The great Christian hero Emperor Charlemagne is depicted in a cycle of texts, comprising *Sir Ferumbras*, *The Sege of Melayne*, *Charles the Grete*, the *Sowdone of Babylone*, *Roland and Vernagu*, *Otuel*, the fragment *The Song of Roland*, and *The Taill of Rauf Coilyear*. The majority are translations or adaptations from the French, although the Scots *Taill of Rauf Coilyear* appears to be a British original.

These romances describe the threat posed and hostility shown by the Saracens toward Christendom. *Ferumbras*, the Saracen from the eponymous text, is a giant and son of the Saracen sultan Balan, but has power in his own right as lord of Alexandria and rules over vast areas between Babylon and

the Red Sea, Apulia, Palermo, and Russia (*Sir Ferumbras*, lines 53–57). He is clearly also the curse of Christendom: he boasts that he has destroyed the city of Rome, killing the Pope, cardinals, abbots, friars, and nuns. Ferumbras brags that as lord of Jerusalem he also possesses holy relics: the Crown of Thorns, the True Cross, and the nails used to crucify Christ, which he has sent to his father, Charlemagne's deadly enemy. Sultan Arabas (*Sege of Melayne*) has also harried Rome and Lombardy, where he burned churches, while King Ebrahim of Spain has persecuted Christians and exiled the patriarch of Jerusalem (*Roland and Vernagu*), and Magog, an emissary of the Khan of Tartary, has persecuted Christians (*The Taill of Rauf Coilyear*). The audience becomes aware that this threat must be eliminated.

After long individual combat, the Saracen Ferumbras is beaten by Oliver and begs for mercy and promises to convert and persecute those who believe in Mahoun (i.e., the Prophet Muḥammad, transmogrified into a Saracen deity) and make all pagans Christians. We find a similar situation in the romance *The King of Tars*, in which the sultan converts to Christianity and then forces all his subjects to do the same on pain of death. Ferumbras even becomes a Christian saint (*Charles the Grete*). In the *Sowdone of Babylone*, there are no long combat scenes, but short shrift is made of the Saracens: quick conversion or death is the motto here.

Anti-Saracen propaganda is provided by descriptions of the Saracens: they are mostly ugly giants. Christian knights clearly have to overcome their revulsion to fight them, making the foregone victory of the Christians all the more glorious in the eyes of the audience. The maltreatment of Christian knights serves as a further technique of creating audience alienation toward the Saracens. In *Sir Ferumbras*, Christian knights are thrown into a dungeon with snakes, and the incoming tide threatens to drown them. But it is even worse when Christian religious symbols are vandalized. *The Sege of Melayne* begins with a scene where Sultan Arabas tries to burn a cross, which, however, refuses to catch fire. Enraged, he has the cross covered with brimstone and pitch. Then as a punishment from God, fire bursts out of the cross and blinds all the Saracens standing around. This scene again highlights the lack of respect the Saracens show toward Christianity, but it also shows how God leads the way as punisher. Divine intervention proves that the Christians are right to annihilate the Saracens. God also helps the Christians directly. When Richard of Normandy tries to break out of a Saracen siege to reach the French

forces in *Sir Ferumbras*, he finds the River Flagot swollen, but a white hart appears from heaven and leads him through the river safely.

The Christians also show intolerance toward the Saracen faith. Christian knights ridicule the Saracen gods by saying that they are asleep all the time and are therefore ineffective. They attempt to wake them up by smashing them and bombarding the Saracens with statues of their own gods. In *Charles the Grete*, Sultan Balan, encouraged by a false devil in the form of the Saracen god Mahoun, attacks the tower where the Christians are holed up, but unlike the Christian God, the Saracen gods are ineffective and the attempt fails. This is juxtaposed to the situation where Floripas, the sultan's daughter, who helps the Christian knights and who is in possession of the holy relics from Jerusalem, holds these out of the tower window, at which all the Saracens drop dead. The author shows that Floripas, a Saracen, is aware of the evil and inferiority of the Saracens and the superiority of the Christian God.

Floripas, sultan Balan's daughter, a traitor to the Saracens, is also portrayed as the antithesis of the Christian courtly lady. She has fallen in love with the Christian Guy of Burgundy and wants to marry him. To this end she helps the Christian knights escape from prison by dashing out the brains of the jailer, and because her governess becomes suspicious of her actions, she tosses her out of the window. Furthermore, when her father is captured by Charles, she advises the Christians not to waste any time but simply to kill him. Sortybran, the sultan's adviser, has warned the sultan from the beginning that he should not trust his daughter because she is a woman (*Sir Ferumbras*). Thus Saracen women in particular are not to be trusted. Sultan Balan is defeated by Charles and is captured. Ferumbras, Balan's son, tries to persuade his father to convert, but he refuses. An attempt at converting Balan is made, and a baptismal font of marble, in which the Saracens apparently keep wine, is prepared. But when the ceremony is about to begin, Balan, in keeping with the stereotype of the short-tempered Saracen, first punches a bishop and then spits into the font and is beheaded on the spot.

Crusading in the East: Richard the Lionheart

The most violent crusading text is *Richard Coer de Lion*, which describes the organization and implementation of the Third Crusade. There are long violent battle scenes in which the Christians are always victorious, though often greatly

outnumbered. Saladin, described as a daunting and untrustworthy military adversary, has the True Cross in his possession, which Richard wants to win back as well as taking Jerusalem. The Christian and Saracen sides each wish to convert the other, so that belief plays a pivotal role. Richard is portrayed as a merciless warlord and orders all Saracens who refuse to accept baptism to be killed. When King Philip II of France, his ally, does not comply with these instructions at Taburet and Archane, Richard storms the towns and kills all the inhabitants. The text insinuates that the Christians would have been able to take their ultimate goal, Jerusalem, had it not been for the weak Christian leadership. Philip leaves for France, and Richard is only able to secure a truce.

The siege of Acre takes center stage, and this part of the text constitutes a unique episode in English literature. Richard has taken 2,000 Saracen prisoners. When he falls seriously ill, he desires pork, which he says will save his life. An old knight of Richard's, who speaks from experience, tells the cook to prepare Saracen, and Richard unsuspectingly eats the dish, thinking it is pork, and recovers. Richard is then told that he has eaten Saracen, and his reaction is to laugh heartily. As a consequence, Richard decides to use his Saracen prisoners in a diplomatic strategy aimed at intimidating Saladin and forcing his hand, while also striking fear into the Saracens with his ruthless behaviour. Thus he invites Saladin to send emissaries for talks. A banquet of Saracen organized by Richard personally is prepared. High-ranking Saracen prisoners are chosen, their heads cooked, and their names placed on their foreheads. Thus Saladin's emissaries are served their own relatives, whom they are then forced to eat by a laughing Richard. Richard says that while he has so many Saracen prisoners his men will not starve at Acre. This gruesome incident possibly reflects acts of cannibalism supposedly perpetrated by the Franks at Ma'arrat al-Numan during the First Crusade. However, Richard's noble and chivalric traits are also highlighted, when he refuses to kill Saracens while they are asleep (*Richard Coer de Lion*, lines 6449–6450).

Later Texts

The Three King's Sons (c. 1500) describes how Sicily has been partly conquered and besieged by Turks. The King of Sicily seeks help from fellow Christian rulers. To his aid come Prince Philip of France, Prince David of Scotland, and Prince Humphrey of England. The hand of Iolante, the king's beautiful daughter, is an added bonus. In this late text, combat

between Saracens and Christians no longer includes decapitations, arms being chopped off, or cleavings in two; in fact, there are very few military details: feelings and doubts play a greater role. The Saracen prince Ferabras of Persia and Orcays the son of the Sultan of Turkey, earmarked as future Christian knights, help the Christian princes to victory over the Saracens and are instrumental in bringing about the obligatory final death of the sultan. Orcays and his beautiful sister convert to Christianity. She marries Humphrey of England, and Orcays marries Humphrey's sister. In the works of Geoffrey Chaucer (d. 1400), we see the contradictions in the depiction of Saracens. Dabbling in science (*Treatise on the Astrolab*) and with a knowledge of alchemy (*The Canon's Yeoman's Tale*), Chaucer integrates Arab, therefore Saracen, learning into his works. He also describes the mysteries of the East in *The Squire's Tale*, where the daughter of the King of Tartary is given a ring by the King of Arabia that allows her to understand the language of the birds. We are presented with a high-born, exemplary Christian knight in the *Knight's Tale* who fights for both Christian and Saracen lords (though never against Christians), thereby highlighting the equality of the East and the West from a courtly military point of view. However, in *The Man of Law's Tale* we find the Constance motif, in which a Christian princess is married to a sultan on condition that he converts. Her jealous Saracen mother-in-law casts her adrift: as in the case of Floripas, we see the violent, at times heartless, Saracen lady. In *The Man of Law's Tale* Chaucer describes Viking Saracens. However, Chaucer also ridicules the whole courtly scene in his *Tale of Sir Thopas*, citing characters from well-known crusading romances, and introducing a giant knight with the name of Sir Olifaunt. Chaucer, the teller of the tale, is stopped in his tracks by the Host, and the *Tale of Melibeus*, based on a traditional French source and the complete antithesis of *Sir Thopas*, then follows. These apparent contradictions can be explained by Chaucer probably finding it imprudent to criticize the social and religious status quo.

Religious Viewpoints

Conversion and religion are clearly central elements in these crusading texts. There are great celebrations when worthy heathen knights become Christians (*Otuel*). There are also Christianized ex-Saracens who become most fervent in converting and killing Saracens, as in *Otuel* and the *King of Tars*.

Although tolerance toward Saracens is shown in some texts (*Piers Plowman*), and equality between Christian and

Saracen chivalry is demonstrated in *Blaunchardyn and Eglantine* and Chaucer's *Knight's Tale*, the *King of Tars* highlights the uselessness of the Saracen faith. A Christian princess is forced to marry a heathen sultan for political reasons, and when she gives birth to their child it is a formless lump of flesh. The sultan says that it is her fault because she does not believe in his gods, Termagaunt, Apolyn, and Mahomet (in most texts the Saracens are presented as having three gods, probably a reflection of the argument put by Arab theologians that Christians could not have three persons in one god). The sultan prays to his gods to make the child normal: nothing happens. The queen then prays to her Christian God and the child is immediately transformed into a beautiful baby. The sultan, now convinced of the efficacy of the Christian God, converts and is baptized, receives a new identity with a change of name, and miraculously changes color from his Saracen black to Christian white, an outward sign that his soul has now been cleansed. We find a similar situation in *Charles the Grete*: the Christian Clotildis's first son, though baptized, dies, and the second son falls ill after baptism. Her heathen husband Cloys says that baptism is to blame, but through Clotildis's prayers the child survives. Now convinced by the efficacy of the Christian God, Cloys converts and is baptized by St. Remigius. Through divine intervention, a dove from heaven brings a vessel with chrism, which from that time is used to anoint the kings of France.

Conclusions

The element of entertainment plays a vital role in these texts, and "Saracen bashing" clearly found favor with courtly circles. Audiences were probably well aware of the superior lifestyle and learning of the Arabs through contacts in the East they had made or through hearsay. Certainly Christians readily adopted Arab lifestyles in Outremer and Sicily. However, as compensation, it was believed that though the Saracens had a superior lifestyle, they could not achieve salvation. Through the Schism of East and West (1054), Western Christendom had needed to define its role in the world anew and acquire an identity of its own through its spiritual center, Rome. Furthermore, through the teachings of influential theologians such as Bernard of Clairvaux, the concept of "us" and "them" and ideas such as offering non-Christians the choice of conversion or death became firmly established, and they are reflected in crusading literature. Saracens and Christians were economic, political, military, and

above all religious rivals. Thus we find populist religious hatred and bigotry in this literature, which considers crusading as constituting a "just war," using Charlemagne's argument from 600 years earlier. However, while demonstrating intolerance, crusading literature in English and Scots also reflects a popular curiosity about and fascination with the "Saracens" that lasted to the end of the Middle Ages.

Epiros

A Byzantine state in northwestern Greece (1204–1449/1479) established after the Latin conquest of Constantinople (mod. İstanbul, Turkey) by the Fourth Crusade (1202–1204), termed a “despotate” from around the middle of the thirteenth century.

Under the Angelos-Komnenos-Doukas dynasty, Epiros became one of the main resistance centers of medieval Hellenism against Latin domination, and the principal rival to the other major Byzantine successor state, the empire of Nicaea, for the recapture of Constantinople from the Latins. Michael I (1204–c.1215), the founder of the Epirot state, gradually annexed the entire northwestern coast of Greece, an area with a largely Greek population and minorities of Slavs, Jews, Armenians, and Vlachs, and also began the Greek reconquest of Thessaly (Central Greece). Michael’s half-brother and successor, Theodore (c. 1215–1230), secured the Epirot possession of Dyrrachion, Arta, Ioannina, and the important port of Naupaktos. He completed the conquest of Thessaly and expanded his territories eastward, extinguishing the Latin kingdom of Thessalonica (1204/1207–1224) and inaugurating another Byzantine Empire there by having himself crowned with the Greek title *autokrator* (emperor) as a manifestation of his ambition to restore Constantinople to Byzantine rule. His plans were, however, marred by his defeat at Klokotnitcha by the Bulgarians (1230), which led to the breakup of the Epirot possessions; Thessalonica eventually fell into the hands of the Nicaean emperor John III Doukas Vatatzes (1246), who had previously forced the Epirot ruler John (1237–1244), to relinquish the title of emperor for that of “despot” (Gr. *despotes*, i.e., local ruler) in 1242.

Following the defeat of an Epirot-Moreote coalition at Pelagonia (1259), Nicaean forces under Michael (VIII) Palaiologos occupied much of Epiros, but Epirot independence was maintained in the territories around Ioannina, Preveza, Arta, and Naupaktos. From the thirteenth century, Epirot history is closely connected with developments in Thessaly, especially after the division of Epiros following the death of Despot Michael II (1268 or 1271), when Epiros was ruled by his sons Nikephoros I (1268/1271–1295/1296) and Thomas (1295/1296–1318), and Thessaly by his illegitimate son, the sebastokrator John I Angelos Doukas (1268/1271–1289/1290) and his successors till 1318. John’s death led to a rapid deterioration in Epirot-Thessalian relations, with a bold but ineffective Thessalian invasion of Epirot territories (c. 1296) taking place, probably with the connivance of the Byzantine emperor Andronikos II Palaiologos.

In 1318 the Italian Orsini dynasty seized control in Epiros. A brief Byzantine recapture by the Palaiologoi (1337) was followed by annexation by Tsar Stephen IV Dušan of Serbia in 1348/1349, inaugurating a period of harsh Serbian rule, which coincided with successive Albanian incursions, resulting in the capture of Arta by the Spata clan late in the fourteenth century. A vain attempt of the despot Nikephoros II, with the support of several Thessalian local lords, to oust the Serbs and Albanians from Thessaly resulted in a devastating defeat at the hands of the Albanians near the town of Acheloos in 1359. The Italians gained a more definitive hold in Epiros from the late fourteenth century onward. A member of the Florentine Buondelmonti house ruled in Ioannina (1385–1411), to be succeeded by Carlo I of the Tocco dynasty (established in the Ionian Islands since the early fourteenth century), whose long presence in the area was described in the early fifteenth-century *Chronicle of the Tocco*. Carlo I succeeded in seizing Arta from the Albanians (1416) and in unifying Epirot possessions in the early decades of the fifteenth century; however, his demise in 1429 precipitated the Ottoman advance westward: Ioannina fell to the Turks in 1430 and Arta in 1449, while the last Epirot vestiges were annexed by 1479.

Eracles

The *Eracles* or *Estoire d'Eracles* was an Old French translation and continuation of the history of William of Tyre by anonymous authors. The *Eracles* of the title refers to the Byzantine emperor Heraclius (610–641), with whose recapture of Jerusalem in 630 William of Tyre's history begins.

The continuation recounts in detail the loss of Jerusalem to Saladin in 1187 and the subsequent history of Outremer, some manuscripts continuing the narrative as far as 1277. Forty-nine manuscripts of the translation with the continuation survive, but there is no critical edition. Two versions of the translation of William of Tyre have been published: the so-called Colbert-Fontainebleau *Eracles* (in the series *Recueil des Historiens des Croisades*) and one by Paulin Paris. The translator (possibly working in the West between 1205 and 1234) and the composers of later versions made important adjustments and additions to William's text, and there are significant differences between the various manuscripts. The continuations that follow the translation were assembled between 1220 and 1277 and added on to the translation.

Forty-four of the manuscripts of the continuation for

1185–1229 record a version of events similar to that preserved in the *Chronique d'Ernoul*. The other five manuscripts, including the Colbert-Fontainebleau manuscripts, preserve different versions of events. All these continuations seem to reflect the political views of part of the Frankish nobility of Outremer. For the period 1229–1261, a variant version of *Eracles* exists in twelve manuscripts, known as the Rothelin Continuation, which was apparently composed in the West and reflects a Western viewpoint.

Eraclius (d. 1190/1191)

Latin patriarch of Jerusalem (1180–1190/1191).

Eraclius was probably born in the 1120s in the Auvergne; he may have been descended from the family of the viscounts of Polignac. After having (probably) taken a master's degree and studied law with Stephen of Tournai at Bologna, he was appointed as archdeacon of the Church of the Holy Sepulchre in Jerusalem (1169–1175) and archbishop of Cae-

Erik I of Denmark (d. 1103)

sarea (1175–1180), with the support of Agnes of Courtenay. Along with William, archbishop of Tyre, and six other ecclesiastical dignitaries, Eraclius represented the Latin Church of Palestine at the Third Lateran Council in October 1178. He was elected patriarch on 16 October 1180, again with decisive support from Agnes of Courtenay. The unsuccessful candidate was William of Tyre, a factor that is significant, in that many of the negative judgements of Eraclius are based on the testimony of William's chronicle and its Old French continuations.

In 1180–1181, on behalf of King Baldwin IV of Jerusalem, Eraclius mediated between Prince Bohemund III of Antioch and the Latin patriarch of Antioch, Aimery of Limoges. In the internal politics of the kingdom of Jerusalem, Eraclius took the part of the magnate faction around Agnes of Courtenay, whose influence helped bring about the appointment of Guy of Lusignan as regent of the kingdom in 1183. Three years later it was Eraclius, in collusion with the masters of the Templars and the Hospitallers, who managed the coronation of the princess Sibyl and her husband Guy of Lusignan as queen and king of Jerusalem (1186). Before this, in order to seek assistance for Outremer against the growing threat from Saladin, Eraclius had been sent to the West (1184–1185), where he met Pope Lucius III, Emperor Frederick I Barbarossa, King Philip II Augustus of France, and King Henry II of England. During the disastrous campaign against Saladin that culminated in the battle of Hattin (3–4 July 1187), Eraclius remained in Jerusalem; he was held responsible for the loss of Outremer and the relic of the True Cross in many contemporary Western sources.

In the summer of 1188, Eraclius went to Antioch, but by August 1189 he was in the camp of Guy of Lusignan when the latter started to besiege Acre. The patriarch died during the siege, probably in late autumn 1190.

Erik I of Denmark (d. 1103)

King of Denmark (1095–1103) and leader of a crusade to the Holy Land in 1103.

Erik was born around 1056 and was the fourth son of King Sven Estridsen (d. 1076) to become king of Denmark. His nickname, Ejegod, means "the Good." On the death of his brother King Oluf Hunger (1095), Erik was recalled from exile in Sweden to assume the crown. He traveled to Rome and Bari, probably in 1098, founding two hospices for pilgrims, one in Lucca and the other near Piacenza. While in Italy he started negotiations that led to the establishment of an independent Danish church province with an archbishopric in Lund (1103/1104). He also managed to have his brother Knud the Holy (d. 1086) canonized in 1100. He fought against the heathen Wends in the 1090s and forced them to pay tribute; it is very likely that the Wendish areas, especially around Rügen, became a Danish missionary field at this time.

In 1103 Erik left for Jerusalem with his wife, Bodil, and a strong following: according to a contemporary Icelandic poet, this was to heal his internal wounds and save his soul. Later twelfth- and thirteenth-century sources suggest that Erik had taken the cross, and if his status as *crucesignatus* (one signed with the cross) cannot be taken as certain, it is at least very likely. His journey to Jerusalem took him via Constantinople (mod. Istanbul, Turkey), where he was splendidly received by the Byzantine emperor. Erik never

reached the Holy Land but died in Paphos on Cyprus; his exact burial place on the island is not known. His wife continued on to Jerusalem, where she died on the Mount of Olives and was buried in the Valley of Jehosaphat.

Erik Jedvardson

King of Sweden (c. 1153–1160), patron saint of Uppsala and later of Sweden.

According to late sources, King Erik is supposed to have led a crusade to Finland (the so-called First Swedish Crusade) in 1155 or 1157 together with Henry, who became the first bishop of Finland but was soon martyred there. The result of this crusade was the forced conversion of the Finns of southwestern Finland. The sources for this crusade are the Legend of Erik and the *vita* (life) of Bishop Henry, both from the end of the thirteenth century. They may perhaps be considered as ideological constructions intended to support renewed Swedish crusading initiatives and a Dominican mission in Finland. Yet crusades were common among the neighboring countries of Sweden in the mid-twelfth century, and so the tradition of Erik’s crusade cannot be dismissed as a fabrication with certainty. In the later Middle Ages, Erik became an important patron saint and a figurehead for Swedish rebellions against the Kalmar Union (1397–1524) with Denmark and Norway.

Ermes, Battle of (1560)

The last pitched battle fought by the Teutonic Order in Livonia.

In 1558 Livonia had been attacked by Ivan IV, tsar of Muscovy, whose forces quickly conquered the eastern part of the country. The Livonian attempts to organize a counteraction remained unsuccessful. In the summer of 1560 the Livonian forces were situated at Trikatēn (mod. Trikāta, Latvia) under the command of Marshal Philipp Schall von Bell. While moving north on 1 August, they encountered a group of Russian cavalry and decided to attack, unaware that this was a patrol of the Russian army on its way from Dorpat (mod. Tartu, Estonia) to Fellin (mod. Viljandi, Estonia).

Near Ermes (mod. Ēr’gēme, Latvia), about 20 kilometers (12½ mi.) west of Walk (mod. Valga, Estonia), the Livonians were surrounded and defeated by the Russians under the command of Prince Vassilii Barboshin. According to contemporary sources, there were 300–500 Livonian cavalymen and 400–500 infantrymen against 12,000 Russians. The Livonians lost 261 men. Most of the order’s leaders were killed or captured, including Schall von Bell, who was executed in Moscow on 28 October. The part of the Livonian army that had stayed in camp managed to escape. The Livonian branch of the Teutonic Order had now lost the main part of its leadership and most of its small military strength. Fellin surrendered to Russian forces on 21 August.

Ernoul

According to the *Chronique d’Ernoul et de Bernard le trésorier*, Ernoul was a squire employed by Balian, lord of Ibelin, and an eyewitness to the fall of the kingdom of Jerusalem to Saladin in 1187. The Old French chronicle attributed to him, which survives in ten manuscripts, tells the history of Outremer from 1100 to 1228; some manuscripts continue the chronicle to 1232 and state that it was copied for Bernard, treasurer of Corbie Abbey.

Apart from the single reference to Ernoul the squire, little is known of the author(s) of this chronicle. Margaret Morgan’s theory that Ernoul was Arneis of Gibelet, a Cypriot lawyer active in the 1220s, has not been accepted by scholars. The content of the chronicle indicates only that the author or compiler was a native of Outremer and supported

Eschatology

the policies of the Ibelin family; it is therefore valuable because it preserves the views of part of the Frankish nobility of Outremer. Like the *Eracles* (the Old French translation of William of Tyre's *Historia*), it recounts many attractive anecdotes, which may not be reliable but which make readable history.

Composed after 1187, the first part of the *Chronique* concentrates on the history of the kingdom of Jerusalem from 1163 and the rise of Saladin, although it also includes a unique and valuable account of the foundation of the Templars. The second section, from 1185 to 1228/1232, is similar to the majority of the continuations of the *Eracles*. Peter Edbury and John Gillingham consider that only the material covering 1187 originated with Ernoul the squire, the rest being a later compilation. Edbury has demonstrated that the Lyons *Eracles* (MS Lyons, Bibliothèque de la Ville, 828), which Morgan had suggested was directly based on Ernoul's original chronicle (now lost), was in fact assembled in the 1240s.

Eschatology

Eschatology, in the sense of Christian beliefs about the end of the world, played an important part in Christian responses to the rise of Islam and also came to form a significant component in the ideology of crusading. Eschatological beliefs, so intense in early Christianity, were derived mainly from biblical prophecies: the Book of Daniel, the Book of Revelation, Jesus's prophetic speech on Jerusalem (Matt. 24), and St. Paul's allusions to the "son of perdition" who, although hidden, will reveal himself at the end of time

(2 Thess. 2:3). Two of Daniel's prophecies (the statue and the four beasts) were interpreted as outlining the progress of future history up to its end: the four successive universal empires (those of the Babylonians, the Persians, the Greeks, and the Romans) will be followed by the collapse of the Roman Empire, symbolized by the ten toes of the statues or the ten horns of the fourth beast. An evil power will then appear, which will eventually be annihilated. The Apocalypse depicted in the Book of Revelation follows the same pattern, but the prophecy here is more specific about certain elements that are to take place before the last days. Thus, the persecution of the Woman (the church) by the Dragon (Satan) will last (as in Daniel) "a time, and times, and half a time" (Rev. 12:14), that is to say, 42 days, or 1,260 prophetic days. The Dragon will be helped by "a Beast" that will "rise up out of the sea," representing the Antichrist. Its number is 666 (Rev. 13:18). It has seven heads and ten horns, ten "kings" (Rev. 17:12) who will fight the Lamb (Christ) in the last battle of history. They will be defeated by Christ and those faithful to him. The Beast will be captured, as will the "false prophet" who had seduced mankind, and they will be annihilated forever (Rev. 19). When evil has been thus defeated, the heavenly Jerusalem will appear. All these eschatological elements lead to Jerusalem, to which Christ will return to defeat the Antichrist and the false prophet before the Last Judgment takes place and the Kingdom of God is established.

Development of Eschatological

Beliefs before the Crusades

Speculation on the time of Christ's return (if not on its precise date, which Christ declared was known only to God the Father, according to Matt. 24:36) began in the first centuries of the Christian church, occasionally drawing on nonbiblical prophecies and various other traditions. To combat such speculation, which he thought harmful, St. Augustine of Hippo condemned all those who tried to know when the world would end; he laid down a spiritual and nonhistorical interpretation of the eschatological prophecies. For him the Last Times had already been accomplished in the church, which foreshadowed the heavenly kingdom into which the faithful would eventually enter. This doctrine was adopted by the Western church. However, it did not wipe out the earlier historical interpretations, which remained popular in the Middle Ages, and were often associated with Islam and the crusades.

As early as 634, the patriarch of Jerusalem envisaged the Arab invasions of the Byzantine Empire in eschatological terms: he likened the capture of Jerusalem to the “abomination of desolation . . . in the holy place” prophesied by Daniel and Jesus (Dan. 9:27, 11:31; Matt. 24:15). Around 640, a work written in Carthage by a converted Jew interpreted the Book of Daniel in the traditional way: the fourth beast represented the Roman Empire, then in decline, and soon the little horn would appear, a demonic power heralding the imminent end of the world. But the “prophet of the Arabs,” who was thought by some Jews to announce the Messiah, was a false prophet who came fully armed and preached false doctrines. Several Eastern writers soon came to see the Muslim invasion as a punishment inflicted upon Christians for their sins, and it was hoped that this punishment would be brief. As Arab rule went on, it was given a place in prophetic history: in times past, God had punished his people by imposing upon them the successive rule of the Babylonians, the Persians, the Greeks, and the Romans; God now was using the Arabs as a scourge with which to chastise the church.

For some, Arab rule marked the beginning of the Last Times. Such was the case for the author known as Pseudo-Sebeos, writing around 660. Soon afterward, the duration of Arab rule was fixed at “ten weeks of years” (i.e., 70 years) in the *Apocalypse* of Pseudo-Methodios of Patara. As the invasion of Syria had taken place in 636, the defeat of the Arabs was expected in 706. The Byzantine emperor would defeat the “pagans” (i.e., Muslims) and present God with his crown at the Mount of Olives. This would usher in the Last Times: the Antichrist would appear, but be defeated by Christ. Around 700, a reworked Latin version of this text spread across Europe: in this version, Arab rule was a temporary punishment and heralded the Last Times. These would begin with the coming of a Christian king who, uniting East and West, would defeat the Arabs in Jerusalem.

In Spain, Paulus Alvarus of Córdoba interpreted the Book of Daniel in the traditional manner, but identified the Arab power with the “little horn” that was to persecute the saints during the last days. He prophesied that it would be annihilated in 16 years’ time, that is around 868. The so-called *Prophetic Chronicle* (883), assigned an important part in history to the Arabs; however, its interpretation of one of the prophecies of Ezekiel was employed for the benefit of the Asturian dynasty, without any eschatological dimension: it predicted an imminent Christian victory

over the Arabs, after 170 years of their rule.

Around 950, the monk Adso of Montier-en-Der abandoned any reference to the Arabs and corrected Pseudo-Methodios: for him the Last Times could not be imminent, since the Roman Empire had been continued by the Frankish kings of the West, thus postponing the coming of the Antichrist. However, when the last Frankish king relinquished his crown in Jerusalem, then the End of the World would come. This interpretation proved highly popular in the eleventh century, as is witnessed by the large number of manuscripts of the text. Around 1085 Benzo of Alba depicted Henry IV, Holy Roman Emperor, as the “Latin” king of the Last Days: he would become king of the Greeks in Constantinople, march on Jerusalem, venerate the Holy Sepulchre, and be crowned with everlasting glory.

Eschatology and the Crusade Movement

The period preceding the crusades (perhaps more than the years around the year 1000) was propitious to the birth of a movement with eschatological undertones. Interpretations of the apocalyptic prophecies indeed focused on Jerusalem and on the Holy Sepulchre, which it was thought had to be reconquered before the end of time by a king who would unite Latins and Greeks. There was, moreover, a vague hope of a prophetically announced victory over the Arabs, whose rule marked a divine punishment that was nearing its end. This idea that Muslim Arab rule was destined to disappear can be found expressed in the letters of Pope Urban II, and the preaching of the crusades was entirely in line with this pedagogic conception of history.

Although the crusade movement was not principally motivated by eschatological expectations, such expectations were associated with many of the crusades. For example, Guibert of Nogent gives an eschatological dimension to Urban II’s call that brought forth the First Crusade (1096–1099): according to prophecy, the Antichrist would come to fight the faithful in Jerusalem, which could only happen if Christian warriors were present in the city. Other sources report such a motivation on the part of some crusaders. The main aim of the anti-Jewish pogroms led by Emicho of Flonheim in the Rhineland was to bring about the forcible conversion of the Jews, which, it was believed, was to take place at the end of time. Emicho, moreover, styled himself the king of the Last Days.

The sources for the Second Crusade (1147–1149) do not suggest any eschatological expectations. However, the anti-

Semitic preaching of the monk Ralph makes it plausible, but no more, that there may have been such expectations. There is more certainty that they were present during the Third Crusade (1189–1192); Frederick I Barbarossa, the Holy Roman Emperor, was indeed inspired by the eschatological myth of the Last Emperor, which was then widespread in Germany. King Richard the Lionheart of England shared this preoccupation with eschatology, as is shown by his dialogue with the mystic Joachim of Fiore. Joachim and Richard understood the twelfth chapter of the Book of Revelation as an announcement of the persecution of the church, which was to last 1,260 years. The seven heads of the Dragon represented the seven persecuting powers; for Joachim, the penultimate one was Saladin and the last was the Antichrist in person. Richard was thus living in the penultimate age of the world and it was his duty to fight Saladin, whose demise was imminent. Joachim announced that this would take place in 1194, seven years after the fall of Jerusalem to Saladin. The Antichrist was then expected to make his appearance about that time.

The deviation of the Fourth Crusade (1202–1204) ruled out any reference to eschatology, but expectations had not disappeared. An author known as William Aurifex or Aurifaber announced that the world would end within five years' time and saw Philip II Augustus, king of France, as the last king of History. The Antichrist had already made his appearance, in the form of Pope Innocent III. According to the chronicler Rigord, who was recording popular rumour, the Antichrist had been born in Babylon and the end of the world was nigh.

In the case of the Fifth Crusade (1217–1221), Joachim of Fiore once again prophesied the demise of Islam. In the encyclical *Quia major* (1213), Innocent III also predicted the collapse of Islam and its false prophet, a collapse announced by the “number of the Beast” (666), which represented a length of time. According to him, 600 years had gone by since the appearance of Muḥammad; approximately 60 years thus remained before the end of Islam. The crusade itself was characterized by the same eschatological atmosphere. The capture of the city of Damietta in Egypt in 1219 heightened expectations, giving rise to pseudoprophetic writings in Arabic. These texts announced that the fall of Damietta would be followed by the coming of the Antichrist, while two Christian kings would come and annihilate Islam. Such hopes may explain the intransigence of the papal legate Pelagius of Albano in

response to concessions offered by the Ayyūbids: relying on these prophetic writings, he was awaiting the arrival of Emperor Frederick II and of a “King David” who would help the Christians to defeat Islam.

When Frederick II himself did eventually arrive in the Holy Land, he fulfilled an eschatological belief when he had himself crowned king of Jerusalem in the Church of the Holy Sepulchre (18 March 1229), thus identifying himself with the “king of the Latins and of the Greeks” who was to reign in Jerusalem and present Christ with his crown before the coming of the Antichrist. The stained-glass windows of the Sainte-Chapelle in Paris suggest that there was also an eschatological dimension to the two crusades of King Louis IX of France.

Eschatological expectations linked to the (supposedly imminent) demise of Islam were thus a feature of most crusades, despite repeated disappointments. These expectations persisted after the last crusade, but the aim would henceforth be to convert Muslims rather than defeat them by the sword.

Eskil of Lund (d. 1181)

Archbishop of Lund (1137–1177).

Eskil was born into the Danish nobility around 1100. After studies in Hildesheim, he became bishop of Roskilde (1134), then archbishop of Lund (1137). Through his contacts with Bernard of Clairvaux, Eskil introduced the Cistercian Order into Denmark and Sweden in 1143–1144. In 1159 he found himself in opposition to King Valdemar I of Denmark in the conflict between Pope Alexander III and Frederick I Barbarossa, the Holy Roman Emperor. As a consequence, in 1161 Eskil went into exile. Upon his return, followed by a partial reconciliation with the king, Eskil participated in a crusade against the Wends, resulting in the conquest of the island of Rügen off the southern coast of the Baltic Sea in 1168. In 1170 he took part in the coronation of the king's son, Knud VI, and the canonization of the king's father, Knud Lavard. Around this time renewed archiepiscopal and royal collaboration resulted in the introduction into Scandinavia of the Order of the Hospital.

Eskil was apparently the architect behind letters from Pope Alexander III issued in the years 1171–1174 that called for crusade and mission toward Estonia, and possibly also Finland. Kings and magnates from Scandinavia were urged to defend and expand the Christian faith. This endeavor was to be headed by Fulco, presumably a Benedictine monk from St. Rémi in France, whom Eskil had apparently ordained as missionary bishop of Estonia many years previously. It remains uncertain, however, whether Fulco ever reached Estonia. Eskil resigned from office in 1177 to spend his last years at the monastery of Clairvaux.

Estonia, Duchy of

In the course of the Baltic Crusades of the early thirteenth century, Danish and German forces conquered the land known in the later Middle Ages as Livonia, corresponding to modern Estonia and northern Latvia. The northernmost parts of Livonia (i.e., mod. northern Estonia) became a duchy belonging to the Danish Crown until the king of Denmark sold it to the Teutonic Order in 1346.

North Estonia before the Crusades

Those areas that later came under Danish rule were the provinces of Harria, Jerwia, Revele, and Vironia (Ger. Wierland), situated on the southern coast of the Gulf of Finland. They were bounded in the east by the River Narva and Lake Peipus (mod. Peipsi Järv, Estonia, Chudskoe Ozero, Russia) and extended as far as the Baltic Sea in the west, and included the two large Baltic islands of Ösel (mod. Saaremaa) and Dagö (mod. Hiiumaa). The area consisted mainly of bogs and wetlands densely wooded with pine and birch and with rocky cliffs lining the northern shores. It was inhabited by Finno-Ugrian-speaking peoples, who were overwhelmingly pagan Estonians. Organized under leaders known as elders, these tribes took an extensive part in the trading and raiding activities that had been elements of the economy of the Baltic region since the Viking age.

The earliest, but apparently ineffective, missionary efforts by Christian powers in Estonia is reported to have come from Sigtuna in Sweden in 1120. However, it was not until sometime before 1171 that Eskil, archbishop of Lund, appointed a French monk, Fulco, as missionary bishop of Estonia, whose work was supported by letters from Pope Alexander III. In 1171/1172 Alexander permitted Fulco to be accompanied in his mission by a certain Nicholas, who seems to have been a converted Estonian living in a Norwegian monastery. It remains uncertain, however, whether Fulco and Nicholas ever reached Estonia.

Written sources mention several clashes between Estonians and Scandinavians in the last third of the twelfth century. However, reliable details of these incidents are often hard to establish. A joint Danish-Norwegian raid against Estonia may have taken place in the late 1180s. Danish sources mention a naval raid against the Estonians in 1184, and Nor-

wegian sources report a son of the Norwegian king raiding in 1185 or 1188. Swedish annals mention a pirate raid in 1187, undertaken either by Estonians or Karelians, on the merchant settlement of Sigtuna and the archiepiscopal fortress in Uppsala, during which the Swedish archbishop Stephen was supposedly killed. A late source mentions a Danish raid against Estonia by King Knud VI in 1196/1197.

The Crusader Conquest

Pope Celestine III (1191–1198) granted indulgences to crusaders who went to the eastern Baltic region. This boosted the German mission in Livonia and may have renewed a Christian interest in Estonia. The chronicler Henry of Livonia tells of an attack by Valdemar II, king of Denmark, in 1206, in response to an Estonian raid on the Danish province of Blekinge in 1203. Henry's account of the Danish expedition remains doubtful, however, since other sources state that the expedition was led by the archbishop of Lund, and at the time in question the king was known to have been waging war in northern Germany. According to Henry, the Danes arrived with a large army on Ösel and immediately erected a wooden fortress as their military base. However, they soon realized the futility of their endeavour, burnt down the fortress, and returned home. The Danish archbishop, however, proceeded to Riga. As a result of this visit, the bishop of Riga, Albert of Buxhövdn, and the Order of the Sword Brethren turned its attention to Estonia.

In 1208 the Sword Brethren waged war in the southern provinces of Estonia following unsuccessful negotiations with the Estonians; it is possible that the Danes also organized an expedition to the area around Fellin (mod. Viljandi) in 1208, perhaps as part of a joint operation with the order. During the campaign of the Sword Brethren, the pagan fortress at Odenpäh was burned down, but retaliation followed, with an attack on Livonia by a large army of united Estonian tribes. These events were the opening of a series of wars, which around 1218 resulted in the submission of the southern Estonian provinces to the Christians.

The northern parts of Estonia still resisted conversion. Strife and competition between the Christian powers aided their resistance. The Estonians often allied themselves with the Russians of Novgorod against the Livonian church; at times, however, these alliances simply seem to have been attempts to hinder simultaneous Russian and Rigan attacks on Estonia.

Danish attempts to conquer the region were buttressed by

papal letters, which in 1212 granted legatine powers to the Danish archbishop to oversee the mission in the Baltic region. In 1213 he was allowed to erect a bishopric in Sakkala and Ugaunia. In December 1215 Pope Innocent III ordered all the faithful in Denmark to go on crusade against those who persecuted the Christians in Livonia. Accordingly, Count Albert of Orlamünde, a vassal of the Danish king, in 1217 went to Livonia to support Bishop Albert of Riga in his continuing struggle to conquer the northern provinces. Pope Honorius III commuted the crusade vows of ten of Count Albert's men and allowed them to do service in Livonia instead of the Holy Land.

In June 1219 King Valdemar II of Denmark landed on the shores of northern Estonia, near Reval (mod. Tallinn). He had obtained a papal privilege recognizing him as the rightful ruler of all the lands he would conquer. The Danish crusade followed a plea for Danish assistance made to Valdemar II by Albert of Riga in 1218. A new royal fortress in Reval became the point of departure for the Danish conquest in the years following a lucky victory over the Estonians in the battle of Lyndanis (15 June 1219). Valdemar II maintained that both Estonia and Livonia had been promised to Denmark by Bishop Albert and exerted pressure on him by blockading the harbour of Lübeck, the main point of embarkation for crusaders going to Livonia. However, Albert and his allies refused to give in. Following the Danish conquest of Ösel, negotiations between Valdemar, Albert, and the Sword Brethren in 1222 made the Danish king restore Livonia to Albert, and all parties agreed on a territorial division of Estonia.

The Estonians of Ösel, however, soon revolted against the Danes, and the rebellion spread to the mainland, with the effect that all the regions conquered by the Danes except for Reval were recaptured. The Sword Brethren, nevertheless, soon suppressed the rebellion. At the same time Valdemar II was taken prisoner in Denmark by one of his North German vassals. This incident effectively brought Danish expansionist politics in the Baltic region to a halt. In 1225, perhaps at the instigation of the Sword Brethren, German vassals from Odenpäh entered Vironia and expelled the Danes from the province. The papal legate William of Modena intervened in the dispute between the Christian powers and confiscated the contested provinces of Vironia, Jerwia, Harria, and Wiek, which had all hitherto been held by the Danes. In 1226, however, Harria was returned to Danish rule. Realizing that the Danish king was occupied in northern Germany, in 1227 the

Sword Brethren were able to capture the fortress at Reval from the Danes and were subsequently given the administration of the confiscated provinces by the papal vice-legate. A new papal legate, Baldwin of Aulne, did not succeed in bringing peace to the region, and was later removed by Pope Gregory IX.

Valdemar II fought to regain the northern Estonian provinces, and through another blockade of Lübeck in 1234 and letters of complaint to Gregory IX he managed to gain the upper hand in the struggle with the Sword Brethren. The Danish cause was helped by a papal ruling of 1236 in Valdemar's favour, as well as the crushing defeat of the order by the Lithuanians at the battle of Saule (1237): the Sword Brethren suffered major losses and their surviving members were absorbed into the Teutonic Order.

North Estonia as a Danish Duchy (1238–1346)

A treaty between the Teutonic Order and the Danish king at Stensby in 1238 reestablished Danish rule over North Estonia. The Order returned the provinces of Harria, Revelle, and Vironia to Valdemar II. Jerwia was granted to the Teutonic Knights in perpetuity, on the specific condition that the order not build any fortifications there without the consent of the Danish king. Functioning as a buffer zone, Jerwia came under the temporal rule of the order, but in ecclesiastical terms it belonged to the Danish bishopric of Reval. The treaty envisaged that the Danish kings, in cooperation with the Teutonic Order, would participate in the expansion of the Christian faith. It was therefore stipulated that when the two powers together conquered land from the pagans, two-thirds should be allotted to the Danish king and one-third to the order.

The Danish possessions in Estonia became a duchy under the Crown. The Danish king's representative, the viceroy or captain of Reval (Lat. *capitaneus Revalie*) governed the lands, often in cooperation with the Council of Vassals. He was in charge of the royal fortresses and military command; he collected taxes, oversaw the mint, and exercised judicial powers. Frequent contact between the Estonian provinces and Denmark was maintained through regular visits to Denmark by the captain of Reval, the bishop of Reval, and the vassals.

Soon after the return of the Estonian provinces to the Danish king, the king enfeoffed the greater part of the land to vassals. According to a list of vassals in the royal cadastral work, the *Liber Censum Daniae* (compiled around

1240), the majority at this time were Germans. However, some Danes and a few Estonians also received fiefs. Relations between king and vassals were regulated in 1252 when vassals were granted the German feudal code, and again in 1315 with the so-called Valdemar-Erikian Feudal Code. Vassals were obliged to travel to court to do homage to the king in person on the accession of a new monarch, or when a new vassal inherited a fief. The vassals had to do service in army and at court; in return they held their land as hereditary fiefs, received tithes from their fiefs, and had full jurisdiction in civil and criminal cases in the first instance. They also came to enjoy great political influence through the Council of Vassals.

The bishop of Reval was a suffragan of the Danish archbishop of Lund. Unlike other bishops in the eastern Baltic region, he had no territorial powers. The kings of Denmark initially claimed the right to appoint the bishop, and this procedure, although in direct violation of canon law, was allowed to continue for long periods during the Danish administration, thus strengthening the king's hold over the provinces. An ecclesiastical organization was set up during the thirteenth century, as the land was divided into parishes where the building of churches soon began. Religious orders, including Dominicans and Cistercians, established houses in Reval and in the surrounding countryside.

The towns in Estonia served as centers of trade and administration. During the Sword Brethren's rule of Reval, the trading community there was expanded by the settlement of merchants from Gotland who were invited in by the order in 1230. In 1248 the Danish king granted Reval the town law code of Lübeck, presumably in order to further the town's ties with the Hanseatic merchants. The same law code was later also granted to the other two towns in the Danish lands, Wesenberg in 1302 and Narva in 1345. German merchants settled in Reval, and the town became an important port of transit on the Hanseatic trade route from Novgorod to the West. All three towns in Estonia included a royal fortress under the command of a royal bailiff (Lat. *advocatus*).

The popes were keen to ensure the expansion and safeguarding of Latin Christendom against the Orthodox faith. Letters from both Gregory IX (1240) and Innocent IV (1245) authorized crusades in defence of the neophytes (converts) in Estonia, who were reportedly threatened by nearby barbarians and idolaters. These letters offered participants an indulgence equivalent to that offered to crusaders going to

Eugenius III, Pope (d. 1153)

the Holy Land. In 1245 King Erik IV of Denmark planned an expedition against the pagans and received not only papal authorization for this project, but also financial support in the form of part of the tithe collected in the church province of Lund; nothing, however, came of this. Yet Danish military forces, including vassals from the Estonian provinces, several times engaged in warfare against the Russians or the pagan peoples of the region, often in cooperation with the Teutonic Order.

On St. George's day (23 April) 1343 the peasants of Harria rose up in rebellion against their foreign masters. The Danish hold over the Estonian provinces had been weakened by an interregnum of several years in Denmark (1332–1340), and there were already plans to sell off the duchy. The position of King Valdemar IV had been further undermined by the abduction of the captain of Reval by the Teutonic Order earlier in 1343. The Teutonic Knights in Livonia intervened, but the rebellion spread, and it was finally put down only in early 1345. Unable to secure his Estonian lands and in need of resources and allies to gain control of his Danish lands, Valdemar IV sold the Estonian provinces to the Teutonic Order in 1346.

The former Danish possessions in Estonia at first came under the formal rule of the grand master of the Teutonic Order, based in Prussia. In 1347 the grand master transferred the governance of the two provinces to the master of the Livonian branch of the order, under whose rule they remained until its secularization in 1561–1562.

Eugenius III, Pope (d. 1153)

Pope (1145–1153), who summoned the Second Crusade (1147–1149) in response to the fall of Edessa to the Muslim leader Zangī in 1144.

Born into the noble Pignatelli family of Pisa, he received the name Bernard either at baptism or when he joined the religious life. He began his ecclesiastical career as a canon of the cathedral of Pisa, but in 1135, impressed by Bernard of Clairvaux's charisma and piety, he joined the Cistercian

Order. Soon afterward he became abbot of Tre Fontane in Rome when that ancient abbey was reformed by the Cistercians. He was elected pope on 15 February 1145, immediately following the death of Lucius II, but had to flee Rome, along with the cardinals who had elected him, because of the formation of an antipapal commune. While in exile in Vetralla, Eugenius urged King Louis VII and the nobles of France to fight off the Muslim attack on Edessa in the bull *Quantum predecessores* (1 December 1145), although some historians suggest that Louis VII had developed plans for a crusade before this. In the bull, subsequently reissued on 1 March 1146 with slight changes, Eugenius made clear that the crusading indulgence granted remission of divine punishment for sin, rather than only remission of ecclesiastical discipline imposed by the church through confession, thus clarifying the ambiguous first crusading dispensation of Pope Urban II.

The crusade gained increased attention after Easter 1146, when Eugenius commissioned Bernard of Clairvaux to preach it. The pope himself traveled to France to promote the crusade in the following year, issuing *Divini dispensatione* (II), in which, under the influence of Bernard, he proclaimed an attack on the Wends to be part of the crusade and welcomed the participation of the king of Germany, Conrad III. On his own initiative, Eugenius also included the reconquest of Spain in the crusade, particularly urging a campaign against Tortosa and Tarragona. Once the news of the failure of the crusade in Outremer reached Europe, Eugenius acknowledged the magnitude of the defeat and resisted calls to summon a new crusade. He returned to Rome in 1149 with the help of King Roger II of Sicily but was soon forced by Roman politics to flee again. With the aid of Emperor Frederick Barbarossa, he regained the city in 1153. He died at Tivoli on 8 July of the same year.

Eugenius IV (1431–1447)

Pope (1431–1447), original name Gabriel Condulmaro.

Born in Venice in 1383, Gabriel became pope in succession to Martin V. He continued ecumenical negotiations with the Byzantines, even agreeing to hold a council in Constantinople. He brought Emperor John V Palaiologos, along with the patriarch of Constantinople and 700 of their supporters, to Ferrara for an ecumenical council beginning 8 January 1438. However, the expense of hosting his Byzantine guests, plus a revolt in Rome, nearly bankrupted him. On 10 January 1439 the council moved to Florence, and on 6 July the union of the Latin and Greek Orthodox churches was proclaimed, followed soon after by similar agreements with the Armenians, Nestorians, and Maronites of Cyprus. The Byzantine reward for the union was help to defend Constantinople, but the crusade of 1444, after a few successes, was defeated at Varna in Bulgaria and did little to protect the empire. Simultaneously, Eugenius was struggling with the Council of Basel, a majority of whose members refused to join the Council of Ferrara-Florence. They deposed him on 25 June 1439, electing Felix V as antipope, which lost the council much of its support. Eugenius continued his policies with widespread support, dying on 23 February 1447.

prominence as the leading vassal of Baldwin I of Jerusalem (1100–1118), who by 1110 had enfeoffed him with the coastal lordships of Sidon (mod. Saïda, Lebanon) and Caesarea (mod. Har Qesari, Israel). During the reign of Baldwin II (1118–1131), Eustace was elected as constable and regent of the kingdom when the king was captured by the Turks of northern Syria, but died after less than three months in this office (15 June 1123). Eustace's major lordships passed to his sons Eustace II, who received Sidon, and Walter, who received Caesarea. His widow later married Hugh, count of Jaffa.

Eustace III of Boulogne (d. 1125)

Count of Boulogne (c. 1089–1125) and participant in the First Crusade (1096–1099).

Eustace was the eldest son of Eustace II, count of Boulogne, and Ida of Bouillon. He succeeded to his father's county of Boulogne in northern France; his younger brothers, Godfrey of Bouillon and Baldwin, were to become the first two Frankish rulers of the kingdom of Jerusalem.

Eustace led a contingent of his own in the First Crusade, although it is unclear from the conflicting accounts in the sources whether he traveled to Constantinople with his brothers or with Robert Curthose of Normandy and Robert

II of Flanders. However, thereafter he and Godfrey often campaigned together. At the siege of Nicaea (mod. İznik, Turkey), Eustace helped lead the initial crusader attack, and he aided in the rescue of Bohemund of Taranto's beleaguered troops at the battle of Dorylaion (July 1097). At Antioch (mod. Antakya, Turkey), he and Godfrey defeated an ambush early in the siege. Later, Eustace, Robert of Normandy, and Adhemar of Le Puy defended the crusader camp while the other leaders attacked the Turkish reinforcements. In the final assault on the city, Eustace led one of the crusader divisions. He participated in the Council of Princes that sought to resolve the conflict between Raymond of Saint-Gilles and Bohemund (November 1098). Shortly thereafter, he assisted Raymond in sacking Ma'arrat an-Nu'man (December 1098).

In July 1099 Eustace and Tancred successfully raided Nablus. Eustace gained great fame at the capture of Jerusalem (15 July): it was he, Godfrey, and their men who breached the walls of the city while the other crusaders despaired of victory. Shortly after Godfrey's election, Eustace and Tancred received the surrender of Nablus, and on their return they took an Egyptian scouting party by surprise. At the battle of Ascalon (12 August 1099), Eustace commanded one of the crusader divisions.

Eustace returned home a few months later. On Godfrey's death, Baldwin I became king of Jerusalem, and when he died in 1118 Eustace was elected as his successor by a group of the magnates of the kingdom. Eustace set off for the Holy Land, but upon his arrival in Apulia a few weeks later, he learned that Baldwin II (of Bourcq) had been crowned king. Without attempting to contest this second election, Eustace returned to Boulogne. Twelfth-century histories and the early crusade epics depict Eustace III as one of the campaign's heroes. In his epitaph, written at Cluny, he is called "the captor of Jerusalem and the dread of the Eastern empires."

Evremar of Chocques (d. 1128/1129)

Latin patriarch of Jerusalem (1102–1106/1108) and archbishop of Caesarea (1108–1128/1129).

Evremar came from Chocques in Flanders, and, like the first Latin patriarch of Jerusalem, Arnulf of Chocques, started his ecclesiastical career as a priest under the tutelage of the prospective bishop of Arras, Lambert of Guines, in the see of Thérouanne after 1068. From the Holy Land, Evremar stayed in touch with his former bishop. According to the chronicler William of Tyre, he reached Palestine together with Robert II, count of Flanders, during the First Crusade (1096–1099).

Largely at the instigation of King Baldwin I of Jerusalem and the papal legate Robert of St. Eusebio, Evremar was chosen to succeed Daibert of Pisa as patriarch in October 1102. He had a reputation for piety and charity, and was considered worthy enough to carry the True Cross when the Jerusalem army fought the Egyptians at the third battle of Ramla in August 1105. He supported the transformation of the Greek Orthodox monastery on Mount Tabor into a Benedictine house (abbey of the Savior) and the foundation of a confraternity in the ruins of the derelict house of Our Lady of Jehosaphat in Jerusalem. Considering these activities, the opinion of Guibert of Nogent that Evremar of Chocques was simple and illiterate can no longer be taken at face value. Because of Evremar's quarrels with King Baldwin I of Jerusalem concerning the foundation of a see in Bethlehem after spring 1106, the king requested his deposition from Pope Paschal II. The pope's legate, Gibelin of Arles, eventually ruled Evremar's election invalid at a church council in Jerusalem in spring 1108. Evremar was transferred to the see of Caesarea (mod. Har Qesari, Israel), where he served as archbishop until his death, which occurred between 25 December 1128 and 31 August 1129.

Excidium Acconis

A contemporary Latin account of the fall of the city of Acre (mod. ‘Akko, Israel) to the Mamlūks in April–May 1291.

The anonymous author, who was not present at the siege, used eyewitness reports to write his description around the end of 1291. In matter-of-fact style, he conveys the dramatic

impact of the loss of the Franks’ last territorial possession in Outremer and conveys much useful information. The *Excidium* may be used with *Thaddeus of Naples* and the *Templar of Tyre* to reconstruct the events of the siege. The *Excidium* was translated into Old French relatively early in two independent versions, neither of which is available in a modern edition or translation. Four manuscripts of the Latin *Excidium* are extant, dating from the fourteenth and fifteenth centuries, the best of which is MS Paris, Bibliothèque Nationale de France, lat.14379.

F

Famagusta

A port in eastern Cyprus. Famagusta (mod. Ammochostos), inhabited by a Greek population, was conquered in 1191 by King Richard I of England in the course of the Third Crusade (1189–1192). After a brief period of rule by the Templars, it became part of the newly founded Frankish kingdom of Cyprus.

The rise of Famagusta into the major city, port, and trading center of the island began in the 1260s. This development was closely connected with the massive arrival of Frankish, Syrian, and Armenian refugees from the ports of Outremer as they were gradually lost to the Muslims. The large number of Arabic-speaking Syrians subject to the king gave rise to the appointment of a *raʿīs* (president of the court) to deal with their judicial matters. The concentration of Frankish refugees accounts for the choice of Famagusta as the coronation venue of the Cypriot rulers as kings of Jerusalem after 1291. The ethnic variety within the city's population persisted in the following centuries.

Famagusta remained under direct royal rule. There is no evidence that it ever obtained municipal franchises. Genoa, Pisa, and Venice were granted commercial privileges in Cyprus, yet no quarters in the city, which was thus spared the political and territorial fragmentation found in several Levantine ports. The growing economic role of Famagusta, boosted by the fall of Outremer to the Mamlūks in 1291, also attracted settlers from the West. It prompted the Western maritime powers to transfer their main representatives in Cyprus to the city within the following decade. Around 1300 the nationals of the maritime powers formed sizeable

communities, the growth of which was furthered by the naturalization of foreigners.

Famagusta's commercial role underwent changes closely connected with political and economic developments in the Mediterranean. The city became a major transit station between the West and Egypt after Pope Nicholas IV decreed an embargo on trade with the Mamlūk territories in 1291. Its importance declined somewhat with the resumption of direct Western links with these territories in 1345, and it also lost much traffic during the Genoese occupation of the city from 1374 to 1464. The period of direct Venetian rule (1489–1571) witnessed a moderate growth of the economy and an increase in population. Famagusta was captured by the Ottoman Turks in 1571.

Fāṭimids

An Arab dynasty that ruled Egypt from 969 to 1171. The Fāṭimids belonged to the Ismāʿīlī branch of Shīʿite Islam, which recognized the descendants of Ḥasan and Ḥusayn, the two sons of Prophet Muḥammad’s daughter Fāṭima and ʿAlī, the fourth caliph, as the legitimate rulers of the Muslim community. By the mid-ninth century, the Ismāʿīlis were engaged in subversive and revolutionary activities against the ʿAbbāsīd caliphs of Baghdad. In 909, the establishment of a Fāṭimid state in Tunisia caused a rupture in the Ismāʿīlī movement, when the Carmathians of Bahrayn opposed the Fāṭimid claim to be the imāms, that is, divinely chosen and rightly guided rulers of Islam.

The Fāṭimids ruled Tunisia and Sicily until 973, when they transferred their state to Egypt, following the conquest of that country by their general Jawhar in 969. The North African phase of the Fāṭimid state was marked by the establishment of two new capital cities: Mahdiya (mod. al-Mahdiyya, Tunisia), built in 916–921, and al-Ṣabra or al-Manṣūriyya (near mod. Kairouan, Tunisia), begun in 946, and occupied until 1053. Mahdiya was erected on a peninsula on the coast of Tunisia and marked the Fāṭimid state’s Mediterranean orientation, both with its deep involvement in trade with Muslim Spain, Italy (especially Amalfi), and Byzantium, and with its naval activities against them. The Fāṭimids also maintained a network of commercial relations with sub-Saharan Africa, where they procured gold and black slaves.

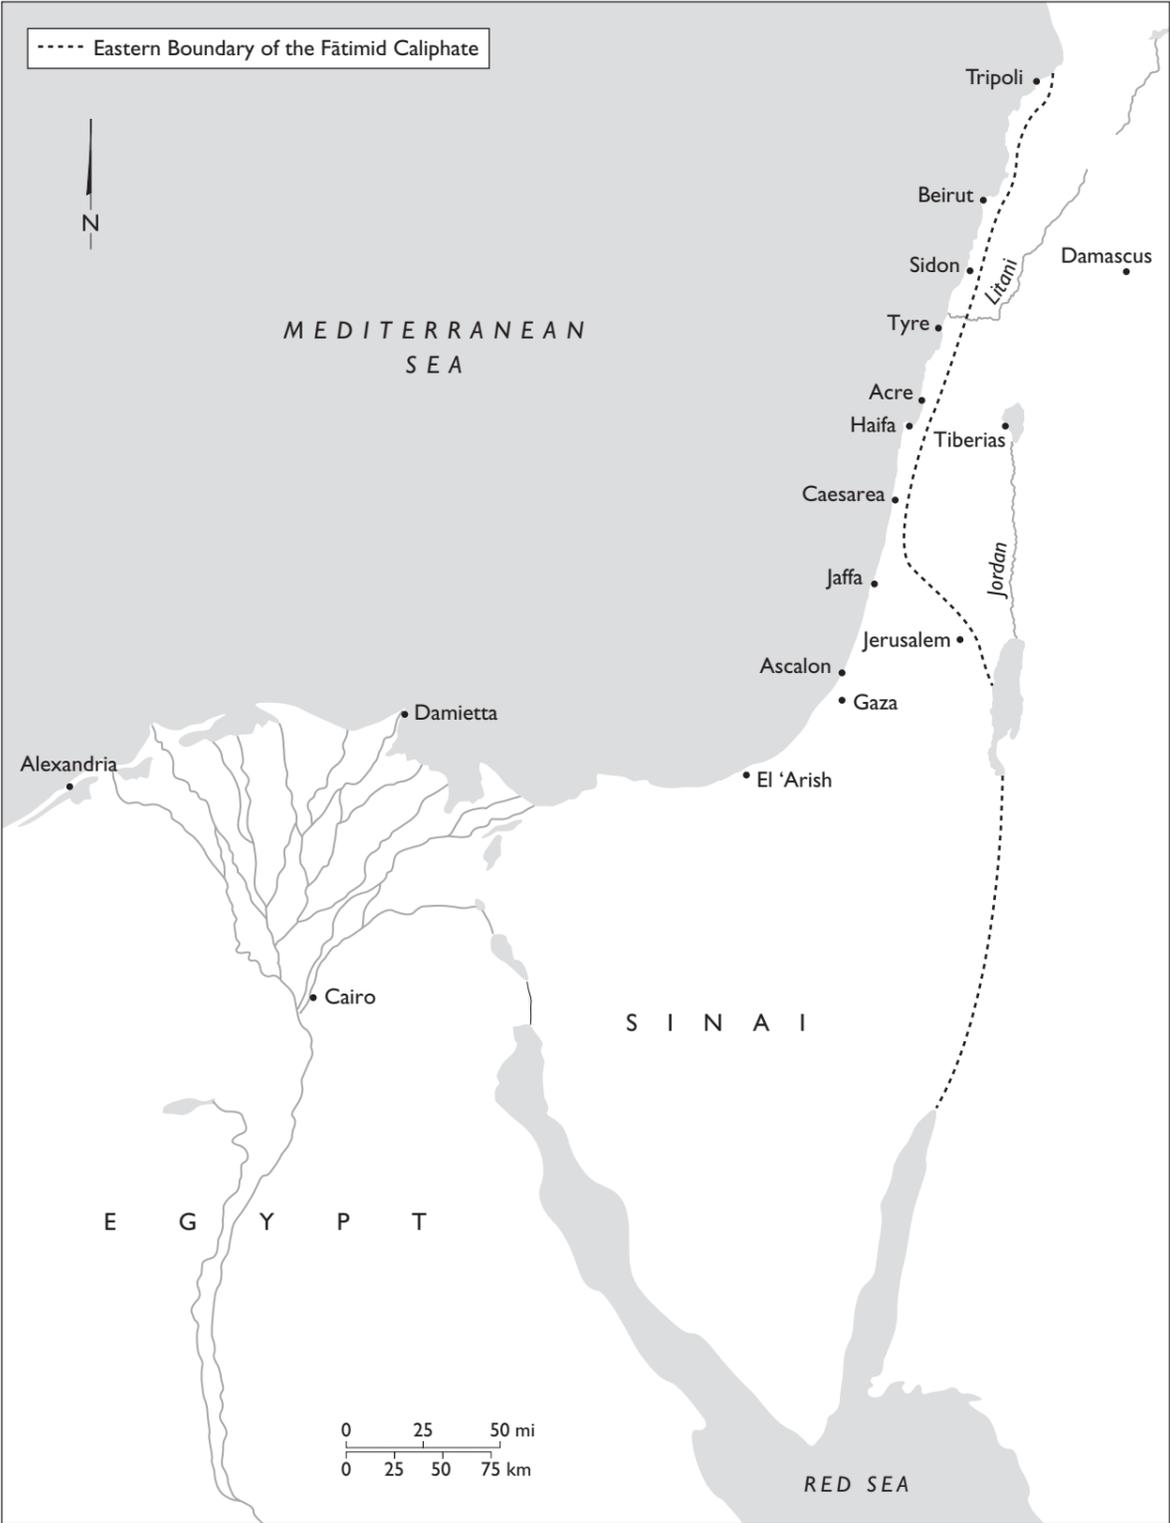

The Fāṭimid efforts to conquer Egypt were inspired not only by their difficulties in ruling North Africa (exemplified by the rebellion of Abū Yazīd in 944–947, which posed a serious challenge to the Fāṭimid rule) but mainly by their desire to reach Baghdad and supplant the ʿAbbāsīd caliphs. The conquest of Egypt in 969 was achieved after some initial failures, and the Near Eastern phase in the history of the Fāṭimid state began. Immediately after the conquest of Egypt, the Fāṭimids invaded Palestine and Syria, but their dream of

reaching Baghdad never materialized and their always precarious hold over Damascus and Palestine collapsed in the second half of the eleventh century with the arrival of the Turkish Saljūqs.

The impact of Fāṭimid rule on Egypt was manifold and outlived the Fāṭimids in two areas. The establishment of Cairo proved to be a great success. The town became the seat of the Fāṭimid rulers, a religious and cultural center and magnet for local and foreign merchants. During Fāṭimid rule in Egypt, a commercial network that connected India and the Mediterranean emerged, and it lasted well into the late Middle Ages, declining only during the Ottoman period. The trade of Egypt flourished, with merchants from the Muslim areas of the Mediterranean (Spain, North Africa, and Sicily), Italy, and Byzantium visiting Alexandria and Cairo in pursuit of spices and goods from India and the East Indies.

The majority of the Egyptian population were Sunnī Muslims, with minorities of Christians and Jews. The number of Shīʿites was small. The Fāṭimid regime depended largely on its control of the army, which was mostly made up of non-Egyptian elements. Although the Fāṭimid caliph was nominally the head of state, from the second half of the eleventh century the actual control of government was usually in the hands of a vizier. The Fāṭimids used missionaries outside the empire to spread Shīʿite doctrines, especially among the urban populations of Saljūq-controlled Syria, but there was no attempt to spread Shīʿism within Egypt, as this would have aroused antagonism within the majority Sunnī population.

The Fāṭimids misunderstood the intentions of the First Crusade (1096–1099) and initially tried to form an alliance with the crusaders for cooperation against the Saljūqs, who supported the rival ʿAbbāsīd caliphate. As it was the Saljūq territories that came under attack first, the Fāṭimids were able to take the opportunity to seize the city of Jerusalem from Saljūq control (June 1099). However, they were slow to recognize that Jerusalem itself was the main goal of the crusade, and their relieving army arrived too late to prevent the fall of the city to the crusaders (15 July 1099). The Fāṭimid army that camped around Ascalon (mod. Tel Ashqelon, Israel) suffered a humiliating defeat by the crusaders at the battle of Ascalon (12 August 1099), allowing the crusaders to consolidate the territorial achievements up to that point. During the first decade of the twelfth century, the Fāṭimids lost the towns of Arsuf, Haifa, Beirut, Sidon, and Tripoli to the Franks of Jerusalem and Tripoli. The Fāṭimid land and

The Fāṭimid Caliphate in 1099

naval efforts were uncoordinated and their armies hesitant and unable to mount a serious military challenge to the Franks. The fall of Tyre (mod. Soûr, Lebanon) in 1124 came about as the result of lack of cooperation between the Fāṭimids and the rulers of Damascus, while a contributory factor to the fall of Ascalon in 1153 was a coup that took place in Cairo while the Franks were besieging the town.

An examination of the battles that took place between the Fāṭimids and the Franks shows that the Fāṭimids failed militarily because their army collapsed in crucial battles fought in Palestine (1099, 1105, and 1123), due to a lack of cooperation between the cavalry and the infantry. This reflected a sociomilitary problem deriving from the inherent weakness of Muslim multi-ethnic armies. Traditionally, the Fāṭimid army was a multi-ethnic force dominated by a very large component of black slave infantry with a much smaller, but ethnically diverse, cavalry element. In the mid-eleventh century, the strength of the Fāṭimid army was probably over 100,000 soldiers, but the numbers dwindled from that point, and during the 1060s, the army consisted of only 40,000 African infantry and over 10,000 cavalry. The Fāṭimid multi-ethnic army was very difficult to handle on the battlefield, since such a heterogeneous force was ridden with ethnic animosities, exacerbated by the different status of freeborn troops and military slaves (Arab. *mamlūks*).

On three occasions (at Ramla in 1105, Ibelin in 1123, and Ascalon in 1153), the navy performed better than the army, but the navy on its own, without the support of the army, achieved nothing. The small Fāṭimid navy was vastly outnumbered by the European fleets that operated in the eastern Mediterranean in support of the crusades, and its ability to ship supplies and reinforcements was limited. For this reason the Fāṭimids were very hesitant about committing their navy to the support of coastal towns that were besieged

by the Franks and large European naval forces, as happened at Acre in 1104, Tripoli in 1109, and Tyre in 1124. In any case, naval battles were quite rare events, and only in the summer of 1123, off the south Palestinian coast, was the Fāṭimid navy involved in a disastrous naval battle with a Venetian fleet. Naval raids were more common, but the shipping lanes used by the European fleets on their way to the Levant were beyond the range of Fāṭimid warships operating from the Egyptian ports of Alexandria and Damietta. The Fāṭimid naval failure was a result of European naval superiority combined with geographical and naval factors characteristic of the eastern Mediterranean.

During the 1160s, the Fāṭimids became entangled in the conflict between Nūr al-Dīn, the ruler of Muslim Syria, and the Franks. Shāwar, an ousted Fāṭimid vizier, managed to involve both Nūr al-Dīn and the king of Jerusalem in the internal affairs of the Fāṭimid state. Each power coveted Egypt and was ready to do anything to prevent its rival from gaining control of Egypt. Politically the Fāṭimid state was weak and divided, and the Fāṭimid army was not a match either for the Franks or the forces of Nūr al-Dīn. In economic terms, Egypt was a valuable prize with its rich agricultural output and flourishing long-distance international trade. The Franks were well informed about Egypt's agricultural potential, and are known to have possessed a list of Egyptian villages and the incomes derived from them. The participation of Italian maritime republics in the crusades also posed a serious dilemma for the Fāṭimids, since the Italians stimulated trade with India because of their demand for spices and their presence in Egypt was crucial to maintain the momentum of this trade. Egypt was also dependent on its Mediterranean partners for supplies of timber, iron, and pitch. The Fāṭimids, like Saladin later on, continued to maintain commercial relations with the Europeans and allowed the presence of Italian and Byzantine merchants in their ports in spite of the wars of the crusades.

Between 1164 and 1171, the armies of Nūr al-Dīn and the kingdom of Jerusalem fought their wars on Egyptian soil with the Fāṭimids being unable to influence the course of events. Eventually, the Franks withdrew from Egypt, and Egypt came under the control of Nūr al-Dīn's general Shirkuh. On Shirkuh's death his nephew Saladin succeeded him as vizier. The Fāṭimid regime had failed to strike deep roots among the Muslim population of the country during the two centuries of its rule in Egypt, and it was overthrown by Saladin with ease. He broke up the Fāṭimid army and on the death of the

caliph al-ʿĀḍid (1171) recognized the religious authority of the ʿAbbāsid caliph in Baghdad, which effectively ended Fāṭimid rule. From the Franks' point of view, the rise of Saladin meant a change for the worst and, under Saladin's rule, Egypt became fully integrated in the Muslim wars against the Franks; the Fāṭimids had lacked any real zeal or motivation in their military efforts against the kingdom of Jerusalem.

Fellin

Fellin (mod. Viljandi, Estonia) was a castle with an adjoining small town in Livonia, constructed on the site of an Eston-

ian hill fort. It was located at the point where the medieval waterway from Pernau (mod. Pärnu) via Dorpat (mod. Tartu) to Pskov was crossed by the road from north to south.

First besieged by the crusaders in 1211, during the subjection of the province of Sakkala (1217), Fellin developed into a center of crusader power, with improved fortifications and a church. The castle was briefly taken by an Estonian uprising, but was finally subjected to the Order of the Sword Brethren in 1223. Fellin later became a commandery of the Teutonic Order. It was regarded as one of the best-equipped and strongest castles in Livonia and housed the treasury of the Livonian branch of the order. In 1560 Fellin was conquered by Muscovite troops. In the following wars between Sweden, Poland, and Muscovy, the castle was ruined, and it lost its military importance by the beginning of the seventeenth century.

Fellin, Battle of (1217)

The greatest battle between the pagan Estonians and the crusaders during the conquest of Estonia, fought near Fellin (mod. Viljandi, Estonia).

In the spring of 1217 an army of crusaders arrived in Livonia led by a vassal of the Danish king, Albert of Orlamünde, count of Holstein. At the same time, on the initiative of Lembitu, the prominent Estonian leader from the district of Sakkala, an army was gathered from almost all regions of Estonia. In September the Estonians waited for a Russian auxiliary army from Novgorod that failed to arrive. Against them assembled an army consisting of crusaders, Livs, Lettgallians, and members of the Order of the Sword Brethren under the leadership of Count Albert and Volkwin, master of the order.

Ferdinand II of Aragon (1452–1516) and Isabella I of Castile (1451–1504)

The two armies met on 21 September (St. Matthew's Day, after which the battle is also sometimes named) north of Fellin; the exact place of the battle is unknown. The Germans, who were positioned in the middle of the battle line, broke through the main unit of the Estonians, and then the Livs and Lettgallians on the wings forced Estonians to flee. Many of the Estonian leaders were killed, among them Lembitu. Caupo, the Christian leader of the Livs, also died. According to the chronicle of Henry of Livonia and the *Livonian Rhymed Chronicle*, 6,000 Estonians and 3,000 Christians took part, and some 1,000 or 1,400 Estonians were killed. After the battle, the district of Sakkala accepted the crusaders' peace terms.

Ferdinand II of Aragon (1452–1516) and Isabella I of Castile (1451–1504)

Ferdinand II, king of Aragon (1479–1516), and Isabella I, queen of Castile (1474–1504), became through marriage joint rulers of the central and eastern kingdoms of Spain. The two sovereigns were granted the title of “Catholic Monarchs,” or literally “Catholic Kings” (Sp. *Reyes Católicos*) by Pope Alexander VI in 1496 as a reward for their extension of the Christian faith, especially for their conquest of the last Muslim enclave in the Iberian Peninsula, the Naşrid kingdom of Granada.

Ferdinand and Isabella were married in 1469. After the struggle over the Castilian throne following the death of Henry IV was decided in favor of Isabella in 1474, she and her husband started preparations for a campaign that would wipe out the Muslim presence in the peninsula. Their main concern was to find ways of financing the war. As early as September 1477, they approached Pope Sixtus IV, and in November 1479 they obtained a first crusading bull, which was limited to the granting of a plenary indulgence to those participating in the war. Further negotiations produced a new and far more generous bull in August 1482, which followed a previous agreement in June 1482 on the division of crusade revenues between the pope, who was to attack the Turks, and the monarchs of Castile and Aragon. The accord and the sub-

sequent bull came after the first serious clashes between Christians and Muslims had already taken place. In December 1481 the frontier castle of Zahara was stormed by Moorish contingents. There was a swift Christian response. At the end of February 1482 the fortress of Alhama to the southwest of the city of Granada was taken. Ferdinand and Isabella exploited civil strife in Granada between King Abu'l-Hasan 'Alī and his son Muḥammad Abū 'Abd Allah (Muḥammad XII, known to the Christians as Boabdil), and later between the former's brother al-Zaghal and Muḥammad.

After severe setbacks at Loja and La Ajarquía in the winter 1482–1483, Ferdinand and Isabella managed to capture Muḥammad XII at the battle of Lucena in April 1483. Cunningly they set him free to foment disunion in the Granadan court, while they put pressure on Muslim fortresses in the western part of the Naşrid kingdom; Alora was taken in June 1484, while Ronda and its encircling mountain range (the Serranía) fell in 1485. Pope Innocent VIII renewed his predecessor's bull in January 1485; in August of that year he renounced his third of the crusade revenues in favor of the Crown, and later he extended the preaching of the crusade to other Iberian kingdoms. Increasing revenues made the war of attrition against the Muslims possible. As Castilian pressure grew tighter and the economic basis of the Naşrid kingdom feebler, the crisis within the Granadan court reached higher levels. Al-Zaghal rose to prominence, and Muḥammad XII had to take refuge in Christian Córdoba, where Ferdinand and Isabella offered him support to reorganize his party.

Meanwhile, the slow Christian advance proceeded. Loja was taken in May 1486, and the city of Málaga a year later. Among the participants in the campaign of the year 1486 were Edward Woodville, Lord Scales, with 300 English knights, showing the extent and success of crusade preaching outside the Iberian Peninsula. The fall of Málaga meant the final loss of the western section of the Naşrid kingdom; its eastern part was attacked from 1488 onward. In December 1489 Al-Zaghal surrendered and ceded Baza and Almería to the Christians. Only the central part of the Naşrid kingdom around the city of Granada remained in Muslim hands. In November 1491, Muḥammad XII was forced to capitulate, and in January 1492 Ferdinand and Isabella entered Granada. The initially tolerant treatment of the vanquished population by Hernando de Talavera, the first archbishop of Granada, was followed by the uncompromising attitude of Francisco Jiménez de Cisneros, archbishop of Toledo, who

took responsibility for conversions in 1499. Harsh measures led to a Muslim revolt in 1500, which was suppressed in May 1501, and the archbishop forced the conversion or expulsion on the Granadan Muslims. That alternative was extended to all Castilian Muslims in 1502 and to the Muslims of other Iberian kingdoms in 1522, thus bringing about an acute Morisco problem until this minority of converts was expelled in 1609. Before and after Isabella's death (1504), crusader activities were extended to the North African coast (Melilla and Alcazarquivir among other points). Aragonese Mediterranean interests promoted these efforts to control both sides of the straits.

The use of the crusade by the Catholic Monarchs to promote territorial expansion over the last Muslim Iberian territories showed how contemporary monarchies used prestigious medieval institutions to foster their own policies. Castilian military orders, which had experienced monarchical encroachment since the fourteenth century, were finally brought under the direct authority of the Crown by the Catholic Monarchs. The orders of Santiago, Calatrava, and Alcántara began to be ruled by the monarchs, first as temporal and later as perpetual administrators.

Ferdinand III of Castile and León (1201–1252)

King of Castile (1217–1252) and León (1230–1252). Ferdinand III inherited the kingdom of Castile on the abdication of his mother, Queen Berenguela, daughter of King Alfonso VIII of Castile. In 1230 he succeeded his father, Alfonso IX, in the kingdom of León. From this point on both kingdoms remained united.

King Ferdinand is associated with the culmination of the offensive of Christian Spain against Islam. His plan for the reconquest of the country adopted the form of a crusade, thanks to the support of the papacy. However, from this time the crusade in the Iberian Peninsula developed specific characteristics that transformed it into a further expression of the strength of the royal power. The Christian offensive was aided by the increasing disintegration of the Almohad Empire, which gave rise to a fragmentation and weakening of political power among the Muslims of the peninsula. Its principal successes were the conquest of Córdoba (1236), Murcia (1243), Jaén (1246), and, finally, Seville (1248). As a consequence, al-Andalus was reduced to one independent kingdom, Granada, and two small protectorates, Niebla and Murcia. These three states were made subject to Castile, obliged to make tribute payments (*Sp. parias*). Military successes brought considerable territorial gains: the ancient kingdoms of Castile and León, amounting to some 250,000 square kilometers (96,500 sq. mi.), increased by a third with the incorporation of Andalusia and Murcia, some 100,000 square kilometers (38,600 sq. mi.).

This new situation permitted the kingdom of Castile and León to consolidate its power throughout the entire peninsula, and allowed Ferdinand III to establish the basis for a solid monarchy. The foundations on which this monarchy rested were of an extremely diverse nature, but four main elements can be distinguished: the unification of laws throughout its territory, submission to the church, an alliance with the nobility, and unequivocal support for the military orders. Ferdinand III extended the frontier law peculiar to the *fuero* (foundation privilege) of Cuenca to numerous towns and cities that had been recently incorporated; he revived the Visigothic law, or *Fuero Juzgo*, which held the authority of the king in the highest esteem; he was also responsible for the creation of a common judicial corpus for the whole kingdom, which was implemented by his son Alfonso X. The king also contributed decisively to increasing the power of the church: the offensives of the reconquest were accompanied by numerous restorations of old diocesan churches, which received generous grants; in return, the monarch demanded loyalty and submission from his bishops. The king was also generous in his treatment of the noble lineages; thanks to the victorious war against Islam, they experienced an increase in their patrimonial fortunes, and consequently few conflicts between Crown and nobility occurred during his reign. Finally, Ferdinand III

Fernández de Heredia, Juan (d. 1396)

gave strong support to the military orders, granting them extensive estates in the region between the River Tagus and the Sierra Morena; in return the orders provided efficient military collaboration, and they colonized the territory by means of a profitable livestock economy. Ferdinand III was canonized by the church during the Counter-Reformation of the seventeenth century. He was succeeded by his son Alfonso X.

Fernández de Heredia, Juan (d. 1396)

Juan Fernández de Heredia was an important religious, political, and cultural figure in Aragon and in the Roman Catholic Church during the fourteenth century.

Born around 1308 in the region of Albarracín into a family of the lesser nobility, he had joined the Order of the Hospital by 1326. In the following years, he held administrative responsibilities for the order in southern Aragon as lieutenant commander of Villel (1329) and commander of Alfambra (1334). He had probably become acquainted with King Peter IV of Aragon before Peter ascended the throne in 1336, because Fernández de Heredia was soon acting as counselor to the new monarch. Royal patronage saw him appointed in 1346 to the castellany of Amposta (the official name of the Hospitaller priory of Aragon), and soon he was able to show his allegiance to the king in the revolt of the *Uniones* (noble fraternities established to defend aristocratic privileges). The compilation of the six-volume Great Cartulary of Amposta was a test of his abilities as an efficient administrator of the Hospitaller domains in the castellany. In the early 1350s, he extended his range of activities to the papal court in Avignon where he became the assistant to several popes, who in return granted him posts and privileges. When the Hospitaller master died at Rhodes in 1377, Pope Gregory XI appointed Fernández de Heredia to this post; he was the first non-French Hospitaller to attain the mastership.

Fernández de Heredia went to Rhodes in 1379 and remained in the East for three years, where he found the closed atmosphere of the central convent less congenial

than Avignon. He returned to the papal court in southern France in 1382 and remained there until his death in 1396. Fernández de Heredia never lost interest in Aragon, where he managed to promote his own family to the highest social ranks, perhaps his main interest in life, above the order or the Aragonese monarchy. His translations of historical works, especially those relating to Greek history, helped to give literary standing to the Aragonese language.

Fidenzio of Padua

A Franciscan friar and author of a crusade treatise entitled *Liber recuperationis Terre Sancte*.

Fidenzio was born around 1230 in the area of Padua in northern Italy. By 1266 he was the vicar general of the Franciscan province of the Holy Land. After the conquest of the Templar fortress of Saphet in Galilee by the Mamlüks, he settled at Tripoli (mod. Trâblous, Lebanon). When news of the fall of Antioch (mod. Antakya, Turkey) reached him there in 1268, he dedicated himself to the rescue of Christian prisoners. In 1274, Fidenzio attended the Second Council of Lyons, where plans for a new crusade were discussed. Commissioned by Pope Gregory X to write a report on the reconquest of the Holy Land, Fidenzio returned to Tripoli. When the Mamlüks conquered the city in 1289, he again became active in the liberation of prisoners.

Fidenzio completed the *Liber recuperationis Terre Sancte* at the beginning of 1291 and presented it to Pope Nicholas IV. It is divided into two main parts. The first part is a his-

torical dissertation that, according to scholarly traditions prevailing at Acre (mod. 'Akko, Israel), adopted a cyclical approach to history deriving from the seven days of Creation; six of these represented the periods of the past, while the seventh looked to the future, to say that the Holy Land would belong to the Christians. The account of the fifth period contains a critical analysis of the period of Frankish domination, insisting that by their faults, the Franks lost the Holy Land. One chapter is dedicated to an adverse biography of the prophet Muḥammad, followed by descriptions of the vices of the Islamic faith and the Saracens. The second part of the treatise deals with the detail of the military campaign that would be required to reconquer the Holy Land. Fidenzio insisted on the meticulous preparation of an army and navy and on the need to raise a sufficient number of fighters, who had to be united under a perfect commander. In order to assure the success of the future crusade, Fidenzio emphasized the necessity of the spiritual training and moral behavior of the crusaders.

Field of Blood

See Ager Sanguinis, Battle of

Fifth Crusade (1217–1221)

A crusade originally launched by Pope Innocent III (1198–1216), but actually implemented by his successor, Honorius III (1216–1227). Its objective was to reestablish Christian possession of Jerusalem and the interior of the Holy Land by means of an attack on Ayyūbid, Egypt, and thus to make good the failings of the Fourth Crusade (1202–1204), which had started with similar aims but had

been diverted to Constantinople (mod. İstanbul, Turkey). Despite the capture and temporary occupation of the port of Damietta in 1219, the crusade was obliged to withdraw from Egypt, having achieved almost nothing.

Origins

In a series of letters in April 1213, Innocent III announced his intention to summon a general council for the reform of the church and to launch a crusade. In the letter *Vineam Domini*, addressed to the hierarchy of the church and secular princes, he asked them for reports on the state of the church. In *Quia maior* he explained his plan for the crusade to all the faithful. Finally, *Pium et sanctum* was sent to those charged to preach the crusade. Clearly, Innocent wanted to allow time for recruitment and careful preparation. These steps were taken by a man who had already occupied the papal throne for fifteen years and who combined his commitment to the crusade with a strong desire to restore the unity of the various Eastern churches to Rome. He also recognized that there were serious obstacles to the achievement of that goal. His hopes for the Fourth Crusade had been frustrated by its diversion and conquest of Constantinople, which left bitterness among the Greeks and a sense of failure in the West. In all probability, the so-called Children's Crusade of 1212 was related to a continuing feeling that the leaders of society, especially in northern France and the Rhineland, had deserted their obligations in order to conquer the Byzantine Empire. Against this background of failure and frustration, Innocent launched his plan for the council and the crusade, linking the reform of the church to the crusade and thereby responding to a longtime concern that the failure of previous crusades stemmed from the corruption of Christian society.

Recruitment, Finance, and Organization

This linkage was made very clear both by the reform-minded individuals Innocent appointed to preach the crusade and the sermons that they preached. Crusade sermons were summons to the “vocation of the cross” as a pathway of salvation for the laity; they had little emphasis on the military aspect of the crusade, which was depicted often as an imitation of Christ's suffering and death, culminating in his resurrection. Those sermons that survive from the period of the Fifth Crusade are chiefly those of James of Vitry, which reflect his personal experience in the Holy Land but also emphasize the power of the cross. The connection between

Fifth Crusade (1217-1221)

Areas of campaigning during the Fifth Crusade (1217-1221)

this emphasis on personal salvation and the instructions of Innocent III is confirmed by the inclusion of the pope's letters in the *Rommendorf Letterbook*, compiled for use by the abbot of that monastery in his preaching of the crusade.

The pope's preachers were often bishops and abbots, most of whom would later participate in the Fourth Lateran Council. Some of those appointed (for example, Cardinal Robert of Courson) enjoyed the status of legate and were also charged with a mission to reform the church. The funding of the crusade was especially important, since the lack of adequate financial support had been largely responsible for the diversion of the Fourth Crusade, but this was a delicate issue, since some of the clergy had resisted a previous effort. What is evident is that *Quia maior* was not so much a crusade plan as a working paper laying out the tasks to be completed at the council in 1215. But that road itself faced various obstacles. Crusades were already under way in Livonia. The Albigensian Crusade (1209–1229), directed against Cathar heretics, was rapidly becoming a political conflict for control of southern France. The imperial title remained in dispute even after the victory of Philip II of France over Emperor Otto IV at Bouvines (1214), which benefited Otto's rival, Frederick (II) of Sicily. The bishops in France were increasingly unhappy with Robert of Courson's efforts to reform the church. These major issues would have to be dealt with at the council.

Although issues concerning the reform of the church dominated the Fourth Lateran Council (1215), the crusade occupied as much or more time. It was clear that Innocent was determined to resolve the causes of conflict in the West in order to advance his crusade agenda, but he was only partially successful. Otto IV's representatives got short shrift, as did the English barons' protest against King John, but Innocent had little success in securing agreement over southern France. His major achievements, however, were to be found in the crusade bull *Ad liberandam*, which was the most sweeping effort to date to provide focus for the crusade program. It set the date of departure for June 1217 and provided for spiritual guidance for the crusaders. It levied a new tax of 5 percent on all clerical incomes; the pope and cardinals would pay 10 percent. Members of the laity who could not afford to go on crusade could band together to support one or more crusaders. The church would take the crusaders and their properties under its protection and would exempt them from payment of interest on loans, as well as suspending collection of principal during their absence on cru-

Manuscript illustration of the taking of Damietta during the Fifth Crusade. (Archivo Iconografico, S.A./Corbis)

sade. This applied also to Jewish lenders, but there enforcement was put in secular hands, since Jews were not subject to ecclesiastical penalties. *Ad liberandam* also prohibited trade and other relations with the Muslims in the eastern Mediterranean and granted pardon for all sins that crusaders had repented of and confessed. But it dealt only with the crusade to the Holy Land. The wars against Muslims in Spain and North Africa, the crusades against heretics and pagans, and the continuing military adventures in the Byzantine East had also to be dealt with if the crusade was to stand any chance of success. Shortly after the council, the pope set out to reconcile conflicts among the Italian communes, but he died in March 1216. His successor, Honorius III, an experienced cardinal who shared his commitment to the crusade, took up the task.

King John of England had taken the cross, but he died in October 1216. King Andrew II of Hungary had been pressured to fulfill the crusade vow taken by his late father, but his commitment was in doubt. Honorius turned to the youthful German king, Frederick II, who had taken the crusade vow in 1215 but still faced opposition from supporters of the deposed Otto IV. This necessitated some interim

Fifth Crusade (1217–1221)

arrangement for leadership if the crusade was to stay on schedule. Such an arrangement, however, was to be left to the crusaders themselves. The German crusaders expected Frederick to join them shortly, but their expectations ran into the realities of prolonged negotiations with the papacy over terms for Frederick's imperial coronation, which lasted until 1220. Only then did Frederick return to his kingdom of Sicily, for the first time in eight years, where he faced rebellion. Despite papal pressure, he delayed his departure.

The Course of the Crusade

Contingents from the Rhineland and Frisia left Vlaardingen in 300 ships on 29 May 1217, crossing to England where they enacted laws for the crusaders and took part in what may have been a ceremony of reconciliation, since many among them had previously been enemies. Aware that they were in advance of Frederick and other crusaders, they were in no great hurry to reach the Holy Land. When they arrived in Lisbon in Portugal, the local bishops sought their aid to lay siege to Alcácer do Sol, whose Muslim garrison menaced Lisbon. The Frisians preferred to continue their journey, taking 80 ships to Italy, where they wintered, leaving the Rhinelanders with the rest of the fleet. After a protracted and costly siege, Alcácer do Sol fell on 21 October.

The first crusaders to arrive in the East were Andrew II of Hungary and Leopold VI, duke of Austria, who landed at Acre (mod. 'Akko, Israel) in September 1217. The situation of the kingdom of Jerusalem was tenuous, and the arrival of a large contingent from the West was welcome, since defenses needed to be bolstered and the territory under Latin control expanded. Although no significant gains were made by Andrew's forces in the short time he remained, their presence, together with that of Leopold, was helpful. Before the arrival of the Rhenish and Frisian contingents (April 1218), further operations were carried out in northern Palestine, including a rather halfhearted effort to capture Mount Tabor, which had been fortified by the Muslims.

This activity seems to have enhanced the short-term security of the kingdom; especially valuable were the efforts to strengthen Château Pèlerin (mod. 'Atlit, Israel) and Caesarea (mod. Har Qesari, Israel). As more crusaders arrived, and it became clear that Frederick was not yet prepared to come to the East, they turned their attention to organization and planning. The choice of leader in the person of John of Brienne, regent of Jerusalem for his daughter Isabella II, was based not merely on his status but also on his reputation as

a soldier. The decision to attack Egypt had already been taken, but now the crusaders decided to focus their main attack on the port of Damietta rather than Alexandria. As well as crusaders from the West, the army comprised troops from the kingdom of Jerusalem and the military orders.

Late in May 1218 the crusaders landed in Egypt near the Damietta mouth of the Nile. They met little resistance. In June, the cardinal legate, Pelagius of Albano, arrived, bringing some of the money raised by the tax on the clergy. With the arrival of John of Brienne, the crusaders began their attack on a tower near the west bank of the river. A stout chain stretched across the river to the wall of the city to prevent ships from moving further south. The siege was extremely difficult and dragged on through the heat of summer, and it was not until late August that the tower was taken. The victory had been costly. Only the arrival of large numbers of French and English crusaders in September restored the crusaders' strength, but they were further delayed by disease, which carried off many, including Cardinal Robert of Courson.

Throughout the winter, the crusaders were harassed by Ayyūbid forces under the command of al-Kāmil, the son of the sultan al-'Ādil I, who had died. Only a conspiracy against al-Kāmil that forced his withdrawal enabled the crusaders to cross the river and lay siege to the city. But the return of the sultan meant that they were virtually surrounded, with the river at their backs. Throughout the summer of 1219 there was a stalemate. Leopold of Austria departed with a large number of crusaders, and few reinforcements had arrived during the spring of 1219. Frederick II had postponed his planned arrival until spring 1220.

In the fall, Francis of Assisi, whose fame as a holy man was already widespread, arrived in the camp. While there, he preached to both the crusaders and the sultan. Although the details of his sermons are unknown, it seems that he advocated peace and conversion instead of military action. His arrival seems to have coincided with a period of truce. The sultan offered to surrender Jerusalem and other sites in the Holy Land in exchange for withdrawal. This was debated, but the crusaders rejected the proposal and additional concessions on the grounds that without the fortresses of Kerak and Montréal in Transjordan (which were excluded from the terms), the holy places could not be defended adequately.

The resumption of military operations in November 1219 resulted in the capture of Damietta, which forced al-Kāmil to move his forces further south. This victory had been

accomplished at a horrendous cost after several costly battles, and the crusaders were in no condition to follow it up. The sultan still had hopes of a negotiated settlement, since his first priority was to consolidate his position as the heir to his father. Although the crusaders had rejected his previous offer, they were still open to further negotiations. But, at the same time, al-Kāmil was awaiting additional military support from his brothers, al-Mu‘azzam, sultan of Damascus, and al-Ashraf of Iraq.

During the winter of 1220–1221 the crusaders worked to consolidate their position. Men and money were running low. Evidence based on deaths among the aristocracy suggests that the casualty rate was well over a quarter of the entire force. There were also disputes as to the ownership of Damietta between Pelagius, as leader of the crusade, and John of Brienne, who claimed it for the kingdom of Jerusalem. Eventually, fear of an attack on Acre and other sites in the Holy Land led John to take a significant contingent back to shore up defenses. The arrival of Frederick had become a necessity for any future action beyond defense.

Ludwig I, duke of Bavaria, who arrived in spring 1221, was viewed as the harbinger of Frederick’s arrival, and pressure to move against the enemy now increased. Pelagius, who was well aware of the shortage of men and money, supported those who wished to act immediately. Acting on instructions from the emperor and the pope, Ludwig was only willing to attack the camp of the sultan, but his caution was unpopular. The time of the Nile flood was approaching, and delay might make an advance up the Nile impossible. Pelagius recalled John of Brienne and circulated prophetic writings that seemed to promise success to the crusaders. On 7 July 1221 John rejoined the army at the head of a large force; this was slightly more than a month before the Nile would flood. On 17 July part of the army advanced while the remainder stayed behind to garrison Damietta. Were some of these reluctant to join a risky venture? We only know that there was opposition.

On 18 July the army reached Sharamsah. The Ayyūbids put up almost no resistance, and by 24 July the army was advancing into a triangle formed by the Nile and the canal from Mansurah (mod. El-Mansūra, Egypt) to Lake Manzala (Bahra el-Manzala).

John’s counsel to retreat, based though it was on information about reinforcements for al-Kāmil and the unusually high water of the Nile, was ignored by Pelagius, who was caught up in the euphoric spirits engendered by the ease of

the victorious advance. Yet al-Kāmil had moved ships through a canal that entered the Nile at El Baramūn, just north of the crusader fleet. On 26 August the army decided to retreat, but it was already too late. The fields were flooded, and the crusader fleet was impeded by four ships that al-Kāmil had ordered sunk in the Nile for just that purpose. With a danger of panic, the crusaders decided to negotiate, and on 29 August they agreed to surrender Damietta in return for being allowed to withdraw in safety. This decision was not popular with all, especially those who had remained behind in the city. The leaders tried, however, to save face by arranging that the eight-year truce would not be binding on Emperor Frederick II.

Conclusions

The Fifth Crusade failed largely for lack of resources. This lesson was not lost on others at the time. When Frederick II finally began to plan his own crusade, he put major emphasis on negotiations. This course was unpopular, but it was realistic in terms of his own resources and his understanding of the desires of al-Kāmil. Of course, there were bad decisions during the Fifth Crusade, but there was no consistency in the assignment of blame. Decision making was a collective process, and leaders were seldom able to make decisions without pressures from various parties in the army. Nor were these differences ideological; rather, they pitted those who supported one course of action against those who supported another. In the last months, some opposed action because they wanted to go home. There is, however, no question that the final move involved a feeling that this was probably a last chance. For Pelagius and those who supported him, the decision to advance was based more on hope than reality.

Filangieri, Richard (d. before 1263)

A leading official in the administration of the kingdom of Jerusalem established by Frederick II, Holy Roman Emperor and king of Sicily, after his crusade (1227–1229).

A descendant of a Norman aristocratic family, with lands in Capua, Rapara, and Salerno, Richard was appointed marshal of Sicily in 1224. In April 1228 he led the advance party of the imperial crusading contingent, and he acted as one of the leaders of the crusading army as a whole. On his return to Sicily he oversaw a campaign against the heretics in Naples (1231), before returning to Outremer as *bailli* (regent) of the kingdom of Jerusalem (1232–1240). He led the imperial forces that in 1231 clashed with the supporters of John of Ibelin in Cyprus, laying the foundations for a conflict that lasted throughout his time in office, and that ultimately spelled the end of Staufen rule in Outremer and Cyprus in 1242–1243.

Although Richard defeated John of Ibelin in the Holy Land in 1232, he was unable to establish control over Cyprus. From 1233 onward, Frederick II sought to gain the backing of Pope Gregory IX in securing a peaceful settlement with the Ibelins, but these efforts too failed by 1235. These failures left the regime of Richard Filangieri fundamentally weakened, and he was ordered back to Sicily in 1240. There he was imprisoned, though he was allowed to leave Sicily for Toulouse in 1244. After the emperor's death, Richard appeared again as governor of the city of Naples (1251); he died at some point before 1263 in Sicily.

