York, plunging into work for the good of others. At that same time, her tall, handsome cousin, Franklin Delano Roosevelt, began courting her. They were married in March 1905. Eleanor now had to contend with a controlling mother-in-law and with a husband who loved to be out in public and who did not really understand Eleanor's struggle to overcome her shyness and insecurity.

Becoming a public figure

Between 1906 and 1916, the Roosevelts had six children, one of whom died as an infant. The family lived in Hyde Park, New York, while Franklin pursued his political ambitions to become a leading figure in the Democratic Party. He served a term in the New York State Senate before President Woodrow Wilson (1856–1924) appointed him assistant secretary of the Navy in 1913. Although Eleanor did much work for the Red Cross (a charitable medical organization) during World War I (1914–18), she remained out of the public eye.

A major turning point in Eleanor's life came in 1921, when Franklin contracted polio (an infectious disease that can cause paralysis). Franklin suffered from paralysis and permanently lost the use of his legs. Although Franklin's mother insisted that Franklin accept his condition and retire, Eleanor finally asserted her will over her mother-in-law and nursed him back into activity. Within a few years he had regained his strength and political ambitions. Meanwhile, Eleanor had become more of a public figure, speaking and working for the League of Women Voters (an organization that promoted active involvement in government), the National Consumers' League (an organization focused on the welfare of consumers and workers), the Women's Trade Union League (an organization concerned with better working conditions for women), and the women's division of the New York State Democratic Committee. She began to act as Franklin's "legs and ears" and acquired a certain reputation of her own. After Franklin became governor of New York in 1928, she kept busy inspecting state hospitals, homes, and prisons for her husband.

President's wife

Franklin Roosevelt's election to the presidency in 1932 meant, as Eleanor later wrote, "the end of any personal life of my own." She quickly became the best-known (and also the most criticized) first lady in American history. She evoked both intense admiration and strong hatred from her fellow Americans.

As first lady, Eleanor gave radio broadcasts and wrote a column that appeared in newspapers across the country. She traveled throughout the United States on fact-finding trips for Franklin. In particular, she became a voice for those in need, including working women, African Americans, youth, and tenant farmers. Such groups had been severely affected by the economic crisis known as the Great Depression (1929–39; the longest and most severe economic depression in the United States), which Franklin Roosevelt had tried to combat through the series of social programs known as the New Deal. Eleanor spoke out freely on issues, and she also became a key contact within the administration for officials seeking the president's support. In short, Eleanor became a kind of go-between between the individual citizen and the government, as well as between the president and some members of his administration.

During the 1930s Eleanor was particularly concerned with creating equal opportunities for women and with making sure that appropriate jobs for writers, artists, musicians, and theater people became a key part of the New Deal employment program known as the Works Progress Administration (WPA). She also promoted the cause of Arthurdale, a farming community built by the government for unemployed miners in West Virginia. She was concerned with pro-

viding work for jobless youth, both white and black. Much more than her husband, she spoke out against racism and tried to aid the struggle of black Americans toward full citizenship.

World figure

As the United States moved toward war in the late 1930s, Eleanor Roosevelt spoke out forcefully in favor of her husband's foreign policy. She accepted an appointment as deputy director in the Office of Civilian Defense but resigned in 1942 after being criticized for being a poor administrator in this position. After the United States formally entered World War II (1939–45) in 1941, she made numerous trips overseas to boost the spirits of troops and to inspect Red Cross facilities.

After Franklin Roosevelt died in office in April 1945, Eleanor was expected to retire to a quiet, private life. However, by the end of the year she was back in public. America's new president, Harry S. Truman (1884–1972), made her the American representative to the United Nations Commission on Human Rights. She remained in this post through 1952. Later, she continued to work for international understanding and cooperation as a representative of the American Association for the United Nations.

During the last decade of her life Eleanor Roosevelt traveled to numerous foreign countries, including the Soviet Union. She completed her *Autobiography* (1961), which included her earlier books *This Is My Story* (1937), *This I Remember* (1949), and *On My Own* (1958). By the early 1960s her strength had lessened. She died in New York City on November 6, 1962.

Despite her shy and lonely girlhood, Eleanor Roosevelt became one of the most important American women of the twentieth century. Her personal and social outlook inspired millions.

FRANKLIN D. ROOSEVELT

Born: January 20, 1882

Hyde Park, New York

Died: April 12, 1945

Warm Springs, Georgia

American president, governor, and politician

Franklin D. Roosevelt, thirty-second president of the United States, led the nation out of the period of economic crisis known as the Great Depression (1929–39) and later into World War II (1939–45). Before he died, he cleared the way for peace, including the establishment of the United Nations.

Youth and marriage

Franklin Delano Roosevelt was born on January 30, 1882, into a well-known family. The Roosevelts had been fairly wealthy for many generations. The family had often been important in the civic affairs of New York. When Franklin was born, his father was fifty-one years old and his mother was twenty-eight. As his parents' only child, he did not have to compete with other siblings for their attention. Tutors and governesses (female, live-in teachers) educated him at home until he was fourteen. At this time he attended Groton School, which educated boys of the upper class. The young Roosevelt was thus surrounded by privilege and by a sense of social importance from an early age. His family traveled in elite (high-society) circles, and he even visited the White House to meet President Grover Cleveland (1837–1908) when he was five years old.

As a young man, Roosevelt attended Harvard University in Cambridge, Massachusetts. While living in Cambridge, he met and decided to marry his cousin, Eleanor Roosevelt (1884–1962). The couple married in 1905. At that same time Franklin entered the Columbia University Law School. He became a lawyer and took a job as a clerk in a New York firm. However, he took his duties there lightly. It was later recalled that he had told

other clerks that he intended to enter politics and eventually become president.

Entering politics

Roosevelt's opportunity came in 1910. He accepted the Democratic nomination for the New York Senate and was elected. He was reelected in 1912, and that same year Woodrow Wilson (1856–1924) was elected president of the United States. Roosevelt had worked to support Wilson's run for office, and his efforts were noticed by the important Democrat Josephus Daniels (1862–1948). When Daniels became secretary of the Navy under Wilson, he persuaded Wilson to offer Roosevelt the assistant secretaryship.

Roosevelt soon became restless in his new position, and he decided to run for the Democratic nomination for U.S. senator of New York. Wilson and Daniels were not pleased, and afterward President Wilson never really trusted Roosevelt. This distrust increased when Roosevelt disagreed with the Wilson administration's policy in the years preceding World War I (1914–18), the conflict that pitted Great Britain, France, Russia, Italy, and other countries against the forces of Germany, Austria-Hungary, and others. Wilson wanted to remain neutral—he wanted to keep the United States from taking sides in the war. Roosevelt openly favored greater engagement in the war. When America finally did enter the war in 1917, Roosevelt worked for a cause he believed in.

After the war came to an end, President Wilson suffered a devastating stroke while fighting to gain American support for the Versailles Treaty, the peace document which set the terms for the war's end. Throughout the United States there was obvious disappoint-

Franklin D. Roosevelt.

ment with the treaty's final terms. Many Americans felt that they would do little to ensure future peace and democracy in the world. Anger and disappointment were widespread.

National politician

The Republican Party had the advantage of not having been responsible for America's role in World War I. In 1920 the Republicans nominated U.S. senator Warren G. Harding (1865–1923) of Ohio as their candidate for president. The Democrats nominated Ohio governor James Cox (1870–1957). His vice presidential candidate was Roosevelt.

It was a doomed run for office, but in one respect it was a beginning rather than an ending for Roosevelt. He had covered the nation by special trains, speaking many times a day and meeting local leaders everywhere. Roosevelt and Cox were easily defeated, but Roosevelt emerged as the leading figure in the Democratic party.

Victim of poliomyelitis

After his run for vice president, Roosevelt returned to work in New York City's financial district. But in the summer of 1921 he became mysteriously ill. His disease, which was not immediately diagnosed, was poliomyelitis. Often called simply polio, this infectious disease is caused by a virus and can lead to paralysis. Roosevelt became almost totally paralyzed as a result of this illness. He would never be able to use his legs again, which might have ended his political career. However, Eleanor and Franklin Roosevelt's friend Louis McHenry Howe (1871–1936) set out to renew Roosevelt's ambition.

Roosevelt's struggle during the next few years was very difficult and disappointing. He did exhausting exercises to reactivate his paralyzed muscles. In 1923 he tried the warm mineral waters of Warm Springs, Georgia. Roosevelt invested a good part of his remaining fortune in Warm Springs, and it soon became a resort for those with similar ailments.

New York governor

While at Warm Springs in 1928, Roosevelt was called to political duty again. Al Smith (1873–1944), the four-time governor of New York, was now running as a Democratic candidate for president. Although it became clear that Smith could not win the

national election, Smith felt that Roosevelt, as a candidate for governor, would help to carry New York. Roosevelt resisted, feeling that if he lost the race for the governorship he might lose his own chance to become president. Nevertheless, he ran and was barely elected.

Roosevelt now began the four years of his New York governorship that led to his presidency. By 1930, it was clear that he should be the Democratic candidate for president in 1932. Since 1929 the nation had been struggling in the Great Depression, the worst economic depression of its kind in history, and the Republican administration of then-president Herbert Hoover (1874–1964) had failed to find a way to help the country recover.

First presidential term

Roosevelt was elected president in 1932. He came to office with a dangerous economic crisis at its height. Some 30 percent of the work force was unemployed. Roosevelt began providing relief on a large scale by giving work to the unemployed and by approving a device for bringing increased income to farmers. He adjusted the U.S. currency (the American money system) so that those in debt could pay what they owed. Banks that were closed all over the country were helped to reopen, and gradually the crisis was overcome.

In 1934 Roosevelt proposed a national social security system that, he hoped, would prevent another such depression. Citizens would never be without at least minimum incomes again, because the new social security system (still in use today) used money paid by employees and employers to provide support to those who were unemployed,

retired, and disabled. Many citizens became devoted supporters of the president who had helped them. Roosevelt became so popular that he won reelection in 1936 by an overwhelming majority.

Second and third terms

Roosevelt's second presidential term began with a battle with the Supreme Court. The justices of the court had considered some of his economic programs to be against the principles of the U.S. Constitution. Roosevelt tried to fight the court by adding new justices who would be more accepting of his policies. However, many even in his own party opposed him in this attempt to pack the court, and the Congress defeated it. After this disagreement, relations were suspended between Roosevelt and the Congress. Nevertheless, in 1940 Roosevelt ran for a third presidential term. He was now certain that the leader of Nazi Germany, Adolf Hitler (1889–1945), intended to conquer all of Europe. Roosevelt saw that Europe would fall unless the United States came to its support.

The presidential campaign of 1940 was the climax of Roosevelt's plea that Americans set themselves against the Nazi threat. Many Americans remembered their disappointment after World War I, and many also leaned toward supporting the Germans rather than the group of countries known as the Allies (including Great Britain, France, and the Soviet Union). The Allies opposed what were known as the Axis Powers—Germany, Italy, and Japan. The American people were so unwilling to be involved in this war that by the end of his campaign Roosevelt practically promised that young Americans would never be sent overseas to fight.

Roosevelt narrowly won the election. He was not far into his third presidential term when the decision to enter the war was made for him. On December 7, 1941, the Japanese attacked the Pearl Harbor naval base in Hawaii, causing serious losses to American forces. At once the White House became headquarters for those who controlled the strategy of World War II. British Prime Minister Winston Churchill (1871–1947) practically began living there. Together the leaders agreed that defeating Germany and Italy was the first priority, rather than focusing on the threat posed by Japan.

The war ends

Hitler's strategy was to defeat the Soviet Union, conquer North Africa, and link up with the Japanese in the East. Roosevelt wanted to retake France, which had been occupied by Germany, and to force Hitler to fight on two fronts. Churchill, however, wanted to attack lower Europe, cut Hitler's lines to the East, and shut him off from Africa. The invasion of Europe was postponed, but Allied troops were sent into Africa. Eventually these forces crossed to the island of Sicily in the Mediterranean Sea and made a slow march up the Italian peninsula. At the same time, Allied troops landed on the beaches of France. The twin attacks forced an Italian collapse and the German surrender.

Meanwhile, American general Douglas MacArthur (1880–1964) drove the Japanese back and destroyed their fleet in the Pacific. After the German surrender, the war came to an end with the American atomic bomb explosion over the Japanese cities of Hiroshima and Nagasaki.

Final days

The decision to drop the bombs was not made by Roosevelt, but by the man who followed him, President Harry S. Truman (1884–1972). Although Roosevelt was elected to a fourth term in 1944, he died before World War II ended. He had gone to Warm Springs in 1945, completely exhausted after having returned from a conference of Allied leaders to set the terms for final peace. At the conference, he had forced other leaders to accept his scheme for a United Nations. On April 12, 1945, he suffered a fatal stroke when an artery ruptured in his brain.

THEODORE ROOSEVELT

Born: October 27, 1858
New York, New York

Died: January 16, 1919

Oyster Bay, New York

American president, politician, and cavalryman

The first modern American president, Theodore Roosevelt was also the youngest and one of the most popular, important, and controversial. During his years in office he greatly expanded the power of the presidency.

Overcoming sickness

Theodore Roosevelt was born in New York City, New York, on October 27, 1858. His father was of an old Dutch mercantile (relating to trade) family in the city's affairs. An energetic, dominant figure, his father was the only man, young Roosevelt once said, that he "ever feared."

As an adult, Roosevelt was known for his great energy and athleticism. But as a young boy, he was very sick. He suffered from severe asthma, a respiratory disease that can cause difficulty breathing. Because of his sickness, he was educated at home by private tutors until the time that he entered college. At age twelve he followed his father's advice and began building his strength through weightlifting, horseback riding, boxing, wrestling, and hunting. He grew to love such activities throughout his life.

Early career

Roosevelt entered Harvard College in 1876. At Harvard, he developed his lifelong political and historical interests. Four months after his graduation in 1880, he married Alice Hathaway Lee, with whom he had a daughter.

In 1882 Roosevelt began the first of three political terms in the New York State Assem-

bly, one of the houses of government of New York state. Upon his retirement in 1884 he had become the leader of the Republican party's reform wing. As a reformer, he gained a reputation for fighting against political corruption (illegal or unethical practices).

In his last term, Roosevelt was discouraged by the sudden deaths of his mother and his wife within hours of each other in February 1884. He retired to a ranch in the American West to study history, completing books on the American senator Thomas Hart Benton and the American statesman Gouverneur Morris. He also began writing his major work, the four-volume *Winning of the West*.

Politics and a romantic interest in childhood friend, Edith Carow, eventually drew Roosevelt back east. He married Carow in 1886. The couple had four sons and a daughter.

Serving the nation

In 1889 he was in Washington, D.C., where he had been appointed by President Benjamin Harrison (1833–1901) to serve on the Civil Service Commission. Under Roosevelt's leadership the group became dedicated to opening equal opportunities for all who were qualified to serve and work in government.

In 1895 Roosevelt returned to New York City to serve two years as president of the police board. He enforced the law with relentless efficiency and honesty, which often led him into arguments with the leaders of his own Republican party. He succeeded in modernizing the force, limiting corruption, and raising morale to new heights. However, he resigned from this position in 1897 to become President William McKinley's (1843–1901) assistant secretary of the Navy.

As assistant secretary, Roosevelt worked closely with senators in Congress to promote war against Spain. This conflict, the Spanish American War (1898), ended Spain's control of colonies in Latin America and resulted in America's gaining its own territories, including the Philippines. Roosevelt embraced the war mainly to expand America's global influence and because he had exaggerated notions of the heroic glories of war. Anxious to prove himself under fire, Roosevelt resigned from the navy in April 1898 to organize the 1st Volunteer Cavalry regiment. This horseback cavalry unit was known as the "Rough Riders." Roosevelt took command of the unit in Cuba

and distinguished himself in a bold charge up the hill next to San Juan. In late summer 1898 he returned home as a war hero and was nominated for governor of New York.

From governor to president

Roosevelt won election as governor in the fall of 1898. His two-year administration was full of positive activity. Winning the favor of public opinion and showing himself to be a master politician, he forced an impressive body of new laws and regulations through a reluctant New York Assembly and Senate.

In 1900 Roosevelt accepted the Republican vice presidential nomination. A landslide victory for McKinley and Roosevelt followed, but on September 6, 1901, McKinley was shot in Buffalo, New York, and he died eight days later. Roosevelt was sworn in as president.

First presidential term

Roosevelt's first three years in office were limited by the conservative policies of Republicans in Congress and the way in which he had come to power. Nevertheless, in 1902 Roosevelt shook the financial community by ordering proceedings against the association of railroad groups known as the Northern Securities Company. When a group of firms or corporations combines or cooperates in order to control prices or reduce competition, this action is known as a trust. Efforts to combat trusts, such as Roosevelt's actions against Northern Securities, are known as antitrust actions. By the time Roosevelt left office as president he had begun forty-three antitrust actions.

In his foreign policy, Roosevelt was intent on expanding the United States' global power. He established a somewhat tolerant government in the Philippines, settled an old

Alaskan boundary dispute with Canada on terms favorable to the United States, and took advantage of a revolution in Panama to acquire the Panama Canal Zone. Roosevelt's policies aimed at expanding American influence and limiting European power in the Western Hemisphere. The United States, he declared, assumed the right to intervene in the internal affairs of the Latin American nations in the event of "chronic wrongdoing" or "impotence [weakness or inability]."

In 1904 Roosevelt ran for a second, full presidential term. He won the election and carried in a great number of candidates to Congress through the influence of his popularity.

Second administration

Roosevelt pushed through a much more progressive program in his second term. One of his primary accomplishments was his drive to protect and to increase development of America's natural resources. By March 1909 Roosevelt's use of his executive power had resulted in the transfer of 125 million acres to the forest reserves. About half as many acres containing coal and mineral deposits had been placed under greater public control. Sixteen national monuments and fifty-one wildlife refuges had been established, and the number of national parks had been doubled.

In the area of foreign policy, Roosevelt's impact on the international scene continued during his second term. This was especially true in the Far East. Perceiving that Japan was destined to become a major Far Eastern power, he encouraged that country to serve as a force to keep the area stable. To this end he used his influence to end a war between Russia and Japan that took place in 1904–5. For his efforts, he received the Nobel Peace Prize.

Progressive movement

Rejecting suggestions that he run for reelection, Roosevelt selected William Howard Taft (1857–1930) as his successor. Taft was elected and this led to disputes within the Republican Party. Caught between the conservative supporters of Taft and the advanced progressive followers of himself and Senator Robert M. La Follette, Roosevelt set forth a radical program of social and economic reforms in 1910. Thereafter pressure to declare himself a candidate for the nomination in 1912 mounted until he reluctantly did so.

Although Roosevelt outpolled Taft easily in the Republican primaries, Taft's control of the party organization won him the nomination. Roosevelt's supporters then stormed out of the party and organized the Progressive Party, also known as the Bull Moose Party. During the campaign that fall, Roosevelt called forcefully for federal regulation of corporations, tax reform, river valley developments, and social justice for workers and the underprivileged. But the Democratic nominee, Woodrow Wilson (1856–1924), won the election.

Roosevelt died at his home in Oyster Bay, Long Island, on January 6, 1919. Today, his reputation as a domestic reformer remains secure.

DIANA ROSS

Born: March 26, 1944

Detroit, Michigan

African American singer and actress

Diana Ross, once the lead singer for the Motown supergroup the Supremes, was the most successful female singer of the rock and roll era. In the next few decades, she continued to enjoy success with a solo career and numerous television and film appearances.

Early life

Diana Ross was born on March 26, 1944, in Detroit, Michigan. She was the second of six children of Fred and Ernestine Ross, who lived in Brewster-Douglass, one of Detroit's low income housing districts. Because of her tight-knit family Ross grew up virtually unaware of the harsh life that surrounded her. While her family was active in the Baptist church choir, Diana learned secular music (nonreligious music) from a cousin. She played baseball and took tap dance and majorette lessons at Brewster Center.

At age fourteen Ross tried out for a part in a school musical, but was turned down. The brief failure turned into good fortune, as she was invited to sing with the Primettes, a girls' vocal group that included Florence Ballard (1943–1976) and Mary Wilson (1944–)

Diana Ross.

Reproduced by permission of Getty Images.

among its members. She sang with the Primettes throughout her high school years at Cass Technical High School, where she took sewing and fashion design courses. The male counterparts of the Primettes were called the Primes, and their members included Paul Williams (1939–1973) and Eddie Kendricks (1939–1992), who would later form part of the Motown superstar group the Temptations.

Primettes to Supremes

Yet another Motown superstar, Smokey Robinson (1940–), introduced Ross and the Primettes at Motown Studios, where they visited frequently until they met Motown producer

Berry Gordy (1929–). Gordy instructed Ross and her friends to finish high school and come back, which they did in 1962. Ross, Ballard, and Wilson then signed a contract with Motown, and Ballard selected a name for the group—the “Supremes”—a name that Ross disliked.

The Supremes released a number of singles and often sang background vocals for Marvin Gaye (1939–1984) and Mary Wells (1943–1992). “Let Me Go the Right Way” became the first Supremes song to register on the national charts, and it enabled the group to join the touring Motor Town Revue. “Where Did Our Love Go?” was their first national number one hit, selling over two-million singles, and the Supremes became the Revue’s opening act. Ross’s ambition and talent helped the trio turn the fierce competition for recording songs at Motown in their favor, and she became the group’s lead singer.

The Supremes proceeded to lead Motown and its outstanding artists into its heyday in the 1960s with a series of number one hits that included “Baby Love” (1964), “Stop! In the Name of Love” (1965), “Back in My Arms Again” (1965) and “I Hear a Symphony” (1966). A popular television group, the Supremes continued to skyrocket in popularity along with the Motown label, and their principal songwriting team—Eddie Holland, Lamont Dozier, and Brian Holland—produced many more of their number one songs, including “You Keep Me Hangin’ On” (1966), “You Can’t Hurry Love” (1966), “Love Is Here and Now You’re Gone” (1967), and “The Happening” (1967).

A solo act

Holland-Dozier-Holland left Motown in 1967, and the Supremes entered their next

phase with a new billing as Diana Ross and the Supremes. Florence Ballard was replaced by Cindy Birdsong, also in 1967. The year 1968 brought "Love Child," yet another top hit, this one written by the Supremes themselves. By this time rumors had begun to circulate about Ross leaving the group, and they reached their peak after her successful performance on the 1969 television special "Like Hep." Ross's last single with the group was the number one hit "Someday, We'll Be Together" (1969). She began her solo career after their last appearance together in January of 1970.

Things would only get better for Ross. Motown Records invested heavily in her new career, which debuted with "Reach Out and Touch (Somebody's Hand)" (1970). Many changes began to take place in her personal life as well. She had helped the Jackson Five get its start with Motown and Berry Gordy, and she had moved into her new Beverly Hills home. In 1971 Ross was married to Robert Silberstein, a pop-music manager, with whom she had three daughters—Rhonda, Tracee, and Chudney.

Ross was cast as the legendary jazz singer Billie Holiday (1915–1959) in the Motown film production *Lady Sings the Blues*. Her critically acclaimed performance earned her an Academy Award nomination for best actress. In 1973 she returned to her customary position atop the national record charts with "Touch Me in the Morning." Her next film was *Mahogany* (1975), from which her "Theme from Mahogany" (1976) was nominated for the Academy Awards' best song in a motion picture and topped the record charts again. After her third daughter was born in 1975 she and Silberstein were divorced.

Ross's hit parade continued with the number one "Love Hangover" (1976). She closed

out the decade with a Broadway show entitled *An Evening With Diana Ross* (1976–1977); a March 6, 1977, television special that featured her alone; and a portrayal as Dorothy in Motown's film production of the Broadway show *The Wiz* (1978).

Later career

Ross continued to perform in concerts, in Atlantic City and Las Vegas casinos, and at charity functions. Her 1980 single "Upside Down" was her sixteenth number one hit, a record surpassed only by the Beatles. She moved to Connecticut with her three daughters and in 1985 married Norwegian businessman Arne Naess, Jr. In 1989 Ross made a return to Motown with a new album titled *Workin' Overtime*, and in 1991 she worked with Stevie Wonder (1950–) and other artists to make *The Force Behind the Power*, a group of modern ballads. In January of 1994, she was highly praised for her role as a mental patient in the ABC television movie *Out of Darkness*.

But tragedy tainted Ross's newfound success in film in 1996 when her brother, Arthur Ross, and his wife, Patricia Ann Robinson, were found smothered to death on June 22, in Oak Park, Michigan. Ross and her family put up a reward of twenty-five thousand dollars for any information leading to an arrest. In September of 1996, two men, Ricky Brooks and Remel Howard, were charged with the killings. Police had no motive at the time, only to say that drugs were involved.

Ross's attempt to jumpstart her professional career has been a difficult one. In 2000, a much-hyped reunion tour with the Supremes was canceled after only a few shows. Concert promoters noted lack of ticket sales as the reason for the cancellation.

Another reason was the dispute between Ross and Mary Wilson, who turned down the reunion tour because she was offered considerably less money than Ross.

DANTE GABRIEL ROSSETTI

Born: May 12, 1828

London, England

Died: April 9, 1882

Birchington-on-Sea, Kent, England

English painter and poet

The English painter and poet Dante Gabriel Rossetti was a cofounder of the Pre-Raphaelite Brotherhood, a band of painters that reacted against unimaginative and traditional historical paintings. His works show a passionate imagination, strongly contrasting Victorian art which was popular during the second half of the nineteenth century.

Childhood

Born on May 12, 1828, in London, England, of English-Italian parents, Dante Gabriel Rossetti was surrounded throughout his childhood in the atmosphere of medieval Italy, which drew heavily from art and literature from the sixth to fifteenth centuries. This influence became a major source of his subject matter and artistic inspiration later in his career. As a child, almost as soon as he could speak, he began composing plays and poems. He also liked to draw and was a bright student. After two years in the Royal Academy schools he studied briefly under Ford Madox Brown in 1848.

Shortly after Rossetti joined William Holman Hunt's studio in 1848, the Pre-Raphaelite Brotherhood was formed, in Hunt's words, "to do battle against the frivolous [silly] art of the day." An association of artists so varied in artistic style, technique, and expressive spirit as the Pre-Raphaelites could not long survive, and it was principally owing to Rossetti's forceful, almost hypnotic personality that the Brotherhood held together long enough to achieve the critical and popular recognition necessary for the success of its mission.

Rossetti's paintings

Rossetti did not have the natural technical talent that is seen in the small detail and brilliant color of a typical Pre-Raphaelite painting, and his early oil paintings, the *Girlhood of Mary Virgin* (1849) and the *Ecce Ancilla Domini* (1850), were produced only at the expense of great technical effort. In the less demanding technique of watercolor, however, Rossetti clearly revealed his imaginative power. The series of small watercolors of the 1850s produced such masterpieces as

Dante's Dream (1856) and the *Wedding of St. George and the Princess Sabra* (1857).

In almost all of Rossetti's paintings of the 1850s he used Elizabeth Siddal as his model. Discovered in a hat shop in 1850, she was adopted by the Brotherhood as their ideal of feminine beauty. In 1852 she became exclusively Rossetti's model, and in 1860 his wife. Struggling with growing depression, she killed herself two years later. Rossetti buried a manuscript of his poems in her coffin, a characteristically dramatic gesture which he later regretted. *Beata Beatrix* (1863), a posthumous portrait (portrait done after her death) of Elizabeth Siddal is one of Rossetti's most deeply felt paintings. It is one of his last masterpieces and the first in a series of symbolic, female portraits, which declined gradually in quality as his interest in painting decreased.

Rossetti's poetry

Although poetry was simply a relaxation from painting early in Rossetti's career, writing later became more important to him, and in 1871 he wrote to fellow painter Ford Madox Brown, "I wish one could live by writing poetry." In 1861 he published his translations from Dante (1265–1321) and other early Italian poets, reflecting the medieval obsessions of his finest paintings. In 1869 the manuscript of his early poems was recovered from his wife's coffin and published the next year.

Rossetti's early poems under strong Pre-Raphaelite influence, such as "The Blessed Damozel" (1850; later revised) and "The Portrait," have an innocence and spiritual passion paralleled by his paintings of the 1850s. As his interest in painting declined, Rossetti's poetry improved, until in his later works, such as "Rose Mary" and "The White Ship"

Dante Gabriel Rossetti.

Reproduced by permission of the Corbis Corporation.

(both included in *Ballads and Sonnets*, 1881), his use of richly colored word textures achieves fantastic expression and feeling.

Rossetti died on April 9, 1882, in Birchington-on-Sea, Kent, England. Rossetti had reached a position of artistic respect, and his spirit was a significant influence on the cultural developments of the late nineteenth century. Although his technique was not always the equal of his powerful feeling, his imaginative genius earned him a place in the ranks of England's most forward-thinking artists.

JEAN-JACQUES ROUSSEAU

Born: June 28, 1712

Geneva, Switzerland

Died: July 2, 1778

Ermenonville, France

French philosopher, author, and composer

The Swiss-born philosopher (seeker of wisdom), author, political theorist (one who forms an explanation or theory on a subject based on careful study), and composer (writer of music) Jean-Jacques Rousseau ranks as one of the greatest figures of the French Enlightenment, a period of great artistic awakening in France.

Early years

Jean-Jacques Rousseau was born to Suzanne Bernard and Isaac Rousseau on June 28, 1712, in Geneva, Switzerland. Nine days later his mother died. At the age of three, he was reading French novels with his father, and Jean-Jacques acquired his passion for music from his aunt. His father fled Geneva to avoid imprisonment when Jean-Jacques was ten. By the time he was thirteen, his formal education had ended and he was sent to work for a notary public (someone legally empowered to certify documents), but he

was soon dismissed as fit only for watchmaking. Afterwards Rousseau spent three miserable years serving as a watchmaker, which he abandoned when he found himself unexpectedly locked out of the city by its closed gates. He faced the world with no money or belongings and no obvious talents.

Rousseau found himself on Palm Sunday, 1728, in Annecy, France, at the house of Louise Eleonore, Baronne de Warens. Rousseau lived under her roof off and on for thirteen years and was dominated by her influence. Charming and clever, a natural businesswoman, Madame de Warens was a woman who lived by her wits. She supported him and found him jobs, most of which he disliked. A friend, after examining the lad, informed her that he might aspire to become a village curé (priest) but nothing more. Still Rousseau read, studied, and thought. He pursued music and gave lessons, and for a time he worked as a tutor.

First publications and operas

Rousseau's scheme for musical notation, published in 1743 as *Dissertation sur la musique moderne*, brought him neither fame nor fortune—only a fond letter from the Académie des Sciences. But his interest in music spurred him to write two operas—*Les Muses galantes* (1742) and *Le Devin du village* (1752)—and permitted him to write articles on music for Denis Diderot's (1713–1784) *Encyclopédie*; the *Lettre sur la musique française* (1753) and the *Dictionnaire de musique*, published in 1767.

From September 1743 until August 1744 Rousseau served as secretary to the French ambassador to Venice, Italy. He experienced at firsthand the stupidity and corrup-

tion (dishonesty and deception) involved in these offices. Rousseau spent the remaining years before his success with his first *Discours* in Paris, where he lived the poor lifestyle of a struggling intellectual.

In March 1745 Rousseau began an affair with Thérèse Le Vasseur. She was twenty-four years old, a maid at Rousseau's lodgings. She remained with him for the rest of his life—as mistress, housekeeper, mother of his children, and finally, in 1768, as his wife. They had five children—though some biographers have questioned whether any of them were Rousseau's. Apparently he regarded them as his own even though he assigned them to a hospital for abandoned children. Rousseau had no means to educate them, and he reasoned that they would be better raised as workers and peasants by the state.

By 1749 Rousseau had befriended the French philosopher Diderot. The publication of Diderot's *Lettre sur les aveugles* had resulted in his imprisonment at Vincennes, France. While walking to Vincennes to visit Diderot, Rousseau read an announcement of a prize being offered by the Dijon Academy for the best essay on the question, "Has progress of the arts and sciences contributed more to the corruption or to the purification of morals?" Rousseau won the prize of the Dijon Academy with his *Discours sur les sciences et les arts*. His famous "attack" on civilization called for sixty-eight articles defending the arts and sciences. Though he himself regarded this essay as "the weakest in argument and the poorest in harmony and proportion" of all his works, he nonetheless believed that it sounded one of his essential themes: the arts and sciences, instead of freeing men and increasing their happiness, had for the most part imprisoned men further.

Major works

Rousseau's novel *La Nouvelle Héloïse* (1761) attempted to portray in fiction the sufferings and tragedy that foolish education and restrictive social customs had among sensitive creatures. Rousseau's two other major writings—*L'émile ou de l'éducation* (1762) and *Du contrat social* (1762)—undertook the more difficult task of constructing an education and a social order that would enable men to be natural and free; that is, to enable men to recognize no bondage except the bondage of natural necessity. To be free in this sense, said Rousseau, was to be happy.

La Nouvelle Héloïse appeared in Paris in January 1761. Originally entitled *Lettres de deux amants, habitants d'une petite ville au pied des Alpes*, the work was structurally a novel in letters, after the fashion of the English author Samuel Richardson (1689–1761). The originality of the novel won it harsh reviews, but its sexual nature made it immensely popular with the public. It remained a best seller until the French Revolution in 1789, a massive uprising calling for political and social change throughout France.

The reputation of *La Nouvelle Héloïse* was nothing compared to the storm produced by *L'émile* and *Du contrat social*. Even today the ideas set forth in these works are revolutionary. Their expression, especially in *L'émile*, in a style both readable and alluring made them dangerous. *L'émile* was condemned (officially disapproved of) by the Paris Parliament (the governing body) and heavily criticized by the archbishop of Paris. Both of the books were burned by the authorities in Geneva, Switzerland.

Exile and death

Forced to flee from France, Rousseau sought refuge at Yverdon in the territory of Bern. There he was kicked out by the Bernese authorities and would spend the next few years seeking a safe place to live. Finally, British philosopher David Hume (1711–1776) helped Rousseau settle in Wotton, Derbyshire, England, in 1766. Hume managed to obtain from George III (1738–1820) a yearly pension (sum of money) for Rousseau. But Rousseau, falsely believing Hume to be in league with his Parisian and Genevan enemies, not only refused the pension but also openly broke with the philosopher.

Rousseau returned to France in June 1767 under the protection of the Prince de Conti. Wandering from place to place, he at last settled in 1770 in Paris. There he made a living, as he often had in the past, by copying music. By December 1770 the *Confessions*, upon which he had been working since 1766, was completed, and he gave readings from this work at various private homes. His last work, *Les Rêveries du promeneur solitaire*, begun in 1776 and unfinished at his death, records how Rousseau, an outcast from society, recaptured “serenity, tranquility, peace, even happiness.”

In May 1778 Rousseau accepted Marquis de Girardin's hospitality at Ermenonville near Paris. There, with Thérèse at his bedside, he died on July 2, 1778, probably from uremia, a severe kidney disease. Rousseau was buried on the Île des Peupliers at Ermenonville. In October 1794 his remains were transferred to the Panthéon in Paris. Thérèse, surviving him by twenty-two years, died in 1801 at the age of eighty.

CARL ROWAN

Born: August 11, 1925

Ravenscroft, Tennessee

Died: September 23, 2000

Washington, D.C.

African American diplomat and journalist

Journalist and author Carl Rowan was one of the first African American officers in the U.S. Navy. He also served as U.S. ambassador (representative) to Finland and director of the U.S. Information Agency.

Early life and education

Carl Thomas Rowan was born on August 11, 1925, in Ravenscroft, Tennessee. He was one of five children born to Thomas David and Johnnie B. Rowan and was raised in McMinnville, Tennessee. As a youth he worked hoeing grass for ten cents an hour. Rowan was determined to get a good education. He graduated from Bernard High School in 1942 as class president and valedictorian (having the highest rank in the class). Rowan then moved in with his grandparents in Nashville, Tennessee, and worked in a hospital for tuberculosis (an infection of the lungs) patients before enrolling in the Tennessee Agricultural and Industrial State College in the fall of 1942.

Rowan, in his freshman year, participated in a training program that led to his being chosen as one of the first fifteen African American persons in history to gain a commission (a certificate giving military rank) as an officer in the U.S. Navy. He was trained at Oberlin College in Ohio and at the Naval Midshipmen School at Fort Schuyler, New

York, and he served during World War II (1939–45; a war fought between France, Great Britain, the United States, and the Soviet Union on one side, and Germany, Italy, and Japan on the other). After leaving the Navy, Rowan returned to Oberlin College, earning his bachelor's degree in mathematics in 1947. He went on to receive his master's degree in journalism from the University of Minnesota. In 1950 Rowan married Vivien Louise Murphy, a public health nurse; they had three children.

Member of the media

Rowan then joined the Minneapolis (Minnesota) *Tribune* as a copyreader. He became a general assignment reporter in 1950. Among his early pieces were a series of columns entitled *How Far from Slavery?*, which he wrote after returning to the South to study issues of race. The articles contributed to Rowan being the first African American to receive the Minneapolis "Outstanding Young Man" award. They also served as the basis for his first book, *South of Freedom* (1952).

Rowan spent 1954 writing columns from India, Pakistan, and Southeast Asia. These led to a second book, *The Pitiful and the Proud* (1956). A third book, *Go South to Sorrow*, was published in 1957. Rowan was the only journalist to receive the Sigma Delta Chi award for newspaper reporting in three straight years: for general reporting in 1954, for best foreign correspondence in 1955, and for his coverage of the political unrest in Southeast Asia in 1956.

Government service

In January 1961 Rowan was appointed deputy assistant secretary of state for public

Carl Rowan.

affairs in the administration of President John F. Kennedy (1917–1963). He was involved in the area of news coverage of U.S. military involvement in Vietnam (1955–75; from 1961 to 1970 the United States aided South Vietnam in its war against Communist North Vietnam) and accompanied then Vice President Lyndon Johnson (1908–1973) on a tour through Southeast Asia, India, and Europe.

Rowan went on to serve as ambassador to Finland (January 1963–January 1964) and as director of the U.S. Information Agency (January 1964–July 1965), the vast government communications network. In the latter post, Rowan became the first African American to

hold a seat on the National Security Council and oversaw a staff of thirteen thousand. In 1965 Rowan resigned to accept an offer to write a national column for the Field Newspaper Service Syndicate and to do three weekly radio commentaries (expressions of opinion) for the Westinghouse Broadcasting Company.

Unafraid to express opinions

Rowan developed a reputation for being independent and often controversial (causing dispute). He urged Dr. Martin Luther King Jr. (1929–1968) to change his antiwar stance because he felt it was hurting the civil rights movement, and he called for J. Edgar Hoover (1895–1972), director of the Federal Bureau of Investigation (FBI), to resign. His column reached nearly half of all homes receiving newspapers in the United States. He appeared on many public affairs television programs, served as a roving reporter for *Reader's Digest* magazine, and was a popular public speaker.

Rowan once told *Publisher's Weekly*, "You gotta get tired before you retire," and he went on to publish several more books, including *Dream Makers*, *Dream Breakers: The World of Thurgood Marshall* and *The Coming Race War in America: A Wake-Up Call*. In 1987 he started Project Excellence, a program designed to make it easier for top-performing African American high school students to attend college. By 2000 the program had given out twenty-six million dollars in scholarships to over eleven hundred fifty students. Rowan died of natural causes in Washington, D.C., on September 23, 2000.

J. K. ROWLING

Born: July 31, 1965

Chipping Sodbury, England

English writer

J. K. Rowling is an English author of novels for young people, and caused an overnight sensation with her first book, *Harry Potter and the Philosopher's Stone* (*... Sorcerer's Stone* in the United States), which rose to the top of the children's best-seller lists in 1998. Even before publication, publishers in the United States were competing for rights to the book, with the top bidder paying one hundred thousand dollars—the most ever for a first novel by a children's book author.

A British upbringing

Born near Bristol, England, Joanne K. Rowling grew up with a younger sister and an intense interest in storytelling. Rabbits played a large part in her early tales, for Rowling and her sister badly wanted a rabbit. Her first story, at age five or six, involved a rabbit named, quite logically, Rabbit, who got the measles (a

contagious virus that occurs in children) and visited his friend, a giant bee named Miss Bee. Rowling said in *J. K. Rowling: The Wizard Behind Harry Potter*, "Ever since Rabbit and Miss Bee, I have wanted to be a writer, though I rarely told anyone so. I was afraid they'd tell me I didn't have a hope."

Two moves took the Rowling family eventually to the town of Tutshill near Chepstow in the Forest of Dean along the border of England and Wales. This brought a longtime country-living dream to reality for Rowling's parents, both Londoners, and the nine-year-old Rowling learned to love the countryside. She and her sister could wander unsupervised amid the fields and play along the River Wye. Rowling once noted that the only problem with her new life was school. It was an old-fashioned school with roll-top desks and a teacher who frightened Rowling.

From Tutshill Primary, Rowling went to Wyedean Comprehensive School. A quiet and unathletic child, English was her favorite subject, and she created stories for her friends at lunchtime, tales involving heroic deeds. Contact lenses soon sorted out any feelings of inferiority in the young Rowling; writing became more impulsive and less of a hobby in her teenage years. Attending Exeter University, Rowling studied French after her parents had advised her that bilingualism (speaking two languages) would lead to a successful career as a secretary.

Working at Amnesty International, Rowling discovered one thing to like about life as a secretary: she could use the computer to type up her own stories during quiet times. At age twenty-six, Rowling gave up her office job to teach English in Portugal. It was there that she began yet another story that might become a

J. K. Rowling.

Reproduced by permission of AP/Wide World Photos.

book, about a boy who is sent off to wizard school. All during the time she spent in Portugal, Rowling took notes on this story and added bits and pieces to the life of her main character, Harry Potter. In Portugal she also met the man who became her husband, and they had a daughter. They later got divorced.

Of naps and “Harry Potter”

Back in England, Rowling decided to settle in Edinburgh and prepared to raise her daughter as a single mother. Accepting a job as a French teacher, she set herself a goal: to finish her novel before her teaching job began. This was no easy task with an active toddler in

hand. Rowling confined her writing to her daughter’s nap time, much of it spent in coffeehouses where the understanding management allowed her space for her papers. She was able to send off her typed manuscript to two publishers before beginning her teaching post, but it was not until several months later that the happy news arrived: her book, *Harry Potter and the Philosopher’s Stone*, would be published in England. And then a few months later, the American rights were bought for an amazing price, and Rowling said good-bye to teaching.

Harry Potter, an orphan, has led a miserable life with the Dursley family, his aunt, uncle, and cousin, who force him to live in a broom closet under the stairs. Small, skinny, and wearing glasses, Harry is an unlikely hero. The only thing physically interesting about Harry is the lightning-shaped scar on his forehead. One day Harry gets a letter telling him that he has been admitted to Hogwarts School of Witchcraft and Wizardry. Thus begins the magical story of Harry Potter. Rayma Turton in *Magpies* called the book “a ripping yarn,” and a “school story with a twist.”

Sequels prove equally popular

Even as enthusiastic reviews were pouring in from America, Rowling’s second installment of the “Harry Potter” saga, *Harry Potter and the Chamber of Secrets*, was published in England to another rave review. The third installment of the series, *Harry Potter and the Prisoner of Azkaban*, begins when Harry is thirteen and starting his third year at Hogwarts School for Witchcraft and Wizardry. Harry’s life-threatening adventures in *The Prisoner of Azkaban*, the fourth Harry Potter novel, indicated a subtle but distinct shift away from the lightheartedness that charac-

terizes the first two novels. Such a shift was “inevitable,” Rowling admitted in a *School Library Journal* interview. “If you are writing about Good and Evil, there comes a point where you have to get serious.”

In November 2001, Harry Potter gained even more fame when *Harry Potter and the Sorcerer’s Stone* graced the big screen as a major motion picture. Rowling’s magical creations cast a spell over theatergoers as the movie was both a commercial and critical success. Rowling lives in Scotland with her daughter, Jessica, and second husband, Neil Murray, whom she married in December 2000. She is currently working on the remaining novels in the “Harry Potter” series.

PETER PAUL RUBENS

Born: June 28, 1577

Siegen, Westphalia, Germany

Died: May 30, 1640

Antwerp, Belgium

Flemish painter and diplomat

The Flemish painter and diplomat Peter Paul Rubens was one of the supreme geniuses in the history of painting.

Childhood

Peter Paul Rubens was born to Jan Rubens and Maria Pypelinckx on June 28, 1577. Jan Rubens was a lawyer of Antwerp who, because of his religious preference, fled to Germany in 1568 to escape persecution. In Cologne, Germany, he had an affair with the wife of William the Silent, Prince of Orange, and as a result he was thrown into prison. Released after two years, due to the devoted efforts of his wife, Jan Rubens was allowed to live in Siegen, in Westphalia, Germany, where Peter Paul was born. The family lived for some years in Cologne until Jan Rubens died in 1587, at which time his widow returned to Antwerp, Belgium, bringing her three children with her.

After a period of schooling which included instruction in Latin and Greek, the young Rubens became a messenger to a noblewoman, Marguerite de Ligne, Countess of Lalaing. This early experience of court life, though he was glad to be released from it, was undoubtedly useful to the future artist, much of whose time would be passed in noble and royal circles. Returning to his home in Antwerp, he had decided to be a painter. He studied under three masters—Tobias Verhaecht, Adam van Noort, and Otto van Veen (1556–1629)—and in 1598 was accepted as a master in the Antwerp Guild of St. Luke, the painters’ guild, or association.

Italian Period, 1600–1608

In Rome, Italy, Rubens completed his education as an artist, studying with unfailing

Peter Paul Rubens.

Reproduced by permission of the Corbis Corporation.

enthusiasm the sculptures of antiquity (the period before the sixth century) and especially the paintings of Raphael (1483–1520) and Michelangelo (1475–1564). During his first stay in Rome, from 1601 to 1602, he painted three altarpieces for the Church of Sta Croce in Gerusalemme (now in the Hospital at Grasse).

Late in 1605 Rubens was again in Rome; he decided to remain there for almost three years. During this time he was commissioned (hired) to decorate the high altar of Santa Maria in Vallicella—an extraordinary honor for a foreigner. His first solution, an altarpiece showing the Madonna and Child with St. Gregory and other saints (now in the

Museum at Grenoble), did not make a good impression owing to unfavorable lighting conditions in the church, and he replaced it by a set of three pictures painted on slate. In October 1608, before this work had been unveiled, there came word that Rubens's mother was seriously ill, and the artist left at once for Antwerp. Though he did not know it at the time, he was never to see Italy again.

Antwerp period, 1609–1621

Rubens arrived at his home to learn that his mother had died before he left Rome. Although it was surely his intention to return to Italy, he soon found reasons for remaining in Antwerp. The Archduke Albert, the acting ruler of the Spanish Netherlands, appointed him court painter with special privileges. In October 1609 Rubens married Isabella Brant, and a year later he purchased a house in Antwerp. The charming painting *Rubens and His Wife in the Honeysuckle Arbor* was painted about this time.

The first big project to be undertaken after Rubens's return from Italy was the *Raising of the Cross* (1609–1611), a triptych, or three-paneled piece, for the church of St. Walburga (now in the Cathedral of Antwerp). With this bold and intensely dramatic work Rubens at once established himself as the leading master of the city. It was followed by another triptych, equally large and no less successful, the *Descent from the Cross* (1611–1614) in the Cathedral.

Rubens's workshop was now in full operation, and he was able, with the aid of his pupils and assistants, to achieve an astonishing output of pictures. The most brilliant of his assistants was Anthony Van Dyck (1599–1641), who entered his studio about

1617 or 1618 and who helped in the execution of a number of important commissions.

In 1620 Rubens was commissioned to execute a series of thirty-nine ceiling paintings for the Jesuit church in Antwerp. It was the largest decorative cycle that the artist had yet undertaken, and as such it called into play all his powers of invention and organization. The entire complex of ceiling paintings was destroyed by fire in 1718.

International fame, 1621–1630

In 1622 Rubens was in Paris, France, to sign a contract for the decoration of two great galleries in the Luxembourg Palace, the residence of the queen mother, Marie de' Medici (1573–1642). The first of these projects, the incomparable series of twenty-one large canvases illustrating the life of Marie (now in the Louvre, Paris), was finished in 1625. The subject matter was decidedly unpromising, but Rubens succeeded in transforming the dreary history of the queen into a brilliant and spectacular one.

There were other decorative schemes to occupy Rubens's attention during this period. For King Louis XIII (1601–1643) of France he designed the tapestry series, the *History of Constantine the Great*, and several years later Infanta Isabella commissioned him to design an even larger tapestry cycle, the *Triumph of the Eucharist*, for the Convent of the Descalzas Reales in Madrid, Spain.

Rubens's diplomatic (having to do with international relations) activity, which had begun some time earlier, reached a peak in the years from 1628 to 1630, when he played an important part in bringing about peace between England and Spain. As the agent of

the Infanta (the daughters of Spanish rulers), he went first to Spain, where in addition to carrying out his political duties he found a new and enthusiastic art patron (a supporter) in King Philip IV (1605–1665). His mission to England was equally successful. Charles I (1600–1649) knighted the artist-diplomat, and the University of Cambridge awarded him an honorary master of arts degree. Rubens returned to Antwerp in March 1630.

Last years, 1630–1640

Isabella Brant, Rubens's first wife, had died in 1626. In December 1630 he married Helena Fourment, a girl of sixteen. Though he had hoped, on returning to Antwerp, to withdraw from political life, he acted once more as confidential agent for the Infanta in the frustrating and unsuccessful negotiations with the Dutch. At length he succeeded in being released from diplomatic employment. In 1635 he purchased a country estate, the Castle of Steen, located some miles south of Antwerp, and from there on divided his time between this country retreat and his studio in town.

In 1635, when the new governor of the Netherlands, Cardinal Infante Ferdinand, visited Antwerp, Rubens was given the task of preparing the temporary street decorations. Swiftly bringing together teams of artists and craftsmen to work from his designs, the master created an amazing series of painted theaters and victorious arches, which were far greater than expected in their magnificence. His last great project was a vast cycle of mythological (having to do with stories that are handed down through generations) paintings for the decoration of Philip IV's hunting lodge near Madrid, the Torre de la Parada.

Rubens was increasingly troubled by arthritis (a persistent swelling of the joints) toward the end of his life, which eventually persuaded him to give up painting altogether. One of the most moving paintings of the last years is the self-portrait in Vienna, in which the master, though already touched by suffering, wears an air of calm and peace. He died in Antwerp on May 30, 1640.

WILMA RUDOLPH

Born: June 23, 1940

St. Bethlehem, Tennessee

Died: November 12, 1994

Brentwood, Tennessee

African American track and field athlete, sports manager, and coach

The African American athlete Wilma Rudolph made history in the 1960 Summer Olympic games in Rome,

Italy, when she became the first American woman to win three gold medals in the track and field competition.

An uphill battle

Almost every circumstance was stacked against Wilma Rudolph from the day she was born on June 23, 1940. Her father, Ed Rudolph, had eleven children by a first marriage while his second marriage yielded eight more, of which Wilma was the fifth. At birth she weighed only four-and-a-half pounds. Her mother, Blanche, a housemaid, feared for Wilma's survival from the outset. The family lived in tiny St. Bethlehem, Tennessee, a farming community about forty-five miles southeast of Nashville, Tennessee. Shortly after Wilma was born, the Rudolphs moved to nearby Clarksville, Tennessee, where they lived in town. Her father worked as a porter on railroad cars, and her mother cleaned houses six days a week. Older siblings helped care for the sickly baby who had come into the world prematurely.

At the age of four, Wilma was severely weakened when she contracted polio, a disease that attacks the central nervous system and often causes developmental problems in children. She survived the illness, but she lost the use of her left leg. Specialists in Nashville recommended routine massage therapy for the limb, and Mrs. Rudolph learned it and taught it to some of the older children. Thus, Wilma's legs were massaged a number of times each day, helping her to regain strength. Rudolph's confidence may have flagged at times in her childhood when it seemed she might spend a lifetime in leg braces or even a wheelchair. Through the efforts of her devoted family—and her own

steely determination to strengthen herself—she rose from disability to Olympic glory.

Staged a comeback from physical disability

After five years of treatment, Wilma one day stunned her doctors when she removed her leg braces and walked by herself. Soon she was joining her brothers and sisters in basketball games in the Rudolph backyard and running street races against other children her age. “By the time I was 12,” she told the *Chicago Tribune*, “I was challenging every boy in our neighborhood at running, jumping, everything.”

Rudolph desperately wanted to play high school basketball, but she simply could not convince the coach to put her on the team. When she finally worked up the nerve to ask him for a tryout, he agreed to coach her privately for ten minutes each morning. Still she was cut in her freshman year. She finally earned a position on the roster at Burt High School in Clarksville, Mississippi, because the coach wanted her older sister to play. Her father agreed to allow her sister to join the team only if Wilma was allowed to join, too.

Rudolph soon blossomed into a fine basketball player. As a sophomore she scored 803 points in twenty-five games, a new state record for a player on a girls’ basketball team. She also started running in track meets and found that her greatest strengths lay in the sprint. She was only fourteen when she attracted the attention of Ed Temple, the women’s track coach at Tennessee State University. Temple told her she had the potential to become a great runner, and during the summer breaks from high school she trained with him and the students at Tennessee State.

An Olympian

The Olympic Games were a far-off dream to a young African American woman in Tennessee. She was a teenager before she even learned what the Olympics were. Rudolph caught on fast, though. In four seasons of high school track meets, she never lost a race. At the tender age of sixteen, she qualified for the Summer Olympics in Melbourne, Australia, and came home with a bronze medal.

Rudolph entered Tennessee State University in the fall of 1957, with the intention of majoring in elementary education. All of her spare time was consumed by running, however. The pace took its toll, and she

found herself too ill to run through most of the 1958 season. She rebounded in 1959, only to pull a muscle at a crucial meet between the United States and the Soviet Union, the former country made up of Russia and several smaller nations. Ed Temple, who would prove to be a lifelong friend, supervised her recovery, and by 1960 Rudolph was ready to go to Rome, Italy.

At the 1960 Olympics, Rudolph won all three of her gold medals in very dramatic fashion. In both the 100-meter dash and the 200-meter dash, she finished at least three yards in front of her closest competitor. She tied the world record in the 100-meter and set a new Olympic record in the 200. Rudolph also brought her 400-meter relay team from behind to win the gold. The French called her “La Gazelle.” Without question, Rudolph’s achievements at the 1960 Olympic Games remain a stand-out performance in the history of Olympic competition.

After the fame

Wilma Rudolph became an instant celebrity in Europe and America. Crowds gathered wherever she was scheduled to run. She was given ticker tape parades, an official invitation to the White House by President John F. Kennedy (1917–1963), and a dizzying round of dinners, awards, and television appearances.

Rudolph made one decision that she stuck to firmly: she refused to participate in the 1964 Olympic games. She felt that she might not be able to duplicate her achievement of 1960, and she did not want to appear to be fading. She retired from amateur athletics in 1963, finished her college work, and became a school teacher and athletic coach.

She also became a mother, raising four children on her own after two divorces.

Talent didn’t go to waste

For more than two decades, Wilma Rudolph sought to impart the lessons she learned about amateur athletics to other young men and women. She was the author of an autobiography, *Wilma*, which was published in 1977—and the subject of a television movie based on her book. She lectured in every part of America and even served in 1991 as an ambassador to the European celebration of the dismantling of the Berlin Wall, the wall that for three decades separated East from West Berlin, Germany. Rudolph helped to open and run inner-city sports clinics and served as a consultant to university track teams. She also founded her own organization, the Wilma Rudolph Foundation, dedicated to promoting amateur athletics.

Rudolph was a member of the United States Olympic Hall of Fame and the National Track and Field Hall of Fame. She traveled frequently and was well known for her motivational speeches to youngsters.

On November 12, 1994, Wilma Rudolph died at her home in Brentwood, Tennessee, of a brain tumor. She is survived by two sons, two daughters, six sisters, two brothers, and a truly inspirational legacy.

SALMAN RUSHDIE

Born: June 19, 1947

Bombay, India

Indian writer

The works of the Indian author Salman Rushdie often focused on outrages of history and particularly of religions. His book *The Satanic Verses* earned him a death sentence from the Iranian leader Ayatollah Ruhollah Khomeini (1900–1989).

Early life and education

Ahmed Salman Rushdie was born on June 19, 1947, in Bombay, India, the only son among Anis Ahmed Rushdie and Negin Butt's four children. His father was a businessman who had been educated at Cambridge University in England. Rushdie's childhood was happy and he was always surrounded by books. Rushdie remembers wanting to be a writer at age five. He was sent to England at age fourteen to attend Rugby, a private school. His fellow students tormented him both because he was Indian and because he had no athletic ability.

Rushdie later attended Cambridge, as his father had done, and his experience there was much more positive. He received his master's degree in history in 1968. After a brief career as an actor he worked as a free-lance advertising copywriter in England from 1970 to 1980. The experience of expatriation (living outside one's country of birth), which he shared with many writers of his generation who were born in the Third World, is an important theme in his work.

First books

Rushdie's first published book, *Grimus* (1975), was classified as science fiction by many critics. It is the story of Flapping Eagle, a Native American who is given the gift of immortality (eternal life) and goes on a journey to find the meaning of life. Although the book received positive reviews, it did not sell very well. Rushdie continued working as a part-time ad writer over the five years it took him to write *Midnight's Children*. He quit his job after finishing the novel without even knowing if it would be published.

Released first in the United States in 1981, *Midnight's Children* is in part the story of a baby who was not only the result of an extramarital affair (an affair between a married person and someone other than his or her spouse) but who was then switched at birth with a second child from a similar situation. The hero is also caught between the two great Indian religions, Islam and Hinduism. Finally, he spends his life moving back and forth between the Indian republic and Pakistan. The book received rave reviews in the United States and was a popular and critical success in England. Rushdie followed this up with *Shame* (1983), the story of a Pakistani

Salman Rushdie.

woman, Sufiya Zinobia, who blushes so hotly with embarrassment at her nation's history that her body boils her bath water and burns the lips of men who attempt to kiss her.

Angers Muslim leaders

Rushdie's *The Satanic Verses* (1988) opens with the survival of two Indian men who fall out of the sky after their jumbo jet to England is blown up in midair by terrorists. These two characters then gain divine and demonic powers. Rushdie's habit of using the atrocities of history—especially involving religion—made *The Satanic Verses* a book of frightening precognition (describing events that have not

yet occurred): another character in the novel is a writer sentenced to death by a religious leader.

The title of the novel refers to verses from the Koran (the holy book of the Islamic faith), which were removed by later Islamic historians, describing a time when the Arab prophet (one with religious insight) Mohammed (the founder of Islam) briefly changed his belief in a single god and allowed mention to be made of three local goddesses. This was considered offensive and an insult to Islam by the Iranian leader Ayatollah Ruhollah Khomeini, who issued a *fatwa*, or religious order, calling for Rushdie's death. Rushdie went into hiding and received round-the-clock protection from British security guards. Rushdie's wife of thirteen months, author Marianne Wiggins, went into hiding with him when the death threat was announced. She soon emerged and announced that their marriage was over.

Khomeini's death threat extended not only to Rushdie himself, but to the publishers of *The Satanic Verses*, any bookseller who carried it, and any Muslim who publicly approved of its release. Several bookstores in England and America received bomb threats, and the novel was briefly removed from the shelves of America's largest book-selling chains. Two Islamic officials in London, England, were murdered for questioning the correctness of Rushdie's death sentence on a talk show. Many book-burnings were held throughout the world.

Rushdie himself, and his possible disguises in hiding, became the subject of many jokes. For example, during the 1990 Academy Awards presentation, which was seen

worldwide by an estimated one billion viewers, comedian Billy Crystal (1947–) joked that “the lovely young woman” who usually hands Oscar statuettes to their recipients “is, of course, Salman Rushdie.”

Working under a death sentence

In 1990 Rushdie released the fantasy (a made-up story) novel *Haroun and the Sea of Stories*, written for his son by his first marriage. That same year Rushdie publicly embraced Islam and apologized to those offended by the *The Satanic Verses*. He made several appearances in London bookstores to autograph his newest work. But even after the Ayatollah's death, his successor, Iran's President Hashemi Rafsanjani, refused to lift the death sentence. Rushdie continued to appear in public only occasionally, and then under heavy security.

Rushdie continued to live an isolated life. He remarried, however, and became a father for the second time. Occasionally he made radio appearances, but they were usually unannounced. Rushdie's novel entitled *The Moor's Last Sigh* was published in 1995. This book drew angry reactions from Hindu militants (those engaged in war) in India. In 1998, as part of an attempt to restore relations between Iran and England, the Iranian foreign minister, while repeating criticism of *The Satanic Verses*, announced that Iran had no intention of harming Rushdie or encouraging anyone to do so. A relieved Rushdie said he would end his nine years of seclusion.

In 1999 Rushdie published *The Ground Beneath Her Feet*, the story of a famous singer lost during an earthquake. Rushdie described it as “a novel of our age” in an interview with CNN's Jonathan Mann. In April 2000 Rushdie created a sensation by visiting India,

his first visit to his birthplace since he was four years old. In November 2001 Rushdie told the *Manchester Guardian* that most Muslims' view of Islam is “jumbled” and “half-examined.” He criticized Muslims for blaming “outsiders” for the world's problems and said that they needed to accept the changes in the modern world to truly achieve freedom.

BABE RUTH

Born: February 6, 1895

Baltimore, Maryland

Died: August 16, 1948

New York, New York

American baseball player

Babe Ruth, an American baseball player, was one of sport's most famous athletes and an enduring legend.

Babe Ruth.

Reproduced by permission of Getty Images.

Early years

George Herman Ruth Jr., later known as Babe Ruth, was born on February 6, 1895, in Baltimore, Maryland, one of George Herman Ruth and Kate Schamberger's eight children. Of the eight, only George Jr. and a sister, Mamie, survived. Ruth's father owned a tavern, and running the business left him and his wife with little time to watch over their children. Young George began skipping school and getting into trouble. He also played baseball with other neighborhood children whenever possible.

At the age of seven Ruth was sent to the St. Mary's Industrial School for Boys, a school that took care of boys who had problems at home. It was run by the Brothers (men who had taken vows to lead religious lives) of a Catholic order of teachers. Ruth wound up staying there off and on until he was almost twenty. At St. Mary's, Ruth studied, worked in a tailor shop, and learned values such as sharing and looking out for smaller, weaker boys. He also developed his baseball skills with the help of one of the Brothers.

Signs baseball contract

Ruth became so good at baseball (both hitting and as a left-handed pitcher) that the Brothers wrote a letter to Jack Dunn, manager of the Baltimore Orioles minor league baseball team, inviting him to come see Ruth. After watching Ruth play for half an hour, Dunn offered him a six-month contract for six hundred dollars. Dunn also had to sign papers making him Ruth's guardian until the boy turned twenty-one.

When Dunn brought Ruth to the Oriole locker room for the first time in 1914, one of the team's coaches said, "Well, here's Jack's newest babe now!" The nickname stuck, and Babe Ruth stuck with the team as well, performing so well that he was moved up later that year to the Boston Red Sox of the American League. Ruth pitched on championship teams in 1915 and 1916, but he was such a good hitter that he was switched to the outfield so that he could play every day. (Pitchers usually play only every four or five days because of the strain that pitching has on their throwing arm.) In 1919 his twenty-nine home runs set a new record and led to the beginning of a new playing style. Up to that point home

runs occurred very rarely, and baseball's best players were usually pitchers and high-average "singles" hitters. By 1920 Ruth's frequent home runs made the "big bang" style of play more popular and successful.

Becomes legend with the Yankees

In 1920 Babe Ruth was sold to the New York Yankees for one hundred thousand dollars and a three hundred fifty thousand dollar loan. This was a huge event which increased his popularity. In New York his achievements and personality made him a national celebrity. Off the field he enjoyed eating, drinking, and spending or giving away his money outright; he earned and spent thousands of dollars. By 1930 he was paid eighty thousand dollars for a season, a huge sum for that time, and his endorsement income (money received in return for public support of certain companies' products) usually added up to be more than his baseball salary.

Ruth led the Yankees to seven American League championships and four World Series titles. He led the league in home runs many times, and the 60 he hit in 1927 set a record for the 154-game season. (Roger Maris hit 61 home runs in a 162-game season in 1961.) Ruth's lifetime total of 714 home runs is second only to the 755 hit by Hank Aaron (1934–). With a .342 lifetime batting average for 22 seasons of play, many consider Babe Ruth the game's greatest player.

When Ruth's career ended in 1935, he had hoped to become a major league manager, but his reputation for being out of control made teams afraid to hire him. In 1946 he became head of the Ford Motor Company's junior baseball program. He died in New York City on August 16, 1948.

NOLAN RYAN

Born: January 31, 1947

Refugio, Texas

American baseball player

Nolan Ryan is considered one of the best pitchers of all time, known both for his fastball and as a role model for players and fans alike.

Early years

Lynn Nolan Ryan Jr. was born January 31, 1947, in Refugio, Texas. He was the

youngest of six children of Lynn Nolan Ryan Sr. and Martha Ryan. Ryan grew up in Alvin, Texas, where his father worked for an oil company and delivered papers for the *Houston Post*. Ryan credits his father for instilling in him the value of a strong work ethic. In second grade, Ryan began helping his father on his paper routes.

Much of Ryan's youth was consumed by sports. While he spent two years on his high school basketball team, it was baseball that was his passion. During his senior year, he dominated the pitching mound. He amassed a 20–4 record, batted .700 in the state tournament, and was named to the All-State team before graduating high school in 1965.

Minor leagues

Ryan was selected by the New York Mets during the 1965 free-agent draft and played in the West Carolinas League beginning on September 11, 1966. During Ryan's time with this league, his teammates began to respect his fastball. Although Ryan lacked true ball control, he nonetheless frightened batters and catchers alike with his scorching fastball, which one day would be known as "The Ryan Express."

As a result the New York Mets called Ryan up to play in the major leagues at the end of the 1966 season. The Mets at that time were in sore need of great players, because until 1969, the Mets had finished last or next to last in every season since the team was founded in 1962. Unfortunately for the Mets, the 1967 season did not bring the great play expected. Ryan was often homesick and therefore missed much of the 1967 season due to illness, an arm injury, and service with the U.S. Army Reserves.

Marriage and the Mets

Ryan married his high school sweetheart, Ruth, in 1968. She moved to New York City to be closer to Ryan and help ease his homesickness. Along with the improved playing ability Ryan achieved during that season, the New York Mets also improved as a team. The Mets added two key people to their pitching staff, Jerry Koosman and Tom Seaver (1944–), a strikeout leader in his own right from whom Ryan learned a great deal.

During the 1969 season, Ryan played as both a starting and relief pitcher, finishing the season with a 6–3 record. This type of finish soon became the norm for Ryan as he concentrated more on striking out batters than on winning games. Regardless, it was primarily Ryan's pitching abilities that took the New York Mets to the league championships that year and later the World Series. Ryan saved the Mets' bid for the World Series title when in the third game of the series, he made the crucial plays needed to earn the win. The Mets went on to upset the Baltimore Orioles after five games.

Ryan, even with a world championship title to his credit, still felt uncomfortable in New York City, and requested to be traded in 1971. Without much discussion, the Mets agreed to Ryan's request and traded him along with three other players to the California Angels. Because of this move, he was able to distance himself from the East and a climate and location he was never fond of. Looking back, as players and managers often do, this trade is often considered the worst in the history of the Mets. Once in California, Ryan blasted his way into superstar status. He stayed with the Angels for eight seasons, from 1972 through 1979.

Team accomplishments

With the Angels Ryan struck out more than three hundred batters for the first time. Ryan finished the 1972 season with 19 wins, 16 losses, and 329 strikeouts. With the close of the 1973 season, Ryan became the first-ever pitcher to have back-to-back seasons of over 300 strikeouts. Striking out 383 hitters, Ryan set an all-time major league record. Additionally, in the 1973 season, Ryan became only the fifth pitcher in baseball history to pitch two no-hit games in one season.

The 1974 and 1975 seasons were also quite good for Ryan statistically. In the 1974 season, Ryan pitched his third no-hit game and completed a third season of over three hundred strikeouts. The 1975 season saw Ryan complete his fourth no-hit game. Ryan became the second pitcher in major league history to achieve this feat.

Move to Texas and desperation

Although Ryan played some of his best games with the California Angels, he still longed for his native Texas. His break came at the end of the 1979 season when he became a free agent. Ryan was immediately signed with the Houston Astros and became baseball's first pitcher to earn one million dollars a year. Although this amount is common by today's standards, when it was awarded to Ryan, such a sum was unheard of at the time.

Ryan pitched for the Astros from 1980 through the 1988 season. In 1981, he threw his fifth no-hitter. He led the league with the lowest earned run average in 1981 and 1987. In 1980, 1981, and 1986, the Astros were in the National League playoffs, but lost all three times.

Nolan Ryan.

Reproduced by permission of AP/Wide World Photos.

After Ryan completed his contract with the Astros, he again was a free agent at the end of the 1988 season. He was quickly picked up, this time by the Texas Rangers in time for the 1989 season. Although Ryan would not play in a playoff series with the Rangers, he did pitch his sixth and seventh no-hit games and led the American League in strikeouts in the 1989, 1990, and 1991 seasons.

Called it quits

On September 22, 1993, on Nolan Ryan Appreciation Day in Seattle, Washington, all that Ryan dreamed of and played for came to

an abrupt halt. Although he planned to retire at the end of the 1993 season, he expected to do so with the grace and dignity deserving of his accomplishments. After feeling his right elbow pop with pain from a torn ligament in the middle of the Rangers game against the Seattle Mariners, Ryan knew his chances at the World Series were over. Ryan was sidelined for the rest of the game, giving him ample time to reflect on his twenty-seven-year career.

That day, at forty-six, Ryan walked off the field giving baseball and its fans something that is rarely seen. As an athlete, Ryan defined his own class and style. He attained the five-thousand-strikeout mark at the age of forty-two, when most professional sports players had long since retired. In 1999 Ryan was inducted into the Baseball Hall of Fame for playing a record twenty-seven seasons and pitching seven no-hitters.

In April of 2000 Ryan underwent emergency double-bypass surgery at the Heart Hospital of Austin, Texas. After experiencing shortness of breath and chest pains, his wife drove him to the Round Rock Medical Center, where doctors performed tests. He was

then taken to the Heart Hospital of Austin, where an angiogram (an X ray of blood vessels) showed a substantial blockage of the left main coronary artery.

Nolan Ryan is currently a cattle rancher and a businessman. He and his wife are also active promoters of healthy and fit lifestyles for Americans.

ALBERT SABIN

Born: August 26, 1906

Bialystok, Poland

Died: March 3, 1993

Washington, D.C.

Polish-born American physician and virologist

Polish-born physician and virologist (scientist who studies viruses) Albert Sabin developed the first effective and widely used live virus polio myelitis (polio) vaccine.

Early years and education

Born on August 26, 1906, in Bialystok, Poland, Albert Bruce Sabin came to the

United States with his parents and three siblings in 1921 in order to avoid persecution (harsh treatment) directed against Jews. They established residence in Paterson, New Jersey. Sabin's father worked in the textile industry in both silk and regular cloth. Sabin worked hard to learn his new language, working odd jobs throughout his high school and college years.

At Paterson High School Sabin participated in after-school activities including the literary and debating clubs. He graduated in 1923. Sabin entered New York University as a pre dental student, then switched to medical school microbiology (the study of life forms that cannot be seen without the aid of a microscope).

Albert Sabin.

Reproduced by permission of Archive Photos, Inc.

Begins polio research

Upon receiving his medical degree in 1931, Sabin immediately began research on the nature and cause of polio, a viral infection that can result in death or paralysis. This disease had reached epidemic (affecting a huge number of people) proportions, affecting people around the world.

Sabin joined the staff of the Rockefeller Institute in New York City in 1935 and four years later left for a post at the Children's Hospital Research Foundation in Cincinnati, Ohio. It was there that he proved that polio viruses not only grew in nerve tissue, as was generally assumed, but that they lived in the

small intestines. This discovery indicated that polio might be vulnerable to a vaccine taken orally (through the mouth).

Sabin's work on a polio vaccine was interrupted by World War II (1939–45; a war fought mostly in Europe with France, Great Britain, the Soviet Union, and the United States on one side, and Germany, Japan, and Italy on the other). In 1941 he joined the U.S. Army Epidemiological Board's Virus Committee and accepted assignments in Europe, Africa, the Middle East, and the Pacific. During this phase of his career Sabin developed vaccines for encephalitis (swelling of the brain), sand-fly fever, and dengue fever (a virus transmitted by mosquitoes).

Develops polio vaccine

At the war's end Sabin returned to Cincinnati and to his research on the polio virus. His approach was to make the human stomach a hostile environment for the polio virus. He intended to accomplish this by isolating a mutant (altered, different) form of the polio virus that was incapable of producing the disease. The avirulent (not able to harm the body's defenses) virus would then be grown and introduced into the intestines. There it would reproduce rapidly, displacing the deadly virulent forms of the polio virus and protecting the human host from the disease.

After an intensive investigation Sabin managed to isolate the viruses he sought. Sabin and his research associates first swallowed the live avirulent viruses themselves before they experimented on other human subjects. For two years (1955–1957) the vaccine was tested on hundreds of prison inmates with no harmful effects.

At this point Sabin was ready for large-scale tests, but he could not carry them out in the United States. A rival polio vaccine developed by Dr. Jonas Salk (1914–1995) in 1954 was then being tested for its ability to prevent the disease among American school children. Salk's approach was to create a vaccine using a killed form of the virus.

Some foreign virologists, especially those from the Soviet Union, were convinced of the superiority of the Sabin vaccine. It was first tested widely in Russia, Latvia, Estonia, Czechoslovakia, Poland, Hungary, and East Germany from 1957 to 1959. A much smaller group of persons living in Sweden, England, Singapore, and the United States received Sabin's vaccine by the end of 1959.

In the meantime Salk's vaccine had been accidentally contaminated with some live virulent polio viruses. It caused death or severe illness to several hundred school children. In addition, the Salk vaccine had to be injected into the body and it was effective for a relatively short time—less than a year. These problems made the American medical community more receptive to Sabin's vaccine.

Sabin's vaccine was free of dangerous viruses, easily administered orally, and effective over a long period of time. Ultimately it was a live virus vaccine that was used in the United States and the rest of the world to eliminate polio.

Later life

Always a tireless researcher, Sabin moved on to a new field of study, the possible role viruses play in creating cancer in humans. After more than a decade of work he was forced in 1977 to conclude that cancers

were not caused by viruses as he had first assumed. Sabin served as research professor at the University of South Carolina until 1982. In 1980 he traveled to Brazil to deal with a new outbreak of polio, and retired from medicine in 1986. Sabin died March 3, 1993, of heart failure.

Sabin's work on a vaccine for the polio virus affected millions of people. By 1993 health organizations reported the near-extinction of the polio disease in the Western Hemisphere.

of nuclear war, and wrote a number of popular books explaining developments in astronomy, biology, and psychology.

Younger years and education

Carl Edward Sagan was born on November 9, 1934, in New York City to Samuel and Molly Sagan. His father was a factory manager. As a child Carl was fascinated with the stars. By age nine he was an amateur astronomer and felt certain there was life on other planets. At age twelve he announced to his grandfather his intention to become an astronomer. However, it was not until he was a sophomore in high school

that he realized that astronomers actually got paid for their work.

The family later moved to Rahway, New Jersey, where Carl graduated from high school in 1951. He was voted “most likely to succeed” and “most outstanding male student.” With the help of several scholarships, he studied astronomy at the University of Chicago. He was captain of a championship intramural basketball team and president of the Astronomical Society, which he had founded. He received a bachelor of arts degree with special honors in the natural sciences in 1954, a bachelor of science degree in physics in 1955, and his doctorate in 1960.

Early teaching and research

Over the next ten years Sagan held teaching and/or research posts at the University of California at Berkeley, Harvard University, the Smithsonian Astrophysical Observatory, and Stanford University. In 1970 he became director of Cornell University’s Laboratory for Planetary Studies and David Duncan Professor of Astronomy and Space Science. In addition to his academic appointments Sagan served as a consultant to the National Aeronautics and Space Administration (NASA) and was closely associated with the unmanned (without astronauts onboard) space missions to Venus, Mars, Jupiter, and Saturn.

The surface and atmosphere of Venus

Sagan’s first major research effort was an investigation of the surface and atmosphere of Venus. In the late 1950s the general scientific view was that the surface of Venus was relatively cool and that life of some sort might exist on the planet. Radio emissions had been

observed and it was thought that they came from the activity of charged particles located in an atmospheric layer.

Sagan overturned these ideas in 1961 by showing that the emissions could be caused by a very hot surface temperature, over 300 degrees Centigrade (572 degrees Fahrenheit), in which life could not exist. He said the high temperatures were caused by a “greenhouse effect,” in which the sun’s heat was trapped between the planet’s surface and its carbon dioxide cloud cover. These ideas were confirmed by an exploratory space vehicle sent to Venus by the Soviet Union in 1967.

Solar system research

The physical characteristics of the surface of Mars have long interested astronomers and science fiction writers. Telescopic observation of the planet revealed distinctive bright and dark areas on its surface. This led some to guess that large regions of Mars were covered with plants that change with the seasons.

In the mid-twentieth century, radar and other new means of observation were used to gather information on the topography (surface features), temperature, wind speeds, and atmosphere of Mars. Reviewing this newly collected data, Sagan concluded that the bright regions were lowlands filled with sand and dust blown by the wind and that the dark areas were elevated ridges or highlands.

The origins of life

Sagan also investigated the origins of life on Earth and championed the study of exobiology (the biology of extraterrestrial life). In the mid-1950s Harold Urey and Stanley Miller had successfully produced key organic

compounds in the laboratory by recreating the physical and chemical conditions that were common on Earth shortly before the first forms of life appeared. Building upon this research, Sagan exposed a mixture of methane, ammonia, water, and hydrogen sulfide to radiation. This had the effect of producing amino acids and adenosine triphosphate (ATP), complex chemical compounds that are crucial to living cells.

Popular writing

It is not his scientific achievements but his popular books and his television appearances that made Sagan a well-known public figure. In 1973 he published *The Cosmic Connection*, a lively introduction to space exploration and the search for extraterrestrial life. Four years later he published his Pulitzer Prize-winning book on the evolution of the human brain, *The Dragons of Eden*.

Another of Sagan’s books, *Cosmos* (1980), deserves notice because it was written in conjunction with his well-received television series of the same name. In this work Sagan offered a brief history of the physical universe, showed how the universe came to be understood with the help of modern science, and warned that the Earth was in danger of being destroyed by a nuclear disaster.

Nuclear winter

In December of 1983 Sagan, with colleagues R. P. Turco, O. B. Toon, T. P. Ackerman, and J. B. Pollack, published “Nuclear Winter: Global Consequences of Multiple Nuclear Explosions.” The article stated that in a nuclear war tremendous quantities of soot and dust would be injected into the atmosphere to form a gigantic black cloud

covering most of the Northern Hemisphere. This cloud would reduce the incoming sunlight by more than 95 percent for a period of several weeks and affect the climate on Earth for a number of years thereafter. During the cold, dark nuclear winter the vegetation which animals and humans need for sustenance (nourishment) would be seriously depleted and great harm would be done to the environment and to human society.

Sagan continued to work and speak about science until his death in Seattle, Washington, on December 20, 1996, of pneumonia brought on by a rare bone marrow disease.

Sagan once said that his own sense of wonder, combined with the encouragement his parents showed for pursuing unusual interests, were the factors that led him to his choice of work. He was best known for popularizing science, presenting it in generally understandable or interesting form. It is a fitting tribute that the Mars Pathfinder lander was renamed the Dr. Carl Sagan Memorial Station when it touched down on the surface of Mars in July of 1997.

ANDREI SAKHAROV

Born: May 21, 1921

Moscow, Russia

Died: December 14, 1989

Moscow, Russia

Russian physicist and reformer

Andrei Sakharov was one of the Soviet Union's leading physicists and is regarded in scientific circles as the "father of the Soviet atomic bomb." He also became Soviet Russia's most prominent political dissident (a person who holds political views that differ from the majority) in the 1970s.

Early years and education

Andrei Sakharov was born in Moscow, Russia, on May 21, 1921, the oldest of two sons. He was also part of a large family. When he was growing up, four Sakharov families shared the same apartment building. His father taught physics, the branch of science that examines matter and energy, and how they work together. He would take young Andrei to his laboratory and show him experiments. Andrei was dazzled and began performing his own experiments at home. His father encouraged him and gave him the desire to find fulfillment in his work.

Sakharov studied physics at Moscow University. During World War II (1939–45; a war fought mostly in Europe between the Axis—Germany, Italy, and Japan—and the Allies—led by the Soviet Union, Great Britain, France, and the United States) he served as an engineer in a military factory. He met Klavdia Vikhireva, a

laboratory assistant, and they married in 1943. The couple had three children.

Physics research

In 1945 Sakharov entered the Lebedev Institute in Physics where he joined the Soviet research group working on atomic weapons. He wrote many scientific articles and his achievements were recognized throughout the world. In 1953, at the age of thirty-two, he became the youngest person ever elected to the Soviet Academy of Sciences.

Between 1950 and 1968 Sakharov conducted top secret research on thermonuclear weapons. Thermonuclear weapons release destructive energy by fusing the nuclei (the dense central cores) of atoms under high temperatures. He was named "Hero of Socialist Labor" in 1953, 1956, and 1962. He also developed a strong awareness of the dangers of nuclear testing activity and the irreversible consequences of nuclear war.

Andrei Sakharov.

Courtesy of the Library of Congress.

Takes stand against Soviet government policies

In the late 1950s Sakharov sent many letters to Soviet leaders urging them to stop nuclear testing. He also published several articles in Soviet journals arguing against continued nuclear testing and the arms race. His views apparently carried weight with Premier Nikita Khrushchev (1894–1971) and others, and influenced the Soviet decision to sign the first nuclear test ban treaty in 1963.

In 1966 and 1967 Sakharov openly pressed for civil liberties (rights of the people of a country). He became more militant (devoted to his cause) following the Soviet invasion of Czechoslovakia in 1968. Some-

times he and other dissidents stood vigil (watch) at trials of those arrested for protest activities. While standing vigil at a trial in 1970 Sakharov, who was then a widower, met Elena Bonner. They later married, and she became his strongest supporter.

Reflections and banishment

At this time Sakharov published his best-known and most persuasive and forceful political essay, *Reflections on Progress, Peaceful Coexistence and Intellectual Freedom*. In it he urged cooperation between East and West (primarily the Soviet Union and the United States), civil liberties, and an end to the arms

race. Following the publication of *Reflections* in the West, Sakharov was removed from most of his scientific projects and dismissed from the Soviet Atomic Energy Commission. It soon became difficult for him to publish scientific works. For a time, Sakharov was protected from being arrested because of his international prestige as a nuclear physicist, and his specific knowledge of the Soviet Union's nuclear weapons program.

Toward the end of the 1970s Sakharov became increasingly alarmed about the Soviet arms build-up, which he saw as a reflection of aggressive plans. He frequently expressed his thoughts to foreign reporters and many of his views were printed in the West. His outspoken criticism of the Soviet invasion of Afghanistan in late 1979 led to the banishment (forced exit) of Sakharov and his wife to Gorky, a small city two hundred fifty miles east of Moscow. He was cut off from open contact with friends and colleagues and constantly harassed by the KGB (Soviet secret police).

In 1983 Sakharov reportedly considered leaving Soviet Russia but was refused because of his knowledge of Soviet state secrets. On several occasions he engaged in hunger strikes (where someone refuses to eat as an act of protest) to call attention to continued threats against him and his family.

In 1983 U.S. president Ronald Reagan (1911–) proclaimed May 21 National Sakharov Day in recognition of his courage and his contribution to humanity. Sakharov was detained in Gorky for almost seven years, released at last by Premier Mikhail Gorbachev (1931–) in 1986. In 1989 he was elected to the newly formed Soviet legislature. The remaining three years of Sakharov's life were spent traveling abroad. He died of a heart attack on December 14, 1989, in Moscow.

Sakharov received the Nobel Peace Prize in 1975 for his work for nuclear disarmament and his outspoken criticism of human rights violations everywhere. He was for many, inside the Soviet Union and out, a noble symbol of courage, intelligence, and humanity. Part of his obituary said, "Everything [he] did was dictated by his conscience."

J. D. SALINGER

Born: January 1, 1919
New York, New York
American writer

J. D. Salinger, best known for his controversial novel *The Catcher in the Rye* (1951), is recognized by critics and readers alike as one of the most popular and influential authors of American fiction during the second half of the twentieth century.

Growing up in the "House of Glass"

Jerome David Salinger was born in New York City on January 1, 1919, and like the

members of the fictional Glass family that appear in some of his works, was the product of mixed parentage—his father was Jewish and his mother was Scotch-Irish. Salinger's upbringing was not unlike that of Holden Caulfield of *The Catcher in the Rye*, the Glass children, and many of his other characters. Unlike the Glass family with its brood of seven children, Salinger had only an elder sister. He grew up in fashionable areas of Manhattan and for a time attended public schools. Later, the young Salinger attended prep schools where he apparently found it difficult to adjust. In 1934 his father enrolled him at Valley Forge Military Academy near Wayne, Pennsylvania, where he stayed for approximately two years, graduating in June of 1936.

Salinger maintained average grades and was an active, if at times distant, participant in a number of extracurricular activities. He began to write fiction, often by flashlight under his blankets after the hour when lights had to be turned out. Salinger contributed work to the school's literary magazine, served as literary editor of the yearbook during his senior year, participated in the chorus, and was active in drama club productions. He is also credited with composing the words to the school's anthem.

Published author

In 1938 Salinger enrolled in Ursinus College at Collegeville, Pennsylvania. While at Ursinus he resumed his literary pursuits, contributing a humorous column to the school's weekly newspaper. He left the school after only one semester. Obviously an intelligent and sensitive man, Salinger apparently did not respond well to the structure and rig-

J. D. Salinger.

ors of a college education. This attitude found its way into much of his writing, as there is a pattern throughout his work of impatience with formal learning and academic types.

Despite Salinger's dislike of formal education, he attended Columbia University in 1939 and participated in a class on short story writing taught by Whit Burnett (1899–1973). Burnett, a writer and important editor, made a lasting impression on the young author, and it was in the magazine *Story*, founded and edited by Burnett, that Salinger published his first story, "The Young Folks," in the spring of 1940. Encouraged by

the success of this effort, Salinger continued to write and after a year of rejection slips finally broke into the rank of well-paying magazines catering to popular reading tastes.

Salinger entered military service in 1942 and served until the end of World War II (1939–45; a war in which Allied forces led by Great Britain, France, the Soviet Union, and the United States fought with the Axis forces of Germany, Italy, and Japan). Salinger participated in the Normandy campaign, when Allied forces landed on French shores and turned the tide of the war, and the liberation of France from the occupying German army. He continued to write and publish while in the army, carrying a portable typewriter with him in the back of his jeep. After returning to the United States, Salinger's career as a writer of serious fiction took off. In 1946 the *New Yorker* published his story "Slight Rebellion Off Madison," which was later rewritten to become a part of *The Catcher in the Rye*.

The Catcher in the Rye

In 1951 Salinger's masterpiece *The Catcher in the Rye* landed at bookstores. In *The Catcher in the Rye*, Holden Caulfield is driven to the brink of a nervous breakdown by his disgust for the "phoniness" of the adult world that he is about to enter. He finds peace only in the presence of Phoebe, his young sister. Taking flight from this world, Holden plans to head west, where he hopes to live a peaceful existence in a log cabin. However, he begins his journey by traveling to New York where he plans to say goodbye to his sister, and on the way he participates in a series of humorous adventures. Such a confusion in direction is characteristic of Caulfield, as there seems to be a pattern of

impulsive behavior in many of his actions. One of Salinger's more subtle devices is to discredit his main character by placing him in situations wherein his own phoniness is exposed. In these situations his character is made all the more interesting through what readers quickly see as his sensitivity and intelligence.

It is little wonder that *The Catcher in the Rye* quickly became a favorite among young people; it skillfully demonstrates the adolescent experience with its spirit of rebellion. At various points in history, *The Catcher in the Rye* has been banned by public libraries, schools, and bookstores due to its presumed profanity (bad language), sexual subject matter, and rejection of traditional American values.

Success

Despite its popular success, the critical response to *The Catcher in the Rye* was slow in getting underway. It was not until *Nine Stories*, a collection of previously published short stories came out in 1953 that Salinger began to attract serious critical attention.

Salinger did not publish another book until 1961, when his much anticipated *Franny and Zooey* appeared. This work consists of two long short stories, previously published in the *New Yorker*. Each concerns a crisis in the life of the youngest member of his fictional Glass family—the quirky characters who populate most of his work. In 1963 Salinger published another Glass family story sequence, *Raise High the Roof Beam, Carpenters*; and *Seymour: An Introduction*, again from two previously published *New Yorker* pieces. Both stories revolve around the life and tragic death of Seymour Glass, the eldest of the Glass children, as narrated by his brother

Buddy Glass, who is frequently identified as Salinger's alter-ego, or a representation of the author's personality.

The myth of J. D. Salinger

While Salinger's fictional characters have been endlessly analyzed and discussed, the author himself has remained a mystery. Since the publication of *The Catcher in the Rye*, he has consistently avoided contact with the public, obstructing attempts by those wishing to pry into his personal life. In 1987 he successfully blocked the publication of an unauthorized biography by Ian Hamilton. In his lawsuit, Salinger claimed copyright infringement on private matters Hamilton had discovered in the course of research. Even after revising his material, Hamilton was unable to satisfy Salinger or the court and was forced to withdraw the book. In 1988 an extensively revised version of Hamilton's work was published under the title *In Search of J. D. Salinger*, which represents a comprehensive study of the author and his work.

Deemed the "Summer of Salinger" by columnist Liz Smith, the summer of 1999 saw the release of the latest Salinger biography and the sale of love letters the author wrote to a former girlfriend, which sold for \$156,000. The letters were bought by software millionaire Peter Norton, who returned the letters to the author. Paul Alexander's *Salinger: A Biography*, published on July 15, 1999, is the first full-length Salinger biography since Ian Hamilton's in 1988. Salinger has not made an effort to limit the release of the book, unlike the Hamilton biography.

In 1997 a rumor surfaced that a Salinger story originally printed in the *New Yorker* in

1965, "Hapworth 16, 1924," was soon to be released in book form. The publication is still planned but no date has been set.

Today Salinger lives in seclusion in rural New Hampshire, writing for his own pleasure and presumably enjoying his private world.

JONAS SALK

Born: October 28, 1914

New York, New York

Died: June 23, 1995

La Jolla, California

American immunologist and virologist

The American physician, virologist (scientist who studies viruses), and immunologist (medical scientist concerned with the structure and function of the immune system, the body's resistance to infection) Jonas Salk developed the first effective poliomyelitis (polio) vaccine.

Jonas Salk.

Reproduced by permission of AP/Wide World Photos.

Early years and education

Jonas Edward Salk was born in New York City on October 28, 1914, the oldest of three sons of Daniel and Dora Salk. The family moved to the Bronx, New York, shortly after Jonas's birth. As a child he was thin and small and did not do well at sports, although he was an excellent student. With his mother's encouragement, he had a sense as a child that when he grew up he would "make a difference" by doing something significant.

Salk graduated from Townsend Harris High School, a school for exceptional students. He studied hard, read everything he could lay his hands on, and always got good

grades. At the age of sixteen Salk entered the College of the City of New York to study law. He subsequently changed his mind and decided instead to pursue medicine. In 1934 he enrolled in the College of Medicine of New York University, from which he graduated in 1939. Salk worked at New York's Mount Sinai Hospital from 1940 to 1942, when he went to the University of Michigan. There he helped develop an influenza (flu) vaccine. In 1944 he was appointed research associate in epidemiology (the study of the causes, distribution, and control of disease), and in 1946 he was made assistant professor.

Polio vaccine

In 1947 Salk accepted a position at the University of Pittsburgh as associate professor of bacteriology (the study of bacteria, one-celled organisms that can cause disease). There he carried out his research on a polio vaccine. Polio vaccines had been attempted before but without success. Until 1949 it was not known that there were three distinct types of polio viruses.

This discovery provided a starting point for Salk. Working under a grant from the National Foundation for Infantile Paralysis, he prepared a killed-virus vaccine effective against all three types. Testing began in 1950, and the preliminary report on the vaccine's effectiveness was published in the *Journal of the American Medical Association* in 1953. National field trials were held in 1954, and in 1955 the vaccine was determined safe for general use.

The Salk vaccine is made by cultivating (growing) three strains of the virus separately, then killing it by applying a strong chemical called formaldehyde. Tests are then per-

formed to make certain the virus is dead. A series of three or four injections is required to make someone immune.

Problems with the Salk vaccine

Acceptance of the vaccine was not without problems. Salk was criticized because a glaring Hollywood-like promotion was undertaken for the vaccine. Also, some medical colleagues favored a live-virus vaccine. The live-virus vaccine developed by Dr. Albert Sabin (1906–1993) contained a mutant (altered, different) form of the polio virus, called an avirulent virus. This means it was not able to harm the body's defenses. The live-virus vaccine had advantages over the killed-virus vaccine. It could be administered orally (through the mouth) rather than by injection, and one dosage gave permanent immunity.

The biggest problem with the Salk vaccine was that improper production of the vaccine by some drug companies resulted in the vaccine being contaminated with live polio virus. Many hundreds of children died or became extremely ill because of this.

Salk, during his polio researches, was made research professor of bacteriology at Pittsburgh, Pennsylvania, (1949–1954) and professor of preventive medicine (1954–1957). In 1957 he was named Commonwealth professor of experimental medicine.

In 1963 he opened the Salk Institute for Biological Studies in San Diego, California. There he and his colleagues studied problems relating to the body's autoimmunization reaction; that is, why the body rejects foreign material, for example, an organ transplant.

Jonas Salk died on June 23, 1995, in La

Jolla, California, at the age of eighty from heart failure. In his lifetime he was able to see the effects of his life's work. By the time Salk died, polio had virtually disappeared from the United States.

GEORGE SAND

Born: July 1, 1804

Paris, France

Died: June 9, 1876

Nohant, France

French author

The French novelist George Sand was one of the most successful female writers of the nineteenth century.

George Sand.

Courtesy of the Library of Congress.

Early life

George Sand was born Armandine Aurore Lucille Dupin in Paris, France, on July 1, 1804. Her father, Maurice Dupin, was related to a line of kings and to the Maréchal de Saxe (Marshal of Saxe); her mother, Sophie, was the daughter of a professional bird fancier who came from a humble background. Maurice Dupin was a soldier and died when Aurore was four years old. After her father's death, Aurore, her mother, and her grandmother moved from Paris to Nohant, France. At the age of fourteen, Aurore was sent to the convent (a community for nuns) of the Dames Augustines Anglaises

in Paris. Though she was often rebellious against the convent's peaceful life, she also felt drawn to quiet, deep thought and direct communication with God.

To save Aurore from mysticism (the belief that communication with God can be achieved through spiritual insight), her grandmother called her to her home. Here Aurore studied nature, practiced medicine on the peasants (poor, working class), read from the philosophers of all ages, and developed a passion for the works of French writer François René Chateaubriand (1768–1848). Her colorful tutor encouraged her to wear men's clothing while horseback riding, and she galloped through the countryside in trousers and a loose shirt, free, wild, and in love with nature.

Marriage and lovers

Aurore became mistress of the estate at Nohant when her grandmother died. At nineteen she married Casimir Dudevant, the son of a baron and a servant girl. He was goodhearted but coarse and sensual, and he offended her far-fetched ideal of love. At the age of twenty-seven Aurore moved to Paris in search of independence and love, leaving her husband and children behind. She began writing articles to earn her living and met many writers. Henri de Latouche and historian Charles Sainte-Beuve (1804–1869) became her mentors.

Aurore fell in love with Jules Sandeau, a charming young writer. They collaborated on articles and signed them collectively "J. Sand." When she published her first novel, *Indiana* (1832), she took as her pen name "George Sand." Eventually her affair with Sandeau dissolved. Then she met the young poet Alfred de Musset (1810–1857), and they became lovers.

George Sand legally separated from her husband; she gained custody over their daughter, Solange, while her husband kept the other child, Maurice. She had come to enjoy a great reputation in Paris both as a writer and as a bold and brilliant woman. She had many admirers and chose new lovers from among them. Her lovers included the Polish composer Frédéric Chopin (1810–1849).

Her novels

Every night from midnight until dawn, George Sand covered her daily quota of twenty pages with her large, tranquil writing, never crossing out a line. All her novels are love stories in which her romantic idealism unfolds in a realistic setting.

The early works by George Sand are novels of passion, written to lessen the pain of her first love affairs. *Indiana* (1832) has as its central theme woman's search for the absolute in love. *Valentine* (1832) depicts an upper-class woman, unhappily married, who finds that a farmer's son loves her. *Lélia* (1854) is a lyrical but searching confession of the author's own physical coldness. *Lélia* is a beautiful woman loved by a young poet, but she can show him only motherly affection.

Le Compagnon du tour de France (1840), *Consuelo* (1842–1843), and *Le Péché de Monsieur Antoine* (1847) are typical novels of this period for the author. She sympathized in these novels with the difficult lives of the worker and the farmer. She also wrote a number of novels devoted to country life, most produced during her retreat to Nohant. *La Mare au diable* (1846), *La Petite Fadette* (1849), and *Les Maîtres sonneurs* (1852) are typical novels of this genre.

As George Sand grew older, she spent more and more time at her beloved Nohant

and gave herself up to the gentle, peaceful life she created for herself there, the entertainment of friends, the staging of puppet shows, and most of all to her grandchildren. Though she had lost none of her vital energy and enthusiasm, she grew less concerned with politics. Her quest for the absolute in love had led her through years of stormy affairs to reaching a tolerant and universal love—of God, of nature, and of children. She died in Nohant on June 9, 1876.

CARL SANDBURG

Born: January 6, 1878

Galesburg, Illinois

Died: July 22, 1967

Flat Rock, North Carolina

American poet, biographer, and singer

An American poet, singer of folk songs and ballads, and biographer, Carl Sandburg is best known for his biography of Abraham Lincoln (1809–1865)

Carl Sandburg.

and his early verse celebrations of Chicago, Illinois.

Son of Swedish immigrants

Carl August Sandburg was born in Galesburg, Illinois, on January 6, 1878, the second of August Sandburg and Clara Mathilda Anderson's seven children. His parents had both come to the United States from Sweden; his father worked as a blacksmith's assistant. Sandburg liked to read and decided at age six that he wanted to be a writer, but he left school after finishing eighth grade to work at a series of jobs. Sandburg was brought up in a largely Republican household, but events

such as the local railway workers' strikes and the Chicago Haymarket riots of 1886 got him interested in social justice.

Sandburg traveled extensively through the West, where he began developing a love of the country and its people. Following eight months of service in the army, Sandburg entered Lombard (now Knox) College in Galesburg. There he wrote his first poetry and was encouraged by Professor Philip Green Wright, who privately published several volumes of his poems and essays.

Early writings

Sandburg left Lombard without graduating and eventually moved to Milwaukee, Wisconsin, where in 1907 and 1908 he was district organizer for the Social Democratic Party in the state. In 1907 he met Lilian Steichen, a schoolteacher, and they were married in 1908. From 1910 to 1912 Sandburg served as secretary to Milwaukee's Socialist (believing in collective ownership of the means of producing goods and services) mayor Emil Seidel. Later he moved to Chicago, becoming an editorial writer for the *Daily News* in 1917. Meanwhile his verse began appearing in *Poetry* magazine; *Chicago Poems* was published in 1916. He made his reputation as a poet of the American scene with *Cornhuskers* (1918), *Smoke and Steel* (1920), and *Slabs of the Sunburnt West* (1922).

Sandburg's early writings dealt with his belief in social justice and equality and were written in such a way that they barely resembled what most people thought of as poetry. "I Am the People, the Mob" from the *Chicago Poems* is an example. The ending of the poem is similar to the style of Walt Whitman (1819–1892): "When I, the People, learn to

remember, when I, the People, use the lessons of yesterday and no longer forget who robbed me last year, who played me for a fool—then there will be no speaker in all the world say the name: ‘The People,’ with any fleck of a sneer in his voice or any far-off smile of derision [ridicule]. The mob—the crowd—the mass—will arrive then.”

Sandburg’s early poetry not only tended toward unshaped imitation of real life but also copied other poets as well. Sandburg’s “Happiness” is somewhat similar to Ezra Pound’s (1885–1972) “Salutation,” and Sandburg’s “Fog” was compared to T. S. Eliot’s (1888–1965) “The Love Song of J. Alfred Prufrock,” which had appeared the year before “Fog” was published. Seventy-three previously uncollected Sandburg poems from the 1910s can be found in *Poems for the People* (1999).

Later work

From 1926 to 1939 Sandburg devoted himself mainly to writing the six-volume biography of President Abraham Lincoln, presenting Lincoln as a symbol of the American spirit; Sandburg received a Pulitzer Prize in history for this work (1939). He also collected the folk songs that made up *The American Songbook* (1927).

Honey and Salt (1963), a remarkable achievement for a “part-time” poet in his eighties, contains much of Sandburg’s best poetry. Here the mellowness and wisdom of age are evident, and the poems are more effective than his earlier verse. By this time Sandburg had developed and begun to express a deeply felt sympathy and concern for actual people. Tenderness replaces sentimentality; controlled feelings replace defensive “toughness.” There is

also a religious element in these last poems that does not appear in Sandburg’s earlier work.

Sandburg also collected folk songs and toured the country singing his favorites. He published a collection of these songs, called *The American Songbag*. Other Sandburg works include a collection of children’s stories, *Rootabaga Stories* (1922); *Good Morning, America* (1928); *The People, Yes* (1936); *Collected Poems* (1950), which won a Pulitzer Prize; and *Harvest Poems, 1910–1960* (1960). *Remembrance Rock* (1948), a sweeping view of American history, was his only novel. Sandburg died in Flat Rock, North Carolina, on July 22, 1967.

MARGARET SANGER

Born: September 14, 1884

Corning, New York

Died: September 6, 1966

Tucson, Arizona

American author, nurse, and activist

The pioneering work of Margaret Sanger, an American crusader for scientific contraception (birth control), family planning, and population control, made her a world-renowned figure.

Influenced in childhood

Margaret Higgins Sanger was born Margaret Higgins on September 14, 1884, in Corning, New York. Her father was a fun-loving freethinker. Her mother was a devoted Roman Catholic who had eleven children before dying of tuberculosis, a deadly disease that attacks the lungs and bones. Margaret was greatly influenced by her father's political views in support of women's suffrage (the right to vote) and tax reform (improvements), although these and other beliefs caused the family to be seen as radical (extreme) in the eyes of their neighbors.

After graduating from the local high school and from Claverack College at Hudson, New York, Margaret took a teaching position in New Jersey, until she was forced to return home to care for her dying mother. Her mother's death in 1896 left her with a deep sense of dissatisfaction concerning her own and society's medical ignorance. Soon afterwards Margaret moved to White Plains, New York, where she took nurse's training. She then moved to New York City and served in the extremely poor conditions in the slums of its Lower East Side. In 1902 she married William Sanger. Although Margaret herself was plagued by tuberculosis, she had her first child, a son, the next year. The couple had another son, as well as a daughter who died in childhood.

Begins work in birth control

Margaret Sanger's experiences with slum mothers who begged for information about how to avoid more pregnancies transformed her into a social radical. She joined the Socialist Party, a political party that believes the government should own and distribute all goods, began attending radical rallies, and read everything she could about birth control practices. She became convinced that oversized families were the basic cause of poverty. In 1913 she began publishing a monthly newspaper, the *Woman Rebel*, in which she passionately urged family limitation and first used the term "birth control." After only six issues, she was arrested and charged with distributing "obscene" literature through the mails. She fled to Europe, where she continued her birth control studies, visiting clinics and talking with medical researchers.

Sanger returned to the United States in 1916 and, after charges against her were dropped, she began nationwide lecturing. In New York City she and her partners opened a birth control clinic in a slum area to give out materials and information about birth control. This time she was arrested under state law. She spent a month in prison, as did her sister. Leaving prison in 1917, Sanger intensified her activities, lecturing and raising money from a group of wealthy patrons (supporters) in New York, and launching the *Birth Control Review*, which became the voice of her movement for twenty-three years. Encouraged by a state court decision that loosened New York's anticontraceptive law, she shifted her movement's emphasis from direct action and open resistance to efforts to secure more flexible state and federal laws. Although regularly in trouble with New York

City authorities, she continued lecturing to large crowds and keeping in touch with European contraceptive research. Her visit to Japan in 1922 was the first of several Asian trips. A year later she and her friends opened clinical research bureaus to gather medical histories and dispense birth control information in New York City and Chicago, Illinois. By 1930 there were fifty-five clinics across the United States. Meanwhile Sanger divorced her husband and married J. Noah H. Slee.

Later work

Margaret Sanger's fame became world-wide in 1927, when she helped organize and spoke before the first World Population Conference at Geneva, Switzerland. She and her followers continued to lobby for freer state and federal laws on contraception and for the distribution of birth control knowledge through welfare programs. By 1940 the American birth control movement was operating a thriving clinic program and enjoying general acceptance by the medical profession and an increasingly favorable public attitude.

For most Americans, Margaret Sanger was the birth control movement. During World War II (1939–45), when European forces and the United States clashed with Germany, Italy, and Japan, her popularity continued to grow, despite her opposition to American participation in the war. (Sanger strongly believed that wars were the result of excess national population growth.) In 1946 she helped found the International Planned Parenthood Federation. This was one of her last great moments. She was troubled by a weak heart during her last twenty years, but she

continued traveling, lecturing, and issuing frequent statements. She died in Tucson, Arizona, on September 6, 1966.

JEAN-PAUL SARTRE

Born: June 21, 1905

Paris, France

Died: April 15, 1980

Paris, France

French philosopher and writer

The French philosopher and distinguished writer Jean-Paul Sartre ranks as the most versatile writer and as the dominant influence in three decades of French intellectual life.

Childhood and early work

Jean-Paul Sartre was born in Paris, France, on June 21, 1905. His father, a naval officer, died while on a tour of duty in Indochina before Sartre was two years old. His mother belonged to the Alsatian Schweitzer family and was a first cousin to the famous physician Albert Schweitzer (1875–1925). The young widow returned to her parents' house, where she and her son were treated as "the children." In the first volume of his autobiography, *The Words* (1964), Sartre describes his "unnatural" childhood as a spoiled and an unusually intelligent boy. Lacking any companions his own age, the child found "friends" exclu-

sively in books. He began reading when he was a very young boy. Reading and writing thus became his twin passions. "It was in books that I encountered the universe," he once said.

Sartre received much of his early education from tutors. He entered the école Normale Supérieure at the University of Paris in 1924 and graduated in 1929. While there, he met the novelist Simone de Beauvoir (1908–1986), and the two formed a close relationship that lasted thereafter. After completing required military service, Sartre took a teaching job at a lycée (public secondary school) in Le Havre, France. There he wrote his first novel, *Nausea* (1938), which some critics have called the century's most influential French novel.

World War II

From 1933 to 1935 Sartre was a research student at the Institut Français in Berlin and Freiburg, Germany. He discovered the works of Edmund Husserl (1859–1938) and Martin Heidegger (1889–1976) and began to philosophize on phenomenology, or the study of human awareness. A series of works on the models of consciousness poured from Sartre's pen: two works on imagination, one on self-consciousness, and one on emotions. He also produced a first-rate volume of short stories, *The Wall* (1939).

Sartre returned to Paris to teach in a lycée and to continue his writing, but this was interrupted by World War II (1939–45; a war in which France, Great Britain, the Soviet Union, the United States and other countries fought against Germany, Italy, and Japan). Called up by the army, he served briefly on the Eastern front and was taken prisoner. After nine months he secured his release and

returned to teaching in Paris, where he became active in the Resistance, a secret French group dedicated to removing the occupying German army. During this period he wrote his first major work in philosophy, *Being and Nothingness: An Essay in Phenomenological Ontology* (1943).

After the war Sartre abandoned teaching, determined to support himself by writing. He was also determined that his writing and thinking should be engaging, or intellectually activating. Intellectuals, he thought, must take a public stand on every great question of their day. He thus became fundamentally a moralist (a teacher of right and wrong), both in his philosophical and literary works.

Other works

Sartre had turned to playwriting and eventually produced a series of theatrical successes which are essentially dramatizations of ideas, although they contain some finely drawn characters and lively plots. The first two, *The Flies* and *No Exit*, were produced in occupied Paris. They were followed by *Dirty Hands* (1948), usually called his best play; *The Devil and the Good Lord* (1957), an insulting, anti-Christian rant; and *The Prisoners of Altona* (1960), which combined convincing character portrayal with telling social criticism. Sartre also wrote a number of comedies: *The Respectful Prostitute* (1946), *Kean* (1954), and *Nekrassov* (1956), which the critic Henry Peyre claimed “reveals him as the best comic talent of our times.”

During this same period Sartre also wrote a three-volume novel, *The Roads to Freedom* (1945–1949); formal writings on literature; lengthy studies of Charles Baudelaire (1821–1867) and Jean Genet (1910–1986);

Jean-Paul Sartre.

Reproduced by permission of AP/Wide World Photos.

and a large number of reviews and criticisms. He also edited *Les Temps modernes*.

Though never a member of the Communist Party (a political party that believes goods and services should be controlled by a strong government), Sartre usually sympathized with the political views of the (liberal) far left. Whatever the political issue, he was quick to publish his opinions, often combining them with public acts of protest.

Later work

In 1960 Sartre returned to philosophy, publishing the first volume of his *Critique of*

Dialectical Reason. It represented essentially a modification of his existentialist ideas, or a philosophy that stresses the importance of the individual experience. The drift of Sartre's earlier work was toward a sense of the uselessness of life. In *Being and Nothingness* he declared man to be "a useless passion," forced to exercise a meaningless freedom. But after World War II, his new interest in social and political questions gave way to more optimistic and activist views.

Sartre was always controversial yet respected. In 1964 he was awarded but refused to accept the Nobel Prize in literature. Sartre suffered from declining health throughout the 1970s and died from lung problems in 1980. He is remembered as one of the most influential French writer of the twentieth century.

OSKAR SCHINDLER

Born: April 28, 1908

Zwittau, Moravia, Austro-Hungarian Empire

Died: October 9, 1974

Frankfurt, Germany

German businessman

German businessman Oskar Schindler became an unlikely hero when he saved hundreds of Jews in Poland and Czechoslovakia from death at the hands of the Nazis during World War II (1939–45). By employing them in his factory, Schindler protected them from the wrath of the Nazi Party and preserved generations of Jewish families.

Early years

Oskar Schindler was born in 1908 in the industrial city of Zwittau, Moravia, then a German province of the Austro-Hungarian Empire and now part of the Czech Republic. The region where Oskar grew up and attended a German-language school was also known as the Sudetenland. Oskar's father, Hans Schindler, was a factory owner and his mother, Louisa Schindler, was a homemaker. Oskar had one younger sister named Elfriede with whom he had a close relationship, despite a seven-year age difference. As a child, Schindler was popular and had many friends, but he was not an exceptional student. Among his childhood playmates were the two sons of a local rabbi.

During the 1920s Schindler worked for his father selling farm equipment. In 1928, however, the young man's marriage to a woman named Emilie caused problems in the relationship between the two men and Schindler left his father's business to work as a sales manager for a Moravian electric company.

Meanwhile, the political landscape in Europe was undergoing major changes, especially in Germany, where Adolf Hitler (1889–1945) and his Nazi Party began their rise to power. Hitler began stirring up ethnic feelings among the Sudeten Germans, point-

ing out that their “rightful” ties were with Germany, not Czechoslovakia. By 1935 many Sudeten Germans joined the pro-Nazi Sudeten German Party. Schindler joined, too—not out of any love for the Nazis, but because it made business sense to go along with the prevailing wind.

In Poland

On September 1, 1939, Hitler invaded Poland, prompting Great Britain and France to declare war on Germany. Within a week, Schindler arrived in Krakow, Poland, eager to find a way to profit from the conflict in one way or another. In mid-October, the city became the new seat (central location) of government for all of Nazi-occupied Poland. Schindler quickly created friendships with key officers in both the Wehrmacht (the German army) and the SS (the special armed Nazi unit), offering them black-market (illegal) goods such as cognac and cigars.

It was around this same time that he met Itzhak Stern, a Jewish accountant who would eventually help his relations with the local Jewish business community. Schindler purchased a bankrupt kitchenware factory and opened it in January 1940. Stern was hired on as the bookkeeper and soon developed a close relationship with his employer.

Schindler relied on his legendary flair as well as his willingness to bribe the right people to secure numerous German army contracts for his pots and pans. To staff his factory, he turned to Krakow’s Jewish community, which, Stern told him, was a good source of cheap, reliable labor. At the time, some fifty-six thousand Jews lived in the city, most living in ghettos (poor neighborhoods that were traditionally reserved for Jews).

*Oskar Schindler.
Courtesy of the Library of Congress.*

By the spring of 1940, the Nazi crackdown against Jews had begun. Schindler was ordered to pay his Jewish employees’ wages directly to the SS rather than to the workers themselves. In August Nazi authorities issued a new regulation ordering all but “work-essential” Jews to leave the city. This sparked the panic that sent Jews scrambling for work that would be considered “essential.”

His work begins

In June of 1942, the Nazis began relocating Krakow’s Jews to labor camps. Some of Schindler’s workers, including his office manager, were among the first group of people

ordered to report to the train station. Schindler raced to the station and argued with an SS officer about how essential his workers were to the war effort. By dropping the names of some of his Nazi friends and making a couple of threats, he was finally able to rescue the workers and escort them safely back to his factory.

In early 1943 the Nazis ordered the final “liquidation” of the Krakow ghetto. The man put in charge of the operation was a young SS officer named Amon Goeth, the commandant of the Plaszow forced labor camp just outside the city. Jews who were healthy and could work were sent to Plaszow and the rest were sent off to death camps or executed on the spot. When Goeth announced that local industries would be moved inside Plaszow, Schindler proposed establishing a labor mini-camp within his factory that would continue to employ his own workers. Goeth agreed after Schindler bribed him.

The list

In early 1944, however, Plaszow’s designation was changed from that of a labor camp to a concentration camp. This meant that its prisoners were suddenly marked for transport to death camps such as Auschwitz. Then came word in the summer that the main camp was to be closed as well as Schindler’s factory. Schindler approached Goeth about moving his factory and his workers to Czechoslovakia so that they might continue to supply the Third Reich (Hitler’s army) with vital war supplies. After another bribe, the SS officer agreed to throw his support behind the plan and told Schindler to draw up a list of those people he wanted to take with him. Schindler was now faced with the task of choosing those he wanted to save—literally a

matter of life and death. Schindler came up with a list containing some eleven hundred names, including all the employees of Emalia Camp and a number of others as well.

During the fall of 1944, Schindler made the necessary arrangements (and paid the necessary bribes) to begin the process of moving his factory to the town of Brunnlitz, Czechoslovakia. The liquidation of the Plaszow camp began that October. Shortly after around eight hundred men were shipped out in boxcars bound for Brunnlitz. Three hundred women and children who were supposed to join them there were mistakenly routed to Auschwitz instead. Schindler immediately rescued these women and children, and they were sent on to Brunnlitz.

Over the next seven months, Schindler’s factory never produced a single useful shell (the outer casings for bullets). He called it “start-up difficulties” when, in reality, he had purposefully weakened the manufacturing process to make sure that the shells failed quality-control tests.

End of the war

Finally, on May 8, 1945, the war came to an end after Germany surrendered. Schindler gathered all of his workers together on the factory floor to pass along the good news. He then asked them not to seek revenge for what had been done to them and called for a moment of silence in memory of those who had died. He also thanked the members of the SS who were present and encouraged them to go home peacefully and without further bloodshed.

Fearing capture, Schindler, along with his wife, fled west to avoid Russian troops advancing from the east. He preferred to take

his chances with the approaching U.S. forces instead. A couple of days later, the twelve hundred or so Schindlerjuden (“Shindler’s Jews”) were freed by a lone Russian officer who rode up to the factory on horseback.

After World War II

Schindler’s postwar life was similar to that before the war, which was marked by a string of failed business ventures, overspending, plenty of drinking, and love affairs. In 1949 Schindler moved to Argentina and purchased a farm. By 1957, however, Schindler had gone bankrupt and was relying on the charity of the Jewish organization B’nai B’rith to survive.

In 1958 Schindler abandoned his wife and returned to West Germany. Once again, the Jewish Distribution Committee and several grateful individuals came through for him with money. He started a cement business in Frankfurt, Germany, but it failed in 1961. From then on, he lived mostly off funds provided by the Schindlerjuden as well as a small pension (retirement money) the West German government granted him in 1968.

The same year Schindler lost his cement business, he was invited to visit Israel for the first time. He was delighted with the warm reception he received, which contrasted sharply with his treatment at home. Many of his countrymen were angry with him for saving Jews and testifying in court against Nazi war criminals. Every spring for the rest of his life, he returned to Israel for several weeks to bask in the admiration of the Schindlerjuden and their offspring, whom he regarded with great affection as his own family.

Shortly after Schindler’s fifty-fourth

birthday in 1962, he was officially declared a “Righteous Gentile (non-Jew)” and invited to plant a tree on the Avenue of the Righteous leading up to Jerusalem’s Yad Vashem Museum, a memorial to the Holocaust, the name for the German liquidation of Jews during World War II. Upon his death from heart and liver problems in 1974, he was granted his request to be buried in Israel. About five hundred Schindlerjuden attended his funeral and watched as his body was laid to rest in the Catholic cemetery on Mount Zion in Jerusalem. Thanks to Oskar Schindler, more than six thousand Holocaust survivors and their descendants were alive in the 1990s to tell the remarkable story of “Schindler’s List.”

ARTHUR SCHLESINGER JR.

Born: October 15, 1917

Columbus, Ohio

American historian and politician

Arthur Schlesinger Jr. is an outstanding historian of the United States and an influential supporter of the Democratic Party.

Influenced by father's work

Arthur Meier Schlesinger Jr. was born on October 15, 1917, in Columbus, Ohio, with the name Arthur Bancroft Schlesinger, later changed by dropping his mother's maiden name and taking his father's full name. Schlesinger's father was one of the leading historians of the 1920s and 1930s. Arthur Schlesinger Sr. (1888–1965) taught one of the first college courses in American social and cultural history (in the early 1920s), he was a leader in the study of social history, and, as a professor at Harvard University between the two world wars, he directed the graduate work of several students who became noted social and intellectual historians. Thus, young Arthur was surrounded by American history.

Arthur Jr. graduated from Harvard University at age twenty and published his honors thesis (a written essay containing original research presented for an advanced degree) one year later. He then spent a year studying in England but did not pursue further degrees. During part of World War II (1939–45; a war fought between the Axis powers: Italy, Japan, and Germany—and the Allies: France, Great Britain, the Soviet Union, and the United States) he served in the U.S. government's Office of War Information. As a member in the Society of Fellows at Harvard he was able to do the research for *The Age of Jackson*, a biography of the seventh U.S. president, Andrew Jackson (1767–1845), which was published in 1945.

Expresses support for Democratic presidents

Though Schlesinger Sr. was a liberal (a person open to social improvement through change) and a Democrat, his work as a historian generally was not used to further his political views. Schlesinger Jr. was more active in politics, and it was his political involvement and the relation of his writing to that involvement that made him a public figure of unusual interest.

The Age of Jackson, which Schlesinger Jr. wrote during Franklin D. Roosevelt's (1882–1945) fourth term as president, argued that the reform era in the years before the American Civil War (1861–65; a war fought between the U.S. government and eleven southern states over opposing views on issues such as slavery and trade) was a reaction to one of many conservative (opposed to social change) periods that failed to address the nation's problems. Schlesinger argued that democracy under Jackson was a social movement that began among poor people in the eastern and southern parts of the country. This theory of regional organization was also linked to Roosevelt's New Deal (1933–39), a series of programs that attempted to carry out political, business, and social reform. It was said that *The Age of Jackson* "voted" for Roosevelt as well as Jackson. The book was awarded the Pulitzer Prize, and Schlesinger was appointed to the Harvard history department, joining his father.

In 1949 Schlesinger published *The Vital Center: The Politics of Freedom*, a history of American social thought organized around the political issues of the years following World War II (1939–45). *The Vital Center* "voted" for Harry Truman (1884–1972),

whose election as president had taken place one year earlier, both in terms of his support of domestic programs, such as those of the New Deal, and in his opposition to totalitarianism (the complete control of power by a government). *The Vital Center* remains a lasting description of the ideas of the mainstream of the Democratic Party.

While Schlesinger was a Harvard professor, he moved his focus from the period before the Civil War to that of the New Deal. Teaching American intellectual history from the colonies to the present, Schlesinger concentrated his research on the *Age of Roosevelt* and published the first three volumes covering the years to 1936: *The Crisis of the Old Order* (1957); *The Coming of the New Deal* (1958); and *The Politics of Upheaval* (1960). In the mid-1980s he resumed work on his multivolume history of the New Deal.

Advisor to Kennedy

Schlesinger was an active supporter of Adlai Stevenson (1900–1965) in Stevenson's unsuccessful bids for the presidency in 1952 and 1956, and he served as a speechwriter for John F. Kennedy (1917–1963) during his 1960 campaign for the presidency. *Kennedy or Nixon: Does it Make Any Difference* (1960) made his case for Kennedy. After serving in the White House as a special assistant to Kennedy (it was said that the two men met every day) and resigning his position at Harvard, Schlesinger wrote *A Thousand Days: John F. Kennedy in the White House* (1965), for which he was again awarded a Pulitzer Prize.

Schlesinger continued to express his ideas in book reviews on other works in American intellectual, political, and social history. He became the Albert Schweitzer Profes-

Arthur Schlesinger Jr.

sor of Humanities at the City University of New York in 1966 and president of the American Institute of Arts and Letters in 1981. In addition, he served as editor of the *History of American Presidential Elections* (four volumes, 1971), and in 1986 he wrote fourteen essays describing *The Cycles of American History*.

Cycles of history

Following Bill Clinton's (1946–) 1992 presidential nomination acceptance speech, Schlesinger stated that a new era in the United States had begun. He based his opinion on the cycles of American history theory put forth by his father. The elder Schlesinger predicted in 1939 that the New Deal would run out of

steam in the mid-1940s. It would give way to a conservative tide, he predicted, which in turn would yield a new liberal era starting in 1962. The next conservative phase would begin around 1978.

On the strength of this record, it was logical to predict, as the younger Schlesinger did in 1986, that at some point, shortly before or after the year 1990, there should come a sharp change in the national mood and direction. The reason each phase returned at roughly thirty-year periods, Schlesinger said, was because generational change kept the cycle going. But because each generation retained its belief in its youthful dreams, Schlesinger continued, the forward movement was guaranteed.

During the 1990s Schlesinger was among an increasing number of political observers who recognized that all was not well with multiculturalism (the maintenance of many different cultures and ethnic traditions); he felt that placing too great an influence on maintaining original cultures inside the United States made it impossible for there to exist a single, unified "American" culture at the same time. This led to the 1998 publication of *The Disuniting of America: Reflections on a Multicultural Society*, a new, enlarged edition of Schlesinger's 1991 book about the subject. Also in 1998, Schlesinger was awarded a National Humanities Medal by President Clinton for his contributions to history. In 2000 Schlesinger published *A Life in the 20th Century: Innocent Beginnings, 1917–1950*, the first volume of his memoirs (remembrances of his life), in which he took a look back at the past century.

FRANZ SCHUBERT

Born: January 31, 1797

Vienna, Austria

Died: November 19, 1828

Vienna, Austria

Austrian composer

Franz Schubert, an early romantic Austrian composer, is best known for his lieder (German art songs for voice and piano) during the nineteenth century. A new profusion of lyric poetry and the evolution of the piano into a highly complex mechanism allowed the gifted Schubert to compose exceptional lyrics.

Childhood and training

Franz Peter Schubert was born in Vienna, Austria, on January 31, 1797, the fourth son of Franz Theodor Schubert, a schoolmaster, and Elizabeth Vietz, a domestic servant in Vienna. Encouraged to pursue his talents in music, Franz received instruction in the violin from his father, his older brother Ignaz, and Michael Holzer, the organist at the Liechtenthal parish church.

In 1808, through a competitive examination, the eleven-year-old Schubert was

accepted into the choir of the Imperial Court Chapel as well as the Royal Seminary. Although he was homesick, he was an outstanding student. Besides singing in the choir, he played in the orchestra. He became familiar at this time with the music of Franz Joseph Haydn (1732–1809), Wolfgang Amadeus Mozart (1756–1791), and Ludwig von Beethoven (1770–1827).

Schubert was a shy youth, and spent most of his spare time practicing and composing by himself. He left the choir at age fifteen when his voice changed, but continued to study at the seminary. Antonio Salieri, the emperor's music director, heard about Schubert's talents and took him in as a student.

Early period

In 1814 the genius of Schubert was first made evident in his work *Gretchen am Spinnrade*, inspired by his reading of Johann Wolfgang von Goethe's (1749–1832) *Faust*. His first Mass and his first symphony appeared about this time and showed the influence of Haydn. Schubert set five other Goethe songs to music that year. By the end of 1814 Schubert was an assistant at his father's school and had begun to make the acquaintance of numerous poets, lawyers, singers, and actors, who soon would be the principal performers of his works at private concerts in their homes or in those of their wealthier friends.

Other eighteenth-century lyric poets whose works Schubert set to music include J. G. von Herder, the collector and translator of folk songs, F. G. Klopstock, and Friedrich von Schiller (1759–1805). None can compare, however, with the remarkable Goethe songs. Even the uninitiated (not educated on a particular subject) must respond to the

Franz Schubert.

excitement of the *Erlkönig* (1815), where by means of changing accompaniment figures, sharp dissonance (an arrangement of clashing chords), and effective modulations (the shifting of one musical tone to another) Schubert makes a distinction between the four characters of the ballad—narrator, father, son, and Erlking—and creates one of the masterpieces of romantic music.

While still a schoolmaster, Schubert composed Symphonies No. 2 through No. 5. At this time he also wrote many of the delightful dances, waltzes, and *Ländler* (a type of Austrian waltz for which he was known during his lifetime).

By 1817 Schubert was living in the home of his friend Franz von Schober, where he wrote several piano sonatas (instrumental music composed of four contrasting movements). In his father's house there had been no piano. Examination of the sonatas proves Schubert to have been rather daring in his juxtaposition (placing one next to another) of keys, particularly in development sections. In addition to instrumental compositions, Schubert wrote fifty songs in 1817. In July 1817 Schubert was appointed to the household of Count Esterhazy and his family, who spent winters in an estate slightly north of Schönbrunn and summers at Zseliz in Hungary. There Schubert composed many of his works for piano duets.

Middle period

Between 1820 and 1823 Schubert achieved his musical maturity. Two of his operettas and several of his songs were performed in public and amateurs and professional quartets sang his part-songs for male voices. Some of his works began to be published and performed in private concerts.

In September 1821 Schubert and Schober left Vienna for the country with the intention of writing *Alfonso und Estrella*, his only grand opera. Shortly after his return to the city, he met Edward Bauernfeld, who introduced him to William Shakespeare's (1564–1616) works. In the fall of 1822, having completed his Mass in A-flat, Schubert began work on the Symphony in B Minor, which became known as the *Unfinished*. Three movements were sketched; two were completed. It is not known why the work was left incomplete.

Schubert's health began to fail, and in May he spent time in the Vienna General Hospital. *Rosamunde*, a play for which Schubert

had written incidental music—only the overture and ballet music are heard today—failed in 1823 and brought to a close his extended efforts to achieve a successful opera.

Schubert now turned to chamber music, producing an Octet for woodwinds and strings and his A Minor, D Minor, and G Major Quartets. In 1825 Schubert formed the mainstay of the Schubertiads, evenings at which Schubert's songs were sung.

Final years

In 1826 and 1827, despite the reappearance of his illness, Schubert wrote four masterpieces, each of which has remained a staple in his repertory (works commonly performed): the String Quartet in G, the Piano Sonata in G, the Piano Trio in B-flat, and the second Piano Trio in E-flat. Schubert was one of the torchbearers at Beethoven's funeral in 1827. Toward the end of that year Schubert completed his two series of piano pieces that he himself entitled *Impromptus*.

In 1828 Schubert composed several first-rate works: the magnificent F-Minor Fantasy for piano duet, the C-Major Symphony, the E-flat Mass, and nine songs to Ludwig Rellstab's poems. On March 26, 1828, Schubert participated in the only full-scale public concert devoted solely to his own works.

On November 11, Schubert began suffering from nausea and headache. Five days later the doctors diagnosed typhoid fever (a bacteria-caused disease marked with fever and the swelling of intestines). He died on November 19, 1828.

The impact of Schubert's work

In musical history Schubert stands with others at the beginning of the romantic

movement, anticipating the highly personal approach to composition of later composers but lacking the forcefulness and the creative means to experiment with instrumental music that Beethoven displayed.

Many of Schubert's large-scale instrumental pieces were unknown until after the middle of the nineteenth century. Moreover, unlike many other romantic composers, Schubert did not try a literary career. He was never a conductor or virtuoso (extremely gifted and skillful) performer. He did not achieve considerable public recognition during his lifetime. However, there is a lasting quality to Schubert's work that reaches out over the ages which few composers have matched.

CHARLES M. SCHULZ

Born: November 26, 1922
Minneapolis, Minnesota

Died: February 12, 2000

Santa Rosa, California

American cartoonist

Cartoonist and creator of *Peanuts*, Charles M. Schulz was the winner of two Reuben, two Peabody, and five Emmy awards and a member of the Cartoonist Hall of Fame.

Early life

Charles Monroe Schulz was born in Minneapolis, Minnesota, on November 26, 1922, the son of Carl and Dena Halverson Schulz. His father was a barber. Charles loved to read the comics section of the newspaper with his father and was given the nickname "Sparky" after Sparkplug, the horse in the *Barney Google* comic strip. He began to draw pictures of his favorite cartoon characters at age six. At school in St. Paul, Minnesota, he was bright and allowed to skip two grades, which made him often the smallest in his class. Noting his interest in drawing, his mother encouraged him to take a correspondence course (in which lessons and exercises are mailed to students and then returned when completed) from Art Instruction, Inc., in Minneapolis after he graduated from high school.

During World War II (1939–45; a war fought between the Axis: Italy, Japan, and Germany—and the Allies: France, England, the Soviet Union, and the United States), Schulz was drafted into the army and sent to Europe, rising to the rank of sergeant. After the war he returned to Minnesota as a young man with strong Christian beliefs. For a while he worked part-time for a Catholic magazine and taught for Art Instruction, Inc. Some of

Charles M. Schulz.

his work appeared in the *Saturday Evening Post*, and eventually he created a cartoon entitled *Li'l Folks* for the *St. Paul Pioneer Press*.

Creates "Peanuts"

In 1950 the United Feature Syndicate of New York decided to publish Schulz's new comic strip, which he had wanted to call *Li'l Folks* but which was named *Peanuts* by the company. In 1950 the cartoon began appearing in seven newspapers with the characters Charlie Brown, Sherm, Patty, and Snoopy. Within a year the strip appeared in thirty-five papers, and by 1956 it was in over a hundred. The *Peanuts* cartoons were centered on

the simple and touching figures of a boy, Charlie Brown, and his dog, Snoopy and their family and school friends. Adults were never seen, only hinted at, and the action involved ordinary, everyday happenings.

Charlie Brown had a round head with half-circles for ears and nose, dots for eyes, and a line for a mouth. Things always seemed to go wrong for him, and he was often puzzled by the problems that life and his peers dealt out to him: the crabbiness of Lucy; the unanswerable questions of Linus, a young intellectual with a security blanket; the self-absorption of Schroeder the musician; the teasing of his schoolmates; and the behavior of Snoopy, the floppy-eared dog with the wild imagination, who sees himself as a fighter pilot trying to shoot down the Red Baron pilot (based on a famous German pilot during World War I) when he is not running a "Beagle Scout" troop consisting of the bird, Woodstock, and his friends.

Charlie Brown's inability to cope with the constant disappointments in life, the failure and renewal of trust (such as Lucy's tricking him every time he tries to kick the football), and his touching efforts to accept what happens as deserved were traits shared to a lesser degree by the other characters. Even crabby Lucy cannot interest Schroeder or understand baseball; Linus is puzzled by life's mysteries and the refusal of the "Great Pumpkin" to show up on Halloween. The odd elements and defects of humanity in general were reflected by Schulz's gentle humor, which made the cartoon appealing to the public.

Schulz insisted that he was not trying to send any moral and religious messages in *Peanuts*. However, even to the casual reader *Peanuts* offered lessons to be learned. Schulz

employed everyday humor to make a point, but usually it was the intellectual comment that carries the charge, even if it was only “Good Grief!” Grief was the human condition, but it was good when it taught us something about ourselves and was lightened by laughter.

Huge success

As the strip became more popular, new characters were added, including Sally, Charlie Brown’s sister; Rerun, Lucy’s brother; Peppermint Patty; Marcie; Franklin; José Peterson; Pigpen; Snoopy’s brother Spike; and the bird, Woodstock. Schulz received the Reuben award from the National Cartoonists Society in 1955 and 1964.

By this time Schulz was famous across the world. *Peanuts* appeared in over twenty-three hundred newspapers. The cartoon branched out into television, and in 1965 the classic special *A Charlie Brown Christmas* won Peabody and Emmy awards. Many more television specials and Emmys were to follow. An off-Broadway stage production, *You’re a Good Man, Charlie Brown*, was created in 1967 and ran for four years (it was also revived in 1999). Many volumes of Schulz’s work were published in at least nineteen languages, and the success of *Peanuts* inspired clothes, stationery, toys, games, and other merchandise. Schulz also wrote a book, *Why, Charlie Brown, Why?* (which became a CBS television special) to help children understand the subject of cancer (his mother had died of cancer in 1943).

Besides the previously mentioned awards, Schulz received the Yale Humor Award, 1956; School Bell Award, National Education Association, 1960; and honorary

degrees from Anderson College, 1963, and St. Mary’s College of California, 1969. A “Charles M. Schulz Award” honoring comic artists was created by the United Feature Syndicate in 1980.

Later years

The year 1990 marked the fortieth anniversary of *Peanuts*. An exhibit at the Louvre, in Paris, France, called “Snoopy in Fashion,” featured three hundred Snoopy dolls dressed in fashions created by more than fifteen world-famous designers. It later traveled to the United States. Also in 1990, the Smithsonian Institution featured an exhibit titled, “This Is Your Childhood, Charlie Brown . . . Children in American Culture, 1945–1970.” By the late 1990s *Peanuts* ran in over two thousand newspapers throughout the world every day.

Schulz was diagnosed with cancer in November 1999 after the disease was discovered during an unrelated operation. He announced in December 1999 that he would retire in the year 2000, the day after the final *Peanuts* strip. Schulz died on February 12, 2000, one day before his farewell strip was to be in newspapers. Schulz was twice married, to Joyce Halverson in 1949 (divorced 1972) and to Jean Clyde in 1973. He had five children by his first marriage.

In March 2000 the Board of Supervisors of Sonoma County, California, passed a resolution to rename Sonoma County Airport after Schulz. In June 2000 plans were announced for bronze sculptures of eleven *Peanuts* characters to be placed on the St. Paul riverfront. That same month President Bill Clinton (1946–) signed a bill giving Schulz the Congressional Gold Medal. In

2002 an exhibition entitled “Speak Softly and Carry a Beagle: The Art of Charles Schulz” was held at the Norman Rockwell Museum in Stockbridge, Massachusetts. Also in 2002, it was announced that the proposed Charles M. Schulz Museum and Research Center in Santa Rosa, California, would be completed in August 2003.

MARTIN SCORSESE

Born: November 17, 1942

Flushing, New York

American director and screenwriter

Martin Scorsese is a director and writer of highly personal films. While many of his works reflect his experience as an Italian American grow-

ing up in New York City, he has also made highly regarded movies of great works of literature.

His early years

Martin Scorsese was born on November 17, 1942, in Flushing, New York. He was the younger of two sons born to Charles and Catherine Scorsese of Sicilian descent. His father was a clothes presser, and his mother was a seamstress. Scorsese had asthma as a child, and he often spent time alone unable to participate in neighborhood activities. He was fascinated with movies and watched films on television, and his father took him to local theaters frequently while his healthier peers engaged in sports and more social activities. Scorsese was able to find in movies the thrills and excitement that did not exist for him in reality. At a young age he became an expert on the Hollywood movies of the 1940s and 1950s.

Originally, Scorsese wanted to become a priest. He attended a Catholic grade school and entered a junior seminary but left after one year. He then entered the Film School at New York University. Scorsese's *It's Not Just You Murray!* won the Producer's Guild Award for best student film in 1964. He also received awards for other short films that he made as an undergraduate.

Drew from own experience

After graduating, Scorsese remained at New York University as an instructor in basic film technique and criticism while beginning his career as a director. His first feature film, *Who's That Knocking at My Door*, was shown in 1969. It introduced the actor Harvey Keitel (1939–), who became a regular in Scors-

ese's works. The director also frequently casts his mother, Catherine, in his films, and Scorsese himself has acted in some as well.

Outraged by the killing of four Kent State student protesters of the Vietnam War (1960–75; a war in which the United States aided South Vietnam in an attempt to prevent a takeover by Communist North Vietnam), and of war in general, Scorsese and some of his students formed a group, the New York Cinetracks Collective, to film student protests against the conflict. The result was *Street Scenes*, shown at the 1970 New York Film Festival, which called for a withdrawal of U.S. troops from Vietnam as well as an end to the Reserve Officers' Training Corps (ROTC; an organization that trains college students for the military) on all U.S. college campuses.

Moves to Hollywood

In the early 1970s Scorsese moved to Hollywood, in Los Angeles, California, and met the producer and director Roger Corman, who asked him to direct a sequel to his *Bloody Mama*. Instead, Scorsese directed Corman's *Boxcar Bertha*, a 1972 gangster film similar to *Bonnie and Clyde*. According to Ephraim Katz in *The Film Encyclopedia*, *Boxcar Bertha* "gave the young director the opportunity to work within the Hollywood system and paved the way to his phenomenal [extraordinary] rise in the coming years."

Next on the filmmaker's career path was a return to familiar turf in *Mean Streets*, a 1973 release about a young Italian American trying to get by in a tough environment. Emphasizing character development over plot, *Mean Streets* featured a style of quick cuts that Scorsese used in later works. It also marked the director's first creative pairing with the

Martin Scorsese.

Reproduced by permission of Archive Photos, Inc.

actor Robert De Niro (1943–), whom Scorsese had grown up with in the Little Italy section of New York City. Their work together evolved into one of the most successful director and actor partnerships in modern film.

Ventures into new areas

Scorsese also began directing documentaries (films that follow real people and real events) in the 1970s. These included *Italianamerican*, a profile of his parents released in 1974, and *American Boy*, a 1978 account of a friend who had immersed himself in the drug culture of the 1960s. He veered away from his usual movie themes with *Alice*

Doesn't Live Here Anymore in 1975, a film about a widowed mother trying to find herself in Arizona. Scorsese followed with his first major hit, *Taxi Driver* (1976). *Taxi Driver* was awarded the International Grand Prize at the Cannes Film Festival. The director's nostalgic (remembering in a sentimental way) look at his city after World War II (1939–45; a war fought between the Axis power: Germany, Italy, and Japan—and the Allies: England, France, the Soviet Union, and the United States), called *New York, New York* proved a critical failure in 1977, despite having the star power of Robert De Niro and Liza Minnelli (1946–). Scorsese became depressed as well as physically ill and required hospitalization following the making of this film.

Scorsese returned to documentaries in the late 1970s by directing a film of the final concert of the rock group the Band entitled *The Last Waltz*. De Niro convinced Scorsese to direct *Raging Bull*, a saga of the boxer Jake LaMotta (1922–). The movie earned Scorsese the National Society of Film Critics Award for Best Director, as well as his first Academy Award nomination. *Raging Bull* was later named the best film of the decade in a movie critics' poll. *The King of Comedy*, a 1983 film about a failed comic who kidnaps a famous talk-show host, was one of Scorsese's less successful efforts. It featured Robert De Niro and Jerry Lewis (1935–). Praises came his way again for his direction of *After Hours*, an unusual comedy about a mild-mannered New York City resident who gets involved in a series of late-night mishaps. Scorsese was honored with the Best Director Award at the Cannes Film Festival for this effort.

Box-office success greeted Scorsese's *The Color of Money* in 1986, a sequel to *The Hus-*

bler starring Paul Newman (1925–). It represented one of Scorsese's few big-budget productions up to that time. Certain religious groups were outraged by his next release, 1988's *The Last Temptation of Christ*, which dealt with an alternative interpretation of Jesus' acceptance of his role on earth.

Scorsese returned to more familiar cinematic ground in 1990 with *Goodfellas*, a violent tale of Mafia (organized crime) hoodlums in New York City that earned him Best Director Awards from the National Society of Film Critics, New York Film Critics, and Los Angeles Film Critics.

Showed versatility with period piece

Scorsese surprised the film community by his filming of *Age of Innocence*, the Edith Wharton (1862–1937) novel set in nineteenth-century New York City. "I had the script in my mind for two years and wrote it in two and half weeks," Scorsese told the magazine *Interview* about the film in 1993. Richly produced and slowly paced, it resembled nothing in Scorsese's directorial past. However, Scorsese jumped back to modern times with a tale of greed and deception in Las Vegas with his 1995 release, *Casino*. Scorsese's next film, *Kundun*, the story of Tibet's exiled spiritual leader, the Dalai Lama (1935–), was released in September 1997.

Scorsese showed his support of film history in 1990 by becoming president of the Film Foundation, an organization dedicated to film preservation. He has also been very active in promoting independent filmmakers. In 1994 became a member of the advisory board for the Independent Film Channel on cable television. The American Film Institute awarded Scorsese its 1997 Life Achievement

Award. In the same year he was awarded the Wexner Prize for originality in the arts. In 2001, because of his efforts to preserve old films, Scorsese was honored as the first person to receive the award for preservation by the International Federation of Film Archives.

Scorsese has directed twenty feature films and documentaries spanning four decades. He has also written a number of screenplays since his first film was released in 1968. His work is often rooted in his life experience of an Italian American Catholic heritage. The director's success can be attributed to his keen insight into human nature and his ability to use that insight to create many of the film industry's most memorable characters.

WALTER SCOTT

Born: August 15, 1771
Edinburgh, Scotland

Died: September 21, 1832

Abbotsford, Scotland

Scottish author

The Scottish novelist and poet Sir Walter Scott is recognized as the master of the historical novel. He was one of the most influential authors of modern times.

Early life

Walter Scott was born in Edinburgh, Scotland, on August 15, 1771, the son of a lawyer with a long family tradition in law. By birth Scott was connected with both the rising middle class of Britain and the aristocratic (ruling class) Scottish heritage then passing into history. As a child, Scott battled polio, a disease that attacks children and impairs their development. Despite the ailment, Scott did enjoy a relatively active and happy childhood. During these years he developed a deep interest in literature and reading, especially the folk tales and legends of his native Scotland.

Scott was educated at Edinburgh University and prepared for a career in law, but his true passions lay in history and literature. During his years at the university, he read widely in English and Continental literatures, particularly medieval and Renaissance romances from the fourteenth to seventeenth centuries. He also enjoyed German romantic poetry and fiction, and the narrative folk poems known as ballads.

Translations and poetry

From these intense interests Scott's earliest publications developed: a translation of

Walter Scott.

J. W. von Goethe's (1749–1832) play *Götz von Berlichingen* (1799) and other translations from German; *Minstrelsy of the Scottish Border* (1802–1803), a collection of ballads that generated great interest in folk poetry; and a succession of narrative poems, mainly of historical action. These poems—including *The Lay of the Last Minstrel* (1805), *Marmion* (1808), and *The Lady of the Lake* (1810)—became best sellers, and Scott established his first literary reputation as a poet of the romantic school, an artistic movement developed in the eighteenth and nineteenth centuries.

During these years Scott also pursued a legal career, rising to the official position of

clerk of the Court of Session. His enormous energies allowed him to engage in scholarly and journalistic activities. His edition and biography of John Dryden (1631–1700), the English poet and dramatist, published in 1808, remains of value. His politically motivated founding of the *Quarterly Review*, a literary journal, helped make Edinburgh the most influential center of British intellectual life outside London. In these years Scott also began to create an estate, Abbotsford. He modeled its furnishings and architecture on the traditions of the medieval era (c. 470–1470 C.E., also known as the Middle Ages).

Waverley novels

When sales of Scott's verse narrative *Rokeby* (1813) declined and a new poet, Lord Byron (1788–1824), appeared on the literary scene, Scott began to develop another of his many talents. Picking up the fragment of a novel he had begun in 1805, he tried his hand at fiction, and his most fully characteristic novel, *Waverley* (1814), resulted. As its subtitle, *'Tis Sixty Years Since*, established, *Waverley* was a historical novel about the 1745 rebellion to restore the Stuart line to the British throne. By leading a young and foolish Englishman through a wide range of Scottish classes, political factions (rival groups), and cultural modes, Scott built up a substantial picture of an entire nation's life at a dramatic historical period.

The success of *Waverley* established Scott in the career of a novelist, but it did not establish his name in that role. Unwilling to invest his career in fiction, he had published *Waverley* anonymously (without the author's name). Finding that the mask of anonymity had stimulated public interest, Scott signed

his later novels “by the Author of Waverley.” This signature became his trademark, the novels bearing it being called the “Waverley” novels. The Waverley novels exercised enormous fascination not only for Scots and Englishmen but also throughout Europe. These novels provided the characters and plots for countless stories, plays, and operas, the most famous of which is Gaetano Donizetti’s (1797–1848) opera *Lucia di Lammermoor*.

Scott’s achievement as a novelist can best be summarized by grouping his novels according to their topics and settings. His first successes were largely in the realm of Scottish history. In the order of their chronological setting (date in which the story takes place), the Scottish novels are *Castle Dangerous* (1832) and *The Fair Maid of Perth* (1828), both set in the fourteenth century; *The Monastery* and its sequel *The Abbot* (both 1820), set during the sixteenth century’s religious upheavals; *A Legend of Montrose* (1819) and *Old Mortality* (1816), which deal with the campaigns of the seventeenth-century civil wars; and a series of novels of the Jacobite (Stuart) rebellions of the eighteenth century—*Rob Roy* (1817), *Waverley*, and *Redgauntlet* (1824). Other Scottish novels indirectly related to historical themes are *The Black Dwarf* (1816), *The Heart of Midlothian* (1818), *The Bride of Lammermoor* (1819), and *The Pirate* (1822). Scott also wrote a group of novels set in his own times: *Guy Mannering* (1815), *The Antiquary* (1816), and *St. Ronan’s Well* (1824).

English novels

Scott, at a critical point of his career, turned to English history for his subject matter. Critics generally agree that the English

(and Continental—those of Europe) novels, mainly set in medieval times, are inferior, but they include Scott’s most lasting popular works. He began with *Ivanhoe* (1820) and then wrote three other novels set in the period of the Crusades: *The Talisman* (1825), *The Betrothed* (1825), and *Count Robert of Paris* (1832). *Quentin Durward* (1823) and *Anne of Geierstein* (1829) deal with the later Middle Ages, and the Renaissance is represented by *Kenilworth* (1821) and *The Fortunes of Nigel* (1822).

So massive a literary output cannot be reduced to broad generalizations. Most critics and readers seem to prefer Scott’s early novels. On the whole, Scott’s work is flawed by overly emotional writing, but his novels command the power to put modern readers in touch with men of the past.

Scott’s later years were clouded by illness, throughout which he continued to write. He spent the energies of his last years trying to write enough to recover honorably from the bankruptcy of a publishing firm in which he had invested heavily. He died in Abbotsford, Scotland, on September 21, 1832.

HAILE SELASSIE

Born: July 23, 1892

Near Harar, Ethiopia

Died: August 27, 1975

Addis Ababa, Ethiopia

Ethiopian emperor

Haile Selassie was an emperor of Ethiopia whose influence as an African leader far surpassed the boundaries of his country. Although his popularity declined near the end of his sixty-year reign, Selassie remains a key figure in turning Ethiopia into a modern civilization.

Childhood

Haile Selassie was born Tafari Makonnen on July 23, 1892, the son of Ras Makonnen, a cousin and close friend of Emperor Menilek II. Baptized Lij Tafari, he is believed to be a direct descendant of King Solomon and the Queen of Sheba, two ancient rulers from the tenth century B.C.E. Raised as a Christian, Tafari was educated by private European tutors.

Haile Selassie spent his youth at the imperial court (court of the emperor) of Addis Ababa, Ethiopia. Surrounded by constant political plots, he learned much about the wielding of power. Menilek no doubt recognized Tafari's capacity for hard work, his excellent memory, and his mastery of detail. The emperor rewarded the youth's intellectual and personal capabilities by appointing him, at the age of fourteen, the governor of Gara Muleta in the province of Harar. When he was twenty, the emperor appointed him *dejazmatch* (commander) of the extensive province of Sidamo.

Regent and Emperor

Upon the death of Menilek in 1913, his grandson, Lij Yasu, succeeded to (gained) the throne. Yasu's apparent conversion to the religion of Islam alienated the national Christian church and gave its favor to the opposition movement led by Ras Tafari (as Haile Selassie was now named). The movement joined noblemen and high church officials in stripping Yasu of the throne in 1916. Zawditu, the daughter of Menilek, then became empress, with Ras Tafari appointed regent (acting ruler while the empress was away) and heir to the throne.

Throughout the regency the empress, conservative in nature and more concerned with religion than politics, served as opposition to Ras Tafari's rising interest in turning the country into a more modern nation. The result was an uneasy decade-long agreement between conservative and reforming forces (forces looking to make social improvements).

In 1926 Tafari took control of the army, an action that made him strong enough to assume the title of *negus* (king). Assuming this title was made possible, in part, by his success in international affairs, namely the admission of Ethiopia in 1923 to the League of Nations, a multinational organization aimed at world peace following World War I (1914–1918; a war fought mostly in Europe involving most countries on that continent and the United States). When Zawditu died in April 1930, Tafari demanded the title *negasa negast* (king of kings) and took complete control of the government with the throne name of Haile Selassie I ("Power of the Trinity").

Italian invasion

In 1931 the new emperor began to develop a written constitution (a system of basic laws of a country) to symbolize his interest in modernization and intention to increase the power of the government, which had been weakening since the death of Menilek. Haile Selassie's efforts were cut short, however, when Benito Mussolini's (1883–1945) Italy invaded the country in 1935. The Italian military used superior weaponry, airplanes, and poison gas to crush the ill-fated resistance led by the emperor. After the invasion, a fascist regime (a country under the control of an all-powerful ruler) occupied the country and marked the first loss of national independence in recorded Ethiopian history. In 1936 Haile Selassie went into exile, meaning he was forced out of the country. While in England he unsuccessfully went to the League of Nations for help.

In early 1941 British forces, aided by the heroic Ethiopian resistance, freed the country from Italian control, enabling Haile Selassie to triumphantly reenter his capital in May. The Italian colonial administration, backed by force and with a vastly improved road network, meant that the emperor returned to find a great deal of his government's independence had been destroyed, leaving him in certain ways stronger than before he left.

Throughout the next decade he rebuilt the administration; improved the army; passed legislation to regulate the government, church, and financial system; and further extended his control of the provinces (government territories) by crushing uprisings in Gojjam and Tigre. But in general the emperor had gradually grown more cautious, and he allowed few new leaders into his government.

Haile Selassie.

Courtesy of the Library of Congress.

In the 1950s Haile Selassie worked to absorb into Ethiopia the important Red Sea province of Eritrea (this was accomplished in 1962). Later he founded the University College of Addis Ababa, and welcomed home many Ethiopian college graduates from abroad. His Silver Jubilee (celebration of twenty-five years in power) in 1955 served as the occasion to present a revised constitution, followed in 1957 by the first general election. Haile Selassie's continued work to hold political balance between several major politicians as well as his efforts to shut out new politicians who still found few places in government, eventually led oppos-

ing elements to attempt a government coup (takeover) in December 1960. The coup failed, but it gave a short and violent message to the unchanging Ethiopian politics and hinted of future possibilities.

Pan-African leader

In the 1960s the emperor was clearly recognized as a major force in the pan-African movement (a movement dedicated to a united Africa), demonstrating his remarkable capacity for adapting to changing circumstances. It was a great personal triumph for him when, in 1963, the newly founded Organization of African Unity established its headquarters in Addis Ababa. Unlike other African leaders, Haile Selassie, of course, had not had to struggle once in office to prove his legitimate authority to his people. Rather, his control of government for more than forty years had given him enough time to demonstrate his strength.

By 1970 the emperor had slowly withdrawn from many day-to-day workings of the government and had become increasingly involved with foreign affairs. He probably made more state visits than any other head of state, enjoying such trips for their own sake even when they had little practical use. To him foreign relations brought admiration from around the world.

At home Haile Selassie showed more caution than ever in his approach to modernization. Though warm to Western advancements, throughout his long reign he never advanced faster than what was agreed upon among his peers. However, by his fortieth year in power he appeared to be more concerned with adjusting to change than with enacting change himself.

A famine, or devastating shortage of food, in Wello province in 1973 seriously hurt the reputation of Selassie's leadership. With a strain on the nation, Selassie was forced to abdicate (step down from power) on September 13, 1974. The eighty-year-old emperor Selassie spent his final year of life under house arrest (restricted to one's house by court order). His death was announced on August 27, 1975. The man who led Ethiopia for sixty years—through some of the nation's darkest times—did not even have a funeral service. The exact location of his grave has never been revealed.

SELENA

Born: April 16, 1971
Lake Jackson, Texas
Died: March 31, 1995
Corpus Christi, Texas
Hispanic American singer

Often called the “Mexican Madonna,” Selena used her talent and voice to become one of popular music’s fastest rising stars. Although she was murdered very early in her career, she brought great exposure to Tejano, or Tex-Mex, music.

A musical family

Selena Quintanilla-Perez was born on April 16, 1971, in Lake Jackson, Texas. Her parents were Abraham Jr. and Marcella Quintanilla. Her father had led a band in the 1950s and 1960s that played early rock and roll songs mixed with traditional Mexican music. This music, later called Tejano music, would become very popular throughout the southwest United States and Mexico. Abraham eventually gave up his music career to start a family.

Selena was the youngest of the three Quintanilla children. She attended elementary school in Lake Jackson, a small town about fifty-five miles south of Houston, Texas. When she was six years old, her father saw her talent. He was teaching her older brother, Abraham III, to play guitar when Selena began to sing. The children formed a family band. They practiced almost every day.

“Selena and the Boys”

In 1980 Selena’s father opened a restaurant. The family band, called Selena y Los Dinos, would play there on weekends and at weddings and parties. Her father began to write original Spanish-language songs for the band to perform. Since Selena’s first language was English, she had to learn the words to the Spanish-language songs syllable by syllable. They had many local fans,

but the family restaurant failed and closed down. Her father moved the family to his hometown of Corpus Christi, Texas, to start over again.

Traveling all over the state, the band continued to perform their music. The concert touring paid off when the band opened for a popular Tejano act called Mazz. At age eleven, Selena took the stage by storm and the crowd loved her. At this time, Selena focused on her music but often missed classes and stopped going to school for good when she was in the eighth grade. To keep up with her schooling, she took courses through the American School in Chicago. She eventually earned her General Education Diploma (GED) in 1989, which is the same as earning a high school diploma.

Early recordings

Selena took some time out from touring to record music. For Corpus Christi’s Freddie label, Selena recorded *Mis Primeras Grabaciones* in 1984. Freddie was one of the oldest and most established Spanish-language record companies in Texas. The album and its only single, “Ya Se Va,” did not sell well. Switching to Cara and Manny record labels, Selena’s albums did not sell much better. Living in a van, the band continued to tour by opening for larger Tejano acts in the southwest United States.

For larger and larger audiences, the band learned to play many different styles of music. They played rhythm-and-blues-based music in larger cities. They played more traditional Tejano music in small Texas towns. In 1988 Selena was popular enough that she was voted the female artist of the year at the Tejano Music Awards. She would win this

Selena.

award again for the next seven years. Her popularity increased every year.

Growing success

In 1989 Selena joined EMI Records. She suddenly had a major record company supporting her. José Behar, the head of the company's new Latin music division, knew that she could appeal to a very wide audience, not just Tejano fans. In 1991 her song with Alvaro Torres, called "Buenos Amigos," became a hit. The song went to number one on *Billboard's* Latin chart and introduced her to audiences throughout the United States. With her next hit song, "Donde Quiero Que Estes," Selena

continued to grow in popularity and reach wider and wider markets for her music.

The early 1990s included many bright spots in Selena's music and personal life. On April 2, 1992, Selena married twenty-two-year-old Christopher Perez. He was the lead guitarist in her band. Together they shared in the success and in Selena's growing popularity, particularly in Mexico. Her father was now writing more international-sounding songs for her. These new songs were not only popular in Mexico but also began to be heard throughout the United States and in South and Central America. The size of the audiences at her shows swelled. In February 1994 more than sixty thousand people saw her perform in Houston. In March 1994 her album *Selena Live* won a Grammy Award for the best Mexican American album.

Selena's growing fame also increased record sales. In July 1994 Selena released *Amor Prohibido*. The album would sell more than one million copies. It was the top selling Latin album of that year. It also was named the Tejano Music Award's album of the year.

English-language success

Selena was often compared with other English-language artists such as Madonna (1958–), Janet Jackson (1966–), and Mariah Carey (1969–). She was eager to make an album in her first language so that she could have the same kind of success that these artists had. In December 1993 Selena was moved to a record company that made mostly English-language records. She began recording English-language songs for a new album and continued performing.

On March 31, 1995, Selena was shot and killed by the president of her fan club, Yolanda

Saldívar (1960–). Millions mourned her death and with this attention she became even more famous. *Dreaming of You*, the album released after her death in 1996, contained five songs sung in English. It also contained a number of traditional Tejano songs. The album was a huge hit and sold more than a million copies. It was the wide success that Selena had always hoped for. The album also introduced Tejano music to millions of new fans. At the Houston Astrodome, a place she often performed, she was honored with a memorial concert. A movie was made about her life, starring Jennifer Lopez (1970–), a year later.

SEQUOYAH

Born: c. 1770

Taskigi, Tennessee

Died: August 1843

Tamaulipas, Mexico

Native American scholar and linguist

Sequoyah, Cherokee scholar, is the only known Native American to have created an alphabet for his tribe. This

advance helped thousands of Cherokee to become literate (able to read and write).

Early life

Sequoyah was born at the Cherokee village of Taskigi in Tennessee. His father probably was Nathaniel Gist, a trader. His mother was part Cherokee and was abandoned by her husband before the birth of Sequoyah. He used his Cherokee name until he approached manhood, when he took the name George Guess (as he understood his father's last name to be).

Sees need for written communication

A hunter and fur trader until a crippling hunting accident, Sequoyah became an excellent silversmith (maker of products containing silver). As an adult, he had contact with white people that made him curious about "talking leaves," as he called books. He believed that if the Cherokees had a system for gathering and passing on written information, it would help them keep their independence from white people. In 1809 he decided to master this secret and to apply it to his own language. After a dozen years of ridicule and insults, he invented a Cherokee alphabet of eighty-five or eighty-six characters that allowed every sound used in Cherokee communication to be written down.

In 1821 Sequoyah demonstrated his invention before the Cherokee council, which approved his work. Within two years, thousands of Cherokee had mastered the set of symbols, an advance that led to the printing of books in the Cherokee language as well as some newspapers printed partly in Cherokee.

Sequoyah.
Courtesy of the Library of Congress.

Helps spread knowledge

In 1823 Sequoyah went to Arkansas to teach his alphabet to the Cherokee who already had moved westward, and he moved with them to Oklahoma in 1828. He became somewhat active in tribal politics and was a Cherokee representative to Washington, D.C., in 1828. With his alphabet a success, Sequoyah devoted much of his time to studying other tribal languages in a search for common elements. His tribe recognized the importance of his contribution when, in 1841, it voted him an allowance, which became an annuity (annual payment) of three hundred dollars.

Early in 1843 Sequoyah became interested in finding the part of the Cherokee nation that had reportedly moved west of the Mississippi River prior to the American Revolution (1775–83; when the American colonies fought for their independence from British rule). His journey led him westward and southward. He died in August 1843, possibly in the state of Tamaulipas in Mexico.

Sequoyah was honored by the state of Oklahoma, which placed a statue of him in Statuary Hall of the National Capitol. Also, a redwood tree, the Sequoia, was named in his honor, as was the Sequoia National Park.

WILLIAM SHAKESPEARE

Born: April 23, 1564
Stratford-upon-Avon, England
Died: April 23, 1616
Stratford-upon-Avon, England
English dramatist and poet

The English playwright, poet, and actor William Shakespeare was a popular dramatist. He was born six years after Queen Elizabeth I (1533–1603) ascended the throne, in the height of the English Renaissance. He found in the theater of London a medium just coming into its own and an audience eager to reward talents of the sort he possessed. He is generally acknowledged to be the greatest of English writers and one of the most extraordinary creators in human history.

Early life

William Shakespeare was born on April 23, 1564, in Stratford-upon-Avon, England. His mother, Mary Arden, was the daughter of a wealthy landowner from a neighboring village. His father, John, was a maker of gloves and a trader in farm produce. John also held a number of responsible positions in Stratford's government and served as mayor in 1569.

Though no personal documents survive from Shakespeare's school years, he probably attended the Stratford grammar school and studied the classics, Latin grammar and literature. It is believed that he had to discontinue his education at about thirteen in order to financially help his father. At eighteen he married Ann Hathaway. They had three children, Susanna, Hamnet, and Judith.

There are no records of Shakespeare's activities between 1585 and 1592. Some have speculated (guessed) that he was a traveling actor or a country schoolmaster. The earliest surviving mention of his career in London, England, is a jealous attack by Robert Greene, a playwright, which indicates that Shakespeare had already established

himself in the capital. It is hard to believe that even Shakespeare could have shown the mastery evident in his plays without several years of apprenticeship (the period of time a person works to learn a skill).

Early comedies

Three early comedies demonstrate that Shakespeare had learned to fuse conventional characters with convincing representations of the human life he knew. Shakespeare's first play is probably *The Comedy of Errors* (1590). Most acknowledge it as a brilliant and intricate farce (a humorous piece of work with a story unlikely to happen in real life) involving two sets of identical twins. The plot of his next comedy, *The Two Gentlemen of Verona* (1591) revolves around a faithful girl who educates her fickle (inconsistent) lover. It has romantic woods, a girl dressed as a boy, sudden changes, music, and happy marriages at the end. The last of the first comedies, *Love's Labour's Lost* (1593), deals with three young men who attempt to withdraw from the world and women for three years to study in their king's school. They quickly surrender to a group of young ladies who come to live nearby.

Early history plays and first tragedy

Though little read and performed today, Shakespeare's first plays in the popular history genre (particular style) are equally ambitious and impressive. *Henry VI* (1592), which is performed in three parts, and *Richard III* (1594) form an epic (story of heroic figures). They deal with the tumultuous (disorderly, agitating) events of English history between the death of Henry V (1387–1422) in 1422 and Henry VII (1457–1509) assuming the

William Shakespeare.

throne in 1485, which began the period of stability maintained by Queen Elizabeth I (1533–1603). Nothing so ambitious as this monumental sequence had ever before been attempted in an English play.

Shakespeare's first tragedy, *Titus Andronicus* (1593), reveals similar ambition. It is recognized as a brilliant and successful piece in the tradition of the revenge play where someone tries to punish someone for a wrong that was done.

Nondramatic works

The theaters were closed because of plague (a bacteria-caused disease that spreads

quickly and can cause death) during much of 1593 and 1594. At this time Shakespeare wrote two narrative poems for the Earl of Southampton. Both the seriocomic (both happy and sad) *Venus and Adonis* and the tragic *Rape of Lucrece* are based on the Renaissance traditions of myth and symbolism.

Shakespeare's most famous poems are the 154 sonnets. They were probably composed in this period but were not published until 1609. Sonnets are fourteen-line poems with a fixed rhyme scheme. Though they often suggest autobiographical revelation (the discovery or realization in oneself), the sonnets cannot be proved to be any less fictional than the plays.

The Lord Chamberlain's Men

In 1594 Shakespeare became principal writer for the successful Lord Chamberlain's Men in London. This was one of the two leading companies of actors. He also became a regular actor in the company and a partner in the group of artist-managers who ran it. The company performed regularly in unroofed but elaborate theaters that seated up to three thousand people. The actors performed on a huge platform stage equipped with additional levels for performances. The audience sat on three sides or stood on the ground in front of the stage. In 1599 this group had the Globe Theater built on the south bank of the Thames River.

Shakespeare produced many plays for the company. They include the comedies *The Taming of the Shrew* (1594) about the taming of an ill-tempered, scolding woman and *A Midsummer Night's Dream* (1595), in which fairies and magic potions in moonlit woods become entangled with young lovers who

escape from a cruel society. These were followed by *The Merchant of Venice* (1596), *Much Ado about Nothing* (1598), *The Merry Wives of Windsor* (1599), and *As You Like It* (1600).

Shakespeare's tragedies of the period are among his most familiar plays: *Romeo and Juliet* (1596), *Julius Caesar* (1599), and *Hamlet* (1601). Although very different from each other, they share the setting of intense personal tragedy in a large world vividly populated by what seems like the whole range of humanity. Like most of his contemporaries in the theater, Shakespeare used the same techniques in writing comedies as tragedies. Politics are constantly present, and what is best in the protagonist (hero) is what does him in when he finds himself in conflict with the world.

Shakespeare, continuing his interest in the historical play, wrote *King John* (1596). Despite its one strong character it is a relatively weak play. His other epics range from *Richard II* (1595), through the two parts of *Henry IV* (1597), to *Henry V* (1599). These four plays pose disturbing questions about politics, particularly the difference between the man capable of ruling and the man worthy of doing so. They are not optimistic about man as a political animal.

The "problem plays"

Several plays produced at the end of Elizabeth's reign are often grouped as Shakespeare's "problem plays." They are not easily categorized as either tragedies or comedies. *All's Well That Ends Well* (1602) is a romantic comedy with qualities that seem bitter to many critics because it presents romantic relations between men and women in a harsh light. *Troilus and Cressida* (1602), is a bril-

liant, sardonic (skeptically humorous), and disillusioned piece on the Trojan War. *Measure for Measure* (1604) focuses on the link between political power and romantic desire.

King's Men and the late tragedies

Upon ascending to the throne in 1603, King James I (1566–1625) bestowed his patronage upon the Lord Chamberlain's Men, so that the flag of the King's Men now flew over the Globe. During his last decade in the theater Shakespeare was to write fewer but perhaps even finer plays. Almost all the greatest tragedies belong to this period, and they share several qualities. The heroes are dominated by passions that make their moral (having to do with right and wrong) status increasingly ambiguous (not clearly one thing or another) and their freedom increasingly constricted. In the end, what destroys the hero is what is best about him. Like the histories, the late tragedies continue to be felt as intensely relevant to the concerns of modern men.

Othello (1604) is concerned with trust and betrayal. In *King Lear* (1605) an aged king foolishly deprives his only loving daughter of her heritage in order to leave everything to her hypocritical (only pretending to have morals) and vicious sisters. *Macbeth* (1606) concentrates on the problems of evil and freedom. It mingles the supernatural with history, and makes a sympathetic hero of a murderer who sins against family and state.

Antony and Cleopatra and *Coriolanus* (both written in 1607 and 1608) embody Shakespeare's bitterest images of political life. *Antony and Cleopatra* sets the temptation of romantic desire against the call to Roman duty. *Coriolanus* pits a protagonist (hero) who cannot live with hypocrisy (pretending to

believe in something) against a society built on it. Both of these tragedies present ancient history with a vividness (intensity) that makes it seem contemporary.

The romances

A final group of plays takes a turn in a new direction. *Pericles* (1607), *Cymbeline* (1609), *The Winter's Tale* (1611), and *The Tempest* (1611) have a unique power to move and are in the realm of the highest art. *The Tempest* is the most popular and perhaps the finest of the group. In it Prospero and his daughter are shipwrecked on an island inhabited by supernatural creatures. Prospero rules the island with magic, but renounces (gives up) magic at the end. After the composition of *The Tempest* Shakespeare retired to Stratford. He returned to London to compose *Henry VIII* and *The Two Noble Kinsmen* in 1613. Neither seems to have fired his imagination. He died in Stratford-upon-Avon on April 23, 1616, at the age of fifty-two.

Shakespeare's work has continued to seem to each generation like its own most precious discovery. His value to his own age is suggested by the fact that two fellow actors performed the virtually unprecedented (never done before) act in 1623 of gathering his plays together and publishing them in the Folio edition. Without their efforts, since Shakespeare was apparently not interested in publication, many of the plays would not have survived.

GEORGE BERNARD SHAW

Born: July 26, 1856

Dublin, Ireland

Died: November 2, 1950

Ayot St. Lawrence, England

Irish playwright and critic

British playwright and critic George Bernard Shaw produced more than fifty plays and three volumes of music and drama criticism. Many critics consider him the greatest English dramatist since William Shakespeare (1564–1616).

Early years

George Bernard Shaw was born in Dublin, Ireland, on July 26, 1856, the son of George Carr Shaw and Lucinda Elizabeth Gurly. His father was the co-owner of a corn mill and had a drinking problem. Shaw was tutored in classics by an uncle, and when he was ten years old, he entered the Wesleyan Connexional School in Dublin. Shaw hated school but loved reading and writing. He also learned a great deal about music and art from his mother, a music teacher and singer.

Shaw took a job as an office boy in 1871 at a monthly salary equal to \$4.50. He resigned in 1876 to join his mother and two sisters in London, England, where they ran a music school. At the age of sixteen Shaw had started writing criticism and reviews for Irish newspapers and magazines; in four years only one piece was accepted. Shaw continued to write criticism while supported by his mother; he also entertained the London society as a singer.

Different kinds of writing

Between 1876 and 1885 Shaw wrote five novels. *Immaturity*, the first, remained unpublished for fifty years, and the other four appeared in various magazines. *An Unsocial Socialist* (1884) was designed as part of a massive projected history of the entire social reform movement in England. *Cashel Byron's Profession* (1882) was produced in 1901 as the drama *The Admirable Bashville; or, Constancy Unrewarded*. *The Irrational Knot* was a description of modern marriage that was similar to Henrik Ibsen's (1828–1906) *A Doll's House*. It appeared in a magazine called *Our Corner*, as did *Love Among the Artists* (1887–88).

In 1879 Shaw had joined a socialist (one who believes in a society in which the means

George Bernard Shaw.
Courtesy of the Library of Congress.

of production are owned by the people) discussion group, and he joined the socialist Fabian Society in 1884. *Fabian Essays* (1887), edited by Shaw, discussed the importance of economics (the study of the production, distribution, and use of goods and services) and class structure. In 1882 two events completed Shaw's conversion to socialism: he heard a speech by Henry George, the American author of *Progress and Poverty*, and he read Karl Marx's (1818–1883) *Das Kapital*. In 1914 Shaw published *Common Sense about the War*, a criticism of the British government. *The Intelligent Woman's Guide to Capitalism and Socialism*, published in 1928, remains a major volume of socialist thought.

Between 1888 and 1894 Shaw wrote for newspapers and magazines as a music critic. At the end of this period, he began writing regularly for the *Saturday Review*; as a critic, he helped introduce Ibsen to the British public. Shaw's *Quintessence of Ibsenism* appeared in 1890, *The Sanity of Art* in 1895, and *The Perfect Wagnerite* in 1898. He married Charlotte Payne-Townshend, a fellow socialist, in 1898. She died in 1943.

Shaw's plays

Widowers' Houses, Shaw's first play, was produced in 1892. He identified this and his other early plays as "unpleasant." Shaw's first stage successes, *Arms and the Man* and *Candida*, were produced in 1894. *You Never Can Tell*, first produced in 1896 and not often performed, is Shaw's most underrated (not highly valued) comedy. The productions at the Royal Court Theater in London of the works of Shaw, Shakespeare, and Euripides (484–406 B.C.E.) between 1904 and 1907 increased Shaw's popularity; eleven of his plays received 701 performances.

Major Barbara (1905) is a drama of ideas, largely about poverty and capitalism (a system in which prices, production, and distribution of goods are determined by competition in a free market); like most of Shaw's drama, the play poses questions and finally contains messages or arguments. *Androcles and the Lion* (1911) discusses religion. *Heartbreak House* deals with the effects of World War I (1914–18; a war fought between the German-led Central Powers and the Allies: England, the United States, Italy, and other nations) on England; written between 1913 and 1916, it was first produced in 1920. Shaw's plays explored such topics as mar-

riage, parenthood, and education. Most of his plays after *Arms and the Man* begin with long essays that are often not directly related to the drama itself.

Shaw's popular success was coupled with growing critical respect. *Heartbreak House*, *Back to Methuselah* (1921), *Androcles and the Lion*, and *Saint Joan* (1923) are considered his best plays. Shaw was awarded the 1925 Nobel Prize for literature. He continued writing drama until 1947, when he completed *Buoyant Billions* at the age of ninety-one. He died in his home at Ayot St. Lawrence, England, on November 2, 1950.

MARY SHELLEY

Born: August 30, 1797
London, England
Died: February 1, 1851
Bournemouth, England
English novelist

English novelist Mary Shelley is best known for writing *Frankenstein, or The Modern Prometheus* (1818) and for her marriage to the poet Percy Bysshe Shelley (1792–1822).

Early years

Mary Wollstonecraft Godwin was born on August 30, 1797, in London, England. She was the only daughter of Mary Wollstonecraft, the early feminist (one who works on behalf of women's rights) and author of *A Vindication of the Rights of Woman*, and William Godwin, the political writer and novelist, both of whom objected to the institution of marriage. Ten days after Mary's birth, Wollstonecraft died from complications, leaving Godwin, a self-absorbed intellectual, to care for both Mary and Fanny Imlay, Wollstonecraft's daughter from an earlier relationship.

Mary's home life improved little when four years later her father married his next-door neighbor, Mary Jane Clairmont, who already had two children of her own. The new Mrs. Godwin favored her own children over the daughters of the celebrated Wollstonecraft, and Mary was often alone and unhappy. She was not formally educated, but she read many of her mother's books and absorbed the intellectual atmosphere created by her father and such visitors as the poet Samuel Taylor Coleridge (1772–1834). Young Mary's favorite retreat was Wollstonecraft's grave in the St. Pancras churchyard, where she went to read and write, and eventually, to meet her lover, Percy Shelley (1792–1822).

Life with Shelley

An admirer of Godwin, Percy Shelley visited the author's home and briefly met Mary when she was fourteen, but their attraction did not take hold until a meeting two years later. Shelley, twenty-two, was married, and his wife was expecting their second child, but he and Mary, like Godwin and Wollstonecraft, believed that ties of the heart were more important than legal ones. In July 1814, one month before her seventeenth birthday, Mary ran away with Percy, and they spent the next few years traveling in Switzerland, Germany, and Italy. Percy's father, Sir Timothy Shelley, cut off his son's large allowance after the couple ran away together.

In 1816 Mary's half-sister Fanny committed suicide; weeks later, Percy's wife, Harriet, drowned herself. Mary and Percy were married in London in an unsuccessful attempt to gain custody of his two children by Harriet. Three of their own children died soon after birth, and Mary fell into a deep depression that did not improve even after the birth in 1819 of Percy Florence, her only surviving child. The Shelleys' marriage suffered, too, in the wake of their children's deaths, and Percy formed romantic attachments to other women.

Despite these difficult circumstances, Mary and Percy enjoyed a large group of friends, which included the poet Lord Byron (1788–1824) and the writer Leigh Hunt (1784–1859). They also maintained a schedule of very strict study—including classical and European literature, Greek, Latin, and Italian language, music and art—and other writing. During this period Mary completed *Frankenstein*, the story of a doctor who, while trying to discover the secret of life, steals bod-

Mary Shelley.

ies from graves in an attempt to create life from the parts—but instead creates a monster.

Critical reaction to *Frankenstein*

While most early reviewers criticized what they considered the gruesome (inspiring horror) elements in *Frankenstein*, many praised the author's imagination and powers of description. In the later nineteenth century and throughout *Frankenstein* criticism, critics have searched for Percy Shelley's influence on the book. Scholars have also debated the value of the additional narratives that he encouraged his wife to write. While some have praised the novel's resulting three-part

structure, others have argued that these additions take away from and merely pad the story. Many have also noted the influence of Shelley's father's social views in the book; in addition, some critics claim to have found links to his fiction.

Mary Shelley's journal entries reveal that during 1816 and 1817, when *Frankenstein* was being written, she and her husband discussed the work many times. It is also known that in these years she and Shelley both read John Milton's (1608–1674) *Paradise Lost*, and that she was interested at this same time in Godwin's *Political Justice*, Thomas Paine's (1737–1809) *The Rights of Man*, and Aeschylus's (525–456 B.C.E.) *Prometheus Bound*. This is not to say that Mary Shelley borrowed her social and moral ideas from Paine, or from Shelley or Godwin. It is perfectly understandable that she shared the social thoughts of her father and her husband and that she wove these ideas, which were shared also by many of the enlightened English public during those years, into a pattern of her own making.

Life as a widow

The Shelleys were settled near Lenci, Italy, in 1822 when Percy Shelley drowned during a storm while sailing to meet Leigh Hunt and his wife. After a year in Italy, Mary returned to England for good with her son. After Percy's death Mary struggled to support herself and her child. Sir Timothy Shelley offered her some support, but he ordered that she keep the Shelley name out of print; thus, all her works were published without her name on them. Mary contributed a series of biographical and critical sketches to *Chamber's Cabinet Cyclopaedia* and published several short stories.

Mary Shelley also produced five more novels, which received negative criticism for being too wordy and having awkward plots. *The Last Man* (1826) is her best-known work after *Frankenstein*. This novel, in which she describes the destruction of the human race in the twenty-first century, is noted as an inventive description of the future and an early form of science fiction. *Valperga* (1823) and *The Fortunes of Perkin Warbeck* (1830) are historical novels that have received little attention from book critics, while *Lodore* (1835) and *Falkner* (1837), thought by many to be autobiographical (based on her own life), are often examined for clues to the lives of the Shelleys and their circle.

The Shelleys' situation improved when Sir Timothy increased Percy Florence's allowance with his coming of age in 1840, which allowed mother and son to travel in Italy and Germany; their journeys are recounted in *Rambles in Germany and Italy in 1840, 1842, and 1843* (1844). Too ill in her last few years to complete her most cherished project, a biography of her husband, Mary Shelley died at age fifty-three.

Mary Shelley's stories were collected and published after her death, as was *Mathilda*, a short novel that appeared for the first time in the 1950s. The story of a father and daughter's attraction, it has been viewed as a fictional treatment of her relationship with Godwin. The verse dramas *Proserpine* and *Midas* (1922) were written to accompany one of Percy Shelley's works and have earned mild praise for their poetry. Critics also admire Mary Shelley's nonfiction, including the readable, though now dated, travel volumes; the vigorous essays for *Chamber's Cabinet Cyclopaedia*; and her notes on her husband's poetry.

PERCY SHELLEY

Born: September 4, 1792

Field Place, Sussex, England

Died: July 8, 1822

Viareggio, Italy

English poet

The English romantic poet Percy Shelley ranks as one of the greatest lyric poets in the history of English literature.

Early years

Percy Bysshe Shelley was born at Field Place near Horsham, Sussex, England, on August 4, 1792. He was the first son of a wealthy, country landowner. As a boy, Shelley felt harassed by his father. This abuse may have first sparked the flame of protest which, during his school days at Eton from 1804 until 1810, earned him the name of "Mad Shelley." At school, however, he proved himself to be a very capable and intelligent stu-

Percy Shelley.

Reproduced by permission of AP/Wide World Photos.

dent. He also began writing some short fiction pieces.

In the course of his first and only year at Oxford University, in England (1810–1811), Shelley and a friend Thomas Jefferson Hogg issued a pamphlet provocatively entitled “The Necessity of Atheism (the belief that there is no God).” Both students were expelled from the university. This event intensified Shelley’s rebelliousness against accepted notions of law and order, both in his private life and in government. In the summer of 1811 Shelley met and married Harriet Westbrook.

Shelley’s first poems

Shelley attempted to communicate his views on politics other topics in the poem “Queen Mab” (1813). Though an immature poem, nevertheless, it contained the germ of his mature philosophy: that throughout the cosmos there is “widely diffused / A spirit of activity and life,” an omnipresent (being everywhere) energy that, unless misguided by people’s lust for power, can lead humankind to paradise.

By the summer of 1814 Shelley had become closely involved with Mary Godwin (1797–1851). In late July Shelley left his wife and ran away to continental Europe with Godwin. In 1816, they married. The same year, Mary Shelley wrote *Frankenstein*.

“Alastor”

When Shelley returned to England, he was increasingly driven to the realization that paradise was not just around the corner. This may have prompted the writing of “Alastor, or the Spirit of Solitude” in December 1815. In this poem Shelley writes that poets are caught between the enticements of extreme idealism (visions for the improvement of humankind) and the awareness that the very nature of humans and the world prevents the achievement of this highest purpose.

Both Shelley’s “Hymn to Intellectual Beauty” and “Mont Blanc,” were planned in 1816, during a stay in Geneva, Switzerland, and make an impressive statement of his belief in an everlasting, compassionate “Spirit,” the hidden source of splendor and harmony in nature and of moral activity in humans.

“The Revolt of Islam”

The winter of 1816 and 1817 was a period of great emotional disturbance for Shelley. Harriet, his wife, died, presumably by suicide, in December. The courts refused to grant Shelley the custody of their two children. In addition, he was beginning to worry about his health. However, there were encouragements as well. Shelley was gaining some recognition as an original and powerful poet.