Finance of Crusades

Issues of finance influenced the goals and military success of crusade expeditions and also determined the nature of participation in them.

Problems of Crusade Finance

Initially, individual crusaders mustered the funds for the arms and supplies necessary for themselves and their dependants, together with cash for their journey and sustenance on campaign. If insufficient funds were forthcoming from debt collection and loans or gifts from lords, allies, or relations, crusaders from the landowning classes often donated, sold, or mortgaged produce from land, livestock or forests, rights and revenues, or, as a last resort, property in exchange for cash or gifts of equipment. These transactions often took the form of a settlement of long-standing disputes over land, combining financial transactions with the confirmation of legal rights and the promise of spiritual benefits regarded as essential for crusaders to depart in peace. Crusaders also turned to moneylenders for loans, leading popes to grant crusaders a temporary moratorium on paying the principal of their debts, exemption from payment of interest, and freedom from taxes and tolls. Intended to aid crusaders in fulfilling their vows, these financial privileges in effect often ruined their credit rating, so that individuals occasionally waived them to obtain loans. These provisos could also threaten the income of rulers who relied on taxation of Jewish and Christian usurers for income crucial for fulfilling their own crusade vows or ensuring the safety of the realm.

Although the hordes of noncombatants who accompanied many crusading armies may have hoped to join the entourage of a lord or knight or to subsidize their meager financial resources by foraging or plunder, the latter proved negligible in offsetting the often ruinous costs of a crusading expedition. Many noblemen, prelates, and kings, including Richard I of England and Louis IX of France, sought to keep crusade armies from dissolving by retaining at their own expense fighters who had run short of cash; in surviving records, these impecunious crusaders and waged knights are often almost indistinguishable from professional mercenaries. Fleets from England and Italy and crusading contingents from urban areas organized themselves after corporate models familiar to them from domestic confraternities and communal governments, forming sworn associations whose members shared the financial burden of the

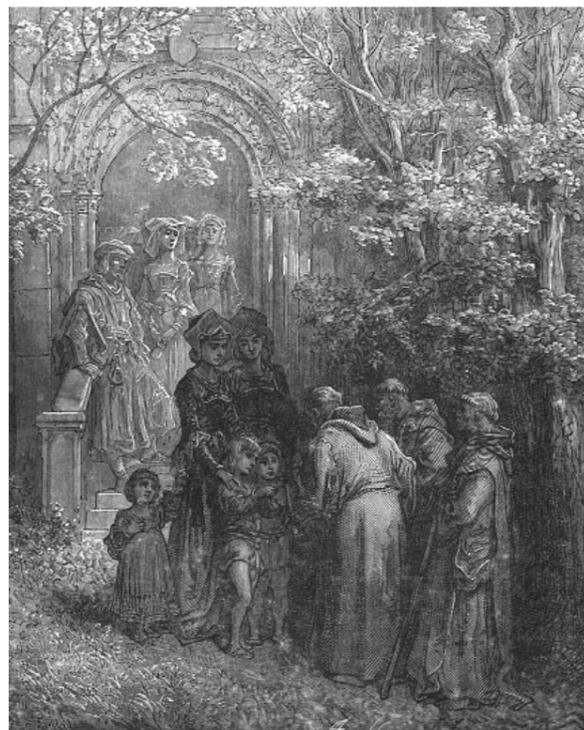

expedition. Affluent prelates and magnates contributed to communally organized and disbursed funds for needy crusaders, while formal agreements regarding the division of deceased crusaders' mobile possessions were often drawn up to ensure the equitable redistribution of resources within the crusading army rather than their bequest to relatives back home. Armies often also adopted elaborate rules for the partitioning of spoils, which were frequently put into a common pool and dispensed in payments scaled according to each category of crusader within the camp.

While a lack of material resources or military reverses could create a unified atmosphere characterized by penitential rituals and the perceived necessity of divine aid for success, infusions of booty or aid from home, which should in theory have bolstered an army's defensive and offensive capabilities, could render it liable to paralysis by debauchery or dissension over the partitioning or theft of resources.

Origins of Crusade Taxation

The changing nature of crusading, including the shift from overland to overseas routes to the Holy Land, reinforced endeavors by organizers to whittle down the numbers of noncombatant crusaders. Crusade finances also evolved in response to the hard lessons learned with each expedition, leading to attempts by kings and popes to create a system of legal privileges and finances to aid individuals in fulfilling their vows. Kings and noblemen also laid imposts (known as tallages) on Jews, townsmen, and peasants, and levied feudal aids from their secular and ecclesiastical vassals to finance their crusades. Such contributions soon evolved into formal taxes. In 1166, Louis VII of France and Henry II of England declared a five-year royal tax on the property and revenues of all laypersons and ecclesiastics in France and England. The fruits of this and of a three-year tax levied in 1185 upon incomes, bequests, and movable possessions were destined directly for the Holy Land. A similar tax intended to subsidize crusade preparations was levied in the same regions in 1188: the Saladin Tithe, as it became known, claimed a tenth of all income and movables from all except crusaders, who were entitled to receive the moneys paid by their noncrusading vassals.

Although occasional secular taxes were imposed throughout the thirteenth century, their contributions to the crusading movement were dwarfed by the papacy's taxation of the church. The first universal clerical income tax was instituted by Pope Innocent III in 1199, who asked

Clergy gathering donations for the holy war. (Pixel That)

ecclesiastics and communes to contribute a set number of warriors or a corresponding sum of money to the Fourth Crusade (1202–1204). The papal legate Peter Capuano persuaded the French clergy to agree to contribute one-thirtieth of their annual income, provided that no precedent was set for future taxation, a sum that Innocent soon reduced to one-fortieth in the face of concerted resistance. Collection proved problematic, particularly from monastic orders claiming exemption from taxation, including the Cistercians, who eventually agreed to a reduced “voluntary” contribution.

Innocent III learned from this episode and sought formal clerical approval for a triennial twentieth for the Fifth Crusade (1217–1221); it was imposed during the Fourth Lateran Council (1215) upon all ecclesiastics, with the exception of certain religious orders. Enforced by the penalty of excommunication for fraud or nonpayment, it set the pattern for future regular levies on clerical income in aid of the crusading movement, varying from a tenth to a hundredth.

Although initially attached only to crusades to the Holy Land, these taxes were soon transferred to crusades in other arenas, including the war against heretics in southern France and the anti-Staufen crusades, although not without serious protest. By the close of the thirteenth century, the tenth was also increasingly granted to secular rulers for purposes unconnected to the crusade, weakening its ties to the crusading movement.

Collection and Use of Taxes

These taxes were aided by enormous leaps in the sophistication and extension of ecclesiastical, papal, and royal accounting and administration. The precise method, however, of collection and disbursement to crusaders, the military orders, or settlers fighting in contested regions seems to have varied considerably. In England, royal agents collaborated with members of the military orders expert in the international transfer of funds and with local clergymen in the collection of the Saladin Tithe of 1188, and bishops were initially responsible for the evaluation and collection of the ecclesiastical income tax. The collection of clerical income taxes was often resisted or delayed, and its expenditure frequently shifted. For example, during the Fifth Crusade, the money collected from income tax, alms, and redemptions of vows by cash payments seems initially to have funded local contingents of crusaders departing for the Holy Land; yet as the campaign wore on, collection became increasingly centralized, and it was often diverted, in response to appeals for money, to the crusaders before Damietta.

The availability of funding directly affected those able to participate in the crusade. Poor or middling persons who took the cross hoping for subsidy from these sources could find themselves forced to redeem their vows when, as increasingly occurred, these sources of funding were granted to noblemen to organize and fund crusading contingents, and these noblemen were not minded to subsidize the participation of devout but untrained pilgrims. In response to pleas from local clergymen entrusted with gathering these moneys and to letters from crusaders, Honorius III appointed papal legates in England, Spain, Germany, Hungary, and Italy to increase the efficacy of their collection and transfer to the needy. The need to collect, store, transport, and efficiently disburse the money amassed for the crusades partly drove advancements in effective record keeping, currency exchange, transferal of funds, and banking. The military orders' expertise in these

matters was often utilized by individual crusaders, secular governments, and the Curia. In the later Middle Ages, Italian bankers served a similar function, transferring crusade revenues from local depositories or the Templar houses in London and Paris to the papal Camera or the crusade front, or advancing money in expectation of revenues yet to be collected.

Experiments with centralizing tax collection via papally appointed legates and collectors continued throughout the thirteenth century. However, the process of centralization was by no means inevitable, nor was it originally intended to enrich the papacy. Self-evaluation and collection by local clergymen and agents posed problems of efficiency, potential diversion, and lack of disinterestedness. Yet because papal collectors were often also entrusted with amassing the papal census or Peter's pence, or funds were diverted from local crusaders to those in greater need, clergymen and crusaders often accused the papacy and its collectors of attempting to profit from the crusading movement. Papal collectors countered with accusations of local obstructionism, while Innocent III and his successors stressed that the Curia was paying a tenth and more of its own revenues in support of various crusades. Yet the impression that crusade taxes were being diverted to Rome was fatally reinforced when Pope Gregory IX and his successors instituted clerical income taxes for the anti-Staufen struggle and granted levies initially intended for the Holy Land to papal allies, including Henry III of England, sparking enormous protest.

Popes continued to struggle with enormous logistical problems, including keeping assessments impartial and up-to-date, balancing impartiality and local knowledge in the appointment of local clergy or papal agents as collectors, circumventing tax evasion, efficiently transporting revenues to where they were most needed, and also keeping accurate accounts to prove that the money was actually spent on the crusade and to counteract suspicions of embezzlement or diversion to other projects. By 1274, Pope Gregory X divided Europe into twenty-six collectorates with agents for each and provided detailed guidelines for the income taxes' assessment, collection, and transport, a system that, by the pontificate of Boniface VIII (1294–1303), provided the means for collecting moneys essential for the crusading movement and the papacy's survival against various political enemies. Yet, although attempts at centralization from the mid-thirteenth to mid-

fourteenth centuries eventually led to greater control of collection by the papal Camera and the levying of new taxes over wider areas, it also resulted in mounting clerical resistance to crusade taxation and increasing demands for control over taxation by secular authorities whose own administrations were expanding. The French clergy deplored the relentless grant of crusade tenths throughout the thirteenth century, while English ecclesiastics protested against the levying of taxes for the papal-imperial struggle, which appeared merely to swell papal coffers. Although local resistance could only delay collection, it threatened good relations between the papacy and regional churches. Similarly, when, from the pontificate of Boniface VIII onward, crusade taxes were commonly transferred to the papal Camera, rulers felt threatened to see precious resources go to pay for foreign projects such as papal wars; their resistance contributed to a gradual loss of papal control over the tenths in France and England in the late thirteenth to early fourteenth centuries.

Despite the problems associated with the clerical income tax, including outdated valuations, slow and costly collection, and the tendency of the papacy to extract rights for clergymen from rulers in return for granting its proceeds to secular magnates, it provided a large and often quantifiable proportion of the funding for many crusades, including those of Louis IX of France. The custom of donating the tenth, vow redemptions, and other funds from a certain region to lay rulers who possessed the resources to organize a crusade also led eventually to the secular taxation of the clergy. As the crusades became increasingly intertwined with dynastic and national policies, rulers tended to spend money raised for the crusade on other more pressing projects, particularly if political considerations or a crisis led to the cancellation of a planned general departure. The failure of past crusades or planned expeditions led to increasing resentment of new taxation, while the inability to obtain sufficient funding through levies spelled the demise of many a projected expedition. Nevertheless, even after the fall of Acre to the Mamlūks (1291), strategic difficulties, rising costs, and repeated delays and diversions led some to lose hope for the recovery of the Holy Land, the collaboration of lay officials remained essential for the success of preaching tours, which used church taxes and the sale of plenary indulgences to finance crusades fought by professional soldiers in Italy, the Iberian Peninsula, and Northern Africa, as well as expeditions against the Turks and Hussites.

Other Sources of Funding: Donations, Alms, Redemptions, and Confiscations

Other sources of funding included gifts and legacies (including the diversion of indistinct bequests), the confiscation of the possessions of convicted heretics or rebels, donations deposited in chests placed in local churches, alms collected by crusade preachers, and the redemption of crusading vows, including those adopted voluntarily or imposed by secular and ecclesiastical courts as a penalty for serious sins or crimes. Grave qualms arose concerning some of these categories, especially when donations to the crusade were substituted for penances or for criminal sentences; Innocent III warned bishops to avoid the appearance of extortion or bribery and to ensure that payments were scaled to the seriousness of the offense and the penitent's means. Kings and noblemen also often exacted heavy tallages from towns and Jews to offset the extraordinary expenses incurred by participation in the crusading movement. Eventually, although not without hesitation and criticism, the incomes of vacant benefices and dubiously acquired possessions that could not be restored to the victims of the original crime (including money confiscated from Christian and Jewish moneylenders and the property of heretics and rebels) were also used for crusade projects.

Innocent III also sought to enable the financial participation of those unable to take the full crusading vow by ordering wooden chests or trunks to be installed in every church conducting the special liturgies organized in support of the crusade. He specified that those who gave alms would receive an indulgence proportionate to their devotion and the financial sacrifice their offering represented, while those who funded substitutes would receive the plenary indulgence. In a similar fashion, many urban confraternities and guilds financed by annual contributions helped to subsidize members who wished to participate in a crusade, while remissions of sin were offered to prelates, secular rulers, and communities who funded contingents of warriors from the late twelfth century onward. Although Innocent III and those he appointed to preach the crusade also encouraged all to take the cross without prior examination (perhaps intending that the fit but impoverished would be subsidized by the alms of the faithful), the reaction of military leaders who feared being burdened with hordes of noncombatants meant that the vows of many were eventually commuted to monetary donations. This led to confusion between the plenary indulgence earned by the full crusade vow and the partial

Finland

indulgences granted for almsgiving. Groups of crusaders unable to fulfill their vows were soon urged to band together to send a substitute in their stead, while several Tuscan communes declared hearth taxes during the Fifth Crusade or supported a communal contingent of fighters. Those who contributed to these efforts or paid crusade taxes were often rewarded with partial indulgences.

Innocent III has been labeled a prescient innovator who encouraged indiscriminate taking of the cross in order to convert the devotion of the militarily unfit into financial support for the crusade through vow redemptions. However, it seems that this was not his original intent, but only gradually became a general policy under pressure from military leaders in charge of the crusade, who sought to restrict crusading to salaried warriors by forcing noncombatants, who they felt consumed limited resources and undermined discipline, to redeem their vows. This policy met with only partial success in the mid to late thirteenth centuries; the masses' desire for personal participation persisted, despite criticism by the chronicler Matthew Paris of the attempts of papally appointed mendicant preachers to immediately redeem the vows of the impecunious or unfit whom they deliberately encouraged to take the cross during preaching campaigns. Originally voluntary, redemption could become forced when the clerical taxes, alms, legacies, and redemptions derived from a given region were handed over to a local magnate unwilling to subsidize the devout faithful. It was only with the loss of the Holy Land in 1291, however, that the outright sale of indulgences was used by the papacy and secular rulers to finance armies made up of hired mercenaries or career soldiers.

It is clear that crusade finance and taxation aided the evolution of social, financial, and legal institutions. Crusaders' quests to realise assets made property more available and increased the circulation of coinage and precious materials within Europe. Crusading expeditions also created immense demand for victuals, supplies, weapons, and shipping, benefiting local merchants and artisans. Levies for various crusades also contributed to the development of centralized financial administrations and the growth of papal and royal taxation, at the same time aiding the development of representative bodies whose consent was required for many forms of taxation.

Finland

During the Baltic Crusades the peoples populating Finland became both targets and participants in the crusades. When the crusades began, the names "Finns" and "Finland" (Finn. *Suomi*) referred only to the inhabitants of the south-western parts of present-day Finland around Turku (Sw. *Åbo*), so-called Finland Proper. The extension of the name

to other Finnic neighbors to the east, the Tavastians (Finn. *Häme*) and the Karelians (Finn. *Karjalaiset*), was a direct consequence of the crusades. All three Finnic tribes lived in the vicinity of one of the ancient trade routes between east and west, and archaeological excavations suggest that by the middle of the eleventh century they had become acquainted with Christianity in both its Eastern and Western forms. However, their societies remained largely pagan, and the wholesale Christianization of the population and its incorporation into the Latin Church were the result of crusades that were launched from Sweden and, for a brief period, Denmark.

The importance of the crusades for Finland is reflected in the fact that the established term for the period 1150–1350 in modern Finnish historiography is the “Crusade Age.” This again reflects a tradition in Swedish historiography founded by the historian and poet Erik Gustaf Geijer (1783–1847). According to him, the Swedish conquest of Finland came about as a result of three successive crusades. The “First” Swedish Crusade is known only from the thirteenth-century life of the king and saint Erik IX Jedvardsson (d. 1160). This was a crusade to Finland Proper that is supposed to have taken place around 1155/1157, led by King Erik and one Henry, an Englishman alleged to have been bishop of Uppsala. Erik returned to Sweden, where he was killed soon after, while Henry stayed on in Finland, where he was martyred. Bishop Henry was considered to be the first bishop of the Finns and later became venerated as Finland’s patron saint.

The establishment of the Swedes in Finland during this period is confirmed in a bull from Pope Alexander III dating from 1171/1172. Rehearsing Swedish complaints that the Finns promised to observe the Christian faith whenever they were threatened by an enemy army, but, when the army retreated, denied the faith and persecuted the priests, the pope ordered the Swedes to force the Finns to observe the Christian creed. Although Bishop Henry’s role remains obscure, there is no doubt that this period saw the establishment of a missionary bishopric for the Finns and Finland, later permanently located at Turku and linked to the Swedish archbishopric in Uppsala.

In the early period the Swedes were not alone in organizing crusades to Finland. The Danes are recorded as having launched at least two expeditions there. Until the establishment of the archbishopric of Uppsala by Pope Alexander III (1164), the Danish archbishopric in Lund was the metropolitan of the Swedish bishoprics and therefore had a legit-

imate interest in the mission to Finland. Alexander also stipulated that the archbishop of Lund was to remain the primate of the Swedish church (Lat. *Swetiae primas*), and so for most of the century after 1164 much papal policy regarding the eastern Baltic region was channeled to the Swedish church through the Danish archbishop, who often had the status of papal legate for the region. This may explain why it was the Danish archbishop, rather than the Swedish one, who was authorized by Pope Innocent III to install a new bishop in Finland in 1209.

According to Danish annals, King Knud VI of Denmark sent an expedition to Finland in 1191 and “won it” [*Danmarks middelalderlige annaler*, ed. Erik Kroman (København: Selskabet for udgivelse af kilder til dansk historie, 1980), p. 18]. In 1202 another Danish army went to Finland under the leadership of Anders Sunesen, archbishop of Lund, and his brothers. They are also recorded as having led an expedition to Estonia in 1206. It is unclear whether these actions were undertaken in collaboration or competition with the Swedish crusades. The Sunesen brothers had close links with the Swedish king Sverker II Karlsson, who was married to their sister, and supported him against a rival claimant to the throne, Erik Knutsson. A more likely possibility is that the Danish activities in Finland were planned in conjunction with the Danish crusades to Estonia. In that case, it is probable that the Danes were not interested in the same areas as the Swedes, but rather, in the southern coastal regions along the Gulf of Finland. This is suggested by the evidence of the so-called *Danish Itinerary*, a thirteenth-century itinerary contained in a Danish manuscript (MS København, Rigsarkivet, C8), often known as Codex ex-Holmianensis A 41 or Kong Valdemars Jordebog. This work outlines a sailing route from the Danish territory of Blekinge (in mod. southern Sweden) across the Baltic Sea to Reval (mod. Tallinn, Estonia). A link with the crusades is indicated by the fact that it is transmitted together with a second itinerary from Ribe in Denmark to Acre (mod. ‘Akko, Israel) in Palestine. The Baltic itinerary follows the Swedish coast as far as the Stockholm Archipelago, then crosses to the southern coast of Finland, which it follows to the Porkkala Peninsula just west of present-day Helsinki. Here, where the distance is shortest, it turns south across the Gulf of Finland to Reval. The itinerary itself, its references to an island called Jutlanders’ Island, and both Danish and Finnish names for some localities all suggest that Danish interest in Finland was focused on the southern coast around the Pokkala Peninsula.

Finland

However, Danish authority in this part of Finland must have collapsed together with other parts of the Danish crusading empire after 1223, when King Valdemar II Sejr was kidnapped by his rebellious vassal Count Henry of Schwerin.

The sudden disappearance of Danish power may explain signs of a crisis of Christianity in Finland, which is revealed in two bulls of Pope Gregory IX. In 1232 Gregory appointed Baldwin of Aulne as his legate with authority to solve the current crises in both Livonia and Finland, and later that year, he found it necessary to ask the Order of the Sword Brethren in Livonia to help the Christians in Finland, who were allegedly threatened by the Russians. Soon after the Danish collapse, the Sword Brethren had taken control of Danish Estonia, and they may have been the Christian force best placed to intervene in Finland. However, it is unclear whether the Sword Brethren were able to intervene in Finland before their near-annihilation in 1236 at the battle of Saule. In December 1237, the pope issued a new bull at the instigation of the archbishop of Uppsala, who claimed that the Tavastians had apostatized and now threatened the Christian plantation in Finland. The pope ordered the archbishop and his suffragans to preach a crusade against the Tavastians.

The immediate result seems to have been the “Second” Swedish Crusade to Finland, led by Birger Magnusson, brother-in-law of the king. The actual campaign is only known from the rhymed *Erik Chronicle*, written in the 1320s. The chronicle gives no date for the crusade, but it presumably took place in 1238 or 1239: according to Novgorodian chronicles, in 1240 Birger Magnusson was able to lead his bishops in a further crusade to the river Neva against Novgorod, accompanied by both Finns and Tavastians. In Tavastia, a castle, presumably Hakoinen, was built as a center of Swedish power, later to be supplanted by a new fortress at Hämeenlinna (Sw. *Tavastehus*). The Tavastians must soon have been firmly integrated into the Swedish realm and church. In summer 1256 they once more participated in Swedish operations against Novgorod, together with the Finns. This time the Swedes sent their fleet across the Gulf of Finland, where they started to build a fortress on the Novgorodian side of the river Narva together with one of the Danish vassals in Estonia.

Around this time, the Swedes began to colonize the thinly populated areas on the coasts of the Gulf of Bothnia and, more importantly, along the Gulf of Finland, where the Danish strongholds had presumably been situated. Control of

this coastal region, which became known as Nyland (New Land), was a necessary precondition for the next stage in the Swedish crusades, which were now to be directed against Karelia, at this time under the rule of the Russian city-state of Novgorod. Plans for this so-called “Third” Swedish Crusade were being made by the mid-thirteenth century. King Valdemar Birgersson procured a crusading bull against the Karelians from Pope Alexander (1254–1261), who also issued a bull against the Russians. It took another thirty years before military operations in Karelia got under way. In 1293 the Swedes established a fortress at Viborg (mod. Vyborg, Russia), which blocked the entrance to the river Vuoksi. However, they failed to take and hold the Karelian center of Kexholm (Russ. *Korel'skii Gorodok* or *Priozërsk*) on the opposite shore of the Vuoksi at Lake Ladoga, and in 1301 they also lost the fortress of Landskrona, which they had started building the previous year. The war continued for another twenty years before Sweden and Novgorod concluded the Treaty of Nöteborg (Pähkinäsaari) in 1323, which fixed a border between Sweden and Russia for the first time.

Some subsequent crusades were launched against Russia by Sweden from Finnish territory, notably the crusade of King Magnus II Eriksson (1347–1351), but these had little importance for Finland. The further expansion of Finnish territory at the expense of Russia was the result of a gradual colonization in the north or later wars that had nothing to do with the crusades. Despite the evidence in papal letters of resistance by both Finns Proper and Tavastians, their respective incorporation into the Swedish realm and church progressed relatively smoothly. One reason may have been that there existed a tradition of collaboration between Swedes and Finns that predated the arrival of Christianity. Also, the Finns were not subjugated by a foreign aristocracy but instead incorporated into Swedish society on equal terms. Therefore, north of the Gulf of Finland, there is no evidence of a division of the population into a ruling upper class and a repressed lower class along ethnic lines, as was the case in Livonia south of the gulf. This state of affairs may also reflect the fact that from 1240 onward, Swedish rulers looked beyond Finland and wanted the Finnish tribes as allies in future drives toward the east. It is not surprising that after the Swedes had incorporated the Finnish provinces, the Finns and Tavastians are repeatedly named as their allies in Russian sources.

First Crusade (1096–1099)

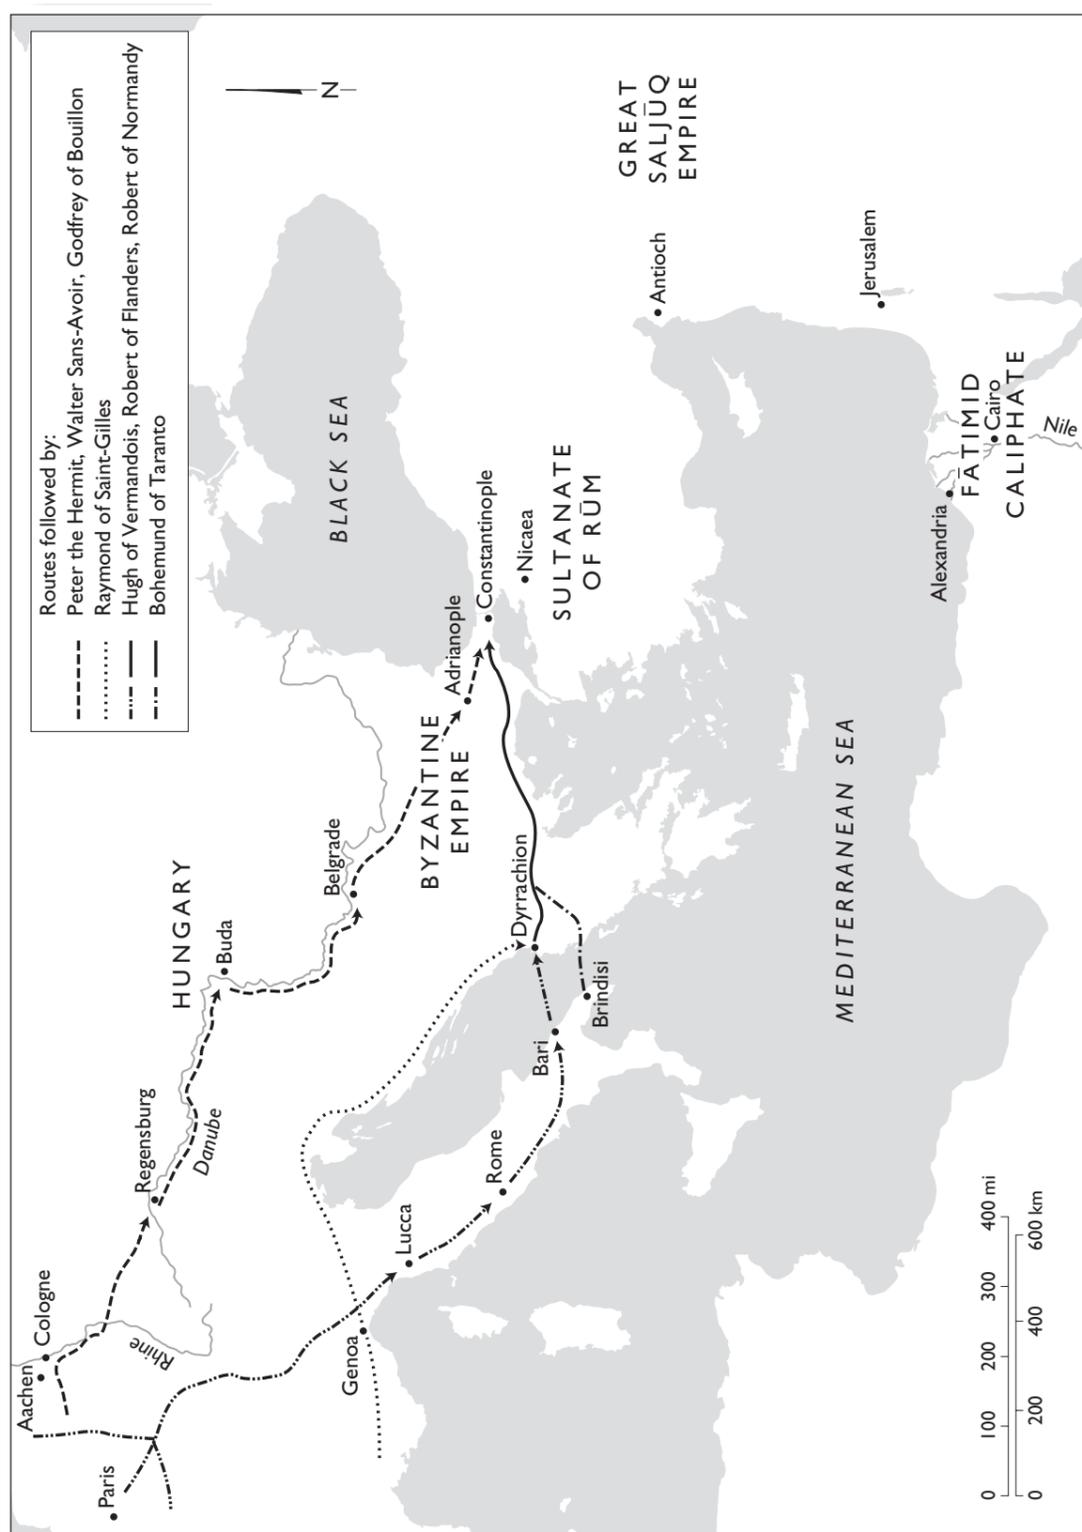

On 27 November 1095, toward the conclusion of a major ecclesiastical council at Clermont in Auvergne, Pope Urban II (1088–1099) launched an appeal for a military expedition to liberate the Christians of the Near East and the Holy Sepulchre at Jerusalem from Islamic domination. His appeal was successful, and this expedition established in the Near East a Frankish kingdom of Jerusalem, together with the county of Edessa, the principality of Antioch, and (later) the county of Tripoli. Because these states were greatly resented by Islam and needed Western support, out of the success of 1099 arose the crusading movement, which powerfully influenced the history of Europe and the Islamic world right down to the seventeenth century.

Origins

The trigger for the appeal of 1095 was a Byzantine imperial delegation that met with Urban II during the Council of Piacenza (1–7 March 1095). The Byzantine emperor, Alexios I Komnenos, had seen that the outbreak of a bitter and complex succession struggle in the ruling family of the Great Saljūq Empire offered a golden opportunity for him to recover Asia Minor, which the Saljūs and other Turks had captured in the 1070s. Alexios hoped to enlist Western mercenaries, and this was the nature of the appeal made at Piacenza. Earlier, in 1074, when the Turkish conquest was under way in the aftermath of the disastrous battle of Mantzikert in 1071, Pope Gregory VII (1073–1085) had tried to persuade the peoples of the West to rally to the cause of the embattled Eastern Christians, and even to capture Jerusalem. His hope, undoubtedly a factor that also influenced Urban, had been that in return the Byzantines would accept the authority of the Holy See. But Urban was moved by other factors. He had cultivated Alexios lest he ally with Henry IV of Germany (1056–1106) in the struggle between empire and papacy known as the Investiture Contest. Undoubtedly Urban saw in this appeal an opportunity to assert papal leadership in the war against the infidel, traditionally the task of the Holy Roman (German) emperor.

However, there was more than self-interest at work, for Urban had supported the Christian reconquest of Spain and

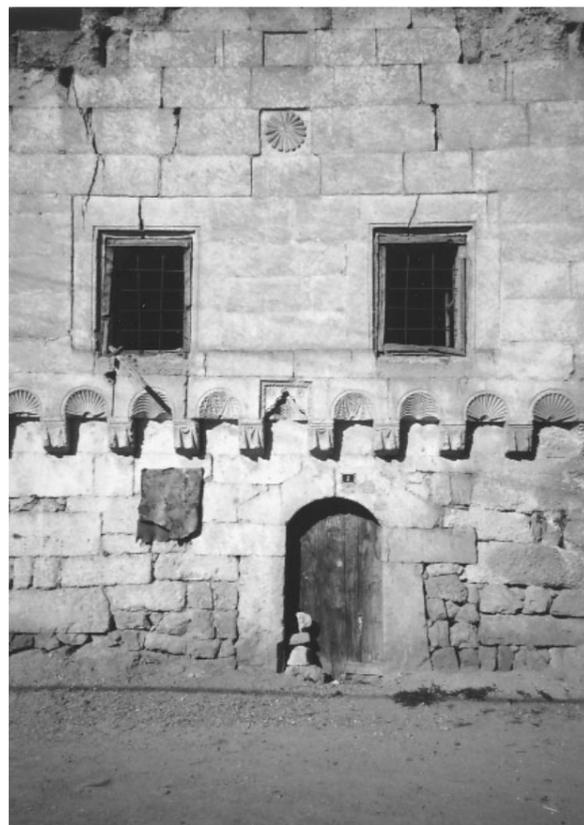

First Crusade (1096–1099)

The First Crusade: the march to Constantinople

seems to have been anxious to roll back the tide of Islam, which had conquered much of the old Roman world since the seventh century. Yet he must have known that Gregory's appeal had failed, and so Urban's problem was to attract support for his project. First and foremost he was anxious for the support of the arms bearers, the aristocracy and knights, because they dominated society and their support would draw in others. He could certainly count on a mood of confidence in an expanding Europe, but most of Europe's growth had hitherto been at a local level, with frontier lords annexing adjacent territory. The Norman conquest of southern Italy appears different, but was actually a slow process built on gradual implantation and alliance with native elites. What Urban proposed was on a scale and at a distance without precedent. Nor, outside the *Reconquista* (the reconquest of Muslim Iberia by the Christian kingdoms of the peninsula), was there any real tradition of such expansion having an ideological dimension, and even in the Iberian Peninsula, Gregory VII's attempt to interfere in local affairs had been resented. However, the later 1080s had seen more lords from northern Europe participating in the Spanish wars; the Investiture Contest had accustomed some to serving the papacy in an ideological conflict; and naval raids by Italian cities on Muslim lands had taken on a sacred character. Moreover, the papacy had developed a new awareness of the value of holy war.

Urban was a skillful diplomat. He eschewed the self-righteous extremism of Gregory VII, and his journey to France was intended to win more friends for his cause. He prepared carefully for his appeal at Clermont. After sending out the summons for the council from Le Puy around 15 August 1095, he turned south into the lands of Raymond of Saint-Gilles, count of Toulouse. It can be no accident that Adhemar, bishop of Le Puy (later the pope's legate on the crusade), was the first person, and Raymond of Saint-Gilles the first major magnate, to take the cross. Born as Odo of Lagery into a French noble family from Châtillon-sur-Marne around the year 1042, Urban knew the kind of people he needed to attract. This European elite was deeply catholic and profoundly hostile to any kind of outsider. Islam was no threat to them, and the Christians of the East were of little interest. At the same time, however, French lords were increasingly taking an interest in the wars in Spain. They were very aware that their military style of life, greed, and acquisitiveness were deeply at odds with the spirit of monasticism that was reckoned to be the most perfect form of the Christ-

Ancient church of St. Peter in Antioch, where the supposed Holy Lance was unearthed by the pilgrim Peter Bartholomew during the First Crusade. (Courtesy Alfred Andrea)

ian life, whose exponents, especially the Cluniac Order, often had great influence with the more pious amongst them.

At the Council of Clermont Urban appealed to Frankish pride of race. He urged the restoration of God's land, the Holy Land, and especially the Holy Sepulchre, a notion that resonated with an elite deeply concerned with landed property. They saw pilgrimage, above all to Jerusalem, as a vital way of expiating their sins, and Urban cast his expedition in the form of a pilgrimage. Above all he offered them an indulgence, forgiveness of all their sins, if they undertook this fighting pilgrimage to the most sacred of shrines. They were to be God's pilgrims, the chosen of the Lord for the Lord's sacred task. In token of their status they would wear crosses and enjoy the protection of their lands by the church during their absence. Forgiveness of sins was confined to the statement that "whoever, for devotion alone, and not to gain

First Crusade (1096–1099)

honour or money, goes to Jerusalem to liberate the Church of God, can substitute the journey for all penance” [Canon 2 of the Council of Clermont, in Riley-Smith and Riley-Smith, *The Crusades*, p. 37]. However, Urban’s project by its nature involved conquest in a land proverbially flowing “with milk and honey” (Josh. 5:6 and Deut. 31:20) and therefore also embodied powerful material incentives.

Aims and Recruitment

Urban II’s appeal was transmitted to a wider world by the bishops present at Clermont, by the monks, who were strongly propal, and by preachers. Urban wrote letters, such as those to Flanders, to Bologna, and to Genoa, soliciting support. No pope had ventured north of the Alps since Leo IX (1048–1054), so Urban’s long journey through France excited enormous interest. Still, all this only partly explains the enthusiasm generated across Europe. The success of the appeal was that it came from a man and an institution (the papacy) that increasingly commanded respect and that it came at a time when the notion of fighting for God was becoming more widespread and when instability in the East was making itself felt in difficulties in reaching Jerusalem. At the same time, expansionism had engendered a sense of confidence and opportunity. Urban seemed to have suddenly opened a gateway to salvation, and many were ready to enter therein. We may surmise that the most pious of the aristocrats and knights were the first to join. Urban’s appeal to the elite drew in their wake their followers—knights, and even humble men, servants, and peasants: the crusade was an embodiment of Western society with its hierarchies and patronage groups. However, his message also appealed to large numbers of unattached noncombatants, and we can only suppose that they were taking the opportunity to make a pilgrimage.

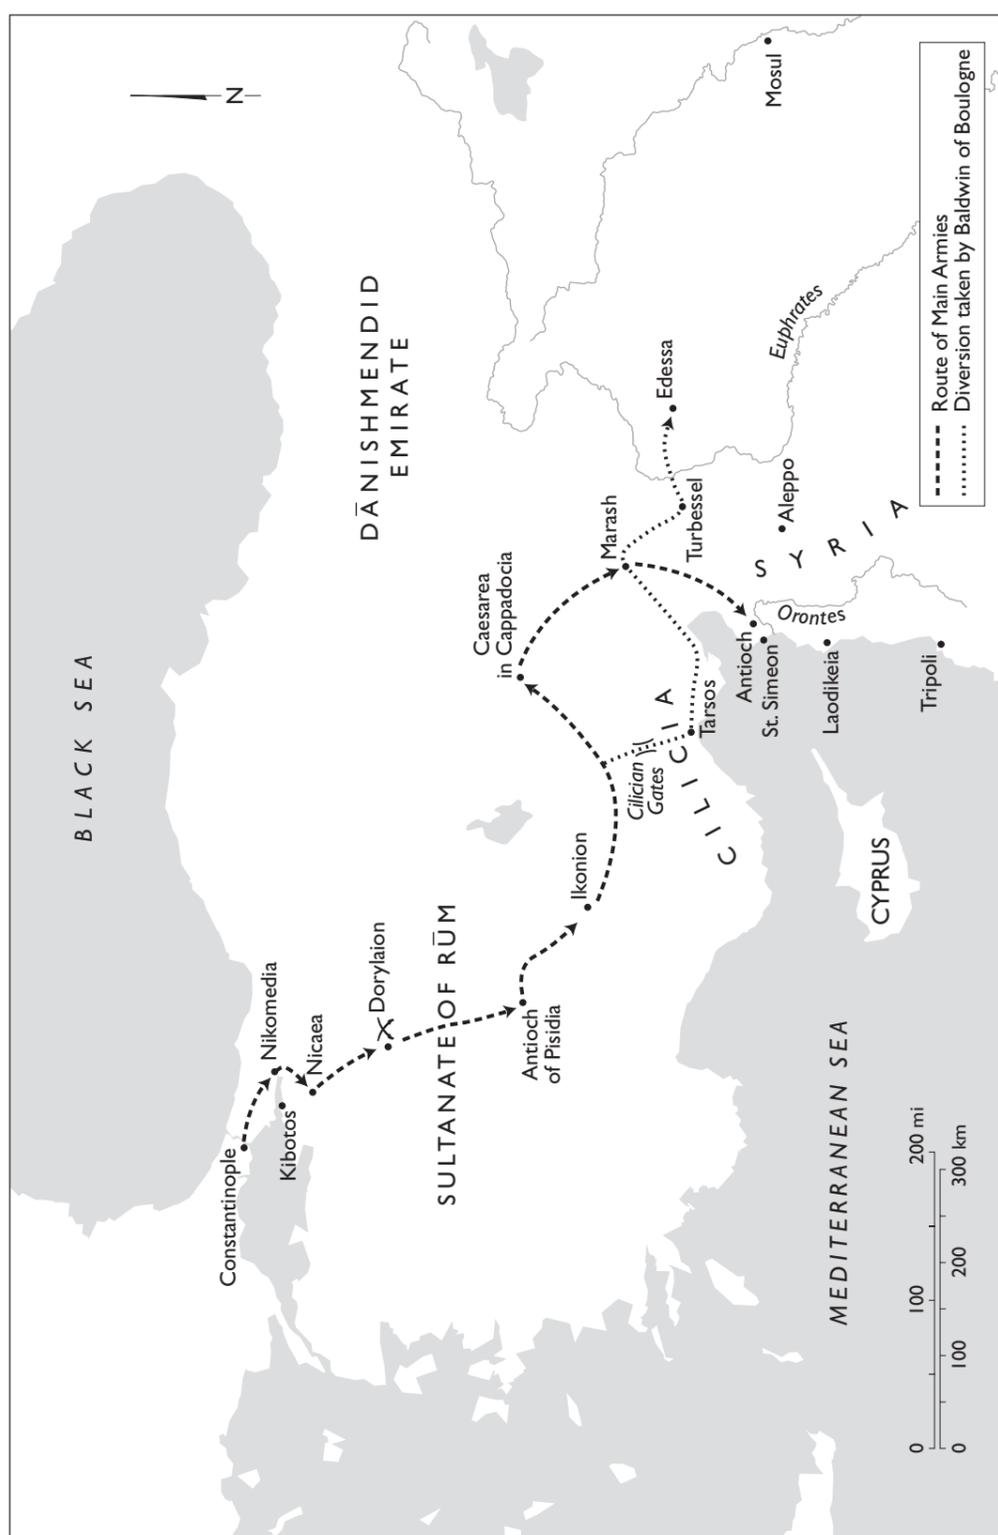

We are very badly informed about what Urban II intended his expedition to do. It is possible that Jerusalem was not mentioned at Clermont, or mentioned only in a minor key, and that the pope’s real intention was simply to express the Byzantine request for mercenaries made at Piacenza, but that public opinion focused on the liberation of Jerusalem and the project took on a life of its own. Since the work of H. E. J. Cowdrey, however, such ideas have had little currency among scholars in the field, and it is now generally thought that Jerusalem was always central to Urban’s message. For long it was considered that the lure of riches was the fundamental reason why people took up the cross, but Jonathan

Riley-Smith [*The First Crusade*, pp. 31–57] has convincingly made the case that the movement was fundamentally a religious one, although John France [*Victory in the East*, pp. 11–16] has more recently stressed that gain was a factor. Among the leaders, very great men like Raymond of Saint-Gilles and Robert II of Flanders seem unlikely to have been moved by hopes of profit. By contrast, for Robert of Normandy and Godfrey of Bouillon the expedition offered an escape from acute political difficulties, while Bohemund of Taranto seems to have been simply out for gain, and younger men like Tancred and Baldwin of Boulogne probably wanted to make their fortunes.

From the West to Constantinople (1096–1097)

The first expeditions to reach Constantinople (mod. İstanbul, Turkey), the appointed concentration point, were those of the so-called People’s Crusades: they were different from the later armies in that none of them were led by a great prince, and they probably contained a smaller proportion of arms bearers. In Northern France an army gathered around a charismatic preacher, Peter the Hermit; in the Rhineland he attracted more followers, and the mood of religious excitement triggered a persecution of the Jews. Although Peter’s force marched peacefully down the Danube, some of the later bands were poorly disciplined and clashed with local forces in Hungary. Peter’s men had their troubles over food supply in the Byzantine Empire, but they were well received by Alexios Komnenos at Constantinople. Once in Asia Minor they joined Germans and Lombard groups and ravaged the countryside. Without strong military leadership these forces, though substantial, were easily defeated in late October 1096 near Nicaea by Qilij Arslān I, the Saljūq sultan of Rūm.

The princely armies took various routes to Constantinople and departed at times of their own choosing. Hugh, count of Vermandois, the brother of King Philip I of France, was the first major leader to leave, taking a traditional pilgrim route to Italy. He crossed from Bari to Dyrrachion (mod. Durrës, Albania) in October 1096 with the intention of taking the old Roman road, the Via Egnatia, to Constantinople, but he was shipwrecked and his army scattered. Bohemund of Taranto, the leader of the Normans of south Italy, crossed on 1 November 1096. He had participated in the attempt of his father, Robert Guiscard, to conquer the Byzantine Empire in 1081–1085, and was anxious to avoid friction with Byzantine forces concentrated at Dyrrachion,

The First Crusade: the march from Constantinople to Antioch

so he landed to the south and cautiously marched to Constantinople, not arriving until 1 April 1097. Contingents from northern France, Normandy, and Flanders were led by Robert Curthose, duke of Normandy, Robert II, count of Flanders, and Stephen, count of Blois and Chartres. These only arrived in southern Italy in late November 1097; Robert of Flanders risked an immediate passage, but the others wintered in Italy, crossing in the spring and arriving at Dyrrachion only on 14 May 1097. Godfrey of Bouillon, duke of Lower Lotharingia, departed in August 1096 with troops from his own duchy and northeastern France, marched down the Danube Valley, and arrived at Constantinople before Christmas. Raymond of Saint-Gilles and Adhemar of Le Puy, the papal legate, led a huge army drawn from southern France and Provence, which seems to have marched across Lombardy and down the Dalmatian coast, arriving at Dyrrachion in early February 1097.

These were the main armies, but we hear of other smaller forces of whose journeys we know nothing. What arrived in the East in the spring of 1097 was not a single army, but a loose aggregation of armies. There was no overall commander, though the papal legate, Adhemar, seems to have enjoyed a preeminence. The various contingents evidently accepted the command of the major leaders, but they retained considerable freedom: Gaston of Béarn, originally attached to the forces of Toulouse, later changed his allegiance and helped the northern French with their siege equipment at Jerusalem.

The lack of any structure of command first became an obvious problem when the princely armies approached Constantinople in the spring of 1097. They needed to establish a relationship with Alexios Komnenos, but because they arrived separately, the emperor was able to deal with them as individuals. Adhemar fell ill and did not arrive at Constantinople until long after the others. Urban II wanted to aid Alexios, but it is unlikely that the emperor ever promised to lead the crusaders to their goal. Most of the princes, accustomed to wide freedom of action in the West, were wary of relations with the Greeks and unwilling to accept any subordination. Raymond of Saint-Gilles had actually conferred with Urban, but even he did not seriously suppose that Alexios would become their commander. Despite some incidental skirmishes, inevitable when large armies were passing through Byzantine territory, all the leaders ultimately took oaths to Alexios to be his men and to return to him any former Byzantine lands, though the extent of these was never defined.

From Constantinople to Antioch (1097–1098)

The working relationship with Byzantium was quickly put to the test at the siege of Nicaea (mod. İznik, Turkey), lasting from 14 May to 19 June 1097, which saw the individual contingents gathered as one army for the first time. The size of that army is a matter of dispute. France [*Victory in the East*, pp. 122–142] has argued for 60,000 participants, including 6,000–7,000 knights, but this has been contested by Bernard Bachrach [“The Siege of Antioch: A Study in Military Demography,” *War in History* 6 (1999), 127–146] who argues for 100,000. The sultan Qilij Arslān I was away from the city when the siege began, and his attempt to relieve it on 16 May was driven off. The siege was energetically pressed, and casualties were heavy. Because there was no single leader, a committee of the most important princes controlled the army, and as a consequence their assaults were poorly coordinated. Alexios supplied the crusaders with food and equipment, and sent boats to close the Ascanian Lake, on which Nicaea stood, a decisive move, which meant that the Turkish garrison was now isolated and had to face attacks on all sides. Alexios’s generals negotiated the surrender of the city to Byzantine forces, but he seems to have been generous to the crusaders. The capture of the city was a triumph for the alliance, and in its wake Alexios attached Byzantine troops to the army and advised them to open negotiations with the Fāṭimids of Egypt. By the spring of 1098 crusaders and Egyptians had reached some kind of *modus vivendi*, presumably on the basis of mutual hatred of the Saljūq Turks of Syria; this understanding was important because Egypt was a strong military power and controlled the only Muslim fleet in the Mediterranean.

The crusader army set off across Asia Minor on 26 June 1097, but divided command led to its separation into two groups, which gave Qilij Arslān the opportunity to attack its vanguard, led by Bohemund, at Dorylaion (mod. Eskişehir, Turkey) on 1 July 1097. The Turkish mounted archers outnumbered the Frankish knights, and they drove them back and besieged them in their camp. The Turks were then drawn into a fight at close quarters, which gave the main crusader force time to arrive and attack them in the rear. The Turkish tactics of enveloping their enemies, showering them with arrows, then exploiting gaps and weaknesses in their line, were an unpleasant shock to the divided and uncoordinated crusader army. But the battle of Dorylaion broke Turkish resistance in Asia Minor, even though the crusader army was sapped by climate and disease, and had lost the

Conquest of Antioch by the Crusaders. (Archivo Iconografico, S.A./Corbis)

bulk of its horses. Guided by Byzantine troops, the crusaders marched via Caesarea in Cappadocia (mod. Kayseri, Turkey) in order to free Armenian centers in the mountains and thus secure a friendly base for the attack they now intended upon the city of Antioch on the Orontes (mod. Antakya, Turkey), where they arrived on 20 October 1097. This policy of friendship toward the Christian Armenians culminated in an invitation to Baldwin of Boulogne, brother of Godfrey of Bouillon, to take over the city of Edessa (mod. Şanlıurfa, Turkey), which in March 1098 became the center of the first Frankish principality in the East.

Turkish-controlled Syria was divided between the Saljūq princes Riḍwān of Aleppo and Duqāq of Damascus, and the rivalry between them had enabled cities like Antioch to establish a fair degree of independence. Alexios Komnenos

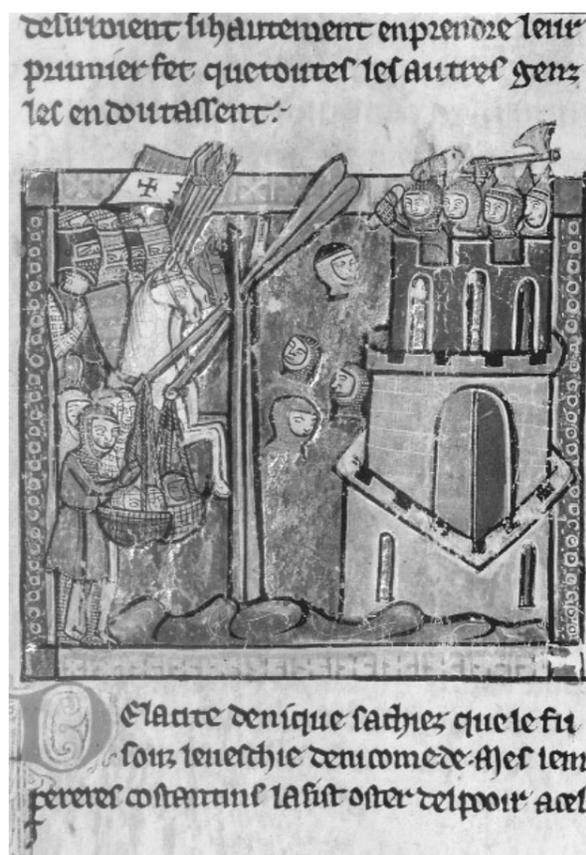

had judged his moment for an assault well, and so the crusaders faced no coordinated Islamic counterattack. Even so, Aleppo and Damascus could raise strong military forces and posed a severe threat to the depleted crusader army. Antioch had strong walls, and it was too big for the army to surround or storm. The crusaders established a close blockade, but this exposed them to harassment from enemy outposts nearby and to the threat of a relief force. Their major problem was food supply. They could draw on the Armenian lands to the north, and Raymond of Saint-Gilles had established an outpost at Rugia in the Syrian plain before the siege began. Most importantly, an English fleet, probably with Byzantine support, had captured St. Symeon (the port for Antioch) and nearby Laodikeia (mod. Al-Lādhiqīyah, Syria) even before the crusaders arrived, which opened up com-

munications with Byzantine Cyprus. In November 1097 a Genoese fleet arrived with timber and skilled labor, enabling the crusaders to fortify their camp. The Byzantine alliance was working well, and it was reinforced by the good ecclesiastical relations that Adhemar had established with the Greeks.

Even so, by Christmas the army was starving, and a large force, commanded by Bohemund and Robert of Flanders, was sent to forage in Syria. Near Albara, on 31 December, they defeated a relief force sent by Duqāq of Damascus. Although the Damascenes retreated, the crusaders were unable to forage, and the crisis in the army deepened when it became known that a Turkish relief force from Aleppo was approaching. In this emergency the leaders finally agreed to appoint a single commander, choosing Bohemund, whose military reputation stood high after his victory over the Damascenes. Although they could raise only 700 cavalry, the crusaders ambushed and crushed the army of Aleppo on 9 February 1098, a victory that impressed the Egyptian envoys who were then in Antioch. Shortly afterward a second English fleet arrived, enabling the crusaders to tighten the siege with new fortifications, and the coming of spring eased supply problems. Antioch was betrayed to Bohemund, who was by now the most famous of their leaders, by a tower commander on the night of 2/3 June, though the crusaders were unable to seize the citadel. On 4 June a huge Turkish relief army arrived under the command of Karbughā, lord of Mosul, trapping the crusaders in Antioch. Despite terrible hardships the crusaders fought off enemy attacks. Morale was revived by a series of visions, and the finding of a relic that was identified as the Holy Lance (the spear with which Christ's side was pierced during the Crucifixion), and on 28 June 1098 the crusaders sallied out and defeated Karbughā at the Great Battle of Antioch.

From Antioch to Jerusalem (1098–1099)

After the victory against Karbughā, the crusade leaders sent envoys to ask Alexios Komnenos to take possession of Antioch, in fulfilment of the oaths they had taken at Constantinople. This action is indicative of their adherence to the oath and of the value they attached to Byzantine help, which had been so important during the siege. However, by autumn they had learned that during Karbughā's siege, Alexios had been told about the army's plight by Stephen of Blois, who had deserted from Antioch, and had then turned back from coming to its aid, in the belief that all was lost. In

Crusaders bombard Nicaea with heads in 1097, from the *History of William of Tyre*, thirteenth century. (Bibliothèque nationale de France, Paris/Bridgeman Art Library)

a letter of 11 September 1098 to Urban II, the leaders expressed their anger at this turn of events. When they gathered at Antioch on 1 November to resume the march, Bohemund claimed the city.

Raymond of Saint-Gilles stood by the Byzantine alliance, but the other leaders were inclined to favor Bohemund. In the subsequent quarrels, personal feelings and old scores came to the fore; Adhemar, who might have been a moderating force, had died of plague (1 August 1098). As a result of this dispute, the army stalled in north Syria after capturing Ma'arrat al-Numan in December. Bohemund demanded that Raymond should abandon his strong points within Antioch and sought recognition of his control of the city. Not until 13 January 1099 did Raymond march south, but as only

Tancred and Robert of Normandy would accompany him, it seems unlikely that he intended an immediate attack on Jerusalem. His army settled down to besiege Arqah on 14 February, while Bohemund remained at Antioch, from which he evicted the garrison left by Raymond. Many knights, despairing of the delay, preferred to stay with Bohemund or joined Baldwin at Edessa. However, popular pressure from within their contingents forced Godfrey of Bouillon and Robert of Flanders south; when they joined the siege of Arqah, they were sullen and resentful. Divisions opened further when an imperial embassy asked the crusaders to delay their march so that Alexios could come to their aid, a development welcomed by Raymond but opposed by the other leaders.

In early May a Fāṭimid embassy arrived from Egypt. The Fāṭimids had seized Jerusalem from Saljūq control in July 1098 and had no intention of conceding it to the crusaders, who rejected anything less than full possession of the city. The leaders, divided as they were, and deeply concerned by the limited manpower available resulting from casualties and the partial breakup of the crusade at Antioch, now rallied the army and marched into Fāṭimid territory in a determined thrust to Jerusalem, which they invested on 7 June. The siege was a race against time, because the crusaders knew that a Fāṭimid relief expedition was in preparation. On 13 June they launched an initial assault, despite having only a single siege ladder. This assault failed, but the arrival of a Genoese fleet on 17 June brought timber, which enabled the construction of siege engines. Forces led by Godfrey of Bouillon began construction work at the northwestern corner of the city. They had to build a ram that would clear a way through the outer wall along the north perimeter of the city, while a tower was intended to dominate the strong inner wall and so to make possible assaults by siege ladders. The defenders observed this activity and strengthened the threatened part of the city's defenses, but on the night of 9/10 July the northern French transported their equipment to a weak spot on the northeastern section of the north wall, which critically undermined the preparations of the defenders. Raymond of Saint-Gilles prepared another tower to attack near the Zion Gate on the southwestern section of the wall, and on 13 July a systematic attack from north and south began. On 15 July 1099 the crusaders broke in across the northern wall and massacred many of the Muslim and Jewish inhabitants (the Christians having previously been expelled by the garrison): this was the normal fate of any city that fell by

storm. Not without much dispute, Godfrey of Bouillon was elected to rule the city, and on 12 August he led the crusaders to victory over the Fāṭimids at the battle of Ascalon (mod. Tel Ashqelon, Israel).

Conclusions

The First Crusade was an astonishing success. As Alexios Komnenos had intended, the crusaders had taken advantage of the divisions of their Islamic enemies and exploited them skillfully. Their own army partially disintegrated because of serious disagreements, but the Muslim powers were never able to exploit them. The crusaders faced formidable military powers, but they triumphed because the longer they survived, the more coherent and effective they became as an army and the better they adapted to the tactics of their enemies. They enjoyed the support of Byzantine and Armenian allies, while Western fleets, in alliance with the Byzantines, commanded the sea and helped to supply them. Islamic and Western armies were on a par technically. Although Western horses were bigger than Eastern ones, they died very quickly and were replaced by local stock, and the victory over Karbughā was largely the victory of an infantry army. Other crucial factors in achieving victory were good military leadership, especially by Bohemund, and the profound religious conviction of the crusaders, who saw themselves as a pilgrim army, the chosen of God. Yet crusader success was limited: they had established only the nuclei of viable states at Antioch, Edessa, and Jerusalem, which would need further support. Moreover, the breach with Byzantium meant that there was no land bridge from the West to the Holy Land, so that the future of the new settlements in the East would depend very heavily upon sea power.

Forbie, Battle of (1244)

A battle fought on 17 October 1244 at Forbie (Harbiyah) near Gaza by the Franks of Jerusalem, who were allied with the Ayyūbids of Damascus, Kerak, and Homs, against the Ayyūbids of Egypt. It was considered the worst Frankish defeat since Hattin (1187).

The battle resulted from disputes among the Ayyūbids after the death of Sultan al-Kāmil (1238). His son al-ʿĀdil II was recognized in Egypt, while another son, al-Ṣāliḥ Ayyūb, seized Damascus, which was soon taken from him by his uncle al-Ṣāliḥ Ismāʿīl.

After al-ʿĀdil had been deposed, Ayyūb was able to install himself in Egypt and plan the reconquest of Damascus. This led to a coalition between Ismāʿīl of Damascus, al-Nāṣir Dāwūd of Kerak, al-Manṣūr Ibrāhīm of Homs, and the Franks, that was determined to prevent the unification of Damascus and Egypt under one ruler. Ayyūb allied himself with the Khwārizmians, a people displaced from Iraq by the Mongol offensives. In 1244 the Khwārizmians captured Jerusalem and joined Ayyūb's troops near Gaza, where they made contact with the Franks and their allies on 17 October. Contrary to the advice of their allies, the Franks, following the leadership of Count Walter of Jaffa, attacked because they outnumbered their opponents, but were defeated. There were more than 5,000 Frankish casualties (among them the archbishop of Tyre and almost all participating members of the military orders), and 800 prisoners were taken to Egypt. Patriarch Robert of Jerusalem reported the defeat to the West.

Fourth Crusade (1202–1204)

A crusade launched by Pope Innocent III with the aim of liberating Jerusalem through an invasion of Ayyūbid Egypt, the chief center of Muslim power in the Levant. In the event, the main body of the crusade was diverted, initially to attack the Christian city of Zara (mod. Zadar, Croatia), and then to

The Crusaders Take Constantinople (1204), by Eugène Delacroix, Louvre, Paris. (Erich Lessing/Art Resource)

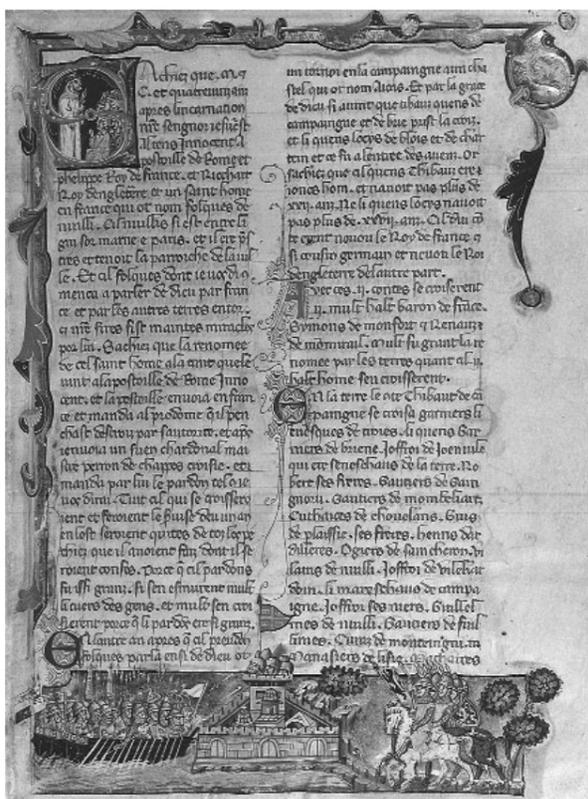

Constantinople (mod. İstanbul, Turkey), where it overthrew the Byzantine Empire and established a Latin regime in its place. Relatively few crusaders made their way to the Holy Land, but those who did were able to help the Latin kingdom of Jerusalem to stabilize and slightly extend its borders.

Origins

On 15 August 1198, Pope Innocent III published his first crusade encyclical, calling for an expedition to liberate Jerusalem that would leave in March 1199. Soldiers would serve a minimum of two years overseas, and in addition to the indulgences and other privileges accorded all crusaders,

the pope offered indulgences to anyone who subsidized a crusader. He appointed two crusade legates, the cardinals Soffredo and Peter Capuano. Soffredo was sent to enlist the aid of Venice, and because Innocent blamed Christendom's failure to recapture Jerusalem on the bickering of its rulers, he dispatched Peter to establish peace between the kings of England and France. He commissioned two other cardinal legates to negotiate an end to the war between Genoa and Pisa. The peace missions to Genoa and Pisa failed, and the five-year truce that Cardinal Peter negotiated between Richard I of England and Philip II of France died along with King Richard in March 1199.

Fourth Crusade (1202–1204)

Fulk of Neuilly preaching the Fourth Crusade. Lower border shows crusaders arriving at Constantinople. From *La Conquête de Constantinople*, by Geoffrey of Villehardouin, c. 1330. (The Art Archive/Bodleian Library Oxford)

Believing that spiritual reformation was another key to success, Innocent enlisted the services of the French evangelical preacher Fulk of Neuilly. On 5 November 1198, the pope granted Fulk permission to enroll monks and canons regular as assistants in preaching the cross. Fulk handed out thousands of crosses, largely to the poor. The high and mighty, who were essential if a crusade army was to take shape, were another matter.

March 1199 came and went with no discernible response from Europe's elites. On 31 December 1199, the pope dispatched a second crusade encyclical, in which he reduced the minimum time of service to a year and set up a church-wide system for raising funds for the Holy Land. He levied a 2.5 percent income tax on all nonexempt clerics, taxed tithe-exempt orders, such as the Cistercians, at a rate of 2 percent,

laid a tax of 10 percent on himself, and set up chests in churches throughout Europe for the reception of donations from the laity. In return, all donors would receive an indulgence. In this manner the pope hoped to involve all of Western Christendom in the crusade and thereby allow everyone to share in its graces. It was this second encyclical that established a new system for raising funds for crusading and other papal programs. Clerical taxes and donation chests in churches became fixtures in the Roman Church and remained so long after the crusades were over. However, the total amount raised for Innocent's crusade was disappointing, and it became clear that most individual crusaders would have to pay their own expenses.

Recruitment and Organization

The preaching of Fulk of Neuilly, Peter Capuano, and others bore fruit when Counts Thibaud III of Champagne and Louis I of Blois took the cross at a tournament at Ecry-sur-Aisne on 28 November 1199. Other lords and knights followed suit, including Baldwin IX of Flanders, Hugh of Saint-Pol, Geoffrey III of Perche, and Simon of Montfort. The great lords dispatched six plenipotentiaries to secure sea transport and supplies; they included Geoffrey of Villehardouin, marshal of Champagne, the future historian and apologist of the crusade. In late winter 1201, the envoys concluded a treaty with the republic of Venice for the transport and provisioning of 33,500 men and 4,500 horses for a payment of 85,000 marks of silver on the standard of Cologne. A fleet of ships sufficient to carry all of these men and their animals, as well as fifty war galleys to be provided at Venice's own expense, was to be ready to sail on 29 June 1202, along with provisions for nine months. The objective, Egypt, made strategic sense, as it was the center of Ayyūbid power and potentially the first step on a triumphal march to Jerusalem, but this destination was kept secret from the rank and file. Venice became a full partner in the crusade and was to receive a half-share of spoils. The city suspended commerce and turned to full-time ship refitting and construction, drafting half its able-bodied men as sailors and marines.

The Venetians upheld their contractual obligations, but the leaders of the crusades had far less control over circumstances surrounding their half of the compact. Thibaud of Champagne died on 24 May 1201. The nominal leadership of the crusade was then offered to, and accepted by, Boniface I, marquis of Montferrat in Lombardy. Boniface duly assumed the crusader's cross at Soissons in late sum-

mer 1201 and probably added a substantial number of followers to the crusade. They were not, however, enough to swell the army's forces to anything approaching the number that the French envoys had estimated would sail from Venice. What is more, the contracted embarkation date of 29 June 1202 arrived and passed with crusaders still straggling into Venice. Even Boniface did not leave home until early August. Many crusaders chose not to rendezvous at Venice but sailed to Outremer from other ports. The cost of passage also dissuaded many. In the end, no more than 12,000–13,000 warriors assembled at Venice. After their money was collected and after the great lords had contributed everything they had or could borrow, the army could only raise 51,000 marks, a shortfall of 40 percent. Venice needed to recoup its investment in time, lost commerce, and materials. To make matters worse, the army's campsite on the sands of the Lido became increasingly oppressive as the hot summer wore on, and the rate of deaths and defections rose alarmingly.

The Diversion to Zara (1202)

In the midst of this crisis, a compromise was proposed by Enrico Dandolo, doge of Venice: the republic would defer payment of the 34,000-mark balance until the army enriched itself with plunder in Egypt, if the army would assist Venice in regaining control over the rebellious city of Zara on the coast of Dalmatia. This proposal was consonant with contemporary mores, inasmuch as every lord or city had the right to secure the loyalty of subject territories before setting off on crusade. Yet it was dangerous, in that Zara, a Latin Christian city, had pledged its loyalty to King Imre of Hungary, himself a sworn crusader, which meant that his lands were under papal protection.

Faced with the choice of accepting the doge's offer or allowing the crusade to disintegrate, the lords agreed to go to Zara. The aged and blind doge requested permission from the Venetians to take up the crusader's cross himself, which he received on 8 September. In response to Dandolo's display of piety, many Venetians who had escaped being drafted for the crusade fleet now flocked to the cause. Venetian draftees and the new volunteers, as well as conscripts later enrolled from Adriatic port cities under Venetian hegemony, combined to raise the number of crusaders to probably over 44,000. This meant that 70 percent or more of the crusaders who sailed with the fleet were Venetians or citizens of cities subject to Venice.

Some of the non-Venetian crusaders from northern Europe who heard of the decision to go to Zara were troubled. These included Abbot Martin of Pairis and Bishop Conrad of Halberstadt, who were commanded by the legate Peter Capuano to stay with the army and work to reduce the level of violence at Zara. However, the Venetians, fearing Peter would forbid the attack once the fleet was under way, refused to accept him as a papal legate, and he returned to Rome, where he informed the pope of this turn of events. Innocent III forbade any attack on Zara under threat of excommunication and dispatched a letter to the army to that effect. It was a canonical yet ultimately impractical response to the crusaders' predicament.

The fleet, consisting of 50 war galleys, about 150 horse transports, and an unknown number of other transport vessels, set sail at the beginning of October 1202, reaching Zara in two divisions on 10 and 11 November. Initially the Zarans were ready to capitulate, but they were dissuaded by some dissidents within the army who believed the pope's warning would forestall any attack. It was bad advice. Despite hearing the pope's words forbidding any violence to the Zarans, most soldiers joined the Venetians in bombarding the city and undermining its walls. On 24 November the Zarans capitulated, and their city was sacked.

The Venetian and Frankish crusaders settled down in winter quarters in the captured city. During the winter, a number of dissident crusaders left the army, some for home and others to the Holy Land. Those who remained behind were eager to have the ban of excommunication lifted from their shoulders. They prevailed upon the clergy traveling with the army to absolve them and sent a legation to Rome to beg papal forgiveness.

Despite his anger, Innocent accepted the Frankish crusaders' profession of contrition and plea that they had acted out of necessity. In February 1203 he provisionally lifted the ban, provided that the crusade leaders bound themselves and their heirs to make full restitution to the king of Hungary. He also ordered them to swear formally never again to attack Christians, save in the most exceptional circumstances, and then only with the approval of the pope or his legate. The Venetians, who admitted no wrongdoing, did not at first seek papal absolution and remained excommunicated. Although Christians normally had to shun excommunicated persons, this extraordinary situation called for extraordinary measures, and Innocent allowed the army to continue to sail with the Venetians.

The Treaty of Zara (1203) and the Diversion to Constantinople

In Zara the crusaders' provisions were dwindling, and their funds were exhausted. While their legates were on their way to Rome, they received emissaries from Philip of Swabia, claimant to the throne of Germany, begging the army to help his brother-in-law, Alexios Angelos. Alexios's father, the Byzantine emperor Isaac II Angelos, had been deposed, blinded, and incarcerated by his brother, also named Alexios, who now reigned as Alexios III. Prince Alexios had fled to the West in 1201. Although rebuffed by the pope, Alexios the Younger continued to court Western help, including meeting Boniface of Montferrat at Philip of Swabia's court at Christmas 1201 and sending representatives from his base in Verona to the crusade leaders assembled in Venice, probably in September 1202. Young Alexios's plight and ambitions were already well known to the Frankish leaders, and Boniface clearly supported his cause. In return for the crusaders' help in ousting his uncle, Prince Alexios promised through Philip's emissaries to submit the Greek Orthodox Church to obedience to Rome, to subvent the crusade with 200,000 marks and provisions for a full year, to supply 10,000 mounted soldiers for the crusade, and to maintain 500 soldiers in the Holy Land for the rest of his life.

The army's leaders were deeply divided on this proposal. After spirited debate, Boniface of Montferrat, Baldwin of Flanders, Louis of Blois, Hugh of Saint-Pol, and Dandolo decided they could not refuse this offer, even though they were in the minority. Several influential clerics, such as Conrad of Halberstadt and Abbot Peter of Lucedio, also supported the baronial leaders. One factor in their decision was the belief that Alexios III was unpopular and would be deposed when the rightful heir appeared before the city. Thus, a small but decisively powerful faction of the army's baronage entered into a treaty with the Byzantine prince whereby he would join the army at Zara before 20 April 1203.

When the legation to the pope returned, the army's leaders conspired to suppress news of Innocent's prohibition of the Constantinopolitan adventure (rumors of which had reached him in Rome) and the Venetians' continued excommunication. As a result, all of the rank-and-file crusaders believed that they had received full absolution for the attack on Zara.

On 7 April the crusaders evacuated Zara. Unable to hold the city with their fleet on crusade, the Venetians reduced it to rubble. On 20 April the army set sail, with Boniface and

Dandolo remaining to wait for Prince Alexios, who arrived on 25 April. A month later they joined the army at Corfu, where the plan to sail to Constantinople met its severest test. Most members of the Frankish army still did not favor the diversion and were only persuaded when the leaders gave a solemn promise that the army would remain in Constantinople no more than a month, unless it freely consented to an extension of that limit.

The First Capture of Constantinople (1203)

The fleet reached the Bosphorus on 24 June. On 26 June the army encamped about a mile upstream from Constantinople and awaited the palace coup they believed was imminent. On 2 July a legation from Alexios III arrived offering the crusaders provisions and money if they promised to leave, and threatening resistance if they remained. The crusade barons countered by calling for Alexios III's immediate abdication. Believing that the people of Constantinople were still ignorant of Prince Alexios's presence, the crusaders sailed up to the city's walls and displayed the young man, while calling on the Byzantines to take action. They were met with missiles and insults.

On 4 July the leaders held a war council and decided their first objective had to be control of the Golden Horn (Turk. *Haliç*), the natural harbor to the north of the city. The following day, the army, which now numbered about 10,000 (not counting the fleet's sailors and marines), landed at the suburb of Pera (Galata) across the harbor from the city. Byzantine resistance was weak and ineffective. On 6 July the crusaders captured the Tower of Galata, which was located at the harbor's entrance, enabling them to break the chain that ran across the harbor from the tower to the city. The Venetian fleet was now able to sail into the Golden Horn, the only enemy fleet ever to do so.

On 17 July the army attacked the land walls at the Blachernae Palace and was repulsed. The Venetians attacked a nearby portion of the inner harbor wall and took twenty-five or thirty towers, about one-quarter of the harbor fortifications. Fierce resistance by the Byzantines prevented any meaningful advance into the city. To protect their perimeter, the Venetians set fire to nearby houses. The wind whipped the fires into a conflagration that consumed about 125 acres of the city. Emperor Alexios sallied out with a massive force in a feigned attack against the Frankish crusaders, inducing the Venetians to abandon their hard-won towers in order to assist their comrades.

By day's end, the crusaders had suffered numerous casualties and apparently gained nothing, but the fire and the emperor's retreat in the face of the smaller crusade army so enraged the citizens of Constantinople that Alexios III fled the city that night. The nobles in the city now reinstalled Isaac II Angelos, who summoned his son to join him in the city. The crusaders, however, refused to allow Prince Alexios to leave camp until Isaac agreed to confirm the Treaty of Zara and to accept Alexios as co-emperor. Isaac acceded, possibly in return for the crusaders' camping across the Golden Horn in Pera and not in the city. The coronation of Alexios IV took place on 1 August.

Alexios IV and Isaac II made an initial payment sufficient to allow the army to pay off its debt to the Venetians; after imperial funds dried up, they had to resort to confiscating church treasures, but even that was insufficient. A more difficult task was delivering on the promise to submit the Byzantine church to papal authority, and there is no evidence that the co-emperors even tried. Isaac and his son had a precarious hold on the throne and faced the grim prospect of not being able to fulfill all of Alexios's promises to the crusaders. On their part, the army's leaders were burdened with their vow to the soldiers to quit Byzantium within a month of their arrival. The most generous computation of the due date was one month from 18 July, when they entered the city. Alexios IV therefore proposed that the army remain in his service until March 1204 and campaign with him so that he could capture his uncle, secure control over the provinces, and gain the riches of empire. The plan made sense to the crusade leaders, who won over the soldiery to their point of view. With most of the crusaders remaining behind as a security force, Alexios and some of the crusaders marched into Thrace, where they won over some cities but failed to capture Alexios III.

Meanwhile two disasters struck in Constantinople. On or around 18 August, a riot broke out in which Greeks slaughtered a number of Latin resident aliens and looted their quarters. Many survivors fled to the crusader camp across the harbor. On 19 August a group of armed westerners (probably largely refugees from the riot) crossed the Golden Horn and attacked a mosque built by Isaac II as a token of friendship with Saladin. The Latins set the mosque on fire and set additional fires in the abandoned Latin quarters. These grew into one of history's greatest urban conflagrations. By the time the flames were under control two days later, about 450 acres of the city had been consumed and

approximately 100,000 inhabitants were homeless, although few, if any, had died in the flames. The city's remaining Latins fled across the harbor to the crusader encampment.

The Constantinopolitans blamed Alexios IV for having brought the destructive Westerners to their city. He now tried to distance himself from the crusaders following his return from the Thracian expedition in November, although he continued to use them to support his hold on the crown. Alexios IV suspended payments to the crusaders, and on 1 December armed conflict on both land and water broke out, with deaths on both sides. After a formal warning to Alexios IV was rebuffed, hostilities now began in earnest, although there is no reason to conclude that the crusaders intended at this time to conquer the city. They wanted to either force Alexios to honor his contract or plunder wealth equal to what the emperor owed them. Alexios's antipathy toward the crusaders appears to have been largely feigned, for he seems to have harbored hopes of reestablishing friendly relations with them.

The Second Capture of Constantinople (1204)

Following two unsuccessful Byzantine attempts to destroy the Venetian fleet with fire ships and the inglorious defeat of an imperial land force, Alexios IV's tenuous popularity plummeted. On 25 January 1204, an urban mob declared him deposed, and two days later they forced the imperial purple on a young nobleman, Nicholas Kanabos. In desperation, Alexios IV turned to the crusaders for assistance, but he was seized and imprisoned by the imperial chamberlain, Alexios Doukas (nicknamed Mourzouphlos), the leader of the faction opposed to the westerners, who declared himself emperor. With the execution of Kanabos and the death of Isaac II, who died from natural causes shortly before or after Alexios IV's deposition, Doukas had an uncontested hold on the throne.

Alexios V Doukas was crowned emperor on 5 February, and on 7 February he tried to negotiate a peaceful crusader withdrawal from Constantinople. The crusaders refused, neither trusting him nor wishing to abrogate their treaty with Alexios IV. The next night, Alexios V had the young emperor strangled. With no reason to hope for any accommodation with the Byzantines, the crusaders decided on a full-scale war against Alexios V and the imperial city. The clergy traveling with the army provided justification by assuring the crusaders that their cause was righteous, and even the moral equivalent of an assault on Muslim-held Jerusalem.

Fourth Crusade (1202–1204)

In March the crusade barons and the Venetians entered into a new treaty that arranged a division of the empire to follow the capture of the city. On 9 April all their forces concentrated an assault on the same area of harbor walls that the Venetians had held for a while in July 1203. They were repulsed with substantial losses but made another amphibious assault on 12 April. Thanks to gallantry, foolhardiness, and luck (largely by forcing an entry through a poorly defended postern gate along the harbor strand), the crusaders established a precarious forward position within the city. With the situation still in doubt, the crusaders set a defensive fire during the night. This—the third conflagration in nine months—brought the overall destruction by fire to about one-sixth of the total area of the city. During the night, Alexios V fled the city, and on the morning of 13 April the crusaders unexpectedly found themselves in uncontested possession of Constantinople. They then subjected the city to three days of pillage.

Conclusions

During the second week of May, the crusaders elected Count Baldwin IX of Flanders as the new emperor. His coronation on 16 May inaugurated the Latin Empire of Constantinople, which lasted to 1261. The crusading clergy had convinced the rank and file that their attack on Christian Constantinople, a city supposedly bathed in sin, schism, and heresy, was consonant with their crusade vow. Cardinal Peter Capuano even confirmed that their capture and defense of the city fulfilled that vow. He and Cardinal Soffredo released the Venetians from their ban of excommunication incurred at Zara, even though they still admitted no wrongdoing, and Peter dispensed from their crusade obligation all crusaders who stayed on in the Latin Empire for an additional year. Despite the consternation of Pope Innocent III, there was great hope in the West that the conquest of Constantinople would unify Christendom under Roman obedience and lay the foundation for the reconquest of Jerusalem. The reality was the opposite. The Latin Empire, teetering continually on the brink of disaster, soaked up crusade energy that could otherwise have been directed to the Holy Land. As for Christian unity, arguably the events of 1204 closed an iron door between the Orthodox East and Roman Catholic West that has not been reopened.

France

The histories of the kingdom of France and the crusades are entwined in both fact and medieval perceptions. Pope Urban II preached the First Crusade (1096–1099) at Clermont in Auvergne (mod. Clermont-Ferrand) in November 1095, and, with rare exceptions, French pilgrims and warriors made up the largest contingents of all subsequent crusades until King Louis IX's ill-fated journey to Tunis in 1270. Support came from all levels of society. Five kings of the Capetian dynasty in succession went on crusade in the thirteenth century. The so-called People's Crusades of 1095–1096 show the depth of the appeal of the crusade among nonnobles and peasants, although it was by no means confined to these groups. Moreover, numerous popular or revivalist crusading movements took place within the kingdom, such as the Children's Crusade of 1212 and the Shepherds' Crusades of 1251 and 1320. Finally, the Albigensian Crusade (1209–1229), launched against the Cathars or "pure Christians," eventually brought most of the autonomous counties of southern France under royal control. Even the deaths of three kings on crusade in the course of the thirteenth century did not end French interests, or the royal family's perceptions of itself as the commanders of wars directed against "the enemies of Christ." For example, Pierre Dubois, a Norman lawyer, wrote *De recuperatione Terre Sancte* around 1306 in an unsuccessful attempt to inspire King Philip IV to continue the exploits of his grandfather, Louis IX.

Origins and Definitions

Although a comprehensive analysis of the crusading movement in France would require a survey of Capetian history, one must be mindful that what defined "France" changed geographically, politically, and culturally throughout the era. For example, the resources held by King Philip I (d. 1108) at the time of the Council of Clermont were strikingly paltry compared with those held by his descendant Louis IX in the 1260s. Yet, even as the people of Toulouse negotiated

with their count, Alphonse (a brother of Louis IX), over the contribution they would make to his participation in Louis's crusade of 1270, they spoke of the need to travel "to France" to meet with him, because they saw their territory as culturally and juridically distinct (although not independent) from the realm.

The degree to which one can speak of proto-crusades or "the idea of crusade" before 1095 is debated. Nevertheless, most historians agree that much of what made "the French" so responsive to Urban II's appeal depended on the vassalic-economic milieu and the lay religious associations of the eleventh century. Nobles often secured or aggrandized their powers by fighting their neighbors, and the feud was an accepted way to respond to disputes. Ecclesiastics sought to control such violence through the Peace and Truce of God, which were first proclaimed by southern French bishops in the decades around 1000. Sometimes the energies of knights could be channeled into punishing those who broke the episcopal peace or into expeditions further afield. For example, Raymond IV of Saint-Gilles, count of Toulouse, occasionally raided Muslim-held towns in northern Spain to capture booty that was denied him in Christian Occitania by the peace movements he supported. Such excursions helped establish the notion that taking war to non-Christians not only satisfied the need for wealth but also might be pleasing to God. More directly, the socioeconomic volatility of such a violent society was exacerbated by a spate of famines in the early 1090s that inspired spiritual reform throughout French society. Perhaps the genius of Urban's appeal, therefore, was that it offered everyone the opportunity to participate in a physical and spiritual battle against church-sanctioned enemies far removed from the difficult environment in which they found themselves. French crusaders happily co-opted the Latin term *milites Christi* ("soldiers" or "knights" of Christ), which had hitherto referred to monks.

The French Monarchy and the Crusades

Before his sermon at Clermont, Pope Urban II spent much of the summer of 1095 convening ecclesiastical councils in France, but deliberately avoided royal territory during his tour. The pope had excommunicated King Philip I because of his scandalous second marriage to Bertranda of Montfort. Papal relations with the Capetian king were nevertheless better than those with the Holy Roman Emperor, Henry IV, who supported the antipope Clement III. Urban's diplomatic

efforts pertinent to the crusade focused on the great noble houses of Boulogne, Blois-Champagne, Normandy, and Toulouse: their territories encircled those of the king, which largely lay in the area between Paris and Orléans.

Although Philip I was not allowed to participate in the crusade, the Capetian family was represented by his younger brother, Count Hugh of Vermandois. Excessively conscious of his status as a cadet of the royal family, Hugh soured relations between the crusaders and the Byzantine emperor, Alexios I Komnenos (whose aid the crusaders hoped to gain on their way to Jerusalem), even before his arrival in Constantinople (mod. Istanbul, Turkey). As the crusading armies marched across the Balkans in 1097, Hugh forwarded a letter demanding that he be received with all the pomp due a king: evidence of the prestige the Capetians sought to portray, though they held but limited power in their own realm.

The socioeconomic effects caused by the departure of the First Crusade in 1096 were profound: a generation of some of the most powerful lords of the realm, not to mention innumerable noncombatants and pilgrim-warriors, sold or leased their properties and delegated their powers to siblings or trusted vassals. Therefore, demand for a depleted food supply was lessened, labor markets had to be replenished, numerous properties and titles changed hands, and new (at least more expansive) means to turn land into cash were devised, all of which helped foster economic recovery. Moreover, once news of the capture of Jerusalem in July 1099 reached France, reformers saw their efforts justified, a new wave of armies mustered, and the processes of exchange and export began anew in 1100–1101.

Departing crusaders mostly sold or mortgaged their properties to local monasteries. One of the more significant sales of the era was that of the city and viscounty of Bourges by Odo Arpin to Philip I around 1100. Philip's purchase represented the first expanse of territory south of the river Loire brought directly under Capetian control. Moreover, Bourges was the seat of an archbishop, whose jurisdiction went far to the south. Royal possession of the viscounty and influence over the archbishopric marked a significant turning point in the fortunes of the Capetians.

Although the principalities of the Levant established by the first crusaders survived the destruction of the reinforcements who arrived in 1101, the city of Edessa (mod. Şanlıurfa, Turkey) was recaptured by the Muslims in 1144, an event that stirred Louis VII (1137–1180) to begin plan-

ning an expedition at the court held at Bourges that Christmas. Indeed, Odo of Deuil, a monk at the royal monastery of Saint-Denis, north of Paris, and chronicler of the Second Crusade (1147–1149), suggests that Louis was the one who spurred Bernard of Clairvaux and others to preach a crusade. Louis took the cross the following Easter, the first of five French kings to do so. However, despite the leadership of Louis and the king of Germany, Conrad II, the crusade further soured relations with the Byzantine emperor before it was defeated in Anatolia.

If Philip I had the good fortune to add to the royal demesne around 1101, King Louis VII had the ill fortune to lose Anjou and Aquitaine when he divorced his famously strong-willed wife, Eleanor of Aquitaine, soon after the surviving crusaders returned. Odo did not provide details of Eleanor's indiscretions while she accompanied Louis to the East, but nor was he disappointed to see such a "foreign" influence leave the royal court. Worse was to follow, however, for Eleanor married Henry II Plantagenet, count of Anjou, who became king of England in 1154. She quickly bore him several sons. Between Henry's hereditary domains in Anjou, Eleanor's extensive dowry of Aquitaine, and the duchy of Normandy held by the kings of England since 1066, the Plantagenets controlled more territory in France than did the Capetians. Although Louis's son Philip II resettled the territorial account slightly in the Capetians' favor, tensions between the kings of England and France colored all crusading plans after 1150 and brought outright war between the two kingdoms for much of the fourteenth and fifteenth centuries.

Philip II Augustus (1180–1223) did not share his father's enthusiasm for the crusade. Philip concentrated on strengthening royal governance and expanding Capetian authority in regions held by de facto autonomous barons, including those held by the king of England. Philip's support for the crusade was always contingent on the simultaneous departures of King Henry II and, later, of Richard I the Lionheart. This contingency brought numerous delays, although Philip continued to collect taxes and tithes meant to support his crusade. Finally, after Henry's death, Philip II and Richard I left on the Third Crusade (1189–1192). Unlike his father or his descendants, Philip embarked on no striking military quests, and thus Richard stole the attentions of chroniclers and poets. Philip considered his part in the recapture of the coastal city of Acre (mod. 'Akko, Israel) enough of a contribution and, much to the consternation of

his contemporaries, returned to France in the summer of 1191. Although he left much of his army under the command of Hugh III, duke of Burgundy, such support for the embattled Frankish states betrays an aspect of Philip's realpolitik: He left the flamboyant Richard and many of the strongest lords of France to fight in the Levant while he returned to co-opt or capture a number of wealthy duchies and counties for the crown.

Despite Philip's domestic preoccupations, his reign witnessed a swell of crusading fervor. A large French contingent left on the Fourth Crusade (1202–1204). Moreover, southern French forces played a significant role in the victory at Las Navas de Tolosa in Spain (1212) against the Muslim lords of northwestern Spain. French knights also joined the Fifth Crusade (1217–1221), which sought, unsuccessfully, to destroy Ayyūbid power in Egypt. Their numbers were limited, though, because of a crusade that was raging within France itself.

The Albigensian Crusade (1209–1229) was launched to destroy the dualist religion of the Cathars in Occitania and adjoining regions of the south. Cathar believers were sometimes called Albigensians because the city of Albi was believed to be the spiritual and administrative center of the sect. The Albigensian Crusade was the first military campaign launched against a heretical group (as opposed to non-Christians), the first crusade to fight within western Europe, and arguably the most important crusade concerning France. The Roman Catholic Church had been aware of the sect's presence in France since Bernard of Clairvaux preached the Second Crusade there in the mid-1140s. The sect was probably quite small at its core, but it enjoyed a good deal of support from nobles eager to challenge episcopal power. Indeed, Pope Innocent III believed that the lack of royal and episcopal authority evident in the south was to blame for the spread of the doctrine. He thus attempted to enlist Philip II's support from at least 1204, but Philip consistently refused to commit royal resources. Innocent proclaimed a full crusade in 1208 in response to the murder of his legate, Peter of Castelnau, who was murdered, many believed, with the implicit consent of Count Raymond VI of Toulouse.

The launch of the crusade also meant an attack on the Saint-Gilles dynasty of Toulouse, a family that had provided one of the leaders of the First Crusade. The archbishops of Bourges were the most enthusiastic preachers of the Albigensian Crusade, and the city was host to a num-

ber of councils and military musters. Response was swift, but one must be aware of the complexities of support and resistance: many southerners initially welcomed the effort to extirpate heresy, whereas some northern clerics questioned the veracity of a crusade to coerce submission to Roman Catholic authority, and—as mentioned—Philip remained aloof from the entire enterprise. Moreover, the crusade was fraught with jurisdictional difficulties. The most pressing question concerned who should possess lands captured from Cathars and their sympathizers. In 1215 Simon of Montfort, commander of the first expedition, was accepted as having de facto possession. Yet, he was killed while fighting outside Toulouse in 1218, and Raymond's son Count Raymond VII was considered a good Catholic who had a legitimate claim to his father's lands. However, a council at Bourges in 1225 dispossessed Raymond VII in favor of Simon's son Amalric, who immediately offered the inheritance to King Louis VIII of France. Louis then marched south as the head of a crusading army. He met almost no armed resistance, but he died of an illness in October 1226, which brought his son Louis IX, still a teenager, to the throne.

The vagaries of battle and diplomacy meant that the Albigensian Crusade lasted until 1229, when Raymond VII submitted himself to Louis IX and a body of clerics in Paris. The Treaty of Paris, promulgated in March, forced Raymond to bequeath his possessions to his daughter Jeanne, who was to be married to a Capetian prince. The county of Toulouse would pass, therefore, into Capetian hands at Raymond's death. To hasten the fateful day, Raymond was required to undertake a crusade to the Levant. He was able to delay his departure for almost two decades, but the beleaguered count died near Nîmes in 1248, and Toulouse passed via his daughter to her husband, Louis IX's brother Alphonse of Poitiers. With this inheritance, most of the territory of modern France came into the possession of the Capetians, although it was not all held directly by the king.

Louis IX and his brothers Alphonse of Poitiers and Charles I of Anjou embarked on perhaps the two best-known crusades in French history. Though Jerusalem was captured by the Muslims in 1244, Louis's first crusade seems to have been his own decision, based upon the family's heritage, his religiosity in the face of severe illness, and a desire to break free from the interference of his domineering mother, Blanche of Castile. Louis's preparations for his Crusade to the East (1248–1254) included the circula-

tion of *enquêteurs* (commissioners) to review the work of local officials (a practice followed by Alphonse in the south, where, in fact, he rarely visited). Louis viewed the abuses and shortcomings found as a personal moral concern that had to be corrected to ensure God's protection of the realm. The reviews, which continued throughout the king's rule, increased his already commanding stature as "the most Christian king." So too did it ensure royal oversight of local tax collection, record keeping, and the enforcement of justice. Louis's efforts and the support he received from the church allowed him to spend perhaps six times the customary annual royal income on the crusade. He even had resources to purchase the relic of the Crown of Thorns from Baldwin II, Latin emperor of Constantinople (a relative he wanted to support financially), and to build the sumptuous Sainte-Chapelle in Paris to house it.

The crusaders were defeated at Mansurah (mod. El-Mansûra, Egypt) soon after their landing in 1250, and Louis was even held captive by the sultan of Egypt for a time. But nothing could deter the king's enthusiasm. Louis made a tour of the Holy Land after he was ransomed, where he purchased more relics and patronized local architectural and manuscript projects. Upon his return to France in 1254, Louis redoubled his efforts at reform, both administrative and personal, in an effort to regain God's favor and plan for a second crusade. Neither the Capetians nor their monastic chroniclers imagined defeat as a military or economic concern. It was invariably described as a divine warning to encourage reform, and Louis epitomized this understanding of the setbacks he and his ancestors had endured.

Though he and his brothers vowed immediately to return to Jerusalem, Charles of Anjou enrolled himself as the papal champion in a conflict with Manfred, illegitimate son of Emperor Frederick II, over Sicily. Charles was preemptively crowned king of Sicily by Pope Urban IV in January 1266, and he captured the kingdom a month later. Louis and Alphonse did not participate, but they awaited its outcome before pressing their plans for a crusade. Louis's piety and Charles's victory arguably marked the apex of Capetian influence throughout Western Christendom.

In the spring of 1267 the three brothers began their preparations in earnest, preparations that yet again reconfigured Capetian governance. Alphonse, for example, established one of the earliest registries of outgoing letters by any Capetian. He did so around Easter 1267, the same moment he took

the cross, in order to keep track of the exceptional financial demands he placed upon his subjects in Poitou and Toulouse. The resources backing Louis's Crusade to Tunis (1270–1271) were even greater than those for his first crusade, but so, too, were its failures. The king and his son Philip fell ill soon after their landing in Tunis. Disease spared the boy, but Louis died on 25 August 1270. Charles led a general retreat, but Alphonse and his wife, Jeanne, sailed to Genoa, from where they hoped to relaunch the expedition. They also died of an illness almost exactly a year after Louis's death. As they had no offspring, their possessions reverted to King Philip III (1270–1285), a reversion that doubled the size of the king's domains.

Possession of the county of Toulouse drew Philip III into Spanish dynastic struggles. Pope Martin IV encouraged Philip to lead a crusade, entirely political in nature and often criticized by contemporaries as such, against King Peter III of Aragon in 1284. After Philip's forces failed to capture Gerona in northeastern Spain, they hoped to pass the winter in Toulouse. The king died in October 1285 on the return. His cousin Charles II of Anjou died on a related campaign the following January, ending Capetian military adventures in the Mediterranean.

King Philip IV (1285–1314), not unlike other rulers of his generation, showed little interest in the crusade. He concentrated his efforts on extending French influence into Flanders to the north and Gascony (held by the kings of England) to the southeast. But so, too, did Philip fight to strengthen the prestige of his lineage by using every means at his disposal to ensure the canonization of Louis IX, granted in August 1297. All the testimonies submitted to support the petition discussed Louis's leadership on two crusades, of course. But many made mention that he was the culmination of a crusading tradition and religious devotion within the Capetian family—a family that deserved canonical recognition for their collective contributions and sacrifices.

After Philip IV's death, a series of short-lived kings who were unable to sire heirs meant that the Capetian line, which had ruled France since 987, gave way to a collateral branch, the Valois, in 1327. Dynastic concerns overshadowed the opportunity to prepare a crusade in the 1320s, although numerous appeals to launch one came from the papacy. Philip VI of Valois (1328–1350) successfully petitioned Pope John XXII to preach the crusade in 1333, and he initially had the support of King Edward III of England. Plans for the route and strategy for the expedition proved difficult to

establish, however. Delays into 1336 engendered distrust in the papal court, where Edward, who claimed the French crown via his mother, Isabella (daughter of Philip IV), spread rumors that Philip's military buildup was really in preparation to attack England.

The opportunity for Philip's planned crusade faded, although a few smaller expeditions embarked for Armenia. Philip indeed used the men and money raised for his crusade to fight the English during the early years of the Hundred Years' War. Nevertheless, the French economy fell into ruin and many noble houses were destroyed during the opening decades of the war, and leadership of the crusading movement passed to Italian city-states, the Holy Roman Emperor, and especially the Iberian kingdoms of Castile and Aragon.

Noble, Knightly, and Popular Participation

As early as the fall of 1095, Pope Urban II was keenly aware of the need to limit participation in the crusade to those capable of bearing arms. For most people, however, the crusade was a pilgrimage, and thus open to any Christian who wished to undertake the journey. Historians have recently delved into local archives throughout France to discover the depth of support for the crusade. Local records, especially contracts of sales, mentions of gifts, and wills, reveal individuals who needed to raise cash or make pious donations before they embarked for the Holy Land or Occitania as *peregrinati* (pilgrims) or (later and more rarely) *crucesignati* (those signed with the cross). In the Berry (the region around Bourges sold to Philip I), for example, local participation seemed to have surged between the crusade of Philip II Augustus in the 1180s and Louis IX's first crusade in the 1250s, although the phenomenon also reflects a greater survival rate of documents more generally. Departures of nonnobles certainly surged with royal preparations, but many left France in the 1160s and the 1240s (for example) as well, when the Capetians were not engaged in a crusade.

The Frankish principalities in Outremer established by the First Crusade were ruled, with occasional exceptions, by lesser French nobles who brought French language and law to the Levant. The kingdom of Jerusalem was ruled by descendants of the counts of Rethel for much of the twelfth century, and the family of Lusignan reigned for much of the thirteenth. The *Assizes of Jerusalem* pertained to procedures of succession of the kingdom and were based on French customs, although it is debated how pertinent the *Assizes* were

in practice. A similar dynamic took place during the Albigensian Crusade, when its commander, Simon of Montfort (a notable on the Fourth Crusade), drew up the *Statutes of Pamiers* in 1212. These were designed to protect the Catholic faith, the church, and the poor in captured lands in the south, and they often referred to establishing customs as practiced in France around Paris. Through such codes, noble French crusaders sought to expand their legal culture throughout many areas of the Mediterranean.

Generations of greater and lesser nobles participated on every crusade here mentioned. During the Fourth and Fifth Crusades, and the Albigensian Crusade that linked and overlapped with them, nobles commanded armies in lieu of kings, a development that might in retrospect appear to have been a tactical disaster of infighting and war-by-committee. Participants nevertheless saw their endeavors as the culmination of noble prowess and crusading zeal. Whereas the narratives of the first two crusades were written by clerics and monks, accounts from the Third Crusade onward were penned mostly by lesser nobles writing in their native French or Occitan. Robert of Clari and Geoffrey of Villehardouin gave veritable roll calls of the nobles who participated on the Fourth Crusade. Villehardouin in particular emphasized the role of the count and lesser nobles of Champagne both in instigating the crusade and in bringing about some form of order and success when Flemish crusaders broke their vows and embarked on their own plans. William of Tudela and his anonymous continuator, as well as troubadours who sang a decade later about the threatened destruction of Occitan culture and Catholic faith in the face of an Albigensian Crusade gone astray with the greed of northern Frenchmen, also named many noble houses on both sides of the conflict, as well as prominent bourgeois who defended their towns. Motivations for lesser nobles and commoners involved a dynamic mix of local and familial traditions, a desire for spiritual reward, and prospects to improve a family's status. Moreover, in such sources we see glimmers both of class consciousness and proto-nationalist sentiment (based mostly on dialect and territory, rather than boundaries and political allegiance).

France also saw numerous crusades led by nonnoble and charismatic men. Many in the twelfth century credited Peter the Hermit, a wandering monk from northeastern France, with inspiring Urban II to preach the crusade. He led a large and ill-prepared contingent of pilgrims to defeat in Asia Minor in 1096. Around 1212 Stephen of Cloyes claimed to

possess a divine letter encouraging him to lead a crusade of pure-minded young men to Jerusalem. His gathering, however, was dispersed along the southern coast of France, perhaps by cynical slave traders. Finally, town and country dwellers referred to as “shepherds” inspired two campaigns, one in 1251 (in response to Louis IX’s capture at Damietta) and the other in the early 1320s. Both movements turned violent toward Jews before they were dispersed by urban and royal authorities in central France. All these movements possessed the energies of religious revivals, and their leaders believed that God had called the humble to capture Jerusalem because kings and nobles had failed to do so.

The most difficult participants to gauge are women. Chroniclers (usually monks) often mentioned the queens and noble ladies who accompanied their husbands (such as Eleanor of Aquitaine, Jeanne of Toulouse, and Louis IX’s wife, Margaret), but little was said about the mass of supporters who followed all the crusades. It is clear that nonnoble women joined the expeditions as pilgrims. The French kings struggled to end prostitution on their crusades as well. After initial hesitation, both the Templars and Hospitallers accepted women into their ranks; this was done on separate estates, and the women usually joined when on their deathbeds, a tradition long practiced by religious orders. In Outremer, where war continually decimated the male population, queens and countesses carried the trappings of power to a much greater degree than in France, from where second or third husbands were often sought.

The search for nonnoble female participants is further hampered by the fact that local records that pertain to exchanges of property to finance pilgrimages invariably refer to the man who controlled the property. Historians are dependent, therefore, on mention of his wife, daughter, or sibling in the transaction. The Occitan *Chanson de la Croisade albigeoise*, however, occasionally refers to the women of Toulouse, who helped defend their city against Simon of Montfort’s attacks in 1216–1217. Though evidence is slim, it would be safe to say that women made up a significant minority of every crusade, and that noble women had notable influence on the decisions made by their husbands.

The Military Orders in France

The Order of the Temple was founded by Hugh of Payns, a nobleman from Champagne, around 1120. The Hospitallers, whose original foundation as a charitable organization took

place a generation before, soon followed the Templars’ example in becoming a military order. The orders had their headquarters in Jerusalem, yet both, especially the Templars, drew most of their membership and wealth from France. Nevertheless, they did not develop nationalist characteristics, unlike the cases of subsequently founded military orders such as the Teutonic Knights or the Spanish Order of Calatrava. The Hospitallers and Templars initially focused their recruitment and fund-raising efforts in Italy, but the support offered by the people of southern and eastern France encouraged them to move their western headquarters to Saint-Gilles, just west of the Rhône, by 1140. Their resources swelled exponentially in the mid-twelfth century through donations from lay people who saw in them the perfect fusion of corporate military strength and individual monastic piety, an image extolled by Bernard of Clairvaux in the 1140s as Louis VII prepared for his crusade.

The orders’ organization in France was initially governed as a province (Templars) or a priory (Hospitallers) run by commanders or priors, respectively. Their success and popularity meant that in the thirteenth century both orders divided their holdings into two or three provinces or priories, with headquarters in Saint-Gilles, Toulouse, Lyons, and Paris. The orders had simple hierarchies with few intermediate ranks between itinerant commanders and local chapters, an evolution that probably helped speed transfer of men and arms to the Levant. Although both orders held extensive property in southern France (invariably an autonomous province or priory), they went to great lengths to avoid participation in the Albigensian Crusade, a stance that would help foster a mythology of Templar gnosticism and even Satanism during the order’s trial in 1308 and subsequent suppression.

The Templars and Hospitallers concentrated their resources on fighting infidels, and the territories and treasures held in France were meant to support that vocation. Such was the wealth of the Templars that King Louis VII borrowed extensively from them to support his crusade in 1147, and his descendants depended on their commandery in Paris as the royal treasury. Philip IV, whose attentions were directed toward the English and Flemish armies in the Low Countries, saw the order as a source of desperately needed income. The king arrested the order’s members in October 1307 and confiscated Templar properties throughout France. The majority of those apprehended, however, were monkish and often older men who could not participate in

the wars in the Levant, but who hoped to support the order's ideals through prayer, almsgiving, and the raising of funds. Nevertheless, Philip pressed his charges, and although Pope Clement V remained unconvinced of the extreme allegations, he accepted the suppression of the Templars in 1311. Philip received little of the wealth of the order, however, as much of it was handed over to the Hospitallers.

Literary Images of the Crusades as a French Enterprise

One aspect of French participation that receives comparatively little attention is the way the French envisioned themselves, their allies, and their enemies via their historical narratives and literature pertaining to the crusades. The anonymous *Gesta Francorum*, written just after the First Crusade by a layman, emphasizes God's plan to liberate Jerusalem as realized through the Franks: Parisians, Angevins, Toulousans, and Burgundians united in their oath to defeat the infidel. Crusading songs of the twelfth century, most of which came from southern France, emphasized the need for a pure heart and chivalric honor for a crusader to succeed. Chronicles written by French clerics from the Second Crusade to the fourteenth century emphasize, not surprisingly, royal participation. Indeed, the kings of France, rather than the popes, were often given credit for launching expeditions. The men who accompanied the Capetians were described as devout and chivalrous. Blame for failure, by contrast, was placed on duplicitous Greeks or vainglorious Germans. Odo of Deuil, for example, contrasted the effeminacy of the Byzantine court with the manly and Catholic court of Louis VII.

Much effort was put into using such propagandistic imagery to describe French military expeditions in the fourteenth century, especially in reference to the campaigns against the Flemings and the English in the first half of the century. In the early 1310s, Philip IV portrayed the Flemings as undermining the peace that would allow him opportunity to organize a crusade against the Muslims. Some twenty years later, Philip VI hoped to convince Pope John XXII that a crusade against the English, who continued to raid areas of southwestern and northern France, was a prerequisite for the success of the crusade he was planning against the Muslims. In neither case did the papacy acquiesce, but it did pursue a notably pro-French agenda that encouraged a developing mythology of "the most Christian king" of France whose inability to lead a crusade was largely blamed on interference from belligerent neighbors. If the crusades were

Kings of France in the Period of the Crusades

Philip I	1060–1108
Louis VI	1108–1137
Louis VII	1137–1180
Philip II Augustus	1180–1223
Louis VIII	1223–1226
Louis IX (St. Louis)	1226–1270
Philip III	1270–1285
Philip IV the Fair	1285–1314
Louis X	1314–1316
John I	1316
Philip V	1316–1322
Charles IV	1322–1328
Philip VI	1328–1350
John II	1350–1364
Charles V	1364–1380
Charles VI	1380–1422
Charles VII	1422–1461
Louis XI	1461–1483
Charles VIII	1483–1498
Louis XII	1498–1515
Francis I	1515–1547

meant to expand the reach of Latin Christianity throughout the Mediterranean world, they in fact encouraged groups within Latin Europe to articulate ever more clearly the linguistic, legal, and cultural distinctions among them.

The Valois kings put great stock in the crusading traditions of their Capetian forebears, perhaps because they could not mount a crusade of their own. They continued, for example, a historical project begun at the royal abbey of Saint-Denis under Louis IX that was designed to exemplify the religious, cultural, and dynastic unity of France: the *Grandes Chroniques*. Jean Foulquet was commissioned by Charles VII to produce an illustrated version. Foulquet, immersed in the ideals and myths of the Valois court and in the triumphal narrative presented in the *Chroniques*, had the temerity to open the chapter relating the rule of Philip I with an image of the Council of Clermont of 1095, at which, according to Foulquet, the excommunicated king sat directly below Urban II as the pontiff preached the crusade [MS Paris, Bibliothèque nationale de France, lat. 6465, fol. 174r]. The image argues that every crusade had been led by a king of France. Although patently untrue, the myth could be perpetuated because, until the 1340s, the greatest and longest-

Francis of Assisi (1182–1226)

lasting gains of the crusading era were made in the governmental power, fiscal resources, and moral authority of the Capetian and Valois kings of France.

Francis of Assisi (1182–1226)

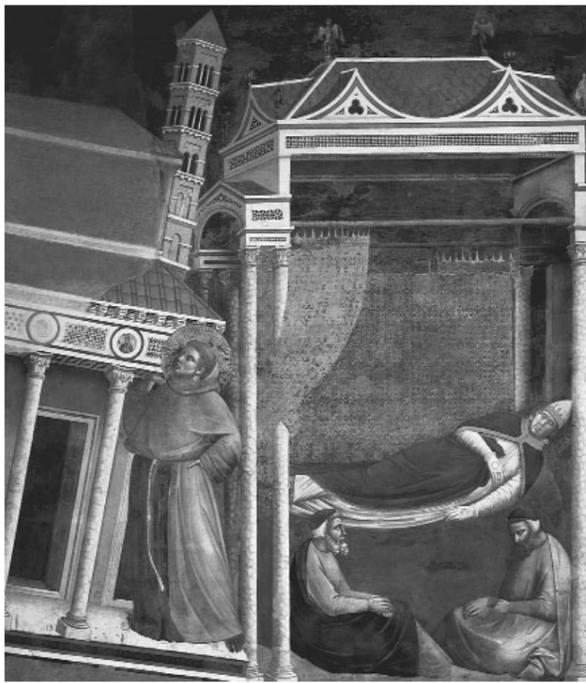

Born into a rich family of cloth merchants of Assisi, Francis in his early twenties had a conversion experience that

pushed him to attempt the apostolic life (Lat. *vita apostolica*), based on absolute poverty. He founded the Order of the Friars Minor, or Franciscans, who saw mission to infidels, and particularly to Muslims, as an integral part of the renovation of Christendom and of the living out of the *vita apostolica*.

Francis’s hagiographers affirm that he wished to live like the apostles, who preached to infidels, and to die like the apostles, martyred by infidels. It was this thirst for martyrdom, according to Franciscan hagiographers Thomas of Celano and Bonaventure, that drove Francis to embark for Outremer in 1212 in order to preach to Muslims, but contrary winds kept him in Italy. He subsequently set out for North Africa, but fell ill in Spain and did not reach Muslim territory. He finally set out for Outremer in 1219 and made his way to the camp of the crusaders who were then besieging Damietta in the course of the Fifth Crusade (1217–1221). Thomas of Celano tells how Francis preached in the crusaders’ camp and predicted a defeat in battle, a warning that went unheeded. Some historians have seen this incident as a testimony to Francis’s opposition to crusade or even his pacifism, yet there is no evidence to support this claim: according to Thomas, Francis warned against fighting on one ill-fated day; he did not preach against crusading in general.

Francis’s goal in coming to Egypt was to preach to al-Kāmil, the Ayyūbid sultan. According to the writer James of Vitry, Francis “came into our army, burning with the zeal of faith, and was not afraid to cross over to the enemy army. There he preached the word of God to the Saracens but accomplished little” [*Lettres de Jacques de Vitry 1160/70–1240, évêque de Saint-Jean d’Acre*, ed. R. B. C. Huygens (Leiden: Brill, 1960), no. 6]. In his *Historia Occidentalis*, James embellishes the incident, affirming that the sultan listened eagerly and attentively to Francis. Franciscan hagiography and iconography developed the encounter in ever greater detail, having Francis propose a trial by fire with the “Saracen priests,” or even having him secretly convert the sultan.

Francis returned to Italy without having gained the palm of martyrdom. The following year (1220), five Franciscan friars succeeded, through repeatedly preaching against Islam and Muḥammad in mosques and public squares in Seville and Marrakesh, in provoking the Almohad caliph al-Mustanşir into having them put to death. Francis, upon learning of their martyrdom, is said to have proclaimed, “Now I can truly say that I have five brothers!” [Arnauld de Sarrant,

Innocent III Dreaming of St. Francis Holding Up the Church, by Giotto di Bondone, c. 1290–1295. (Archivo Iconografico, S.A./Corbis)

Chronica XXIV Generalium Ordinis Minorum, in *Annales Franciscanorum* 3 (1897), 593]. Such missions were encouraged by the earliest extant version (1221) of the rule of the Friars Minor, the so-called *Regula non bullata* (or *Regula Prima*). A chapter of the rule encouraged those friars who were spiritually prepared to undertake mission among Saracens and other infidels and urged them not to fear death. Many Franciscans heeded these injunctions: over the course of the thirteenth and fourteenth centuries, scores of them died at the hands of Muslims and other non-Christians throughout North Africa, the Near East, and Asia.

Franciscan Order

The Order of Friars Minor (generally known as the Franciscan Order) was founded during the second decade of the thirteenth century. It was based on the ideal of apostolic poverty and followed a rigorous program of pastoral reform within the church. The Franciscan Order shows many points of contact with the crusades throughout the later Middle Ages. It came into existence during one of the most vital periods of the crusade movement, and its founder Francis of Assisi (canonized in 1228) was himself an active supporter of the crusade movement, joining the Fifth Crusade (1217–1221) at Damietta in 1219. Later the Franciscan friars, alongside their Dominican counterparts, became one of the most important and effective bodies of crusade preachers in the service of the papacy and thus played a vital role in spreading the crusade message and sustaining the crusade movement throughout Europe.

The common ground between the Franciscan Order and the crusade movement was the context of church reform. The bulk of the Franciscan friars supported the papacy's impetus toward spiritual and institutional renewal of the church, embracing an active role in reforming pastoral care by popular preaching and advocating penance. Their support of the crusade movement was to a large extent due to the fact that they saw individual participation in the crusade above all as a penitential and spiritual activity. Thus crusading could be understood in terms of Franciscan ideas of Christocentric theology and corresponded well to the overall importance the friars attached to penance as an expression of a life spent in accordance with the precepts of Christian religion.

Whether St. Francis openly supported all aspects of the crusade movement remains a moot point. As well as participating in the crusade, he was portrayed as a mediator between the Christian and Muslim forces, advocating peaceful mission alongside, though not necessarily instead of, crusading, since crusade and mission were at the time viewed as complementary rather than mutually exclusive activities. St. Francis seems to have been in favour of the spiritual and political objectives of the crusades as an expression of Christocentric spirituality on the part of individual participants and as a collective effort of the church to defend and spread Christianity and the Christian message. Throughout the later Middle Ages the Franciscan friars by and large followed their founder's attitude toward the crusade, leading to an active involvement in the crusade movement.

Early on in the order's history, the papacy was aware of the potential of the new mendicant friars for spreading crusade propaganda effectively over large areas. Following the rapid growth of the order throughout Europe, Pope Gregory IX began using friars as crusade preachers and money collectors for the crusade from the early 1230s. Throughout the thirteenth century and beyond, the popes made use of the Franciscan friars, alongside their Dominican counterparts, to target and control the propaganda for specific crusades in particular areas and at particular times. The large number of trained preachers and the strictly hierarchical organization of the order made this possible. The Franciscan Order thus became a sophisticated propaganda tool employed by the papacy for the promotion of the crusades in all parts of Christendom. Despite their insistence on poverty, the Franciscan friars also took on the role of collecting money given in support of the crusade during their propaganda activities. Through the practice of redeeming crusade vows for money, which became a regular feature in the later Middle Ages, the friars' activities provided the crusades with much needed financial resources. In contrast, the Franciscan friars were reluctant to collect crusade taxes on behalf of the papacy, as this brought them into conflict with the secular clergy and, being an activity solely concerned with money, could be seen as compromising their commitment to the ideal of poverty.

Of the two great mendicant orders of the Franciscans and the Dominicans, the Franciscan Order was perhaps the less reliable agent of crusade propaganda. Even though there is no doubt about the overall volume, importance, and impact of Franciscan crusade preaching, there were periods in the order's history when internal strife made it more difficult for the papacy to rely on the Franciscan friars as effective crusade propagandists. Although there seems to have been little internal resistance to the Franciscans' support of the crusades specifically, divisions within the order, especially in the fourteenth century, sometimes translated into political activism that obstructed papal crusade policy. This activism mainly played a role during the political crusades in Italy in the fourteenth century and had little bearing on the Franciscans' support of other crusading ventures. The Franciscans showed a particular interest in the crusades to the Near East and Northern Africa, as these provided them with a context for developing missionary activities in Muslim countries. By the thirteenth century, the Franciscans had established houses at Constantinople, in Cyprus, at Acre, and at

Ceuta in the wake of crusading campaigns. After their expulsion from Palestine in 1291, they returned to the Holy Land in the 1320s, establishing houses at Jerusalem, Bethlehem, and elsewhere.

Frankish Greece

Frankish Greece refers to those parts of the Byzantine Empire conquered and ruled by Franks in central and southern Greece after the capture of Constantinople (mod. İstanbul, Turkey) by the Fourth Crusade (1202–1204). The main states established were the principality of Achaia and the duchy of Athens and Thebes. Other possessions, particularly in the islands, were held by the Italian republics of Venice and Genoa.

Greeks and Franks were no strangers to each other by 1204, especially in the major commercial and administrative centers of the Byzantine Empire, where Italian merchants and Norman mercenaries had been a presence since the late eleventh century. As disrupters of imperial peace they had been prominent both when crusading armies passed through the empire and when the Normans from Sicily had attacked parts of the empire in 1085, 1149, 1157, and again in 1185. Some of them had married Greeks and learned Greek. In Byzantine literary sources the Franks were labeled as barbarians, polluters of altars, and despicable cooks and were compared to dogs in their unseemliness, an abuse that seems to have enraged them more than any other obloquy. Despite this invective, which was limited to times of tension

The Frankish states of Greece and their neighbors, c. 1215

and to the works of Constantinopolitan writers, the Greek authorities appreciated the political, commercial, and military value of the Franks.

After 1204 Westerners continued to serve as mercenaries in Greek armies: they served with the Epirote Greeks against their fellow Franks in Thessaly in 1210; made a significant contribution in 1211–1214 by fighting against the Saljūqs of Rūm and the Komnenoi of the empire of Trebizond in the forces of Theodore I Laskaris, ruler of the Byzantine successor state at Nicaea; and cleared much of western Asia Minor of the Turks for Emperor Andronikos II Palaeologos, through the Catalan Company, in 1305–1309. With the occupation of territories of the former Byzantine Empire, the Franks came as rulers and settlers, and as such they brought change to the majority Greek populations in the spheres of politics, economics, religion, and social intercourse, and along with it, the need for accommodation on both parties.

The scant nature and uneven distribution of the evidence in the region lends support to polarized views of the extent to which a Franco-Greek society evolved after the conquest of Greece in the thirteenth century. Reliance on the literary sources, which are not always devoid of cultural nationalism, means reliance on anecdotal evidence for one view or another regarding the extent of symbiosis between the two cultures. The most recent approach is to move away from the construct of ethnicity to focus on everyday issues of gender, religion, and social status as revealed in the notarial documents surviving from Venetian Crete.

Society

The initial reception of the Franks by the native populations differed dramatically; in Greece and the Aegean islands they were frequently welcomed as liberators and as guarantors of stability, whereas in Crete and Rhodes there was resistance that flared up into sporadic revolts throughout the period of Frankish occupation. Furthermore, there was little homogeneity among the invaders themselves. The Greeks referred to them in linguistic or religious terms as *Frankoi* (Franks) and *Latinoi* (Latins), but the Westerners were much more culturally diverse, being composed of (at various times and places) Burgundians, Catalans, Champagnards, Florentines, Genoese, Navarrese, Normans, and Venetians. These diverse groups were too small, and their effective control too brief and too limited, for anything other than an encounter between two societies rather than an acculturation between them to take place.

The Latin conquerors did not profoundly alter the society that they found in place in central and southern Greece. There was no attempt to remove the topmost rung of landlords (archons) and their client groups as had happened in Constantinople in 1204. This is the single most important difference between those areas of relatively peaceful conquest, such as Greece and the islands, and other areas of Latin settlement. Indeed, there was no need to do so, since the number of Franks was small and the available former imperial and ecclesiastical estates ample for their needs without dispossession of the native Greek archontic class. These were confirmed in the possession of their patrimonial lands together with the peasants settled there. Inheritance customs were also confirmed, and religious toleration was practically conceded for rural areas, although it was never given any legal sanction by inclusion in the *Assizes of Romania*. In Achaia, the archons prostrated themselves in front of William of Champlitte as a sign of submission and subordination and agreed to provide the homage and military service consonant with their rank. They had in effect been Frankicized or feudalized, yet there is much that is unknown behind this apparent easy integration.

Major campaigns outside Frankish Greece required Greek troops either as mercenaries or as vassals, as, for example, in Thessaly in 1259 and 1304 and the Tagliocozzo campaign in Italy in support of the Angevins in 1268. At some point prior to one of these engagements, as articles 70 and 71 of the *Assizes of Romania* make clear, there was an inconclusive discussion as to whether Greek archons could be summoned to provide mounted service on the same terms as Franks. In the pages of the *Chronicle of the Morea*, Greeks play substantial roles as military advisers and warriors in Latin armies as well as trusted functionaries and persons of influence in political and military society. Greek landowners seemed eager to attain Latin titles and honors; on Crete following sporadic risings, these were distributed as part of the pacification process. The majority group, the Greek peasantry, seems to have acquiesced passively in Latin rule. It seems that their status may well have been diminished. They were not allowed to buy, inherit, or bequeath landed property. No example of Frankish status being conferred on a Greek has yet come to light.

From the outset of the Frankish settlement, there was considerable cooperation between the conquerors and the majority population. Greeks served as guides and interpreters. Six Greeks served on the partition committee

chaired by the chronicler Geoffrey of Villehardouin, and likewise in the Morea (Peloponnese) five Greek landowners served on the committee of twelve responsible for the initial land allocations. Access and translations were provided to Byzantine cadastral and fiscal documents, and in Crete oral evidence was gathered from local Greeks of substance. For many people in the former provinces of the Byzantine Empire not closely connected with the Byzantine court or the Greek Orthodox hierarchy, the Franks were not seen as a threat.

There are no sure guides to the population of Frankish Greece. The invaders of the Morea in 1205 numbered between 700 and 1,000 men. Historians have no idea of the number of women present with the army; certainly the leading men brought their wives eastward after the fighting was over. The Latins have been estimated as constituting one-third of the population in the towns of central Greece in the fourteenth century, and this proportion has been accepted for Frankish Greece as a whole [Rubió y Lluç, "La Grecia catalana"]. Certainly the overall population of Franks was not large, given that they tended to live in towns, leaving the countryside largely to the majority Greek population. Underpopulation was a problem for the Franks in the East. Constantinople continued to exert its attraction for Western settlers, as did Cyprus, despite the fact that King Guy of Lusignan had advertised the attractions of the island widely to Western knights and the Greek landowners had been expropriated. Immigration from the West did not appeal to many. As early as 1212 there were insufficient Latin priests, and the attempt by Otho of La Roche to establish a parochial structure around a core of twelve Frankish residents met with no success. A century later, in 1336, it was noted that Franks in central Greece and on the island of Negroponte (Euboea) were attending Orthodox services and even having their children baptized into the Orthodox rite because of the scarcity of both Franks and Latin priests in the region; these circumstances were attributed by Pope Benedict XII to the unstable and dangerous conditions that prevailed there. It would appear that Franks were being absorbed into the Orthodox, who formed the vast majority of the population.

In 1224 Pope Honorius III had described Frankish Greece as Nova Francia (New France). It was to remain a frontier society throughout its existence. The incomers sought to maintain control by means of institutions imported from their homelands. They also attempted to maintain a racial, linguistic, and territorial distinctiveness from their Greek

subjects. The *Assizes of Romania* provided the framework for this. The Catalan chronicler Ramon Muntaner noted the purity of French diction in the early fourteenth century, and the marriage market he described following the battle of Halmyros seems to indicate a marked preference for Western brides on the part of the Catalans.

The *Chronicle of the Morea* gives many examples of bilingualism among the Frankish ruling class, however, by the second generation of Frankish rule. Interpreters had played an important role at the time of the conquest and continued to do so in the Angevin court of Naples, yet settlers in Romania learned Greek, perhaps after the example of Stephano Bon, who took lessons in a Greek monastery near Candia (mod. Irakleio) in Crete. He took a Greek wife, spent his life engaging in commercial endeavors that required him to negotiate with Cretan farmers, and was buried there after his death. Material regarding mixed marriages is patchy. There had been marriages between Greeks and Franks from the beginning of the Western influx into the eastern Mediterranean. The Latin and Greek churches seemed to have discouraged them, while acknowledging that rulers had to marry for reasons of state despite religious or social preference. Yet Western women were always in short supply. In the early fourteenth century intermarriage between nonnoble Westerners and Greek women is mentioned as an issue for the first time in papal letters; this has been taken as evidence that intermarriage was increasing, yet for some Greek chroniclers it was an issue before this time. In the main, mixed marriages, and the children of such unions, escaped official notice until times of tension, as in Constantinople in the 1260s when Greek chroniclers such as Akropolites and Pachymeres concerned themselves with the loyalties of the *gasmouloi* (children of mixed parentage).

Religious Life

Religious differences remained the great stumbling block to assimilation. There is some evidence to indicate that, following the crusader conquest of Constantinople in 1204, Pope Innocent III thought that Greek Orthodoxy as such would simply cease to exist. A Latin church hierarchy was imposed, but it failed to reach out into the countryside. It was not a missionizing church and did not appeal to the Orthodox population. Very few Greeks, indeed, adopted Catholicism. Greek priests who Latinized were often treated with violence to their property and isolated from their fellow Greeks. The new church depended on the Frankish

Franks

nobility and landowners to support it. Its attempts to extend ecclesiastical tithes and fees to the Greek rural population often led to violence against the archdeacons concerned; often such incidents were followed up with papal appeals to local Frankish landowners to intervene, apparently with little or no response from the latter.

Papal provision to bishoprics from the late thirteenth century onward led to increased absenteeism and a further weakening of the Latin Church. In 1404 a naval contingent made up of three galleys manned by the Knights Hospitallers tried to organize resistance against the Ottomans among the inhabitants of Galaxeidi, on the north coast of the Gulf of Corinth. The Galaxidhiots took their money and accepted the church that the knights built there but then threatened to hand them over to the Turks if they did not leave, since “the Franks do not believe in the true Christ and are in fact anti-Christ” [Rosser, “Byzantine ‘Isles of Refuge’ in the Chronicle of Galaxeidi,” p. 145]. This event as well as the appeal of the Orthodox population on Naxos to the Ottoman sultan in 1466 was a measure of how little love was lost between the two official religious communions and how the Orthodox community saw the advent of the Ottomans as a measure of relief.

Conclusions

More than just capitulation and acquiescence were required if a hybrid society was to develop. Changes in self-perception and in perception of the other, Frank or Greek, would have to take place. The two and a half centuries of Frankish rule in Greece led to a gradual assimilation of the minority Frankish population into Hellenic culture. Whatever members of the elites in both Byzantine and Western cultures might write, ethnic identities had become blurred and at the day-to-day level merged. Only where Latin rule persisted, as on Crete until 1669, did ethnic labels persist in law codes and other official documentation.

Franks

Franks (Lat. *Franci*, OFr. *Francs*) is probably the most common term used in medieval sources and modern scholarship to designate the ruling and privileged classes in the various principalities of Outremer, Cyprus, and Greece that were established in the course of the crusades. The Franks who occupied and settled these countries were of western European origin; they belonged to the Latin (Roman Catholic) Church and were predominantly French-speaking, key characteristics that were retained by the descendants of the original settlers, thus distinguishing them from the subject populations of the lands they controlled.

The term *Franks* in this sense most probably derives from established Byzantine and Arabic usages. During the migration period of Late Antiquity, the Franks, a Germanic people, conquered much of western Europe, expanding their dominion under the Merovingian and Carolingian (751–987) dynasties. Although the Frankish Carolingian Empire had fragmented into various successor kingdoms by the beginning of the crusade movement, the Byzantines continued to use *Frangoi*, the Greek word for Franks, as a generic designation for all Westerners. Similarly, Arabic speakers used the word *al-Ifranj* to refer to Western Christians in distinction to the Greek-speaking Byzantines. The Latin chronicles of the First Crusade (1096–1099) reveal a diverse use of the Latin term *Franci* (sing. *Francus*). In some contexts the word is applied only to those crusaders who were originally subjects of the king of France. However, it is also used to refer to all members of the crusader armies, irrespective of nationality or origins, particularly with reference to the later stages of the crusade and the beginning of the Latin settlement in Syria and Palestine. It seems likely that the chronicles, some of which were composed by eyewitnesses, reflect actual linguistic usage; having become familiar with Byzantine and Arabic terms for “Franks” in the course of the crusade, the crusaders themselves and, increasingly, their descendants who remained in the East adopted the name as a convenient self-designation to reflect the realities of life in a region where their own diverse origins were far less important than the crucial social and legal distinctions between dominant Latin Westerners on the one hand and the various native peoples on the other. The Arabic, Syriac, and Armenian sources that touch on events in Outremer generally refer to its Latin Christian inhabitants as Franks in their own languages.

This usage, which first developed during the conquest and settlement of Outremer, extended to the Westerners who ruled Cyprus after the Third Crusade (1189–1192), and to those who established their own principalities in Constantinople and Greece after the overthrow of the Byzantine Empire by the Fourth Crusade (1202–1204). The Greek term *Frankokratia* (“rule of the Franks”) is often encountered in modern scholarship with reference to the period of Frankish domination in former Byzantine territories.

Frankokratia

See Franks

Frederick I of Austria (d. 1198)

Duke of Austria (1194–1198) and participant in the Crusade of Emperor Henry VI (1197–1198), in the course of which he died.

Frederick was the elder son of Leopold V, duke of Austria and Styria. He succeeded his father in the duchy of Austria; Styria passed to his brother Leopold VI. Frederick’s crusade journey was essentially penitential in character. His father had been excommunicated by Pope Celestine III for having arrested and imprisoned a fellow crusader, King Richard the Lionheart of England. The conditions imposed by the church for lifting the excommunication were the release of Richard’s hostages, the return of Leopold’s share of the ransom money he had obtained from Richard, and the promise to join a new crusade.

Leopold died, still excommunicate, as the result of a riding accident in December 1194. In order to permit his father’s burial and to avoid incurring a new sentence of excommunication, Frederick freed the hostages, although he was unwilling or unable to return the full amount of ransom money. His decision to join the emperor’s crusade should be seen as a penitential attempt to complete his reconciliation with the church: he is recorded as having taken the cross for the good of his father’s soul.

In the summer of 1197 Frederick traveled with Wolfger of Erla, bishop of Passau, to Sicily, where the crusade army was assembling. He is documented at Messina in July, and

Frederick I Barbarossa of Germany (1122–1190)

he sailed to the Holy Land with the main contingent of the crusade in September. Despite Frederick's rank, he seems to have played a relatively peripheral part in the direction of the crusade, possibly a reflection of his relative youth. He was, however, present at the foundation of the Teutonic Order in Acre (mod. 'Akko, Israel) in March 1198. Frederick died on 16 April 1198 while preparing for his return to Europe. The duchy of Austria passed to his brother Leopold.

Frederick I Barbarossa of Germany (1122–1190)

Frederick I, king of Germany (1152–1190) and Holy Roman Emperor (1155–1190), known as Barbarossa ("Red Beard"), was the most powerful ruler of late twelfth-century Europe. Much of his long reign was spent trying to secure domestic peace among the German princes, attempting to enforce his direct rule over the north Italian cities, and supporting a series of rival popes to the generally acknowledged pontiff, Alexander III (during the years 1159–1177). He played an important role in the Second Crusade (1147–1149) as chief lieutenant to his uncle King Conrad III, and after the fall of Jerusalem to Saladin in 1187 he led the first of the Western armies that went to recover the Holy Land on the Third Crusade (1189–1192).

During the Second Crusade, Frederick's role was inevitably overshadowed by that of his uncle, though he may not have been fully in accord with the latter's pro-Byzantine policy—certainly Frederick was responsible for the destruction of a Greek monastery in reprisal for attacks on the German column, which came close to jeopardizing good relations with the Byzantines. Later, as emperor, he was markedly less committed to an alliance with Byzantium than was Conrad. Otherwise, his first experience of the crusade seems to have had little subsequent impact upon him,

although in 1158 he recalled that while at Jerusalem he had "seen with his own eyes the work of Christ for the poor" carried on by the Hospitallers [*Die Urkunden Friedrichs I.*, no. 152]. However, he made no response to pleas for help after the failure of the kingdom of Jerusalem's attack on Egypt in 1169, and in 1175 he even sent an embassy to Saladin. But at this stage he was still involved in major conflicts in Italy.

By 1187 Frederick's situation was very different. Peace had been made with the papacy and the Italian cities a decade earlier, and even the long-running dispute between Germany and the kingdom of Sicily had been brought to an end through the marriage of his eldest son, Henry (VI), with the Sicilian heiress Constance in 1186. His dominant position in Germany had been consolidated by the confiscation of most of the lands of Henry the Lion, duke of Saxony, in 1180 and by the election of Henry VI as king in 1184. Frederick was thus in a position to lead the crusade to recover Jerusalem. Recruitment for this expedition began at his Christmas court at Strasbourg in 1187, although the emperor only formally took the cross at Mainz in March 1188, perhaps because he was waiting to see how much enthusiasm there was for the enterprise before committing himself. He also took the precaution of establishing diplomatic contacts with Sultan Qilij Arslān II of Rūm in an attempt to secure a peaceful passage through Asia Minor and thus to avoid the fighting that had so damaged the Second Crusade, and an embassy from the sultan was received at Nuremberg at Christmas 1188. (However, a letter purporting to be from Frederick to Saladin, ordering him to surrender the Holy Land, appears to be a contemporary forgery or propaganda document confected in England.)

Frederick was also anxious to limit the problems of supply and indiscipline that had hampered the German contingent on the Second Crusade: significant financial reserves were gathered, regulations were made for cash to be carried by individual crusaders, and stringent discipline enforced, even on those of noble birth. These measures were to stand the crusade in good stead on its march. Before leaving, Frederick took careful measures to ensure stability in Germany during his absence or in the event that he failed to return. A general land peace was proclaimed, and his heir, Henry VI, was left behind to rule the empire. His second son, Duke Frederick V of Swabia, accompanied him on the crusade. Henry the Lion, who was given the choice of joining him on the expedition or going into exile, chose the latter. The emperor also prevented a recurrence of the attacks on

The river Saleph in Cilicia where Emperor Frederick I died on 10 June 1190. The Armenian castle of Silifke dominates the hill in the background. (Courtesy Alfred Andrea)

the Jewish communities of Germany that had accompanied the First and Second Crusades. The German army left from Regensburg in May 1189. Frederick was accompanied by a very large force, including 11 bishops and some 28 counts, with possibly as many as 4,000 knights.

The early stages of the crusade proceeded smoothly, with the willing cooperation of King Béla III of Hungary. However, problems developed once the army crossed into Byzantine territory at the end of June 1189. The Byzantine emperor Isaac II Angelos had made an alliance with Saladin some years earlier and had promised the sultan that he would do his best to prevent the expedition from crossing his territory. He was also suspicious of Frederick's negotiations with the rulers of Serbia and with the Turks of Asia Minor—indeed, he arrested the envoys whom Frederick had sent to the Rüm sultanate on their return journey. When the German army reached Philipopolis (mod. Plovdiv, Bulgaria) at the end of August, relations were already breaking down, and while the

expedition remained in this fertile region for some eleven weeks, they grew worse. By the time the German expedition moved on to Adrianople (mod. Edirne, Turkey) in mid-November, there was open warfare with the Greeks. Indeed, there was strong pressure from within the army for an attack on Constantinople, not least because there appears to have been knowledge of Isaac's alliance with Saladin. But although Frederick was prepared to threaten Isaac with such an attack, and even to open negotiations for the assistance of the Bulgarians in this, he was anxious that the crusade should proceed to its intended destination and restrained his troops.

After wintering with his forces in Adrianople, he reached an agreement with the Byzantines on 14 February 1190. The army crossed the Hellespont from Gallipoli (mod. Gelibolu, Turkey) during Easter week at the end of March without incident, transported on both Pisan and Byzantine ships. Frederick kept his army well in hand as they marched

southeast through Byzantine territory, but once they crossed into Turkish territory at the end of April, attacks on the crusaders started almost immediately. Frederick had hoped that his negotiations with Qilij Arslān II, which had continued while the army was at Adrianople, would have prevented this. However, during the winter of 1189/1190 the sultan's authority had been usurped by his eldest son, Quṭb al-Dīn Malik-Shāh, who was reluctant to allow the Christian army to pass through Saljūq territory, not least since he had recently married a daughter of Saladin. Furthermore, the latter's disputes with his brothers had led to a breakdown of the Saljūq state, which would have made restraining attacks on the crusaders difficult, even if the rulers had been so minded. A series of attacks were beaten off, but the crusaders soon began to run short of food, as well as fodder for their animals.

After defeating a major attack on 14 May, Frederick decided to attack the Saljūq capital of Ikonion (mod. Konya, Turkey), which was captured four days later. The Saljūqs then agreed to provide supplies if the army moved on, and while the expedition made its way toward the friendly territory of Cilician Armenia, attacks on the column were limited to minor harassment from Turcoman nomads. After 30 May, when the army reached this point, its problems were

caused more by the difficulties of the terrain and the privations already suffered than by enemy action. The most difficult part of the journey had been accomplished when the army reached the plain of Seleucia (mod. Silifke, Turkey) on the morning of 10 June 1190, but here disaster struck. The emperor, who insisted, despite the pleas of his entourage, in swimming his horse across the river Saleph, was drowned.

Command devolved upon the emperor's son Duke Frederick V of Swabia. The subsequent breakup of the army has often been ascribed to his shortcomings, with critics claiming that he lacked his father's authority and qualities of leadership. However, one should note that the expedition arrived in Antioch (mod. Antakya, Turkey) only ten days after the emperor's death, and that Duke Frederick had played a prominent and effective part in the early fighting, including leading the assault on Ikonion. Casualties in Asia Minor had been heavy, especially among the infantry, and the loss of horses and baggage animals, many of which were eaten, had posed serious problems. One Arabic source described the crusaders abandoning and destroying armor and equipment that they could no longer carry. The army remained together as a fighting force until it reached Antioch. However, there it was ravaged by disease, the impact of which was no doubt made much more deadly by the earlier sufferings and lack of food, of which the contemporary sources give a graphic picture. At Antioch, according to one eyewitness, "there was such widespread sickness and death that scarcely anyone was spared, for both noble and poor, young and old, were all struck down indiscriminately" [*Quellen zur Geschichte des Kreuzzuges Kaiser Friedrichs I.*, p. 92]. Some of the survivors then went home; others accompanied Frederick of Swabia to the siege of Acre (mod. 'Akko, Israel), but disease in the crusader camp continued its ravages there. Frederick of Swabia died in January 1191, and despite further reinforcements arriving by sea, the German contribution to the crusade was thereafter relatively minor.

The ultimate failure of the German expedition was a major setback to the Third Crusade. Its arrival in northern Syria did lead Saladin to withdraw substantial parts of his army from the siege of Acre, in an attempt to prevent the Germans from joining the other Christian forces, and those troops that did eventually arrive at Acre helped to prolong the siege until the French and Anglo-Norman armies arrived in 1191. Much more, however, had been expected. But it was disease, rather than Frederick's death, that ruined the German expedition, even if his death was a significant

blow to Christian morale. The sufferings of his army also showed that the land route across Asia Minor was no longer practical for crusader forces. The tragic, and seemingly random, nature of Frederick's death was much commented upon by contemporaries, although most concluded, like the author of the *Historia de Expeditione Friderici*, that "one who stood forth as a knight of Christ and wore his Cross, . . . notwithstanding his sudden end, will undoubtedly find salvation" [*Quellen zur Geschichte des Kreuzzuges Kaiser Friedrichs I.*, p. 91].

Frederick II of Germany (1194–1250)

King of Sicily (1208–1250), king of Germany (1211–1220), and Holy Roman Emperor (1220–1250); leader of a crusade to the Holy Land that brought the city of Jerusalem back under Christian control.

The son of Emperor Henry VI (d. 1197) and Constance, heiress to the kingdom of Sicily, Frederick was born at Jesi (near Ancona in central Italy) on 26 December 1194. He was

initially named Frederick Roger after his two grandfathers, a name that embodied the twin poles of his political life: the Holy Roman Empire and the Norman kingdom of Sicily. Frederick's early years were dominated by rivalries between the German officials of his father and his Sicilian officials, with control of the regency at the heart of these struggles.

Frederick came of age as king of Sicily in 1208, but continued to face a restive baronage and powerful enemies at home and abroad. In Germany, the early death of Frederick's father had led to the election of two rival kings: Otto IV of Brunswick, count of Poitou, and Frederick's uncle Philip, duke of Swabia. All sides initially ignored the claims of the infant Frederick. However, when Otto (crowned emperor in 1209) invaded the kingdom of Sicily (1210), Pope Innocent III began to promote Frederick's candidacy for the German throne. Thanks to support from the papacy and within Germany, Frederick was elected king in 1211 at Nuremberg, and crowned at Mainz on 9 December 1212. This act was repeated on 25 July 1215, at Aachen, the traditional place for the coronation of the king of Germany, and there Frederick promised to lead a crusade to the Holy Land. Pope Innocent III insisted that when Frederick was crowned emperor, he should bestow Sicily on his infant son Henry (VII); the papacy was anxious to maintain the separation between Sicily and the empire, which together surrounded the Papal States around Rome. Frederick's actions soon demonstrated that he did not mean to keep to the undertaking he had made to the pope: he had Henry brought to Germany, and made him duke of Swabia, the traditional heartland of the Stauf dynasty, and rector of the kingdom of Burgundy. Finally, he had Henry elected king of Germany by the German princes in April 1220.

Nevertheless, Frederick received and depended upon ecclesiastical support. Pope Honorius III, who was keen to see him go on crusade, crowned him Holy Roman Emperor at Rome on 22 November 1220. Frederick had already (1213) confirmed Otto IV's grants to the papacy in the Golden Bull of Eger, and in 1220 he issued a confirmation of privileges to the prelates of the empire, the *Confoederatio cum principibus ecclesiasticis*. Many of these privileges referred to matters of economic organization (including restrictions on the expansion of towns, coinage, and mining), but they also helped to strengthen the political role of the ecclesiastical princes. Similarly, Frederick's coronation as emperor went hand in hand with draconian legislation against heresy and a public display of mutual support

between Frederick and Honorius III, including a renewal of the emperor's promise to lead a campaign to the Holy Land. The years immediately following Frederick's imperial coronation were, however, taken up with the affairs of Sicily and imperial Italy. In 1220, at a diet in Capua, he ordered a thorough investigation of royal grants since 1189 and began to attack several of the powerful baronial families that had established themselves on the mainland. Simultaneously, Frederick began to expand his lands and territories in Northern Italy, where he soon clashed with the Lombard League of northern cities led by Milan.

In 1222–1224 the emperor undertook several campaigns against the Muslims living in the mountainous regions of Sicily, and he resettled them at Lucera in Apulia. This campaign, fought with brutal ferocity on Frederick's part, should serve as a warning against a common misperception that Frederick was more liberal or tolerant in his attitude toward Muslims than his contemporaries. The surviving Muslims were used to provide the emperor's bodyguard, servants, and entertainment, but also found themselves exposed to systematic efforts to convert them to Christianity. To some extent this effort formed part of a more wide-ranging campaign against heretics and non-Christians within imperial domains. Frederick had set the tone by taking the cross in 1215 and issuing legislation against heretics in 1220, and sharpening it in his corpus of legal customs for the kingdom of Sicily (the *Liber Augustalis*, 1230). More importantly, by issuing the Golden Bull of Rimini (1226), the emperor laid the foundations for what was to become the territory of the Teutonic Order in Prussia, and encouraged it to take up the fight against the pagans in the Baltic region. Although Frederick maintained friendly relations with al-Kāmil, sultan of Egypt, the emphasis in his dealings with Muslim rulers remained on conversion and on the expansion of Christendom.

To some extent, the emperor's activities in these years formed part of the process of preparing for his imminent crusade. In 1226 he had the towns of Lombardy excommunicated because they were preventing him from setting sail for the Holy Land; a truce concluded in 1227 stipulated that they should provide him with a contingent of 400 knights for his campaign. After all, the pacification of a crusader's own lands was an essential precondition if he was to spend years away from his domains while on crusade. In the end, it was the collision between the needs of the Holy Land and Frederick's continuing inability to leave for the East that led to

his excommunication by Pope Gregory IX (September 1227). Frederick, however, set sail regardless, and in 1229 he arranged a truce that returned the city of Jerusalem to Christian control for a period of ten years.

Frederick pursued his policies with renewed vigor on returning from his crusade in 1229, attempting to extend and manifest imperial authority across the whole range of his territories. In Burgundy he sought to settle relations between the counts of Provence and Toulouse following the upheaval of the Albigensian Crusade (1209–1229). In Germany he not only deposed his eldest son, Henry (VII), but he also issued the *Mainzer Reichslandfrieden*, which remained one of the basic legal texts defining the political structure of the Holy Roman Empire until its dissolution in 1806. In Italy he won a decisive victory over the Milanese at Cortenuova in November 1237. Frederick saw the Holy Land as part of this constellation, although his position there was a difficult one. His rights derived from his marriage in 1225 to Isabella II, queen of Jerusalem. However, Isabella died in 1227 after giving birth to a son, Conrad (IV). Thus Frederick exercised rights in the kingdom of Jerusalem at first only by right of his wife, and then on behalf of Conrad. Nonetheless, Frederick refused to acknowledge his lack of a clear legal right to the rulership, and crowned himself king of Jerusalem in 1239.

Frederick pursued a policy in the Holy Land not dissimilar to his policies in Italy, Burgundy, and Germany; that is, he sought to strengthen and expand what he believed to be royal or imperial rights and prerogatives. This policy soon led to clashes with the Frankish nobility of Outremer and Cyprus, in particular the Ibelin family. These tensions were aggravated by Frederick's appointment of his own officials to run the kingdom of Jerusalem: Richard Filangieri and Thomas of Acerra as imperial governors and Walter of Ocre as chancellor of Jerusalem. Furthermore, after Frederick secured the return of Jerusalem and additional territory to Christian control, many of the lands regained were awarded not to their former lords, but to those close to the emperor. In short, Frederick was prepared to ignore established customs and procedures in order to expand his own authority. Yet many of these initiatives were essential for securing the recovery of Jerusalem, and to prepare for the time after the expiry of the truce of 1229 with the Ayyūbids.

The emperor's handling of affairs in Italy and Sicily soon brought him into conflict with the papacy, leading to his second excommunication, by Gregory IX on 20 March 1239.

The bull of excommunication stressed Frederick's frequent infringements of ecclesiastical liberties, but also laid the foundations for his modern image as an "enlightened autocrat" by accusing him of illicit dealings with Muslims and of failing to defend the Christian faith against its enemies. These accusations were taken up by Pope Innocent IV, who, at the First Council of Lyons (1245), deposed Frederick as emperor, king of Sicily, and king-regent of Jerusalem. The pope's fight against the emperor now became embedded in a wider campaign against the enemies of Christendom. Innocent IV argued that Frederick consorted with the enemies of the faith, that he aided and abetted them by sowing discord among Christians, and that he therefore posed an even greater danger than Muslims, Mongols, Byzantines, and pagans combined. Frederick's deposition led to the election of Landgrave Henry Raspe of Thuringia (1246–1247) and then of Count William of Holland (1247–1256) as antikings in Germany with papal support. Frederick and his son Conrad IV (king of Germany since 1237) maintained control of most of Germany and Italy, but lost control in Burgundy and the kingdom of Jerusalem. By 1249–1250 it seemed as if Frederick might be able to decide the conflict in his favor by military means, but his death on 13 December 1250 near Lucera put an end to these hopes.

The needs of Outremer and the expansion and defence of Christendom played a major part in Frederick's actions from the moment he was crowned king of Germany in 1215. They provided a means to legitimize his political undertakings during the 1220s and 1230s, and they constituted an integral function of his understanding of the royal and imperial office. That understanding, however, went beyond merely fighting in the Holy Land or elsewhere; Frederick saw his mission as preparing Christendom internally for its external expansion. In order to be able to defeat its manifold enemies, Christendom had to be both politically and religiously reformed. Moreover, even after his second excommunication, and after the collapse of Staufan rule in Outremer in 1242, Frederick continued to be involved in the crusades. He supported the first crusade of King Louis IX of France (1248–1254), and was, in fact, recognized as regent of Jerusalem by Louis. He arranged several truces between the Latin Emperor at Constantinople and his Greek adversaries, and he sought to organize a campaign against the Mongols. More importantly even, like his papal opponents, he frequently sought to tie their conflict to the affairs of the Latin East, and his diplomatic initiatives thus played

a major part in the crusading preparations of Louis IX and Henry III of England, as well as in those of the rulers of Hungary, Castile, and Aragon.

Frederick V of Swabia (1167–1191)

Commander of the German army in the Third Crusade (1189–1192) from the death of his father, Emperor Frederick I Barbarossa (1190), until his own death in 1191.

Frederick was the third son of Frederick Barbarossa and Beatrix of Burgundy, born at Modigliana in Romagna (central Italy) in February 1167. He was originally called Conrad, but received the traditional forename of the Staufan (Hohenstaufen) family after the death of his elder brother, also called Frederick (1169). As the second brother, Henry, was intended as future king of Germany and the Holy Roman Emperor, Frederick was given the duchy of Swabia, which

Frederick of Laroche (d. 1174)

had become vacant on the death of his cousin Frederick IV (of Rothenburg).

Frederick V of Swabia took the cross in March 1188 in Mainz at the gathering known as the Court of Jesus Christ (Lat. *curia Iesu Christi*) along with his father and numerous other German nobles and prelates. Unlike the other contingents that joined the crusade, Barbarossa's army travelled overland to the East. Frederick of Swabia was entrusted with many important diplomatic and military responsibilities during the march, and he led the crusader assault that captured Ikonion (mod. Konya, Turkey), capital of the Saljūq sultanate of Rūm (18 May 1190).

When his father was drowned in Cilicia (10 June 1190), Frederick was unanimously recognized as the commander of the German army. Although a large number of German crusaders quickly returned home, Frederick led the remainder via Tarsos (mod. Tarsus, Turkey) and Antioch (mod. Antakya, Turkey) to Tripoli (mod. Tráblous, Lebanon), from where they traveled to Palestine by sea, arriving in October. They joined the other crusader contingents engaged in the siege of Acre (mod. 'Akko, Israel), but Frederick succumbed to a pestilence and died on 20 January 1191.

Oppl, Ferdinand, *Friedrich Barbarossa* (Darmstadt: Wissenschaftliche Buchgesellschaft, 1990)

Frederick of Laroche (d. 1174)

Bishop of Acre (1148/1153–1164) and archbishop of Tyre.

Frederick was a son of Henry I, count of Laroche, a member of the comital family of Namur. He pursued a clerical career in the cathedral chapter of Liège during the episcopate of his cousin, Bishop Albero II, rising to become archdeacon and great provost by 1139. In 1142 Frederick migrated to the kingdom of Jerusalem, where his kinswoman Melisende had become sole ruler on the death of her husband, Fulk of Anjou. Frederick served as a royal chaplain and bishop of Acre (mod. 'Akko, Israel), and in 1164 he was appointed

archbishop of Tyre (mod. Soûr, Lebanon). After King Amalric's abortive invasion of Egypt (1168–1169), Frederick led an ultimately fruitless diplomatic mission to seek assistance from Henry II of England and Louis VII of France. He died at Nablus after an illness on 30 October 1174.

Freidank (d. 1233)

A German didactic poet who gave an eyewitness account of the city of Acre (mod. 'Akko, Israel) during the crusade of Emperor Frederick II (1227–1229) in his Middle High German ethical compendium *Bescheidenheit* ("Wise Judgment").

Swabian monastic annals record the death of a *Fridancus magister* in 1233; his poetry shows he had a theological education. A later history calls him *Frydancus vagus* ("itinerant poet" or "cleric without a benefice"), and Freidank could be a given name or a pseudonym expressing independence of mind.

In 268 lines of *Bescheidenheit*, Freidank gives a scathing caricature of Acre. The Franks of Outremer are in league with Islam to defraud pilgrims: "old and young, they speak heathen tongues. They value one heathen more than three Christians." Emperor and sultan should stop their "whispering," squabbling like "Stingy and Mean splitting three marks." Yet "what can an emperor do when heathen and priests both fight against him?" Gregory IX's excommunication of Frederick II is seen as malicious and invalid. Despite the pope, "God and the Emperor have freed the Holy Sepulchre." Had Pope and Franks supported Frederick, all "holy places where God's feet trod" might have been won back.

Despite doubts and disillusionment, Freidank clings to faith in the crusading idea: "Acre may torture the body, yet it fortifies the soul; so never doubt, whoever dies there in faith will be saved" [*Kreuzzugsdichtung*, ed. Müller, 102–109].

French Language in the Levant

The language used among the Franks of Outremer and Cyprus in written and oral communication was a form of Old French, recorded from the beginning of the thirteenth century and articulated in different local varieties. Italian dialects were diffused among traders and sailors in the coastal cities. Arabic was the mother tongue of most of the local population of Outremer, whether Muslim, Christian, or Jewish, while Armenian, Syriac, and Greek were also spoken, especially in the northern states. In Cyprus, Greek was the language of the majority native population.

The early emergence of French as a literary language (and the high level attained by this literature in verse and prose) favored its spread all over western Europe, where, at the time, the choice of a vernacular for literary purposes was relatively independent of the nationality of the author. The diffusion of French in the Levant may be considered an important (although often ignored) step in this process: during the twelfth century, it became the language of the ruling class in Outremer, much of which had a Northern French origin. French acquired the status of an international vehicular language in the eastern Mediterranean, together with Greek, Arabic, and some Italian dialects, diffused in the same area but in different sociolinguistic domains.

In Outremer and Cyprus, French was used, together with Latin, for a wide range of written texts: chronicles (e.g., *Chronique d'Ernoul*, *Gestes des Chiprois*), moralistic treatises (e.g., *La Dime de penitance* by Jean de Jurny, *Quatre âges de l'homme* by Philip of Novara), legal handbooks (e.g., *Livre en forme de plait* by Philip of Novara, *Livre des Assises* by John of Ibelin), translations (e.g., *Rhetorica ad Herennium* and Cicero's *De inventione* as translated by John of Antioch, Boethius's *Consolatio Philosophiae* as translated by Peter of Paris), celebrative inscriptions, and funeral epitaphs.

French was employed as an administrative language, and many documents (e.g., charters, wills, commercial transactions, and statutes) were recorded in it. Given the influential position of its users, it could also serve as a diplomatic language in international political relations: the Venetian Archives preserve later copies of French documents addressed to Venetian authorities by al-Nāṣir Yūsuf, ruler of Aleppo (1254) and by the kings of Cilicia Leon II (1272), Leon III (1307), and Leon IV (1321). The originals were probably written in Arabic or Armenian and then translated into French in the chanceries of Aleppo and Sis.

Presumably, the use of French for written texts was par-

alleled in Outremer by its employment in oral communication, but evidence for this is scanty and often indirect. The upper layer of Frankish society was mainly of northern French origin, with significant Provençal (Occitan) and Italian elements. The spread of French in this aristocratic milieu seems plausible, and is witnessed by the vernacular literature addressed to or sponsored by this social class, mirroring its tastes and values. It is more difficult to assess the linguistic medium of the lower layers of society: probably there were many, depending on ethno-religious affiliations, on social and professional ranks, and on relationships with other groups and communities. French may well have experienced a massive expansion among Western settlers, who had quite diverse origins. A good number of these settlers arrived in Outremer together with their lords, either bound by feudal obligations or enticed by the possibilities of social ascent offered in a frontier land. And since the majority of the nobles of Outremer came from French-speaking areas, so too did their followers.

Arabic was employed as a literary, religious, and administrative language, but its knowledge was unusual among Franks, as may be inferred by the frequent reference to interpreters (often Eastern Christians) in contemporary sources, where the ability of Franks to understand, speak, read, or write Arabic is considered exceptional and worth mentioning. Greek, too, enjoyed the status of a language of culture and worship among many of the Arabic-speaking Christians on the mainland. In spite of the segmented character of the society of Outremer, there were contacts, and sometimes permanent relations, among individuals and groups belonging to different social layers or communities. These contacts are reflected in loan-words: hundreds of lexical items of Greek, Arabic, Persian, or Turkish origin entered western European languages during the Middle Ages; the focal points of this linguistic exchange were the Iberian Peninsula, Sicily, and Outremer. Most of the exotic words that came from Outremer refer to the fields of trade and navigation, and, not surprisingly, were brought to western Europe via Italian dialects, mainly Venetian, Genoese, and Tuscan. But French also played a role, although a minor one, in this impressive process of lexical borrowing.

Characterizing the French of Outremer is not an easy task: its description is necessarily based on written texts, and therefore ignores the language of the illiterate part of society, which made up the majority. Moreover, most of the literary (and some of the legal and administrative) texts orig-

inally written in Outremer were later copied elsewhere, so that they reflect the linguistic habits of their scribes more than that of their writers. Finally, the few surviving texts written and copied in Outremer have often been poorly edited, and therefore cannot be used as reliable sources for linguistic inquiry. However, thanks to some good (and usually recent) editions, it is possible to sketch a tentative characterization.

The French of Outremer was the outcome of a situation of interdialectal contact, due to the presence in Outremer of settlers from different French-speaking regions, in a wider context of interlinguistic contact. Because of its geographical remoteness and its peculiar nature, Outremer French was less affected by the leveling influence of the Parisian dialect, a long-lasting process of standardization that began in the thirteenth century and concluded only in modern times. Literary texts, especially those with artistic pretensions, were usually closer to European French norms than documentary or practical texts, which could more directly reflect everyday speech.

After the loss of Outremer to the Mamlûks in 1291, Cyprus inherited the role, cultural traditions, and to some extent the social structures of the Frankish states of the mainland, but it suffered a gradual weakening of its Latin or Frankish character. French was still widely used on the island in the fourteenth century as a literary and administrative language, and was commonly spoken by Franks. However, the local population (whether nobles, bourgeois, or peasants) predominantly spoke Greek, and the political and economic expansion of Venice and Genoa increased the growth of Italian colonies, leading to the spread of Italian dialects all over the eastern Mediterranean. In the fifteenth century, French was still used in the royal chancery of Cyprus, and probably in some aristocratic groups, but it was losing ground to its strongest competitors, Greek and Venetian. The native Cypriot nobility recovered its cultural self-consciousness, and through mixed marriages with Frankish aristocrats, it regained its powerful position as a ruling class, favoring the oral use of Greek and its literary revival after a long period of decline. Some Cypriot documents dating to the late fourteenth or to the fifteenth centuries show an inextricable intermingling of (northern) Italian and French, although it is difficult to say whether these texts portray an effective situation of language mixing or a written bureaucratic convention. The island's incorporation into the Venetian mercantile empire continued

until it was completed in 1489. For nearly a century, Cyprus was a Venetian island, and an Italianized form of Venetian (or a Venetianized form of Italian) replaced French in all its remaining official functions. On the eve of the Turkish conquest (1571), the Venetian Senate ordered the translation into Italian and publication of the *Assises de la Haute Cour du Royaume de Chypre*, the traditional legal texts that Venetian officers were no longer able to read.

It is possible to identify at least two local varieties of Levantine French: one in Outremer and the other in Cyprus; the latter is much better documented than the former, its documentation covering almost three centuries. Possibly this dialectal variation, at least at phonetic and lexical levels, was due to the linguistic substratum or adstratum, which was Arabic in the case of Outremer, and Greek in that of Cypriot French. Both varieties share a number of linguistic features, at graphical, phonetic, morphological, syntactic, and lexical levels. Among those, we can mention: use of the grapheme *-z-* for *-s-* (*espouze, iglize*) and *-h-* for *-s-* (*amohne, dihme*); preference for *-ou-* forms over those with *-eu-*, both from Latin long *Ō* (*doulour, seignour*); monophthongation of the diphthongs *-ei-* > *-e-* (*fes, saver*) and *-ui-* > *-u-* (*nut, redure*); preservation of the final consonant in words like *leuc, feuc*; extension to the singular of the plural ending *-au(s)* in words with final *-l* (*cazau, mareschau*); occasional post-position of the personal pronoun to the infinitive (*avoir les, tenir le*). The field of lexicon is certainly what gives Outremer French its characteristic flavor: there are general French words that acquired a specialized meaning in the Latin East (*bain, poulain*); some regional French words that gained general diffusion in Outremer (*mermer, delier*); and several loan-words from Arabic (*fonde* < Arab. *funduq*, *mathessep* < Arab. *muhtāsib*) and Greek (*apodixe* < Gr. *apodeixis*, *pitare* < Gr. *pitharia*). The word *apaut* (< Lat. *appactum*) was apparently coined by French and Italian notaries in Outremer and then spread overseas.

French Literature

In the twelfth century, coinciding with the period of the first four major crusades, there was a great flowering of vernacular literature in France and the Anglo-Norman realm. The genres of Old French imaginative literature most associated with a crusading theme are the *chansons de geste* (epic poems) and those lyric poems known as the *chansons de croisade* (crusade songs), but crusading themes and the conflict of Christian versus non-Christian are also found in other texts. Old French texts characterize the crusaders’ enemies as Saracens who are polytheistic pagans. Even chronicles, which generally show a more accurate knowledge of Islam, use the term “Saracen” to denote the opposing forces; the term can only be defined as “non-Christian.”

Chansons de Geste

The *chansons de geste* were long narrative poems written in *laissez* (strophes of irregular length) united by a common assonance or rhyme and often linked by devices of repetition. They are tales of heroic deeds, sometimes loosely based on historical fact, situated in the age of Emperor Charlemagne (771–814) or his immediate predecessors and successors. The literary techniques of these texts suggest an oral prehistory with the extant written texts destined for oral presentation. The best-known and earliest *chanson de geste* is the masterpiece of the genre, the *Chanson de Roland*, written down in its present form around 1100.

The *chansons de geste* are often grouped into cycles (Fr. *gestes*). These were first named by an epic poet, Bertrand de Bar-sur-Aube, in *Girart de Vienne* (c. 1180): the *Geste du roi*, the cycle of poems centered around Charlemagne; the *Geste*

de Garin de Monglane, more generally known as the Guillaume d’Orange cycle; and the *Geste de Doon de Mayence*, the ancestor of the traitor family. For Bertrand the key connection between the texts of one cycle seems to be family. To this classification can be added the texts of the *Cycle de la croisade* (Crusade Cycle) and the *Cycle des barons révoltés*, which was linked to the Mayence cycle; these two groupings are primarily thematic. Texts of the same cycle may be found grouped in compilation manuscripts, or, in the case of the Guillaume d’Orange cycle, rewritten to join texts together in great cyclical manuscripts that create a kind of family history.

The Crusade Cycle is composed of fictionalized accounts, primarily of the First Crusade (1096–1099). Its nucleus is formed by the *Chanson d’Antioche*, the *Chanson de Jérusalem*, and *Les Chétifs*, which survive only in cyclical form in a redaction that dates from the late twelfth century. The originally separate folktale of the Swan Children is attached to the semihistorical branches by making the character of the Swan Knight the ancestor of Godfrey of Bouillon, one of the leaders of the First Crusade and subsequently ruler of Jerusalem. A related but more loosely connected group of poems (sometimes known as the “Second Crusade Cycle”) extends the story of the Bouillon-Boulogne family beyond historical fact in the descendants of Godfrey and ends in the story of Saladin, which survives only in prose manuscripts of the fifteenth century.

The crusading background is also important in poems centered upon Charlemagne or Guillaume d’Orange, in which the heroes serve both God and their king in wars against the infidel; the ideal is that of the *miles Christi* (knight of Christ). The infidels, “Saracens,” or “pagans” are apparently followers of Muhammad, but the religion they follow is distorted; it is both a reflection of the pagans of the Old Testament and a distorted mirror image of the Christian religion, with a trinity of gods and worshipping of idols. The gods are not always the same, though Muhammad, elevated from his position as prophet, is a constant. Others found alongside him make up a trinity; Apollo, Jupiter, and Ter-vagent are the most popular. There are common motifs in the *chansons de geste*: Christian warriors destroy the statues of the idols in the *mahommerie* (a kind of pagan temple rather than a mosque), for example, in the *Chanson de Roland*, *Fierabras* (c. 1200), and *Aspremont* (c. 1190), and the Saracen leader rails against his gods, illustrating the fact that the Saracens are not only infidels, but are not even faith-

ful to their own gods, in *Fierabras*, and the *Siège de Barbastre* (late twelfth century). The action commonly takes place in northern Spain or Italy, but in *Acquin* (late twelfth century) Charlemagne drives the Norsemen out of Brittany. In Jehan Bodel's *Chanson des Saisnes* (written before 1202), the enemy is the Saxons, and in *Garin Le Loherain* (late twelfth century) they are Vandals, but generally they are Moors. The act of fighting the infidel is often explicitly referred to as a penance. Death in such a fight is martyrdom, as in the *Chanson de Roland* and *Aspremont*. The *Chanson des Saisnes* is an unusual text in several ways. It is one of the few chansons de geste for which we have a named author, one who is known to have written a number of other texts, although it may not be entirely his work. Bodel exploits the genre skillfully, using conventional representations of the Saracen applied to the Saxons.

Single combats between a Christian champion and a Saracen, in texts such as *Fierabras*, *Otinél* (thirteenth century), and the *Couronnement Louis* (twelfth century), are presented as contests between the Christian God and false gods, with the Christian champion eventually winning, with or without direct intervention from God. The Saracen will normally either convert or be killed, although there is from the time of the earliest texts some admiration for the bravery of Saracens. They are worthy enemies who would be noble if only they were Christian, an attitude also common in Latin and vernacular chronicles. In some texts (for example, *Fierabras*, *Anseïs de Carthage*, *Bueves de Conmarchis*, and *Huon de Bordeaux*), this potential for the Saracen to be noble is realized through conversion, while in others (such as *Otinél*) the conversion of the Saracen is not prepared for by nobility. Forced conversions, where the alternative is death, do exist, usually when a large group is converted at once (*Chanson de Roland*); Saracens may, however, choose death (*Aye d'Avignon*).

There is a tendency to demonize the enemy. Alongside the noble Saracen there are fierce Saracen emirs who refuse conversion and do not deserve to live (Balan in *Fierabras*), gigantic Goliath types (Corsolt in the *Couronnement Louis*), and absolute monsters, not recognizable as humans (Ago-lafre in *Fierabras*).

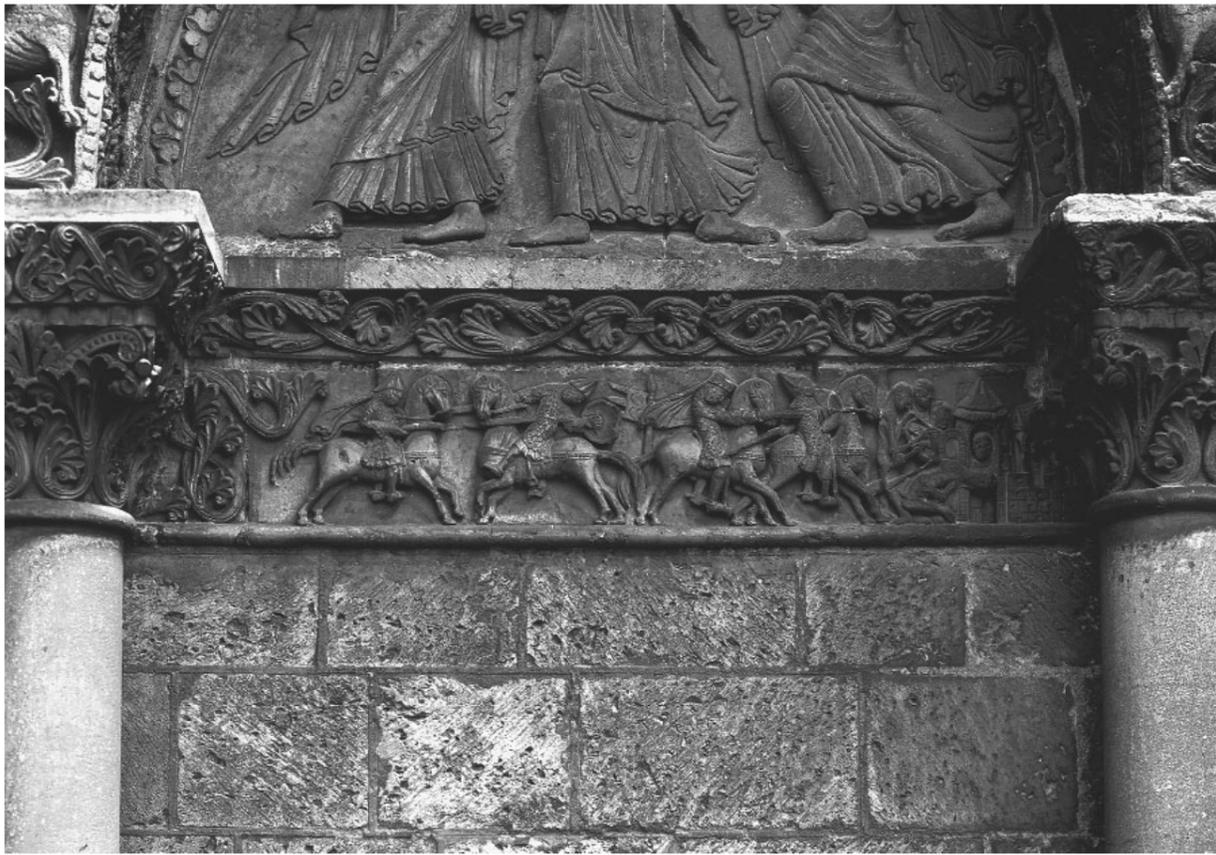

In the central texts of the Guillaume d'Orange cycle (the *Couronnement Louis*, the *Prise d'Orange*, and the *Charroi de Nîmes*) the struggle against the Saracens is linked inextricably to the gaining of land and the acquisition of a bride; Guillaume's bride is a converted Saracen queen who betrays

her people. These texts are concerned with political and religious ideals. The man who defeats the Saracens, taking over land held by the infidel, will also be faithful to his king. The king may not deserve this loyalty, but Guillaume is an exemplary vassal. Denied his rights by the king, Guillaume will carve out a fief for himself, taking land held by the Saracens. He thus upholds the authority of the king and extends the kingdom of God.

A significant figure is the converted Saracen princess, often improbably conforming to Western ideals of beauty. Guillaume's wife, who takes the name Guibourc on conversion, abandoning her pagan name of Orable, and her brother Rainouart, who also converts, figure in central texts of the Guillaume cycle, and the theme is important also in texts of the *Cycle du roi*. This is often ascribed to the influence of courtly romance, but the nature of that influence is not straightforward. Strongminded young women, such as Floripas or Guibourc/Orable, who act independently and against the interests of their own families, are very different from the heroines of romance. They may suffer for love, but they are prepared to take action, sometimes violently, to achieve their desired end; since this is generally to help the Christian knight with whom they are in love, this is condoned rather than condemned by the poet.

Conversion and marriage go together; the Christian knight may not even kiss the princess until she is baptized. Extramarital sex is the stuff of romance rather than epic, but there are two notable exceptions: in the *Pèlerinage de Charlemagne a Constantinople* (a text with a strong religious theme, but not a crusading one), Oliver sleeps with the daughter of the emperor of Constantinople; in *Anseïs de Carthage*, Anseïs, left in charge of the conquered Spain by Charlemagne, seduces the daughter of one of the emirs, with disastrous consequences, including the reneging of the emir; the romantic in the end is subjugated to the ideological. In some texts, notably the thirteenth-century *Aiol*, the adventures and love interest seem more important than the crusading ethos, but conversion remains important. Although a Saracen prince is more likely to be converted by single combat than for love, Ganor in *Aye d'Avignon* is accepted by Aye as a husband on condition that he accepts Christianity.

Tensions between more "domestic" concerns and inter-religious conflict, and the awareness of the need to subject personal and feudal matters to the higher call of religion, can be seen in the person of the traitor/renege/rebel. The traitor damages not just the nation, but also the cause, as is

Scenes from the *Chanson de Roland* in the cathedral of St. Peter, Angoulême, France, twelfth century. (Giraudon/Art Resource)

made evident in the *Chanson de Roland*, where the treachery of Ganelon leads to the loss of Charlemagne's best warriors. In *Aspremont*, the rebellion of Girart de Fraite also threatens Christian success.

The same tension is seen in rebellion against the emperor; the rebel with just cause is treated with respect in the poems of the *Cycle des barons révoltés*—for example, Renaud and his brothers in *Renaud de Montauban*, Girart in *Girart de Vienne* and *Girart de Roussillon*, and Ogier in *La Chevalerie Ogier*. All these poems date from the early thirteenth century and may be linked to the situation in France at the time, with the king strengthening the central power of the monarchy. Ultimately the rebel subjects himself to the emperor. In *Ogier*, the poet indicates quite clearly that energies ought to be turned against pagans rather than dissipated in civil war, and Ogier finally subjects himself to Charlemagne for the sake of Christianity. Charlemagne and Ogier together defeat

the pagans. Similarly, in *Girart de Roussillon*, Christian unity, with Charlemagne and Girart fighting together against the Saracens following a reconciliation between them, is clearly preferable to the rift.

The renegade is a rare figure in the *chanson de geste*. Only a fragment remains of the twelfth-century text of *Gormont et Isembart* in which a French knight, Isembart, unjustly treated by the king like the heroes of the rebel cycle, goes beyond the acceptable line and joins forces with the pagan king, Gormont. Isembart dies in battle but is first reconciled to God. In the *Chanson de Guillaume*, by contrast, Guibourc's nephew Girart, a converted pagan like Guibourc herself, apostasizes just before his death. His role seems to be largely that of a foil to Guillaume's own nephews, who are faithful even unto death.

Some *chansons de geste*, surprisingly, do show an ambivalent attitude to the violent killing that is clearly an

integral part of any warfare, whether religious or merely political. The Guillaume cycle includes two poems in which the hero retires to a monastery to end his days in repentance: both the *Moniage Guillaume* and the *Moniage Rainouart* are a mixture of the heroic and the comic, as the hero cannot be contained within the restrictions of the monastic life. In the *Moniage Rainouart*, the ex-pagan Rainouart specifically wants to repent from his deeds of violence, and yet he continues to act violently. The poem reaches its climax with Rainouart fighting an army of Saracens led by his own son. Rainouart, naturally, wins; his son and the Saracens convert, and Rainouart retires again to his monastery. In *Gadifer*, a sequel, Rainouart is again forced to fight the Saracens. While these poems show that a hero's rightful place is in heroic, and therefore violent, combat, they also show an awareness of the problem of Christians committing acts of violence.

Many of the chansons de geste survived long after the peak period of the crusades, being incorporated into longer pseudo-historical texts, such as the fourteenth-century *Chronique rimée of Philippe Mouskés* or the *Chroniques et conquêtes de Charlemagne* of David Aubert (fifteenth century), or reworked as prose texts. Most of the prose adaptations date from the fourteenth and fifteenth centuries, but the Crusade Cycle poems, *Hélias*, *Enfances Godefroi*, *Chanson d'Antioche*, *Les Chétifs*, and the *Chanson de Jérusalem*, were turned into an abridged prose version as early as the thirteenth century. Some of the prose texts were then translated and adapted into English and other languages.

The action-packed tales of knights and beautiful Saracen princesses had an appeal that outlasted their use as crusading propaganda, if that is what they were. Undoubtedly the religious element remained an important factor in their popularity; those texts most often adapted, translated, and turned into prose (such as *Fierabras*, *Otinel*, and the story of *Guillaume d'Orange*) often had at their heart themes of conversion or Christian triumph over Saracens. Their entertainment value was no doubt also enhanced by the combination of fantasy and humor found quite frequently in the chanson de geste.

The Chansons de Croisade

The Old French lyric owes much to its Occitan neighbor, and the chanson de croisade is no exception. Some of the earliest, and arguably finest, crusade songs are found among the works of the Occitan poet Marcabru. Because of the difficulty in defining this subgenre of the lyric, with poems centered

on the crusades and others where the reference is a more oblique one, scholars have compiled widely different lists of texts containing anything from six to around thirty-five poems. Various typologies have been attempted, the most enduring being Joseph Bédier's division of the poems into two groups: (1) exhortations to take up the cross, and (2) love poems. The second group can be further subdivided according to voice, that is, whether it is the crusader speaking, or the lady lamenting the loss of her beloved who is departing on crusade; a few poems alternate the voices of the man and the woman. There are also a few later poems that show an element of criticism about the conduct of the crusades, for example, by Philippe de Nanteuil and Rutebeuf.

Typically the chansons de croisade deal with how an individual is affected by the crusades. Many are anonymous, but some are by significant poets. The Châtelain Gui de Couci, whose death (1203) is mentioned by Geoffrey of Villehardouin in his chronicle of the Fourth Crusade (1202–1204), wrote several songs, and his own life became the stuff of legend. In the late thirteenth-century romance *Le Châtelain de Coucy*, given the name of Guy's successor, Renaut, he has his heart brought back from the Holy Land for his mistress, only for it to be intercepted by her husband and served to her as a meal.

Conon de Béthune (d. c. 1220) took part in both the Third Crusade (1189–1192) and the Fourth Crusade and was a significant figure as one of the negotiators in the latter; his role is also recorded by Villehardouin. Conon wrote two chansons de croisades; his *Ahi! amours, com dure departie* is one of the best-known examples of the genre and exemplifies the difficulties of any typology, as it combines a propagandist appeal with a love song. In *Bien me deüsse targier*, part leave-taking of his beloved, part polemic against those who take the cross for the wrong reason, Conon uses a fellow-poet, Huon d'Oisi, as a scapegoat, a target for those who disagree with him. *Maugré tous sainz et maugré Dieu ausi*, attributed to Huon d'Oisi, is a satiric response to Conon's work.

Thibaud IV, count of Champagne and king of Navarre, took part in a crusade to the Holy Land (1239–1240), arriving just after the battle of Gaza in 1239. He wrote several poems about the crusades. In *Seignor, sachiés qi or ne s'en ira*, he gives an impassioned polemic against those who do not take up the cross. In *Au tens plain de felonie*, he links the two main themes of the crusading poem, the crusades and love, but in a more clumsy juxtaposition. The expedition of 1239 would also be the inspiration for poetry by Philippe de

Nanteuil, whose only surviving poem, *En chantant veil mon duel faire*, criticizes the advice of the Hospitallers and the Templars that led to captive crusaders being abandoned.

With this later phase of the crusades comes the expression of a less straightforward approach to them. Philippe de Nanteuil laments the losses and the actions of the Christians; the thirteenth-century poet Rutebeuf also laments the loss of faith in his *Complainte de Constantinople* (1262) and *Complainte d'Outremer* (1265). Rutebeuf wrote a number of poems centered on the crusades, mostly *complaintes* (lyric poems, usually of love, in which the poet bemoans the cause of his melancholy); these make him arguably the most significant lyric poet of the crusades in France, although he himself seems to have remained in Paris. He calls on the faithful to succor Acre, the main surviving Christian stronghold in the Holy Land, and bemoans the lack of commitment to the crusades by the clergy, an aspect of his anticlericalism, which coexists with his zeal and piety.

More controversial is Rutebeuf's *Débat du croisé et du décroisé* (1268/1269) in which two knights in turn put the case for and against the crusades. While the crusader wins, persuading the *décroisé* (noncrusader) to take up the cross, the *décroisé* is given a strong voice. The reasons given by the *décroisé* no doubt express a view shared by many, and they are not entirely condemned by the poet. The crusader does not really have an answer to the questions raised by his opponent regarding his responsibilities to his family. The *décroisé*, having given his point of view, capitulates too suddenly for his change of heart to be convincing. The whole poem is based on exploitation of literary convention. The commonplace of the lover lost in abstraction is replaced by the poet lost in contemplation of the suffering of the inhabitants of Acre. The love debate is replaced by a debate of ideals.

The *chanson de croisade* shares characteristics with other lyric genres, such as the *chanson de congé* (departure poem), adapting literary conventions to fit the circumstances of crusading.

Other Works

The literary theme of crusading is not limited to specific genres. The *Ordene de Chevalerie* (c. 1220) offers a different treatment of the noble Saracen. Here Hugh of Fauquembergues, lord of Tiberias (Hue de Tabarie in the text), a prisoner of the Saracens, consents reluctantly to knight Saladin, whose reputation as a noble Saracen seems to have been established from the time of the Third Crusade. This com-

bination of infidel Saracen and Christian knighthood was seen to be an anomaly. Although Hugh consents to knight Saladin, this does not prevent him from classing him as "vile as regards the religion of goodness, baptism and faith" [*Ordene de Chevalerie*, ed. and trans. Keith Busby (Amsterdam: Benjamins, 1983), 171].

Muhammad himself figures in some of the encyclopedic works of the thirteenth century, and legend and myth rose around him. In the *chanson de geste* we find a distorted awareness of the Islamic ban on alcohol and pork in the account given of Muhammad's death: in a state of drunkenness, Muhammad falls over and is eaten by a herd of pigs. Muhammad's fictionalized biography, written in Latin, was adapted into French verse by Alexandre du Point in 1258. This legendary and defamatory account owes more to literary tradition and myth than reality, though it clearly springs from the spirit of the crusades; the same is true of other texts.

In the unique *chantefable* (work that is part verse, part prose) *Aucassin et Nicolette*, the commonplaces of the literary treatment of the Saracens are both exploited and subverted. The beautiful Saracen slave girl turns out to be the daughter of the king of Carthage, and Aucassin is caught up in a series of mock-heroic adventures. "Saracen" in this case is more of a literary construct to be played with than a real threat to Christendom. Similarly, the popular romance *Floire et Blanchefleur* (1150/1160) takes as its starting point the attack by a Saracen king on a group of pilgrims traveling to the shrine of Santiago de Compostella in Spain, but its interest is in the romance between the young Muslim Floire and the Christian slave girl Blanchefleur. In this case, Floire's conversion comes after their marriage but precedes his coronation.

Jean Bodel, who develops the Christian/Saracen theme to good effect in his *Chanson des Saisnes*, makes parodic use of the same theme in the drama *Jeu de Saint Nicholas*, where a Saracen army defeats the crusaders. The text exploits commonplaces of the *chanson de geste* and specifically draws upon the tale of *Fierabras*. Despite the comic elements, the crusading theme is not subverted but rather upheld by the eventual conversion of the Saracen emir when, in response to the prayers of the only Christian survivor, St. Nicholas forces three thieves to return what they had stolen from the emir.

Finally, chronicles of the crusades, while not strictly "imaginative" literature, have an important place in Old French literary tradition. The earliest chronicles were dynas-

Friedrich von Hausen (d. 1190)

tic and domestic, but at the end of the twelfth century Ambroise's *Estoire de la Guerre Sainte*, a verse chronicle of the Third Crusade, demonstrates the potential literariness of the genre. The chronicles of the Fourth Crusade by Geoffrey of Villehardouin and Robert of Clari are among the earliest extant prose narratives in French.

Conversion in the French literature of the crusades is presented more in terms of baptism than conviction. Where clear conviction precedes baptism, whether as a result of defeat in combat or the work of the Holy Spirit, the Saracen is not presented as Christian until after baptism.

Many of the texts in Old French that deal with crusading material offer difficulties of interpretation unless they are read contextually. Some of the chansons de croisade require extratextual knowledge to make sense, and most are enhanced by some appreciation of the historical context. The Holy Land as the feudal patrimony of God is implicit in much of this literature. Intertextual reference and an understanding of literary tradition are equally important. Finally, it should be noted that although the texts reflect contemporary attitudes of crusaders or noncrusaders, they were primarily literary constructs and should be read as such.

Friedrich von Hausen (d. 1190)

The first German lyric poet of crusade, and the only one whose death on crusade is documented.

Friedrich is named in charters of the imperial chancellor Christian, archbishop of Mainz (1171, 1175), and King (later Emperor) Henry VI (1186–1187), and he is recorded by the chronicler Gislebert of Mons as Frederick Barbarossa's counselor and judge (1187–1188). Five chronicles of the Third Crusade (1189–1192) record his death while repelling a Turkish attack against the rearguard of the German army near Philomelion (mod. Akşehir, Turkey) on 6 May 1190.

Hausen's courtly love lyrics foreground the lover's mordant critique of unrequited *hohiu minne* (high love). Having taken the cross, presumably in 1188, he exploited Minnesang (German love lyric) as propaganda for crusade. The crusader must choose between the irreconcilable claims of secular love and divine love. In the song *Si darf mich des zihen niet* ("She has no cause to reproach me"), the lover abandons the habitually indifferent lady in order to serve God, "who knows how to reward," and regrets having "forgotten God so long" [*Des Minnesangs Frühling*, V, 4]. Now his priority is to serve him, and "only after that shall my heart serve all women" (V, 5).

Min herze und min lip diu wellent scheiden (VI, "My heart and my body will go separate ways") takes its central motif of the divided self from the song *Ahi! amours, com dure departie* ("Alas, love, what painful parting") by the trouvère Conon de Béthune. The inner conflict of the knight, torn between "God's honor" and worldly pleasure, and unable to persuade his heart to crusade with him (VI, 1–3), is resolved only by repudiating secular love: "No one can accuse me of inconstancy if I come to hate the one I loved. However much I begged and beseeched her, she behaves as if she understood not a word. [. . .] I'd be a fool to put up with her stupidity—it will never happen again" (VI, 4). *Min herze den gelouben hât* (VII, "My heart believes") commends those the crusader leaves behind to God's mercy, trusting "good ladies" to

spurn lovers too cowardly to go on “God’s journey” (VII, 2). *Si waenent dem tôde entrunden sîn* (XVI, “They imagine they have escaped death”) castigates those who go back on their vow: “Whoever takes the cross and never sets off will see God at the last—when the gate is shut in his face which He opens wide for His own people” (XVI, 5–8).

Frisia

Medieval Frisia was the coastal area between the north-western corner of Holland and the town of Bremen, whose inhabitants participated in nearly every crusade to the East, acquiring fame as freighters and marine fighters.

In the period of the crusades, Frisia consisted of a series of autonomous districts, each governed in a more or less communal way by a local elite, whose members considered themselves to be noble but rejected secular knighthood. As a consequence of its geophysical structure, the Frisian territory was partitioned between the four dioceses of Utrecht, Münster, Osnabrück, and Bremen, but its people were bound by a common language, laws, and a sense of origin that centered on the myth of Charlemagne granting the Frisians freedom of territorial lordship. In non-Frisian crusade sources, the Frisians are always treated as a collective. They traveled by ship and usually fought on foot, as their watery lands did not favor mounted combat.

During the First Crusade (1096–1099), some Frisians made up part of the pirate fleet of Guynemer of Boulogne that offered military and logistic support to Baldwin of Boulogne in Tarsos (mod. Tarsus, Turkey) in November 1097. As they are mentioned along with men from Flanders, Antwerp, and other parts of *Gallia* (Gaul), it is likely that they came from the neighboring territories of Zeeland or Holland, which still were regarded as Frisian up to 1100/1125. Frisian is also mentioned by the chronicler Fulcher of Chartres as

one of the languages spoken in the Lotharingian contingent of the crusade army.

Frisian participation in the conquest of Lisbon (1147) during the Second Crusade (1147–1149) is recorded only in Frisian sources. The author of an itinerary of the 1217 expedition which brought Frisians to Portugal revived the memory of the Frisian hero Poptetus Ulvinga who had died at the siege of Lisbon seventy years before. If he really had been one of the leaders of a Frisian contingent, then it must have sailed with the Germans from the Weser area, who were led by the archbishop of Bremen.

From the Third Crusade (1189–1192) onward, the Frisians are more clearly distinguished in the sources. A false letter of Frederick I Barbarossa, Holy Roman Emperor, to Saladin (dated 1189/1190) mentions Frisians as part of a series of Western peoples whose mobilization is announced, and indeed two groups of Frisians from the northern coasts are known to have taken part in this crusade. The first squadron, of more than 50 ships, left Frisia in February 1189. At the mouth of the Rhine, it joined crusaders from Holland and Cologne and sailed to Dartmouth, where English and Flemish squadrons were gathering. Their main goal was the city of Acre (mod. ‘Akko, Israel) in Palestine, but the crusaders were persuaded by the Portuguese to assist in the capture of the Moorish stronghold of Alvor in the Algarve (16 June 1189). Thereafter the Frisians embarked again for the Holy Land, together with some Danes. A speedy voyage via Messina in Sicily, where they chose the Hainaut knight James of Avesnes as their commander, brought them to Acre in time to help the Franks close the ring around the Muslim-held city at the beginning of September. At the end of April 1189, a second fleet of 11 ships, probably from eastern Frisia, departed from Blexen near Bremen, sailing via England to southern Portugal, where the crusaders took part in the siege of Silves (September 1189). This small squadron can only be traced up to 17 October, when it sailed into Marseilles, but it is assumed that it, too, ultimately reached Acre. Eight years later another Frisian unit is reported to have left for the Holy Land; it is likely that it accompanied the north German fleet of Bishop Hartwig II of Bremen, which formed part of the Crusade of Emperor Henry VI (1197–1198).

More numerous were the Frisians who took the cross on the Fifth Crusade (1217–1221). Recruitment (at least for the archbishopric of Cologne) was organized by the papal delegate Oliver, master of the Cologne cathedral school, in collaboration with the abbots of many newly founded monas-

teries in Frisia. Helped by a series of miraculous signs in the sky during his campaign, this preacher managed to recruit 13,000 Frisian fighters according to his own estimation. They sailed with crusaders from Germany, England, and Holland, manning no fewer than 86 out of 200 ships. In contrast to the other nationalities, who decided to campaign in Portugal, the Frisians obeyed the strict orders of Pope Honorius III to sail directly to the Holy Land, but were delayed by bad weather, wintering in southern Italy. In April 1218 they set sail for Acre, where their fleet was chartered by John of Brienne, king of Jerusalem, to transport the crusader army to the Nile delta. The Frisians also served the Christian cause by constructing a siege machine on 2 cogs, with which they were able to capture the chain tower of the port of Damietta (25 August 1218). However, immediately after this feat of arms, the majority of the Frisians went home; a huge flood that caused thousands of casualties in Frisia soon after their return was blamed on the premature departure of these crusaders.

In 1224 Oliver of Cologne again preached the crusade in Frisia. Although he had less success on this occasion, a small Frisian fleet departed from the island of Borkum in the spring of 1227; its further adventures are unknown. Shortly afterward the bishop of Utrecht acquired massive support in the Frisian parts of his diocese for three successive crusade expeditions against the rebellious population of Drenthe (1227–1233). Some Frisians also participated in a similar political crusade against another neighboring people, the Stedinger, who had been declared heretics by the archbishop of Bremen (1234).

In 1247 the Frisians were called on by Pope Innocent IV and King Louis IX of France to join the latter's crusade to the East (1248–1254), but the pope eventually allowed the Frisians to fulfill their vows in aiding William of Holland, king of the Romans, against the city of Aachen. By contrast, Frisians joined King Louis's second crusade (1270–1272) in large numbers. On 18 April 1270, 50 cogs left Borkum, and although they were too late to sail from Aigues Mortes in France with the main fleet, they managed to arrive in Tunis shortly before the king died. According to the Frisian chronicler Menco, abbot of Wittewierum, the Frisians fought in a battle under the command of the king's brother Charles I of Anjou, probably at El-Bahira. Like other nations in the crusader army, their group was decimated by an epidemic. The survivors left Tunis in September and sailed to Acre with 32 ships, only to discover that they could not be of any military

importance there. With this expedition, Frisian crusade participation came to an end.

In late medieval Frisian historiography, the memory of heroic crusaders is a central theme, connected with the idea that the chosen people of Frisia had earned its freedom because of its achievements for Christianity. The mythical stories were most popular in West Frisian districts, which were longest able to resist the territorial expansion of neighboring lords.

Enthusiasm for the crusade is reflected in the relatively high number of establishments of the military orders in Frisia: the oldest foundations date to before 1240, and by 1300 there were twenty-one separate houses of the Order of the Hospital and three of the Teutonic Order. The Teutonic houses, situated west of the Lauwers, were organized in the provincial district of Utrecht. The one commandery of the Hospitallers in the same region also came under a Utrecht house (St. Catherine's convent). All other Hospitaller establishments (situated in the modern Dutch province of Groningen and the German district of Ostfriesland) formed an administrative area of their own, the Bailiwick of Frisia, which came under the authority of the commander of Steinfurt in Westphalia. Peculiar to the houses of both military orders was the fact that they had no knight brethren. The wealthier establishments developed into either nunneries or convents of priests, some of whose members were active as parish ministers, while the poorer houses were peopled with lay sisters. The commanders were always priest brethren. This monastic structure can be explained by the character of the Frisian aristocracy, which lacked a knightly class from which knight brethren could otherwise have been recruited.

In the fourteenth century a series of conflicts broke out between the monastic communities and their respective provincial superiors on issues such as the recruitment of new members and the election of commanders. These were resolved by permitting the Frisian brethren autonomy in these matters. In the last quarter of the fifteenth century, the Hospitaller provincial commander at Utrecht and his Teutonic counterpart at Steinfurt both strengthened their grip on their Frisian houses by peopling them with non-Frisians and diminishing the number of lay brethren and sisters. In all of the Frisian lands, the Reformation brought an end to the houses of the military orders, first in the areas under the Lutheran counts of Eastern Frisia and Oldenburg, and later in the provinces of Friesland and Groningen, which in 1580

and 1594 respectively joined the Calvinist-oriented Republic of the United Netherlands.

Froben Christoph of Zimmern

See Zimmern, Chronicle of

Frutolf of Michelsberg (d. 1103)

Prior of the monastery of Michelsberg near Bamberg, and author of a universal chronicle dealing with events from the Creation up to the year 1099.

Frutolf's work, which contains information about the First Crusade (1096–1099), particularly relating to the People's Expeditions, was used as the basis for the chronicle of Ekkehard of Aura, who provided a continuation up to the year 1125, including extended descriptions of the First Crusade and the Crusade of 1101.

Fulcher of Chartres (d. c. 1127)

A participant in the First Crusade (1096–1099) and author of a Latin history dealing with the crusade and subsequent

events in Outremer up to 1127.

Fulcher was probably born in Chartres around 1059, and he was educated for the priesthood. He responded enthusiastically to Pope Urban II's preaching of the crusade (although it is disputed whether he was at the Council of Clermont in November 1095), and set off with the army of Stephen of Blois in October 1096. This army wintered in southern Italy, leaving Bari for Constantinople (mod. İstanbul, Turkey) in April 1096, and proceeding from there into Asia Minor.

In October 1097 Fulcher became chaplain to Baldwin of Boulogne (later king of Jerusalem) until Baldwin's death in 1118, and he remained in Outremer until his own death in 1127 or soon thereafter. His close association with Baldwin meant that he was in Edessa (mod. Şanlıurfa, Turkey) and its environs during the sieges of Antioch (mod. Antakya, Turkey) and Jerusalem 1097–1099, and so he was not an eyewitness to these events, which he described using the account of Raymond of Aguilers and the anonymous *Gesta Francorum*. However, Fulcher was able to give a first-hand account of how Baldwin achieved power in Edessa. When Baldwin went to Jerusalem as successor to his brother Godfrey of Bouillon (autumn 1100), Fulcher accompanied him and remained in the kingdom of Jerusalem as his chaplain. For the next twenty-seven years, Fulcher's history is a unique and invaluable source for the early years of the Frankish settlement.

Fulcher's *Historia Hierosolimitana* was written to celebrate the success of the First Crusade, in response to urging by "a comrade." This, along with his use of the other eyewitness accounts, suggests he began to write soon after he arrived in Jerusalem in 1100. The first version of his history appeared in 1106, and it may have been completed with a view to circulation as propaganda for a new crusade. Its enthusiastic reception encouraged Fulcher to continue his work in 1110, summarizing events in the intervening four years; thereafter he revised the early part of the work twice, and continued to write year by year until 1127, when his chronicle ends abruptly. Fulcher was the best educated of the Latin eyewitnesses of the First Crusade. He quoted, sometimes rather ineptly, from a range of classical and biblical texts and occasionally included short verse passages, some of them making enigmatic use of astrological dates and times. He had a keen interest in natural history and phenomena and described strange plants and animals he observed on his travels, though usually with reference to

Fulcher, Patriarch of Jerusalem (d. 1157)

Solinus, the classical author through whose work Pliny's observations on natural history were accessible to medieval schoolmen.

Although Fulcher was at the side of Baldwin I during his entire reign as king of Jerusalem (1100–1118), he is disappointingly reticent about the politics of church and state. He describes with enthusiasm an expedition beyond the Dead Sea in 1100 and seems to have been present on campaigns until 1111 or 1112, leaving detailed accounts of them. The evidence suggests that he spent more and more time in the city of Jerusalem, neither accompanying Baldwin I when he went north to assist Roger of Antioch in 1115, nor going with him into Egypt in 1116 or 1118. On this last journey Baldwin died, and Fulcher appears not to have served his successor, Baldwin II (1118–1131), as chaplain, nor traveled with him. He was in his sixties by this time, and apparently devoted his time to writing his history in Jerusalem. His loyalty to his adopted land is expressed in a remarkable and often quoted passage written in the 1120s, in which he tells how the Frankish settlers had come to think of themselves as Orientals and to be at home in Outremer.