During the spring and summer of 1817, Shelley composed his most ambitious poem to that date, “The Revolt of Islam.” In this work the theme of love between man and woman was skillfully woven into the wider pattern of humankind’s love-inspired struggle for brotherhood. The work demonstrates that Shelley had now come to a mature insight into the complex relationship between good and evil. A person’s recognition of his or her boundaries is the first step to wisdom and inner liberty. Martyrdom does not put an end to hope, for it is a victory of the spirit and a vital source of inspiration.

“Exile” and “Prometheus Unbound”

In March 1818 Percy and Mary Shelley left England, never to return. The bulk of the poet’s output was produced in Italy in the course of the last four years of his short life. Though life in Italy had its obvious rewards, this period was by no means one of pure happiness for Shelley. He was increasingly anxious about his health. He was beginning to resent the social ostracism (shunning) that had made him an exile. The exile itself was at times hard to bear, even though the political and social situations in England were most unattractive. Finally, his son William died in June 1819. A note of despair can be perceived in some of his minor poems, such as the

“Stanzas Written in Dejection near Naples.” In “Prometheus Unbound” (1818–19), Shelley turned to myths (ancient stories that explain natural occurrences) to convey, in a more sensitive and complex way, the basic truth that had been expressed through the narrative technique of “The Revolt of Islam.”

Drama and social tracts

Like the other romantic poets, Shelley was aware of the limitations of poetry as a medium of mass communication. He, too, struggled to deliver his message to a larger audience. He experimented with stage drama in *The Cenci* (1819) a tragedy which illustrates the problems caused by humans’ lust for power, both physical and mental, in the sphere of domestic life.

Shelley’s interest, however, lay in wider issues, which he now began to tackle in satires (humorous pieces pointing out people’s weaknesses). He vented his social outrage in the stirring argument of *The Masque of Anarchy* (1819); in *Peter Bell the Third* (1819), a satire of the poet William Wordsworth (1770–1850); and in *Oedipus Tyrannus, or Swell-Foot the Tyrant* (1820), a mock tragedy on the royal British family.

In “Hellas” (1821), Shelley’s major political poem, Hellas celebrates the Greek war of liberation. It crowns a large series of minor poems in which Shelley, throughout his writing career, had hailed the spirit of liberty, not only among the oppressed classes of England but also among the oppressed nations of the world.

Final poems and prose works

Shelley’s concern with promoting the cause of freedom was genuine, but his per-

sonality found a more compatible outlet in his “visionary rhymes.” In his poems the almost mystical concepts of oneness and love, of poetry and brotherhood are expressed. Such themes remained the source of his inspiration to the last. As he was nearing his thirtieth year, he wrote with a more urgent yet less harsh sense of the unbridgeable gap between the ideal and the real. He movingly expressed this sense in “The Sensitive Plant” (1820) and in the poem that he composed on the death of John Keats (1795–1821), “Adonais” (1821).

Shelley’s *The Defence of Poetry* (1821) is one of the most eloquent prose assessments of the poet’s unique relation to the eternal. And, in 1822, he focused on the poet’s relation to earthly experience in *The Triumph of Life*. This work contains an impassioned condemnation of the corruption wrought by worldly life, whose “icy-cold stare” irresistibly obscures the “living flame” of imagination.

Shelley drowned in the Gulf of Spezia near Lerici, Italy, on July 8, 1822, shortly before his thirtieth birthday. He is regarded as one of the greatest English poets of the romantic age of art.

BEVERLY SILLS

Born: May 25, 1929

Brooklyn, New York

American singer

Beverly Silles was a child performer, coloratura soprano (a light voice used in a very ornate type of singing), and operatic (in operas) superstar who retired from her performance career in 1980 to become general director of the New York City Opera Company.

Early years

Beverly Silles was born Belle Miriam Silverman in Brooklyn, New York, on May 25, 1929, during the era of Shirley Temple (1928–) and other child stars of the movies. Her father was an insurance salesman who wanted his daughter to become a teacher. Her mother had different plans, however. Silles was singing on the radio by age three. At the age of four she was a regular on a children’s Saturday morning radio program. At seven she sang in a movie and had already memorized twenty-two opera arias (solos). She continued to perform on radio shows and did laundry soap commercials, which got her the nickname “Bubbles.” She left

radio work at age twelve to pursue her love of opera.

After Sills graduated from grammar school she attended the Professional Children's School in New York City. By the time she was nineteen she had memorized between fifty and sixty operas. She studied voice privately with her lifelong associate Estelle Liebling and eventually achieved professional competence on the piano as well, studying with Paolo Gallico.

Billed as "the youngest prima donna in captivity," Sills joined a Gilbert and Sullivan touring company in 1945. Two years later she sang her first operatic role with the Philadelphia (Pennsylvania) Opera Company. She toured with several different small opera companies starting in 1948.

Sills made her debut with the New York City Opera on October 29, 1955, singing Rosalinde in *Die Fledermaus*. The critics loved her and predicted great success for her career. Eventually she would command a vast repertoire of one hundred roles, actively performing sixty of them in one hundred opera or concert appearances each year at the peak of her career. Her great memory allowed her not only to master her own enormous repertoire of roles but also to understand the other principal roles in the operas she performed. This ability earned her a reputation not only as a singer on the stage but as an actress as well.

Family life

In 1956 Sills married Peter Bulkeley Greenough, associate editor of the *Cleveland Plain Dealer*. She and her husband had two children. Their daughter was born hearing impaired and their son was developmentally

Beverly Sills.

disabled. Their son had to be institutionalized (put in a hospital) when he was six due to the great amount of care he required. Sills carried two watches, one set to her son's schedule in the time zone where he lived, so that she could always know what he was doing. The tragedies with her children would lead Sills into philanthropic (helping others through work and donations) work later in her career.

Metropolitan Opera and Europe

On July 8, 1966, Sills sang Donna Anna in *Don Giovanni* with the Metropolitan Opera,

but her formal debut with the Metropolitan Opera did not actually occur until 1975. Sills was able to rise to the top of her profession before touring Europe. She finally did so in 1967, a guest of the Vienna State Opera. She went on to sing in Buenos Aires, Argentina; La Scala in Milan, Italy; and Covent Garden, London, England. She also performed in Naples, Italy; Berlin, Germany; and Paris, France.

On October 27, 1980, Sills gave her last performance. Opera critics said it was overdue, as her voice had been deteriorating (weakening) for some time due, in part, to health problems. The very next day she assumed the general directorship of the New York City Opera. She displayed great management skill and public relations talent, appearing on popular television programs and in other ways representing opera to a wide audience. She helped pull the New York City Opera out of both financial and public crises.

Sills wrote three autobiographies. She received honorary doctoral degrees from Harvard University, New York University, Temple University, the New England Conservatory, and the California Institute of the Arts. In 1973 she was awarded the Handel Medallion, New York City's highest cultural award.

In 1972 Sills added philanthropy to her list of careers, becoming the national chairman of the Mothers' March on Birth Defects. She continues to be a highly visible active public figure, promoting both operatic and philanthropic causes.

Retirement

In 1989 Sills formally retired and remained in quiet seclusion with her hus-

band for about five years. In 1994 she returned to public life as the chairwoman of the Lincoln Center for the Performing Arts. At this point in her life Sills says "I've done everything I set out to do . . . sung in every opera house I wanted to . . . to go on past the point where I should, I think would break my heart. I think my voice has served me very well."

NEIL SIMON

Born: July 4, 1927

New York, New York

American playwright and writer

Pulitzer Prize-winning playwright Neil Simon is one of America's most productive and popular dramatists. His plays expose human weaknesses and make people laugh at themselves.

Early years

Marvin Neil Simon was born in the Bronx, in New York, on the Fourth of July in 1927. His father Irving, a garment salesman, disap-

peared from time to time, leaving his wife, Mamie, to support their two sons by working at a department store and by relying on family and friends. After his parents divorced, Simon lived with relatives in Forest Hills, New York. Simon received the nickname “Doc” as a child because he was always pretending to be a doctor, listening to people’s heartbeats with a toy stethoscope (an instrument used to listen to sounds inside the body). He also loved comedy films and was often thrown out of movie theaters for laughing too loudly.

Simon and his older brother Danny were very close. During their teens, they wrote and sold material to standup comedians and radio shows. It was his brother who encouraged him to pursue writing while in the United States Army Air Force Reserve program. Simon also attended college at this time. His childhood love of comedy stuck, and his writing was inspired by the work of his favorite comics—Robert Benchley (1889–1945) and Ring Lardner (1885–1933).

Writing for a living

After being discharged (let out) from the army, Simon got a job in Warner Brothers’ mailroom—thanks to his brother, who worked in the publicity department. They began working together again, and from 1947 to 1956 they wrote comedy for television shows starring Jackie Gleason (1916–1987) and Phil Silvers (1911–1985). Simon continued writing comedy after his brother quit to become a television director, and his work appeared on some of television’s top shows. The pleasure was fading, however, so he began writing plays in 1960.

Simon’s first play, *Come Blow Your Horn*, was a modest hit. It was followed shortly

Neil Simon.

Reproduced by permission of AP/Wide World Photos.

thereafter with *Barefoot in the Park*, which ran on Broadway for four years. His third play, *The Odd Couple*, introduced two famous characters, Felix and Oscar, two men with failing marriages who move in together to save money and find that they have the same problems living with each other as they did with their wives. Simon’s storylines usually presented conflicts between two people and were filled with funny one-liners.

Simon admitted that he often used personal experiences or those of his friends for material. *Come Blow Your Horn* was about two brothers who moved away from home and

shared an apartment (just as Simon and his brother had); *Barefoot in the Park* was the story of newlyweds adjusting to married life (similar to his own marriage); and of *The Odd Couple* Simon once commented, “[The story] happened to two guys I know—I couldn’t write a play about Welsh miners.” *The Odd Couple* had a two-year run on Broadway, won Simon his first Tony Award (an award given every year for achievement in the theater), and was adapted to television and film several times.

New approach to drama

In the 1970s Simon made an effort to add depth to his work by treating serious issues with comic touches. He presented works such as *The Last of the Red Hot Lovers*, the story of a married man in a mid-life crisis who has a series of affairs; *The Gingerbread Lady*, in which a one-time singer, who is now an alcoholic, struggles to make a comeback; and *The Prisoner of Second Avenue*, which witnesses the nervous breakdown of a recently fired business executive.

Simon continued to create characters who struggled to handle their feelings in difficult situations and who released tension with humor. He began to share more of himself and his life, including boyhood dreams of escaping from his family problems and the difficulty of coping with his wife’s terminal illness. During this period he wrote *The Sunshine Boys*, *The Good Doctor*, *California Suite*, and *Chapter Two*, whose main character, a widower, feels guilty over falling in love and remarrying, much as Simon had. He also wrote several screenplays, including *The Goodbye Girl*, which was nominated (put forward for consideration) for an Academy Award in 1977.

Even more personal works

Simon took his mixing of honesty and humor to new levels in the 1980s. *Brighton Beach Memoirs*, the first in a trilogy (series of three works) of semiautobiographical (some-what based on his own life) plays, tells the story of a middle-class Jewish American teenager growing up in a troubled family. *Biloxi Blues* deals with the boy’s coming of age and facing of anti-Semitism (hatred of Jewish people) while in the army. Finally, *Broadway Bound* takes audiences into the boy’s young adulthood, as he struggles to establish his career and sees the problems in his parents’ relationship more clearly. Simon claimed that writing the play helped him address the problems he had with his own mother.

When Simon’s third marriage broke up, he wrote *Jake’s Women*, in which he introduces “ghosts”—good and bad experiences of two marriages and their effect on the third. He began the 1990s with *Lost in Yonkers*, a painfully funny story about the effect an abusive mother has on her grown children. The play was a success, and in 1991 it earned the Pulitzer Prize for drama.

Later years

Simon’s next work, *Laughter on the 23rd Floor*, is a behind-the-scenes look at writing comedy by committee, as a group of men shout one-liners, each trying to top the other. Critics found it funny but talked about the lack of plot and depth of the characters. Simon received Kennedy Center honors in 1995 from President Bill Clinton (1946–) for his contribution to the arts and to popular culture in the twentieth century. In 1996 Simon wrote a book entitled *Rewrites*, a look back at his early career. The book received mixed reviews; *Peo-*

ple Weekly commented that it “doesn’t live up to the creativity it documents.”

In 1997 Simon introduced his first major black character in *Proposals*. In an interview with David Stearns for *USA Today* he said, “It is one of the most loving plays I’ve ever written. There’s also a lot of anger. Because love is the main theme in the play, I was trying to cover all the aspects [elements] of it—those who get it and those who don’t.” In 1999 Simon was honored by ringing the bell to open trading at the New York Stock Exchange as part of the Exchange’s Bridging the Millennium program, which honored leaders of the twentieth century whose achievements continue to enrich humanity.

In 2001, just about the same time his new play *45 Seconds from Broadway* was opening, Simon was presented with the first Sarah Applebaum Nederlander Award for Excellence in Theatre at Wayne State University in Detroit, Michigan. As President Clinton remarked of Simon when presenting him with the Kennedy Center honors, “He challenges us and himself never to take ourselves too seriously. Thank you for the wit and the wisdom.”

FRANK SINATRA

Born: December 12, 1915

Hoboken, New Jersey

Died: May 14, 1998

Los Angeles, California

American singer, actor, and performer

Frank Sinatra is one of the most popular singers in American history. As an actor, he appeared in fifty-eight films and won an Academy Award for his role in *From Here to Eternity*. His career started in the 1930s and continued into the 1990s.

Early years

Francis Albert Sinatra was born in Hoboken, New Jersey, on December 12, 1915, the only child of Italian immigrants Martin and Natalie “Dolly” Sinatra. His father was a firefighter for the city of Hoboken and his mother was an amateur singer who often sang at social events. Sinatra lived in a mainly Italian American working-class neighborhood. His first experience with music came when his uncle gave him a ukulele, and on hot summer nights he loved to go outside and sing while playing the instrument. His other interest was boxing. To protect himself in the tough neighborhood he grew up in, he became a competent boxer. In high school he was a generous but pugnacious (likely to fight) individual—the traits he would carry with him throughout his life.

Early in his life Sinatra knew he wanted to become a singer. His influences were Rudy Vallee (1901–1986) and Bing Crosby (1903–1977). He dropped out of high school and began to sing at small clubs. He got his first

Frank Sinatra.

Reproduced by permission of AP/Wide World Photos.

big break on the radio talent show *Major Bowes and his Amateur Hour* in 1935, singing in a group called the Hoboken Four. At this time Sinatra sang in various New Jersey nightclubs, hoping to attract the attention of “Swing Era” bandleaders. In 1939, he began working on radio station WNEW in New York City with bandleader Harry James for \$75 per week. That same year he married his longtime sweetheart, Nancy Barbato. They would eventually have three children.

The beginning of success

After seven months with Harry James, Sinatra joined Tommy Dorsey and his orches-

tra, causing his career to skyrocket. Dorsey’s orchestra was one of the most popular in the land, and it remained so with Sinatra singing with it from 1940 through 1942.

During that time, Sinatra performed with the band in his first two movies—*Las Vegas Nights* (1941) and *Ship Ahoy* (1942). He began his solo career at the end of 1942 and continued his meteoric (speedy and brilliant) rise.

Fans

The Swing Era lasted from 1935 through the end of World War II (1939–45; a war fought between the Axis Powers—Italy, Japan, and Germany—and the Allies—France, Great Britain, the Soviet Union, and the United States). Sinatra was by far the Swing Era’s best-known vocalist. His musical roots combined Tin Pan Alley (the song writing center of New York City) and Italian opera. Most important to him throughout his career would be his insistence on his own style and arrangements for whatever music he sang, thus producing his own unique phrasing of lyrics and melody lines.

Though Sinatra was exempted from military service in World War II because of a damaged eardrum, he helped the war effort with his appearances in movies and benefits for soldiers. He was also an outspoken supporter of Franklin D. Roosevelt (1882–1945) and liberal viewpoints, including racial and religious tolerance. He made many appearances to support charities.

Sinatra’s wide-shouldered suits and his bow ties were imitated by many men, but his most ardent followers were teenaged girls, nicknamed “bobby-soxers” for the ankle-high socks they wore. His widespread appeal

was further fueled by America's explosive mass media growth in newspapers, magazines, films, record players, and radio stations. Sinatra was the first singer to attract the kind of near hysteria that would later accompany live appearances by Elvis Presley (1935–1977) and the Beatles.

This type of excitement reached its peak in the Columbus Day riot of October 12, 1944. Thousands of his fans (mostly female) were denied entry into the already-packed Paramount Theater in New York City. They stormed the streets and vented their frustration by smashing nearby shop windows.

The 1950s

There were rumors that Sinatra was connected to the Mafia (organized crime). These stories arose mostly from his socializing with alleged Mafia kingpins (chiefs). He also received bad publicity about his noted barroom brawls (fights) with customers and reporters. The allegations of underworld activity were never proven, and no criminal charges were ever made.

In 1954 Sinatra appeared in the critically acclaimed film *From Here to Eternity* (1954). The role won him an Academy Award for best supporting actor. He appeared in nine films in just two years, including *Guys and Dolls* (1955), *Young At Heart* (1955), *The Tender Trap* (1955), *The Man With the Golden Arm* (1955), and *High Society* (1956). Sinatra was back on the record charts as well with "Young at Heart." Nelson Riddle became his musical arranger in the 1950s, and he helped Sinatra stay on the record charts throughout the rest of the decade. (In fact, Sinatra stayed on the charts steadily through 1967, in spite of rock and roll.) Sinatra did not just record singles.

He recorded albums around a central theme with a large collection of songs or ballads. From 1957 through 1966 he had twenty-seven Top Ten albums without producing one Top Ten single.

Sinatra's bobby-soxer fans were now adults and Sinatra had shifted smoothly to the role of the aging romantic bachelor. This was signified by the image of him leaning alone against a lamppost with a raincoat slung over one shoulder.

The 1960s

Sinatra's hits in the 1960s included "It Was a Very Good Year" and "Strangers in the Night" (1966). He reached the top of the singles charts in a duet, "Somethin' Stupid," with his daughter Nancy in 1967.

Sinatra continued to act in several movies in the 1960s, including *Ocean's 11* (1960), *The Manchurian Candidate* (1962), *Robin and the Seven Hoods* (1964), and *Tony Rome* (1967). Many critics felt several of these films had declined in artistic merit. Sinatra became known as part of a group of friends called the "Rat Pack." It included entertainers Dean Martin (1917–1995), Sammy Davis Jr. (1925–1990), Joey Bishop, and Peter Lawford.

"My Way"

After Sinatra's famous recording of "My Way" (1969), he made an ill-fated attempt to sing some of the lighter tunes of modern rock composers. This led to a brief retirement from entertainment (1971 through 1973). At this time he also shifted his politics from liberal to conservative. He had become a close friend of Ronald Reagan (1911–), helping him in his later successful presidential campaigns.

Sinatra's financial empire produced millions of dollars in earnings from investments in films, records, gambling casinos, real estate, missile parts, and general aviation. He came out of his retirement in 1974 with a renewed interest in older tunes. His return to the limelight was highlighted by his famous recording of "New York, New York" (1980) as he entered his sixth decade of entertaining.

In 1988 Sinatra, Sammy Davis Jr., and Dean Martin embarked on a cross-country tour. The tour lasted only one week. Sinatra later organized another reunion tour with Shirley MacLaine (1934–) in 1992 and it was an undeniable success.

By 1994 Sinatra was experiencing memory lapses, but that did not keep him from performing publicly. He merely added the use of a prompter (device that shows the words of a song) to remind him of the lyrics. After celebrating his eightieth birthday at a public tribute, new packages of recordings were released and became instant best-sellers. But Sinatra's health continued to deteriorate in the 1990s. On the evening of May 14, 1998, Sinatra died of a heart attack in Los Angeles, California.

The audiences who grew up with him and his music were complemented by adoration from younger generations. They have all made "Old Blue Eyes" one of the most outstanding popular singers of the twentieth century.

UPTON SINCLAIR

Born: September 20, 1878

Baltimore, Maryland

Died: November 25, 1968

Bound Brook, New Jersey

American writer

Upton Sinclair, American novelist and political writer, was one of the most important muckrakers (writers who search out and reveal improper conduct in politics and business) of the 1900s. His novel *The Jungle* helped improve working conditions in the meat-packing industry.

Early life and education

Upton Beale Sinclair Jr. was born in Baltimore, Maryland, on September 20, 1878. He was the only child of Upton Beall Sinclair and Priscilla Harden. His father worked at different times selling liquor, hats, and men's clothes. He also struggled with poverty and a drinking problem. Young Upton was a shy, thoughtful boy who taught himself to read at age five. The family moved to New York City when Upton was ten, and at fourteen he entered New York City College. He graduated in 1897 and

went to Columbia University to study law, but instead became more interested in politics and literature. He never earned a law degree. Through these years he supported himself by writing for adventure-story magazines. While attending Columbia he wrote eight thousand words a day. He also continued to read a great deal—over one two-week Christmas break he read all of William Shakespeare's (1564–1616) works as well as all of John Milton's (1608–1674) poetry.

Becomes involved in politics

Sinclair moved to Quebec, Canada, in 1900. That same year he married Meta Fuller, with whom he had a son. His first novel, *Springtime and Harvest* (1901), was a modest success. Three more novels in the next four years failed to provide even a bare living. Sinclair became a member of the Socialist Party in 1902, and he was a Socialist candidate for Congress from New Jersey in 1906. (Socialists believe in a system in which there is no private property and all people own the means of production, such as factories and farms, as a group.)

Also in 1906 Sinclair's *The Jungle*, a novel exposing unfair labor practices and unsanitary conditions in the meat-packing factories of Chicago, Illinois, was a huge success. Sinclair had spent seven weeks observing the operations of a meat-packing plant before writing the book. *The Jungle's* protest about the problems of laborers and the socialist solutions it proposed caused a public outcry. President Theodore Roosevelt (1858–1919) invited Sinclair to discuss packing-house conditions, and a congressional investigation led to the passage of the Pure Food and Drug Act.

Upton Sinclair.

Documents personal life

Sinclair divorced his first wife in 1913. The autobiographical (based on his own life) novel *Love's Pilgrimage* (1911) treats his marriage and the birth of his child with an honesty that shocked some reviewers. Sinclair married Mary Craig Kimbrough in 1913. *Sylvia* and *Sylvia's Marriage*, a massive two-part story, called for sexual enlightenment (freedom from ignorance and misinformation).

King Coal (1917), based on a coal strike of 1914 and 1915, returned to labor protest and socialistic comment. However, in 1917

Sinclair left the Socialist Party to support President Woodrow Wilson (1856–1924). He returned to the socialist camp when Wilson supported intervention in the Soviet Union. In California Sinclair ran on the Socialist ticket for Congress (1920), for the Senate (1922), and for governor (1926 and 1930).

Continues stirring things up

Sinclair continued his writings on political and reform issues. *Oil!* (1927) dealt with dishonesty in President Warren G. Harding's (1865–1923) administration. *Boston* (1928), a novel about the Sacco-Vanzetti case (in which two Italian men, believed by many to have been innocent, were convicted and executed for having committed a murder during a payroll robbery), brought to light much new material and demonstrated the constructive research that always lay beneath Sinclair's protest writings.

In 1933 Sinclair was persuaded to campaign seriously for governor of California. He called his program "End Poverty in California." His sensible presentation of Socialist ideas won him the Democratic nomination, but millions of dollars and a campaign based on lies and fear defeated him in the election.

World's End (1940) launched Sinclair's eleven-volume novel series that attempted to give an insider's view of the U.S. government between 1913 and 1949. One of the novels, *Dragon's Teeth* (1942), a study of the rise of Nazism (a German political movement of the 1930s whose followers scorned democracy and favored the destruction of all "inferior" non-Germans, especially Jewish people), won the Pulitzer Prize. Before his death on

November 25, 1968, Sinclair had produced more than ninety books that earned at least \$1 million, most of it contributed to socialist and reform causes.

ISAAC BASHEVIS SINGER

Born: July 14, 1904

Radzymin, Poland

Died: July 24, 1991

Miami, Florida

Polish-born American author

Isaac Bashevis Singer, a Polish-American author, was admired for his recreation of the forgotten world of nineteenth-century Poland and his depiction of a timeless Jewish ghetto (a city neighborhood where a minority group lives).

Early life

Isaac Bashevis Singer was born on July 14, 1904, in Radzymin, Poland. His family

moved to Warsaw, Poland, when he was four years old. Both of his grandfathers were rabbis (Jewish spiritual leaders), and Singer was also groomed for Hasidism, a strict spiritual practice, and attended a seminary (a school to train rabbis). However, he decided on a writing career. His older brother, Israel Joseph, was a well-known Yiddish (a language spoken by Jewish people in eastern Europe) writer. Growing up, Singer was impressed by the Jewish folk tales told by his parents. These tales set the groundwork for some of Singer's fictional characters and religious faith.

After Singer completed his seminary studies, he worked as a journalist for the Yiddish press in various parts of Poland. Moving to the United States in 1935, Singer became a reporter for the *Daily Forward* in New York City, America's largest Yiddish newspaper. Although he personally adapted to his new habitat, his early literary efforts display an appreciation for the "old country." The subjects seem part of a distant past remembered from vivid tales of Polish storytellers.

First works

Singer's first novel, *The Family Moskat* (1950), was likened by critics to the narratives of the Russian writer Ivan Turgenev (1818–1883) and the French writer Honoré de Balzac (1799–1850). Based on Singer's own family, the novel succeeds in translating the reality of an orthodox (traditional) Jewish home into a universal reality. Two short stories, "Satan in Goray" and "The Dybbuk and the Golem" (1955), treat the superstition and foolishness of eastern European peasants (people from the lower,

Isaac Bashevis Singer.

Reproduced by permission of Mr. Jerry Bauer.

working class). A collection of short narratives, *Gimpel, the Fool, and Other Stories* (1957), reworked earlier themes but skillfully avoided repetition. Beneath the grotesque and folk elements, Singer included in "Gimpel" a psychological-theological (religious) moral conflict in which an uncomplicated man finds his existence threatened by black magic and sorcery (powers from evil spirits).

Modern man is the subject of Singer's novel *The Magician of Lublin* (1960), which portrays a protagonist (main character) who dares to violate the holiness of tradition. The

novel lacks the superb intricacy of *The Family Moskat* and the haunting suspense of "Gimpel." Still grappling with the modern experience in his next work, Singer set the eleven short pieces of *The Spinoza of Market Street* (1961) in a ghetto after World War II (1939–45; a war in which the United States, Great Britain, France, and the Soviet Union fought against Germany, Japan, and Italy). Having departed from his quaintly unsophisticated world into contemporary urban madness, Singer revealed the stylistic limitations of his simple, flowing writings. "I've always stayed in my same nook, my same corner," Singer once reflected. "If a writer ventures out of his corner he is nothing."

Later work

Singer's *The Slave* (1962), an epic about seventeenth-century Poland, recounts the brutal world of Russian Cossacks (peasant soldiers in the Ukraine) through the eyes of an enslaved, sensitive Jew; yet somehow the work appeals to modern sensibilities. Once again Singer's flawless writing recaptures a timeless folk element. When a collection of scenes filled with memories of Singer's childhood in the Warsaw ghetto (an extremely poor neighborhood), *A Day of Pleasure: Stories of a Boy Growing Up in Warsaw* (1969), won the National Book Award for children's literature, Singer remarked that he wrote for young people because "they still believe in God, the family, angels, devils, witches, goblins, and other such obsolete stuff." *A Friend of Kafka*, a collection of short fiction, appeared in 1970.

Recipient of numerous other literary awards, Singer remained an active journalist

and critic for the *Daily Forward*. He always wrote in Yiddish and then worked closely with his English translators (people who change text from one language to another) because of the difficulty in finding equivalents for his subtle writings. His "simple" and "unchanging" fictions have gained in popularity with a new generation possessing a taste for an obscure and sometimes grotesque past which seems more real than an unclear future, for his stories capture the essence of the human condition.

Singer received numerous awards throughout the latter portion of his life. Some of the more noted include Nobel Prize in literature (1978) and the Gold Medal for Fiction (1989). Singer continued to publish new material until his death in 1991.

BESSIE SMITH

Born: April 15, 1894

Chattanooga, Tennessee

Died: September 26, 1937

Clarksdale, Mississippi

African American singer

The African American singer Bessie Smith was called “The Empress of the Blues.” Her magnificent voice, sense of the dramatic, clarity of diction (one never missed a word of what she sang), and incomparable time and phrasing set her apart from the competition and made her appeal as much to jazz lovers as to blues lovers.

Early years

Bessie Smith was born into poverty in Chattanooga, Tennessee, one of seven children of William and Laura Smith. Her father was a Baptist minister and a laborer. Her father died soon after her birth and her mother and two of her brothers died by the time she was eight or nine. An unmarried aunt raised her and her siblings. Smith realized that she had an unusual voice and sang for money on street corners at an early age, accompanied on guitar by Andrew, her younger brother.

At age eighteen Bessie worked with the Moses Stokes traveling minstrel show, and later with the Rabbit Foot Minstrels under Gertrude “Ma” Rainey. The minstrel show (a show based on African American music and humor) circuit was a difficult life. Late hours, low pay, gambling, fighting, and abusing alcohol and drugs were commonplace. But

Smith’s voice was remarkable, filling the largest hall without amplification (the expansion of sound) and reaching out to each listener in beautiful, earthy tones.

In 1920 Mamie Smith (no relation to Bessie Smith) recorded the first vocal blues record and sold one hundred thousand copies in the first month. Record executives realized they had a new market and the “race record” was born. These records were shipped only to the South and selected areas of the North where African American people congregated. Bessie Smith produced “Down-Hearted Blues” and “Gulf Coast Blues” in February 1923. An astounding 780 thousand copies sold within six months.

Recorded with the jazz elite

In 1923 Smith’s big break came when she was discovered by Columbia Records. Frank Walker handled her recording contract from 1923 through 1931 and helped launch her successful career of 160 titles.

Smith purchased a custom-designed railroad car for herself and her troupe in 1925. This allowed her to bypass some of the dispiriting (negative) effects of the racism found in both northern and southern states. She traveled with her own tent show or with the Theater Owners’ Booking Association (TOBA) shows, commanding a weekly salary that peaked at two thousand dollars.

Smith recorded with a variety of accompanists during her ten-year recording career. They included pianists Fred Longshaw, Porter Grainger, and Fletcher Henderson; saxophonists Coleman Hawkins and Sidney Bechet; trombonist Charlie Green; clarinetists Buster Bailey and Don Redman; and cornetist

Bessie Smith.

Reproduced by permission of the Corbis Corporation.

Joe Smith. With Louis Armstrong (1900–1971) she recorded “St. Louis Blues,” “Cold in Hand Blues,” “Careless Love Blues,” “Nashville Woman’s Blues,” and “I Ain’t Gonna Play No Second Fiddle.”

Singing the blues

As the popularity of Smith’s records grew, her touring schedule grew. As she traveled from her home base of Philadelphia, Pennsylvania, throughout the United States, adoring crowds greeted her at each stop. In spite of Smith’s commercial success, her personal life was very similar to the blues she sang. Her marriage to Jack Gee was stormy

and ended in a bitter separation in 1929. Smith was also struggling to battle liquor.

Smith’s popularity as a recording artist crested around 1929. Then the combination of radio, talking pictures, and the Great Depression (1929–39; a period of severe economic downfall resulting in the loss of jobs for millions) undermined the entire recording industry. The price she could demand dipped and she was forced to sell her railroad car. The smaller towns she played housed theaters of lesser quality. Even so she starred in a 1929 two-reel film, *St. Louis Blues*, a semiautobiographical effort that received some exposure through 1932.

Smith’s lean years ended in 1937, as the recording industry again soared on the craziness of the early Swing Era, spearheaded by the success of Benny Goodman’s (1909–1986) band. Smith had proven adaptable throughout her career and could certainly swing with the best of them. Also, blues singing was experiencing a revival in popular taste.

Tragedy

On the morning of September 26, 1937, Smith and her close friend Richard Morgan were driving from a Memphis performance to Darling, Mississippi, for the next day’s show. Near Clarksdale, Mississippi, their car was involved in an accident resulting in Bessie Smith’s death.

It was estimated that over ten thousand adoring fans attended the funeral of the blues singer who had become the largest-selling recording artist of her day. In *Early Jazz*, Gunther Schuller heralded Smith as “the first complete jazz singer” whose influence on the

legendary Billie Holiday (1915–1959) and a whole generation of jazz singers cannot be overestimated.

SOCRATES

Born: c. 469 B.C.E.

Died: c. 399 B.C.E.

Athens, Greece

Greek philosopher and logician

The Greek philosopher and logician (one who studies logic or reason) Socrates was an important influence on Plato (427–347 B.C.E.) and had a major effect on ancient philosophy.

Early life

Socrates was the son of Sophroniscus, an Athenian stone mason and sculptor. He learned his father's craft and apparently practiced it for many years. He participated in the

Peloponnesian War (431–04 B.C.E.) when Athens was crushed by the Spartans, and he distinguished himself for his courage. Details of his early life are scarce, although he appears to have had no more than an ordinary Greek education before devoting his time almost completely to intellectual interests. He did, however, take a keen interest in the works of the natural philosophers, and Plato records the fact that Socrates met Zeno of Elea (c. 495–430 B.C.E.) and Parmenides (born c. 515 B.C.E.) on their trip to Athens, which probably took place about 450 B.C.E.

Socrates himself wrote nothing, therefore evidence of his life and activities must come from the writings of Plato and Xenophon (c. 431–352 B.C.E.). It is likely that neither of these presents a completely accurate picture of him, but Plato's *Apology*, *Crito*, *Phaedo*, and *Symposium* contain details which must be close to fact.

From the *Apology* we learn that Socrates was well known around Athens; uncritical thinkers linked him with the rest of the Sophists (a philosophical school); he fought in at least three military campaigns for the city; and he attracted to his circle large numbers of young men who delighted in seeing their elders proved false by Socrates. His courage in military campaigns is described by Alcibiades (c. 450–404 B.C.E.) in the *Symposium*.

In addition to stories about Socrates's strange character, the *Symposium* provides details regarding his physical appearance. He was short, quite the opposite of what was considered graceful and beautiful in the Athens of his time. He was also poor and had only the barest necessities of life. Socrates's physical ugliness did not stop his appeal.

Socrates.

Reproduced by permission of the Corbis Corporation.

His thought

There was a strong religious side to Socrates's character and thought which constantly revealed itself in spite of his criticism of Greek myths. His words and actions in the *Apology*, *Crito*, *Phaedo*, and *Symposium* reveal a deep respect for Athenian religious customs and a sincere regard for divinity (gods). Indeed, it was a divine voice which Socrates claimed to hear within himself on important occasions in his life. It was not a voice which gave him positive instructions, but instead warned him when he was about to go off course. He recounts, in his defense before the Athenian court, the story of his friend

Chaerephon, who was told by the Delphic Oracle (a person regarded as wise counsel) that Socrates was the wisest of men. That statement puzzled Socrates, he says, for no one was more aware of the extent of his own ignorance than he himself, but he determined to see the truth of the god's words. After questioning those who had a reputation for wisdom and who considered themselves, wise, he concluded that he was wiser than they because he could recognize his ignorance while they, who were equally ignorant, thought themselves wise.

Socrates was famous for his method of argumentation (a system or process used for arguing or debate) and his works often made as many enemies as admirers within Athens. An example comes from the *Apology*. Meletus had accused Socrates of corrupting the youth, or ruining the youth's morality. Socrates begins by asking if Meletus considers the improvement of youth important. He replies that he does, whereupon Socrates asks who is capable of improving the young. The laws, says Meletus, and Socrates asks him to name a person who knows the laws. Meletus responds that the judges there present know the laws, whereupon Socrates asks if all who are present are able to instruct and improve youth or whether only a few can. Meletus replies that all of them are capable of such a task, which forces Meletus to confess that other groups of Athenians, such as the Senate and the Assembly, and indeed all Athenians are capable of instructing and improving the youth. All except Socrates, that is. Socrates then starts a similar set of questions regarding the instruction and improvement of horses and other animals. Is it true that all men are capable of training horses, or only those men with special qualifications and experience?

Meletus, realizing the absurdity of his position, does not answer, but Socrates answers for him and says that if he does not care enough about the youth of Athens to have given adequate thought to who might instruct and improve them, he has no right to accuse Socrates of corrupting them.

Thus the Socratic method of argumentation begins with commonplace questions which lead the opponent to believe that the questioner is simple, but ends in a complete reversal. Thus his chief contributions lie not in the construction of an elaborate system but in clearing away the false common beliefs and in leading men to an awareness of their own ignorance, from which position they may begin to discover the truth. It was his unique combination of dialectical (having to do with using logic and reasoning in an argument or discussion) skill and magnetic attractiveness to the youth of Athens which gave his opponents their opportunity to bring him to trial in 399 B.C.E.

His death

Meletus, Lycon, and Anytus charged Socrates with impiety (being unreligious) and with corrupting the youth of the city. Since defense speeches were made by the principals in Athenian legal practice, Socrates spoke in his own behalf and his defense speech was a sure sign that he was not going to give in. After taking up the charges and showing how they were false, he proposed that the city should honor him as it did Olympic victors. He was convicted and sentenced to death. Plato's *Crito* tells of Crito's attempts to persuade Socrates to flee the prison (Crito had bribed [exchanged money for favors] the jailer, as was customary), but

Socrates, in a dialogue between himself and the Laws of Athens, reveals his devotion to the city and his obligation to obey its laws even if they lead to his death. In the *Phaedo*, Plato recounts Socrates's discussion of the immortality of the soul; and at the end of that dialogue, one of the most moving and dramatic scenes in ancient literature, Socrates takes the hemlock (poison) prepared for him while his friends sit helplessly by. He died reminding Crito that he owes a rooster to Aesculapius.

Socrates was the most colorful figure in the history of ancient philosophy. His fame was widespread in his own time, and his name soon became a household word although he professed no extraordinary wisdom, constructed no philosophical system, established no school, and founded no sect (following). His influence on the course of ancient philosophy, through Plato, the Cynics, and less directly, Aristotle, is immeasurable.

STEPHEN SONDHEIM

Born: March 22, 1930

New York, New York

American composer

Stephen Sondheim redefined the Broadway musical form with his creative and award winning productions. He continues to be a major force in the shaping of the musical theater.

Early years

Stephen Sondheim was born on March 22, 1930, to upper-middle-class parents, Herbert and Janet Sondheim. His father was a dress manufacturer and his mother was a fashion designer and interior decorator. He studied piano for two years while very young and continued his interest in the musical stage throughout his education.

Sondheim's parents divorced in 1942 and his mother took up residence in Doylestown, Pennsylvania, which was near the summertime residence of Oscar Hammerstein II (1895–1960). As a friend of Hammerstein's son, Sondheim was able to ask the famous librettist (a person who writes the words for a musical or opera) for an evaluation of his first stage work, a high school production produced at the age of fifteen.

Hammerstein's critical evaluation of *By George* began the four-year relationship that was decisive in formulating the young Sondheim's style. Sondheim became Hammerstein's personal assistant and gained entry into the world of professional theater.

While attending Williams College in Massachusetts, Sondheim performed duties in the preparation and rehearsals of the Rogers and Hammerstein productions of *South Pacific* and *The King and I*. Upon graduation he won the Hutchinson Prize, which enabled him to study composition at Princeton University.

Early successes

Sondheim began his professional career in television by writing scripts for the *Topper* and *The Last Word* series. He also composed incidental music (minor pieces used as background or between scenes) for the Broadway musical *Girls of Summer*.

Shortly after that Sondheim made the acquaintance of Arthur Laurents, who introduced him to Jerome Robbins and Leonard Bernstein (1918–1990) as the possible songwriter for *West Side Story*, which was produced in 1957. The young man found himself involved in one of the most successful shows ever produced on Broadway. However, in an interview Sondheim gave to National Public Radio (NPR) in 2002, he said that, in spite of the success of *West Side Story*, he is embarrassed by the lyrics he wrote for the show because of their lack of artistic merit.

Sondheim followed this success by working on the Broadway production of *Gypsy* in 1959, distinguishing himself as one of the great young talents in American musical theater.

Sondheim, intent on broadening his talents, sought productions where he could use his musical as well as lyrical expertise. He produced *A Funny Thing Happened on the Way to the Forum* in 1962, a farce (broad and unsophisticated humor) based on the plays

of Plautus (c. 254–184 B.C.E.). The show had an impressive run of almost one thousand performances, won the Tony Award for Best Musical, and was made into a successful film in 1966. Sondheim followed with two less successful ventures: *Anyone Can Whistle* (1964) and *Do I Hear a Waltz* (1965). Although both failed commercially, Sondheim contributed songs of high quality.

Develops his own musicals

In 1970 Sondheim produced *Company*, which once again won him unanimous (an agreement by all) praise from the critics. The production was awarded the Drama Critics and Tony Award for Best Musical of the season, and Sondheim received awards for the best composer (writer of music) and best lyricist (song-writer). One critic commented that *Company* “is absolutely first rate . . . the freshest . . . in years. . . This is a wonderful musical score, the one that Broadway has long needed.”

The following year Sondheim produced *Follies*, a retrospective (a look back) musical about the Ziegfield Follies, large Broadway productions of the 1920s. The composer blended the nostalgia (sentimental feelings for the past) of popular songs of the past with his own style of sentimental ballad. He was awarded both the Drama Critics and Outer Critics Circle Awards for Best Musical of 1971.

In *A Little Night Music* (1973) Sondheim exposed his strong background in classical music. Critics were reminded of several classical composers: Gustav Mahler (1860–1911), Maurice Ravel (1875–1937), Franz Liszt (1811–1886), and Sergey Rachmaninoff (1873–1943). The musical won the Tony Award and included his first commercial hit song, “Send in the Clowns.”

Stephen Sondheim.

Reproduced by permission of AP/Wide World Photos.

Noted as a relentless (untiring, unwilling to stop) innovator, Sondheim worked with Hal Prince on *Pacific Overtures* (1976). In an attempt to relate the westernization of Japan with the commercialized present, Sondheim fused the unlikely elements of Haiku poetry (unrhymed verse of three lines that are made up of seventeen syllables), Japanese pentatonic scales (musical scales made up of only five notes), and Kabuki theater (a form of traditional classical Japanese drama) with modern stage techniques in a production that was hailed as a successful Broadway hit. It was followed by *Sweeney Todd* (1979), the melodramatic story of the barber of Fleet Street (Lon-

don) who conspired with the neighborhood baker to supply her with enough barbershop victims for her meat pies. Less funny than tragic, *Sweeney Todd* explored the dark side of the nineteenth-century English social system.

Artistic approach

Sondheim's talent derives from his ability to cross different types of music and theater, thus offering Broadway audiences works of remarkable craft. He deals with unexpected subjects that challenge and test the form of the American musical. Sondheim explores issues of contemporary life: marriage and relationships in *Company*; madness and the human condition in *Anyone Can Whistle*; nostalgia and sentiment in *Follies*; Western imperialism (extension of power) in *Pacific Overtures*; and injustice and revenge in *Sweeney Todd*.

Sondheim avoids filler, or needless content, in his lyrics. He concentrates on direct impact through verbal interplay. His lyrics are witty without ever sacrificing honesty for superficially (shallow and unimportant) clever rhyme. Similarly, he maintains his musical individuality even while operating in the adopted Eastern musical style of *Pacific Overtures*. Sondheim's consistent ability to merge words and music that hint at the deeper personality of his characters distinguishes him as a composer of rare ingenuity (clever at inventing) and talent.

Side by Side by Sondheim, a musical tribute to the artist, was successfully produced in 1976. Sondheim's later works included the film score for *Reds* (1981) and *Sunday in the Park with George* (1984), which won a 1985 Pulitzer Prize. *Into the Woods* was another musical hit on Broadway in 1987.

In recent years many of Sondheim's earlier projects have been reproduced and have enjoyed success in cities in the United States and in Europe. Sondheim's first musical *Front Porch in Flatbush*, which first opened in 1955 on Broadway, was put on in Chicago, Illinois, in 1999. In 2001 *Follies*, a musical that had not been on Broadway since opening in 1971, returned to the New York theater district. In 2000 Sondheim won the best new musical award from the twenty-fifth annual Laurence Olivier Awards for *Merrily We Roll Along*. The show had first opened in 1981 on Broadway but was new to London, England. Sondheim's musicals have thus stood the test of time, as they continue to entertain theatergoers worldwide.

SOPHOCLES

Born: c. 496 B.C.E.
Colonus, Greece
Died: 406 B.C.E.
Athens, Greece
Greek dramatist

The Greek playwright Sophocles was responsible for several improvements in the presentation of drama. His tragedies (plays in which characters suffer because of their actions and usually die) rank him among the greatest Greek classical dramatists.

Sophocles's background

The son of Sophilus, the owner of a successful weapons factory, Sophocles was born c. 496 B.C.E. in Colonus near Athens, Greece. He grew up during the most brilliant intellectual period of Athens. Sophocles won awards while in school for music and wrestling, and because of his constant activity he was known as the "Attic Bee." His music teacher was Lamprus, a famous composer. Tradition says that because of his beauty and talent, Sophocles was chosen to lead the male chorus at the celebration of the Greek victory over the Persians at Salamis.

In 468 B.C.E. Sophocles defeated the famous playwright Aeschylus (525–456 B.C.E.) in one of the drama contests common at the time. He gained first prize more than any other Greek dramatist. He was also known for being friendly and popular. From 443 to 442 B.C.E. he served the Athenian empire as imperial treasurer, and he was elected general at least twice. His religious activities included service as a priest, and he turned over his house for the worship of Asclepius (the Greek god of medicine) until a proper temple could be built. For this he was honored with the title *Dexion* as a hero after his death. Sophocles had two sons, Iophon and Sophocles, by his first wife, Nicostrata. He had a third son, Ariston, by his second wife, Theoris.

Style and contributions to theater

Of the approximately 125 tragedies that Sophocles is said to have written, only 7 have survived. According to the Greek biographer Plutarch (46–119), there were three periods in Sophocles's development as a writer: imitation of the style of Aeschylus, use of an artificial style, and use of a style that is most expressive of character. The existing plays are from the last period. While the works of Aeschylus deal with the relationship between man and the gods, the works of Sophocles deal with how characters react under stress (mental pressure). Sophocles's heroes are usually subjected to a series of tests that they must overcome.

Sophocles is credited with increasing the number of actors with speaking parts in a play from two to three. He raised the number of chorus members from twelve to fifteen and developed the use of painted scenery. He also abandoned the practice of presenting tragedies as trilogies (series of three works) by instead presenting three plays with different subjects. This led to faster development of characters. Sophocles's songs are also considered to be beautifully structured.

Plays

The dates of Sophocles's seven known plays are not all certain. In *Ajax* (447 B.C.E.) the hero, described as second only to Achilles, is humiliated (reduced to a lower position in the eyes of others) by Agamemnon and Menelaus when they award the arms of Achilles to Odysseus. Ajax vows revenge on the Greek commanders as well as on Odysseus. Except, the goddess Athena makes him believe he is attacking the Greeks when he is in fact attacking sheep. When he realizes what he has done, he is so upset that he com-

Sophocles.

mits suicide. He is given a proper burial only after Odysseus steps in to make it possible.

The title character in *Antigone* (442–441 B.C.E.) is a young princess whose uncle, King Creon, has forbid her to bury her brother Polyneices. Her brother, in attempting to seize the throne from his brother Eteocles, killed Eteocles in a fight and also died himself. *Antigone* has been interpreted as showing the conflict between devotion to family and devotion to the state. In *Trachiniae* (437–432 B.C.E.) Heracles's wife, Deianira, worries about the fifteen-month absence of her husband. Deianira sends him a poisoned robe that she believes has magical powers to restore lost love. Her

son, Hyllus, and her husband denounce her before dying, and she commits suicide. In this play Sophocles describes the difficult situation of the person who, without meaning to, hurts those whom he or she loves.

Oedipus Rex (429 B.C.E.), which many have considered the greatest play of all time, is not about sex or murder, but man's ability to survive almost unbearable suffering. The worst of all things happens to Oedipus: unknowingly he kills his own father, Laius, and is given his own mother, Jocasta, in marriage after he slays the Sphinx. When a plague (a bacteria-caused disease that spreads quickly and can cause death) at Thebes forces him to consult an oracle (a person through whom a god is believed to speak), he finds that he himself is the cause of the plague. Sophocles brings up the question of justice—why is there evil in the world, and why does the man who is basically good suffer? The answer is found in the idea of *dike*—balance, order, justice. The world is orderly and follows natural laws. No matter how good or how well-meaning man may be, if he breaks a natural law, he will be punished and he will suffer.

Later works

Electra (418–414 B.C.E.) is Sophocles's only play whose theme is similar to those of the works of Aeschylus (*Libation Bearers*) and Euripides (484–406 B.C.E.; *Electra*). Again Sophocles concentrates on a character under stress: a worried Electra, anxiously awaiting the return of her avenging brother, Orestes. In *Philoctetes* (409 B.C.E.) Odysseus is sent with young Neoptolemus, the son of Achilles, to the island of Lemnos to bring back Philoctetes with his bow and arrows to help capture Troy. Neoptolemus has second thoughts and

**STEVEN
SPIELBERG**

refuses to deceive the old man. *Philoctetes* clearly shows how man and society can come into conflict and how society can toss aside an individual when it does not need him.

Oedipus at Colonus (401 B.C.E.), produced after Sophocles's death, is the longest of his dramas. It brings to a conclusion his concern with the Oedipus theme. Exiled by Creon, Oedipus becomes a wandering beggar accompanied by his daughter Antigone. He stumbles into a sacred grove at Colonus and asks that Theseus be summoned. Theseus arrives and promises him protection, but Creon tries to remove Oedipus. Theseus comes to the rescue and foils Creon. The arrival of his son Polyneices angers Oedipus, who curses him. Oedipus soon senses his impending death and allows only Theseus to witness the event by which he is changed into a hero and a saint.

"Many are the wonders of the world," says Sophocles in *Antigone*, "but none is more wonderful than man." Sophocles's interest in human welfare is best shown in this famous quotation. Man is able to overcome all kinds of obstacles and is able to be inventive and creative, but he is mortal and therefore limited. Suffering is simply part of the nature of things, but learning can be gained from it, and through suffering man can achieve dignity.

American film director

Steven Spielberg is one of the wealthiest and most powerful moviemakers in Hollywood. The director of such elaborate fantasies as *Close Encounters of the Third Kind* and *E.T.: The Extra-Terrestrial*, he is regarded as a man who understands the pulse of America as it would like to see itself.

Early years

Steven Spielberg was born in Cincinnati, Ohio, on December 18, 1947. He was the oldest and the only son of four children. His father, Arnold, was an electrical engineer who worked in what was then the newly emerging field of computers. His mother, Leah, had been a concert pianist.

Steven's mother and three sisters doted on (gave a great deal of attention, spoiled) him. He was indulged throughout his childhood at home, but he was not treated the same way at school. He displayed little enthusiasm for his studies and made average grades at best. The Spielbergs moved frequently because of the father's job. They moved to New Jersey, suburban Phoenix, Arizona, and finally to what would be known as "Silicon Valley" near San Jose, California.

The young filmmaker

The first film that Spielberg recalled seeing in a movie theater was *The Greatest Show*

Steven Spielberg.

on *Earth*, a spectacular 1952 circus epic directed by Cecil B. De Mille (1881–1959). As a child, Spielberg began using his family's home movie camera. He started recording camping trips and other family events but soon grew dissatisfied with them. He began to film narrative movies and attempted to set up shots with different angles and primitive special effects. By the time he was twelve years old he actually filmed a movie from a script using a cast of actors. He grew increasingly ambitious and continued to make movies from then on.

When Spielberg was sixteen, he filmed a feature-length science fiction movie, which

he entitled *Firelight*. This movie was over two hours long and had a complex plot about an encounter with some aliens. His father rented a local movie theater to show the film. In one night it made back the \$500 it cost to film it.

Spielberg's poor grades in high school prevented him from entering the University of Southern California (UCLA), but he was accepted at California State College at Long Beach. He graduated in 1970 with a bachelor's degree in English. Because California State had no formal film program, he frequently went to the movies and saw every film that he could. He also cajoled (flattered and manipulated) his way past the guards at Universal Studios and watched major projects being filmed.

Spielberg continued to make films and prepared a short subject film, *Amblin'*, which he later entered in the 1969 Atlanta Film Festival. It also won an award at the Venice Film Festival, and got him a seven-year contract at the studio whose gates he used to crash—Universal. Studio executives had been so impressed with *Amblin'*, a simple story about a boy and girl who hitchhike from the Mojave Desert to the ocean, that they released it with *Love Story*, a major hit of 1970. Today Spielberg uses the name “Amblin” for his own production company.

Early successes

Spielberg began his career as a professional by directing several episodes of television programs that were being shot at Universal. Included in his work at this time were episodes of *Marcus Welby, M.D.* and *Columbo*.

The first movie that Spielberg directed professionally was a made-for-television

movie named *Duel*. It was about a deadly battle of wits between an ordinary man driving a car and a crazed driver of an eighteen-wheeler truck. It was generally regarded as one of the greatest movies ever made for U.S. television. It was released in movie theaters in Europe and Japan as a feature film. It took sixteen days to make and had only cost \$350,000 to produce. Its release overseas earned over \$5 million and the film earned many awards.

Spielberg was offered many scripts to film after that, but he was not impressed by the quality of the properties that he was offered. He withdrew from the studio mainstream for a year in order to develop a project of his own.

Directing what he wanted

What Spielberg came up with was *The Sugarland Express*, a drama about a woman who browbeats (forcefully convinces) her husband into breaking out of jail to kidnap their baby from its foster parents. A spectacular car chase happens after the couple steals a police cruiser. The film was a critical success but a commercial failure. Nonetheless, it led to the breakthrough film of Spielberg's career, the spectacularly successful *Jaws* (1975).

Despite bringing in *Jaws* at 100 percent over its \$3.5 million budget, Spielberg became Hollywood's favorite director of the moment when the film grossed over \$60 million in its first month. The film was as popular with critics as with the public. Spielberg was now in a position to do whatever he wanted. He embarked on a film whose subject had obsessed him since his childhood.

Science fiction and beyond

Close Encounters of the Third Kind (1977) was perhaps Spielberg's most personal film. It dealt with the heroic efforts of average middle-class Americans to make contact with visitors from another planet. For all of its staggering special effects, its power derived from its exploration of what people will do when they find that they have the opportunity to make their dreams come true.

The "Indiana Jones" trilogy (1981–1989), *E.T.: The Extra-Terrestrial* (1982), and *The Color Purple* (1985) are examples of Spielberg at his best and worst. The "Indiana Jones" pictures mixed a loving affection for old-time movie serials with a contemporary sensibility. However, the high level of gore and violence in the second installment of the series, *Indiana Jones and the Temple of Doom* (1984), led to the creation of a new rating code, "PG-13," which cautions parents to the presence of violence, language, and nudity—but at a level or an intensity that is lower than that found in an R-Rated movie.

E.T. (1982) swept the nation, and its catchphrase, "Phone home!," was heard around the world. Another film, *The Color Purple* (1985), received mixed response. Spielberg was accused of patronizing (treating in a lowly manner; looking down upon) African Americans and prettifying rural Southern poverty. Others praised the movie; in fact, it received multiple awards and award nominations.

Spielberg was a great favorite among his fellow directors, such as George Lucas (1944–) and John Landis (1950–). He stood by the latter when he was implicated in the deaths of three cast members of *Twilight Zone: The Movie*, a film which Spielberg also

worked on. In 1991 Spielberg directed a big-budget movie about Peter Pan called *Hook*.

As Spielberg continued to direct and produce he grew more and more powerful. He was able to make any film that he wanted and seemed totally uninterested in pleasing the public or the critics.

Continued success

Spielberg's 1993 mega-hit *Jurassic Park* was the subject of one of the longest and most intensive pre-release publicity campaigns in film history. It was about a present day theme park that featured genetically engineered dinosaurs as the main attraction. The movie was a box office and home theater success. Spielberg released the sequel entitled *The Lost World: Jurassic Park* in 1997.

Perhaps the most poignant (emotionally moving) of Spielberg's movies was the critically acclaimed *Schindler's List* (1993), which was filmed in black and white. It was a fictionalized account of real life instances in which German businessman Oskar Schindler (1908–1974) saved the lives of thousands of Jews who worked in his factory during World War II (1939–45; a war fought between the Axis Powers of Germany, Italy, Japan and the Allies of Great Britain, France, the Soviet Union, and the United States). The picture won the 1993 Best Picture Academy Award and Spielberg won Best Director. In 1999 he won both the Golden Globe and the Academy Award for Best Director for his work on the movie *Saving Private Ryan*.

Spielberg married actress Amy Irving in 1985. They had one son, Max, before a divorce. He later married Kate Capshaw in 1991, and they have five children.

Spielberg has won many awards both in the United States and abroad not only for his films, but also for his work supporting human rights and social justice. He continues to be one of the most powerful film directors and producers in the world.

BENJAMIN SPOCK

Born: May 2, 1903

New Haven, Connecticut

Died: March 15, 1998

La Jolla, California

American pediatrician and political activist

Benjamin Spock, pediatrician (doctor who treats children) and political activist, was most noted for his book *Baby and Child Care*, which significantly changed widely held attitudes toward the raising of infants and children.

Youth and education

Benjamin McLane Spock was born on May 2, 1903, in New Haven, Connecticut, the oldest child in a large, strict New England family. His family was so strict that in his eighty-second year he would still be saying, “I love to dance in order to liberate myself from my puritanical [strict and conservative] upbringing.” He was educated at private preparatory schools when he was young and attended Yale from 1921 to 1925, majoring in English literature. He was also a member of the rowing crew that represented the United States in the 1924 Olympic Games in Paris, France. Spock began medical school at Yale in 1925 but transferred to Columbia University’s College of Physicians and Surgeons in 1927. By this time he had married Jane Davenport Cheney.

Spock had decided well before starting his medical studies that he would “work with children, who have their whole lives ahead of them.” He believed that pediatricians of the time were focusing too much on the physical side of child development, so he learned psychiatry (medicine focusing on the mind) as well.

Baby and Child Care

Between 1933 and 1944 Spock practiced pediatric (specializing in children) medicine. At the same time he taught pediatrics at Cornell Medical College and consulted (advised) in pediatric psychiatry for the New York City Health Department. On a summer vacation in 1943 he began to write his most famous book, *Baby and Child Care*. He continued to work on it from 1944 to 1946 while serving as a medical officer in the navy.

Benjamin Spock.
Courtesy of the Library of Congress.

Many early baby-care books said to feed infants on a strict schedule and not to pick them up when they cried. Spock’s book broke with the strict tone and rigorous instructions found in earlier generations of baby-care books. Spock told his readers, “You know more than you think you do. . . . Don’t be afraid to trust your own common sense. . . . Take it easy, trust your own instincts, and follow the directions that your doctor gives you.” The response was overwhelming. At that time *Baby and Child Care* became America’s all-time best-seller except for William Shakespeare’s (1564–1616) works and the Bible. By 1976 it had also passed Shakespeare.

After Spock's discharge from the navy, he became associated with the famous Mayo Clinic (1947–1951). He then became a professor of child development at the University of Pittsburgh (1951–1955) and at Case Western Reserve (1955–1967).

Becomes politically active

Spock's political activism began during this period, growing logically out of his concern for children. A healthy environment for growing children, he believed, included a radiation-free atmosphere to breathe. In 1962 he became cochairman of SANE, an organization dedicated to stopping nuclear bomb tests in the Earth's atmosphere.

The following year Spock campaigned for Medicare, a government program to help older citizens. He angered the American Medical Association, many of whose members were already suspicious of a colleague who wrote advice columns for the *Ladies Home Journal* and *Redbook* instead of writing technical articles for the medical journals.

Spock was an early opponent of the Vietnam War (1955–75; a conflict fought in Vietnam when Communist North Vietnam invaded democratic South Vietnam). As the war escalated (grew), so did antiwar protest, in which Spock participated energetically. He marched and demonstrated with young people who had not yet been born when he had begun his medical career.

Spock's political opponents accused him of teaching "permissiveness" in *Baby and Child Care*. They claimed an entire generation of American youth had been raised and ruined. Without success Spock pointed out that similar student protests were happening in Third

World countries, where his book was not sold, and were not happening in Western European countries, where it sold well.

Baby and Child Care revised

Because of Spock's own strict personal upbringing and his acute moral sense, he may have intended a lot less than some of them realized when he told parents to "relax." In 1968 he revised *Baby and Child Care* to make his intentions more clear, now cautioning his readers "Don't be afraid that your children will dislike you" when they set limits and enforced them. Nevertheless, the 1968 edition showed a fifty percent drop in sales. Spock thought it was because of his stand on the war in Vietnam.

On May 20, 1968, Spock was put on trial for conspiracy, along with several other leading war protesters. The charge was that he had counseled young people to resist the draft. He was convicted, but on appeal the verdict was set aside (cancelled) on a technicality (small detail). Some upset readers turned in their well-thumbed copies of *Baby and Child Care* in order to prevent further undermining of their children's patriotism. To many other readers, however, the government's indictment (charging with an offense) of the baby doctor seemed rather like prosecuting Santa Claus.

Modifies and explains his views

Two books published in 1970, *Decent and Indecent: Our Personal and Political Behavior* and *A Teenager's Guide to Life and Love*, made it clear that Spock was a good deal more of a traditional moralist than either his friends or enemies realized. He had been driven into the antiwar and other reform

movements by the same old-fashioned conscience that propelled some of his opponents in exactly the opposite direction. At the same time the doctor showed himself capable of growing and changing. In 1972 he ran for president on the People's Party (an independent political party) ticket.

Spock was also capable of admitting a mistake. Badgered for some five years on the lecture platform by feminists objecting to the gender-role stereotypes of fathers and mothers as they appeared in *Baby and Child Care*, he eventually admitted that much of what they had said had been right. In 1976, thirty years after its initial publication, Spock brought out a third version of the famous book. He deleted material he himself termed "sexist" and called on fathers to share more of the parental responsibility.

Last years

Formally retired in 1967, Spock was the kind of person who never really retired in spirit. Contemplating his own death as his health began to fail in the 1980s, he wrote in 1985 (at the age of eighty-two) that he did not want any dark funeral tunes played over him: "My ideal would be the New Orleans black funeral, in which friends snake-dance through the streets to the music of a jazz band."

Spock had chronic bronchitis and suffered a stroke in 1989. His second wife, Mary, worked with him on his autobiography, *Spock on Spock*, which was published in 1989. Dr. Spock died at his home in La Jolla, California, on March 15, 1998, at the age of ninety-four.

Spock's work influenced how Americans brought up an entire generation of young

people. Even today his books are still regarded as a popular source of information for bringing up children.

JOSEPH STALIN

Born: December 21, 1879

Gori, Georgia

Died: March 5, 1953

Moscow, Union of Soviet Socialist Republics

Russian ruler

The Soviet statesman Joseph Stalin was the supreme ruler of the Soviet Union. He led his country alongside America and England through World War II (1939–45) in their fight against Germany, Italy and Japan. As ruler of Russia, Stalin was the leader of world communism for almost thirty years.

Early years

Joseph Stalin was born Iosif Vissarionovich Dzhugashvili on December 21, 1879, in Gori, Georgia. He was the only surviving son of Vissarion Dzhugashvili, a cobbler who first practiced his craft in a village shop but later in a shoe factory in the city. Stalin's father died in 1891. Stalin's mother, Ekaterina, a religious and illiterate (unable to read or write) peasant woman, sent her teenage son to the theological seminary in Tbilisi (Tiflis), Georgia, where Stalin prepared for the ministry. Shortly before his graduation, however, he was expelled in 1899 for spreading subversive views (ideas that went against those of the government).

Stalin then joined the underground revolutionary Marxist movement in Tbilisi, a movement devoted to the views of Karl Marx (1818–1883) and Frederick Engels (1821–1896), who believed in the political system of socialism that gave power to the working class and would ultimately lead to communism, where goods and services would be distributed by the government. In 1901 he was elected a member of the Tbilisi committee of the Russian Social Democratic Workers Party. The following year he was arrested, imprisoned, and later exiled (forced to move) to Siberia, a cold and remote region of Russia. Stalin escaped from Siberia in 1904 and rejoined the Marxist underground in Tbilisi. When the Russian Marxist movement split into two factions (rival groups), Stalin identified himself with the Bolsheviks.

During the time of the 1904–1905 revolution, Stalin made a name for himself as the organizer of daring bank robberies and raids on money transports, an activity that Marxist leader V. I. Lenin (1870–1924) considered

important due to the party's need for funds. Many other Marxists considered this type of highway robbery unworthy of a revolutionary socialist.

Stalin participated in congresses (governing parties) of the Russian Social Democratic Workers Party at Tampere, London, and Stockholm, Sweden, in 1905 and 1906, meeting Lenin for the first time at these congresses. In 1912 Lenin recruited Stalin into the Central Committee of the Bolshevik party. Stalin spent the major portion of the years from 1905 to 1912 in organizational work for the movement, mainly in the city of Baku, Russia. The secret police arrested him several times, and several times he escaped. Eventually, after his return from Vienna, Austria, the police caught him again, and he was exiled to the faraway village of Turukhansk beyond the Arctic Circle. He remained there until the fall of czarism, the Russian rule of a sole leader or king. He adopted the name Stalin ("man of steel") around 1913.

First Years of Soviet rule

After the fall of czarism, Stalin made his way at once to Petrograd, Russia, where until the arrival of Lenin from Switzerland he was the senior Bolshevik and the editor of *Pravda*, the party newspaper. After Lenin's return, Stalin remained in the high councils of the party, but had only a small role in the preparations for the October Revolution, which placed the Bolsheviks in power. In the first position of the communist Soviet government, he held the post of people's commissar for nationalities (in charge of party loyalty).

Within the party, he rose to the highest ranks, becoming a member of both the Political Bureau and the Organizational Bureau.

When the party Secretariat was organized, he became one of its leading members and was appointed its secretary general in 1922, where Lenin appreciated Stalin's ability as a politician and as a troubleshooter. The strength of Stalin's position in the government and in the party was probably anchored by his secretary generalship, which gave him control over party personnel administration—over admissions, training, assignments, promotions, and disciplinary matters. This position also ranked him as the most powerful man in Soviet Russia after Lenin.

Rise to power

During Lenin's last illness and after his death in 1924, Stalin served as a member of the three-man committee that ran the affairs of the party and the country. Stalin represented, for the time, the right wing (conservative) of the party that wanted to stay true to the ideas of the revolution. He and his spokesman, Nikolai Bukharin (1888–1938), warned against revolutionaries and argued in favor of continuing the more cautious and patient policies that Lenin had installed with the New Economic Policy (NEP).

In 1927 Stalin succeeded in defeating the entire opposition and in eliminating its leaders from the party. He then adopted much of its domestic program by starting a five-year plan of industrial development and by executing it with a degree of recklessness that angered many of his former supporters, who then formed an opposition to him. This opposition, too, was defeated quickly, and by the early 1930s Stalin had gained dictatorial (total) control over the party, the state, and the entire Communist International.

Joseph Stalin.

Reproduced by permission of AP/Wide World Photos.

Stalin's personality

Although always depicted as a towering figure, Stalin, in fact, was fairly short. His personality was highly controversial, and it remains a mystery. Stalin was crude and cruel and, in some important ways, a primitive man. In political life he tended to be cautious and slow-moving, and his writing style was much the same. Stalin was at times, however, a clever speaker and a fierce debater. He seems to have possessed boundless energy and an amazing ability to absorb detailed knowledge.

About Stalin's private life, little is known beyond the fact that he seems always to have been a lonely man. His first wife, a Georgian

girl named Ekaterina Svanidze, died of tuberculosis, a terrible disease that attacks the lungs and bones. His second wife, Nadezhda Alleluyeva, killed herself in 1932, apparently over Stalin's dictatorial rule of the party. The only child from his first marriage, Jacob, fell into German hands during World War II (1939–45; a war fought between the Axis—Germany, Italy, and Japan—and the Allies—led by Britain, France, the Soviet Union, and, later, the United States) and was killed. The two children from his second marriage outlived their father, but they were not always on good terms with him. The son, Vasili, an officer in the Soviet air force, drank himself to death in 1962. The daughter, Svetlana, fled to the United States in the 1960s.

Stalin's achievements

In back-to-back five-year plans, the Soviet Union under Stalin began to modernize (to accept modern ideas and styles) with great speed. Although the military needs of the country drained away precious resources, and World War II brought total destruction to several cities and death to many millions of citizens, the nation by the end of Stalin's life had become an important industrial country in the world, second only to the United States.

The price the Soviet Union paid for this great achievement remains staggering. It included the destruction of all free enterprise (business organizations) in both town and country. The transformation of Soviet agriculture in the early 1930s into collectives (groups of managed farms) tremendously damaged the country's food production. Living standards were drastically lowered at first, and more than a million people died of starvation. Meanwhile, Stalin jailed and executed

vast numbers of party members, especially the old revolutionaries and the leading figures in many other areas. Stalin created a new kind of political system characterized by severe police control, strengthening of the government, and personal dictatorship. Historians consider his government one of history's worst examples of totalitarianism, or having complete political control with no opposition. In world affairs the Stalinist system became isolationist, meaning the country moved away from building relations with foreign nations.

From the middle of the 1930s onward, Stalin personally managed the vast political and economic system he had established. Formally, he took charge of it in May 1941, when he assumed the office of chairman of the Council of Ministers. After Germany invaded the Soviet Union, Stalin also assumed formal command of the entire military establishment.

Stalin's conduct of Russian military strategy in the war remains as controversial as most of his activities. Some evidence indicates that he committed serious mistakes, but other evidence gives him credit for brilliant achievements. The fact remains that under Stalin the Soviet Union won the war, emerged as one of the major powers in the world, and managed to bargain for a distribution of the spoils of war (seized land resulting from Soviet victory) that enlarged its area of domination significantly.

Stalin died of a brain hemorrhage (an abnormal bleeding of the brain) on March 5, 1953. His body was placed in a tomb next to Lenin's in Red Square in Moscow. After his death Stalin became a controversial figure in the communist world, where appreciation for his great achievements was offset by harsh criticism of his methods.

ELIZABETH CADY STANTON

Born: November 12, 1815

Johnstown, New York

Died: October 26, 1902

New York, New York

American writer and women's rights activist

The writer and reformer Elizabeth Cady Stanton (1815–1902) was perhaps the most gifted feminist leader in American history.

The makings of a feminist

Elizabeth Cady was born in Johnstown, New York, on November 12, 1815. She came from a wealthy and politically important family. Her father, Daniel Cady (1773–1859), was a well-known lawyer who had served in Congress, on the New York state legislature, and as a judge on the New York state supreme court. Her mother came from a wealthy fam-

ily whose members had included a hero of the American Revolution (1775–83), when the thirteen British colonies in North America fought for their freedom.

The Cadys had eleven children, most of whom did not survive to adulthood. Eleazar Cady, their only son to survive, died when he was twenty, leaving them with four daughters. In her autobiography, *Eighty Years and More*, Stanton related her father's feelings at having lost all his male heirs. Although the eleven-year-old Elizabeth attempted to console him, his reaction was to tell her, "Oh, my daughter, I wish you were a boy." The experience made young Cady determined to be the equal of any male. She tried hard to please her father by excelling in areas normally reserved for men, starting with Greek and horsemanship.

Cady's father's profession also led her to embrace the cause of women's rights. As the daughter of a judge, she was exposed early to the legal barriers to women's equality. While still a child, she heard her father tell abused women that they had no legal alternative but to endure mistreatment by their husbands and fathers. She was especially outraged by the rights of husbands to control their wives' property.

Education and marriage

As a young woman, Elizabeth Cady studied at the Troy Female Seminary from 1830 to 1833. She had the best education then available to women. The school offered a strong academic course of studies in addition to the more typical educational options for women at that time—which tended to focus on developing social skills. However, while at Troy, she experienced a nervous col-

Elizabeth Cady Stanton.

lapse after experiencing a religious conversion (change) that filled her with fears that she would go to hell. After this experience, she developed an intense dislike toward organized religion.

In 1840 she married the abolitionist (a person who is against slavery) leader Henry B. Stanton (1805–1887). Her feminist side showed at the wedding ceremony, in which she insisted (and Stanton agreed) that she would not give the wife's traditional promise to "obey" her husband. Keeping her maiden name as Elizabeth Cady Stanton, rather than going by the name of Mrs. Henry B. Stanton, was also unusual at the time.

Working for suffrage

Although Henry Stanton sympathized with his wife's ambitions for a wider role in the world, he was not wealthy, and she remained home with her five children for many years. All the same, she was able to do some writing and speaking for the feminist cause. In 1848 she organized America's first woman's rights convention in Seneca Falls, New York, where the Stantons lived. She also composed a declaration of principles, which described the history of humankind as one in which men had repeatedly and intentionally suppressed the rights of women in order to establish "absolute tyranny" over them. Despite opposition, she persuaded the convention to approve a resolution calling for women's suffrage, or women's right to vote.

The Civil War (1861–65) was fought between the northern states and southern states to decide whether or not slavery would be allowed in new territories, and whether or not the South would leave the Union to form an independent nation. During the war Stanton and her ally Susan B. Anthony (1820–1906) created the National Woman's Loyal League to build support for what became the Thirteenth Amendment to the Constitution, which ended slavery in the United States. Once the slaves were free, Stanton and Anthony worked to ensure that women would be given the vote along with former male slaves. However, it was thought that if the struggle to gain the right to vote for black men was associated with votes for women, neither black men nor women of any color would get the vote.

This opposition only made Stanton and her colleagues more stubborn. Their campaign finally divided the women's suffrage

movement into two camps. One was their own, New York-based band of uncompromising radicals (people who are extreme in their political beliefs), called the National Woman Suffrage Association. The other was a more conservative group, the American Woman Suffrage Association, which was centered in Boston and supported the idea that attaining the vote for black men was more important than demanding the vote for women. There were several differences in the positions of the two organizations, and a good deal of personal hostility developed between them. By 1890, however, these problems were overcome, and the two organizations merged into the National American Woman Suffrage Association. Stanton became the group's president.

Later years

Stanton remained active during her later years, however, she was less concerned with suffrage and more interested in reforming divorce laws and other similar matters. A stylish and witty writer, she worked with Anthony and Matilda Gage on the first three volumes of the massive collection *History of Woman Suffrage* and edited *The Woman's Bible*. Stanton also wrote articles on a variety of subjects for the best magazines of her time. She died on October 26, 1902, in New York City. With Susan B. Anthony, she is recognized today as one of the most important figures in the early movement to gain women's rights in the United States.

EDITH STEIN

Born: October 12, 1891

Breslau, Germany

Died: August 9, 1942

Auschwitz, Poland

German philosopher

German philosopher Edith Stein was a leading supporter of the early twentieth century's phenomenological school of thought, which explored human awareness and perception. A Jew by birth who converted to Catholicism, she was killed in a Nazi (having to do with members of the German Socialist Party led by Adolf Hitler from 1933 to 1945) concentration camp (a guarded enclosure where political prisoners were kept) and canonized (declared a saint) in 1998.

Childhood

Edith Stein was born on October 12, 1891, in Breslau, Germany. She was the youngest of eleven children born to Jewish lumber merchants hailing originally from Silesia (now part of Poland). Raised in a very religious atmosphere, four of her siblings died

Edith Stein.

Reproduced by permission of the Corbis Corporation.

before Stein's birth. Stein's father died when she was only a year old, leaving her mother, Auguste Stein, in charge of the debt-ridden business and the surviving children. Because her mother was required to devote most of her time to work outside the home, her oldest daughter, Else, took on much of the responsibility of raising the younger children.

As a child, Stein was known for her intelligence and sense of humor—she would often recite poetry and make clever remarks. But she disliked her reputation as “the smart one” of the family and began to develop a more quiet nature in her early school days. She attended the Victoria School in Breslau,

where she not only began classes early, but quickly became the top student in her grade. Her love of learning extended to her hours at home as well, where she spent much of her free time reading.

At the age of thirteen, Stein underwent a crisis of faith and decided to leave school. Although she no longer believed in God, she did not discuss her beliefs with her family and continued to attend religious services. Stein soon came to terms with her new ideas and decided to devote her life to teaching and the pursuit of the truth. She returned to Victoria School and completed her coursework in hopes of attending college.

Discovering Catholicism

Stein began her advanced education at the University of Breslau in 1911 where she was influenced by the works of Edmund Husserl (1859–1938) who was a professor of philosophy (the study of knowledge) at Göttingen University and was the founder of the school of thought known as phenomenology, an examination of the development of human awareness. The work was an eye-opener to Stein, who decided that she wanted to study with Husserl at Göttingen. It was at Göttingen that Stein was first exposed to the Roman Catholic faith. When in 1916 Husserl took a professorship at the University of Freiburg, he requested that Stein join him as his graduate assistant. She was very successful at Freiburg and soon became known as a top philosopher at the university.

Stein's interest in Catholicism increased in 1917 which led her to read the New Testament, the second half of the Bible. These experiences convinced Stein that she believed in God and the divinity of Jesus

Christ, but did not convert to Catholicism until 1921.

During a stay at a girl's school in Speyer, Germany, Stein was encouraged by the Jesuit priest and philosopher Erich Przywara not to abandon her academic work. At his urging, she began a German translation of a Latin work on truth by St. Thomas Aquinas (1225–1274). Through her study of Aquinas and her discussions with Przywara, she was convinced that she could serve God through a search for truth. Her writing and translations became popular, and Stein was invited to lecture for a number of groups on religious and women's issues in Germany, Switzerland, and Austria.

Completes book on Jewish life

Attacks on Jewish people were becoming frequent and in 1933, Adolf Hitler (1889–1945) and his Nazi Party came to power in Germany. One result of the rise of Hitler was that Stein and other people of Jewish origin in university positions were fired from her job. Stein felt that she had a unique opportunity and responsibility, as a Jewishborn Catholic, to bridge the gap of understanding between Christians and Jews. To accomplish this, she wrote the book *Aus dem Leben einer Jüdischen Familie*, (“Life in a Jewish Family”) which tried to show the similar human experiences of Jews and Christians in their daily lives. In 1933, she attempted to combine the thoughts of Husserl and Aquinas in her book *Endliches und ewiges Sein* (“Finite and Eternal Being”), completed in 1936. Under the anti-Jewish laws in effect then, however, the book was refused for publication and was not printed until 1950.

Because of the Nazi rule, Stein realized she was no longer safe in her native country and fled to a convent (a community of nuns) in Echt in the Netherlands on December 31, 1938. In Echt, she was joined by her sister Rosa, who had also converted to Catholicism.

Killed in concentration camp

In 1942 the Nazis began removing Jews from the Netherlands, and Stein urgently applied for a Swiss visa (an official authorization of travel) in order to transfer to a convent in Switzerland. Her sister was unable to arrange similar travel arrangements, however, and Stein refused to leave without her. On August 2, 1942, the sisters were removed from the convent at Echt by Nazi troops and transported to a concentration camp at Amersfoort, Netherlands, for a few days before being sent on to the Auschwitz camp in Poland. While nothing is known about their last days or the exact circumstances of their deaths, it is assumed the women were among the many people killed in the Nazi gas chambers, placed in mass graves on the site, and later cremated, or burned to ashes.

In 1987, decades after the travesties of the Jewish Holocaust (the horrors imposed by the Nazis which resulted in the deaths of thousands of Jews), Stein was beatified (blessed) by Pope John Paul II (1920–), who praised her as a Catholic martyr (one who dies for their beliefs) and also praised her phenomenological works. This created controversy among Jewish groups, who were upset that she was remembered in this way since the reason she was killed was because she was a Jew, not because she was Catholic. In an apologetic statement, John Paul II acknowledged that her fate was a symbol of

the great loss of Jewish life during World War II (1939–45; a war fought between the Axis Powers: Germany, Italy, and Japan, and the Allied Powers: England, France, the Soviet Union, and the United States). This discussion highlighted the difficult, but important place Stein holds among both Jews and Catholics. Stein's canonization (emergence to sainthood) by the Pope on October 11, 1998, also drew protest from some Jews.

GERTRUDE STEIN

Born: February 3, 1874

Allegheny, Pennsylvania

Died: July 27, 1946

Neuilly, France

American writer

American writer Gertrude Stein was a powerful literary force in the early part of the twentieth century. Although the ultimate value of her writing was a matter of debate, it greatly affected the work of a generation of American writers.

Childhood

Gertrude Stein was born in Allegheny, Pennsylvania, on February 3, 1874, the youngest of five children of Daniel and Amelia Stein, her wealthy German-Jewish-American parents. As a child, she lived in Vienna, Austria, and Paris, France, but grew up mainly in Oakland, and San Francisco, California. Living in these different countries, she learned to speak German, French, and English fluently. She also learned music and dance. Her early formal education was spotty, but she was a dedicated reader and had a strong interest in art. When Stein was fourteen her mother died, followed by her father just three years later. With the family splintered, Stein, along with one sister, moved to Baltimore, Maryland, to live with her aunt.

With only a year of high school, Stein managed to be admitted in 1893 to Radcliffe College, in Massachusetts, where she specialized in psychology (the study of the mind) and became a favorite of psychologist and philosopher (one who seeks wisdom about humans and their place in the universe) William James (1842–1910). He discovered her great capacity for automatic writing, in which the conscious waking mind is suspended and the unconscious sleeping mind takes over. The emphasis of the primitive mind at the expense of the sophisticated mind was to become an important part in Stein's theory and is demonstrated in most of her writing.

Moves to France

Stein did not take a degree at Radcliffe or Johns Hopkins University, in Maryland, where she studied medicine for four years. In 1903 she went to Paris, France, and took up residence on the Left Bank (a famous neighborhood in Paris) with her brother Leo. In 1907 she met Alice B. Toklas (1877–1967), a wealthy young San Franciscan who became her lifelong companion and secretary, running the household, typing manuscripts, and screening visitors. France became their permanent home.

During Stein's early Paris years she established herself as a champion of the avant-garde painters, or artists that strive for new methods and techniques within their art. With her inherited wealth she supported young artists and knew virtually all of the important painters, including Pablo Picasso (1881–1973), who did a famous portrait of her, Henri Matisse (1869–1954), Juan Gris (1887–1927), Andrée Derain (1880–1954), and Georges Braque (1882–1963). Her brother Leo became a famous art critic, but their relationship, which had been extremely close, fell apart in 1912 because of a disagreement over his marriage.

Stein's first two books, *Three Lives* (1909) and *Tender Buttons* (1915), stirred considerable interest among a limited but sophisticated audience, and her home became an informal meeting place visited by many creative people, including American composer Virgil Thomson (1896–1969), British writers Ford Madox Ford (1873–1939), Lytton Strachey (1880–1932), and Edith Sitwell (1887–1964), and American writers Ezra Pound (1885–1972), Elliot Paul (1891–1958), Sherwood Anderson (1876–1941), F. Scott Fitzgerald (1896–

1940), and Ernest Hemingway (1899–1961). It was to Hemingway that Stein characterized the disenfranchised expatriate veterans (those living overseas) as a "lost generation."

A woman with deep black eyes and a supremely self-assured manner, Stein was frequently intimidating, impatient with disagreement, and oftentimes pushed people away. The unique style of her writing appealed primarily to a small audience, but her reputation as a patron of the arts was lifelong.

Stein's 1934 visit to the United States for the opening of her opera *Four Saints in Three Acts*, with music by Virgil Thomson, started an

enormously successful university lecture tour. During the German occupation of France (the time during World War II when German forces took over large portions of France), both Stein and Toklas lived briefly in Culoz, France, returning to Paris in 1944. Stein's reactions to World War II (1939–45; a war in which American-led British, French, Soviet, and American forces battled those led by Germany) were recorded in *Paris, France* (1940) and *Wars I Have Seen* (1945), and her interest in the soldiers was reflected in the conversations of *Brewsie and Willie* (1946), which was published a week before her death, on July 27, 1946, in Neuilly, France.

Her writings

Stein's first book, *Three Lives*, her most realistic work, foreshadowed her more abstract (conceptual and not easily expressed by conventional methods) writings and demonstrated a number of influences including, Gustave Flaubert's (1821–1880) *Trois contes*, and automatic writing. "Melanctha," the best of the three novellas (written pieces that are shorter than a novel but longer than a short story) that made up the book, was an especially tender treatment of an impulsive, flirting African American woman whose relations with men were recorded in a informal, deliberately repetitious style intended to capture the immediacy of consciousness. Stein wanted to give literature the plastic freedom that painting has, and *Tender Buttons* was a striking attempt at verbal "portraits" in the manner of the cubist painters, an early twentieth-century movement that emphasized the use of geometric shapes.

Stein's *The Making of Americans: Being a History of a Family's Progress* (1925) gave

character analysis within a family chronicle, although it was chiefly concerned with the servants and only very little with the family members. In the 1930s and 1940s she concentrated on memoirs (an account of personal experience), aesthetic theory, plays, and art criticism. *How to Write* (1931) and *The Geographical History of America: The Relation of Human Nature to the Human Mind* (1936) explained the theoretical basis of her literary practice.

The Autobiography of Alice B. Toklas (1933), written as if by Toklas, was an autobiography of Stein. Unexpectedly readable and charming, it became a best-seller. Critic F. W. Dupee called it "one of the best memoirs in American literature." A sequel, *Everybody's Autobiography* (1937), described Stein's visit to America, and *Portraits and Prayers* (1934) was a collection of verbal pictures of her Paris circle.

Stein's libretto (opera) for *Four Saints in Three Acts* (1934) was a study of the attraction of opposites—the self-disciplined and the compassionate. *Picasso* (1939) was an inconsistent, witty, sometimes illuminating study of the development of the great painter's art. Her three wartime books and *In Savoy; Or Yes Is for a Very Young Man: A Play of the Resistance in France* (1946) showed unexpected social concern.

After Stein's death, there were numerous publications of the works she left behind. Some of the more notable are *The Previously Uncollected Writings of Gertrude Stein* and *Dear Sammy: Letters from Gertrude Stein and Alice B. Toklas*. These works were released in 1974 and 1977 respectively. In 1996 Stein's *Four Saints in Three Acts* was remade into an avant-garde opera.

JOHN STEINBECK

Born: February 27, 1902

Salinas, California

Died: December 20, 1968

New York, New York

American writer

John Steinbeck, American author and winner of the Nobel Prize in 1962, was a leading writer of novels about the working class and was a major spokesman for the victims of the Great Depression (a downturn in the American system of producing, distributing, and using goods and services in the 1930s, and during which time millions of people lost their jobs).

Early life

John Ernst Steinbeck was born on February 27, 1902, in Salinas, California, the only son of John Ernst Steinbeck Sr. and Olive Hamilton. His father was a bookkeeper and accountant who served for many years as

the treasurer of Monterey County, California. Steinbeck received his love of literature from his mother, who was interested in the arts. His favorite book, and a main influence on his writing, was Sir Thomas Malory's (c. 1408–1471) *Le Morte d'Arthur*, a collection of the legends of King Arthur. Steinbeck decided while in high school that he wanted to be a writer. He also enjoyed playing sports and worked during the summer on various ranches.

Steinbeck worked as a laboratory assistant and farm laborer to support himself through six years of study at Stanford University, where he took only those courses that interested him without seeking a degree. In 1925 he traveled to New York (by way of the Panama Canal) on a freighter (boat that carries inventory). After arriving in New York, he worked as a reporter and as part of a construction crew building Madison Square Garden. During this time he was also collecting impressions for his first novel. *Cup of Gold* (1929) was an unsuccessful attempt at romance involving the pirate Henry Morgan.

Begins writing seriously

Undiscouraged, Steinbeck returned to California to begin work as a writer of serious fiction. A collection of short stories, *The Pastures of Heaven* (1932), contained vivid descriptions of rural (farm) life among the "unfinished children of nature" in his native California valley. His second novel, *To a God Unknown* (1933), was his strongest statement about man's relationship to the land. With *Tortilla Flat* (1935) Steinbeck received critical and popular success; there are many critics who consider it his most artistically satisfying work.

John Steinbeck.

Steinbeck next dealt with the problems of labor unions in *In Dubious Battle* (1936), an effective story of a strike (when workers all decide to stop working as a form of protest against unfair treatment) by local grape pickers. *Of Mice and Men* (1937), first conceived as a play, is a tightly constructed novella (short novel) about an unusual friendship between two migrant workers (laborers who travel to wherever there is available work, usually on farms). Although the book is powerfully written and often moving, some critics feel that it lacks a moral vision.

Steinbeck's series of articles for the *San Francisco Chronicle* on the problems of migrant farm laborers provided material for

The Grapes of Wrath (1939), his major novel and the finest working-class novel of the 1930s. *The Grapes of Wrath* relates the struggle of a family of Oklahoma tenant farmers forced to turn over their land to the banks. The family then journeys across the vast plains to the promised land of California—only to be met with scorn when they arrive. It is a successful example of social protest in fiction, as well as a convincing tribute to man's will to survive. *The Grapes of Wrath* received the Pulitzer Prize in 1940.

Other subjects

During World War II (1939–45), which the United States entered to help other nations battle Germany, Italy, and Japan, Steinbeck served as a foreign correspondent. From this experience came such nonfiction as *Bombs Away: The Story of a Bomber Team* (1942); *Once There Was a War* (1958), a collection of Steinbeck's dispatches from 1943; and *A Russian Journal* (1948), with photographs by Robert Capa. More interesting nonfiction of this period is *The Sea of Cortez*, coauthored with scientist Edward F. Ricketts. This account of the two explorers' research into sea life provides an important key to many of the themes and attitudes featured in Steinbeck's novels.

Steinbeck's fiction during the 1940s includes *The Moon Is Down* (1942), a tale of the Norwegian resistance to occupation by the Nazis (German ruling party that scorned democracy and considered all non-German people, especially Jews, inferior); *Cannery Row* (1944), a return to the setting of *Tortilla Flat*; *The Wayward Bus* (1947); and *The Pearl*, a popular novella about a poor Mexican fisherman who discovers a valuable pearl that brings bad luck to his family.

Later decline

In the 1950s Steinbeck's artistic decline was evident with a series of novels that were overly sentimental, stuffy, and lacking in substance. The author received modest critical praise in 1961 for his more ambitious novel *The Winter of Our Discontent*, a study of the moral disintegration (falling apart) of a man of high ideals. In 1962 *Travels with Charley*, a pleasantly humorous account of his travels through America with his pet poodle, was well received. Following the popular success of the latter work, Steinbeck was awarded the Nobel Prize.

Steinbeck's work remains popular in both the United States and Europe, chiefly for its social consciousness and concern and for the narrative qualities displayed in the early novels. Although he refused to settle into political conservatism (preferring to maintain traditions and resist change) in his later years, his all-embracing support of American values and acceptance of all national policies, including the Vietnam War (1955–75; conflict in which the United States fought against Communist North Vietnam when they invaded Democratic South Vietnam), lost him the respect of many liberal (preferring social change) intellectuals who had once admired his social commitments. He died on December 20, 1968, in New York City.