Fulcher's work was eagerly adopted by other writers as early as 1105–1106, when two anonymous authors (one known as Bartolf of Nangis) produced versions with some added details. The same text was probably used by Guibert of Nogent, Ekkehard of Aura, and Radulph of Caen, all writing soon after 1106. Fulcher's first redaction, which finished in 1124, was used by Orderic Vitalis and by William of Malmesbury. William of Tyre, writing in the 1170s, also used Fulcher (with other sources) for his account of the First Crusade and the reigns of Baldwin I and Baldwin II. As in the case of other eyewitness accounts, William's elegantly written narrative overshadowed Fulcher's more naive history. More than fifteen copies of Fulcher's *Historia Hierosolimitana* are extant; the earliest is MS Cambridge, University Library, Ii.iv.4.

Fulcher, Patriarch of Jerusalem (d. 1157)

Latin archbishop of Tyre (1135–1145) and patriarch of Jerusalem (1145–1157).

A Frenchman by origin, Fulcher started his career in Outremer when he fell out with his bishop in Angoulême over the disputed papal election of 1130. Fulcher became a canon of the Church of the Holy Sepulchre before his appointment as archbishop of Tyre (mod. Soûr, Lebanon).

As archbishop, Fulcher worked tirelessly to assert his independence, even to the point of securing papal injunctions against Patriarch William. Ultimately Fulcher succeeded: the archbishop of Tyre became second only to the patriarch of Jerusalem in the hierarchy of the kingdom. After his election as patriarch in 1145, Fulcher continued to champion ecclesiastical privileges, which brought him into various conflicts with Queen Melisende, King Baldwin III, and the Order of the Hospital.

When Baldwin III finally decided to rule alone and began a civil war, Fulcher quietly backed the queen. Ultimately Melisende lost her official role in government, but Fulcher may have influenced the settlement that Baldwin III offered her in 1152. He himself seems not to have been reconciled with the king.

Fulco

Missionary bishop of Estonia (1171–1180).

Fulco was a Benedictine monk at the abbey of La Celle who before 1171 expressed a desire to work among pagans.

He was consecrated as missionary bishop for the Estonians by Eskil, archbishop of Lund (who was then in exile), at the instigation of Peter, the previous abbot of La Celle, who had been abbot of Saint-Remi at Rheims since 1162. During 1171–1172 Fulco visited Pope Alexander III and procured a number of bulls in support of the mission. An Estonian monk in Norway was asked to join him, and the pope urged Scandinavian kings and their peoples to undertake a crusade against the Estonians.

Whether this crusade actually took place and whether Fulco ever reached Estonia are unknown. He was in Denmark in the late 1170s before going back to France and once more visiting Pope Alexander, seemingly on behalf of Absalon, the new Danish archbishop. Peter now tried to involve Absalon in Estonia, but there were apparently no Danish or Norwegian campaigns to Estonia until the 1180s and 1190s. No further information on Fulco exists from those decades, however, although some scholars have identified him with one Folquinus, who is mentioned in a fifteenth-century chronicle (*Catalogus et ordinaria successio episcoporum Finlandensium*) as the third bishop of the Finns around the year 1200.

Fulk of Anjou (d. 1143)

King of Jerusalem (1131–1143) through his marriage to Melisende, eldest daughter of King Baldwin II.

Fulk (Fr. *Foulques*) was born around 1090, the son of Fulk IV Rechin, count of Anjou, and Bertrada of Montfort, and succeeded to Anjou in 1109. Fulk's success in holding his hereditary lands, enlarging them by the annexation of Maine, and maintaining his position between the kings of England and France through a series of skillful alliances earmarked him as a capable ruler. These accomplishments, his ties to royal families, and his reputation for piety (marked by a pilgrimage to Jerusalem in 1120) made him an obvious candi-

date when Baldwin II of Jerusalem sought a husband for Melisende, his eldest daughter and designated heir, in 1127. Fulk ceded Anjou and Maine to his eldest son, Geoffrey Plantagenet (who was betrothed to Matilda, heiress to the throne of England), and married Melisende in 1129.

On his deathbed, Baldwin II designated Fulk, Melisende, and their son Baldwin III as joint heirs to the kingdom (1131). Disinclined to share power, Fulk increasingly cut his wife out of government and favored new men from Anjou over the established magnates of Jerusalem. Fulk was obliged to spend considerable time in northern Syria between 1132 and 1135. He put down an attempt by the Princess Alice to seize control of the principality of Antioch from its heiress, Constance, in alliance with Count Pons of Tripoli and Count Joscelin II of Edessa; later he returned to Antioch to attend to its defense and government. In 1134 Melisende's cousin Hugh of Jaffa started a rebellion in an attempt to restore the queen's royal power. Although Hugh's revolt quickly fell apart, Fulk had to compromise with Melisende and her supporters by allowing his wife to share rule with him. These events showed how crises in the northern Frankish states might require Fulk's attention, for a threat to any of them endangered all of Outremer. Yet if the king and the army headed north, Jerusalem was vulnerable to attack from Egypt. Three other issues further complicated the situation: Emperor John I Komnenos's interest in reasserting Byzantine claims over Antioch; the ambition of Zangī, ruler of Mosul, to conquer all of Syria; and Damascus's equally fervent wish to stay out of Zangī's hands.

Fulk dealt with all these problems effectively, for the most part. Between 1136 and 1142, he built a ring of castles around the Egyptian fortress of Ascalon (mod. Tel Ashqelon, Israel) to guard Jerusalem's southwestern flank. Several of these strongholds became the property of the Hospitallers and prevented Egyptian raids. The king also encouraged magnates to expand into areas served by important trade routes. A strategic series of alliances helped keep the other problems in check. John Komnenos came to Syria in 1137 and 1143, trying to enforce his suzerainty over Antioch. Fulk declined to help the prince of Antioch contest imperial authority and at the same time prevented John from claiming power over his own kingdom. He also allied with John against Zangī until their pact fell apart in late 1137. Soon Fulk found another partner in Muslim Damascus, which Zangī's expansion in Syria finally pushed into an alliance with Jerusalem that lasted from

Fulk of Neuilly (d. 1202)

1139 to 1144. When Fulk died in a hunting accident, however, it became clear that his solutions had not fully settled Outremer's problems. Many of the same issues reemerged during the regency of Melisende and the majority of Baldwin III.

Fulk of Neuilly (d. 1202)

A reformer and parish priest who preached in support of the Fourth Crusade (1202–1204).

It is unknown whether Fulk waited for a papal commission by letter or from the legate Peter Capuano before beginning to recruit for the crusade in 1198. Pope Innocent III later granted Fulk the right to commission other preachers, who included Eustace of Saint-Germer-de-Flay and (despite initial resistance of their order's general chapter), the Cistercian abbots of Vaux-de-Cernay, Perseigne, and Cercanceaux. Fulk and his fellow preachers successfully recruited noblemen from the Ile-de-France, Champagne, Flanders, and Brabant, in addition to hosts of commoners whose personal participation they intended to subsidize with offerings collected from the devout. After Fulk's untimely death, these funds seem to have been transferred to the leaders of the crusade or sent to the Holy Land, lead-

ing to allegations that they had been embezzled by Fulk or his collaborators.

Fulk of Villaret (d. 1327)

Master of the Order of the Hospital (1305/1306–1317/1319).

Fulk (Fr. Foulques) came from a family that had associated itself with the Hospitallers, and he was a nephew of the previous master, William of Villaret. Little is known of his early life. He was appointed admiral of the order in 1299 (the first recorded instance of such an office). In 1301 and 1303 he held the office of grand commander, and in 1303 he was made lieutenant master.

On William's death, Fulk was elected master and embarked at once on a series of ambitious projects that would permanently alter the character of the order. He sent a calculating proposal for a crusade to Pope Clement V, and together with the Genoese adventurers Vignolo di Vignoli and Boniface Grimaldi made plans in 1306 to seize the island of Rhodes (mod. Rodos, Greece) and establish a base there for the order. The crusade was eventually carried off, in modified form, in 1309–1310, and the conquest of Rhodes was completed around 1310, giving the Hospital an independent base and transforming it from a land-based knightly order to a Mediterranean naval power.

After 1307 Fulk had to deal with the stresses generated by the trial and suppression of the Order of the Temple. He spent the years 1307–1309 in the West, mostly near the papal court in Poitiers, in a dangerously exposed position but also well-placed to stay abreast of developments. Because of his swift and vigorous action in seizing an independent base for the Hospital, his persistent prosecution of the crusade of 1309–1310, and his evident political sophistication, he managed to bring about a successful acquisition of the property of the Temple and to prevent the French Crown and others from destroying the Hospital. Returning to the East, he became involved in the affairs of the kingdom of Cyprus. He

was designated briefly as Henry II's deputy in 1310, and he helped to arrange the marriage of Henry's sister to James II of Aragon in 1315. But his character appears to have been deteriorating, and what had been vigorous activity became overbearing tyranny.

In 1317 the Hospitaller brethren on Rhodes rebelled against Fulk and tried to assassinate him in his bed; having deposed him and elected Maurice of Pagnac as master in his stead, they then besieged Fulk in Lindos castle. Pope John XXII summoned both Fulk and Maurice to Avignon in 1319 and confirmed Fulk in his magistracy, apparently on condition that he resign. He was then appointed prior of Capua,

but after further trouble there Fulk seems to have lived as a pensioned brother from 1325 until his death in 1327.

G

Galilee

The name of the northern part of Palestine since the Herodian period, deriving from its Hebrew appellation Galil Hagoyyim, “the province of the Gentiles.” Due to its paleo-Christian reminiscences connected with Christ’s life, the name Galilee remained in constant use by Christians through the centuries thereafter.

In the summer of 1099, after his conquests in the region, Tancred, a Norman crusader from southern Italy, adopted the title of “prince of Galilee” and undertook a series of campaigns in order to extend his domination over its territory, from the Litani River in the north to the hills of Samaria in the south, as well as from the Terre de Suète (Arab. *al-Sawād*) and Golan in the northern Transjordan to the shores of the Mediterranean in the west. His attempt to extend his rule to Haifa (mod. Hefa, Israel) on the coast brought him in conflict with the new king of Jerusalem, Baldwin I, who appointed one of his vassals as lord of Haifa.

History of Galilee, 1101–1187

Tancred relinquished Galilee to the king on being called to the principality of Antioch to serve as its regent in 1101. In the following years Baldwin I implemented a new feudal organization of the province. Eastern Galilee became a new lordship based on the town of Tiberias (mod. Teverya, Israel), which was bestowed on one of Baldwin’s vassals, Hugh of Fauquembergues. Following the foundation of the Cluniac abbey on Mount Tabor in 1102, the neighboring villages were given to its abbot, forming an ecclesiastical lordship in the heart of the province. This was followed by the establishment of a lordship in the Bethsan Valley,

whereas the port of Acre (mod. ‘Akko, Israel) and western Galilee became part of the royal demesne. In 1108, with the establishment of a Latin archbishopric in Nazareth (mod. Nazerat, Israel), the city and its surroundings were detached to form a further ecclesiastical seignory. Finally, the castle of Toron (mod. Tibnin, Lebanon), built by Hugh of Saint-Omer, became the seat of a lordship in northern Galilee.

Although these measures augmented the effective authority of the kingship, they weakened the local lords, who did not dispose of sufficient forces to check the attacks of the Turkish rulers of Damascus. Thus, in 1111 Ṭughtigīn, the *atabeg* of Damascus, invaded Galilee, penetrating as far as Nablus. The kingdom was saved only due to internal conflicts of the Damascenes rulers, which obliged Ṭughtigīn to retreat. A revolt of Muslim peasants during the invasion posed a serious threat to the food supplies of the Franks, who were not settled in the rural areas. They therefore erected small castles in order to dominate the villages. Frankish control was assisted by the conquest of Tyre (mod. Soûr, Lebanon) in 1123, the next major port of Galilee after Acre, and of Banyas (mod. Bānīyas, Syria) in 1129, which secured the sources of Jordan and the fertile valley of al-Huleh. Banyas was reconquered by the Muslims in 1132, although it was held by the Franks again between 1140 and 1168.

An important step in the Frankish domination of Galilee was the fortress-building campaign of King Fulk (d. 1143), who integrated the local fortifications in his strategic system of the defense of the kingdom. In the Galilee, this system was based on four lines of fortification, two in the east and two

View of Lake Tiberias (Sea of Galilee). (Library of Congress)

in the west. The eastern lines were based on castles built on the heights of the Golan, such as Qal'at Namrud, established after the seizure of Banyas in 1140, and Cave de Suète (Habis Jaldak), dominating the Yarmuq Valley; they were connected with smaller castles, built by the lords of Tiberias. On the western bank of the Jordan, fortresses erected on the hills, beginning with Beaufort, which dominated the Litani River, through Château Neuf (Qal'at Hunin) and Saphet (mod. Zefat, Israel), were connected with the fortified city of Tiberias and the fortress of Belvoir, which dominated the Jordan Valley south of Lake Tiberias. The western fortifications included a number of castles on the hills and the fortified cities of the Mediterranean shore, from Tyre to Haifa. Some of these fortresses were entrusted to the orders of the Temple and Hospital, which provided garrisons for them.

King Fulk's achievement brought about a period of peace and economic prosperity in the region. Trade flourished

along the protected routes of Galilee between Damascus, the outlet of oriental goods, and the coastal cities of Acre and Tyre, where the goods were loaded for shipping to the West. This brought about the emergence of a cosmopolitan society in the coastal cities where Jews, Byzantines, and Eastern Christians were active alongside the Franks. Merchants of various origins also settled in the towns of the interior, especially contributing to the growth of Nazareth.

The history of the province in the second half of the century was influenced by the new situation in the aftermath of the Second Crusade (1147–1149). It was characterized by the renewal of Muslim unity, first under Nūr al-Dīn, whose conquest of Damascus led to the union of Muslim Syria (1154), and then under Saladin, the ruler of Muslim Syria and Egypt. This situation caused a constant pressure on the Franks, who were now placed on the defensive, finally leading to the collapse of the Latin kingdom in 1187.

In 1157, Nūr al-Dīn attacked Banyas and the northern Jordan Valley; the Franks were compelled to mobilize all the forces of the kingdom under Baldwin III in order to check the Muslim attack and to secure Banyas. In 1163, a new offensive against Banyas resulted in the Muslim conquest of the city and of Qa'lat Namrud, which led to the loss of control of the fertile valley of the Huleh and the sources of the Jordan. To prevent further invasions, a fortress, called Le Chastellet, was erected at Jacob's Ford (1178–1179), south of Lake Huleh, controlling the caravan route from Damascus to Acre. But this measure proved to be only a temporary remedy. Profiting from the internal political disputes in the Latin kingdom, Saladin undertook repeated invasions of Galilee, destroying Le Chastellet and Cave de Suète, which enabled his forces to penetrate and devastate the province.

Saladin's final invasion of Galilee resulted in the defeat of the Franks at the Horns of Hattin (4 July 1187) and the collapse of the entire kingdom of Jerusalem. The Muslim peasants revolted, as did the Jewish villagers of Upper Galilee, and both attacked Frankish survivors in their flight to Tyre.

History of Galilee, 1187–1291

The Third Crusade (1189–1192) resulted in the Christian reconquest of Acre and the coastal area between Jaffa and Tyre as well as of a tiny hinterland in western Galilee, where some of the twelfth-century lordships were reestablished, notably Haifa, Casal Imbert, and Scandalion. The lords of the lost lordships and their heirs settled at Acre, retaining their titles and hoping to reconquer their possessions. Some of them emigrated to Cyprus and later to Frankish Greece. To provide a defense for Acre, the new capital of the kingdom after the loss of Jerusalem, the Franks built some new castles on the western Galilean hills; the most important was Montfort, given in 1227 to the Teutonic Order.

The Crusade of Emperor Frederick II managed to reopen Nazareth to pilgrimage (1229), but that of 1239–1241, led by Thibaud IV of Champagne, resulted in the temporary reconquest of the province. This was followed by the erection of a large castle by the Templars at Saphet in 1240, while the fortifications of Tiberias were restored by Odo of Montbéliard. The Khwārazmian invasion of 1244 caused the loss of eastern and central Galilee. Further unsuccessful attempts to recover the province were made by later crusade leaders, such as Louis IX, king of France, in 1254, whose campaign ended at Banyas.

After the victory of the Mamlūk sultanate over the Mon-

gols at 'Ayn Jālūt in 1261, the Mamlūk sultan Baybars undertook a series of campaigns against the last Frankish strongholds. In 1263 he conquered Nazareth and destroyed it; this was followed by the destruction of Haifa's castle (1265) and the conquest of Toron and of Saphet (1266), which became the capital of Mamlūk Galilee. In 1271 Baybars conquered Montfort, depriving Acre of its hinterland. Finally, in 1291 the conquest of Acre by a Mamlūk army under al-Ashraf Khalīl marked the fall of the Frankish enterprise in the Levant.

Christian Traditions in the Frankish Period

Christian tradition considered Galilee as part of the Holy Land, second only to Jerusalem in importance. From late antiquity onward, pilgrims came to see and venerate sites associated with St. Anne at Saphorie, the Annunciation, Christ's childhood and youth at Nazareth, the wedding at Cana, the Transfiguration on Mount Tabor, and Christ's ministry around the Sea of Galilee. The crusader conquest of Galilee and the establishment of a logistic infrastructure by the Hospitallers facilitated the renewal of pilgrimage in the province. Churches and monasteries were built on the holy sites, attracting both Franks from Outremer and pilgrims from the West, particularly on the appropriate feast days in the church calendar. The most important monument built by the Franks was the romanesque fortified cathedral of Nazareth, completed just before Saladin's conquest of 1187. Acre, where most pilgrims landed, was not considered part of the biblical Holy Land. However, from the mid-thirteenth century, when the loss of Jerusalem and the Galilean sites created difficulties for pilgrimage, new churches were erected there that became the scenes of processions symbolizing the rites of pilgrimage in the holy sites.

Gallus Anonymus

The anonymous author of a Latin chronicle, written in Poland in 1112–1116, now generally known as *Cronicae et gesta ducum sive principum Polonorum*.

The fifteenth-century historian Marcin Kromer attributed the chronicle's authorship to one Gallus, whom he regarded as probably having been a monk. This view has been generally accepted, and the *Gesta's* author is known in historiography as Gallus Anonymus. He arrived at the court of Bolesław III Krzywousty (Wrymouth), the ruler of Poland, before 1110. He probably originated from France (most likely Provence) and reached Poland via Hungary.

The *Gesta* is the oldest extant narrative source originating in and concerning Poland. It was written about twenty years after the First Crusade (1096–1099), and is a fundamental source, which established a chronology of Polish history focused on the lives of the rulers of the realm, although no precise dates are preserved in the text. The *Gesta* became the principal source for later authors and historians such as Wincenty Kadłubek and Jan Długosz. The *Gesta's* third book dwells especially on the wars fought by its protagonist, Bolesław Krzywousty, against the Pomeranians and Prussians, and reflects the crusading ideology of the leading families of Poland. The sources of the *Gesta* were oral history and the traditions of the ruling house.

Garin of Montaigu (d. 1227/1228)

Master of the Hospitallers (1207–1227/1228).

A member of a family that originated in Auvergne, Garin occupied a high rank in the Hospitallers' central convent during the turbulent mastership of Alfonso of Portugal, who resigned in 1206. He served as preceptor (1204–1206) and marshal (1206–1207), and he was elected master after the death of Master Geoffrey Le Rat (1207). Garin attended the coronation of John of Brienne as king of Jerusalem (1210), played an active role during the crusade of Andrew II of Hungary (1217), and participated in the Fifth Crusade (1217–1221).

As a member of a prominent delegation from Outremer, he traveled to the West (1222) and witnessed the deliberations between Emperor Frederick II and Pope Honorius III concerning a new crusade (1223). Garin subsequently visited England, France, and Sicily, returning to Outremer in 1225; he was the only master of the Hospitallers between 1191 and 1291 who traveled from Outremer to the West. Garin died in 1227/1228 during the rebuilding of the fortifications of Sidon and was succeeded by Bertrand of Thessy.

Gaza, Battle of (1239)

A battle fought on 13 November 1239 at Gaza between a contingent of crusaders and Franks of the kingdom of Jerusalem and the Ayyūbid forces of Egypt, ending in a devastating Christian defeat.

The crusaders under Thibaud IV, count of Champagne (since 1234 also king of Navarre), had decided to fortify the city of Ascalon (mod. Tel Ashqelon, Israel) to protect the southern border of the kingdom of Jerusalem. While they were marching from Acre to Jaffa (2–12 November 1239), Egyptian troops moved up to Gaza. Several prominent crusaders and local nobles, namely Henry of Bar, Amalric of Montfort, Hugh of Burgundy, Walter of Jaffa, Balian of Sidon, John of Arsuf, Odo of Montbéliard, and Richard of

Beaumont, ignored the warnings of Thibaud, Peter of Dreux, and the masters of the Templars, Hospitallers, and Teutonic Knights, and decided to lead a group of 400–600 knights against the enemy. Meanwhile the main army was to continue on to Ascalon.

On 13 November the detached force made a rest stop in a valley surrounded by sand dunes that it had failed to secure properly and was surprised by the Muslims. While Hugh of Burgundy and Walter of Jaffa argued in favor of a hasty retreat to Ascalon, Henry of Bar and Amalric of Montfort decided to stay with the infantry and fight. After an initial success of Amalric's crossbowmen, the Christians were lured into pursuing the Muslims, who feigned a retreat. The Muslims subsequently managed to surround the Christians. In the ensuing close combat, Henry was killed, while Amalric and many others were taken prisoner. Meanwhile Hugh and Walter had reached Ascalon, where they convinced the main army to move to the rescue of the Christians trapped at Gaza. However, help came too late. At the sight of the crusading army, the Muslims merely abandoned their pursuit of the Christians who were fleeing the battlefield.

Following the defeat, the Templars and Hospitallers convinced Thibaud of Champagne to retreat to Acre rather than to pursue the Egyptians and their prisoners. It fell to Richard of Cornwall, in 1241, to have the casualties of the battle buried at Ascalon and to negotiate the release of the prisoners taken by the Muslims. The main sources for this battle are the *Eracles*, the *Gestes des Chiprois*, and the historical work of al-Maqrīzī.

Gaza, Town of

A castle and township in southern Palestine (in mod. Gaza Strip), occupying an ancient tell (mound) 4 kilometers (2½

mi.) from the sea between Ascalon (mod. Tel Ashqelon, Israel) and Darum.

The castle, with stone walls and towers, was built by King Baldwin III of Jerusalem in the winter of 1149–1150 as one of several fortifications encircling the Fātimid enclave of Ascalon. There were insufficient men or resources to fortify the entire site, and the chronicler William of Tyre records that the castle occupied only part of it. It was granted with its surrounding lands to the Templars and soon afterward withstood a Muslim attack. After the fall of Ascalon to the Franks of Jerusalem (1153), the Arab writer al-Idrīsī described Gaza as populous, with a sea port called Tayda. The civilian faubourg (suburb), defended by low and rather feeble walls and gates, occupied the remainder of the tell. The jurist John of Jaffa records the existence of a burgess and justice court.

Together with nearby Darum, built in the 1160s, Gaza remained militarily important as a frontier fortress close to the border with Egypt. When Saladin laid siege to Darum in December 1170, King Amalric withdrew Gaza's Templar garrison to assist in its defense. Saladin therefore fell on Gaza, destroying the faubourg and slaughtering its inhabitants, who had been denied access to the castle by the temporary castellan, Miles of Plancy. In November 1177, the Templars again prepared to defend Gaza when Saladin raided Ascalon. In September 1187, they finally surrendered Gaza in return for the release of their master, Gerard of Ridefort.

Saladin ordered Gaza's destruction in September 1191. Although it was refortified and returned to the Templars by King Richard I of England in 1192, Gaza's fortifications were again demolished under the terms of the Treaty of Jaffa later that year. Thereafter Gaza developed as an Ayyūbid town, with the emir 'Alam al-Dīn Qayṣar as its first governor. A failed attempt to retake it was made by Count Henry of Bar and other nobles during the Crusade of 1239–1241; and a further attempt in 1244 ended in disaster at La Forbie.

Among the medieval buildings surviving in Gaza are a large three-aisled Latin church (now the great mosque) and a smaller Greek Orthodox church of St. Porphyrios, both dating from the twelfth century; however, nothing now remains of the castle or town walls.

Gediminas (d. 1341/1342)

Jerusalem: A Corpus, 3 vols. (Cambridge: Cambridge University Press, 1993–).

Gediminas (d. 1341/1342)

Grand duke of Lithuania (c. 1316–1341/1342), who made this pagan state into a powerful opponent of the Teutonic Order during the Baltic Crusades.

Gediminas (Ger. *Gedimin*, Pol. *Giedymin*, Russ. *Gedimin*) was probably born in the 1270s. His father was Pukoveras, a Lithuanian noble; his mother is unknown. Gediminas seems to have inherited power in Lithuania from his brother, Grand Duke Vytenis (c. 1295–1315). His descendants, the Gediminids (Lith. *Gedimainaičiai*), ruled Lithuania until 1572.

Gediminas fought the crusaders led by the Teutonic Order and also attacked German territory in alliance with King Kazimierz III of Poland, who married Gediminas's daughter Aldona-Anna in 1325. Lithuanian and Polish forces ravaged the margraviate of Brandenburg in 1326, reaching Frankfurt an der Oder and taking many prisoners. Continuing a close alliance with Riga that had been established by Vytenis, Gediminas helped this city to resist the Teutonic Order until 1330. He fostered Lithuanian trade with Riga, the Hanseatic League, Russia, Ukraine, and points east, inviting foreign merchants to Lithuania and allowing even the merchants from towns of the Teutonic Order safe passage through his realm. This policy probably provided an economic base for resisting the crusaders and certainly allowed Lithuanians to buy and have made the latest military technology, so that the Christian technological advantage was slowly lost on the Baltic front.

Gediminas also attacked the Teutonic Order through diplomacy and propaganda. He sent letters written by Christian friars at his court to Pope Innocent IV, to the Hanseatic cities of northern Germany, and to German Franciscans and Dominicans, proclaiming his willingness to accept Christianity and accusing the Teutonic Knights of hindering Lithuania's conversion through their attacks. This diplomatic maneuver enabled Gediminas to conclude a peace for two years with the Livonian branch of the Teutonic Order, and the pope sent important legates to confirm the treaty and offer baptism to the Lithuanian ruler. When they arrived, Gediminas renewed his complaints against the Teutonic Knights, but refused baptism. Lithuania remained pagan, but Gediminas had obtained a much needed peace.

Although Gediminas built several Christian churches for foreigners in Lithuania, had Franciscans and Dominicans at his court as scribes and advisors, and generally seems to have tolerated Christian worship, he would not allow attacks on his pagan gods. He executed two newly arrived Franciscans who had been seized in Vilnius by a mob angered at their preaching against the ancient Lithuanian religion.

Through conquest and marriage alliances, Gediminas expanded his power into present-day Russia and Ukraine. He obtained from the patriarch of Constantinople the appointment of a Greek Orthodox primate, a "Metropolitan of Lithuania" for territories under Lithuanian rule.

Gediminas had at least seven sons (Manvydas, Algirdas, Kęstutis, Karijotas-Mikhail, Liubartas-Dmitri, Narimantas, and Jaunutis) and five daughters (Aldona-Anna, Aigusta-Anastasia, Maria, Elizabeth, and Eufemia). His wife's name is unknown. His sons ruled Slavic and Lithuanian principalities, while his daughters married Christian princes, accepted baptism, and formed valuable alliances for Lithuania. He was succeeded by his son Jaunutis (1341–1345).

Genoa

A city in Liguria on the northwestern coast of Italy, which together with its hinterland formed an important maritime republic for most of the crusading period.

The crusade movement came into existence shortly before the beginning of communal government in Genoa and well before the commune finally supplanted episcopal rule in the city. Initially only a few Genoese decided to support the crusaders in 1097, and it was only some years later, after the successes of the First Crusade (1096–1099), that support was given to the crusade movement by the association known as the *Compagna Communis*. The *Compagna* was originally a voluntary, exclusive, and initially temporary association of citizens who were opponents of the existing town authorities. It was made up of very active Genoese merchants, as well as members of noble families who had emigrated from Genoa's hinterland (It. *contado*) to the city and invested their wealth in merchant ventures there. The *Compagna* developed into a commune, or public corporation, and thenceforth determined the political and economic course of the city. The result was that in Genoa there was both private involvement of individual citizens, as well as a more official public engagement in the crusades.

Genoa's Involvement in the Crusade Movement

Those Genoese who became involved in the First Crusade on their own initiative did business not only in supplying the crusaders with food, but also actively participated in the sieges and conquest of cities such as Antioch (mod. Antakya, Turkey) in 1098 and Jerusalem in 1099, using their ships to bring supplies and providing siege equipment constructed from ships' timber. In doing so Genoese crusaders did not lose sight of either their own business dealings or the wider economic interests of Genoa itself. As the price of their assistance they obtained for themselves and their fellow citizens concessions for future trade at centers of potential economic interest, such as the city of Antioch (1098).

By the time that the survivors of this group returned to Genoa (1099/1100) the *Compagna* had been established, and this association subsequently took over the organization of almost all the Genoese assistance for the new Frankish states that were still establishing themselves in Syria and Palestine. The communal government decided on the size of nearly all the fleets that were sent to the East after the capture of Jerusalem (1099) in order to provide support for the Franks and also to secure an advantageous position for Genoese

commerce. Only on one occasion did Genoese entrepreneurs equip a fleet at their own expense, after the fashion of the Genoese expedition of July 1097: this was a squadron of 17 ships that set sail for Syria in August 1101. Once there, they participated in the conquest of the coastal town of Tortosa (mod. Tartūs, Syria) in February 1102, but had to return home in the autumn of 1102 without any further significant military success and—more importantly—without any of the material benefits they had evidently hoped to gain.

More impressive than these private efforts was the willingness of the commune to make a military and financial commitment to the consolidation of the Frankish states in the East, which lasted for almost a decade after the capture of Jerusalem. Between 1100 and 1109, Genoa sent a total of four fleets, amounting to at least 150 galleys and countless other ships, to Outremer in 1100–1101, 1103–1104, 1108–1109, and 1109–1110. The largest of these consisted of 60 galleys and transported an army from Provence under Count Bertrand of Saint-Gilles to the area of the future county of Tripoli in the autumn of 1108. At most half as large as this was the so-called Caesarea fleet (30 ships, including 26 galleys), with whose help King Baldwin I of Jerusalem captured the cities of Caesarea (mod. Har Qesari, Israel) and Arsuf (near mod. Herzliyya, Israel) in the spring of 1101.

A squadron of 40 galleys made a significant contribution to the conquest of Gibelet (mod. Jubail, Lebanon) and Acre (mod. 'Akko, Israel) in the spring of 1104. The smallest fleet was the squadron of around 22 galleys whose crews took part in the conquest of the inland city of Mamistra (mod. Misis, Turkey) during a layover on the Cilician coast in the autumn of 1109 and whose ships also afforded valuable support to King Baldwin I during the siege of the coastal city of Beirut in the spring of 1110.

It was not only the hope of spiritual benefits that motivated Genoa and its citizens in these military and financial endeavors. Just as important was the expectation of material reward, whether in the form of plunder or of trading concessions in a region where up to that time Genoese merchants had not been active. In some cases the Genoese had to be satisfied with a part of the spoils; in others the Frankish rulers, whose early conquests were largely dependent on naval assistance, granted what the Genoese requested: trading quarters along with legal and economic privileges. With the conquest of Beirut, the military cooperation between Genoa and the Frankish states ceased for a long time. After 1110, Genoa endeavored to consolidate its trade with Out-

Areas of Genoese crusading and commercial activity in the period of the Crusades

remer and to assert the privileges acquired during the period of conquest. In retrospect, the extent of these privileges often seemed to have been much too generous to some of the Frankish rulers, and particularly intense conflicts flared up over this issue from the middle of the twelfth century in the kingdom of Jerusalem and the county of Tripoli.

It was only after the collapse of the Frankish states after 1187 that Genoese assistance was sought to defend those areas still in Christian hands and to reconquer those occupied by the Muslims. During Genoa's participation in the Third Crusade (1189–1192), religious zeal and crusading ardor were of secondary importance. The Genoese were unwilling to endanger without good reason the trade relations they had built up in the course of the twelfth century with the Islamic world, above all with Egypt. When the commune took the decision to support the Third Crusade, it did so because it saw an opportunity to assert many of its older claims to privileges and property that rulers in Outremer, such as the kings of Jerusalem and the counts of Tripoli, had refused to recognize up to that point. The trading interests of the commune and of those families with the greatest political and economic power (such as the Embriaci, who were particularly active in Syria) were the motivating force behind the activities of Genoa in support of the Third Crusade. The Genoese were particularly keen to regain their trading bases in those coastal cities that had fallen into Muslim hands from 1187 onward.

In 1189, much later than the Pisans and Venetians, Genoa sent a fleet to the East under the command of Consul Guido Spinola. It carried many Genoese pilgrims, including many crusaders from the city's leading families, and was intended to take part in the siege of Muslim-held Acre. At the same time, the commune was keen to maximize the financial advantage that could be gained from the capacity of Genoa's dockyards and the skills of its sailors. In February 1190 the city concluded a contract of charter with Philip II Augustus, king of France, and within a few months equipped a fleet for the transport of 650 knights, 1,300 squires, 1,300 horses, gear for men and animals, and supplies of food, wine, and fodder. For this, the Genoese demanded not only a large cash payment, but also the assurance of extensive privileges in any areas that were reconquered; these effectively corresponded to the privileges that Genoa had previously claimed, largely without success, from the Frankish princes. The exact size of the fleet chartered by the French that sailed for Outremer under

Genoese command in the late summer of 1190 is not known. Both the charter fleet and that which had left in 1189 arrived somewhat late in the East, but the Genoese took part in the siege of Acre until its capture in July 1191; their commitment was no less than that of their Pisan rivals. The fate of these two Genoese war fleets thereafter is unknown.

Genoese participation in the crusades of the thirteenth century was determined by economic considerations to a far greater extent than in the twelfth century. It is true that the hire of ships, particularly to French crusaders, and the transport of crusade armies to the main theater of war on the Egyptian coast brought in a sizable income. Yet the city government and individual citizens were only willing to support crusades in these ways as long as they had the impression that trade relations with a Christian-ruled Egypt would be significantly more advantageous for Genoese merchants than if the country remained under Islamic rule. The Genoese, who after the Third Crusade immediately resumed and intensified trade with Egypt and also expanded their trade relations with North Africa (notably with Ceuta and Tunis), were not willing to put their existing commercial ties at risk by premature participation in any crusade that seemed doomed to failure from the outset. Genoa did not participate at all in the Fourth Crusade (1202–1204), which was originally intended to attack Egypt; participants in this expedition did not find a war fleet awaiting them in Genoa, although they did find Genoese transports to take them to Acre in the kingdom of Jerusalem.

The overthrow of the Byzantine Empire by the Fourth Crusade in 1204 and the resulting dominant position of Venice in the newly established Latin Empire of Constantinople brought about the loss of all the possessions and commercial privileges that had been granted to Genoa by Emperor Manuel I Komnenos in 1170 and renewed by Alexios III Angelos in 1201. The piratical activities of Genoa and its allies against Venetian shipping in the Aegean Sea could not prevent the exclusion of Genoese merchants from Constantinople, the Aegean Sea, and the Black Sea until peace was concluded in 1218. This treaty readmitted the Genoese to trade in the Latin Empire on the basis of the privileges of 1201, and also restored their former possessions in the Venetian territories of the empire.

The crusading abstinence of the Genoese ended after the general call to crusade made at the Fourth Lateran Council (December 1215). The Fifth Crusade (1217–1221) met with a positive response from Genoa, which concluded a contract

with delegates of the French crusaders for the hire of Genoese ships to take them to the East in the summer of 1218. A year later Genoa equipped 10 galleys at its own expense, which put to sea at the end of July with Genoese crusaders on board, bound to join the crusader army in the siege of the Egyptian port of Damietta. They gained part of the spoils after the capture of Damietta in November 1219, but the subsequent failure of the crusade in the summer of 1221 dashed their hopes of improving the conditions for Genoese trade. For various reasons, the Genoese could expect no assistance from Frederick II, Holy Roman Emperor and king of Sicily: these reasons included the rivalry between the Genoese and Sicilian merchants in the trade with North Africa, Genoa's refusal to recognize the emperor as its lord, and the city's membership of the anti-imperialist Lombard League.

It may have been with the hope of an improvement in their position in Egypt that the Genoese began negotiations in 1246 to provide ships to transport the crusade army of King Louis IX of France via Cyprus to the Egyptian coast at Damietta. In 1248 Genoa delivered 12 very large transports completely equipped for war, along with 4 smaller sailing ships, which formed a substantial part of the fleet commissioned by the king. Two Genoese employed as admirals of the French Crown supervised the construction and equipping of the ships. Bankers from Genoa assumed organization of the necessary financial transactions. However, with the failure of the Crusade of Louis IX to the East (1248–1254), the second major crusade undertaken against Egypt, Genoa's dreams of better conditions for its own trade with Egypt evaporated.

Yet the interest of the Genoese in commercial relations with the main trade centers in Egypt was so great that twenty years later they took advantage of the opportunity to earn money by providing and equipping ships to transport the army of the second crusade of Louis IX (1270). After negotiations in October 1268, Louis IX ordered part of the fleet he required from the city government and several Genoese shipowners: a squadron consisting of a few very large transports together with smaller sailing ships, which would set out together with the French-built transports from the port of Aigues-Mortes. Contrary to the usual practice of the time, they would not be under the command of a Genoese, but of a French admiral. A further contrast to King Louis's first crusade was that in 1270 many Genoese crusaders (infantrymen and crossbowmen) joined the pre-

dominantly French crusader army. Yet contrary to Genoese expectations, the fleet sailed not to Egypt, but to Tunis on the coast of North Africa. This change of plan was not at all to Genoa's liking, since many of its citizens were involved in trade with Tunis.

Thereafter the Genoese, who in 1283 decisively defeated their Pisan rivals in a naval battle off the island of Meloria, thus effectively eliminating them as competitors, could not be recruited for any new crusade enterprises, whether by papal appeals or any other means. It was only the prospect of realizing its political and commercial aims that caused Genoa to intervene once more in the internal affairs of the county of Tripoli in the 1280s, shortly before it was finally overrun by the Mamlūks.

Genoa and the Frankish States of Outremer

The assistance provided by Genoese fleets during the First and Third Crusades, as well as the numerous other occasions when they brought support to the rulers of Outremer, came at a price. Both the Genoese government and those individuals acting on their own initiative demanded privileges in exchange for their naval and military support. These privileges usually involved the transfer of urban property for the establishment of trading quarters (often provided with their own churches), the grant of legal privileges of varying dimensions, and financial advantages. During the phase of conquest between 1098 and 1110 many privileges were obtained from the Frankish rulers. Thus, options were secured with respect to the future development of trade in the most important coastal cities of the Levant: in the principality of Antioch (in the cities of Antioch and Laodikeia in Syria), in the kingdom of Jerusalem (Arsuf, Caesarea, and Acre), and in the county of Tripoli (Gibelet and the city of Tripoli).

The extent of the privileges secured by the Genoese during the conquest phase, and documented in written charters, has long been overestimated. This misinterpretation is the result of some unconventional methods, not to mention uncritical and contradictory arguments, of Genoese historians, who have concentrated their attention exclusively on conditions in the kingdom of Jerusalem. A tradition that arose in the mid-twelfth century in Genoa itself, and that was consciously created as a propaganda weapon in disputes with the kingdom of Jerusalem and the county of Tripoli over the extent of Genoese privileges, has been used as an argument for the existence of a magnificent inscription in the Church of the Holy Sepulchre in Jerusalem dating from the

beginning of the twelfth century, which supposedly commemorated the contribution of Genoa to the conquest of the Holy Land. Despite the results of a critical study of all the charters granted to Genoa and its citizens by the rulers of Jerusalem, Tripoli, and Antioch in the first half of the twelfth century, Genoese scholarship has largely accepted as credible the authenticity of a document supposedly mentioned in the inscription, which has been identified with a charter issued in the name of King Baldwin I of Jerusalem (and preserved in the Archivio di Stato in Genoa). Although this document lends support to a Genoese claim to a third of the city of Acre, it is undoubtedly a forgery, whose existence is connected with the beginning of the historiographical tradition regarding this “golden inscription.”

With one exception (Antioch 1098), the early privileges for Genoa from the principality of Antioch and the county of Tripoli only survive in the form of forged versions. In fact the Genoese received far more modest concessions in the Frankish states of Syria and Palestine up to 1109 than the wording of the surviving privileges would suggest. Not least through comparisons with the exorbitant concessions granted to Venice, in particular in Tyre (mod. Sôûr, Lebanon) by the *Pactum Warmundi* (1123), and the restrictive treatment of their own legal claims, the Genoese realized with hindsight that the original privileges granted them so little that they made “improvements” to the documents in question and thus started a protracted conflict with the rulers of Jerusalem and Tripoli.

Genoa provided fleets and other forms of military assistance during the Third Crusade and the parallel struggle for the throne of Jerusalem only in exchange for complete or at least far-reaching recognition of their claims to privileges in the coastal trading centers of Outremer. However, they were unable to obtain complete recognition of their claims in any of the Frankish states even after the Third Crusade. As Genoese commercial interests gradually shifted to the Islamic world (Egypt and North Africa) and the territory of the former Byzantine Empire (Constantinople, the Black Sea, the Aegean Islands, and the Empire of Nicaea), the ports of Outremer declined in importance from a Genoese perspective.

Nevertheless, as a result of the weakness of Frankish rule in the thirteenth century and thanks to their own relative strength in internal political conflicts, the Genoese became sought-after coalition partners. They followed their own interests in the Latin East without regard to the wider con-

cerns of the Frankish states, and, just like the other Western trading nations, they were not afraid to indulge in open conflict with their opponents. An example of this was the War of St. Sabas, the first great colonial conflict between Genoa and Venice in the Levant. The war broke out over the long-running legal dispute concerning property of the monastery of St. Sabas in Acre, which was claimed by both republics. The dispute escalated as both sides sought allies among the other Western trading nations, the military orders, and the Frankish aristocracy. In the course of the fighting, the Genoese quarter in Acre was severely damaged. After the defeat of a Genoese fleet off Acre and an unsuccessful attempt to capture the city by their ally Philip of Tyre (1258), fighting died down, only to flare up again whenever fleets arrived from the West. Hostilities ceased only with a truce concluded in 1261. The Genoese were now excluded from Acre, but found refuge in Tyre, where their ally Philip of Montfort had expelled the Venetians. In 1270 Venice recognized Genoa's claims to its quarter in Acre, thus establishing the basis for a resumption of Genoese trade there.

Genoa's policies in Outremer and the conduct of its citizens there contributed, as did those of the other trading nations, to the weakening of Frankish rule. It is not without reason that the Genoese are held to a large degree responsible for the collapse of the Frankish states in 1291.

Geoffrey III of the Perche (d. 1202)

Count of the Perche (1191–1202), who twice took the cross, but who died while preparing to go on crusade.

Geoffrey was born before 1160, the eldest son of Rotrou III, count of the Perche in central France, and Matilda, daughter of Thibaud IV, count of Blois (1107–1152). Both his grandfather, Rotrou II of the Perche, and his great-grandfather, Stephen of Blois, had taken part in the First Crusade (1096–1099).

In 1189 Geoffrey married Matilda, daughter of Henry the Lion, duke of Saxony and Bavaria, and niece of Richard I the Lionheart, king of England. Geoffrey and his father joined the Third Crusade (1189–1192), although Rotrou III seems to have joined the forces of King Philip II of France, while Geoffrey joined Richard. He was with Richard in Messina at Christmas 1190 and is mentioned in Richard’s best-known song, *Ja nus hons pris*. In May 1191 Geoffrey witnessed the marriage settlement of his cousin, Berengaria of Navarre, and King Richard at Limassol in Cyprus. Despite the death of his father in July 1191, Geoffrey remained in the Holy Land until 1192. He fought in an engagement outside Jerusalem in June 1192 in company with the bishop of Salisbury, Hubert Walter. Geoffrey returned to the Perche in 1192/1193, burdened by debt, and was given a subvention by the family foundation of Saint-Denis of Nogent-le-Rotrou.

Geoffrey was an equally enthusiastic prospective participant in the Fourth Crusade (1202–1204). He sought and received leave from King John of England to take mort-

gages on his lands in England and Normandy and borrowed from his cousin, William Marshal, as well as from a wealthy townsman of Mortagne, Lawrence Flaaut. He was not to return to the Holy Land, however, for during Lent 1202 he was taken seriously ill, and by Easter he was dead. On his deathbed he entrusted his brother Stephen with command of his troops and gave him access to extensive financial resources in the Perche. Stephen’s benefactions to local religious houses in the months after his brother’s death and before his own departure give some idea of the level of resource that Geoffrey had proposed to devote to the crusade.

Geoffrey Le Tor (d. c. 1265)

A member of a knightly family of Outremer first mentioned in sources dating from the 1120s, Geoffrey made his earliest appearance in sources in 1222. He later emerged as a supporter of the Ibelins in their struggle against the Emperor Frederick II, and on two occasions, in 1229 and 1236, they entrusted him with diplomatic missions to the West.

Though born in the kingdom of Jerusalem, Geoffrey came to acquire a substantial fief in Cyprus, where by 1247 he held the office of chamberlain. His chief claim to fame is as the author of two short treatises on the law and custom of the High Court. He would have been well known to Philip of Novara and John of Ibelin, the authors of the two major works on this topic, and his own writings indicate that he was familiar with Philip’s treatise. Internal evidence suggests that he was writing in the 1260s.

Geoffrey of Villehardouin (the Marshal)

Marshal of Champagne and Romania, a leading figure in the Fourth Crusade (1202–1204), and its principal chronicler.

Geoffrey was born near Troyes around 1150, a member of the lesser nobility of Champagne. By 1172 he was a knight serving the count of Champagne, and he was appointed marshal of Champagne in 1185. He fought in the Third Crusade in 1190 and was captured by the Muslims during the siege of Acre (mod. 'Akko, Israel).

By 1194 Geoffrey of Villehardouin was back in Champagne, where he was an important member of the court of Count Thibaud III. He was chosen by the leading crusaders as one of the envoys sent to Venice to negotiate transport to the East, where he acted as the envoys' spokesman. When Thibaud III died, Villehardouin proposed Boniface of Montferrat as leader of the crusade, and at Zara (mod. Zadar, Croatia) he favored accepting the offer of the exiled Prince Alexios (IV) Angelos to divert the crusade army to Constantinople (mod. Istanbul, Turkey). After the arrival of the fleet at Constantinople he acted as one of the leaders of the knights from Champagne, and he was in charge of the army's rear guard during the confrontation with Alexios III (18 July 1203). After the restoration of Emperor Isaac II Angelos, Villehardouin led the delegation to the emperor to announce the crusaders' conditions. In November 1203 he went with Conon of Béthune to confront Alexios IV, who was not observing his agreement with the crusaders.

After the second capture of Constantinople by the crusaders and the election of Baldwin of Flanders as Latin emperor, Villehardouin acted as one of the commanders in the capital, while Baldwin and Boniface were campaigning in Thrace. He also played a prominent role in appeasing the quarrel between the two men: trusted by Boniface, he was able to persuade him to submit to arbitration. Villehardouin received a fief at Makre (autumn 1204) and was probably created marshal of Romania then. He led the vanguard when Baldwin went to lift the siege of Adrianople (mod. Edirne, Turkey). During the battle he was in charge of the camp guard (14 April 1205), and it fell to him to rally the fugitives and command the withdrawal to Rodosto.

In early 1206 Villehardouin accompanied Baldwin's successor, Henry, in his successful campaign against Kalojan (Joanitsa), the Bulgarian ruler, leading a dangerous mission to rescue Renier de Trit. He was sent by Henry to escort his bride, the daughter of Boniface of Montferrat, to Constantinople (January 1207) and was chosen by Henry as one of

the judges to fix the division between French and Venetian possessions in Gallipoli (mod. Gelibolu, Turkey). He was present at the last interview between Henry and Boniface (August 1207), when Boniface offered him Mosynopolis. In March 1208 he made gifts to religious houses in France, where his sisters and daughters were nuns, and in May of that year, when Henry defeated the Bulgarians under Boril, Villehardouin commanded the vanguard. He was left in charge of Constantinople when Henry campaigned against the Lombards (December 1208); this is the last mention of him by the chronicler Henry of Valenciennes. Villehardouin's name appears in two acts, one from 1210 and the other from 1212, after which there is silence until June 1218, when his son confirmed two gifts to religious houses to celebrate the birthdays of his father and mother. Four similar acts exist from 1218 and 1219, suggesting that Villehardouin had died quite recently.

Villehardouin's chronicle covers the period from the preaching of the crusade by Fulk of Neuilly (1198) until the death of Boniface of Montferrat (4 September 1207). It is written in unpretentious French prose with only a few dialectal features, and Villehardouin claims that he is writing about only what he himself witnessed. As one of the crusade's leaders, he had access to the inner councils and was both an eyewitness and a participant in everything that he describes. He was wholly committed to the success of the crusading army and regarded the preservation of the unity of the army as an end in itself. He is very critical of any who opposed the policies of the army leaders and full of contempt for the Greeks, who, in his eyes, were treacherous, schismatic, and unfit to hold their land. He is not blind to the faults of the crusaders in Greece, but remains convinced that only God's will could have secured the triumph of such a small army over the greatest city in Christendom. There has been intense, critical controversy over his sincerity, but his account remains the most important and detailed Western source for the progress of the Fourth Crusade.

Geoffroy de Charny (d. 1356)

A crusader and author of a treatise on chivalry.

Geoffroy de Charny was a nobleman from Burgundy, with links to Champagne. He may have accompanied his father Jean and his brother Dreux to the Morea with Louis of Burgundy in 1315. He became well known as a soldier at the beginning of the Hundred Years' War. During a period of truce between France and England, he took part in the crusade of Humbert of Viennois, which left Marseilles in September 1345, but was back in France as early as July 1346. Perhaps he already owned (and certainly his homonymous son did) the Holy Shroud, which was kept in the collegiate church of Lirey he founded in 1349. He was killed while fighting against the English at the battle of Poitiers on 19 September 1356.

St. George

A pseudo-historical Christian martyr, revered especially by crusaders, whose death is usually dated to 23 April 303. The conventional image of the soldier-saint overcoming a dragon probably has little or no connection with any historically authentic personality.

Eusebius, bishop of Caesarea in the mid-fourth century, wrote of the martyrdom in 303 of an unnamed man during the reign of the Roman emperor Diocletian (284–305); this man is usually identified as St. George. Said to be of high rank, he tore down the edict outlawing Christianity that had been fixed to the door of the cathedral of Nikomedeia (mod. İzmit, Turkey), a town on the Asiatic shore of the Bosphorus, and was then tortured and executed when he refused to renounce his beliefs. No original text of the *passio* (martyrdom) of St. George is known, but the account, which seems to be the earliest extant version of the legend (c. 350–500), also sets the story at Nikomedeia and identifies the saint as a Cappadocian. However, despite this emphasis on the northeastern Mediterranean, St. George's cult soon came to be centered on the Palestinian towns of Jaffa (mod. Tel Aviv-Yafo, Israel) and Diospolis or Lydda (mod. Lod, Israel), places that both claimed to be the site of his martyrdom.

Lydda, in particular, proved important in the propagation of St. George's cult among the crusaders. Emperor Constantine the Great (d. 337) is said to have built a basilica over the saint's tomb there, and it is claimed that this church was subject to a series of razings and rebuilds during the period of the crusades. A cathedral is said to have been raised over the tomb between 1150 and 1170, only to be destroyed by Saladin in 1191. King Richard I (the Lionheart) of England is credited with rebuilding this cathedral, but there is little evidence to support this. It is also sometimes argued that returning crusaders were responsible for introducing St. George's cult into western Europe, but there is clear evidence of a cult, albeit of limited importance, in early medieval France, Germany, Italy, and England: if anything, crusaders were reinforcing a veneration that was already established. St. George has been recognized as patron of a wide variety of countries and cities across both eastern and western Europe. Most significantly in this context, he was especially venerated in both Constantinople (mod. İstanbul, Turkey) and Antioch (mod. Antakya, Turkey), and his most notable contribution to the crusades, his miraculous "appearances" at the sieges of Antioch (1098) and Jerusalem (1099) during the First Crusade, may well be related to preexisting seats of devotion.

Late sources claim that Richard the Lionheart had a personal vision of the saint at Acre (mod. 'Akko, Israel) during the Third Crusade (1189–1192); this is in contrast to the more generalized appearances usually associated with the saint. For example, during the First Crusade, Godfrey of Bouillon was one of many who apparently saw a host of

Stone tympanum showing St. George, from Damerham (Hampshire, England), eleventh century. (Courtesy Duncan Givans)

ghostly warriors riding white horses and bearing white banners coming to the aid of the besiegers at Antioch, a legend recounted in the *Gesta Francorum*. St. George was understood to be their captain, and this is consistent with the many stories of the appearances of soldier-saints such as SS. Theodore, Demetrios, Mercurios, and Maurice, often in a group with St. George. The first mention of a manifestation of St. George relates to a battle between the Normans and the Sicilian Muslims at Cerami in 1063, and this may well relate to the development of an identification of St. George as a soldier-saint, a variation on the original story, which was by no means general before the twelfth century.

Vernacular imagery of St. George in battle arose during the period of the crusades, for example, on sculpted tympana at Fordington (Dorset) and Damerham (Hampshire), both from around 1100, and in a wall painting at Hardham (Sussex) from 1120/1140. This iconography was in time superseded by the topos of the dragon fight, but they may well have coexisted for a period. The mid-thirteenth-century *Legenda Aurea* version of the legend of St. George recounts the appearance of the saint at the head of a heavenly troop at the siege of Jerusalem, but this text also includes the

dragon story and was a principal progenitor of the concept of the saint as a dragon-slayer. This significant development consolidated the identification of the saint as a model of chivalry and authority, moving him still further away from his original construction as a tortured martyr. However, it is clear that St. George continued to be recognized in both roles throughout the late medieval period; even when his importance as a soldier fighting human enemies began to dwindle, the dragon-slayer was still understood as a suffering martyr. It is perhaps this fluidity of presentation that underlay his wide appeal and assured his continued popularity across both Roman Catholic and Greek Orthodox churches into the present day.

St. George of Alfama, Order of

Military religious order in the Crown of Aragon, founded in 1201 and incorporated into the Order of Montesa in 1400.

The conquest of the town of Tortosa from the Muslims in 1148 brought the lower Ebro Valley under the control of the Christians of Aragon, but the stretch of coast north of the Ebro delta remained uninhabited in the second half of the twelfth century and was an easy prey to Muslim naval raids. The area between the mountains and the sea was barren and so had not been affected by post-1148 resettlement of southern Catalonia. The existing military orders did not show any interest in the area. For those reasons King Peter II of Aragon decided to found there a new institution that would combine prayer, assistance to travelers, and defense against Muslim pirates. The royal privilege of 1201 granted to the new order, which received the symbolic name of St. George, the territory of Alfama, a coastal area between the Gulf of Sant Jordi on the northern side of the Ebro delta and the Cala Gestell facing the Coll de Balaguer about 20 kilometers (12½ mi.) to the north. A castle was built in the following years on the seaward side whose structure was unearthed in 1988.

The Order of St. George of Alfama did not go much further from these small beginnings. It never managed to control many territories beyond the coastal region. In the thirteenth century, only two commanderies were established to control distant areas. These were Bujaraloz in eastern Aragon, which in 1229 was sold to the Hospitaller monastery of Sigena to pay off pressing debts (an early sign of continuous economic problems), and Alcarrás near Lleida (Lérida). Several grants in the kingdom of Valencia and the church and castle of Riquer in eastern Catalonia were put under the rule of commanders in the fourteenth century. Some of the donations in Valencia, as well as minor ones in Mallorca, Menorca, and Sardinia, came as a result of mili-

tary contributions of the order to campaigns of the kings of Aragon. The order's modest domains produced meagre rents, which held back the development of the institution, and its eager quest for alms showed the insufficient amounts of other types of rents; an alms collector was even sent to France and England in 1368. The limited number of landed properties showed the order's lack of appeal in the Aragonese territories, despite firm support from the Aragonese kings, and professed members were few: only six brethren in the 1370s.

The foundation did not grow firm institutional roots either. Papal confirmation was delayed until 1373, and a proper internal structure took time to develop. The office of master did not appear until 1355, and the king appointed its holders in the second half of the fourteenth century, a clear indication of the leading role of the Crown, but also of the feeble character of the order. Religious life followed the Rule of St. Augustine, but this set of regulations was only officially recognized as the code of the house by a papal bull of 1373. It did not last long; it was replaced by a new rule in 1385. The fact that this new rule was composed by Peter IV of Aragon showed the complete control of the institution by the Crown.

The extreme weakness of the Order of St. George of Alfama forced its last master, Francesc Ripollés, to approach the king of Aragon for a solution. King Martin the Humane realized that the community could not exist by itself and in 1399 decided to merge it with the much bigger Order of Montesa. Pope Benedict XIII gave his assent in 1400. St. George of Alfama vanished as an independent institution, but the plain red cross of Alfama survived and became the distinctive sign of the joint order.

St. George's Night Revolt (1343)

A major uprising of the Estonian peasantry against the nobility of Danish North Estonia. The causes of the revolt were most probably agricultural crisis, famine, and oppression by the vassals of the king of Denmark. The main source for the rebellion is the *Jüngere Livländische Reimchronik* of Bartholomäus Hoeneke, who, although a participant in the events, represented the viewpoint of the Teutonic Order and tried to justify its intervention in Danish territory.

The revolt began with a massacre of the German nobility in the province of Harria and the monks of the Cistercian abbey in Padis (mod. Padise, Estonia) on St. George's Night (23 April) 1343. The peasants gathered in the vicinity of Reval (mod. Tallinn) and elected leaders, who sent a delegation to the Swedish authorities in Finland to negotiate about subjection. The Teutonic Order reacted with remarkable speed and sent forces into Danish territory. These forces gained a victory over the rebels near Reval. It took longer to pacify Harria and Wiek. On St. James' Eve (24 July), the Estonians on the island of Ösel (mod. Saaremaa) also rose up; they destroyed the stronghold of the order in Peude (mod. Pöide). The order suppressed this uprising with two campaigns in 1344 and 1345.

The St. George's Night Revolt has remained one of the most controversial issues in the historiography of medieval Livonia. Although it was primarily a peasant uprising, modern Estonian historiography has stressed the political goals of the rebels—driving out their German and Danish rulers. Consequently the event has gained in Estonia a symbolic meaning comparable to that of the fight against the crusade armies in the early thirteenth century.

Georgia

Located among the mountains of Transcaucasia between the Black Sea and the Caspian Sea, Georgia has a long history dating back to the second millennium B.C. Christianity was introduced in the region in the first century and became the state religion in 337. After the country was overrun by the

Arabs in the seventh century, Georgian principalities gradually emerged under the leadership of the Bagratid dynasty, which succeeded in uniting eastern and western Georgia into one kingdom by 1010.

The eleventh century was marked by Georgian-Byzantine rivalry, which was interrupted by the arrival of the Turkish Saljūq tribes. The Saljūqs raided Georgia in 1064–1068 and then began massive migration into the southern Caucasus, where they devastated the Georgian principalities and occupied large expanses of territory. King Giorgi II (1072–1089) was forced to recognize their supremacy and paid tribute to the Great Saljūqs, whose dominance continued unchecked for almost a decade. During this period the country was ravaged by invasions, internal dissent, and natural disasters. In 1089, a bloodless coup d'état forced King Giorgi II to resign his throne in favor of his sixteen-year-old son David. The new king faced a daunting challenge of defeating a powerful enemy and rebuilding his devastated country. Despite his age, David proved to be a capable statesman and military commander. In 1089–1100, he organized small detachments to harass and destroy isolated Saljūq troops and began resettlement of devastated regions.

King David took advantage of the arrival of the First Crusade in Syria and Palestine (1096–1099) and ceased paying annual tribute to the Great Saljūqs. Over the next ten years, he gradually liberated most of eastern Georgia. He also turned his attention to domestic problems. In 1103, the Ruis-Urbnisi church council reformed the Georgian Orthodox Church, limiting its authority and expelling rebellious clergy. The office of the powerful archbishop of Chqondidi was merged with that of *mtsignobartukhutsesi* (chief royal adviser), and the new office became the second highest in the realm, introducing direct royal authority into the church. King David then organized a new court system (Georg. *saajo kari*) and police apparatus (Georg. *mstovrebi*). As part of his reforms, he also began the construction of a monastery and academy at Gelati in 1106, which developed into a major educational and cultural center.

In 1110–1117, King David continued his conquests throughout southern Transcaucasia, capturing the key fortresses of Samshvilde, Rustavi, Lore, and others. Saljūq invasions in 1105, 1110, and 1116 were all crushed. To strengthen his army, King David launched a major military reform in 1118–1120. After marrying the daughter of a Qipchaq (Polovtsian) tribal leader, he resettled some 40,000 Qipchaq families from the northern Caucasus steppes to

Kartli and recruited one soldier from each family, securing a steady supply of manpower. The new army provided the king with much needed force to fight both external threats and the internal discontent of powerful lords.

In 1120, King David began a more aggressive policy of expansion. He established contact with the Franks in the Holy Land, and the two sides tried to coordinate their actions against the Muslims. In 1121, King David faced the most trying moment of his reign. Sultan Maḥmūd declared a holy war on Georgia and rallied a large coalition of Muslim countries against Georgia. A battle fought in the Didgori Valley, near Tbilisi, on 12 August 1121, ended in complete annihilation of the Muslim force. Following this triumph, King David captured Tbilisi, the last Muslim enclave remaining from the Arab occupation (1122), and declared it the capital of a united kingdom of Georgia. In 1123–1124, Georgian armies were victorious in neighboring territories of Armenia, Shirwan, and the northern Caucasus. By the time of King David's death (24 January 1125), Georgia was one of the most powerful states in the region.

During the reign of David's son Demetre I (1125–1156), Georgia continued to dominate southern Transcaucasia and neighboring territories. In 1138, Georgians captured the strategic fortress of Gandja (in mod. Azerbaijan); a trophy of this expedition was the city's iron gate, which is still kept in the Gelati monastery. However, Demetre also had to make concessions in his relations with the Saljūqs, relinquishing the Armenian capital of Ani.

Under King Giorgi III (1156–1184), a new wave of Georgian expansion was initiated, as his armies restored Georgian control over Ani in 1161 and conquered Shirwan in 1167. However, internal dissent among the nobles grew as the king grew older and it became apparent that he would be succeeded by his daughter Tamar. In 1177, the nobles, led by the powerful Prince Demna (Demetre) and Lord Ioane Orbeli, rose in rebellion but were suppressed. The following year, King Giorgi III ceded the throne to Tamar but remained co-ruler until his death in 1184. Powerful lords took advantage of the passing of the king to reassert themselves. Queen Tamar was forced to agree to a second coronation that emphasized the role of noble families in investing her with royal power. The nobility then demanded the establishment of the *karavi*, a political body with legislative and judicial power; Tamar's refusal to satisfy these demands brought the Georgian monarchy to the verge of civil war, but that was averted through negotiations. In the end, royal authority was

significantly limited, and the responsibilities of the royal council, dominated by the nobles, expanded.

Despite internal dissent, Georgia remained a powerful kingdom and enjoyed major successes in its foreign policy, and the characteristic trait of Tamar's rule was her successful policy. The Bagratid dynasty enjoyed close relations with the Byzantine Empire and Kievan Rus' after Tamar's great aunt Kata (a daughter of David IV) was married to Alexios Bryennios-Komnenos, and her aunt (sister of Giorgi III) wed Prince Izyaslav II of Kiev. After its crushing defeat in 1176 by Qilij Arslān II, Saljūq sultan of Rūm (1156–1188), the Byzantine Empire entered the dark period of the Angeloi, which eventually led to the fall of Constantinople in 1204. The sultanate of Rūm enjoyed the leading political position in Asia Minor, but Georgia under Tamar successfully contained the neighboring Muslim states and expanded her own sphere of influence. In 1195, a large Muslim coalition was crushed in the battle at Shamkhor. In 1203, Tamar achieved another triumphant victory when the sultan of Rūm was crushed at Basiani. The Georgians annexed Ani, Arran, and Duin in 1201–1203, and, in 1209 captured the emirate of Kars, while the mighty Armen-Shahs, the emirs of Erzurum and Erzincan, and the north Caucasian tribes became vassals of the kingdom.

Tamar was also involved indirectly in the events of the Fourth Crusade (1202–1204) and in the establishment of the empire of Trebizond. In 1185, a violent revolution resulted in the death of Emperor Andronikos I Komnenos. However, his two infant grandsons Alexios and David, sons of the *sebastokrator* Manuel and a Georgian princess, were saved through Georgian intervention and taken to Tbilisi, where they were raised at the court of Tamar. In 1203, Tamar donated large sums of money to the Georgian monasteries in Antioch and Mount Athos. However, Emperor Alexios III Angelos confiscated Tamar's donation; infuriated by this action, Tamar used this hostile act as a pretext for her expansion along the southwestern coastline of the Black Sea. In 1204, as the Fourth Crusade attacked the Byzantine capital, a Georgian army under the command of Alexios and David Komnenos attacked the Byzantine realm from the east and seized the city of Trebizond (mod. Trabzon, Turkey), where they established a pro-Georgian state. The following year, David Komnenos commanded the Georgian troops in a successful campaign that resulted in the conquest of territory between Trebizond and Herakleia Pontike (mod. Ereğli, Turkey). David even threatened the

Niceaean Empire, but was beaten back by Theodore Laskaris in 1205. In the meantime, Tamar carried war into Azerbaijan, and her troops advanced into Persia (1208–1210).

These victories brought Georgia to the summit of its power and glory, establishing a pan-Caucasian Georgian Empire stretching from the Black Sea to the Caspian Sea and from the Caucasus Mountains to Lake Van. Centralized royal power facilitated the growth of cities and towns and the development of trade and crafts. A sophisticated irrigation system in the Samgori and Alazani valleys covered some 53,000 hectares of land. Changes in agricultural technology led to the invention of a large “Georgian plough,” which improved cultivation of land and increased productivity. Tbilisi, with a population of some 100,000, became a center of regional and international trade, with one of the routes of the Silk Road, linking China, Central Asia, and the West, passing through it [*Sakartvelos istoria*, ed. N. Asatiani, pp. 160–165].

The period also witnessed a renaissance of Georgian sciences and art. Georgian craftsmen, notably Beshken and Beka Opizari, gained fame for their unique goldsmithery. Georgian architecture rose to a new level and is well represented in Gelati cathedral, the domed church at Tighva, the churches of Ikorta and Betania, and the rock-cut monastic complexes of David Gareja and Vardzia. Georgian monasteries were constructed and flourished beyond Georgian territory: they included the monasteries of Gethsemane, Golgotha, Karpana, and the Holy Cross in Jerusalem, the Mangana and Trianfios in Constantinople, the Petritsoni in Bulgaria, and St. Athanasios and the Iveron on Mount Athos. Numerous scholarly and literary works (such as *Amiran-Darejaniani*, *Abdulmesia*, and *Tamariani*) were produced both within Georgia and abroad, while the art of illumination of manuscripts and miniature painting reached its zenith. Georgian philosophers and scholars such as Giorgi Mtatsmindeli, Eprem Mtsire, Giorgi Khutsesmonazoni (Mtsire), Arsen Ikaltoeli, and others enjoyed international eminence, while Shota Rustaveli wrote his epic poem *The Knight in the Panther's Skin*, the greatest cultural achievement of this age, which combined cultural, philosophical, and moral values of the East and the West.

Tamar died in 1213 and was succeeded by her son Lasha-Giorgi. In the late 1210s, according to the Georgian chronicles, he began making preparations for a campaign in the Holy Land to support the Franks. However, his plans were

cut short by fateful events. The Mongols raided Georgia in 1220, followed by the Khwarāzm-Shah Jalal al-Dīn, who spread death and destruction in eastern Transcaucasia. The shroud of Mongol domination thus fell on Georgia.

Gerard of Nazareth

A hermit of the Black Mountain near Antioch (mod. Antakya, Turkey) and Benedictine monk at Mount Tabor in his native Galilee, Gerard became bishop of Laodikeia in Syria (mod. Al-Lādhiqīyah, Syria) around 1140.

In 1159 Gerard was involved in the reconciliation of Prince Reynald of Antioch with Emperor Manuel I Komnenos, but soon after this, perhaps as a result of the agreement, he seems to have been replaced in his see by a Greek Orthodox bishop. He appears sporadically in witness lists in the kingdom of Jerusalem in the early 1160s.

Gerard's importance lies in his pastoral, theological, and polemical writings, which, even in their fragmentary condition, advance our knowledge of the intellectual life of the Latin Church in Outremer. Passages of his *De conversatione servorum Dei*, *Vita abbatis Eliae*, *De una Magdalena contra Graecos*, and *Contra Salam presbyterum* survive in the sixteenth-century *Historia Ecclesiastica* of the Magdeburg Centuriators, and shorter fragments in Carmelite manuscripts from the fourteenth and sixteenth centuries. The first two of these works deal with Frankish hermits and reforming monks, largely in Galilee and on the Black Mountain, and show Gerard to have been sympathetic to new eremitical foundations inspired by Cistercian austerity. His vivid bio-

Gerard of Ridefort (d. 1189)

graphical sketches of Bernard of Machanath and Elias of Narbonne demonstrate the difficulties faced by reformers in the face of opposition from traditionally minded monks, and recall familiar episodes in Western reform foundations at the same period. The *De una Magdalena*, which propounds the Western identification of Mary Magdalene with Mary the sister of Martha, was a defense of an earlier sermon, *Ad ancillas Dei ad Bethaniam*, written for the nuns of Bethany, against Orthodox criticism. This polemic was widened in the *Contra Salam*, written against a Greek priest of Laodikeia, which defends Latin episcopal authority over Orthodox clergy. The English historian John Bale (1495–1563) claimed Gerard as a Carmelite.

Gerard of Ridefort (d. 1189)

Master of the Order of the Temple (1185–1189).

A knight of Flemish or Anglo-Norman origin, Gerard entered the service of Count Raymond III of Tripoli in the early 1170s and became marshal of the kingdom of Jerusalem by 1179. However, in 1180 he joined the Templars and rapidly rose within the order, becoming seneschal by 1183 and master by 1185. Gerard supported the claims of Princess Sibyl and her husband Guy of Lusignan to the throne of Jerusalem after the death of the young Baldwin V in 1186; he was thus in opposition to the party led by Raymond of Tripoli. Gerard facilitated the coronation of Sibyl and Guy by surrendering the Temple's key to the royal treasury (where the crowns were located) and by collecting the key that the master of the Hospital, Roger of Les Moulins, had discarded. The chronicle known as *Eraclès* ascribes Gerard's actions to his enmity toward Raymond of Tripoli. Ray-

mond had promised Gerard an advantageous marriage, and around 1180 Gerard had expected to marry the heiress of Botron (mod. Batrūn, Lebanon) in the county of Tripoli; however, Raymond had given her to a wealthy Pisan merchant instead. It is possible that this disappointment prompted Gerard to join the Templars.

Faced with the growing threat from Saladin, King Guy selected Gerard as one of a delegation that was intended to make peace with Raymond of Tripoli in April 1187. At the Templar castle of La Fève, he and Roger of Les Moulins learned of a large Muslim force in Nazareth. Accounts vary as to whether both masters decided to attack or whether Gerard persuaded Roger against his better judgment. Roger was killed, along with most of the Christian forces, at the ensuing battle of the Springs of Cresson (1 May 1187); Gerard was one of only three Templar knights who escaped. The defeat reduced Christian forces, and Gerard hired mercenaries with the money that King Henry II of England had deposited with the Templars.

When Saladin mounted his great invasion of Galilee later that year, Gerard advised King Guy to fight Saladin, contrary to Raymond of Tripoli's counsel. Gerard was the only Templar to survive the defeat at Hattin (4 July 1187), and was apparently ransomed in exchange for the Templar castle at Gaza. He joined King Guy's army in besieging Acre (mod. 'Akko, Israel) in August 1189 and died during the siege on 4 October 1189.

German Literature

Poetry of holy war in German survives from Carolingian times, and pilgrimage hymns of the eleventh century anticipate aspects of crusade, but literature that engaged with the idea and reality of the crusades began in the second half of the twelfth century, following the first major involvement of Germans in crusading in the form of the various expeditions that made up the Second Crusade (1147–1149). From the 1180s onward, a lyric of the crusades (songs propagandiz-

ing specific military expeditions) exploited the allure of courtly love poetry or expounded the themes of sermons and church pronouncements. Before and after 1200, major narrative works articulated a specifically German conception of crusade as imperial holy war. From the later thirteenth century onward, lyric and narrative texts reflect the decline of the crusading movement up to a last revival in the verse chronicles of the Teutonic Order.

Pre-crusade Traditions

“Pre-crusading” literary traditions can only be briefly illustrated. The Old High German *Ludwigslied* (881/882) adapts ancient traditions of Germanic heroic song to propagate a conception of just war, eulogizing Louis III, king of West Francia, for his victory over Norse invaders at Saucourt in 881. In Old Testament fashion, God punishes the Franks for their sins by sending the Vikings to scourge them, testing the mettle of the king, his chosen leader. Louis heeds God’s summons and leads his penitent men into battle, singing the *Kyrie eleison*. God’s might gives Louis victory. Though they fight as “God’s vassals,” the warriors’ reward is restricted to the secular. Military service of God in holy war by warriors whose fealty to God is channeled through their allegiance to a sacral monarch will later become a central theme of crusading epic.

Religious lyrics in Middle High German from the years just before the First Crusade (1096–1099) that express a more personal spirituality centered on pilgrimage and the veneration of the Cross survive. The *Ezzolied*, a song sung on the pilgrimage to Jerusalem led by Bishop Gunther of Bamberg in 1064–1065, expounds the ancient image of life as a voyage to the Heavenly Jerusalem and apostrophizes the Cross, which is the mast of the pilgrims’ boat. A little strophe, *In gotes namen fara wir* (“We journey in God’s name”), sung by the army of Emperor Henry VI at the battle of Tusculum in 1191, is quoted in sources up to the fifteenth century but may go back to the eleventh century. The full verse is “We journey in God’s name, seeking his grace. May His strength aid us, and the Holy Sepulchre in which he was laid. Kyrie eleison” [Müller, *Kreuzzugsdichtung*, p. 9]. The Middle High German word *faren* ranges in meaning from going to war to making pilgrimage, setting out on crusade, and traveling in general. The song suggests how fluid the boundaries were between different forms and conceptions of Christian and secular life in the Middle Ages, and how flexible our notions of a literature of crusade should be.

Lyric Poetry

Middle High German lyric, beginning with songs of the Third Crusade (1189–1192), relates most closely to major historical expeditions to the Holy Land and thus matches a strict definition of literature of the crusades. The 1180s saw a first flowering of courtly love lyric at the imperial German court, and poets in the entourage of Emperor Frederick I Barbarossa responded with propaganda songs when he took the cross in 1187. Friedrich von Hausen, well documented as a soldier and diplomat in the service of Barbarossa and his son Henry VI, borrowed the melody of an Old French lyric by Conon de Béthune and with it the motif of conflict between heart, in thrall to a lady, and body, committed to service of God. In two further songs, Hausen resolves the conflict by contrasting the sure rewards of divine love with the foolish deceit of secular passions. This model is imitated by Heinrich von Rugge, notably in a long lament for the death of Barbarossa. Albrecht von Johansdorf, in another imitation of Conon’s song, offers an alternative rationale for the knight caught between worldly and divine love. In his songs, the beloved woman reinforces the crusader’s commitment and hope thus to share in his spiritual reward.

These alternative ways of exploiting the cultural allure of courtly love poetry for the propagation of crusade are developed in songs that relate to the crusade of 1197. The poets Reinmar (der Alte), at the Austrian ducal court, and Otto von Botenlauben, in the service of Henry VI, composed elegant variations on the theme of the divided self. Hartmann von Aue exploits both approaches in songs that vehemently renounce courtly love and love-song or that recruit the courtly lady to send her lover on crusade and claim half his reward. Hartmann’s songs are innovative in their fervent expression of a personal spiritual conversion prompted by the death of his (unidentified) lord, which impels him to fight “in Christ’s host.”

We may assume that poet-singers who performed to their courtly public in the persona of crusader had themselves taken the cross. Friedrich von Hausen died in combat at Philomelion in Asia Minor in 1190. Otto von Botenlauben went on crusade in 1197 and settled near Acre, having married Beatrix, daughter of Joscelin III of Courtenay, seneschal of Jerusalem. Hausen vilifies Conon de Béthune for reneging on his vow. Walther von der Vogelweide, cleric and the first non-noble, professional singer in German courtly literature, cannot assume the role of courtly lover turned crusader. His songs, which span the decades between the cru-

sades of 1197 and 1227–1229, adapt the manner and content of sermons and encyclicals, ranging from vigorous images of imminent apocalypse to intense meditations on the theology of the Cross, but always stressing the necessity of inner conversion. Only in his *Palästinalied*, where the pilgrim retraces the earthly footsteps of Christ, does he speak as if from first-person experience. Walther's verses of political comment and satire, produced over the same thirty-year span, are often savagely critical of temporal and ecclesiastical leaders. Leopold V, duke of Austria, is savaged for his capture of the crusader Richard I of England. The emperors Otto IV and Frederick II are harassed into taking or fulfilling their crusading vows. Pope Innocent III is lampooned for extorting crusade taxes from guileless Germans to fill his own coffers. In this pivotal phase of crusading history, Walther's songs reflect both its continuing spiritual energy and its ensnarement in politics. A younger contemporary known as Bruder Werner imitates Walther's political satire in songs urging Frederick II to set off to the Holy Land.

Frederick II's extraordinary expedition of 1227–1229 provoked lyrics that again illuminate a wide diversity of attitudes. Rubin and the poet known as Burggraf von Lienz return to the tradition of adapting forms of courtly love-song to express the emotions of departing crusaders. The clerical moralist Freidank, torn between pilgrim fervor, relief that Jerusalem is in some sense "ours" again, and disgust at the behavior of the pope and the Franks of Outremer, delivers a devastating critique of Frederick's dealings with the Ayyūbid sultan and condemns the cynical exploitation of crusaders by the inhabitants of Acre, who are "undistinguishable from the heathen." The two most prominent lyric poets of the period, Neidhart and Tannhäuser, sing facetiously of homesickness and seasickness as the worst terrors the crusader contends with. Ulrich von Lichtenstein's self-ironical alter ego in the *Frauendienst*, his lyric autobiography composed around 1250, argues that love for the woman who promises him sexual reward for fighting on crusade is the only persuasive argument for taking the cross, and that this will move God to add spiritual benefits. A rare return to older religious commitment in Hawart's two devotional songs may perhaps be associated with the Crusade of Louis IX of France to Tunis (1270–1272). But what may be deemed to be the last medieval crusading song in German, by the Tyrolean knight Oswald von Wolkenstein (c. 1410), is a burlesque dialogue of parting lovers in which a woman instructs the knight sailing in a boat and teaches him the polyglot

names of the Mediterranean winds. The pilgrim is now little more than an adventurous tourist.

Epic Poetry and Vernacular Verse Chronicles

The first narrative account of crusade in German occurs in the *Kaiserchronik*, a Middle High German verse history of Roman emperors, written in Regensburg after 1150. The chronicle propounds the ideal of cooperation between Roman Church and Roman Empire, exemplified in its depictions of Constantine the Great and Pope Sylvester I, and Charlemagne and Pope Leo III. In recounting the conflict of empire and church in the later eleventh century, it firmly supports Pope Gregory VII against Emperor Henry IV. Its account of the First Crusade provides a kind of compensation for Henry's disturbance of the divine order. Though the anonymous clerical poet draws in detail on the chronicles of Ekkehard of Aura and Albert of Aachen, he depicts Godfrey of Bouillon as the divinely ordained, sole leader of the crusade, acting without papal authorization, and, within the *Kaiserchronik's* structure of imperial biographies, a surrogate for the absent and unworthy emperor. This inaugural narrative of crusade assimilates it into a Carolingian model of imperial holy war. Ironically, the manuscript of the *Kaiserchronik* breaks off at that point when Bernard of Clairvaux recruits King Conrad III as a crusade leader in 1147.

The first major German epic of crusade also has its roots in the Second Crusade. Around 1170, Henry the Lion, duke of Saxony and Bavaria, commissioned the *Rolandslied* from a cleric named Conrad, probably the court chaplain of that name documented in the 1170s. It had been Henry and other northern European nobles who persuaded St. Bernard to obtain papal approval in 1148 for the extension of crusading status to a campaign against the Slav-speaking, still largely pagan peoples in the lands beyond the Elbe, which had been a theater of imperial wars of conquest and conversion since the reign of Emperor Otto I. Henry, grandson of Emperor Lothar III and a member of the Welf dynasty, which claimed descent from Charlemagne and thus qualification for royal status, fought throughout the 1150s and 1160s to establish his control over these colonial territories. Marriage to Mathilda, daughter of Henry II of England, gave him access to a manuscript of the French *Chanson de Roland*, which he used as the basis for his German poem.

The priest Conrad infuses the chivalric ethos and redemptive spirituality of crusade into Carolingian imperial holy war. God's angel commands the emperor, Karl, to conquer

and convert pagan Spain. His warriors wear the badge of the cross, and he promises them the penitential benefits of crusade. Conrad's verse is suffused with echoes of Bernard's writings for the Templars and his sermons of 1147–1148, as also with the arsenal of biblical reference familiar from crusade chronicles. The *Rolandslied* assimilates crusade into the narrative tradition of imperial holy war and allows the pope no role in its direction. Henry the Lion may have looked to Conrad's epic for an idealized image of his pagan wars, for a confirmation of his Carolingian lineage, and, as seen in Roland, on whom Conrad confers lion heraldry, for a paradigm (in the event perhaps uncomfortably austere) of crusading knighthood.

In fact it was Henry's great rival, Frederick I Barbarossa, who came closest to realizing Conrad's vision of imperial crusade, but his death at the outset of the Third Crusade, then Henry VI's death on the eve of the crusade of 1197, made Germany's experience of crusade deeply problematic. It was full forty years after the writing of the *Rolandslied* that the greatest of medieval German narrative poets, Wolfram von Eschenbach, received the manuscript of another French *chanson de geste* (epic poem) from his patron Landgrave Hermann of Thuringia. Hermann, his elder brother Ludwig III, and his son Ludwig IV were all crusaders between 1190 and 1227, and their dynasty was prominent in royal and imperial service. But the story Wolfram tells, in the very different climate of the 1220s, is that of a weak King Louis (a historically inaccurate version of Emperor Louis the Pious) and Willehalm, whose marcher lordship in Provence is imperiled by an aggressively militant Islam.

This recourse to older Christian epic in quest of validating narratives for the medieval crusade presents the age of barbarian threat and pagan resurgence in the later ninth century as a metaphor for crisis in empire and Holy Land around 1200. Charlemagne's son is a feeble cipher, lacking all resolve or military capacity to wage holy war. Although Willehalm and his warriors wear the cross and the fallen go as martyrs to Paradise, their crusade wins only desperate knife-edge victory in what threatens to be an interminable war of mutual attrition between two entrenched ideologies. More than that, key characters, and Wolfram von Eschenbach in his authoritative narrator's voice, raise questions that potentially strike at the heart of the idea of crusade itself.

Human love and the mutual recognition of chivalric virtue cross the battle lines of warring faiths, yet these crossings of armed frontiers simultaneously break through and trans-

gress boundaries. The Muslim queen Giburg falls in love with Willehalm and with Christ, but it earns her the hatred of her kinsmen. Her brother Rennewart, who is alienated from his Muslim family but not integrated into the Christian world, loses faith in heathen gods yet cannot commit himself to the Christian God. He fights for Willehalm and wins victory for the Christian army, yet only by killing his own kind. The work is unfinished, and we cannot know whether the nobility of individuals would prevail against the intransigence of ideologies. What Wolfram does say, before the story breaks off, is that he believes it is a sin to slaughter like cattle those who are the handiwork of God the Creator merely because they had no knowledge of Christian baptism.

The *Rolandslied* and *Willehalm*, commissioned by crusading princes, reflect major issues in the history of crusade and articulate a distinctive German conception of the holy war of empire and church. From the later twelfth century, though often preserved only in late medieval manuscripts, a group of short narrative poems, of anonymous authorship, documents the reception of crusade at a less ambitious cultural level. *Herzog Ernst* (c. 1180) adapts elements from the contemporary conflict of Henry the Lion and Frederick Barbarossa. In *Oswald* (after 1196), God's angel charges the king with a dual mission, to win a heathen queen and to convert the heathen. *König Rother* (c. 1195) and *Graf Rudolf* (before 1200) have the same merging of reflexes from the *Rolandslied* with the folktale motif of bride-quest. *Orendel* (after 1196?) links the bride-winning journey with the legend of the Grey Mantle, the seamless garment worn by Christ at the Crucifixion. These short narratives suggest that in the last quarter of the twelfth century, alongside the rise of high courtly lyric and epic of crusade, contemporary interest in the events in the Holy Land was sufficiently strong to generate a more informal genre of adventure story.

In the thirteenth century, a heterogeneous body of narrative poetry was generated partly by the enduring influence of Wolfram von Eschenbach, though none of these works matches either the aesthetic or the spiritual achievement of *Willehalm*. In the 1260s, Ulrich von dem Türlin composed *Arabel*, a prelude to *Willehalm* that expands the story of Willehalm's imprisonment and his wooing of Arabel, who escapes with him, marries him, and in baptism becomes Giburg. Ulrich von Türheim's *Rennewart* (1240s) sets out to complete Wolfram's story. At inordinate length, and without the psychological and thematic complexity of Wolfram's characterization of Rennewart, Ulrich deploys an older appa-

ratus of miraculous divine interventions in battle and depicts Rennewart as a crudely aggressive warrior, unaware of any potential for mediating between Christendom and Islam. A more profound tribute to Wolfram is Ulrich von Etzenbach's *Wilhelm von Wenden*, composed at the court of King Wenceslas II of Bohemia between 1287 and 1297. Wilhelm is a heathen Wendish prince moved by an encounter with Christian pilgrims to surrender all and imitate Christ. Baptized by the patriarch of Jerusalem, he takes the cross, though, like the patriarch, he is imbued with a sense of pity and mercy for the unbaptized handiwork of God.

A less specific but still significant obligation to Wolfram's narrative art is discernible in two verse romances composed soon after 1300. In these, crusading themes and oriental milieu become more and more a matter of exotic surface than of deep structure; the end of the Christian kingdom in the Holy Land seems to relegate crusade to a legendary past. *Reinfried von Braunschweig* (c. 1300) is an account by an anonymous poet of a crusading expedition prompted by the fall of Acre in 1291. It is quite unhistorical, drawing motifs from *Herzog Ernst* and, particularly, Arthurian romance. Reinfried's crusade is prompted by the Virgin's pledge that he will be granted a male heir if he goes to the Holy Land, from which she promises him safe return. The motivation of his army is still more mixed. Of eight reasons the narrator cites for taking the cross, six are wholly secular and material. Battle with the heathen is in the spirit of courtly joust, and Reinfried lacks the conviction to refute the defeated opponent, who rejects baptism, arguing that enforced or hypocritical conversion is valueless. In Johannes von Würzburg's *Wilhelm von Österreich* (before 1314), the story of the conversion of the heathen King Agrant is interwoven with the love story of Wilhelm and the heathen princess Aglye. Wilhelm fights at different times for and against the heathen, always on expedient rather than religious grounds. Crusading motifs and themes are incidental to erotic and chivalric adventure, as when Richard the Lionheart and Philip II of France interrupt their siege of Damietta to defend the (heathen) queen of Candia against King Agrant.

The classic epics of crusade make a quite different claim to historical truth: both Conrad and Wolfram insist on the *warheit* (truth) of their stories, and narrator and characters of *Willehalm* cite events of the *Rolandslied* as though they were authoritative instances for their own historical experience. Abridgements of both works then appear in redactions

of the *Weltchronik* of Heinrich von München (the *Rolandslied* in the revised version by Der Stricker), along with *Arabel* and *Rennewart*. Vernacular verse chronicles of the historical crusades arise only at a late stage. *Die Kreuzfahrt des Landgrafen Ludwig* (completed 1301) has first an account of the deeds of the kings of Jerusalem up to Saladin's victory at Ascalon, then relates the Third Crusade, foregrounding the figure of Ludwig III, landgrave of Thuringia, with little regard for historical fact. Ottokar von Steiermark's *Österreichische Reimchronik* (c. 1300–1320) contains a description of the siege of Acre during the Third Crusade. It is not reliable as historiography either, conflating the sieges of Acre and Damietta and importing to Acre a cardinal legate clearly modeled on the figure of Pelagius from the Fifth Crusade (1217–1221). Criticism of the military orders for their arrogance and worldliness does echo contemporary sources. The Teutonic Order, however, is shown as the ultimately faithful servant of Rome. Ottokar places blame for the dire situation of the Latin kingdom squarely on the church and has heathen leaders criticize crusading theology, notably the perceived absurdity that Christians may earn absolution for murdering fellow Christians by slaughtering Muslims.

The pervasive sense of waning belief evident in narrative sources by 1300 is not, however, the final state of German literature of the crusades. In the areas of northeastern Europe to which the sanction and privileges of crusade were transferred in 1147, crusading enthusiasm held firm throughout the thirteenth and fourteenth centuries. Soon after 1200, the popes encouraged the transfer of the Teutonic Order, founded in Acre in 1190, to Prussia and the Baltic lands, which became its exclusive concern after 1291. The order provided its knight brethren with libraries of vernacular texts, which included Der Stricker's *Karl*, the thirteenth-century modernization of the *Rolandslied*, verse paraphrases of biblical narrative, notably the Books of the Maccabees, and legends of the Virgin, patron saint of the order. Its most interesting commissions are vernacular chronicles of its own military history, such as the *Livonian Rhymed Chronicle* (1291/1297), dealing with the conquest and conversion of Livonia, and the German translation by the chaplain Nikolaus von Jeroschin (1330/1340) of the slightly earlier Latin chronicle by Peter von Dusburg, which provides a full-scale history of the order from its beginnings to the time of composition.

The transmission of the order's crusading ideology and the education of the knight brethren in the aims and ethos

of missionary war are Jeroschin's overriding priorities. His work was a response to a historical moment when the order had vital need of effective propaganda for its work and for its defense against powerful critics, even in Rome. The utter conviction with which he deploys a vision of crusade close to that of Conrad the Priest around 1170 brings the history of German crusading literature startlingly full circle after all the vicissitudes of the movement and its poetry over almost two centuries.

German Order

See Teutonic Order

Germany

Although the German contribution to the First Crusade (1096–1099) was insignificant, German knights and German rulers, from King Conrad III in the Second Crusade (1147–1149) to Emperor Frederick II in 1228, made major commitments to campaigns for the defense and recovery of the Holy Land. The year 1147 also saw the first papal recognition of the crusade against the pagan Slavs to the east of the river Elbe, whereas campaigns against the pagan Baltic and Finno-Ugrian peoples in the lands to the south and east of the Baltic Sea became a major focus of crusading warfare between the thirteenth and fifteenth centuries.

In the following account, "German" and "Germany" refer essentially to the medieval German-speaking lands, roughly coextensive with modern-day Germany, Austria, and German-speaking Switzerland. The medieval kingdom of Germany also included lands that were not (or not exclusively) German-speaking: to the west, the counties of Holland, Brabant, and Hainaut and the duchies of Lower and Upper Lotharingia; to the east, the kingdom of Bohemia and the margraviate of Moravia. Many of the kings of Germany were crowned as Holy Roman Emperors and thus also exercised authority in the other two kingdoms regarded as making up the Holy Roman (also Western or German) Empire: the kingdom of Burgundy (parts of modern southeastern France, northwestern Italy, and western Switzerland) and the medieval kingdom of Italy (Lombardy, Veneto, and Tuscany). From 1194, the Staufens emperors Henry VI and Frederick II also ruled the kingdom of Sicily, which included the southern half of mainland Italy.

The First and Second Crusades (1095–1149)

The early medieval Western Empire inherited from Carolingian times a tradition of imperial holy war against the non-Christian peoples of western and central Europe, exemplified in Charlemagne's campaigns of conquest and conversion against Muslims in Spain and against the pagan Saxons. In their later medieval manifestations, the Spanish *Reconquista* and the crusade against heathen Slavs, these older forms of holy war became absorbed into the wider ambit of crusading. The ancient association of Christian Empire and warfare sanctioned by the church is invoked in one contemporary version of Pope Urban II's sermon at the Council of Clermont in 1095, which reports him citing Charlemagne as a prototype crusader.

Germany shared with France other preconditions of the

emergence of the idea of crusade in the eleventh century. Both had undergone a similar militarization of feudal society and had dominant warrior elites. Monastic reform in Germany followed the example of Cluny, and it was Emperor Henry III who at the Synod of Sutri in 1046 initiated the reform of the papacy that led to the church's efforts to control feudal violence, the motive for the Council of Clermont. The Truce of God that Pope Urban proclaimed in his sermon had parallels in Germany, notably the Cologne truce of 1083. The deeper penetration of lay piety among the feudal warrior caste in France and Germany, which encouraged the practice of pilgrimage and helped give the Holy Land and Jerusalem their strong appeal to crusaders, was evident in both countries, as in the major pilgrimages of Duke Robert I of Normandy in 1035 and of Bishop Gunther of Bamberg in 1064–1065.

Germany did not respond to the crusading appeal in 1095 with the same fervor as France because it was in the grip of the Investiture Contest, the conflict between Emperor Henry IV and the papacy over the powers of ecclesiastical and lay rulers. No German bishops attended the Council of Clermont, and the crusade was not preached officially or systematically in Germany; the chronicler Ekkehard of Aura explains that this was "because of the schism between royal and priestly authority which . . . has made us hated by the Romans and them by us" [Ekkehard of Aura, "Chronicon universale," in *Frutolfs und Ekkehards Chroniken und die anonyme Kaiserchronik*, ed. Franz-Josef Schmale and Irene Schmale-Ott (Darmstadt: Wissenschaftliche Buchgesellschaft, 1972), p. 140]. However, the large army of Godfrey of Bouillon marched across Germany along the land route to Byzantium, and though it contained relatively few German knights, Godfrey himself was a vassal of the emperor as duke of Lower Lotharingia, and a large part of his force came from the northwestern marches of the empire, where French and German linguistic and political identities merged. The chronicler Albert of Aachen also shows particular interest in German participation. But the bulk of German participants in the First Crusade, warriors and noncombatants alike, appear to have joined the two cohorts of the "People's Crusades" led by the priest Gottschalk and Count Emicho of Flonheim, almost all of whom perished before they even reached the borders of the Byzantine Empire. The purported participation of large contingents of nobles and clerics from Swabia and the Rhineland, as claimed in the sixteenth-century *Chronicle of*

Zimmern, is an invention of its compiler, Count Froben Christoph of Zimmern (d. 1566).

Contingents of German knights are recorded in expeditions of 1098 (the so-called third wave of the First Crusade) and 1101, and early awareness of one key development in the Holy Land is documented by Emperor Lothar III's gift of property to the Hospitallers in 1130. Yet the most remarkable testimony to German reception of the crusading idea in the aftermath of the capture of Jerusalem in 1099 is the appeal of Archbishop Adelgot of Magdeburg and east Saxon clerical and lay leaders, addressed to the churches and lay nobility of northern Germany, Lotharingia, and Flanders, to imitate the deeds of the French, who had liberated Jerusalem, and to "hasten to join the war of Christ and assist the warriors of Christ" in the defense of "our Jerusalem," the missionary church in the heathen Slav territory beyond the Elbe [*Urkunden und erzählende Quellen zur deutschen Ostsiedlung im Mittelalter*, ed. Herbert Helbig and Lorenz Weinrich (Darmstadt: Wissenschaftliche Buchgesellschaft, 1975), pp. 100–101]. The transferral in this text of the idiom and imagery of crusade sermons and chronicles to religious war on the eastern marches of the empire foreshadows aspects of the first full engagement of Germany with the crusade in 1145–1148.

In response to the fall of the city of Edessa (mod. Şanlıurfa, Turkey) to Zangī in 1144, King Louis VII of France conceived a military expedition to support the Frankish states of Outremer. To preserve papal control of crusading initiatives, Pope Eugenius III and Abbot Bernard of Clairvaux launched a general appeal in France. When the crusade was preached without their authorization in Germany, precipitating pogroms against Jews, Eugenius and Bernard were compelled to enlist King Conrad III, who took the cross at Christmas 1146. By March 1147, the Saxon nobles were demanding the church's permission to fulfill their vows by campaigning against the Slavs (known to contemporaries as Wends) who populated the regions east of the river Elbe. At the same time, King Alfonso VII of Castile requested crusading privileges for a campaign against the Moors in Spain. Bernard and Eugenius were compelled to accept the principle of a crusade that did not have the Holy Land as its goal, so that the Second Crusade became a general Christian offensive in three theaters of holy war, in which all participants fought under the sign of the cross and were regarded as detachments of a single host.

In the East, both French and German armies suffered defeats and setbacks before they joined forces at Acre

(mod. 'Akko, Israel). Together with an army led by King Baldwin III, they launched an assault on Damascus in July 1148. Repulsed by the defenders of the city, the crusaders were forced by lack of water and strong counterattacks to abandon the siege. The Saxon campaign was equally futile. Attacks on Dobin, Demmin, and Stettin ended in truces with their Slav defenders. Only in Spain were significant gains achieved, with the capture of Lisbon, Faro, Almeria, and Tortosa by the Iberian kings, with the support of crusaders from northern Europe and Genoa. Although the fiasco in the Holy Land caused widespread consternation in Europe, it did not inhibit the subsequent growth of enthusiasm for the idea of crusade in Germany. This was fueled by the two highly significant innovations of the Second Crusade: the enlistment of kings as sponsors and military leaders, and the extension of the sanction and spiritual rewards of crusade to warfare against the heathen Slavs on the northeastern marches of Germany. Although it was to be forty years before the next major crusade was launched in 1188, the impact of these new dimensions of crusading is apparent in the meantime, both on the level of high politics and in the reception and depiction of crusade in vernacular literature.

The Crusades of Frederick I Barbarossa and Henry VI (1189–1198)

Already in the 1150s, the *Kaiserchronik*, a verse chronicle of Roman and German emperors, inserts into its biography of Henry IV an account of the First Crusade, in which Godfrey of Bouillon is presented as the instigator of the crusade, without papal involvement, and as its sole military leader, acting seemingly as a surrogate emperor in place of the disqualified Henry. The chronicle breaks off in mid-sentence as the writer describes Conrad III's departure on the Second Crusade. Around 1170, at the court of Duke Henry the Lion of Saxony, the priest Conrad adapted the Old French *Chanson de Roland* into Middle High German. Charlemagne's campaign in Spain is transformed into a formal crusade, with sermons and indulgences, but summoned and led by the emperor without papal sanction. The chivalric heroes are motivated by a crusading piety strongly reminiscent of Bernard of Clairvaux's *De laude novae militiae*. Conrad's epilogue extols Henry as crusader, as converter of the heathen, and as the Charlemagne of his age.