ROBERT LOUIS STEVENSON

Born: November 13, 1850

Edinburgh, Scotland

Died: December 3, 1894

Upolu, Samoa

Scottish writer

The Scottish novelist, essayist, and poet Robert Louis Stevenson was one of the most popular and highly praised British writers during the last part of the nineteenth century.

Sickly childhood

Robert Louis Stevenson was born on November 13, 1850, in Edinburgh, Scotland, the son of a noted lighthouse builder and harbor engineer. Though healthy at birth, Stevenson soon became a victim of constant breathing problems that later developed into tuberculosis, a sometimes fatal disease that attacks the lungs and bones. These persistent health problems made him extremely thin and weak most of his life.

By the time Stevenson entered Edinburgh University at the age of sixteen to study engineering, he had fallen under the spell of language and had begun to write. For

Robert Louis Stevenson.

Courtesy of the Library of Congress.

several years he attended classes irregularly, developing a bohemian existence (an artistic lifestyle different than that of mainstream society), complete with long hair and velvet jackets. He also associated himself with Edinburgh's seedy and dangerous neighborhoods.

Early works

When Stevenson was twenty-one years old, he openly declared his intention of becoming a writer, against the strong opposition of his father. Agreeing to study law as a compromise, in 1875 Stevenson was admitted to the Scottish bar, an organization for lawyers. Having traveled to the European

mainland several times for health and pleasure, he now swung back and forth between Scotland and a growing circle of artistic and literary friends in London, England, and Paris, France. Stevenson's first book, *An Inland Voyage* (1878), related his adventures during a canoe trip on Belgium and France's canals.

In France in 1876 Stevenson met an American woman named Fanny Osbourne. Separated from her husband, she was eleven years older than Stevenson and had two children. Three years later Stevenson and Osbourne were married. After accompanying his wife to America, Stevenson stayed in an abandoned mining camp, later recounted in *The Silverado Squatters* (1883). A year after setting out for the United States, Stevenson was back in Scotland. But the climate there proved to be a severe hardship on his health, and for the next four years he and his wife lived in Switzerland and in the south of France. Despite his health, these years proved to be productive. The stories Stevenson collected in *The New Arabian Nights* (1883) and *The Merry Men* (1887) range from detective stories to Scottish dialect tales, or tales of the region.

Popular novels

Treasure Island (1881, 1883), first published as a series in a children's magazine, ranks as Stevenson's first popular book, and it established his fame. A perfect romance, according to Stevenson's formula, the novel tells the story of a boy's involvement with murderous pirates. *Kidnapped* (1886), set in Scotland during a time of great civil unrest, has the same charm. In its sequel, *David Balfour* (1893), Stevenson could not avoid psychological and moral problems without marked strain. In *The Strange Case of Dr. Jekyll*

BRAM STOKER

and *Mr. Hyde* (1886) he dealt directly with the nature of evil in man and the hideous effects that occur when man seeks to deny it. This work pointed the way toward Stevenson's more serious later novels. During this same period he published a very popular collection of poetry, *A Child's Garden of Verses* (1885).

After the death of Stevenson's father in 1887, he again traveled to the United States, this time for his health. He lived for a year at Saranac Lake, New York, in the Adirondack Mountains. In 1889 Stevenson and his family set out on a cruise of the South Sea Islands. When it became clear that only there could he live in relatively good health, he settled on the island of Upolu in Samoa. He bought a plantation (Vailima), built a house, and gained influence with the natives, who called him Tusifala ("teller of tales"). By the time of his death on December 3, 1894, Stevenson had become a significant figure in island affairs. His observations on Samoan life were published in the collection *In the South Seas* (1896) and in *A Footnote to History* (1892). Of the stories written in these years, "The Beach of Falesá" in *Island Nights' Entertainments* (1893) remains particularly interesting as an exploration of the confrontation between European and native ways of life.

Born: November 8, 1847

Clontarf, Ireland

Died: April 20, 1912

London, England

Irish writer

Bram Stoker is best known as the author of *Dracula* (1897), one of the most famous horror novels of all time.

Early life

Abraham Stoker was born in Clontarf, Ireland, on November 8, 1847. He was a sickly child, bedridden for much of his boyhood until about the age of seven. As a youth, Stoker was intrigued by the stories told him by his mother, Charlotte. Especially influential to the mind of young Stoker were the stories she related about the cholera epidemic of 1832 which claimed thousands of lives. These cruel and vivid tales began to shape the young Stoker's imagination.

Stoker grew up strong, and as a student at Trinity College, in Dublin, Ireland, he excelled in athletics as well as academics, and graduated with honors in mathematics in 1870. He worked for ten years in the Irish Civil Service, and during this time contributed theater criticism to the *Dublin Mail*. His glowing reviews of Henry Irving's performances encouraged the actor to seek him out. The two became friends, and in 1879 Stoker became Irving's manager. He also performed managerial, secretarial, and even directorial duties at London, England's Lyceum Theatre. In 1878 he married Flo-

Bram Stoker.

rence Balcombe and the couple moved to Cheyne Walk, Chelsea, in London.

Early writings

Despite Stoker's active personal and professional life, he began writing and publishing novels, beginning with *The Snake's Pass* in 1890. The success of this book prompted Stoker to continue writing.

Although most of Stoker's novels were favorably reviewed when they appeared, they are dated by their stereotyped characters (characters based on broad generalizations) and romanticized plots, and are rarely read today. Even the earliest reviews frequently

point out the stiff characterization and tendency to be overly dramatic that flaw Stoker's writing. Critics have universally praised, however, his beautifully precise place descriptions. Stoker's short stories, while sharing the faults of his novels, have fared better with modern readers. Anthologists (a person who puts together a collection of literary pieces) frequently include Stoker's stories in collections of horror fiction. "Dracula's Guest," originally intended as an introductory chapter to *Dracula*, is one of the best known. After a pair of books—*The Watter's Mou'* and *Antheneum*—were well received, he began research into the world of vampires.

Dracula

Stoker's *Dracula* appeared in 1897. The story is centered around the diaries and journal entries of Jonathan Harke when he meets the mysterious Count Dracula. The Transylvanian follows Harke to England, where the count continues his blood-thirsty endeavors. Laced with themes of lust and desire, Stoker spins a bloodcurdling tale that still haunts readers more than one hundred years after it was first published.

Dracula is generally regarded as the culmination of the Gothic (style of the twelfth to fifteenth centuries) vampire story, preceded earlier in the nineteenth century by William Polidori's *The Vampyre*, Thomas Prest's *Varney the Vampyre*, J. S. Le Fanu's *Carmilla*, and Guy de Maupassant's *Le Horla*. An early reviewer of *Dracula* in the *Spectator* commented that "the up-to-dateness of the book—the phonograph diaries, typewriters, and so on—hardly fits in with the medieval methods which ultimately secure the victory for Count Dracula's foes." The narrative, comprising journal

entries, letters, newspaper clippings, a ship's log, and phonograph recordings, allowed Stoker to contrast his character's actions with their own analysis of their acts.

Some early critics of Stoker's novel noted the "unnecessary number of hideous incidents" which could "shock and disgust" readers of *Dracula*. One critic even advised keeping the novel away from children and nervous adults. Initially, *Dracula* was interpreted as a straightforward horror novel. Dorothy Scarborough indicated the direction of future criticism in 1916 when she wrote that "Bram Stoker furnished us with several interesting specimens of supernatural life always tangled with other uncanny motives." In 1931 Ernest Jones, in his *On the Nightmare*, drew attention to the theory that these motives involve repressed sexual desires. Critics have since tended to view *Dracula* from a Freudian psychosexual standpoint, which deals with the sexual desires of the unconscious mind. However, the novel has also been interpreted from folkloric, political, medical, and religious points of view.

The legacy of Dracula

Today the name of *Dracula* is familiar to many people who may be wholly unaware of Stoker's identity, though the popularly held image of the vampire bears little resemblance to the demonic being that Stoker depicted. Adaptations of *Dracula* in plays and films have taken enormous creative freedoms with Stoker's characterization. A resurgence of interest in traditional folklore has revealed that Stoker himself did not use established vampire legends. Yet *Dracula* has had tremendous impact on readers since its publication. Whether Stoker created a universal

fear, or as some modern critics would have it, gave form to a universal fantasy, he created a powerful and lasting image that has become a part of popular culture.

Following the death of Stoker's close friend Irving, in 1905, he was associated with the literary staff of the *London Telegraph* and wrote several more works of fiction, including the horror novels *The Lady of the Shroud* (1909) and *The Lair of the White Worm* (1911). He died on April 20, 1912, in London, England.

**OLIVER
STONE**

Born: September 15, 1946
New York, New York
American director and writer

Oliver Stone is a writer-director of films with a flashy style that often deal with issues of the 1960s, such as America's involvement with the Vietnam War (1955–75; a war in which the United States aided South Vietnam in its fight against a takeover by Communist North Vietnam). He has won several Academy Awards as a writer and as a director.

Conservative background

Oliver William Stone was born on September 15, 1946, in New York City, the only child of Louis and Jacqueline Goddet Stone. His father was a successful stockbroker. Stone's childhood was marked by all the privileges of wealth—private schooling, summer vacations in France, and most importantly, a sense of patriotism. Stone's father was strongly conservative (one who believes in maintaining social and political traditions and who opposes change). When Stone was a junior at the Hill School, a Pennsylvania college prep academy, his parents decided to divorce. He discovered that his father was actually deeply in debt, which led him to question the values he had been taught. Stone entered Yale University in 1965, but he quit after only one year.

Late in 1965 Stone took a job teaching English at a school in Saigon, South Vietnam. He arrived there at the same time as did the first major commitment of U.S. troops, which were sent to help fight in Vietnam's civil war. Stone left after six months and returned home. While on his way back, he began to work on a novel, which he continued to work on during a brief stay in Mexico and another failed attempt at college. He was unable to find a publisher for it, and he then decided to

join the army. Stone continued to work on the novel, which grew to eleven hundred pages. *A Child's Night Dream* was finally released in 1997.

Shaped by Vietnam experience

Stone could have avoided the Vietnam War by staying in college, but he joined the service and insisted on combat duty in an attempt to prove to his father that he was a man. He soon discovered that real combat was much different than he expected. "Vietnam completely deadened me and sickened me," he told the *Washington Post*. Stone was involved in several deadly battles. He was shot once and wounded by shrapnel (bomb fragments) another time, and he often witnessed the brutal treatment of Vietnamese citizens by U.S. soldiers.

After Stone was discharged and returned to the United States, he enrolled at New York University, where he began to study filmmaking with director Martin Scorsese (1942–). Stone decided he wanted to write screenplays and make movies. Stone graduated from the university in 1971 and within two years had sold his first project to a small Canadian film company. His first writing and directing effort was *Seizure* (1974), a horror story about a writer whose creations come to life.

Seizure did not make money or receive great reviews, and Stone entered a period marked by heavy drug and alcohol use. He finally pulled himself together in 1976 and decided to write a screenplay about his Vietnam experiences. Between 1976 and 1978 Stone wrote two stories on the war: *Platoon*, which was based on himself and other soldiers he had known in Vietnam; and *Born on the Fourth of July*, which was based on the

autobiography (the written story of one's own life) of crippled war veteran Ron Kovic. No studio would touch either property; the scripts were considered too violent and too depressing. Stone's writing talents were recognized, however, and he was invited to work on other projects.

Oscars and controversy

In 1977 Stone was hired to write the screenplay for *Midnight Express*, a drama based on the true-life imprisonment of Bill Hayes in a Turkish jail. Many reviewers criticized the film's violence and accused it of racism (unequal treatment based on race) against the Turks. The controversy (open to dispute) helped the movie turn a profit, and it was also nominated (put forward for consideration) for five Academy Awards. Stone himself won an Oscar for his screenplay.

Stone then wrote and directed the horror movie *The Hand* (1981), and he wrote scripts for other movies, including *Scarface*. The film *Scarface*, which told the story of a ruthless cocaine dealer, offended some with its violence. For Stone, who had rid himself of a cocaine habit while writing the screenplay, it was a very important project. In an effort to exercise more control over his work, Stone then began making films independently. With the backing of Hemdale, a small British production company, he filmed *Salvador* (1986), based on the violence of the United States-supported Salvadoran army. Hemdale then gave Stone the money to make *Platoon* (1986). Stone used the script he had written in 1976 and the film won a number of Oscars, including best picture and best director.

Stone followed *Platoon* with *Wall Street*, his first big-budget project. *Wall Street* told

Oliver Stone.

Reproduced by permission of AP/Wide World Photos.

the story of a young stockbroker and the ruthless older businessman who influences him. By this time Stone had found the money to film *Born on the Fourth of July* (1989). With Hollywood superstar Tom Cruise (1962–) as the raging Ron Kovic, who endures not only the horror of battle but life in a wheelchair, *Born on the Fourth of July* brought Stone yet another Academy Award for best director.

Stone explored the 1960s with *The Doors* (1991) and his most controversial feature, *JFK* (1991). In *JFK* Kevin Costner plays Jim Garrison, the Texas Attorney General who battled what the film views as a plot to cover up the real circumstances behind the assassi-

nation of President John F. Kennedy (1917–1963). The film's mixture of dream-like scenes and historical details angered many, but even his critics admitted that Stone's methods were effective. Stone returned to the subject of Vietnam for *Heaven and Earth* (1993), showing the war from the point of view of a Vietnamese woman. His brutally violent *Natural Born Killers* (1994), the story of two disturbed young lovers who become famous for their killing spree, was attacked for its casual treatment of violence.

Major step forward

Stone's next film was the story of another American president, Richard Nixon (1913–1994), who resigned in disgrace after the Watergate scandal (in which it was revealed that Nixon had broken the law by using bug-ging devices to listen in on the conversations of his opponents). With British actor Anthony Hopkins (1937–) in the title role, *Nixon* (1995) earned several Academy Award nominations. Many reviewers praised Stone's newly found ability to overlook his political beliefs and make a universally appealing film.

Stone's more recent film projects include directing *U-Turn* (1997), writing and directing *Any Given Sunday* (1999), and serving as executive producer of the TV movie *The Day Reagan Was Shot* (2001). In 2001 a Louisiana court threw out a lawsuit against Stone and Warner Brothers studios that claimed that viewing *Natural Born Killers* had led two people to shoot a store clerk, leaving her paralyzed. In 2002 Stone traveled to Cuba, where he spent seventy-two hours filming Cuban leader Fidel Castro (1927–) for a documentary (a completely fact-based film) on the country.

TOM STOPPARD

Born: July 3, 1937

Zlin, Czechoslovakia

Czech-born English playwright

One of England's most important playwrights, Czechoslovakian-born Tom Stoppard is popular in the United States as well. His two great stage successes were *Rosencrantz and Guildenstern Are Dead* and *The Real Thing*, and he reached an even wider audience—and won an Academy Award—for his screenplay for the 1998 film *Shakespeare in Love*.

Early life and career

The second son of a doctor for the Bata shoe manufacturing company, Thomas Straussler (Stoppard) was born on July 3, 1937, in Zlin, Czechoslovakia. The family fell victim to the Nazi racial laws, a wide-ranging set of laws enforced by Germany's radical Nazi Army that were aimed at severely restricting the freedoms of Jews and other

minorities. Since there was “Jewish blood” in the family, his father was transferred to Singapore in 1939, taking the family with him. When the Japanese invaded that city in 1942, Thomas’s mother fled with her children to India. Dr. Straussler stayed behind and was later killed.

Thomas attended an American boarding school in Darjeeling, India. In 1946 his mother married Kenneth Stoppard, a British army major, and both of her sons took his name. The Stoppards moved to Bristol, England, where Thomas’s stepfather worked in the machine tool industry. Thomas continued his education at a preparatory school in Yorkshire, England.

At age seventeen Thomas felt that he had had enough schooling. He became first a reporter and then a critic for the *Western Daily Press* of Bristol, England, from 1954 to 1958. He left the *Press* and worked as a reporter for the *Evening World*, also in Bristol, from 1958 to 1960. Stoppard then worked as a freelance reporter from 1960 to 1963. During these years he experimented with writing short stories and short plays. In 1962 he moved to London, England, in order to be closer to the center of the publishing and theatrical worlds in the United Kingdom.

The playwright

Stoppard’s first radio plays for the British Broadcasting Company (BBC), *The Dissolution of Dominic Boot* and *M Is for Moon Among Other Things*, aired in 1964. Two more, *Albert’s Bridge* and *If You’re Glad I’ll Be Frank*, followed in 1965. His first television play, *A Separate Peace*, appeared the next year, as did his only novel, *Lord Malquist and Mr. Moon*, and the stage play that established his reputa-

Tom Stoppard.

Reproduced by permission of AP/Wide World Photos.

tion as a playwright, *Rosencrantz and Guildenstern Are Dead*.

The year 1968 saw another television play, *Neutral Ground*, and two short works for the theater, *Enter a Free Man* and *The Real Inspector Hound*. In 1970 Stoppard returned to the BBC with the two radio plays, *Artist Descending a Staircase* and *Where Are They Now*. He also authored the television plays *The Engagement* and *Experiment in Television* as well as the stage work *After Magritte*. It was about this time that Stoppard became acquainted with Ed Berman from New York City’s Off-Off-Broadway. Berman was attempting to establish an alternative theater

in London. For him Stoppard composed Dagg's *Our Pet*, which was produced in 1971 at the Almost Free Theater.

In 1972 Stoppard had presented *Jumpers*, which begins with circus acts and evolves into religious and moral philosophy (the study of knowledge). Although critics reacted warmly to the play, *Jumpers* did not enjoy the same praise that had greeted *Rosencrantz and Guildenstern*. Theater critic Stanley Kauffmann labeled it "fake, structurally and thematically," while another critic, John Simon, wrote that "there is even something arrogant about trying to convert the history of Western culture into a series of blackout sketches, which is very nearly what *Jumpers* is up to."

Two years later Stoppard produced his third major work, *Travesties*. It is based on the coincidence that Russian exile politician Vladimir Lenin (1870–1924), Irish novelist James Joyce (1882–1941), and the father of the French Dadaist movement in literature and art, Tristan Tzara (1896–1963), were all in Zurich, Switzerland, at times during World War I (1914–18; when German-led forces pushed for European domination). It is assumed that they never met in reality, but their interaction in Stoppard's play asks the question of what defines art. The author's conclusion seems to be that its sole function is to make the meaninglessness (complete emptiness) of life more bearable.

Later works

In 1977 Stoppard offered *Every Good Boy Deserves Favour*, a remarkable achievement performed for the first time at the Royal Festival Hall by the Royal Shakespeare Company and the one hundred-piece London Symphony Orchestra, conducted by Andre Previn (1929–).

Brought to the United States, it was presented at the Metropolitan Opera House in New York City with an eighty-one-piece orchestra.

Stoppard summed up his life's work as an attempt to "make serious points by flinging a custard pie around the stage for a couple of hours." Some of his serious points must have been heard in 1999, when he shared the Academy Award for Best Original Screenplay with Marc Norman for their work on the movie *Shakespeare in Love*. The movie also won the award for Best Picture of the year.

HARRIET BEECHER STOWE

Born: June 14, 1811
Litchfield, Connecticut
Died: July 1, 1896
Hartford, Connecticut
American writer

The impact created in 1852 by Harriet Beecher Stowe's novel *Uncle Tom's Cabin* made her one of the most widely known American women writers of the nineteenth century.

Childhood

Harriet Elizabeth "Hattie" Beecher was born in Litchfield, Connecticut, on June 14, 1811, into a family of powerful and very demanding individuals. Her father, Lyman Beecher, was a fiery, evangelical Calvinist (a strict religious discipline) who drove his six sons and two daughters along the straight and narrow path of devotion to God, to duty, and to himself. Much of her father's religious influence would show up in her writings as an adult. Her mother, Roxana Foote Beecher, died when she was four, leaving a legacy of quiet gentleness and a brother—the Beecher children's uncle Samuel Foote. Uncle Sam, a retired sea captain, brought a sense of romance and adventure into the household, as well as a measure of warm tolerance which might otherwise have been absent.

In October 1832 Harriet's family moved to Cincinnati, Ohio, where the elder Beecher became director of the Lane Theological Seminary and where his older daughter, Catherine, opened her Western Female Institute, a school in which Harriet taught. She began to study Latin and the romance languages and made her first attempts at writing fiction, although her sister did not approve.

In 1834 Harriet began writing for the *Western Monthly Magazine* and was awarded a fifty-dollar prize for her tale "A New England Sketch." Her writing during the next sixteen years was to be infrequent, for on January 6, 1836, she married Calvin Ellis Stowe, a pro-

fessor in the Lane Seminary. They had seven children during a period of financial hardship. At the same time she had the opportunity to visit the South, and she observed with particular attention the operation of the slave system there. The atmosphere at the Lane Seminary was that of extreme abolitionists (those fighting to end slavery). Harriet herself did not at that time pursue this position. In 1849 she published her first volume, *The Mayflower*, a slender book, but one that convinced her husband that she should seriously pursue a literary career.

Uncle Tom's Cabin

In 1850 Harriet's husband Calvin Stowe was called to a chair job at Bowdoin College in Brunswick, Maine, where they had their last child. She then set about writing *Uncle Tom's Cabin*, which first appeared in serial form in 1851 through 1852 in the *National Era*, a Washington, D.C., antislavery newspaper. The book was published in 1852 in a two-volume edition by the house of John P. Jewett and sold three hundred thousand copies in its first year—ten thousand in the first week. During the first five years of its publication, the book sold half a million copies in the United States alone.

Though Stowe's *Uncle Tom's Cabin* was received with wild attention, its reception was (except for the abolitionist press) almost completely in opposition. In the South each newspaper was a sea of fury, and in the North there were universal charges that the world of the slave had been misrepresented. The action of the book traces the passage of the slave Uncle Tom through the hands of three owners, each meant to represent a type of Southern figure. The first is a kind planter, the second a South-

Harriet Beecher Stowe.

Courtesy of the National Archives and Records Administration.

ern gentleman, and the last the wicked Simon Legree, who causes the death of Uncle Tom. The fortunes of the slaves in the book curve downward, and the finally successful dash for freedom taken by George and Eliza makes up the high drama of the book. But the overall treatment of slave and master reveals something far more complex than abolitionist ideas: the high, clear style contains much that is warmly, even fiercely sympathetic to the world of the old South.

Stowe answered her critics in 1853 with *A Key to Uncle Tom's Cabin*, a book designed to document the facts of the novel, but she also responded to her success by traveling

widely, receiving praise in England and in Europe. In 1856 she published her novel *Dred: A Tale of the Great Dismal Swamp*. This, too, was a slave novel, and its reception was hardly less enthusiastic than that of *Uncle Tom's Cabin*. In England alone, during the first month, over one hundred thousand copies were sold. Although Stowe then turned to instructive writings, producing a series of novels based on New England and drawing heavily on local color, her reputation for years to come was connected with the instructional power of her first two novels. Indeed, when she was introduced to President Abraham Lincoln (1809–1865) in 1862, he is said to have exclaimed, “So this is the little lady who started our big war!”

Later years

In 1869 Stowe again toured Europe, renewing an earlier friendship with Lord Byron's (1788–1824) widow. As a result, the novelist published *Lady Byron Vindicated* (1870), charging the dead poet with having violated his marriage vows by having a sexual relationship with his sister. Byron was a legend by this time, and the charges resulted in Stowe losing much of her loyal British audience. Undisturbed, however, she continued her series of novels, poems, and sketches, as well as her autobiography, never lacking a devoted and enthusiastic American audience.

The later years of Stowe's life were spent, in large part, in Florida, where she and her husband tried, with only moderate success, to manage the income from her literary activities. Stowe died in Hartford, Connecticut, on July 1, 1896.

Harriet Beecher Stowe's personality and her work are mint products of her culture.

They represent a special combination of rigid Calvinist discipline (fight against it though she tried), sentimental weakness for the romanticism of Sir Walter Scott (1771–1832) and Lord Byron, and a crusading sense of social and political responsibility.

ANTONIO STRADIVARI

Born: c. 1644

Cremona, Italy

Died: December 18, 1737

Cremona, Italy

Italian violin maker

Italian violin maker Antonio Stradivari created instruments that are still considered the finest ever made. The new styles of violins and cellos that he developed were remarkable for their excellent tonal quality and became the basic design for all modern versions of the instruments.

Family of violin makers

There are no records of Antonio Stradivari's birth, but based on the documentation

of his age that accompanied his signature on some of the instruments he created late in his life, it is assumed that he was born in 1644. There is also little known about his youth. He was probably born in Cremona, Italy, the city where his family had been established for five centuries, and he was the son of Alessandro Stradivari. Cremona was a town that had been renowned for its master violin makers for nearly one hundred years. Its leading craftsman during Stradivari's early life was Niccolo Amati, who represented the third generation of his family to contribute to the development of the traditional violin style popular at the time. Stradivari was probably apprenticed (worked to learn a trade) to Amati by the early 1660s and under Amati's direction learned the craft of violin making.

Experimented with violin design

By 1666 Stradivari was producing instruments independently as well as continuing to work at his mentor's (an advisor and guide) shop, which he probably did until Amati's death in 1684. In 1667 he was married to Francesca Feraboschi and set up his own household and shop. The couple eventually had six children and two of their sons would follow in their father's footsteps as violin makers. In the decade or so before 1680 Stradivari created a wide variety of stringed instruments, including guitars, harps, lutes, and mandolins. He continued to follow Amati's basic design for violins, but during this time he began experimenting with improvements in tone and design.

The Stradivari family moved to a new house at No. 2, Piazza San Domenico in 1680, and the building would serve as the violin maker's home and workshop for the rest of his

Antonio Stradivari.

Reproduced by permission of Archive Photos, Inc.

life. Here he matured in his art and created his greatest works, most notably the violins that set the standard for perfection in the music world. In the 1680s he continued to develop his own style, moving away from Amati's design to create a more solid-looking violin made of new materials and finishes. The resulting instruments during this time created a more powerful sound than earlier violins, and musicians from outside Cremona began to seek out instruments from his workshop as his fame grew. Upon Amati's death in 1684, Stradivari was considered the city's greatest violin maker.

Despite Stradivari's considerable success with his designs, he continued to look for

ways to improve his violins. He succeeded in finding a deeper, fuller tone that was quite distinct from the lighter sounds of other Cremona instrument makers. Stradivari's wife died in 1698, and she was honored with a large funeral. In the summer of the following year, the craftsman married his second wife, Antonia-Maria Zambelli. He had five more children from this marriage, but none of them ever entered the instrument-making business.

Created finest works in "golden period"

The years from 1700 to 1720 were the greatest of Stradivari's career, and the era was often referred to as the craftsman's "golden period." It was during this time that he perfected his violin design and created his finest instruments. Not only was his design revolutionary, but the materials he used also helped to create his unique effects. He selected excellent wood, such as maple, for his violins and developed the orange-brown varnish that became a trademark of his work. His works from this period were so magnificent that some violins created at this time have developed individual identities and reputations. Some of the most famous include the 1704 "Betts" violin, now in the United States Library of Congress; the 1715 "Alard," which is considered the finest Stradivarius in existence; and the 1716 "Messiah," an instrument that Stradivari never sold and is now in the best condition of any of his surviving pieces.

After 1720 Stradivari continued to produce violins and other stringed instruments, but the number of items decreased through the years. While his work maintained a high level of quality, it began to show the effects of failing eyesight and a less steady hand. Stradivari continued producing instruments

on his own until his death at the age of ninety-three on December 18, 1737.

Stradivari's violins remain as some of the most sought-after instruments in the world. In May 2000 a Stradivari violin sold at a New York City auction for \$1.3 million. In September of that year experts laid to rest speculation that a Stradivari violin on display at the Ashmolean Museum in England was a forgery (a fake). The handcrafted 284 year-old Stradivari violin is considered the most valuable in the world, worth nearly \$15 million.

JOHANN STRAUSS

Born: October 25, 1825

Vienna, Austria

Died: June 3, 1899

Vienna, Austria

Austrian composer

Johann Strauss, Vienna's greatest composer of light music, was known for his waltzes (dances) and operettas (light operas with songs and dances). His music seems to capture the height of elegance and refinement of the Hapsburg regime.

Early life

Johann Strauss Jr. was born on October 25, 1825, in Vienna, Austria. He was the eldest son of Johann Strauss Sr., a famous composer and conductor, known as "the father of the waltz." Although the elder Strauss wanted his sons to pursue business careers, the musical talents of Johann, Jr., quickly became evident, as he composed his first waltz at the age of six.

Strauss's mother secretly encouraged the musical education of her son behind his father's back. She arranged for one of the members of the father's orchestra to give the younger Johann lessons without his father's knowledge. When his father left the family in 1940, Strauss was relieved, for it meant that he could freely pursue his music without secrecy. At the age of nineteen he organized his own small orchestra, which performed some of his compositions in a restaurant in Hietzing. When his father died in 1849, Strauss combined his band with his father's and became the leader. He ultimately earned his own nickname, "the king of the waltz," or "the waltz king."

Touring

Strauss toured throughout Europe and England with great success and also went to America. He conducted huge concerts in Boston, Massachusetts, and New York City. He was the official conductor of the court

Johann Strauss.

Courtesy of the Library of Congress.

balls in Vienna from 1863 to 1870. During this time he composed his most famous waltzes, including *On the Beautiful Blue Danube* (1867), probably the best-known waltz ever written, *Artist's Life* (1867), *Tales from the Vienna Woods* (1868), and *Wine, Women, and Song* (1869).

In 1863 Jacques Offenbach (1819–1880), Paris's most popular composer of light operas, visited Vienna. The two composers met. The success of Offenbach's stage works encouraged Strauss to try writing operettas. He resigned as court conductor in 1870 to devote himself to this pursuit.

Operettas and waltzes

Three operettas are consistently popular and available for performance today. The finest of them, *Die Fledermaus* (1874; *The Bat*), is probably one of the greatest operettas ever written and a masterpiece of its kind. The lovely *Du und Du* waltz is made up of excerpts from this work. His two other most successful operettas were *A Night in Venice* (1883), from which he derived the music for the *Lagoon Waltz*, and *The Gypsy Baron* (1885), from which stems the *Treasure Waltz*.

Strauss continued to compose dance music, including the famous waltzes *Roses from the South* (1880) and *Voices of Spring* (1883). This last work, most often heard today as a purely instrumental composition, was originally conceived with a soprano solo as the composer's only independent vocal waltz.

Strauss wrote more than 150 waltzes, one hundred polkas, seventy quadrilles (square dances), mazurkas (folk dances from Poland), marches, and galops (French dances). His music combines considerable melodic invention, tremendous energy and brilliance with suavity and polish, and even at times an incredibly refined sensuality. He refined the waltz and raised it from its beginnings in the common beer halls and restaurants to a permanent place in aristocratic (having to do with the upper-class) ballrooms.

IGOR STRAVINSKY

Born: June 17, 1882

Oranienbaum, Russia

Died: April 6, 1971

New York, New York

Russian-born American composer

The Russian-born American composer Igor Stravinsky identified himself as an “inventor of music.” The novelty, power, and elegance of his works won him worldwide admiration before he was thirty. Throughout his life he continued to surprise admirers with transformations of his style that stimulated controversy.

Beginnings in Russia

Igor Fedorovich Stravinsky was born at Oranienbaum near St. Petersburg, Russia, on June 17, 1882. Although his father was a star singer of the Imperial Opera, he expected the boy to become a bureaucrat. Igor finished a university law course before he made the decision to become a musician. By this time he was a good amateur pianist, an occasional professional accompanist (someone who plays along with a singer), an enthusiastic reader of avant-garde (non-traditional) scores

from France and Germany, and a connoisseur (expert) of Italian, French, and Russian opera.

The closest friend from Stravinsky's youth was Stephan Mitusov, the stepson of a prince. Mitusov translated the poems of the French poet Paul Verlaine (1884–1896) that Stravinsky set to music in 1910, and he arranged the libretto (text that accompanies a musical work) of Stravinsky's opera *The Nightingale*.

Early works

One of Stravinsky's classmates at the university was Vladimir Rimsky-Korsakov, the son of the composer Nikolai Rimsky-Korsakov (1844–1908). Stravinsky became an apprentice to the elder Rimsky-Korsakov. He did not enter classes at the conservatory but worked privately at his home.

For the sake of learning the most advanced craftsmanship from Rimsky-Korsakov, Stravinsky hid his independent taste, confident that he could exercise it later. His *Symphony in E-flat* (1905–1907), *Pastorale* (1907), and *Fireworks* (1908) demonstrate this. Stravinsky also wrote a funeral dirge (a dark, moody piece) for Rimsky-Korsakov, which he later recalled as the best of his early works. It was not published, and the manuscript was lost.

Scandal, glory, and misunderstanding in France

The great impresario (sponsor of entertainment) Sergei Diaghilev (1872–1929) heard Stravinsky's works in St. Petersburg and invited him to go to Paris, France, to write orchestral arrangements of Chopin's (1810–1849) works for ballets that he was

Igor Stravinsky.

Reproduced by permission of Archive Photos, Inc.

producing. Each scandalized (caused a debate among) the first audiences. The ballets were also unique and quickly became classics. The three ballets—*Firebird* (1910), *Petrushka* (1911), and *The Rite of Spring* (1912–1913)—together made Stravinsky's influence on all the arts enormous. They established him as a leader of a heroic musical generation alongside older composers such as Maurice Ravel (1875–1937) and Arnold Schoenberg (1874–1951).

World War I (1914–18; a war involving Germany, Turkey, and Austria-Hungary on one side, and Great Britain, France, Russia, Italy, Japan, and the United States on the

other) prevented Stravinsky from writing more for Diaghilev's company. The Russian Revolution (1917; two revolutions that first overthrew the monarchy then replaced it with the Communists) prevented Stravinsky from returning home from Paris. During the war he lived in Switzerland, where he collaborated with the poet C. F. Ramuz on a series of works based on folklore, including *The Soldier's Tale* (1918). This work deeply influenced Bertolt Brecht (1898–1956), Jean Cocteau (1889–1963), and other dramatists of the 1920s.

Another ballet, begun in 1914, and finally orchestrated in 1923, was the grandest achievement of these years: *Svadebka* (Les Noces, or The Little Wedding). In it the barbaric power of *The Rite of Spring* and the modern concision (shortness) of *The Soldier's Tale* met in a serious affirmation of love. Along with these very diverse major works were several smaller ones, for voices and for instruments in various combinations. Outstanding among these was a memorial to Claude Debussy (1862–1918), *Symphonies for Wind Instruments*.

A short comic opera, *Mavra* (1922), revealed a new lyricism (personal, emotional) in Stravinsky's complicated development. Though it was not a popular success—to Stravinsky's great disappointment—it influenced young composers including Darius Milhaud, Francis Poulenc, Kurt Weill, Sergei Prokofiev, and Dmitri Shostakovich.

Stravinsky's instrumental works of the 1920s included the Piano Concerto, the Octet for Winds, the Sonata, and the Serenade for a piano solo. He produced an opera-oratorio (a long work usually without action or scenery), *Oedipus Rex*, in 1927, and a bal-

let, *Apollo*, in 1928. *The Fairy's Kiss* (1928), a ballet in tribute to Tchaikovsky, made use of themes from Tchaikovsky's songs and piano pieces. The death of Diaghilev in 1929 marked the end of a social focus for much of Stravinsky's work. Though Stravinsky became a French citizen in 1934, he was not able to win in France the recognition and security he needed.

The Symphony of Psalms (1930) for a chorus of men and boys and an orchestra without violins became the most widely known of all of Stravinsky's works after *The Rite of Spring*. At first its seriousness seemed at odds with the worldliness of the ballets. Later it was often recommended as a good starting point for acquaintance with Stravinsky's work as a whole. The theatrical works *Persephone* (1934) and *A Game of Cards* (1936) were as unique as the *Symphony of Psalms*. Stravinsky also wrote instrumental works on a grand scale: the *Violin Concerto* (1931), *Duo concertante for violin and piano* (1932), *Concerto for two pianos* (1935), *Concerto for chamber orchestra* ("Dumbarton Oaks," 1938), and *Symphony in C* (1940).

From 1942 to 1948 Stravinsky worked intermittently (on and off) on an uncommissioned (through his own initiative) setting of the Ordinary of the Roman Catholic Mass for chorus and winds. He had been spurred to this work by Mozart's Masses but not in any obvious way.

Renewals in America

When Stravinsky settled in the United States in 1939, he renewed his interest in popular music. He composed several short pieces, including *Ebony Concerto* (1946) for Woody Herman's band. His arrangement of

the "Star-Spangled Banner" (1944) was too severe to become a favorite. Several projects for film music were begun, though none was completed. A collaboration happier even than that with Diaghilev developed with the New York City Ballet under George Balanchine (1904–1983). The first fruit of this collaboration was *Orpheus* (1948). In 1948 Stravinsky undertook a full-length opera, *The Rake's Progress*. This was a fulfillment of his mature ethical and religious concerns. The music included some of Stravinsky's most melodious ideas.

The young conductor Robert Craft became Stravinsky's devoted aide while he worked on the opera, and he introduced Stravinsky to the work of Anton Webern. During the 1950s Stravinsky studied Webern and gradually absorbed new elements into his own still evolving, still very individual, style. This is evident in the Cantata on medieval English poems (1952), the Septet (1953), the Song (1954) with dirge canons in memory of Dylan Thomas (1914–1953), the oratorio *Canticum Sacrum* (1956) in honor of St. Mark, and the ballet *Agon* (1953–1957).

Stravinsky's works of the 1960s continued to demonstrate complex rhythms and sounds, as well as fascinating harmony and counterpoint. These included *Threni*, i.e., *Lamentations of Jeremiah* (1958), *A Sermon, a Narrative, and a Prayer* (1961), *The Flood* (1962), *Abraham and Isaac* (1963), *Requiem Canticles* (1966), the unaccompanied Anthem on stanzas from T. S. Eliot's (1888–1965) *Quartets*, *The Dove Descending Breaks the Air* (1962), the setting for voice and three clarinets of W. H. Auden's (1907–1973) *Elegy for JFK* (1964), and the song for voice and piano on Edward Lear's (1812–1888) poem *The Owl*

and the *Pussycat* (1968). Stravinsky's last major instrumental works were the *Movements for piano and orchestra* (1959) and the *Variations for orchestra* (1964), both of which were interpreted in ballets by Balanchine.

Stravinsky died on April 6, 1971, in New York City and was buried in Venice. His approach to musical composition was one of constant renewal. Rhythm was the most striking ingredient, and his novel rhythms were most widely imitated. His instrumentation and his ways of writing for voices were also distinctive and influential. His harmonies and forms were more elusive (difficult to grasp). He recognized melody as the "most essential" element.

BARBRA STREISAND

Born: April 24, 1942

Brooklyn, New York

American actress, singer, songwriter, director, and producer

Barbra Streisand is an award-winning performer on stage, television, and in motion pictures, as well as a recording artist of popular music.

Younger years

Barbara Joan Streisand was born on April 24, 1942, in Brooklyn, New York, to Emanuel and Diana (Rosen) Streisand. Her father was a high school English teacher who died when Streisand was only fifteen months old. Her mother raised Barbara and her older brother, Sheldon, by working as a secretary in the New York City public school system. Her mother remarried in the late 1940s.

Streisand has described her childhood as painful. She was shy as a child, and often felt rejected by other children because her looks were unusual. She accentuated her uniqueness by wearing odd outfits and by avoiding school activities. She also felt rejected by her mother and her stepfather, who was a used-car salesman.

Streisand graduated from high school when she was sixteen years old and moved to Manhattan in New York City, where she shared an apartment with friends. At this time Streisand changed the spelling of her first name to "Barbra." She worked in several small plays during this time and also sang in nightclubs.

Broadway debut

Streisand was spotted by a Broadway producer and was hired to appear in the musical *I Can Get It for You Wholesale*. The production opened in March of 1962, ran for nine months, and produced a very well-received cast album. With the popularity of

her stage role, she was an almost overnight success.

Streisand was signed by Columbia Records and recorded *The Barbra Streisand Album* and *The Barbra Streisand Second Album* in 1963. Both albums were very successful. *The Barbra Streisand Album* won Streisand a Grammy for both album of the year and best female vocal. She followed up with *The Barbra Streisand Third Album*.

Streisand then took the role of the comedian and singer Fanny Brice in the Broadway production of *Funny Girl* in 1964. It was one of the most successful stage productions in the history of Broadway, and her performance in it would win her first of many Golden Globe Awards.

Streisand's next album, *People*, was one of her highest-selling albums and earned her a third Grammy Award.

Television success

Streisand next took aim at television. *My Name Is Barbra* aired in 1965 and its follow-up *Color Me Barbra* followed in 1966. She appeared in a total of ten more television specials between 1967 and 1986.

In 1968, at the young age of twenty-six, Streisand was the largest selling female singer of popular standards since Judy Garland (1922–1969).

Motion picture success

Barbra's success continued throughout 1968, as she continued to release albums and perform concerts. She repeated her role as Fanny Brice for the 1968 film version of *Funny Girl*. She won an Academy Award for

Barbra Streisand.

Reproduced by permission of AP/Wide World Photos.

best actress for this role. In 1969 Streisand appeared as Dolly Levi in the motion picture *Hello, Dolly!* At this time she received a Golden Globe award as Best Female World Film Favorite.

After the success of *Funny Girl*, Streisand began to concentrate more on motion pictures than on live performances. She appeared in *What's Up, Doc?* and *Up the Sandbox* in 1972. In 1973 she won critical acclaim for her work in *The Way We Were*, in which she starred opposite Robert Redford (1937–). She won another Golden Globe Award for this role.

Director and producer

Streisand starred in *For Pete's Sake* and *Funny Lady* before her 1976 movie *A Star Is Born*. The movie and her rendition of the theme song, "Evergreen," earned her a second Academy Award, two Grammy Awards, and three Golden Globe Awards. The film was one of the highest moneymakers that year. Some critics, however, believed Streisand was executing too much control, as she was listed in the credits as not only the star, executive producer, and cosongwriter, but also as the wardrobe consultant and the designer of "musical concepts."

Streisand would take yet another leap in her creative life when she decided to direct, produce, and star in *Yentl* in 1983. Filmed in Eastern Europe, *Yentl* was the story of a woman masquerading as a man to get orthodox Jewish religious education. The film earned more than \$35 million, but it would be four years before she appeared in another film.

Streisand's role in *Nuts* (1987), opposite Richard Dreyfuss (1947–), is the story of a woman who must go through a competency (able to function mentally in a normal way) hearing to determine if she is sane enough to stand trial for manslaughter. Most critics disliked the film, which Streisand produced, but some called it her best work ever. The dramatic role prepared her for the tension and emotion that she displayed in her next movie.

In *The Prince of Tides* (1991) Streisand, opposite Nick Nolte (1940–), not only starred, but directed and coproduced the film. The film was nominated for several Academy Awards, including the award for best picture. Streisand won a Golden Globe Award for directing.

Top of the charts

In addition to performing in motion pictures and on television throughout the 1970s, 1980s, and 1990s, Streisand continued to release albums. After *Funny Girl—Original Broadway Cast Recording* there would be over fifty Streisand albums released. Over the years she has recorded duets with performers Barry Gibb (1946–), Bryan Adams, Don Johnson, Neil Diamond (1941–), Kim Carnes, Johnny Mathis, and Michael Crawford.

After receiving a death threat in 1967, Streisand developed stage fright and stopped performing in public concerts. She commented to Susan Price of *Ladies Home Journal*, "You don't get over stage fright—you just don't perform." However, new friendships seemed to have a positive impact. In the early 1990s she began to grow closer to her mother and became friends with then-President Bill Clinton (1946–) and his wife Hillary (1947–).

Streisand did a world tour in 1994, starting in London, England, and ending in New York City. Her shows were some of the biggest moneymaking concerts of the year.

Streisand released *Higher Ground* in November of 1997 and it immediately became number one on the *Billboard* chart. It set a record for the greatest span of time between a performer's first and most recent number one albums—thirty-three years. The first single released from the album, "Tell Him," a duet with Celine Dion (1968–), was immediately a Top 40 hit and was nominated for a Grammy Award.

A lifetime of achievement

Streisand has recorded fifty-four albums and has collected an overwhelming thirty-

nine gold albums, twenty-five platinum albums, and twelve multi-platinum albums. She was the first person to win an Academy Award, an Emmy Award, a Grammy Award, and an Antoinette Perry (Tony) Award. She is also the only person to have won an Academy Award for both acting and songwriting.

Streisand married actor James Brolin in July 1998. The couple divides their time between homes in Malibu and Beverly Hills, California. She has given concerts to help benefit political candidates and charities that benefit social causes such as acquired immune deficiency syndrome (AIDS; a disease that affects the body's immune system) research. The Streisand Foundation was established in 1992 to help advocate women's rights, civil liberties, and environmental protection.

President Clinton presented Streisand a National Medal of Arts in 2000. She gave what she said were her final live performances in Madison Square Garden in New York City that year.

Streisand won an Emmy in 2001 for her Fox TV special *Barbra Streisand: Timeless*. At the ceremony she sang "You'll Never Walk Alone" in tribute to the victims of the September 11, 2001, attacks on New York City and Washington, D.C.

SUN YAT-SEN

Born: November 12, 1866

Choyhung, Kwangtung, China

Died: March 12, 1925

Peking, China

Chinese president and politician

Sun Yat-sen was the leader of China's republican revolution. He did much to inspire and organize the movement that overthrew the Manchu dynasty in 1911—a family of rulers that reigned over China for nearly three hundred years. Through the Kuomintang Party he paved the way for the eventual reunification of the country.

Childhood

Sun Yat-sen was born on November 12, 1866, into a peasant household in Choyhung in Kwangtung near the Portuguese colony of Macao. His father worked as a farmer, which had been his family's traditional occupation for many generations. His early education, like his birthplace, established him as a man of two worlds, China and the West. After a basic training in the Chinese classics in his village school, he was sent to Hawaii in 1879 to join his older brother. There he enrolled in a college where he studied Western science and Christianity.

Sun Yat-sen.

Upon graduation in 1882, he returned to his native village. After learning about Christianity, Sun had come to believe that the religious practices in the village where he grew up were nothing more than superstitions. He soon showed these changed beliefs by damaging one of the village idols and was banished from the village.

Though Sun returned home briefly to undergo an arranged marriage, he spent his late teens and early twenties studying in Hong Kong. He began his medical training in Canton, China, but in 1887 returned to Hong Kong and enrolled in the school of medicine. After graduation in June 1892, he went to Macao, where Portuguese authori-

ties refused to give him a license to practice medicine.

By the time Sun returned to Hong Kong in the spring of 1893, he had become more interested in politics than in medicine. Upset by the Manchu government's corruption, inefficiency, and inability to defend China against foreign powers, he wrote a letter to Li Hung-chang (1823–1901), one of China's most important reform leaders (social-improvement leaders), supporting a program of reform. Ignored, Sun returned to Hawaii to organize the Hsing-chung hui (Revive China Society). When war between China and Japan appeared to present possibilities for the overthrow of the Manchus, Sun returned to Hong Kong and reorganized the Hsing-chung hui as a revolutionary secret society. An uprising was planned in Canton in 1895 but was discovered, and several of Sun's men were executed. Having become a marked man, Sun fled to Japan.

Revolutionist

The pattern for Sun's career was established: unorganized plots, failures, execution of coconspirators, overseas wanderings, and financial backing for further coups (hostile takeovers). Sun grew a moustache, donned Western-style clothes, and, posing as a Japanese man, set out once again, first to Hawaii, then to San Francisco, and finally to England to visit a former school instructor. Before leaving England, he often visited the reading room of the British Museum, where he became acquainted with the writings of Karl Marx (1818–1893).

Sun returned to Japan in July 1905 to find the Chinese student community stirred to a pitch of patriotic excitement. Joined by

other revolutionists such as Huang Hsing and Sung Chiao-jen (1882–1913), Sun organized, and was elected director of, the T'ung-meng hui (Revolutionary Alliance). The T'ung-meng hui was carefully organized, with a sophisticated and highly educated membership core drawn from all over China.

By this time Sun's ideas had developed into the "Three People's Principles"—his writings on nationalism, democracy, and people's livelihood. When Sun returned from another fundraising trip in the fall of 1906, his student following in Japan numbered in the thousands. However, under pressure from the government in China, the Japanese government threw him out.

Sun's fortunes had reached a low point. The failure of a series of poorly planned and armed coups relying upon the scattered forces of secret societies and rebel bands had reduced the reputation of the T'ung-meng hui in Southeast Asia. However, Sun found that Chinese opinion in the United States was turning against his rivals. Sun visited the United States and was on a successful fundraising tour when he read in a newspaper that a successful revolt had occurred in the central Yangtze Valley city of Wuchang, China.

President of the Chinese Republic

By the time Sun arrived back in China on Christmas Day 1911, rebellion had spread through the Yangtze Valley. An uneasy welcome greeted him, and in Nanking, China, revolutionaries from fourteen provinces elected him president of a provisional (temporary) government. On January 1, 1912, Sun Yat-sen proclaimed the establishment of the Republic of China.

The next year a bitter power struggle developed in the Chinese government. On March 20, 1913, Yüan's agents assassinated Sung Chiao-jen at the Shanghai, China, railroad station. Sun hurried back and demanded that those responsible be brought to justice. Yüan resisted, sparking the so-called second revolution. Yüan removed Sun from office and on September 15, 1913, ordered his arrest. By early December, Sun was once again a political refugee (one who is forced to flee) in Japan.

Preparations for a comeback

Sun now began to work for the overthrow of Yüan. However, Yüan was undone by his own mistakes rather than by Sun's plots. His attempt to replace the republic with a monarchy (rule by one) touched off revolts in southwestern China followed by uprisings of Sun's followers in several other provinces. Sun returned to Shanghai in April 1916, two months before Yüan's death.

Following a fruitless quest for Japanese assistance, Sun established a home in Shanghai. There he wrote two of the three treatises (formal writings) later incorporated into his *Chien-kuo fang-lueh* (Principles of National Reconstruction). In the first part, *Social Reconstruction*, completed in February 1917, Sun attributed the failure of democracy (rule by the people) in China to the people's lack of practice and application. The second treatise, *Psychological Reconstruction*, argued that popular acceptance of his program had been obstructed by acceptance of the old saying "Knowledge is difficult, action is easy." The third part, *Material Reconstruction*, constituted a master plan for the industrialization of China to be financed by lavish investments from abroad.

Once again Sun reorganized his party, this time as the Chinese Kuomintang. He also kept a hand in the political world in Canton, China. When the city was occupied on October 26, 1920, by Ch'en Chiung-ming and other supporters, Sun named Ch'en governor of Kwangtung, China. In April 1921 the Canton Parliament established a new government to rival the Peking government and elected Sun president.

After driving Ch'en from Peking, Sun resumed preparation for the northern expedition, but Ch'en recaptured Canton and forced Sun to flee to a gunboat in the Pearl River. There, in the company of a young military aide named Chiang Kai-shek (1887–1975), Sun tried unsuccessfully to engineer a comeback.

Communist alliance

Never one to be discouraged by failure, Sun returned to Shanghai and continued his plans to retake Canton through alliances with northern warlords (military commanders of independent armies). About this time, Sun accepted support from the Soviet Union, a mark of his disappointment with the Western powers and Japan and his need for political, military, and financial aid. Part of the agreement provided for the admission of individual Chinese Communists into the Kuomintang. On January 26, 1923, the Soviet Union guaranteed its support for the reunification of China. This would give Sun the muscle he needed.

Meanwhile Sun's military allies were paving the way for a return to Canton. By the middle of February 1923 Sun was back again as head of a military government. In January 1924 the first National Congress of the Kuomintang approved a new constitution (a formal document which sets the standards

for a government), which remodeled the party along Soviet lines. At the top of the party was the Central Executive Committee with bureaus in charge of propaganda (using literature and the media to influence the masses), workers, peasants, youth, women, investigation, and military affairs. Sun's *Three People's Principles* were restated to emphasize anti-imperialism (domination by a foreign power) and the leading role of the party.

Even the most disciplined party, Sun realized, would be ineffective without a military arm. To replace the unreliable warlord armies, Sun chose the Soviet model of a party army. The Soviets agreed to help establish a military academy, and a mission headed by Chiang kai-shek was sent to the Soviet Union to secure assistance.

Final days in Peking

However, the lure of warlord alliances remained strong. In response to an invitation from Chang Tso-lin (1873–1928) and Tuan Ch'i-jui (1865–1936), Sun set out for Peking to discuss the future of China. However, negotiations with Tuan Ch'i-jui soon collapsed. This proved to be the last time that Sun would be disappointed by his allies. Following several months of deteriorating health, in late 1924, Sun found that he had incurable cancer.

Sun passed his final days by signing the pithy "political testament," urging his followers to hold true to his goals in carrying the revolution through to victory. He also signed a highly controversial valedictory (farewell address) to the Soviet Union to reaffirm the alliance against Western domination. The following day, March 12, 1925, Sun died in Peking, China. He was given a state funeral under orders of Tuan Ch'i-jui.

Though the guiding spirit of the Chinese revolution, Sun was widely criticized during his lifetime. After his death he became the object of a cult (a following) that elevated him to a sacred position.

reader's guide

U•X•L Encyclopedia of World Biography features 750 biographies of notable historic and contemporary figures from around the world. Chosen from American history, world history, literature, science and math, arts and entertainment, and the social sciences, the entries focus on the people studied most often in middle school and high school, as identified by teachers and media specialists.

The biographies are arranged alphabetically across ten volumes. The two- to four-page entries cover the early lives, influences, and careers of notable men and women of diverse fields and ethnic groups. Each essay includes birth and death information in the header and concludes with a list of sources

for further information. A contents section lists biographees by their nationality. Nearly 750 photographs and illustrations are featured, and a general index provides quick access to the people and subjects discussed throughout *U•X•L Encyclopedia of World Biography*.

Special thanks

Much appreciation goes to Mary Alice Anderson, media specialist at Winona Middle School in Winona, Minnesota, and Nina Levine, library media specialist at Blue Mountain Middle School in Cortlandt Manor, New York, for their assistance in developing the entry list. Many thanks also go to the following people for their important editorial contri-

butions: Taryn Benbow-Pfalzgraf (proofreading), Jodi Essey-Stapleton (copyediting and proofing), Margaret Haerens (proofreading), Courtney Mroch (copyediting), and Theresa Murray (copyediting and indexing). Special gratitude goes to Linda Mahoney at LM Design for her excellent typesetting work and her flexible attitude.

Comments and suggestions

We welcome your comments on the *U•X•L Encyclopedia of World Biography*. Please write: Editors, *U•X•L Encyclopedia of World Biography*, U•X•L, 27500 Drake Road, Farmington Hills, MI 48331-3535; call toll-free: 1-800-877-4253; fax to 248-699-8097; or send e-mail via www.gale.com.

MARIA TALLCHIEF

Born: January 24, 1925

Fairfax, Oklahoma

Native American dancer and choreographer

Maria Tallchief is a world-renowned ballerina and one of the premiere (first-ranking) American ballerinas of all time. She was the first American to dance at the Paris Opera and has danced with the Paris Opera Ballet, the Ballet Russe, and the Balanchine Ballet Society, later renamed the New York City Ballet.

Early years

Maria Tallchief was born in Fairfax, Oklahoma, on January 24, 1925. Fairfax is located on the Osage Indian Reservation. Her grandfather had helped negotiate the treaty (agreement) that established the reservation and kept the tribe's right to own any minerals found on the land. When oil was discovered on the reservation, the Osage became the wealthiest Native American tribe in the country.

Maria's father, Alexander Joseph Tall Chief, an Osage Indian, was a wealthy real estate executive. Her mother, Ruth Mary Porter Tall Chief, was of Scottish and Irish ancestry. Eliza Big Heart, her grandmother, frequently took young Maria and her sister, Marjorie, to the ceremonial tribal dances.

Maria Tallchief.

Reproduced by permission of Archive Photos, Inc.

Tallchief began ballet and piano lessons at the age of three and frequently performed before civic organizations in Osage County. By age eight she and her sister had exhausted the training resources in Oklahoma, and the family moved to Beverly Hills, California. Although her mother hoped she would be a concert pianist, Tallchief devoted more and more of her time to dance. At one of her performances she devoted half of her program to the piano and half to dance.

By age twelve Tallchief was studying under Madame Nijinska, sister of the great Russian ballet dancer Vaslav Nijinsky (1890–1950), and

David Lichine, a student of the renowned Russian ballerina Anna Pavlova (1882–1931).

When she was fifteen years old, Tallchief danced her first solo performance at the Hollywood Bowl in a number choreographed by Nijinska. Following her graduation from Beverly Hills High School in 1942, it was apparent that ballet would be Tallchief's life. Instead of college she joined the Ballet Russe de Monte Carlo, a highly acclaimed Russian ballet troupe based in New York City. She made her debut with the company in Canada. It was at this time that Marie Elizabeth Tall Chief changed her name to Maria Tallchief to give herself a more European image.

Early professional career

Initially Tallchief was treated with skepticism (uncertainty) by members of the Russian troupe, who were unwilling to acknowledge the Native American's greatness. When choreographer George Balanchine (1904–1983) took control of the company, however, he recognized Tallchief's talent. He selected her for the understudy role in *The Song of Norway*. Under Balanchine, Tallchief's reputation grew, and she was eventually given the title of ballerina. During this time, Tallchief married Balanchine. When he moved to Paris, France, she went with him.

As had happened with the Ballet Russe, Tallchief was initially treated as an inferior in Paris. Her debut at the Paris Opera was the first ever for any American ballerina, and Tallchief's talent quickly won French audiences over. She later became the first American to dance with the Paris Opera Ballet at the Bolshoi Theatre in Moscow, Russia. She quickly became the ranking soloist and soon after joined the Balanchine Ballet Society, now called the New York City Ballet.

Later career

At the New York City Ballet Tallchief became recognized as one of the greatest dancers in the world. When she became the prima (lead) ballerina, she was the first American dancer to achieve this title. She held that title for eighteen years, until she retired.

Tallchief left the New York City Ballet in 1966. She went on to found the Chicago City Ballet in 1981. She also served as the artistic director of that company through 1987. Tallchief had formed a strong relationship with the Chicago art community when she danced in a production of *Orfeo ed Euridice* with the Lyric Opera of Chicago in 1962.

Tallchief was presented with a National Medal of the Arts award by the National Endowment for the Arts in 1999.

AMY TAN

Born: February 19, 1952
Oakland, California
Asian American writer

Amy Tan is known for her lyrically written (using flowing, melodic language) tales of emotional conflict between Chinese American mothers and daughters separated by generational and cultural differences.

Early life

Amy Ruth Tan was born in Oakland, California, on February 19, 1952. Her father was a Chinese-born Baptist minister; her mother was the daughter of an upper-class family in Shanghai, China. Throughout much of her childhood, Tan struggled with her parent's desire to hold onto Chinese traditions and her own longings to become more Americanized (integrated with American ideals). Her parents wanted Tan to become a neurosurgeon (a doctor who performs surgery on the brain), while she wanted to become a fiction writer. While still in her teens, Tan experienced the loss of both her father and her sixteen-year-old brother to brain tumors and learned that two sisters from her mother's first marriage in China were still alive (one of several autobiographical elements she would later incorporate into her fiction).

Tan majored in English at San Jose State, in California, in the early 1970s rather than fulfill her mother's expectations of becoming a surgeon. After graduate work at the University of California, Berkeley, she began a career as a technical writer (a person who writes about mechanical and computer issues). As a release from the demands of her technical writing career, she turned to fiction writing, having gained inspiration from her reading of Louise Erdrich's novel of Native American family life, *Love Medicine*.

Amy Tan.

Reproduced by permission of Archive Photos, Inc.

First novels

Despite Tan's achievements, her literary career was not planned; in fact, she first began writing fiction as a form of therapy. Considered a workaholic by her friends, Tan had been working ninety hours per week as a freelance technical writer. She became dissatisfied with her work life, however, and hoped to rid herself of her workaholic tendencies through psychological counseling. But when her therapist fell asleep several times during her counseling sessions, Tan quit and decided to cut back her working hours by jumping into jazz piano lessons and writing fiction instead. Tan's first literary efforts were

stories, one of which secured her a position in the Squaw Valley Community of Writers, a fiction writers' workshop. Tan's hobby soon developed into a new career when her first novel, *The Joy Luck Club*, was published in 1989.

Tan's *The Joy Luck Club*, received the Commonwealth Club gold award for fiction and the American Library Association's best book for young adults award in 1989 and stayed on the *New York Times's* best-seller list for nine months. In 1993, Tan produced and coauthored the screenplay (script for a movie) for *The Joy Luck Club* which was made into a critically acclaimed film. It was adapted for the stage in a production directed by Tisa Chang for Pan Asian Repertory in 1999. Tan's second novel, *The Kitchen God's Wife*, was published in 1991 followed by the children's books *The Moon Lady* (1992) and *The Chinese Siamese Cat* (1994). The year 2001 saw the release of yet another successful novel, *The Bonesetter's Daughter*.

Tan's *The Joy Luck Club* is made up of sixteen stories told by four Chinese immigrant women and their four American-born daughters, linked together by the narrative of June, whose mother had founded a women's social club in China. Nearly forty years later, June's mother has died. The surviving members, the "aunties," recruit June to replace her mother, then send her to China to meet her half-sisters and inform them of the mother's death. When June expresses doubts about her ability to execute this assignment, the older women respond with disappointment. June then realizes the women rightly suspect that she, and their own daughters, know little of the women's lives and the strength and hope they wished to give the next generation.

Throughout the novel, the various mothers and daughters attempt to demonstrate their own concerns about the past and the present and about themselves and their relations.

Critical praise

Amy Tan's novels, *The Joy Luck Club* and *The Kitchen God's Wife*, were enthusiastically received by critics as well as the book-buying public. Focusing on the lives of Chinese American women, Tan's books introduce characters who are uncertain as she once was about their Chinese background. Tan remarked in a *Bestsellers* interview that though she once tried to distance herself from her ethnicity, writing *The Joy Luck Club* helped her discover "how very Chinese I was. And how much had stayed with me that I had tried to deny." Upon *The Joy Luck Club's* release, Tan quickly became known as a gifted storyteller, a reputation she upheld with the publication of *The Kitchen God's Wife*.

Tan's *The Joy Luck Club* was praised as a thought-provoking, engaging novel. In *Quill and Quire*, Denise Chong wrote: "These moving and powerful stories share the irony, pain, and sorrow of the imperfect ways in which mothers and daughters love each other. Tan's vision is courageous and insightful." In her review for the *Toronto Globe and Mail*, Nancy Wigston declared that Tan's literary debut "is that rare find, a first novel that you keep thinking about, keep telling your friends about long after you've finished reading it." Some critics were particularly impressed with Tan's ear for authentic dialogue. Carolyn See, for instance, wrote in the *Los Angeles Times Book Review* that Tan ranks among the "magicians of language."

Tan's *The Kitchen God's Wife* deals with a young woman in California who realizes a

greater understanding of her mother's Chinese background. A generation gap exists between the two heroines: Mother Winnie has only awkwardly adapted to the relatively freewheeling ways of American—particularly Californian—life; daughter Pearl, on the other hand, is more comfortable in a world of sports and fast food than she is when listening, at least initially, to her mother's recollections of her own difficult life in China. As Winnie recounts the secrets of her past, including her mother's mysterious disappearance, her marriage to a psychotic and brutal man, the deaths of her first three children, and her journey to the United States in 1949, Pearl is able to view her mother in a new light and gathers the courage to reveal a secret of her own.

Critics hailed Tan's *The Kitchen God's Wife*, admiring its touching and bittersweet humor. Sabine Durrant, writing in the *London Times*, called the book "gripping" and "enchanting," and Charles Foran, in his review for the *Toronto Globe and Mail*, proclaimed Tan's work "a fine novel" of "exuberant storytelling and rich drama." In a *Washington Post Book World* review, Wendy Law-Yone asserted that Tan exceeded the expectations raised by her first book, declaring that "*The Kitchen God's Wife* is bigger, bolder and, I have to say, better" than *The Joy Luck Club*.

Tan continues to write. In 2001 her novel *The Bonesetter's Daughter* was released to much of the same praise as her earlier books.

ELIZABETH TAYLOR

Born: February 27, 1932

London, England

American actress

Elizabeth Taylor is one of film's most famous women, having starred in over fifty films and having won two Academy Awards. She also attracted attention because of her eight marriages and her devotion to raising money for research to fight acquired immune deficiency syndrome (AIDS; a virus that destroys the body's ability to fight off infection).

Began acting at nine

Elizabeth Rosemond Taylor was born in London, England, on February 27, 1932, to American parents Francis and Sara Taylor. Her father was a successful art dealer who had his own gallery in London. Her mother was an actress who had been successful before marriage under the stage name Sara Sothorn. Taylor has an older brother, Howard, who was born two years earlier. In 1939 the family moved to Los Angeles, California, where Taylor was encouraged and coached by her mother to seek work in the motion picture industry. Taylor was signed by Universal in 1941 for \$200 a week.

Success and special treatment

In 1942 Taylor signed a contract with Metro-Goldwyn-Mayer, the biggest and best studio of the time, and landed a part in *Lassie Come Home*. In 1943 she was cast in *National Velvet*, the story of a young woman who wins a horse in the lottery and rides it in England's Grand National Steeplechase. Taylor was so determined to play the role that she exercised and dieted for four months. During filming she was thrown from a horse and suffered a broken back, but she forced herself to finish the project. *National Velvet* became both a critical and commercial success.

Taylor loved her work, the costumes, the makeup, and the attention. Columnist Hedda Hopper, a friend of Taylor's mother, declared that at fifteen Elizabeth was the most beautiful woman in the world. Making films such as *Little Women*, *Father of the Bride*, *Cynthia*, and *A Place in the Sun*, Taylor began to gain a reputation as a moody actress who demanded special treatment. In May 1950 she married Conrad N. Hilton Jr., whose family owned a chain of hotels, but the union lasted less than a year. After divorcing Hilton, she married British actor Michael Wilding in February 1952. They had two sons.

Between 1952 and 1956 Elizabeth Taylor played in many romantic films that did not demand great acting talent. In 1956 she played opposite James Dean (1931–1955) in *Giant*, followed by the powerful *Raintree County* (1957), for which she was nominated (put forward for consideration) for an Academy Award for the first time. In *Suddenly Last Summer* (1959) she received five hundred thousand dollars (the most ever earned by an actress for eight weeks of work) and another Academy Award nomination.

Movies and marriages

In 1956 Taylor and Wilding separated, and in February 1957 she married producer Mike Todd. Taylor was shaken by James Dean's death and her friend Montgomery Clift's (1920–1966) near-fatal automobile accident, which occurred when the actor was driving home from a party at her house. In March 1958 her husband Mike Todd died in a plane crash. Taylor began trying to ease her grief with pills and alcohol. Her performance in the film *Cat on a Hot Tin Roof* (1958) won her an Academy Award nomination and led to a relationship with singer Eddie Fisher, who had been Mike Todd's best man at their wedding. Soon after his divorce from actress Debbie Reynolds (1932–), who had been Taylor's matron of honor, Taylor and Fisher were married in May 1959.

In 1960 Taylor turned in one of her best performances in *Butterfield 8*, for which she won an Oscar as Best Actress. A few months later, in 1961, she signed with 20th Century-Fox for \$1 million for the film *Cleopatra*, also starring Richard Burton (1925–1984). The two stars were soon romancing off the set as well as on, leading to criticism from the Vatican, which referred to the two stars as "adult children." Upset and confused over her tangled relationships, Taylor attempted suicide in early 1962. By 1964, however, she and Burton had each divorced their spouses and were married.

Taylor won another Oscar for her performance alongside Burton in *Who's Afraid of Virginia Woolf?* (1966). Over a dozen films followed, as did a divorce from Burton. The couple remarried in October 1975 before divorcing for the second and final time in July 1976. In 1978 Taylor married for the seventh time. Her new husband was John Warner, a candi-

Elizabeth Taylor.

Reproduced by permission of Archive Photos, Inc.

date for the U.S. Senate in Virginia. According to one biographer, Taylor broke "all the rules for being a good political wife." She had also gained considerable weight, and the press attacked her about it. After Warner was elected, he and Taylor divorced.

Pain and loss

Taylor then moved to Broadway for the first time in a well-received staging of *The Little Foxes*. She and Richard Burton appeared together in a 1983 production of *Private Lives*, but critics felt that the dramatic spark between them was no longer there. In 1983 Taylor checked into the Betty Ford Clinic in California

for treatment for her alcohol addiction. The death of Burton in August 1984, however, combined with back pain and general ill health, led to her return to drinking and drugs.

Taylor was also alarmed as a number of her friends, including actor Rock Hudson (1925–1985) and fashion designer Halston, became ill with AIDS. Taylor began to speak out on behalf of AIDS research. In 1985 she became the cofounder and chair of the American Foundation for AIDS Research (AmFAR). Her “Commitment to Life” benefit of that year was the first major AIDS research fundraiser staged by the Hollywood community.

Taylor returned to the Betty Ford Clinic in 1988, where she met a forty-year old construction worker named Larry Fortensky. Their friendship continued outside the clinic and they married in 1991. In 1993 the Academy of Motion Picture Arts and Sciences honored Taylor with a special humanitarian (supporter of human welfare) award for her years with AmFAR. In 1994 Taylor returned to the movies after a fourteen-year absence for a small part in *The Flintstones*. She then announced her retirement from films. Her marriage to Fortensky ended in 1996.

Later years

In February 1997 Taylor participated in the ABC-TV (American Broadcasting Company-television) special, “Happy Birthday Elizabeth—A Celebration of Life,” which marked her sixty-fifth birthday and raised money for AIDS research. The following day she underwent an operation to remove a two-inch tumor from her brain. She also underwent operations on her hip and broke her back in 1998. In the summer of 1999 she fell and suffered a fracture to her spine.

In May 2000 Taylor was dubbed Dame Commander of the Order of the British Empire, the female version of a knight. Queen Elizabeth (1926–) presented her with the award for services to the entertainment industry and to charity. That same year she was given the Marian Anderson Award for her efforts on behalf of the AIDS community. She also returned to the hospital briefly after coming down with pneumonia. Taylor is a beautiful, much-beloved woman with a larger-than-life presence, both on and off the screen.

PETER ILYICH TCHAIKOVSKY

Born: May 7, 1840
Votkinsk, Russia
Died: November 6, 1893
St. Petersburg, Russia
Russian composer

Peter Ilyich Tchaikovsky was one of the most loved of Russian composers. His music is famous for its strong emotion, and his technical skill and strict work habits helped guarantee its lasting appeal.

Early years

Born on May 7, 1840, in Votkinsk in the Vyatka district of Russia, Peter Ilyich Tchaikovsky was the son of a successful engineer. Peter and his brothers and sister received a sound education from their French governess. His parents sometimes took him to concerts, and after one such evening he complained that he could not fall asleep because of the music stuck in his head. He was devoted to his mother, and at age four he and his sister composed a song for her. Her death when he was fourteen was a huge blow to him.

Tchaikovsky attended law school in St. Petersburg, Russia, and, while studying law and government, he took music lessons, including some composing, from Gabriel Lomakin. Tchaikovsky graduated at the age of nineteen and took a job as a bureau clerk. He worked hard, but he hated the job; by this time he was totally absorbed by music. He soon met the Rubinstein brothers, Anton (1829–1894) and Nikolai (1835–1881), both of whom were composers. Anton was a pianist second only to Franz Liszt (1811–1886) in technical brilliance and fame. In 1862 Anton opened Russia's first conservatory (a school that focuses on teaching the fine arts), under the sponsorship of the Imperial Russian Music Society (IRMS), in St. Petersburg. Tchaikovsky was its first composition student.

Early works

Tchaikovsky's early works were well made but not memorable. Anton Rubinstein was demanding and critical, and when Tchaikovsky graduated two years later he was still somewhat frightened by Anton's harshness. In 1866 Nikolai Rubinstein invited Tchaikovsky to Moscow, Russia, to live with him and serve as professor of composition at the Moscow Conservatory, which he had just established. Tchaikovsky's father was now in financial (money-related) trouble, and the composer had to support himself on his meager earnings from the conservatory. The musical poems *Fatum* and *Romeo and Juliet* that he wrote in 1869 were the first works to show the style he became famous for. *Romeo and Juliet* was redone with Mily Balakirev's (1837–1910) help in 1870 and again in 1879.

During the 1870s and later, there was considerable communication between Tchaikovsky and the Rubinsteins on the one hand and the members of the "Mighty Five" Russian composers—Balakirev, Aleksandr Borodin (1834–1887), Modest Mussorgsky (1839–1881), Nicolai Rimsky-Korsakov (1844–1908), and César Cui—on the other. It was widely reported that the two groups did not get along, but this was not true. Tchaikovsky worked as an all-around musician in the early 1870s, and, as was expected of a representative of the IRMS, he taught, composed, wrote critical essays, and conducted (although he was not a great conductor). In 1875 he composed what is perhaps his most universally known and loved work, the Piano Concerto No. 1. Anton Rubinstein mocked the piece, although he himself often performed it years later as a concert pianist. Also popular was Tchaikovsky's ballet *Swan Lake* (1876). It is the most success-

Peter Ilyich Tchaikovsky.
Courtesy of the Library of Congress.

ful ballet ever written if measured in terms of broad audience appeal.

A disastrous marriage

In 1877 Tchaikovsky married the twenty-eight-year-old Antonina Miliukova, his student at the conservatory. It has been suggested that she reminded him of Tatiana, a character in his opera *Eugene Onegin*. His unfortunate wife, who became mentally ill and died in 1917, not only suffered rejection by her husband but also the vicious criticism of his brother Modeste Tchaikovsky. Modeste, like Peter, was a misogynist (one who hates women). Modeste attacked Antonina in

a biography he wrote about Peter. This was an attempt to shield Peter and mask his weaknesses. Later biographers repeated and even exaggerated Modeste's claim that Antonina was cheap and high-strung.

Tchaikovsky never stuck around to find out what she was like. Within a few weeks he had fled Moscow alone for an extended stay abroad. He made arrangements through his relatives to never see his wife again. In his correspondence of this period—indeed through a large part of his career—he was often morbid (gloomy) about his wife, money, his friends, even his music and himself. He often spoke of suicide. This, too, has been reported widely by Tchaikovsky's many biographers. Even during his life critics treated him unkindly because of his open, emotional music. But he never sought to change his style, though he was dissatisfied at one time or another with most of his works. He also never stopped composing.

Arrangement with Madame von Meck

Tchaikovsky became involved in another important relationship at about the same time as his marriage. Through third parties an unusual but helpful arrangement with the immensely wealthy Nadezhda von Meck was made. She was attracted by his music and the possibility of supporting his creative work, and he was interested in her money and what it could provide him. For thirteen years she supported him at a base rate of six thousand rubles a year, plus whatever "bonuses" he could manage to get out of her. He was free to quit the conservatory, and he began a series of travels and stays abroad.

Von Meck and Tchaikovsky purposely never met, except for one or two accidental

encounters. In their correspondence Tchaikovsky discusses his music thoughtfully; in letters to his family he complains about her cheapness. He dedicated his Fourth Symphony (1877) to her. Tchaikovsky finished *Eugene Onegin* in 1879. It is his only opera generally performed outside the Soviet Union. Other works of this period are the Violin Concerto (1881), the Fifth Symphony (1888), and the ballet *Sleeping Beauty* (1889).

Later years

Tchaikovsky's fame and his activity now extended to all of Europe and America. To rest from his public appearances he chose a country retreat in Klin near Moscow. From this he became known as the "Hermit of Klin," although he was never a hermit. In 1890 he finished the opera *Queen of Spades*, based on a story by the Russian poet Aleksandr Pushkin (1799–1837). Tchaikovsky was happy when, despite the criticism of "experts," the opera was well received. In late 1890 Von Meck cut him off. He had reached the point where he no longer depended on her money, but he was still upset by her rejection. Even his brother Modeste expressed surprise at his anger. Tchaikovsky had an immensely successful tour in the United States in 1891.

The Sixth Symphony was first heard in October 1893, with the composer conducting. This work, named at Modeste's suggestion *Pathétique*, was poorly received—very likely because of Tchaikovsky's conducting. Tchaikovsky never knew of its eventual astonishing success, for he contracted cholera (a disease of the small intestine) and died, still complaining about Von Meck, on November 6, 1893.

ALFRED, LORD TENNYSON

Born: August 6, 1809

Somersby, England

Died: October 6, 1892

Haslemere, England

English poet

Alfred, Lord Tennyson was regarded by many in his generation as the greatest poet of Victorian England. A superb craftsman in verse, he wrote poetry that ranged from confident assertion to black despair.

His early days

Alfred, Lord Tennyson was born on August 6, 1809, in the village of Somersby, Lincolnshire, England. His parents were the Reverend George Clayton Tennyson and Elizabeth Fytche Tennyson. He had seven brothers and four sisters. His father was an educated man, but was relatively poor. He was a country clergyman (church official). Though he was not very wealthy, he did have a large library. Alfred read widely in this library, and he learned to love reading, especially poetry,

Alfred, Lord Tennyson.

Reproduced by permission of AP/Wide World Photos.

at an early age.

As Tennyson's father grew older, he became more passionate and melancholy (sad). He began drinking heavily, suffered from lapses of memory, and once even tried to kill his eldest son. Misfortune, not surprisingly, haunted the whole Tennyson family. The year he died, the elder Tennyson said of his children, "They are all strangely brought up."

Early poetry and Cambridge

Tennyson began writing poetry as a child. At twelve he wrote a six-thousand-line epic (a long poem about a real or fictional

heroic figure) in imitation of Sir Walter Scott (1771–1832). Other models were Lord Byron (1788–1824), and Percy Bysshe Shelley (1792–1822). In 1827 there appeared a small volume entitled *Poems by Two Brothers*. The book, despite its title, included poems by three of the Tennyson brothers, a little less than half of them probably by Alfred. That same year he entered Trinity College, Cambridge University. Tennyson's undergraduate days were a time of intellectual and political turmoil in England. He belonged to a group called the Apostles. The institutions of church and state were being challenged, and the Apostles debated these issues. He also took up the cause of rebels in Spain.

Those who knew Tennyson as a university student were impressed by his commanding physical presence and his youthful literary achievements. In 1831 his father died, and Tennyson left the university without taking a degree.

Love of beauty and obligation to society

In the volume entitled *Poems*, which Tennyson published in 1832, a recurring theme is the conflict between a selfish love of beauty and the obligation to serve society. The collection includes "The Lady of Shalott," a narrative set in the England of King Arthur (a mythical king of England). Tennyson was saddened by some of the reviews of this book and by the death of a close friend. For the next ten years he did not publish anything. In 1840 he invested what money he had inherited in a plan to make woodworking machinery. By 1843 he had lost his small inheritance.

Turning point

Poems, Two Volumes (1842) signaled a change in Tennyson's fortunes. It contained one of the several poems that would eventually make up the *Idylls of the King*. Other poems in this collection are "Ulysses," a dramatic monologue (speech given by one person) in which the aging king urges his companions to undertake a final heroic journey. In "The Two Voices" he wrote of an interior debate between the wish to die and the will to live. *Poems, Two Volumes* was well received. The prime minister (head of government) of England, who was particularly impressed by "Ulysses," awarded Tennyson a pension (a fixed annual amount of money) that guaranteed him two hundred pounds a year.

In Memoriam

The greatest year of Tennyson's life was 1850. On June 1 he published *In Memoriam*, the long elegy (an artistic piece expressing sadness over someone's death) inspired by the death of his friend Arthur Hallam. Less than two weeks later he married Emily Sellwood, with whom he had fallen in love fourteen years before. Finally, in November, he was appointed poet laureate (official poet of a country) to succeed William Wordsworth (1770–1850). Tennyson's years of uncertainty and financial insecurity were over. He became the highly regarded poetic spokesman of his age.

In Memoriam is a series of 129 lyrics (short poems) of varying length, all composed in the same form. The lyrics may be read individually, rather like the entries in a journal, but the poem has an overall organization. It moves from grief through acceptance to joy. The poem combines private feeling with a confusion over the future of

Christianity, which was a feeling many of Tennyson's age group shared.

Although Tennyson was now settled and prosperous, his next book, *Maud and Other Poems* (1855), is notable for another study in sadness. Tennyson described the poem as a "little Hamlet," a reference to the play written by William Shakespeare (1564–1616). It almost certainly expresses some of the author's youthful anxieties as recollected in his middle age. Of the other poems in the 1855 volume, the best-known are "The Charge of the Light Brigade" and "The Ode on the Death of the Duke of Wellington," perhaps the greatest of the poems written by Tennyson in his capacity as poet laureate.

The Idylls of the King

Between 1856 and 1876 Tennyson's principal concern was the composition of a series of narrative poems about King Arthur and the Round Table. He worked on this project for more than twenty years. One section was written as early as 1833. Another part was not published until 1884. As published in 1889, *The Idylls of the King* consisted of twelve blank-verse (unrhymed iambic pentameter [lines of five poetic feet]) narratives (the idylls) that dealt with Arthur, Merlin, Lancelot, Guinevere, and other figures in the court. The individual narratives are linked by a common theme: the destructive effect of incorrect passion on an honorable society. The Round Table is brought down in ruins by the unlawful love of Lancelot and Guinevere.

Some of Tennyson's peers regretted that he had expended so much attention on the legendary past. However, it is clear that this poetic myth of a dying society expressed some of his fears for nineteenth-century England.

Plays and last years

Tennyson had a long and immensely productive literary career. A chronology (list of works by date) shows that he did ambitious work until late in his life. In his sixties he wrote a series of historical verse plays—"Queen Mary" (1875), "Harold" (1876), and "Becket" (1879)—on the "making of England." The plays were intended to revive a sense of national grandeur and to remind the English of their liberation from Roman Catholicism.

Tennyson's last years were crowned with many honors. The widowed Queen Victoria (1819–1901) ranked *In Memoriam* next to the Bible as a comfort in her grief. In 1883 Tennyson was awarded a peerage (rights of nobility).

Tennyson died in Haslemere, England, on October 6, 1892. He was buried in Westminster Abbey after a great funeral. The choir sang a musical setting for "Crossing the Bar," Tennyson's poem that is placed at the end of all collections of his work.

**VALENTINA
TERESHKOVA**

Born: March 6, 1937

Maslennikovo, Russia

Russian cosmonaut

Valentina Tereshkova was the first woman in space, orbiting the earth forty-eight times in *Vostok VI* in 1963. She orbited the Earth for almost three days, showing that women have the same ability in space as men. Later she toured the world promoting Soviet science and feminism. She also served on the Soviet Women's Committee and the Supreme Soviet Presidium (government committee).

Early years

Valentina Vladimirovna "Valya" Tereshkova was born on March 6, 1937, in the Volga River village of Maslennikovo. Her father, Vladimir Tereshkov, was a tractor driver. He had been a Russian Army soldier during World War II (1939–45; a war fought mostly in Europe that pitted Great Britain, France, the United States, and the Soviet Union against Italy, Germany, and Japan). He was killed during the war when Valentina was two. Her mother Elena Fyodorovna Tereshkova was a worker at the Krasny Perekop cotton mill. She single-handedly raised Valentina, her brother Vladimir, and her sister Ludmilla in economically trying conditions. Valentina helped her mother at home and was not able to begin school until she was ten.

Tereshkova later moved to her grandmother's home in nearby Yaroslavl, where she

worked as an apprentice at a tire factory in 1954. In 1955 she joined her mother and sister as a loom operator at the cotton mill. Meanwhile, she took correspondence courses (courses taught through the mail) and graduated from the Light Industry Technical School. An ardent communist (believer that there should be no private property), she joined the mill's Komsomol (Young Communist League) and soon advanced to the Communist Party.

Joins space program

In 1959 Tereshkova joined the Yaroslavl Air Sports Club and became a skilled amateur (nonprofessional) parachutist. Inspired by the flight of Yuri Gagarin (1934–1968), the first man in space, she volunteered for the Soviet space program. Although she had no experience as a pilot, her achievement of 126 parachute jumps gained her a position as a cosmonaut (Russian astronaut) in 1961. At the time the Russian space program was looking for people with parachuting experience, because cosmonauts had to parachute from their capsules after they came back into Earth's atmosphere.

Five candidates were chosen for a one-time woman-in-space flight. Tereshkova received a military rank in the Russian air force. She trained for eighteen months before becoming chief pilot of the *Vostok VI*. All candidates underwent a rigorous (difficult) course of training, which included tests to determine the effects of being alone for long periods, tests with machines made to create extreme gravity conditions, tests made to duplicate the zero gravity weightless conditions in space, and parachute jumps.

Admiring fellow cosmonaut Yuri Gagarin was quoted as saying, "It was hard

Valentina Tereshkova.

Reproduced by permission of the Corbis Corporation.

for her to master rocket techniques, study spaceship designs and equipment, but she tackled the job stubbornly and devoted much of her own time to study, poring over books and notes in the evening."

Into space

At 12:30 P.M. on June 16, 1963, Junior Lieutenant Tereshkova became the first woman to be launched into space. Using her radio callsign (nickname) Chaika (Seagull), she reported, "I see the horizon. A light blue, a beautiful band. This is the Earth. How beautiful it is! All goes well."

Tereshkova was later seen smiling on Soviet and European TV, pencil and logbook floating weightlessly before her face. Vostok VI made forty-eight orbits (1,200,000 miles) in 70 hours, 50 minutes, coming within 3.1 miles of the previously launched *Vostok V*, which was piloted by cosmonaut Valery Bykovsky. By comparison, the four American astronauts who had been in space before this flight had a combined total of thirty-six orbits.

Tereshkova's flight confirmed Soviet test results that women had the same resistance as men to the physical and psychological stresses of space. In fact, tests showed that women could actually tolerate G-forces (gravitational forces) better than men.

Upon her return Tereshkova and Bykovsky were hailed in Moscow's Red Square, a large plaza in Moscow used for official celebrations. On June 22 at the Kremlin she was named a Hero of the Soviet Union. Presidium Chairman Leonid Brezhnev (1906–1982) decorated her with the Order of Lenin and the Gold Star Medal.

A symbol of the liberated Soviet woman, Tereshkova toured the world as a goodwill ambassador, promoting the equality of the sexes in the Soviet Union. She received a standing ovation at the United Nations. With Gagarin, she traveled to Cuba in October as a guest of the Cuban Women's Federation and then went to the International Aeronautical Federation Conference in Mexico.

Unfortunately, Tereshkova and the other female Russian cosmonauts were not taken as seriously inside the Soviet Union as they were outside. The Russians used the female cosmonauts for publicity purposes to show how women were treated equally in their country.

In truth, however, they were never thought of as the equals of the "regular," that is, male, cosmonauts, and they never received the same quality of flight assignments.

After Tereshkova's flight

On November 3, 1963, Tereshkova married Soviet cosmonaut Colonel Andrian Nikolayev, who had orbited the earth sixty-four times in 1962 in the *Vostok III*. Their daughter, Yelena Adrianovna Nikolayeva, was born on June 8, 1964. Doctors, who were fearful of her parents' space exposure, carefully studied the girl, but no ill effects were found.

Tereshkova, after her flight, continued as an aerospace engineer in the space program. She also worked in Soviet politics, feminism, and culture. She was a deputy to the Supreme Soviet between 1966 and 1989, and a people's deputy from 1989 to 1991. Meanwhile, she was a member of the Supreme Soviet Presidium from 1974 to 1989. During the years from 1968 to 1987, she also served on the Soviet Women's Committee, becoming its head in 1977. Tereshkova headed the USSR's International Cultural and Friendship Union from 1987 to 1991, and later chaired the Russian Association of International Cooperation.

Tereshkova summarized her views on women and science in an article titled "Women in Space," which she wrote in 1970 for the American journal *Impact of Science on Society*. In that article she said, "I believe a woman should always remain a woman and nothing feminine should be alien to her. At the same time I strongly feel that no work done by a woman in the field of science or culture or whatever, however vigorous or demanding,

can enter into conflict with her ancient ‘wonderful mission’—to love, to be loved—and with her craving for the bliss of motherhood. On the contrary, these two aspects of her life can complement each other perfectly.”

Valentina Tereshkova still serves as a model not only for the women of her native country, but for women throughout the world who wish to strive for new goals.

WILLIAM MAKEPEACE THACKERAY

Born: July 18, 1811

Calcutta, India

Died: December 24, 1863

London, England

English novelist

The English novelist William Makepeace Thackeray created unrivaled panoramas (thorough and complete

studies of subjects) of English upper-middle-class life, crowded with memorable characters displaying the realistic mixture of virtue, vanity, and vice.

Early life

William Makepeace Thackeray was born on July 18, 1811, in Calcutta, India. He was the only child of Richmond and Anne Thackeray. His family had made its fortunes in the East India Company for two generations. In 1817, after the death of his father, five-year-old Thackeray was sent to England to live with his aunt while he received his education. He was a precocious (showed the characteristics of an older person at a young age) child and showed a talent for drawing.

Around 1818 Thackeray’s mother married Major Carmichael Smyth, an engineer and author. In 1821 the two moved back to England and reunited with Thackeray, who developed a close relationship with his stepfather. When Thackeray was eleven, he was sent to the prestigious Charterhouse School. Schoolmates described him as a student who was not too serious, but very sociable. Also, he did not enjoy or participate in any sports or games. However, he did learn about gentlemanly conduct—an ideal that later he both criticized and upheld.

Education

In 1829 Thackeray entered Trinity College at Cambridge University, where he was only an average student. He left the university the next year, convinced that it was not worth his while to spend more time in pursuit of a second-rate degree under an unsuitable educational institution. A six-month stay in Weimar, Germany, gave Thackeray a more

William Makepeace Thackeray.
Courtesy of the Library of Congress.

sophisticated polish, as well as a more objective view of English manners. After Thackeray returned to London, he began studying law at the Middle Temple. He seemed more devoted to the fashionable but expensive habits of drinking and gambling that he had acquired at Cambridge, however.

At the age of twenty-one Thackeray rejected law and went to Paris, France, to study French, to draw, and to attend plays. The inheritance he acquired at that age soon disappeared into bad business ventures, bad investments, and loans to needy friends. Unfortunately, he was unable to distinguish himself as an artist. He met Isabella Shawe

while in Paris, and they married in 1836. They had two daughters.

Magazine writing

Between 1837 and 1844 Thackeray wrote critical articles on art and literature for numerous papers and journals, but he contributed most of his fiction of this period to *Fraser's Magazine*. In *The Memoirs of C. J. Yellowplush*, which appeared in a series from 1837 to 1838, he parodied (humorously wrote in the style of) the high-flown language of "fashnabble" novels. In *Catherine* (1839–1840) he parodied the popular criminal novel. "A Shabby Genteel Story" (1840) and other short compositions explored the world of rogues (dishonest people) and fools in a spirit of extreme and bitter disappointment. *The Irish Sketch Book* (1843) and *Notes of a Journey from Cornhill to Cario* (1845), supposedly written by the confirmed Londoner Mr. M. A. Titmarsh, were in a lighter vein.

In the fall of 1840 Thackeray's wife suffered a mental breakdown from which she never recovered. This experience profoundly affected his character and work. He became more sympathetic and less harsh in his judgments, and came to value domestic affection as the greatest good thing in life. These new attitudes emerged clearly in the best of his early stories, "The History of Samuel Titmarsh and the Great Hoggarty Diamond" (1841). In this tale an obscure (not distinct) clerk rises to sudden success and wealth but finds true happiness only after ruin has brought him back to hearth and home.

Adopting the mask of an aristocratic (upper-class) London bachelor and clubman named George Savage Fitz-Boodle, Thackeray next wrote a number of papers satirizing

(pointing out and devaluing sin or silliness) his way of life. The series called “Men’s Wives,” which was written at the same time, shows a maturing sense of comedy and tragedy. With *The Luck of Barry Lyndon* (1844) Thackeray returned to an earlier subject, the gentleman scoundrel. His central theme is the ruin of a young man’s character by false ideals of conduct and worldly success.

As a regular contributor to the satiric magazine *Punch* between 1844 and 1851, Thackeray finally achieved widespread recognition. His most famous contribution was *The Snobs of England, by One of Themselves* (1846–1847). It was a critical survey of the manners of a period in which the redistribution of wealth and power caused by industrialism (the rise of industry) had shaken old standards of behavior and social relationships.

Thackeray’s novels

Vanity Fair (1847–1848) established Thackeray’s fame permanently. Set in the time just before and after the Battle of Waterloo (1815; a battle that ended French domination of Europe), this novel is a portrait of society and centers on three families interrelated by acquaintance and marriage. In the unrestrained and resourceful Becky Sharp, Thackeray created one of fiction’s most engaging characters.

In *Pendennis* (1849–1850) Thackeray concentrated on one character. The story of the development of a young writer, the first part draws on Thackeray’s own life at school, at college, and as a journalist. The second half, which he wrote after a severe illness, lost the novel’s focus. It presents only a superficial (having insincere and shallow qualities) analysis of character in Pen’s struggle to

choose between a practical, worldly life and one of domestic virtue.

The History of Henry Esmond (1852), Thackeray’s most carefully planned and executed work, is a historical novel set in the eighteenth century. He felt a temperamental sympathy with this age of satire and urbane wit. *Esmond* presents a vivid and convincing realization of the manners and historical background of the period. It contains some of Thackeray’s most complex and firmly controlled characters.

The Newcomes (1854–1855) is another serial. Supposedly written by the hero of *Pendennis*, it chronicles the moral history of four generations of an English family. The most massive and complex of Thackeray’s social panoramas, it is also the darkest in its relentless portrayal of the defeat of humane feeling by false standards of respectability.

Later career

Thackeray, feeling that he had written himself out, returned to earlier works for subjects for his later novels. *The Virginians* (1858–1859) follows the fortunes of Henry Esmond’s grandsons in the United States, and *The Adventures of Philip* (1862) continues “A Shabby Genteel Story.” His later career included an unsuccessful campaign for Parliament as a reform candidate in 1857, and two lecture trips to the United States in 1852 and 1855. A founding editor of the *Cornhill Magazine*, he served it from 1859 to 1862.

Thackeray was 6 feet 3 inches tall, and a pleasant and modest man, fond of good food and wine. In the years of his success he openly took great pleasure in the comforts of the society that he portrayed so critically in

his novels. Thackeray died on December 24, 1863, in London, England.

When William Makepeace Thackeray began his literary career, Charles Dickens (1812–1870) dominated English prose (having to do with the common language) fiction. Thackeray's writing style was formed in opposition to Dickens's accusation of social evils, and against the artificial style and sentimentality (emotionalism) of life and moral (having to do with right and wrong) values of the popular historical romances. Although critical of society, Thackeray remained basically conservative (a person who prefers to preserve existing social and political situations without change). He was one of the first English writers of the time to portray the commonplace with greater realism. This approach was carried on in the English novel by Anthony Trollope (1815–1882).

TWYLA THARP

Born: July 1, 1941

Portland, Indiana

American dancer and choreographer

Dancer and choreographer (one who develops and directs dances) Twyla Tharp is known for developing a unique style that merged ballet and modern dance techniques with various forms of American vernacular (everyday) dance.

Early years

Twyla Tharp was born in Portland, Indiana, on July 1, 1941, the daughter of Lecile and William Tharp. Her grandparents on both sides were Quakers and farmers. She was named after Twila Thornburg, the "Princess" of the eighty-ninth Annual Muncie Fair in Indiana. Her mother changed the "i" to "y" because she thought it would look better on a marquee (a sign outside a theater). Twyla was the eldest of four children. She had twin brothers and a sister, Twanette. Her mother, a piano teacher, began giving Twyla lessons when she was eighteen months old.

When Tharp was eight years old, the family moved to the desert town of Rialto, California, where her parents built and operated the local drive-in movie theater. The house her father built in Rialto included a playroom with a practice section featuring a built-in floor for tap dancing, ballet barres (rails used for dance exercises and stretches), and closets filled with acrobatic mats, batons, ballet slippers, castanets (mini-sized percussion instruments that are attached to the thumb and forefinger), tutus, and capes for matador routines. Her well-known tendency as a workaholic and a perfectionist began with her heavily scheduled childhood.

Tharp began her dance lessons at the Vera Lynn School of Dance in San Bernardino, California. Then she studied with the Mraz sisters. She also studied violin,

piano, drums, Flamenco dancing, castanets, cymbals, and baton twirling with Ted Otis, a former world champion. At age twelve she began studying ballet. She attended Pacific High School and spent her summers working at the family drive-in.

Young adulthood

Tharp entered Pomona College as a freshman, moving to Los Angeles, California, that summer to continue her dance training with Wilson Morelli and John Butler. At midterm of her sophomore year she transferred to Barnard College in New York City. She studied ballet with Igor Schwesoff at the American Ballet Theater, then with Richard Thomas and his wife, Barbara Fallis. She began attending every dance concert she could and studied with Martha Graham (1893–1991), Merce Cunningham (1919–), and Eugene “Luigi” Lewis, the jazz teacher.

In 1962 Tharp married Peter Young, a painter whom she had met at Pomona College. Her second husband was Bob Huot, an artist. Both marriages ended in divorce. Huot and Tharp had one son, Jesse, who was born in 1971.

Start as an artist

Tharp graduated from Barnard College in 1963 with a degree in art history. She made her professional debut that year with the Paul Taylor dance company, billed as Twyla Young. In the following year, at age twenty-three, she formed her own company and began experimenting with movement in an improvisatory (made up on the spot) manner.

For the first five years Tharp and her dancers struggled, but by the early 1970s she

Twyla Tharp.

Reproduced by permission of Archive Photos, Inc.

began to be recognized for the breezy style of dance that added irreverent squiggles, shrugged shoulders, little hops, and jumps to conventional dance steps, a technique she called the “stuffing” of movement phrases.

Among the most creative of her early pieces is *The Fugue* (1970) for four dancers, set to the percussive beat of their own feet on a floor set up with microphones. In 1971 she choreographed *Eight Jelly Rolls* to music by Jelly Roll Morton (1890–1941) and *The Bix Pieces* to music by jazz musician Bix Beiderbecke (1903–1931).

Tharp performed as a member of her company until the mid-1980s. She stopped dancing to concentrate on her many projects for television and film, as well as for her company. She returned to performing in 1991. Other works for her company include *Sue's Leg* (1975), *Baker's Dozen* (1979), *In the Upper Room* (1986), and *Nine Sinatra Songs* (1982) set to the music of Frank Sinatra (1915–1998).

Beyond her own dance company

In 1973 Tharp created a work for the Joffrey Ballet, her first for a company other than her own and her first work for dancers on pointe (on the tip of the toe). Tharp used the Joffrey dancers and her own company in a work entitled *Deuce Coupe*, set to music by the Beach Boys. Teenage graffiti artists created the setting on stage each night. It was a huge success.

Tharp then went on to create *As Time Goes By* (1973) for the Joffrey; five works for the American Ballet Theater, including *Push Comes to Shove* (1976) and *Sinatra Suite* (1984), both with leading roles for Mikhail Baryshnikov (1948–); *Brahms-Handel* (1984) in collaboration with Jerome Robbins for the New York City Ballet; and *Rules of the Game* (1989) for the Paris Opera Ballet.

Tharp's work for her own company and for the ballet troupes made her among the first to demand a "crossover" dancer, one who would be equally at home in ballet and modern dance technique. With the success of *Deuce Coupe*, Tharp was in demand everywhere for her irreverent, funky-look choreography that appealed to the widest array of audiences in the United States.

New projects

Tharp made her first television program for the Public Broadcasting Service (PBS) series *Dance in America* (1976). She continued in television with *Making Television Dance* (1980), *Scrapbook Tapes* (1982), *The Catherine Wheel* (1983) for the British Broadcasting Corporation (BBC), and the television special *Baryshnikov by Tharp* (1985). Her film work began in 1978 with *Hair*, followed by *Ragtime* (1980), *Amadeus* (1984), and *White Nights* (1985). Tharp directed two full-evening productions on Broadway: *The Catherine Wheel* (1981) and the stage adaptation of the film *Singing in the Rain* (1985).

By 1987 Tharp was forced to disband her company because raising money to keep her dancers on salary was getting difficult. She was also interested in various other projects. She was invited to join the American Ballet Theater as artistic associate with Baryshnikov. When he departed the American Ballet Theater in 1989, she left as well, taking her ballets from the theater's repertory (the works regularly presented by a performance company). After that her works were presented by the Boston (Massachusetts) Ballet and the Hubbard Street Dance Company, based in Chicago, Illinois.

Work in the 1990s

After leaving the American Ballet Theater, Tharp embarked on a variety of endeavors that kept her in the forefront of American dance, including an autobiography (a book written by oneself about oneself), *Push Comes to Shove*, published in 1992; a series of tours with pick-up companies of dancers recruited mainly from the ballet troupes where she had worked; and a new work for the Boston Bal-

**CLARENCE
THOMAS**

let, which premiered in April 1994. Tharp continued to tour nationally and internationally with her assistant, Shelley Washington Whitman, often working without a company of her own or a permanent support base.

In 1996 she choreographed *Born Again*, a trio of new dances. They were performed by a group of thirteen young unknown dancers, who were selected in a series of nationwide auditions and trained by Tharp and Whitman. She returned to the American Ballet Theater in 1995 with successful revisions of two recent works, *Americans We* (1995) and *How Near Heaven* (1995), and a new work, *The Elements*.

In 2000 Tharp choreographed a new work for the New York City Ballet based on Beethoven's (1770–1827) seventh and eighth symphonies. In 2001 Tharp made the Lafayette Presbyterian Church in New York City the permanent home for her company. This was her first permanent base in her thirty-five-year career.

Tharp is the recipient of many awards, including a creative citation in dance from Brandeis University (1972), the MacArthur "Genius" Award (1992), and five honorary (earned without completing the usual requirements) doctorates. She has established her own unique style, combining various dance and musical styles.

Born: June 23, 1948

Pin Point, Georgia

American Supreme Court justice

President George Bush (1924–) named Clarence Thomas to the U.S. Supreme Court in 1991. Since joining the Court, Thomas—the second African American to serve on the court—has often voted with the more conservative justices.

Georgia childhood

Clarence Thomas was born in the tiny coastal town of Pin Point, Georgia, on June 23, 1948. As a very young boy he lived in a one-room shack with dirt floors and no plumbing. When Thomas was two years old, his father walked out on the family. As a result, at the age of seven he and his younger brother were sent to live with their grandfather, Myers Anderson, and his wife in Savannah, Georgia. Anderson, a devout Catholic and active member of the National Association for the Advancement of Colored People (NAACP), sent Thomas to a Catholic school staffed by nuns.

In remarks reported by *Jet* magazine, Thomas has said that he grew up speaking Gullah, a creole dialect spoken by African Americans on the coastal islands of the southeastern United States. Unlike other Supreme Court justices, he rarely asks questions from the bench during court proceedings. He has said that he developed this habit of silent listening when he was young because he found it a struggle to speak "stan-

Clarence Thomas.

Courtesy of the Supreme Court of the United States.

standard English” correctly in school. Nevertheless, he was always a strong student.

In 1964 Thomas’s grandfather withdrew him from the all-black religious high school he was attending and sent him to an all-white Catholic boarding school in Savannah. Despite being confronted with racism (a dislike or disrespect of a person based on his or her race), Thomas made excellent grades and played on the school’s football team. Thomas’s grandfather next sent him to Immaculate Conception Seminary (a place for religious education) in northwestern Missouri after his graduation from high school in 1967. Although Thomas was not the only

African American student, he still was troubled by poor race relations. A racist remark he overheard about the assassination of Martin Luther King Jr. (1929–1968) caused him to decide that he would not become a priest.

Turning to the law

Thomas left the seminary and enrolled at Holy Cross, a college in Worcester, Massachusetts. There he was a devoted student who also participated on the track team, did volunteer work in the community, and helped found the Black Student Union at Holy Cross. He also met Kathy Ambush, whom he married after graduating in 1971. The couple had one son, but divorced in 1984. (Thomas married his second wife, Virginia Lamp, in 1987.)

Thanks to his excellent academic record, Thomas was admitted to the law schools at Yale, Harvard, and the University of Pennsylvania. He chose Yale because of the financial support it offered him as part of its affirmative action policy to attract students from racial and ethnic minorities. At Yale he continued to do well academically, and he appeared to fit in socially as well. Yet, years later, he described his “rage” and loneliness at feeling snubbed by white people who viewed him as someone who could only attend Yale through an affirmative action program.

First government posts

Thomas graduated from Yale law school in 1974 and accepted a position on the staff of Missouri’s Republican attorney general, John Danforth (1936–). In 1979 he moved to Washington, D.C., and became a legislative assistant to Danforth on the condition that he not be assigned to civil rights issues. His

resentment toward some aspects of affirmative action, combined with his grandfather's lessons on self-sufficiency and independence, had moved Thomas into a circle of African American conservatives.

Thomas's conservative ideas soon brought him to the attention of the presidential administration of Ronald Reagan (1911–). In 1981 Thomas was appointed assistant secretary for civil rights in the U.S. Department of Education. Thomas openly stated that minority groups must succeed by their own merit. He asserted that affirmative action programs and civil rights legislation do not improve living standards.

In 1982 Thomas became the chairman of the U.S. Equal Employment Opportunity Commission (EEOC), which was designed to enforce laws against discrimination (unequal treatment based on age, disability, nationality, race, religion, or sex) in the workplace. Thomas served two consecutive terms as chairman, despite having previously sworn he would never work at the EEOC.

Supreme Court nomination

In 1990 President George Bush (1924–) appointed Thomas to the Washington, D.C., circuit of the United States Court of Appeals, a common stepping stone to the Supreme Court. Thomas served on this court for only one year. Despite this relatively limited experience, Bush nominated Thomas to replace retiring Supreme Court Justice Thurgood Marshall (1908–1993) on July 1, 1991.

Senate hearings to confirm Thomas's nomination appeared to be moving along smoothly until allegations by Anita Hill, a former EEOC employee, were made public. On

October 8, Hill held a press conference in which she made public the main points of testimony she previously had given the Federal Bureau of Investigation (FBI). Protests by some women's groups led the Senate confirmation committee to publicly review Hill's charges.

Anita Hill's charges

Hill charged that while she worked at the EEOC nearly a decade earlier Thomas pestered her for dates and told stories in her presence about pornographic film scenes and his own sexual ability. Hill claimed that Thomas's actions made it difficult for her to do her job and caused physical distress. Nevertheless, she continued to contact Thomas voluntarily even after he helped arrange for her appointment as a law professor at the University of Oklahoma.

Hill, Thomas, and witnesses on both sides testified about the allegations during the televised confirmation hearings, which were among the most widely viewed political events in television history. Thomas denied any wrongdoing. He remarked that the process had been a harrowing personal ordeal for him and his wife. Referring to the acts of violence by which whites had terrorized blacks in the American South in which he grew up, Thomas characterized the televised hearings as a "high-tech lynching." In the end, Thomas was confirmed by a 52-48 margin, the smallest—according to *Time* magazine—by which any justice has been confirmed in the past century.

Hill's allegations helped to make sexual harassment a major political issue. The phrase itself had varying and even conflicting definitions. Nevertheless, local, state, and national laws were passed to stop workplace

practices that could make other employees uncomfortable. Meanwhile, articles and books continued to debate whether Hill's specific charges against Thomas were valid.

The quiet justice

After joining the Supreme Court, Thomas voted frequently with Justice Antonin Scalia (1936–) and Chief Justice William Rehnquist (1924–), thereby siding with the court's leading conservatives (people who resist change and prefer to keep traditions). Although generally silent during oral arguments at court proceedings, Thomas has been visible in his opinion writing from the beginning. Reviewers of his legal essays and opinions (the written arguments by which court justices explain the reasons for their ruling or their disagreement with the ruling) agree that they are clear, well researched, and consistent. However, African American political groups criticized Thomas for maintaining his conservative values in cases affecting minorities.

For the first few years after his appointment, Thomas tended to keep a low public profile. Starting in 1996, however, he began to make occasional appearances before conservative political groups. Since the election of George W. Bush (1946–) as president in 2000, he has been increasingly hailed as a judicial hero by American conservatives.

DYLAN THOMAS

Born: October 27, 1914

Swansea, Carmarthenshire, Wales

Died: November 9, 1953

New York, New York

Welsh poet

The Welsh poet Dylan Thomas has been hailed as one of the most important poets of the century. His lyrics rank among the most powerful and captivating of modern poetry.

Welsh childhood

Dylan Marlais Thomas was born in the Welsh seaport of Swansea, Carmarthenshire, Wales, on October 27, 1914. His father, David John, was an English teacher and a would-be poet from whom Dylan inherited his intellectual and literary abilities. From his

mother, Florence, a simple and religious woman, Dylan inherited his mood, temperament, and respect for his Celtic heritage. He had one older sister, Nancy. He attended the Swansea Grammar School, where he received all of his formal education. As a student he made contributions to the school magazine and was keenly interested in local folklore (stories passed down within a culture). He said that as a boy he was “small, thin, indecisively active, quick to get dirty, curly.” During these early school years, Thomas befriended Daniel Jones, another local schoolboy. The two would write hundreds of poems together, and as adults Jones would edit a collection of Thomas’s poetry.

After leaving school, Thomas supported himself as an actor, reporter, reviewer, scriptwriter, and with various odd jobs. When he was twenty-two years old, he married Caitlin Macnamara, by whom he had two sons, Llewelyn and Colm, and a daughter, Aeron. After his marriage, Thomas moved to the fishing village of Laugharne, Carmarthenshire.

Begins writing career

To support his growing family, Thomas was forced to write radio scripts for the Ministry of Information (Great Britain’s information services) and documentaries for the British government. He also served as an aircraft gunner during World War II (1939–45; a war fought between Germany, Japan, and Italy, the Axis powers; and England, France, the Soviet Union, and the United States, the Allies). After the war he became a commentator on poetry for the British Broadcasting Corporation (BBC). In 1950 Thomas made the first of three lecture tours through the

Dylan Thomas.

United States—the others were in 1952 and 1953—in which he gave more than one hundred poetry readings. In these appearances he half recited, half sang the lines in his “Welsh singing” voice.

Thomas’s poetic output was not large. He wrote only six poems in the last six years of his life. A grueling lecture schedule greatly slowed his literary output in these years. His belief that he would die young led him to create “instant Dylan”—the persona of the wild young Welsh bard, damned by drink and women, that he believed his public wanted. When he was thirty-five years old, he described himself as “old, small, dark, intelli-

gent, and darting-doting-dotting eyed . . . balding and toothlessing.”

During Thomas's visit to the United States in 1953, he was scheduled to read his own and other poetry in some forty university towns throughout the country. He also intended to work on the libretto (text) of an opera for Igor Stravinsky (1882–1971) in the latter's California home. Thomas celebrated his thirty-ninth birthday in New York City in a mood of gay exhilaration, following the extraordinary success of his just-published *Collected Poems*. The festivities ended in his collapse and illness. On November 9, 1953, he died in St. Vincent's Hospital in New York City. Some reports attribute his death to pneumonia brought on by alcoholism, others to encephalopathy, a brain disease. His body was returned to Laugharne, Wales, for burial.

Literary works

Thomas published his first book of poetry, *Eighteen Poems* (1934), when he was not yet twenty years old. “The reeling excitement of a poetry-intoxicated schoolboy smote the Philistine as hard a blow with one small book as Swinburne had with *Poems and Ballads*,” wrote Kenneth Rexroth. Thomas's second and third volumes were *Twenty-five Poems* (1936) and *The Map of Love* (1939). The poems of his first three volumes were collected in *The World I Breathe* (1939).

By this time Thomas was being hailed as the most spectacular of the surrealist poets, or poets who used fantastic imagery of the subconscious in their verse. He acknowledged his debt to James Joyce (1882–1941) and dotted his pages with invented words and puns (the use of two or more words that sound the same, usually for humorous pur-

poses). Thomas also acknowledged his debt to Sigmund Freud (1856–1939), stating: “Poetry is the rhythmic, inevitably narrative, movement from an overclothed blindness to a naked vision. . . . Poetry must drag further into the clear nakedness of light more even of the hidden causes than Freud could realize.”

A Portrait of the Artist as a Young Dog (1940) is a collection of humorous autobiographical (having to do with writing about oneself) sketches. Thomas loved the wild landscape of Wales, and he put much of his childhood and youth into these stories. He published two more new collections of poetry, both of which contained some of his finest work: *Deaths and Entrances* (1946) and *In Country Sleep* (1951). *Collected Poems, 1934–1953* (1953) contains all of his poetry that he wished to preserve.

Themes and style

Thomas claimed that his poetry was “the record of my individual struggle from darkness toward some measure of light. . . . To be stripped of darkness is to be clean, to strip of darkness is to make clean.” He also wrote that his poems “with all their crudities, doubts, and confusions, are written for the love of man and in praise of God, and I'd be a damned fool if they weren't.” Passionate and intense, vivid and violent, Thomas wrote that he became a poet because “I had fallen in love with words.” His sense of the richness and variety and flexibility of the English language shines through all of his work.

The theme of all of Thomas's poetry is the celebration of the divine (godly) purpose he saw in all human and natural processes. The cycle of birth and flowering and death, of love and death, are also found throughout his

poems. He celebrated life in the seas and fields and hills and towns of his native Wales. In some of his shorter poems he sought to recapture a child's innocent vision of the world.

Thomas was passionately dedicated to his "sullen art," and he was a competent, finished, and occasionally complex craftsman. He made, for example, more than two hundred versions of "Fern Hill" before he was satisfied with it. His early poems are relatively mysterious and complex in sense but simple and obvious in pattern. His later poems, on the other hand, are simple in sense but complex in sounds.

Under Milk Wood, a radio play commissioned by the BBC (published 1954), was Thomas's last completed work. This poem-play is not a drama but a parade of strange, outrageous, and charming Welsh villagers. During the twenty-four hours presented in the play, the characters remember and ponder the casual and crucial moments of their lives. *Adventures in the Skin Trade and Other Stories* (1955) contains all the uncollected stories and shows the wit and humor that made Thomas an enchanting companion.

HENRY DAVID THOREAU

Born: July 12, 1817

Concord, Massachusetts

Died: May 6, 1862

Concord, Massachusetts

American writer

Henry David Thoreau was an accomplished American writer, as well as an outstanding transcendentalist, a person who seeks to rise above common thought or ideas. He is best known for his classic book, *Walden*.

New England childhood

Henry David Thoreau was born on July 12, 1817, in Concord, Massachusetts, and lived there most of his life; it became, in fact, his universe. His parents were permanently poor, as his father failed in several business ventures. Thoreau was raised along with three siblings, but his brother's death in 1842 and a sister's death in 1849 deeply affected him. He attended Concord Academy, where his record was good but not outstanding. Nevertheless, he entered Harvard University in 1833 as a scholarship student. Young as he was he established a reputation at Harvard

Henry David Thoreau.

for being an individualist, one who follows his own will. He was friendly enough with his fellow students, yet he soon saw that many of their values could never become his.

After Thoreau graduated in 1837, he faced the problem of earning a living. He taught briefly in the town school, taught for a longer while at a private school his brother John had started, and also made unsuccessful efforts to find a teaching job away from home. Meanwhile, he was spending a good deal of time writing—he had begun a journal in 1837, which ran to fourteen volumes of close-packed print when published after his death. He wanted, he decided, to be a poet.

Enchanted by nature

America was not supportive of its poets as a rule. Thoreau spent much of his life attempting to do just what he wanted while at the same time surviving, for he wanted to live as a poet as well as to write poetry. He loved nature and could stay indoors only with effort. The beautiful woods, meadows, and waters of the Concord neighborhood attracted him like a drug. He wandered among them by day and by night, observing the world of nature closely and sympathetically. He named himself, half humorously, “inspector of snow-storms and rainstorms.”

Thoreau’s struggles were watched with compassion by an older Concord neighbor, who was also one of America’s great men—Ralph Waldo Emerson (1803–1882). Emerson proved to be Thoreau’s best friend. In 1841 Emerson invited Thoreau to live at his home and to make himself useful there only when it would not interfere with his writing. In 1843 he got Thoreau a job tutoring in Staten Island, New York, so that he could be close to the New York City literary market.

Most of the time, however, Thoreau lived at home. A small room was all he needed. He never married, and he required little. At one point he built a cabin at Walden Pond just outside Concord, on land owned by Emerson, and lived in it from 1845 to 1846. There, he wrote much of his book *Walden*.

Literary works

Thoreau wrote nature essays both early and late in his career. They range from the “Natural History of Massachusetts” (1842), which is supposedly a review but seems to be a delightful discussion on the world of nature

around him, to the poetic “Autumnal Tints” and “Walking” (both 1862), which appeared shortly after his death. He also wrote three rather slender volumes that might be termed travel books: *The Maine Woods* (1864), *Cape Cod* (1865), and *A Yankee in Canada* (1866). Each was made up of essays and was first serialized (arranged and distributed at set times by a publisher) in a magazine. They were published in book form after Thoreau’s death on May 6, 1862.

Thoreau’s two most interesting books are hard to classify, or sort. They are not travel books, nor are they polemics (arguments to oppose an accepted opinion). The first is *A Week on the Concord and Merrimack Rivers* (1849), issued at his own expense. As a framework he used two river adventures he and his brother John had made, and he drew heavily from his journal of that time. He filled out the book with other journalizing (keeping a record of), bits of poetry, old college themes, and youthful philosophizing (seeking knowledge). The result was a book that a few enthusiasts (people who follow a special interest) hailed but that the public ignored.

Walden (1854), however, attracted followers from the beginning, and today editions of it crowd the bookshelves of the world. Though basically it is an account of Thoreau’s stay beside Walden Pond, it is also many other things. It is a how-to-do-it book, for it tells how to live one’s life with a minimum of distasteful labor. It is an apologia, or formal defense. It is a spiritual (or rather, philosophical) autobiography (a book written about oneself). It is a book of seasons. And it is a defiant declaration to the world, for Thoreau was crowing in triumph at his ability to live as he pleased.

The transcendentalist

Thoreau was, so to speak, a working transcendentalist. Thoreau put his personal stamp on those higher ideals of transcendentalism and translated them into action. For example, when a neighbor wanted to hire him to build a wall, Thoreau asked himself whether this was the best way to use his time and decided it was much better to walk in the woods. Transcendentalists regarded nature, both as symbol and actuality. Thoreau made Mother Nature into something like a deity, or god, and he spent more time in the world of nature than any other transcendentalist.

As Thoreau grew into middle age, he inevitably made a few changes. He had to take over the little family business after his father died, since there was no one else to do it. He did some surveying (mapping out land for development) and he became more of a botanist (one who studies plants) and less of a transcendentalist. His spells of illness increased during the 1850s. By December 1861 he no longer left the Thoreau house. By the next spring he could hardly talk above a whisper. He died on May 6, 1862. In spite of the painful last years of his life, his end was peaceful. “Never saw a man dying with so much pleasure and peace,” one of his townsmen observed.

During an elegy (a poem to praise the dead) for Thoreau, Emerson characterized him as a hermit and stoic (unaffected by pleasure or pain), but added that he had a softer side that showed especially when he was with young people he liked. Furthermore, Thoreau was resourceful and ingenious—he had to be, to live the life he wanted. He was patient and had to be to get the most out of nature. He could have been a notable leader, given all of those qualities, but, Emer-

son remarked sadly, Thoreau chose a different path. Nevertheless, Thoreau was a remarkable man, and Emerson gave him the highest possible praise by calling him wise. "His soul," said Emerson in conclusion, "was made for the noblest society."

JIM THORPE

Born: May 28, 1888

Bellemonta, Oklahoma

Died: March 28, 1953

Lomita, California

American football player, baseball player, and Olympic athlete

American track star and professional football and baseball player Jim Thorpe was the hero of the 1912 Olympic Games in Stockholm, Sweden, but had his gold medals taken from him for his status as a professional athlete.

Athletic youth

James Francis Thorpe (Native American name, Wa-tho-huck, or Bright Path) was born south of Bellemonta, near Prague, Oklahoma, on May 28, 1888. He was the son of Hiran P. Thorpe, of Irish and Sac-Fox Indian descent, and Charlotte View, of Potawatomi and Kickapoo descent. He grew up with five siblings, although his twin brother, Charlie, died at the age of nine. Jim's athletic abilities showed at a very early age, when he learned to ride horses and swim at the age of three. Thorpe first attended the Sac-Fox Indian Agency school near Tecumseh, Oklahoma, before being sent to the Haskell Indian School near Lawrence, Kansas, in 1898.

When Thorpe was sixteen, he was recruited to attend a vocational school (a school to learn a trade) for Native Americans, the Carlisle Indian School in Pennsylvania. His track potential was obvious in 1907, when he cleared the high jump bar at 5 feet 9 inches while dressed in street clothes. Glenn S. "Pop" Warner, the school's legendary track and football coach, asked him to join the track team. That fall Thorpe made the varsity football team, playing some but starting the next year as a running back. In 1908 Thorpe was awarded third team All-American status, the highest honor for a collegiate athlete.

Following the spring of 1909, when Thorpe starred in track, he left the Carlisle school with two other students to go to North

Carolina, where they played baseball at Rocky Mount in the Eastern Carolina Association. Thorpe pitched and played first base for what he said was \$15 per week. The next year he played for Fayetteville, winning ten games and losing ten games pitching, while batting .236. These two years of paid performances in minor league baseball would later tarnish his 1912 amateur Olympic status.

Thorpe had matured to almost six feet in height and 185 pounds and led Carlisle to outstanding football seasons in 1911 and 1912. In 1911, against Harvard University's undefeated team led by the renowned coach Percy Houghton, Thorpe kicked four field goals—two over 40 yards—and the game ended in a stunning 18-15 victory. Carlisle lost only two games in 1911 and 1912, against Penn State and Syracuse University, but conquered such teams as the U.S. Army, Georgetown University, Harvard, and the University of Pittsburgh. In his last year he scored twenty-five touchdowns and 198 points, and for the second year in a row he was named All-American by football pioneer Walter Camp (1859–1925).

Star of the 1912 Olympics

During the summer of 1912, before Thorpe's last year at Carlisle, he was chosen to represent the United States at the Stockholm Olympics in the decathlon (ten track events) and the pentathlon (five track events). He was an easy victor in the pentathlon, winning four of the five events (broad jump, 200 meter dash, discus, and 1,500 meter race), losing only the javelin. In the decathlon Thorpe set an Olympic mark of 8,413 points that would stand for two

Jim Thorpe.

decades. King Gustav of Sweden addressed Thorpe as the “greatest athlete in the world” and presented him with several gifts, including one from Czar Nicholas of Russia (1868–1918)—a silver, 30-pound likeness of a Viking ship, lined with gold and containing precious jewels.

The gold medal ceremony for the decathlon, Thorpe said, was the proudest moment of his life. A half-year later charges against Thorpe for professionalism led to Thorpe's confession that he had been paid to play baseball in North Carolina in 1909 and 1910. (Actually, Thorpe had been paid cash by coach “Pop” Warner as an athlete at

Carlisle before that.) Shortly thereafter the Amateur Athletic Union (AAU) and the American Olympic Committee declared Thorpe a professional, asked Thorpe to return the medals won at the Olympics, and erased his name from the record books.

Thorpe, a great athlete but not a great baseball player, almost immediately signed a large \$6,000-per-year, three-year contract with the New York Giants, managed by John J. McGraw. Thorpe was to be mainly as a gate attraction. His six-year major league career resulted in a .252 batting average with three teams: the New York Giants, the Cincinnati Reds, and the Boston Braves. He batted .327 in 1919, his last year in the majors.

Thorpe signed to play professional football in 1915 with the Canton Bulldogs for the "enormous" sum of \$250 a game. Attendance at Canton immediately skyrocketed, and Thorpe led Canton to several championships over its chief rival, the Massillon Tigers. In 1920 he was appointed president of the American Professional Football Association, which would become the National Football League. Thorpe was the chief drawing power in professional football until Red Grange (1903–1991) entered the game in 1925.

The campaign to restore his medals

Honors for past athletic achievements kept coming to Thorpe. At mid-century the Associated Press (AP) polled sportswriters and broadcasters to determine the greatest football player and most outstanding male athlete of the first half of the twentieth century. Thorpe outdistanced Red Grange and Bronko Nagurski (1908–1990) for the title of the greatest football player. He led Babe Ruth (1895–1948) and Jack Dempsey (1896–

1983) for the most outstanding male athlete, being paired with Babe Didrikson Zaharias (1914–1956), the outstanding female athlete.

This recognition, however, did not influence the United States Olympic Committee to help restore Thorpe's Olympic medals. There had been an attempt in 1943 by the Oklahoma legislature to get the AAU to reinstate Thorpe as an amateur. Thirty years later the AAU did restore his amateur status. In 1952, shortly before his death, there was an attempt by Congressman Frank Bow of Canton, Ohio, to get Avery Brundage, president of the United States Olympic Committee (USOC) to use his good offices to restore Thorpe's medals to him. This effort failed. Following Brundage's death in 1975, the USOC requested the International Olympic Committee to restore Thorpe's medals, but it was turned down. Not until 1982, when USOC president William E. Simon met with the International Olympic Committee president Juan Antonio Samaranch, was the action finally taken.

Outside of athletics, Thorpe's life had much more tragedy than two gold medal losses. Besides his twin brother Charlie's death when he was nine years old, his mother died of blood poisoning before he was a teenager. Four years later, shortly after Thorpe entered Carlisle, his father died. Following his marriage to Iva Miller in 1913, their first son died at the age of four from polio, a life-threatening disease that affects development in children. Twice divorced, he had one boy and three girls from his first marriage, and four boys from his second marriage in 1926 to Freeda Kirkpatrick. His third marriage was to Patricia Askew in 1945. His place in sports history, though, was estab-

lished well before he died of a heart attack on March 28, 1953 in Lomita, California, at the age of sixty-four.

JAMES THURBER

Born: December 8, 1894

Columbus, Ohio

Died: November 2, 1961

New York, New York

American writer and artist

James Thurber was an American writer and artist. One of the most popular humorists (writers of clever humor) of his time, Thurber celebrated in stories and in cartoons the comic frustrations of eccentric yet ordinary people.

Early life in Ohio

James Grove Thurber was born on December 8, 1894, in Columbus, Ohio, to Charles Leander and Mary Agnes Thurber. The family soon moved to Virginia where Charles was employed as a secretary to a congressman. While playing with his older brother, Thurber was permanently blinded in his left eye after being shot with an arrow. Problems with his eyesight would plague Thurber for much of his life. After Charles's employer lost a reelection campaign, the Thurbers were forced to move back to Ohio. Thurber attended the local public schools and graduated high school with honors in 1913. He went on to attend Ohio State University—though he never took a degree—and worked for some years afterwards in Ohio as a journalist.

Life in New York City

Thurber moved to New York City in 1926 and a year later he met writer E. B. White (1899–1985) and was taken onto the staff of the *New Yorker* magazine. In collaboration with White he produced his first book, *Is Sex Necessary?* (1929). By 1931 his first cartoons began appearing in the *New Yorker*. These primitive yet highly stylized characterizations included seals, sea lions, strange tigers, harried men, determined women, and, most of all, dogs. Thurber's dogs became something like a national comic institution, and they dotted the pages of a whole series of books.

Thurber's book *The Seal in the Bedroom* appeared in 1932, followed in 1933 by *My Life and Hard Times*. He published *The Middle-aged Man on the Flying Trapeze* in 1935, and by 1937, when he published *Let Your*

James Thurber.

Reproduced by permission of AP/Wide World Photos.

Mind Alone!, he had become so successful that he left his position on the *New Yorker* staff to become a freelance writer and to travel abroad.

The Last Flower appeared in 1939; that year Thurber collaborated with White on a play, *The Male Animal*. The play was a hit when it opened in 1940. But this was also the year that Thurber was forced to undergo a series of eye operations for cataract and trachoma, two serious eye conditions. His eyesight grew steadily worse until, in 1951, it was so weak that he did his last drawing. He spent the last decade of his life in blindness.

Later years

The last twenty years of Thurber's life were filled with material and professional success in spite of his handicap. He published at least fourteen more books, including *The Thurber Carnival* (1945), *Thurber Country* (1953), and the extremely popular account of the life of the *New Yorker* editor Harold Ross, *The Years with Ross* (1959). A number of his short stories were made into movies, including "The Secret Life of Walter Mitty" (1947), which is also regarded as one of the best short stories written in the twentieth century.

Thurber died of pneumonia (an infection of the lungs) on November 2, 1961, just weeks after suffering a stroke. Thurber left behind a peculiar and unique comic world that was populated by his curious animals, who watched close by as aggressive women ran to ground apparently spineless men. But beneath their tame and defeated exteriors, Thurber's men dreamed of wild escape and epic adventure and, so, in their way won out in the battle of the sexes.

MARSHAL TITO

Born: May 25, 1892

Kumrovec, Croatia

Died: May 4, 1980

Ljubljana, Yugoslavia

Yugoslav politician and president

The Yugoslav statesman Marshal Tito became president of Yugoslavia in 1953. He directed the rebuilding of a Yugoslavia devastated in World War II and the bringing together of Yugoslavia's different peoples until his death in 1980.

Brief history of Yugoslavia

From its creation in 1918 until the country broke apart in the early 1990s, Yugoslavia was a multinational state composed of many ethnic (cultural) and religious groups. The various ethnic groups were dissatisfied with their status in the new state, opposed the domination of one ethnic group, the Serbs, and called for greater national and political rights. The country's economy was unstable and the country was surrounded by enemy states dedicated to its destruction.

Because of these conditions, many groups found support for their activities and sought to destroy order. Two of these groups were the fascists, who believed in a strong central government headed by a dictator, or

sole ruler, and the communists, who believed that goods and services should be owned and distributed among the people. Among the communists who supported a revolutionary change was Josip Broz, who is commonly known as Marshal Tito.

Tito's early years

Tito was born Josip Broz on May 25, 1892, the seventh of fifteen children of a peasant (poor farmer) family of Kumrovec, a village near Zagreb, Croatia. Tito began working on his family's farm when he was just seven years old. At the same time, he attended an elementary school where he studied until he was twelve years old. When he was fifteen years old, he began training to become a locksmith. During this time he also went to night school where he studied subjects including geography, history, and languages.

After spending several years working as a mechanic in Croatia, Slovenia, Austria, and Germany, Tito was drafted into the Austro-Hungarian army at the outbreak of World War I (1914–18) where German-led forces fought for control of Europe. He was wounded and captured by the Russians, and spent time in a prisoner-of-war camp. Tito soon joined the Red Army, the Communist group that rose to power after the Russian Revolution of October 1917 and would ultimately lead to the creation of the Communist Soviet Union.

In 1920 Tito returned to Croatia and joined the Communist Party of Yugoslavia. In 1928 he was sentenced to five years' imprisonment for Communist activity. After spending several years in the Soviet Union (the name of Communist Russia), in 1934 he was

Marshal Tito.

ected to the Central Committee and Politburo of the Yugoslav Party, the top offices of the Communist Party. In 1937 he was appointed secretary general of the Yugoslav Party after many other untrustworthy members were executed.

World War II

Tito was able to revive the Yugoslav Party and to make it a highly disciplined organization. He cleaned the ranks of disloyal members and gave the party a clear-cut and realistic policy to unite the country. For the first time, the party firmly supported the preservation rather than the breakup of Yugoslavia.

Tito was able to develop the Yugoslav Communist Party into a powerful political and military organization during World War II (1939–45), where the Axis powers of Germany, Italy, and Japan clashed with the Allied powers of America, Great Britain, and the Soviet Union.

After the Axis invasion of Yugoslavia in April 1941 and Germany's attack on the Soviet Union in June, Tito ordered the Communist Party to activate a small force to resist the Axis powers. At the same time, a movement headed by Colonel (later General) Draza Mihajlovic gained the support of the Yugoslav king Peter II. Allied officers reported that Tito's movement supported national unity rather than communism, and at the same time reported that Mihajlovic's forces had been cooperating with the Axis troops. This conflict between the two resistance leaders led to a bloody civil war.

Communist revolution in Yugoslavia

Tito's greatest accomplishment during World War II was the organization of perhaps the most effective resistance movement in the history of communism. While resisting the Axis forces, he embarked upon a communist revolution. His forces proceeded to destroy the class structure, destroy the old social and economic order, and lay the foundations for a postwar communist state system. By the end of the war, the communist military force was expanded into a large army (the National Liberation Army).

Basic policies of the Communist Party regarding the new Yugoslav state, such as federal organization of the country, were partially begun during the war. Tito provided the country with a system of temporary revolu-

tionary government—the Committee for the National Liberation of Yugoslavia. Skillfully he took advantage of every social opportunity to pursue communist political and military goals. Neither his domestic rivals nor the powerful forces of nations that occupied Yugoslavia were able to cope with the widespread activities of Tito's followers.

In December 1943 the Allies, ignoring King Peter who was exiled (forced to live) in London, declared that Tito's supporters would lead the Yugoslav forces against the occupying Axis troops. Tito's forces and those of the Soviet Union entered Belgrade, Yugoslavia, on October 20, 1944. Tito's men, however, drove the Germans from the country essentially by their own efforts, an event of the greatest importance in the future history of Yugoslavia. Unlike communist leaders of other East European countries, Tito himself had commanded the forces defeating the Axis troops and had not entered his country with the victorious Red Army. In August 1945 the Federal Republic of Yugoslavia was created.

Postwar years

From 1945 to 1953 Tito acted as prime minister and minister of defense in the government, whose most dramatic political action was the capture, trial, and execution of General Mihajlovic in 1946. Between 1945 and 1948 Tito led his country through an extreme form of dictatorship (rule by one all-powerful person) in order to mold Yugoslavia into a state modeled after the Soviet Union. In January 1953, he was named first president of Yugoslavia and president of the Federal Executive Council. In 1963 he was named president for life.

By 1953 Tito had changed Yugoslavia's relationship with the Soviet Union. He refused to approve Soviet leader Joseph Stalin's (1879–1953) plans for integrating Yugoslavia into the East European Communist bloc (a group aligned for a common cause). He now started on his own policies, which involved relaxing of central control over many areas of national life, and putting it back into the control of the citizens. Although relations between the Soviet Union and Yugoslavia improved when Soviet leader Nikita Khrushchev (1894–1971) visited Belgrade after Stalin's death in 1955, they never returned to what they were before 1948.

Tito attempted to build a bloc of "non-aligned" countries after Stalin's death. Under his leadership, Yugoslavia maintained friendly ties with the Arab states and criticized Israeli aggression in the Arab-Israeli War of 1967. He protested the Soviet invasion of Hungary in 1956 and Czechoslovakia in 1968, and maintained friendly relations with Romania after Nicolae Ceausescu (1918–1989) became its leader in 1965. Under Tito's leadership Yugoslavia was a very active member of the United Nations (UN), a multinational organization aimed at world peace.

Tito was married twice and had two sons. His first wife was Russian. After World War II he married Jovanka, a Serbian woman from Croatia many years younger than him. His wife often accompanied him on his travels. President for life, Tito ruled until his death in Ljubljana, Yugoslavia, on May 4, 1980, maintaining several homes, where he entertained a wide variety of international visitors and celebrities.

J. R. R. TOLKIEN

Born: January 3, 1892

Bloemfontein, South Africa

Died: September 2, 1973

Bournemouth, England

English writer, essayist, poet, and editor

J. R. R. Tolkien gained a reputation during the 1960s and 1970s as a cult figure (a person with a devoted following amongst a small group of people) among youths discouraged by war and the technological age from his work *The Hobbit* and the trilogy that followed, *The Lord of the Rings*.

Early life

John Ronald Reuel Tolkien was born on January 3, 1892, the son of English-born parents in Bloemfontein, in the Orange Free State of South Africa, where his father

worked as a bank manager. To escape the heat and dust of southern Africa and to better guard the delicate health of Ronald (as he was called), Tolkien's mother moved back to a small English village with him and his younger brother when they were very young boys. Tolkien would later use this village as a model for one of the locales in his novels. Within a year of this move their father, Arthur Tolkien, died in Bloemfontein, and a few years later the boys' mother died as well.

The Tolkien boys lodged at several homes from 1905 until 1911, when Ronald entered Exeter College, Oxford. Tolkien received a bachelor's degree from Oxford in 1915 and a master's degree in 1919. During this time he married his longtime sweetheart, Edith Bratt, and served for a short time on the Western Front with the Lancashire Fusiliers (a regiment in the British army that used an older-style musket) during World War I (1914–18), when Germany led forces against much of Europe and America).

Begins writing

In 1917, Tolkien was in England recovering from "trench fever," a widespread disease transmitted through fleas and other bugs in battlefield trenches. While bedridden Tolkien began writing "The Book of Lost Tales," which eventually became *The Silmarillion* (1977) and laid the groundwork for his stories about Middle Earth, the fictional world where Tolkien's work takes place.

After the war Tolkien returned to Oxford, where he joined the staff of the *Oxford English Dictionary* and began work as a freelance tutor. In 1920 he was appointed Reader in English Language at Leeds University. The following year, having returned to

Oxford as Rawlinson and Bosworth Professor of Anglo-Saxon, Tolkien became friends with the novelist C. S. Lewis (1898–1963). They shared an intense enthusiasm for the myths, sagas, and languages of northern Europe, and to better enhance those interests, both attended meetings of the “Coalbiters,” an Oxford club, founded by Tolkien, at which Icelandic sagas were read aloud.

During the rest of Tolkien’s years at Oxford—twenty as Rawlinson and Bosworth Professor of Anglo-Saxon, fourteen as Merton Professor of English Language and Literature—Tolkien published several well-received short studies and translations. Notable among these are his essays “Beowulf: The Monsters and the Critics” (1936), “Chaucer as a Philologist [a person who studies language as it relates to culture]: The Reeve’s Tale” (1934), and “On Fairy-Stories” (1947); his scholarly edition of *Ancrene Wisse* (1962); and his translations of three medieval poems: “Sir Gawain and the Green Knight,” “Pearl,” and “Sir Orfeo” (1975).

The Hobbit

As a writer of imaginative literature, though, Tolkien is best known for *The Hobbit* and *The Lord of the Rings*, tales which were formed during his years attending meetings of the “Inklings,” an informal gathering of like-minded friends and writers, that began after the Coalbiters dissolved. The Inklings, which was formed during the late 1930s and lasted until the late 1940s, was a weekly meeting held in Lewis’s sitting room at Magdalen College, at which works-in-progress were read aloud and discussed and critiqued by the attendees. Having heard Tolkien’s first hobbit story read aloud at a meeting of the

J. R. R. Tolkien.

Inklings, Lewis urged Tolkien to publish *The Hobbit*, which appeared in 1937.

Tolkien retired from his professorship in 1959. While the unauthorized publication of an American edition of *The Lord of the Rings* in 1965 angered him, it also made him a widely admired cult figure in the United States, especially among high school and college students. Uncomfortable with this status, he and his wife lived quietly in Bournemouth for several years, until Edith’s death in 1971. In the remaining two years of his life, Tolkien returned to Oxford, where he was made an honorary fellow of Merton College and awarded a doctorate of letters. He was at the

height of his fame as a scholarly and imaginative writer when he died in 1973, though critical study of his fiction continues and has increased in the years since.

The world of Middle Earth

Tolkien, a devoted Roman Catholic throughout his life, began creating his own languages and mythologies at an early age and later wrote Christian-inspired stories and poems to provide them with a narrative framework. Based on bedtime stories Tolkien had created for his children, *The Hobbit* concerns the efforts of a hobbit, Bilbo Baggins, to recover a treasure stolen by a dragon. During the course of his mission, Baggins discovers a magical ring which, among other powers, can render its bearer invisible. The ability to disappear helps Bilbo fulfill his quest; however, the ring's less obvious powers prompt the evil Sauron, Dark Lord of Mordor, to seek it. The hobbits' attempt to destroy the ring, thereby denying Sauron unlimited power, is the focal point of the *Lord of the Rings* trilogy, which consists of the novels *The Fellowship of the Ring* (1954), *The Two Towers* (1954), and *The Return of the King* (1955). In these books Tolkien rejects such traditional heroic qualities as strength and size, stressing instead the capacity of even the humblest creatures to win against evil.

Throughout Tolkien's career he composed histories, genealogies (family histories), maps, glossaries, poems, and songs to supplement his vision of Middle Earth. Among the many works published during his lifetime were a volume of poems, *The Adventures of Tom Bombadil and Other Verses from the Red Book* (1962), and a fantasy novel, *Smith of Wootton Major* (1967). Though many of his

stories about Middle Earth remained incomplete at the time of Tolkien's death, his son, Christopher, rescued the manuscripts from his father's collections, edited them, and published them. One of these works, *The Silmarillion*, takes place before the time of *The Hobbit* and tells the tale of the first age of Holy Ones (earliest spirits) and their offspring.

Nonetheless, Tolkien implies, to take *The Lord of the Rings* too seriously might be a mistake. He once stated that fairy stories in itself should be taken as a truth, not always symbolic of something else. He went on to say, "but first of all [the story] must succeed just as a tale, excite, please, and even on occasion move, and within its own imagined world be accorded literary belief. To succeed in that was my primary object."

Nearly thirty years after his death, the popularity of Tolkien's work has hardly slowed. In 2001 *The Lord of the Rings: The Fellowship of the Ring* was released as a major motion picture. The magic of Tolkien's world won over both the critics and public alike as the movie was nominated in thirteen categories, including Best Picture, at the Academy Awards; it won four awards. Two more films are scheduled for release by the end of 2003.

LEO TOLSTOY

Born: August 28, 1828

Tula Province, Russia

Died: November 9, 1910

Astapovo, Russia

Russian novelist

The Russian novelist and moral philosopher (person who studies good and bad in relation to human life) Leo Tolstoy ranks as one of the world's great writers, and his *War and Peace* has been called the greatest novel ever written.

Early years

Leo (Lev Nikolayevich) Tolstoy was born at Yasnaya Polyana, his family's estate, on August 28, 1828, in Russia's Tula Province, the youngest of four sons. His mother died when he was two years old, whereupon his father's distant cousin Tatyana Ergolsky took charge of the children. In 1837 Tolstoy's father died, and an aunt, Alexandra Osten-Saken, became legal guardian of the children. Her religious dedication was an important early influence on Tolstoy. When she died in 1840, the children were sent to Kazan, Rus-

sia, to another sister of their father, Pelageya Yushkov.

Tolstoy was educated at home by German and French tutors. He was not a particularly exceptional student but he was good at games. In 1843 he entered Kazan University. Planning on a diplomatic career, he entered the faculty of Oriental languages. Finding these studies too demanding, he switched two years later to studying law. Tolstoy left the university in 1847 without taking his degree.

Tolstoy returned to Yasnaya Polyana, determined to become a model farmer and a "father" to his serfs (unpaid farmhands). His charity failed because of his foolishness in dealing with the peasants (poor, working class) and because he spent too much time socializing in Tula and Moscow. During this time he first began making amazingly honest diary entries, a practice he maintained until his death. These entries provided much material for his fiction, and in a very real sense the collection is one long autobiography.

Army life and early literary career

Nikolay, Tolstoy's eldest brother, visited him at in 1848 in Yasnaya Polyana while on leave from military service in the Caucasus. Leo greatly loved his brother, and when he asked him to join him in the south, Tolstoy agreed. After a long journey, he reached the mountains of the Caucasus, where he sought to join the army as a Junker, or gentleman-volunteer. Tolstoy's habits on a lonely outpost consisted of hunting, drinking, sleeping, chasing the women, and occasionally fighting. During the long lulls he first began to write. In 1852 he sent the autobiographical sketch *Childhood* to the leading journal of the day, the *Contemporary*. Nikolai Nekrasov, its

Leo Tolstoy.

Courtesy of the Library of Congress.

editor, was ecstatic, and when it was published (under Tolstoy's initials), so was all of Russia. Tolstoy then began writing *The Cossacks* (finished in 1862), an account of his life in the outpost.

From November 1854 to August 1855 Tolstoy served in the battered fortress at Sevastopol in southern Ukraine. He had requested transfer to this area, a sight of one of the bloodiest battles of the Crimean War (1853–1856; when Russia battled England and France over land). As he directed fire from the Fourth Bastion, the hottest area in the conflict for a long while, Tolstoy managed to write *Youth*, the second part of his autobio-

graphical trilogy. He also wrote the three *Sevastopol Tales* at this time, revealing the distinctive Tolstoyan vision of war as a place of unparalleled confusion and heroism, a special space where men, viewed from the author's neutral, godlike point of view, were at their best and worst.

When the city fell, Tolstoy was asked to make a study of the artillery action during the final assault and to report with it to the authorities in St. Petersburg, Russia. His reception in the capital was a triumphant success. Because of his name, he was welcomed into the most brilliant society. Because of his stories, he was treated as a celebrity by the cream of literary society.

Golden years

In September 1862, Tolstoy married Sofya Andreyevna Bers (or Behrs), a woman sixteen years younger than himself. Daughter of a prominent Moscow doctor, Bers was beautiful, intelligent, and, as the years would show, strong-willed. The first decade of their marriage brought Tolstoy the greatest happiness; never before or after was his creative life so rich or his personal life so full. In June 1863 his wife had the first of their thirteen children.

The first portion of *War and Peace* was published in 1865 (in the *Russian Messenger*) as "The Year 1805." In 1868 three more chapters appeared, and in 1869 he completed the novel. His new novel created a fantastic outpouring of popular and critical reaction.

Tolstoy's *War and Peace* represents a high point in the history of world literature, but it was also the peak of Tolstoy's personal life. His characters represent almost everyone he

had ever met, including all of his relations on both sides of his family. Balls and battles, birth and death, all were described in amazing detail. In this book the European realistic novel, with its attention to social structures, exact description, and psychological rendering, found its most complete expression.

From 1873 to 1877 Tolstoy worked on the second of his masterworks, *Anna Karenina*, which also created a sensation upon its publication. The concluding section of the novel was written during another of Russia's seemingly endless wars with Turkey. The novel was based partly on events that had occurred on a neighboring estate, where a nobleman's rejected mistress had thrown herself under a train. It again contained great chunks of disguised biography, especially in the scenes describing the courtship and marriage of Kitty and Levin. Tolstoy's family continued to grow, and his royalties (money earned from sales) were making him an extremely rich man.

Spiritual crisis

The ethical quest that had begun when Tolstoy was a child and that had tormented him throughout his younger years now drove him to abandon all else in order to seek an ultimate meaning in life. At first he turned to the Russian Orthodox Church, visiting the Optina-Pustyn monastery in 1877. But he found no answer.

In 1883 Tolstoy met V. G. Chertkov, a wealthy guard officer who soon became the moving force behind an attempt to start a movement in Tolstoy's name. In the next few years a new publication was founded (the *Mediator*) in order to spread Tolstoy's word in tract (pamphlets) and fiction, as well as to

make good reading available to the poor. In six years almost twenty million copies were distributed. Tolstoy had long been watched by the secret police, and in 1884 copies of *What I Believe* were seized from the printer.

During this time Tolstoy's relations with his family were becoming increasingly strained. The more of a saint he became in the eyes of the world, the more of a devil he seemed to his wife. He wanted to give his wealth away, but she would not hear of it. An unhappy compromise was reached in 1884, when Tolstoy assigned to his wife the copyright to all his works before 1881.

Tolstoy's final years were filled with worldwide acclaim and great unhappiness, as he was caught in the strife between his beliefs, his followers, and his family. The Holy Synod (the church leaders) excommunicated (kicked him out) him in 1901. Unable to endure the quarrels at home he set out on his last pilgrimage (religious journey) in October 1910, accompanied by his youngest daughter, Alexandra, and his doctor. The trip proved too much, and he died in the home of the stationmaster of the small depot at Astapovo, Russia, on November 9, 1910. He was buried at Yasnaya Polyana.

HENRI DE TOULOUSE-LAUTREC

Born: November 24, 1864

Albi, France

Died: September 9, 1901

Malromé, France

French painter

The French painter Henri de Toulouse-Lautrec depicted the Parisian night life of cafés, bars, and brothels (houses of prostitution, where sexual acts are traded for money)—the world that he inhabited at the height of his career.

Crippled childhood

Henri de Toulouse-Lautrec, a direct descendant of an aristocratic family of a thousand years, was born on November 24, 1864, at Albi, France, to Alphonse-Charles and Adèle Zoë. His wild and colorful father lived in moderate luxury, hunting with falcons and collecting exotic weapons. Henri began to draw at an early age and found the arts an escape from his loving but over-protective family.

In 1878 Toulouse-Lautrec suffered a fall and broke one femur (thigh bone). A year later he fell again and broke the other one. His legs did not heal properly. His torso developed normally, but his legs stopped growing and were permanently deformed. Many attribute his health problems to the fact that his parents were first cousins.

In 1882, encouraged by his first teachers—the animal painters René Princeteau and John Lewis Brown—Toulouse-Lautrec decided to devote himself to painting, and

that year he left for Paris. Enrolling at the École des Beaux-Arts, he entered the studio of Fernand Cormon. In 1884 Toulouse-Lautrec settled in Montmartre, an area in north Paris, where he stayed from then on, except for short visits to Spain, where he admired the works of El Greco (1541–1614) and Diego Velázquez (1599–1660). In England he visited celebrated writer Oscar Wilde (1854–1900) and painter James McNeill Whistler (1834–1903). At one point Toulouse-Lautrec lived near painter Edgar Degas (1834–1917), whom he valued above all other contemporary artists (artists from his time) and by whom he was influenced. From 1887 his studio was on the rue Caulaincourt next to the Goupil printshop, where he could see examples of the Japanese prints of which he was so fond.

By habit Toulouse-Lautrec stayed out most of the night. He frequented many entertainment spots in Montmartre, especially the Moulin Rouge cabaret (a nightclub with entertainment). He also drank a great deal. His loose lifestyle caught up with him—he suffered a breakdown in 1899. His mother had him committed to an asylum, a hospital for the mentally ill, at Neuilly, France. He recovered and set to work again, but not for very long. He died on September 9, 1901, at the family estate at Malromé, France.

The influence of Parisian nightlife

Toulouse-Lautrec moved freely among the dancers, the prostitutes, the artists, and the intellectuals of Montmartre. From 1890 on his tall, lean cousin, Dr. Tapié de Celeyran, accompanied him, and the two, depicted in *At the Moulin Rouge* (1892), made a colorful pair. Despite his deformity,

Toulouse-Lautrec was extremely social and readily made friends and inspired trust. He came to be regarded as one of the people of Montmartre, for he was an outsider like them, fiercely independent, but with a great ability to understand everything around him.

Among the painter's favorite subjects were the cabaret dancers Yvette Guilbert, Jane Avril, and La Goulue and her partner, Valentin le Désossé, the contortionist (an acrobat who demonstrates extraordinary bodily positions). Through the seriousness of his intention, Toulouse-Lautrec depicted his subjects in a style bordering on, but rising above, caricature (exaggeration). He took subjects who often dressed in disguise and makeup as a way of life and stripped away all that was not essential, thus revealing each as an individual—but a prisoner of his own destiny.

The two most direct influences on Toulouse-Lautrec's art were the Japanese print, as seen in his slanted angles and flattened forms, and Degas, from whom he derived the tilted perspective, cutting of figures, and use of a railing to separate the spectator from the painted scene, as in *At the Moulin Rouge*. But the genuine feel of a world of wickedness and the harsh, artificial colors used to create it were Toulouse-Lautrec's own.

Unusual types performing in a grand show attracted Toulouse-Lautrec. In his painting *In the Circus Fernando: The Ringmaster* (1888) the nearly grotesque (distorted and ugly), strangely cruel figure of the ringmaster is the center around which the horse and bareback rider must revolve. From 1892 to 1894 Toulouse-Lautrec produced a series of interiors of brothels, where he actually lived for a while and became the companion of the women. As with his paintings of cabarets, he

Henri de Toulouse-Lautrec.

Reproduced by permission of the Corbis Corporation.

caught the feel of the brothels and made no attempt to glamorize them. In the *Salon in the Rue des Moulins* (1894) the prostitutes are shown as ugly and bored beneath their makeup; the madam (woman in charge) sits quietly in their midst. He neither sensationalized nor drew a moral (having to do with right and wrong) lesson but presented a certain interpretation of this side of society for what it was—no more and no less.

Color lithography and the poster

Toulouse-Lautrec broadened the range of lithography (the process of printing on metal) by treating the tone more freely. His

strokes became more summary (executed quickly) and the planes more unified. Sometimes the ink was speckled on the surface to bring about a great textural richness. In his posters he combined flat images (again the influence of the Japanese print) with type. He realized that if the posters were to be successful their message had to make an immediate and forceful impact on the passerby. He designed them with that in mind.

Toulouse-Lautrec's posters of the 1890s established him as the father of the modern large-scale poster. His best posters were those advertising the appearance of various performers at the Montmartre cabarets, such as the singer May Belfort, the female clown Cha-U-Kao, and Loïe Fuller of the Folies-Bergère.

In an 1893 poster of dancer Jane Avril, colored partially in bright red and yellow, she is pictured kicking her leg. Below her, in gray tones so as not to detract attention, is the diagonally placed hand of the violinist playing his instrument. There is some indication of floorboards but no furniture or other figures. The legend reads simply "Jane Avril" in white letters and "Jardin de Paris" in black letters.

EIJI TOYODA

Born: September 12, 1913

Kinjo, Nishi Kasugai, Japan

Japanese businessman and engineer

Eiji Toyoda is a former chairman of the Toyota Motor Company. His family-run business made revolutionary changes in the way automobiles were made.

Family business

Eiji Toyoda was born September 12, 1913, in Kinjo, Nishi Kasugai, Aichi, Japan, the son of Heikichi and Nao Toyoda. Toyoda's uncle, Sakichi, founded the original family business, Toyoda Automatic Loom Works, in 1926 in Nagoya, about 200 miles west of Tokyo, Japan. The family was so involved in the business that Eiji's father Heikichi (younger brother of Sakichi) even made his home inside the spinning factory. Such an early exposure to machines and business would have a significant effect on Toyoda's life.

Sakichi ultimately sold the patents (documents that give a person the legal right to control the production of an invention for a specific period of time) for his design to an English firm for two hundred fifty thousand dollars, at a time when textiles was Japan's top industry and used the money to pay for his eldest son Kiichiro's venture into auto making in the early 1930s.

After graduating in 1936 with a mechanical engineering degree from the University of Tokyo—training ground for most of Japan's future top executives—the twenty-three-year-

old Toyoda joined the family spinning business as an engineering trainee and transferred a year later to the newly formed Toyota Motor Company. The company was a relative newcomer to the auto business in Japan. Eiji worked on the A1 prototype, the forerunner of the company's first production model, a six-cylinder sedan that borrowed heavily from Detroit automotive technology and resembled the radically styled Chrysler Airflow model of that period. During those early years, Toyoda gained lots of hands-on experience.

Expansion

In this spare time, Eiji Toyoda studied rockets and jet engines and, on the advice of his cousin, even researched helicopters. World War II (1939–45)—when Japan fought alongside Germany and Italy against France, Great Britain, the Soviet Union, and the United States—left Japan's industry in a shambles, and the automaker began rebuilding its production facilities from scratch. But while Kiichiro Toyoda was rebuilding the manufacturing operations, Japan's shattered economy left the company with a growing bank of unsold cars. By 1949, the firm was unable to meet its payroll, and employees began a devastating fifteen-month strike (where workers walk out in protest)—the first and only walk-out in the company's history—which pushed Toyota to the brink of bankruptcy. In 1950 the Japanese government forced Toyota to reorganize and split its sales and manufacturing operations into separate companies, each headed by a nonfamily member. Kiichiro Toyoda and his executive staff all resigned. Kiichiro died less than two years later.

Eiji Toyoda, meanwhile, had been named managing director of the manufacturing arm,

Eiji Toyoda.

Toyota Motor Company. He was sent to the United States in 1950 to study the auto industry and return to Toyota with a report on American manufacturing methods. After touring Ford Motor's U.S. facilities, Toyoda turned to the task of redesigning Toyota's plants to incorporate advanced techniques and machinery.

President of Toyota

In 1967 Toyoda was named president of Toyota Motor Company—the first family member to assume that post since Kiichiro resigned in 1950. A year later, the two branches of the company were unified in the new Toyota Motor Corporation, with Eiji

Toyoda as chairman and Shoichiro Toyoda as president and chief executive officer.

The Toyodas led their company to a record year in 1984. Toyota sold an all-time high 1.7 million vehicles in Japan and the same number overseas and profits peaked at \$2.1 billion in 1985. While that performance would certainly earn Toyota a mention in automotive history books, Eiji Toyoda and his company may be better remembered for a unique management style that has been copied by hundreds of Japanese companies and is gaining growing acceptance in the United States. The Toyota approach, adopted at its ten Japanese factories and twenty-four plants in seventeen countries, has three main objectives: keeping inventory to an absolute minimum through a system called *kanban*, or “just in time;” insuring that each step of the assembly process is performed correctly the first time; and cutting the amount of human labor that goes into each car.

What Toyoda accomplished for Toyota Motor was dazzling success at a time when Detroit automakers were struggling to stay profitable. Toyota, Japan’s number one automaker, spearheaded the tidal wave of small, low-priced cars that swept the United States after successive energy crises in the mid- and late-1970s. In addition to running the largest corporation in Japan—and the world’s third largest automaker, behind General Motors (GM) and Ford—Toyoda has overseen the development of a highly efficient manufacturing system that is being copied worldwide. Although Eiji Toyoda gave up his post as chairman in 1994, he continues to hold the title of honorary chair of the company.

HARRY S. TRUMAN

Born: May 8, 1884

Lamar, Missouri

Died: December 26, 1972

Kansas City, Missouri

American president, vice president, and senator

Harry S. Truman (1884–1972), thirty-third president of the United States, led America’s transition from wartime to peacetime economy, created the Truman doctrine, and made the decision to defend South Korea against communist invasion.

A shy start

Harry S. Truman was born in Lamar, Missouri, on May 8, 1884. He went to high school in Independence, Missouri. From 1900 until 1905 he held various small business positions, then for the next twelve years he farmed on his parents’ land. In 1917, soon after the United States entered World War I (1914–18; a war fought in Europe between the Central Powers—Germany, Austria-Hungary, and Turkey—and the Allies—France, Great Britain, Russia, Italy, Japan, and, after 1917, the United States), he enlisted in the artillery, serving in France. After returning from the war, he married Bess Wallace

(1885–1982) in 1919. The couple had one child, Margaret.

As Truman grew to manhood, he achieved a notable change. As president he would be known for his outgoing personality and for his use of such tough-talking phrases as “The buck stops here!” and “If you can’t stand the heat, get out of the kitchen.” As a boy, however, Truman was anything but tough and outgoing. He was accident-prone and sickly, and his poor vision and thick glasses forced him to avoid the rough activities in which other boys engaged. Instead, he stayed indoors, taking piano lessons and reading. One of his favorite books as a boy, *Great Men and Famous Women*, detailed the lives of influential historical and political figures.

Political beginnings

A loyal Democrat, Truman entered politics in the 1920s. He was elected as a Jackson County, Missouri, judge in 1922 and served until 1924. He was presiding judge from 1926 to 1934, giving close attention to problems of county administration.

In the national election of 1934, Truman, who was a firm supporter of President Franklin Roosevelt (1882–1945), was chosen U.S. senator from Missouri. Relected in 1940, he gained national attention as chairman of the Senate Committee to Investigate the National Defense Program. He kept his chairmanship loyal to the Roosevelt administration. When Roosevelt was nominated for a fourth presidential term in June 1944, he chose Truman for vice president.

Thrust into the presidency

Roosevelt was reelected, but after Truman had served only eighty-two days as his

*Harry S. Truman.
Courtesy of the Library of Congress.*

vice president, Roosevelt died suddenly on April 12, 1945. Truman then became the president. He quickly took command, and in his first address to Congress he promised to continue Roosevelt’s policies. That July he attended the Potsdam Conference, Germany, at which the United States, Great Britain, and the Soviet Union set terms for the administration of Germany after World War II (1939–45; a war fought between the Axis powers—Germany, Italy, and Japan—and the Allied powers—mainly Great Britain, France, the Soviet Union, and after 1942, the United States). Later in the summer he authorized the dropping of the atomic bomb on Hiroshima, Japan, on August 6, 1945, and

approved the surrender of the Japanese in a treaty signed on September 2, 1945.

The Truman administration quickly took steps to dismantle the military forces and the agencies set up to conduct the war, as well as to resume production of peacetime goods. Truman was soon forced to tackle inflation (a steep rise in the cost of living) and new demands by labor unions. He showed his power of quick decision declaring wage increases that were needed to cushion the blows from changes in the economy. He also sternly opposed measures to restrict labor organizations and acted to maintain union rights.

Truman also called for a broad program of social welfare. Although sharp friction developed between the Truman administration and conservatives (people who resist change and prefer to keep traditions) in Congress, he pushed measures through Congress for clearing away slums, construction of low-cost housing, health insurance, and the establishment of the Council of Economic Advisers to help citizens gain full employment.

In his foreign policy, Truman was alarmed by the growing power of the Soviet Union, a communist nation. He feared the spread of Soviet influence in eastern Europe and Asia, and he supported strong Western reaction to the threat of Soviet expansion. As Soviet aggressiveness made the international scene stormier, he gave vigorous support to the establishment of the United Nations.

Truman Doctrine

In the wake of World War II, Turkey and Greece seemed to be at risk of economic collapse and communist takeover. To prevent this from happening, Truman backed the leaders of his State Department in their stand

for continued American support to democracy abroad and asked Congress for \$400 million in funds to sustain Turkey and Greece. He also announced the Truman Doctrine (March 12, 1947), declaring that the United States would support all free peoples who were resisting attempts to dominate them, either by armed minorities at home or aggressors outside their borders.

Truman's policy made it possible for members of his state department to push through Congress the important measure known as the Marshall Plan, which began in April 1948. The plan provided for the transfer of large amounts economic aid from Western nations to countries in Europe and Asia that were threatened by communist domination. The presidential campaign of 1948 came as the Marshall Plan gathered widespread support from democratic governments in Europe, South America, Africa, and elsewhere.

Reelection

In 1948 Truman entered the presidential contest and fought a stubborn battle against Republican Thomas E. Dewey (1902–1971). Truman faced heavy odds in this presidential race. Besides the Democratic and Republican candidates, the entry of two new political parties into the battle made the outcome doubtful.

As the election drew near most newspapers seemed confident that Dewey would win. Public opinion polls also indicated a Dewey victory. On election night, Truman went to bed as the *Chicago Tribune* published a special issue with the headline "Dewey Defeats Truman!" The next morning, however, Truman awoke to find the he had not only carried the country by more than two million votes but had also brought in a Democratic Congress.

Korean War

On Sunday, June 25, 1950, the Korean War (1950–53) began when North Korean Communist forces invaded the Republic of South Korea. Truman at once summoned an emergency conference and announced that he would pledge American armed strength for the defense of South Korea. By September 15, American troops, supported by other forces of the United Nations, were in action in Korea. Truman held firm in the costly war that followed but hesitated to approve a major advance across the Yalu River on the northwest border of North Korea and China. China had entered the war on North Korea's side partly to protect its territory in this area.

In April 1951, amid national frustration over the war, Truman dismissed General Douglas MacArthur (1880–1964) as head of the Far East Command of the U.S. Army. He took this action on the grounds that MacArthur—a national hero of World War II (1939–45)—had repeatedly challenged the Far Eastern policies of the administration and had recommended the use of bombs against Chinese forces north of the Yalu. Such an attack against the Chinese might have provoked open war with the Soviet Union and cost the United States the support of important allies in the war. Nevertheless, MacArthur's dismissal was highly controversial, and Truman announced that he would not run again for the presidency. He retired to private life, publishing two volumes of memoirs (memories) in 1955 and 1956.

Lasting popularity

Truman died on December 26, 1972, but his popularity continued to soar long after his death. New books and movies about him

have continued to appear, and he has been commemorated with a U.S. postage stamp.

DONALD TRUMP

Born: 1946

New York, New York

American businessman and real estate developer

An American real estate developer, Donald Trump became one of the best known and most controversial businessmen of the 1980s and 1990s.

Donald Trump.

Reproduced by permission of Archive Photos, Inc.

Privileged childhood

Donald John Trump was born in 1946 in Queens, New York City, the fourth of five children of Frederick C. and Mary MacLeod Trump. Frederick Trump was a builder and real estate developer who specialized in constructing and operating middle income apartments in the Queens, Staten Island, and Brooklyn sections of New York. Donald Trump was an energetic and bright child, and his parents sent him to the New York Military Academy at age thirteen, hoping the discipline of the school would channel his energy in a positive manner. Trump did well at the academy, both socially and academically, ris-

ing to be a star athlete and student leader by the time he graduated in 1964.

During the summers, Trump worked for his father's company at the construction sites. He entered Fordham University and then transferred to the Wharton School of Finance at the University of Pennsylvania, from which he graduated in 1968 with a degree in economics.

Trump seems to have been strongly influenced by his father in his decision to make a career in real estate development, but the younger man's personal goals were much grander than those of his father. After graduating college, Trump joined the family business, the Trump Organization. In 1971 Trump moved his residence to Manhattan, where he became familiar with many influential people. Convinced of the economic opportunity in the city, Trump became involved in large building projects in Manhattan that would offer opportunities for earning high profits, utilizing attractive architectural design, and winning public recognition.

Building an empire

When the Pennsylvania Central Railroad entered bankruptcy, Trump was able to obtain an option (a contract that gives a person the authority to sell something for a specific price during a limited time frame) on the railroad's yards on the west side of Manhattan. When plans for apartments were refused because of a poor economic climate, Trump promoted the property as the location of a city convention center, and the city government selected it over two other sites in 1978. Trump's offer to drop a fee if the center were named after his family, however, was turned down, along with his bid to build the complex.

In 1974 Trump obtained an option on one of the Penn Central's hotels, the Commodore, which was unprofitable but in an excellent location near Grand Central Station. The next year he signed a partnership agreement with the Hyatt Hotel Corporation, which did not have a large downtown hotel. Trump then worked out a complicated deal with the city to revamp the hotel. Renamed the Grand Hyatt, the hotel was popular and an economic success, making Trump the city's best known and most controversial developer.

In 1977 Trump married Ivana Zelnickova Winklmayr, a New York fashion model who had been an alternate on the 1968 Czech Olympic Ski Team. After the birth of the first of the couple's three children in 1978, Donald John Trump, Jr., Ivana Trump was named vice president in charge of design in the Trump Organization and played a major role in supervising the renovation of the Commodore.

In 1979 Trump rented a site on Fifth Avenue next to the famous Tiffany & Company as the location for a monumental \$200 million apartment-retail complex designed by Der Scutt. It was named Trump Tower when it opened in 1982. The fifty-eight-story building featured a six-story courtyard lined with pink marble and included an eighty-foot waterfall. The luxurious building attracted well-known retail stores and celebrity renters and brought Trump national attention.

Atlantic City

Meanwhile Trump was investigating the profitable casino gambling business, which was approved in New Jersey in 1977. In 1980 he was able to acquire a piece of property in

Atlantic City, New Jersey. He brought in his younger brother Robert to head up the complex project of acquiring the land, winning a gambling license, and obtaining permits and financing. Holiday Inns Corporation, the parent company of Harrah's casino hotels, offered a partnership, and the \$250 million complex opened in 1982 as Harrah's at Trump Plaza. Trump bought out Holiday Inns in 1986 and renamed the facility Trump Plaza Hotel and Casino. Trump also purchased a Hilton Hotels casino-hotel in Atlantic City when the corporation failed to obtain a gambling license and renamed the \$320 million complex Trump's Castle. Later, while it was under construction, he was able to acquire the largest hotel-casino in the world, the Taj Mahal at Atlantic City, which opened in 1990.

Back in New York City, Trump had purchased an apartment building and the Barbizon-Plaza Hotel in New York City, which faced Central Park, with plans to build a large condominium tower on the site. The tenants of the apartment building, however, who were protected by the city's rent control and rent stabilization programs, fought Trump's plans and won. Trump then renovated the Barbizon, renaming it Trump Parc. In 1985 Trump purchased seventy-six acres on the west side of Manhattan for \$88 million to build a complex to be called Television City, which was to consist of a dozen skyscrapers, a mall, and a riverfront park. The huge development was to stress television production and feature the world's tallest building, but community opposition and a long city approval process delayed construction of the project. In 1988 he acquired the Plaza Hotel for \$407 million and spent \$50 million renovating it under his wife Ivana's direction.

Declining wealth

It was in 1990, however, that the real estate market declined, reducing the value of and income from Trump's empire; his own net worth plummeted from an estimated \$1.7 billion to \$500 million. The Trump Organization required massive loans to keep it from collapsing, a situation that raised questions as to whether the corporation could survive bankruptcy. Some observers saw Trump's decline as symbolic of many of the business, economic, and social excesses from the 1980s.

Yet Trump climbed back and was reported to be worth close to \$2 billion in 1997. Donald Trump's image was tarnished by the publicity surrounding his controversial separation and the later divorce from his wife, Ivana. But Trump married again, this time to Marla Maples, a fledgling actress. The couple had a daughter two months before their marriage in 1993. He filed for a highly publicized divorce from Maples in 1997, which became final in June 1999.

On October 7, 1999, Trump announced the formation of an exploratory committee to inform his decision of whether or not he should seek the Reform Party's nomination for the presidential race of 2000, but backed out because of problems within the party.

A state appeals court ruled on August 3, 2000, that Trump had the right to finish an 856-foot-tall condominium on New York City's east side. The Coalition for Responsible Development had sued the city, charging it with violation of zoning laws by letting the building reach heights that towered over everything in the neighborhood. The city has since moved to revise its rules to prevent more of such projects. The failure of Trump's oppo-

nents to obtain an injunction (a court order to stop) allowed him to continue construction.

SOJOURNER TRUTH

Born: 1797

Ulster County, New York

Died: November 26, 1883

Battle Creek, Michigan

African American abolitionist

One of the most famous nineteenth-century black American women, Sojourner Truth was an uneducated former slave who actively opposed slavery. Though she never learned to read or write, she became a moving speaker for black freedom and women's rights. While many of her fellow black abolitionists (people who campaigned for the end of slavery) spoke

only to blacks, Truth spoke mainly to whites. While they spoke of violent uprisings, she spoke of reason and religious understanding.

Sojourner Truth was born Isabella Baumfree around 1797 on an estate owned by Dutch settlers in Ulster County, New York. She was the second youngest in a slave family of the ten or twelve children of James Baumfree and his wife Elizabeth (known as “Mau-Mau Bett”). When her owner died in 1806, Isabella was put up for auction. Over the next few years, she had several owners who treated her poorly. John Dumont purchased her when she was thirteen, and she worked for him for the next seventeen years.

In 1817 the state of New York passed a law granting freedom to slaves born before July 4, 1799. However, this law declared that those slaves could not be freed until July 4, 1827. While waiting ten years for her freedom, Isabella married a fellow slave named Thomas, with whom she had five children. As the date of her release approached, she realized that Dumont was plotting to keep her enslaved. In 1826 she ran away, leaving her husband and her children behind.

Wins court case to regain son

Three important events took place in Isabella’s life over the next two years. She found refuge with Maria and Isaac Van Wageningen, who bought her from Dumont and gave her freedom. She then underwent a religious experience, claiming from that point on she could talk directly to God. Lastly, she sued to retrieve her son Peter, who had been sold illegally to a plantation owner in Alabama. In 1828, with the help of a lawyer, Isabella became the first black woman to take a white man to court and win.

Sojourner Truth.

Reproduced by permission of Archive Photos, Inc.

Soon thereafter, Isabella moved with Peter to New York City and began following Elijah Pierson, who claimed to be a prophet. He was soon joined by another religious figure known as Matthias, who claimed to be the Messiah. They formed a cult known as the “Kingdom” and moved to Sing Sing (renamed Ossining) in southeast New York in 1833. Isabella grew apart from them and stayed away from their activities. But when Matthias was arrested for murdering Pierson, she was accused of being an accomplice. A white couple in the cult, the Folgers, also claimed that Isabella had tried to poison them. For the second time, she went to court.

She was found innocent in the Matthias case, and decided to file a slander suit against the Folgers. In 1835 she won, becoming the first black person to win such a suit against a white person.

Changes name

For the next eight years, Isabella worked as a household servant in New York City. In 1843, deciding her mission was to preach the word of God, Isabella changed her name to Sojourner Truth and left the city. Truth traveled throughout New England, attending and holding prayer sessions. She supported herself with odd jobs and often slept outside. At the end of the year, she joined the Northampton Association, a Massachusetts community founded on the ideas of freedom and equality. It is through the Northampton group that Truth met other social reformers and abolitionists, including Frederick Douglass (1817–1895), who introduced her to their movement.

During the 1850s, the issue of slavery heated up in the United States. In 1850 Congress passed the Fugitive Slave Law, which allowed runaway slaves to be arrested and jailed without a jury trial. In 1857 the U.S. Supreme Court ruled in the case of Dred Scott (1795?–1858) that slaves had no rights as citizens and that the government could not outlaw slavery in new territories.

Lectures to hostile crowds

The results of the Scott case and the unsettling times did not frighten Truth away from her mission. Her life story, *Narrative of Sojourner Truth*, cowritten with Olive Gilbert, was published in 1850. She then headed west and made stops in town after town to speak

about her experiences as a slave and her eventual freedom. Her colorful and down-to-earth style often soothed the hostile crowds she faced. While on her travels, Truth noted that while women could be leaders in the abolitionist movement, they could neither vote nor hold public office. Realizing she was discriminated against on two fronts, Truth became an outspoken supporter of women's rights.

By the mid-1850s, Truth had earned enough money from sales of her popular autobiography to buy land and a house in Battle Creek, Michigan. She continued her lectures, traveling throughout the Midwest. When the Civil War began in 1861, she visited black troops stationed near Detroit, Michigan, offering them encouragement. Shortly after meeting U.S. president Abraham Lincoln (1809–1865) in October 1864, she decided to stay in the Washington area to work at a hospital and counsel freed slaves.

Continues fight for freed slaves

Following the end of the Civil War, Truth continued to work with freed slaves. After her arm had been dislocated by a streetcar conductor who had refused to let her ride, she fought for and won the right for blacks to share Washington streetcars with whites. For several years she led a campaign to have land in the West set aside for freed blacks, many of whom were poor and homeless after the war. She carried on her lectures for the rights of blacks and women throughout the 1870s. Failing health, however, soon forced Truth to return to her Battle Creek home. She died there on November 26, 1883.

TU FU

Born: c. 712

Kung-hsien, China

Died: c. 770

Tanzhou, China

Chinese poet

Tu Fu was a great Chinese poet of the Tang dynasty, a family that ruled China from 618 to 907. He is known as a poet-historian for his portrayal of the social and political disorders of his time and is also noted for his artistry and craftsmanship.

The life of Tu Fu

Born in Kung-hsien, Honan, of a scholar-official family, Tu Fu lost his mother in early childhood. His father, a minor district official, remarried, and the boy lived for some time with his aunt in Loyang, the eastern capital. In his youth he traveled widely in the Yangtze River and Yellow River regions. He first met the poet Li Po (c. 701–762) in 744 in North China and formed a lasting friendship with him. In 746 Tu Fu went to Ch'ang-an, the capital, in search of an official position, but he failed to pass the literary examination or to win the support of influential people. In 751 he sent a *fu* (rhymed prose) composition to the emperor for each of three grand state ceremonies. While the emperor appreciated Tu Fu's literary talents, he failed to award the poet an office or payment.

After a long, uneventful wait in Ch'ang-an, where Tu Fu's resources were exhausted and his health declined, he was offered a minor position at court. Just then the An Lu-shan rebellion broke out (December 755). The country was thrown into chaos when rebels tried to overthrow the T'ang Dynasty. The rebels captured Tu Fu, but he escaped. He lived the life of a refugee (someone forced away from home for political reasons) for some time before he was able to join the new emperor's court in exile, a court set up in foreign lands after being ousted. As a reward for his loyalty, he was appointed "Junior Reminder" in attendance upon the emperor. In late 757 he returned with the court to Ch'ang-an, which had been recovered from the rebels, but he did not stay there long. He had offended the emperor with his advice and was banished (sent away) to a provincial post, or a remote border post. He soon gave it

Tu Fu.

Reproduced by permission of the Picture Desk, Inc.

up and in the fall of 759 started a long journey away from the capital.

Tu Fu spent the next nine years (759–768), the most fruitful period of his poetic career, in various cities in Szechwan, China. He settled down with his family in Ch'eng-tu, the provincial capital, where he built a thatched cottage and led a quiet, happy, though still extremely poor life. Occasionally he had to go from one city to another to seek employment or to escape uprisings within the province. For a year or so, he was appointed by Yen Wu, the governor general of Ch'eng-tu district, as military adviser in the governor's headquarters and assistant secre-

tary in the Board of Works. Upon Yen Wu's death in 765, Tu Fu left Ch'eng-tu for a trip that took him to a number of places along the Yangtze River. Three years later he reached Hunan. After having roamed up and down the rivers and lakes there for almost two years (768–770), he died of sickness on a boat in the winter of 770.

Tu Fu's poetry

The rich and varied experiences in Tu Fu's life went into the making of a great poet. His works reveal his loyalty and love of the country, his dreams and frustrations, and his sympathy for the sad status of the common people. He was an eyewitness to the historical events in a critical period that saw a great, prosperous nation ruined by military rebellions and wars with border tribes. Eager to serve the country, Tu Fu was helpless in stopping its disasters and could only faithfully record in poems his own observations and feelings. While some of his poems reflect his mood in happier moments, most of them tell of his poverty, his separation from and longings for his family, his terrible life during the war, and his encounters with refugees, draftees, and recruiting officers.

Tu Fu possesses a remarkable power of description, with which he clearly presents human affairs and natural scenery. Into his poetry he introduces an intense, dramatic, and touching personalism through the use of symbols and images, irony and contrast. Above all, he has the ability to rise above the world of reality to the world of imagination. An artist among poets, he excelled in a difficult verse-form called *lü-shih* (regulated verse), of which he is considered a master.

TUTANKHAMEN

Born: c. 1370 B.C.E.

Died: c. 1352 B.C.E.

Egyptian king and pharaoh

Tutankhamen was the twelfth king of the eighteenth Egyptian dynasty (reigned 1361–1352 B.C.E.). Although his reign was relatively unimportant, Tutankhamen became the most famous of the pharaohs (Egyptian kings) when his treasure-filled tomb was discovered in the early twentieth century. The vast and untouched contents of his tomb offered historians great insight into the ancient Egyptian culture.

Early life

Little is known of Tutankhamen's childhood; even the identity of his parents remains a mystery. Historians believe Tutankhamen was the son of either Amenophis III or Akhenaten. His mother was probably one of

the king's many wives, most likely Kiya, a wife of Akhenaten who was often referred to as the "Greatly Beloved Wife."

Tutankhamen was only a child when he became king, for although he reigned eight full years, examination of his body has shown that he was little more than eighteen years old at the time of his death. He may have owed his rise to king to his marriage to Ankhnesamun, the third daughter of the fourteenth century Egyptian rulers, Ikhnaton and Nefertiti. The couple would have no children.

Tutankhamen had originally been named Tutankhaten, meaning "gracious life is Aton," but both he and Ankhnesamun (originally Ankhnespaten) dropped from their names all references to the sun god Aton and the cult (a religious following) that was promoted by Akhenaten. He then became known as Tutankhamen, "gracious life is Amon (an Egyptian god)." Soon after, the royal couple abandoned Amarna, the city built by Akhenaten for the sole worship of Aton. Tutankhamen apparently left the city very early in his reign, for, with the exception of a few scarabs (Egyptian beetles that were inscribed and buried alongside mummies), no trace of him has been found at Amarna.

The reign of King Tutankhamen

The addition to Tutankhamen's label as "Ruler of Southern On" shows that he regarded Thebes as his capital city. There can be little doubt that he made every effort to satisfy the supporters of the god Amun; a *stèle* (statue) erected near the Third Pylon of the temple of Karnak depicts Tutankhamen offering to gods Amun and Mut. The accompanying text tells of the state of decay into which the temples and shrines of the gods had fallen

Tutankhamen.

Courtesy of the Library of Congress.

during the period of Aten. Tutankhamen had a large hall at Luxor decorated with reliefs illustrating the festival of Amen-Re.

Despite the existence of the standard paintings of the pharaoh slaying his foes, it is doubtful that Tutankhamen engaged in any serious military operations. Tutankhamen was a trained archer and in his tomb were found many trophies from his hunts.

There is some indication that the actual power behind the throne was an elderly official named Ay, who is depicted on a fragment of gold leaf with Tutankhamen. On another

fragment Ay bears the title of vizier, or high government official. He had already posed as a coregent (coruler) before the death of Tutankhamen. After Tutankhamen's death, Ay married his widow. The cause of Tutankhamen's death is unknown, although, due to skull damage found in his remains, many believe he was assassinated.

The tomb of Tutankhamen

Tutankhamen is probably the best-known of the pharaohs, owing to the fortunate discovery of his treasure-filled tomb virtually intact. His burial place in the Valley of the Kings had escaped the fate of the tombs of other ancient Egyptian kings. Fortunately, the entrance was hidden from tomb raiders by debris heaped over it during the cutting of the later tomb of the twelfth century B.C.E. King Ramses VI. In 1922 Howard Carter (1873–1939) discovered Tutankhamen's tomb after searching for nearly ten years. Tutankhamen's tomb remains as one of the greatest and most important discoveries in archeology (the study of ancient forms of life). From Carter's discovery, historians were able to piece together the life of King Tutankhamen.

The tomb room contained more than five thousand objects, many of which were covered with gold and beautifully carved. The most famous of these objects is probably the lifelike gold mask that covered the face of Tutankhamen's mummy. Carter also uncovered military items, clothing, jewelry, and many statues of Tutankhamen and Egyptian gods. In fact, there were so many items in the tomb that many are still being examined today and have yet to be displayed in museums—nearly eighty years after their discovery.