This symbiosis of imperial holy war and crusade can be traced in the political and military projects of Emperor Fred-

Statue of Frederick I Barbarossa, Nuremberg. (Studio Patellani/Corbis)

erick I Barbarossa and major German territorial princes through the decades between the Second and Third Crusades. Barbarossa had gone on crusade with Conrad III in 1147–1148. From the beginning of his reign in 1152, the relationship of the German Empire with Byzantium, and hence also the Islamic sphere, was a continuing concern of imperial diplomacy. In 1172 Frederick sent envoys to Saladin, probably in order to strengthen his position in negotiations with Emperor Manuel I Komnenos. Saladin responded by sending his own ambassadors, who proposed a marriage between his son and a daughter of Barbarossa. They spent almost six months accompanying the imperial court on its travels through Germany in 1173–1174. A German diplomatic mission was sent to Egypt and Syria in 1175. An exchange of letters between Frederick and Saladin, preserved in the chronicle *Itinerarium peregrinorum et gesta Regis Ricardi*, though clearly not authentic, presents the start of the Third Crusade in 1188 as a declaration of war between two empires in ideological confrontation. This echoes the genuine letter to Barbarossa from the papal legate Henry of Albano, which describes the crusade as an obligation laid upon the Christian emperor by God. At the same time, the recruitment of German crusaders drew on vernacular lyrics

composed by chivalric poets at the imperial court, which testify to the extent to which the ideals of redemptive knight-hood had taken root in courtly culture during the period since 1147.

The imperial princes, whose transformation of the ancient tribal duchies into territorial lordships was strongly promoted by Frederick I Barbarossa, also showed a continuing interest in crusade. Henry Jasomirgott, margrave and later duke of Austria, who had gone on crusade with King Conrad III, became an active patron of the Hospitallers, securing Barbarossa's confirmation of the order's Austrian possessions in 1156. His brother Bishop Otto of Freising, his son Leopold V, and his grandsons dukes Frederick I and Leopold VI all shared the Babenberg dynasty's commitment to the crusades between 1147 and 1217, surpassing even the record of the landgraves of Thuringia. In the north of Germany, the Welf prince Henry the Lion, duke of Saxony, had taken part in the campaign against the Slavs in 1147 as a very young man. He became a major patron of the Templars and the Cistercians, a connection perhaps attributable to the influence of Bernard of Clairvaux.

The church never revoked its recognition of the Slav wars as crusades, and in 1171 Pope Alexander III confirmed that the war against pagans in northern Europe had exactly the same status as the crusade to the Holy Land. Between the late 1150s and 1170, Henry pursued the colonial expansion of Saxony and the conquest and conversion of the pagan Slavs. His brutality and ruthless self-interest frequently provoked the censure of the church, but by around 1170 the often critical chronicler Helmold of Bosau hails him as a reborn Emperor Otto the Great for his extension of empire and Christendom. The priest Conrad in the epilogue of the *Rolandlied* dubs Henry the new Charlemagne for his conquest and conversion of the heathen. In 1172 Henry led over 1,000 followers, knights, and clerics, including the converted Abodrite prince Pribislav, on an armed pilgrimage to Jerusalem. In Byzantium he was treated as an envoy of Barbarossa. Thwarted of the opportunity to lead his army in warfare in the Holy Land, he made lavish donations to the Templars and to the Church of the Holy Sepulchre in Jerusalem.

Frederick Barbarossa may have planned a relief expedition to the Holy Land as early as 1184, but the catastrophe of Hattin and the fall of Jerusalem precipitated action in 1187. Frederick, though now sixty-five years old, took the cross and vigorously promoted the crusade. With an army of up to 15,000 men, he set off in May 1189 along "Charle-

magne's road" to the East. Encountering hostility from Byzantium, he came close to attacking Constantinople. Only in late March 1190 did the army cross the Hellespont. After difficult progress through Asia Minor, the Germans took Ikonion (mod. Konya, Turkey) on 13 May. On 10 June, while bathing in the river Saleph on a baking hot day, Frederick suffered a fatal heart attack. Many of his followers fled homeward in despair, but his son, Duke Frederick V of Swabia, persevered with the remnant of the army and reached Acre. He, in turn, died there in January 1191. Duke Leopold V of Austria brought German reinforcements by the sea route, but the major roles in the siege of Acre and the forays along the Mediterranean coast, which brought the Third Crusade its meager successes, were played by the French, and, above all, by Richard I's English and Angevin army.

At the capture of Acre, Leopold V found himself so marginalized in the sharing of booty by Richard I that he departed the Holy Land swearing vengeance on the English king. When shipwreck forced Richard to travel incognito through Austria, Leopold seized him and held him to ransom. Handed over to Emperor Henry VI, Richard was eventually freed. Pope Celestine III excommunicated Leopold and demanded that he, and his son Frederick, undertake a new crusade, to last at least as long as Richard's captivity. The German Crusade of 1197–1198 was thus, for the large Austrian contingent at least, a penitential pilgrimage. Henry VI, who had succeeded to the kingdom of Sicily through marriage to its heiress, Constance of Hauteville, took a "secret" vow of crusade at Bari on Good Friday 1195. Despite the symbolic timing of his act, his motives were less transparent. The crusade vow was also a quid pro quo for papal acceptance of Henry's plan to secure the succession of his infant son Frederick's succession in Germany as well as in Sicily, and part of a larger strategy to extend the power of the Staufens dynasty in the Mediterranean, and perhaps also to threaten the Byzantine Empire. Tension between pope and emperor dogged the preparations for crusade. Then, a few weeks after the bulk of his knights had set sail from Palermo, in April 1197 Henry's Sicilian nobles rose in revolt. Scarcely had the emperor suppressed the uprising when he died of a malarial fever on 28 September. Despite this second catastrophic death of a crusading emperor, the substantial German army of imperial troops and contingents from Austria, Thuringia, Brabant, and elsewhere made some modest gains, restoring the land-link between the county of Tripoli and the kingdom of Jerusalem by the capture of Sidon and

Beirut. Significant for the future was to be the formal incorporation by the German princes of the Teutonic Order, which had begun as a field-hospital at Acre in 1190 and now acquired a charter from the pope and a rule based on that of the Templars.

Crusading during the Struggle between the Staufen and Welf Dynasties (1198–1215)

The death of Henry VI led to the election by rival parties of two competing kings, Henry's younger brother Philip of Swabia and the Welf prince Otto IV (of Brunswick), son of Henry the Lion. Intermittent civil war persisted until 1208, when Philip was assassinated. Otto IV briefly ruled unchallenged. However, it was not long before the Staufen family put forward Henry VI's son Frederick II, the young king of Sicily, as a rival candidate.

Pope Innocent III, elected in 1198, intervened actively in the political conflict in Germany and vigorously reasserted papal control and direction of the crusade. Already in August 1198 he began the preaching of a new expedition and found support not only in France and the Low Countries, but also in northern Italy and the Rhineland, though the political and military situation in the empire ruled out organized German participation. Nonetheless, King Philip acquired a strong interest in the crusade. At Whitsun 1197 he had married Irene (who took the new name Maria), daughter of the Byzantine Emperor Isaac II Angelos, a marriage that had formed part of the long-term policy of Frederick Barbarossa and Henry VI to gain influence in the eastern Mediterranean and work toward the reuniting of the Eastern and Western empires and churches. Isaac had been deposed, blinded, and imprisoned with his son Alexios IV in 1195. Innocent's expedition, the Fourth Crusade (1202–1204), did not depart until late 1202. In order to pay the Venetians for providing the army with sea transport, the crusade's leaders were forced to divert the campaign to recover the Venetian city of Zara (mod. Zadar, Croatia), lost to Hungary in 1186. Alexios had escaped from Constantinople and now persuaded the leaders of the crusade to restore him and his father to power. In return, he would pay 200,000 marks to finance the crusade and reunite the Greek Orthodox and Latin churches. Constantinople surrendered to the crusaders in July 1203. Alexios IV and his father were then deposed once more—and murdered—by a popular uprising. On 15 April 1204 the crusaders took control of the city, crowned Count Baldwin IX of Flanders as first Latin ruler of the new empire of Romania, and established new cru-

sader states across its territory. With that, a long-nurtured strategic interest of the Staufen dynasty in the Byzantine Empire was extinguished without the possibility of German military involvement.

Until 1227, when Frederick II fulfilled the crusading vow he first took in 1215, German participation in crusading ventures of different kinds remained more or less marginal. With the Albigensian Crusade against the heretical Cathar sect in southern France (1209–1229), Innocent III extended the status of crusade to what Pope Gregory VII had called the *militia sancti Petri* (military service of St. Peter), that is, holy war within Christendom in defense of papal interests. Though overwhelmingly a French affair, the crusade was preached also in the Low Countries, Lotharingia, Saxony, Bavaria, and Austria. Its most prominent German participant was Duke Leopold VI of Austria, who followed his father and brother as a devoted crusader. Beyond papal or secular control was the calamitous Children's Crusade (1212), which is poorly documented but was evidently sparked off in Cologne by the ferment aroused by popular preaching for the Albigensian Crusade.

Frederick II and the Crusade

Pope Innocent's repeatedly frustrated attempts to organize a crusade that would recover Jerusalem ended with his appeal at Easter 1213. This campaign, the so-called Fifth Crusade (1217–1221), did not begin until after his death (1216). It was not the young German king Frederick II, despite the vow he took after his coronation at Aachen in 1215, but Leopold VI of Austria who departed first. He was joined at Acre by the kings of Hungary and Cyprus. Only in the spring of 1218 were sufficient forces assembled to mount an attack on Egypt, including "men of noble birth, and the great soldiery of the Teutonic king," according to Oliver of Paderborn [*Christian Society and the Crusades 1198–1229*, ed. Edward Peters (Philadelphia: University of Pennsylvania Press, 1971), p. 52]. Under Leopold's command, the knights of the Teutonic Order for the first time joined the Templars and Hospitallers in warfare. Leopold fought with distinction in the siege of Damietta, alongside Count Simon of Saarbrücken and Count Adolf of Berg, brother of Archbishop Engelbert I of Cologne. However, the duke returned home in May 1219, having "for a year and a half fought faithfully for Christ, full of devotion, humility, obedience, and generosity" [Oliver of Paderborn, in *Christian Society and the Crusades 1198–1229*, p. 78].

Once Damietta was taken, the papal legate Cardinal Pelagius of Albano waited twenty months for Frederick II to arrive. The Teutonic Knights, as well as nobles such as Count Henry of Schwerin and Count Diether of Katzenellenbogen, maintained a German presence, and Duke Ludwig I of Bavaria arrived as Frederick's representative legate, with Bishop Ulrich of Passau and Margrave Hermann V of Baden. However, the recently crowned Emperor Frederick II never came, thus escaping or failing to avert the capitulation of Pelagius's army in August 1221.

Frederick II had made his vow of crusade immediately after his coronation as king of Germany in Aachen on 25 July 1215, his enthronement on the seat of Charlemagne, and his ceremonial sealing of the refurbished shrine of the great emperor. This reassertion of the imperial prerogative of leading the holy war of Christendom implied a challenge to Innocent III's papal control and direction of the crusade. In the immediate term, Frederick needed to complete his hold over his German territories. That he played no role in the siege and capture of Damietta scarcely needs excusing. Innocent's successor, Pope Honorius III, first attempted to enforce the king's vow in late 1218. Frederick assured the pope that he and his nobles would depart on crusade by 24 June 1219, provided Honorius did all that was possible to force the German princes to cease their obstructive stratagems. Should all that fail, he urged the pope to excommunicate him and the princes. Frederick hoped by this device to force the princes to elect his young son Henry (VII) to the German crown and to ensure his own imperial coronation before his departure on crusade. It was not until November 1220 that these preconditions were fulfilled. The crucial issue that remained was Frederick's resumption of control over the kingdom of Sicily, which his father, Henry VI, had acquired through his marriage to Constance of Hauteville.

The specter of an emperor with a firm basis of power in southern Italy as well as an effective cooperation with the German princes had haunted Rome since 1191. Honorius was nonetheless prepared to accept Frederick's restoration of imperial power, provided the emperor was committed to defend the church against heresy and to unite the laity in crusade to recover Jerusalem. What brought church and empire into final collision was Frederick's continuing failure to fulfill promises of action. In March 1223 Frederick had sworn that he would depart on crusade by June 1225; he coupled this with an undertaking to marry Isabella II (also known as Yolande), daughter of John of Brienne and queen of

Jerusalem through succession to her mother, Maria of Montferrat ("la Marquise"). It may have been the pope who proposed this marriage in order to strengthen Frederick's commitment, but the ideological resonance of adding the kingship of Jerusalem to the German imperial and Sicilian royal crowns must have been a powerful inducement to Frederick. Efforts to raise enthusiasm for a crusade met with no success in England or France. In July 1225 a papal delegation met Frederick in San Germano and extracted from him a new pledge to lead 1,000 knights and 150 ships and galleys to the Holy Land, on pain of excommunication, by August 1227. On 9 November 1225 Frederick married Isabella II in Brindisi and claimed the title and rights of king of Jerusalem. For the first time, a crusade was to be the obligation of a single monarch, and one who would go not merely as a crusader but as the first Western ruler to wear the crown of Jerusalem.

When Honorius III died in March 1227, the cardinals elected the eighty-six-year-old Gregory IX. His choice of adopted name signaled his intention to assert papal interests against the empire. When August 1227 came, Frederick's fleet began to leave Brindisi. Frederick himself set sail on 8 September with Landgrave Ludwig IV of Thuringia, but he returned to land within two days when an epidemic broke out on board, from which Ludwig died. Gregory excommunicated the emperor for his technical breach of the agreement of San Germano. When Frederick embarked again on 28 June 1228, the pope renewed the ban, and the emperor reached Acre as excommunicate crusader. Not only in this further sense was Frederick's expedition unique. He immediately took up earlier preparatory contact with Sultan al-Kāmil of Egypt, and on 11 February 1229 they concluded a treaty that ceded to the Christians most of Jerusalem, along with Bethlehem, Nazareth, and a land corridor to Acre. Jerusalem and Montfort could be refortified, and a ten-year truce was agreed. On 17 March the emperor entered Jerusalem, where he crowned himself king in the Church of the Holy Sepulchre, though the papal ban disqualified him from hearing Mass, and he issued an imperial encyclical extolling himself as soldier of Christ and divinely ordained instrument of God's plan of salvation.

On 1 May 1229 Frederick left the Holy Land, never to return, though he used the title of king of Jerusalem until his death and continued to support the kingdom financially and diplomatically. Gregory IX responded to Frederick's defiance by releasing his subjects in Sicily from their alle-

giance to their king and invading the kingdom. Though forced to come to terms with Frederick in 1230, Gregory was determined to secure the papal states of central Italy against imperial domination. He fomented opposition against Frederick in the north Italian imperial territories, which led to open war in 1237. The emperor fought to crush resistance and marched on Rome itself in 1240. Pope Gregory proclaimed a crusade against Frederick but died, aged 100, in 1241. His successor, Innocent IV, issued a new bull of crusade in 1244, and a general council of the church deposed the emperor in July 1245. Forces of the north Italian cities defeated Frederick's army at Vittoria in 1248, and Frederick died on 13 December 1250. After the brief reign of Frederick's son Conrad IV (d. 1254), further "crusades" led by Charles I of Anjou ended in the defeat and death of Frederick's illegitimate son Manfred in 1266 and of his grandson Conradin in 1268. Thus the search for a synthesis of empire and crusade reached its bitter conclusion.

After 1254 the German kings were usually too preoccupied with struggles against rival claimants to undertake crusades, even if they proclaimed their intention to do so, and it was not until the reign of Sigismund, king of Hungary and Holy Roman Emperor, that a German monarch played a major role in the crusade movement. Some individuals and groups, such as the Rhineland Crusade of 1267, did go to the Holy Land, but the main crusading activity of Germans in the later Middle Ages was to be directed toward the Baltic front.

The Teutonic Order and the Baltic Crusades

Sometime before 1118, a "Hospital of St. Mary of the Germans in Jerusalem" was founded as a hostel for German pilgrims, providing also medical care for the sick. It acquired a small church dedicated to the Virgin. At papal insistence the Hospitallers supervised its functioning. It ceased to exist with the fall of Jerusalem in 1187. In 1190 at the siege of Acre a group of merchants from Bremen and Lübeck set up a field hospital, with encouragement from Duke Frederick V of Swabia. When Acre was captured, it became a permanent hospital with the revived name of the Hospital of St. Mary. Emperor Henry VI envisaged a more prominent role for it and took the first steps to develop it as a military order following the model of the Hospitallers and Templars. Henry and Duke Leopold VI of Austria were among its first patrons. It built castles, notably Montfort, in the north of the kingdom of Jerusalem.

The order's rapid evolution in the early thirteenth century

owed much to its third grand master, the Thuringian nobleman Hermann von Salza, who became a key adviser of Emperor Frederick II. The order's knights played a prominent role in the Fifth Crusade. Frederick was not only a generous source of donations and privileges, but looked to the Teutonic Order as his prime military presence in the kingdom of Jerusalem from 1228. That led Pope Gregory IX to attempt to renew the supervisory role of the Hospitallers over the order, and both the older military brotherhoods resented its rapid rise. This enmity climaxed in 1241 in armed conflict between Teutonic Knights and Templars.

What set the Teutonic Order apart from the two older military orders in the Holy Land was its almost exclusively German national composition and support. At the outset its mission was to care for German pilgrims; it recruited only German knights, and although it attracted donations from across Europe, its material base was essentially in Germany, even if it also held lands and occasionally fought in Italy and Spain. The Hospitallers had extensive possessions in Germany; the Templars were less favored, with the exception of some houses in Bohemia and Moravia. The Teutonic Order came to outstrip both in popularity within the German-speaking lands. As Frederick II's power waned, and as the Holy Land came under increasing threat in the thirteenth century, the order's influence and role in Syria and Palestine began to diminish. Already in the early thirteenth century a new theater of holy war began to open up. Popes Celestine III and Innocent III began in the 1190s to take a new interest in the Baltic Crusades, authorizing indulgences for the defense of the church in Livonia in 1193 and 1197 and proclaiming a Livonian crusade in 1199. By 1202 Albert of Buxhövden, bishop of Riga, formed a small military order, the Sword Brethren, and around 1222 Bishop Christian of Prussia recruited fourteen German knights to form the Brethren of the Knighthood of Christ, known after their fortress as Knights of Dobrin.

The lack of success of the crusading campaign in Prussia led Duke Conrad of Mazovia to urge the Teutonic Order to take over the conquest and conversion of Prussia. Hermann von Salza was wary, in light of a failed involvement of the order in Hungary, whereas Frederick II was looking to the order for a major military role in the Holy Land. However, by 1229, with Frederick's crusade accomplished, Hermann deployed a detachment to the River Vistula, and Frederick, in the Golden Bull of Rimini, granted the grand masters the rights of an imperial territorial prince in the lands to be con-

Germany

quered. Gregory IX countered this in the Bull of Rieti in 1234, taking all lands conquered by the order under the protectorate of the Holy See.

By 1236 the Teutonic Order had assimilated the Sword Brethren. The response to the order's new focus in the eastern Baltic region stimulated a flood of recruits and donations from those areas of northern and central Germany that preserved the ancient tradition of the Slav wars from Ottonian times, and where these wars had been regarded as crusades since 1147. From the mid-thirteenth century onward, the Baltic or Northern Crusades became gradually more an

aspect of German expansion along the Baltic than of the crusading movement in a precise sense. By 1240 the conquest of the western Prussians was accomplished and by 1283 that of the Curonians and southern Letts. Victory on the Baltic coincided with the relentless fall of Christian strongholds in the Holy Land. In 1309 the order's headquarters were transferred to the Marienburg (mod. Malbork, Poland) in Prussia.

The Teutonic Order did not escape the criticism that was leveled at the Templars and Hospitallers once they had lost their primary role in the Holy Land. As early as 1268 the philosopher Roger Bacon had accused them of behaving as brutal conquerors instead of converting the heathen. In 1297–1299, discord between Archbishop John III of Riga and the citizens of the town, on the one hand, and the order, on the other, led to an alliance of the burgesses with the heathen Grand Duke Vytenis of Lithuania against the Teutonic Knights. Echoing Bacon's strictures, the archbishop took their complaints to the Curia between 1300 and 1306, forcing the order to defend its record. When the order then seized Danzig (mod. Gdańsk, Poland), the Polish monarchy likewise appealed to Rome, and in 1309 the pope authorized envoys to investigate the order's activities.

Under the reforming grand masters Werner von Orseln, Luder von Braunschweig, and Dietrich von Aldenburg between 1324 and 1341, the Teutonic Order was able to strengthen its spiritual and military disciplines and to reestablish its legitimacy in the eyes of the church. Its possession of rich agricultural lands and the economic prosperity generated by the Hanseatic League took the order to the peak of its prestige and success in the later fourteenth century. Royal and noble knights from all over Europe flocked to join its summer campaigns against pagan Lithuania. However, the Lithuanians, once converted, entered into alliance with Poland, and in 1410 the knights were crushingly defeated by these fellow Christians at the battle of Tannenberg (Grunwald). As the order discharged its perpetual crusade and lost its ideological reason for existence, German and Polish nobles and burgesses came to resent its unchecked power and wealth. In the Thirteen Years' War of 1454–1466, they ousted the order from West Prussia, and the grand masters became vassals of the Polish kings.

The Crusades against the Hussites

The abuses of theocracy in the Teutonic Order became one of the many issues debated at the Council of Konstanz

Kings of Germany in the Period of the Crusades

Note: Particularly in the thirteenth and fourteenth centuries, there were often rival claimants to the throne. Dates in parentheses give the years of coronations as Holy Roman Emperors.

Henry IV	1056–1105 (1084)
Henry V	1105–1125 (1111)
Lothar III	1125–1137 (1133)
Conrad III	1138–1152
Frederick I Barbarossa	1152–1190 (1155)
Henry VI	1190–1197 (1191)
Philip of Swabia	1198–1208
Otto IV	1198–1218 (1209)
Frederick II	1212–1250 (1220)
Henry Raspe	1246–1247
William of Holland	1247–1256
Conrad IV	1250–1254
Richard of Cornwall	1257–1272
Rudolf of Habsburg	1273–1291
Adolf of Nassau	1292–1298
Albert I	1298–1308
Henry VII	1308–1313 (1312)
Ludwig IV	1314–1347 (1328)
Frederick of Habsburg	1314–1330
Charles IV	1346–1378 (1355)
Günther of Schwarzburg	1349
Wenceslas	1378–1400
Rupert of the Palatinate	1400–1410
Sigismund of Luxembourg	1410–1437 (1433)
Albert II	1438–1439
Frederick III	1440–1493 (1452)
Maximilian I	1493–1519 (1508)
Charles V	1519–1558 (1530)

between 1415 and 1418. Another was the heretical movement in Bohemia led by Jan Hus, who was burned at the stake in Konstanz in 1415. Sigismund, German king from 1410, king of Bohemia from 1419, and crowned emperor in 1433, was persuaded by Pope Martin V to lead a crusade against the Hussites in 1420, but was defeated at the battles of Vitkov and Vyšehrad and forced out of Prague and Bohemia. In no less than five crusades between 1420 and 1431, mounted by Sigismund and the German princes from Silesia and Hungary, Meißen, Bavaria, and Austria, the Hussites maintained the military advantage, until Emperor Sigismund was compelled to reach a politico-religious compromise with them in 1436.

The Roman Catholic Church, at the Council of Trent, linked the combating of the Protestant Reformation with the idea of the crusade against the Turkish infidels. Knights of the Teutonic Order played a small part in the wars to halt the Turkish advance in the seventeenth century. But in reality, the profession of the Lutheran faith by Albrecht von Brandenburg-Ansbach, grand master of the Teutonic Order in 1525, and the consequent transformation of the order's Prussian lands into a Protestant duchy of the kingdom of Poland, then the secularization of the Livonian territories in 1561, marked the end of the long history of German imperial holy war and crusade in the eastern Baltic lands and along the eastern marches of the empire. Those Teutonic Knights who remained Catholic retreated to a small free imperial territory around Mergentheim in southwestern Germany, where—like the Hospitallers—they turned increasingly to an auxiliary medical role. In 1809 the order moved its headquarters to Vienna, where a grand master still presides over its charitable activities.

Gerold of Lausanne (d. 1238/1239)

Latin patriarch of Jerusalem (1225–1238/1239) and papal legate.

Born into the nobility of Burgundy, Gerold served as abbot of Molesme (1208–1215), abbot of Cluny (1215–1219/1220), and bishop of Valence (1220–1225). Gerold's accession to the patriarchate occurred when the Frankish states of Outremer needed powerful Western allies after the failure of the Fifth Crusade (1217–1221). While still bishop of Valence, he attended the meeting at Ferentino in March 1223 to discuss the possibility of a marriage between Frederick II, Holy Roman Emperor and king of Sicily, and Isabella II, daughter of John of Brienne and heiress to the kingdom of Jerusalem.

On the death of Ralph of Merencourt (1124), the canons of the Church of the Holy Sepulchre nominated Cardinal Thomas of Capua to the patriarchate, but Pope Honorius III refused their postulation and appointed Gerold as patriarch and papal legate. The new patriarch set out for Palestine in September 1227 along with Frederick's long-promised cru-

sade, although the emperor, who remained in Italy pleading that illness made him unfit to travel, was excommunicated by Pope Gregory IX for failing to fulfil his obligations as a crusader (29 September 1227), supposing that the emperor was using the deferred crusade to neutralize papal opposition to his Italian policies.

The eventual arrival of the excommunicate emperor in Palestine (September 1228) posed problems for the patriarch and the Latin hierarchy. In February 1229 Frederick II agreed on a ten-year truce with al-Kāmil, Ayyūbid sultan of Egypt, and thereby gained Jerusalem, Lydda (mod. Lod, Israel), Bethlehem, and a strip of land as far as the coast. Gerold, along with the Templars and Hospitallers, fought against this treaty, believing that it implied the abandonment of the rest of the former kingdom, and that the places restored were indefensible.

After Frederick entered Jerusalem on Saturday 17 March 1229 with his army and wore the crown, Patriarch Gerold had an interdict placed on the Church of the Holy Sepulchre and the other holy sites in Jerusalem by the archbishop of Caesarea (19 March). The patriarch and the Curia vacillated between dismissing Frederick's performance in the holy city as a miserable spectacle and condemning it as the ultimate sinful endeavour. The conflict was brought to an end when news reached Frederick that a papal army, led by his father-in-law, John of Brienne, had invaded the kingdom of Sicily, and he left with his troops for the West on 1 May 1229. Thereafter, the patriarch and the bishops reconsecrated the regained holy sites.

In the continuing conflict between supporters and opponents of Frederick II in Palestine, the patriarch's position was not simple, not least because Frederick II made peace with the pope in 1230 (Treaty of San Germano) and was thenceforth recognized by Gregory IX as lawful king of Jerusalem. Gerold and Bishop Peter of Caesarea, together with the masters of the Temple and the Hospital, attempted to mediate peace between the two factions during the civil war, but met with no success. The emperor was persuaded that the patriarch was his enemy, and on 7 July 1232 prevailed on the pope to recall Gerold to Rome. The patriarch did not evidently obey this summons for over a year, but when he finally reached Rome in 1233, he was detained there for four years.

Gerold returned to Syria in 1237 with his full legatine powers restored. He attended to conflicts between the Order of the Temple, the Teutonic Knights, and the Order of St. John, and he filled a number of vacant sees (Caesarea,

Nazareth, Bethlehem) without reference to Frederick, since the emperor's authority was not recognized in most of the kingdom. Gerold continued to reside in Acre (mod. 'Akko, Israel), not wishing to live in Jerusalem, because the Holy City was partly held by the Muslims under the terms of the treaty of 1229. He appointed the dean of Jaffa and the abbot of the Mount of Olives as his vicars in Jerusalem, but does not seem to have visited the Holy City himself.

The truce with al-Kāmil expired in 1239. Gerold accompanied the Crusade of 1239–1241, led by Thibaud IV of Champagne, in its campaign against Egyptian-held territory in southern Palestine, but the attack was defeated near Gaza (November 1239). This was Gerold's last known public act: he died later that winter, leaving a fortune estimated at more than 16,000 bezants, which he deposited with the Templars for the defense of the Holy Land.

Gervase of Bazoches (d. 1108)

A probable participant in the First Crusade (1096–1099), and later lord of Tiberias (1106–1108).

Gervase was the second son of Milo, lord of Bazoches-sur-Vesle in the county of Soissons. He was appointed as lord of Tiberias by King Baldwin I of Jerusalem, as successor to Hugh of Fauquembergues (1106). In May 1108 he was captured while attempting to repel an invasion of Galilee by ʿUḡtīgīn, atabeg of Damascus. Baldwin offered a large cash ransom for Gervase's release, but would not accept ʿUḡtīgīn's demands for the surrender of the cities of Acre (mod. 'Akko, Israel), Haifa (mod. Hefa, Israel), and Tiberias (mod. Teverya, Israel). Gervase was executed after refusing to convert to Islam.

Gesta Francorum

The *Gesta Francorum* (*et aliorum Hierosolimitanorum*) is a short and apparently simple eyewitness account of the First Crusade (1096–1099), written in Latin by an anonymous author, that has profoundly shaped views of the First Crusade and of the whole crusading idea.

The work seems to have been written immediately after the capture of Jerusalem in 1099, as the Provençal priest Raymond of Aguilers used it to produce his own account, which was certainly finished by 1105. It was long thought to be an abbreviated version of the very similar account by Peter Tudebode, but since Heinrich Hagenmeyer's edition (1890) it has generally been accepted that the *Gesta* was actually Tudebode's source.

We know nothing of the author except what he tells us in his account. It is evident from his standpoint that he traveled in the army of Bohemund, leader of the South Italian Normans, whom he often refers to in terms such as "my lord Bohemund," suggesting that he was one of Bohemund's followers. However, he was clearly not a person of rank; he writes of the doings of the leaders from an outsider's viewpoint with little understanding of their problems. For example, at Constantinople he objected to the agreement they reached with Emperor Alexios I Komnenos, although it was

obviously necessary. He seems to have taken part in military events, notably the assault after the betrayal of Antioch on the night of 2/3 June 1098, and most commentators have surmised that he was a knight who either wrote the account or dictated it to a clerical amanuensis.

The Anonymous has been seen as very devout, because when Bohemund left the crusade to secure control of Antioch (mod. Antakya, Turkey), he continued with the main army to Jerusalem. The apparently simple Latin and the vividness of the account, enhanced by the constant use of the first-person plural and the lack of overt reflection on events, led Rosalind Hill to portray him as a simple knight telling a straightforward tale. This assessment, however, is at odds with some literary and highly imaginative passages in the work. Colin Morris argued that the Anonymous's Latin style was far from poor and that he wrote in an epic tradition rooted in vernacular literature, suggesting that there is more religious reflection than we might expect from a simple knight.

The Anonymous's account was probably circulated in northern France in support of Bohemund's crusade against Byzantium in 1106–1107, and this seems to have given it a wide currency. It was extensively used by early twelfth-century writers and powerfully influenced subsequent historians' views of the events of the First Crusade. Moreover, the monastic writers of the generation after the crusade were concerned to give the crusade a coherent ideology and a place in the divine dispensation, and the Anonymous's work, with its emphasis on pilgrimage, was therefore highly influential on the emergence of the crusading idea.

Gestes des Chiprois

An Old French prose chronicle, completed around 1315–1320, dealing with the history of Cyprus and Outremer, and based on different sources.

The anonymous author was probably born in Tyre (mod. Soûr, Lebanon), and later became a member of the chancery of the Order of the Temple in Acre (mod. Akko, Israel). After 1291, he moved to Cyprus, where he was active in the entourage of King Henry II (1285–1324), working as a secretary and a copyist. He apparently belonged to a family of the lesser nobility, and in his work he expressed the perspectives, values, expectations, and class consciousness of the aristocracy. Nevertheless, he was not hostile to merchants (especially to the Genoese), and sometimes drew on their eyewitness testimony for some details of his chronicle.

Les Gestes des Chiprois survives in a single, humble manuscript (MS Torino, Biblioteca Reale, Varia 433), lacking a beginning and end; it was copied in the castle of Kyrenia in Cyprus in 1343 for the lord of Mimars by his prisoner Johan le Miege. The chronicle comprises three different parts: the first is based essentially on the *Annales de Terre Sainte*, known in Latin, French, Castilian, and Italian versions; it covers the years 1132–1224, but it originally began with the Creation of the World. The second part incorporates the memorials of Philip of Novara concerning the war (1223–1242) between Emperor Frederick II and part of the Cypriot nobility, led by the powerful Ibelin family; it also preserves five poems written by Philip on some relevant episodes of the war. For the third part the author drew on the French continuation of the chronicle of William of Tyre

(the so-called *Eracles*, here referred to as *Livre dou Conquest*) and, from the year 1270 onward, on his own experience and the oral testimony of his most reliable informants. This last part, conventionally called *Chronicle of the Templar of Tyre*, is considered the richest and most accurate source for the last decades of Outremer, and gives an exceptional firsthand account of the fall of Acre. In its unique manuscript the chronicle ends abruptly with the year 1309, although it also gives a detailed and dispassionate description of the trial of the Templars (1314).

Ghāzīs

Ghāzīs (Turk. *Ġazi*) were Muslim warriors who fought to uphold and expand the Islamic faith in the medieval Arabic and Turkish periods down to the early Ottoman centuries, inclusive of the crusading period.

It should be noted that the fighters of the twelfth-century Muslim rulers such as Zangī, Nūr al-Dīn, and Saladin were not composed of *ghāzīs*, but of professional Turkish and Kurdish soldiers. The term *ghāzī* originates from Arabic *ghazw[a]*, meaning a military expedition or raid, and is connected with *ghaza* or "holy war," otherwise mostly referred to in Arabic as *jihād*. The holy war was waged from the "abode of the true faith" (Arab. *dār al-Islām*) against the "abode of confrontation" (Arab. *dār al-Ḥarb*) against both infidels and heretics, but, as was to be expected, often

ghāzī bands degenerated into wandering bands of brigands and freebooters.

During the wars of the Arabs and Turks against the Byzantines, the ghāzīs were thought to be the equivalent of the Byzantine *akritai* (frontier guards). The first known Muslim ghāzī to perish against the Byzantines, at the battle of Akroinon (740) was the semi-legendary ‘Abd Allah al-Baṭṭāl (from *baṭṭāl*, “hero,” “the brave one”). From the ninth century onward, the ‘Abbāsids introduced Turkish mercenaries and slave soldiers into their armies, with the result that Arabo-Byzantine battles eventually developed into Turco-Byzantine warfare.

In early Turkish times (eleventh century onward), the ghāzīs became fighters of the frontier zone (Turk. *uc*, “borders”) under their leaders (*udj beys*) especially in central Asia (among the Sāmanids and Ghaznavids) and in Anatolia (chiefly among the Turcoman bands of the Saljūqs of Rūm and the Dānishmendids). The first pre-Ottoman ghāzī state in Anatolia following the defeat of the Byzantine Empire at Mantzikert (1071) was that of the Dānishmendids under their first two notable emirs, Malik Dānishmend Ghāzī and Amir Ghāzī Gümüştegin, when the local ghāzī element was reinforced by the massive immigration of Oghuz tribes from the East. Gradually, the “ghāzī corporations” of Anatolia became closely associated with the mystic *futuwwa* (organizations influenced by Sufi Islam), especially following the reforms introduced around 1200, by the ‘Abbāsīd caliph al-Nāṣir, whereby a special investiture conferred the title of *ghāzī* and granted weapons and insignia. Ghāzī ideology survived the collapse of the Saljūq sultanate of Rūm and the Ilkhanid Mongols of Persia (late thirteenth century) and was transmitted in the period of the Turcoman principalities (known as emirates or beyliks), as well as in the early Ottoman emirate, which was to emerge as the strongest of these principalities. Important texts describing the Turcoman and Ottoman ghāzīs as divine instruments of Allah’s will have survived in Aflākī’s *Manakib al-arifin* (*Virtues of the Gnostics*) and in the works of the early Ottoman historians Ahmedī, Yakhshī Fakih, Ashikpashazade, and Urūj. The first three Ottoman sultans (Osman I, Orhan, and Murad I) added the honorific title of *ghāzī* to their names.

Gibelin of Arles (d. 1112)

Latin patriarch of Jerusalem (1109–1112). Born in France around 1050, Gibelin was appointed archbishop of Arles in 1080 by Pope Gregory VII in place of the imperialist Archbishop Aichard (d. 1090), but he did not secure full control of the province until about 1094.

Pope Paschal II employed Gibelin as a legate to the Iberian kingdoms in 1100–1101 and in 1108 appointed him as legate to the kingdom of Jerusalem. Gibelin presided at a council there in 1108 at which the incumbent patriarch, Evremar of Chocques, was deposed and appointed to the vacant archbishopric of Caesarea (mod. Har Qesari, Israel).

Gibelin himself was elected as new patriarch in the autumn of 1109; he retained his legatine powers and reorganized the Latin Church in Palestine. He transferred the bishopric of Ascalon (mod. Tel Ashqelon, Israel) to Bethlehem and defined the respective powers of the abbots of Mount Tabor and the bishops of Nazareth in Galilee. He also advised Paschal II to rule that the Latin patriarchate of Jerusalem should be coextensive with the boundaries of the kingdom. This decision was of crucial importance because King Baldwin I of Jerusalem was making extensive territorial conquests at this time, and despite complaints by the Latin patriarchs of Antioch, it was never reversed in practice. Gibelin died on 6 April 1112. His deathbed wish, that the Church of the Holy Sepulchre should be served by canons regular, was implemented in 1114.

Gibraltar, Siege of (1349–1350)

Gibraltar was the eastern rock that closed the Bay of Algeciras at the southern end of the Iberian Peninsula.

Its strategic importance in the long struggle for the control of the straits between Africa and Spain was not as great as that of Tarifa or Algeciras, but its conquest became an obsession for King Alfonso XI of Castile. This was because the place had been lost during his reign to the Marīnid forces of Abu'l-Ḥaṣan (1333) after over twenty years of Castilian rule, and also because its capture would deny landing bases in the Iberian Peninsula to African forces and isolate inland Marīnid settlements like Ronda.

The siege began in early July 1349. Alfonso XI had previously guaranteed enough funds for the campaign. The collection of the *alcabala* (a new sales tax) was prolonged; royal domains were sold, and contributions from the church were imposed, as in the case of the cathedral of Ávila. The siege was cut short by Alfonso XI's death on 27 March 1350; he was the only Western Christian monarch to die from the Black Death. The plague had entered the Christian camp, but the king disregarded his council's advice to leave the place and soon became infected. The Marīnids controlled Gibraltar until 1375. Rodrigo Ponce de León, son of the count of Arcos, conquered it in 1462, but the duke of Medina-Sidonia took charge of the strongpoint immediately; later his successor had to give it to the Castilian Crown.

Gilbert de Lannoy (d. 1462)

A Burgundian crusader and diplomat.

Gilbert was born around 1386 in French Flanders and began his military career in the war against the English (1403–1404). He followed Jean de Werchin, seneschal of Hainaut, to the Holy Land (1405–1406), and went on to fight the Muslims in Spain under Jacques de Bourbon, count of La Marche (1407). He returned there in 1410. He was knighted in Prussia in 1413 and was made a prisoner fighting against the English at the battle of Agincourt (1415). After the Treaty of Troyes (1420), King Henry V of England and Duke Philip the Good of Burgundy sent Gilbert to the Levant to undertake a spying tour of Egypt, Syria, and the Dardanelles (he was unable to enter Turkey). He returned with a detailed report on the places and the harbors of the region, of which the maps are lost (1421–1423).

In 1428, Gilbert served as Philip's ambassador to Sigismund, the Holy Roman Emperor and king of Hungary, in the matter of the crusades against the Hussites of Bohemia. Gilbert was one of the first knights of the Order of the Golden Fleece, founded by Duke Philip in 1430. He went to the Holy Land for the third time in 1446 to undertake a pilgrimage and a diplomatic mission to Cyprus. He took part in the Vow of the Pheasant, an event intended to raise support for a new crusade, in Arras in 1454.

Gilo of Paris (d. after 1139)

Author of a Latin poem on the First Crusade (1096–1099).

Born in Toucy near Auxerre, Gilo (Egidius) became a cleric in Paris and afterward a monk in Cluny. By 1121 he was cardinal-bishop of Tusculum, and in 1129–1130 he served as papal legate in the kingdom of Jerusalem.

At some point before 1120 Gilo composed the earliest Latin epic about the First Crusade, of which six manuscripts survive. It is initially written in rhymed hexameters, which are replaced by unrhymed ones when the narrative reaches Jerusalem. Later in the twelfth century, substantial additions to Gilo's poem were made by an anonymous author from Champagne or Lorraine. He was once erroneously known as Fulco, but is today known as the Charleville Poet, as the only extant manuscript of this version is preserved in MS Charleville-Mézières, Bibliothèque municipale, 97. Gilo starts his poem with the siege of Nicaea (1097); his finale is the election of Godfrey of Bouillon as ruler of Jerusalem (July 1099). The Charleville Poet added previous stages of the expedition such as the Council of Clermont (1095). Whereas Gilo clearly showed his preference for Bohemund of Taranto, the Charleville Poet favored Godfrey of Bouillon. Before the end of 1121, Gilo wrote a prose life of Hugh I, abbot of Cluny.

Girbert Eral (d. 1200)

Master of the Templars (1193/1194–1200).

Girbert's early career is unknown. In 1183 he served as grand preceptor in the Templars' central convent, and from 1185 to 1189 functioned as provincial master in parts of Provence and Spain, and accepted numerous donations on behalf of the order. After the death of Master Gerard of Ridefort (1189), Girbert briefly traveled to Outremer (1190), served as grand preceptor, and took part in the siege of Acre (mod. 'Akko, Israel) during the Third Crusade.

In 1191 Girbert was appointed master of all Templars in the West and returned to France, but after the death of Master Robert of Sablé (1193), he was elected master of the order in absentia. He postponed his departure for Outremer until he had visited Spain for one last time (1195–1196). At his request, the papal Curia repeatedly confirmed the Templars' most important papal privilege, *Omne datum optimum*, between 1194 and 1200. In the central convent the powerful office of seneschal disappeared during Girbert's mastership. Girbert died in 1200 and was succeeded by Philip of Plessis.

Godfrey of Bouillon (d. 1100)

One of the leaders of the First Crusade (1096–1099), and subsequently the first Frankish ruler of Jerusalem (1099–1100) after its capture from the Fāṭimids.

Godfrey was born in the third quarter of the eleventh century, the second son of Eustace II, count of Boulogne, and

Godfrey of Bouillon (d. 1100)

Death of Godfrey of Bouillon (1100) and crowning of his brother Baldwin I as king of Jerusalem. Fourteenth-century manuscript from Jerusalem, Bibliotheque municipale, Lyon, France. (Snark/Art Resource)

Ida of Bouillon, daughter of Godfrey II “the Bearded,” duke of Upper and Lower Lotharingia. Since his elder brother Eustace III was intended to inherit the paternal inheritance, Godfrey was groomed as heir to his childless maternal uncle, Godfrey III, duke of Lower Lotharingia, on whose death he inherited the county of Verdun, the territory of Bouillon, and other domains in the Ardennes region, Brabant, and the valley of the middle Meuse (1076). However, the office of duke of Lower Lotharingia, which had been held by several of his ancestors, was withheld from him by the Emperor Henry IV (1056–1106), who compensated him with the largely powerless office of margrave of Antwerp.

From the outset Godfrey’s possession of his hereditary domains was disputed by rival claimants and other enemies: Countess Mathilda of Tuscany (estranged wife of Godfrey III), Count Albert III of Namur, Count Arnulf II of Chiny, the bishop of Verdun, and others. Since most of his opponents were adherents of the papal party in the struggle then raging between the German monarchy and the Reform papacy, Godfrey benefited from the support of the imperialist bishop of Liège, Henry of Verdun. Nevertheless, for most of the two

decades following his accession, Godfrey was engaged in a relentless struggle to defend his inheritance, and although he was finally made duke of Lower Lotharingia by Henry IV in 1087, he was never able to exercise effective ducal authority.

Godfrey’s decision to take part in the First Crusade was the occasion for the dissolution of his inheritance, since the disposal of his landed territories offered the most effective means of raising funds for the forthcoming expedition, as well as presenting an opportunity to resolve outstanding disputes with his enemies. By the summer of 1096, he had sold his rights in the county of Verdun to the bishop of Verdun and mortgaged the territory of Bouillon to the bishop of Liège, while smaller domains were sold off or donated to the church. Godfrey was accepted as leader by a large number of crusaders from Lower and Upper Lotharingia and north-eastern France, including his younger brother, Baldwin, and many other kinsmen and allies. This army left Lotharingia in the middle of August 1096, marching up the Rhine and along the Danube, then through Hungary and the Balkans, arriving at Constantinople in December 1096. There, like most of the other crusade leaders, Godfrey took an oath to the Emperor Alexios I Komnenos, promising to restore to him any former Byzantine territories recaptured by the crusade, and receiving in return a cash subsidy from the imperial treasury (spring 1097).

After crossing to Asia Minor, Godfrey’s largely Lotharingian army was joined by many crusaders who had come east with other contingents, such as his elder brother, Count Eustace III of Boulogne, and numerous French and German crusaders from the “People’s Crusades” defeated by the Turks in the autumn of 1096. In the course of the march from Nicaea (mod. İzmit, Turkey) to northern Syria, Godfrey figured as an active commander who had generally good relations with the other leaders. During the winter of 1097–1098, he provided his brother Baldwin with troops and resources for the conquest of the territories of Edessa (mod. Şanlıurfa, Turkey) and Turbessel (mod. Tellbaşar Kalesi, Turkey); he was repaid by Baldwin in the form of money and supplies, and the duke’s financial and logistic strength enabled him to maintain and attract the service of numerous crusaders in the course of the march to Palestine.

During the six-week siege of Jerusalem by the crusade (June–July 1099), Godfrey and his troops undertook the investment of the northeastern section of the walls, but took up new positions facing the northwestern walls for the assault beginning on 13 July. On 15 July he fought in a siege tower

that the crusaders dragged up to the walls, and it was troops under his command who achieved the first breakthrough into the city the same day. On 22 July Godfrey was chosen as ruler of Jerusalem by the leading members of the crusade in preference to Raymond of Saint-Gilles, count of Toulouse. To forestall objections by Raymond and others that it was sacrilegious for a king to be crowned in the city where Christ had worn a Crown of Thorns, Godfrey declined to adopt a royal title, taking that of prince (Lat. *princeps*) and defender of the Holy Sepulchre (Lat. *advocatus Sancti Sepulchri*). The territory under his control consisted of Jerusalem, Bethlehem, Hebron, and environs, and the coast between Jaffa (mod. Tel Aviv-Yafo, Israel) and Lydda (mod. Lod, Israel).

The crusade armies successfully repulsed a Fāṭimid invasion at the battle of Ascalon (12 August 1099), but the subsequent return of the majority of crusaders to the West left Godfrey with only around 300 knights and 2,000 foot soldiers to defend and expand the Christian-held territory. Looking to conquer the Fāṭimid cities of the coast, Godfrey came to an agreement with the papal representative Daibert, archbishop of Pisa, who had arrived with a fleet in the autumn of 1099. In order to secure the services of the Pisan ships, Godfrey was obliged to accept Daibert as patriarch of Jerusalem in place of the patriarch-elect Arnulf of Chocques (Christmas 1099).

The next year Daibert demanded sole possession of the cities of Jerusalem and Jaffa, a concession that would have reduced Godfrey to impotence, but the departure of the Pisan fleet in the spring of 1100 deprived Daibert of his principal bargaining counter. The relationship between the ecclesiastical and secular powers was still unresolved when Godfrey fell gravely ill in June 1100, and on his death (18 July) Godfrey's household knights, led by Warner of Grez, seized control of Jerusalem and Jaffa, and defied Daibert and his ally Tancred until Baldwin I arrived from Edessa to take up his brother's inheritance.

Godfrey was buried in the Church of the Holy Sepulchre in Jerusalem. His distinction as first Frankish ruler of the liberated Holy Land, his death at a relatively early age, and his reputation for valor and personal piety combined to ensure that subsequent generations regarded Godfrey as the principal hero of the First Crusade. He was celebrated in literature, notably as the central figure of a whole series of epic poems in the Old French Crusade Cycle, with the legendary Swan Knight as his ancestor. He was also generally regarded as one of the three Christian members of the configuration of chivalric heroes known as the Nine Worthies. In Jewish

folklore, by contrast, Godfrey acquired a largely undeserved reputation as a notorious persecutor of the Jews.

Golden Bull of Rimini

See Rimini, Golden Bull of

Golden Fleece, Order of

The Golden Fleece (Fr. Toison d'Or) was an order of chivalry founded by Philip the Good, duke of Burgundy (d. 1467), on the occasion of his wedding with Isabella of Portugal, in January 1430.

Philip promulgated the statutes of the order at the first meeting of its chapter, held at Lille in November 1431. Like other orders of chivalry, the Golden Fleece was founded for the defense of the Catholic faith of the Holy Church, as well as the tranquillity and prosperity of the common weal; if the head of the order (Philip himself) were to take up arms in defense of the Christian faith or to fight for the church or the Holy See of Rome, the knights of the order were obliged to accompany him. For its chancellor, Philip twice chose bishops who were in favor of the crusade: Jean Germain (1430–1461) and Guillaume Fillastre (1461–1473). In fact, the crusade only figured in two meetings of the chapter of the order, at Mons in 1451 and Valenciennes in 1473.

At Mons in 1451, Philip the Good vowed to go on a crusade (without having any precise aim) and asked his fellow

knights to go with him, but they showed no such enthusiasm. Jean Germain presented his works, the *Débat du Chrétien et du Sarrasin* (also known as *Trésor des simples*) and the *Mappemonde spirituelle*. During the homily of the Mass, he described the desolation of the militant church and called for its defense. It was decided to organize a feast to publicize this aim, which was held at Lille in 1454 (the Feast of the Pheasant). However, the subsequent preparations for a crusade and the dispatch of a fleet under Anthony, the Great Bastard of Burgundy (1464), was not directly connected with the order.

At Valenciennes in 1473, the papal legate called on the knights to fight against the Turks, as did the Venetian and Napolitan ambassadors. Although Philip's son Duke Charles the Bold made repeated promises to launch such an expedition, he never fulfilled them.

After the turmoil following the death of Charles the Bold at the battle of Nancy (1477), the new head of the order was Maximilian of Habsburg (d. 1519), the husband of Charles's heiress Mary of Burgundy. Maximilian considered suppressing the Golden Fleece or splitting it into two orders, a Netherlandish one and a German one. The order regained its splendor under Mary's grandson Charles V, Holy Roman Emperor and king of Spain, who opened its membership to subjects from all his dominions. It continued to hold chapters until 1559. After that, new knights were no longer elected, but nominated by the sovereign. With the advent of the Bourbon dynasty in Spain (1700), the order split into separate Spanish and Austrian branches.

Gran Conquista de Ultramar

A romanced chronicle (Sp. *crónica novelesca*) in prose, dating from the end of the thirteenth century, dealing with historical events of the crusades between the years 1095 and 1271.

The original text of the chronicle is in Castilian (Old Spanish), drawing primarily on French sources. It is preserved in three incomplete manuscripts of the fourteenth–fifteenth centuries (MSS Madrid, Biblioteca Nacional, J-1 and 2454; Madrid, Biblioteca de Palacio, no shelfmark) and a complete first printed edition (Salamanca, 1503). Two other versions of the chronicle, in Catalan and Gallego-Portuguese, are adaptations of the Castilian text.

There is reason to assume that the *Gran Conquista* was originally written or compiled by Alfonso X, king of Castile (1252–1284), for propagandistic purposes, as he showed interest in participating in the crusades proclaimed by the two councils of Lyons (1245 and 1274) after the fall of Jerusalem in 1244. The *Gran Conquista* shows certain conceptual parallels with another of Alfonso's works, the *Estoria de España*. However, Alfonso's successor Sancho IV (1284–1295) can be considered as responsible for at least parts of the *Gran Conquista*. It is possible that Alfonso's text ended with the description of the fall of Antioch (1098), and that it was completed by Sancho, motivated by his own wars against the Muslims on the Iberian Peninsula, which ended with the capture of Tarifa in 1292.

The *Gran Conquista* is a compilation and translation of several French and Occitan sources, which explains its lack of structural unity. The original narrative nucleus was the text known as the *Eracles*, the French translation and continuation of the Latin chronicle *Historia rerum in partibus transmarinis gestarum* by Archbishop William of Tyre, written between 1170 and 1183 and later continued up to 1291. Another contributory text is a separate French work, the *Chronique d'Ernoul et de Bernard le trésorier*, which treats events in the Holy Land up to 1229. The *Eracles* was augmented by various works of fiction, such as the *Chanson du Chevalier au Cygne*, the *Chanson de Godefroi de Bouillon*, *Les Chétifs*, the *Chanson d'Antioche*, the *Chanson de Jérusalem*, *Berte aus grans pies*, and *Mainet*. These French poems (in Alexandrine monorhymed stanzas), some of which are drawn from the Old French Crusade Cycle, together make up one third of the *Gran Conquista* text. It is unclear whether the Spanish translator found this poetic compilation in a French version or whether he undertook the work of compilation himself.

The principal figure of the Castilian text is Godfrey of Bouillon (Sp. *Godofredo de Bouillon*), ruler of Jerusalem (d. 1100), whose supposed legendary origin as a descendant of the Swan Knight is explained in the *Leyenda del Caballero del Cisne*, which forms part of book 1. Carolingian themes are treated in book 2, dealing with Charlemagne's mother *Berta, la de los grandes pies* (*Berta with the Big Feet*) and *Mainete*, dealing with the youth of Charlemagne. Book 3 relates the history of the First Crusade (1096–1099), culminating in the capture of Jerusalem by Godfrey of Bouillon, who is then elected king of Jerusalem (1099–1100). Book 4 follows the chronicle of William of Tyre, narrating the reign of Baldwin V, the child king of Jerusalem (d. 1186), the complete defeat of the Christians by Saladin at the battle of Hattin, and the loss of Jerusalem and most of the Holy Land (1187).

The most elaborate of the legends included in the *Gran Conquista* concerns the mythical origins of Godfrey of Bouillon as a descendant of the legendary Swan Knight, as told in the *Leyenda del Caballero del Cisne*, which combines a lost French epic called *Isomberta* with the *Chevalier au Cygne* and the *Godefroi de Bouillon* epics. Numerous marvellous and legendary elements are combined with the historical life of the real hero, told from birth to death, as is typical of this literary genre.

Whereas the legendary background of the Swan Knight is closely connected with the key figure of the crusader Godfrey of Bouillon, the Castilian *Berta, la de los grandes pies* and the legend of the youth of Charlemagne in the *Mainete* are not essential to the central theme of the *Conquista*. The various narratives and characters, well known from French epic poems, are now adapted for a Spanish public: Flores and Blancaflor are no longer monarchs of Hungary but of Almería; Flores conquers great parts of Africa and Spain, while Blancaflor promises to give the realms of Córdoba, Almería, and the rest of Spain to her grandson Charlemagne. However, when the queen dies, all her territories are lost to the Muslim kings. In a subsequent episode of the Castilian *Mainete*, Charlemagne has to fight against his bastard brothers and is sent to Spain, where he fights against the Muslim kings of Córdoba and Zaragoza on the side of the Muslim king of Toledo, whose daughter (after she has been baptized and named Sevilla) he will marry. After having defeated his stepbrothers, Charlemagne is crowned king of France. On his way to Spain, where he is to receive the realm of Toledo from his father-in-law, he is informed of an attack

by the Saxons on Cologne and returns there. This is the end of the *Mainete* episode.

The Catalan version of the *Conquista* was made at the request of King James II of Aragon (1264–1327). The Gallego-Portuguese version is included in the *Crónica general* of 1404, where it is interpolated into the reign of Alfonso VI, king of Castile and León (d. 1109).

Granada

The city of Granada was the capital of one of the most important of the Taifa kingdoms of eleventh-century Spain, and from around 1250 until 1492 it was the only surviving Muslim kingdom in the Iberian Peninsula.

The city became important for the first time under the Zirid dynasty and their Ṣanhāja Berber supporters when they established an independent kingdom there after the sack of Córdoba in 1013. Granada on its easily fortified hill-top site replaced Elvira, in the plains below, as the main local urban center. The Zirids built a citadel on what is now the Albaicin hill, and it rapidly became one of the most important cities in al-Andalus. During the course of the eleventh century, many of the smaller Taifa kingdoms were swallowed up by their larger neighbors and Granada was the only one of the Taifas of Andalusia strong enough to resist the expansion of Seville.

In 1056 the Zirids were able to take Malaga, which became a sort of second capital for the kingdom, entrusted to younger members of the ruling family. The kingdom was also noted for its influential Jewish community. Samuel ibn Naghrila was both the chief minister of the Zirid sovereigns

Granada

and an important Hebrew intellectual. In 1066 his son Joseph attempted a coup d'état to put the ruler of Almería, al-Mufitaṣim, on the throne. The attempt was thwarted by the Sanhāja Berbers, and the subsequent massacre greatly reduced the influence of the Jews. The Zīrids maintained their independence until the last of them, 'Abd Allāh ibn Buluggīn, author of the famous memoirs known as the *Tibyan*, was deposed by the Almoravids in 1090 and carried off into exile in Morocco.

Under Almoravid and Almohad rule (1091–1250), Granada remained an important provincial center, although Seville was the real capital. With the collapse of Almohad rule in the 1230s and 1240s, the position of the Muslims in al-Andalus became increasingly desperate. When Córdoba (1236) and Seville (1248) were taken by Ferdinand III, king of Castile, the rich and fertile lands of the Guadalquivir Valley were lost, and it must have seemed as if the days of Muslim political power were coming to an end.

Around 1246 Granada was seized by Muḥammad ibn

Yūsuf ibn Naṣīr, known as Ibn al-Aḥmar. He came from a family of Arab origin long established in al-Andalus that does not seem to have played an important political role before. He realized that the only way to preserve his independence was by cooperation with the Castilians. He accepted Ferdinand III of Castile as his overlord and sent troops to help the Castilians in the final assault on Seville in 1248. He made no effort to help the insurgents in the great Muslim rebellion of 1264–1266 in Andalusia. As a reward, he was allowed to consolidate his power, and no effort was made to conquer his mountain kingdom. When he died in 1272, his power was inherited by his son, also named Muḥammad (1272–1302), and the Naṣrid dynasty was founded.

The fourteenth century was the golden age of the kingdom of Granada. It stretched along the south coast of Spain and into the mountains behind from beyond Almería in the east to Algeciras in the west. The city of Granada itself expanded greatly. The Naṣrids established themselves in the fortified

palace since known as the Alhambra. Here, throughout the fourteenth century, they constructed the network of courts and palaces that have survived as the most perfect example of a medieval Muslim palace. The city below was developed as a commercial and silk-making center. There were important colonies of Genoese merchants in Granada itself, Malaga, and Almeria.

The frontiers with Castile remained more or less static throughout the fourteenth century and the early part of the fifteenth, apart from the definitive loss in 1344 of Algeciras, which was taken by King Alfonso IX, assisted by northern European crusaders, including Henry of Lancaster. The survival of the kingdom against the might of Castile can be attributed to a number of factors. The geography of the southern mountains meant that the kingdom was well protected by steep mountains and narrow passes. It was also fairly densely populated. Many Muslim refugees had come from the neighboring lands now under Christian rule, while much of Christian Andalusia was very sparsely inhabited; there was no demographic pressure on the kingdom.

In the early years the kingdom also gained some support from the Marīnids, who had succeeded the Almohads in Morocco. The Naṣrids were able to play off Marīnids and Castilians and give themselves some diplomatic room for maneuver. After their defeat at the battle of the Rio Salado (1340), however, the Marīnids were no longer a power in the Iberian Peninsula, and the Naṣrids were left without allies. Marīnid power in North Africa soon disintegrated. They were helped by internal political dissension in Castile, the ambitions of King Alfonso X to become Holy Roman Emperor, the upheavals of the Trastámara revolution in 1369, and the almost continuous strife between the Castilian Crown and nobles in the late fourteenth and fifteenth centuries. The kingdom of Granada paid valuable tribute to the kings of Castile, who were always short of money, and it was probably more valuable to them as a source of tribute than it would have been conquered and divided up among the nobility. The frontier with Granada became the scene of chivalric skirmishes and the setting for frontier ballads. But until the end of the fifteenth century and the reigns of the "Catholic Monarchs," Ferdinand II of Aragon and Isabella I of Castile, there was little serious attempt at conquest.

In 1482 a Castilian force took the town of Alhama de Granada in the heart of the kingdom, and this marked the beginning of a new, aggressive policy, while Granada was weakened by continual internal feuds. The Christians were

now using new and more effective artillery to reduce Muslim fortified towns, such as Ronda, which fell in 1486. In the same year the fall of Loja left the plain of Granada wide open to Christian attack. Throughout 1490 and 1491 the Christians closed in on Granada. On 25 November 1491 the surrender of the city was negotiated, and on 1 January 1492 the Christian forces entered the Alhambra itself.

The terms under which the city had surrendered allowed wide freedoms to the Muslim population, who were entitled to keep their property and practice their religion openly. For eight years the provisions were respected; Granada was essentially a Muslim city with a small Christian ruling elite. From 1500 things began to change. A revolt in the Alpujarra Mountains against the oppressive policies of Cardinal Cisneros gave the more militant Christians their excuse. Within a generation, the practice of Islam and Muslim customs had been effectively exterminated, and Granada became a truly Christian city.

Greek Sources

Histories, panegyrics, and letters written in Greek are a vital source of information, not only about the first four major

crusades, which passed through Byzantine territory, but also for the later period when containment of the Ottoman Turks came to replace the recapture of Jerusalem as the main aim of crusades. The Greek sources have to be read, however, in the context of the culture, genre, and political circumstances in which they were created.

Authors writing in Constantinople (mod. Istanbul, Turkey) during the Byzantine period were mostly connected in some way to the imperial court and were influenced by two all-important factors. The first was a literary convention dictating that they write in an artificial and archaic language. It was considered unacceptable to write in the everyday Greek that was no doubt spoken in the streets of Constantinople. Instead, authors were expected to employ the ancient Greek of classical Athens. This was the language of authors such as Thucydides and Plato in the fourth and fifth centuries B.C., but it was no longer spoken by the period of the crusades. The use of this highly complex idiom inevitably engendered a certain artificiality into Byzantine prose and explains why Byzantine authors are so difficult to read. It also explains the sharp distinction that they drew between the “Romans”—that is, themselves—and the “barbarians”—that is, all others: they were simply imitating their ancient exemplars, who distinguished between the civilized and intelligent Greeks and the barbarians who lived to the north and east. The second major factor influencing Byzantine authors was an internal political agenda. Political activity in Byzantium was centered around the imperial office, and support or opposition to particular policies was voiced in terms of praise or criticism of individual emperors. Byzantine historical writing has therefore been described as *Kaiserkritik* (the attempt to assess or judge emperors). These two factors are important to bear in mind when reading Byzantine accounts of crusades.

Byzantine Narrative History

Four Byzantine authors provide information on the First Crusade (1096–1099). The contemporary John Zonaras gives a very short description that contains demonstrable errors. The late thirteenth-century writer Theodore Skoutariotes also gives a short account and adds the intriguing detail that Emperor Alexios I Komnenos deliberately encouraged Western knights to liberate Jerusalem when he made his appeal to Pope Urban II in March 1095, a remark that has been hotly debated by modern crusade historians. Alexios I himself offers an insight into his attitude toward the First

Crusade in his *Mousai*, his political testament to his son and successor, John II. He counseled John to store up gold and treasure so that he would be better able to deal with any “massed movement hither from the West” [Maas, “Die Musen des Kaisers Alexios I,” pp. 356–358].

The fullest account of the First Crusade, however, is to be found in the *Alexiad* of Alexios’s daughter Anna Komnene. The *Alexiad* is a typical work of Byzantine historiography. It is written in archaic Greek and is full of allusions to classical Greek literature. It reproduces the conventional distinction between Greeks and barbarians, designating Godfrey of Bouillon, Bohemund of Taranto, and the other crusaders as barbarians. The use of this convention does not necessarily denote contempt or disdain for the crusaders, whose military prowess Anna clearly admired. Rather, it represents an effort to write within the acceptable literary framework of the circles in which Anna moved. Her main concern is not with the crusaders at all, but with advancing her own political agenda. By praising Alexios I as the ideal emperor and extolling his wise handling of the perceived threat of the First Crusade, Anna was, by implication, criticizing his successor, John II, to whom she had lost out in the power struggles after Alexios’s death.

The same mixture of literary convention and political *Kaiserkritik* appears in the work of John Kinnamos, who gives an account of the Second Crusade (1147–1149) and of John II’s and Manuel I’s relations with the Frankish principality of Antioch. Kinnamos’s hero is Manuel I, whose secretary he was, and he sometimes plays down the exploits of John II, the better to reflect the achievements of Manuel. Kinnamos also adheres to the literary conventions, though he was by no means as accomplished a stylist as Anna Komnene. His description of the relations between Manuel I and Conrad III, king of Germany, during the passage of the Second Crusade through Byzantine territory in 1147–1148 portrays the latter as an unruly buffoon brought to heel by the superior wisdom of the Byzantine emperor.

The historical work of Niketas Choniates covers the period 1118 to 1207 and is particularly important for two events that Choniates witnessed personally: the passage of the army of Frederick I Barbarossa, the Holy Roman Emperor, through Byzantine territory in 1189–1190 during the Third Crusade (1189–1192), and the sack of Constantinople in April 1204 by the army of the Fourth Crusade (1202–1204). Choniates is sometimes regarded as virulently anti-Latin, but he was following the same literary style and political agenda as Kin-

namos and Anna Komnene, and his criticisms of crusaders are often less strident than those leveled against Byzantine emperors. He revised his history in exile in the Byzantine successor state of Nicaea after 1204, introducing stinging criticisms of the emperors of the Angelos family who ruled between 1185 and 1204, and who, in Choniates' opinion, delivered the empire into the hands of the crusaders. By implication, Choniates was praising Theodore I Laskaris of Nicaea, at whose court he was writing.

Byzantine Panegyric Literature and Letter Collections

Along with histories, there survive numerous panegyrics, or laudatory speeches, addressed by members of the imperial court to Byzantine emperors, praising their policies toward passing crusades and the Frankish states of Outremer during the twelfth century. Often couched in long-winded and pretentious language, these florid orations contain little in the way of concrete historical information, but they are a good guide to how emperors wanted themselves and their actions to be seen. The court orator Michael Italikos, for example, wrote in praise of the expedition of John II against Outremer in 1137–1138, claiming, with some exaggeration, that the count of Edessa had offered the emperor the help of his lance, that the king of Jerusalem had set down his crown and recognized John as the only emperor, and that the sovereignty of Constantinople had been extended over Antioch. Manganeios Prodromos addressed two such speeches to Manuel I. In one he praised Manuel for saving Constantinople from the wild beast from the West, by which he meant Conrad III and the Second Crusade. In another he exulted because the prince of Antioch, Reynald of Châtillon, had been compelled in 1159 to “curl up like a small puppy” at Manuel’s “red-slippered feet” [Magdalino, “The Pen of the Aunt,” p. 19]. Even Niketas Choniates, in sharp contrast to the criticisms later leveled in his history, produced a similar speech in praise of Isaac II Angelos, lauding Isaac for his handling of Frederick Barbarossa during the Third Crusade and extolling him in Homeric terms as the godlike emperor. Just how far these orations could go in presenting inept handling of passing crusades as a resounding success is demonstrated by that delivered by Nikephoros Chrysoberges before Alexios IV Angelos on 6 January 1204. Chrysoberges eulogizes the emperor because he was able to persuade the leaders of the Fourth Crusade, by then camped outside the walls of Constantinople, that they would prosper only as long as they sided with him. In fact, Alexios’s policy toward the

Fourth Crusade was rapidly unraveling, and he was deposed and murdered shortly afterward.

Byzantine writers are less informative about subsequent crusades and the states of Outremer after 1204. This was no doubt partly because no more crusading expeditions crossed Byzantine territory and partly because the emperors were no longer powerful enough to attempt to impose their will on Antioch and Jerusalem. George Akropolites and George Pachymeres, who between them cover the period 1204 to 1308, devote little space to events in the Latin East. However, they have preserved a great deal of information on the period when crusades were being preached against the Byzantines for the defense of the Latin Empire of Constantinople and, after 1261, for the recovery of the city from the Byzantine emperor Michael VIII Palaiologos. Akropolites makes the recapture of Constantinople by Michael VIII in 1261 the climax of his work, and Pachymeres writes at great length about the plans hatched by the king of Sicily, Charles I of Anjou, to lead an expedition against Constantinople after 1267. As is the case with earlier Byzantine historians, there is a strong political agenda at work, and *Kaiserkritik* provides the central focus of both works. Akropolites, who held high office under Michael VIII, not surprisingly, adopts Michael as his hero, quietly ignoring Michael’s brutal sidelining and blinding of the legitimate emperor of Nicaea, John IV Laskaris. Pachymeres takes a less enthusiastic line toward Michael VIII because he was unable to forgive the emperor’s decision to end the schism between the Eastern and Western churches on papal terms at the Second Council of Lyons (1274), in the hope of defusing the threat from Charles of Anjou.

No major Byzantine histories were written after 1360, but there are a number of letter collections that describe the Ottoman conquest of the Balkans and the crusade of Nikopolis, which unsuccessfully attempted to relieve the Turkish siege of Constantinople in 1396. Of these, the most important are the letters of Emperor Manuel II Palaiologos, all written in complex literary Greek and displaying a touching resignation to the desperate straits in which the Byzantine Empire now found itself. The memoirs of the Byzantine courtier George Sphrantzes chronicle the efforts of the Byzantines to persuade the pope to send a crusade to help them against the Turks and their bitter disappointment when it failed to materialize. Recounting the fall of Constantinople in 1453, Sphrantzes bitterly concludes that the Byzantines received as much help from Rome as they did from the sultan of Cairo.

History Writing in Frankish Greece and Cyprus

As well as literature written in Constantinople, there are a number of works in Greek produced in those areas of former Byzantine territory that were under Frankish rule after 1204. These works are often written in a more colloquial Greek and display none of the obsession with the person of the emperor that dominates Byzantine histories. *The Chronicle of Morea*, for example, exists in a Greek version that was probably compiled for the benefit of Greek-speaking Franks and describes the history of Frankish Greece up to 1388. Another Greek version was made in the fifteenth century in which the pronounced anti-Greek bias was removed.

Two Greeks writing on Cyprus under Lusignan rule have left sources of information on the crusades. The monk Neophytos (1134–c. 1214), a recluse who spent most of his life living in a cave on the island, wrote a short description of the conquest of Cyprus by Richard the Lionheart, king of England, in 1191. Surprisingly, although Neophytos denounces Richard as a wretch and a sinner, his hostility is mainly reserved for the Greek usurper and ruler of the island, Isaac Komnenos. The demotic Greek chronicler Leontios Makhairas was the author of a history covering the thirteenth and fourteenth centuries and part of the fifteenth, including episodes such as the capture of Alexandria in 1365 by Peter I, king of Cyprus. Makhairas has been accused, however, of being more of a storyteller than a historian, and his chronicle tends to be narrowly focused on events that took place on the island of Cyprus.

There are two major histories in Greek written during the later fifteenth century covering the rise of the Ottoman Turks, the Crusade of Nikopolis (1396), the Crusade of Varna (1444), and the fall of Constantinople (1453). Doukas was writing on the island of Lesbos under the Genoese Gattilusi family, whom he served as secretary and interpreter. A convert to Roman Catholicism, Doukas regards the fall of Constantinople as a well-merited punishment visited on the Byzantines for their refusal to accept ecclesiastical union with Rome. He gives a brief and garbled account of the Crusade of Nikopolis. His treatment of the Crusade of Varna is fuller but still muddled and inaccurate. Predictably, he attributes its failure to the sins of the Christians but makes no mention of what he considers those sins to have been.

Laonikos Chalkokondyles was originally from Athens, which was ruled by the Florentine Acciaiuoli family, and wrote his *Demonstrations of History* during the 1480s. Unlike

Doukas, Chalkokondyles wrote in archaic Greek and adopted a far more sophisticated approach to historical causation. He believed that the Ottomans were successful because of their superior courage, along with a healthy dose of luck, but that their empire would ultimately be overthrown. The defeat of the Crusade of Nikopolis is put down not to divine punishment but to the arrogance and overconfidence of the French, who failed to wait for the arrival of King Sigismund of Hungary. The defeat at Varna is largely blamed on Cardinal Cesarini, who is identified as the prime mover in the decision to break the oath sworn to the Ottoman sultan, Murad II. Chalkokondyles' account of both battles is rather vague and contains inaccuracies.

Doukas and Chalkokondyles are not, therefore, primary sources of information on crusading expeditions themselves. They are far more informative in their accounts of Latin rule over areas that had once been part of the Byzantine Empire, of the rise of the Ottoman Turks, and of the fall of Constantinople in 1453.

Greenland

In the last decades of the tenth century, Scandinavians settled in two areas on the west coast of Greenland (the so-called Western and Eastern Settlements). With their conversion to Christianity and the foundation of a bishopric at Garðar in the Eastern Settlement during the eleventh century, the Scandinavian settlements joined the periphery of Latin Christendom.

The Scandinavian Greenlanders were aware of the heathen Inuit peoples (whom they called *Skraelings*) living to the north and west of them, and both Latin sources and the sagas describe contacts in terms of a meeting between Christianity and paganism as well as of conflict; the sagas even relate a few instances of forced conversion. From the middle of the thirteenth century, Greenland became one of the tributary lands of the king of Norway.

The Scandinavian settlements were probably abandoned in the first half of the fifteenth century for various reasons, including climatic changes, but probably not as a result of attacks by heathens, as is sometimes claimed, although the Icelandic annals do tell of one raid by the Inuit resulting in eighteen deaths among the Greenlanders. However, Greenland was not forgotten in Scandinavia, and in the fifteenth century the kings of Denmark maintained their rights to the trade with Greenland, which had become part of their realm on the formation of the Union of Kalmar (1397) uniting Denmark, Norway, and Sweden. They claimed, however, that Greenland had been lost to the heathens, as was reported to Rome in the 1420s, 1448, and 1492. In 1427 the Danish cartographer Claudius Clavus claimed that the heathen Karelians, who lived in Finland, were able to reach Greenland with large armies from the other side of the North Pole via an

European and pygmy fighting on Greenland. Detail from the map *Carta Marina*, by Olaus Magnus (1539). (Courtesy Janus Moller Jensen)

unknown land. The idea of a continental connection between Greenland and Europe can be traced back at least to the thirteenth century, and by the fourteenth there was a widespread belief that the Karelians lived north of Greenland.

In the fifteenth century, Greenland came to figure in Danish plans to reach India. From the reign of King Christopher III (1440–1448), Danes participated in the Portuguese crusades in North Africa that, among other goals, aimed to find a passage to India and the mythic realm of Prester John. During the reign of Christian I (1448–1481), Danes continued to participate in the Portuguese crusades, and the king also launched expeditions in cooperation with the Portuguese in order to discover new lands by sailing toward Greenland, and in this context the claims that Greenland had been lost to the heathens were important.

Very little is known of these northern expeditions, but there is no reason to assume that they were conceived as being different in character from the Portuguese crusades to Africa. King Christian II of Denmark (1513–1523) applied to the papacy in 1514 for indulgences for the participants of an expedition that was to go to the islands on the other side of the Arctic Ocean, and in 1519 Pope Leo X

Gregory VII (d. 1085)

issued a bull nominating a new bishop of Garðar because Christian II wanted to “re-conquer the city of Garðar from the hands of the heathens with a mighty fleet” [*Diplomatarium Norvegicum*, ed. Christian C. A. Lange et al. (Kristiania: Malling, 1902–1913), 17: 1164–1166]. This crusade, which was to be led by the experienced sailor Søren Nordby, was abandoned at the last minute as a result of events in Sweden that eventually led to the dethronement of Christian II in 1523. The latest geographical knowledge at this time (for example, as expressed in the Ruysch world map of 1508) viewed Greenland as a peninsula on the continent of Asia, and from other sources it is evident that India was the ultimate goal of this crusade, as it had probably been for the fifteenth-century expeditions as well.

Contemporaneously with these plans, the legend of a Danish hero was being created that told how in the ninth century India had been conquered by Ogier the Dane, who took possession of all the countries from Jerusalem to Paradise and subsequently founded the realm of Prester John. In a small work (*En wdschrifft aff gamble krönnicker . . .*) originating in the court circle of Christian II in 1521, Prester John was counted as one of the three greatest heroes ever to have left Denmark to win great dominion in the world. Such legends were part of a larger ideological program of the fifteenth and early sixteenth centuries that presented the Danish kings as crusading monarchs and must be seen in connection with plans for crusades to Greenland.

Gregory VII (d. 1085)

Pope (1073–1085). Originally named Hildebrand, he was born probably about 1015 into a Tuscan family; he became

a prominent figure at the papal court from about 1050 and archdeacon of Rome in 1059. He was elected pope in April 1073.

Gregory was a vigorous proponent of ecclesiastical reform, an opponent of the control of the church by the laity and of abuses such as simony and clerical marriage. His opposition to lay interference in church affairs led to the commencement of the Investiture Contest, the papal dispute with the Holy Roman Empire that was to dominate the politics of Christendom for the next two centuries, and Gregory’s ideas concerning papal authority were to be immensely influential under his successors.

Gregory’s importance in the context of the crusade was fourfold. First, in 1073–1074 he proposed a military expedition intended to subdue the unruly Normans of southern Italy (with whom he was then in dispute), and then go on to assist the Byzantine Empire against the Saljūq Turks; Gregory proposed to lead this enterprise in person. Toward the end of 1074, he developed this plan further, with the intention of ultimately proceeding on to the Holy Sepulchre in Jerusalem, but although he attempted to enlist the support of a number of Western princes for this expedition, the response was lukewarm, and it never actually took place. The failure to offer any direct spiritual reward to participants may have discouraged recruitment. However, it is probable that knowledge of this plan underlay Urban II’s successful call to crusade in 1095. Furthermore, Gregory’s hope that by successfully assisting the Byzantine Empire he would restore the unity of the universal church under papal leadership also served as a model for Urban’s enterprise.

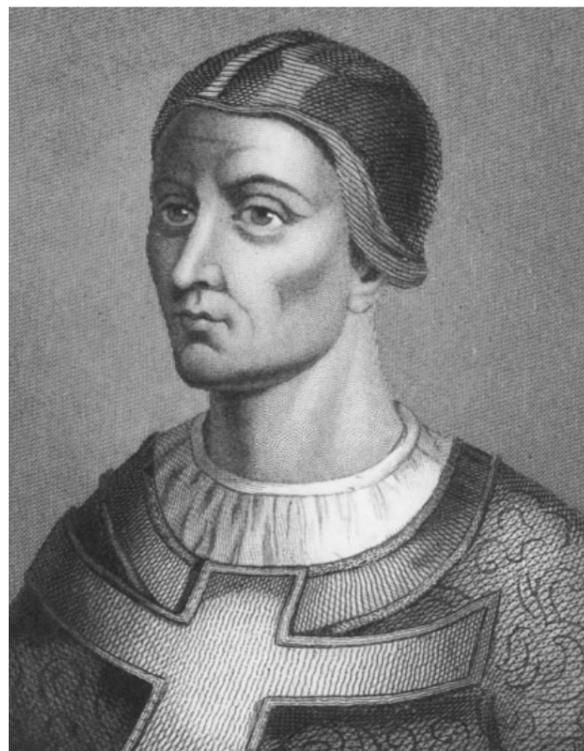

Second, Gregory’s pontificate saw significant developments in Christian ideas about both warfare and the role of the laity within the Christian commonwealth. From the start of his pontificate he encouraged the Pataria, a primarily lay movement for religious reform at Milan, to fight the supporters of simony and other enemies of the church, if that should be necessary. Much more important, however, were the consequences of the breach with the empire, which led to Gregory excommunicating the king of Germany, Henry IV, first in 1076, and then (after a period of reconciliation) once again in 1080.

The first time he probably intended only to suspend Henry from office, hoping that there would be a peaceful settlement to the dispute, albeit on his own terms, but in 1080 he declared Henry definitively and irrevocably deposed and replaced by his German rival, Rudolf of Rheinfelden, duke

of Swabia. This crisis led to open war between papal and imperial supporters, during which Gregory preached not just the legitimacy but the positive duty of all good Christians to oppose forcibly the enemies of the church and therefore of Christ. He appealed to the laity to act as the *militia Sancti Petri* (“soldiers of St. Peter”) in fighting the church’s battles against those who sought to destroy or pollute it. By doing so, in a proper spirit of righteousness, laymen would also be ensuring their own salvation. In the later part of his pontificate Gregory claimed that by fighting in the church’s cause, laymen would secure absolution for their sins. Indeed, on occasion Gregory praised those who died fighting for righteousness as martyrs. He thus directly anticipated several key ideas in the First Crusade. Throughout his pontificate Gregory also showed a vigorous concern for the general spiritual welfare of the laity, not least by refining and developing the concept of penance, a concept that also underlay Urban’s preaching in 1095–1096. Gregory saw the role of the laity within the church as being to act where directed under papal instruction, thus anticipating how later popes saw their function in the crusades.

Gregory’s ideas about warfare were extremely controversial, primarily because after 1080 he was promoting a holy war against fellow Christians. Pro-imperial propagandists offered extended and often very effective criticism of a pope whose policies, they argued, were leading to the shedding of Christian blood. Gregory’s intransigence undoubtedly alienated some of his more moderate supporters, including a number of the cardinals, who deserted him and went over to the imperialist antipope Clement III in 1084. However, his supporters, notably Bishop Anselm II of Lucca and the circle of reformers at the court of Gregory’s lay ally Countess Mathilda of Tuscany, justified and expanded Gregory’s ideas concerning the righteousness of Christian warfare, and helped to prepare the climate of opinion for the crusade.

Third, there was Gregory’s interest in Sicily and Spain, where the frontiers of Christendom were already expanding before 1095. He encouraged Count Roger I of Sicily in his campaign against the Muslims on that island, which he argued should be conducted in a spirit of penitence. He similarly promoted the campaign of Duke Robert Guiscard (leader of the south Italian Normans) against Byzantium in 1081 within the parameters of Christian just war theory: participants should display a sense of penitence and true faith. Here again Gregory anticipated the ideas of the First Crusade. While there is little evidence for Gregory directly

Pope Gregory VII. (Pixel That)

encouraging Christian campaigns against the Muslims in Spain, he was concerned to vindicate claims for papal authority over the Spanish kingdoms, whose rulers he argued should be direct vassals of St. Peter (i.e., of the pope). He thus played a part in developing papal interest in Spain, which was to lead to the encouragement by later popes of military campaigns there against Islam and ultimately to the incorporation of the Reconquest in Iberia within the overall concept of the crusade. Gregory thus played an essential part in developing and publicizing a concept of Christian warfare that was to find its full expression in the crusade.

Finally, Gregory forcefully developed papal claims to supreme authority within Christendom. These claims were far from generally accepted, and indeed in 1084 Gregory was forced to abandon Rome to Henry IV and take refuge with the Normans of southern Italy, where he died (25 May 1085). Later popes, however, went a long way to transform these claims into reality: Urban II’s preaching of the First Crusade was an important step along this road, displaying

Gregory IX, Pope (d. 1241)

the pope as the true leader of Christendom. Yet Gregory VII had anticipated many of the ideas of the later crusade, and his proposed expedition in 1074 might be considered as a first draft for the one that actually took place in 1096. It was Urban who linked the idea for an expedition to Jerusalem with the spiritual benefit for the laity that Gregory suggested could be obtained by fighting on behalf of the church, but without the ideological developments during the pontificate of Gregory, the First Crusade would probably not have occurred, and certainly not when, and with the ideas, that it did.

Gregory IX, Pope (d. 1241)

Pope (1227–1241).

Hugo (Ugolino) of Segni, who as pope took the name Gregory, was born around 1170. While a cardinal (1198–1226), Hugo preached the Fifth Crusade in northern Italy as a joint papal-imperial legate (1217–1221) and witnessed the deleterious effects of the emperor Frederick II's repeatedly delayed departure upon the enterprise.

Elected pope on 19 March 1227, Gregory invoked the excommunication previously accepted by Frederick as the penalty he would have to pay if he failed to fulfill his crusading vow on schedule (September 1227). Although Frederick's crusade gained Christians access to Jerusalem through a ten-year truce with the Ayyūbid sultan al-Kāmil

(February 1229), his excommunicate status and his political claims as husband of Isabella II, heiress to the kingdom of Jerusalem, caused lasting and debilitating divisions among the leaders of Outremer. The emperor returned to rout the papal army that Gregory IX had sent to invade Sicily, leading to a temporary settlement of the papal-imperial conflict at the Treaty of San Germano (1230).

Although Gregory initially condemned Frederick's treaty with al-Kāmil, it enabled him to pursue plans for crusades in other areas. After the legate Romanus successfully concluded the Albigensian Crusade at the Peace of Paris (1229), Gregory drew the mendicant orders, whom he had fostered from their very origins, into the earliest papal antiheretical inquisitions, as well as into crusade recruitment, mission work, and negotiations concerning reunion with the Greek church. Seeking to protect recent converts in the Baltic region from oppression by the Order of the Sword Brethren and other crusaders, Gregory used the Dominican Order to channel aid, in addition to papal and imperial privileges, to the Teutonic Order. In 1234 he began planning a crusade in expectation of the expiration of Frederick's treaty in 1239, although a general passage to the Holy Land never materialized, as crusaders were diverted to other projects. Delayed by the papal-imperial struggle, yet hoping to protect Frederick II's gains in the Holy Land, some crusaders led by Thibaud IV of Champagne and Richard of Cornwall reached Outremer in 1239 and 1240.

Gregory's pontificate saw the first full application of crusading indulgences, privileges, and taxes to the struggle against the emperor, as well as the increasingly forceful commutation of crusaders' vows from expeditions to Outremer to other enterprises that were portrayed as more urgent or equally essential for the preservation of the Holy Land. These measures and the diversion of the clerical income tax normally reserved for the crusade to the papal-imperial conflict foreshadowed the full development of political crusades against papal enemies by Gregory's successor, Innocent IV. For after Frederick II sought greater influence in areas technically subject to the papacy, including Lombardy and Sardinia, Gregory excommunicated him in 1239, ordered a crusade to be preached against him in Lombardy and Germany, and convoked a general council meant to depose the emperor to be held in Rome in 1241. However, this project was ended by a blockade imposed on Rome by the emperor, during which Gregory died (22 August 1241).

Gregory X (1270–1276)

Pope (1271–1276). Tedaldo Visconti was an archdeacon of Liège on pilgrimage in Outremer when he was elected pope in 1271. His predecessor, Clement IV, had died on 29 November 1268, and the interval that followed constituted the longest vacancy in papal history. Gregory's election occurred only because St. Bonaventure and the mayor of Viterbo locked the cardinals in a palace on a diet of bread and water until they elected a pope. The length of Gregory's journey back from Outremer to Rome further delayed his coronation until 27 March 1272.

Because his predecessors had succeeded in obliterating the political power of the Staufers emperors, Gregory was free to develop his plans for the reunion of the Greek Orthodox and the Latin churches; in his eyes, this was necessary for a new crusade and the protection of Outremer. While still in Outremer, Gregory wrote a letter to the Byzantine emperor Michael VIII Palaiologos expressing his interest in opening negotiations for union. Once in Rome, the new pope called for a council to be held in Lyons to discuss union with the Orthodox, a new crusade, and reform of the church.

The council opened on 7 May 1274. The Orthodox delegation sent by the Byzantine emperor was small but was authorized to accept Latin definitions of papal authority, purgatory, and the procession of the Holy Spirit. Gregory demanded that the Byzantines fully accept Latin teaching but acknowledged that it would take time for change to take place. Although some Orthodox theologians were interested in Latin theology, much of the Byzantine interest in union was predicated on the belief that it would prevent Western attacks on the empire.

Gregory overturned previous papal support for Charles I of Anjou, king of Sicily, seeing his growing influence in northern Italy as a threat to papal independence. This furthermore pleased the Byzantines, for an invasion by Charles was one of the threats the Byzantine emperor feared the most. Gregory's planned crusade never materialized, mainly as a result of European conflicts that lessened monarchical interest in joining the crusade. Gregory died on 10 January 1276 in Arezzo.

Gregory the Priest

An Armenian historian active in the mid-twelfth century, who is known for a single work covering the history of his people in Cilician Armenia from 1136 to 1162. Gregory's history is a continuation and conclusion of the much longer chronicle of Matthew of Edessa. Given its modest length as well as its limited chronological and geographical scope, Gregory must be ranked as one of the lesser historians of the crusading period.

Other than that he was a priest and came from Edessa (mod. Şanlıurfa, Turkey), nothing seems to be known about Gregory or how he came to continue the history of Matthew. He evidently drew all his information from his own experi-

Guibert of Nogent (1055–c. 1125)

ence as an eyewitness. The central theme of his history is the repeated attempts of outsiders (Greeks, Turks, and crusaders) to impose their rule over Cilician Armenia and the increasing inability of the Armenians to resist.

At least twenty manuscripts of the history survive today. The Armenian text was edited twice in the nineteenth century; it was translated into French in 1858, Turkish in 1962, modern Armenian in 1973, and English in 1993.

Grigor of Akanc'

See Armenian Sources

Guibert of Nogent (1055–c. 1125)

Chronicler of the First Crusade (1096–1099) and the early years of Frankish Outremer.

Born into a noble but obscure French family, Guibert entered the abbey of Saint-Germer-en-Fly as an adolescent, and in 1104 he was elected abbot of Nogent-sous-Coucy. The outlines of his life are known from his autobiography. An accomplished Latinist, he cultivated a difficult style that failed to please either contemporaries or posterity. He was one of three key Western churchmen to rework the popular account of the First Crusade, the *Gesta Francorum*, and to fashion from it the elements of a crusade theology in his revealingly named and unjustly neglected *Dei Gesta per Francos* (1109). His extraordinary knowledge and extreme prejudice is visible from the opening of Book I, which gives some account of the religious background to the crusade, starting with the heresies of Pelagius, Arius, and Manes and proceeding through the degeneration of the Greek Church.

His account of the Prophet Muḥammad and the "pagan heresy" of Islam would offend a Muslim but is striking for its rarity in a Christian source of this period. He preserves a letter of the Byzantine emperor Alexios I Komnenos to Duke Robert I of Flanders, detailing the menace from the Turks faced by the empire and its holy places.

Dei Gesta goes far beyond its main source in providing additional material, both written (from Fulcher of Chartres and the letters of Anselm of Ribemont) and oral. It provides unique insights into medieval mentality in its disdain of the poor and their leader Peter the Hermit, and in its attempt to exculpate fallible nobles such as Stephen of Blois.

Guillaume de Machaut (d. 1377)

One of the greatest French poets and musicians of the Middle Ages, whose works included *La Prise d'Alexandre*, an account of the crusade of King Peter I of Cyprus against Egypt (1365).

Born in Champagne around 1300, Machaut served various members of the French nobility and royalty as well as John of Luxembourg, king of Bohemia. Machaut evidently met Peter I when the latter was touring Europe in 1364 to

raise support for a new crusading venture. After the failure of Peter's expedition, Machaut wrote a verse history in French dealing with the crusade and its brief capture of Alexandria. It presents Peter as an epic hero in the style of the Arthurian and Alexandrine romances of the day. Machaut relied on secondhand information, although much of this came from eyewitness reports and sources now lost.

Guillaume de Puylaurens

See William of Puylaurens

Gunther of Pairis

A Cistercian monk of the abbey of Pairis in Alsace and author of the *Hystoria Constantinopolitana*, an account of the Fourth Crusade (1202–1204).

Inspired by the crusade exploits of Martin, abbot of Pairis, Gunther crafted his initial version of the *Hystoria* before the end of 1205. Originally it contained twenty-four prose chapters, each followed by a poem; in 1207 or 1208 he added a twenty-fifth, anticlimactic, and structurally disharmonious chapter and poem. Gunther's main objectives were to celebrate the actions of Abbot Martin and to justify the crusaders' capture and sack of Constantinople, acts that Gunther interpreted as directed by God. To achieve this dual purpose, he employed a number of artistic devices. One was irony, which underscored the theme that the ways of God transcend human understanding. Thus, Abbot Martin's theft of relics was "sacred sacrilege," because this apparently sacrilegious act was part of the Divine Plan—a plan that Gunther attempted to mirror in the *Hystoria*'s structure. By

juxtaposing the first twelve chapters with the last twelve, which enabled him to echo scenes, themes, and motifs, Gunther argued in word and form that God used human agents to achieve ends they could never imagine. Because of its apologetic purposes and artistry, the *Hystoria* contains numerous factual errors. Gunther died around 1210.

Guy of Lusignan (d. 1194)

King of Jerusalem as consort to Queen Sibyl (1186–1190/1192) and subsequently lord of Cyprus (1192–1194) after its conquest in the course of the Third Crusade.

Guy was a son of Hugh VIII of Lusignan, a nobleman from Poitou in the Plantagenet sphere of influence in southern France. In 1180 his brother Aimery, who had gone to the Holy Land in 1174, proposed Guy as a suitable husband for Sibyl, elder sister of Baldwin IV, king of Jerusalem. Baldwin wanted an ally in case Raymond III of Tripoli, Bohemund III of Antioch, and the Ibelin clan grew too powerful in Outremer. On his marriage Guy was made count of Jaffa (mod. Tel Aviv-Yafo, Israel) and Ascalon (mod. Tel Ashqelon, Israel); as a protégé of the king and the king's mother, Agnes of Courtenay, he became an enemy of the opposing faction (the side favored by the chronicler William of Tyre).

In 1183 the leper king named Guy as his regent and handed over all the Crown lands except Jerusalem. However, the two men very quickly quarreled over these lands and over Guy's performance on the battlefield. When Saladin invaded Galilee in October, Guy led the army to meet him at Saforie but avoided battle. These were reasonable tactics but could be interpreted as cowardice. Baldwin IV then acted to prevent Guy from ruling, designating as heir his young nephew Baldwin V (Sibyl's son by her first husband, William of Montferrat). The king also tried to have his sister divorced in 1184, so that Guy could not serve as

regent. Although this attempt came to nothing, it deepened the breach between the king and his sister's family, to the point that Guy and Sibyl refused to let Baldwin enter Ascalon. When Guy failed to appear at court that same year, Baldwin IV confiscated Jaffa. He then convened the High Court of the kingdom to make further arrangements for the regency of Baldwin V, so that Guy could not even act as his stepson's guardian. Baldwin IV had effectively closed off all Guy's avenues to power save one, for he had failed to separate his sister from her husband.

After the deaths of Baldwin IV in 1185 and Baldwin V in 1186, the barons of Jerusalem turned to the king's sisters. Sibyl seized power with the help of Reynald of Châtillon, lord of Transjordan, and Eraclius, patriarch of Jerusalem. She agreed to a divorce from Guy and was crowned by the patriarch, who then asked her to select a suitable husband. Sibyl chose Guy, negating the divorce and reopening all the quarrels that had divided the kingdom during her brother's lifetime. A significant number of powerful lords, including Reynald, refused to accept the situation. Raymond III urged Isabella's husband, Humphrey IV of Toron, to press his wife's claims, but Humphrey recognized Guy and Sibyl as his sovereigns. Although civil war had been averted, the new king and queen had angered several magnates. Balian of Ibelin, Isabella's stepfather, and his brother Baldwin, who had once planned to marry Sibyl, never became reconciled.

Reynald showed his independence by refusing to honor the king's truce with Saladin. When Saladin invaded Galilee in 1187, the largest Frankish army ever assembled advanced to the relief of Tiberias (mod. Teverya, Israel), where Eschiva, Raymond III's wife, was under siege. Guy and the Templars decided to attack, despite Raymond's strenuous objections against leaving their position. Historians have long discounted chivalry as the reason behind this strategy. It seems much more likely that Guy felt he had to act, either because his refusal to move in 1183 had cost him the regency, or because he and the Templars needed a victory to justify spending funds sent by King Henry II of England for the defense of the kingdom. The Franks were trapped at Hattin and virtually wiped out (4 July 1187). Guy was captured, and most of Outremer's barons suffered a similar fate or died that day. Saladin took Jerusalem later that summer, marking the end of the First Kingdom, though not of Guy's bids for power.

When Guy was released in 1188, he returned to a desperate situation, for himself and for the kingdom. The Franks

had retained control of Tyre (mod. Soûr, Lebanon) with the help of Conrad of Montferrat, a brother of Sibyl's first husband, who had joined the Ibelin clan in opposing Guy. In 1189 Conrad refused to allow Guy entry into Tyre, so Guy laid siege to the city. Here he gained the assistance of men who had arrived from Europe on the Third Crusade (1189-1192). However, the deaths of Sibyl and her two daughters in 1190 further weakened Guy's claim to the throne. The Ibelins proclaimed Isabella queen, divorced her from Humphrey IV of Toron, and married her to Conrad. Guy refused to acknowledge Conrad and attacked the Muslim-held city of Acre (mod. 'Akko, Israel).

At this point, Philip II Augustus, king of France, arrived in Outremer. He supported Conrad; together the two joined the siege of Acre in 1191. Guy then left for Cyprus, where he helped Richard I of England conquer the island. Because Richard backed Guy's claim, his problems with Philip grew. Finally the two kings arranged that Guy would reign and Conrad would be his heir. In July 1191 Acre fell to the crusaders and Philip returned to France. Conrad then moved to exclude Guy from power. By this point, Richard's support for Guy's kingship had worn thin. He sold the island of Cyprus to Guy, hoping this would ease the tension.

In April 1192 Conrad was assassinated. His widow, Queen Isabella I, retained the throne, and the barons quickly married her off to Henry of Champagne. Guy then took part in an unsuccessful scheme to wrest Tyre from Henry's grasp. Richard withdrew all aid for Guy and left Outremer later that year. Realizing that his hopes for the throne could not be realized, Guy moved to Cyprus with his remaining supporters. He encouraged magnates from the mainland to relocate, offering land and money fiefs as an incentive. Great families of Outremer built up estates on the island as well as the mainland; their interests in both places shaped politics over the next century. Guy died in late 1194. His brother Aimery became lord and later king of Cyprus. This kingdom stayed in the hands of the Lusignan family until 1489.

Guy of Vaux-de-Cernay (d. 1225)

A Cistercian monk who preached in support of the Fourth Crusade (1202–1204) and the Albigensian Crusade (1209–1229).

While he was serving as abbot of the Cistercian monastery of Vaux-de-Cernay (1181–1212) near Paris, Guy's association with the king of France and the school of Peter the Chanter drew him into preaching the Fourth Crusade with Fulk of Neuilly. By 1200, Guy and the abbot of St. Victor (Paris) were commissioned to help organize the new crusade

and collect the clerical income tax imposed for it. Guy also successfully recruited many noblemen with ties to his monastery and acted as their spiritual director, leading Simon and Guy of Montfort and many others to proceed directly to the Holy Land, rather than accept the expedition's diversion to Zara (mod. Zadar, Croatia) and Constantinople (mod. İstanbul, Turkey).