DESMOND TUTU

Born: October 7, 1931

Klerksdorp, South Africa

South African antiapartheid activist and religious leader

In the 1980s Archbishop Desmond Tutu became South Africa's most well-known opponent of apartheid, that country's system of racial discrimination, or the separation of people by skin color. In 1984, he was awarded the Nobel Peace Prize for his work in South Africa.

Apartheid

South African apartheid allowed white Africans, who made up 20 percent of the population, to reserve for themselves about

87 percent of the land, most natural resources, and all meaningful political power. Black Africans who found themselves in lands reserved for whites were made citizens of one of ten homelands, which the white-controlled government (but virtually no one else) called nations. In order to remove black people from areas reserved for whites, the government kicked out many from their homes, though their families had in some cases occupied them for decades. Black South Africans in the Republic were forced into the lowest-paying jobs, denied access to most public places, and had drastically lower life expectancies than whites. Meanwhile, white South Africans had one of the highest standards of living in the world.

Black opposition to these conditions began in 1912 when the African National Congress (ANC) was formed. Until the 1960s it engaged in various peaceful campaigns of protest that included marches, petitions, and boycotts (refusing to purchase or participate in businesses)—actions which ultimately helped blacks little. In 1960, after police fired on a crowd at Sharpeville, South Africa, killing sixty-nine and wounding many others, and after the ANC leader Nelson Mandela (1918–) was imprisoned for life in 1964, many black Africans decided to abandon the policy of nonviolent resistance. Most ANC members, led by Oliver Tambo, left South Africa and launched a campaign of sabotage (destruction) from exile. The government increased its violence in return. In 1976, five hundred black students were shot during protests, and in 1977 and 1980 black leader Steve Biko (1946–1977) and trade unionist Neil Aggett were killed while in police custody. Beginning in 1984 violence again swept South Africa. By the time the government

declared a state of emergency in June 1986, more than two thousand individuals had been killed.

Rise of Tutu

Against this backdrop Desmond Tutu emerged as the leading spokesman for non-violent resistance to apartheid. Desmond Mpilo Tutu was born on October 7, 1931, to Zachariah and Aletta Tutu, in Klerksdorp, a town in the Transvaal region of South Africa. Tutu was born a Methodist but became an Anglican when his family changed religions. The Tutu family moved to Johannesburg, South Africa, when Desmond was twelve

years old. In Johannesburg he first met the Anglican priest Trevor Huddleston who was strongly against apartheid and became Tutu's main role model. At the age of fourteen he contracted tuberculosis, a terrible disease which effects the lungs and bones, and was hospitalized for twenty months. He wanted to become a doctor, but because his family could not afford the schooling, he became a teacher.

When the government instituted a system of racially discriminatory education in 1957, a system that would separate black students from white students, Tutu left teaching and entered the Anglican Church. Ordained (declared a priest) in 1961, he earned a bachelor of arts degree in 1962 from the University of South Africa, and then a master's degree from the University of London. From 1970 to 1974 he lectured at the University of Lesotho, Botswana, and Swaziland. In 1975 he became dean of Johannesburg, a position from which he publicly challenged white rule. He became bishop of Lesotho in 1976, and in 1985 bishop of Johannesburg. A short fourteen months later, in April 1986, he was elected archbishop of Cape Town, South Africa, the first black person to head the Anglican Church in southern Africa.

Begins the fight

By the 1980s clergymen (religious leaders) were among the most passionate opponents of apartheid within South Africa. Allan Boesak, a biracial minister, and Beyers Naude, head of the Christian Institute, were unusually outspoken. Naude was silenced in the late 1970s by being banned, a unique South African punishment by which the victim was placed under virtual house arrest (forced to stay at home by court order) and could not

speak or be quoted publicly. Tutu's international recognition as a critic of apartheid came when he became first general secretary of the South African Council of Churches in 1978.

Nobel Prize

The problem faced by antiapartheid clergymen was how to oppose both violent resistance and apartheid, which was itself increasingly violent. Tutu was determined in his opposition, and he spoke out both in South Africa and abroad, often comparing apartheid to Nazism (a radical movement of racial superiority led by Adolf Hitler [1889—1945]) and communism (where a strong-handed government controls goods and services within a country). As a result the government twice revoked his passport, and he was jailed briefly in 1980 after a protest march. Tutu's view on violence reflected the tension in the Christian approach to resistance: "I will never tell anyone to pick up a gun. But I will pray for the man who picks up a gun, pray that he will be less cruel than he might otherwise have been. . . ."

Another issue Tutu faced was whether other nations should be urged to apply economic sanctions (limitations) against South Africa. Many believed that sanctions would hurt the white-controlled economy, therefore forcing apartheid to end. Others believed the sanction would hurt the black community more. Tutu favored sanctions as the only hope for peaceful change. He also opposed the "constructive engagement" policy of U.S. president Ronald Reagan (1911–). When the new wave of violence swept South Africa in the 1980s and the government failed to make fundamental changes in apartheid, Tutu pronounced constructive engagement a failure.

A new era

In 1989 F. W. de Klerk (1936–) was elected the new president of the Republic of South Africa. He had promised to abolish apartheid, and at the end of 1993 he made good on his promise when South Africa's first all-race elections were announced. On April 27, 1994, South Africans elected a new president, Nelson Mandela, and apartheid was finally over. Mandela symbolized South Africa's new freedom, since until 1990 he had spent twenty-seven years as a political prisoner because of his outspoken opposition to apartheid.

In 1997 Tutu received the Robie Award for his work in humanitarianism. The award came in the midst of Tutu's battle with prostate cancer, and shortly after the presentation he announced plans to undergo several months of cancer treatment in the United States. As head of South Africa's Truth and Reconciliation Commission, a group that investigates apartheid crimes, Tutu planned to set up an office in the United States, where he could continue his work throughout the rigorous cancer treatment. It was determined in October 1999 that the cancer had not spread to other parts of Tutu's body. In August 2001, Tutu returned to South Africa after spending two years in the United States undergoing cancer treatment.

Receiving the Robie was certainly not Tutu's first recognition: he was the second South African to earn the Nobel Peace Prize. The first was Albert Luthuli of the ANC, who received it in 1960 for the same sort of opposition to apartheid.

MARK T WAIN

Born: November 30, 1835

Florida, Missouri

Died: April 21, 1910

Redding, Connecticut

American writer and humorist

Mark Twain, American humorist (comic writer) and novelist, captured a world audience with stories of boyhood adventure and with commentary on man's faults that is humorous even while it probes, often bitterly, the roots of human behavior.

Childhood along the Mississippi

Mark Twain was born Samuel Langhorne Clemens on November 30, 1835, in the frontier village of Florida, Missouri. He

spent his boyhood in nearby Hannibal, on the banks of the Mississippi River, observing its busy life, fascinated by its romance, but chilled by the violence and bloodshed it bred. Clemens was eleven years old when his lawyer father died. In order to help the family earn money, the young Clemens began working as a store clerk and a delivery boy. He also began working as an apprentice (working to learn a trade), then a compositor (a person who sets type), with local printers, contributing occasional small pieces to local newspapers. At seventeen his comic sketch "The Dandy Frightening the Squatter" was published by a sportsmen's magazine in Boston, Massachusetts.

In 1853 Clemens began wandering as a journeyman printer to St. Louis, Missouri; Chicago, Illinois; New York, New York; and Philadelphia, Pennsylvania; settling briefly with his brother, Orion, in Iowa before setting out at twenty-two years old to make his fortune, he hoped, beside the lush banks of the Amazon River in South America. Instead, traveling down the Mississippi River, he became a steamboat river pilot until the outbreak of the Civil War (1861–65), when Northern forces clashed with those of the South over slavery and secession (the South's desire to leave the Union).

Western years

In 1861 Clemens traveled to Nevada, where he invested carelessly in timber and silver mining. He settled down to newspaper work in Virginia City, until his reckless pen and redheaded temper brought him into conflict with local authorities; it seemed profitable to escape to California. Meanwhile he had adopted the pen name of Mark Twain, a

riverman's term for water that is just safe enough for navigation.

In 1865, Twain began to write a short story, *The Jumping Frog of Calaveras County*, which first brought him national attention. Most of his western writing was hastily, often carelessly, done and he later did little to preserve it.

Traveling correspondent

In 1865 the *Sacramento Union* commissioned Mark Twain to report on a new excursion service to Hawaii. His accounts as published in the newspaper provided the basis for his first successful lectures and years later were collected in *Letters from the Sandwich Islands* (1938) and *Letters from Honolulu* (1939). His travel accounts were so well received that he was contracted in 1866 to become a traveling correspondent for the *Alta California*; he would circle the globe, writing letters.

In 1870 Twain married Olivia Langdon. After a brief residence in upstate New York as an editor and part owner of the *Buffalo Express*, he moved to Hartford, Connecticut, where he lived for twenty years; there three daughters were born, and prosperity as a writer and lecturer (in England in 1872 and 1873) seemed guaranteed. *Roughing It* (1872) recounted Mark Twain's travels to Nevada and reprinted some of the Sandwich Island letters.

Meanwhile Mark Twain's account of steamboating experiences for the *Atlantic Monthly* (1875; expanded to *Life on the Mississippi*, 1883) captured the beauty, glamor, and danger of the Mississippi River. Boyhood memories of life beside that river were written into *The Adventures of Tom Sawyer* (1875), which immediately attracted young and old

Mark Twain.

Reproduced by permission of AP/Wide World Photos.

alike. With more exotic and foreign settings, *The Prince and the Pauper* (1882) and *A Connecticut Yankee in King Arthur's Court* (1889) attracted readers also, but *The Adventures of Huckleberry Finn* (1885), in which Mark Twain again returned to the river scenes he knew best, was considered unacceptable by many.

“Tom” and “Huck”

Twain's *Tom Sawyer*, better organized than *Huckleberry Finn*, is a narrative of innocent boyhood play that accidentally discovers evil as Tom and Huck witness a murder by Injun Joe in a graveyard at midnight. The boys run away, are thought dead, but turn up at their

own funeral. Tom and Huck decide to seek out the murderer and the reward offered for his capture. It is Tom and his sweetheart who, while lost in a cave, discover the hiding place of Injun Joe. Though the townspeople unwittingly seal the murderer in the cave, they close the entrance only to keep adventuresome boys like Tom out of future trouble. In the end, it is innocent play and boyish adventuring which really triumph.

Huckleberry Finn is considered by many to be Mark Twain's finest creation. Huck lacks Tom's imagination; he is a simple boy with little education. One measure of his character is a proneness to deceit, which seems instinctive, a trait shared by other wild things and relating him to nature—in opposition to Tom's tradition-grounded, book-learned, imaginative deceptions. *The Adventures of Huckleberry Finn*, a loosely strung series of adventures, can be viewed as the story of a quest for freedom and an escape from what society requires in exchange for success. Joined in flight by a black companion, Jim, who seeks freedom from slavery, Huck discovers that the Mississippi is peaceful (though he is found to be only partially correct) but that the world along its shores is full of trickery, including his own, and by cruelty and murder. When the raft on which he and Jim are floating down the river is invaded by two criminals, Huck first becomes their assistant in swindles but is finally the agent of their exposure.

Whatever its faults, Twain's *Huckleberry Finn* is a classic. Variouslly interpreted, it is often thought to suggest more than it reveals, speaking of what man has done to confuse himself about his right relation to nature. It can also be thought of as a treatment of man's

failures in dealing with his fellows and of the corruption that man's only escape is in flight, perhaps even from himself. Yet it is also an apparently artless story of adventure and escape so simply and directly told that novelist Ernest Hemingway (c.1899–1961) once said that all American literature begins with this book.

Last writings

After a series of unsuccessful business ventures in Europe, Twain returned to the United States in 1900. His writings grew increasingly bitter, especially after his wife's death in 1905. *The Man That Corrupted Hadleyburg* (1900) exposed corruption in a small, typical American town. *Eve's Diary* (1906), written partly in memory of his wife, showed a man saved from bungling only through the influence of a good woman.

In 1906 Twain began to dictate his autobiography to Albert B. Paine, recording scattered memories without any particular order. Portions from it were published in periodicals later that year. With the income from the excerpts of his autobiography, he built a large house in Redding, Connecticut, which he named Stormfield. There, after several trips to Bermuda to improve his declining health, he died on April 21, 1910.

JOHN UPDIKE

Born: March 18, 1932

Shillington, Pennsylvania

American author and poet

Author John Updike mirrored his America in poems, short stories, essays, and novels, especially the four-volume “Rabbit” series.

Early life

John Hoyer Updike was born on March 18, 1932, in Shillington, Pennsylvania. His

father, Wesley, was a high school mathematics teacher, the model for several sympathetic father figures in Updike’s early works. Because Updike’s mother, Linda Grace Hoyer Updike, had literary dreams of her own, books were a large part of the boy’s early life. A sickly child, Updike turned to reading and art as an escape. In high school, he worked on the school newspaper and excelled in academics and upon graduation was admitted into Harvard University in Cambridge, Massachusetts.

At the age of twenty-two, Updike began his writing career when he published his first story “Friends from Philadelphia,” in the *New Yorker* in 1954. Since childhood Updike had admired the *New Yorker* and always dreamed

John Updike.

Reproduced by permission of AP/Wide World Photos.

of becoming a cartoonist for the magazine. He majored in English at Harvard where he developed his skills as a graphic artist and cartoonist for the *Lampoon*, the college's humor magazine. In 1953, his junior year at Harvard, he married Mary Pennington, a Radcliffe art student. Upon graduation the following year, Updike and his bride went to London, England, where he had won a Knox fellowship (scholarship) for study at the Ruskin School of Drawing and Fine Art in Oxford, England.

Updike returned to the United States in 1955 and took a job as a staff writer at the

New Yorker at the invitation of famed editor E. B. White (1899–1985), achieving a life-long goal. But after two years and many “Talk of the Town” columns, he left New York City for Ipswich, Massachusetts, to devote himself full time to his own writing.

Twenty years of poetry

Updike began his remarkable career as a poet in 1958 by publishing his first volume, a collection of poems titled *The Carpentered Hen*. It is a book of light, amusing verse in the style of Ogden Nash (1902–1971) and Robert Service (1874–1958). The poetry possesses several styles shared by his fiction: careful attention to the sounds of words and of their meanings, the use of popular culture by identifying objects by familiar brand names, and the imitation of the popular press through advertising language.

Updike's output of light verse diminished with the publication of each succeeding volume of poems. His poetry has been collected in several volumes, among them *Telephone Poles and Other Poems* (1963); *Midpoint* (1969), which is a personal look at the midpoint of his life; and *Tossing and Turning* (1977), which some critics consider his finest collection of verse.

The “Rabbit” series and other novels

Although Updike's reputation rests on his complete body of work, he was first established as a major American writer upon the publication of his novel *Rabbit Run* (1960)—although at that date no one could have predicted the rich series of novels that would follow. It chronicled the life of Harry (Rabbit) Angstrom, creating as memorable an American character as any that appeared in

the twentieth century. Harry Angstrom's life peaked in high school where he was admired as a superb basketball player. But by the age of twenty-six he is washed up in a dead-end job, demonstrating gadgets in a dime store, living a disappointed and constricted life. His natural reaction to this problem is to "run" (as would his namesake). And he runs, fleeing his wife and family as though the salvation of his soul depends upon it. The climax of Rabbit's search results in tragedy, but it is to the credit of Updike's skill that great sympathy for a dislikable character is brought forth from readers.

The second novel in the series, *Rabbit Redux* (1971), takes up the story of Harry Angstrom ten years later at the age of thirty-six. Updike continues Rabbit's story against a background of current events. The novel begins on the day of the moon shot, when the first human walked on the moon. It is the late 1960s and the optimism of American technology is countered by the sour feelings towards race riots, antiwar protests, and the drug culture. His family is falling apart, mirroring the problems of the country at large. Rabbit finally overcomes his dismal situation and brings "outsiders" into his home, attempting to recreate his family.

The next book in the series is *Rabbit Is Rich* (1981), which won the 1982 Pulitzer Prize. Rabbit is forty-six and finally successful, selling Japanese fuel-efficient cars during the time of the oil crisis in the 1970s. In this novel Rabbit's son Nelson's failure becomes the counterweight to Rabbit's success.

Rabbit at Rest (1990) brings Rabbit into the 1980s to confront an even grimmer set of problems: acquired immune deficiency syndrome (AIDS; an incurable disease that

attacks the immune system), cocaine addiction, and terrorism. Rabbit suffers a heart attack and is haunted by ghosts of his past. Death looms ever larger. In these four novels an insignificant life presses and insists itself upon our consciousness, and we realize that this life has become the story of our common American experience recorded over three decades.

Other works

Updike wrote many other major novels, including *The Centaur* (1963), *Couples* (1965), *A Month of Sundays* (1975), *The Witches of Eastwick* (1984), *Brazil* (1993), and *Bech at Bay* (1998). Updike was also the author of several volumes of short stories, among them *Pigeon Feathers* (1962), *The Music School* (1966), *Bech: A Book* (1970), *Museums and Women* (1972), and *Bech Is Back* (1982).

In 1999 Updike published *More Matter: Essays and Criticism*, a collection of occasional pieces, reviews, speeches, and some personal reflection. On February 27, 2000, his novel *Gertrude and Claudius* was published by Knopf. The book was based on William Shakespeare's (1564–1616) play *Hamlet*.

Updike has been honored throughout his career: twice he received the National Book Critics Circle Award and the Pulitzer Prize. He also received the American Book Award and was elected to the American Academy of Arts and Letters. Updike has been one of the most productive American authors of his time, leading even his most dedicated fans to confess, as Sean French did in *New Statesman and Society*, "Updike can write faster than I can read."

VINCENT VAN GOGH

Born: March 30, 1853
Groot-Zundert, Holland
Died: July 29, 1890
Auvers, France
Dutch painter

Vincent Van Gogh was a Dutch painter whose formal distortions and humanistic concerns made him a major pioneer of twentieth-century expressionism, an artistic movement that emphasized expression of the artist's experience.

Childhood

Born on March 30, 1853, at Groot-Zundert in the province of Brabant, Holland, Vincent Willem Van Gogh was the son of a Protestant minister, Theodorus Van Gogh. Exactly a year before his birth, his mother, Cornelia, gave birth to an infant, also named Vincent, who was stillborn, or dead upon birth. His grieving parents buried the child and set up a tombstone to mark the grave. As a result, Vincent Van Gogh grew up near the haunting sight of a grave with his own name upon it. His mother later gave birth to Theo, his younger brother, and three younger sisters. Not much is known about Van Gogh's earlier education, but he did receive some encouragement from his mother to draw and

paint. As a teenager he drew and painted regularly.

Van Gogh's uncle was a partner in Goupil and Company, art dealers. Vincent entered the firm at the age of sixteen and remained there for six years. He served the firm first in The Hague, the political seat of the Netherlands, and then in London, England, where he fell in love with his landlady's daughter, who rejected him. Later he worked for Goupil's branch in Paris, France.

Because of Van Gogh's unpleasant attitude, Goupil dismissed him in 1876. That year he returned to England, worked at a small school at Ramsgate, and did some preaching. In early 1877 he clerked in a bookshop in Dordrecht. Then, convinced that the ministry ought to be his calling, he joined a religious seminary in Brussels, Belgium. He left three months later to become an evangelist (a preacher) in a poor mining section of Belgium, the Borinage. Van Gogh exhibited the necessary dedication, even giving away his clothes, but his odd behavior kept the miners at a distance. Once again, in July 1879, he found himself dismissed from a job. This period was a dark one for Van Gogh. He wished to give himself to others but was constantly being rejected.

In 1880, after much soul searching, Van Gogh decided to devote his life to art, a profession he accepted as a spiritual calling. When in London he had visited museums, and he had drawn a little while in the Borinage. In October 1880 he attended an art school in Brussels, where he studied the basics of perspective (representing three-dimensional objects on a two-dimensional surface) and anatomy (the human body). From April to December 1881 he stayed with

his parents, who were then in Etten, and continued to work on his art. At this time, too, he studied at the academic art school at The Hague, where his cousin Anton Mauve taught.

Dutch period

During Van Gogh's Dutch period (1880–1886) he created works in which his overriding concerns for his fellow man were growing. His subjects were poor people, miners, peasants, and inhabitants of almshouses, or houses for the poor. Among his favorite painters at this time were Jean François Millet (1814–1875), Rembrandt (1606–1669), and Honoré Daumier (1808–1879). Complementing Van Gogh's dreary subject matter of this time were his colors, dark brownish and greenish shades. The masterpiece of Van Gogh's Dutch period is the *Potato Eaters* (1885), a night scene in which peasants sit at their meal around a table.

Van Gogh decided to go to Paris in early 1886, partially because he was drawn to the simple and artistic life of the French city. His younger brother, Theo, was living in Paris, where he directed a small gallery maintained by Goupil and Company. Theo had supported Vincent financially and emotionally from the time he decided to become a painter, and would continue to do so throughout his life. The letters between the brothers are among the most moving documents in all the history of Western art. Vincent shared Theo's apartment and studied at an art school run by the traditional painter Fernand Cormon, where he met Émile Bernard (1868–1941) and Henri de Toulouse-Lautrec (1864–1901), who became his friends.

By now Van Gogh was largely under the influence of the impressionists, a style of painting where the artist concentrates on the immediate impression of a scene by the use of light and color. Especially influenced by Camille Pissarro (1830–1903), Van Gogh was persuaded to give up the gloomy tones of his Dutch period for bright, high-keyed colors. Also, his subject matter changed from the world of peasants to a typically impressionistic subject matter, such as cafés and cityscapes around Montmartre, an area of northern Paris. He also copied Japanese prints. While subjects and handling were obviously taken from impressionism, there frequently could be detected a certain sad quality, as in a scene of *Montmartre* (1886), where pedestrians are pushed to the outer sides of an open square.

Stay at Arles

Longing for a place of light and warmth, and tired of being entirely financially dependent on Theo, Van Gogh left for Arles in southern France in February 1888. The pleasant country about Arles and the warmth of the place restored Van Gogh to health. In his fifteen months there he painted over two hundred pictures. At this time he applied color in simplified, highly dense masses, his drawing became more energetic and confused than ever before, and objects seemed to radiate a light of their own without giving off shadows. During this period he also turned to painting portraits and executed several self-portraits. Among the masterpieces of his Arles period are the *Fishing Boats on the Beach at Saintes-Maries* (June 1888); the *Night Café* (September); and the *Artist's Bedroom at Arles* (October).

At Arles Van Gogh suffered fainting spells and seizures (involuntary muscle

Vincent Van Gogh.
Courtesy of the Library of Congress.

spasms). The local population began to turn against him as well. Paul Gauguin (1848–1903), responding to his invitation, visited him in October 1888, but the two men quarreled violently. Gauguin left for Paris. Van Gogh, in a fit of remorse and anger, cut off his ear. On May 9, 1889, he asked to be admitted to the asylum at Saint-Rémy-de-Provence, a hospital for the mentally ill.

Production at Saint-Rémy

In the year Van Gogh spent at the asylum he worked as much as he had at Arles, producing 150 paintings and hundreds of drawings. Van Gogh suffered several attacks but

was completely peaceful in between. At this time he received his first critical praise (a good review), an article by the writer Albert Aurier.

During Van Gogh's stay at Saint-Rémy, his art changed markedly. His colors lost the intensity of the Arles period: yellows became coppers; reds verged toward brownish tones. His lines became restless. He applied the paint more violently with thicker impasto, the application of thick layers. Van Gogh was drawn to objects in nature under stress: whirling suns, twisted cypress trees, and surging mountains. In *Starry Night* (1889) the whole world seems engulfed by circular movements.

Van Gogh went to Paris on May 17, 1890, to visit his brother. On the advice of Pissarro, Theo had Vincent go to Auvers, just outside Paris, to submit to the care of Dr. Paul Gachet, an amateur painter and a friend of Pissarro and Paul Cézanne (1839–1906).

Last year at Auvers

Van Gogh arrived at Auvers on May 21, 1890. He painted a portrait of Dr. Gachet and portraits of his daughters, as well as the *Church of Auvers*. The blue of the Auvers period was not the full blue of Arles but a more mysterious, flickering blue. In his last painting, the *Cornfield with Crows*, Van Gogh showed a topsy-turvy world. The spectator himself becomes the object of perspective, and it is toward him that the crows appear to be flying.

At first Van Gogh felt relieved at Auvers, but toward the end of June he experienced fits of temper and often quarreled with Gachet. On July 27, 1890, he shot himself in a lonely field and died the morning of July 29, 1890.

JAN VERMEER

Born: October 30, 1632

Delft, Netherlands

Died: December 15, 1675

Delft, Netherlands

Dutch painter

The Dutch painter Jan Vermeer of Delft transformed traditional Dutch themes into images of fantastic poise and peace, rich with symbolic meaning.

Mysterious childhood

The documented facts about Jan Vermeer's life are few. He was born on October 30 or 31, 1632, in Delft, Netherlands, the second of two children to Digna Baltens and Reynier Jansz. His father was an art dealer and silk weaver who also kept a tavern, and Vermeer probably took over the business after his father's death in 1655. It is presumed that his father, who was actively involved with the local artists and collectors, was an early influence on the young child. Vermeer supposedly began his training as an artist around the mid-1640s.

In 1653 Vermeer married a well-to-do Catholic girl from Gouda; they had eleven children. In the year of his marriage he became a master in the Delft painters' guild (an association), of which he was an officer from 1662 to 1663, and again, from 1669 to 1670. He seems to have painted very little and to have sold only a fraction of his limited production, for the majority of his paintings were still in the hands of his family when he died. His dealings in works by other artists seem to have supported his family reasonably well until he was financially ruined following the French invasion of 1672, when France invaded the Spanish Netherlands. He died in 1675 and was buried on December 15. The following year his wife was forced to declare bankruptcy.

Nothing is known about where Vermeer was educated and trained as a painter. In part because verses written following the death of Carel Fabritius (1622–1654) in 1654 mention Vermeer as his successor as Delft's leading artist, it has been suggested that Fabritius was Vermeer's teacher. Certainly Fabritius helped develop Vermeer's interest in perspective experiments (experiments with depth)

Jan Vermeer.

Reproduced by permission of the Bridgeman Art Library.

and his use of a light-flooded wall as a background for figures. But Fabritius lived in Delft only after 1650, by which time Vermeer would have been well on his way toward the completion of his training.

Early works

The warm colors of *The Procuress* relate it to paintings of the Rembrandt school (styled after the painter Rembrandt [1606–1669]) of the 1650s, but its subject matter and composition reflect influence by paintings of the 1620s by the Utrecht Caravaggists, a group of painters in Utrecht, Netherlands, who stressed a new, international style. Considered

to be earlier than *The Procuress* are two pictures that resemble it because of the color scheme, dominated by reds and yellows, and because they are larger in size and scale than Vermeer's later works. *Christ in the House of Martha and Mary* is similar to compositions by Hendrick Terbrugghen (1588–1629) and Gerrit van Honthorst (1590–1656), who spread the Caravaggesque (having to do with the painting style of Italian painter Caravaggio [c. 1571–1610]) style in Holland. *Diana and Her Companions*, Vermeer's only mythological subject, is also suggestive of Italy. It is his only painting of figures in a landscape setting.

After these three diverse experiments, which may have owed something to Vermeer's familiarity with works in his father's stock of art, he painted the *Girl Asleep at a Table*, in which he used the warm range of colors of his other early pictures but in terms of subject matter and composition plunged into the mainstream of current Delft painting.

The Soldier and Laughing Girl, marked the shift between Vermeer's early and mature works in that pointillé (gleaming highlights of thick layers of paint, which brightens the surface) appeared for the first time.

Mature period

Vermeer's style just before 1660 is also well represented by *The Cook*. The rich paint surface with its extraordinary quality, the monumental figure perfectly balanced in space and involved in a humble task, and the intense colors dominated by yellow and blue all show Vermeer at the height of his powers.

Following these works, which are assumed to have immediately followed 1660, come the "pearl pictures." *The Concert* of about 1662 and the *Woman with a Water Jug*

of perhaps a year later display the pleasing charms of this period.

More complicated compositions and especially larger space representations mark the major works of the last decade of Vermeer's life. The *Allegory of the Art of Painting* (c.1670) is large and complex in both composition and meaning. On the whole it is not influenced by the hardness and dryness that weakened his later works, such as the *Allegory of the Catholic Faith*.

The quietness, peacefulness, order, and unchanging world of Vermeer's art provide hints of immortality, or the idea that one cannot be affected by death. Perhaps that is why this painter, whose works appear to be as clear as the light of day, has always been thought to be mysterious.

**JULES
VERNE**

Born: February 8, 1828

Nantes, France

Died: March 24, 1905

Amiens, France

French novelist and writer

The French novelist Jules Verne was the first authentic writer of modern science fiction. The best of his works, such as *Twenty Thousand Leagues Under the Sea* and *Journey to the Center of the Earth*, are characterized by his intelligent foresight into the technical achievements that are within man's grasp.

Early life

Jules Gabriel Verne was born on February 8, 1828, in Nantes, France, the eldest son of a prosperous lawyer, Pierre Verne, and his wife Sophie. Raised in a middle-class family, Jules despised his parents' constant drive to achieve middle-class respectability. Always rebellious but unsuccessful, Verne learned to escape into his own world of imagination. These feelings would show up in many of Verne's works as an adult.

An otherwise uneventful childhood was marked by one major event. In his twelfth year, Jules worked as a cabin boy on an ocean-going ship. The ship was intercepted by his father before it went to sea, and Jules is said to have promised his parents that in the future he "would travel only in imagination"—a prediction fulfilled in a manner his parents could not have imagined.

Career as a playwright

In 1847 Verne went to Paris, France, to study law, although privately he was already planning a literary career. Owing to the friendship he made with French author Alexandre Dumas the Elder (1802–1870), Verne's first play, *Broken Straws*, was produced—with some success—in 1850. From 1852 to 1855 he held a steady and low-pay-

Jules Verne.

ing position as secretary of a Paris theater, the Théâtre Lyrique. He continued to write comedies and operettas and began contributing short stories to a popular magazine, *Le Musée des familles*.

During a visit to Amiens, France, in May 1856, Verne met and fell in love with the widowed daughter of an army officer, Madame Morel (née Honorine de Viane), whom he married the following January. The circumstance that his wife's brother was a stockbroker may have influenced Verne in making the unexpected decision to embrace this profession. Membership in the Paris Exchange did not seriously interfere with his literary labors,

however, because he adopted a rigorous timetable, rising at five o'clock in order to put in several hours researching and writing before beginning his day's work at the Bourse.

First novels

Verne's first long work of fiction, *Five Weeks in a Balloon*, took the form of an account of a journey by air over central Africa, at that time largely unexplored. The book, published in January 1863, was an immediate success. He then decided to retire from stockbroking and to devote himself full time to writing.

Verne's next few books were immensely successful at the time and are still counted among the best he wrote. *A Journey to the Center of the Earth* (1864) describes the adventures of a party of explorers and scientists who descend the crater of an Icelandic volcano and discover an underground world. *The Adventures of Captain Hatteras* (1866) centers on an expedition to the North Pole (not actually reached by Robert Peary until 1909). In *From the Earth to the Moon* (1865) and its sequel, *Round the Moon* (1870), Verne describes how two adventurous Americans—joined, naturally, by a Frenchman—arrange to be fired in a hollow projectile from a gigantic cannon that lifts them out of Earth's gravity field and takes them close to the moon. Verne not only pictured the state of weightlessness his "astronauts" experienced during their flight, but also he had the vision to locate their launching site in Florida, where nearly all of the National Aeronautics and Space Administration's (NASA) space launches take place today.

Later works

Verne wrote his two masterpieces when he was in his forties. *Twenty Thousand Leagues*

Under the Sea (1870) relates the voyages of the submarine *Nautilus*, built and commanded by the mysterious Captain Nemo, one of the literary figures in whom Verne incorporated many of his own character traits. *Around the World in Eighty Days* (1873) is the story of a successful bet made by a typical Englishman, Phineas Fogg, a character said to have been modeled on Verne's father, who had a mania for punctuality, or the art of timeliness.

Other popular novels include *The Mysterious Island* (1875) and *Michael Strogoff* (1876). Verne's total literary output comprised nearly eighty books, but many of them are of little value or interest today. One noteworthy feature of all his work is its moral idealism, which earned him in 1884 the personal congratulations of Pope Leo XIII (1810–1903). "If I am not always what I ought to be," Verne once wrote, "my characters will be what I should like to be." His interest in scientific progress was balanced by his religious faith, and in some of his later novels (such as *The Purchase of the North Pole*, 1889), he showed himself to be aware of the social dangers of uncontrolled technological advance.

Verne the man

Verne's personality was complex. Though capable of bouts of extreme liveliness and given to joking and playing practical jokes, he was basically a shy man, happiest when alone in his study or when sailing the English Channel in a converted fishing boat.

In 1886 Verne was the victim of a shooting accident, which left him disabled. The man that shot him proved to be a nephew who was suffering from mental instability.

This incident served to reinforce Verne's natural tendency toward depression. Although he served on the city council of Amiens two years later, he spent his old age in retirement. In 1902 he became partially blind and he died on March 24, 1905 in Amiens.

AMERIGO VESPUCCI

Born: March 9, 1451

Florence, Italy

Died: February 22, 1512

Seville, Spain

Italian navigator

A Florentine navigator and pilot major of Castile, Spain, Amerigo Vespucci, for whom America is named, played a major part in exploring the New World.

Childhood

The father of Amerigo Vespucci was Nastagio Vespucci, and his uncle was the learned Dominican Giorgio Antonio Vespucci, who had charge of Amerigo's education. The entire family was cultured and friendly with the Medici rulers of Florence, a family that ruled Italy from the 1400s to 1737. Domenico Ghirlandaio (1449–1494) painted Amerigo in a family portrait when the youth was about nineteen. However, the explorer had reached his forties by the time he began his voyage to America, so Ghirlandaio's painting shows only an approximate idea of Vespucci's mature appearance.

It is known that Vespucci visited France, in his uncle's company, when he was about twenty-four years old, and that his father intended for him a business career. He did get involved in business, first in Florence and then in Seville, Spain, in a bank. Later, in Seville, he entered a partnership with a fellow Florentine, Gianetto Berardi, and this lasted until Berardi's death at the end of 1495.

Meanwhile, Christopher Columbus (1451–1506) had made his first two voyages to the West Indies, and he returned from the second in June 1496. At this time, he and Vespucci met and talked, and Amerigo appears to have been doubtful of Columbus's belief that he had already reached the outskirts of Asia. Moreover, Vespucci's curiosity about the new lands had been aroused, together with a determination—though no longer young—to see them himself.

First voyage

According to a controversial letter, Vespucci embarked from Cadiz, Spain, in a Spanish fleet on May 10, 1497. Serious doubts have been raised about the letter's authenticity (based on fact), because dates in the letter do not coordinate with authenticated events, and because the voyage, if made, presents serious geographical problems and seems to have passed unnoticed by the cartographers (mapmakers) and historians of the time.

If the letter is real, the ships passed through the West Indies—sighting no islands—and in thirty-seven days reached the

mainland somewhere in Central America. This would predate Columbus's discovery of the mainland of Venezuela by a year. On their return to Spain, Vespucci's men discovered the inhabited island of "Iti," identified by some as Bermuda. However, by 1522 the Bermudas were unpopulated. The expedition returned to Cadiz in October 1498.

Vespucci, in all probability, voyaged to America at the time noted, but he did not have command and as yet had had no practical experience piloting a ship. Inexperience could explain many of the errors in the letter, but the strong likelihood remains that the letter was altered.

In 1499 Vespucci sailed again, and this time there is proof of the expedition besides his own letters. His education had included mathematics, and he had surely learned a great deal from his first crossing. From Cadiz, they first dropped to the Cape Verde Islands and then divided forces in the Atlantic. Vespucci explored to Cape Santo Agostinho, at the shoulder of Brazil, after which he coasted westward past the Maracaibo Gulf. This may have been the first expedition to touch Brazil as well as the first to cross the Equator in New World waters. During these travels, Vespucci probably discovered the mouth of the Amazon River.

A new world

Two years later Amerigo went on his most important voyage, this time for King Manuel I (1469–1521) to Brazil. Vespucci, having already been to the Brazilian shoulder, seemed the person best qualified to go as an observer with the new expedition. Vespucci did not command at the start but ultimately took charge at the request of the Portuguese officers.

This voyage traced the South American coast from a point above Cape São Roque to Patagonia. Among the important discoveries were Guanabara Bay (Rio de Janeiro) and the Rio de la Plata, which soon began to appear on maps as Rio Jordán. The expedition returned by way of Sierra Leone and the Azores, and Vespucci, in a letter to Florence, called South America *Mundus Novus* (New World).

In 1503 Amerigo sailed in Portuguese service again to Brazil, but this expedition failed to make new discoveries. The fleet broke up, the Portuguese commander's ship disappeared, and Vespucci could proceed only a little past Bahia before returning to Lisbon, Portugal, in 1504. He never sailed again.

Vespucci's legacy

In 1507 a group of scholars at St-Dié in Lorraine brought out a book of geography entitled "Cosmographiae introductio." One of the authors, Martin Waldseemüller, suggested the name America, especially for the Brazilian part of the New World, in honor of "the illustrious man who discovered it." After some debate, the name was eventually adopted.

During his last years, Amerigo held the office of pilot major, and it became his duty to train pilots, examine them for ability in their craft, and collect data regarding New World navigation. He remained pilot major until his death on February 22, 1512, a month short of his fifty-eighth birthday.

VICTORIA

Born: May 24, 1819

London, England

Died: January 22, 1901

Isle of Wight, England

English queen

Victoria was queen of Great Britain and Ireland from 1837 to 1901 and empress of India from 1876 to 1901. During her reign, England grew into an empire of 4 million square miles and 124 million people. As queen, she saw slavery end in the colonies, saw her country undertake successful wars in the Crimea, Egypt, the Sudan, and South Africa, acquired the Suez Canal, and established constitutions in Australia and Canada.

Victoria.

Courtesy of the Library of Congress.

Early life and the throne

Alexandrina Victoria was born in Kensington Palace, London, on May 24, 1819. She was the only child of Edward, Duke of Kent (1767–1820), by Mary Louis Victoria (1786–1861). Her father died when she was very young and her early years were disrupted by family arguments. She grew up under her mother's care and that of Louisa Lehzen, her German governess. The education Victoria received from Lehzen was limited, and she spoke only German until she was three years old.

From 1832 Victoria's mother took her on extended tours through England. On May 24,

1837, she came of age, and on June 20, after the death of her uncle William IV (1765–1837), she inherited the throne. Her chief advisers at first were Prime Minister Lord Melbourne, a Whig (or a member of the liberal political party), and Baron Stockmar, a German sent to London by her uncle King Leopold of the Belgians as adviser to his eighteen-year-old niece. On June 28, 1838, her coronation (crowning ceremony) took place.

In October her first cousin Albert Edward (1819–1861) of Saxe-Coburg-Gotha, came to London. Victoria fell in love with him instantly, proposed to him, and they were married on February 10, 1840. It was a happy marriage and restored the influence of the Crown, which had weakened during the reigns of those that ruled before her. Prince Albert was granted a thirty-thousand-pound annual income by Parliament, the governing body of Great Britain. He also was named regent (acting ruler) in the event of the queen's death in childbirth, and in 1857 was made Prince Consort by Victoria.

In June 1842 Victoria made her first railway journey from Slough, the station nearest Windsor Castle, to Paddington, and in that same year she first went to Scotland, traveling by sea. In 1843 Victoria and Albert visited King Louis Philippe (1773–c.1850). She was the first English monarch to land in France since Henry VIII (1491–1547) visited Francis I (1494–1547) in 1520. King Louis Philippe's return visit was the first voluntary visit to England of any French ruler. In 1845 Victoria, with Albert, made the first of many trips to Germany, staying at Albert's birthplace, Rosenau.

Queen of England

In 1844 Queen Victoria had Osborne Palace built for her on the Isle of Wight and

in 1848 Balmoral Castle in Scotland. Until the end of her life she spent part of each spring and fall in these places. In 1851 she and Prince Albert were much occupied with the Great Exhibition, a world's fair held in London and the first of its kind.

In 1856 Victoria and Albert visited Napoleon III (1808–1873) in Paris, and in 1857 the Indian Mutiny against British rule in India led to Victoria's writing that there now existed in England "a universal feeling that India [should] belong to me." In 1858 the British charter that opened trade with Asia, known as the East India Company, was dismantled. That same year Victoria's eldest child, Victoria, married Prince (later Emperor) Frederick of Prussia (today known as Germany). In March 1861 Victoria's mother died, and her eldest son, Albert Edward, while in camp in the Curragh in Ireland, had an affair with an actress called Nelly Clifden. The affair worried Victoria and Albert, who were planning his marriage to Princess Alexandra of Denmark. Meanwhile, Albert was suffering from typhoid fever, a terrible disease that causes fever and other symptoms and is easily spread, and died on December 14, 1861, at the age of forty-two.

In 1862 Victoria's daughter Alice married Prince Louis of Hesse, and a year later her eldest son, the Prince of Wales, married Princess Alexandra of Denmark. Victoria supported Prussia during its war with Denmark over Schleswig-Holstein (a state in northwest Germany) and she approved Russia's brutal crushing of Poland's national uprising in 1863. In 1865 in the Seven Weeks War between Prussia and Austria, Victoria was again pro-Prussian. In 1867 Victoria entertained the Khedive of Egypt and the Sultan of Turkey.

In the Franco-Prussian War of 1870 between France and Prussia, Victoria was still pro-Prussian, though she welcomed the French empress Eugénie and allowed her and the emperor to live at Chislehurst. In 1873 Prime Minister William Gladstone (1809–1898) resigned, and in 1874, to Victoria's delight, Benjamin Disraeli (1804–1881) became prime minister, the chief advisor to the throne. He called the plump, tiny queen "The Faery" and admitted he loved her. That same year Victoria's son Prince Alfred married Marie, daughter of the Russian czar (king), who insisted she be called "Imperial," not "Royal Highness." This encouraged Victoria to look into officially assuming the title "Empress of India," which she did on May 1, 1876.

In 1875 Disraeli bought the majority of the Suez Canal, a key waterway for trade in the Mediterranean Sea, from the bankrupt Khedive of Egypt. That same year Gladstone roused the country with stories of "Bulgarian atrocities" where twelve thousand Bulgarian Christians had been murdered by the Turks. In 1877 Russia declared war on Turkey; Victoria and Disraeli were pro-Turk, sending a private warning to the czar of Russia that, were he to advance, Britain would join in the fight against Russia. In 1878 at the Congress of Berlin, Disraeli obtained, as he told Victoria, "peace with honour."

Last years

In 1887 Victoria's golden jubilee (fifty years in power) was celebrated, and ten years later, her diamond jubilee (sixty years in power) was magnificently celebrated. In 1899 the Boer War broke out, where British soldiers fought against Dutch forces in South Africa. In 1900 Victoria went to Ireland,

where most of the soldiers who fought on the British side were recruited. In August she signed the Australian Commonwealth Bill, bringing Australia in the British Empire, and in October lost a grandson in the war.

On January 22, 1901, Queen Victoria died. At sixty-three years, Queen Victoria enjoyed the longest reign in British history. During her reign the British crown was no longer powerful but remained very influential. The Victorian age witnessed the birth of the modern world through industry, scientific discovery, and the expansion of the British empire. Her reign also witnessed the beginnings of pollution, unemployment, and other problems that would plague the twentieth century.

GORE VIDAL

Born: October 3, 1925

West Point, New York

American writer

Gore Vidal is one of America's most important literary figures on the basis of an enormous quantity of work, including novels, essays, plays, and short stories.

Influenced by politics

Eugene Luther Gore Vidal was born into a family long important in American politics on October 3, 1925, in West Point, New York. His maternal grandfather was Thomas P. Gore, senator from Oklahoma; his father, Eugene Luther Vidal, was director of air commerce under President Franklin D. Roosevelt (1882–1945); and he is distantly related to Albert Gore (1948–), vice president of the United States in the administration of President Bill Clinton (1946–). Although Vidal was never close to his mother, Nina, he had to live with her after his parent's divorce in 1935. As a child Vidal spent long hours in his grandfather's vast library. There young Vidal began to develop his love of literature and history.

The importance of politics in Vidal's life is obvious from his statement, "The only thing I've ever really wanted in my life was to be president." But Vidal did more than talk: he was the Democratic Party candidate for Congress from New York's 29th District (Duchess County) in 1960; he served in the President's Advisory Committee on the Arts under John F. Kennedy (1917–1963) from 1961 to 1963; he was a cofounder of the New Party, backing Senator Eugene McCarthy (1916–), from 1968 to 1971; he was cochairman and secretary of state-designate of the People's Party in the period 1970–1972; and he ran unsuccessfully for the nomination as the Democratic Party's senatorial candidate in California in 1982.

Literature wins over politics

Although always involved in politics, Vidal was a central figure in literature after 1946. In that year, while working as an editor at E. P. Dutton, he published his first novel, *Williwaw*, based on his service during the last years of World War II (1939–45; a war fought between the Axis powers: Germany, Japan, and Italy—and the Allies: England, France, the Soviet Union, and the United States).

After the poorly received *In a Yellow Wood* in 1947, Vidal had his first best-seller with *The City and the Pillar*, a successful but scandalous novel about a homosexual (a person sexually attracted to a member of their own sex). Although many critics termed it groundbreaking because the hero is an all-American youth, its tragic ending is rather conventional for its time. It may or may not be coincidence that his next five novels were negatively reviewed and were all commercial failures.

In 1954 Vidal developed what he called his five-year plan—that is, to go to Hollywood, write for films and television, and make enough money to be financially independent for the rest of his life. Between 1956 and 1970 he wrote or collaborated on seven screenplays, including the film version of Tennessee Williams's (1911–1983) *Suddenly Last Summer*, on which he worked with the playwright in 1959. Between 1954 and 1960 he also completed fifteen television plays.

Returns to the novel

After the novel *Washington, D.C.*, in 1967, he wrote another novel, *Myra Brecken-*

Gore Vidal.

Reproduced by permission of the Kobal Collection.

ridge (1968), the saga of a homosexual male converted into a female via a sex change operation, called by Nat Hentoff in the *Village Voice*, “the first popular book of perverse pornography.” After a long stay on the best-seller lists, it was made into a movie.

Two Sisters (1970) was followed by ten novels, a number of them about politics. They were *Burr* (1973), *Myron* (1974), *1876* (1976), *Kalki* (1978), *Creation* (1981), *Duluth* (1983), *Lincoln* (1984), *Empire* (1987), *Hollywood* (1990), *The Smithsonian Institution* (1998), and *The American Presidency* (1998), the text of Vidal's three-part British television series.

Fame as a critic

While the general public enjoyed Vidal as a novelist, more sophisticated readers and the critics praised him more for his essays, many of which had appeared first in periodicals, published between 1962 and 1993. *The Second American Revolution* (1982) won the National Book Critics Circle Award for Criticism in 1982 and *United States* won the National Book Award in Nonfiction in 1993.

Continuing with literary nonfiction, Vidal released a critically successful memoir in 1995, *Palimpsest: A Memoir*. In it he reflected upon a life peopled with such interesting friends and acquaintances as his relative Jackie Kennedy (1929–1994), President John F. Kennedy (1917–1963), and many others he mixed with in the literary and political scene. In 2000, Vidal's novel *The Golden Age* was published.

In May 2000, Vidal gained controversy by announcing plans to attend the execution of Timothy McVeigh, who was convicted of masterminding the bombing of a federal office building in Oklahoma City, Oklahoma, in 1995, resulting in the deaths of 169 people. Due to scheduling conflicts, Vidal was unable to attend.

Born: October 15, 70 B.C.E.

Andes, Italy

Died: September 21, 19 B.C.E.

Brundisium, Italy

Roman poet

Virgil, or Publius Vergilius Maro, is regarded as one of the greatest Roman poets. The Romans regarded his *Aeneid*, published two years after his death, as their national epic (a long poem centered around a legendary hero).

Early years and education

Virgil was born on October 15, 70 B.C.E., at Andes near Mantua in Cisalpine Gaul (modern Mantova, 20 to 25 miles southwest of Verona, Italy) of humble parentage. His father, either a potter or a laborer, worked for a certain Magius, who, attracted by the intelligence and industry of his employee, allowed him to marry his daughter, Magia. Because the marriage improved his position, Virgil's father was able to give his son the education reserved for children of higher status. Virgil began his study in Cremona, continued it in Milan, and then went on to Rome to study rhetoric (the study of writing), medicine, and mathematics before giving himself to philosophy (the study of knowledge) under Siro the Epicurean. His education prepared him for the profession of law (the alternative was a military career), but he spoke only once in court. He was shy, retiring, and of halting speech—no match for the aggressive, well-spoken lawyers of the Roman court.

Virgil returned from Rome to his family's farm near Mantua to spend his days in study and writing and to be near his parents. His father was blind and possibly dying. His mother had lost two other sons, one in infancy, the other at the age of seventeen. When Virgil's father died, she remarried and bore another son, Valerius Proculus, to whom Virgil left half his fortune.

In appearance Virgil was tall and dark, his face reflecting the rural lower-class stock from which he came. His health was never strong. Horace (65–8 B.C.E.) tells us that on a journey to Brundisium in 37 B.C.E., he and Virgil were unable to join their fellow travelers in their games for he had sore eyes and Virgil was suffering from indigestion. Poor health and his shy nature and love of study made him a recluse, or one who withdraws from the world.

The farm of Virgil's father was among the land confiscated (forcefully taken) as payment for the victorious soldiers of the Battle of Philippi (42 B.C.E.). But Augustus (63 B.C.E.–14 C.E.) restored the farm to the family. Virgil then rendered thanks to young Caesar in his first *Eclogue*.

The final phrase of the epitaph (etching on a tombstone) on Virgil's supposed tomb at Naples runs "cecini pascua, rura, duces (I sang of pastures, of sown fields, and of leaders)." This summarizes the progression from *Eclogues* to *Georgics* to *Aeneid* (which appeared in that order) and, as has been said, "proposes a miniature of the evolution of civilization from shepherds to farmers to warriors."

Pastoral poems

The *Eclogues* (this, the more usual title, means "Select Poems"; they are also known as

Virgil.

Reproduced by permission of the
Gamma Liaison Network.

Bucolics, or "Pastorals") were written between 42 B.C.E. and 37 B.C.E. These ten poems, songs of shepherds, all about one hundred lines long, were modeled on the pastoral poems, or *Idylls*, of Theocritus of Syracuse (c. 310–250 B.C.E.).

Eclogue 4, the so-called Messianic *Eclogue*, is the best known. Written in 40 B.C.E., during the temporary rule of Pollio (76 B.C.E.–4 C.E.), Virgil's benefactor (one who gives financial aid) a year or two previously, it hails the birth of a baby boy who will usher in a golden age of peace and prosperity in which even nature herself will participate. The golden age is the new

era of peace for which Augustus was responsible, and the child is thought to be the expected offspring of Augustus and Scribonia (the infant turned out to be a girl).

The Georgics (“Points of Farming”), a didactic (intended to instruct) poem in four books, was written from 37 B.C.E. to 30 B.C.E. Book 1 treats the farming of land; Book 2 is about growing trees, especially the vine and the olive; Book 3 concerns cattle raising; and Book 4, beekeeping.

The Aeneid

The *Aeneid* is one of the most complex and subtle works ever written. An epic poem of about ten thousand lines and divided into twelve books, it tells of the efforts of the Trojan hero, Aeneas, to find a new homeland for himself and his small band of followers, from the time he escapes from burning Troy until he founds Lavinium (in Italy), the parent town of Rome.

Shortly after Actium, the final battle of the Roman civil war 31 B.C.E., Augustus, the victor, was looking for a poet who could give to his accomplishments their proper literary enhancement in an epic poem. Maecenas (c. 70–8 B.C.E.) offered the commission to Propertius and to Horace, both of whom declined as graciously as possible. Virgil had been less reluctant than the other two and found, through his imagination, a solution. His epic of Augustan Rome would be cast in mythological form, making use of the legend of the founding of Rome by Aeneas, a Trojan hero mentioned by Homer (ninth or eighth century B.C.E.), who, tradition held, escaped from Troy and went to Italy. Virgil’s models were the *Iliad* and the *Odyssey* of Homer.

The *Aeneid* can be divided into two parts of six books each or into three parts of four books each. Books 1 through 4, organized around Aeneas’s narration of the destruction of Troy and his wanderings, have Carthage as their dramatic setting; Books 5 through 8 act as entertainment between the drama of 1 through 4 and 9 through 12, the story of the fighting in Italy. Moreover, the even-numbered books are highly dramatic, while the odd-numbered books reflect a lessening of tension and have less dramatic value.

Last years

Virgil worked on the *Aeneid* for the last eleven years of his life. The composition of it, from a prose (writing) outline, was never easy for him. Augustus once wrote asking to see part of the uncompleted work. Virgil replied that he had nothing to send and added, “I have undertaken a task so difficult that I think I must have been mentally ill to have begun it.”

In 19 B.C.E. Virgil resolved to spend three more years on his epic after taking a trip to Greece, perhaps to check on some details necessary for his revision. At Megara he contracted a fever and became so ill that he returned to Brundisium, where he died on September 21. He left instructions that the *Aeneid* should be burned, but Augustus refused and ordered Varius and Tucca, two friends of the poet, to edit it for publication. It appeared in 17 B.C.E.

ANTONIO VIVALDI

Born: March 4, 1678

Venice, Italy

Died: July 26, 1741

Vienna, Austria

Italian composer, violinist and priest

Antonio Vivaldi was an Italian violinist and composer whose concertos—pieces for one or more instruments—were widely known and influential throughout Europe.

Childhood and early career

Antonio Vivaldi was born in Venice, Italy, on March 4, 1678. His first music teacher was his father, Giovanni Battista Vivaldi. The elder Vivaldi was a well-respected violinist, employed at the church of St. Mark's. It is possible, though not proved, that as a boy Antonio also studied with the composer Giovanni Legrenzi (1626–1690).

Antonio was trained for a clerical (religious service) as well as a musical life. After going through the various introductory stages, he was ordained (authorized) a priest in March 1703. His active career, however, was devoted to music. In the autumn of

1703 he was appointed as a violin teacher at the Ospitale della Pietà in Venice. A few years later he was made conductor of the orchestra at the same institution. Under Vivaldi's direction, this orchestra gave many brilliant concerts and achieved an international reputation.

Vivaldi remained at the Pietà until 1740. But his long years there were broken by the numerous trips he took, for professional purposes, to Italian and foreign cities. He went, among other places, to Vienna, Italy, from 1729 to 1730 and to Amsterdam, Netherlands, from 1737 to 1738. Within Italy he traveled to various cities to direct performances of his operas. He left Venice for the last time in 1740. He died in Vienna on July 26 or 27, 1741.

Vivaldi's music

Vivaldi was very productive in vocal and instrumental music, sacred and secular (non-religious). According to the latest research, he composed over seven hundred pieces—ranging from sonatas (instrumental compositions usually with three or four movements) and operas (musical dramas consisting of vocal and instrumental pieces) to concertos (musical compositions for one or two vocal performers set against a full orchestra).

Today the vocal music of Vivaldi is little known. But in his own day he was famous and successful as an opera composer. Most of his operas were written for Venice, but some were performed throughout Italy in Rome, Florence, Verona, Vicenza, Ancona, and Mantua.

Vivaldi was also one of the great eighteenth century violin virtuosos, or musicians with superb ability. This virtuosity is reflected in his music, which made new demands on

Antonio Vivaldi.

Reproduced by permission of Archive Photos, Inc.

violin technique. In his instrumental works he naturally favored the violin. He wrote the majority of his sonatas for one or two violins and thorough-bass. Of his concertos, 221 are for solo violin and orchestra. Other concertos are for a variety of solo instruments, including the flute, the clarinet, the trumpet, and the mandolin. He also wrote concertos for several solo instruments, concerti grossi, and concertos for full orchestra. The concerto grosso features a small group of solo players, set against the full orchestra. The concerto for orchestra features differences of style rather than differences of instruments.

Orchestral music

Vivaldi's concertos are generally in three movements, arranged in the order of fast, slow, fast. The two outer movements are in the same key; the middle movement is in the same key or in a closely related key. Within movements, the music proceeds on the principle of alternation: passages for the solo instrument(s) alternate with passages for the full orchestra. The solo instrument may extend the material played by the orchestra, or it may play quite different material of its own. In either case, the alternation between soloist and orchestra builds up a tension that can be very dramatic.

The orchestra in Vivaldi's time was different, of course, from a modern one in its size and constitution. Although winds were sometimes called for, strings constituted the main body of players. In a Vivaldi concerto, the orchestra is essentially a string orchestra, with one or two harpsichords or organs to play the thorough-bass.

Some of Vivaldi's concertos are pieces of program music, for they give musical descriptions of events or natural scenes. *The Seasons*, for instance, consists of four concertos representing the four seasons. But in his concertos the "program" does not determine the formal structure of the music. Some musical material may imitate the call of a bird or the rustling of leaves; but the formal plan of the concerto is maintained.

Vivaldi's concertos were widely known during and after his lifetime. They were copied and admired by another musician, Johann Sebastian Bach (1685–1750). In musical Europe of the eighteenth century Vivaldi was one of the great names.

VOLTAIRE

Born: November 21, 1694

Paris, France

Died: May 30, 1778

Paris, France

French poet and philosopher

The French poet, dramatist, historian, and philosopher Voltaire was an outspoken and aggressive enemy of every injustice but especially of religious intolerance (the refusal to accept or respect any differences).

Early years

Voltaire was born as François Marie Arouet, perhaps on November 21, 1694, in Paris, France. He was the youngest of the three surviving children of François Arouet and Marie Marguerite Daumand, although

Voltaire claimed to be the “bastard [born out of wedlock] of Rochebrune,” a minor poet and songwriter. Voltaire’s mother died when he was seven years old, and he developed a close relationship with his godfather, a free-thinker. His family belonged to the upper-middle-class, and young Voltaire was able to receive an excellent education. A clever child, Voltaire studied under the Jesuits at the Collège Louis-le-Grand from 1704 to 1711. He displayed an astonishing talent for poetry and developed a love of the theater and literature.

Emerging poet

When Voltaire was drawn into the circle of the seventy-two-year-old poet Abbé de Chaulieu, his father packed him off to Caen, France. Hoping to stop his son’s literary ambitions and to turn his mind to pursuing law, Arouet placed the youth as secretary to the French ambassador at The Hague, the seat of government in the Netherlands. Voltaire fell in love with a French refugee, Catherine Olympe Dunoyer, who was pretty but barely educated. Their marriage was stopped. Under the threat of a *lettre de cachet* (an official letter from a government calling for the arrest of a person) obtained by his father, Voltaire returned to Paris in 1713 and was contracted to a lawyer. He continued to write and he renewed his pleasure-loving acquaintances. In 1717 Voltaire was at first exiled (forced to leave) and then imprisoned in the Bastille, an enormous French prison, for writings that were offensive to powerful people.

As early as 1711, Voltaire, eager to test himself against Sophocles (c. 496–406 B.C.E.) and Pierre Corneille (1606–1684), had written a first draft of *Oedipe*. On November 18,

Voltaire.

1718, the revised (changed for improvement) play opened in Paris to a sensational success. The *Henriade*, begun in the Bastille and published in 1722, was Voltaire's attempt to compete against Virgil (70–19 B.C.E.) and to give France an epic poem (a long poem centered around a legendary hero).

While Voltaire stayed in England (1726–1728) he was greatly honored; Alexander Pope (1688–1744), William Congreve (1670–1729), Horace Walpole (1717–1797), and Henry St. John, Viscount Bolingbroke (1658–1751), praised him; and his works earned Voltaire one thousand pounds. Voltaire learned English by attend-

ing the theater daily, script in hand. He also absorbed English thought, especially that of John Locke (1632–1704) and Sir Isaac Newton (1642–1727), and he saw the relationship between free government and creative business developments. More importantly, England suggested the relationship of wealth to freedom. The only protection, even for a brilliant poet, was wealth.

At Cirey and at court, 1729–1753

Voltaire returned to France in 1729. One product of his English stay was the *Lettres anglaises* (1734), which have been called “the first bomb dropped on the Old Regime.” Their explosive potential (something that shows future promise) included such remarks as, “It has taken centuries to do justice to humanity, to feel it was horrible that the many should sow and the few should reap.” Written in the style of letters to a friend in France, the twenty-four “letters” were a clever and seductive (desirable) call for political, religious, and philosophic (having to do with knowledge) freedom; for the betterment of earthly life; for employing the method of Sir Francis Bacon (1561–1626), Locke, and Newton; and generally for striving toward social progress.

Prior to 1753 Voltaire did not have a home; but for fifteen years following 1733 he had stayed in Cirey, France, in a château (country house) owned by Madame du Châtelet. While still living with her patient husband and son, Émilie made generous room for Voltaire. They were lovers; and they worked together intensely on physics and metaphysics, a philosophy which investigates the nature of reality.

Honored by a respectful correspondence

with Frederick II of Prussia (1712–1786), Voltaire was then sent on diplomatic (having to do with international affairs) missions to Prussia. But Voltaire's new interest was his affair with his widowed niece, Madame Denis. This affair continued its passionate and stormy course to the last years of his life. Émilie, too, found solace in other lovers. The simple and peaceful time of Cirey ended with her death in 1749.

Voltaire then accepted Frederick's repeated invitation to live at court. He arrived at Potsdam (now in Germany) with Madame Denis in July 1750. First flattered by Frederick's hospitality, Voltaire then gradually became anxious, quarrelsome, and finally bored. He left, angry, in March 1753, having written in December 1752: "I am going to write for my instruction a little dictionary used by Kings. 'My friend' means 'my slave.'" Frederick took revenge by delaying permission for Voltaire's return to France, by putting him under a week's house arrest at the German border, and by seizing all his money.

Sage of Ferney, 1753–1778

Voltaire's literary productivity did not slow down, although his concerns shifted as the years passed while at his estate in Ferney, France. He was best known as a poet until in 1751 *Le Siècle de Louis XIV* marked him also as a historian. Other historical works include *Histoire de Charles XII*; *Histoire de la Russie sous Pierre le Grand*; and the universal history, *Essai sur l'histoire générale et sur les mœurs et l'esprit des nations*, published in 1756 but begun at Cirey. An extremely popular dramatist until 1760, he began to be outdone by competition from the plays of William Shakespeare (1564–1616) that he had introduced to France.

The philosophic *conte* (a short story about adventure) was a Voltaire invention. In addition to his famous *Candide* (1759), others of his stories in this style include *Micromégas*, *Vision de Babouc*, *Memnon*, *Zadig*, and *Jeannot et Colin*. In addition to the *Lettres Philosophiques* and the work on Newton (1642–1727), others of Voltaire's works considered philosophic are *Philosophie de l'histoire*, *Le Philosophe ignorant*, *Tout en Dieu*, *Dictionnaire philosophique portatif*, and *Traité de la métaphysique*. Voltaire's poetry includes—in addition to the *Henriade*—the philosophic poems *L'Homme*, *La Loi naturelle*, and *Le Désastre de Lisbonne*, as well as the famous *La Pucelle*, a delightfully naughty poem about Joan of Arc (1412–1431).

Always the champion of liberty, Voltaire in his later years became actively involved in securing justice for victims of persecution, or intense harassment. He became the "conscience of Europe." His activity in the Calas affair was typical. An unsuccessful and depressed young man had hanged himself in his Protestant father's home in Roman Catholic city of Toulouse, France. For two hundred years Toulouse had celebrated the massacre (cruel killings) of four thousand of its Huguenot inhabitants (French Protestants). When the rumor spread that the dead man had been about to abandon Protestantism, the family was seized and tried for murder. The father was tortured; a son was exiled (forced to leave); and the daughters were forcefully held in a convent (a house for nuns). Investigation assured Voltaire of their innocence, and from 1762 to 1765 he worked in their behalf. He employed "his friends, his purse, his pen, his credit" to move public opinion to the support of the Calas family. In 1765, Parliament declared the Calas family innocent.

Voltaire's influence continued to be felt after his death in Paris on May 30, 1778.

WERNHER VON BRAUN

Born: March 23, 1912

Wirnitz, Germany

Died: June 16, 1977

Alexandria, Virginia

German-born American scientist

The German-born American space scientist Wernher von Braun, the "father of space travel," developed the first practical space rockets and launch vehicles. His advancements were instrumental in space exploration and in putting the first men on the moon.

An inspired student

Born on March 23, 1912, in Wirnitz, Germany, Wernher von Braun's father, Baron Magnus von Braun, was a founder of the German Savings Bank, a member of the Weimar

Republic Cabinet, and minister of agriculture. His mother, the former Emmy von Quistorp, a musician and amateur astronomer (one who studies the universe), was a strong influence on her son, especially after she gave her son a telescope as a present. Wernher spent his childhood in several German cities, as the family moved wherever Magnus was transferred.

At the French Gymnasium, Wernher excelled in languages but failed physics and mathematics. He then attended the Hermann Lietz School at Ettersburg Castle, where he developed an intense interest in astronomy and overcame his failures in other subjects. Fascination with the theories of space flight then prompted him to study mathematics and physics with renewed interest. Before he graduated, he was teaching mathematics and tutoring other students.

Von Braun enrolled in the Charlottenburg Institute of Technology in Berlin. He became an active member of the Verein für Raumschiffahrt (VfR; Society for Space Travel) and an associate of Hermann Oberth (1894–1989), Willy Ley (1906–1969), and other leading German rocket enthusiasts. In 1930 Oberth and von Braun developed a small rocket engine, which was a technical success.

German army rocket program

Adolf Hitler (1889–1945) rose to power and became chancellor (leader) of Germany on January 30, 1933. Still upset about the restrictions of the Treaty of Versailles that ended World War I (1914–18), the German army looked to rebuild its forces. The treaty severely restricted Germany's production of weapons, such as guns and cannons. But the

treaty made no mention of rockets, and German military planners hoped to develop rockets as weapons. They immediately turned to von Braun.

When World War II (1939–45) began, Germany gave rocket development highest priority. While von Braun developed a large rocket named the V-2, the Nazis (Hitler's army) wanted it as a weapon of war. Von Braun had a different vision: space travel.

By 1943 von Braun's rocket complex was the primary target of the Allied forces (America, France, and Great Britain). When Germany was near collapse, von Braun evacuated his staff to an area where the Americans might capture them. He reasoned that the United States was the nation most likely to use his resources for space exploration. The rocket team, which consisted of more than five thousand coworkers and their families, surrendered to U.S. forces on May 2, 1945.

Early U.S. rocket experiments

During questioning by Allied officers, von Braun prepared a report on rocket development and applications in which he predicted trips to the moon, orbiting satellites, and space stations. Recognizing the potential of von Braun's work, the U.S. Army authorized the transfer of von Braun, 112 of his engineers and scientists, 100 V-2 rockets, and the rocket technical data to the United States.

In 1946 the team moved to what is now the White Sands Proving Grounds in New Mexico. In 1950 they relocated to the Redstone Arsenal in Huntsville, Alabama, where von Braun remained for the next twenty years. He used his free time to write about space travel and to correspond with his fam-

Wernher von Braun.

Courtesy of the Library of Congress.

ily and his cousin, Maria von Quistorp. In early 1947 he obtained permission to return to Germany to marry Maria. They had three children. On April 15, 1955, von Braun and forty of his associates became naturalized citizens.

The Russian space program outpaced that of the United States in the 1950s. When the Russians successfully put *Sputnik I* into space and the U.S. Navy's Vanguard program failed, the United States turned to von Braun's group. Within ninety days, on January 31, 1958, the team launched the free world's first satellite, *Explorer I*, into orbit.

U.S. space program

After the creation of the National Aeronautics and Space Administration (NASA), von Braun was appointed director of the George C. Marshall Space Flight Center at Huntsville, Alabama, on July 1, 1960. The space agency sought his advice about techniques later used in landing on the moon. Just before Christmas, 1968, a Saturn V launch vehicle, developed under von Braun's direction, launched *Apollo 8*, the world's first spacecraft to travel to the moon. In March 1970 NASA transferred von Braun to its headquarters in Washington, D.C., where he became deputy associate administrator.

Von Braun resigned from NASA in July 1972 to become vice president for engineering and development with Fairchild Industries of Germantown, Maryland. Besides his work for that aerospace firm, he continued his efforts to promote human space flight, helping to found the National Space Institute in 1975 and serving as its first president. On June 16, 1977, he died of cancer at a hospital in Alexandria, Virginia.

KURT VONNEGUT

Born: November 11, 1922

Indianapolis, Indiana

American writer, essayist, and dramatist

Kurt Vonnegut is acknowledged as a major voice in American literature and applauded for his subtle criticisms and sharp portrayal of modern society.

Early life

Kurt Vonnegut Jr. was born on November 11, 1922, in Indianapolis, Indiana, the son of a successful architect, Kurt Sr., and his wife, Edith Sophia. Vonnegut was raised along with his sister, Alice, and brother Bernard (whom he spoke of frequently in his works). Fourth-generation Germans, the children were never exposed to their heritage because of the anti-German attitudes that had spread throughout the United States after World War I (1914–18; a war in which many European countries, some Middle Eastern nations, Russia, and the United States fought against Germany, Austria-Hungary, and Turkey). Because of the Great Depression (the severe economic downturn in the 1930s), the Vonneguts lost most of their wealth and the household was never the same. Vonnegut's father fell into severe depression and his mother died after overdosing on sleeping pills the night before Mother's Day. This attainment and loss of the "American Dream" would become the theme of many of Vonnegut's writings.

After attending Cornell University, where he majored in chemistry and biology,

he enlisted in the United States Army, serving in the World War II (1939–45; a war fought between the Axis powers: Germany, Italy, and Japan—and the Allies: England, France, the Soviet Union, and the United States). This would set the stage for another crucial element for his writings when he was taken prisoner by the German army. Following the war, Vonnegut studied anthropology at the University of Chicago and later moved to Schenectady, New York, to work as a publicist for the General Electric Corporation. During this period, he also began submitting short stories to various journals, and in 1951, he resigned his position at General Electric to devote his time solely to writing.

The novels

Vonnegut published several novels throughout the 1950s and 1960s, beginning with *Player Piano* in 1952. *Player Piano* depicts a fictional city called Ilium in which the people have given control of their lives to a computer humorously named EPICAC, after a substance that causes vomiting. *The Sirens of Titan* (1959) takes place on several different planets, including a thoroughly militarized Mars, where the inhabitants are electronically controlled. The fantastic settings of these works serve primarily as a metaphor (comparison) for modern society, which Vonnegut views as absurd to the point of being surreal (irrational; dreamlike), and as a backdrop for Vonnegut's central focus: the hapless human beings who inhabit these bizarre worlds and struggle with both their environments and themselves.

Vonnegut once again focuses on the role of technology in human society in *Cat's Cradle* (1963), widely considered one of his best

Kurt Vonnegut.

Reproduced by permission of AP/Wide World Photos.

works. The novel recounts the discovery of a form of ice, called *ice-nine*, which is solid at a much lower temperature than normal ice and is capable of solidifying all water on Earth. *Ice-nine* serves as a symbol of the enormous destructive potential of technology, particularly when developed or used without regard for the welfare of humanity.

Slaughterhouse-Five

Vonnegut's reputation was greatly enhanced in 1969 with the publication of *Slaughterhouse-Five*, an antiwar novel that appeared during the peak of protest against

American involvement in the Vietnam War (1955–75; when American forces aided South Vietnam in their fight against North Vietnam).

Vonnegut described *Slaughterhouse-Five* as a novel he was compelled to write, since it is based on one of the most extraordinary and significant events of his life. During World War II when he was a prisoner of the German Army, Vonnegut witnessed the Allied bombing of Dresden, Germany, which destroyed the city and killed more than one hundred thirty-five thousand people. One of the few to survive, Vonnegut was ordered by his captors to aid in the grisly task of digging bodies from the rubble and destroying them in huge bonfires. Because the city of Dresden had little military value, its destruction went nearly unnoticed in the press. *Slaughterhouse-Five* is Vonnegut's attempt to both document and criticize this event.

Like Vonnegut, the main character of *Slaughterhouse-Five*, named Billy Pilgrim, was present at the bombing of Dresden and has been deeply affected by the experience. His feelings develop into spiritual uncertainty that results in a nervous breakdown. In addition, he suffers from a peculiar condition, of being “unstuck in time,” meaning that he randomly experiences events from his past, present, and future. The novel is therefore a complex, nonchronological (in no order of time) narrative in which images of suffering and loss prevail.

Breakfast of Champions

After the publication of *Slaughterhouse-Five*, Vonnegut entered a period of depression during which he vowed, at one point, never to write another novel. He concentrated,

instead, on lecturing, teaching, and finishing a play, *Happy Birthday, Wanda June*, that he had begun several years earlier. The play, which ran Off-Broadway from October 1970 to March 1971, received mixed reviews. There were several factors which could be interpreted as the cause of Vonnegut's period of depression, including, as he admitted, the approach of his fiftieth birthday and the fact that his children had begun to leave home. Many critics believe that, having at last come to terms with Dresden, he lost the major inspiration for much of his work; others feel that *Slaughterhouse-Five* may have been the single great novel that Vonnegut was capable of writing. Whatever the cause, *Breakfast of Champions* marked the end of his depression and a return to the novel.

In *Breakfast of Champions*, as in most of Vonnegut's work, there are very clear autobiographical tendencies. In this novel however, the author seems to be even more wrapped up in his characters than usual. He appears as Philboyd Sludge, the writer of the book, which stars Dwayne Hoover, a Pontiac dealer (Vonnegut once ran a Saab dealership) who goes berserk after reading a novel by Kilgore Trout, who also represents Vonnegut. Toward the end of the book, Vonnegut arranges a meeting between himself and Trout, whom Robert Merrill calls his “most famous creation,” in which he casts the character loose forever; by this time the previously unsuccessful Trout has become rich and famous and is finally able to stand on his own.

Later work

Breakfast of Champions and *Slapstick, or Lonesome No More* (1976) both examine the widespread feelings of despair and loneliness

that result from the loss of traditional culture in the United States; *Jailbird* (1979) recounts the story of a fictitious participant in the Watergate scandal of the Richard Nixon (1913–1994) administration, a scandal which ultimately led to the resignation of the president; *Galapagos* (1985) predicts the consequences of environmental pollution; and *Hocus-Pocus; or, What's the Hurry, Son?* (1990) deals with the implications and aftermath of the war in Vietnam.

In the 1990s, he also published *Fates Worse Than Death* (1991) and *Timequake* (1997). Before its release Vonnegut noted that *Timequake* would be his last novel. Although many of these works are highly regarded, critics frequently argue that in his later works Vonnegut tends to reiterate themes presented more compellingly in earlier works. Nevertheless, Vonnegut remains one of the most-loved American writers.

Kurt Vonnegut Jr. is currently teaching advanced writing classes at Smith College, and in November of 2000, he was named the State Author of New York.

RICHARD WAGNER

Born: May 22, 1813

Liepzig, Germany

Died: February 13, 1883

Venice, Italy

German composer

The German operatic composer Richard Wagner was one of the most important figures of nineteenth-century music. Wagner was also a crucial figure in nineteenth-century cultural history for both his criticism and polemical writing, or writing that attacks established beliefs.

Early life

Wilhelm Richard Wagner was born on May 22, 1813, in Leipzig, Germany, into a middle-class family. Raised along with eight siblings, his father, Friedrich, died shortly after Richard's birth, and within the year his mother, Johanna, married Ludwig Geyer. There is still some controversy as to whether or not Geyer, a traveling actor, was Wagner's real father. As a child, Wagner showed little talent or interest in anything except for writing poetry.

Wagner's musical training was largely left to chance until he was eighteen, when he studied with Theodor Weinlig in Leipzig, Germany, for a year. He began his career in 1833 as choral director in Würzburg and composed

Richard Wagner.

Courtesy of the Library of Congress.

his early works in imitation of German romantic compositions. Ludwig van Beethoven (1770–1827) was his major idol at this time.

First works

Wagner wrote his first opera, *Die Feen* (The Fairies), in 1833, but it was not produced until after the composer's death. He was music director of the theater in Magdeburg from 1834 to 1836, where his next work, *Das Liebesverbot* (Forbidden Love), loosely based on William Shakespeare's (1564–1616) *Measure for Measure* was performed in 1836. That year he married Minna Planner, a singer-actress active in local theatrical life.

In 1837 Wagner became the first music director of the theater in Riga, Russia (now the capital of Latvia), where he remained until 1839. He then set out for Paris, France, where he hoped to make his fortune. While in Paris, he developed an intense hatred for French musical culture that lasted the remainder of his life, regardless of how often he attempted to have a Parisian success. It was at this time that Wagner, in financial desperation, sold the scenario for *Der fliegende Holländer* (The Flying Dutchman) to the Paris Opéra for use by another composer. Wagner later set to music another version of this tale.

Wagner returned to Germany, settling in Dresden in 1842, where he was in charge of the music for the court chapel. *Rienzi*, a grand opera in imitation of the French style, enjoyed a modest success. In 1845 *Tannhäuser* premiered in Dresden and proved the first undoubted success of Wagner's career. In November of the same year he finished the poem for *Lohengrin* and began composition early in 1846. While at work on *Lohengrin* he also made plans for his tetralogy (a series of four dramas), *Der Ring des Nibelungen* (The Ring of the Nibelungen), being captivated by Norse sagas. In 1845 he prepared the scenario for the first drama of the tetralogy to be written, *Siegfried's Tod* (Siegfried's Death), which later became *Die Götterdämmerung* (The Twilight of the Gods).

Years of exile

Wagner had to flee Dresden in 1849 in the aftermath of the Revolution of 1848, which resulted in an unsuccessful uprising against the German monarchy or king. He settled in Switzerland, first in Zurich and then near Lucerne. He remained in Switzer-

land for the most part for the next fifteen years without steady employment, banished from Germany and forbidden access to German theatrical life. During this time he worked on the *Ring*—this dominated his creative life over the next two decades.

The first production of *Lohengrin* took place in Weimar under Franz Liszt's (1881–1886) direction in 1850 (Wagner was not to see *Lohengrin* until 1861). The year 1850 also saw publication of one of Wagner's most vulgar tracts, *The Jew in Music*, in which he viciously attacked the very existence of Jewish composers and musicians, particularly in German society.

In 1853 Wagner formally began composition on the *Rheingold*; he completed the scoring the following year and then began serious work on the *Walküre*, which was finished in 1856. At this time he was toying with the notion of writing the drama *Tristan and Isolde*. In 1857 he finished the composition of Act II of *Siegfried* and gave himself over entirely to *Tristan*. This work was completed in 1859, but it was mounted in Munich only in 1865.

Last years

In 1860 Wagner received permission to reenter Germany except for Saxony, an area in eastern Germany. He was granted full amnesty (political freedom) in 1862. That year he began the music for *Die Meistersinger von Nürnberg* (The Mastersingers of Nuremberg), which he had first thought of in 1845. The *Meistersinger* was completed in 1867; the first performance took place in Munich the following year. Only then did he pick up the threads of the *Ring* and resume work on Act III of *Siegfried*, which was finished in September

1869, a month that also saw the first performance of the *Rheingold*. He wrote the music for *Götterdämmerung* from 1869 to 1874.

The first entire *Ring* cycle (*Rheingold*, *Walküre*, *Siegfried*, and *Götterdämmerung*) was given at the Festspielhaus, the shrine Wagner built for himself at Bayreuth, in 1876, over thirty years after the idea for it had first come to mind. He finished *Parsifal*, his final drama, in 1882. Wagner died on February 13, 1883, in Venice, Italy, and was buried at Bayreuth.

ALICE WALKER

Born: February 9, 1944

Eatonton, Georgia

African American novelist

Pulitzer Prize-winning novelist Alice Walker is best known for her stories about African American women who

achieve heroic stature within the borders of their ordinary day-to-day lives.

Early life

Alice Malsenior Walker was born on February 9, 1944, in Eatonton, Georgia, to Willie Lee and Minnie Tallulah (Grant) Walker. Like many of Walker's fictional characters, she was the daughter of a sharecropper (a farmer who rents his land), and the youngest of eight children. At age eight, Walker was accidentally injured by a BB gun shot to her eye by her brother. Her partial blindness caused her to withdraw from normal childhood activities and begin writing poetry to ease her loneliness. She found that writing demanded peace and quiet, but these were difficult things to come by when ten people lived in four rooms. She spent a great deal of time working outdoors sitting under a tree.

Walker attended segregated (separated by race) schools which would be described as inferior by current standards, yet she recalled that she had terrific teachers who encouraged her to believe the world she was reaching for actually existed. Although Walker grew up in a poor environment, she was supported by her community and by the knowledge that she could choose her own identity. Moreover, Walker insisted that her mother granted her "permission" to be a writer and gave her the social, spiritual, and moral substance for her stories.

Upon graduating from high school, Walker secured a scholarship to attend Spelman College in Atlanta, Georgia, where she got involved in the growing Civil Rights movement, a movement which called for equal rights among all races. In 1963, Walker received another scholarship and transferred

to Sarah Lawrence College in New York, where she completed her studies and graduated in 1965 with a bachelor's degree. While at Sarah Lawrence, she spent her junior year in Africa as an exchange student. After graduation she worked with a voter registration drive in Georgia and the Head Start program (a program to educate poorer children) in Jackson, Mississippi. It was there she met, and in 1967 married, Melvyn Leventhal, a civil rights lawyer. Their marriage produced one child, Rebecca, before ending in divorce in 1976.

Writing and teaching careers begin

In 1968, Walker published her first collection of poetry, *Once*. Walker's teaching and writing careers overlapped during the 1970s. She served as a writer-in-residence and as a teacher in the Black Studies program at Jackson State College in Tennessee (1968–69) and Tougaloo College in Mississippi (1970–71). While teaching she was at work on her first novel, *The Third Life of Grange Copeland* (1970), which was assisted by an award from the National Endowment for the Arts (1969; a government program to provide money to artists). She then moved north and taught at Wellesley College, in Massachusetts, and the University of Massachusetts at Boston (both 1972–73). In 1973 her collection of short stories, *In Love and Trouble: Stories of Black Women*, and a collection of poetry, *Revolutionary Petunias*, appeared. She received a Radcliffe Institute scholarship (1971–73), a Rosenthal Foundation award, and an American Academy and Institute of Arts and Letters award (both in 1974) for *In Love and Trouble*.

In 1976 Walker's second novel, *Meridian*, was published, followed by a Guggen-

heim award (in 1977–1978). In 1979 another collection of poetry, *Goodnight, Willie Lee, I'll See You in the Morning*, was published, followed the next year by another collection of short stories, *You Can't Keep a Good Woman Down* (1980).

Walker's third novel, *The Color Purple* was published in 1982, and this work won both a Pulitzer Prize and the American Book Award the following year. Walker was also a contributor to several periodicals and in 1983 published many of her essays, a collection titled *In Search of Our Mother's Gardens: A Collection of Womanist Prose* (1983). Walker worked on her fourth novel while living in Mendocino County outside San Francisco, California.

Walker's novels

Walker's first novel, *The Third Life of Grange Copeland*, centers on the life of a young African American girl, Ruth Copeland, and her grandfather, Grange. As an old man, Grange learns that he is free to love, but love does not come without painful responsibility. At the climax of the novel, Grange summons his newly found knowledge to rescue his granddaughter, Ruth, from his brutal son, Brownfield. The rescue demands that Grange murder his son in order to stop the cycle of cruelty.

Walker's third and most famous novel, *The Color Purple*, is about Celie, a woman so down and out that she can only tell God her troubles, which she does in the form of letters. Poor, black, female, alone and uneducated, held down by class and gender, Celie learns to lift herself up from sexual exploitation and brutality with the help of the love of another woman, Shug Avery. Against the backdrop of Celie's letters is another story about African customs. This evolves from her

Alice Walker.

sister Nettie's letters which Celie's husband hid from Celie over the course of twenty years. Here, Walker presented problems of women bound within an African context, encountering many of the same problems that Celie faces. Both Celie and Nettie are restored to one another, and, most important, each is restored to herself.

Walker's writing analyzed

At the time of publication of Walker's first novel (in 1970), she said in a *Library Journal* interview that, for her, "family relationships are sacred." Indeed, much of

WALKER, MADAME C. J.

Walker's work describes the emotional, spiritual, and physical devastation that occurs when family trust is betrayed. Her focus is on African American women, who live in a larger world and struggle to achieve independent identities beyond male domination. Although her characters are strong, they are, nevertheless, vulnerable. Their strength resides in their acknowledged debt to their mothers, to their sensuality, and to their friendships among women. These strengths are celebrated in Walker's work, along with the problems women encounter in their relationships with men who regard them as less significant than themselves merely because they are women. What comes out of this belief is, of course, violence. Hence Walker's stories focus not so much on the racial violence that occurs among strangers but the violence among friends and family members, a kind of deliberate cruelty, unexpected but always predictable.

Walker began her exploration of the terrors that beset African American women's lives in her first collection of short stories, *In Love and Trouble*. Here she examined the stereotypes about their lives that misshape them and misguide perceptions about them. Her second short story collection, *You Can't Keep a Good Woman Down*, dramatizes the strength of African American women to rebound despite racial, sexual, and economic difficulties.

MADAME C. J. WALKER

Born: December 23, 1867

Delta, Louisiana

Died: May 25, 1919

New York, New York

African American businesswoman

As a manufacturer of hair care products for African American women, Madame C. J. Walker, born Sarah Breedlove, became one of the first American women millionaires.

Struggling childhood

Madame C. J. Walker, named Sarah Breedlove at birth, was born December 23, 1867, in Delta, Louisiana, to Owen and Minerva Breedlove, both of whom were emancipated (freed) slaves and worked on a cotton plantation. At the age of six Sarah's parents died after the area was struck by yellow fever, a deadly disease oftentimes spread by mosquitoes. The young girl then moved to Vicksburg to live with her sister Louvinia and to work as a housemaid. She worked hard from the time she was very young, was extremely

poor, and had little opportunity to get an education. In order to escape the terrible environment created by Louvinia's husband, Sarah married Moses McWilliams when she was only fourteen years old. At eighteen she gave birth to a daughter she named Lelia. Two years later her husband died.

Sarah then decided to move to St. Louis, Missouri, where she worked as a laundress (a woman who washes people's clothes as a job) and in other domestic positions for eighteen years. She joined St. Paul's African Methodist Episcopal Church and put her daughter through the public schools and Knoxville College. Sarah, who was barely literate (able to read and write), was especially proud of her daughter's educational accomplishments.

Develops hair care products

By the time Sarah was in her late thirties, she was dealing with hair loss because of a combination of stress and damaging hair care products. After experimenting with various methods, she developed a formula of her own that caused her hair to grow again quickly. She often said that after praying about her hair, she was given the formula in a dream. When friends and family members noticed how Sarah's hair grew back, they began to ask her to duplicate her product for them. She began to prepare her formula at home, selling it to friends and family and also selling it door to door.

Sarah began to advertise a growing number of hair care products with the help of her family and her second husband, Charles Joseph Walker, a newspaperman whom she had married in 1906 after she moved to Denver, Colorado. She also adopted her husband's initials and surname as her professional name,

Madame C. J. Walker.

Reproduced by permission of the Granger Collection.

calling herself Madame C. J. Walker for the rest of her life, even after the marriage ended. Her husband helped her develop mail marketing techniques for her products, usually through the African American-owned newspapers. When their small business was successful, with earnings of about ten dollars a day, Walker thought she should continue to expand, but her husband thought otherwise. Rather than allow her husband's wishes to slow her work, the couple separated.

Business booms

Walker's business continued to expand. She not only marketed her hair care products

but also tutored African American men and women in their use, recruiting a group called “Walker Agents.” Her products were often used with a metal comb that was heated on the stove, then applied to straighten very curly hair. She also began to manufacture a facial skin cream. The hair process was controversial (open to dispute) because many felt that African American women should wear their hair in natural styles rather than attempt to change the texture from curly to straight. In spite of critics, Walker’s hair care methods gained increasing popularity among African American women, who enjoyed products designed especially for them. This resulted in growing profits for Walker’s business and an increasing number of agents who marketed the products for her door to door.

Walker worked closely with her daughter Lelia and opened a school for “hair culturists” in Pittsburgh, Pennsylvania,—Lelia College—which operated from 1908 to 1910. In 1910 the Walkers moved to Indianapolis, Indiana, where they established a modern factory to produce their products. They also began to hire African American professionals who could direct various aspects of their operation. Among the workers were tutors who helped Walker get a basic education.

Walker traveled throughout the nation demonstrating her products, recruiting salespersons, and encouraging African American entrepreneurs (business investors). Her rounds included conventions of African American organizations, churches, and civic groups. Not content with her domestic achievements, Walker traveled to the Caribbean and Latin America to promote her business and to recruit individuals to teach her hair care methods. Observers estimated

that Walker’s company had about three thousand agents for whom Walker held annual conventions where they were tutored in product use, hygienic (cleaning) care techniques, and marketing strategies. She also gave cash awards to those who were most successful in promoting sales.

At Lelia’s urging, Walker purchased property in New York City in 1913, with the belief that a base in that city would be important. In 1916 she moved to a luxurious townhouse she had built in Harlem, and a year later to an estate called Villa Lewaro she had constructed at Irvington-on-Hudson, New York.

Charity and legacy

Although Walker and her daughter lived well, they carefully managed each aspect of their business, whose headquarters remained in Indianapolis, and gave to a number of philanthropic (charity) organizations. According to rumor, Walker’s first husband was lynched (killed by a group of people acting outside of the law). Perhaps it was partially for this reason that Walker supported antilynching legislation (laws) and gave generously to the National Association for the Advancement of Colored People (NAACP), eventually willing that organization her estate in Irvington-on-Hudson. The Walkers generously supported religious, educational, charitable, and civil rights organizations.

Walker did not listen to her doctors’ warnings that her fast-paced life was hurting her health. On May 25, 1919, when she was fifty-one years old, she died of hypertension (high blood pressure). Her funeral service was held in Mother Zion African Methodist Episcopal Zion Church in New York City.

Celebrated African American educator Mary McLeod Bethune (1875–1955) delivered the eulogy (a tribute), and Walker was buried at Woodlawn Cemetery in the Bronx. Her daughter, Lelia, took over her role as president of the Madame C. J. Walker Manufacturing Company.

BARBARA WALTERS

Born: September 25, 1931

Boston, Massachusetts

American newscaster and reporter

Drawing the highest pay in the history of television broadcasting at the time, Barbara Walters became

the first woman coanchor of a network evening newscast. She developed to a high art the interviewing of public figures.

Early life

Barbara Walters was born to Dena (Selett) and Lou Walters on September 25, 1931, in Boston, Massachusetts. Her only brother, Burton, had died of pneumonia before Barbara was born, and her sister, Jacqueline, was born mentally handicapped. Her father operated a number of nightclubs, resulting in Barbara attending schools in Boston, New York City, and Miami Beach, Florida. Because of this lifestyle, Walters grew up a lonely and shy child and was especially close to her only playmate and sister, Jacqueline.

Walters earned a bachelor's degree in English from Sarah Lawrence College in 1954. After working briefly as a secretary she landed a job with the National Broadcasting Company's (NBC) New York affiliate WRCA-TV where she quickly rose to producer and writer. She also held various writing and public relations jobs, including a stint as a women's program producer at WPIX-TV in New York City.

Walters's abilities and experience in research, writing, filming, and editing earned her a job as news and public affairs producer for Columbia Broadcasting System (CBS) television. There she wrote materials for noted personalities who appeared on the CBS morning show that competed with NBC's *Today* program. She left CBS because she believed further advancement was unlikely.

Moving in front of the camera

In 1961 Walters was hired by NBC as a writer with an occasional on-the-air feature

Barbara Walters.

Reproduced by permission of Archive Photos, Inc.

for the *Today* show. Within three years Walters became an on-camera interviewer and persuaded such notables as Mamie Eisenhower (1896–1979), Anwar Sadat (1918–1981), and H. R. Haldeman (1926–1993) to appear with her.

Meanwhile, a number of different “show business” women held the post as the “*Today* girl,” but none had a journalism background. Mainly they engaged in small talk and read commercials. Some at NBC began to think a different kind of woman might help the show. When the spot was unexpectedly opened, Walters was given the “*Today* girl” slot on a trial basis. The public readily

accepted this bright, on-the-air newswoman, who also continued to write and produce much of her own material. A few months later, Hugh Downs (1921–) said Walters was the best thing that had happened to the *Today* show during his time as host. They would later be teamed on ABC’s program *20/20* as competition to CBS’s *Sixty Minutes*.

Today featured stories by Walters that included socially significant topics, and frequently she got on-the-spot experience which gave her reports even more credibility. As her reputation grew, NBC made her a radio commentator on *Emphasis* and *Monitor*. She also participated in such NBC specials as “The Pill” and “The Sexual Revolution” (1967), and in 1969 she covered the ceremony which conferred Prince Charles (1948–) as the Prince of Wales.

Finally in 1974 Walters was named cohost of the *Today* show. By then, her status as a broadcaster had risen to such heights that she had twice been named to *Harper’s Bazaar’s* list of “100 Women of Accomplishment” (1967 and 1971), *Ladies Home Journal’s* “75 Most Important Women” (1970), and *Time’s* “200 Leaders of the Future” (1974). As the most influential woman on television, others soon competed for her talents.

Million-dollar newswoman

In 1976 Walters accepted a million-dollar-a-year contract for five years to move to ABC, where she became television’s first network anchorwoman, the most prestigious job in television journalism. She also anchored and produced four prime-time specials and sometimes hosted or appeared on the network’s other news and documentary programs. Her contract stirred professional criti-

cism and jealousy. It not only doubled her income from NBC and her syndicated show, *Not For Women Only*, but it also made her the highest paid newscaster in history at that time. Walter Cronkite (1916–), John Chancellor, and Harry Reasoner then received about four hundred thousand dollars.

Executives of other networks cried that their established anchors might demand salary increases, questioned what they perceived as a “show biz” tint to the dry task of news reporting, and questioned whether the public would accept a woman news anchor. (ABC’s private polls before they made their record offer indicated only 13 percent preferred a male anchor, and they knew her presence could easily increase advertising revenues far exceeding her salary.)

Despite Walters’s sharp, probing interviewing techniques, she seldom seemed to alienate the person she was interviewing. She revealed some of the secrets of her success in her book *How to Talk With Practically Anybody About Practically Anything* (1970). Others attributed her interviewing success to her amazing ability to ask primarily those questions that the public would want answered.

However, Walters still had her critics. Some interview-subjects said her nervousness distracted them. Others claimed she was so eager that disastrous mistakes occurred, citing the instance when she grabbed another network’s microphone as she dashed to get a unique interview. Washington press corps members charged that she acted more as a “star” than as a reporter on presidential trips. However, her professional admirers outnumbered those who criticized her. Walter Cronkite noted her special interviewing talents. Sally Quinn, former rival on *CBS Morn-*

ing News, commented how “nice” Walters was to her.

Still on top

Walters’s personal life held considerable interest to the public. Her brief marriage to businessman Bob Katz was annulled, or made void; her thirteen-year marriage to Lee Guber, a theatrical producer, ended in divorce. Still they remained friendly, sharing mutual love for their daughter, Jacqueline Dena. In 1985 she married Merv Adelson, who had also previously been wed twice.

Walters has had a reputation for often being the first to interview world leaders. During the 1996 presidential campaign she interviewed the first African American Chair of the Joint Chiefs of Staff, General Colin Powell (1937–), after his retirement from the military. She has also had exclusive interviews with both Christopher Darden and Robert Shapiro of the O. J. Simpson murder trial, noted by the media as one of the most controversial murder trials of the twentieth century. Walters also had exclusive interviews with billionaire David Geffen, then with Christopher Reeve (1952–) following the horseback riding fall that left him paralyzed. In 1999, Walters was the first to be granted a public interview by Monica Lewinsky, the former White House intern whose affair with President Bill Clinton (1946–) led to his impeachment trial by the U.S. House of Representatives.

Walters’s elevation to top-paid broadcaster was credited with raising the status of other women journalists. Her own prowess as a broadcaster exploring socially important issues and as top-notch interviewer were undeniable. In addition, she excelled at bringing to the television public subjects that

ranged from show business personalities to heads of state.

In September 2000, Walter renewed her contract with ABC. The lucrative deal reportedly pays Walters \$12 million per year, making her one of the highest paid news anchors in the world.

AN WANG

Born: February 7, 1920

Shanghai, China

Died: March 24, 1990

Boston, Massachusetts

*Chinese-born American inventor, engineer,
and business executive*

An Wang made important inventions relating to computer memories and to electronic calculators. He was the founder and longtime executive officer of Wang Laboratories Incorporated, a leading American manufacturer of computers and word processing systems.

Childhood and education

An Wang was born the oldest of five children on February 7, 1920, in Shanghai, China, to Yin Lu and Zen Wan Wang. His father taught him English at home and Wang began his formal schooling at age six when he entered the third grade. In elementary school, Wang began to excel in science and mathematics. He became interested in radio as a high school student, built his own radio, and went on to study communications engineering at Chiao-Tung University in his native city. After graduation he stayed on at the university for another year as a teaching assistant. With the outbreak of World War II (1939-45; a war in which France, Great Britain, the Soviet Union, the United States, and other European forces fought against those of Germany, Japan, and Italy), Wang moved to inland China, where he spent the war designing radio receivers and transmitters for the Chinese to use in their fight against Japan.

Wang left China in the spring of 1945, receiving a government stipend (financial support) to continue his education at Harvard University in Cambridge, Massachusetts. He completed his master's degree in communications engineering in one year. After graduation, he worked for an American company for some months and then for a Canadian office of the Chinese government. In 1947, he returned to Harvard University and rapidly completed a doctorate degree in engineering and applied physics. Wang married in 1949, and he and his wife had three children. Six years later Wang became an American citizen.

Invention

In the spring of 1948 Howard Aiken (1900–1973) hired Wang to work at the Harvard Computation Laboratory. This institution had built the ASSC Mark I, one of the world's first digital computers, a few years earlier and was developing more advanced machines under a contract from the U.S. Air Force. Aiken asked Wang to develop a way to store and retrieve data in a computer using magnetic devices. Wang studied the magnetic properties of small doughnut-shaped rings of ferromagnetic material, or materials that can become highly magnetized. Wang soon developed a process where one could read the information stored in a ring by passing a current around it. Researchers at the nearby Massachusetts Institute of Technology (MIT) and elsewhere were interested in the idea of magnetic core storage of information and greatly developed it for use in various computers. Wang published an account of his results in a 1950 article coauthored by W.D. Woo, another Shanghai native who worked at Harvard. He also patented his invention and, despite a long court fight, earned substantial royalties (money earned from sales) from International Business Machines (IBM) and other computer manufacturers who used magnetic core memories. These cores remained a basic part of computers into the 1970s.

Wang was not happy with having others develop and sell his inventions. In 1951 he left the Computation Laboratory and used his life savings to start his own electronics company. He first sold custom-built magnetic shift registers for storing and combining electronic signals. His company also sold machines for magnetic tape control and numerical control. In the mid-1960s Wang

An Wang.

Reproduced by permission of the Corbis Corporation.

invented a digital logarithmic converter that made it possible to perform routine arithmetic electronically at high speeds and relatively low cost. Wang desktop calculators were soon available commercially, replacing traditional machines with mechanical parts. Several calculators operated on one processing unit. These early electronic calculators sold for over one thousand dollars per keyboard. They were used in schools, scientific laboratories, and engineering firms. By 1969, Wang Laboratories had begun to produce less expensive calculators for wider business use. However, Wang saw that the introduction of other technology would allow competitors to

sell electronic handheld calculators at a much lower price than the machines his company offered.

Time to change

Confronted with the need to find new products, Wang directed his firm toward the manufacture of word processors and small business computers. The first Wang word processing systems sold in 1976. They were designed for easy access by those unfamiliar with computers, for broad data base management, and for routine business calculations. In addition to such computer networks, the company developed personal computers for office use.

Wang began his business in a room above an electrical fixtures store in Boston, Massachusetts, with himself as the only employee. By the mid-1980s the company had expanded to over fifteen thousand employees working in several buildings in the old manufacturing town of Lowell, Massachusetts, and in factories and offices throughout the world. To acquire money to finance this expansion and to reward competent employees, Wang Laboratories sold stock and piled up a considerable debt. The Wang family retained control of the firm by limiting administrative power to a special class of shareholders. In the early 1980s when company growth slowed while debt remained large, Wang made some effort to reduce his personal control of the business and follow regular corporate management practices.

While remaining a company officer and leading stockholder, Wang gave increased responsibilities to his son Frederick and to other managers. Wang intended to devote

even more time to educational activities. He served as an adviser to several colleges and as a member of the Board of Regents of the University of Massachusetts. Wang also took a particular interest in the Wang Institute of Graduate Studies which he founded in 1979. This school offers advanced degrees in software engineering. Difficult times in the computer industry soon led Wang to turn his concentration from these projects and resume full-time direction of Wang Laboratories.

Later years and slowing business

In the last decades of the twentieth century, Wang's economic structure faltered. In 1982 the organization generated more than a billion dollars a year, and by 1989 sales were \$3 billion a year. But Wang Laboratories fell on hard times as well. In the early 1990s the former minicomputer maker fell into Chapter 11 bankruptcy and Wang died of cancer in March of 1990 at the age of seventy.

On January 30, 1997, the Eastman Kodak Company bought the Wang Software business unit for \$260 million in cash. The deal put Kodak into the document imaging and workflow business and took Wang out of software. Wang also began a relationship with Microsoft, and Michael Brown, chief financial officer for Microsoft, sat on Wang's board of directors. The reorganization enabled the company to prosper once again.

Wang's engineering insight and business success made him a fellow (member) of the Institute of Electrical and Electronic Engineers and a fellow of the American Academy of Arts and Sciences. He received an honorary doctoral degree from the Lowell Technological Institute.

BOOKER T. WASHINGTON

Born: April 5, 1856

Franklin County, Virginia

Died: November 14, 1915

Tuskegee, Alabama

African American educator, author, and leader

Booker T. Washington, African American educator and leader, founded Tuskegee Institute for black students. His "Atlanta Compromise" speech made him America's major black leader for twenty years.

Born into slavery

Booker Taliaferro (the Washington was added later) was born a slave in Franklin County, Virginia, on April 5, 1856. His mother was the plantation's cook, while his father, a local white man, took no responsibility for him. From a very early age, Washington recalled an intense desire to learn to read and write.

Washington's mother married another slave, who escaped to West Virginia during the Civil War (1861–65; a war in which Northern forces fought against those of the South over, among other things, secession, or the South's desire to leave the Union). She and her three children were liberated (freed) by a Union army in 1865 and, after the war, joined her husband in West Virginia.

Desire to learn

The stepfather put the boys to work in the salt mines in Malden, West Virginia. Booker eagerly asked for education, but his stepfather gave in only when Booker agreed to work in the mines mornings and evenings to make up for earnings lost while in school. He had known only his first name, but when students responded to roll call with two names, Booker desperately added a famous name, becoming Booker Washington. Learning from his mother that he already had a last name, he became Booker T. Washington.

Overhearing talk about an African American college in Hampton, Virginia, Washington longed to attend the school. Meanwhile, as houseboy for the owner of the coal mines and saltworks, he developed sturdy work habits. In 1872 he set out for Hampton Institute. When he ran out of money, he worked at odd jobs. Sleeping under wooden sidewalks, begging rides, and walking, he traveled the remaining eighty miles and, tired and penniless, asked for admission and assistance. After Hampton officials tested him by making him clean a room, he was admitted and given work as a janitor.

Hampton Institute, founded in 1868 by a former Union general, emphasized manual training. The students learned useful trades

WASHINGTON, BOOKER T.

*Booker T. Washington.

Fisk University Library.*

and earned their way. Washington studied brickmasonry (laying of bricks) along with other courses. Graduating in 1876, he taught in a school for two years. Studying at Wayland Seminary in Washington, D.C., he became bored with classical education, considering his fellow students to be more interested in making an impression and living off the black masses than in serving mankind. He became convinced that practical, manual training in rural skills and crafts would save his race, not higher learning, which separated the reality of the black man's miserable existence. In 1879 he was invited to teach at

Hampton Institute, particularly to supervise one hundred Native Americans admitted experimentally. He proved a great success in his two years as part of the teaching staff.

Tuskegee Institute

In 1881 citizens in Tuskegee, Alabama, asked Hampton's president to recommend a white man to head their new black college. He suggested Washington instead. The school had an annual legislative appropriation (government money) of two thousand dollars for salaries, but no campus, buildings, students, or staff. Washington had to recruit students and teachers and raise money for land, buildings, and equipment. Hostile rural whites who feared education would ruin black laborers accepted his demonstration that his students' practical training would help improve their usefulness. He and his students built a kiln, an oven used for making bricks, and they erected campus buildings brick by brick.

Under Washington's leadership, Tuskegee Institute became an important force in black education. Tuskegee pioneered in agricultural extension, sending out demonstration wagons that brought better methods to farmers and sharecroppers (farmers who work land owned by another and give a portion of the crop in exchange for the use of the land). Graduates founded numerous "little Tuskegees." African Americans immersed in the poverty of cotton sharecropping improved their farming techniques, income, and living conditions. Washington urged them to become capitalists (business investors), founding the National Negro Business League in 1900. Black agricultural scientist George Washington Carver (c. 1864–1943) worked

at Tuskegee from 1896 to 1943, developing new products from peanuts and sweet potatoes. By 1915 Tuskegee had fifteen hundred students and a larger endowment (designated funds) than any other black institution.

“Atlanta Compromise”

In 1895 Washington gave his famous “Atlanta Compromise” speech. Although he shared the late Frederick Douglass’s (1817–1895) long-range goals of equality (idea that all races are equal) and integration (bringing different races together), Washington criticized disturbing the peace and other protest strategies. He urged black people to drop demands for political and social rights, concentrating instead on improving job skills and usefulness. “The opportunity to earn a dollar in a factory just now is worth infinitely more than the opportunity to spend a dollar in an opera-house,” he said. He appealed to white people to rely on loyal, proven black workers, pointing out that the South would advance to the degree that blacks were allowed to secure education and become productive.

Washington’s position so pleased whites, North and South, that they made him the new black spokesman. He became powerful, having the deciding voice in federal appointments of African Americans and in philanthropic grants (charitable donations) to black institutions. Through subsidies, or secret partnerships, he controlled black newspapers, therefore silencing critics. Impressed by his power and hoping his tactics would work, many black people went along. However, increasingly during his last years, such black intellectuals as W. E. B. Du Bois (1868–1963), John Hope (1868–1936), and William Monroe Trotter (1872–1934) criticized his surren-

der of civil rights (the fight for racial equality) and his stressing of training in crafts, some irrelevant, while forgetting liberal education, which stressed social improvements for black people. Opposition centered in the Niagara Movement, founded in 1905, and the National Association for the Advancement of Colored People (NAACP), which succeeded it in 1910.

Although outwardly calm and nonconfrontational, Washington secretly financed and encouraged attempts and lawsuits to block Southern moves to segregate (to separate black and white Americans) black people and stop them from gaining citizenship. He had lost two wives by death and married a third time in 1893. His death on November 14, 1915, cleared the way for black people to return to Douglass’s tactics of protesting for equal political, social, and economic rights. Washington won a Harvard honorary degree in 1891. His birthplace in Franklin County, Virginia, is now a national monument.

GEORGE WASHINGTON

Born: February 22, 1732

Bridges Creek, Virginia

Died: December 14, 1799

Mount Vernon, Virginia

American president, politician, and military leader

George Washington (1732–1799) was commander in chief of the American and French forces in the American Revolution (1775–83) and became the first president of the United States.

Virginia childhood

George Washington was born at Bridges Creek (later known as Wakefield) in Westmoreland County, Virginia, on February 22, 1732. His father died when he was eleven years old, and the boy spent the next few years living in different households throughout Virginia. He lived with his mother near Fredericksburg, with relatives in Westmoreland, and with his half brother in Mount Vernon.

Not much is known about Washington's childhood. Many American children have heard the story of how the young Washing-

ton took a hatchet and cut down a cherry tree, then admitted his deed because his honest character would not allow him to lie. This tale was probably invented by Mason Locke Weems (1759–1825), author of the biography of Washington that appeared the year after his death. At the age of fourteen Washington had planned to join the British navy but then reluctantly stayed home in obedience to his mother's wishes. By the age of sixteen he had obtained a basic education in mathematics, surveying (the process of measuring and plotting land), reading, and the usual subjects of his time. In 1749 Washington was appointed county surveyor, and his experience on the frontier led to his appointment as a major (a military officer who is above a captain) in the Virginia militia (a small military force that is not part of the regular army) in 1752.

French and Indian War

Washington began to advance in the military ranks during the French and Indian War (1754–63), the American portion of a larger conflict between France and Great Britain over control of overseas territory. In America, this conflict involved a struggle between the two countries over a portion of the Ohio River Valley. Before the war began, Virginia governor Robert Dinwiddie (1693–1770) appointed Washington to warn the French moving into the Ohio Valley against invading English territory. Dinwiddie then made Washington a lieutenant colonel (a military officer who is above a major), with orders to dislodge the French at Pennsylvania's Fort Duquesne, but a strong French force beat the Virginia troops. This conflict triggered the beginning of French and Indian War, and

Great Britain dispatched regular troops in 1755 to remove the French by force.

Later in the year, Dinwiddie promoted Washington to colonel (a military officer who is above a lieutenant colonel) and made him commander in chief of all Virginia troops. In 1758 he accompanied British troops on the campaign that forced the French to abandon Ft. Duquesne. With the threat of violence removed, Washington married Martha Custis (1731–1802) and returned to his life at Mount Vernon.

Early political career

Washington had inherited local importance from his family. His grandfather and great-grandfather had been justices of the peace, a powerful county position in eighteenth-century Virginia. His father had served as sheriff, church warden, and justice of the peace. His half-brother Lawrence had been a representative in the Virginia legislature from Fairfax County. George Washington's entry into politics was based on an alliance with the family of Lawrence's father-in-law.

Washington was elected to the Virginia House of Burgesses (an early representative assembly in Virginia) in 1758 as a representative from Frederick County. From 1760 to 1774 he served as a judge of Fairfax County. His experience on the county court and in the colonial legislature molded his views on British taxation of the thirteen American Colonies (which became the first thirteen states of the United States) after 1763. He opposed the Stamp Act (which placed a tax on printed materials) in 1765. In the 1760s he supported the nonimportation of goods (refusal to import goods) as a means of

*George Washington.
Courtesy of the Library of Congress.*

reversing British policy. In 1774 he joined the call for a meeting of representatives who would define policies for all thirteen colonies, called the Continental Congress, that would take united colonial action against recent laws directed by the British against Massachusetts.

In July 1774 Washington led the county meeting that was held to adopt the Fairfax Resolves, which he had helped write. These resolves (resolutions) influenced the adoption of the Continental Association, a plan devised by the First Continental Congress (1774) for enforcing nonimportation of British goods. They also proposed the cre-

ation of a militia company in each county that was not under the control of a British-appointed governor. This idea became the basis of the development of the Continental Army, the united military forces of the American colonies fighting the British.

By May 1775 Washington, who headed the Fairfax militia company, had been chosen to command the companies of six other counties. When the Second Continental Congress (1775) met after the battles of Lexington and Concord (the first battles of the Revolution) in Massachusetts, Washington was elected unanimously as commander in chief of all Continental Army forces. From June 15, 1775, until December 23, 1783, he commanded the Continental Army. After the French joined the war on the American side in 1778, it was Washington who headed the combined forces of the United States and France in the War of Independence against Great Britain.

Revolutionary Years

Throughout the Revolutionary years Washington developed military leadership, administrative skills, and political sharpness. From 1775 to 1783 he functioned, in effect, as the chief executive of the United States. His wartime experiences gave him a sense of the importance of a unified position among the former colonies. His writings suggested that he favored a strong central government.

Washington returned to his estates at Mount Vernon at the end of the Revolution. There was little time for relaxation, as he was kept constantly busy with farming, western land interests, and navigation of the Potomac River. Finally, Washington led the proceedings at the Federal Convention in 1787 that

led to ratification, or confirmation, of the new American constitution.

First American president

The position of president of the United States seemed shaped on the generally held belief that Washington would be the first to occupy the office. In a day when executive power was regarded with suspicion, the constitution established an energetic and independent chief executive. Pierce Butler (1744–1822), one of the Founding Fathers, noted that the Federal Convention would not have made the executive powers so great “had not many of the members cast their eyes toward General Washington as President.”

After he was unanimously chosen as president in 1789, Washington helped translate the new Constitution into a workable instrument of government. With his support, the Bill of Rights (a written list of basic rights that are guaranteed to all citizens) was added to the Constitution; an energetic executive branch was established in American government; the departments of state, treasury, and war became official parts of the American president’s cabinet; the federal court system was begun; and Congress’s power to tax was used to raise money to pay the Revolutionary War debt and to establish American credit at home and abroad.

As chief executive, Washington consulted his cabinet on public policy. He presided over their differences, especially those between Thomas Jefferson (1743–1826) and Alexander Hamilton (1755–1804). Jefferson and Hamilton represented two opposing sides of an extremely important debate during this time about the role of a strong federal government in gov-

erning the former British colonies. Hamilton advocated a strong, centralized federal government, whereas Jefferson, fearing that the executive leader would have too much power, pressed for strong states' rights. Hamilton's position is known as the Federalist position; Jefferson's is known as the anti-Federalist or, later, the Republican position (not to be confused with the present-day Republican political party).

Washington approved the Federalist financial program and later, the Hamiltonian proposals, such as funding of the national debt, assumption of the state debts, the establishment of a Bank of the United States, the creation of a national coinage system, and an internal tax on goods. He also presided over the expansion of the federal union from eleven states (North Carolina and Rhode Island ratified [approved] the Constitution after Washington was sworn in as president) to sixteen (Vermont, Kentucky, and Tennessee were admitted between 1791 and 1796). Washington's role as presidential leader was of great importance in winning support for the new government's domestic and foreign policies.

Second term

Despite his unanimous election, Washington expected that the measures of his administration would meet opposition—and they did. By the end of his first term the American political party system was developing. When he mentioned the possibility of retirement in 1792, both Hamilton and Jefferson agreed that he was “the only man in the United States who possessed the confidence of the whole” country and urged him to continue with a second term.

Washington's second term was dominated by foreign-policy considerations. Early in 1793 the French Revolution, which had overthrown the French monarchy in 1789, became the central issue in American politics. France had declared war on Great Britain and appointed Edmond Genet (1763–1834) as minister to the United States. Determined to keep America out of the war and free from European influence, Washington issued a neutrality proclamation (a statement that the United States would not take sides or become involved in the conflict), although the word “neutrality” was not used.

Despite the proclamation, Genet supplied French pirates in American ports and organized expeditions against Florida and Louisiana (which were not then part of the United States). For his undiplomatic conduct, the Washington administration requested and obtained his recall to France. In the midst of the Genet affair, Great Britain began a blockade of France and began seizing neutral ships trading with the French West Indies. Besides violating American neutral rights (the territorial rights of a neutral country), the British still held posts in the American Northwest. The Americans claimed that they plotted with the Indians against the United States.

In 1794 Washington sent John Jay (1745–1829) to negotiate a settlement of the differences between the British and the Americans. Although Jay's Treaty was vastly unpopular—the British agreed to leave the Northwest posts but made no concessions on other key issues—Washington finally accepted it. The treaty also paved the way for a new treaty with Spain, which had feared an alliance of American and British interests against Spain in the Western Hemisphere.

Washington's contributions

Nearly all observers agree that Washington's eight years as president demonstrated that executive power was completely consistent with the spirit of republican government. The term "republican" here refers to the principles of a republic, a form of government in which citizens have supreme power through elected representatives and in which there is no monarchy (hereditary king or queen). Washington put his reputation on the line in a new office under a new Constitution. He realized that in a republic the executive leader, like all other elected representatives, would have to measure his public acts against public opinion. As military commander during the Revolution, he had seen the importance of administrative skills as a means of building public support of the army. As president, he used the same skills to win support for the new federal government.

Despite Washington's dislike of fighting among political "sides," his administrations and policies spurred the beginnings of the first political party system. This ultimately identified Washington with the Federalist party, especially after Jefferson's retirement from the cabinet in 1793.

Retirement

Washington's public service did not end with his retirement from the presidency. During the presidency of John Adams (1735–1826), when America seemed on the brink of a war with France, Adams appointed him commander in chief of the American forces. Washington accepted with the understanding that he would not take field command until troops had been recruited and equipped. Since Adams settled the differences with France by diplomatic negotiations, Washing-

ton never assumed actual command. He continued to live at Mount Vernon, where he died on December 14, 1799.

At the time of Washington's death, Congress unanimously adopted a resolution to erect a marble monument in the nation's capital in honor of his great military and political accomplishments. The Washington Monument was completed in 1884.

**JAMES
WATT**

**Born: January 19, 1736
Greenock, Scotland**

Died: August 25, 1819

Heathfield, England

Scottish engineer, instrument maker, and inventor

The British instrument maker and engineer James Watt developed an efficient steam engine that was a universal (covering everything) source of power and thereby provided one of the most essential technological parts of the early industrial revolution (a period of rapid economic growth that involved increased reliance on machines and large factories).

Watt's early years

James Watt was born on January 19, 1736, in Greenock, Scotland, the son of a shipwright (a carpenter who builds and fixes ships) and merchant of ships' goods. As a child James suffered from ill health. He attended an elementary school where he learned some geometry as well as Latin and Greek, but he was not well enough to attend regularly. For the most part he was educated by his parents at home. His father taught him writing and arithmetic, and his mother taught him reading.

Of much more interest to James was his father's store, where the boy had his own tools and forge (furnace to shape metals), and where he skillfully made models of the ship's gear that surrounded him. His father taught him how to craft things from wood and metal. He also taught James the skill of instrument making. As a youngster he played with a small carpentry set his father gave him, taking his toys apart, putting them back together, and making new ones.

In 1755 Watt was apprenticed (working for someone to learn a craft) to a London,

England, mathematical instrument maker. At that time the trade primarily produced navigational (ship steering) and surveying (land measuring) instruments. Watt found London to be unpleasant, however. A year later he returned to Scotland.

Watt wanted to establish himself in Glasgow, Scotland, as an instrument maker. However, restrictions imposed by the tradesmen's guilds (associations of craftsmen) stood in his way. Friends at the University of Glasgow eventually arranged for him to be appointed as "mathematical instrument maker to the university" in late 1757. About this time Watt met Joseph Black, who had already laid the foundation (base) of modern chemistry and of the study of heat. Their friendship was of some importance in the early development of the steam engine.

Invention of the steam engine

At the University of Glasgow, Watt had become engaged in his first studies on the steam engine. During the winter of 1763–64 he was asked to repair the university's model of an earlier model of the steam engine made by Thomas Newcomen around the year 1711. After a few experiments, Watt recognized that the fault with the model rested not so much in the details of its construction as in its design. He found that a volume (amount of space taken up by an object or substance) of steam three or four times the volume of the piston cylinder (chamber with a moving object inside of it) was required to make the piston move to the end of the cylinder.

The solution Watt provided was to keep the piston at the temperature of the steam (by means of a jacket heated by steam) and to condense (make less dense) the steam in a

James Watt.

Courtesy of the Library of Congress.

separate vessel (chamber) rather than in the piston. Such a separate condenser avoided the large heat losses that resulted from repeatedly heating and cooling the body of the piston, and so engine efficiency was improved.

It took time for Watt to turn a good idea for a commercial invention into reality. A decade passed before Watt solved all the mechanical problems. Black lent him money and introduced him to John Roebuck of the Carron ironworks in Scotland. In 1765 Roebuck and Watt entered into a partnership.

Watt still had to earn his own living but his employment as surveyor of canal construc-

tion left little time for developing his invention. However, Watt did manage to prepare a patent application on his invention, and the patent was granted on January 5, 1769.

By 1773 Roebuck's financial difficulties brought not only Watt's work on the engine to a standstill but also Roebuck's own business. Matthew Boulton, an industrialist (someone who owns and operates a factory) of Birmingham, England, then became Watt's partner. Watt moved to Birmingham. He was now able to work full time on his invention. In 1775 Boulton accepted two orders to build Watt's steam engine. The two engines were set up in 1776 and their success led to many other orders.

Improvements in the steam engine

Between 1781 and 1788 Watt modified and further improved his engine. These changes combined to make as great an advance over his original engine as the latter was over the Newcomen engine. The most important modifications were a more efficient use of the steam, the use of a double-acting piston, the replacement of the flexible chain connection to the beam by the rigid three bar linkage, the provision of another mechanical device to change the reciprocating (back and forth) motion of the beam end to a rotary (circular) motion, and the provision of a device to regulate the speed.

Having devised a new rotary machine, the partners had next to determine the cost of constructing it. These rotary steam engines replaced animal power, and it was only natural that the new engine should be measured in terms of the number of horses it replaced. By using measurements that millwrights (people who build mills), who set up horse gins (ani-

mal-driven wheels), had determined, Watt found the value of one “horse power” to be equal to thirty-three thousand pounds lifted one foot high per minute. This value is still used as the standard for American and English horsepower. The charge of building the new type of steam engine was based upon its horsepower from that time forward.

Other inventions

On Watt’s many business trips, there was always a good deal of correspondence (letters) that had to be copied. To avoid this tiresome task, he devised letter-press copying. This works by writing the original document with a special ink. Copies are then made by simply placing another sheet of paper on the freshly written sheet and then pressing the two together.

Watt’s interests in applied (practical) chemistry led him to introduce chlorine bleaching into Great Britain and to devise a famous iron cement. In theoretical chemistry, he was one of the first to argue that water was not an element (basic substance of matter made up of only one kind of atom) but a compound (substance made up of two or more elements).

In 1794 Watt and Boulton turned over their flourishing business to their sons. Watt maintained a workshop where he continued his inventing activities until he died on August 25, 1819.

Watt’s achievements in perfecting the steam engine have been recognized worldwide. The watt, a unit of electrical power, was named after him.

JOHN WAYNE

Born: May 26, 1907

Winterset, Iowa

Died: June 11, 1979

Los Angeles, California

American actor

American actor John Wayne played characters that typically showed a heroic American “can-do” spirit in over seventy-five films, mostly Westerns and war movies. He is considered an icon in American film.

“The Duke”

John Wayne was born Marion Mitchell Morrison, of Scotch-Irish descent, to Clyde and Mary Morrison on May 26, 1907, in Winterset, Iowa. He had one brother, Robert Emmet Morrison. He received his nickname “Duke” while still a child, because of his love for a dog of that name. His father was a pharmacist whose business ventures did not succeed. In 1914, when Duke was six, the family moved to California where his father was able to open a drugstore. In 1926 his parents were divorced.

John Wayne.

Courtesy of the Library of Congress.

From the age of twelve Duke helped his father at his drugstore in his spare time. He also supported himself with a variety of odd jobs, including stints as a delivery boy and as a trucker's helper. At first he aspired to attend the Naval Academy and become a naval officer but things did not work out as planned. Fortunately, he was a star football player on the Glendale High School team, and he was accepted at the University of Southern California on a football scholarship. But an accident soon ended his playing career and scholarship. Without funds to support himself, he left the university in 1927 after two years there.

In college Duke worked at the Fox studio lots in Los Angeles, California, as a laborer, prop boy, and extra. While doing so he met director John Ford (1895–1973), who took an interest in him (and would over the years have a major impact on his career). In 1928, after working at various odd jobs for some months, he was again employed at the Fox studios, mostly as a laborer but also as an extra and bit player. His efforts generally went unbilled, but he did receive his first screen credit as Duke Morrison.

Becoming "John Wayne"

Wayne's first real break came in 1929, when through the intervention of Ford he was cast as the lead in a major Fox production, the Western movie *The Big Trail*. According to some biographers, Fox executives found his name inappropriate and changed it to John Wayne, the last name being taken from the American Revolutionary general "Mad Anthony" Wayne.

The Big Trail was not a success and Fox soon dropped Wayne. During the 1930s he worked at various studios, mostly those on what was known as "Poverty Row." Wayne appeared in over fifty feature films and serials, mostly Westerns. He even appeared in some films as "Singing Sandy." Tall, likeable, able to do his own stunts, it appeared that he was doomed to be a leading player in low-budget films.

However, thanks to Ford, with whom Wayne had remained friends, he was cast as the lead in the director's film *Stagecoach*, a 1939 Western that became a hit and a classic. This film was a turning point in Wayne's career. And although it took time for him to develop the mythic-hero image which pro-

pelled him to the top of the box office chart, he was voted by movie exhibitors as one of the Top Ten box office attractions of the year—a position he maintained for twenty-three of the next twenty-four years.

Superstar

Wayne appeared in over seventy-five films between 1939 and 1976 when *The Shootist*, his last film, a Western, was released. In the vast majority of these films he was a man of action, be it in the American West or in U.S. wars of the twentieth century. As an actor he had a marvelous sense of timing and of his own persona, but comedy was not his specialty. Action was the essence of his films. Indeed, critics have repeatedly emphasized the manner in which he represented a particular kind of “American Spirit.”

As a box-office superstar Wayne had his choice of roles and vehicles, but he chose to remain with the types of films he knew best. As the years passed his only admission to age was from the roles he played. He went from wooing leading ladies, such as Marlene Dietrich (1901–1992) (*Pittsburgh*, 1942), Gail Russell (*Angel and the Badman*, 1947), and Patricia Neal (*Operation Pacific*, 1951) to more mature roles as a rowdy father figure (*McClintock*, 1963), an older brother (*The Sons of Katie Elder*, 1965), and a kind marshal (*Rio Lobo*, 1970).

Wayne's politics were not always right-of-center, but in the latter part of his life he became known for his anticommunism (a political theory where goods and services are owned and distributed by a strong central government) activities. His conservatism began in the mid-1940s. He served as head of the anticommunist Motion Picture Alliance

for the Preservation of American Ideals; supported various conservative Republican politicians, including Barry Goldwater and Richard Nixon (1913–1994); and spoke out forcefully on behalf of various causes such as American participation in the Vietnam War (1955–75; when American forces aided South Vietnam with their struggle against North Vietnam).

Later career

Wayne's politics also influenced his activities as a producer and director. Wayne's production companies made all kinds of films, but among them were *Big Jim McClain* (1951), in which he starred as a process server for the House Un-American Activities Committee fighting communists in Hawaii, and *Blood Alley* (1955), in which he played an American who helps a village to escape from the Communist Chinese mainland to Formosa. The two films that Wayne directed also are representative of his politics: *The Alamo* (1960) is an epic film about a heroic last stand by a group of Texans in their fight for independence against Mexico and included some preaching by the Wayne character about democracy as he saw it; and *The Green Berets* (1968), in which Wayne played a colonel leading troops against the North Vietnamese, which was an outspoken vehicle in support of America's role in the war.

Wayne was married three times. He had four daughters and three sons by two of his wives (Josephine Saenez, 1933–1945, and Pilar Palette Weldy, after 1954). His second wife was Esperanza Diaz Ceballos Morrison (1946–1954). Wayne was the recipient of many awards during his career, including an Oscar for his role as the hard-drinking, one-

eyed, tough law man in *True Grit* (1969) and an Academy Award nomination for his playing of the career marine in *Sands of Iwo Jima* (1949). Plagued by various illnesses during the last few years of his life, he publicly announced his triumph over lung cancer in 1964. But a form of that disease eventually claimed his life on June 11, 1979.

DANIEL WEBSTER

Born: January 18, 1782

Salisbury, New Hampshire

Died: October 24, 1852

Marshfield, Massachusetts

American orator and lawyer

Daniel Webster, a notable public speaker and leading constitutional lawyer, was a major congressional spokesman for the Northern Whigs during his twenty years in the U.S. Senate.

Childhood

Daniel Webster was born in Salisbury, New Hampshire, on January 18, 1782. His parents were Ebenezer, who worked as a tavern owner and a farmer and was also involved in politics, and his second wife, Abigail. While a child, Daniel earned the nickname "Black Dan" for his dark skin and black hair and eyes. The second youngest of ten children, Daniel developed a passion for reading and learning at a young age. His formal education began in 1796 when he started at Phillips Academy in Exeter. Then when he was fifteen, Daniel went on to Dartmouth College.

After graduating from Dartmouth, Daniel studied law and was admitted to the bar (an organization for lawyers) in 1805. He opened a law office in Portsmouth, New Hampshire, in 1807, where his success was immediate. He became a noted spokesman for the Federalists (a leading political party that believed in a strong federal government) through his addresses on patriotic occasions. In 1808 he married Grace Fletcher.

Early years in politics

Elected to the U.S. House of Representatives in 1813, Webster reenergized the Federalist minority with his attacks on the war policy of the Republicans, the opposing political party. Under his leadership the Federalists often successfully obstructed war measures.

After the War of 1812, when American and British forces clashed over shipping rites, he called for the restructuring of the Bank of the United States, but he voted against the final bill, which he considered defective. As the representative of a region where shipping was basic to the economy, he voted against the protective tariff (tax).

Webster left politics for a while when he moved to Boston, Massachusetts. As a result of his success in pleading before the U.S. Supreme Court, Webster's fame as a lawyer grew, and soon his annual income rose to fifteen thousand dollars a year. In 1819 Webster secured a triumph in defending the Bank of the United States in *McCulloch v. Maryland*. On this occasion Supreme Court Chief Justice John Marshall drew from Webster's brief the belief that the power to tax is the power to destroy. In 1824 Webster was also successful on behalf of his clients in *Gibbons v. Ogden*.

When Webster returned to the U.S. House of Representatives in 1823, his speeches began to attract national attention. From 1825 to 1829 Webster was one of the most faithful backers of President John Quincy Adams (1767–1848), supporting federal internal improvements and supporting Adams in his conflict with Georgia over the removal of the Cherokee Indians.

The Senator

When Webster was elected to the Senate in 1827, he made the first about-face in his career when he became a champion of the protective tariff. This shift reflected the growing importance of manufacturing in Massachusetts and his own close involvement with factory owners both as clients and as friends. It was largely due to his support that the "Tar-

Daniel Webster.
Courtesy of the Library of Congress.

iff of Abominations" was passed in 1828. His first wife died shortly after he entered the Senate, and in 1829 he married Catherine Le Roy of New York City.

In January 1830 Webster electrified the nation by his speeches in response to the elaborate explanations of the Southern states' rights doctrines (teachings) made by Senator Robert Y. Hayne of South Carolina. In memorable phrases Webster exposed the weaknesses in Hayne's views and argued that the Constitution (the document that states the principles of the American government) and the Union rested upon the people and not upon the states. These speeches, delivered

before crowded Senate galleries, defined the constitutional issues which disturbed the nation for nearly thirty years.

The person

Webster was at the height of his powers in 1830. Regarded by others as one of the greatest orators (public speakers) of the day, he delivered his speeches with tremendous dramatic impact. Yet in spite of his emotional style and the passionate character of his speeches, he rarely sacrificed logic for effect. His striking appearance contributed to the forcefulness of his delivery. Tall, rather thin, and always clad in black, Webster's face was dominated by deep, luminous black eyes under craggy brows and a shock of black hair combed straight back.

In private Webster was more approachable. He was fond of gatherings and was a lively talker, although at times given to silent moods. His taste for luxury often led him to live beyond his means. While his admirers worshiped the "Godlike Daniel," his critics thought his constant need for money deprived him of his independence. During the Panic of 1837, a desperate financial crisis resulting from the expansion into western lands, he was in such desperate circumstances as a result of excessive investments in western lands that only loans from business friends saved him from ruin. Again, in 1844, when it seemed financial pressure might force him to leave the Senate, he permitted his friends to raise a fund to provide him with an income.

Secretary of State

Webster was one of the leaders of the anti-Andrew Jackson (1767–1845) forces

that came together in the Whig party, a political party which opposed Jackson's Democrats. Regardless, Webster did endorse President Jackson's stand during the nullification crisis in 1832, where several states threatened to leave the Union unless granted the right to "nullify," or make void, certain federal laws. In 1836 the Massachusetts Whigs named Webster as their presidential candidate, but in a field against other Whig candidates he polled only the electoral votes of Massachusetts. In recognition of his standing in the party and in gratitude for his support during the campaign, President William Henry Harrison (1773–1841) appointed him secretary of state in 1841. He continued in this post under John Tyler (1790–1862), who succeeded to the presidency when Harrison died a month after he was sworn in as president. Among other accomplishments, Webster sent Caleb Cushing (1800–1879) to the Orient (Far East) to establish commercial relations with China, although he was no longer in office when Cushing concluded the agreement. Late in 1843 Webster, feeling that he no longer enjoyed Tyler's confidence, gave in to Whig pressure and retired from office.

Webster, in spite of his disappointment at not receiving the presidential nomination in 1844, actively campaigned for Henry Clay (1777–1852), his rival within the party. On his return to the Senate in 1844, Webster opposed the annexation (acception into the Union) of Texas and as well as the expansionist policies that peaked in the war with Mexico (1846–48), when American forces clashed with Mexico over western lands. After the war he worked to remove slavery from the newly acquired territories which resulted in the Wilmot Proviso.

Although Northern businessmen agreed, the average citizen was outraged over Webster's speech of March 1850 in defense of the new Fugitive Slave Law, a law that provided for the return of escaped slaves. Webster again became secretary of state in July 1850, in Millard Fillmore's Cabinet. In 1852 he lost his last hope for the presidency when the Whigs passed over him in favor of General Winfield Scott (1786–1866), a former Democrat. Deeply outraged, he refused to support the party candidate. He died just before the election on October 24, 1852.

NOAH WEBSTER

Born: October 16, 1758

West Hartford, Connecticut

Died: May 23, 1843

New Haven, Connecticut

American lexicographer

Noah Webster, American lexicographer (one who compiles a dictionary), remembered now almost solely as the compiler of a continuously successful dictionary, was for half a century among the more influential and most active literary men in the United States.

Early life

Noah Webster was born on October 16, 1758, in West Hartford, Connecticut. The fourth son of five children of Noah and Mercy Steele Webster, young Noah showed exceptional scholarly talents as a child, and his father sacrificed much in order that his son would gain the best education available.

In 1774, at age sixteen, Webster entered Yale College, sharing literary ambitions with his classmate Joel Barlow and tutor Timothy Dwight. His college years were interrupted by terms of military service. After his graduation in 1778, Noah began studying law, but because his father could no longer support him, he took a job as a schoolmaster in Hartford, Litchfield, and Sharon, all in Connecticut. Meanwhile, he read widely and studied law. He was admitted to the bar (an association for lawyers) and received his master of arts degree in 1781. Dissatisfied with the British-made textbooks available for teaching, he determined to produce his own. He had, he said, "too much pride to stand indebted to Great Britain for books to learn our children."

Schoolmaster to America

Webster soon developed the first of his long series of American schoolbooks, a speller titled *A Grammatical Institute of the English*

Noah Webster.

Courtesy of the National Archives and Records Administration.

Language, Part I (1783). Known for generations simply as *The Blue-back Speller*, it was in use for more than a century and sold over seventy million copies. His book's effect on students is said to have been unequalled in the history of American elementary education. Part II of the *Grammatical Institute*, a grammar, reprinted often under various titles, appeared in 1784. Part III, a reader, in the original 1785 edition included sections from yet-unpublished poetry by Dwight and Barlow. Though the reader had a shorter life and more vigorous competition than other parts of the *Institute*, it set a patriotic (having to do with the

love for one's country) and moralistic (having to do with right and wrong) pattern followed by rival books, some of which were thought to attract attention because they were more religiously orientated. Webster stressed what he called the "art of reading" in later volumes, including two secularized (nonreligious) versions of *The New England Primer* (1789, 1801), *The Little Reader's Assistant* (1790), *The Elementary Primer* (1831), and *The Little Franklin* (1836).

Webster toured the United States from Maine to Georgia selling his textbooks, convinced that "America must be as independent in *literature* as she is in *politics*, as famous for *arts* as for *arms*," but that to accomplish this she must protect by copyright (the legal right of artistic work) the literary products of her countrymen. He pleaded so effectively that uniform copyright laws were passed early in most of the states, and it was largely through his continuing effort that Congress in 1831 passed a bill which ensured protection to writers. On his travels he also peddled (sold from door to door) his *Sketches of American Policy* (1785), a vigorous plea on behalf of the Federalists, a then-popular political party that believed in a strong central government. In Philadelphia, Pennsylvania, where he paused briefly to teach school and see new editions of his *Institute* through the press, he published his politically effective *An Examination into the Leading Principles of the Federal Constitution* (1787).

In New York City, Webster established the *American Magazine* (1787–88), which he hoped might become a national periodical (magazine distributed regularly). In it he pled for American intellectual independence, education for women, and the support of Feder-

alist ideas. Though it survived for only twelve monthly issues, it is remembered as one of the most lively, bravely adventuresome of early American periodicals. He continued as a political journalist with such pamphlets as *The Effects of Slavery on Morals and Industry* (1793), *The Revolution in France* (1794), and *The Rights of Neutral Nations* (1802).

Language reform

But Webster's principal interest became language reform, or improvement. As he set forth his ideas in *Dissertations on the English Language* (1789), theatre should be spelled theater; machine, masheen; plough, plow; draught, draft. For a time he put forward claims for such reform in his readers and spellers and in his *Collection of Essays and Fugitiv [sic] Writings* (1790), which encouraged "reezoning," "yung" persons, "reeding," and a "zeel" for "lerning"; but he was too careful a Yankee to allow odd behavior to stand in the way of profit. In *The Prompter* (1790) he quietly lectured his countrymen in corrective essays written plainly, in a simple and to-the-point style.

After Webster married in 1789, he practiced law in Hartford for four years before returning to New York City to edit the city's first daily newspaper, the *American Minerva* (1793–98). Tiring of the controversy (open to dispute) brought on by his forthright expression of Federalist opinion, he retired to New Haven, Connecticut, to write *A Brief History of Epidemic and Pestilential Diseases* (1899) and to put together a volume of *Miscellaneous Papers* (1802).

The dictionaries

From this time on, Webster gave most of his attention to preparing more schoolbooks,

including *A Philosophical and Practical Grammar of the English Language* (1807). But he was primarily concerned with assembling *A Compendious Dictionary of the English Language* (1806); its shorter version, *A Dictionary . . . Compiled for the Use of Common Schools* (1807, revised 1817); and finally, in two volumes, *An American Dictionary of the English Language* (1828). In range this last surpassed (went beyond) any dictionary of its time. A second edition, "corrected and enlarged" (1841), became known popularly as *Webster's Unabridged*. Conservative contemporaries (people of the same time or period), alarmed at its unorthodoxies (untraditional) in spelling, usage, and pronunciation and its proud inclusion of Americanisms, dubbed the work as "Noah's Ark." However, after Webster's death the rights were sold in 1847 to George and Charles Merriam, printers in Worcester, Massachusetts; and the dictionary has become, through many revisions, the foundation and defender of effective American lexicography.

Webster's other late writings included *A History of the United States* (1832), a version of the Bible (1832) cleansed of all words and phrases dangerous to children or "offensive especially to females," and a final *Collection of Papers on Political, Literary and Moral Subjects* (1843). Tall, redheaded, lanky, humorless, he was the butt of many cruel criticisms in his time. Noah Webster died in New Haven on May 23, 1843.

ORSON WELLES

Born: May 16, 1915

Kenosha, Wisconsin

Died: October 10, 1985

Los Angeles, California

American actor, writer, and director

Orson Welles was a Broadway and Hollywood actor, radio actor, and film director. His earliest film production, *Citizen Kane*, was his most famous, although most of his other productions were notable as well.

Early life and education

Orson Welles was born George Orson Welles in Kenosha, Wisconsin, on May 6, 1915, the second son of Richard Welles, an inventor, and Beatrice Ives, a concert pianist. The name George was soon dropped. The family moved to Chicago, Illinois, when Welles was four, and two years later his parents separated formally. The comfortable family life in which Orson was born gradu-

ally fell apart. Orson lived with his mother for the next few years and was deeply involved with her artistic lifestyle. Upon her death, his father resumed the task of continuing the eight-year-old Orson's education. An important early influence on his life was Maurice Bernstein, an orthopedist who would eventually be his guardian after his father's suicide in 1928. Upon Dr. Bernstein's suggestion, young Orson was enrolled in the progressive Todd School in Woodstock, Illinois. There, Orson was first introduced to theater and learned a great deal about production and direction. His formal education ended with graduation in 1931.

After a short stay in Ireland, where Welles was involved in the theater as an actor, he returned to Chicago where he briefly served as a drama coach at the Todd School and coedited four volumes of plays by William Shakespeare (1564–1616). He made his Broadway debut with Katharine Cornell's company in December 1934. He and John Houseman (1902–1988) joined forces the next year to manage a unit of the Federal Theatre Project, one of the work-relief arts projects established by the New Deal, a major nationwide social program intended to spark economic recovery during the 1930s. Welles's direction was inspired, injecting new life into various classics, including an all-African American *Macbeth*, the French farce (humorous ridicule) *The Italian Straw Hat*, and the morality (having to do with right and wrong) play *Dr. Faustus*.

The Mercury Theatre

Welles and Houseman broke with the Federal Theatre Project over its attempt to shut down their June 1937 production of

Marc Blitzstein's pro-labor *The Cradle Will Rock*. They organized the Mercury Theatre, which over the next two seasons had a number of extraordinary successes, including a modern dress *Julius Caesar* (with Welles playing Brutus), an Elizabethan working-class comedy *Shoemaker's Holiday* (rewritten by Welles), and George Bernard Shaw's (1856–1950) *Heartbreak House* (with the twenty-four-year-old Welles convincingly playing an elderly man). Welles also found time to play "The Shadow" on radio and to supervise a "Mercury Theatre on the Air," whose most notorious success was an adaptation of H. G. Wells's (1866–1946) *War of the Worlds*, which resulted in panic as many listeners believed that Martians were invading New Jersey.

In 1939 the Mercury Theatre collapsed as a result of economic problems and Welles went to Hollywood, California, to find the cash to resurrect it. Except for a stirring dramatization of Richard Wright's (1908–1960) *Native Son* in 1940, an unhappy attempt to stage Jules Verne's (1828–1905) *Around the World in 80 Days* (music and lyrics by Cole Porter (c.1891–1964) in 1946, and an unsatisfactory *King Lear* in 1956, his Broadway career was over. He did continue theater activity overseas: during the 1950s he successfully staged *Moby Dick* in England, directed Laurence Olivier (1907–1989) in the London production of Eugène Ionesco's *Rhinoceros*, and wrote a script for the Roland Petit ballet.

Citizen Kane and other films

Following an early flirtation with movies and after casting around some months for a subject, Welles filmed *Citizen Kane* in 1939

Orson Welles.

Reproduced by permission of AP/Wide World Photos.

and 1940. Since its release in 1941 this film has generally been praised as one of the best movies of all time. It is a fascinating study of a newspaper publisher. Controversy surrounds the production of this film, which Welles is credited with producing, directing, and coscripting. He also played the leading role. However one views the making of this film, there is no doubt about his role as its catalyst (a provider of action or quick change).

Years later Welles declared "I began at the top and have been making my way down ever since." All the films he directed are of interest, but none matched his initial achieve-

ment of *Citizen Kane*. Among his other films are *The Magnificent Ambersons* (1942), *The Lady From Shanghai* (1946), *Othello* (1952), *Touch of Evil* (1958), *The Trial* (1962), and *F Is for Fake* (1973). Most of these films have been marked by disputes and Welles often disowned the final version. His critics argue that a self-destructive tendency caused these problems and cite his experiences with the unfinished *It's All True*, which he embarked on in Brazil in 1942 before finishing the final editing of *The Magnificent Ambersons*. But his supporters called it a destroyed masterpiece (in his absence, one hundred thirty-one minutes were edited down to a final release print of eighty-eight minutes).

A somewhat hammy actor with a magnificent voice, Welles appeared in over forty-five films besides his own. In some of these films, such as *The Third Man* (1949) and *Compulsion* (1959), he was superb. But all too many were junk movies such as *Black Magic* (1949) and *The Tartars* (1960). He accepted these so that he might earn the funds necessary to finance films of his own such as *Chimes at Midnight* (released in 1966, a film based on various Shakespeare plays).

Later career

For various reasons Welles left the United States after World War II (1939–45; a war fought between the Axis: Italy, Japan, and Germany—and the Allies: England, France, the Soviet Union, and the United States), and for three decades lived a kind of uprooted existence abroad, with occasional visits back to America for movie assignments or other work. An intelligent individual with many interests, Welles during World War II had put in a stint as a columnist at the liberal *New*

York Post and later gave some thought to a political career. During the latter part of his life, despite being dogged by ill health, he earned a comfortable living doing television commercials for companies such as Paul Masson wines, putting much of what he earned into the production of various films, including *The Other Side of the Wind* (which dealt with an old filmmaker and which was unfinished at the time of his death as well as being involved in litigation, or legal matters). A superb storyteller, Welles—after moving back to the United States in the mid-1970s—was much in demand as a guest on television talk shows.

Married three times, Welles had children with each wife: Virginia Nicolson (Christopher), Rita Hayworth (Rebecca), and his widow Paola Mori (Beatrice). He had many friends in his lifetime, including Oja Kodar, a Yugoslav artist who was his companion and assistant from the mid-1960s onward. Welles shared an Academy Award for the script of *Citizen Kane* and in 1975 was honored by the American Film Institute with a Life Achievement Award. His other awards include a 1958 Peabody Award for a TV pilot. Welles died of a heart attack on October 10, 1985.

EUDORA WELTY

Born: April 13, 1909

Jackson, Mississippi

Died: July 22, 2001

Jackson, Mississippi

American writer and editor

Eudora Welty is considered one of the most important authors of the twentieth century. Although the majority of her stories are set in the American South and reflect the region's language and culture, critics agree that Welty's treatment of universal (covering or including all) themes and her wide-ranging artistic influences clearly cross all regional boundaries.

Southern childhood

Eudora Alice Welty, the oldest of her family's three children and the only girl, was born on April 13, 1909, in Jackson, Mississippi. That neither of her parents came from the Deep South may have given her some detachment from her culture and helped her become a careful observer of its manners. Her father, Christian Welty, had been raised on a

farm in Ohio and had become a country school teacher in West Virginia. Marrying a fellow teacher, Chestina Andrews, he moved to Jackson to improve his fortunes by entering business. From bookkeeper in an insurance company, he eventually advanced to president. Welty described hers as a happy childhood in a close-knit, bookish family. One of her earliest memories was the sound of her parents' voices reading favorite books to one another in the evenings.

Welty's education in the Jackson schools was followed by two years at Mississippi State College for Women between 1925 and 1927, and then by two more years at the University of Wisconsin and a bachelor of arts degree in 1929. Her father, who believed that she could never earn a living by writing stories, encouraged her to study advertising at the Columbia University Graduate School of Business in New York City during 1930 and 1931. The years in Wisconsin and New York broadened Welty's horizons, and the time she spent in New York City was especially meaningful for it was during the peak of The Harlem Renaissance, an artistic awakening that produced many African American artists. Welty and her friends went to dances in Harlem clubs and to musical and theatrical performances all over the city.

Welty returned to Jackson in 1931 after her father's death and worked as a part-time journalist, copywriter, and photographer for the Works Progress Administration (WPA), which was aimed at providing jobs for writers. The latter job took her on assignments throughout Mississippi, and she began using these experiences as material for short stories. In June 1936, her story "Death of a Traveling Salesman" was accepted for publication

Eudora Welty.

Reproduced by permission of AP/Wide World Photos.

in the journal *Manuscript*, and within two years her work had appeared in such respected publications as the *Atlantic* and the *Southern Review*.

Produces fiction

Critical response to Welty's first collection of stories, *A Curtain of Green* (1941), was highly favorable, with many commentators predicting that a first performance so impressive would no doubt lead to even greater achievements. Yet when *The Wide Net, and Other Stories* was published two years later, critics were split as some praised the work and others slammed it.

As Welty continued to develop her vision her fictional techniques gained wider acceptance. Indeed, her most complex and highly symbolic collection of stories, *The Golden Apples*, won critical acclaim, and she received a number of prizes and awards throughout the following decade, including the William Dean Howells Medal of the Academy of Arts and Letters for her novella *The Ponder Heart* (1954).

Occupied primarily with teaching, traveling, and lecturing between 1955 and 1970, Welty produced little fiction. These were years of personal difficulty, as she nursed her mother through a long fatal illness and lost both of her brothers. She was nevertheless at work on long projects, notably *Losing Battles*, which she continued to shape for a decade. Then, in the early 1970s, she published two novels, *Losing Battles* (1970), which received mixed reviews, and the more critically successful *The Optimist's Daughter* (1972), which won a Pulitzer Prize.

Although Welty had published no new volumes of short stories since *The Bride of Innisfallen* in 1955, the release of her *Collected Stories* in 1980 renewed interest in her short fiction and brought all-around praise. In addition, the 1984 publication of Welty's *One Writer's Beginnings*, an autobiographical (having to do with a book written about oneself) work describing her own artistic development, further clarified her work and inspired critics to reinterpret many of her stories. She continued to protect the essential privacy of her daily life, however, by discouraging biographic inquiries, carefully screening interviews, and devoting most of her energies to her work. During the later 1970s this work consisted largely of collecting her nonfiction

writings for publication as *The Eye of the Story* and of assembling her short stories as *The Collected Stories of Eudora Welty*. With these two important collections she rounded out the shape of her life's work in literary commentary and fiction.

Later career

An invitation to give a series of lectures at Harvard in 1983 resulted in the three autobiographical pieces published as *One Writer's Beginnings* the next year. Perhaps because she wished to forestall (keep away) potential biographers or because she came to accept public interest in a writer's early experiences in shaping her vision, Welty provided in *One Writer's Beginnings* a recreation of the world that nourished her own imagination. Characteristically, however, she left out family difficulties and other personal matters, focusing instead on the family love of books and storytelling, the values and examples her parents provided, and the physical sensations of life in Jackson that influenced her literary sensitivities.

Welty's fictional chronicle of Mississippi life adds a major comic vision to American literature, a vision that supports the power of community and family life and at the same time explores the need for peace. In his 1944 essay, Robert Penn Warren (1905–1989) identifies these twin themes in Welty's work as love and separateness. While much of modern American fiction has focused on isolation and the failure of love, Welty's stories show how tolerance and generosity allow people to adapt to each other's weaknesses and to painful change. Welty's fiction particularly celebrates the love of men and women, the fleeting joys of childhood, and

the many dimensions and stages of women's lives.

With the publication of *The Eye of the Story* and *The Collected Stories*, Eudora Welty achieved the recognition she has long deserved as an important American fiction writer. Her position was confirmed in 1984 when her autobiographical *One Writer's Beginnings* made the best-seller lists with sales over one hundred thousand copies. During the early decades of her career, she was respected by fellow writers but often dismissed by critics as an oversensitive "feminine" writer. The late 1970s and 1980s, however, saw a critical reevaluation (the act of examining the same thing over again) of her work.

In August of 2000, *Country Churchyards*, with photographs by Welty, excerpts from her previous writings, and new essays by other writers, was published. Welty was inducted into the National Women's Hall of Fame in Seneca Falls, New York, on October 7, 2000. Welty died at the age of ninety-two on July 22, 2001, in Jackson, Mississippi.

EDITH WHARTON

Born: January 24, c. 1861

New York, New York

Died: August 11, 1937

Paris, France

American author

Edith Wharton, American author, chronicled the life of upper-class Americans between the late nineteenth to early twentieth century. She is best known for her novels *The House of Mirth* and *The Age of Innocence*.

Childhood

Edith Wharton was born Edith Newbold Jones in New York City, on January 24, probably in 1861. Like many other biographical facts, she kept her birth year secret. Gossip held that the family's English tutor—not George Frederic Jones—was really Edith's father. The truth may never be known, but Edith evidently believed the story. After the Civil War (1861–65), when Northern forces clashed with those of the South, George Jones took his family to Europe, where they could have a better quality of life. In Europe, young Edith began to develop her love of literature and writing.

Back in New York City, by the age of eighteen Edith had published poems in magazines and in a privately printed volume and had experimented with fiction. However, events put off her writing career. The family's second long European trip ended in her father's death. In New York City again, she evidently fell in love with Walter Berry; yet she became engaged to Edward Wharton, eleven years her senior and a wealthy Bostonian. They were married in 1885.

Time to write

Marriage brought Edith Wharton two things she valued most, travel and leisure for writing. In the early 1890s her stories began appearing in magazines, but her first commercial success was a book written with an architect, *The Decoration of Houses* (1897). She sought help on it from Walter Berry, who remained in some uncertain way part of her life until his death in 1927. Soon after this book, Wharton suffered a nervous breakdown. For therapy her physician suggested she write fiction. In 1899 a collection of sto-

ries, *The Greater Inclination*, appeared—the first of her thirty-two volumes of fiction.

In 1905, after Wharton began her friendship with writer Henry James (1843–1916), her first masterpiece, *The House of Mirth*, laid bare the cruelties of the New York City society. Her range was apparent in *Tales of Men and Ghosts* (1910), a collection of chillers, and in the celebrated novella *Ethan Frome* (1911). In 1910 the Whartons moved to France, where Edward Wharton suffered a nervous breakdown and was placed in a sanatorium, a hospital for the mentally unstable. After their divorce in 1913, Edith Wharton stayed in France, writing lovingly about it in *French Ways and Their Meanings* (1919) and other books.

The Age of Innocence, a splendid novel of New York, won the Pulitzer Prize (1921), and a dramatization of Wharton's novella *The Old Maid* won the Pulitzer Prize for drama (1935). Edith Wharton died of a heart attack on August 11, 1937, and was buried in Versailles, France, next to Walter Berry.

JAMES WHISTLER

Born: July 10, 1834

Lowell, Massachusetts

Died: July 17, 1903

London, England

American painter and etcher

The American painter, etcher, and lithographer James Whistler created a new set of principles for the fine arts, championed art for art's sake, and introduced a subtle style of painting in which atmosphere and mood were the main focus.

Early life

James Abbott McNeill Whistler was born in Lowell, Massachusetts, on July 10, 1834, the son of Major George Whistler, a railroad engineer, and Anna McNeill. In 1842 Czar Nicholas I (1796–1855) of Russia invited Major Whistler to build a railroad from St. Petersburg to Moscow and offered the princely salary of twelve thousand dollars a year. In St. Petersburg the family lived luxuriously, with several servants, and James and his brother had a governess and a Swedish tutor. Because French was the court language, the boys soon became fluent in it. On one occasion the Whistlers took a trip fifteen miles out of St. Petersburg to Tsarkoe Selo. Here, in the palace built by Catherine the Great (1729–1896), there was a suite of apartments in the Chinese style containing many fine examples of Oriental porcelain. James was fascinated by this collection and later became a collector of blue-and-white porcelain.

Whistler's interest in drawing, which had begun when he was four, greatly increased

James Whistler.

during the years in Russia, and in 1845 he was enrolled in a drawing course at the Academy of Fine Arts in St. Petersburg. In 1849 Major Whistler died, and Mrs. Whistler returned to the United States with her sons, settling in Pomfret, Connecticut. James decided he wanted to go to the U.S. Military Academy at West Point, which his father had attended, and obtained an appointment in 1851. At West Point he stood first in the drawing course but did poorly in chemistry. Because he constantly broke the rules, he racked up two hundred eighteen demerits (marks for bad conduct) and as a result was dismissed in 1854.

After an unsuccessful apprenticeship (a job acquired to learn a trade) with the Winaas Locomotive Works in Baltimore, Maryland, Whistler obtained a job in Washington, D.C., with the Coast and Geodetic Survey. He was always late, often absent, and was the despair of his employer. However, he had the finest training in etching (the process of producing a design or a picture off a hard surface with the use of chemicals) and learned the basic principles of printmaking.

Departure for Europe

With a three hundred fifty dollar-a-year inheritance from his father, Whistler went abroad to study art. He arrived in Paris, France, in 1855 and at once threw himself into the artistic life of the French students. While copying in the Parisian art museum the Louvre in 1858, Whistler met Henri Fantin-Latour (1836–1904), who in turn introduced him to Alphonse Legros (1837–1911) and other artists, including the great realist painter Gustave Courbet (1819–1877). In 1858 Whistler brought out *Twelve Etchings from Nature*, known as the French Set. The next year his first important painting, *At the Piano*, influenced by Fantin-Latour and Dutch seventeenth-century interiors, was rejected by the Paris Salon (an art gallery), although it was accepted by the Royal Academy in London, England, in 1860.

Whistler's painting *Wapping* (1861) shows the influence of Courbet's realism, an art style that seeks to capture reality. One of the figures in the foreground is the redheaded Irish beauty Joanna Hiffernan, known as Jo, who became both Whistler's model and mistress. He painted her as *The White Girl* (1862), standing in a white dress, against a

white background, with her red hair over her shoulder. The figure is medieval (having to do with the Middle Ages) in feeling with a remoteness and deep-thinking gaze that place it close to the Pre-Raphaelite painters, a band of painters that reacted against the unimaginative and traditional historical paintings of their time. Whistler knew their work; he had met Dante Gabriel Rossetti (1828–1882) in 1862 and was decidedly influenced by the Pre-Raphaelites at this time. Although *The White Girl* was rejected by the Royal Academy in 1862 and the Paris Salon of 1863, it was a sensation at the Salon des Refusés, admired by artists though laughed at by the public.

In 1863 Whistler leased a house in the Chelsea section of London, where he set up housekeeping with Jo. His mother arrived late that year and spent the rest of her life in England. Whistler became a collector of blue-and-white porcelain as well as Oriental costumes, in which he posed his models for such pictures as *La Princess du pays de la porcelaine* (1864).

The nocturnes

In 1871 Whistler published the sixteen etchings, *Views of the Thames*, known as the Thames Set. He also did a series of atmospheric paintings which he called nocturnes. He liked to go out on the river at twilight and was fascinated by the foggy or misty effects in the fading light. In putting these impressions on canvas from memory, he made use of the Japanese concept of space as a well-balanced design in which perspective plays no part. In the famous *Arrangement in Grey and Black, the Artist's Mother* (1872) he composed the picture with disarming simplicity, keeping the Japanese concept of space in mind.

During 1877 Whistler exhibited several paintings, including *Falling Rocket*, a nocturne showing the mysterious and elusive (hard to grasp) effects of fireworks at night at Cremorne Gardens. It outraged John Ruskin (1819–1900), considered the country's finest judge of good taste in England, and he wrote an insulting review of the exhibition. Whistler sued him for libel (a written statement that hurts someone's public image) in what was the most sensational art trial of the century and was awarded very little money. The trial ruined Whistler financially, and he had to sell his new house and sell off his porcelain collection.

Fortunately, the Fine Arts Society commissioned Whistler to do twelve etchings of Venice, Italy. He spent fourteen months in Venice doing many etchings as well as small oils, watercolors, and pastels. His etching style was now completely changed. He treated his themes with the utmost delicacy, using a spidery line and lively curves, and he often wiped the plates to give tone. His Venetian work sold well and he was financially reestablished. He took a house in London with Maud Franklin, who had replaced Jo as model and mistress.

On the evening of January 31, 1885, Whistler delivered at Prince's Hall the "Ten O'Clock," his famous lecture summing up his theories on the nature of beauty in polished prose. He mentioned the poetry that evening mists produce when "the tall chimneys become campanili and the warehouses are palaces at night."

Master lithographer

One of Whistler's finest achievements was in the field of lithography (the process of printing on metal), which he concentrated on for a ten-year period beginning in 1887.

Drawing in the most spirited way, he used a stump as well as a pencil and obtained effects never achieved by a lithographer before him. He had great ability with watercolors and small oils which sometimes depicted the seaside or shop fronts in Chelsea. In portraiture he favored full-length standing poses, influenced by Diego Velázquez (1465–1524), and was more concerned with subtle tones and atmosphere than he was with exact likenesses.

In 1888 Whistler married E. W. Godwin's widow, Beatrix. The Whistlers moved to Paris in 1893 but two years later were back in England. Trixie, as his wife was called, died of cancer in 1896. After her death, Whistler maintained studios in both Paris and London. He died in London on July 17, 1903.

E. B. WHITE

Born: July 11, 1899

Mount Vernon, New York

Died: October 1, 1985

North Brooklin, Maine

American essayist and author

E. B. White was one of the most influential modern American essayists, largely through his work for the *New Yorker* magazine. He also wrote two children's classics and revised William S. Strunk's *The Elements of Style*, widely used in college English courses.

Becoming a writer

Elwyn Brooks White was born on July 11, 1899, in Mount Vernon, New York, the son of a piano manufacturer, Samuel Tilly White, and Jessie Hart. The family was comfortably well off, but not wealthy. Raised with two brothers and three sisters, White attended local public schools in Mount Vernon. He went on to attend Cornell University, graduating in 1921.

White was offered a teaching position at the University of Minnesota, but turned it down because his goal was to become a writer. He worked for the United Press International and the American Legion News Service in 1921 and 1922 and then became a reporter for the *Seattle Times* in 1922 and 1923. White then worked for two years with the Frank Seaman advertising agency as a production assistant and copywriter. During this time he had poems published in "The Conning Tower" of Franklin P. Adams, the newspaper columnist who helped several talented young people achieve success during the 1920s and 1930s.

New Yorker

In 1925 White published the article "Defense of the Bronx River" in the *New Yorker* magazine, his first piece in this publi-

cation. It led to his being named a contributing editor in 1927, an association which continued until his death in 1985.

From the time of its origin, *The New Yorker* was one of the most well-received periodicals in the nation. It featured such celebrities as Alexander Woolcott, Dorothy Parker (1893–1967), Robert Benchley (1889–1945), and George S. Kaufman (1889–1961) as contributors, so White was in the company of the best when he was added to the staff.

At some time White became the principal contributor to the magazine's column "Notes and Comment" and set the tone of informed, intelligent, tolerant, faintly amused city life in observations on the passing scene, a feature that continued after his death.

A name for himself

In 1929 White published a poetry collection, *The Lady Is Cold*, and then joined fellow *New Yorker* writer James Thurber (1894–1961) in *Is Sex Necessary?* Freudian psychology, or the study of the subconscious, had been enormously influential in America in the 1920s, giving rise to many volumes analyzing or presenting advice on the subject. The time was ripe for a parody (a literary or artistic work that copies the style of an existing subject in order to make fun of it) of such books, and these two came up with a witty, low key work featuring passages like this: "The sexual revolution began with Man's discovery that he was not attractive to Woman, as such. . . . His masculine appearance not only failed to excite Woman, but in many cases it only served to bore her. The result was that Man found it necessary to develop attractive personal traits to offset his

E. B. White.

Reproduced by permission of the Corbis Corporation.

dull appearance. He learned to say funny things. He learned to smoke, and blow smoke rings. He learned to earn money. This would have been a solution to his difficulty, but in the course of making himself attractive to Woman by developing himself mentally, he had inadvertently [unintentionally] become so intelligent an animal that he saw how comical the whole situation was."

Also in 1929, White married *New Yorker* editor Katharine Sergeant Angell; the marriage produced one son. He published *Ho Hum* in 1931, *Another Ho Hum* in 1932, *Every Day Is Saturday* in 1934, and in 1936, in the *New Yorker*, under the pseudonym (pen

name) Lee Strout White, the essay "Farewell My Lovely!" One of his best-known pieces, it was suggested to him by a manuscript submitted by Richard L. Strout of the *Christian Science Monitor*. It served as the basis for the book *Farewell to the Model T*, published later that same year.

White's next work was a poetry collection, *The Fox of Peapack* (1938), the same year that he began the monthly column "One Man's Meat" for *Harper's* magazine, a column which lasted five years. There followed the essay collection *Quo Vadimus?* in 1939; an editing job with his wife, *The Subtreasury of American Humor*, in 1941; and *One Man's Meat*, a collection of his *Harper's* columns, in 1942.

Children's books

In 1945 White entered a new field with great success, writing *Stuart Little* for children. The story of a mouse born to normal human parents was clearly intended to console young people who thought themselves different or odd, and it carried the message that Stuart's parents never batted an eye when their son turned out to be a mouse and that the hero could build himself a good life.

After *The Wild Flag* in 1946 and *Here Is New York* in 1949, White returned to children's literature with his most popular book in the genre (category), *Charlotte's Web*, in 1952. The story of the bond between the young pig Wilbur and the clever spider who saves his life is a look at the power of friendship and a reminder to young readers that death is a part of life. *The Second Tree from the Corner* came in 1954. Three years later White and his wife gave up their New York City apartment and moved permanently to North Brooklin, Maine.

Elements of Style

While an undergraduate at Cornell, White had taken a course with Professor William S. Strunk Jr. Strunk used a text he had written and published at his own expense, a thin volume titled *The Elements of Style*. White edited it, revised it, and added the chapter "An Approach to Style," offering such advice as "Place yourself in the background; do not explain too much; prefer the standard to the offbeat." The book sold widely and became a college campus fixture for the next twenty years in several editions.

Honors began to pour in for White. He won the Gold Medal for Essays and Criticism from the National Institute of Arts and Letters in 1960, the Presidential Medal of Freedom in 1963, the Laura Ingalls Wilder Medal for his children's books in 1970, and the National Medal for Literature in 1971. In 1973 he was elected to the American Academy of Arts and Letters.

E. B. White's influence was great, particularly in his popular essays, which served as models for two generations of readers. In the 1930s, 1940s, and 1950s, the *New Yorker* was judged by critics to be a model of elegant yet simple style in nonfiction, and White was in no small measure responsible for this reputation. He died on October 1, 1985, in North Brooklin, Maine.

WALT WHITMAN

Born: May 31, 1819

West Hills, New York

Died: March 26, 1892

Camden, New Jersey

American poet

Walt Whitman is generally considered to be the most important American poet of the nineteenth century. He wrote in free verse (not in traditional poetic form), relying heavily on the rhythms of common American speech.

Childhood and early career

Walt Whitman was born on May 31, 1819, in West Hills, Long Island, the second of nine children. His family soon moved to Brooklyn, where he attended school for a few years. Young Whitman took to reading at an early age. By 1830 his formal education was over, and for the next five years he learned the printing trade. For about five years, beginning in 1836, he taught school on Long Island; during this time he also founded the weekly newspaper *Long-Islander*.

By 1841 Whitman was in New York City, where his interests turned to journalism. His short stories and poetry of this period were

indistinguishable from the popular work of the day, as was his first novel, *Franklin Evans, or the Inebriate* (1842). For the next few years Whitman edited several newspapers and contributed to others. He was dismissed from the *Brooklyn Eagle* because of political differences with the owner. In 1848 he traveled south and for three months worked for the *New Orleans Crescent*. The sheer physical beauty of the new nation made a vivid impression on him, and he was to draw on this experience in his later poetry.

First edition of Leaves of Grass

Not much is known of Whitman's literary activities that can account for his sudden transformation (change) from journalist and hack writer into revolutionary poet. The first edition of *Leaves of Grass* (1855) opened with a rather casual portrait of Whitman, the self-professed "poet of the people," dressed in workman's clothes. In a lengthy preface Whitman announced that his poetry would celebrate the greatness of the new nation—"The Americans of all nations at any time upon the earth have probably the fullest poetical nature. The United States themselves are essentially the greatest poem"—and of its peoples—"The largeness of nature or the nation were monstrous without a corresponding largeness and generosity of the spirit of the citizen." Of the twelve poems (the titles were added later), "Song of Myself," "The Sleepers," "There Was a Child Went Forth," and "I Sing the Body Electric" are the best known today. In these Whitman turned his back on the literary models of the past. He stressed the rhythms of common American speech, delighting in informal and slang expressions.

Walt Whitman.

Courtesy of the National Archives and Records Administration.

The first edition of *Leaves* sold poorly. Fortunately, Whitman had sent Ralph Waldo Emerson (1803–1892) a free copy, and in his now famous reply, Emerson wrote: “I find it the most extraordinary piece of wit and wisdom that America has yet contributed. . . . I greet you at the beginning of a great career.” Emerson’s enthusiasm for *Leaves of Grass* was understandable, for he had strongly influenced the younger poet. Whitman echoed much of Emerson’s philosophy in his preface and poems. Emerson’s letter had a profound impact on Whitman, completely overshadowing the otherwise poor reception the volume received.

Second edition of *Leaves of Grass*

For the second edition of *Leaves of Grass* (1856), Whitman added twenty new poems to his original twelve. With this edition, he began his lifelong practice of adding new poems to *Leaves of Grass* and revising those previously published in order to bring them into line with his present moods and feelings. Also, over the years he was to drop a number of poems from *Leaves*.

Among the new poems in the 1856 edition were “Crossing Brooklyn Ferry” (one of Whitman’s masterpieces), “Salut au Monde!,” “A Woman Waits for Me,” and “Spontaneous Me.” Most of the 1855 preface he reworked to form the nationalistic poem “By Blue Ontario’s Shore.” Like the first edition, the second sold poorly.

The third edition of *Leaves* (1860) was brought out by a Boston publisher, one of the few times in his career that Whitman did not have to publish *Leaves of Grass* at his own expense. This edition, referred to by Whitman as his “new Bible,” contained the earlier poems plus one hundred forty-six new ones. For the first time Whitman arranged many of the poems in special groupings, a practice he continued in all later editions. The most notable of these “groups” were “Children of Adam,” a gathering of love poems, and “Calamus,” a group of poems celebrating the brotherhood and comradeship of men, or, in Whitman’s phrase, “manly love.”

Whitman and the Civil War

Soon after the outbreak of the Civil War (1861–65; a war between regions of the United States in which Northern forces clashed with those of the South), Whitman

went to Virginia to search for his brother George, reported wounded in action. Here Whitman experienced the war firsthand. He remained in Washington, D.C., working part-time in the Paymaster's Office. He devoted many long hours serving as a volunteer aide in the hospitals in Washington, ministering to the needs of the sick and wounded soldiers. His daily contact with sickness and death took its toll. Whitman himself became ill with "hospital malaria." Within a few months he recovered. In January 1865 he took a clerk's position in the Indian Bureau of the Department of the Interior.

The impact of the war on Whitman was reflected in his separately published *Drum-Taps* (1865). In such poems as "Cavalry Crossing a Ford," "The Wound-Dresser," "Come Up from the Fields Father," "Vigil Strange I Kept on the Field One Night," "Sight in Camp in the Daybreak Gray and Dim," and "Year That Trembled and Reel'd Beneath Me," Whitman caught with beautiful simplicity of statement the horror, loneliness, and anguish caused by the war.

Later career

Following the Civil War and the publication of the fourth edition, Whitman's poetry became increasingly preoccupied with themes relating to the soul, death, and immortality (living forever). He was entering the final phase of his career. Within the span of some dozen years, the poet of the body had given way to the poet of internationalism (not concentrating on a single country) and the cosmic (relating to the universe). Such poems as "Whispers of Heavenly Death,"

"Darest Thou Now O Soul," "The Last Invocation," and "A Noiseless Patient Spider," with their emphasis on the spiritual, paved the way for "Passage to India" (1871), Whitman's most important (and ambitious) poem of the post-Civil War period.

In 1881 Whitman settled on the final arrangement of the poems in *Leaves of Grass*, and thereafter no revisions were made. (All new poems written after 1881 were added as annexes [additions] to *Leaves*.) The seventh edition was published by James Osgood. The Boston district attorney threatened prosecution against Osgood unless certain poems were removed. When Whitman refused, Osgood dropped publication of the book. However, a Philadelphia, Pennsylvania, publisher reissued the book in 1882.

In his last years Whitman received the respect due a great literary figure and personality. He died on March 26, 1892, in Camden, New Jersey. *Leaves of Grass* has been widely translated, and Whitman's reputation is now worldwide.

ELIE
WIESEL

Born: September 30, 1928

Sighet, Romania

Romanian-born American writer and teacher

Romanian-born American writer, speaker, and teacher Elie Wiesel is a survivor of the Holocaust, the massive killing of Jews by the Nazis, Germany's radical army during World War II (1939–45; a war fought between the Axis powers: Italy, Germany, and Japan—and the Allies: England, France, the Soviet Union, and the United States). Wiesel is currently the chairman of the United States Holocaust Memorial Council.

Childhood

Elie Wiesel was born in Sighet, Romania, on September 30, 1928. He was the third of four children and the only son of Shlomo and Sarah Wiesel. Wiesel was encouraged by his father to learn modern Hebrew literature, and his mother encouraged him to study the sacred Jewish texts. His father instilled in him the ability to reason and from his mother, he learned faith. When he was fifteen, Wiesel and his family were taken to the concentration camps (harsh political prisons) at Birkenau and Auschwitz, Poland, where he remained until January 1945 when, along with thousands of other Jewish prisoners, he was moved to Buchenwald in a forced death march. Buchenwald was freed on April 11, 1945, by the U.S. Army, but neither Wiesel's parents nor his younger sister survived. His two remaining sisters survived, and they were reunited after the war ended in 1945.

After the war Wiesel went to France where he completed secondary school, studied at the Sorbonne in Paris, France, and began working as a journalist for an Israeli newspaper. In 1956 he moved to New York City to cover the United Nations (UN; a multinational organization aimed at world peace) and became a U.S. citizen in 1963. He was the Andrew Mellon Professor of Humanities at Boston (Massachusetts) University in the mid-1980s.

His writings

Wiesel's writings bear witness to his year-long ordeal and to the Jewish tragedy. In 1956 Wiesel's first book, a Yiddish memoir entitled *And the World Was Silent*, was published in Argentina. Two years later a much smaller version of the work was published in France as *La Nuit*. After the 1960 English language publication of *Night*, Wiesel wrote more than thirty-five books: novels, collections of short stories and essays, and plays. His works established him as the most widely known and admired Holocaust writer.

Only in *Night* does Wiesel speak about the Holocaust directly. Throughout his other works, the Holocaust looms as the shadow, the central but unspoken mystery in the life of his protagonists, or main characters. Even pre-Holocaust events are seen as warnings of impending doom. In *Night* he narrates his own experience as a young boy transported to Auschwitz where suffering and death shattered his faith in both God and humanity. *Night* is widely considered a classic of Holocaust literature.

Night was followed in 1961 by *Dawn*, the story of a young Holocaust survivor brought to work for the underground in preindependen-

dence Israel. Young Elisha is ordered to execute a British army officer in retaliation for the hanging of a young Jewish fighter. Through Elisha's ordeal, Wiesel describes the transformation of the Jewish people from defenseless victims into potential victimizers. The execution occurs at dawn, but the killing is an act of self-destruction with Elisha its ultimate victim.

The struggle between life and death continues to dominate Wiesel's third work of the trilogy (a set of three), but in *The Accident* (*Le Jour* in French), published in 1962, God is not involved in either life or death. The battle is waged within the protagonist, now a newspaper correspondent covering the United Nations, who is fighting for life after an accident. In these three early works Wiesel moved from a universe greatly influenced by God to a godless one. The titles of his books grow brighter as the presence of God becomes dimmer, yet the transition is never easy.

Other roles

Wiesel, in addition to his literary activities, played an important role as a public orator, or speaker. Each year he gave a series of lectures on Jewish tradition at New York City's 92nd Street Young Men's Christian Association (YMCA). These lectures formed the basis for his retelling of Jewish tales: stories of Hasidism (eighteenth- and nineteenth-century Jewish pietists [people who stress extreme religious studies and practices]) which Wiesel published in *Souls on Fire* (1972), *Somewhere a Master* (1982), and *Four Hasidic Masters* (1978). Biblical legends are covered in *Messengers of God* (1975), *Images from the Bible* (1980), and *Five Biblical Portraits* (1981). Wiesel spun his own tales in

Elie Wiesel.

Reproduced by permission of AP/Wide World Photos.

such works as *Legends of Our Time* (1968), *One Generation After* (1970), and *A Jew Today* (1978). The themes of these stories remained tragedy and joy, madness and hope, the fragility of meaning, and the quest for faith.

As a social activist, Wiesel used his writing to plead for Jews in danger and on behalf of all humanity. From his trips to Russia in 1965 and 1966, he produced *The Jews of Silence* (1966) which describes Wiesel's visits with Soviet Jews, or Jewish people living in the Soviet Union (the former country made up of Russia and several smaller states and run by communism, a political system where goods and services are owned and distributed

by a strong central government). Wiesel captured the spiritual reawakening that was to mark the struggle of Soviet Jewry during the 1970s and 1980s. Soviet Jews were not Wiesel's Jews of silence. Western Jews, who dared not speak out on their brothers' behalf, were the silent ones.

Honored

Wiesel was the recipient of numerous awards throughout his career, including the Nobel Peace Prize in 1986. His humanitarian activities were also rewarded with many honors, such as Eleanor Roosevelt Memorial Award (1972) and the International League for Human Rights humanitarian award (1985). Numerous honors have been established in his name, including the Elie Wiesel Chair in Holocaust Studies at Bar-Ilan University and the Elie Wiesel Chair in Judaic Studies at Connecticut College.

Later work

In 1979 President Jimmy Carter (1924–) named Wiesel chair of the President's Commission on the Holocaust, which recommended creation of a memorial museum and educational center in Washington, D.C. In 1980 Wiesel was appointed chairman to the U.S. Holocaust Memorial Council. In 1985 Wiesel led the opposition to President Ronald Reagan's (1911–) trip to a German military cemetery which contained the graves of Adolf Hitler's (1889–1945) elite S.S. Waffen soldiers.

Speaking in 1984 at the White House, where President Reagan presented him with the Congressional Gold Medal, Wiesel summarized his career, "I have learned that suffering confers no privileges: it depends on what one

does with it. This is why survivors have tried to teach their contemporaries how to build on ruins; how to invent hope in a world that offers none; how to proclaim faith to a generation that has seen it shamed and mutilated."

OSCAR WILDE

Born: October 16, 1854

Dublin, Ireland

Died: November 30, 1900

Paris, France

Irish-born English author, dramatist, and poet

The English author Oscar Wilde was part of the "art for art's sake" movement in English literature at the end of the nineteenth century. He is best known for his brilliant, witty comedies including the play *The Importance of Being Earnest* and his classic novel *The Picture of Dorian Gray*.

Outstanding childhood

Oscar Fingall O'Flahertie Wills Wilde was born in Dublin, Ireland, on October 16, 1854. His father, Sir William Wilde, was a well-known surgeon; his mother, Jane Francisca Elgee Wilde, wrote popular poetry and other work under the pseudonym (pen name) Speranza. Because of his mother's literary successes, young Oscar enjoyed a cultured and privileged childhood.

After attending Portora Royal School in Enniskillen, Ireland, Wilde moved on to study the classics at Trinity College, Dublin, from 1871 to 1874. There, he began attracting public attention through the uniqueness of his writing and his lifestyle. Before leaving Trinity College, Wilde was awarded many honors, including the Berkely Gold Medal for Greek.

Begins writing career

At the age of twenty-three Wilde entered Magdalen College, Oxford, England. In 1878 he was awarded the Newdigate Prize for his poem "Ravenna." He attracted a group of followers whose members were purposefully unproductive and artificial. "The first duty in life," Wilde wrote in *Phrases and Philosophies for the Use of the Young* (1894), "is to be as artificial as possible." After leaving Oxford he expanded his cult (a following). His iconoclasm (attacking of established religious institutions) clashed with the holiness that came with the Victorian era of the late nineteenth century, but this contradiction was one that he aimed for. Another of his aims was the glorification of youth.

Wilde published his well-received *Poems* in 1881. The next six years were active ones.

Oscar Wilde.

Courtesy of the Library of Congress.

He spent an entire year lecturing in the United States and then returned to lecture in England. He applied unsuccessfully for a position as a school inspector. In 1884 he married, and his wife bore him children in 1885 and in 1886. He began to publish extensively in the following year. His writing activity became as intense and as inconsistent as his life had been for the previous six years. From 1887 to 1889 Wilde edited the magazine *Woman's World*. His first popular success as a fiction writer was *The Happy Prince and Other Tales* (1888). *The House of Pomegranates* (1892) was another collection of his fairy tales.

Sexuality of Oscar Wilde

In 1886 Wilde became a practicing homosexual, or one who is sexually attracted to a member of their own sex. He believed that his attacks on the Victorian moral code was the inspiration for his writing. He considered himself a criminal who challenged society by creating scandal. Before his conviction (found guilty) for homosexuality in 1895, the scandal was essentially private. Wilde believed in the criminal mentality. "Lord Arthur Savile's Crime," from *Lord Arthur Savile's Crime and Other Stories* (1891), treated murder and its successful cover-up comically. The original version of *The Picture of Dorian Gray* in *Lippincott's Magazine* emphasized the murder of the painter Basil Hallward by Dorian as the turning point in Dorian's downfall. Wilde stressed that criminal tendency became criminal act.

Dorian Gray was published in book form in 1891. The novel was a celebration of youth. Dorian, in a gesture typical of Wilde, is parentless. He does not age, and he is a criminal. Like all of Wilde's work, the novel was a popular success. His only book of formal criticism, *Intentions* (1891), restated many of the views that *Dorian Gray* had emphasized, and it points toward his later plays and stories. *Intentions* emphasized the importance of criticism in an age that Wilde believed was uncritical. For him, criticism was an independent branch of literature, and its function was important.

His dramas

Between 1892 and 1895 Wilde was an active dramatist (writer of plays), writing what he identified as "trivial [unimportant] comedies for serious people." His plays were

popular because their dialogue was baffling, clever, and often short and clear, relying on puns and elaborate word games for their effect. *Lady Windermere's Fan* was produced in 1892, *A Woman of No Importance* in 1893, and *An Ideal Husband* and *The Importance of Being Earnest* in 1895.

On March 2, 1895, Wilde initiated a suit for criminal libel (a statement that damages someone's reputation) against the Marquess of Queensberry, who had objected to Wilde's friendship with his son, Lord Alfred Douglas. When his suit failed in April, countercharges followed. After a spectacular court action, Wilde was convicted of homosexual misconduct and sentenced to two years in prison at hard labor.