Abbot Guy was one of twelve Cistercian abbots who preached against heresy in southern France with Diego of Osma, Dominic Guzman, and the legate Arnold Amalric from the spring of 1207 onward. By 1208 he had joined masters trained in Paris in recruiting individuals for an antihetical crusade in Languedoc, including Simon of Montfort and many who had previously participated in the Fourth Crusade. Guy and other preachers continued to combat heresy through preaching while acting as spiritual directors for the crusading army. Appointed bishop of Carcassonne (1212–1223), Guy sought to combine these activities with the spiritual and temporal renovation of his diocese, attendance at reforming councils, sponsorship of Dominic's new religious house at Prouille (which adopted Cistercian customs), and crusade-recruiting missions that took him and Bishop Fulk of Toulouse to northern France. From 1212 onward, he was accompanied by his nephew, Peter of Vaux-de-Cernay, whose *Historia Albigensis* provides valuable evidence of his uncle's career.

Ḥafṣids

A North African dynasty (1229–1574) whose power base was Tunisia (Arab. Ifriqiya), characterized by strong ties with Christian powers and domestic infighting. The founder, Abū Zakariyyā', had trade agreements with French and Italian principalities, and by the 1270s the major partner was the Crown of Aragon. Frequent struggles with the towns of Constantine and Bougie (mod. Bejaïa, Algeria) undermined Tunis's power, allowing Aragonese influence to increase after King Peter III sent an expeditionary force to support his candidate in 1279. As relations declined, Aragon took the island of Jerba and allied with the rival Marinids.

Internal disarray and invasion (by Bedouins and Marinids) characterized the fourteenth century. Stability returned with the rule of Abū'l-'Abbās, who reunited the Ḥafṣid realms and resisted the French-Genoese invasion of Mahdia in 1390. In 1432 Abū Fāris reestablished control over Jerba (initially retaken in 1335), after defending the inhabitants from Aragonese invasion, and conquered Tlemcen and Ceuta.

Under 'Uthmān the situation deteriorated: the succession faltered and Muslim neighbors encroached. The coast became a lair for pirates, who raided the northern shore and attacked the Ḥafṣids. Bougie and Tripoli were lost to the Spanish in 1510; Tunis fell to Turkish-led Algerian forces in 1534. Restored by the French, the dynasty persevered

with Spanish assistance until 1569 against the Turks, who had taken Mahdia in 1554.

The Ḥafṣids readily engaged Christians as diplomatic partners, playing them off against each other and against Muslim rivals. In 1254 Pope Alexander IV disauthorized a crusade proposed by the bishop of Tarragona against Tunis. In the late thirteenth and fourteenth centuries, diplomacy and exchanges of soldiers continued with Aragon. The Mallorcan missionary Ramon Llull was expelled for preaching in Bougie in 1307; he returned in 1314 and was rumored to have been stoned to death. Another Mallorcan, the Franciscan Anselm Turmeda, converted to Islam and wrote anti-Christian polemics from Tunis. In the end, the Ḥafṣids depended on Christian allies to save them from the Muslim Ottomans.

Haifa

A town and port in northern Palestine, known in Latin as Cayphas (mod. Hefa, Israel), a lordship in the kingdom of Jerusalem.

On the eve of the First Crusade (1096–1099), Haifa was a small town, mainly populated by Jews, with its own harbor and a castle manned by a Fāṭimid garrison. The crusaders decided to attack it in the summer of 1100 in the search of a better port than that of Jaffa (mod. Tel Aviv-Yafo, Israel). The conquest was planned by Godfrey of Bouillon, Frankish ruler of Jerusalem, before his death: it was intended to be a combined naval expedition by a Venetian fleet and terrestrial forces commanded by Tancred, prince of Galilee, who was promised the lordship of the town. However, surprised by the fierce defense of the garrison, the Venetians withdrew, and Tancred's knights were challenged by the inhabitants and compelled to conduct a long siege. They finally set fire to the fortress and conquered the town, having massacred the Jewish population.

The death of Godfrey of Bouillon and the succession of Baldwin I as king of Jerusalem, despite Tancred's opposition, brought a revision of the royal policy concerning Haifa. Baldwin enfeoffed it to Tancred's rival, Geldemar Carpinel, whose claims were based on an earlier promise by Godfrey. Geldemar settled in the restored fortress of the town with his vassals and until 1108 held a lordship separate from the principality of Galilee; it extended over Mount Carmel and included several villages on the coastal area between Acre (mod. 'Akko, Israel) and Atlit (mod. 'Atlit, Israel). According to the Arab geographer al-Idrisī, who wrote in the middle of the twelfth century, the harbor of Haifa was the main seaport for Galilee and its revenues were the principal source of prosperity of its lords.

After Geldemar's departure to Hebron, Baldwin I granted the lordship to another of his vassals, Pagan, who founded a dynasty that ruled until the second half of the thirteenth century. The lords enjoyed baronial privileges, such as rights of justice and use of a seal bearing the symbol of the castle of Haifa. They had to provide ten knights to the royal army. Despite their relatively high rank within the Frankish nobility, the lords of Haifa did not play an important role in the political life of the Latin kingdom and dedicated themselves to administering their lordship. In the aftermath of the battle of Hattin (1187), Haifa was conquered by Saladin's army.

This conquest proved to be important during the Third Crusade (1189–1192), especially when the crusaders laid siege to Acre. Haifa became a rear base of Saladin in his efforts to rescue Acre; Egyptian vessels carried supplies to his army, and the harbor became an important store for food.

Its strategic importance was obvious to King Richard I of England, who attempted to conquer it. In order to prevent Haifa and its stores from falling into crusader hands, Saladin ordered its evacuation and the destruction of its walls. After the reconquest of Acre, Haifa was restored to its former lords. However, its fortifications were not rebuilt until a program of reconstruction was carried out by Louis IX, king of France (1250). During the struggles among the nobility of the kingdom after Frederick II's crusade, the lords of Haifa supported the emperor, and one of the members of the family, Reynald, was appointed as governor of Jerusalem.

Due to the expansion of monasteries near Haifa and their endowment with some of the villages of the lordship, the lords of Haifa became more dependent on revenues from its harbor. Although a minor port compared with Acre, Haifa had an important share of the maritime trade. It attracted the interest of Genoese merchants, who in 1244 obtained trade privileges in Haifa, although these did not include the establishment of an autonomous commune.

The history of Frankish Haifa came to an end in 1265, when the Mamlūk army of Baybars I stormed the city and destroyed it. Part of the population remained within its ruins until its final conquest in 1281.

Al-Ḥākīm (985–1021)

Al-Ḥākīm bi-Amr Allāh was the sixth Fāṭimid caliph (996–1021).

He was only eleven when he acceded to the caliphate, so for the first five years of his reign effective power lay in the hands of his subordinates. However, in April 1000 he had Barjuwān, his tutor and the current *wāsiṭah* (prime minister), killed, and from then on he reigned as absolute ruler of the Fāṭimid state in Egypt and Palestine. His reign was characterized by numerous executions and the promulgation of unpopular and seemingly bizarre legislation, the latter often followed by the mitigation or abolition of said laws, followed by their reintroduction, apparently according only to his whims. He took measures against Sunnīs,

women (including his own sister and wives), and dogs; prohibited various foods, questionable pursuits, and the game of chess; and most importantly for crusade studies, enacted several measures against Christians and Jews. These included forcing them to wear distinctive dress, demolishing churches or converting them into mosques, banning processions on holy days, and confiscating the property of monasteries. In 1009–1010, he had the Church of the Holy Sepulchre in Jerusalem demolished, an event that sent reverberations through Christendom and probably contributed to the buildup of support for the First Crusade (1096–1099).

At times al-Ḥākim also legislated in favor of Sunnīs, Christians, and Jews. For example, in 1013 he allowed Christians and Jews to emigrate to Byzantine territory; in 1021 he allowed Christian converts to Islam to celebrate Mass, restored monasteries, and returned their possessions; and at times he authorized the use of the Sunnī fasting practices and *adhān* (call to prayer).

Toward the end of his reign, he became increasingly ascetic, wearing ragged clothes, abstaining from food and bodily pleasures, riding only a donkey, and forbidding his subjects from prostrating themselves before him. Then in February 1021 he vanished while wandering in the Muqāṭṭam hills on the outskirts of Cairo. Various explanations have been given for this. Some believe that he was murdered at the instigation of his sister, Sitt al-Mulk, with whom he was at odds. However, the Druze, a Shīʿite sect regarding him as a manifestation of the Divinity, believe that he entered occultation and will return at the end of the world.

Scholars have remained divided on the issue of al-Ḥākim's sanity. Some regard him as having been a dangerous lunatic, while others maintain that his actions had sensible motivations. Whichever is correct, his reign was filled with inconsistent attitudes toward his subjects that defy full explanation.

Hakon Palsson (d. c. 1123)

Earl of Orkney (1103–c. 1123), who went on a pilgrimage to Jerusalem around 1120, probably in expiation of his sins relating to the murder of his cousin and co-ruler, Magnus I Erlendsson.

Hakon was born around 1170, the son of Earl Paul I, who ruled Orkney jointly with his brother Erlend II until 1098, when King Magnus III Barelegs of Norway took control of the islands and sent the earls to Norway, where they both died soon after. In 1103 Sigurd, the ruler installed by Magnus, was recalled to Norway to be crowned joint king, whereupon Hakon claimed his birthright to Paul's share of the earldom of Orkney.

A few years later, Erlend's son Magnus obtained his father's share, and the two cousins ruled the earldom jointly until Hakon murdered Magnus on the island of Egilsay (1115/1117). Hakon's pilgrimage took him via Rome to the Holy Land, where he saw the holy places in and around Jerusalem and bathed in the river Jordan, where, as was customary, he brought back a palm frond from the far bank. A round church at Orphir on the mainland of Orkney may have been built by Hakon on his return from the Holy Land in imitation of the Church of the Holy Sepulchre in Jerusalem, but its circular shape might also be the result of inspiration from southern Scandinavia or Bohemia.

Halmyros, Battle of (1311)

A battle fought on 15 March 1311, between Walter I, duke of Athens, supported by many of the leading knights of Frankish Greece, and the Catalan Company, the duke's former mercenaries, whom he was trying to dismiss from his service and remove from his duchy.

The battle was decisive in that many members of the French ruling element in central Greece were slaughtered and replaced by the victorious Catalans. Like other battles of the fourteenth century, it demonstrated how well-drilled foot soldiers with crossbow support could trounce an army of mounted knights. The site of the battle is not securely known. The medieval writers Ramón Muntaner and Nikephoros Gregoras both located the battle on the marshy plain of the Kephissos in the region of Orchomenos; in this they were followed by all writers before 1940, who thus named the engagement the battle of the Kephissos. In 1940 a hitherto unknown letter of Marino Sanudo came to light; written in 1327, it referred to the battle taking place near Halmyros, presumably at or near the modern town of Halmyros, just south of modern Volos on the Pagasaitic Gulf.

Hamburg-Bremen, Archbishopric of

The northernmost archbishopric of medieval Germany, founded on the two missionary bishoprics of Bremen and Hamburg. In Bremen the first cathedral was built as early as 789, whereas the bishopric of Hamburg came into being in 831.

In 832 Pope Gregory IV turned Hamburg into an archbishopric and gave Archbishop Ansgar the task of Christianizing the Swedes, the Danes, and the western Slavs. In 847 Ansgar was expelled from Hamburg by the Danes, who raided and burned the town. He took refuge in Bremen and was able to take over the bishopric there, which was vacant.

Shortly afterward, Hamburg and Bremen were made into one joint archbishopric. Like the Christianization of the Scandinavians, the mission to the Slavic peoples east of the river Elbe was a central concern for the archbishops of Hamburg-Bremen, especially from the tenth century, when a missionary bishopric was founded at Oldenburg in Holstein and placed under the jurisdiction of Hamburg-Bremen.

It was not until the mid-twelfth century that the Christianization of the western Slavs met some lasting success after the so-called Wendish Crusade of 1147 and the involvement of Henry the Lion, duke of Saxony, in the conquest of the Slavic lands. The old bishopric of Oldenburg was now moved to Lübeck and in 1160, together with two new bishoprics in Schwerin (originally in Mecklenburg) and Ratzeburg, formally subjected to Hamburg-Bremen by a new papal decision.

In the 1180s the archbishopric of Hamburg-Bremen also became engaged in the Christianization of the peoples of the eastern Baltic region through the work of Meinhard, a cleric from Segeberg in Holstein. For some time Meinhard had been committed to the work of preaching to and baptizing the pagan Livonians, with the support of the archbishop of Hamburg-Bremen. In 1186 Archbishop Hartwig II appointed Meinhard as first bishop of Livonia and made the new diocese part of the archbishopric. This arrangement lasted only until 1210, when the bishopric of Livonia (Riga) became exempt; later it was raised to the status of an archbishopric itself.

In the early 1230s the archbishop initiated a new series of crusades, this time against the population of the northwestern parts of the archbishopric, who were known as the Stedinger. Archbishop Gerhard II accused them of heresy and persuaded the pope to call for a crusade against them. It was, however, only after a series of hard-fought campaigns that the crusaders were finally able to defeat the Stedinger in 1234.

The engagement of the archbishopric of Hamburg-Bremen in the crusading movement in general, particularly in the Baltic Crusades, continued over the years, inasmuch as clerics preached crusades, collected alms and crusade taxes, and also recruited crusaders within the boundaries of the archbishopric. The city of Lübeck, also located within the archbishopric, became the most important crusade harbor of the region, with seasonal shipments of crusaders to the eastern Baltic region.

Ḥanbalīs

The adherents of one of the four schools of Islamic law (Arab. *madhāhib*, sing. *madhhab*), who played an important role in propagating opposition to Frankish rule in the Levant. Ḥanbalī scholars served this cause while acting as propagandists of jihad (holy war) in the courts of local rulers, as popular preachers (some of whom joined the army on military campaigns), as authors of religious treatises of various genres, as emissaries to the caliphal court in Baghdad, and, in one case, as a leader of an emigration of villagers from Frankish Outremer to Muslim-ruled territory.

The Ḥanbalī school struck roots in Syria and Palestine in the eleventh century with the establishment of Ḥanbalī communities in Damascus, Jerusalem, Harran, Baalbek, and Mt. Nablus. It is considered to have been founded by the Baghdadi Aḥmad Ibn Ḥanbal (d. 855), who preached a strict reading of the letter of the law, literal interpretation of theological maxims in the Qurʾān, rigid mores, an ascetic lifestyle, and material independence from rulers. Ibn Ḥanbal's followers, especially between the ninth and thirteenth centuries, clashed with Shīʿites, with adherents of schools of speculative theology (the Muʿtazila and Ashʿariyya), and with any individual or group they considered heretic or corrupt. Ḥanbalīs stood in the forefront of the political-religious movement of Sunnī restoration, initiated in the court of the ʿAbbāsīd caliph in face of the Shīʿite-Buyid occupation of Baghdad in the eleventh century, which was taken up by the Zangid and Ayyūbid rulers of Syria in the later twelfth and thirteenth centuries.

Harran

A city in Upper Mesopotamia, some 35 kilometers (c. 22 mi.) south of Edessa (mod. Şanlıurfa, Turkey).

In ancient times Harran was the site of a famous moon cult, which survived well into the Islamic period. In the seventh century Harran was briefly the Umayyad capital; parts of the Great Mosque date from this period.

Though repeatedly threatened by the Franks during the first quarter of the twelfth century, Harran remained an important Muslim shield against the county of Edessa. Divisions in the Muslim world made Harran a target for the Franks in 1104; a siege mounted by Baldwin II of Edessa, Joscelin I of Courtenay, Bohemund I of Antioch, and Tancred was lifted at the approach of a relieving Muslim army. Jökürmish of Mosul and Suqmān ibn Artūq of Mardin cut the Franks of Edessa to pieces; both Baldwin and Joscelin were captured.

Harran was taken by Zangī in 1127; his governor there informed him of the weakening of Edessa's garrison in 1144, leading to the capture of that city. Saladin used Harran, controlled by his follower Gökböri, as a base in his operations against Mosul (1182–1186). The city and citadel were strengthened by Nūr al-Dīn and by the Ayyūbids, but Harran was systematically depopulated and destroyed by its Mongol rulers in 1271. The Mamlūks garrisoned the citadel for a time, but the town never recovered.

Harria

Harria (Est. Harjumaa) was a province of medieval Livonia, corresponding to the northeastern coast of modern Estonia,

conquered in the course of the Baltic Crusades in the thirteenth century. Harria was originally a central province south of the coastal land called Revalia, but during the thirteenth century the name came to be applied to both areas. The name of Revalia survived only in the name of the city and castle of Reval (mod. Tallinn, Estonia).

The chronicle of Henry of Livonia mentions important Estonian hill forts at Lone (mod. Lohu), Warbola (mod. Varbola), and Keava; Raigele (mod. Raikküla) was known as a meeting place of the surrounding Estonian tribes. The German crusaders based in Riga began to mount raids into Harria in 1216, but after the Danes gained control of Reval in 1219, Harria was disputed between the two Christian powers until the Treaty of Stensby awarded the province to the king of Denmark (1238). Harria was the region with the greatest development of new manors, and the royal vassals in Harria and Vironia emerged as a powerful corporation able to pursue its own interests and policies. The rapid development of a manorial system has been regarded as a main reason for the St. George's Night revolt of the native Estonians, which started in Harria in 1343.

In 1346 Harria was sold together with the rest of North Estonia to the Teutonic Order. Reval became the center of administration. The order extended the inheritance rights of the nobility of Harria and Vironia in 1397 to secure their support for the policies of the order in Livonia, but it was also to develop its own domains in Harria.

Hartmann von Aue

A German poet active in the period 1180–1200, known as the first adapter of Arthurian romance in Middle High German (*Erec and Iwein*). Hartmann also wrote religious narratives (*Der Arme Heinrich* and *Gregorius*), love songs, and three

crusading songs, either for the Third Crusade (1189–1192) or the crusade of Emperor Henry VI (1197–1198). In two of these, Hartmann laments the death of his lord, possibly Berthold IV, duke of Zähringen (d. 1186), or Emperor Frederick I Barbarossa (d. 1190), or even Emperor Henry VI (d. 1197), giving a rare glimpse into personal motivations for taking the cross.

The song *Swelch vrowe sendet ir lieben man* (VI) argues, like works by the poet Albrecht von Johansdorf, that the woman who sends her lover on crusade will earn half his spiritual reward—if she keeps faith with him and prays for them both, while he fights for them both. Argued with powerful emotion, *Dem kriuze zimet wol reiner muot* (V, "Purity and chastity befit the crusader") requires radical renunciation of the world and the devil, insists that the crusader bring both faith and works to the service of God, and rejoices at the promised entry to the tenth choir of heaven. Hartmann mourns the death of his unnamed lord, praying that half the crusader's reward should accrue to his lord's salvation. For all its austerity, the song promises "praise in this world" as well as "the soul's salvation" [*Des Minnesangs Frühling*, V, 2].

In *Ich var mit iuweren hulden* (XVII), the poet seeks leave of lords and kinsmen. Love has taken him captive and demands he fight in her cause—but not that love the Minnesinger praise, all words not works, vain hope that is not reciprocated. It is love of God and sorrow at the death of his lord that together make him go out to fight "Saladin and all his army" (XVII, 1)—though without this personal bereavement, as the ambiguous manuscript text appears to say, the crusade would not have drawn him abroad.

Hattin, Battle of (1187)

A decisive defeat of the armies of Outremer by the forces of Saladin on 4 July 1187, leading to the collapse of the Latin kingdom of Jerusalem and the loss of the city of Jerusalem to the Muslims.

From the 1170s on, Saladin, the most powerful Muslim ruler in the Near East, launched a series of attacks against the kingdom of Jerusalem. In 1185, however, a truce was concluded. When Reynald of Châtillon, lord of Transjordan, attacked a Muslim caravan traversing his territory in late 1186 or early 1187, Saladin demanded restitution. Reynald refused to comply, and Saladin raided Transjordan in May 1187. He also proclaimed the *jihād* (holy war) and assembled 30,000 troops, including 12,000 mounted men, from his empire in Egypt, Syria, and Mesopotamia. In the same month Guy of Lusignan, king of Jerusalem, called all able-bodied men of the kingdom to arms. They were reinforced by men drawn from the fortresses, mercenaries, and pilgrims, as well as by contingents from the principality of Antioch, the county of Tripoli, and the military orders. In June some 1,200 knights, 4,000 light cavalry, and 11,000–14,000 infantry assembled at the springs of Saforie, some 25 kilometers (15½ mi.) west of Tiberias (mod. Teverya, Israel).

On 27 June 1187 Saladin crossed the Jordan south of Lake Tiberias. The situation was reminiscent of events in 1183. At that time Saladin's invading forces had to withdraw (although after extensive raiding) because the Frankish army, then led by Guy of Lusignan as regent for King Baldwin IV, refused to be drawn from its advantageous position at La Fève to join battle. The operational concept of 1183 acknowledged the strategic disparity between the Frankish and Muslim sides: the Franks could not afford to lose a pitched battle for fear that their cities and fortresses—stripped of manpower to bolster the field army—would become easy prey for the victors if the battle was lost. Although Guy's tactics in 1183 were operationally sound and eventually successful, his course of action was severely criticized in the kingdom, and as a consequence he lost the office of regent. Saladin, by contrast, could afford to lose substantial forces in battle, as he could easily replace them from his vast dominions. He sought to draw the Franks from their position at Saforie by laying siege to Tiberias on 2 July 1187. The city fell quickly, but the citadel held out. The besieged Franks sent an appeal for help to the Frankish army.

The decision to leave the base at Saforie was debated at a council of war held on the evening of 2 July. A number of fac-

tors contributed to this decision. Among the Franks, two principal strategies to counter the Muslim numerical superiority were in evidence in the 1180s: One school, represented by Count Raymond III of Tripoli among others, favored avoiding a decisive encounter with the Muslims for fear of the possibly disastrous outcome. Another group, among them Reynald of Châtillon and Gerard of Ridefort, master of the Templars, advocated striking a decisive blow before the balance of power shifted even more in favor of the Muslims. More immediately, the loss of Tiberias threatened to give Saladin a permanent base in Galilee and close to the heart of the kingdom of Jerusalem. The Franks may also have underestimated the strength of the invaders. And last but not least, Guy's personal negative experience of 1183 may have influenced the decision to confront Saladin's forces in 1187.

On the morning of 3 July, the Frankish army left Saforie in order to relieve Tiberias. The Franks' main problem was access to water, which could only be found at the springs of Saforie, Turan, and Hattin along the way, whereas the Muslim forces could easily be supplied from Lake Tiberias. Once the Franks had passed Turan, the army was encircled by the Muslims, slowed down, and continually harassed. Fighting on the march, the Franks reached Maskanah where they spent the night. The Muslim forces, led by Saladin in person, converged on the encircled Franks.

On the morning of 4 July, the Franks progressed about 2 kilometers (1¼ mi.) along the road toward Tiberias. The rear-guard came under heavy attack by the main body of the Muslim forces. The Frankish advance came to a halt near the Horns of Hattin, a small elevated plateau, as a result of the continuing harassment by the Muslim light cavalry and bowmen, the lack of water, and the smoke from the fires that had been lit by the Muslims. Raymond of Tripoli and the vanguard had become separated from the main body of the Frankish forces. He and his mounted men broke through the Muslim lines to the northeast and escaped to Saphet.

The Franks' only hope was a breakthrough along the road toward Lake Tiberias. Their forces, however, had become disordered. Against the express orders of King Guy, the Frankish infantry retreated to the relative safety of the Horns of Hattin. But there was no water on the Horns, and the infantry could not be moved to resume the march. The mounted Franks had to retreat to the heights as well, as they could not hold their position without infantry support. From the Horns the mounted knights launched two charges at the Muslim center, but both were repulsed. The Muslims fought

Hattin, Battle of (1187)

The Horns of Hattin. (Courtesy Alfred Andrea)

their way onto the Horns against fierce resistance and captured the relic of the Holy Cross and the king's tent. When King Guy himself was captured, the battle was over. The surviving Franks surrendered. The infantry were enslaved or killed, while the secular knights were held for ransom. The knights of the military orders, however, were purchased by Saladin from their captors and decapitated. The only secular knight to share their fate, at Saladin's personal behest, was Reynald of Châtillon.

After the crushing defeat of the Franks, the kingdom of Jerusalem collapsed for lack of defenders. Most of the fortified places in the kingdom surrendered to Saladin or were captured soon after the battle; Jerusalem surrendered on 2 October 1187. The loss of Jerusalem brought about the Third Crusade (1189–1192), which resulted in the recapture of Acre (mod. 'Akko, Israel) in 1191 and the reconstitution of the kingdom of Jerusalem (although with greatly reduced

territory and without the city of Jerusalem) under King Guy, who had meanwhile been released from captivity. But the Franks were never able to recover fully from the defeat at Hattin, nor to regain a territorial basis that would have enabled them to perpetuate their hold on the East.

Hebrew Sources

The Hebrew sources for the First Crusade (1096–1099) are especially rich, comprising three narratives, which constitute some of the oldest examples of medieval Jewish historiography, and a considerable number of *piyyutim* (liturgical poems). For the Second Crusade (1147–1149) we have, besides poetry, one chronicle, which also contains some brief additional material in an appendix on the York pogrom in the Third Crusade (1189–1192). A second short work concerns Mainz at the time of the First Crusade.

The material for the First Crusade has engaged scholars since the end of the nineteenth century. Recent decades have seen a spate of new assessments of the material, especially in the United States and Israel. The three narratives consist of one long composite text ascribed to Solomon bar Simson, a shorter prose text interspersed with four pieces of liturgical verse by Eliezar bar Nathan, a halakhist (Jewish legal expert) from Mainz, who lived from about 1090 to about 1170, and another shorter text by the so-called Mainz Anonymous. The manuscript transmission of all three is sparse and faulty. Only Eliezar bar Nathan's chronicle has been transmitted in more than one manuscript, the oldest dating to the fourteenth century. The Mainz Anonymous exists only in one incomplete manuscript of the fourteenth century. The so-called Solomon bar Simson text exists in a single fifteenth-century manuscript. Because there is a great deal of overlap between the material covered in each of the narratives, many theories have been advanced about the relationship between them. Some have argued that their

interrelationship is indirect, with all three relying on common source material, such as an earlier report or communal letters; others have suggested that the shorter texts rely directly on the longer one, while still others have asserted the exact opposite. Some have combined all three propositions in a number of different ways. Generally most scholars agree that the three narratives were composed within fifty years of the 1096 pogroms, in other words, before the Second Crusade, although Robert Chazan has dated Eliezar bar Nathan's chronicle to after the Second Crusade. Most scholars also agree that of the three, the Mainz Anonymous was completed first.

The three chronicles describe the confrontation between the crusaders of the so-called People's Crusades (1096) and the Jews of the Rhineland. Considerable detail is given about relations between Jews and Christians in these towns, which seem to have been on the whole good in the beginning. Many Christians seem at first to have been prepared to help their Jewish neighbors. Graphic accounts are given about how the Jews sought protection of the bishops or archbishops of their towns. There are suggestions concerning the motives of Christians (crusaders, and later townsfolk, too) for attacking Jews (vengeance and greed) and offering them the choice between baptism and death, and also information about Jewish self-defense and the conversion many Jews were forced to endure. Attention is drawn to the plight of the converted and to the fact that most returned to Judaism as soon as they could. Particularly evocative are the heartrending scenes in which whole Jewish families decide they should martyr themselves in order to sanctify God's name (Heb. *kiddush ha-Shem*) rather than risk death or baptism at the hands of their enemies. The sacrificial slaughter of the young and old is an essential component of these texts. Very striking is the prominence given to female protagonists. The narratives are written in passionate Hebrew, celebrating the heroic deeds of the martyrs and invoking God's aid for his people.

All of these elements raise crucial questions about these texts. Were they written as history or as liturgy? How accurate is the information they give about what actually happened in 1096? How do they compare with the Latin sources concerning these events? Can so many Jews have martyred themselves and sacrificed their children? If so, how can this novel response to persecution, which hardly conforms to conventional halakhah (Jewish law), be explained? If not, what do these texts mean? What do these texts tell us about

Jewish experience in the Rhineland in this period? In short, what are these narratives really about?

Historiography of the nineteenth and much of the twentieth century assumed that the narratives are essentially historical. Although the Latin sources for these events are much shorter, they corroborate the fact that many Jews were killed and forcibly converted; they also attest that many Jews committed suicide and killed their children rather than be baptized. Scholars accepted the scale of martyrdom as accurate and tended to interpret this as a particular feature of the Jews of Ashkenaz (northern Europe). In the wake of the Holocaust, an extra dimension of emotionality was added to research into the 1096 pogroms, and many scholars took the acts of martyrdom as proof of the special tenacity of Ashkenazi Jews in resisting apostasy against all odds.

In recent years scholars have gone beyond examining the narratives for factual material and have paid much more attention to possible underlying meanings of the texts. A combination of literary and anthropological methods has been employed to decode their rich biblical imagery. These methods have produced suggestions that the chronicles contain far more information about the survivors of the pogroms, who wrote the texts, than about the martyrs themselves. Seen in this light, the narratives would bear testimony to how those who remained alive by succumbing to baptism came to terms with the guilt and ambivalence they felt toward those who had the courage to die. The underlying assumption here is that many more Jews were forcibly baptized than the chronicles were willing to admit. This methodology has also produced a reading of the texts as an *ex post facto* explanation of the 1096 pogroms. According to this assessment, the narratives would constitute a legitimization of the new kind of martyrdom that had occurred. By referring over and over again to Abraham's sacrifice of Isaac, the texts place the mass sacrifice of life in the Rhineland within the context of the Temple. Abraham bound Isaac on Mount Moriah, the supposed site of the future Temple of Jerusalem. Isaac was only one person; the Jews of Mainz outdid his sacrifice by over a thousand. By turning themselves and their children into Temple sacrifices, they brought Jerusalem to Mainz, robbing the crusaders of the very goal toward which they were marching. (Interestingly enough, no reference is made to those Jews who chose martyrdom through suicide rather than surrender to the Roman forces at the siege of Masada in 73, even though the Jews of Ashkenaz would have known about Masada through a Hebrew version of Jose-

phus's *History of the Jewish War*.) The narratives come alive through this kind of interpretation as a creative response to persecution and a dramatic statement of firm Jewish identity. Especially striking is the way close reading of the texts seems to reveal remarkable similarities with Christian images and values. The chronicles seem to reveal Jewish communities that were very much part of their surrounding society, notwithstanding the religious gulf that separated them from it.

Others have used similar methods, even as they have interpreted the texts as more accurate reflections of the actual events. A storm of debate was caused by a recent suggestion that the reports of martyrs slaughtering their own children before committing suicide themselves helped stimulate medieval Christians to suspect Jews of killing Christian children. These suspicions would have fed into blood libel accusations against Jews, which began to surface in the twelfth century, and they would have been strengthened by eschatological passages in the narratives that expressed the hope that the blood of the martyrs would hasten God's revenge on the enemies of Israel.

Another recent approach has been to distinguish carefully between different voices within the three narratives: the Mainz Anonymous, the author of the Trier section in the long composite text, the author of the Cologne section of that composition (Solomon bar Simson is named in this unit as the recorder of the persecutions in a village outside Cologne), the voice of the editor of the composition, and, finally, the voice of Eliezar bar Nathan. Voices one and two probably stand closest in time to the 1096 persecutions and seem to be particularly interested in the actual occurrences of spring and summer 1096. The other voices seem to be more concerned to give broader meaning to what occurred. They seem more ideologically propelled, with the aim of presenting a counterideology to the crusading ethos that was threatening Jewish survival. By extolling the heroism of the martyrs, they invoke God's future intervention on behalf of the Jews. It is the Jews undergoing *kiddush ha-Shem*, rather than the *milites Christi* (soldiers of Christ), who thus become the true servants of God. By contrast, the chroniclers' interest in the actions and intentions of individual Jewish men and women betray the twelfth century's widespread interest in the human condition, which is known so well from contemporary Christian sources.

In summary, one can say that it does seem likely that more Jews were forcibly baptized than the chroniclers wished to

portray. To a certain extent, they probably describe in broad terms what occurred, but at the same time the narratives should certainly also be read as the interpretations of events by people who survived the carnage of 1096. Seen in this light, the narratives present us with a vivid picture of robust Jewish communities engaged in an uncompromising rejection of Christianity even as the very terms of their response betray considerable knowledge and even absorption of Christian values and culture. The response of martyrdom to religious persecution, as recorded in the chronicles, became normative among Ashkenazi Jews and found its way into their liturgy.

The Hebrew narrative of the Second Crusade is the *Sefer Zekhirah* (*Book of Remembrance*), written by Ephraim of Bonn (died after 1196), a liturgist who headed the rabbinical court in Bonn for some years. The chronicle contains a number of poems, and the text was transmitted in the same manuscripts that contain Eliezar bar Nathan's narrative on the First Crusade. The narrative is particularly interesting in that it records how Bernard of Clairvaux stopped the monk Ralph from preaching violence against the Jews. An additional section describes anti-Jewish violence from 1171 to 1196 and contains some material on the martyrdom of the Jews of York in 1190. It is the Latin source material, however, that provides the greater amount of detail for that event. The *Divrei Zikhronot* (*Words of Remembrance*) by the pietist Eleazar ben Judah of Worms (c. 1165–c.1230) provides valuable information on the situation in Germany in the years 1187–1188.

Hebron

Hebron (mod. Al-Khalil, West Bank) is a town 30 kilometers (18³/₄ mi.) south of Jerusalem. A pilgrimage center and bishopric of the kingdom of Jerusalem, it was known to the Franks of Outremer as St. Abraham.

Hebron was renowned among Jews, Muslims, and Christians as the burial place of the biblical patriarchs Abraham, Isaac, and Jacob and their wives Sarah, Rebecca, and Leah. Various traditions also associated the site with the resting place of Adam and Joseph. The ancient sanctuary housing the saints' cenotaphs, converted into a church in the fourth century and then into a mosque after the seventh-century Muslim conquest, was plundered by the crusaders following the fall of Jerusalem in July 1099.

In late 1099 or early 1100, the town and sanctuary were taken by Godfrey of Bouillon, the ruler of Jerusalem, who appointed Geldemar Carpenel (d. 1101) as the first lord of Hebron. The territory changed hands several times over the following years, periodically reverting to the Crown and allowing the kings of Jerusalem to restructure the lordship on favorable terms. By 1112 a priory of Augustinian canons had been installed at the patriarchs' tomb. In 1119, during the lordship of Baldwin of St. Abraham (1119–1136), the Latin clerics at the site announced that they had discovered the relics of the biblical patriarchs, an event celebrated by Arabic chroniclers but greeted with indifference by the Patriarch Warmund and the Latin Church of Jerusalem.

In 1168, due to its strategic importance, coupled with its significance as a pilgrimage site, Hebron became the second Latin parish to be raised to the status of bishopric without precedent in the Greek ecclesiastical lists. Rainald, nephew of Patriarch Fulcher, became the first bishop, and the priory

Heinrich von Plauen (d. 1429)

was established as the city's cathedral chapter. Although the Frankish possession of the patriarchs' tombs caused difficulties for non-Christian devotees, in some cases forcing Jewish pilgrims to bribe the caretakers or to enter the sanctuary disguised as Christians, the site saw its share of Muslim and Jewish visitors throughout the crusader period, including the well-known traveler Benjamin of Tudela. Hebron was captured by Saladin in August 1187, and the Latin bishopric lapsed until around 1252, when it was resurrected and continued in titular form. In 1266, the Mamlük Sultan Baybars I formally barred Jews and Christians from the sanctuary, which had been changed back into a mosque, although as late as 1267 Pope Clement IV directed the Latin patriarch of Jerusalem to supply Hebron with a priest.

Hein van Aken

See Dutch Literature

Heinrich von Plauen (d. 1429)

A commander of the Teutonic Order who saved the territory of the order in Prussia after the battle of Tannenberg (1410) and subsequently became grand master (1410–1413).

Born around 1370 into a ministerial family from Plauen in the Vogtland (Saxony), Heinrich came to Prussia as a crusader in 1391 and probably joined the Teutonic Order then. From 1397 to 1407 he held different offices before becoming commander of the castle at Schwetz (mod. Swiecie, Poland). After the order's high officers had been killed in the defeat by the Poles at the battle of Tannenberg, he organized the defense of Marienburg (mod. Malbork, Poland) and became deputy grand master. Because of his leading role in

the reconquest of Prussia, Heinrich was elected grand master on 9 November 1410. A peace with Poland was concluded early in 1411. To ransom prisoners, pay its mercenaries, and compensate war damages, the order levied several extraordinary taxes, which aroused opposition among the Prussian estates. When Heinrich prepared for another war, the high officers resisted his warlike and high-handed policy and removed him from office (9 October 1413). After ten years of imprisonment he was sent to Lochstädt, where he died in 1429. Heinrich was buried in the chapel of St. Anne at Marienburg castle.

Helmold of Bosau (d. after 1177)

A German cleric and author of the *Chronica Slavorum*.

Born around 1120, in his youth Helmold joined the Augustinian canons in Segeberg in Holstein. As a result of Slavic attacks, the canons later had to move to Neumünster. Helmold then went to Braunschweig to receive further education. On his return, his friend and mentor Bishop Gerold of Oldenburg and Lübeck made Helmold a priest in Bosau around 1156.

Helmold probably began writing his chronicle shortly after 1167, incited, as it seems, by an erupting conflict between the newly elected Bishop Conrad I of Lübeck and Henry the Lion, duke of Saxony. The chronicle, dedicated to the canons of Lübeck, describes in great detail the Christianization of the Slavic peoples northeast of the river Elbe from the time of Charlemagne until 1171, emphasizing the importance of the Saxon mission and expansion in the region. Helmold recounts the frequent rivalries between the Saxons (notably Duke Henry the Lion), the archbishopric of Hamburg-Bremen, and the kings of Denmark as background to the crusades against the Slavs. His writings undoubtedly influenced later chroniclers, but they also provoked others,

such as the Danish chronicler Saxo Grammaticus, into presenting events differently.

Henricus de Segusio

See Hostiensis

Henry I of Cyprus (1217–1253)

King of Cyprus (1218–1253), the son of King Hugh I (d. 1218) and Alice of Champagne (d. 1246).

Hugh I died at a relatively young age when Henry was only eight months old. Henry’s mother then formally acted as regent, but in reality Cyprus was controlled by the powerful Ibelin family. However, in 1228–1229 Frederick II, Holy Roman Emperor, visited the island. Frederick was suzerain of Cyprus because his father, Henry VI, had crowned the first Cypriot king, Aimery (1197), and he now claimed the regency for himself. From 1228 onward this state of affairs sparked a civil war between Frederick’s supporters, who initially controlled Henry, and the Ibelins, who gained possession of the king in 1230 and emerged victorious in 1233. Thereafter, Henry, who had come of age in 1232, consistently showed great favor toward the Ibelins.

From 1246 onward Henry acted as regent in the kingdom of Jerusalem on behalf of King Conrad, a son of Frederick II, but he rarely visited the mainland and left its administration to his Ibelin supporters. During the winter of 1248–1249 Henry played host to the first crusade of King Louis IX of

France, and the following spring he briefly accompanied Louis to Egypt, where 120 Cypriot knights subsequently participated in Louis’s failed campaign. Henry died in Nicosia (mod. Lefkosia, Cyprus) on 18 January 1253 and was succeeded by his son Hugh II.

Henry I of Jerusalem

See Henry of Champagne

Henry II of Cyprus and Jerusalem (d. 1324)

King of Cyprus and Jerusalem (1285–1324), the last Frankish king to rule on the mainland of Palestine.

Henry was a younger son of Hugh III, king of Cyprus and Jerusalem, and Isabella of Ibelin. He came to the throne on the death of his older brother, John I. In 1286 Henry regained control over Acre (mod. ‘Akko, Israel) from the supporters of Charles I of Anjou, his rival for the crown of Jerusalem. They had held Acre since 1277, but their position worsened considerably following Charles’s loss of Sicily in 1282 and his death in 1285. This strengthened Henry’s grip on the fragmented kingdom of Jerusalem, but he still failed to prevent the Mamlūk conquest of Tripoli (mod. Trâblous, Lebanon) in 1289 and of all remaining Frankish possessions in Outremer, including Acre, in 1291.

Thereafter, Henry organized seaborne raids from his kingdom of Cyprus against the mainland of Syria and Palestine in 1300–1301. However, these failed to meet up with Mongol forces attacking Syria, as had been planned, and ended after the Mamlūks captured Ruad (mod. Arwād, Syria), a fortified Templar island off Tortosa (1302). Meanwhile, tensions were growing on Cyprus between various competing factions previously based on the mainland. Henry tried to prevent the military orders from acquiring too many estates, provoking the Hospitallers into undertaking the conquest of Rhodes

Henry II of England (1133–1189)

(mod. Rodos, Greece) in 1306–1310 and the Templars into siding with his political opponents, until the order was suppressed in 1308–1313. As competition for Cypriot trade intensified, Henry favored the Venetians in their war (1294–1299) with the Genoese, who later carried out raids near Paphos (mod. Pafos, Cyprus) in 1312 and 1316.

In 1306 these problems resulted in Henry being deposed by one of his younger brothers, Amaury of Tyre, who was supported by most of the Cypriot nobility and the military orders. Amaury styled himself “governor and rector” of Cyprus and forced Henry into retirement. At first Amaury was popular, especially with the Genoese and his brother-in-law, King Oshin of Cilicia. However, Amaury failed to gain permanent recognition of his title either from Henry or from the papacy. From 1308 onward, more and more nobles as well as the Hospitallers switched allegiance. Amaury responded by sending Henry into exile in Cilicia (1309), but in 1310 he was mysteriously murdered and Henry regained power.

Henry’s reign was also dominated by plans for a new crusade to the Holy Land. However, the fact that it never materialized was not entirely disadvantageous to Henry and Amaury because its key backers, the papacy and the French monarchy, supported the claims to Jerusalem maintained by the descendants of Charles I of Anjou. Nevertheless, Henry tried to garner Western support against potential Mamlūk attacks by marrying his sister Maria to King James II of Aragon in 1315 and by (officially at least) enforcing the papal embargo on Christian trade with the Mamlūks. He was succeeded by Hugh IV, the son of another of his brothers, Guy.

Henry II of England (1133–1189)

King of England (1154–1189), who promised to go on crusade in 1170, 1172, and 1177, and even took the cross, but never went to the East in person.

The son of Matilda, heiress of Henry I of England, and

Geoffrey V, count of Anjou, Henry succeeded to the kingdom of England and vast domains in France. He had a dynastic interest in the affairs of the kingdom of Jerusalem as a relative of its ruling family, who were descendants of Henry’s grandfather Fulk V of Anjou. Henry’s promise to go on crusade in 1172 was part of his penance for the murder of Thomas Becket, archbishop of Canterbury; the undertaking of 1177 arose from an agreement with King Louis VII of France. Henry’s endorsement of English participation in Philip of Flanders’s crusade of 1177 was motivated by a desire to curb Philip’s ambitions in the East.

Henry showed little interest in the appeals for aid made by Eraclius, patriarch of Jerusalem, on the latter’s visit to England in 1185, and he took the cross in 1188 only after his son Richard. Henry did, however, support the crusade financially, and the crusade taxes he raised in 1166 and 1185, along with the famous Saladin Tithe of 1188, were important in the development of direct taxation in England. Money sent to the East by Henry helped pay for the Hattin campaign of 1187, and he left funds for the support of the Holy Land in his will.

Henry III of England (1209–1272)

King of England (1216–1272), who twice took the cross, but never actually went on crusade.

The eldest son of King John, Henry came to the throne at the age of nine and did not assume full control of government until 1225. His reign was dominated by two themes: first, the implementation of Magna Carta, the treaty forced upon John by his barons (1215); second, Henry’s attempt to recover his inheritance in France: Normandy, Anjou, and Maine, which had been seized by King Philip II Augustus of France in 1204, and Poitou which was conquered by Louis VIII in 1224. Henry III eventually surrendered his claims to Normandy and Poitou, in the Treaty of Paris (1259). A series of military failures, combined with competition for patronage between the English aristocracy and the king’s

Lusignan and Savoyard relatives culminated in the reform program of the Provisions of Oxford (1258) and civil war between the king's supporters and the barons, the latter under the leadership of Simon of Montfort (the Barons' War, 1263–1265).

Henry took the cross in 1216, which gained him protection and papal support against those backing the bid of Prince Louis of France (the future Louis VIII) for the English throne. However, the political situation faced by his minority government did not permit Henry's absence from the kingdom. He took the cross again in 1250 to provide reinforcements for the crusade of Louis IX of France to the East, but did not set an immediate date for his departure.

Plans for Henry's second crusade soon ran into difficulties. Henry refused to set sail or to allow his subjects to join Louis's campaign until the question of his claims to Normandy and Poitou had been settled. Furthermore Henry had frequently clashed with Alfonso X, king of Castile, over the possession of Gascony. In 1254, Alfonso surrendered his claims in exchange for Henry's promise that he would join Alfonso on a crusade to North Africa (rather than Palestine). This could not be done without papal authorization, which Henry failed to receive because of his entanglement in the affairs of Sicily: in early 1254, Henry had accepted the throne of Sicily on behalf of his son Edmund. The kingdom had yet to be wrested from its lord, Conrad IV of Germany, and securing the financial and military means necessary preoccupied Henry for the next decade or so. This involvement not only limited the amount of troops available for a crusade, but also led to increasing dependence on the papal court. Successive popes refused Henry's request that his crusading vow be commuted from a campaign to the Holy Land to one in North Africa (thus making it difficult for Henry to meet his obligations toward Alfonso), but suggested that it could be fulfilled by a campaign in Sicily. These difficulties not only led to a worsening of Henry's relations with Alfonso; they also weakened his ability to make demands of Louis IX of France and brought him into increasing conflict with his barons.

The king's subjects had not taken kindly to his crusading plans. In fact, one chronicler described the king's vow as a little more than a means of extorting money from his barons and clergy. Henry's refusal to allow English crusaders to join Louis's campaign did little to restore confidence, and many contemporaries viewed the "Sicilian Business" as an expensive aberration. They were unwilling to join the king volun-

tarily, and few took up the papacy's offer to fulfil their vows by fighting in Sicily. The use of crusading taxes to fund the Sicilian scheme further alienated the king from both secular lords and clergy. These tensions culminated in the baronial movement that in 1258 led to demands for a reform of the king's government. When these demands led to the outbreak of civil war in England (1263–1265), Henry III's crusading plans were doomed. Although the rebellion was ultimately defeated, and Henry's status as a crusader was never revoked, he lacked the military and financial means to embark on crusade.

Henry's experience, abortive as it was, is helpful in understanding key themes in thirteenth-century crusading. It illustrates both the geographical range of crusading and the political uses and challenges of the crusading movement. Last but not least, it highlights the conflict between official concepts of a crusade as directed against all enemies of the faith and the continuing primacy commonly given to those campaigns aimed directly at recovering or defending the Holy Land.

Henry IV of England (1367–1413)

Henry Bolingbroke, earl of Derby (later king of England as Henry IV), was a dedicated crusader in the years before he seized the throne in 1399. He took part in two crusades to Prussia and one pilgrimage to Jerusalem. He planned to take

Henry VI of Germany (1165–1197)

Henry IV of England. (Corel)

part in a crusade as king, but the troubles of his reign never allowed him to do so.

Henry was a son of John of Gaunt, duke of Lancaster (d. 1399). After taking part in the Appellant movement, which aimed to limit the powers of King Richard II, Henry was politically sidelined after Richard's reassertion of his personal power in 1388. This marginalization provided the context for Henry's devotion to crusading in the early 1390s. He planned to take part in the crusade of Louis, duke of Bourbon, to Tunis (1390), one of several Franco-English crusading ventures mooted in a period of truce between the two countries (1390–1398). However, Henry was prevented from entering France, and so went on crusade to Prussia, largely financed by his father.

Accompanied by some French knights, Henry arrived in Prussia in the autumn of 1390. He fought alongside the Teu-

tonic Knights and was involved in a victory over the Lithuanians on the river Memel, and in the siege of Vilnius, which was abandoned after a successful start when disease broke out in the besiegers' camp. Henry enjoyed the subsequent Baltic winter in style at Königsberg (mod. Kaliningrad, Russia) and Danzig (mod. Gdańsk, Poland), feasting and spending large sums on gambling expenses. He took part in a second crusade to the Baltic region in 1392, but did not see any military action. Before returning to England, he went on pilgrimage to the Holy Land in the winter of 1392–1393, traveling via central Europe and Venice.

Henry became king of England following his overthrow of Richard II in 1399. As king, he hoped to lead a crusade against the Turks; his interest in the crusade reflected his own military career before becoming king, his orthodox religious views (he was a persecutor of the heretical Lollards), and a desire to legitimize his rule. Even as he lay dying in the winter of 1412–1413, he was planning an expedition to the Holy Land. The chronicler Adam of Usk, who liked to record prophecies and omens, claimed that Henry died in the Jerusalem Chamber of the abbot's palace at Westminster, thereby fulfilling a prophecy that he would die in Jerusalem.

Henry VI of Germany (1165–1197)

King of Germany (1169–1197) and Sicily (1194–1197), Holy Roman Emperor (1191–1197), and organizer of a crusade to the Holy Land (1197–1198).

Henry was born in Nijmegen in 1165, the second son of Frederick I Barbarossa, Holy Roman Emperor (d. 1190), and his second wife, Beatrix of Burgundy. In that same year Frederick secured the canonization of his predecessor Emperor Charlemagne (d. 814) from the imperialist antipope, Paschal III (d. 1168), who had been elected in opposition to Alexander III. By underlining Charlemagne's role as defender of

Christendom, the canonization was intended to support and exalt the imperial ideology of the Staufen dynasty, which already had acquired a crusading tradition of its own through the participation of Frederick Barbarossa and his uncle Conrad III in the Second Crusade (1147–1149).

The death of his elder brother Frederick (1168/1169) left Henry as the heir to the German monarchy of the Staufen family. At the age of four Henry was elected king by the German princes at a diet in Bamberg (June 1169) and crowned at Aachen on 15 August. During this summer Frederick Barbarossa recognized Paschal III's successor, Calixtus III, thus prolonging his dispute with the Roman pope Alexander III and the Lombard League of northern Italy, which was not finally resolved until the Treaty of Konstanz (1183).

When Henry came of age in 1178, he began to take over political responsibilities. At a great festival held in Mainz at Whitsun 1184, Henry was knighted, together with his younger brother Frederick, duke of Swabia (originally named Conrad). Later that year Henry was betrothed to Constance, the daughter of King Roger II of Sicily and aunt of the ruling King William II of Sicily (29 October 1184). William's marriage was childless and the line of succession uncertain; by allying himself to the mighty Staufen dynasty, he hoped to secure the position of the Hauteville family in Sicily. For Frederick Barbarossa the Sicilian alliance brought a powerful ally in the Italian peninsula, but also offered at least a prospect that Henry might eventually succeed to the Sicilian kingdom. At the end of 1185, Henry joined his father in Italy, where the Barbarossa was again attempting to assert imperial control. The next year Henry's marriage to Constance of Sicily was celebrated in Milan (27 January 1186). About this time he seems to have received the title of Caesar, probably as a signal of Frederick Barbarossa's intention to have him recognized as co-emperor, a desire that was opposed by the papacy.

Henry remained in Italy until 1187. In the autumn news of the great defeat at Hattin and the subsequent fall of Jerusalem to Saladin reached the West. Frederick Barbarossa and Frederick of Swabia took the cross at the so-called Court of Jesus Christ (Lat. *Curia Iesu Christi*) at Mainz on 27 March 1188 in the presence of Henry VI, who was to take over government in the absence of his father.

During the Third Crusade (1189–1192), Frederick Barbarossa was in frequent contact with Henry, among other things admonishing him to have the Italian cities equip a fleet and send it to the East to persuade the Byzantine

emperor to support the crusade. William II of Sicily died childless on 18 November 1190 and was succeeded by an illegitimate half-brother, Tancred of Lecce. Henry now made peace with his enemies in Germany (the Welf family and their supporters), with the intention of pursuing his wife's claims to the throne of Sicily. However, these plans received a setback when news of the death of Frederick Barbarossa during the crusade (10 June 1190) reached Germany in the autumn of that year. A German army went to Italy, and Henry followed across the Alps in early 1191. He was crowned Holy Roman Emperor on 14 April in Rome by the new pope, Celestine III.

Emperor Henry now launched a campaign to realize his claims to Sicily. However, he met with defeat outside Naples, and Constance was taken captive. Yet Henry still had strongholds in southern Italy, and he managed to secure his position in Germany. The pope tried to negotiate peace between Henry and Tancred, to little avail, although Constance was released in 1192. Then events turned to Henry's advantage. At Milan he met with Philip II Augustus, king of France, who was on his way back from the Third Crusade. Henry and Philip concluded an alliance directed against King Richard I Lionheart of England, who was the principal ally of both King Tancred of Sicily and Henry's enemies in Germany. The turning point came when Richard was taken captive on his way back from the Third Crusade in 1192 by Duke Leopold V of Austria, who handed him over to Henry. As a condition of his release, Richard was to pay a vast ransom and also to supply 50 ships for the campaign against Sicily. Deprived of a powerful ally, the German opposition collapsed; its leader, Henry the Lion, sought an accommodation with the emperor (March 1194).

In May 1194 Emperor Henry marched south with a land army consisting of perhaps 20,000 men supported by Genoese and Pisan fleets. In August these forces attacked the Sicilian kingdom, and after the capture and sack of Salerno in September the other cities surrendered one by one. In November Henry entered Palermo in triumph. On 25 December 1194 he was crowned king of Sicily; the next day Constance gave birth to a son, who was named Frederick Roger after his two grandfathers.

Henry's main political aims from this point were to assert the authority of the Holy Roman Empire throughout Christendom and to secure the succession for his son in both the empire and Sicily. Continuing negotiations begun by his father, in 1197 Henry agreed to bestow royal crowns on Leon

Henry of Champagne (1166–1197)

II, the Rupenid prince of Cilicia (king as Leon I), and Aimery of Lusignan, the ruler of Cyprus. Both of the newly created kings thereby became Henry's vassals, accepting the overlordship of the Holy Roman Empire. In the meantime Henry had also concluded a marriage alliance between his younger brother Philip, duke of Swabia, and Irene, daughter of the Byzantine emperor Isaac II Angelos.

These diplomatic successes greatly enhanced Henry's prestige and authority throughout the eastern Mediterranean region. In 1195 he proposed to organize a crusade to the Holy Land, hoping that this would help him gain the agreement of the papacy to his plans for hereditary rule of the Staufen dynasty in the empire and Sicily. Yet Henry was unable to reach an accommodation with Pope Celestine III, although the German princes were prepared to recognize his son Frederick (II) as king of Germany. The emperor returned to the kingdom of Sicily in April 1197, but his preparations for the crusade were delayed by a rebellion that broke out in May. It is uncertain whether Henry intended to lead the crusade himself, although he does appear to have taken the cross in March 1195. In the event, he appointed Conrad of Querfurt, bishop of Hildesheim, and the imperial marshal Henry of Kalden as leaders of the expedition. During the summer Henry fell ill with malaria, to which he succumbed on 28 September. He was buried in the cathedral of Palermo.

Like his father, Henry did not live to see the completion of the crusade he had launched. He was widely regarded by contemporaries as the most powerful ruler in Christendom, and his death at the age of not yet thirty-two plunged the empire into crisis. In Sicily he was succeeded by the infant Frederick, who had also been intended for the German throne. However, with the prospect of a rival Welf candidate emerging there, it was Henry's younger brother Philip of Swabia who was crowned king of Germany by the supporters of the Staufen family.

Henry Bolingbroke

See Henry IV of England

Henry of Champagne (1166–1197)

Ruler of the kingdom of Jerusalem (1192–1197) as consort of Queen Isabella I.

The eldest son of Henry I "the Liberal," count of Champagne, Henry (II) succeeded to his father's lands in 1181. In 1190 he arrived at Acre (mod. 'Akko, Israel) at the head of a large contingent of French knights to join the Third Crusade (1189–1192). As a nephew of both Richard I of England and Philip II of France, Henry was one of the crusade army's early leaders.

Henry played a prominent part in the siege of Acre (1190–1191) and led a contingent on campaign with Richard. On the assassination of Conrad of Montferrat (April 1192), who had just been recognized as king of Jerusalem, Henry was asked to marry his widow, Queen Isabella I, and rule the kingdom. With King Richard's consent, and having been persuaded that the English monarch would return to Outremer with reinforcements, he agreed. Henry was de facto ruler of the realm but was never crowned. He styled himself count palatine of Troyes and only once (1196) used the title "lord of the kingdom of Jerusalem."

Henry was not associated with the discord that had prevailed within the kingdom during the 1180s and secured peace. He concluded a treaty with Cyprus intended to safeguard the future of Outremer. It included an attempt to unite the two ruling houses through the marriage of Henry's three daughters to the three sons of Aimery of Cyprus. Henry also reconciled Bohemund III of Antioch with Leon II of Armenia, used his revenues from Champagne for the benefit of the kingdom, and extended the truce with the Muslims. When the truce expired in 1197, Henry mustered his troops to

defend Jaffa (mod. Tel Aviv-Yafo), but he died on 10 September, having fallen from a window when the railings he was leaning upon broke.

Henry of Constantinople (d. 1216)

Second (and most successful) Latin emperor of Constantinople (1206–1216).

Sometimes referred to as Henry of Flanders or Henry of Hainaut, he was probably born at Valenciennes around 1178, the third son of Baldwin V, count of Hainaut, and Margaret, countess of Flanders.

Henry took the cross in 1200 and followed his brother Count Baldwin IX of Flanders (VI of Hainaut) on the Fourth Crusade (1202–1204). He is mentioned only rarely in the early stages of the crusade. Once the crusaders had arrived at Constantinople (mod. Istanbul, Turkey), he was put in charge of the second squadron and accompanied his brother, who commanded the vanguard when the crusading army confronted the army of Alexius III Angelos outside the walls of the city (17 July 1203). In 1204 Henry led a successful foraging raid against the Greek city of Philea. On the way back to Constantinople, he defeated an ambush prepared by Alexios V Doukas Mourtzouphlos, capturing a holy icon of the virgin that Alexios V had brought to assure himself of victory.

After the election of Baldwin as Latin emperor (May 1204), Henry was one of the leaders in the conquest of Greek lands, participating in the occupation of Thrace and then crossing the Dardanelles to capture Adramyttum (mod. Edremit, Turkey). There he was supported by the local Armenians, who followed him with their families across the straits when Henry was recalled in haste by Baldwin in the face of a Greek rebellion in Thrace. As the Armenians were

unable to keep up with him, he left them between Gallipoli (mod. Gelibolu, Turkey) and Rodosto (mod. Tekirdağ, Turkey), where they were massacred by the Greeks. Henry was too late to bring any aid to his brother, who was captured by the Bulgarians at Adrianople (mod. Edirne, Turkey), but he encountered the survivors under the command of Geoffrey of Villehardouin at Rodosto.

Henry was recognized as regent of the empire while there remained any hope of the survival of Baldwin and fought to hold his brother's empire together. In July 1205 he unsuccessfully laid siege to Adrianople and Demotika, and in October he renewed the treaty of partition with the Venetians. A new Bulgarian invasion (January 1206) forced the Greeks to appeal to Henry, who advanced to Adrianople and then pursued the retreating Bulgarians far into their own territory.

With the confirmation of the death of Baldwin in 1206, Henry was chosen as the second Latin emperor and crowned on 20 August 1206. A new invasion by Kalojan was driven off and 20,000 prisoners were rescued as the new emperor ravaged the lands of Kalojan. Two squadrons were then sent across the straits to occupy Cyzicus (near mod. Erdek, Turkey) and Nikomedia (mod. İzmit, Turkey), and a reconciliation with Boniface of Montferrat was sealed by the marriage of Henry with Agnes of Montferrat (4 February 1207). Each attempt to attack Kalojan was thwarted by the need to rescue the Franks in Asia Minor, so that to secure his rear, Henry negotiated a two-year truce with Theodore I Laskaris, the Greek emperor of Nicaea. He then reoccupied Thrace and raided deep into Bulgaria. He had a last meeting with Boniface to coordinate their policy and to tell him that Agnes was pregnant, but before they could combine forces, Boniface was killed in a skirmish (4 September 1207). Henry then had to rescue his Greek ally, David Komnenos, ruler of Paphlagonia, from the attacks of Theodore Laskaris before facing one of the greatest crises of his reign, the revolt of the Lombards of Thessalonica against the regency of Boniface's widow, Margaret (Mary) of Hungary, for her infant son Demetrius. During the bitter winter of 1206–1207, Henry outmaneuvered the plotters and in a brilliant campaign smashed the resistance of the Lombards further south so that Thessaly came under his control.

In May 1209 Henry held an assembly at Ravennika at which Geoffrey I of Villehardouin (nephew of the marshal of Champagne) and Otho of La Roche did homage for the Morea and Athens, respectively. Lombard resistance was

Henry of Grosmont (d. 1361)

finally crushed at the siege of Thebes, and in June 1209 the emperor entered Athens and subsequently made sure of the loyalty of the Italians in Negroponte. Another parliament at Ravennika in May 1210 regularized the position of the church in the kingdom of Thessalonica.

The year 1211, however, was the year of the four enemies. From the west, Thessalonica was attacked by Michael Komnenos Doukas, the ruler of Epiros, in alliance with Henry's former ally, the Vlach prince Strez. No sooner had Henry driven them back and invaded their lands than he was recalled to Constantinople by the threat of an attack by Theodore I Laskaris. His army was threatened on the march through Thrace by Boril of Bulgaria. Having disposed of these enemies, Henry carried the war to Theodore by crossing the straits and defeating him in a battle near the river Luparchos. He then recaptured Adramyttum and advanced south to the frontier with the Saljūq sultanate of Rūm. The outcome of these campaigns was a peace with Nicaea that left the Franks in possession of the southern coast of the Dardanelles and the Sea of Marmara. Boril of Bulgaria sought peace, offering his daughter as a bride to the now widowed emperor. With some reluctance, Henry married the Bulgarian princess and together with his son-in-law advanced to Niš against the Serbs with whom Strez had sought shelter. A disagreement between the allies meant that Henry had to withdraw. A second expedition against Niš, this time in conjunction with the king of Hungary, also had to withdraw when the king made a separate peace with the Serbs. Henry died suddenly on 11 June 1216. Although there were some rumors that his Bulgarian empress had poisoned him, there is no evidence that his death was due to anything other than marsh fever.

Henry was by far the most successful of the Latin emperors of Constantinople. He was an energetic and talented soldier who defeated both internal and external enemies. He was a shrewd diplomat and made great efforts to conciliate and protect the Greeks who rallied to him. He healed the breach within the ranks of the crusaders by his alliance with Boniface of Montferrat and after the death of the latter showed himself to be the active protector of Boniface's widow. He won over all but the most embittered of the Lombard rebels and pursued a successful policy of establishing client states, such as Thessalonica (governed by Maria) and the principalities of his brother Eustace, the Vlach and Bulgarian chieftains Strez and Slav, David Komnenos in Paphlagonia, and Geoffrey I of Villehardouin in the Morea.

He worked closely with the Venetians under their podestà, Marino Zeno.

The first part of his reign is fully documented by the chroniclers Villehardouin and Henry of Valenciennes, but after 1211 there are no detailed contemporary sources that survive. He was succeeded by Peter of Courtenay, the husband of his sister Yolande. Peter died en route to his new domains, and thereafter Yolande ruled until her death in 1219, to be succeeded by her son Robert of Courtenay.

Henry of Derby

See Henry IV of England and Henry of Grosmont

Henry of Flanders

See Henry of Constantinople

Henry of Grosmont (d. 1361)

Duke of Lancaster and earl of Derby, born around 1300. Henry of Grosmont was one of the leading nobles of England, who took part in two crusading expeditions: to Spain in 1343, and to Prussia in 1352. He also played an important role in the wars with France.

Henry fought alongside King Alfonso XI of Castile in the siege of Algeciras, which was controlled by the Muslim Marinids, as well as taking part in a Castilian naval engage-

ment with the Marinid fleet off Ceuta. At the same time, Henry pursued negotiations for a marriage between Alfonso's son and heir, Peter "the Cruel," and a daughter of Edward III of England. Henry probably saw no fighting during his expedition to Prussia in 1352, as a truce was in force between the Teutonic Knights and the Lithuanians. A claim that Otto V, duke of Brunswick, had plotted to kidnap him on his return journey through Germany led to a duel between the two men in Paris that December, which was settled by the mediation of King John II of France.

Henry of Huntingdon (c. 1088–1156/1160)

Author of the *Historia Anglorum*, a history of England containing important information on the early crusading movement.

Henry succeeded his father, Nicholas, as archdeacon of Huntingdon between 1113 and 1123. The history, his greatest work, was commissioned by Alexander, bishop of Lincoln; its post-Conquest sections, constantly updated during the 1130s and 1140s, benefited from Henry's extensive contacts in England and abroad.

Henry's account of the First Crusade (1096–1099) in Book VII was based upon the *Gesta Francorum* but added material from oral sources. He alone alleged that in 1099 the rulership of Jerusalem was first offered to Robert Curthose, duke of Normandy, whose refusal blighted the rest of his life. Henry's forte was the good story that pointed a moral. He was much briefer on the Second Crusade (1147–1149) and highly critical of its failure in Outremer, which he attributed to the moral failings of the crusaders as well as to Greek treachery (Book X). He pointed to the successes in Iberia achieved by a smaller, humbler army, which included his kinsman Hervey de Glanville, as well as Seher de Arcelles, a benefactor of Lincoln cathedral and his probable source for this campaign.

Henry of Kalden

Marshal of the Holy Roman Empire and military commander of the Crusade of Emperor Henry VI (1197–1198).

Henry of Kalden was probably a member of the knightly family of Pappenheim in Swabia, whose members held the hereditary office of imperial marshal. He is first documented as a marshal in the entourage of Frederick I Barbarossa, Holy Roman Emperor, in 1185. Four years later he took part in the emperor's expedition to the East in the Third Crusade (1189–1192). During this campaign he led the attack that captured the Byzantine fortress of Skribention and also commanded a division during the assault on Ikonion (mod. Konya, Turkey), the capital of the Saljūq sultanate of Rūm.

The marshal continued to serve Frederick's son, Henry VI, Holy Roman Emperor and king of Sicily, as a commander and confidante in both Germany and Italy. At the end of 1196, he was sent at the head of an embassy to Byzantium to demand financial and military support for the emperor's planned crusade to the Holy Land. He returned to Apulia shortly after the outbreak of a major rebellion against the emperor's rule in the kingdom of Sicily (May 1197). The marshal's leading role in its suppression brought him rewards in the form of extensive estates around Neuburg an der Donau.

Henry of Kalden's outstanding military abilities were undoubtedly the main reason for his appointment by Henry VI as military commander of his crusade, although its political leadership was entrusted to the imperial chancellor, Conrad of Querfurt, bishop of Hildesheim. The marshal sailed to Palestine with the main contingent of the crusade fleet, leaving Brindisi on 1 September 1197 and arriving at Acre (mod. 'Akko, Israel) probably at the end of the month. He took part in the crusader capture of Sidon (mod. Saïda, Lebanon) and Beirut and the siege of Toron, and returned to Germany in the summer of 1198. After the death of Henry VI (1197), Henry of Kalden served his successors Philip of Swabia, Otto IV, and finally Frederick II. He probably died soon after February 1214, when he is last documented.

Henry the Lion (1129/1131–1195)

Duke of Saxony (1142–1180) and Bavaria (1154–1180), participant in the Wendish Crusade (1147), and leader of an armed pilgrimage to Jerusalem in 1172.

Through his parentage on both sides, Henry had royal connections. His mother, Gertrude, was the daughter of Lothar III, Holy Roman Emperor. The Welf dynasty of his father, Henry the Proud, duke of Bavaria and Saxony (d. 1139), had Carolingian marriage links. His father competed for the German crown with Conrad III in 1138, and a sense of royal status remained a powerful factor throughout Henry's career.

Henry's youth was dominated by the struggle to recover Saxony and Bavaria, forfeited as a result of his father's opposition to the election of Conrad III. By 1142 he was confirmed as duke in Saxony, but Bavaria had been secured by Henry Jasomirgott, margrave of Austria. Thwarted in this claim, Henry the Lion and the Saxon magnates refused in 1147 to join Conrad's army for the Second Crusade (1147–1149). Yet Bernard of Clairvaux acceded to their proposal that a war against the unchristianized Slavs on the northeastern marches of the empire should carry crusading status and privileges. Though the campaign was no more successful than that in the Holy Land, it helped establish Henry in the role of conqueror and converter in the lands beyond the Elbe.

Emperor Frederick I Barbarossa granted Henry powers to refound and invest bishoprics in these territories and in 1156 restored him as duke of Bavaria. For the next twenty years, duke and emperor cooperated to their mutual advantage: in return for Henry's military support in Italy and his recognition of Pope Victor IV, Barbarossa left him a free hand in transforming Saxony into a territorial principality. While in Bavaria he had no allodial lands, in Saxony he had extensive landholdings, the advocacy of around fifty churches, and some 400 ministerial knights, and it was there that he sought to create a compact territorial state as his main power base.

Central to Henry's ambitions was the colonial expansion of Saxony beyond the Elbe. Campaigns, climaxing in the

1160s with the conquest of the Abodrites, allowed the chronicler Helmold of Bosau to hail him in 1171 as a reborn Otto the Great for his extension of empire and Christendom. Henry controlled swathes of new land between the rivers Elbe and Oder, exercised quasi-royal investiture rights in the bishoprics of Ratzeburg, Oldenburg in Holstein, and Mecklenburg-Schwerin, refounded Lübeck as a trading town, and remodeled Braunschweig as a ducal residence. In 1168 he married Mathilda, daughter of Henry II of England, and in 1172 he led more than 1,000 followers on an armed pilgrimage to Jerusalem. At the same time, his ruthless pursuit of power provoked the mediatized Saxon nobles to rebel against him in 1166–1167.

In 1176 Henry refused military support for Frederick I in Italy, and the emperor blamed Henry's defection for his defeat in the battle of Legnano. The Peace of Venice with Pope Alexander III left the emperor free to move against the overmighty duke. Found guilty in 1179 of breaching the peace of the kingdom, and outlawed, then arraigned, under feudal procedure in 1180, Henry was stripped of his fiefs, his two duchies were alienated and divided, and in 1182 he was banished to England. Allowed to return in 1185, he was banished again as a precaution when Barbarossa left on the Third Crusade in 1189. Returning illegally the same year, he campaigned to recover Saxony until 1193, when the Emperor Henry VI finally subdued the Lion.

Henry's campaigns east of the Elbe in the 1150s and 1160s were an important step toward the later Baltic Crusades; the church never revoked its sanction of the Slav wars as crusades. However, Henry's ruthless pursuit of his interests, and the ambition and arrogance that his contemporaries accused him of, were at odds with the ideal of the soldier of Christ. The fullest account of Henry's wars, the *Chronica Slavorum* by Helmold of Bosau, captures the ambivalence of his motives and actions. Seeing Henry in the long historical perspective of holy war against pagan Saxons and Slavs, led by Charlemagne and Otto the Great, Helmold often finds him wanting, even as a military tactician. He especially contends that in Henry's campaigns in 1149 "there was no mention of Christianity, but only of money"; once they pay the duke his tribute, "the Slavs still sacrifice to their demons and not to God" [Helmold of Bosau, *Slawenchronik*, ed. Heinz Stoob (Darmstadt: Wissenschaftliche Buchgesellschaft, 1973), 240]. From around 1160, however, Helmold depicts Henry as combining conquest and conversion in cooperation with the missionary church, an exemplar

more of the Carolingian and Ottonian imperial mission than of the twelfth-century crusader.

A second *Chronica Slavorum*, by Arnold of Lübeck, enhances the picture of Henry as crusader. Its opening episode narrates Henry's triumphal pilgrimage to Jerusalem in 1172. In this account, 1,200 armed men and a large contingent of clergy follow the traditional route of Emperor Charlemagne's road to Byzantium, where Henry is received like a king. In Jerusalem, he hopes for military venture until dissuaded by the Templars, to whom he donates money and weapons.

Henry's sense of royal status, his imitation of Carolingian and Ottonian holy war in the lands beyond the Elbe, and his desire to play the crusader generated striking representations of his power and prestige. From the time of his royal marriage in 1168, he developed Dankwarderode into a palatial ducal residence in Braunschweig, taking royal palaces, especially Goslar, as his model. Before the palace stands a monumental bronze lion, symbol of the Welf dynasty and Henry's personal heraldic image. He rebuilt the church of St. Blasius as a dynastic shrine, and its canons served as his chaplains and chancery staff. The effigies of Henry and Mathilda lie before the high altar, surrounded by the liturgical artifacts with which the ducal couple endowed their church. The marble altar houses relics brought back from Byzantium, and a great seven-branched candelabra associates the church with Solomon's Temple. The Helmarshausen Evangeliary (MSS Wolfenbüttel, Herzog August Bibliothek, 105 Noviss., and München, Bayerische Staatsbibliothek, clm.30055), commissioned for the altar, links Henry in its dedicatory poem with Charlemagne. One of its sumptuous miniatures shows him and Mathilda flanked by royal forebears, holding crosses, being crowned by the hands of God.

The symbiosis of imperial mission and crusading piety finds most explicit expression in the translation commissioned by Henry around 1172, at Mathilda's prompting, of the Old French *Chanson de Roland*. Its author, the priest Conrad, turns Charlemagne's campaign in Spain into a formal crusade, with sermons and indulgence, albeit one summoned and led by the emperor without papal sanction. The chivalric heroes shed all secular concerns and are motivated by a crusading fervor voiced in language strongly reminiscent of St. Bernard's *De laude novae militiae*. Conrad's epilogue extols Henry as crusader, as converter of the heathen, and as the Charlemagne of his age.

Henry of Livonia

Henry of Livonia (Lat. Henricus de Lettis) was a priest and chronicler of the crusader conquest of Livonia. His *Chronicon Livoniae*, written and twice reworked in the period 1225–1227, is in large parts based upon his own eyewitness accounts and is the main source for the Baltic Crusades in the period 1180–1227.

Biographical details for Henry must be largely deduced from his chronicle. He was born around 1188 into a family of the lower nobility, probably from Poppendorf near Magdeburg in northern Germany. He was educated in the Augustinian canonry of Segeberg, with a thorough knowledge of the Vulgate and of the missal and the liturgy of the Roman church. In 1205, Henry went to Livonia to support the mission of Bishop Albert of Riga and was employed as a translator for the Estonian, Lettish, and Livonian languages. In 1208 he was ordained and sent to Rubene on the river Ymera to preach and baptize.

Over the years in his parish, Henry participated in several battles against the surrounding pagans. His church was burnt on three occasions, and he and his followers had to flee several times. In 1213–1215, Henry worked as an assistant to Bishop Philip of Ratzeburg, himself a coadjutor to Albert of Riga, and may have joined Philip at the Fourth Lateran Council (1215). In 1222–1224 Henry was possibly in Germany with Albert of Riga, and in 1225–1226 he acted as assistant to the papal legate William of Sabina, who may have urged him to write his chronicle.

The chronicle shows Henry as an ardent believer in the divine right of the Germans to conquer and convert the eastern Baltic region and manifests a staunch support for the

Henry the Navigator (1394–1460)

young church of Riga against intrusions from other Christian powers. However, Henry was also critical of the Christian administration of the conquered lands. Among other things, Henry expresses his contempt for appointed judges more concerned with filling their purses than with furthering Christianity. The chronicle also displays Henry's interest in the tactics and technology of warfare.

Henry the Navigator (1394–1460)

Portuguese prince, the third son of King John I and Philippa of Lancaster. As duke of Viseu, lord of Covilhã, and administrator of the Order of Christ, Prince Henry (Port. *Henrique*) played a decisive role in many of the political conflicts of his time, although his image and his historiographical fortunes are still largely coupled with the maritime discoveries of the period.

Henry's participation in the Portuguese conquest of Ceuta

in North Africa (1415) and the subsequent responsibility for the defense of the city given him by the Crown (1416) gave him an interest in projects for holy war in Africa. However, these projects did not have the consensus of the Portuguese court and were successively put off during the reign of John I. The king's wish to renew the expeditions to Morocco led Henry to envisage himself as the inheritor of his father's African policies, putting pressure on the Crown to embrace his project for an attack on the territories of the Moors (1434). The attack that Henry led against Tangier (1437), which should have launched a prolonged campaign, ended with defeat and the capture of his younger brother, thus obliging him to consider abandoning Ceuta as the price to be paid for his brother's release. Ceuta was not surrendered to the Moors, but the captivity of Henry's brother put an end to Portuguese conquests in Africa until the second half of the fifteenth century, even though Henry had obtained papal blessing to renew the offensive in 1442.

In the meantime, the defense of Ceuta led him to establish a fleet, whose ships occupied the island of Madeira (1419), and headed toward the waters of Bojador in the western Sahara, probably in an attempt to encounter a Christian ally whose help would enable him to attack the kingdom of Fez from the south. This change of interests caused Henry to organize many expeditions to the Canary Islands, and also led to the discovery of the Azores (1427) and the exploration of the African coast to the south of Bojador. The importance of the navigational expeditions only became evident during the early 1440s, when the income from plunder and slave trading aroused the interest of some nobles and the Crown, which granted Henry a monopoly on expeditions beyond Cape Bojador. Nevertheless, the struggle against the infidels was not forgotten, making him publicize a new desire to settle in Ceuta (1450), where he wished to end his days fighting for the honor of the kingdom and for the praise of the Christian faith. In spite of this dream of a crusade, he only returned to Africa shortly before his death, when he served in the army that conquered Alcacer-Ceguer in 1458.

See Hostiensis

Henry of Valenciennes

A chronicler at the court of Henry, Latin emperor of Constantinople (1206–1216).

Little is known about the life of Henry of Valenciennes, but he probably wrote in other genres (poetry and hagiography) before completing his chronicle, which describes events that occurred at the beginning of Emperor Henry's reign (1208–1209), continuing the narrative of Geoffrey of Villehardouin, whose work he undoubtedly knew. There is a short break of eight months between the end of Villehardouin's account and the start of Henry's. The narrative covers two of Henry's campaigns: one against the Bulgarians and another against the rebellious Lombards of Thessalonica, who had risen against Demetrius, the infant son of Boniface of Montferrat and Margaret (Maria) of Hungary, the regent. Henry crushed the resistance of the Lombards after campaigning throughout northern and central Greece. The end of the chronicle is hurried, suggesting that the author did not have time to polish it before sending it to the West, probably with Peter of Douai, who returned home in the autumn of 1209.

Henry of Valenciennes is our only source for the first part of Emperor Henry's reign and almost certainly was an eyewitness of some of the events, which he describes with color and panache. His admiration for the emperor is patent throughout. His style is slightly influenced by the hyperbole of epic poetry, but he gives an honest account by his lights of the events of 1208–1209.

Henryk of Sandomierz (d. 1166)

A prince of the Polish Piast dynasty, duke of Sandomierz, crusader, and pilgrim to Jerusalem.

Born between 1127 and 1134, Henryk was the third surviving son of the Polish ruler Bolesław III Krzywousty (Wrymouth) and Salome, daughter of Henry, count of Berg. According to an act of succession dating from 1138, Henryk ruled the duchy of Sandomierz in the eastern part of Poland from about 1146, with his court based in Wiślica. Henryk was a close ally of his elder brother, Prince Bolesław IV Kędzierzawy (the Curly) (d. 1173).

Henryk and his elder brothers formed a coalition of the younger sons of Bolesław III, who are known to scholars as the "Piast Juniors." They opposed the rule of their stepbrother, Prince Władysław II Wygnaniec (the Exile) (d. 1155) and, with the support of the Polish magnates and prelates, defeated him during a civil war (1142–1146). Henryk was evidently greatly influenced by the preaching of the Second Crusade (1147–1149), and it is probable that he was the "King of the Poles" listed by the Greek chronicler John Kinnamos as leading the Polish contingent in the crusade. If this hypothesis is correct, it means that Henryk went on crusade to the Holy Land at least twice.

Henryk's participation on crusade in 1153–1154 is confirmed by a number of Polish annals, which report in an almost uniform way under the year 1154 that he went to Jerusalem. It is likely that Henryk and his troops took part in some military action under the direction of King Baldwin III of Jerusalem. A fifteenth-century narrative, the *Annals* of Jan Długosz, commented that Henryk went to Jerusalem and spent about a year in the Holy Land, together with a group of Polish knights. After his return to Poland, he was revered by his compatriots for his chivalric prowess and his pursuit of crusading, and esteemed as an example of a Christian knight and Christian ruler.

Henryk's involvement in the crusading movement is also highlighted by his close relationship with the military Order of the Hospital. At some point between 1154 and 1166, Henry granted the Hospitallers an estate in Zagość, where the order soon established a church, hospice, and commandery. Henry's contacts with and subsequent adherence to the culture of crusading, courtliness, and the art of chivalry were a significant conduit for the introduction of these cultural influences to Poland and led to their imitation by the court circle. For example, the romantic tale of Walter and Helgunda was sung at Henry's court in Wiślica, and preserved in the thirteenth-century *Chronica Poloniae Maioris*.

Henryk was killed on 18 October 1166 during an expedition of his brother Bolesław against the pagan Prussians. His

Heraclius (d. 641)

remains were probably buried in the collegiate church in Wiślica, where his grave is marked by an ornamental tombstone donated by his younger brother and heir, Kazimierz II Sprawiedliwy (the Just).

Heraclius (d. 641)

Byzantine emperor (610–641), famous during the crusade period for his recovery of the relic of the True Cross from the Persians.

Heraclius came to power after overthrowing his predecessor, Phokas. At the time of his accession, Byzantium faced major military threats from the Slavs and Avars in the Balkans and from the Persians in the eastern provinces. In 614, the Persians took Jerusalem, capturing its most holy relic, the True Cross. By 629, Syria, Palestine, and Egypt had fallen, and Constantinople was deprived not only of fiscal revenues but substantial grain supplies. After making peace with the Avars by paying them a vast tribute, Heraclius turned his attention eastward and campaigned far into Persia. In 627 internal strife led to the overthrow of the Persian shah, Chosroes II. The True Cross was returned in triumph to Jerusalem in 630. However, the end of Heraclius’s reign was marked by the rise of Islamic power, culminating in the defeat of his armies at the battle of the Yarmuk in 639. By 642, Syria, Palestine, Mesopotamia, and Egypt had been overrun by the Arabs. In 636 Heraclius returned to Constantinople, where, in the last years of his reign, he became

increasingly unpopular; criticism centered on his unsuccessful attempts to resolve theological disputes and on his marriage to his niece Martina.

Heraclius’s defense of the Holy Land and his recovery of the True Cross meant that he was sometimes regarded as a kind of proto-crusader in later ages, notably by the twelfth-century crusade chronicler William of Tyre, who began his history of Outremer with an account of the wars fought by the emperor.

Hermann I of Thuringia (d. 1217)

Landgrave of Thuringia (1190–1217), count palatine of Saxony (1181–1217), and participant in the Crusade of Emperor Henry VI (1197–1198).

Born about 1155, Hermann was the youngest son of Ludwig II, landgrave of Thuringia (d. 1172), and Jutta, daughter of Frederick II, duke of Swabia; he was thus a nephew of Emperor Frederick I Barbarossa. From 1178 to 1180 Hermann and his elder brother, Landgrave Ludwig III (d. 1190), supported the emperor in his struggle against Henry the Lion, duke of Saxony. After Duke Henry was deprived of his fiefs (1180), the emperor enfeoffed Hermann with the palatinate of Saxony in the following year. In 1190 Hermann became landgrave of Thuringia in succession to Ludwig III, who had died without male heirs in October 1190 while returning from the Third Crusade (1189–1192).

Hermann took the cross in October 1195 in response to an appeal for a new crusade from Pope Celestine III. In spring 1196 Emperor Henry VI offered the German princes unlimited heritability of all their imperial fiefs in order to obtain their support for the crusade that he proposed to lead. In return, the emperor wanted them to renounce their right to elect the king of Germany. Hermann was one of the most influential among the German princes who succeeded in forcing the emperor to abandon this demand.

In spring 1197 Hermann set off for Palestine. Nothing is known about his involvement in military action from 1197 to 1198, but in March 1198 he took part in the meeting of numerous bishops and German princes in the camp at Acre (mod. 'Akko, Israel), which requested that the pope elevate the fraternity of German hospitallers in the Holy Land into a military religious order of knights. Papal confirmation was given in 1199, laying the foundation for the development of the Teutonic Order. The ties between the land-graves of Thuringia and the order grew closer when Hermann's son and successor, Ludwig IV (d. 1227), granted the order his special protection in 1222. Hermann returned to Thuringia in summer 1198. During the next twenty years, until his death, he played a major role in the struggle for the crown in Germany between the Staufens and Welf dynasties.

Hermann Balk (d. 1239)

Prussian master (1230–1238) and Livonian master (1237–1238) of the Teutonic Order.

Hermann probably belonged to a family from the east of Lower Saxony. He went to Prussia as leader of the order's second contingent of brethren and servants in 1230. They crossed the river Vistula in 1231, (re-)erecting a castle at Thorn (mod. Toruń, Poland). When a crusading army reached the Vistula in 1232, Hermann and the brethren of the order built another castle at Altkulm (mod. Starogród, Poland) and probably subdued most of the Kulmerland (ter-

ritory of mod. Chełmno, Poland). In the summer of 1233 he was in Bohemia (and Silesia) to subject the order's bailiwick to the control of the Prussian branch and to gain men and money for Prussia. After this, Hermann turned to neighboring Pomesania, where the towns of Marienwerder (mod. Kwidzyn, Poland) and Elbing (mod. Elbląg, Poland) were founded in 1234 and 1237. Hermann probably instituted two land commanders for the Kulmerland and Prussia.

After the Order of the Sword Brethren was defeated by the Lithuanians at the battle of Saule in September 1236 and its unification with the Teutonic Knights was publicly declared in June 1237, Grand Master Hermann von Salza nominated Hermann Balk as first master of Livonia. There, he had to face stern opposition by the former Sword Brethren because of the surrender of northern Estonia to Denmark as part of an agreement with Pope Gregory IX. Finally Hermann was forced to resign in favour of Dietrich von Grüningen, and he returned to Germany. In February 1239 he was at Würzburg, and he probably died in the following month.

———, *Von Akkon zur Marienburg: Verfassung, Verwaltung und Sozialstruktur des Deutschen Ordens, 1190–1309* (Marburg: Elwert, 1999).

Hermann von Salza (d. 1239)

Fourth grand master of the Teutonic Order. In some respects Hermann von Salza can be considered as the second founder of the order; during his period of office the Teutonic Knights rose from humble origins to become nearly as influential as the Templars and Hospitallers.

Hermann was probably born around the year 1180 as a member of a Thuringian ministerial family from the area of Gotha and Langensalza. He entered the Teutonic Order when Thuringia was its main German territory. He is first mentioned as grand master in June 1209 and was largely resident in the Mediterranean countries; after 1209 he only spent about four years in Germany. In the Holy Land, he tried to expand the order's possessions through donations and purchases. His first acquisitions were in Cilicia, which

Het'um I of Armenia (d. 1270)

he visited in 1211–1212, but his policies only really began to bear fruit after his participation in the Fifth Crusade (1217–1221). With the help of a donation of 6,000 marks of silver by Duke Leopold VI of Austria (1220), Hermann acquired the possessions of Otto and Beatrix of Henneberg, the heirs of Joscelin III of Courtenay. This was the *Seigneurie de Joscelin*, comprising the barony of Toron with the castles of Banyas and Châteauneuf, which enabled him to start building the order's main castle, Montfort, though Toron itself was never conquered from the Muslims. The order also received donations in Greece, Italy, and Spain (1222).

The most important acquisition during Hermann's mastership was the Burzenland, a part of southeastern Hungary (today in Romania), where King Andrew II commissioned the order to fight against the heathen Cumans (1211). When the Teutonic Knights were expelled after trying to establish their own lordship in 1225, Hermann personally intervened with the pope and acquired papal letters, but these had no effect with the Hungarian king. It was also probably due to Hermann's decision that the order afterward followed the call of Duke Conrad of Mazovia to fight the heathen Prussians (1225/1230). On this occasion, Hermann secured imperial and papal privileges and thus laid the foundations for the independent territory of the order in Prussia. In 1236–1237, after the heavy defeat of the Sword Brethren, the order also took over a leading role in Livonia, although it was obliged to share government with the (arch)bishop of Riga, the other bishops, and the regional knighthood.

Hermann not only consolidated and expanded the order, he also was a gifted diplomat, who mediated between Emperor Frederick II and Pope Gregory IX when the latter excommunicated the emperor for postponing his crusade. His first contacts with the Curia probably went back to the Fourth Lateran Council (1215). He met Frederick the first time in 1216, and afterward he undertook negotiations with the Curia on his behalf. In 1228–1229, he accompanied Frederick on his crusade to the Holy Land, during which the emperor had himself crowned king of Jerusalem and regained the city of Jerusalem through negotiation with the Ayyūbids. Hermann was rewarded by imperial donations, notably the German hospital in Jerusalem.

In 1230, Hermann reconciled pope and emperor by the Treaty of San Germano. Afterward he mediated during conflicts in Germany and the Holy Land, even in the dispute between Frederick and his rebellious son Henry (VII) in 1235. It was perhaps also due to Hermann's influence that Freder-

ick made Lübeck an imperial town in 1226. Just when the conflict between emperor and pope was renewed, Hermann fell ill and withdrew to Salerno, where he died on 20 March 1239.

Het'um I of Armenia (d. 1270)

King of Armenia (1226–1269) and leading promoter of Christian alliance with the Mongols.

The rival Armenian dynasties of the Het'umids and Rupenids were reconciled under King Leon I (1219), and the marriage of Het'um to Leon's heiress, Isabel, ended the feud in 1226.

Het'um initially acknowledged the overlordship of the Saljūq sultanate of Rūm but used the arrival of the Mongols to exchange suzerains: after the battle of Köse Dagh (1243), he ingratiated himself with the Mongols by handing over the Saljūq sultan's family. His brother, Smpad, and then Het'um himself traveled to the Mongol capital, Qaraqorum, to obtain recognition from the Great Khan (1253–1256).

Following the Mongol invasion of Syria under Hülegü in 1260, the Armenian kingdom expanded eastward to the Euphrates, and Het'um had a notable role in the Mongol occupation of Aleppo and Damascus, gaining the enmity of the Mamlūks.

Het'um continued to fight for the Mongols, but by 1266 the Mamlūks had turned to the offensive. Despite Het'um's attempts to negotiate a truce, a Mamlūk force attacked Cilicia, defeating the royal army trying to hold the Amanus Gates and going on to ravage most of the Cilician plain; in the fighting, Het'um's son Leon was captured and another son killed. In 1268 Het'um surrendered to the Mamlūks a series of castles on his eastern borders and obtained the release of his son. Having consulted the Ilkhan Abagha, Het'um abdicated in favor of Leon in 1269, dying a year later.

Historia Belli Sacri

A Latin compilation dealing with the First Crusade (1096–1099) and the earliest years of the principality of Antioch, written around 1130 by a monk at the abbey of Monte Cassino in Italy. It draws primarily on the anonymous *Gesta Francorum* and the *Gesta Tancredi* of Radulph of Caen, but also incorporates the work of other chroniclers as well as some original material.

"*Historia Belli Sacri*," in *Recueil des Historiens des Croisades. Historiens Occidentaux*, 5 vols. (Paris: Académie des Inscriptions et Belles-Lettres, 1844–1895), 3: 165–229.

Historia de expeditione Friderici imperatoris

The *Historia* is a detailed narrative of the Third Crusade (1189–1192), whose core consists of an account of the expedition of Frederick I Barbarossa, Holy Roman Emperor, from its departure from Regensburg (11 May 1189) up to Frederick's death (10 June 1190).

The work was originally composed as three separate reports sent to Germany by an eyewitness who was probably a member of the imperial chancery. One of the four manuscripts (MS Praha, Strahovska knihovna, DF.III.1), written between 1202 and 1221, adds an introduction containing

texts of five letters concerning the summoning of the crusade, as well as a continuation dealing with events up to 1197. An Austrian cleric called Ansbert, who is named in this manuscript, can probably be regarded as the author of one or more of the original reports and the compiler of the longest version of the *Historia*.

Historia de profectione Danorum in Hierosolymam

A short narrative describing the participation of a Danish-Norwegian fleet in the Third Crusade (1189–1192).

The work was written by an unknown canon from the Premonstratensian monastery in Tønsberg (Norway) at the instigation of a superior cleric known only as Dominus K, and some of the participants, probably in the late 1190s and certainly before 1202.

The narrative tells of five Danish nobles and their followers who left for the Holy Land in 1191 on four ships ahead of a Norwegian contingent of 200 men. The Danish ships were abandoned on the Frisian coast after a violent storm in the North Sea where one ship was lost and several people drowned. The survivors continued by land but only reached the Holy Land after the peace of September 1192. The text was probably written to demonstrate that the expedition was a real crusade, in view of the fact that the participants reached the Holy Land too late for the actual fighting.

Historia Nicaena vel Antiochena

A Latin prose chronicle composed around 1146, commissioned by King Baldwin III of Jerusalem. Its anonymous author, who wrote in Outremer, used the account of the First Crusade (1096–1099) given by Robert of Rheims, then drew on Fulcher of Chartres for the early history of the kingdom of Jerusalem up to 1123.

The work opens with a verse prologue describing all the rulers of Jerusalem up to Baldwin III. The narrative commences just prior to the Council of Clermont (chapters 1–3), traces the course of the First Crusade (chapters 4–60), and briefly covers events in Outremer up to the capture of Baldwin II by the Turks in 1123 (chapters 61–80). The author relies heavily on his sources, repeating them almost verbatim, but instead of embellishing, omits all rhetorical flourishes. The prologue reveals the author's attitudes: he greatly admired the prowess of Godfrey of Bouillon and Baldwin I, but had little to say about their successors.

Historiography, Modern

Describing and interpreting the Christian holy wars now known as the crusades began with the earliest Western accounts of the First Crusade (1096–1099) in the first decade after the fall of Jerusalem in 1099, such exegesis forming part of the phenomenon itself. From the early twelfth century, images and morals drawn from the history of previous expeditions were employed to incite enthusiasm and devotion for new campaigns. Such early historiography, part homily, part adventure story, proved, like much subsequent study, mutable and partisan, as with the emergence

only after 1200 of the primacy of the story of Peter the Hermit, transmitted from Albert of Aachen via William of Tyre and James of Vitry.

The later Middle Ages witnessed no cessation of attention to a glorious crusading past in the quest to bring about a glorious crusading future. By the fifteenth century, appreciation of crusade history underpinned all serious discussion of crusading, such as Jean Germain's *Discours du voyage d'Outremer* (1452). Provoked by immediate political concerns, such studies tended to polemic and self-interest, unable to distinguish the past of legend from the past of evidence. Only with humanist scholarship and theological hostility could a historiography emerge independent of the phenomenon it was trying to assess, even if still contingent on the interests of the historians themselves. Thus, the Florentine humanist scholar and civil servant Benedetto Accolti's extensive history of the First Crusade, based on William of Tyre, operated as part of attempts to drum up support for the crusade of Pope Pius II (d. 1464).

The Early Modern Period

In the sixteenth century, study of the crusades received encouragement, urgency even, from the two major crises that tore Christendom apart: the advance of the Ottoman Turks and the Protestant Reformation. Traditional wars of the cross seemed to offer military and spiritually penitent and redemptive solutions to the problem of the recrudescing infidel. Yet such wars also stood as symbols of papist superstition and corruption of the pure religion of the Faithful. The continuous dialogue between present and past was lent added vitality by the new technology of printing. Later medieval libraries were littered with manuscripts of crusade chronicles and romances, not all of them unread. Printing encouraged examination of their significance, topicality, popularity, or suitability as polemic.

While the Turkish wars sharpened interest (some of it, as in the case of the humanist Erasmus, critical) in holy war as a political option, the Reformation inspired different concerns in crusading. Protestants claimed to be returning the church to pristine purity. Consequently, they needed to sift acceptable elements from the past and to identify where the Roman Church had sullied or corrupted the faith. The crusades provided an excellent case study of what the English martyrologist John Foxe described in his *History of the Turks* (1566) as papal idolatry and profanation. In this context, war against the infidel was laudable; crusading, dependent on the

doctrines of papal power and indulgences, was damnable, especially when directed against religious dissidents within Christendom. Conversely, certain Roman Catholic writers looked to the crusades as providing precedents for dealing with heretics. These distinctive confessional strands of historiography shared certain features. The crusaders, whatever their leaders' faults of ideology and sin, appeared as sincere; their cause, when fighting infidels, just.

Increasingly, both Roman Catholic and Protestant displayed an uneasiness at regarding war as a religious exercise, preferring wars for territory rather than faith, a secularization that revived juristic ideas of just war to which Lutherans and Calvinists, as well as Roman Catholics, could subscribe. Indulgences were increasingly marginalized in Roman Catholic tracts on fighting the Turks. In the writings on secular international laws of war by Alberico Gentili (1552–1608) and Hugo Grotius (1583–1645), religion was discounted as a legitimate cause, although such views competed with more traditional behavior: popes persisted in issuing crusade bulls for generations.

The major sixteenth-century historiographical development revolved around the editing of texts. Prominent, perhaps surprisingly, were Protestants. Foxe's *History of the Turks* could rail against faith corrupted, but his themes received more nuanced treatment from the Lutheran Matthäus Dresser (1536–1607), university professor and official historiographer to the elector of Saxony. The only fault of the first crusaders was their credulity in being misled by pope and profane monks. Dresser went behind confessional diatribe in identifying the clash between temporal and spiritual motives; the role of papal policy and self-interest; the driving force of popular piety and ecclesiastical manipulation of common superstition. In particular, Dresser appeared eager to affirm the great deeds performed by those he saw as German, from Godfrey of Bouillon onward, and rejected any crude judgmental link between action and outcome of the sort that permeated so many medieval chronicles. This absence of downright dismissal of crusading by non-Roman Catholic scholars operated as part of a wider cultural enterprise providing a bridge between the papist past and Protestant future through reconciling changed circumstances with proud tradition, a process crucial in the maintenance of a sense of inherited national identity and, ultimately, the creation of a secular concept of Europe transcending confessional divides.

Dresser's coadjutor Reinier Reineck (1541–1595) played an important role as editor of numerous editions of crusade texts, notably the chronicle of Albert of Aachen, but he was overshadowed by one of the greatest editors of crusade texts, the French Calvinist diplomat Jacques Bongars (1554–1612). In his widely circulated *Gesta Dei per Francos* (1611), whose two volumes ran to over 1,500 pages, Bongars published all the main narrative sources for the First (1096–1099) and the Fifth (1217–1221) Crusades, as well as the chronicle of William of Tyre, the *Secreta Fidelium Crucis* of Marino Sanudo Torsello (1321), and the *De recuperatione Terrae Sanctae* by Pierre Dubois (1306). Bongars followed a path away from religious controversy, appropriately for a servant of King Henry IV of France, a Huguenot turned Roman Catholic. Instead of confessional polemic, Bongars emphasized the distinguished roles played by kings of France, to whose successor Louis XIII he dedicated his book.

Such pioneering textual scholars established two dominant themes of subsequent crusade historiography: intellectual or religious disdain contrasted with national or cultural admiration. As crusading ceased to exert more than a technical impact on actual wars, it provided images of noble and often lost causes, as in Shakespeare's *Henry IV, Part II*, or excuses for excursions into chivalric fantasy or the exotic, notably in Torquato Tasso's *Gerusalemme liberata* (1580), a reinvention of Godfrey of Bouillon and the First Crusade as a romantic story of love, magic, valor, loyalty, honor, and chivalry. Translated widely and regularly, Tasso's romance heavily influenced subsequent popular ideas of the crusade. The tradition of moral and religious disapproval was sustained in the influential *History of the Holy Warre* (1639) by the Anglican divine Thomas Fuller, who added to his theological hostility a lofty condescension: "Superstition not only tainted the rind, but rotted the core of this whole action. Indeed most of the potage of that age tasted of this wild gourd." [Fuller, *History of the Holy Warre* (Cambridge: Buck, 1639), 5, c. ix–xvii].

The tradition of national pride and admiration for distant heroism was embodied in Louis Maimbourg's populist and royalist *Histoire des Croisades* (1675), its rhetoric of excitement praising this "famous enterprise," its "heroic actions . . . scarcely to be outdone," its scope embracing "the Great Concerns and the Principal Estates of Europe and Asia" [Maimbourg, *The History of the Crusade*, trans. J. Nalson (London: Dring, 1685), pp. 2–3, 200–1, 407–10]. Maim-

bourg and Fuller both brought their narratives into the seventeenth century; both works were internationally popular; both pushed their subject beyond the judgment of religion. The secularization of crusading history increasingly depicted the wars of the cross as features of a distant past, a quarry for good stories or edifying or repulsive models.

The Enlightenment

By the early eighteenth century, historians had begun to give crusades numbers, some eight, others, like Georg Christoph Müller of Nuremberg in 1709, five (1096–1099, 1147–1149, 1189–1192, 1217–1229, and 1248–1254, i.e., those large expeditions that reached the eastern Mediterranean). With this trend came a narrowing of the chronological and geographical frame. As the living experience of holy wars receded, the historical perception increasingly focused on expeditions to the Levant and the history of the Western settlements in Syria and Palestine within the familiar terminal dates of 1095 and 1291.

As the Ottoman threat evaporated in the eighteenth century, the prevalent intellectual tone, spiced by anticlericalism, was set by disdain for the apparent ignorance, fanaticism, and violence of earlier times, a view expressed by four of the most influential writers of the period: Denis Diderot (1713–1784), Voltaire (1694–1778), David Hume (1711–1776), and Edward Gibbon (1737–1794). Diderot regarded the material effects of the crusades as uniformly dire, its ideology framed by “imbecility and false zeal” for “a piece of rock not worth a single drop of blood” [Diderot, *Oeuvres*, 26 vols. (Paris, 1821–1834), 14:496, 511]. Hume memorably dismissed the whole enterprise as “the most signal and most durable monument of human folly that has yet appeared in any age or nation” [David Hume, *History of England*, 2 vols. (London: Millar, 1761), 1:209].

Yet no monolithic orthodoxy emerged. Voltaire, in his internationally circulated *Essay on the Manners and Spirit of Nations* (1753), tempered his disapproval with admiration for individuals. Gibbon’s *Decline and Fall of the Roman Empire* (1776–1788) went further, presenting heroism as a cultural rather than merely personal feature, an active energy that, once freed of savage fanaticism (i.e., religion), offered future advantages to the West. More than is often realized, Gibbon concerned himself with the fate of Byzantium, pointing the contrast between its effete of cultured decadence with the vigor and brutality of its conquerors, crusaders, and Muslims. Adopting the ideas of Joseph de Guignes’s *Histoire*

des Huns (1756–1758) that the crusades opened new horizons for Western trade, manufacture, and technology, Gibbon foreshadowed what became a major concern of the next generation, as he did in evoking the conflict between Christianity and Islam in terms of “the World’s Debate.”

Romanticism, Orientalism, Empire, and the Revival of Chivalry

To Gibbon’s contemporaries, that debate appeared to have been won by the West, if not necessarily by Christianity. Fear of the Ottomans was replaced by a patronizing orientalism, by turns contemptuous and fascinated. The Muslims of the Near East became curiosities, their culture exotic, pathetic, comic, or bizarre. Inevitably, the past was rearranged to suit the new commercial, intellectual, and political dominance of the West. This shift required shining the spotlight on the motives and behavior of the crusaders themselves rather than on the outcome of their exertions, on the cultural values rather than the undoubted failure. External stimulus to shifting perceptions came from a growing elite fashion for oriental and Near Eastern artifacts, clothing, and cultural anecdotes.

More direct contact with the Near East followed Napoleon’s campaign in Egypt and Syria in 1798–1799, consolidating the view, especially among Frenchmen, that the crusades primarily concerned the occupation of the Holy Land. Contemporary with the reconfigured interest in the Near East was the popularity of neomedievalism, a different sort of otherness to contrast the self-perceived settled modernity of Enlightenment Europe. In the crusades orientalism and medievalism combined in forms that were lent further definition by political reaction to revolution and the sentimentality of romanticism. The Middle Ages received more positive appreciation, as in Frederick Wilken’s *History of the Crusades* (1807–1832), which pioneered use of Eastern sources. The new cult of chivalry supplied moral, religious, and cultural buttresses for an aristocratic ancien régime losing much of its exclusivity. The effect on the study of the crusades was profound, although not uniform. Popular literary admirers of chivalry, such as Sir Walter Scott (1771–1832), in his novels *Ivanhoe* (1819) and *The Talisman* (1825), or Charles Mills (1788–1826), in his widely circulated *History of the Crusades* (1820), remained equivocal in their admiration of the ideology and violence of crusading despite the heroism of participants. Hesitation over what Henry Stebbings described as the crusades’ “grand but erring spirit

of enthusiasm” [Stebbing, *History of Chivalry and the Crusades*, 2 vols. (Edinburgh: Constable, 1829–1830), p.1] persisted, especially among Protestant writers. However, in the face of the unsettling change consequent on galloping, indiscriminate industrialization, crusaders and crusading increasingly received the benefit of the doubt from nostalgic or escapist apologists, popular historians, and imaginative travelers returning from the newly popular Levantine package tours.

The most influential historian of the crusades in the nineteenth century was Joseph François Michaud (1767–1839) in his *Histoire des croisades* (1812, revised after 1831) and its companion collection of texts, the *Bibliothèque des croisades* (1829). Antiquarian and uncritical, Michaud, a monarchist, nationalist, antirevolutionary Christian, allied admiration with supremacist triumphalism, regarding the crusade achievements as “heroic victories . . . astonishing triumphs which made the Muslims believe that the Franks were a race superior to other men,” sapping the spirit of Islam even in defeat. More insidiously, “the victorious Christian law began a new destiny in those far away lands from which it had first come to us,” the “holy wars,” Michaud argued, having “as their goal the conquest and civilisation of Asia.” At a time of nascent European commercial and political colonialism in the Near East, such “precedents” were seized upon, Michaud even describing the crusaders as founding “Christian colonies” [Michaud, *Histoire des croisades*, 6 vols. (Paris: Furne, 1817–1841), 6:371].

With colonialism as the litmus test of European hegemony, the crusades could be transformed into precursors of that superiority and cultural ascendancy, taking their place in the march of Western progress, at once a defensive shield against alien infidel culture, a harnessing and softening of the primitive military barbarism of the early Middle Ages, and, confusingly, a conduit for the reception of the material and intellectual riches of the East. Michaud’s convenient and seductive vision of crusading cast long and dark shadows. An exasperated T. E. Lawrence at the Versailles Peace Conference in 1919 had to remind Frenchmen claiming control of Syria that “the Crusaders had been defeated; the Crusades had failed” [Margaret Macmillan, *Peacemakers* (London: Murray, 2001), p. 401].

The French academic tradition of seeing the crusaders as colonial forerunners remained tenacious. In 1917, Louis Madelin described a supposedly beneficent and benevolent Franco-Syrian society in Outremer, an attitude with clear

attractions during the French mandates in Syria and the Lebanon after 1919. The lengthiest exposition of this strand of interpretation was almost the last. René Grousset’s three-volume *Histoire des croisades* (1934–1936) talked of *La France du Levant* and ended with the comment that “the Templars held on only to the islet of Ruad (until 1302) south of Tortosa through which one day—in 1914—the ‘Franks’ were to set foot once again in Syria” [Grousset, *Histoire des croisades*, 3 vols. (Paris: Plon, 1934–1936), 3:763]. Even Jean Richard, in many ways a radical revisionist of such interpretations, in 1953 described the kingdom of Jerusalem as “the first attempt by Franks of the West to found colonies” [Richard, *The Latin Kingdom of Jerusalem*, 2 vols. (Amsterdam: North Holland, 1979), 2:463]. The literal acceptance of the concept of *Gesta Dei per Francos* had a long history.

Ironically, Michaud’s vision of the crusades set the agenda for Muslim attitudes as well. Until the collapse of the Ottoman Empire and the penetration of European power, the crusades failed to arouse interest among Islamic and Arabic scholars. By the second half of the nineteenth century, this changed. The Christians once again intruded into the *Dār al-Islām* (“abode of Islam”), intent on rewriting the past. In the first modern Muslim account of the crusades using medieval Islamic sources, *Splendid Accounts in the Crusading Wars* (1899), the Egyptian Sayyid ‘Ali al-Hariri quoted the Ottoman sultan’s remark that “Europe is now carrying out a Crusade against us in the form of a political campaign” [Emmanuel Sivan, “The Crusaders Described by Modern Arab Historiography,” *Asian and African Studies* 8 (1972), 112]. The earliest modern Islamic biography of Saladin, by the Turkish Namik Kemal (1872), explicitly challenged the distortions in Michaud’s *Histoire*, recently translated into Turkish. Much of the subsequent Islamic discourse on Western attitudes to the crusades and to the Near East has been colored by a negative acceptance of the Michaud version of crusade history, as if this version was the immutable Western response. Thus criticisms of the West and the crusades, such as Edward Said’s tendentious *Orientalism* (1979), tend to operate within as well as against this essentially nineteenth-century Western construct.

The Modern Age

The academic study of the crusades was transformed by the publication of Heinrich von Sybel’s *Geschichte des ersten Kreuzzuges* (1841). A pupil of Leopold von Ranke (1795–

1886), Sybel developed his mentor's suggestion of 1837 that William of Tyre's account of the First Crusade (accepted as authoritative since around 1200) was secondary. Through close textual analysis instead of mere compilation, Sybel revealed the different stands of narrative, arguing for an appreciation of sources as transmitters of variant stories and legends, not statements of unadorned fact. Sybel's application of what he called critical method to the history of the crusades and his use of sources other than narrative chronicles ushered in a golden age of crusade scholarship, even if they left the popular image largely unchanged.

The foundations of modern scholarship were laid between the 1840s and the First World War. In France, the main Western texts, as well as Arabic and Armenian texts, were edited in the monumental series *Recueil des historiens des croisades* (1841–1906). A Société de l'Orient Latin, inspired by the Comte Riant (1836–1888), briefly concentrated publications of new texts in the 1870s and 1880s. New areas of research were explored: Joseph Delaville Le Roulx (1855–1911) on the Hospitallers and on fourteenth-century crusading; Louis de Mas Latrie (1815–1897) on Latin Cyprus; Riant himself on narrative sources for the Fourth and Fifth Crusades; Gustave Schlumberger (1844–1929) on coins and seals of the Latin East; Camille Enlart (1862–1927) on crusader castles. In Germany, the history of the kingdom of Jerusalem was set on a sound archival footing by another prolific editor of texts, the austere Prussian schoolmaster Reinhold Röhricht (1842–1905), editor of the *Regesta Regni Hierosolymitani* (1893); and that of the First Crusade by Heinrich Hagenmeyer (1834–1915) through his editions of texts. His *Peter der Eremit* (1879) established an orthodoxy on the crusade's origins and course not seriously challenged until the 1980s.

Scholarship does not exist in a cultural vacuum. The crusade remained harnessed to political polemic: of national identity, religious duty, and cultural dominance. In the absence of devastating general conflicts after 1815, nineteenth-century Europe spawned a cult of war that could be projected back onto the crusades, as by Ernest Barker in his brilliant essay on the crusades for the eleventh edition of the *Encyclopaedia Britannica*: “It would be treason to the majesty of man's incessant struggle towards an ideal good, if one were to deny that in and through the Crusades men strove for righteousness' sake” [*Encyclopaedia Britannica*, 11th ed., 29 vols. (Cambridge: Cambridge University Press, 1910–1911), p. 550]. The association of just causes and

sanctified violence, sealed with the muddled sentimentality of neochivalry, found stark, concrete form in countless war memorials across western Europe after 1918, yet after the horrifying First World War, crusading ceased to attract the positive responses it had enjoyed over the previous century. Not just because he saw the crusades as having willfully destroyed the civilization of Byzantium did Steven Runciman end his highly influential *History of the Crusades* (1951–1954) with the chilling judgment: “the holy war itself was nothing more than a long act of intolerance in the name of God, which is the sin against the Holy Ghost” [Runciman, *A History of the Crusades*, 3 vols. (Cambridge: Cambridge University Press, 1951–1954), 3:480]. To the mid-twentieth-century West, war may have appeared necessary but never good, still less sanctified or personally redemptive.

Since what is now known as the Wisconsin collaborative *History of the Crusades* (1969–1989) under the general editorship of Kenneth M. Setton was originally planned in the early 1950s, an explosion of research has cast doubt on the coherence as well as the nature of the subject. Leading this development has been the school of Israeli scholars led by Joshua Prawer. Prawer, in parallel with the Frenchman Jean Richard, rewrote the history of the Latin East through a re-examination of legal practices and institutions to produce a new constitutional history overthrowing the idea of the Latin East as some model “feudal” society or state, notably in the *Histoire du royaume Latin de Jerusalem* (1969–1970). Prawer and his pupils, informed by their sense of place, revisited the notion of the Latin settlements in the East as protocolonies, an idea Prawer derived from his own mentors of the French school of earlier in the century and maintained in *The Latin Kingdom of Jerusalem: European Colonialism in the Middle Ages* (1972). Implicitly, Prawer was intent on demonstrating that, unlike the state of Israel in modern times, Frankish settlement was always too limited to promise permanency and that the Franks failed to engage with the local culture or environment; their system he described as apartheid. Much of this model, supported by R. C. Smail, author of a highly influential study of crusader warfare (1956), was aimed at revising the Franco-Syrian construct of Louis Madelin and Grousset.

Recently the Prawer thesis itself has received serious modification if not contradiction from a younger Israeli scholar, Ronnie Ellenblum, whose *Frankish Rural Settlement in the Latin Kingdom of Jerusalem* (1998) argues for a

more extensive Latin settlement in the countryside. The work of Israeli scholars and Westerners such as Claude Cahen, especially in his groundbreaking *La Syrie du Nord à l'époque des croisades* (1940), has established the study of the Latin settlements as features of Near Eastern history, increasingly detached from the concurrent debates about Western responses. Yet Hans Eberhard Mayer, whose *Geschichte der Kreuzzüge* (1965, English translation 1972) reopened debate about the definition of the crusades, is also the historian of the chancery of the Latin kingdom of Jerusalem and a pioneer in the study of Latin lordships in the East. Jonathan Riley-Smith, a leading disputant on the nature of the crusade in the West, began as a scholar of the Latin East and straddles the two arenas in studies on the actions as well as motives of the earliest crusaders. However, just as crusading in the West has increasingly been integrated into mainstream study of theology, the church, law, popular religion, aristocratic society and values, and politics, the Muslim world's context of the Western incursions in the Near East has begun to receive serious and distinctive attention from Islamicists such as Peter M. Holt, Robert Irwin, and Carole Hillenbrand.

Among historians of the crusades as a feature of the medieval West, the disdainful judgmentalism of Runciman has given place to attempts to locate crusading within its social, cultural, intellectual, economic, and political context. In common with other medievalists, crusader historians employ wider ranges of evidence, including charters, archaeology, and the visual arts, to supplement chronicles and letters. Local studies have lent precision as well as diversity to previously monolithic generalities, although some scholars still see almost universal significance in the crusade. One contentious issue revolves around the definition of the crusade. As with the very first observers after 1099, the nature of the enterprise excites explanation and definition. All seem to agree with Riley-Smith that "everyone accepted that the crusades to the East were the most prestigious and provided the scale against which the others were measured" [Riley-Smith, "The Crusading Movement and Historians," p. 9]. However, there is disagreement over whether only those campaigns launched to recover or protect the Holy Sepulchre should be classed as proper crusades (as Mayer and, for different reasons, the French historian of chivalry Jean Flori would have it), or whether all those wars to which popes applied the temporal and spiritual privileges originally associated with the Jerusalem cam-

paign were equally legitimate and respected, as maintained by Riley-Smith and Norman Housley, historian of the Italian wars of the thirteenth and fourteenth centuries and of the later medieval crusades. Neither argument places what only appeared as a remotely coherent set of institutions around 1200 in the wider context of Christian holy war from the early Middle Ages, as suggested by John Gilchrist, who insists, against the hugely influential study on the origins of the crusade by Carl Erdmann (1935), that the Wars of the Cross occurred as the result, not of ecclesiastical initiative but of the submission of the church to secular militarism and militancy, a process Gilchrist sees as complete only in the early thirteenth century.

Crusade historians today study all areas of Europe, the Baltic, the Mediterranean, the Near East, even the Atlantic, and all aspects of crusading's position in and derivation from host and victim societies: Muslim, Jew, pagan, and Christian dissident. Chronological horizons match the geographic, crusades limping into the early modern world. The survival of the Order of St. John on Malta until 1798 has become as much an object of scrutiny as the fall of Acre in 1291. Crusading is now recognized as integral to European culture, therefore both more and less influential than was once understood: one form of legitimate war combining novelty and tradition; one sort of spiritual exercise; one strand in the rich polemic of Christian action, self-justification, and self-awareness, originally elevated by its connection with the liberation of the Holy Sepulchre.

Hittin

See Hattin, Battle of

Hoeneke (Höneke), Bartolomäus

A German from Osnabrück who was chaplain to three Livonian Masters of the Teutonic Order. He wrote a rhymed chronicle, which is usually called the *Jüngere Livländische Reimchronik*.

Hoeneke’s chronicle was written in the 1340s and covers the period 1315–1348. The original text, probably in Middle Low German, is now lost, but the sixteenth-century chronicler Johannes Renner recounted its contents in prose in his *Livländische Historien*. Hoeneke’s chronicle covers the wars of the Livonian branch of the Teutonic Order against Russians, Lithuanians, and the townspeople of Riga, as well as the Estonian uprising of 1343. Although the author’s sympathies are with the Teutonic Knights, he portrays the subject Estonians’ hatred of their conquerors very realistically, and his chronicle is considered an important historical source based on now lost documents and oral traditions. It was utilized by Wigand von Marburg and Hermann von Wartberge as a source for their chronicles.

Holy Lance

A relic discovered at Antioch (mod. Antakya, Turkey) on 14 June 1098, identified by many participants in the First Crusade (1096–1099) with the weapon that pierced Christ’s side during the Crucifixion (John 19:33–34).

According to the eyewitness chronicler Raymond of Aguilers, a week after the capture of Antioch from the Turks on 3 June 1098, a Provençal peasant called Peter Bartholomew approached Bishop Adhemar of Le Puy and Raymond of Saint-Gilles, claiming that he had received a series of visions from St. Andrew during the previous months. On one of these visitations, Andrew had revealed to him the spot where the lance that pierced Christ’s side lay hidden within the Church of St. Peter in Antioch. After five days of fasting and penance, twelve men (including Raymond of Aguilers) accompanied Peter Bartholomew to the church on the morning of 14 June 1098 and began to excavate the site in search of the relic. That evening the lance was uncovered by Peter Bartholomew himself. Both Raymond of Aguilers and the anonymous *Gesta Francorum* report that the discovery of the Holy Lance was greeted with great enthusiasm by the crusaders, at that point themselves besieged within Antioch by Turkish forces. These same sources, as well as a letter sent by the crusade leaders to Pope Urban II on 11 September 1098, relate that the lance was carried into combat when the crusaders broke the siege of Antioch on 28 June 1098. From these accounts, it seems clear that the crusaders attributed their success in that battle to the inspiration and divine protection offered by the holy relic.

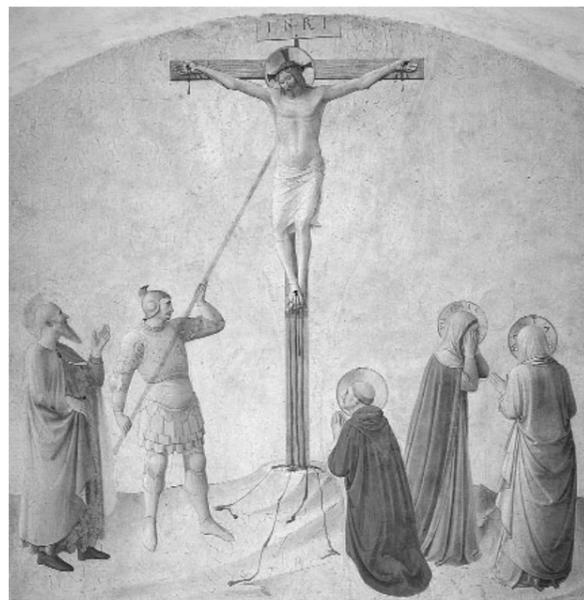

Over the following months, however, while factionalism among the crusade leaders delayed the army’s departure for Jerusalem, the authenticity of the lance was called into question, particularly by the Norman followers of Bohemund I, future prince of Antioch. In addition to claiming lordship over the newly conquered city, Bohemund was vying for authority over the crusade army with Raymond of Saint-Gilles, the guardian of the lance, and his southern French supporters. This situation came to a head when certain nobles and the less privileged elements of the army beseeched Count Raymond to lead them to Jerusalem or surrender the lance to those who were willing to continue the march. Raymond acquiesced and led a substantial portion of the crusaders toward Jerusalem in early January 1099. Nevertheless, a faction led by Arnulf of Chocques, chaplain to Robert, duke of Normandy, persisted in ques-

tioning the legitimacy of the relic. This situation encouraged Peter Bartholomew to undertake an ordeal in order to prove the lance's authenticity. On 8 April 1099, Peter hazarded an ordeal by fire while bearing the lance. Raymond of Aguilers reports that Peter crossed safely between two piles of burning wood, but was mortally crushed by the thronging crowds that greeted him on the other side. Regardless of the exact circumstances, Peter Bartholomew died on 20 April 1099.

Though this turn of events did not diminish Raymond of Aguilers's enthusiasm for the lance, it clearly contributed to the relic's controversial status among contemporary crusade historians. Fulcher of Chartres, who was at Edessa (mod. Şanlıurfa, Turkey) when the lance was discovered, expressed his skepticism about its authenticity and wrote that Peter Bartholomew's death was a clear sign of his duplicity in the matter, adding that the ordeal's outcome greatly disheartened the bulk of the relic's supporters.

Writing around 1115 in praise of the recently deceased Norman crusader Tancred, the chronicler Raduph of Caen excoriated both Raymond of Saint-Gilles and Peter Bartholomew for their fabrication of the supposedly holy relic. Raduph asserts that Peter Bartholomew's demise was clear proof of the lance's falsity. Writing from a less polemical standpoint, subsequent generations of crusade historians, including Albert of Aachen, Guibert of Nogent, and William of Tyre, present the discovery of the lance as a moment of great significance during the course of the First Crusade, but also acknowledge the controversy that surrounded the relic and its discoverer's ordeal.

The question of the Holy Lance's authenticity was further complicated by the existence of well-known competitors, including a lance kept at Constantinople (mod. Istanbul, Turkey) since the seventh century and one possessed by the Holy Roman Emperors since the tenth century. The ultimate fate of the lance found at Antioch is unclear. Raymond of Aguilers writes that it was carried into battle when the crusaders marched against the Fāṭimid-held city of Ascalon (mod. Tel Ashqelon, Israel) in August 1099, while Fulcher of Chartres comments that Raymond of Saint-Gilles kept the relic for a long time after Peter Bartholomew's disappointing ordeal. According to secondhand sources, Count Raymond may have given the lance to the Byzantine emperor, Alexios I Komnenos, or he may have lost it during his participation in the ill-fated Crusade of 1101. If the lance dis-

covered by the crusaders did find its way to Constantinople, it may have been the same one purchased in 1241 by King Louis IX of France from Baldwin II, Latin emperor of Constantinople.

Holy Sepulchre

Holy Sepulchre

The site traditionally identified as both the place of the Crucifixion and the tomb of Jesus Christ, subsequently a church and pilgrimage center in the city of Jerusalem.

According to the New Testament, Jesus was crucified at Golgotha, “the place of the skull” (Matt. 27:33–35; Mark 15:22–25; John 19:17–24). This has been identified as an area of abandoned stone quarries just outside the city wall of the time (known as the “second wall” to archaeologists). About ten years after the Crucifixion, a third wall was built that enclosed the area of the execution and burial within the city, and this accounts for the Holy Sepulchre’s location inside the Old City of Jerusalem today.

The Roman emperor Constantine the Great (308–337), a Christian, had the temple of Venus in Jerusalem demolished to make way for a church. In the course of the demolition a tomb was discovered that was recognized as the tomb of Christ. The first Church of the Holy Sepulchre was approached by a flight of steps from the *Cardo* (the main

street of the city). Then pilgrims went through a narthex, a basilica, and an open area, the “holy garden,” which had in it the rock of Golgotha, finally reaching the Holy Sepulchre itself. The rock-cut tomb was initially open to the elements, but later it was protected by an edicule (small building). The whole complex was richly decorated, as we know from the description by Constantine’s biographer Eusebius (337), from pictures in the Church of St. Pudenziana in Rome dating from early in the fifth century, and on the Madaba mosaic map from the sixth, and from modern excavations. In 326 Constantine’s mother, Helena, made a pilgrimage to Jerusalem, where, according to legend, she discovered the relic of the cross of Jesus. The story of the Invention (that is, discovery) of the Cross was current early in the fifth century, and in the eleventh a cave deep below the ruins of the basilica came to be known as the Chapel of the Invention of the Cross.

In 614 a Persian army sacked the church and the True Cross was taken away, but in 631 the Emperor Heraclius

Pilgrim graffiti at the Church of the Holy Sepulchre. Tens of thousands of crosses and names were carved into the church’s stone by medieval pilgrims. (Courtesy Alfred Andrea)

negotiated its return. The Arab conquest in 638 was initially less disruptive, as Christians were treated tolerantly, but 300 years later (938) the entrance to the basilica was converted into a mosque, and in 966 the dome was destroyed by fire during anti-Christian riots. In 1009 the fanatical Fāṭimid caliph al-Ḥākīm ordered the destruction of the church. The Byzantine emperor Constantine IX Monomachos (1042–1055) funded its rebuilding, but on a different plan, with the entrance on the south side. This was the church that drew pilgrims from all over Christendom in the later eleventh century, and for much of that period the Muslim rulers of the city treated them well. It was only after the capture of the city by the Saljūq Turks (1077) that rumors began to circulate that Christian pilgrims were being ill treated and denied access to the church. The liberation of the holy places, the foremost of which was the Holy Sepulchre, was an important motivation for the First Crusade (1096–1099).

After the capture of the city by the crusaders (15 July 1099), eyewitnesses tell how the survivors of the expedition prayed in the Church of the Holy Sepulchre, which struck them as unusual because it was open to the sky. During the next half-century the church of Constantine Monomachos was largely reconstructed. Although the building's footprint was preserved, the church acquired the attributes of a cathedral on the Western model. The holy garden became the basilica of the crusaders' church, and the rock of Golgotha was given its own chapel. The Church of the Holy Sepulchre was reconsecrated on 15 July 1149, fifty years to the day after the capture of Jerusalem by the First Crusade, but in fact work continued on the building for some years afterward. Nevertheless, the church of the crusaders is essentially the church that is to be seen today.

The crusaders' church attracted enormous numbers of pilgrims, whose entry and circulation had to be controlled: the twin doorways can still be seen, although the elaborately carved lintels under which the pilgrims passed were removed after the earthquake of 1927 and are now in the Rockefeller Museum in Jerusalem. The right-hand door was blocked up after the Muslim reconquest of the city in 1187. However, even during periods of Muslim occupation, pilgrims continued to be admitted to the site, and indeed Western leaders were anxious to negotiate rights of entry. Some features of the medieval church can no longer be seen—for example, the tombs of the first rulers, Godfrey of Bouillon (1099–1100) and Baldwin I (1100–1118), which were removed in the early nineteenth century when the

Greeks were carrying out restoration work. All of the kings of Jerusalem up to 1187 (but not Queen Melisende) were buried in the Calvary Chapel.

As twelfth-century maps reveal, the Holy Sepulchre in Jerusalem was the spiritual focus of Christendom and its most important pilgrimage center. The church was laid out to enable pilgrims to move from chapel to chapel, their visit culminating in the Holy Sepulchre itself. At Golgotha, to mark the completion of their pilgrimage they would leave the crosses they had carried on the journey, and a great pile of these would be burnt on Easter Eve. On the same day, Holy Saturday, the ceremony of the Holy Fire took place. The patriarch entered the edicule, where the Easter Fire was miraculously kindled and then passed from hand to hand. This was witnessed by the chroniclers Ekkehard of Aura in 1101 and Caffaro in 1102.

Holy Sepulchre, Canons of the

The religious Order of Canons of the Holy Sepulchre (Lat. *Ordo Canonicorum regularium Sancti Sepulchri Hierosolymitani*) goes back to the cathedral chapter established after the First Crusade (1096–1099) by Godfrey of Bouillon at the Church of the Holy Sepulchre in Jerusalem.

Under the direction of a prior, the chapter assisted the Latin patriarch of Jerusalem in the administration of his archdiocese and the performance of the liturgy. In 1114 the patriarch Arnulf of Chocques reformed the chapter, which initially was heavily involved in the disputes concerning the organization of the Latin Church of Jerusalem and the nature of its relationship to the monarchy of Palestine. From this time it followed the Rule of St. Augustine and constitutions modeled on French centers of reform and based its liturgy on usages that, though also corresponding

to native Greek Orthodox customs, took local idiosyncrasies into consideration.

The spiritual life of the canons was characterized by their guardianship of Christendom's most holy sites and the incumbent liturgical duties. The popes gave them the specific duty of placing the Lord's Passion and the triumph of the Cross at the center of the liturgy and ecclesiastical life. In Jerusalem, the canons provided pastoral care for their parishioners in the city, saying Mass at the parish altar in the Church of the Holy Sepulchre and administering the sacraments there. They are also known to have instructed Jews and Muslims who intended to convert to Christianity. The canons also carried out pastoral duties in their Palestinian and Syrian dependencies, in the episcopal churches of Tyre (mod. Soûr, Lebanon), Jaffa (mod. Tel Aviv-Yafo, Israel), and Nablus, and in the churches and chapels on their estates, notably at Magna Mahomeria (mod. al-Bira, West Bank) and Parva Mahomeria (mod. al-Qubaiba, West Bank). The chapter also trained its own clergy. In its scriptorium, manuscripts of all kinds were produced, and theological texts like Ambrose's *Hexameron* and Augustine's *Tractates on the Gospel of John* were copied. It must also be assumed that the canons participated in the architectural modification of the Church of the Holy Sepulchre, as well as the establishment of pictorial programs and inscriptions in it.

The chapter had additional responsibilities that were only rarely performed by Western spiritual institutions. These included dealing with non-Christians and Christians of other denominations, looking after a never-ending stream of pilgrims and crusaders, and participation in the country's defense. The canons were—more or less—capable of coordinating these functions. Even in the first years after the conquest of the Holy City, the canons, in conjunction with the patriarchs, employed knights to carry out the military service owed to the king by the chapter and patriarch, without, however, turning them into a military order comparable with the Templars or Hospitallers. As early as 1112, the chapter combined with other spiritual institutions to form communities in prayer, for example, in Italy, France, Poland, Germany, and Spain.

The status of the Church of the Holy Sepulchre as the patriarch's titular church, the burial site of the kings of Jerusalem, the repository of important relics, and (from 1131 to 1186) the coronation venue, all helped the canons to attain a leading position within the church and kingdom of Jerusalem. This facilitated the order's acquisition of large

estates and establishment of numerous branches in Outremer and Europe. The loss of Jerusalem in 1187 and the fall of Acre (mod. 'Akko, Israel) in 1291 led to restrictions concerning the original function of the chapter, which underwent a reorganization under Pope Urban IV.

From 1291, the prior (later known as archprior) and chapter resided in Perugia in Italy. Pope Innocent VIII's command to disband the order and transfer its property to the Order of St. John in 1489 was only partly successful. The establishment in Perugia and a number of houses in Italy, Spain, France, and parts of Germany were lost, but the congregations in Spain, Poland, Hungary, Bohemia, Savoy, and Germany continued to exist. The English houses, which had become independent in the late Middle Ages, and the houses in the north of Germany fell prey to the Reformation, but other houses of the order in Europe retained their autonomy, in spite of the attempt of the house at Miechów in Poland to become the headquarters of the order (Lat. *caput ordinis*) in the course of the nineteenth century.

Another development in the order went back to the middle of the fifteenth century, when Dutch branches of the cloister of Denkendorf in Württemberg started a profound process of *renovatio* (renewal). Their most important results of this were the female branches of the order, which still exist in Belgium, England, southwestern Germany, and the Netherlands, conserving the tradition of the cathedral chapter of the Church of the Holy Sepulchre in Jerusalem from 1099.

Holy Sepulchre, Order of the

The Order of the Holy Sepulchre (Lat. *Ordo Equestris Sancti Sepulcri*) is a lay association whose organization and objectives have often changed during the course of its history. It originated as a lay order or association of knights, and was thus quite different in character from religious knightly orders such as the Templars or Hospitallers.

The origins of the order go back to the fourteenth century, when it became customary for noble Western pilgrims to be knighted at the Church of the Holy Sepulchre in Jerusalem or to ask for a renewal of an earlier ceremony of knighting. It was undoubtedly influenced by the revival of pilgrimage and the idea of recovery of the Holy Land after the fall of Acre (mod. 'Akko, Israel) to the Mamlūks in 1291. The first attested knighting ceremony dates from 1332/1336. In contrast to the forms of knighting (dubbing) common at this time in western Europe, the ceremony at the Holy Sepulchre distinguished itself through the special holiness of the place where it was carried out. As part of his obligations, the new knight also undertook to take the cross in the case of a future crusade.

In 1312, following the departure of the Franks and the end of the Latin patriarchate of Jerusalem, Pope Clement VI entrusted the Franciscans of Mount Zion with the mission of representing the papacy in the Holy Land. But this religious community was only officially recognized by the Turks in 1333, when the king of Naples got the Sultan to agree (upon payment of 32,000 gold ducats) that the Franciscans could remain in Palestine and continue to guard the holy places. The prerogative of dubbing knights before the tomb of Christ, in the past exercised by the canons, was thus transferred to the Franciscan custodian, who had the rank of bishop and

who alone upheld the presence of the papacy in the Holy Land until 1847, often under adverse conditions. It was a great privilege to receive the spurs of a knight before the tomb of Christ, this being the reward for an exceptional act of piety.

During the fourteenth and fifteenth centuries, many pilgrims travelled to Jerusalem to be dubbed knights of the Holy Sepulchre, including such important persons as Frederick, duke of Austria (the future Emperor Frederick III) in 1436. Chronicles from this time report that individual dubbing of knights before the Holy Sepulchre continued over the centuries. In 1806, the Vicomte de Châteaubriand described his own investiture at the Basilica of the Holy Sepulchre in his *Mémoires d'Outre-Tombe*. The knights, whose elevation was registered and recorded in a patent, were received into a community that demanded the fulfillment of the usual chivalric obligations plus compliance with religious rules as they are found in the statutes of those fraternities counseled by the mendicant orders. However, the order had no organizational ties; the knights did not assemble in chapters of the order and were not subject to any leadership. Attempts to unite and organize all knights of the Sepulchre, for which evidence can be found from the sixteenth century onward, were to no avail.

It was only in 1868 that a permanent association of all knights of the Holy Sepulchre was established at the instigation of the Latin patriarch of Jerusalem by Pope Pius IX, who gave the association the formal character of a papal order of knights. It was placed under the pope as supreme sovereign, with the Latin patriarch serving as the actual head, and organized in national bailiwicks. The order's organizational structure was reformed several times during the twentieth century. Its objectives are the promotion of its members' Christian way of life and the spiritual and material support of the activities and facilities of the Roman Catholic Church in Israel, the West Bank, Gaza, and Jordan. These include the construction and operation of churches, schools, kindergartens, old people's homes, and hospital wards, and the provision of assistance for the old and infirm. The order is now represented in thirty countries and has about 20,000 members.

Holy War

The idea of holy war originates in the Old Testament, with the conquest of the Promised Land by the Israelites in the time of Joshua, ordained and directed by God. When his people are loyal to him, God facilitates their victories by unleashing forces only he can control, such as earthquakes, hornets, and celestial armies; Jehovah is held to be the sole protector of the Israelites, whose rebellions he chastises by subjecting them to the rule of gentiles.

These ideas of ethnic exclusivity are completely overturned in the New Testament: now the elect are those who, without distinction of race, accept Jesus Christ as their Savior. The Kingdom of God does not belong to this world and will not be established by force. It will be accomplished by God himself at the end of time, when Jesus will come down from heaven to destroy once and for all the forces of evil led by the Antichrist. Christ preaches a religion of love extended to all, and his disciples take no interest in worldly quarrels, which Jesus condemns in both word and deed. In his Sermon on the Mount, he refines the Mosaic Law, extending the idea of one's neighbor to include all of humankind, and advocating a morality in which intention plays an important part: not only is it wrong to kill, but even anger and animosity should be banished. Even when acclaimed in Jerusalem as "king" and liberator of the Jews from Roman occupation, Jesus refuses to take any political actions; he chooses not to defend himself when arrested and forbids his

disciples to defend him: "For all they that take the sword shall perish with the sword" (Matt. 26:52). Found guilty and sentenced, he prays for those who nail him to the Cross.

Over the next three centuries Christians followed this teaching and practiced nonviolence: when persecuted, they did not attempt to defend themselves, but either fled, or allowed themselves to be arrested and sentenced. They generally refused to do military service, to avoid having to kill others, but otherwise tried to be good citizens of the Roman Empire. According to the Christian leader Hippolytus of Rome (d. 235), Christians should not become soldiers, while those soldiers who became Christians should undertake not to kill, even if ordered to do so by their commander. According to the theologian Origen (d. 253/254), their prayers were of more use to the empire than their arms.

With the conversion to Christianity of Emperor Constantine I (the Great) in 312, perspectives shifted dramatically: the Christian Church was now favored, and the ensuing phenomenon of mass conversions led to less intense faith among believers, as well as a greater division between the clergy and their lay followers. Faced with the threat of barbarian invasions, Christians, by this time a majority, were forced to take up arms to defend the empire and civilization. The church began to excommunicate laymen who refused to take up arms, as, for example, at the Council of Arles (314), although the clergy, by contrast, were required to abstain from shedding blood.

St. Augustine of Hippo (d. 430) argued that one could still find favor with God by pursuing a military career, citing the biblical wars of the Lord as evidence. Morally acceptable wars still existed, even if they were not directed by God. Without actually developing a full-fledged theory of just war (which was to be the task of canonists of the twelfth and thirteenth centuries), Augustine laid down the foundation of the future doctrine of a just war: it should be declared by a legitimate authority (the emperor); it should be undertaken for morally acceptable reasons (such as the recovery of stolen property, the reestablishment of justice, or protection of the population against invaders); and it should be carried out by soldiers without hatred or personal interest in the conflict. If this was the case, the soldier who killed under orders was not committing homicide. Despite the influence of Augustine's doctrine, medieval penitentials for a long time reflected older attitudes: a soldier who killed in a "public" war had committed a sin and had to do penance for it.

The breakdown of political unity after the collapse of the Roman Empire obscured the definition of legitimate authority: the idea of the state lost its influence, to be replaced by personal allegiances. The church became the primary ideological point of reference. This shift prematurely ended the incipient legal concept of the just war. Yet the use of arms was more than ever necessary in a fragmented medieval society dominated by aristocrats and warriors, in which the church itself required protection. This situation resulted in a progressive ideological glorification of certain wars, which led to the development of the concept of “holy war,” which up to that time had been alien to Christianity.

Several factors contributed to this doctrinal revolution, which in the course of a millennium took the church from pacifism to the crusade. The first of these was already in existence: the glorification of the defense of one’s country. Self-evident in the age of the Christian Roman Empire, it dwindled in importance after the establishment of the barbarian kingdoms in the West. Yet it reemerged when Clovis, king of the Franks (d. 511), a convert to Christianity, chose to champion the Roman Catholic form of Christianity against the Arianism of the other barbarian kingdoms and forged an alliance between the Merovingian monarchy and the papacy. The idea gained in importance under the Carolingian dynasty, which rose to power with papal support: Charlemagne (d. 814) styled himself the renovator of the empire and protector of the church and of “Christendom,” a concept that was still in the process of formation.

The task of protection of ecclesiastical personnel and property against the Norman invaders and against neighboring lay lords gave a new dimension to the idea of the sanctification of warriors fighting for the church. The movement known as the Peace of God demonized and anathematized warriors (Lat. *milites*) who despoiled church property, but praised those who protected it. Tales of miracles highlighted the violent punishments inflicted by the patron saints of monasteries upon those who caused damage to them; they glorified those who, led by the saints themselves, fought to defend them. The church blessed their weapons and their banners. Warriors fighting for the church were thus the object of a genuine sanctification, which was evident in the liturgy, in particular in the investiture rituals of lay advocates of monasteries (Lat. *advocati*) and of defenders of churches (Lat. *defensores et milites ecclesiae*).

This trend intensified when the papacy was threatened by enemies deemed to be “pagans,” and thus easy to demonize, notably Vikings and Saracens. The monarchical development of the papacy encouraged it increasingly to identify its own interests with those of the entire church, or even of Christendom as a whole; this identification brought about a greater sanctification of battles fought on its behalf, as well as the development of doctrinal elements characteristic of holy war: spiritual rewards for the living and the status of martyrs for those who had been killed. These elements had existed from the very beginning of the Islamic concept of holy war (Arab. *jihād*), and they now appeared in Christianity at the time when Islam threatened Rome. In 846, faced with a Muslim raid, Pope Leo IV called upon the Frankish warriors with spiritual promises: to those who died in battle to protect Rome “the heavenly kingdom would not be denied” [*Epistolae Karolini aevi*, vol. 3, ed. Ernst Dümmler (Berlin: Monumenta Germaniae Historica, 1899), p. 601]. Pope John VIII renewed this promise in 879.

The sanctification of warfare, either on behalf of the papacy or against the Muslims, did not cease with the end of the Muslim threat to Rome. The idea of holy war that eventually led to the crusades came about through the conjunction of two factors: the consolidation of papal authority as a result of the Gregorian Reform movement, and the beginnings of Christian reconquest in the West. In its battle for preeminence, the church reform movement of the eleventh century demonized all of its adversaries: heretics, “schismatic” clergy, and rebellious lay powers, as well as Muslims. Conversely, it praised and sanctified those who fought against them. Thus, in 1053 Pope Leo IX claimed to have had a vision of how soldiers who died fighting for him against the Normans at Civitate shared in the rewards of saints and martyrs. Thereafter various ecclesiastical writers stressed the merit of their struggle, emphasizing the heavenly rewards that accompanied it. In 1075 a knight named Erlembald, who had been killed in combat during the struggle of the reform party of Milan (known as the Pataria) against the “schismatic” (i.e., traditionalist) clergy of the archbishopric, was called a “soldier of Christ” (Lat. *miles Christi*), an expression that, after 1095, referred to crusaders. Erlembald was regarded as a martyr, miracles occurred at his tomb, and Pope Urban II beatified him shortly before the beginning of the First Crusade. The canonist Bonizo of Sutri saw him as a hero waging “the war of the Lord” (Lat. *bellum domini*), an expression borrowed from

the Old Testament. The idea of holy war had made its appearance.

These ideas continued to manifest themselves when the enemies of the church were Muslims, who were identified with the pagans of earlier struggles. The fight against Islam, particularly in the Iberian Peninsula, thus took on the characteristics of a sanctified war of reconquest. As early as 1035, the chronicler Ralph Glaber related that monks who had been killed after having taken up arms to defend the population against the attacks of the vizier al-Manṣūr (c. 1000) had gained the status of martyrs and been admitted into paradise. Pope Alexander II, perhaps in the context of the Barbastro expedition (1064), encouraged the clergy to help those who, "inspired by God," decided to go to Spain; he lifted their penances and granted them absolution of their sins. Around 1073, Pope Gregory VII encouraged the French nobleman Ebalus of Roucy to go and liberate lands occupied by Muslims in Spain in order to restore the legitimate rights of St. Peter there. Pope Urban II, too, glorified and sanctified the reconquest in Iberia. According to him, Muslim rule was a temporary punishment inflicted by God upon his people and was nearing its end: the Christian reconquest thus had to continue in Spain, Sicily, Corsica, and the Near East. This armed reconquest was for him a pious and worthy enterprise, to be undertaken by princes as a penance. Writing to the princes of Catalonia, the pope encouraged them to recover the city of Tarragona rather than go on a pilgrimage to distant Jerusalem. Thus, military action linked to the reconquest of Spain was thought to be holy enough to be prescribed in atonement for sins, that is, as a penance; it was also considered as equivalent to the most prestigious of pilgrimages, that to Jerusalem.

For Pope Urban II, the reconquest of Iberia from the Muslims was just as holy an undertaking as the crusade for the liberation of Jerusalem that he proclaimed in 1095. He stated this in letters to Peter, bishop of Huesca, and to the Catalans, between 1096 and 1099; in them he emphasized the praiseworthiness of this reconquest, stating that the two wars against the Muslims, in Spain and in the East, were equally meritorious. Previously Pope Gregory VII had expressed in several of his letters his intention of personally leading an army to rescue the Christians of the East, driving out the Muslims, and liberating the Holy Sepulchre, accompanying this call with promises of spiritual rewards (1074). Urban II developed this idea by recommending the crusade to warriors as a penitential expedition, thus laying

the foundations for the doctrine of indulgences that developed in the twelfth and thirteenth centuries. From 1095, however, the preaching of the crusade testified to the fact that the church had accepted the idea of holy war. It was regarded as meritorious, was recommended by preachers as a penance through which one could atone for one's sins, and was thought to guarantee a place in Heaven to those who died in it, since they became martyrs for the faith. The diversification of crusading would later lead to a greater popularization of the idea of holy war. However, for the medieval church the crusade to the Holy Land remained the most commendable of all holy wars. At one and the same time it was a pilgrimage and a war sanctified by both the religious authority that proclaimed it (the pope) and by its aim, the liberation of the Holy Sepulchre, foremost among the holy places of Christendom.

Homs

Homs or Emesa (mod. Ḥims, Syria) is a city situated on the eastern bank of the river Orontes in the center of a cultivated plain.

At the start of the crusading period, it was held by Riḍwān, the ruler of Aleppo. Riḍwān's atabeg, Janāḥ al-Dawla Ḥusayn, made himself independent there in 1097. After his death in 1103 it passed under the control of the rulers of Damascus, although at times this control was only nominal. The city became a major Muslim military camp, supplying large numbers of troops, and was also used as an

assembly point and a depot for weapons and siege equipment.

In 1138, after a number of attempts to subjugate it by force, ʿImād al-Dīn Zangī received the city as part of a matrimonial alliance. Upon his death in 1144, Homs passed under the control of Muʿīn al-Dīn Unur of Damascus. In 1148 it proved to be a valuable rallying point for the Zangid troops assembling to oppose the Second Crusade. It came under the control of Nūr al-Dīn in 1149 and of Saladin in 1175. The latter gave the city to his cousin, Naṣīr al-Dīn Muḥammad, who founded the Asadī dynasty (named after Saladin's uncle, Muḥammad's father, Asad al-Dīn Shirkūh). The Asadīs ruled almost without interruption until 1262, after which the importance of the city declined. The great victory won by the Mamlūk sultan Qalāwūn over the Mongols in 1281 was fought at Homs, but the city remained merely a minor governorship in the Mamlūk sultanate until the Ottomans took over Syria in 1516.

Homs, Battle of (1281)

The battle of Homs was fought on 29 October 1281, between Homs (mod. Ḥims, Syria) and Rastan, when Mamlūk forces led by the sultan Qalāwūn halted the invasion of Syria by the Mongol armies of the Ilkhan Abaqa, ruler of the Mongol state in Persia. As a result, the immediate Mongol threat to Mamlūk territories was removed, and Qalāwūn turned his attention to the elimination of the Frankish states of Outremer.

Mamlūk intelligence had learned of an imminent Mongol invasion, and on 6 September Qalāwūn learned details from a captive Mongol officer. He proceeded to assemble his forces, and began deliberations over where to meet the enemy. Sources suggest he favored Damascus, but his emirs wished to advance to Homs, and when they simply

announced they would go there with or without the sultan, he followed.

From a deserter, the Mamlūks learned that the Mongols' strength was concentrated at their center, with which they hoped to break the Mamlūk center. The Mongol right was also strong, and contained the Armenian and Georgian contingents led by their kings. Qalāwūn decided to strengthen his left, where he placed Turcoman troops and the forces of some leaders who had rebelled against him, as well as other emirs.

During the battle, the Mongol right crushed the Mamlūk left, and pursued the enemy as far as the Lake of Homs, where they paused to wait for the rest of their army. However, the other Mongol forces had not fared so well, and were routed. The Mongol left was crushed, and the center gave way when the commander, Mengü Temür, fell wounded. Abaqa died a few months later.

Honorius III (d. 1227)

Pope (1216–1227). Honorius III was born Cencio (Cencius) Savelli in Rome at an unknown date. He was a canon at St. Maria Maggiore, served in the household of Giacinto Bobone (cardinal deacon of St. Maria in Cosmedin), and became papal subdeacon and chamberlain under Pope Clement III (1187–1191).

Giacinto Bobone became pope as Celestine III in 1191 and Cencio served under him as papal chamberlain and chancellor. In 1192, he compiled the *Liber Censuum*, a list of the regular payments owed to the papacy, plus additional documents. Cencio was made cardinal deacon of St. Lucia in Orthea in 1193 and cardinal priest of SS. Giovanni e Paolo in 1200, but after the succession of Pope Innocent III in 1198, Cencio's role in papal government was limited. While a cardinal, he wrote a number of sermons that were later distributed to several religious houses.

Upon his election to the papacy at Perugia on 18 July 1216, Cencio took the name Honorius. He immediately stated his intention to follow in the footsteps of his prede-

Hospital, Order of the

cessor, Innocent III. He adhered to the judgments of the Fourth Lateran Council (1215) in supporting first Simon of Montfort and then King Louis VIII of France against the Saint-Gilles family in Languedoc in the Albigensian Crusade (1209–1229). Honorius also followed Innocent's lead by approving the rules of the Dominican and Franciscan friars and by issuing a collection of his own decretals (*Compilatio Quinta*). His legates Guala and Pandulf, both of whom had served under Innocent, played major roles in the government of England during the minority of King Henry III. Honorius tried, as Innocent reportedly did, to institute an income tax on churches in order to finance papal government, but he abandoned the plan in the face of strong opposition.

The major projects Honorius inherited from Innocent III were the reform program of Lateran IV and the Fifth Crusade (1217–1221). His efforts to carry out the moral and institutional reforms mandated by Lateran IV seem to have been modest and of little effect, but he was an enthusiastic supporter of the crusade.

Honorius hoped that Frederick II, king of Germany and Sicily and emperor-elect, would act as leader of the crusade and that he would maintain a legal separation between the empire and the kingdom of Sicily, thereby assuring the security of papal rule in central Italy. He crowned Frederick as Holy Roman Emperor in 1220, but their relationship gradually deteriorated as Frederick delayed his departure for the crusade, at the same time attempting to exert authority over most of Italy. Without Frederick, a crusading army began to arrive in Outremer in 1217 and moved on to Egypt in 1218. There it was joined by other crusaders and Honorius's legate Pelagius of Albano, one of the principal leaders of the army until its defeat in 1221. Honorius continued to recruit crusaders in the hope that Frederick would fulfill his oath to go on crusade, and Frederick continued to encourage that hope. But the emperor did not depart until after the death of Honorius on 18 March 1227.

Among his contemporaries, Honorius had a reputation for holiness. Earlier views of Honorius that saw him as ineffective because of old age, ill health, and personal ineptitude have been challenged by some modern scholars who portray him as an effective administrator who faithfully pursued Innocent's projects.

Hospital, Order of the

The Order of the Hospital (also known as the Order of St. John, and later as the Knights of Rhodes and the Knights of Malta), was an international military religious order that originated in the city of Jerusalem before the First Crusade (1096–1099). Originally established as an order whose function was to provide hospital service, it gradually assumed military responsibilities and became involved in the defense and internal politics of the Frankish states of Outremer. At the same time, the order received European properties that were organized into *langues* (literally, “tongues”) that paid annual dues, called responsions, to the central convent.

The order moved its central convent and hospital to Acre (mod. ‘Akko, Israel) when Saladin captured Jerusalem in 1187. After the fall of Acre in 1291, the order briefly moved to Cyprus. By 1310 it had captured the island of Rhodes (mod. Rodos, Greece) from the Byzantines, and it became a naval power in the eastern Mediterranean, maintaining a fleet of galleys and garrisoning castles. On Rhodes the Hospitallers faced several major sieges, including two by the Mamlūks in 1440 and 1444 and two by the Ottomans in 1480 and 1522. The Hospitallers surrendered Rhodes to the Ottomans in 1522. In 1530 Charles V, Holy Roman Emperor and king of Spain, gave the order the island of Malta. The Hospitallers ruled Malta until 1798, when Grand Master Ferdinand von Hompesch surrendered the island to Napoleon Bonaparte. Subsequently the order briefly found refuge in Russia and in Italy. Today, the order is still sovereign and devoted to hospitaller activities, administering medical charities worldwide from its headquarters in Rome. It no longer has a military character.

Origins and Militarization

The Order of the Hospital began as a pilgrim's hospice, established in the city of Jerusalem by merchants from the

Italian city of Amalfi. The hospice was operated by a lay confraternity under the auspices of the Benedictine abbey of St. Mary of the Latins. The Hospitallers of St. John began receiving grants of lands and properties in Europe and Outremer after the conquest of Jerusalem in 1099 and were recognized as a separate order by Pope Paschal II in 1113. The first master, Gerard, died in 1120 and was succeeded by Raymond of Le Puy (1120–1158/1160), a French knight who had come to Jerusalem with the First Crusade (1096–1099). Raymond's leadership shaped the order, and it was under his mastership that the Hospitallers began to assume military duties in addition to the care of pilgrims and the sick in their Jerusalem hospital. References to the Hospitallers as a primarily charitable institution appear in papal documents until the late twelfth century. However, it appears that the entry of Raymond and other former knights into the order, the need to police pilgrimage routes, and a new definition of the Christian knight as a lover of justice and defender of the weak, influenced by Bernard of Clairvaux's *De laude novae militiae ad milites Templi* (1128), caused the Hospitallers to gradually assume military responsibilities.

By the end of the twelfth century, the Hospitallers, along with the Templars, provided military forces for the Christian states of Outremer and garrisoned frontier castles. They

were granted their first castle, Bethgibelin (mod. Bet Guvrin, Israel), in 1136 by Fulk of Anjou, king of Jerusalem. In 1142/1144 Count Raymond II of Tripoli gave them the Krak des Chevaliers (mod. Ḥisn al-Akrād or Qal'at al-Ḥisn, Syria). This castle and the castle of Margat (mod. Marqab, Syria, acquired in 1186) became major administrative centers with extensive domains that provided income for the order.

The early charters do not indicate whether Hospitallers initially garrisoned the castles themselves, and there is no definite reference to military personnel as members of the order before the middle of the twelfth century. Hospitallers did, however, serve in the armies of Outremer. Raymond of Le Puy fought in the army of Baldwin II of Jerusalem in 1128, and according to the chronicler William of Tyre, Hospitallers served at the siege of Ascalon (mod. Tel Ashqelon, Israel) in 1153. In Aragon, Hospitallers were present at Tortosa in 1148 and received the castle of Amposta in 1149. The order may have reexamined its military role following the resignation of the master Gilbert of Assailly (1163–1169/1170), who had encouraged King Amalric of Jerusalem in his unsuccessful invasion of Egypt and left the order in debt.

It is probable that the order initially followed the Rule of St. Benedict until the promulgation of its first rule, attributed to Raymond of Le Puy and strongly influenced by the Rule of St. Augustine. Subsequent masters augmented the rule with statutes approved by meetings of the chapter general of the order. By the 1170s these statutes had institutionalized the Hospitallers' military duties. The 1206 statutes of Margat first describe the offices of knights and sergeants-at-arms, and by the 1270s knights held all the high offices in the order. The 1206 statutes also reveal the international structure of the order and were influential in shaping its development. At the end of the thirteenth century, William of St. Stephen compiled the customs of the order (called *esgarts* and *usances*), which were based upon decisions made at meetings of the chapter general. The statutes of the order were not compiled and organized until Guillaume Caoursin, the vice-chancellor, published the *Stabilimentum* in 1494.

The Hospitallers in Outremer (to 1291)

Under Roger of Les Moulins (1177–1187), the Hospitallers became more involved in the politics of the Frankish states of Outremer, particularly the succession of Guy of Lusignan and his wife Sibyl to the throne of Jerusalem in 1186. Roger, a supporter of the faction led by Count Raymond III of

Tripoli, vied with Gerard of Ridefort, the master of the Temple, who supported the Lusignans. Roger was killed in May 1187, at the battle of the spring of Cresson, leaving the Hospitallers leaderless at the battle of Hattin (4 July 1187). There the order suffered considerable losses, and in the aftermath of the battle lost its castles of Bethgibelin and Belvoir (mod. Kokhav ha-Yarden, Israel), although Saladin did not attempt to besiege Margat and Krak des Chevaliers.

After Hattin, the Hospitallers and Templars became more important as military and political advisors to the Frankish rulers, and their Western resources became essential for the survival of European rule in Outremer. The Hospitallers received money and provisions from their Western priories in addition to income from their properties in Outremer and from their participation in the coastal sugar trade. They contributed substantially to the campaigns of the Third Crusade (1189–1192), serving as senior advisors to King Richard I of England.

The two major military religious orders also assumed some administrative responsibility in the kingdom of Jerusalem, which for much of the thirteenth century was ruled by a series of regents for an absentee monarchy. As Mamlūk power increased in the later part of the thirteenth century, the Hospitallers played an important role in making treaties with Egypt. Masters such as Hugh Revel actively acquired properties around the Krak des Chevaliers and adopted an aggressive policy against the Mamlūks. However, the Mamlūks took Krak des Chevaliers in 1271 and Margat in 1285. The Hospitallers left Outremer after the fall of Acre in May 1291, when the master, John of Villiers, was severely wounded during the city's defense and was evacuated to Cyprus with the remains of the convent.

The Hospitallers on Rhodes (1310–1522) and Malta (1530–1798)

After the fall of Acre, there was some discussion in western Europe about combining or dissolving the Hospitallers and the Templars. The two biggest military religious orders had been criticized for their sometimes rancorous participation in the politics of Outremer and their apparent hesitancy to pursue the immediate recovery of the Holy Land. The Hospitallers' establishment of their central convent and infirmary on Rhodes coincided with the dissolution of the Order of the Temple and the confiscation of its properties. Although there is no evidence that the Hospitallers planned for this eventuality, they avoided a fate similar to that of the

Templars by removing their convent from any possible interference from European rulers.

From 1306 to 1310 the Hospitallers conquered the island of Rhodes (located off the southwestern coast of Anatolia) from the Byzantines. They subsequently acquired other islands and territories in the Dodecanese, notably Kos, Simi, Kastellorizo, and Bodrum. On Rhodes, although still subject to the authority of the pope, the order became a sovereign state and naval power involved in the politics of the eastern Mediterranean. The order entered into treaties with and collected tribute from Muslim potentates.

Individual popes, such as Innocent VI, pressured the order to move to the Anatolian mainland and fight against the Turks, under the threat of losing its lands to a new military religious order. These plans did not come to fruition, however, and Rhodes served as the base for several crusading expeditions in the fourteenth century. The Hospitallers participated in Pope Clement VI's crusade to capture Smyrna (mod. İzmir, Turkey) in 1343–1349, and then contributed 3,000 florins a year to its defense until it was lost in 1402. In 1365 Rhodes was the staging place for the crusade of King Peter I of Cyprus against Alexandria in Egypt. The sack of Alexandria in October 1365 alarmed the master of the Hospital, Raymond Berengar, who feared that the Mamlūk sultan would retaliate by blockading Rhodes and Cyprus; this concern demonstrates the extent of Hospitaller reliance upon the mainland of the Near East for food and other supplies.

The Great Schism between rival popes in Rome and Avignon (1378–1417), combined with the order's financial difficulties, prevented any military campaigns against the Turks, although the Hospitallers leased Morea in Greece from the Byzantines between 1376/1381 and 1404 and began construction of the castle of Bodrum on the mainland of southwestern Anatolia in 1404. The increasing Mamlūk and Ottoman activity in the eastern Mediterranean in the fifteenth century caused the Hospitallers to update their fortifications. The Mamlūks attacked Rhodes and Kos in 1440, and Rhodes again in 1444. The Ottomans attacked the Morea in 1446, completing its conquest in 1460; in 1453 they captured Constantinople (mod. İstanbul, Turkey) and thus extinguished the Byzantine Empire. The Hospitallers assisted the Venetians when Sultan Mehmed II, the conqueror of Constantinople, besieged Venetian Negroponte (Euboia) in 1470, although the Venetians lost the island. Mehmed's fleet unsuccessfully besieged Rhodes itself in

1480. Mehmed died the following year; when his son Bayezid II became sultan his other son, Cem (Djem), fled to the Hospitallers on Rhodes for sanctuary. Bayezid paid the Hospitallers an annual income to keep Cem hostage. After Cem's death, hostilities resumed between the Hospitallers and the Ottomans. Grand Master Philippe de Villiers de l'Isle Adam surrendered Rhodes to the forces of Sultan Süleyman II in 1522.

Süleyman permitted the Hospitallers to withdraw from Rhodes with many of their possessions and archives. The order debated where to relocate the central convent; the French knights, who were in the majority, preferred France, which the Spanish knights opposed. Emperor Charles V offered the Hospitallers the island of Malta, together with the islands of Gozo and Comino, and Tripoli (mod. Tarābulus, Libya) in North Africa. The order considered his offer for some time before accepting it in 1530, noting Malta's relative poverty, its fine harbor, and its importance for the defense of Sicily. Tripoli proved to be indefensible and was abandoned in 1551.

On Malta, the Hospitallers decided not to establish the convent in the city of Mdina, and settled initially in the village of Birgu on the Grand Harbour. There they defended the island against the forces of Süleyman II in the Great Siege of Malta, lasting from May to September 1565. This was the last great battle between Christians and the Ottomans in the Mediterranean until Lepanto in 1571. Even after Lepanto ended the threat of Ottoman fleets to western Europe, Hospitaller ships continued patrols against North African corsairs until 1798.

After the Great Siege, the grand master, Jean de la Valette, decided to build a city on the Sciberras peninsula jutting into the Grand Harbour. This city, named Valletta, was the first planned city in Europe. Behind its massive walls, the streets followed a grid plan; each house was required to have a cistern to enable the household to sit out a siege. The order also built a hospital (the Sacra Infermia), the conventual church, a palace for the grand master, and, in the late eighteenth century, the library. This structure, today the National Library of Malta, still contains the main archives of the order.

By the end of the eighteenth century, the order's identification with the Ancien Régime, plus the loss of its properties resulting from the French Revolution, weakened its moral authority and financial resources. The last grand master on Malta, Ferdinand von Hompesch, surrendered the island to Napoleon Bonaparte and his fleet in 1798.

Structure and International Organization

As an exempt order of the church, the Hospitallers were under the direct jurisdiction of the pope. The head of the order was the master, who governed with the central convent through meetings of the chapter general. The extent of the master's executive powers is unclear for the early period, although it appears he shared authority with the convent. The chapter general, which did not meet annually, acted as a court to decide disputes among members, issued licenses for travel, and discussed the military preparedness of the convent. Generally, the meetings took place at the location of the main hospital, although some were held in Rome, most notably in 1462. Attendance at the meetings of the chapter general consisted of the master, the senior members of the order, the order's top officials, and two representatives from each province (Fr. *langue*). The master became known as the grand master in the fifteenth century, was given the status of a cardinal in the sixteenth century, and claimed princely rank by the eighteenth century. The chief officials of the order served as advisors to the master and formed part of his council at the central convent. The offices were those of the conventual prior, grand preceptor, hospitaller, marshal, admiral, turcopolier (originally the officer in charge of the Turcoples, or light cavalry), draper, and treasurer. By the fourteenth century each of these offices was assigned to a specific *langue*, except for that of the conventual prior, who supervised the conventual chaplains.

The Hospitallers were a lay order whose members took vows of poverty, chastity, and obedience to the master. Serving brethren formed the majority of the members in the twelfth through fourteenth centuries and did most of the work in the hospital. Fighting men of free, but not necessarily knightly, birth served as brother sergeants. Conventual chaplains tended to the spiritual needs of members of the order. The knight brethren fought on behalf of the order, and by the mid-thirteenth century had attained higher status than the conventual chaplains. The office of the master was reserved to knights by 1262, and by 1270 knights held all the high offices of the order. By the sixteenth century, prospective knights had to produce proofs of noble birth for several generations (the number varying according to *langue*) before admittance to the order. Around this time the order created two ranks of knights: the knights of justice, who were of noble birth, and the knights of grace, nonnobles who performed service for the order. The knights of grace remained of lower status and could not hold high office in the order.

It is possible that in the twelfth century female members served in the hospital, although they were not mentioned in the Hospitaller rule. At the end of the twelfth century, cloistered female convents dependent on the order emerged. Of these, the most important was the convent of Sigena, founded in Aragon in 1187. The cloistered female Hospitallers neither fought nor served in the hospitals, although they contributed responsions to the main convent. There were also associate members (called donates): men and women who took vows of obedience and promised to join the order in the future. Confraters and consors gave an annual donation to the order and were promised care in their old age and a Christian burial in return.

The Hospitallers acquired property throughout those parts of Europe that belonged to the Latin Church. Initially, the first grants were in southern France and Iberia. In the aftermath of the Second Crusade (1147–1149), the order began to receive more donations elsewhere, particularly in the British Isles, France, Germany, and Italy. Eventually it also acquired property in Hungary, Bohemia-Moravia, Poland, and Scandinavia. The basic unit of Hospitaller property was the commandery, usually an estate with a small religious house attached. Serving brethren and novice knights lived in the commandery, with a chaplain. By the fourteenth century, a knight who had served some time in the central convent and made at least three trips in the order's galleys could be granted a commandery within his own province. He then administered the commandery and received a portion of its income.

Commanderies were grouped by region into priories, each headed by a prior. The oldest priory was the Priory of Saint-Gilles, founded circa 1115; the Priory of Aragon (later the Castellany of Amposta) was founded in 1149. By the late thirteenth century, the priories were grouped into *langues*, "tongues," according to nationality. Initially there were seven *langues*: Saint-Gilles (or Provence), Auvergne, France, the Castellany of Amposta (Aragon), Italy, England (which included Ireland, Scotland, and Wales), and Germany (which included central and eastern Europe). These priories were enlarged when the Hospitallers acquired former Templar lands in France, Aragon, England, Scotland, and Brandenburg after the Templars' dissolution in 1312. In 1462 the order created the *langue* of Castile-Portugal.

Each *langue* was headed by the conventual bailiff (pillier) who held one of the chief offices of the order and served as an advisor to the master. The office of grand preceptor, who func-

tioned as the second-in-command, was traditionally held by the bailiff of Provence. The bailiff of France was the hospitaller, responsible for the infirmary. The bailiff of Auvergne was the marshal, the chief military officer of the order. The bailiff of Italy was the admiral, commanding the fleet of the order. The bailiff of England was the turcopolier, commanding the mounted native mercenary troops. This office was later assumed by the grand master when the English priory was dissolved in 1540. The bailiff of Aragon was the draper, an office that initially issued clothing, fabric, and alms, and later provisioned the order's military forces. The bailiff of Germany was the treasurer, but when Germany was demoted to a province, the treasury was subordinated to the grand preceptor. When the new *langue* of Castile-Portugal was created in 1461, the office of chancellor was elevated to the council and became the bailiwick of the *langue* of Castile-León. In addition to assuming responsibility for each of the chief offices of the order, each *langue* maintained and defended a portion of the town defenses of Rhodes and, later, Valletta.

The archival records from the Rhodian era reveal more information about the role of the *langues* in the organization of the order. Although the central convent had income from local revenues, first from the Hospitallers' estates in Outremer, and then from coastal trade and the estates on Cyprus, the Western priories paid yearly responsions that subsidized the hospital, the necessities of the convent, and its defense. In times of emergency, the *langues* provided men, money, and materials for military campaigns. The *langues* also formed the basis for conventual life and administration. Knights were admitted to the order through their native *langue*, and, when in residence in Rhodes or Malta, lived in their *langue's* own *auberge* (residence). The system by which bailiffs of the *langues* served as the chief officials of the order broke down during the Great Schism; between 1378 and 1409 local obedience in some *langues* to the Roman pope reduced the payment of responsions to the central convent, which obeyed the Avignon pope. During the fifteenth century, the order faced a severe financial crisis, and Pope Paul II had to call a meeting of the chapter general in Rome in 1462 to reform the statutes and to collect the responsions. The power of the grand master to collect responsions increased, thus improving the revenues of the main convent.

Medical Activities

The order maintained a hospital at the site of the central convent, allocating one-third of its yearly income from its

European priories for its needs. The first hospital, in Jerusalem, was located in the Muristan, near the Church of the Holy Sepulchre. Recent archaeological excavations have revealed the true size and layout of the hospital complex in Acre. The infirmary buildings in Rhodes and Malta survive intact. The physical remains suggest that the hospitals of the order were large and able to accommodate many patients. Hospitaller concerns with hygiene and isolation of infec-

tious diseases were influenced by the desire to provide luxuries for the sick, as well as by Greek and Muslim medical practices. The rule of the order referred to the patients as "our lords the sick," illustrating the order's precepts that the sick represented Christ, and that the Hospitallers served Christ by caring for them. In this spirit of hospitality, the statutes of the order dictated that patients should receive white bread and comfortable beds in addition to their spir-

itual care. The Hospitallers had separate wards for male and female patients, provided obstetric care, and made provisions for child and infant care within the hospitals. The order employed qualified physicians and surgeons to diagnose and care for the patients' ailments. Serving brethren worked in the hospital, and chaplains attended to the patients' spiritual health. In acknowledgment of their hospitaller duties, the chief officers of the convent, including the master, performed regular service in the infirmary on Rhodes and on Malta.

Hospitallers and the Arts

The Hospitallers in Outremer were not noted patrons of the arts, although frescoes in their church at Abu Ghosh survive. On Rhodes, Master Juan Fernández de Heredia was a noted humanist, with strong connections to the Avignon papacy and the king of Aragon. It was on Malta that the Hospitallers left a lasting artistic legacy, with the construction of the city of Valletta, and the patronage of the painters Caravaggio and Matteo Preti. The order's most noted contributions were to the field of military architecture, particularly with the castles of Belvoir, Lindos, and Bodrum, the citadel of Rhodes, and the fortifications of Valletta.

Hospital of St. John (Jerusalem)

An institution in the city of Jerusalem, initially for the accommodation of pilgrims, that developed into a facility for the infirm under the care of a dedicated military order, the Knights of St. John (or Hospitallers).

The hospital was founded in the middle of the eleventh century by a group of merchants from Amalfi in Italy as a hostel for pilgrims visiting the holy places in Jerusalem. It was situated in the Christian quarter of the city, near the Church of the Holy Sepulchre. Italian monks staffed the hostel, which they dedicated to St. John the Baptist. After the First Crusade captured Jerusalem in 1099, making it safer and more attractive as a pilgrimage center, the hostel was expanded to cope with the influx of pilgrims. Archaeology has revealed an ambitious building program in the middle of the twelfth century.

Travelers described an institution that could house up to 2,000 patients in the 1170s. When Saladin captured Jerusalem in 1187, he was so impressed by the hospital that he allowed it to remain open for a year so that it could dispose of its affairs in good order. Documents from a few years before confirm the exceptional size of the hospital, though its maximum capacity may only have been achieved at the expense of the brethren's own beds. Pilgrims were received into the wards of the hospital. There were ten general wards and one for the weakest patients. All were housed in comfort, with sheepskin covers and dressing gowns. Salaried staff comprised four doctors, a physician for the weakest patients, and three or four surgeons, plus blood-letters. The hands-on nursing was done by sergeants of the order, though the hospital regulations stipulated that the

Interior of St. John's Hospital, Jerusalem. (Library of Congress)

knights should also be prepared to take on menial tasks.

The most important recourse was the power of prayer ("celestial medicine"). Almost equally important was dietary regulation. In accordance with the science of the time, the patients were prescribed strengthening foods to counteract the cold, moist humors of old age and infirmity. Their diet included luxuries such as wine, sugar, and almonds, as well as meat, vegetables, and white bread. Much less is known about medicines administered. Surgery was important after battles, and one source claims that the knights had first-aid stations on the battlefield, from which the wounded were brought back to the hospital. A separate women's facility (dedicated to St. Mary Magdalene) had female attendants and wards for lying-in and for the care of foundlings.

Hostiensis (d. 1271)

Henry Bartolomei of Susa (Lat. *Henricus de Segusio*) was one of the foremost canonists of the thirteenth century and an influential writer on legal aspects of crusading. He was known in later life and to posterity as Hostiensis from his

title of cardinal bishop of Ostia.

Probably born around 1200, Henry of Susa seems to have taught canon law in Paris before 1240. After becoming a papal chaplain and bishop of Sisteron in 1243/1244, he probably attended a crusade planning council at Lyons (1245). As archbishop of Embrun (1250–1261), he replaced Philip Fontana as papal legate to northern Italy in 1259 during the denouement of the political crusade against Ezzelino of Romano and his supporters. Appointed cardinal of Ostia in 1262, he participated in the conclave that eventually elected Pope Gregory X (1271–1276) before ill health ended his career.

Hostiensis composed two influential commentaries on the decretals of Gregory IX, known as the *Summa aurea* (c. 1253) and the *Lectura in quinque libros Decretalium* (c. 1271). These and his *Lectura* (1245/1246–1253) on the *Novellae* of Pope Innocent IV (whom Hostiensis met while studying canon and Roman law in Bologna in the 1220s) illuminate how extensively the legal obligations and privileges of the crusading vow had been defined by the mid-thirteenth century.

Hromgla

Hromgla (mod. Rumkale, Turkey) was a fortress-town on a promontory above the Euphrates, 90 kilometers east of Edessa (mod. Şanlıurfa, Turkey) and 50 kilometers northwest of Aintab (mod. Gaziantep, Turkey). It was known as Ranculat by the Franks, Hromgla in Armenian, and Qal‘at al-Rūm in Arabic; all of these names derive from forms that mean “Castle of the Romans.”

Probably originally a Byzantine frontier fortress guarding a Roman road that ran along the Euphrates, Hromgla was settled by the Armenians in the eleventh century. At the time of the First Crusade (1096–1099), it was part of the principality of the Armenian Kogh Vasil (Basil the Robber), who

was based at Kaysoun further north. It was in Frankish hands (probably of the counts of Marash) from at least 1116, when Count Baldwin II of Edessa captured its Armenian ruler. It survived the collapse of the county of Edessa (1144) and the death of Baldwin of Marash; in contrast to the other remaining Edessan fortresses, which were sold to the Byzantine emperor Manuel I Komnenos and then taken by the Saljūqs of Rūm or Nūr al-Dīn, Hromgla was given to the head of the Armenian church, the catholicos. It remained his headquarters, generally isolated from the rest of Armenian-held territory, until its capture in 1292 by the Mamlūks, who refortified and garrisoned it, changing its official name to Qal‘at al-Muslimūn (“Castle of the Muslims”). It is now ruined and partially flooded.

Hugh I of Cyprus (1195–1218)

King of Cyprus (1205–1218).

As Hugh was only nine years old on the death of his father, King Aimery (1197–1205), the regency of Cyprus passed to Walter of Montbéliard, husband of Hugh’s elder sister Burgundia. In 1210 Walter oversaw Hugh’s marriage to Alice, the daughter of Henry of Champagne, lord of Jerusalem (d. 1197). However, when Hugh came of age later that year he accused Walter of incompetence and embezzlement. Walter sought refuge with his cousin John of Brienne, king of Jerusalem (1212–1225), whose relations with Cyprus remained tense for several years. In the war over the succession to the principality of Antioch then raging, John of Brienne supported Bohemund IV and the Templars, whereas Hugh supported the Hospitallers and King Leon I of Cilicia, the husband of Hugh’s half-sister Sibyl. However, with papal encouragement Hugh was reconciled with John of Brienne sufficiently to participate in the opening campaign of the Fifth Crusade in Galilee (autumn 1217). Shortly

Hugh II of Cyprus (1253–1267)

afterward, one of the leading crusaders, King Andrew II of Hungary, decided to return home, and Hugh accompanied him as far as Tripoli (mod. Trâblous, Lebanon), where he died suddenly on 10 January 1218.

Hugh I of Jerusalem

See Hugh III of Cyprus and I of Jerusalem

Hugh II of Cyprus (1253–1267)

King of Cyprus (1253–1267).

The son of King Henry I and Plaisance of Antioch, Hugh II came to throne while still an infant. His mother ruled on his behalf in Cyprus and also in the kingdom of Jerusalem, where in 1258 Hugh was confirmed as regent for its underage king, Conradin (1254–1268), because the High Court of Jerusalem considered Hugh to be Conradin's closest living relative in the East. Plaisance and her supporters (notably John of Arsuf and Geoffrey of Sergines, her representatives in the kingdom of Jerusalem, and her brother, Bohemund VI of Antioch-Tripoli) enjoyed considerable power in the 1250s. In 1258 their support helped the Venetians to win the War of St. Sabas, a bitter power struggle then raging in Acre (mod. 'Akko, Israel) between Venice and Genoa.

After Plaisance died (1261), her right to rule Cyprus and to hold Conradin's regency on Hugh II's behalf passed to Hugh's aunt, Isabella. Isabella appointed her own son, Hugh of Antioch-Lusignan, to govern Cyprus for her, and after she died (1264), he saw off a legal challenge by his cousin, Hugh of Brienne, to be recognized as holder of the regency in Jerusalem as well. When Hugh II died on 5 December 1267, having never come of age, it was Hugh of Antioch-Lusignan who succeeded in Cyprus (as Hugh III).

Hugh III of Cyprus and I of Jerusalem (d. 1284)

King of Cyprus (1267–1284) and Jerusalem (1268–1284).

Hugh of Antioch-Lusignan, as he was originally known, was the son of Isabella, sister of King Henry I of Cyprus, and Henry, brother of Prince Bohemund V of Antioch. In 1261 Hugh was appointed by his mother as regent for his cousin and namesake, the underage Hugh II of Cyprus. In 1267 he was also confirmed as regent for the absent King Conradin of Jerusalem (1254–1268). When Conradin was executed in 1268 after his attempt to gain the kingdom of Sicily, Hugh, who by now was king of Cyprus, succeeded to the throne of Jerusalem (as Hugh I).

Hugh was the first king of Jerusalem to be actually present in the East since the 1220s, and he tried to restore royal authority weakened by decades of absentee rulers. He regained some influence over Tyre (mod. Soûr, Lebanon), which was theoretically part of the royal domain, through good relations with its lord, Philip of Montfort. However, Hugh's other attempts to extend his authority beyond Acre (mod. 'Akko, Israel) generally failed, partly because after 1271 his Cypriot vassals, having accompanied him to the mainland repeatedly in the 1260s, no longer agreed to serve him outside Cyprus except for limited periods. Hugh's efforts were also undermined because his status as regent and then as king of Jerusalem was challenged by another relative of Conradin, Maria of Antioch. In 1268 the High Court of Jerusalem had rejected her claim and confirmed Hugh as Conradin's closest living relative in the East. However, in 1277 Maria, supported by the papacy, sold her claim to Charles I of Anjou, king of Sicily and brother of King Louis IX of France. Thereafter, Charles's representatives took control of Acre, which Hugh, frustrated at his limited authority, had effectively abandoned in 1276. Some now recognized Charles as king of Jerusalem in the hope that he would bring greater military aid against the Muslims than Hugh. Charles

was particularly welcomed by the Templars, because of their close links with the papacy and the French monarchy, and by the Venetians, whose rivals, the Genoese, were based in pro-Cypriot Tyre. Hugh responded by confiscating the Templars' Cypriot properties (1279–1282). In 1279 he landed at Tyre in a failed bid to regain Acre from Charles's representatives. In 1283 he sent forces to Beirut and Tyre in another attempt, but he died in Tyre on 24 March 1284.

The period between 1265 and 1271 also witnessed numerous conquests by Baybars I, the Mamlūk sultan of Egypt, including Caesarea, Arsuf (1265), Saphet (1266), Jaffa, Beaufort, Antioch (1268), Montfort, and several Tripolitan strongholds (1271). In 1271 Baybars also made a failed naval attack against Limassol (mod. Lemesos, Cyprus). In response, Hugh brought troops to the mainland occasionally in the 1260s, and in 1271 he joined the Crusade of the Lord Edward of England in two major raids in the Holy Land. In April 1272 hostilities ended with a truce that lasted for the rest of Hugh's reign.

Hugh IV of Cyprus (1295–1359)

King of Cyprus and titular king of Jerusalem (1324–1359).

The son of Guy, a younger son of King Hugh III of Cyprus, and Eschiva of Ibelin, Hugh succeeded his uncle, Henry II (1285–1324) to the throne of Cyprus in preference to two elderly aunts whose claim to the succession was arguably stronger. During his reign, at least until the time of the Black Death (1348), Cyprus enjoyed its greatest period of prosperity during the Middle Ages.

Hugh participated in various Christian leagues against the Turks in the Aegean region and was able to place the Turkish emirates of southern Anatolia under tribute. However, he appears to have been careful to avoid conflict with the Mamlūk sultanate. He seems to have been of a curmudgeonly disposition, treating his own kinsmen with considerable

harshness, and even imprisoning his own sons, Peter (the future Peter I) and John, after they had absconded to the West.

Hugh married twice. A son by his first marriage, Guy, predeceased him, leaving a son of his own, Hugh of Galilee, and it was probably to prevent this grandson from asserting a claim to the throne that Hugh had Peter I, his eldest son by his second marriage, crowned in his own lifetime shortly before he died.

Hugh of Fauquembergues (d. 1106)

A participant in the First Crusade (1096–1099) and later lord of Tiberias (1101–1106).

From Fauquembergues near Saint-Omer in the diocese of Thérouanne, Hugh was installed by King Baldwin I of Jerusalem in March 1101 as lord of Tiberias (mod. Teverya, Israel), a position that had been vacated by the Norman Tancred. Hugh secured the defense of the frontier lordship through the construction of castles at Saphet (mod. Zefat, Israel), dominating central Galilee, and Toron, to control communications between Muslim Tyre (mod. Soûr, Lebanon) and the interior, and attempted to extend Frankish control into the Terre de Suète.

In 1105 Hugh began construction of a castle at Qasr Bardawil, east of Lake Tiberias, which, however, was destroyed before completion by ʿUghtigīn, atabeg of Damascus, but he was later able to establish a forward position further east at the cave fortress of Cave de Suète (Habis Jaldak). It was while returning from a successful raid in this region that Hugh was killed in an ambush by ʿUghtigīn's troops (September 1106).

Hugh of Jaffa

One of the leading nobles of the kingdom of Jerusalem during the reign of Baldwin II (1118–1131). He held the lord-

Hugh of Payns (d. c. 1136)

ship of Jaffa (mod. Tel Aviv-Yafo, Israel) but was dispossessed by Baldwin's successor Fulk.

Hugh was the son of Hugh II of Le Puiset, a lordship near Chartres in France, and was thus a member of a family related to many of the nobility of northern and northeastern France. Hugh II came to Outremer some time after 1106, and some time after the accession of his cousin Baldwin II (of Bourcq) as king of Jerusalem (1118), he was made lord of the important town of Jaffa.

The younger Hugh succeeded his father around 1123; the fact he was the first member of the nobility of Jerusalem to be given the title of count is an indication of his high status. He also seems to have made claims to the future lordship of the Muslim city of Ascalon (mod. Tel Ashqelon, Israel), situated to the south of the county of Jaffa. Hugh's fortunes went into decline after the accession of Baldwin II's daughter Melisende and her husband Fulk of Anjou (1131). The chronicler William of Tyre, writing fifty years later, claimed that Hugh was the queen's lover. In fact it is clear that Fulk was attempting to govern on his own, in breach of the settlement made by Baldwin II, which made over the kingdom to the joint rule of Fulk, Melisende, and their young son Baldwin III. Hugh of Jaffa was Melisende's closest adult male relative in the kingdom, and his opposition to Fulk derived from his desire to safeguard the rights of his kinswoman and her son.

This constitutional crisis culminated in a rebellion led by Hugh, which lost support after he allied himself with Muslim Ascalon (1133–1134). Hugh was obliged to submit and go into exile. He went to Sicily, where he died. Jaffa returned to the royal demesne until Baldwin III granted it to his younger brother Amalric.

Hugh of Le Puiset

See Hugh of Jaffa

Hugh of Payns (d. c. 1136)

First master of the Order of the Temple, Hugh was a vassal of the count of Champagne from Payns, northwest of Troyes in France. He settled in the kingdom of Jerusalem after 1113, and in 1119, together with Godfrey of Saint-Omer and a few other companions, began to patrol the road from Jaffa (mod. Tel Aviv-Yafo, Israel) to Jerusalem in order to protect pilgrims from Muslim attack. They were sustained by benefices centered on the Temple platform in Jerusalem.

In 1127, Hugh was part of a delegation sent by King Baldwin II to accompany Fulk V, count of Anjou, to Jerusalem, where he was to marry Melisende, Baldwin's eldest daughter. While in the West, Hugh traveled extensively in France, Normandy, Flanders, England, and Scotland in order to recruit forces for an attack on Damascus planned for late 1129. In January 1129 the Templars received a rule at the Council of Troyes following an oral explanation of their original customs by Hugh himself. At about the same time, Hugh asked Bernard of Clairvaux to write in their support, a request that resulted in the treatise *De laude novae militiae*. A contemporary letter by a "Hugo Peccator," intended to strengthen Templar morale, may have been Hugh's own work.

Hugh Revel (d. 1277/1278)

Master of the Order of the Hospital (1258–1277/1278).

During William of Chateaufort's mastership (1242–1258), Hugh served as castellan of the Krak des Chevaliers (1243), preceptor of Acre (1251), and grand preceptor of the order's central convent (1252–1258). In disputes involving

the Hospitallers and John of Ibelin (1256), as well as Bohemund VI of Antioch-Tripoli (1256/1257), he served as arbiter.

Hugh was elected master after the death of William of Châteauneuf (1258). He reached an agreement with the Templars and the Teutonic Knights to establish procedures for the settlement of disputes between the military orders (1258); these procedures were successfully implemented when Hospitallers and Templars achieved a compromise over disputed possessions in Valania, Margat, Sidon, and Beaufort (1262). On the Hospitallers' behalf, Hugh concluded truces with Baybars I, sultan of Egypt, in 1267 and 1271 (after the Mamlük capture of the Krak des Chevaliers).

Hugh is considered the most influential of the thirteenth-century Hospitaller masters. He played a crucial role in the order's constitutional development and presided over several general chapters that confirmed old and enacted important new statutes (1262–1276). Hugh's successful administration benefited from Joseph of Cancy's long tenure as treasurer of the Hospitallers' central convent (1248–1271). Hugh died in 1277/1278 and was succeeded by Nicholas Lorgne.

Hugh of Vermandois (1057–1101)

One of the leaders of the First Crusade (1096–1099) and a participant in the Crusade of 1101.

Hugh was a younger son of Henry I of France (d. 1060) and Anna Yaroslavina of Kiev (d. 1076). He was nicknamed “the Great,” which possibly stems from a Latin mistranslation of the French for “the Younger.” Around 1064 he married Adele of Vermandois (d. 1120) and had twelve children, including Ralph I, count of Vermandois (d. 1152). Hugh's elder brother King Philip I of France (d. 1108) had been excommunicated at the Council of Autun in 1094 for adultery, a decision confirmed by Pope Urban II at the Council of Clermont in 1095. In July 1096 Hugh took crusading vows, and Philip wrote to Urban II announcing his submission; Hugh's decision to join the First Crusade appears to have been the result of the political difficulties of his brother.

Hugh's crusading activity suggests he was a reluctant crusader. He was the first of the crusading princes to depart, leaving in late August 1096. At Constantinople (mod. İstanbul, Turkey) he swore an oath of fealty to the Byzantine emperor Alexios I Komnenos for any lands the crusaders might gain. He participated in the battle of Dorylaion in July 1097 and the capture of Antioch (mod. Antakya, Turkey) in 1098, but then was sent by the crusading leaders to ask Alexios to take possession of Antioch. Hugh remained in Constantinople and then returned to France.

Hugh later joined the Aquitanian expedition commanded by Duke William IX on the Crusade of 1101 and fought in the second battle of Herakleia (mod. Ereğli, Turkey) around 26 August 1101, where he was injured. Hugh escaped to Tarsos (mod. Tarsus, Turkey), only to die there on 18 October 1101.

Hülegü (d. 1265)

Mongol prince and founder of the Ilkhanate, the Mongol state in Persia. Hülegü was born around 1217, the son of Chinggis Khan's youngest son Tolui.

In 1253 Hülegü's elder brother, the Great Khan (Mong. *qaghan*) Möngke, dispatched him westward with an army to assume overall command of the Mongol forces operating in Persia and the Caucasus. Having largely annihilated the Ismā'īlī Assassins (1256) and destroyed the 'Abbāsīd caliphate in Baghdad (1258), Hülegü entered Syria and captured Aleppo in January 1260. But in the spring he withdrew into Azerbaijan with the bulk of his army, and a smaller force left in Palestine under his general Kitbuqa was overwhelmed by the Egyptian Mamlüks at 'Ayn Jālūt on 3 September 1260; Syria and Palestine were lost.

Hülegü was unable to avenge this defeat, owing to the disintegration of the empire following Möngke's death (1259) and the outbreak in 1261 of war with his cousin Berke, khan of the Mongols of the Golden Horde. It was probably at this juncture that he established himself as virtually an autonomous ruler in Persia and Iraq, recognized by his brother, the new *qaghan* Qubilai (Kublai) in the Far East.

In 1262 Hülegü inaugurated a series of Ilkhanid overtures to the Latin West by writing to King Louis IX of France, urg-

Humbert II of Viennois (1312–1355)

ing concerted action against the Mamlūks. His envoy to Pope Urban IV reported his desire for baptism (c. 1263). Hülegü's mother, Sorqaqtani, had been a Nestorian Christian, as was his principal wife, Doquz Khātūn. Nevertheless, he also manifested a marked interest in Tibetan Buddhism and remained attached to the shamanistic practices of his forebears until his death (8 February 1265).

Humbert II of Viennois (1312–1355)

Humbert II, dauphin of Viennois (1333–1349), was leader of a crusade that went to the relief of Smyrna (mod. İzmir, Turkey) in western Anatolia in 1346.

Humbert was the son of John II, dauphin of Viennois, and Beatrix of Hungary. He spent his youth in Hungary and Naples, where he married Marie of Baux in 1332. He became dauphin of Viennois on the death of his elder brother Guiges in 1333.

Ambition and vanity, but also piety, motivated Humbert to take part in a crusade. At the beginning of 1345, like other rulers, Humbert received appeals from Pope Clement VI for a new crusade to aid Smyrna, which had been captured by a Christian naval league in October 1344 from Umur Beg, emir of Aydin. Humbert wanted to lead this expedition, against the misgivings of the pope, the cardinals, and even his own councillors, but Clement VI yielded. On 26 May, in Avignon, Humbert was named captain general of the Holy See against the Turks, took the cross, and received the standard of the church.

Humbert sailed from Marseilles in late August, and proceeded to Venice, collecting Italian crusaders on his way. He left Venice at the beginning of November and sailed to the island of Negroponte (Euboia), situated off eastern Greece. In February or more likely March 1346, the crusaders

defeated the Turks on the island of Mytilene. In June they arrived at Smyrna and fortified the town against the castle, which was still occupied by Umur Beg. Skirmishes took place, but more people were killed by disease than by fighting. Humbert left Smyrna for Rhodes (mod. Rodos, Greece). He was so ill that he wrote his will on 29 January 1347, although it was his wife who died several weeks later. On 19 March Clement VI relieved him of his crusade vow and authorized him to return to his lands, giving him permission to trade with the Muslims of Egypt with 2 ships and 12 galleys.

Humbert II's expedition was a complete failure: he lost his beloved wife, a great deal of money, and most of what little renown he possessed. In 1349 he ceded the Viennois to the king of France and entered the Dominican Order. He became titular Latin patriarch of Alexandria in 1351.

Humbert of Romans (d. 1277)

A preacher and theorist of crusade.

Born around 1200, Humbert joined the Dominican Order as a theology student in Paris in 1224. While serving as provincial minister of the order in northern France (1244), Humbert organized its substantial contributions to the preaching and organization of the first crusade undertaken by Louis IX, king of France. He continued to promote the crusading movement as Dominican master general (1254–1263) and during his subsequent retirement at Lyons.

His *Opus tripartitum*, a treatise written for the Second Council of Lyons (1274), reiterated earlier moralists' assertions that the reform of the institutional church and laity was essential for the success of the crusades.

Humbert also described contemporary criticism of the crusading movement, dealt with the proposed reunion of the Latin and Greek Orthodox churches, and suggested that traditional crusade expeditions should be replaced by a permanent military force stationed in the Holy Land, supported by taxation and donations. His *De predicatione crucis* (1266/1268) was intended to provide preachers with material and guidance for the construction of crusade sermons. Humbert's own sermons to pilgrims and crusaders were reworked as part of the material included in his *De eruditione praedicatorum* (1266/1277).

Hungary

Up to 1526 the medieval Hungarian kingdom included not only the modern state of Hungary, but also areas then known as Upper Hungary (mod. Slovakia), Transylvania (mod. western Romania), and Slavonia and Dalmatia (the Adriatic coast of mod. Croatia). Hungary converted to Christianity in the reign of King Stephen I (1000–1038), who stabilized the kingdom after a period of civil war. After 1018 Hungary figured as a place of transit for pilgrims going from the West to Constantinople and the Holy Land. Pilgrims followed the river Danube, passed the city of Győr, and crossed the country via the royal center of Székesfehérvár and southward in the direction of Belgrade.

The Earlier Crusades, 1096–1290

The idea that King Ladislas I (1077–1095) was asked to become the military leader of the First Crusade (1096–1099)

was an invention of later Hungarian historiography, influenced by his canonization in 1192; in fact the king died before the crusade was proclaimed by Pope Urban II at the Council of Clermont (1095).

Many of the armies of the First Crusade crossed Hungary in 1096. The badly disciplined and often rapacious contingents of the so-called People's Crusades especially provoked hostile reactions, while the crusaders seem to have been shocked by the Hungarians' oriental way of life, which gave rise to unfavorable depictions in medieval historiography of the crusade. The French leader Walter Sans-Avoir passed through the country with only minor incidents, but later the army of Peter the Hermit conquered the southern border castle of Zemun (Hung. Zimony, part of mod. Belgrade). In the second wave of the People's Crusade, the crusaders of Gottschalk were annihilated by the royal army led by King Koloman (1095–1116) near Székesfehérvár; the army of Emicho of Flonheim was defeated while besieging the castle of Moson on the western border. Godfrey of Bouillon's army, which gave hostages to the king, marched through the country peacefully.

The Second Crusade (1147–1149) saw an important change in relations between Hungary and crusaders, when King Conrad III of Germany and King Louis VII of France were received solemnly by King Géza II (1141–1162). This event evidently had a major significance for the reception of the military orders in Hungary: the orders of the Temple and the Hospital of St. John settled in the country during this reign, receiving property from the king and his queen Eufrosina. Moreover, the foundation of a separate Hungarian hospitaller order, dedicated to the Virgin Mary and St. Stephen, has been recently attributed to Géza II; its rule was approved by Pope Urban III in 1187. The order's center was at Esztergom-Szentkirály near Székesfehérvár, and it is last mentioned in sources in 1439; however, its history has often been confused with that of the Hospitallers of St. John.

The impact of the Second Crusade was surpassed by that of the campaign of the Holy Roman Emperor Frederick I Barbarossa during the Third Crusade (1189–1192). This expedition communicated chivalric ideas to the Hungarian royal court, and motivated a larger-scale Hungarian participation in the crusade. In the event, most of the 2,000 Hungarians who joined were ordered home from Thrace by King Béla III (1172–1196) as a result of the tensions between crusaders and Byzantines, but a few of them fulfilled their

vows. Béla III himself took a crusade vow during the 1190s but died before he could go.

The military orders were enriched with substantial properties by Béla III and his sons Emeric (1196–1204) and Andrew II (1205–1235). The first known master of the Templars in Hungary appeared in 1194; their central seat was at Vrana on the Adriatic coast, which became the headquarters of the Hospitallers in Hungary after 1336. Most of the possessions of the Hospitallers and Templars were situated in the western, more developed part of the country, mostly in Transdanubia, Slavonia, and Croatia. The Hospitallers settled around the royal centers of Esztergom, Buda, and Székesfehérvár, and also had houses in the rich coastal cities of Biograd na Moru, Zara (mod. Zadar, Croatia), and Šibenik. The first master of the Hospitallers in Hungary was mentioned in 1186; by the fourteenth century the order had eighteen commanderies. Though recruited mostly from non-Hungarians, both orders were integrated into Hungarian society by their public notarial activities, provided at so-called places of authentication (Lat. *loca credibilia*), which also provided an important part of their revenues.