Prison transformed Wilde's experience as extremely as had his 1886 introduction to homosexuality. In a sense he had prepared himself for prison and its transformation of his art. *De Profundis* is a moving letter to a friend and apologia (a formal defense) that Wilde wrote in prison; it was first published as a whole in 1905. His theme was that he was not unlike other men and was a scapegoat, or one who bears blame for others. *The Ballad of Reading Gaol* (1898) was written after his release. In this poem a man murdered his mistress and was about to be executed, but Wilde considered him only as criminal as the rest of humanity. He wrote: "For each man kills the thing he loves, / Yet each man does not die."

After Wilde was released from prison he lived in Paris, France. He attempted to write a play in his style before his imprisonment, but this effort failed. He died in Paris on November 30, 1900.

LAURA INGALLS WILDER

Born: February 7, 1867

Pepin, Wisconsin

Died: February 10, 1957

Mansfield, Missouri

American writer

American author Laura Ingalls Wilder was the creator of the much-loved children's series of "Little House" books that recounted her life as a young girl on the Western frontier during the late 1800s.

Raised on the American prairie

Laura Ingalls Wilder was born Laura Elizabeth Ingalls on February 7, 1867, in Pepin, Wisconsin, the second of four children. She once described her father, Charles

Philip Ingalls, as always jolly and sometimes reckless. Her mother, Caroline Lake Quiner, was educated, gentle, and proud, according to her daughter. Her sisters, all of whom would eventually appear in her books, were Mary, Carrie, and Grace. Laura also had a younger brother, Charles, Jr. (nicknamed Freddie), who died at the age of only nine months.

As a young girl, Laura moved with her family from place to place across America's heartland. In 1874, the Ingalls family left Wisconsin for Walnut Grove, Minnesota, where they lived at first in a dugout house. Two years later, the family moved to Burr Oak, Iowa, where Charles became part-owner of a hotel. By the fall of 1877, however, they had all returned to Walnut Grove. In 1879, the Ingalls family moved again, this time to homestead in the Dakota Territory.

The family finally settled in what would become De Smet, South Dakota, which remained Charles and Caroline's home until they died. Their second winter in De Smet was one of the worst on record. Numerous blizzards prevented trains from delivering any supplies, essentially cutting off the town from December until May. Years later, Laura wrote about her experiences as a young teenager trying to survive the cold temperatures and lack of food, firewood, and other necessities.

Laura attended regular school whenever possible. However, because of her family's frequent moves, she was largely self-taught. In 1882, at the age of fifteen, she received her teaching certificate. For three years, Laura taught at a small country school a dozen miles from her home in De Smet and boarded with a family who lived nearby.

Married a farmer

During this same period, Ingalls came to know Almanzo Manly Wilder, who had settled near De Smet in 1879 with his brother Royal. Almanzo frequently headed out into the country on his sleigh to pick up the young teacher and drop her off at her parents' home for weekend visits. After courting for a little more than two years, they were married on August 25, 1885. Laura Wilder then quit teaching to help her husband on their farm. She later wrote about this time in her life in her book *The First Four Years*.

The couple's only surviving child, Rose, was born on December 5, 1886. Although all

homesteaders (those settling new lands) had to endure the hardships and uncertainty of farm life, the Wilders experienced more than their share of tragedy and misfortune. In August 1889, Wilder gave birth to a baby boy who died shortly after, an event that never appeared in any of her books. Her husband then came down with diphtheria, a terrible disease that causes breathing problems, which left him partially paralyzed. Finally, their house, built by Manly himself, burned to the ground.

On July 17, 1894, the Wilders began their journey to Mansfield, Missouri, the place they would call home for the rest of their lives. There they established a farm and named it Rocky Ridge. Wilder kept a journal of their experiences as they traveled. When she reached Lamar, Missouri, she sent her account of their travels through South Dakota, Nebraska, and Kansas to the *De Smet News*. This was her first published writing.

Produced her first autobiographical work

By the mid-1920s Wilder and her husband were doing little of their own farming on Rocky Ridge, which allowed her to spend most of her time writing. Around this same time, Rose returned to Missouri, built a new home for her parents on Rocky Ridge, and moved into the old farmhouse. She also began encouraging her mother to write the story of her childhood.

Wilder completed her first autobiographical work in the late 1920s. Entitled *Pioneer Girl*, it was a first-person account of her childhood on the frontier from the time she was three until she reached the age of eighteen. After Rose edited the book, Wilder submitted it to various publishers

under the name Laura Ingalls Wilder. But no one was interested in her chronicle, which contained plenty of historical facts about her childhood but little in the way of character development.

Created the “Little House” books

Refusing to become discouraged, Wilder changed her approach. The “I” in her stories became “Laura,” and the focus moved from the story of one little girl to the story of an entire family’s experiences on the new frontier. Wilder also decided to direct her writing specifically at children. Although she sometimes streamlined events, created or omitted others entirely (such as the birth and death of her brother), and opted for happier endings, she wrote about real people and things that had actually happened.

In 1932, at the age of sixty-five, Wilder published the first of her eight “Little House” books, *Little House in the Big Woods*. It told the story of her early childhood years in Wisconsin and was a huge hit with readers. *Farmer Boy*, an account of Manly’s childhood in New York state, followed in 1933. Two years later, *Little House on the Prairie* appeared on the shelves. Five more books followed that took the reader through Wilder’s courtship and marriage to Manly—*On the Banks of Plum Creek* (1937), *By the Shores of Silver Lake* (1939), *The Long Winter* (1940), *Little Town on the Prairie* (1941), and *These Happy Golden Years* (1943). New editions of all of the “Little House” books were reissued by Harper in 1953 with the now-familiar illustrations of Garth Williams (1912–1996).

Wilder was seventy-six years old when she finished the final book in her “Little House” series. By that time, she and her hus-

band had sold off the majority of their land and virtually all of their livestock, but they still lived on the remaining seventy acres of Rocky Ridge. It was there that Manly died in 1949 at the age of ninety-two.

Wilder was ninety when she died at Rocky Ridge Farm on February 10, 1957. After her death, her daughter, Rose Wilder Lane, edited the diary her mother had written as she and Manly traveled to Missouri, the one that had first appeared in the *De Smet* newspaper. The resulting book, *On the Way Home: The Diary of a Trip from South Dakota to Mansfield, Missouri, in 1894*, was published in 1962. Twelve years later, a television series based on Wilder’s stories debuted and ran for nine seasons. Through her engaging tales of life on the untamed American frontier, Wilder succeeded beyond her wildest dreams at taking a unique time and place of adventure, hardship, and simple pleasures and making it real to scores of young readers across the world.

THORNTON WILDER

Born: April 17, 1897

Madison, Wisconsin

Died: December 7, 1975

Hamden, Connecticut

American playwright and novelist

Novelist and playwright Thornton Wilder won two Pulitzer Prizes for his plays *Our Town* and *The Skin of Our Teeth*, written in 1938 and 1942 respectively. His most well-known novel, *The Bridge of San Luis Rey*, also won him a Pulitzer Prize in 1927.

Childhood

Thornton Niven Wilder was born on April 17, 1897, in Madison, Wisconsin, the second son of four children of Amos Parker and Isabella Wilder. In 1906 the family moved to China when his father became the United States Consul-General in Hong Kong. The teenager attended the English China Inland Mission School at Cheefoo but returned with his mother and siblings to California in 1912 because of the unstable political conditions in China at the time. While in high school, Wilder became interested in theater and began regularly attending performances of plays. He also began to demonstrate his unique talents for writing.

Graduating in 1915 from Berkeley High School, Wilder attended Oberlin College before transferring to Yale University in 1917. He served with the First Coast Artillery in Rhode Island in 1918 during World War I (1914–18), when Germany waged war

against much of Europe. After the war he returned to his studies at Yale. In 1920 he received his bachelor's degree and saw the first publication of his play *The Trumpet Shall Sound* in *Yale Literary Magazine*.

Writing professionally

Wilder started his novel *The Cabala* at the American Academy in Rome, Italy, in 1921. In New Jersey he taught at the Lawrenceville School while earning a master's degree at Princeton University. He received his degree in 1926, the publication year of *The Cabala*. Its publication came at the same time as the first professional production of *The Trumpet Shall Sound* by the American Laboratory Theater. But it was his breakthrough work, *The Bridge of San Luis Rey* (1927), that thrust him to the forefront of American literature.

A lifelong traveler, Wilder later taught at the University of Chicago, in Illinois, (1930–1936) and the University of Hawaii (1935). He volunteered in World War II (1939–45; the war fought between the Axis: Italy, Germany, and Japan—and the Allies: France, England, the Soviet Union, and the United States). During the war he served in Africa, Italy, and the United States. A lecturer at Harvard in the early 1950s, he received the Gold Medal for Fiction from the Academy of Arts and Letters in 1952. In 1962 he retired to Arizona for almost two years, then renewed his travels. Wilder was awarded the Presidential Medal of Freedom in 1963 and the National Book Committee's National Medal for Literature (first time presented) in 1965.

Career as a playwright

Wilder's first successful dramatic work, which he started at Oberlin, was *The Angel That*

Troubled the Waters (1928). A four-act play, *The Trumpet Shall Sound* (1919–20), was produced unsuccessfully off-Broadway in 1926. *The Long Christmas Dinner and Other Plays in One-Act*, published in 1931, contained three plays that gained popularity with amateur groups: *The Long Christmas Dinner*, *Pullman Car Hiawatha*, and *The Happy Journey to Trenton and Camden*. This last series marked Wilder's trademark use of a bare stage for the actors.

Wilder's first Broadway shows were translations: André Obey's *Lucrece* (1932) and *A Doll's House* (1937) by Henrik Ibsen (1828–1906). His dramatic reputation soared with *Our Town* (1938). Written for a bare stage, guided throughout by a narrator, his script examines a small town for the "something way down deep that's eternal about every human being."

Wilder's dramatic work that followed, *The Merchant of Yonkers*, failed initially in 1938. But when produced with slight changes as *The Matchmaker* in 1954, it proved a fascinating farce, or a show made ridiculous for effect. (It later re-emerged as the musical play *Hello, Dolly!* in 1963, then an overwhelming success.) Wilder mingled style and forms even more daringly in *The Skin of Our Teeth*. Here, Wilder described the human race as flawed but worth preserving. A complex and difficult play that drew from James Joyce's (1882–1941) *Finnegans Wake*, it became the work that claimed him his final Pulitzer Prize in 1943.

The essentially conservative (having to do with the commonly accepted) thematic material staged in radical styles made Wilder's plays unique. His later work included an unsuccessful tragedy, *A Life in the Sun* (or *The Alcestiad*, 1955) and three short plays of an

Thornton Wilder.

Reproduced by permission of AP/Wide World Photos.

intended fourteen-play cycle: *Someone from Assisi*, *Infancy*, and *Childhood* (produced as *Plays for Bleecker Street* in 1962).

Career as a novelist

Wilder established his reputation as a novelist with *The Cabala*, a minor work that showed Wilder's moral (having to do with wrong or right) concerns. *The Bridge of San Luis Rey*, set in eighteenth-century Peru, proved immensely popular and led to the Pulitzer Prize in 1928. *The Woman of Andros* (1930), based on Terence's (c. 185–159 B.C.E.) play *Andria* was not well received. Although Wilder's view of life encouraged heavy criti-

cism (negative judgment), *Heaven's My Destination* (1934), set in the American Midwest, grew in favor over the years. In *The Ides of March* (1948) Wilder tried a novel approach to Julius Caesar (100–44 B.C.E.). *The Eighth Day* in 1967 returned Wilder to a twentieth-century American setting that examined the lives of two families. Wilder's last novel, *Theophilus North*, was published in 1973.

In line with Wilder's diverse interests and scholarly (having to do with learned knowledge) bent, Wilder lectured and published extensively. His Harvard lectures "Toward an American Language," "The American Loneliness," and "Emily Dickinson" appeared in the *Atlantic Monthly* (1952). His topics addressed play writing, fiction, and the role of the artist in society. His range spanned from the works of the ancient Greeks to modern dramatists (writers of plays), particularly Joyce and Gertrude Stein (1874–1946). His observations and letters were published in a variety of works, from André Maurois's (1885–1967) *A Private Universe* (1932) to Donald Gallup's *The Flowers of Friendship* (1953). Wilder died of a heart attack December 7, 1975, in Hamden, Connecticut.

TENNESSEE WILLIAMS

Born: March 26, 1914

Columbus, Mississippi

Died: February 25, 1983

New York, New York

American dramatist, playwright, and writer

Tennessee Williams, dramatist and fiction writer, was one of America's major mid-twentieth-century playwrights. He is best known for his powerful plays, *A Streetcar Named Desire* and *Cat on a Hot Tin Roof*.

Becoming Tennessee

Tennessee Williams was born Thomas Lanier Williams in Columbus, Mississippi, on March 26, 1914, the second of three children of Cornelius and Edwina Williams. His father, a traveling salesman, was rarely home and for many years the family lived with his mother's parents. As a result, the young boy developed a close relationship with his grandfather, and also his older sister, Rose. William's family life was never a happy one. His parents were resentful of each other, his mother once describing her husband as "a man's man" who loved to gamble and drink. When his father obtained a position at a shoe factory, the family moved to a crowded, low-rent apartment in St. Louis, Missouri.

About this time, young Thomas adopted the name Tennessee (presumably because many of his descendants hailed from that state). Williams grew to hate St. Louis. He and his sisters were often ridiculed by other students because of their Southern accent.

He also skipped school regularly and did poorly in his studies, preferring instead to escape into the world of reading and writing.

At the age of sixteen Williams published his first story. The next year he entered the University of Missouri but left before taking a degree. He worked for two years for a shoe company, spent a year at Washington University (where he had his first plays produced), and earned a bachelor of arts degree from the State University of Iowa in 1938, the year he published his first short story under his literary name, Tennessee Williams.

In 1940 the Theatre Guild produced Williams's *Battle of Angels* in Boston, Massachusetts. The play was a total failure and was withdrawn after Boston's Watch and Ward Society banned it. Between 1940 and 1945 he lived on grants (donated money) from the Rockefeller Foundation and the American Academy of Arts and Letters, on income scraped together from an attempt to write film scripts in Hollywood, and on wages as a waiter-entertainer in Greenwich Village in New York City.

Accomplished playwright

With the production of *The Glass Menagerie* Williams's fortunes changed. The play opened in Chicago, Illinois, in December 1944 and in New York City in March; it received the New York Drama Critics Circle Award and the Sidney Howard Memorial Award. *You Touched Me!*, written with Donald Windham, opened on Broadway in 1945. It was followed by publication of eleven one-act plays, *27 Wagons Full of Cotton* (1946), and two California productions. When *A Streetcar Named Desire* opened in 1947, New York audiences knew a major playwright had

Tennessee Williams.
Courtesy of the Library of Congress.

arrived. *A Streetcar Named Desire* won a Pulitzer Prize. The play combines sensuality, melodrama, and lyrical symbolism (a poetic representation of significant things). A film version was directed by Elia Kazan (1909–) and their partnership lasted for more than a decade.

Although the plays that followed *Streetcar* never repeated its overwhelming success, they kept Williams's name on theater marquees and in films. His novel *The Roman Spring of Mrs. Stone* (1950) and three volumes of short stories brought him an even wider audience. Some writers consider *Summer and Smoke* (1948) Williams's most sensitive play. While *The Rose*

Tattoo (1951) played to appreciative audiences, *Camino Real* (1953) played to confused ones. *Cat on a Hot Tin Roof* (1955) was a smashing success and won the New York Drama Critics Circle Award and a Pulitzer Prize.

Baby Doll (an original Williams-Kazan film script, 1956) was followed by the dramas *Orpheus Descending* (1957), *Garden District* (1958; two one-act plays, *Something Unspoken* and *Suddenly Last Summer*), *Sweet Bird of Youth* (1959), *Period of Adjustment* (1960), and *The Night of the Iguana* (1961). With these plays, critics charged Williams with publicly trying to solve personal problems, while including confused symbolism, sexual obsessions, thin characterizations, and violence and corruption for their own sake. *The Milk Train Doesn't Stop Here Anymore* (1963), *The Seven Descents of Myrtle* (1963; also called *Kingdom of Earth*), and *In the Bar of a Tokyo Hotel* (1969) neither helped Williams's standing with the critics nor proved that Williams's remarkable talent had vanished. Published after his death, *Not about Nightingales* (1998) had been written in 1938 and was Williams's first full-length play.

Later career

Through the 1970s and 1980s, Williams continued to write for the theater, though he was unable to repeat the success of most of his early years. One of his last plays was *Clothes for a Summer Hotel* (1980), based on passionate love affair between the American writer F. Scott Fitzgerald (1896–1940) and his wife, Zelda.

Two collections of Williams's many one-act plays were published: *27 Wagons Full of Cotton* (1946) and *American Blues* (1948). Williams also wrote fiction, including two novels, *The Roman Spring of Mrs. Stone* (1950)

and *Moise and the World of Reason* (1975). Four volumes of short stories were also published. *One Arm and Other Stories* (1948), *Hard Candy* (1954), *The Knightly Quest* (1969), and *Eight Mortal Ladies Possessed* (1974). Nine of his plays were made into films, and he wrote one original screenplay, *Baby Doll* (1956). In his 1975 tell-all novel, *Memoirs*, Williams described his own problems with alcohol and drugs and his homosexuality (the attraction to members of the same sex).

Williams died in New York City on February 25, 1983. In 1995, the United States Post Office commemorated Williams by issuing a special edition stamp in his name as part of their Literary Arts Series. For several years, literary enthusiasts have gathered to celebrate the man and his work at the Tennessee Williams Scholars Conference. The annual event, held along with the Tennessee Williams/New Orleans Literary Festival, features educational, theatrical and literary programs.

WOODROW WILSON

Born: December 28, 1856

Staunton, Virginia

Died: February 3, 1924

Washington, D.C.

American president, governor, and educator

Woodrow Wilson was admired as a writer, a scholar, and an educator more than two decades before he became president. He spent twenty-four years working in the academic world as a professor, then as a college president, before he was elected governor of New Jersey. Two years later he was elected president of the United States, led the country through World War I (1914–18) and was the primary architect of the League of Nations.

Early years

Stephen Woodrow Wilson was born in Staunton, Virginia, on December 28, 1856, the son of Joseph and Jeanie Wilson. His father was a Presbyterian minister. Wilson briefly attended Davison University in North Carolina, but transferred to Princeton University and graduated there in 1879. He received his doctorate in 1886 from Johns Hopkins University.

In his doctoral thesis Wilson analyzed the American political system, and criticized what he believed was a breakdown of power in Congress, which was caused by the committee system. He believed that the president ought to solely lead the nation, a view that did not change once he was in the White House.

From 1886 to 1910 Wilson was in academic life—as a professor of political science at Bryn Mawr College, Wesleyan University, and Princeton. In 1902, he was named president of Princeton. He strongly favored an educational system that promoted a close relationship between teachers and students.

From academia to politics

By 1910 Wilson had established such a solid reputation as an educator that the Democratic party in New Jersey offered him the nomination for governor. After winning the election, Governor Wilson showed strong leadership, pushing through legislation dealing with such issues as employers' liability and public utilities. His success made him a prominent candidate for the presidency in 1912. He was nominated on the forty-sixth ballot, and went on to soundly defeat former president Theodore Roosevelt (1858–1919) and current president William Howard Taft (1857–1930) in the November election.

First term as president

In the first two years of his presidency Wilson dominated the Democratic-controlled Congress and secured legislation of great historical significance. The tariff (duties or a kind of tax) was revised downward, beginning a policy that was to be of substantial importance later. The Federal Reserve Act created a banking system under governmental control. The Federal Trade Commission Act created a body that has had an important role in preventing monopolies (an overwhelming concentration of power in an industry).

Early on Wilson faced difficult questions of foreign policy. Wilson refused to recognize

Woodrow Wilson.

Courtesy of the Library of Congress.

Mexico's new military dictator president, Victoriano Huerta, and worked for social reform in that country. In 1914 Wilson ordered the occupation of Veracruz to prevent Huerta from receiving arms from abroad. War was averted when the countries of Argentina, Brazil, and Chile mediated. Huerta was soon overthrown.

Beginning of World War I

In August 1914 World War I broke out in Europe. This was a particularly difficult time for Wilson. In addition to the beginning of the war, his wife, Ellen Axson Wilson

(1860–1914) died. The grieving president kept himself busy with his work and confided in his three daughters and a few close friends. His grief lightened early the following year, when he met Edith Bolling Galt (1872–1961). The couple married in December 1915.

Wilson kept the United States out of the war based on a policy of neutrality (taking no side). But there is little doubt that he sympathized with France and Great Britain and feared the victory of imperial Germany. The warring countries soon began interfering with American trade. The British restricted American commerce, but the Germans proclaimed a new kind of warfare, submarine warfare, with the prospect of American ships being sunk and their passengers and crew being lost. Wilson took German policies more seriously, because they involved the potential destruction of human life, whereas the British interfered only with trade. As early as February 1915, in response to a German declaration instituting the U-boat war, the president declared that Germany would be held to “strict accountability” for the loss of American lives.

For a time thereafter Wilson took no action. But on May 7, 1915, the liner *Lusitania* was sunk, with over a hundred American lives lost. The President addressed a stiff note to Germany. After other painful submarine episodes, Wilson convinced Germany to abandon the U-boat war in 1916.

In the meantime the presidential campaign of 1916 was approaching. Wilson was easily renominated and went on to win a close election against the Republican candidate, former Supreme Court justice (and future chief justice) Charles Evans Hughes

(1862–1948). Part of Wilson's success came from the Democratic platform that touted the president's ability to keep the United States at peace. "He kept us out of war" was a successful pro-Wilson slogan, though Wilson never promised anything about the country's future involvement in the war.

Second term as president

Wilson's efforts to bring the warring countries together were not successful. When the German government sought unlimited warfare on the sea, Wilson severed diplomatic relations with that nation but continued to hope that a direct challenge could be avoided. But on April 2, 1917, Wilson asked Congress for a declaration of war against Germany, and Congress overwhelmingly approved.

Wilson believed that the defeat of Germany was necessary, but he held out hope that at the end of the war a League of Nations might be established that would make impossible the recurrence of another bloody struggle. As early as April 1916 the president had begun to formulate his views on this. He was in favor of an association of nations that would act together against any nation that disrupted peace. There was much support for his point of view.

Fourteen Points

Throughout the war Wilson insisted on two things: the defeat of German militarism and the establishment of peace resting on just principles. In January 1918 he proposed the "Fourteen Points" that would need to be met in order to secure an armistice (cease fire) and begin serious peace negotiations. In the negotiations that autumn he made the acceptance of these points the primary condi-

tion on the part of his European associates and of the Germans as well. In November 1918 Wilson succeeded; an armistice was signed. Throughout the world Wilson was looked at with great esteem.

But difficulties loomed. The 1918 elections returned a Republican majority to Congress. The president himself stimulated partisanship by his appeal to elect a Democratic legislature. Though he selected able men to accompany him to the forthcoming peace conference in Paris, France, he did not think of accommodating the Republican opposition. By insisting on going to Paris in person and remaining there until the treaty was finished, he cut himself off from American opinion.

Treaty of Versailles and the League of Nations

At the peace conference Wilson strove to realize his ideals. He worked on drafting the Covenant of the League of Nations. This would provide for a League Council of the five great world powers and four elective members and for an assembly in which every member state would have a vote. Disputes would either go to arbitration or be decided amongst council members. If they failed to do this, they would be subjected to economic and possibly to military sanctions. They were also to agree to respect and preserve the territorial integrity and political independence of the members of the League.

At the talks that eventually led to the Treaty of Versailles, Wilson argued successfully for fairness on many issues, but he had to compromise on two vital points: France and England insisted on huge war reparations (payments for damages) against Germany; and Japan, which had joined the Allies

late in the war, was allowed to keep control of a province of China it had invaded. Wilson deeply opposed both resolutions, but he compromised to keep alive his vision for the League of Nations.

The Treaty of Versailles was not to stand the test of time. In detaching substantial territories from Germany and in fixing Germany with responsibility for the war, it furnished the basis for that German nationalism which was to strengthen with Adolf Hitler (1889–1945).

Wilson returned to the United States with a political battle ahead. Many disliked the Treaty of Versailles and opposed the “world politics” concept of the League of Nations. He erred in demanding ratification of the treaty without any changes. He made his appeal in an exhausting countrywide tour. He was hailed by large, enthusiastic crowds, but his health gave way, forcing him back to the White House. A stroke temporarily incapacitated him.

The Senate rejected unconditional ratification but adopted the treaty with reservations that Wilson refused to accept. In January 1920 a compromise was attempted. But Wilson spoiled these efforts by including the issue in the 1920 presidential campaign. In the fall election the Republican candidate, U.S. senator Warren G. Harding (1865–1923) of Ohio, easily defeated a fellow Ohioan, Governor James M. Cox (1870–1957). The new chief executive never sought to bring the Treaty of Versailles to the Senate or to bring the United States into the League, which was by now actually in existence. Wilson’s presidency ended in a stunning defeat. Despite this disappointing end to Wilson’s eight years in the White House, many historians view him as one of the country’s great presidents. Wilson died on February 3, 1924.

OPRAH WINFREY

Born: January 29, 1954

Kosciusko, Mississippi

African American television host and actress

America’s first lady of talk shows, Oprah Winfrey is well known for surpassing her competition to become the most watched daytime show host on television. Her natural style with guests and audiences on the *Oprah Winfrey Show* earned her widespread popularity, as well as her own production company, Harpo, Inc.

A difficult childhood

Oprah Gail Winfrey was born to Vernita Lee and Vernon Winfrey on an isolated farm

in Kosciusko, Mississippi, on January 29, 1954. Her name was supposed to be Orpah, from the Bible, but because of the difficulty of spelling and pronunciation, she was known as Oprah almost from birth. Winfrey's unmarried parents separated soon after she was born and left her in the care of her maternal grandmother on the farm.

As a child, Winfrey entertained herself by “playacting” in front of an “audience” of farm animals. Under the strict guidance of her grandmother, she learned to read at two and a half years old. She addressed her church congregation about “when Jesus rose on Easter Day” when she was two years old. Then Winfrey skipped kindergarten after writing a note to her teacher on the first day of school saying she belonged in the first grade. She was promoted to third grade after that year.

At six years old Winfrey was sent north to join her mother and two half-brothers in a Milwaukee ghetto, an extremely poor and dangerous neighborhood. At twelve years old she was sent to live with her father in Nashville, Tennessee. Feeling secure and happy for a brief period she began making speeches at social gatherings and churches, and one time earned five hundred dollars for a speech. She knew then that she wanted to be “paid to talk.”

Winfrey, again, was called back by her mother, and she had to leave the safety of her father's home. The poor, urban lifestyle had its negative effect on Winfrey as a young teenager, and her problems were compounded by repeated sexual abuse, starting at age nine, by men that others in her family trusted. Her mother worked odd jobs and did not have much time for supervision.

After years of bad behavior, Winfrey's mother sent her back to her father in Nashville.

A turning point

Winfrey said her father saved her life. He was very strict and provided her with guidance, structure, rules, and books. He required his daughter to complete weekly book reports, and she went without dinner until she learned five new vocabulary words each day.

Winfrey became an excellent student, participating as well in the drama club, debate club, and student council. In an Elks Club speaking contest, she won a full schol-

arship to Tennessee State University. The following year she was invited to a White House Conference on Youth. Winfrey was crowned Miss Fire Prevention by WVOL, a local Nashville radio station, and was hired by the station to read afternoon newscasts.

Winfrey became Miss Black Nashville and Miss Tennessee during her freshman year at Tennessee State. The Nashville Columbia Broadcasting System (CBS) affiliate offered her a job; Winfrey turned it down twice, but finally took the advice of a speech teacher, who reminded her that job offers from CBS were “the reason people go to college.” The show was seen each evening on WTVF-TV, and Winfrey was Nashville’s first African American female coanchor of the evening news. She was nineteen years old and still a sophomore in college.

Professional career

After Winfrey graduated, WJZ-TV in Baltimore, Maryland, scheduled her to do the local news updates, called cut-ins, during *Good Morning, America*, and soon she was moved to the morning talk show *Baltimore Is Talking* with cohost Richard Sher. After seven years on the show, the general manager of WLS-TV, American Broadcasting Company’s (ABC) Chicago affiliate, saw Winfrey in an audition tape sent in by her producer, Debra DiMaio. At the time her ratings in Baltimore were better than Phil Donahue’s, a national talk-show host, and she and DiMaio were hired.

Winfrey moved to Chicago, Illinois, in January 1984 and took over as anchor on *A.M. Chicago*, a morning talk show that was consistently last in the ratings. She changed the emphasis of the show from traditional women’s

issues to current and controversial (debatable) topics, and after one month the show was even with Donahue’s program. Three months later it had inched ahead. In September 1985 the program, renamed the *Oprah Winfrey Show*, was expanded to one hour. As a result, Donahue moved to New York City.

In 1985 Quincy Jones (1933–) saw Winfrey on television and thought she would make a fine actress in a movie he was coproducing with director Steven Spielberg (1946–). The film was based on the Alice Walker (1944–) novel *The Color Purple*. Her only acting experience until then had been in a one-woman show, *The History of Black Women Through Drama and Song*, which she performed during an African American theater festival in 1978.

Popularity of Oprah

The popularity of Winfrey’s show skyrocketed after the success of *The Color Purple*, and in September 1985 the distributor King World bought the syndication rights (the rights to distribute a television program) to air the program in one hundred thirty-eight cities, a record for first-time syndication. That year, although *Donahue* was being aired on two hundred stations, Winfrey won her time slot by 31 percent, drew twice the Chicago audience as Donahue, and carried the top ten markets in the United States.

In 1986 Winfrey received a special award from the Chicago Academy for the Arts for unique contributions to the city’s artistic community and was named Woman of Achievement by the National Organization of Women. The *Oprah Winfrey Show* won several Emmys for Best Talk Show, and Winfrey was honored as Best Talk Show Host.

Production

Winfrey formed her own production company, Harpo, Inc., in August 1986 to produce the topics that she wanted to see produced, including the television drama miniseries based on Gloria Naylor's *The Women of Brewster Place*, in which Winfrey was featured along with Cicely Tyson, Robin Givens, Olivia Cole, Jackee, Paula Kelly, and Lynn Whitfield. The miniseries aired in March 1989 and a regular series called *Brewster Place*, also starring Winfrey, debuted on ABC in May 1990. Winfrey also owned the screen rights to *Kaffir Boy*, Mark Mathabane's autobiographical (having to do with a story about oneself) book about growing up under apartheid in South Africa, as well as Toni Morrison's (1931–) novel *Beloved*.

In September 1996 Winfrey started an on-air reading club. On September 17 Winfrey stood up and announced she wanted "to get the country reading." She told her adoring fans to hasten to the stores to buy the book she had chosen. They would then discuss it together on the air the following month.

The initial reaction was astonishing. *The Deep End of the Ocean* had generated significant sales for a first novel; sixty-eight thousand copies had gone into the stores since June. But between the last week in August, when Winfrey told her plans to the publisher, and the September on-air announcement, Viking printed ninety thousand more. By the time the discussion was broadcast on October 18, there were seven hundred fifty thousand copies in print. The book became a number one best-seller, and another one hundred thousand were printed before February 1997.

The club ensured Winfrey as the most powerful book marketer in the United States. She sent more people to bookstores than morning news programs, other daytime shows, evening magazines, radio shows, print reviews, and feature articles combined. But after a six-year run with her book club, Winfrey decided to cut back in the spring of 2002 and no longer have the book club as a monthly feature.

The future

Although one of the wealthiest women in America and the highest paid entertainer in the world, Winfrey has made generous contributions to charitable organizations and institutions such as Morehouse College, the Harold Washington Library, the United Negro College Fund, and Tennessee State University.

Winfrey renewed her contract with King World Productions to continue *The Oprah Winfrey Show* through the 2003–2004 television season. Winfrey and Harpo Production company plan to develop other syndicated television programming with King World.

ANNA MAY WONG

Born: January 3, 1905

Los Angeles, California

Died: February 3, 1961

Santa Monica, California

Asian American actress

Anna May Wong is chiefly remembered as the first actress of Asian descent to achieve stardom as the “Oriental temptress,” so much a fixture of melodramas in the late 1920s and 1930s.

Childhood

Born on Flower Street in Los Angeles, California, in 1907, Anna May Wong was named Wong Liu Tsong, which in Cantonese means “frosted yellow willow.” Wong was third-generation Chinese American; her father was born in Sacramento, California, and his father had moved to California during the Gold Rush, where thousands flocked to the state in hopes of striking it rich with gold.

Growing up, Wong and her six brothers and sisters lived in an apartment over the family’s run-down laundry. Her first memories were of constant steam and the strong odor of hot-ironed linen. As a young child, Wong became fascinated with the brand new world of movies. She began skipping Chinese school in the evenings to watch such movies as *The Perils of Pauline* (1914) at the local theater. By the time she was eleven, Wong decided she was going to be a movie actress. Against all odds, she got her first part at age fourteen when an agent hired three hundred Chinese girls as extras in the 1919 film *The*

Red Lantern. Hardly visible in the film, she went on to get a few more minor roles.

Hollywood calls

For two years, Wong worked after school as an extra without telling her parents, who, she knew, would not approve. At age sixteen, her father found her a job as a secretary, but Wong was fired as unqualified one week later. When she returned home, fearing her father’s anger, she found a letter from a director’s office offering her a role in the film *Bits of Life* (1921). It would bring Wong her first screen credit. Although Wong’s father strongly objected to his daughter’s chosen career, he eventually gave in on the condition that an adult escort, often he himself, would accompany the young Wong on the film sets at all times. When she was not in front of the cameras, her father locked her into her room on the set.

At age seventeen, Wong had one of the few romantic lead roles she would ever play in *Toll of the Sea* (1923), the first Technicolor (an early color film) feature ever made. As a young village girl who marries an American sailor, Wong captured the media’s attention for the first time. Reporters began to appear at the laundry in the hopes of catching Wong for an interview or a photo.

International fame came in 1924 with *The Thief of Bagdad*, in which Wong played an exotic Mongol slave girl opposite star Douglas Fairbanks Sr. (1883–1939). Wong’s role embarrassed her family. Although Wong would continue to support her family for many years, she remained close only to her brother, Richard.

The movie star's life

The success of *Bagdad* led to countless new offers. She appeared as an Eskimo in *The Alaskan* and a Native American girl in *Peter Pan*. In addition to film roles, Wong also worked as a model. She made a few more films, but soon became aggravated with the roles and with Hollywood's practice of casting non-Asians in the few leading Asian roles. Wong finally fled to Europe where, in London, she costarred with Charles Laughton (1899–1962) in *Piccadilly*. After the film, director Basil Dean produced a Chinese play, *A Circle of Chalk*, specifically for Wong. She successfully played opposite the rising new talent, Laurence Olivier (1907–1989), in London's New Theater.

Wong remained in Europe for three years, where she was hailed for her film and stage appearances. In Germany and France, she made foreign versions of her British films, including Germany's first sound picture. She spoke both German and French so fluently that critics could hardly believe they were hearing her voice instead of a native actress. During her career, Wong taught herself to speak English, Chinese, French, German, and Italian.

Wong's next screen role, *Daughter of the Dragon*, cast her in yet another stereotypical (having to do with opinions based on generalizations) role as the daughter of the infamous Dr. Fu Manchu. Wong then appeared in the thriller *Shanghai Express*, starring Marlene Dietrich (1901–1992). Wong's portrayal of the bad-girl-turned-good inspired better reviews than Dietrich received. Years later, the star would complain that Wong had upstaged her.

Anna May Wong.

An early retirement

In 1942, finally fed up with the Hollywood system, Wong retired from films at the age of thirty-five. Throughout the war, she contributed to the war efforts by working for the United China Relief Fund and touring with the United Service Organizations, Inc. (USO; a group that provided entertainment and other services for the U.S. military). During the 1940s and 1950s, Wong took occasional small parts on television, even starring in her own series, *Mme. Liu Tsong*, in which she played the owner of an international chain of art galleries who was also a sleuth.

Seventeen years after retirement, Wong attempted a film comeback. She returned as Lana Turner's (1920–1995) mysterious housekeeper in the 1950 film, *Portrait in Black*. In 1961, while she was preparing for the role of the mother in *Flower Drum Song*, Wong died of a heart attack in her sleep.

TIGER WOODS

Born: December 30, 1975

Cypress, California

African/Asian American golfer

American golfer Tiger Woods is the youngest man ever, and the first man of color, to win the Masters Tournament of golf.

Childhood in golf

Tiger Woods was born Eldrick Woods on December 30, 1975, in Cypress, California. He is the only child of Earl and Kultida Woods. His parents identified their son's talent at an unusually early age. They said that he was playing with a putter before he could walk. The boy was gifted not only with excep-

tional playing abilities, but he also possessed a passion for the sport. Woods first gained national attention on a talk show when he beat the famed comedian and avid golfer Bob Hope (1903–) in a putting contest. The young boy was only three at the time, and he was quickly hailed as a prodigy, or a child with remarkable talent. Not long after that, when he was five years old, Woods was featured on the popular television show *That's Incredible!*

Tiger's father has never denied that he devoted his energies to developing his son's talent and to furthering the boy's career as a golfer. During practice sessions, Tiger learned to maintain his composure and to hold his concentration while his father persistently made extremely loud noises and created other distractions. All the while, Tiger's mother made sure that her son's rare talent and his budding golf career would not interfere with his childhood or his future happiness. His mother was a native of Thailand and passed on to her son the mystical ideals of Buddhism, an eastern religion that seeks to go beyond human suffering and existence.

In many ways Woods grew up as a typical middle-class American boy. He developed a taste for junk food and an affection for playing video games. He also spent a fair share of his time clowning around in front of his father's ever-present video camera. As for playing golf, there is no question that the sport was the focus of his childhood. He spent many hours practicing his swing and playing in youth tournaments. Woods was eight years old when he won his first formal competition. From that point he became virtually unstoppable, winning trophies and breaking amateur records everywhere. Media accounts of the boy prodigy had reached

nearly legendary proportions by 1994, when he entered Stanford University as a freshman on a full golf scholarship.

College years

During Woods's first year of college, he won the U.S. Amateur title and qualified to play in the Masters tournament in Augusta, Georgia, in the spring of 1995. Although he played as an amateur—not for prize money—Woods's reputation preceded him. By 1996, Woods had won three U.S. Amateur titles, one after another, an amazing accomplishment in itself. Woods was only twenty years old, and in August of 1996, he decided to quit college in order to play professional golf.

Four months later in December, Woods celebrated his twenty-first birthday. He marked the occasion with a legal name change, from Eldrick to Tiger. Woods had been called Tiger by his father even as a youngster. The nickname stuck, and Woods had always been known to his friends, and to the press, as Tiger. It soon became evident that he was destined for success. *Sports Illustrated* named him 1996 "Sportsman of the Year," and by January of 1997, he had already won three professional tournaments. He was a media sensation.

Tiger the champion

In April of 1997, only eight months into Woods's professional career, he played in the prestigious (important and famous) Masters tournament held at Georgia's Augusta National Golf Club. The Masters title is perhaps the greatest honor in the world of golf. In addition to hefty prize money, first-place winners are awarded a green blazer to symbolize their membership among the top golfers in the world.

Tiger Woods.

Reproduced by permission of AP/Wide World Photos.

When the tournament was over, Woods had made history as the youngest person ever to win the Masters title. His score was an unprecedented 270 strokes. His victory margin set another record—twelve strokes ahead of the runner-up. This feat was enhanced by the fact that Woods was the first man of color ever to win the title. He accepted all of these honors with grace and humility, and gave tribute to the African American golfers who came before him and helped pave the way. He also honored his mother (who is Asian) by reminding the world of his diverse ethnic background; he is African American, Thai, Chinese, Native American, and Caucasian.

Less than three months passed until July 6, 1997, when Woods won the Western Open, another major golf tournament. Critics credited his amazing success to relentless work and an extraordinary desire to win.

Impact of Tiger Woods

Woods is credited too with popularizing the sport of golf, not only among African American people and other minorities, but among children of all backgrounds. His personal sponsorship of programs for children has been reported for years, and at least one corporate sponsor found that in order to secure an endorsement (an official document of agreement) from Tiger Woods the price would include the added cost of a generous donation to the Tiger Woods Foundation for inner city children.

In 1999 Woods achieved the greatest moment in his career when he won the PGA Championship by one shot. He had been in the lead for most of the tournament, but lost his lead on the last day, making his one stroke victory over Sergio Garcia even more memorable for the crowd that had gathered to watch. Woods continued his success in November 1999 when he shot the best total ever in the World Cup, helping to lead the United States to victory in the tournament. He was also named the PGA Tour Player of the Year for the second time on November 30, 1999, earning more than \$6.6 million in prize money during the season.

On January 9, 2000, Woods won the Mercedes Championship. It was his fifth consecutive victory and, at the time, golf's longest winning streak in forty-six years. On February 7, 2000, he extended that streak by winning the Pebble Beach National Pro-Am. He became

the first player since Ben Hogan (1912–1997) in 1948 to win six straight tour events. He went on to win the Bay Hill Invitational on March 19, 2000. On June 18, 2000, he won the U.S. Open, his third major championship. The next month, on July 23, he won the British Open, thus winning the Grand Slam. He became the youngest player to win all four major championships and just the fifth ever.

On April 8, 2001, Woods won the sixty-fifth Masters Tournament at the Augusta National Golf Club. The win made him the only golfer in history to hold the four major championship titles at the same time. Woods won the sixty-sixth Masters Tournament on April 14, 2002. At the turn of the twenty-first century, Woods was the most dominant figure in all of sports, and his name will surely be decorated throughout the record books before his career is over.

**VIRGINIA
WOOLF**

**Born: January 25, 1882
London, England**

Died: March 28, 1941

Lewes, Sussex, England

English novelist, critic, and essayist

The English novelist, critic, and essayist Virginia Woolf ranks as one of England's most distinguished writers of the middle part of the twentieth century. Her novels can perhaps best be described as impressionistic, a literary style which attempts to inspire impressions rather than recreating reality.

Early years and marriage

Virginia Stephen was born in London on January 25, 1882. She was the daughter of Sir Leslie Stephen, a famous scholar and philosopher (a seeker of knowledge) who, among many literary occupations, was at one time editor of *Cornhill Magazine* and the *Dictionary of National Biography*. James Russell Lowell, the American poet, was her godfather. Her mother, Julia Jackson, died when the child was twelve or thirteen years old. Virginia and her sister were educated at home in their father's library, where Virginia also met his famous friends who included G. E. Moore (1873–1958) and E. M. Forster (1879–1970). Young Virginia soon fell deep into the world of literature.

In 1912, eight years after her father's death, Virginia married Leonard Woolf, a brilliant young writer and critic from Cambridge, England, whose interests in literature as well as in economics and the labor movement were well suited to hers. In 1917, for amusement, they founded the Hogarth Press by setting and handprinting on an old press *Two Stories* by "L. and V. Woolf." The volume was a success, and over the years they published many important books, including *Pre-*

lude by Katherine Mansfield (1888–1923), then an unknown writer; *Poems* by T. S. Eliot (1888–1965); and *Kew Gardens* by Virginia Woolf. The policy of the Hogarth Press was to publish the best and most original work that came to its attention, and the Woolfs as publishers favored young and unknown writers. Virginia's older sister Vanessa, who married the critic Clive Bell, participated in this venture by designing dust jackets for the books issued by the Hogarth Press.

Virginia Woolf's home in Tavistock Square, Bloomsbury, became a literary and art center, attracting such diverse intellectuals as Lytton Strachey (1880–1932), Arthur Waley (1889–1966), Victoria Sackville-West (1892–1962), John Maynard Keynes (1883–1943), and Roger Fry (1866–1934). These artists, critics, and writers became known as the Bloomsbury group. Roger Fry's theory of art may have influenced Virginia's technique as a novelist. Broadly speaking, the Bloomsbury group drew from the philosophical interests of its members (who had been educated at Cambridge) the values of love and beauty as essential to life.

As critic and essayist

Virginia Woolf began writing essays for the *Times Literary Supplement* (London) when she was young, and over the years these and other essays were collected in a two-volume series called *The Common Reader* (1925, 1933). These studies range with affection and understanding through all of English literature. Students of fiction have drawn upon these criticisms as a means of understanding Virginia Woolf's own direction as a novelist.

An essay frequently studied is "Mr. Bennett and Mrs. Brown," written in 1924, in

Virginia Woolf.

Reproduced by permission of AP/Wide World Photos.

which Virginia Woolf described the manner in which the older-generation novelist Arnold Bennett would have portrayed Mrs. Brown, a lady casually met in a railway carriage, by giving her a house and furniture and a position in the world. She then contrasted this method with another: one that exhibits a new interest in Mrs. Brown, the mysteries of her person, her consciousness (awareness), and the consciousness of the observer responding to her.

Achievement as novelist

Two of Virginia Woolf's novels in particular, *Mrs. Dalloway* (1925) and *To the Light-*

house (1927), successfully follow the latter approach. The first novel covers a day in the life of Mrs. Dalloway in postwar London; it achieves its vision of reality through the reception by Mrs. Dalloway's mind of what Virginia Woolf called those "myriad impressions—trivial, fantastic, evanescent [vanishing], or engraved with the sharpness of steel."

To the Lighthouse is, in a sense, a family portrait and history rendered in subjective (characterized by personal views) depth through selected points in time. Part I deals with the time between six o'clock in the evening and dinner. Primarily through the consciousness of Mrs. Ramsay, it presents the clash of the male and female sensibilities in the family; Mrs. Ramsay functions as a means of balance and settling disputes. Part II is a moving section of loss during the interval between Mrs. Ramsay's death and the family's revisit to the house. Part III moves toward completion of this complex portrait through the adding of a last detail to a painting by an artist guest, Lily Briscoe, and through the final completion of a plan, rejected by the father in Part I, for him and the children to sail out to the lighthouse.

Last years and other books

Virginia Woolf was the author of about fifteen books, the last, *A Writer's Diary*, posthumously (after death) published in 1953. Her death by drowning in Lewes, Sussex, England, on March 28, 1941, has often been regarded as a suicide brought on by the unbearable strains of life during World War II (1939–45; a war fought between the Axis powers: Japan, Italy, and Germany—and the Allies: France, England, the Soviet Union, and the United States). The true explanation

seems to be that she had regularly felt symptoms of a mental breakdown and feared it would be permanent.

Mrs. *Dalloway*, *To the Lighthouse*, and *Jacob's Room* (1922) represent Virginia Woolf's major achievements. *The Voyage Out* (1915) first brought her critical attention. *Night and Day* (1919) is traditional in method. The short stories of *Monday or Tuesday* (1921) brought critical praise. In *The Waves* (1931) she masterfully employed the stream-of-consciousness technique which stresses "free writing." Other experimental novels include *Orlando* (1928), *The Years* (1937), and *Between the Acts* (1941). Virginia Woolf's championship of women's rights is reflected in the essays in *A Room of One's Own* (1929) and in *Three Guineas* (1938).

WILLIAM WORDSWORTH

Born: April 7, 1770

Cookermouth, Cumberland, England

Died: April 23, 1850

Rydal Mount, Westmorland, England

English poet

William Wordsworth was an early leader of romanticism (a literary movement that celebrated nature and concentrated on human emotions) in English poetry and ranks as one of the greatest lyric poets in the history of English literature.

His early years

William Wordsworth was born on April 7, 1770, in Cookermouth, Cumberland, England, the second child of an attorney. Unlike the other major English romantic poets, he enjoyed a happy childhood under the loving care of his mother and was very close to his sister Dorothy. As a child he wandered happily through the lovely natural scenery of Cumberland. In grammar school, Wordsworth showed a keen interest in poetry. He was fascinated by the epic poet John Milton (1608–1674).

From 1787 to 1790 Wordsworth attended St. John's College at Cambridge University. He always returned to his home and to nature during his summer vacations. Before graduating from Cambridge, he took a walking tour through France, Switzerland, and Italy in 1790. The Alps made an impression on him that he did not recognize until fourteen years later.

Stay in France

Revolutionary passion in France made a powerful impact on Wordsworth, who returned there in November 1791. He wanted to improve his knowledge of the

William Wordsworth.

French language. His experience in France just after the French Revolution (1789; the French overthrew the ruling monarchy) reinforced his sympathy for common people and his belief in political freedom.

Wordsworth fell passionately in love with a French girl, Annette Vallon. She gave birth to their daughter in December 1792. However, Wordsworth had spent his limited funds and was forced to return home. The separation left him with a sense of guilt that deepened his poetic inspiration and resulted in an important theme in his work of abandoned women.

Publication of first poems

Wordsworth's first poems, *Descriptive Sketches* and *An Evening Walk*, were printed in 1793. He wrote several pieces over the next several years. The year 1797 marked the beginning of Wordsworth's long friendship with Samuel Taylor Coleridge (1772–1834). Together they published *Lyrical Ballads* in 1798. Wordsworth wanted to challenge “the gaudiness [unnecessarily flashy] and inane [foolish] phraseology [wording] of many modern writers.” Most of his poems in this collection centered on the simple yet deeply human feelings of ordinary people, phrased in their own language. His views on this new kind of poetry were more fully described in the important “Preface” that he wrote for the second edition (1800).

“Tintern Abbey”

Wordsworth's most memorable contribution to this volume was “Lines Composed a Few Miles Above Tintern Abbey,” which he wrote just in time to include it. This poem is the first major piece to illustrate his original talent at its best. It skillfully combines matter-of-factness in natural description with a genuinely mystical (magical) sense of infinity, joining self-exploration to philosophical speculation (questioning). The poem closes on a subdued but confident reassertion of nature's healing power, even though mystical insight may be obtained from the poet.

In its successful blending of inner and outer experience, of sense perception, feeling, and thought, “Tintern Abbey” is a poem in which the writer becomes a symbol of mankind. The poem leads to imaginative thoughts about man and the universe. This cosmic outlook rooted in the self is a central

feature of romanticism. Wordsworth's poetry is undoubtedly the most impressive example of this view in English literature.

Poems of the middle period

Wordsworth, even while writing his contributions to the *Lyrical Ballads*, had been feeling his way toward more ambitious schemes. He had embarked on a long poem in unrhymed verse, "The Ruined Cottage," later referred to as "The Peddler." It was intended to form part of a vast philosophical poem with the title "The Recluse, or Views of Man, Nature and Society." This grand project never materialized as originally planned.

Abstract, impersonal speculation was not comfortable for Wordsworth. He could handle experiences in the philosophical-lyrical manner only if they were closely related to himself and could arouse his creative feelings and imagination. During the winter months he spent in Germany, he started work on his magnum opus (greatest work), *The Prelude, or Growth of a Poet's Mind*. It was published after his death.

However, such a large achievement was still beyond Wordsworth's scope (area of capabilities) at this time. It was back to the shorter poetic forms that he turned during the most productive season of his long literary life, the spring of 1802. The output of these fertile (creative) months mostly came from his earlier inspirations: nature and the common people. During this time he wrote "To a Butterfly," "I Wandered Lonely as a Cloud," "To the Cuckoo," "The Rainbow," and other poems.

Changes in philosophy

The crucial event of this period was Wordsworth's loss of the sense of mystical oneness, which had sustained (lasted throughout) his highest imaginative flights. Indeed, a mood of despondency (depression) descended over Wordsworth, who was then thirty-two years old.

In the summer of 1802 Wordsworth spent a few weeks in Calais, France, with his sister Dorothy. Wordsworth's renewed contact with France only confirmed his disillusionment (disappointment) with the French Revolution and its aftermath.

During this period Wordsworth had become increasingly concerned with Coleridge, who by now was almost totally dependent upon opium (a highly addictive drug) for relief from his physical sufferings. Both friends came to believe that the realities of life were in stark contradiction (disagreement) to the visionary expectations of their youth. Wordsworth characteristically sought to redefine his own identity in ways that would allow him a measure of meaning. The new turn his life took in 1802 resulted in an inner change that set the new course his poetry followed from then on.

Poems about England and Scotland began pouring forth from Wordsworth's pen, while France and Napoleon (1769–1821) soon became Wordsworth's favorite symbols of cruelty and oppression. His nationalistic (intense pride in one's own country) inspiration led him to produce the two "Memorials of a Tour in Scotland" (1803, 1814) and the group entitled "Poems Dedicated to National Independence and Liberty."

Poems of 1802

The best poems of 1802, however, deal with a deeper level of inner change. In Wordsworth's poem "Intimations of Immortality" (March–April), he plainly recognized that "The things which I have seen I now can see no more"; yet he emphasized that although the "visionary gleam" had fled, the memory remained, and although the "celestial light" had vanished, the "common sight" of "meadow, grove and stream" was still a potent (strong) source of delight and solace (comfort).

Thus Wordsworth shed his earlier tendency to idealize nature and turned to a more sedate (calm) doctrine (set of beliefs) of orthodox Christianity. Younger poets and critics soon blamed him for this "recantation" (renouncing), which they equated with his change of mind about the French Revolution. His *Ecclesiastical Sonnets* (1822) are clear evidence of the way in which love of freedom, nature, and the Church came to coincide (come together at the same time) in his mind.

The Prelude

Nevertheless, it was the direction suggested in "Intimations of Immortality" that, in the view of later criticism, enabled Wordsworth to produce perhaps the most outstanding achievement of English romanticism: *The Prelude*. He worked on it, on and off, for several years and completed the first version in May 1805. *The Prelude* can claim to be the only true romantic epic (long, often heroic work) because it deals in narrative terms with the spiritual growth of the only true romantic hero, the poet. The inward odyssey (journey) of the poet was described not for its own sake but as a sample and as an adequate image of man at his most sensitive.

Wordsworth shared the general romantic notion that personal experience is the only way to gain living knowledge. The purpose of *The Prelude* was to recapture and interpret, with detailed thoroughness, the whole range of experiences that had contributed to the shaping of his own mind. Wordsworth refrained from publishing the poem in his lifetime, revising it continuously. Most important and, perhaps, most to be regretted, the poet also tried to give a more orthodox tinge to his early mystical faith in nature.

Later years

Wordsworth's estrangement (growing apart) from Coleridge in 1810 deprived him of a powerful incentive to imaginative and intellectual alertness. Wordsworth's appointment to a government position in 1813 relieved him of financial care.

Wordsworth's undiminished love for nature made him view the emergent (just appearing) industrial society with undisguised reserve. He opposed the Reform Bill of 1832, which, in his view, merely transferred political power from the land owners to the manufacturing class, but he never stopped pleading in favor of the victims of the factory system.

In 1843 Wordsworth was appointed poet laureate (official poet of a country). He died on April 23, 1850.

WRIGHT BROTHERS

ORVILLE WRIGHT

Born: August 19, 1871

Dayton, Ohio

Died: January 30, 1948

Dayton, Ohio

WILBUR WRIGHT

Born: April 16, 1867

Millville, Indiana

Died: May 30, 1912

Dayton, Ohio

American aviators

The American aviation pioneers Wilbur and Orville Wright were the first to accomplish manned, powered flight in a heavier-than-air machine.

Their early years

Wilbur and Orville Wright were the sons of Milton Wright, a bishop of the United Brethren in Christ. Wilbur was born on April 16, 1867, in Millville, Indiana. Orville was born on August 19, 1871, in Dayton, Ohio. Until the death of Wilbur in 1912, the two

were inseparable. Their personalities were perfectly complementary (each provided what the other lacked). Orville was full of ideas and enthusiasms. Wilbur was more steady in his habits, more mature in his judgments, and more likely to see a project through.

While in high school, Wilbur intended to go to Yale and study to be a clergyman. However, he suffered a facial injury while playing hockey, which prevented him from continuing his education. For the next three years he continued his education informally through reading in his father's large library.

In their early years the two boys helped their father, who edited a journal called the *Religious Telescope*. Later, they began a paper of their own, *West Side News*. They went into business together as printers producing everything from religious handouts to commercial fliers. In 1892 they opened the Wright Cycle Shop in Dayton. This was the perfect occupation for the Wright brothers because it involved one of the exciting mechanical devices of the time: the bicycle. When the brothers took up the problems of flight, they had a solid grounding in practical mechanics (knowledge of how to build machines).

The exploits of one of the great glider pilots of the late nineteenth century, Otto Lilienthal, had attracted the attention of the Wright brothers as early as 1891, but it was not until the death of this famous aeronautical (having to do with the study of flying and the design of flying machines) engineer in 1896 that the two became interested in gliding experiments. They then decided to educate themselves in the theory and state of the art of flying.

WRIGHT BROTHERS

Their beginnings in flight

The Wrights took up the problem of flight at a favorable time, for some of the fundamental, or basic, theories of aerodynamics were already known; a body of experimental data existed; and, most importantly, the recent development of the internal combustion engine made available a sufficient source of power for manned flight.

The Wright brothers began by accumulating and mastering all the important information on the subject, designed and tested their own models and gliders, built their own engine, and, when the experimental data they had inherited appeared to be inadequate or

wrong, they conducted new and more thorough experiments. The Wrights decided that earlier attempts at flight were not successful because the plans for early airplanes required pilots to shift their bodies to control the plane. The brothers decided that it would be better to control a plane by moving its wings.

First trip to Kitty Hawk

The Wright brothers proceeded to fly double-winged kites and gliders in order to gain experience and to test the data they had. After consulting the U.S. Weather Bureau, they chose an area of sand dunes near the small town of Kitty Hawk, North Carolina, as the site of their experiments. In September 1900 they set up camp there.

The Wrights's first device failed to fly as a kite because it was unable to develop sufficient lift (upward force). Instead, they flew it as a free glider. They kept careful records of their failures as well as of their successes. Their own data showed conclusively that previous tables of information they had were greatly inaccurate.

Returning to Dayton in 1901, the Wright brothers built a wind tunnel (a tunnel wherein one can control the flow of wind in order to determine its effect on an object)—the first in the United States. This is where they tested over two hundred models of wing surfaces in order to measure lift and drag (resistance) factors and to discover the most suitable design. They also discovered that although screw propellers had been used on ships for more than half a century, there was no reliable body of data on the subject and no theory that would allow them to design the proper propellers for their airship. They had to work the problem out for themselves mathematically.

The Wrights, by this time, not only had mastered the existing body of aeronautical science but also had added to it. They now built their third glider, incorporating their findings, and in the fall of 1902 they returned to Kitty Hawk. They made over one thousand gliding flights and were able to confirm their previous data and to demonstrate their ability to control motions of the glider. Having learned to build and to control an adequate air frame, they now determined to apply power to their machine.

Powered flight

The Wright brothers soon discovered, however, that no manufacturer would undertake to build an engine that would meet their specifications, so they had to build their own. They produced one that had four cylinders and developed 12 horsepower (a unit that describes the strength of an engine). When it was installed in the air frame, the entire machine weighed just 750 pounds and proved to be capable of traveling 31 miles per hour. They took this new airplane to Kitty Hawk in the fall of 1903 and on December 17 made the world's first manned, powered flight in a heavier-than-air craft.

The first flight was made by Orville and lasted only 12 seconds, during which the airplane flew 120 feet. That same day, however, on its fourth flight, with Wilbur at the controls, the plane stayed in the air for 59 seconds and traveled 852 feet. Then a gust of wind severely damaged the craft. The brothers returned to Dayton convinced of their success and determined to build another machine. In 1905 they abandoned their other activities and concentrated on the development of aviation. On May 22, 1906, they received a patent for their flying machine.

The next step

The brothers looked to the federal government for encouragement in their venture, and gradually interest was aroused in Washington, D.C. In 1907 the government asked for bids for an airplane that would meet certain requirements. Twenty-two bids were received, three were accepted, but only the Wright brothers finished their contract.

The brothers continued their experiments at Kitty Hawk, and in September 1908, while Wilbur was in France attempting to interest foreign backers in their machine, Orville successfully demonstrated their contract airplane. It was accepted by the government. The event was marred by a crash a week later in which Orville was injured and a passenger was killed.

Wilbur's trip to France proved to be a success. In 1909 the Wright brothers formed the American Wright Company, with Wilbur taking the lead in setting up and directing the business. His death in Dayton on May 30, 1912, left Orville feeling depressed and alone. In 1915 he sold his rights to the firm and gave up his interest in manufacturing in order to turn to experimental work. He had little taste for the busy activity of commercial life.

After his retirement, Orville lived quietly in Dayton, conducting experiments on mechanical problems of interest to him, none of which proved to be of major importance. His chief public activity was service on the National Advisory Committee for Aeronautics (the government agency that came before the National Aeronautics and Space Administration, or NASA), of which he was a member from its organization by President Woodrow Wilson in 1915 until his death in Dayton on January 30, 1948.

The Wright Brothers helped found modern aviation through their curiosity, their inventiveness, and their unwillingness to give up their vision.

**FRANK LLOYD
WRIGHT**

Born: June 8, 1869
Richland Center, Wisconsin
Died: April 9, 1959
Phoenix, Arizona
American architect

The American architect Frank Lloyd Wright designed dramatically creative buildings during a career of almost seventy years. His work established the imagery for much of the modern architectural environment.

Early life and education

Frank Lloyd Wright was born on June 8, 1869, in Richland Center, Wisconsin, the first of three children to William, a preacher, and Anna Wright. When he was twelve years old his family settled in Madison, Wisconsin, and Wright worked on his uncle's farm at Spring Green during the summers. After the couple divorced in 1885, Frank lived with his mother, and the two shared a lasting relationship. It was from her that he developed an early love for pure geometric forms and designs, which later influenced his architecture.

Wright developed a passion for the farmland that never left him. He attended Madison High School and left in 1885, apparently without graduating. He went to work as a draftsman, and the following year, while still working, took a few courses in civil engineering at the University of Wisconsin.

In 1887 Wright moved to Chicago, Illinois, worked briefly for an architect, and then joined the firm of Dankmar Adler (1844–1900) and Louis Sullivan (1856–1924). Wright was very much influenced by Sullivan, and, although their relationship ended when Sullivan found out that Wright was designing houses on his own, he always acknowledged Sullivan's influence and referred to him as "lieber meister." In 1893 Wright opened his own office.

Master of domestic architecture

The houses Wright built in Buffalo, New York, and in Chicago and its suburbs before World War I (1914–18), when German-led forces pushed for European domination, gained international fame wherever there were avant-garde (having to do with new ideas and techniques) movements in the arts. Similarly, in the United States, Wright's clients were exceptional individuals and small, adventurous institutions, not governments or national corporations. A small progressive private school (Hillside Home School, Spring Green, 1902) and an occasional private, commercial firm (Larkin Company in Buffalo) came to him, but chiefly, his clients were Midwestern businessmen, practical, unscholarly, independent, and moderately successful, such as the Chicago building contractor Frederick C. Robie, for whom Wright designed houses.

Early, Wright insisted upon declaring the presence of pure cubic mass, the color and texture of raw stone and brick and copper, and the sharp-etched punctures made by unornamented windows and doors in sheer walls (Charnley House, Chicago, 1891). He made of the house a compact block, which might be enclosed handsomely by a hipped roof (Winslow House, River Forest, Illinois, 1893). Soon, the delight in the simplicity of a single mass gave way to his passion for passages of continuous, flowing spaces and he burst the enclosed, separated spaces of classical architecture, removed the containment, the sense of walls and ceilings, and created single, continuously modified spaces, which he shaped by screens, piers, and different planes and masses.

Philosophy of architecture

Wright's philosophy of architecture was composed of several radical (extreme in differ-

Frank Lloyd Wright.

Reproduced by permission of Archive Photos, Inc.

ence) and traditional ideas. There was, first, the romantic idea of honest expression: that a building should be faithful in revealing its materials and structure, as Eugène Emmanuel Viollet-le-Duc (1814–1879) had argued, without any classical ornament or fake surface or structure. There was, second, the idea that a building's form should reflect its plan, its functional arrangement of interior spaces, as Henry Latrobe and Horatio Greenough had proposed. There was, third, the belief that each building should express something new and distinctive in the times (G. W. F. Hegel [1770–1831], Gottfried Semper [1803–1879]) and specifically the new technical resources, such

as steel skeletons and electric light and elevators, which suggested skyscrapers and new forms of building (John Wellborn Root). There was, fourth, the ambition, even pride, to achieve an art appropriate to a new nation, an American art, without Continental or English or colonial dependencies. Finally, there was the theory derived by Sullivan from Charles Darwin (1809–1882) and Herbert Spencer (1820–1903) that a building should be similar to a biological organism, a unified work of art, rooted to its soil, organized to serve specified functions, and, as a form, evolved as an organism evolves, fitted to its environment, expressive of its purpose.

If the handsome Taliesin East, whose roofs are rhythmical accents on the edge of a bluff overlooking two valleys, were all that Wright left, he would be remembered as the finest architect who worked in the nineteenth-century tradition of romantic domestic design. But, early, he prepared an idea and an imagery for modern design. He achieved in the Larkin Building, Buffalo (1904; destroyed) an integration of circulation, structure, ventilation, plumbing, furniture, office equipment, and lighting.

Constant search for form

Always distinctive and independent, Wright's style changed often. For about ten years after 1915 he drew upon Mayan (an ancient Indian tribe in Mexico) ornament (Barndall House, Hollywood, California, 1920). Even then Wright avoided the barrenness and abstraction of his designs, he insisted upon having the multiple form of buildings reflect the movement of unique sites: the Kaufmann House, "Falling Water," at Bear Run, Pennsylvania (1936–37), where

interlocked, reinforced-concrete terraces are poised over the waterfall; the low-cost houses (Herbert Jacobs House, Madison, 1937); and the "prairie houses" (Lloyd Lewis House, Libertyville, Illinois, 1940). No architect was more skillful in fitting form to its terrain: the Pauson House in Phoenix, Arizona (1940) rose from the desert, like a Mayan pyramid, its battered wooden walls reflecting the mountains and desert.

Those brilliant rural houses did not reveal how Wright would respond to an urban setting or to the program of a corporate client. But in the Administration Building for the Johnson Wax Company, Racine, Wisconsin (1936–39, with a research tower added in 1950), he astonished architects with his second great commercial building (after the Larkin Building). A continuous, windowless red-brick wall encloses a high, window-lighted interior space; that space, which contains tall columns, is one of the most peaceful and graceful interior spaces in the world. At Florida Southern College he set side-by-side circle and fragmented rhombus (a four-sided circle plane), recalling Hadrian's Villa at Tivoli, Italy; he set a helix (spiral form structure) inside the Morris Gift Shop in San Francisco, California (1948–49). Ultimately, he conceived of having the helix surround a tall central space: the six-story Guggenheim Museum in New York City (1946–59), which paid in significant functional defects to gain a memorable experience in viewing art, especially where the helix affords views into a side gallery below.

The architectural drawings Wright left behind are magical and lyrical. No one might ever build accordingly, but Wright was never content with the commonplace or ordinary to

the conventional or the practical. He imagined the wonderful where others were content with the probable. Wright's drawings suggest how far his talent surpassed any client's capacity fully to realize his dream: a world of sanctuaries and gardens, of earth and machines, of rivers, seas, mountains, and prairies, where grand architecture enables men to dwell nobly.

Wright died at Taliesin West on April 9, 1959. His widow, Olgivanna, directed the Taliesin Fellowship.

RICHARD WRIGHT

Born: September 4, 1908

Natchez, Mississippi

Died: November 25, 1960

Paris, France

African American writer

The works of Richard Wright, a politically sophisticated and socially involved African American author, are notable for their passionate sincerity. He was perceptive about the universal problems that had the ability to destroy mankind.

Southern upbringing

Richard Nathaniel Wright was born in Natchez, Mississippi, on September 4, 1908. His mother was a country school teacher and his father an illiterate (a person who is unable to read or write) sharecropper, a poor farmer who shares land with other farmers. The family moved to Memphis, Tennessee, in 1914, and soon the father abandoned them. From then on Richard's education was inconsistent, but he had attained experience beyond his years. He bounced from school to school and desperately tried to make friends and fit in with his fellow classmates.

Wright knew what it was to be a victim of racial hatred before he learned to read, for he was living with an aunt when her husband was lynched (brutally attacked or killed because of one's race). Richard's formal education ended after the ninth grade in Jackson, Mississippi. The fact that his "The Voodoo of Hell's Half-acre" had been published in the local black paper set him apart from his classmates. He was a youth upon whom a dark spirit had already settled.

Becoming a writer

At nineteen Wright decided he wanted to be a writer. He moved to Chicago, Illinois, where he had access to public libraries. He read all he could of Feodor Dostoevsky (1821–1881), Theodore Dreiser (1871–1945), Henry

Richard Wright.

Reproduced by permission of Fisk University Library.

James (1843–1916), and William James (1842–1910). His interest in social problems led to a friendship with the sociologist (a person who studies the interactions of a society) Louis Wirth. When Richard's mother, brother, and an aunt came to Chicago, he supported them as a postal clerk until the job ended in 1929. After months of living on public welfare, he got a job in the Federal Negro Theater Project in the Works Progress Administration, a government relief agency. Later he became a writer for the Illinois Writers' Project.

Meantime, Wright had joined the John Reed Club, beginning an association with the Communist Party, a political party that

believes goods and services should be owned and distributed by a strong central government. His essays, reviews, short stories, and poems appeared regularly in communist papers, and by 1937, when he became Harlem editor of the *Daily Worker*, he enjoyed a considerable reputation in left-wing circles. Four novellas (short novels), published as *Uncle Tom's Children* (1938), introduced him to a large general audience.

Native Son

Wright's first novel, *Native Son* (1940), a brutally honest depiction of black, urban, ghetto life, was an immediate success. The story's protagonist, or main character, represents all the fear, rage, rebellion, spiritual hunger and the undisciplined drive to satisfy it, that social psychologists (people who are trained to study the mental and behavioral characteristics of people) were just beginning to recognize as common elements in the personality of the poor people of all races.

Wright's intention was to make the particular truth universal (all around) and to project his native son as a symbol of the poorly treated in all lands. Critics, however, unimpressed by the universal symbol, were interested instead in Wright's passionate criticisms of white racism (belief that one race is superior to another) and the lifestyle it imposed upon African Americans. Wright believed that there was a better way of social organization different from democracy (government by the people), and that Communism could be the better way. These ideas were toned down in the stage version. In 1941 Wright also published *Twelve Million Black Voices: A Folk History of the Negro of the United States*.

By 1940 Wright had married and divorced; and a few months after his second marriage, he broke with the Communist Party. (His "I Tried To Be a Communist," published in the *Atlantic* in 1944, was reprinted in 1949 in *The God That Failed*, edited by Richard Crossman.) The break freed him from social commitments that were beginning to seem troublesome. In *Black Boy*, a fictionalized autobiography (book written about oneself), his only commitment is to truth. The book was published in January 1945, and sales reached four hundred thousand copies by March. Wright accepted an invitation from the French government to visit France, and the three-month experience, in sharp contrast to his experience in his own country, "exhilarated" (excited and refreshed) him with a "sense of freedom." People of the highest intellectual and artistic circles met him "as an equal."

Years overseas

Wright, his wife, and daughter moved permanently to Paris, France. Within a year and a half Wright was off to Argentina, where he "starred" in the film version of *Native Son*. *The Outsider*, the first of three novels written in France, was deeply influenced by existentialism, a philosophy that stresses the individual experience in the universe, whose most famous spokespersons, Jean Paul Sartre (1905–1980) and Simone de Beauvoir (1908–1986), were Wright's close friends. Following *Savage Holiday* (1954), a potboiler (a book, that is usually of poorer quality, written to make money), *The Long Dream* (1958) proved that Wright had been too long out of touch with the American reality to deal with it effectively. None of the novels written in

France succeeded. His experiments with poetry did not produce enough for a book.

Nonfiction works

In 1953 Wright visited Africa, where he hoped to "discover his roots" as a black man. *Black Power* (1954) combines the elements of a travel book with a passionate political treatise, or formal writing, on the "completely different order of life" in Africa. In 1955 he attended the Afro-Asian Conference in Bandung, Indonesia, and published his impressions in *The Color Curtain* (1956). *Pagan Spain* (1956), based on two months in Spain, is the best of his nonfiction works. *White Man, Listen* (1957) is a collection of four long essays on "White-colored, East-West relations."

In 1960, following an unhappy attempt to settle in England, and in the midst of a rugged lecture schedule, Wright fell ill. He entered a hospital in Paris on November 25 and died three days later. *Eight Men* (1961), a collection of short stories, and *Lawd Today* (1963), a novel, were published after his death.

WILLIAM BUTLER YEATS

Born: June 13, 1865

Dublin, Ireland

Died: January 28, 1939

Roquebrune, France

Irish poet and dramatist

William Butler Yeats was an Irish poet and dramatist (playwright). Some think he was the greatest poet of the twentieth century. He won the Nobel Prize for literature in 1923. The works of William Butler Yeats form a bridge between the romantic poetry of the nine-

teenth century and the hard clear language of modern poetry.

Early years

William Butler Yeats was born on June 13, 1865, in Dublin, Ireland. He was the oldest of four children of John Butler Yeats, a portrait artist. His father added to William's formal schooling with lessons at home that gave him an enduring taste for the classics. John Yeats had a forceful personality. His personal philosophy was a blend of aestheticism (a belief that art and beauty are important for everything) and atheism (a belief that there is no God). William felt its influence much later as it showed up in his interest in magic and the occult (supernatural)

William Butler Yeats.

sciences and in his highly original system of aesthetics (beauty).

At the age of nineteen Yeats enrolled in the Metropolitan School of Art in Dublin, intending to become a painter. In 1887 he became a literary correspondent for two American newspapers. Among his acquaintances at this time were his father's artist and writer friends, including William Morris (1834–1896), George Bernard Shaw (1856–1950), and Oscar Wilde (1856–1900).

Important friendships

In 1889 Yeats met the woman who became the greatest single influence on his life

and poetry, Maud Gonne. She was Yeats's first and deepest love. She admired his poetry but rejected his repeated offers of marriage, choosing instead to marry Major John MacBride. Gonne came to represent for Yeats the ideal of feminine beauty—she appears as Helen of Troy in several of his poems—but a beauty disfigured and wasted by what Yeats considered an unsuitable marriage and her involvement in a hopeless political cause, Irish independence.

Yeats became a founding member of literary clubs in London, England, and Dublin. During this period he became friends with the dramatist John Millington Synge (1871–1909). He was introduced to Synge in 1896, and later directed the Abbey Theatre in Dublin with him.

The American poet Ezra Pound (1885–1972) came to London for the specific purpose of meeting Yeats in 1909. Pound served as Yeats's secretary off and on between 1912 and 1916. Pound introduced Yeats to the Japanese *No* drama (a form of Japanese theater similar in many ways to Greek tragedy). Yeats's verse dramas (plays in the form of poetry) reflect the ceremonial formality and symbolism of *No*.

The death of Maud Gonne's husband seemed to offer promise that she might now accept Yeats's proposal of marriage. She turned him down in 1917. He proposed to her daughter, Iseult MacBride, only to be rejected by her too. That same year he married Miss George Hyde-Less.

Soon after their wedding, Yeats's new wife developed the power of automatic writing (writing as though coming from an outside source) and began to utter strange phrases in her sleep that she thought were dictated by spirits from another world. Yeats

copied down these fragments and incorporated them into his occult aesthetic system, published as *A Vision* in 1925. A daughter, Anne Butler Yeats, was born in 1919, and a son, William Michael, two years later.

Poet and dramatist

Yeats's first book of poems, *The Wanderings of Oisín and Other Poems*, was published in 1889. In the long title poem he began his celebration of the ancient Irish heroes Oisín, Finn, Aengus, and St. Patrick. This interest was evident also in his collection of Irish folklore, *Fairy and Folk Tales* (1888). His long verse drama, *The Countess Cathleen* (1892), was a combination of modern dramatic forms with ancient beliefs and modern Irish history. He followed this with his collection of romantic tales and mood sketches, *The Celtic Twilight* (1893). Yeats's *Secret Rose* (1897) includes poems that he called personal, occult, and Irish. More figures from ancient Irish history and legend appeared in this volume. *The Wind among the Reeds* (1899) won the Royal Academy Prize as the best book of poems published that year.

The Abbey Theater

An important milestone in the history of the modern theater occurred in 1902, when Yeats, Maud Gonne, Douglas Hyde, and George Russell founded the Irish National Theatre Society, out of which grew the Abbey Theatre Company in 1904. Yeats's experience with the theater gave to his volume of poems *In the Seven Woods* (1907) a new style—less elaborate, less romantic, and more straight forward in language and imagery.

Some of Yeats's plays show his great interest in ancient royalty and "half-forgotten things," but his poetry was unmistakably

new. Yeats's play *At the Hawk's Well*, written and produced in 1915, showed the influence of Japanese *No* drama in its use of masks and in its dances by a Japanese choreographer.

From 1918 to 1923 Yeats and his wife lived in a restored tower at Ballylee (Galway), Ireland. The tower became a prominent symbol in his best poems, notably in those that make up *The Tower* (1928).

Yeats was elected an Irish senator in 1922, a post he filled until his retirement in 1928. He received the Nobel Prize in Literature in 1923. His acceptance of the role and its responsibilities had been foreshadowed (predicted) in his poems *Responsibilities* (1914). The outbreak of civil war in Ireland in 1922 had heightened his conviction that the artist must lead the way through art, rather than through politics, to a harmonious (in tune) ordering of chaos.

Aesthetic theories and systems

Yeats devised his doctrine of the mask as a means of presenting very personal thoughts and experiences to the world without danger of sentimentality (excessive emotions). By discovering the kind of man who would be his exact opposite, Yeats believed he could then put on the mask of this ideal "antiseif" and thus produce art from the synthesis (combination) of opposing natures. For this reason his poetry is often structured on paired opposites, as in "Sailing to Byzantium."

Yeats turned to magic for the illogical system that would oppose and complete his art. He drew upon Buddhism (an ancient Eastern religion), as well as upon Jewish and Christian mystic (spiritual) books to try and capture what he thought was a harmony of the opposite elements of life

Yeats believed that history was cyclical (circular) and that every two thousand years a new cycle, which is the opposite of the cycle that has preceded it, begins. In his poem "The Second Coming," the birth of Christ begins one cycle, which ends, as the poem ends, with a "rough beast," mysterious and menacing, who "slouches towards Bethlehem to be born."

Last works

Yeats's last plays were *Purgatory* (1938) and *The Death of Cuchulain* (1938). He died in Roquebrune, France, on January 28, 1929. He had retired there because of ill health. He had the lines of one of his poems engraved on his tombstone in Ireland: "Cast a cold eye / On life, on death. / Horseman, pass by!" Yeats was not only one of the greatest poets and a major figure in the Irish literary renaissance (rebirth), but also wrote some of the greatest of all twentieth-century literature.

BORIS YELTSIN

Born: February 1, 1931

Butko, Siberia, Russia

Russian president, politician, and government official

Boris Yeltsin, who became president of Russia in 1991, was one of the most complex political leaders of his time. A longtime Communist Party leader, he was an important leader in the reform (social improvement) movements of the late 1980s and 1990s. Yeltsin was perceived at varying times as a folk hero, as a symbol of Russia's struggle to establish a democracy, and as a dictatorial figure (an all-powerful ruler).

Early life

Boris Nikolaevich Yeltsin was born into a Russian working-class family on February 1, 1931, in the small Siberian village of Butko. His parents were Nikolai and Klavdia Yeltsin. He grew up with a younger brother, Mikhail, and a younger sister, Valya. The Yeltsin family lived in communal, or group, situations, first on a farm and later at a construction site where his father worked. His family was in close contact with many other families and their privacy was extremely limited. Yeltsin lived and worked in Siberia for most of his life. His early life, like most of his countrymen in the 1930s and 1940s, was marked by hardship, and as the oldest child Boris had numerous responsibilities at home.

A strong-willed child, Boris twice stood up to the educational system. At his elementary school graduation he criticized his homeroom teacher's abusive behavior, which resulted in him being kicked out of school. He appealed the decision and, after an investigation, the teacher was dismissed. During his last year in high school Yeltsin was stricken with typhoid fever, a terrible disease that causes fever and other symptoms and is easily spread, and forced to study at home. Denied the right to take final examinations

because he had not attended school, he appealed and won. His actions were extraordinary considering this happened during the rule of Joseph Stalin (1879–1953), a period when the government had an intense stronghold on its citizens.

Trained as an engineer, Yeltsin graduated from the Ural Polytechnic Institute. He married his wife Naina at a young age and they had two daughters. The family is believed to be closely knit.

Yeltsin initially worked as an engineer in the construction industry in Sverdlovsk, moved into management of the industry, and later began a career in the Communist Party, eventually becoming first secretary of the party in Sverdlovsk. Yeltsin joined the Communist Party at age thirty, relatively late for a man with political dreams.

A party leader in Moscow

In 1985 Mikhail S. Gorbachev (1931–), the new general secretary of the Communist Party of the Soviet Union (CPSU), brought Yeltsin to Moscow to serve as secretary for the construction industry. Within a year he was appointed head of the Communist Party of Moscow. The eighteen months that followed were a time of achievement and frustration, ending in his dismissal as a candidate member of the Politburo (the top members of the Communist Party) and first secretary of the Moscow Party.

Yeltsin disliked Moscow at first and criticized the privileges of the city's political elite (highest social class). As a political leader, Yeltsin often traveled to work on public transportation and mingled with ordinary people, unusual behavior among the Soviet

elite, who usually traveled in curtained limousines. Yeltsin criticized the pace of the reforms known as *perestroika* and the behavior of some Politburo members. Yeltsin was removed as secretary of the Moscow Party, and he resigned from the Politburo. Yeltsin remained a party member, and Gorbachev appointed him a deputy minister in the construction industry, an area in which he had decades of experience.

In the late 1980s, after Yeltsin criticized *perestroika*, his personal relationship with Gorbachev fell apart. In the 1989 elections Yeltsin surprised the party by receiving 90 percent of the vote and, with great difficulty, was

elected to the small, but important, parliamentary (governing) body, the Supreme Soviet. Gorbachev was elected (chairman) president of the Soviet Union by the new parliament.

During 1989 and 1990 Yeltsin's views made him a folk hero in Moscow, where crowds chanting "Yeltsin, Yeltsin" were a frequent sight. Yeltsin was also elected to the Russian parliament, which in May 1990 selected him as chairman (president) of the Russian Republic. Later that year, Yeltsin formally resigned from the Communist Party.

President of the Republic of Russia

In June 1991 the Russian Republic held its first election for president, and Yeltsin defeated six opponents to win the presidency. As president he declared the Russian Republic independent of the Soviet Union.

Yeltsin as president of the Russian Republic (RSFSR) and Gorbachev as president of the Soviet Union agreed to cooperate on economic reform, a reversal since their relationship fell apart in 1987. However, on August 19, 1991, eight conservative party and government leaders led a coup (takeover) against the vacationing Gorbachev. Yeltsin led the dramatic opposition to the coup and secured Gorbachev's return to Moscow.

In the aftermath of Gorbachev's rescue, Yeltsin consolidated (unified) his own power. Yeltsin led the movement to dissolve the Russian parliament and outlaw the Communist Party on Russian soil. These acts further weakened Gorbachev's power base. In the fall of 1991 Yeltsin and other republic leaders declared the independence of their respective republics, and in December the presidents of Russia, Ukraine, and Belarus (Belorussia)

formed the Commonwealth of Independent States (CIS), declaring they would no longer recognize the Soviet Union as of January 1, 1992. Eight other republics joined the CIS, while four republics became completely independent. Gorbachev resigned before year's end, and as of January 1, 1992, the Soviet Union no longer existed. Yeltsin, who in 1987 had been dismissed from the Soviet leadership, became the head of post-Soviet Russia, the largest of the Soviet successor states.

A new era

Yeltsin began a new chapter in 1992 as president of independent Russia. He undertook an ambitious program of economic reform with mixed results. Businesses were returned to the private sector but the economy began to crumble. Yeltsin's policies were frequently challenged during 1992, ending in a major showdown with the Russian parliament in December 1992. Yeltsin dissolved parliament in September 1993 and a sit-in (peaceful protest) began. In early October 1993, a confrontation occurred, resulting in hundreds of deaths and injuries as well as considerable damage to several Moscow landmarks. The sit-in was eventually stopped.

Yeltsin survived the political crisis, but his reputation suffered. The democratic Yeltsin who protested in the streets of Moscow in the late 1980s was forgotten and a dictatorial (harsh leadership by one) image of Yeltsin emerged. Yeltsin remained at the helm of Russian politics, but as a less heroic figure than the Yeltsin of 1991. Although reelected in 1996, Yeltsin's future was clouded by Russia's economic crisis and the failure of his reform program, combined with the bitter aftertaste of Yeltsin's confrontation with parliament.

Losing power

After the 1996 elections it became clear that Yeltsin had deceived the Russian people about his health. In fact, he had suffered a heart attack prior to elections, and was not well. Although he continued as president, there was talk within the international and Russian community about who would take his place as president.

In 1997 Yeltsin continued to face domestic problems in his new term. The Russian financial picture continued to grow grim, industrial production slowed, and even Russian life expectancy dropped drastically, by six years. Indeed, in 1997, employees frequently waited as long as three months for payment.

Yeltsin had his political stability tested again in May of 1999 when a Communist-led attempt to impeach (to charge with misconduct) him failed. Yeltsin faced five charges—one of the most significant being the accusation that he started the war in Chechnya in 1994—but eventually the charges were dropped. Yeltsin continued to suffer from health problems during his second term, spending large amounts of time out of the public eye as a result. Despite his ill health, Yeltsin remained a dominant political force, dismissing four prime ministers during 1998 and 1999.

Stepping down

Citing the need for new leadership in Russia, Yeltsin suddenly resigned as president on December 31, 1999. Many believed that Yeltsin's declining popularity and failing health contributed to the decision that ended the leader's second term six months early. "I am stepping down ahead of term. I under-

stand that I must do it and Russia must enter a new millennium with new politicians, with new faces, with new intelligent, strong, energetic people, and we who have been in power for many years must go," Yeltsin said during a public address on Russian national television.

Though Yeltsin received praise from then-President Bill Clinton (1946–), most Russians would likely disagree with the glowing review of the leader's eight years in office. Yeltsin's attempts to create a better economy were often crippled by corruption and incompetence, and he became increasingly disliked by the Russian people as a result. Yeltsin appointed Russian Prime Minister Vladimir Putin (1952–) as acting president until a March 2000 election. Putin, a former KGB (the Soviet Union secret police) officer and popular politician, served as both acting president and prime minister. Yeltsin planned to start a political foundation and travel Europe in his retirement.

In 2001 Yeltsin was given Russia's highest award known as "Order of Service to the Fatherland, First Degree." President Putin honored Yeltsin with this award for his part in changing the future of Russia by helping to end the Soviet Union.

PAUL ZINDEL

Born: May 15, 1936

Staten Island, New York

American playwright, screenwriter, and author

From Pulitzer prize-winning playwright to young adult fiction writer, American author Paul Zindel turned his real-life turbulent (marked by disturbance and unrest) teens into fictional stories to show teenagers that their lives and feelings do matter.

Early adventures

Paul Zindel was born on May 15, 1936, in Staten Island, New York. His father, also named

Paul, left Zindel, his older sister Betty, and his mother, Betty, for a girlfriend when young Paul was just two years old. This event began Zindel's early adventures. After his father left, Zindel's mother started moving from town to town and from job to job. From shipyard worker to dog breeder, Betty Zindel seemed unable to keep any job. Yet Zindel offered a sort of compliment to his mother: "what mother lacked in money, she made up for being able to talk a mile a minute." Zindel's mother, however, also constantly threatened suicide. Zindel described his home as a "house of fear." He coped not only by creating a fantasy life, but also by wishing he would be abducted by aliens.

In 1951, when Zindel was fifteen, his wish to escape from his home was granted—

Paul Zindel.

Reproduced by permission of AP/Wide World Photos.

although not by aliens, but by doctors. He was diagnosed with tuberculosis. Since tuberculosis is a highly contagious disease of the lungs, he was confined to the hospital for eighteen months—it was here that Zindel wrote his first play.

After recovering, Zindel graduated from high school and left home once again, this time to attend Wagner College in Staten Island. Zindel did not receive a degree in English, literature, or writing, but in 1958, received his bachelor's degree in chemistry and education. In 1959 he also completed a masters of science degree in chemistry. Following college, Zindel found work as a tech-

nical writer for a chemical company. After six months, he quit and became a chemistry teacher at Tottenville High School in Staten Island. In his free time, he continued to write plays such as *Dimensions of Peacocks* and *A Dream of Swallows*. In the early 1960s, both plays ran on stage in New York City.

Success in two genres

In the mid-1960s, Zindel wrote *The Effect of Gamma Rays on Man-in-the-Moon Marigolds*. *Gamma Rays* tells the story of Tillie, a teenager who feels smothered by her critical mother and a sister who suffers from epilepsy, a severe disorder that effects motor skills. However, Tillie finds hope for her life when the marigolds she exposed to radiation for a science project, bloom. Zindel won many awards for *Gamma Rays*, including the 1971 Pulitzer Prize in drama. Zindel, as stated in the forward to the Bantam Edition, said of this often-awarded play, "I suspect it is autobiographical, because whenever I see a production of it I laugh and cry harder than anyone else in the audience."

After viewing a televised version of *Gamma Rays*, Charlotte Zolotow, an editor at Harper & Row publishers, suggested to Zindel that he write a young adult fiction book. Zindel published *The Pigman* in 1968. *The Pigman* told the story of a betrayed friendship between two high school sophomores, John and Lorraine, and a widower named Mr. Angelo Pignati. After an illness forces Mr. Pignati, the "Pigman," out of his home, he entrusts John and Lorraine with its care and his cherished ceramic pig collection. John and Lorraine betray this trust and the Pigman's friendship, however, by throwing a party where his collection is accidentally

smashed. With this book, Zindel not only continued collecting awards, including the American Library Association's Best Young Adult Book citation, but also praise.

Writing for teenagers

Throughout the 1970s and 1980s, Zindel continued writing books for teenagers. *My Darling, My Hamburger* (1969) probed the questions about lust, sex, contraception (birth control), and abortion (a woman's right to end a pregnancy); true love was the subject in *I Never Loved Your Mind* (1970); parental pressure and friendship came under discussion in *Pardon Me, You're Stepping on My Eyeball!* (1976); and truth and the perception (the concept) of truth in *The Undertaker's Gone Bananas* (1978). A collaboration (the work of two or more people) with his wife, Bonnie Hildebrand, whom he had married in 1973, produced *A Star for the Latecomer* in 1980. In that same year, Zindel published a sequel (the next part of a story) to his most popular book *The Pigman*. *The Pigman's Legacy* returned readers to Mr. Pignati's house where John and Lorraine have a second chance to do the right thing and help another elderly man, Gus, live out his final days. However, this was not Zindel's final tale about a "Pigman."

Zindel's works in the 1990s have stretched his talents even more. In 1993 he published several children's books, including *Fright Party*, *David and Della*, and *Attack of the Killer*. That same year, he also released *The Fifth-Grade Safari*. Returning to his young adult audience, Zindel published *Loch* in 1994 and *The Doom Stone* the following year.

Over the past thirty years, Zindel has followed his Pigman's advice. From stage and screen plays to young adult fiction books, he has used his imagination and shared his real-life adventures. In 2002 Zindel was awarded the Margaret A. Edwards Award for his lifetime contribution in writing for young adults.