The Teutonic Order also found its way into Hungary when it was settled by King Andrew II in the Burzenland, a sparsely populated area of southern Transylvania, in 1211. Through his wife and his brother-in-law Ludwig IV, landgrave of Thuringia, the king had family ties to Hermann von Salza, grand master of the order; it was invited primarily to defend and advance the frontiers of the kingdom against the heathen Cumans, a nomadic people settled to the east of Hungary. The order's privileges were gradually extended to an extent that was eventually considered intolerable by the local lay and ecclesiastical magnates. The aspirations of the order also came to be unacceptable to the centralized Hungarian kingdom. After provoking royal authority by activities such as illegal minting, they were expelled by royal troops in 1225, despite their successful policy of castle building and the support they enjoyed from the papacy.

The only Hungarian crusading expedition to the Holy Land was launched by King Andrew II as part of the Fifth Crusade (1217–1221). The popes had frequently had occasion to remind Béla III and Andrew II of their crusading vows. The Hungarian crusade was further delayed by the capture of the Hungarian city of Zara in 1202 by the Fourth Crusade (1202–1204). Andrew also had aspirations to the throne of the Latin Empire of Constantinople as a result of his marriage to Yolande (1215), daughter of the future Latin

emperor Peter of Courtenay, although these were never realized. Andrew II finally departed in September 1217, together with his cousin Duke Leopold VI of Austria, and accompanied by his dignitaries, bishops, and abbots. An army of some 2,000–3,000 crusaders embarked on 10 large ships and an unspecified number of smaller vessels, hired mostly from Venice, at the port of Split. Yet even this limited enterprise tried the country's financial resources: the king gave up his rights over Zara to Venice in compensation for the ships, but also spent much of the royal treasury. The Hungarian contingent in the Fifth Crusade was largely led by John of Brienne, king of Jerusalem, while Andrew II apparently kept a distance from the military operations. The active Hungarian involvement was limited to a relatively short period of time, from 4 November 1217 up to January 1218.

The campaign was not entirely unsuccessful, as the Hungarians pillaged Bethsan, and besieged and almost captured Mount Tabor; they were defeated only once, in the mountains of Lebanon. The decision of Andrew II to return home in early 1218 was regarded as treason by many contemporaries, but it was justified by the local military situation and the unstable political climate in Hungary. The return to Hungary by land took longer than the outward journey by sea, but it offered the opportunity of establishing marriage contracts and buying precious relics. A few Hungarian nobles remained in the East and fought in the Damietta campaign. A horde of thirty-two Eastern coins found in Hungary in 1982 is probably connected with this crusade.

During the thirteenth century, some Hungarian crusade vows were fulfilled by attacks on heretics in Bosnia and Bulgaria, or by assistance to the Byzantines, as in the case of a contingent of 300 crusaders in 1231–1232, mentioned in letters of Pope Gregory IX. The great Mongol invasion of Hungary (1241–1242), which culminated in the defeat of King Béla IV at the battle of Muhi (11 April 1241), brought forth calls for a new crusade. However, the crusade was prevented by the rivalries between the papacy and the Holy Roman Emperor and ultimately by the death of the pope. Similarly, in 1281 Hungary faced the second Mongol attack without any foreign help.

The Hospitallers were authorized to organize the defense of the southern borderlands by Béla IV in 1247, but when they proved unable to do this, they lost this responsibility by 1260. The long process of settling and Christianizing the heathen, nomadic Cumans (from 1242), as well as King Ladislas IV's controversial favor toward them, increased ten-

sions between the papal legates, the Hungarian church, and the king, who was twice excommunicated; a Cuman rebellion (1282) and a Mongol incursion into northern Hungary (1285) were defeated by royal armies. After 1290 inner turmoil paralyzed the kingdom's political activities abroad. This state of affairs ended only after the accession of the Angevin dynasty in the person of King Charles Robert (1307–1342).

The Later Middle Ages and the Ottoman Threat

Hungarian participation in the later crusades reached its peak between 1342 and 1490. By this time several long-lasting campaigns by the Angevins of Hungary aimed at conquering the kingdom of Naples had failed, while papal-Hungarian relations were consolidated by the peace of 1352 between Louis I the Great of Hungary (1343–1382) and Queen Joanna I of Naples. After 1353 Hungary became one of the most important foreign allies of the popes in Avignon. As a consequence, Louis I obtained a tithe of church incomes first for four, and later for seven years, to be used for crusading against the Ottoman Turks and heretics in the Balkans, and against the pagan Lithuanians, and for assisting the papacy in Italy. In fact Louis I never fought against the Ottomans, although he twice fought their allies: the Bulgarians of Vidin in 1365 or later and the Wallachians in 1375. He established a foundation at Mariazell in Styria in memory of his victory, although some scholars have suggested that this explanation is a fiction of the fifteenth century.

Crusades launched under the pretext of combating heresy became an integral part of Hungarian strategy to advance the southern borders of the kingdom into Bulgaria, Bosnia, Serbia, and Wallachia. This strategy had limited success, as a result of local pro-Ottoman parties and rivalries between Roman Catholic and Greek Orthodox powers, and it was disastrously weakened by the defeat of the Serbs by the Ottomans at the battle of Kosovo Polj (1389). From this time on, the Ottomans were able to raid southern Hungary at any time, resulting in a period of continuous warfare between Hungary and the ever more menacing Ottoman Empire.

The years between 1389 and the Nikopolis Crusade of 1396 were a spectacularly active period of anti-Ottoman warfare, which attracted Germans and Burgundians for short campaigns intended to counter the enemy advance. From 1394 King Sigismund (1387–1437) negotiated with the papacy and European courts with a view to organizing a major crusade against the Turks. Sigismund's troops took

the castle of Nikopolis Minor on the lower Danube in 1395. Meanwhile Western crusaders assembled in Hungary: Burgundians and Germans coming by land, and French by sea. They joined Sigismund and the Hungarian royal army under the Palatine Leusták Ilsvai and the *voivod* of Transylvania, Stibor, arriving at the departure point of Orsova on 13 August 1396. The combined crusader army of some 15,000–20,000, together with light cavalry under Prince Mircea of Wallachia, advanced slowly and besieged every fortress on the road. While assaulting the fortress of Nikopolis, they were surprised by the army of Sultan Bayezid and fought a battle by the Danube on 25 September (or 28 September according to some scholars). As a consequence of poorly chosen battle tactics, the best equipped crusader knights began the battle, but were stopped by obstacles and pits, and then either annihilated or captured within a few hours by the Turkish janissaries and the Serbian heavy cavalry fighting on the side of the Ottomans. Sigismund escaped to Constantinople. Over the succeeding decades he adopted a new and effective defense strategy that involved military, financial, and recruitment reforms, the import of firearms, and the organization of a system of fortifications on the southern border. This system was centered on Belgrade and was supported by a large administrative hinterland.

After Sigismund's death (1437), Ottoman attacks intensified, and were stopped only by the successful three-month defense of Belgrade in 1440. The response to the Ottoman advance in the Balkans was increasingly seen as a common task of Christendom, with the popes at its heart sending regular financial aids, trying to harmonize the diverse interests of the European powers and attempting to organize large crusades, although without any significant results. Hungary became the main theater of the anti-Ottoman wars, in addition to the eastern Mediterranean, and a permanent papal legate resided in Buda. As a sign of Rome's goodwill, these papal representatives were usually very active and high-ranking figures, especially in the sixteenth century. They included the cardinals Tommaso de Vio, Lorenzo Campeggio, and Giovanni Antonio Burgio.

The last active phase of the Hungarian wars against the Ottomans was represented by the activity of John Hunyadi (Hung. Hunyadi János). This nobleman and professional soldier proved to be the most talented warlord of his time, with outstanding tactical sense. He advanced deep into the Ottoman Empire during the so-called Long Campaign of 1443–1444, during which he occupied Sofia and reached

Hungary

Varna. However, he suffered a crushing defeat at the hands of Sultan Murad II's army at Varna on 10 November 1444. The deaths in this battle of King Vladislav I (king of Poland as Władisław III) and of the papal legate Giuliano Cesarini, as well as another defeat of Hunyadi at Kosovo Polje in October 1448, made clear the limits of Christian military potential in the Balkans, although Hunyadi was able to advance into Ottoman territory again in 1445, in cooperation with a Burgundian fleet in the Black Sea.

By the mid-fifteenth century, the human and economic resources of the Ottoman Empire far surpassed those of

Hungary, overburdened by the costs of defense and often involved in the affairs of other kingdoms as a result of dynastic unions. The relative weakness of Hungary is one of the reasons why the kingdom did not assist Byzantium in 1453, while even the successful defense of Belgrade in 1456 was partly due to good luck. Sultan Mehmed II personally led an army of 90,000 troops against the carefully reinforced city on 2 July 1456. John Hunyadi mobilized a force consisting of 10,000 regular troops and some 20,000 poorly equipped and undisciplined crusaders organized by the papal legate Juan de Carvajal and the Franciscan friar John of Capistrano, as well as a flotilla on the Danube. The Christian forces surprised the Ottoman besieging army, broke through its lines on 14 July, and finally overran the Ottoman artillery with an assault on 22 July and put the sultan to flight. However, the plague killed Hunyadi and Capistrano after the victory, and Serbia (1457) and Bosnia (1463) collapsed in the face of the Ottoman advance, though some of their territories were incorporated into the Hungarian frontier defense zone. The years between 1466 and 1521 could be characterized as a period of static warfare, with minimal differences between peace and wartime. By that time the kingdom was defended by two parallel lines of castles established on former Bosnian, Serbian, and Croatian territories, extending from Orşova and Timișoara in the east via Belgrade to Senj, Klis, and Skradin on the Adriatic coast.

The election of Matthias Corvinus as king of Hungary (1458–1490) was largely due to the anti-Ottoman achievements of his father, John Hunyadi. King Matthias, a better strategist than his father, followed a defensive policy toward the Ottomans, and an aggressive one against his Christian neighbors (the Holy Roman Emperor, Poland, and Venice) and the Hussites of Bohemia, whose king George of Poděbrad had been declared a heretic in 1466. The Hungarian king received significant and regular financial aid from the popes, amounting to some 250,000 golden florins in 1459–1476. He developed one of the best mercenary armies of his time, but even with this military machine, he had only minor successes against the Ottomans: a campaign in Bosnia in 1463–1464, the capture of the castle of Szabács (15 February 1476), and the dispatch of an expeditionary force to the kingdom of Naples during the occupation of Otranto by the Turks (1480–1481). Nevertheless, his rhetoric and excellent humanistic propaganda secured him a more positive fame in Europe. His general Pál Kinizsi defeated a huge raiding army of 15,000 Turks in the most outstanding battle of the

Kings and Queens of Hungary in the Period of the Crusades

Louis II (Lajos)	1516–1526

period (13 October 1479) at Kenyérmező (mod. Ciimpul Pîinii, Romania) in southern Transylvania, but his policies with respect to the Ottomans were criticized at home, and even led to a revolt against him. Matthias's marriage alliance with the court of Naples (1476) involved him in Italian conflicts to the extent that the papal aids were stopped and his attempts to get possession of the exiled Ottoman prince Cem (Djem) were upset.

After Matthias's death, the country never recovered militarily or economically. The supremacy of the estates, the middle nobility, and the magnates, as exercised through the diets, blocked royal efforts to centralize power, weakened the fiscal system, and thus hampered the possibility of any centrally organized campaigns. In fact effective state administration had been paralyzed long before the Ottoman attacks of the 1520s. The Ottoman menace again brought regular financial help from the papacy (amounting to 106,000 golden florins in 1501–1502), but it was not used with the expected effectiveness, since the kingdom had no clear anti-Ottoman strategy. Nevertheless, this foreign aid was vital and greatly helped to balance the constant deficit of the defense budget, and it was often paid directly to leaders in the border areas.

In 1513 Pope Leo X declared a new crusade. It was launched in Hungary on 23 March 1514 under the leadership of the Hungarian cardinal Thomas Bakócz, but the court and magnates remained indifferent to it, and it was officially cancelled on 15 May. However, by this time it was too late, and the crusade developed into a bloody civil war between some 40,000 peasants and the conservative establishment of the nobles. By July 1514 the main peasant force had been defeated by John Szapolyai, voivod of Transylvania; its leader, the lesser noble George (György) Dózsa was executed, and internal order was reestablished. The bloodshed of this war was not the main reason for Hungary's subsequent defeat by the Ottomans, as was long believed. It did, however, show how traditional religious conviction could cause a crusade to develop into a revolt in an unstable social environment, for which the economic and legal position of the nobility and their selfish reluctance to defend the country were responsible.

The papacy and the Hungarian monarchy tried to develop the military potential of the country, but the lack of coordination between local and foreign efforts brought these efforts to naught. In 1518 the papal delegate Nicolaus of Schönberg even prevented a Hungarian-Turkish peace treaty in order to push the king into a more offensive strategy, all in vain.

This failure was a telling sign of the way that papal crusade efforts tended not to coincide with the actual military needs and possibilities in Hungary itself. By 1521 the fall of Belgrade to the Turks, together with the lesser strongholds of Zemun and Szabács, marked the collapse of the first line of border castles. In 1526 the final blow came when the Hungarian army was defeated at the battle of Mohács (29 August 1526), where King Louis II Jagiełło died.

The defeat of Mohács led to the Ottoman occupation of Buda (1541) and the division of Hungary into three parts: the largest was Turkish Hungary, comprising the Hungarian plain and Slavonia; the northern and eastern rump became imperial Hungary, which passed under the rule of the Austrian Habsburg dynasty; Transylvania was ruled by its own princes, mostly under Turkish overlordship. The Habsburgs also took over the idea of Hungary as the "bastion of Christendom" (Lat. *antemurale Christianitatis*), originally conceived by King Béla IV after 1241–1242 in connection with resistance to the Mongols, and later extensively used to describe both the country and its leadership.

Hussites, Crusades against the

A series of crusades launched in the fifteenth century against the Hussites, a religious movement in Bohemia that was held to be heretical by the Roman Catholic Church.

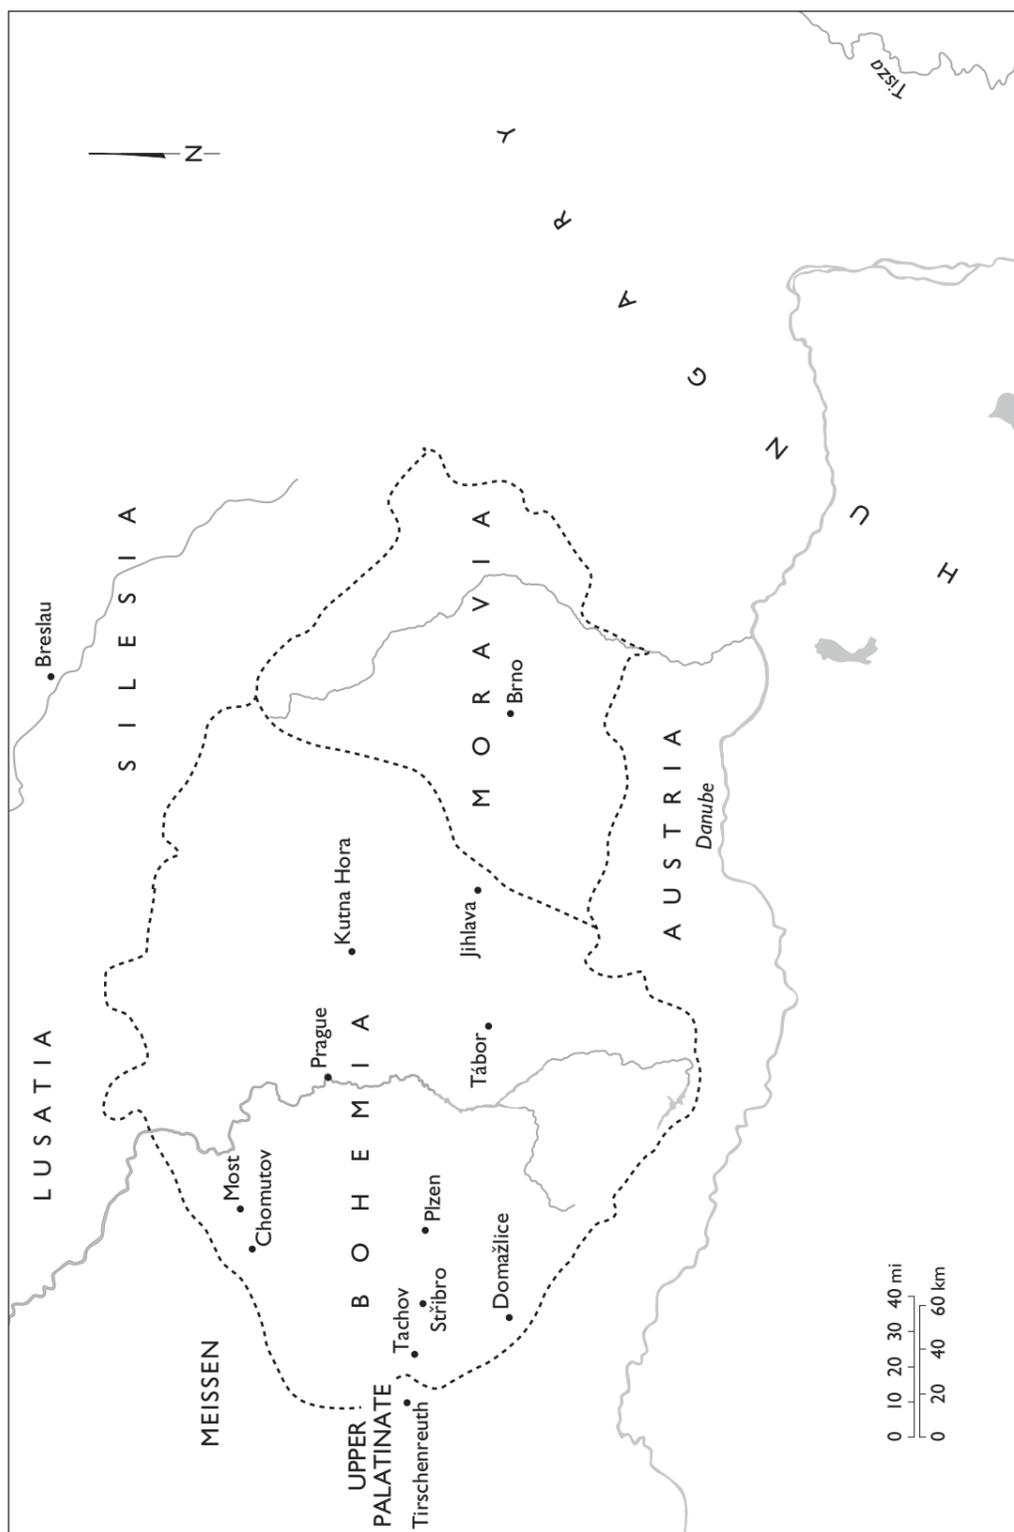

The Hussite movement derives its name from Jan Hus, an influential teacher at the University of Prague, who became popular as an eloquent and fervent preacher who severely castigated clerical vices. His theology was neither unique nor entirely revolutionary. But the situation in Bohemia was favorable for him. The Czech aristocracy and the mostly Czech citizens of lower rank resented the higher clergy and the leading citizens, who were predominantly German and supported the Crown. In 1409 Hus and his friends induced King Wenceslas IV of Bohemia to change the constitution of the university in order to secure better promotion of Czech students. As a consequence, many German students left Prague, and soon charges of heresy were made against Hus because he shared some views of the late John Wyclif, the English Lollard heretic.

Hus was forced to leave Prague in 1412 because of his criticism of a papal indulgence against King Ladislas of Naples. Sheltered by nobles in southern Bohemia, Hus came into closer contact with peasants and radicalized his preaching. The church Council of Konstanz, which convened in 1414, invited Hus to defend his opinions. He was given a safe-con-

duct by the protector of the council, Sigismund, king of the Romans, but he was burned to death on 6 July 1415. Embittered and enraged, 452 Czech lords and nobles issued a fierce protest. The religious reformers in Bohemia now began to be called Hussites. In March 1417 the University of Prague asserted that laymen should receive communion in both kinds (Lat. *sub utraque specie*), that is, wine as well as bread. This belief, known as Utraquism, became the dominant characteristic of the Hussite movement.

When the Hussites were expelled from their churches in Prague, rebels led by a former Premonstratensian monk, Jan Želivský, took over the city on 30 July 1419. King Wenceslas died on 16 August 1419. His brother and heir Sigismund was held responsible for the burning of Jan Hus, and was therefore unacceptable to the Hussites. Sigismund assembled his forces at Breslau, the capital of Silesia and the second city of the Bohemian realm, where on 17 March 1420 a crusade against the Hussite heretics was officially proclaimed. The royal troops conquered the western part of Prague with the royal palace and the cathedral, where Sigismund was crowned as king of Bohemia. On 14 July 1420, however, Jan Žižka, a former captain of Wenceslas’s palace guard, defeated the royal army near Prague. Bohemia proper—although not Moravia, Silesia, and Lusatia (Lausitz)—was lost to the king, with the exception of a few isolated towns that had German majorities or were anxious not to lose their commercial relations outside Bohemia. Fearing that the end of the world was near, radical preachers and peasants formed Christian model societies in southern Bohemia on a mountain called Tábor and in the northeast on a mountain called Horeb. The breakdown of traditional authority was followed by rioting. Lower-class radicals were defeated both at Prague, where Jan Želivský perished, and at Tabor, where Jan Žižka emerged as a military dictator.

In June 1421 a diet at Čáslav deposed Sigismund and agreed on four principles proposed by the University of Prague, which became known as the *Four Articles of Prague*: freedom of preaching, reception of the chalice by laymen, relinquishing of worldly power and wealth by the church, and proper punishment of all public mortal sins. This program was accepted even by the highest officer of the realm, the burggrave Čeněk of Wartenberg, and by the archbishop of Prague, the German-born Konrad von Vechta, who had recently crowned Sigismund. In order to replace Sigismund, Grand Duke Vytautas of Lithuania and then his nephew Sigismund Korybut were invited to Bohemia, but Hussite

Crusades against the Hussites

military leaders such as Jan Žižka (d. 11 October 1424) and his successor Prokop the Great opposed any restoration of the monarchy.

Despite these quarrels, the Hussites successfully survived a second and a third wave of crusades in 1421 and in 1422. From August to October 1421, two incursions were made into Bohemia from the north and from the west. The Hussites defeated Margrave Frederick of Meissen near Most, and Cardinal Branda and several princes of the Holy Roman Empire near Žatec. In October 1421 Sigismund, who was also king of Hungary, moved into Moravia, where he was largely accepted, especially in the towns of Brno and Jihlava, which were controlled by Germans. But when he passed on into Bohemia proper to attack Kutná Hora, he suffered defeat. In October 1422 Margrave Frederick I of Brandenburg advanced into Bohemia from the west and Margrave William of Meissen moved from the north. Both were defeated, William near Chomutov in November 1422 and Frederick near Tachov in December 1422.

The Hussite successes were due to several reasons. Sigismund, his subjects in Silesia and Hungary, and the German princes were unable to coordinate their invasions effectively. By contrast, the Hussites profited from the short lines of communication within Bohemia. Their forces included many religious fanatics who fought fiercely to defend their faith and their country, whereas the crusader armies were led by politicians and suffered from indiscipline, because their rank-and-file soldiers were serving for pay and looking for easy looting. Furthermore, the crusaders were surprised by military innovations such as war-wagons and battle flails. The Hussite use of a mobile barrier of wagons started as an improvised defense for the vulnerable infantry, but developed into rectangular formations strengthened by ditches. This tactic resulted in a virtually impregnable fortification, which could, however, be rapidly dismantled for counterattacks. The battle flails, too, started as an improvisation, because the Hussite peasants were initially armed only with the flails that they used to thresh grain. Žižka and other military leaders also taught their troops how to use firearms and other long-distance weapons, which were despised by traditional knightly ethics of warfare.

The fourth crusade against the Hussites was not launched until 1427. Margrave Frederick I of Brandenburg, Cardinal Henry Beaufort, and the archbishop-elect of Trier Otto von Ziegenhain assembled at Tirschenreuth in Franconia, the same place where Frederick had begun the third crusade in

1422. This time the crusaders bypassed Tachov, but were soon routed near Stříbro. A trade embargo on the Hussite lands and the massive devastation caused by the fighting induced the Hussite military leaders to invade neighboring countries for plunder and also to spread religious propaganda. Hungary, Austria, Franconia, Meissen, Brandenburg, Poland, and even Prussia were raided, and the Hussites occupied strongholds from Lusatia through Silesia and Moravia to northern Hungary (mod. Slovakia). The heretics won little sympathy and aroused much hatred, and as the Hussites were predominantly Czech, national antipathies were used to stir up resistance. Although the religious zeal of the Hussites aimed at universal conversion, they sometimes deliberately played on Slavic resentment against German predominance. This approach was not enough, however, to win the support of Catholic Poland.

In August 1431 the fifth and last crusade again concentrated efforts from the east and from the west. Sigismund's son-in-law and heir-presumptive, Duke Albrecht of Austria, moved from Austria into Moravia, but his troops fled at Přerov. In the meantime the main forces assembled near Weiden in the Upper Palatinate under Cardinal Giuliano Cesarini, Margrave Frederick I of Brandenburg, and Duke Frederick II of Saxony. This time they avoided Tachov and Stříbro, using a more southern road to Pilsen (mod. Plzeň, Czech Republic), a Catholic stronghold. Near the Taborite town of Domažlice, they were routed by the Hussites on 15 August 1431.

Now both sides realized that a compromise had to be reached. Negotiations began with the Council of Basel and with Sigismund. When the Compacts of Prague permitted the chalice to laymen in 1433 (the main Utraquist goal), the military leader Prokop the Great and his radical supporters were defeated at Lipany in 1434 by the more moderate nobility and citizens. When Sigismund permitted the great nobles to retain former ecclesiastical property, he was finally accepted as king by the victorious Hussite majority. The archbishopric of Prague, however, had to be left vacant, because the Utraquist candidate Jan Rokycana was not recognized by the Catholics.

On Sigismund's death in 1437, his son-in-law Albrecht of Austria met with strong opposition by the Utraquists, who maintained that the ruling dynasty had become extinct in the male line and that the Bohemians had the right to elect a new king. On Albrecht's death (1439), the lords, nobles, and towns of Bohemia did not agree upon a royal election or succession

for years. Finally, an Utraquist nobleman called George of Poděbrad conquered Prague and defeated both the radical Hussites from Tábor and the Catholic lords under Ulrich of Rosenberg. George was appointed governor for the boy-king Ladislav, the posthumous son of King Albrecht. When Ladislav died, George himself was elected king in 1458. After swearing a secret oath that he would return to Catholicism, George was legitimately crowned by two Catholic bishops from Hungary. His hopes, however, that Pope Pius II would confirm the Compacts of Prague of 1433 and accept Jan Rokycana as archbishop of Prague proved to be futile.

George was deposed as a stubborn heretic by Pope Paul II in 1466, and in 1467 crusades were again preached against Bohemia. Although the papal legates appealed to the national pride of the Germans, nothing substantial was achieved. Only pro-Catholic Moravia, Silesia, and Lusatia were conquered by the Hungarian king Matthias Corvinus, who was also elected as king of Bohemia in 1469 by magnates and towns of Moravia and Silesia, despite the fact that the papacy would have preferred him as a crusader against the Ottoman Turks. In 1471 the Utraquists accepted the Catholic prince Vladislav from Poland as George's successor; in 1479 he ceded the territories of Moravia, Silesia, and Lusatia to Matthias. In 1483 Vladislav recognized the Utraquists as a legal church with a status vaguely similar to the Orthodox Church in Poland and Lithuania. Nevertheless, Vladislav was reconciled with Pope Innocent VIII in 1487. This series of events proved that traditional crusades within Europe were no longer successful, because papal or conciliar definitions no longer controlled the internal affairs and the external relations of states. So the instrument of crusades against heretics that had been developed by Innocent III and his immediate

successors in the thirteenth century failed against the Hussites in the fifteenth century and could no longer be used against the Reformation from the sixteenth century onward.

Ibelin, Battle of (1123)

A defeat of an Egyptian invasion by the Franks of the kingdom of Jerusalem on the plain near Ibelin (mod. Yavne, Israel).

In May 1123 the Fāṭimid regime of Egypt sent a joint naval and land expedition to its forward base at the coastal city of Ascalon (mod. Tel Ashqelon, Israel) in southern Palestine, seeking to capitalize on the absence of King Baldwin II of Jerusalem, who had been captured by the Turks of northern Syria. When the Fāṭimid navy laid siege to Jaffa, the regent of Jerusalem, Eustace Granarius, sent for assistance to a Venetian fleet that was en route to the Holy Land and assembled the kingdom's forces at Caco, south-east of Caesarea (mod. Har Qesari, Israel). They marched south, bypassing Jaffa, and met the Egyptian land army near Ibelin on 29 May 1123.

The Egyptians fled in the face of the first Frankish attack, which resulted in a major rout and a massacre of the Egyptian infantry. The Egyptian naval force was subsequently dispersed by the Venetian fleet. This was the last great Fāṭimid invasion of the kingdom of Jerusalem.

Ibelins

A Frankish noble family in the kingdoms of Jerusalem and Cyprus.

In 1141 King Fulk of Jerusalem granted to Barisan, the constable of Jaffa, the newly built castle of Ibelin (mod. Yavne, Israel), about 20 kilometers (12½ mi.) south of Jaffa (mod. Tel Aviv-Yafo, Israel), and its lordship. It was from there that his descendants took their name. Barisan had been constable of Jaffa since before 1115 and came to prominence in about 1134 when he turned against his lord, Count Hugh of Jaffa, and sided with King Fulk when the two came into conflict.

Ibelin itself, part of a strategic ring of castles formed to put pressure on Muslim-held Ascalon (mod. Tel Ashqelon, Israel), was never of any great significance, and later in the 1140s Barisan considerably enhanced his own standing and that of his family by acquiring the much more important town of Ramla, his wife's patrimony. Barisan's origins are unknown, although his name suggests he may have come from Genoa or thereabouts. He is the quintessential example of a successful seigneurial officer who rose to eminence by entering royal service and making a good marriage. He died in 1150.

Barisan had three sons, all of whom were to play an important role in the politics of the kingdom of Jerusalem during the second half of the twelfth century. In 1163 the eldest, Hugh, married Agnes of Courtenay, the divorced wife of King Amalric, thus bringing his family into the ranks of the highest aristocracy in the East. Hugh died childless around 1170. His next brother, Baldwin, thereupon inherited the lordship of Ramla, and at some point the third brother, Balian (a variant of the name "Barisan"), was provided for with Ibelin. Baldwin and Balian were leading figures among the nobility of Jerusalem in the time of King

Baldwin IV. Both made good marriages, especially Balian, who in 1177 married King Amalric's widow, Maria Komnene. More than any other single event, it was this marriage that laid the foundations of the family's dominance in the thirteenth century. On the eve of the battle of Hattin (1187), Baldwin and Balian found themselves opposed to King Guy of Lusignan, so much so that in 1186 Baldwin preferred to go into exile than serve under him. Both were powerful figures: as lord of Ramla, Baldwin owed forty knights to the crown, while Balian owed ten as lord of Ibelin and eighty-five from his wife's dower lands at Nablus.

With the collapse of the kingdom of Jerusalem in 1187, the Ibelins lost most of their lands. Baldwin evidently died in about 1187, and his only son clearly failed to survive to manhood. At some point in the 1170s, however, his daughter Eschiva had married a young newcomer to the East named Aimery of Lusignan, and it was their descendants who were to rule as kings of Cyprus for the next three centuries. Balian survived Hattin and went on to oversee the Christian evacuation of Jerusalem later in 1187. He evidently lived until the latter part of 1193 and at the close of his life was a leading counselor of Henry of Champagne, who was then ruling as the husband of Balian's stepdaughter, Queen Isabella I of Jerusalem.

Although Ibelin and Ramla remained under Muslim control after 1192, Balian's children did well. His elder son, John, was made constable of Jerusalem, and then, at some point during his reign, King Aimery (1198–1205), who by now had married Queen Isabella, gave him Beirut, recovered from the Muslims in 1197. The king's generosity is not surprising: John and his brother Philip were Aimery's first wife's first cousins and his second wife's half-brothers. Apparently cold-shouldered by King John of Brienne after 1210, the brothers now took the lead among the nobility in Cyprus, where Philip became regent after the death of King Hugh I in 1218, while John steadily built up the importance of Beirut. The scene was now set for the showdown between John and Frederick II, Holy Roman Emperor and king of Sicily, who claimed royal power in the kingdom of Jerusalem through his marriage to Isabella II. By the time of his death in 1236, John had defeated his opponents in the civil war in Cyprus (1229–1233). He or his allies controlled most of the kingdom of Jerusalem, with the exception of Tyre (mod. *Soûr*, Lebanon) and Jerusalem itself.

The dominant position the Ibelins had now acquired was set to continue long after. John had four sons who survived

to have children of their own, and a fifth branch of the family was represented by another John of Ibelin, the son of Philip. In the kingdom of Jerusalem, John's eldest son, Balian, and his son, John II, were successive lords of Beirut, which then passed into the hands of John II's two daughters in turn, who continued to possess it until it fell to the Muslims in 1291. Another of John's sons held the lordship of Arsuf, and in 1246 or 1247 John son of Philip received the county of Jaffa and with it the lordship of Ramla, which had been restored to Christian control in 1229. What is more, between them the family effectively ran the government of the kingdom in Acre (mod. 'Akko, Israel) from the early 1230s until 1258.

In Cyprus all five branches of the family had estates. John of Beirut's other two sons, Guy and Baldwin, were constable and seneschal, respectively, of Cyprus, and the links with the Cypriot royal house were reinforced when Guy's daughter married the future King Hugh III (1267–1284). In the later thirteenth century as the Christian lordships in Outremer were conquered by the Mamlûks, the members of the other branches of the Ibelin family came to live in Cyprus. The senior branch, the lords of Beirut, failed in the male line in 1264, but the other branches all continued until the middle of the fourteenth century. At the beginning of the century King Henry II was accused of relying on the counsel of his maternal uncle, Philip of Ibelin, seneschal of Cyprus, to the exclusion of his other nobles, and in the political crisis of 1306–1310 members of all the branches of the family played leading roles. In the end it was descendants of Baldwin the Seneschal and the counts of Jaffa who suffered for their opposition to the king. The success of the family continued: both of the wives of King Hugh IV (1324–1359) were Ibelins, as was the bishop of Limassol between 1357 and 1367.

The final member of the family to have played a significant role was Philip of Ibelin, titular lord of Arsuf. In 1369 he was one of the assassins of King Peter I of Cyprus, and he was subsequently executed along with the other culprits in 1374. The last known man to bear the Ibelin name was a certain Nicholas of Ibelin who was taken to Genoa as a hostage at the end of the Genoese war with Cyprus of 1373–1374.

Ibn al-Athīr (1160–1233)

ʿIzz al-Dīn Abuʿl Ḥasan ʿAlī Ibn al-Athīr was an Arabic writer who is a major source for the history of the Muslim world at the time of the crusades.

Born on 13 May 1160 to a well-known family of Mosul in northern Iraq, Ibn al-Athīr spent most of his life in the city as a private scholar. In 1188 he served in Saladin’s army campaigning against the Franks of Outremer, and in 1228–1231 he stayed in Aleppo as a guest of the *atabeg* of the city. He died in May–June 1233. He is best known for his historical works. The short *Bāhir* treats the history of the Zangids of Aleppo, and the much longer *al-Kāmil fiʾl-Taʾrīkh* (*The Universal History*) deals with the whole of Islamic history up to the year 1231.

Ibn al-Jawzī

See Sibṭ Ibn al-Jawzī

Ibn Jubayr (1145–1217)

Abuʿl-Ḥusayn Muḥammad ibn Jubayr al-Kinānī was a Muslim Andalusian author of a travelogue that contains valuable insights into life in the Levant at the time of the crusades.

Ibn Jubayr, secretary of an Almohad governor of Granada, left his home during February 1183 on a penitential pilgrimage to Mecca and Medina. He traveled for more than two years, visiting the North African coast, Sicily, Alexandria, Cairo, and Jeddah. Having completed his pilgrimage, he proceeded to Kūfa, Baghdad, Aleppo, Damascus, Tyre (mod. Soūr, Lebanon), and Acre (mod. ʿAkko, Israel) and finally returned home on a Genoese ship through the straits of Messina.

Ibn Jubayr recorded his experiences in a diary known as *al-Riḥlah* (*The Journey*), a detailed and vivid mine of information on the demography, politics, sociology, navigation, and architecture of his age. It is told from the perspective of a devout Muslim who was also a keen observer of people and places. Ibn Jubayr’s impressions of his relatively short stay in the kingdom of Jerusalem (thirty-two days, of which thirteen were spent on a ship in the harbor of Acre) are frequently cited in modern works pertaining to Muslims under Frankish rule. Best known are the passages concerning the plight of Muslim war prisoners, the fair treatment of Muslim villagers in the region of Tibnin by Frankish lords, the efficient and civil port administration of the otherwise filthy Acre, the right of Muslims to worship in their mosques, the ambivalent description of Raymond III of Tripoli, and the eulogy of Saladin.

Despite Ibn Jubayr’s deep antagonism toward the Franks—whom he does not mention without adding curses, and regardless of his indignation with Muslims who chose

Ibn al-Qalānīsī (d. 1160)

to remain under their rule rather than emigrate to Muslim territory—he seems to have been a fair and rather even-handed observer of Outremer.

Ibn al-Qalānīsī (d. 1160)

Abū Ya‘lā Ḥamza ibn Asad ibn al-Qalānīsī al-Tamīmī was a member of an important family in Damascus, born around the year 1073. He twice occupied the position of *raʾīs* of Damascus (leader of the townspeople and controller of the urban militia). He is best known for his *Dhayl Taʾriḫ Dimashq* (*Continuation of the History of Damascus*), a two-part chronicle continuing a (now lost) annal by the historian Hilāl ibn al-Muḥassin al-Ṣābiʿ (d. 1056).

Ibn al-Qalānīsī’s chronicle begins in 1056 and recounts events up to the year of his own death in 1160. Unlike the work of al-Ṣābiʿ, which was a universal history, Ibn al-Qalānīsī’s history, which includes relevant extracts of his predecessor’s chronicle as a preface, is concerned above all with Damascus and its surroundings, dealing with events in other regions in a much more incidental fashion. It is one of the few Arabic histories contemporary with the First (1096–1099) and Second Crusades (1147–1149), and it served as a major source for later writers, including Ibn al-Athīr (d. 1233), Sibṭ Ibn al-Jawzī (d. 1256), and Abū Shāma (d. 1268).

In writing his history, Ibn al-Qalānīsī used a mixture of material drawn from Syro-Egyptian archives and chronicles and accounts of events witnessed by both himself and his contemporaries. His work is an essentially straightforward account of the history of Damascus, but unfortunately it is rather lacking in detail, and its concentration on the city and

its territories makes it of relatively little value for details of events taking place outside the region. In addition, the author rarely cites the sources of his information, making it difficult to assess his reliability, particularly in the case of oral reports. He also shows an understandable partiality toward Damascus and its rulers, although this does not seriously compromise the narrative.

Ibn Shaddād (1145–1234)

One of two Muslim writers known as Ibn Shaddād (the other being ‘Izz al-Dīn, the biographer of Baybars), Bahā’ al-Dīn Yūsuf ibn Shaddād was born and educated in Mosul. He taught for four years in Baghdad, then in 1173–1174 he returned to Mosul, where he continued to teach, also serving the Zangid rulers as an ambassador. After completing the pilgrimage to Mecca in 1188, he passed into the service of Saladin, who made him *qāḍī* (judge) of the army. He was a close companion of the sultan until the latter’s death in 1193.

In 1195 Ibn Shaddād moved to Aleppo, where he served the Ayyūbid rulers as an ambassador and peacemaker until 1232. Although he wrote several works, Ibn Shaddād is best known for his biography of Saladin, *al-Nawādir al-Sulṭāniyya waʾl-Maḥāsin al-Yūsufiyya* (*The Rare Qualities of the Sultan and the Merits of Yūsuf*), which is a vital source for the life of the sultan.

Ibn Wāṣil (1208–1298)

Jamāl al-Dīn Muḥammad ibn Wāṣil was a Syrian *qāḍī* (judge) and historian.

After completing his education, he served a number of Ayyūbid rulers, including the sultan al-Mu‘azzam Tūrān Shāh. In 1261 he was sent as an ambassador to Manfred, king of Sicily, by the Mamlūk sultan Baybars I. About three years later he became chief *qāḍī* of his native city of Hamah in Syria, where he remained until his death.

Ibn Wāṣil wrote several works, the most valuable of which is his history of the Ayyūbids, *Mufarrij al-Kurūb fī Akhbār Banī Ayyūb* (*The Remover of Worries about Reports of the Scions of Ayyūb*).

Ideology

Crusade ideology can be described as the ideas and the modes of perception that defined and justified the institution of the crusade and informed the way in which people at the time conceptualized crusades and the crusade movement.

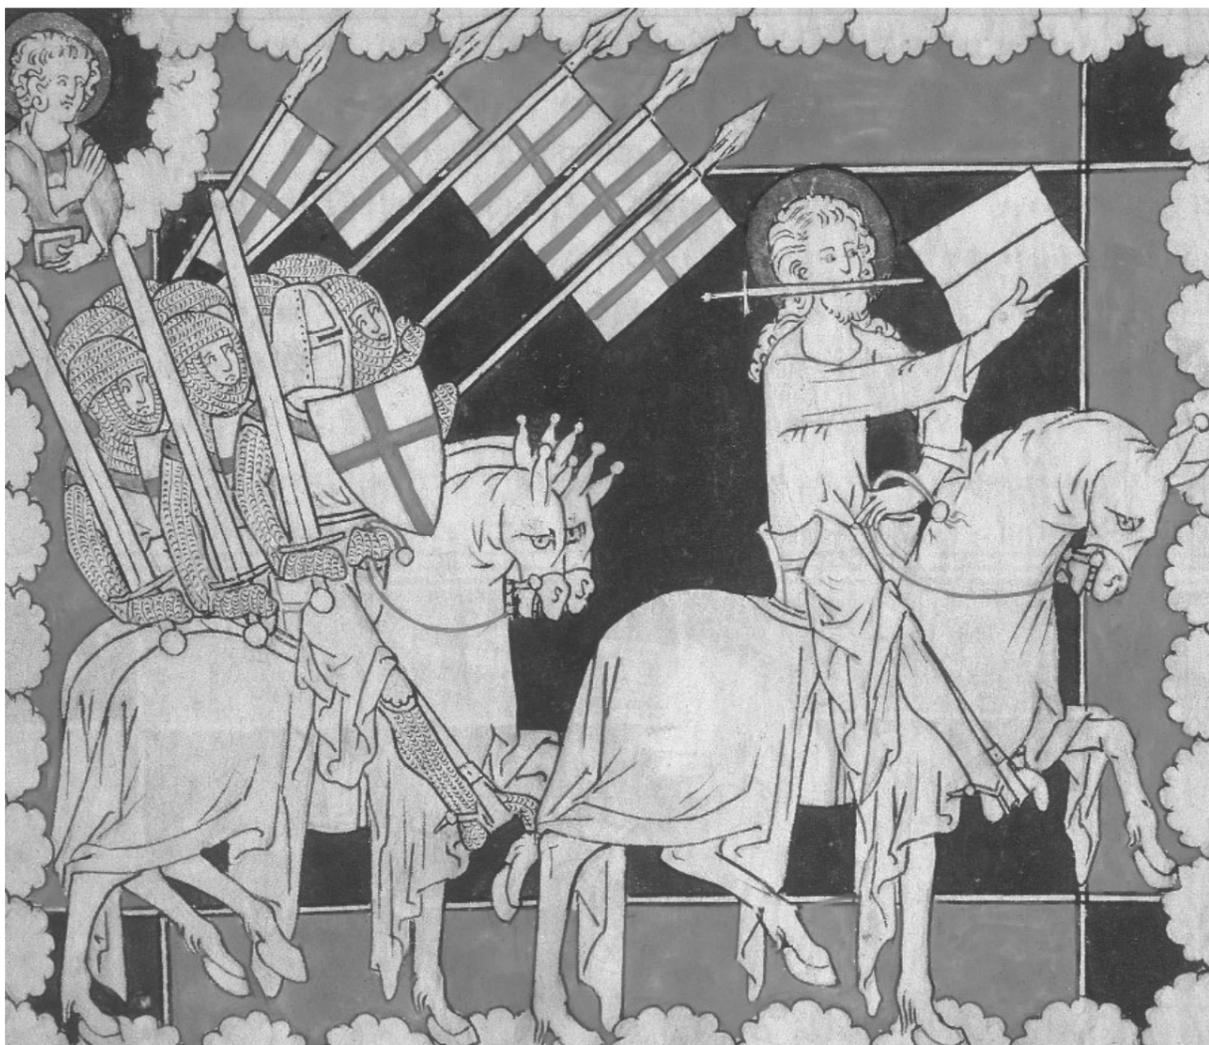

The ideology of the crusade becomes apparent in all

kinds of historical sources about crusading, most clearly in texts concerned with the definition, regulation, and promotion of crusades. Crusade ideology was based on both legal theory and theology. In legal and institutional terms, the idea of crusade rested on the twin pillars of the theory of holy war and the model of pilgrimage, which represented the collective and individual aspects characterizing the activity of crusading. The traditions of holy war and pilgrimage reached far back into the history of Christianity, its intellectual foundations, and pastoral practice, and both played important roles during the eleventh century, the period leading up to the First Crusade (1096–1099). In theological terms, crusading was couched in both Old and New Testament thought. Whereas crusades were presented as parallels to the wars fought by the people of Israel in the Old Testament with the help and on the instigation of God, the spirituality of the individual crusader was based on New Testament theology and seen in Christocentric terms as forming a personal relationship with Christ.

The ideology of the crusade thus rested on four principal elements: holy war theory, the model of pilgrimage, Old Testament history, and New Testament theology. Early on in the history of the crusade movement, these four elements were fused into one more or less coherent cluster of ideas, giving the crusade a firm intellectual foundation, which among other factors accounted for the dynamism and longevity of the institution of the crusade and the activity of crusading.

Holy War

The theory of holy war was central to the formation and justification of the idea of crusading. The medieval concept of holy war goes back to the idea of just war (Lat. *bellum iustum*) of antiquity, which was adapted to a Christian context by St. Augustine of Hippo. Based on his writings, theologians and canon lawyers from the eleventh century onward elaborated a full-fledged theory of Christian holy war (Lat. *bellum sacrum*). There were three main conditions that had to apply for a war to be called holy. First, holy war had to be initiated by a legitimate authority. Initially this meant the pope or the emperor, as they were understood to act with divine authority on the guidance or instigation of God as the supreme ruler of the universe. Later medieval theorists discussed the question whether the authority to call for a holy war might extend to princely rulers in general. Second, holy war required a just cause (Lat. *causa iusta*). The enemy had to have committed a seri-

Crusaders led by Christ; above left is St. John the Evangelist, fourteenth century. Detail from *The Apocalypse*, roy.19.B.XV. Folio No: 37. British Library, London. (HIP/Art Resource)

ous offense, overt aggression, or injurious action that justified the use of military force. In the case of holy war, the enemy had to have caused damage or insult or posed a threat to Christian religion in general or to peace and right order within Christian society. Third, holy war had to be conducted with the right intention (Lat. *intentio recta*). The initiators and participants of holy wars were supposed to act with pure motives and solely for the good of their religion and their fellow Christians. In essence, the Christian theory of holy war was meant to justify, in specific cir-

cumstances, the transgression of the divine prohibition of homicide enshrined in the Fifth Commandment.

The theory of holy war was fully elaborated in the twelfth century by the canonist Gratian and the Decretists and was given authoritative treatment by St. Thomas Aquinas in the thirteenth. The suggestion of Hostiensis (Henry of Segusio) that holy war against non-Christians could be justified simply by their opposition to the Christian religion was never universally accepted. The theory of holy war underpinned some of the most important constitutive elements of the cru-

sade. Legitimate authority was provided by reserving the right to call crusades to the papacy, based on the claim that God himself could authorize the crusade only through his vicar on earth, the pope. The character of the crusade as a war fought in defense of the church and for the support of the Christian religion was directed by the idea of just cause as laid down in the theory of holy war. The fact that crusaders took a vow and were supposed to lead an exemplary Christian life in accordance with that vow answered to the requirement of right intention applied to the individual participants. In general, the regulation of all aspects of crusading by canon law was meant to guarantee that crusades were called and conducted within the rules set down by the theory of holy war.

Pilgrimage

The tradition of pilgrimage provided the model for shaping the perception of the individual crusader. A crusade was thought of as a special pilgrimage, a journey both physical and spiritual in the service of God or Christ, rather than a particular saint. But whereas ordinary pilgrims traveled to a shrine to pray for the good of their own soul, crusaders were armed warriors, or at least members of an army, not only in pursuit of personal salvation. Crusaders were serving the church and making a personal effort to benefit the whole of the Christian community. In terms of legal obligations and privileges, the status of the crusader was closely modeled in the mold of pilgrimage. Like pilgrims, crusaders were in theory subject to ecclesiastical jurisdiction and enjoyed the legal protection of the church. In turn, crusaders vowed to serve in crusade armies on the conditions set out by the papacy. The model of pilgrimage was thus important for defining the legal position of crusaders and their relationship with church institutions. It also established the aspect of penance as a fundamental element of crusading. Both pilgrimage and crusade were in essence acts of penance by which individuals tried to cleanse their souls from sin.

In the case of the crusader, the act of penance was accorded special recognition because it was linked to a plenary indulgence promised by the popes. By earning a plenary indulgence, crusaders were believed to be granted the remission of all temporal penalties that God was said to impose on sinners. In the popular mind, the crusading indulgence provided the most comprehensive way of dealing with the consequence of sin and, for those who died on crusade, a direct way into heaven.

Old Testament History

From the very beginning of the crusade movement, crusades were described with reference to the wars fought by the Israelites, God's chosen people of the Old Testament, for the recovery and the defense of the Promised Land. The most frequent parallels were drawn with the Israelites' conquest of Canaan after the Exodus from Egypt and the wars of the Maccabees against the enemies of Israel. Both were perfect examples of wars fought by God's people, led by the Lord against the enemies of his religion, and were well suited to serve as historical models for the crusades. This historical comparison suggested that, just as God initiated and supported the wars of his people in ancient times, so, too, he was the prime mover behind the contemporary crusades. The historical parallel thus emphasized the idea of the crusades as sacred warfare conducted with God's authority and supported by the powers of divine grace. Individual exponents of these Old Testament wars, such as, for example, Joshua or Judas Maccabaeus, were also presented as figures to be emulated by the crusaders, heroes displaying extraordinary military prowess and war leaders who, trusting God's commands in war, successfully fought for the good of their people and religion. The comparison with the wars of the Old Testament thus helped explain and justify the idea of the crusades as wars against enemies of the faith led by the church on behalf of God and fought by religious warriors.

New Testament Theology

Crusaders were viewed as soldiers of Christ (Lat. *milites Christi*) forming an army of Christ (Lat. *militia Christi*). Whereas prior to the First Crusade, the concept of the "soldier of Christ" was only used in a metaphorical sense (most often to describe monks), the transfer of the concept to secular soldiers fighting for the honor of the church and the defense of Christendom in essence created a type of Christian holy warrior. From the end of the twelfth century the most common way of referring to a crusader was the Latin word *crucesignatus* (male) or *crucesignata* (female), meaning "one signed by/with the cross." This referred to the crosses of cloth that crusaders attached to their garments as an outward sign of their crusading vow, starting with the First Crusade of 1095.

As a symbol, the crusader's cross represented the True Cross of Christ. The religious significance of the Cross of Christ shaped the ideas informing the individual crusader's spirituality, which was seen in terms of forming a special relationship with Christ. Taking the cross made the cru-

sader a follower and devotee of Christ responding to the New Testament call “to carry one’s cross and follow [Christ]” (Luke 9:23).

The special relationship between crusader and God was understood to be governed by the mechanisms of love, duty, and reward (*largesse*). The crusader expressed his love of God by taking upon himself the duty of fighting in the army of the crusades or supporting the crusades by other means, such as money or prayer. God returned his love for the crusader by letting him or her participate in the powers of redemption of Christ’s death on the cross and saving his or her soul from the punishments of sin. The cross thus symbolized the crusader’s devotion to Christ as well as the penitential aspect of the act of crusading. It was this personal relationship between crusader and God that, based on the theology of redemption and salvation, marked the core of the crusader’s spirituality. This explained why it was believed that, in principle, everybody could become a crusader, irrespective of gender, wealth, or social standing.

At times, the act of crusading was also seen as a form of imitation of Christ (Lat. *imitatio Christi*), an act of sacrifice motivated by charity for one’s fellow Christians after the example of Christ’s suffering for humankind. Crusaders who died on campaign were sometimes said to imitate Christ in the most radical way, by giving their lives as martyrs in imitation of Christ’s death on the cross.

The New Testament, in particular the figure of Christ, also played an important role in justifying specific crusades on a spiritual level. Thus, for example, the Holy Land was represented as the patrimony of Christ that the crusaders were recovering on God’s behalf. The Albigensian Crusade (1209–1229) was called a war in defense of the French church as the spouse of Christ; the Baltic Crusades were conceptualized as campaigns to conquer for Christianity lands beloved of Mary, the mother of Christ.

Conclusions

The theory of holy war, the model of pilgrimage, Old Testament precedent, and New Testament theology were the main foundations of crusade ideology. The combination of these four elements was what made crusade ideology distinct from the ideology of other types of religious wars or devotional activities. The perception of the crusade as a holy war was set against the background of historical parallels with the wars of the Israelites in the Old Testament. This combined the idea of a war led by the church for the good of

Christianity with the concept of a war initiated by divine authority and fought by God’s chosen people. The idea of pilgrimage as a devotional activity imbued in New Testament theology contributed toward the definition of a specific crusader spirituality. In ideal terms, the crusader was seen as a special pilgrim who carried arms or actively supported a military venture and whose spiritual journey in the act of crusading was aimed at salvation by forming a closer relationship with God or Christ.

From the beginning of the movement, crusading was closely associated with the recovery of Jerusalem and the Christian holy places in Palestine. The symbolic significance of Jerusalem in Christian history, in particular as the setting for Christ’s act of redemption, was pivotal in bringing about the First Crusade and successfully establishing the institution of crusading. This explains why throughout the Middle Ages crusades to the Holy Land always met with the greatest enthusiasm and support and gave the most forceful expression to the idea of the crusader as a soldier fighting on Christ’s behalf.

But the idea of crusading was not exclusively tied to the significance and symbolism of Jerusalem and the Holy Land. Already in the first half of the twelfth century the practice of crusading was transferred to other theaters of war between Christians and non-Christians on the periphery of Christian Europe, in particular on the Iberian Peninsula, where crusading became an integral element of the *Reconquista*, and in northeastern Europe in the wars against the Wends. By the thirteenth century the crusade movement also encompassed the missionary crusades in the Baltic region, wars against dissident groups of heretics in France, Germany, and Hungary, and campaigns against political enemies of the papacy in Italy and elsewhere.

Common factors in all these conflicts were their authorization by the papacy and justification as wars fought for the integrity of the church and the honor and defense of Christendom. Crusade ideology was thus closely linked to the medieval concept of Christendom as one single Christian community represented by the church, headed by the papacy, and distinguished from all nonbelievers (Lat. *gentiles*). The crusades were called by the pope as the spiritual leader of Christendom, were fought by participants from all over Christendom, and were aimed at furthering the cause of Christendom and the Christian religion in its entirety.

Crusade ideology was surprisingly uniform throughout the centuries spanned by the crusade movement. Its formation, vitality, and survival were ultimately dependent on two prin-

cial factors: the idea of Christendom as a geopolitical reference, and the penitential practice of the medieval church. The rise and fall of the idea of Christendom represented by one church led by the pope, which was actively promoted by the Gregorian Reformers of the eleventh century and died down in the aftermath of the Reformation, mirrored the beginning and end of the idea and the practice of crusading. By the same token, the universal acceptance of penitential practice and the belief in the effectiveness of the indulgence enshrined in Roman Catholic doctrine, which were preconditions for creating and sustaining the ideology of the crusade, gained momentum with the crusade movement and were dealt a serious blow during the Reformation. Even though the ideology of the crusade was kept alive after the sixteenth century, most notably in the aspirations of the military orders, its impact dwindled as the arrival of other forms of religious wars led to the formation of new ideologies.

Ignatius III of Antioch (d. 1252)

Ignatius III David was Syrian Orthodox (Jacobite) patriarch of Antioch (1222–1252), renowned for his reform activities

and generosity. He especially sponsored education and learning, as well as the construction of ecclesiastical buildings, notably in Frankish Antioch (mod. Antakya, Turkey).

Educated in the famous monastery of Mor Barsaumo near Melitene (mod. Malatya, Turkey), he was elected *maphrian* (primate) of the eastern part of the Syrian Orthodox Church in 1215, but resided in Cappadocia from 1219, and became the first *maphrian* to be elected patriarch (1222). Raids on Mesopotamia by the Mongols and encroachments on Christian territory by Muslim rulers explain why Ignatius spent his patriarchate largely in areas under Armenian and Frankish protection, particularly in Antioch.

Latin sources, among them letters of Pope Gregory IX, tell of Ignatius’s submission to papal authority. However, the Syriac chronicle by Gregory Bar Ebroyo (Bar Hebraeus) mentions nothing of the kind but describes Ignatius’s diplomatic maneuvers as calculated rather than straightforward, because of his delicate position. He was buried in the Armenian cathedral in Hromgla (mod. Rumkale, Turkey).

Īlghāzī (d. 1122)

Najm al-Dīn Īlghāzī ibn Artūq was founder of the Mardin-Mayyafarikin branch of the Turkish Artūqid dynasty. He contributed significantly to the check of the Frankish advance to the north and east of Outremer before the time of Zangī and Saladin, although personal vice (drunkenness) and self-interested aspirations (consolidation of his Mardin possessions) prevented him from effecting a decisive victory against the principality of Antioch.

Īlghāzī was born around 1062, the son of Artūq, a Turcoman leader. He was initially in the service of the Great Saljūq Empire, but in 1108–1109 he seized the town of Mardin. He fell out with the Saljūqs because of his reluctance to join the

Ilkhans

Muslim coalition against the Franks in 1111–1115 and also because of his part in a Turcoman alliance against the Saljūq emir of Mosul; it was only after 1118 that he reestablished good relations with Sultan Muḥammad I's successor, Maḥmūd I. In 1117–1118 Īlghāzī seized power in Aleppo in response to its inhabitants' plea to save the city from the power of Roger of Salerno, regent of Antioch, thus ending the short-lived rule of the Saljūq dynasty there.

Around 1118 Īlghāzī became master of Diyar Bakr, and subsequently took possession of Martyropolis (Mayyafarikin), which had experienced successive Saljūq and Dānīshmendid rule. In the summer of 1119 he mounted an invasion of the principality of Antioch, inflicting a major defeat on the forces of Prince Roger in a battle known as the *Ager Sanguinis* (Field of Blood), yet wasted this great victory (won without the support of the Saljūq sultan) by failing to capture the city of Antioch (mod. Antakya, Turkey).

In 1120 and 1122 Īlghāzī launched further attacks against Frankish northern Syria, while in 1121 he participated in an abortive Saljūq campaign in Georgia. He died at Mayyafarikin in late 1122, and his inheritance was divided among his sons and nephews.

Ilkhans

A dynasty of Mongol rulers in Persia (c. 1261–1353), founded by Chinggis Khan's grandson Hülegü, and viewed as possible allies of the Christian West in the war against the Mamlūk sultanate of Egypt.

The term "Ilkhan" appears to mean "subordinate khan." Some uncertainty surrounds the creation of the Ilkhanate around the year 1261, as the Mongol Empire dissolved in civil war. Mamlūk sources allege that Hülegü, hitherto merely lieutenant on behalf of his brother, the Great Khan Möngke, now usurped control over Persia and established himself as a khan on a level with the other regional Mongol

rulers. But according to the Ilkhanid minister and historian Rashīd al-Dīn, Möngke had privately intended Hülegü and his descendants to rule the country in perpetuity. The Ilkhans were repeatedly called upon to repel invasions from north of the Caucasus by their relatives, the khans of the Golden Horde, who claimed the pasturelands of Azerbaijan and northwestern Persia. Hülegü and his successors, prevented from devoting their full attention to the war against the Mamlūks, therefore negotiated with the pope and Western monarchs for concerted action against Egypt.

These exchanges became more frequent in the reign of Hülegü's son and successor Abaqa, who was in touch with the Crusade of the Lord Edward of England (1270–1272) and whose envoys attended the Second Council of Lyons (1274). Renewed after a brief hiatus in the reign of the Muslim Aḥmad Tegüder, they peaked under Arghun (1285–1291). The ambassadors to the West were often Christians, either Nestorians like Rabban Sawma (1287) or expatriate Italians like Buscarello di' Ghisolfi (1289), and they emphasized their master's readiness to embrace the Christian faith. Yet no Ilkhan became a Christian, and no synchronized campaign ever occurred. Some Hospitallers from Margat joined an invading army sent into northern Syria by Abaqa in 1281, and King Henry II of Cyprus and the Templars endeavored to collaborate with the Ilkhan Ghazan when his forces drove the Mamlūks temporarily from Syria and Palestine in 1299–1300, an episode greeted with widespread and unrealistic enthusiasm in Western Europe.

Ghazan's successor Öljeitü (1304–1316), the last Ilkhan to launch an invasion of Syria or to make overtures to the West, was followed by Abū Sa'īd, who in 1323 made peace with the Mamlūks. Ilkhanid efforts to secure Western cooperation had failed for various reasons, including logistical difficulties and residual Latin distrust of Mongol rulers who were as yet unbaptized. That Ghazan and Öljeitü were Muslims was apparently unknown in the West, perhaps in part because it did not affect their foreign policy.

‘Imād al-Dīn al-Iṣfahānī*See Al-Iṣfahānī***‘Imād al-Dīn Zangī***See Zangī***Inab, Battle of (1149)**

A major defeat of the Franks of Antioch under Prince Raymond of Poitiers at the hands of Nūr al-Dīn, Muslim ruler of Aleppo.

After the failure of the attempt to capture Damascus by the Second Crusade (1148), Nūr al-Dīn intensified his attacks on the southern part of the principality of Antioch. In the summer of 1149, he assembled a force of some 6,000 cavalry from his own troops and those of Unur, ruler of Damascus, and moved to besiege Inab, one of the main Antiochene strongholds east of the Orontes. Raymond marched to its relief with a smaller force, which included a band of Assassins under their leader, the Kurd ‘Alī ibn Wafā, and the Muslims fell back, having initially overestimated their opponents’ numbers. While ‘Alī counseled a withdrawal, Raymond’s vassals pressed for an advance. On 28 June Raymond’s troops camped on low ground in the plain between Inab and the marshes east of the Orontes, and during the night Nūr al-Dīn, now apprised of the Frankish strength, surrounded their positions.

The next day (29 June), the Franks tried in vain to fight their way out of encirclement; almost all were captured or killed, including Prince Raymond, whose skull Nūr al-Dīn had mounted as a trophy of victory. Antioch was now left without a ruler, as Raymond’s son Bohemund III was still a minor. In the course of the summer Nūr al-Dīn was able to capture all of the remaining Antiochene strongholds east of the Orontes, including Artah, Harenc (mod. Ḥarim, Syria), and Apamea (mod. Afamiyah, Syria); his victory at Inab brought him huge renown in the Muslim world and constituted a major milestone in his career.

Indulgences and Penance

The term *indulgence* is typically defined as the remission of temporal punishment due to God for sin. The term penance refers to a sacramental rite comprising the contrite oral confession of one’s sins to a priest, the penitent’s acceptance and eventual completion of acts of satisfaction imposed by the priest, and the priest’s absolution of the penitent from the guilt incurred by those sins.

Several problems complicate the historical study of indulgences. The use of indulgences in practice long predated theologians’ attempts to precisely explain and justify the way in which indulgences functioned and the spiritual benefits they provided. Moreover, conceptions and uses of indulgences evolved dramatically throughout the Middle Ages; definitions and usages that hold true for one period may not hold true for another. Both in theory and in practice, indulgences were closely tied to pilgrimage, the veneration of saints and their relics, and changing conceptions of purgatory and the sacrament of penance.

Penance and the Origin of Indulgences

By the twelfth century, the concept of indulgences and the sacrament of penance both rested upon what was known as the doctrine of the keys, deriving from Matthew 16:19. This was the belief that Christ had granted to the first pope, St. Peter, and his ecclesiastical successors, the ability to refuse or grant to penitents absolution from the guilt and the punishment attached to their sins. Some theologians claimed that the penitent’s contrition for his sin absolved him from his guilt. However, true contrition would be manifested by confession to a priest (unless one were unavailable). The priest’s absolution of the confessing penitent represented God’s forgiveness of the guilt incurred by his sin, freeing him from the danger of hellfire. However, the penalty, or punishment, due for sin still remained. Ideally, the penance imposed by the priest upon the sinner would achieve two things. It would counteract the nature of the sins committed. It would also enable the penitent to pay the penalty incurred by his sins in this world through works of satisfaction in order to avoid having to pay it in the next through purgatorial torments.

Penitential handbooks had customarily prescribed rigorous set penances for many sins, such as years of harsh fasting. For fear that penitents genuinely unable to complete imposed penances within their lifetimes would despair or ignore them, confessors soon adapted the nature and quan-

tivity of the penance imposed to the personalities and circumstances of penitents. The degree of the penitent's contrition was another important factor, as it was believed to directly affect the validity of any penance performed. Pences, whether undertaken voluntarily or imposed, could include works of charity (and financial sacrifice) such as almsgiving, acts of devotion such as prayer or pilgrimage, and forms of self-denial and physical hardship such as fasting or physical discipline. Through the power of the keys, priests and other ecclesiastics possessing jurisdiction over the penitent could also commute penances by substituting alternative works of satisfaction. This could result in a shorter but harsher penance, such as an arduous pilgrimage. Alternatively, the individual could be assigned less exacting penances such as prayers or the giving of alms. In this case, the responsibility of supplementing the remitted penance fell upon other members of the church, whose prayers, austerities, and good works would make up for any penance the penitent failed to perform before death.

The power of the keys was also invoked by popes, abbots, and bishops to grant indulgences, that is partial remissions of the penance originally imposed by an absolving priest, to individuals who performed a specified work of devotion. These could include attending particular churches or religious festivals (often feasts that marked the canonization of a saint or translation of relics), reciting prayers, visiting pilgrimage shrines, or giving alms for the building or sustenance of religious houses, hospitals, bridges, and churches. These partial remissions were often expressed in terms of days, weeks, or years, or a percentage subtracted from the estimated penance or satisfaction owed for sin. Despite persistent doubts concerning the precise functioning and potential spiritual dangers attached to indulgences, many bishops and popes appear to have viewed them as essential instruments for encouraging lay confession and for stimulating, channeling, and rewarding charitable works and devotion.

Indulgences and the Crusade

Many historians attribute the first offer of a plenary indulgence, or full remission of all the penance due for contritely confessed sins, to Pope Urban II. While preaching the First Crusade in 1095, he is reported to have offered it to all who, with pure motives, vowed to make an armed pilgrimage in order to aid the Holy Land. However, some scholars have argued that the crusade indulgence was not fully institutionalized until the late twelfth century. Many participants seem

to have viewed the First Crusade (1096–1099) as an extraordinary and not necessarily repeatable opportunity for a form of arduous yet relatively brief penance. The crusade campaign fused military service for Christ with pilgrimage and offered the possibility of erasing one's confessed sins and earning salvation without the complete and permanent renunciation of the world required by the monastic profession. Granted in acknowledgment of the possible hardships endured by those who took the crusader's cross and their potential martyrdom in defense of the faith, the plenary crusade indulgence was also at first conceptually linked to the remissions of sin traditionally granted to those who made the arduous pilgrimage to the Holy Sepulchre in Jerusalem. This understanding led some early crusaders to fear that if they died before reaching Christ's tomb, they would not receive the crusade indulgence.

After the crusade indulgence was applied to struggles against Muslims in Spain, pagans in the Baltic region, Cathar heretics in southern France, and political opponents of the papacy, the original association of the crusade with the Holy Land was gradually weakened. This meant that the exact nature of the service required to obtain the plenary became the subject of debate. Theologians and canon lawyers stressed that the indulgence was a reward for the penitent's imitation of Christ's sufferings and the death he risked while combating the enemies of the faith. Some individuals took the crusade vow on their own initiative or in response to appeals from the East without waiting for the pope to formally offer an indulgence, although the papacy largely successfully defended its exclusive right to grant various indulgences for the crusades. Some popes attempted to stipulate the term of military service necessary to earn the plenary, varying from one to three years for crusades to the Holy Land to forty days for the Albigensian Crusade in southern France (1209–1229). However, many crusaders considered shorter periods sufficient and left after their resources petered out, or after an important military or devotional objective was achieved.

Similarly, concepts of the precise extent and applicability of the crusade indulgence could vary widely according to the enthusiasm of those who preached the crusade and the interpretation given to their promises by their audiences. Many believed that the plenary indulgence granted to those who devoutly fulfilled a crusading vow replaced all penances imposed for previously committed but contritely confessed sins (and in some instances, forgotten and future sins as well!). Even in papal bulls, the precise formulation of the crusade indulgences' conditions and benefits continued to vary

until Innocent III established several categories of remissions granted in *Ad liberandam* (1215). This decree's categories and phraseology were adopted by most later crusade bulls. Those who performed the labor and undertook the expense of the crusading pilgrimage in a devout frame of mind received a full remission of contritely confessed sins, as did those who paid for substitutes to fulfill their vow or served as substitutes themselves. Those providing assistance or counsel also partook in the crusade indulgence according to their devotion and the type of aid rendered. Partial indulgences similar to those granted to persons giving alms to charitable projects also came to be awarded to those who dutifully paid crusade taxes, attended crusade sermons, liturgies, and processions, lent substantial advice or aid to crusading projects, or made voluntary donations or bequests. Ideally, these partial indulgences were rated according to the penitents' devotion and the financial hardship their donation or participation represented.

The crusade thus remained firmly linked in conception and practice to other penitential practices rewarded by partial indulgences, including local pilgrimages to devotional sites and the financial support of charitable enterprises. Similar to other works of satisfaction or pilgrimage vows, the commitment to armed pilgrimage held necessary to obtain the full crusading indulgence could, in cases of poverty, illness, age, or debility, be commuted into another form of penance. This might include sending a substitute or donating the money that would have been spent on the journey to the crusade or another charitable project. This meant that over time, despite many attempts to curtail the practice, the full indulgence gradually became attached to activities such as almsgiving that originally had been granted only partial indulgences. This transferral and the offer of partial indulgences for the crusade were not initially motivated by a desire to convert the devotion of the faithful into cash for the crusade. On the contrary, both appear to have stemmed from a desire on the part of the papacy and those preaching the crusade to allow those unable to participate personally in the military expedition to contribute to the crusade effort and partake in its spiritual rewards.

Until the late twelfth century, dispensations from the crusade vow were generally difficult to obtain. Individuals were screened before being allowed to take the cross and were granted commutations or redemptions of their crusading vow only on the grounds of extreme poverty, the safety of the realm, old age, or permanent disabilities. However, Pope

Innocent III and many of his preachers insisted that the crusade vow should be granted to all who desired it. They appear to have intended to financially subsidize those hardy enough to make the journey. The devotion of other militarily unfit individuals who took the crusader's cross and had fully intended to join the expedition until their vows were commuted just before the departure of the crusading army would be rewarded by being granted the plenary indulgence in return for other forms of contribution to the crusade. Yet this plan for universal participation unwittingly enabled individuals technically capable of fulfilling their vows in person to gain the plenary indulgence through deliberately commuting their personal participation into a donation to the crusade effort.

By the mid-thirteenth century, as the offices of preacher and commutator of vows became increasingly combined, critics complained that the plenary indulgence was being "sold" when the unfit, aged, and deathly ill were urged to take crusading vows, which were redeemed immediately. The instantaneous nature of these vow redemptions tended to erode the intention for personal participation present when redemptions were made at a much later date (if at all). Speedy redemptions also contributed to erasing the distinction between the putatively greater labor required for the plenary indulgence and the relatively minor almsgiving required for partial indulgences. Moreover, in response to pressure from military leaders responsible for organizing crusading contingents (who were worried about managing mobs of devout but untrained crusaders), crusade preaching very gradually shifted its emphasis from recruiting individuals to mustering funds. Categories deemed militarily useless were encouraged, and in some instances obliged, to redeem their crusade vow with money while still receiving the full crusading indulgence. However, the ideal of personal participation in the crusade remained strong.

Theory, Practice, and the Changing Conception of Indulgences

Variation, confusion, and evolution in practice were exacerbated by the fact that indulgences effectively operated without a theoretical explanation until theologians began systematically considering the sacrament of penance in the mid- to late twelfth century. They were soon forced to retroactively justify indulgences while defending the validity of the sacrament of penance, saintly intercession, penance by proxy, the concept of purgatory, and the priestly

power of the keys against criticism by “heretics.” However, they also sought to ensure that indulgences did not become a means for mulcting the faithful for money or enabling the cynical to escape the penance enjoined upon them by their priests. Some theologians insisted that all indulgences were mere spiritual insurance policies. They became valid only if the penitent could not physically perform the original penance assigned to him by his confessor, who had to approve any indulgences obtained. Remissions could only be granted by an ecclesiastical authority possessing penitential jurisdiction over the penitent, such as his bishop or the pope.

Many theologians claimed that an indulgence’s efficacy depended upon the substituted act that the penitent was responsible for performing (which ought to be proportionate to the remission granted) and his or her contrition and devotion. It was also contingent on variables outside the penitent’s control, including the quantity and quality of the good works, prayers, masses, and so on, organized by the authority offering the indulgence. These constituted a reserve that could be drawn upon to vicariously fulfill the penitent’s remitted original penance. This highly conditional conception of indulgences tended to limit the extent and number of remissions granted, since the reserves generated by the church militant (i.e., the members of the church alive on earth) was not bottomless. For this very reason, Innocent III and other popes organized special crusading liturgies and processions designed to earn enough spiritual credit to back up the partial and plenary indulgences offered for the crusade.

Unlike earlier secular theologians who had based their theory of indulgences upon the limited powers of priests and bishops to remit penance, mendicant theologians working in the second half of the thirteenth century theoretically mirrored current practice by gradually eroding the concept that indulgences should be proportionate to the suffering incurred by the recipient’s donation or labors. They severed the validity of indulgences from the limiting factors of the penitent’s own efforts and those of the church on earth by emphasizing the power of the penitent’s contrition and formulating the concept of the *treasury of merits*. According to this theory, by a special exercise of the power of the keys, the pope and those to whom he delegated his authority could dispense merit bankrolled from the limitless virtues of Christ and of the church triumphant (i.e., the saints and martyrs in heaven) in order to disproportionately relieve sinners of their enjoined penance, although the penitent’s contrition and confession

were still essential. The concept that the power of an indulgence was linked to the merits of the saints and Christ was by no means entirely novel. Yet the formulation and acceptance of this theory accompanied the widespread granting of the plenary indulgence in return for donations to the crusade and the plenary’s gradual, though by no means inevitable, disassociation from the crusading movement.

Criticism and Evolution

Complaints about the abuse of indulgences proliferated throughout the Middle Ages, but initially focused largely on the activities of wandering fund-raisers, or pardoners, who toured with relics and letters of indulgence to gather alms for charitable projects. The Fourth Lateran Council (1215) sought to restrain these fund-raisers and to combat bishops’ perceived tendency to inflate partial indulgences granted to those attending church dedications and anniversaries. Preachers bent more on offerings than on the good of souls were also accused of claiming the ability to free the souls of specific persons from purgatory or even hell through the grant of transferable indulgences in return for donations. However, the theoretical qualms expressed by theologians and many bishops were often strikingly absent from their presentation of indulgences in devotional works intended for lay audiences. Crusade sermons often portrayed the plenary indulgence as a key that granted instant access to heaven to the contrite, even if they died with only the intent of fulfilling their crusading vow in person. Preachers also insisted that crusaders’ spouses and family, dead or alive, share in the benefits of the crusading indulgence long before these benefits were enshrined in papal bulls.

The generous terms of indulgences gradually increased during the thirteenth century, leading eventually to the grant of the plenary indulgence for the pilgrimage to Rome by Boniface VIII and his successors. Complaints regarding the hyperinflation of indulgences and the number of projects to which they were applied also continued to grow, reaching their zenith during the publicizing of plenary indulgences for the crusades against the Ottoman Turks in the fourteenth and fifteenth centuries. Moreover, by the late fifteenth century, the advent of the printing press exacerbated the already existing mass production of “pardons.” Typical of the late medieval period, these standardized letters granting indulgences and other spiritual privileges were sold by professional pardoners in return for a minimal contribution to any one of a long list of charitable causes (including various crusades). Par-

doners' hyperbolic promotional techniques and unscrupulous activities invoked the scorn of writers such as Geoffrey Chaucer and the ire of reformers, including Martin Luther.

Many popes and church councils attempted to redress abuses associated with indulgences. Nevertheless, secular rulers, conciliarists, and other reformers resented the perceived diversion of money to Rome and the dubious methods employed by some preachers, particularly as the donations required to receive the increasingly inflated benefits ascribed to the plenary indulgence continued to decrease. Critics' disillusionment with the "sale" of indulgences grew after money raised by preaching tours for the Holy Land or the anti-Ottoman crusades was consumed by local princes or diverted to other enterprises. Moreover, despite attempts to reclaim the plenary indulgence for the crusade alone, it was increasingly applied to other causes, including papal wars, almsgiving, donations to church building projects, and the pilgrimage to Rome or Jerusalem. This transfer paralleled the gradual loss of the crusades' allure, as rulers and populace alike reluctantly came to accept that the Holy Land would not be recovered by a traditional crusade.

Ingria

Ingria, or Izhoria, was a region of northwestern Russia, situated on the southeastern shore of the Gulf of Finland, that was a target for crusader attacks from Sweden and Livonia in the period of the Baltic Crusades.

Ingria included the basins of the rivers Kovashi and Izhora, and extended to the east as far as the river Neva. It was inhabited by a Finnic people known to the Russians as Izhorians and in Latin sources as Ingrians; their native names were Ingeri, Inkeri, or Inkerikot.

Ingria was incorporated into the territory of the Novgorodian state in the eleventh century, forming an administrative unit called the *Izhorskaya Zemlya* (Izhorian Land). The Ingrian "elders" (the social elite) had extensive landed possessions and controlled external trade. Some of them, together with their dependents, had adopted Orthodox Christianity and served the Novgorodian state, but the majority of the Ingrians remained pagan up to the mid-thirteenth century. Only one Ingrian elder is known by name: Pelgusii (baptized as Philip), who owned lands between the rivers Neva and Izhora and served Novgorod by watching over navigation at the mouth of the Neva with his followers. In 1240 the Swedes launched an expedition into Ingria with the aim of establishing control by building a fortress at the mouth of the river Izhora and cooperating with Ingrian elders who opposed Novgorod. Thanks to Pelgusii's watchmen, the arrival of the Swedish ships was quickly communicated to the Novgorodians, who were able to surprise and defeat the Swedes in battle at the Neva (15 July 1240).

The Swedes were more successful in 1300 when they built a fortress called Landskrona on an island in the mouth of Neva, but being unable to come to terms with the Ingrians they had to abandon it. Ingrians joined with the Novgorodians to drive the Teutonic Knights of Livonia and their allies out of Votia in the winter of 1241–1242, and they also repelled Swedish attacks in 1292 and 1348. In the winter of 1444–1445 the Livonians devastated the Ingrian lands as far

Innocent III (1160/1161–1216)

as the Neva. After the Russian-Livonian Treaty of 1448, there were no more major attempts by Swedes or Livonians to conquer Ingria in the Middle Ages, although sporadic smaller-scale hostilities continued.

Innocent III (1160/1161–1216)

Pope (1198–1216), born Lothar (Lothario) dei Conti di Segni, of aristocratic parents, in Gavignano, south of Rome, in 1160 or 1161.

Educated at Rome, Paris, and Bologna, Lothar became a cardinal in 1189 or 1190, was elected pope 8 January 1198, and consecrated on 22 February, after first being ordained priest and bishop. His main goals throughout his papacy were to safeguard what he called the liberty of the church (especially the independence of the Papal State in central Italy), to regain the Holy Land from Muslim control, and to reform the church in all its members.

The death in 1197 of Henry VI, the Holy Roman Emperor, gave Innocent the opportunity to seek a replacement who would honor the pope's claim to the Papal State. Two rival candidates claimed the imperial crown: Otto of Brunswick and Philip of Swabia. After Philip was assassinated in 1208, Innocent crowned Otto, but Otto's violation of earlier promises to respect papal claims led Innocent to excommunicate him and give his support to Henry VI's son Frederick (II), king of Sicily. The full consequences of Frederick's accession were not to become evident until after Innocent's death. Innocent had conflicts with other princes, notably with Philip II Augustus of France over Philip's repudiation of his wife and with King John of England over John's rejection of Innocent's candidate for the archbishopric of Canterbury. The latter conflict led to a lengthy interdict on England and finally, in 1213, to John's surrender of England and Ireland to the pope, to be held by John as fiefs. This act gave John papal support against the barons of England, who forced

upon him Magna Carta (1215). It also deprived Philip Augustus and his son of an excuse for their planned invasion of England.

Innocent initiated the crusades commonly called the Fourth Crusade (1202–1204), the Albigensian Crusade (1209–1229), and the Fifth Crusade (1217–1221) and gave his continuing support to crusades against Muslims in Spain and against heathens in the Baltic area. The crusading efforts in southern France, Spain, and Livonia achieved some success; those aimed at recovering the Holy Land did not. A few times he hinted that he might turn a crusade against non-heretical Christians whom he saw as obstructing crusading efforts, but nothing came of the threats.

Even before Innocent became pope, the papal Curia had come to see the fall of Jerusalem to the Muslims in 1187 as divine punishment for the sins of Christians, especially the sexual sins of Latin princes. Innocent embraced this view and consequently saw the reform of the church and the recovery of Jerusalem as inseparable goals to be sought by all Christians, especially by him as the vicar of Christ. The first call for the Fourth Crusade was issued in August 1198. Innocent offered a full indulgence to crusaders for those sins that they had confessed and repented, together with other privileges, notably exemption from interest payments and papal protection for the crusaders and their lands. To those who stayed at home but offered money to support other crusaders, he offered an indulgence in proportion to their donations and their fervor. This call for crusaders, and a papal tax of 2.5 percent to be imposed on clergy to finance the crusade, were generally ignored. Gradually, however, enthusiasm for the crusade began to develop, and in late 1199 and early 1200 a number of French princes took the cross.

Although Innocent intended the crusade to be under the direction of papal legates, from the very beginning its direction was in the hands of princes of France, and in 1201 they offered the leadership to Boniface, marquis of Montferrat. A few months earlier in 1201, envoys of the French princes had entered into an agreement with Venice whereby they promised to arrive in the city with a predetermined amount of money and a military force of a certain size, which would be transported to Egypt by a Venetian fleet. But as the army gathered at Venice in 1202, it had neither the money nor the numbers that the envoys had promised. The Venetians, who had produced the fleet they had promised, offered to postpone payment of the debt if the crusaders would join them in an attack on Zara (mod. Zadar, Croatia), a city

Thirteenth-century Italian fresco of Pope Innocent III. Sacro Speco (S. Scolastica), Subiaco, Italy. (Archivo Iconografico, S.A./Corbis)

claimed by the Venetians. Although Innocent had forbidden the crusaders to attack Christians except under very special circumstances and only with approval of papal legates, most of the crusaders reluctantly agreed to participate in the attack. The city was captured and sacked in November 1202, and those who participated were automatically excommunicated, although most of the crusaders other than the Venetians soon sought and received papal absolution. The crusading force defied papal orders a second time by proceeding to Constantinople (mod. İstanbul, Turkey) to restore the dethroned Byzantine emperor, Isaac II Angelos, and his son, Alexios (IV). Alexios promised substantial Greek support for the crusade once he was restored.

The Latins went to Constantinople with the expectation that they would be welcomed and supplied with men and money to continue the crusade, but continuing conflicts between the Greeks and the Latins led the latter to capture and sack the city in April 1204. They then elected one of their leaders, Count Baldwin IX of Flanders, as Latin emperor of Constantinople and declared the Greek Church reunited with Rome. Some have suggested that Innocent III was part of an early conspiracy aimed at diverting the crusade to Constantinople in order to bring the Greek Empire under Latin control. Most modern scholars, however, see the diversions as the pragmatic response of the crusaders to several difficult situations. Although Innocent had forbidden the diver-

sion to Constantinople, he chose to see the fall of the city as a miraculous act of God, reuniting the Greek and Latin branches of the Christian church under papal authority. His enthusiasm waned somewhat as he learned of the atrocities that had accompanied the sack of the city, and the following years showed that the Latin occupation was troubled by conflicts between Latins and Greeks and among the Latins themselves, but Innocent continued to hope for the complete integration of the two churches and their combined movement to regain Jerusalem.

From early in his papacy, Innocent was concerned about heresy in Europe, especially in Italy and southern France. He authorized papal legates to work against heresy in France through preaching, reforming local clergy, and recruiting the aid of local princes. In 1208, however, after the murder of his legate Peter of Castelnau, Innocent intensified his efforts to recruit the aristocracy of France for a crusade against heretics and their supporters in the south, especially against Count Raymond VI of Toulouse. In 1209 a crusading army led by Simon of Montfort and the papal legates Milo and Arnold Amalric, abbot of Cîteaux, moved from Lyons into southern France. Raymond had been accused of protecting heretics in his territories, but he himself was able to make peace with the pope. Nevertheless, the army conquered most of Raymond's lands, as well as those of his nephew Raymond-Roger, viscount of Béziers and Carcassonne, and of Raymond-Roger, count of Foix. In 1215, with the reluctant approval of Innocent, the Fourth Lateran Council awarded the title of count of Toulouse to Simon, but warfare in the area continued until the region was brought under the control of the French monarchy in 1229. This crusade, like the Fourth Crusade, was scarcely under papal control from the time it was set in motion, but it did achieve its goal of making southern France less hospitable to heretics than it had been before. Still, Innocent's approval of Francis of Assisi and Dominic of Osma, founders of the Franciscan and Dominican orders, respectively, was probably more important than the crusade in the long-range effort to control heresy.

Throughout most of Innocent's papacy, the Christian kings in Spain were so often at odds with one another that the area was extremely vulnerable to Muslim expansion. Innocent continued crusaders' privileges for those who came from other parts of Europe to defend Spain, and he worked to stop the fighting among the kings, hoping to unite them against the Muslim threat. Alfonso VIII of

Castile, Peter II of Aragon, and Sancho VII of Navarre did in fact unite and in 1212 led a combined force against Almohad Muslims from Africa. Against great odds, they achieved a remarkable victory at Las Navas de Tolosa, thereby ending the Almohad threat.

Encouraged by the success in Spain and southern France, Innocent informed Latin Christendom in 1213 that he was summoning an ecumenical council (Lateran IV), the twofold purpose of which would be the recovery of the Holy Land and the reform of the church. Innocent now expanded the notion of crusade so as to include all Christians and set up more elaborate preparations than had been attempted in the past. He appointed regional commissioners to supervise recruiting and fundraising and instructed them to allow all Christians, regardless of their suitability for combat, to take the cross, offering all, men and women alike, the indulgences and other benefits accorded to crusaders. As was the case with the Fourth Crusade, those who could not actually participate were to make contributions and would receive the indulgence in proportion to the amount of their contribution and the quality of their devotion. Prayers and processions were to be organized throughout Christendom, and chests for donations were to be placed at the churches where the processions ended. In order to focus volunteer efforts on the Holy Land, Innocent also withdrew the indulgence that had previously been offered to those crusading in Spain or southern France. In late 1215, after Lateran IV, he issued more instructions, including an itinerary to be followed through Italy or Sicily (where he would himself greet the crusaders) and a 5 percent tax to be levied on all clergy to finance the crusade.

In 1213, Innocent wrote to al-'Adil I, Ayyübid sultan of Egypt, encouraging him to surrender the holy places so as to avoid bloodshed. But short of that unlikely development, Innocent saw crusading as an opportunity for the faithful to enrich their spiritual lives; as a duty owed to the Lord, whose lands had been occupied by the infidel; as an act of charity to those Christians suffering under Muslim control; and as a stage in God's plan to unite the whole world under Christ and his vicar, the pope. His pontificate saw the real or apparent addition of Livonia, Bulgaria, Vlachia, Armenia, and the Byzantine Empire to the papal fold, not to mention successful military operations in Spain and southern France. He looked forward to the conversion of Jews and pagans and saw in the number 666 of the Book of Revelation a sign that the territories conquered by Muslims some 600 years earlier would soon be regained for

Christianity. However, he did not live to see the formation of his crusading army or its collapse in Egypt.

As a cardinal, Innocent wrote treatises of enduring influence, and many of his papal decretals were incorporated into canon law. He is generally regarded as one of the most important popes of the Middle Ages, second only to Gregory VII in his influence. He died at Perugia on 16 July 1216.

Innocent IV (d. 1254)

Pope (1243–1254). Sinibaldo Fieschi, born around 1190, was elected pope as Innocent IV in June 1243 after an interregnum that, apart from the short pontificate of Celestine IV, had lasted since the death of Pope Gregory IX in August 1241.

From Gregory, Innocent inherited a continuing political confrontation with the Holy Roman Emperor and king of Sicily, Frederick II, as well as a crusading policy that targeted the Orthodox Russians. Innocent was, however, the first pope to seriously face the challenge posed by the Mongol onslaught on western Europe in the course of 1241. After the First Council of Lyons (1245), Innocent sent envoys to the Mongols in order to explore the possibilities of either converting them or turning them into allies of the crusading movement. One of these envoys, John of Plano Carpini, also negotiated with Russian princes over church union with Rome. As both Daniel Romanovich of Galicia-Volhynia and Yaroslav II, grand prince of Vladimir, seemed to respond positively, Innocent abandoned the idea of an alliance with

the Mongols and aimed instead to form a grand alliance against them that would include the Russians. In January 1248 Innocent circulated letters to Daniel and to Yaroslav's son Alexander Yaroslavich (Nevskii), with copies to the master of the Teutonic Order in Prussia; he urged them to warn him through the Teutonic master of impending Mongol attacks on Christianity and to unite under papal protection in the defense against the Mongols. Both Russian princes accepted the proposal. In 1250 Alexander's brother, Grand Prince Andrei, joined Innocent's alliance when he married Daniel's daughter, and in 1251 even the pagan Lithuanian prince Mindaugas accepted baptism. All eastern European rulers still not under Mongol domination had now joined Innocent's alliance.

Soon, however, this alliance began to dissolve because Innocent was unable to match his diplomacy with military forces that would enable the Russians and Lithuanians to withstand Mongol attacks. In 1253 he tried to salvage the alliance by offering royal crowns to Mindaugas and Daniel. They, in turn, established mutual marital links. However, both succumbed to Mongol attacks in the following years: the church union broke up and Lithuania returned to paganism.

Innocent VIII (1432–1492)

Pope (1484–1492), original name Giovanni Battista Cibo.

As pope, Innocent VIII at first showed little interest in sponsoring a crusade against the Ottoman Turks, in spite of the threat that they now posed to Italy. In 1489, however,

Iqtāʿ

Cem (Djem), brother of Sultan Bayezid II and pretender to the Ottoman throne, arrived in Rome. Innocent now had a useful political pawn in his hands, since releasing Cem could spark civil war in the Ottoman Empire, and the mere threat to do so could put a brake on Ottoman expansion in the Balkans.

Innocent summoned a crusade congress to Rome to consider how to make the most of this advantage and overcome the practical problems of mounting an expedition against the Turks. The congress met in March 1490, but its deliberations ultimately came to nothing. Of the two powers on which such an expedition would depend, Venice was reluctant to renew the war against the Turks, and Hungary was in a weak position following the death of its king, Matthias Corvinus. Nevertheless, the possession of Cem was a useful lever against Bayezid, who was careful to cultivate Innocent by sending him a gift in 1492—the iron head of the Holy Lance, which was supposed to have pierced Christ’s side during the Crucifixion.

Intercultural Relations in Outremer

See Outremer: Intercultural Relations

Iqtāʿ

The Arabic word *iqtāʿ* literally means “a portion” or “a section”; more specifically, in the period of the crusades it was used to refer to an assignment of land or other source of revenue (such as a factory or a caravanserai) to a soldier or other functionary in the employment of a Muslim ruler in return for his service.

The term *iqtāʿ* has sometimes been translated by scholars as “fief,” but this is misleading, as these grants were not, in theory at least, hereditary, nor did they convey ownership over the land or judicial rights over those who worked on the land. The grant of an *iqtāʿ* merely conferred the right to collect taxes on a particular village or other revenue source and to keep those revenues. It can therefore be seen as a kind of tax farm. In most cases, the main revenue collected

by the *iqtāʿ* holder (Arab. *muqṭaʿ*) was the *kharāj* (land tax), which would normally be collected in kind as a proportion of the crops. One consequence of this was that the soldiers who held the *iqtāʿ* assignments tended to be reluctant to campaign during the harvest time, for that was when they or their agents collected their revenue. *Iqtāʿ* revenue was often supplemented by pay (Arab. *jāmakīyya*) and campaign handouts.

The institution seems to have originated under the Saljūqs in Persia. It was imported to Egypt by Saladin. The Mamlūk military regime in Egypt and Syria from the late thirteenth century onward was founded on the institution of *iqtāʿ*. Theory notwithstanding, in practice some of the *iqtāʿ* holders did acquire wider powers over their estates and were successful in transmitting them to their descendants. This particularly happened in Persia and Iraq during the late Saljūq period. Occasionally, the term *iqtāʿ* could be used in a much looser sense. For example, the word is sometimes used to refer to the princely appanages of the Ayyūbids. It was also sometimes used to recognize the jurisdiction of a hereditary tribal chieftain, particularly in highland Palestine and Lebanon.

Isaac II Angelos (1153/1156–1204)

Byzantine emperor (1185–1195 and 1203–1204).

The founder of the Angelos dynasty, Isaac came to the throne upon the violent overthrow of the last Komnenian emperor, Andronikos I (12 September 1185). He succeeded in expelling the Norman conquerors of Thessalonica (mod. Thessaloniki, Greece) from Macedonia in 1185–1186, but was unable to subdue either Isaac Komnenos, the rebellious ruler of Cyprus, or the Bulgarian Asenid dynasty, which (with Vlach and Cuman support) established the Second Bulgarian Empire, which Isaac was forced to recognize (1186/1187).

In 1189–1190 the depredations on Byzantine territory by the land army of the Third Crusade (1189–1192) led by the

Holy Roman Emperor, Frederick I Barbarossa, resulted in Isaac's approach to Saladin, Ayyūbid sultan of Egypt; Frederick threatened Constantinople (mod. İstanbul, Turkey) itself and forced Isaac to conclude the Treaty of Adrianople (February 1190), which obliged him to transport the crusader army across the Hellespont to Anatolia. In the early 1190s Isaac faced insurrections by the Serbs and Byzantine pretenders in Anatolia and the Balkans.

In April 1195, while preparing a campaign against the Serbs, Isaac was arrested and blinded by his brother, Alexios III Angelos, who seized the throne. Isaac remained a prisoner until August 1203, when he was freed by the victorious army of the Fourth Crusade (1202–1204) and restored to the throne with his son, Alexios IV Angelos, as co-emperor. The two Angeloi were overthrown by a coup led by Alexios V Doukas Mourtzouphlos (January 1204). Isaac died a broken man (28/29 February 1204) a few weeks following the assassination of his son (8 February).

Isaac Komnenos (d. 1195/1196)

Independent Byzantine ruler of Cyprus (1184–1191), overthrown in the course of the Third Crusade (1189–1192).

Isaac Doukas Komnenos was born around 1155, a great-nephew of the Byzantine emperor Manuel I Komnenos. After serving as *doux* (governor) of Cilicia, he seized power in Byzantine Cyprus around 1184, ruling despotically with

the title *basileus* (king) and even minting his own coinage, where he is portrayed in imperial garments. His rule, the last period of Byzantine control over the island, was ended by the arrival of the Third Crusade (1189–1192). In May 1191 King Richard I of England, using as a pretext Isaac's maltreatment of crusader pilgrims in Cyprus and fearing his amicable relations with Saladin, landed at Limassol (mod. Lemesos). Richard's forces defeated Isaac in two battles at Kolossi and Tremethousa, and occupied the entire island within 20 days.

Isaac was captured and delivered by Richard to the Hospitallers, who incarcerated him in the fortress of Margat (mod. Marqab, Syria), where he most probably died, although one account records that he was released around 1194 and then went to the Saljūqs of Rūm, where he was poisoned after attempting to foment rebellion against Emperor Alexios III Angelos.

Isabella I of Castile

See Ferdinand II of Aragon and Isabella I of Castile

Isabella I of Jerusalem (1172–1205)

Queen of Jerusalem (1192–1205), whose last two husbands ruled the kingdom in her name.

Isabella II of Jerusalem (1211/1212–1228)

Isabella was the only child of King Amalric of Jerusalem and his second wife, Maria Komnene. Isabella married her first husband, Humphrey IV of Toron, in 1183. In 1186, some Frankish barons tried to establish the couple as rivals to Queen Sibyl (Isabella's half-sister) and her husband, Guy of Lusignan, but the plan was abandoned when Humphrey swore fealty to his sister-in-law. In 1190 Sibyl died, and an annulment of Isabella's marriage was procured by Maria Komnene and Conrad of Montferrat, to whom Isabella was now promptly married in order to bolster Conrad's claim to the throne of Jerusalem against Guy.

In 1192 Conrad was recognized as king, but he was assassinated before he and Isabella could be crowned. Within eight days Isabella was married to Henry of Champagne, who ruled the kingdom in right of his wife, although the couple were never crowned. On Henry's death (1197), the barons of the kingdom selected Aimery, king of Cyprus, as Isabella's new husband, and the two were crowned in October.

Isabella was regularly associated with Henry and Aimery in the charters they issued, but there is little evidence that she took an active political role. The date of her death is unknown but probably occurred soon after that of Aimery (April 1205). She was predeceased by her only son (also called Aimery) and survived by five daughters: Maria of Montferrat (by Conrad), who succeeded her; Alice and Philippa (by Henry); and Melisende and Sibyl (by Aimery).

Isabella II of Jerusalem (1211/1212–1228)

Queen of Jerusalem (1225–1228), coming to the throne as a minor in succession to her mother, Maria of Montferrat. Isabella was nominal ruler until her death in 1228, although power was exercised on her behalf by her father, John of Brienne, and then her husband, Frederick II, Holy Roman Emperor.

Nothing is known of Isabella's early life, but in March 1223 it was agreed that she should marry Frederick in order to secure his support for the kingdom of Jerusalem. The wedding took place by proxy in Acre (mod. 'Akko, Israel) in 1225, and Isabella was then crowned. In August she sailed

for Europe, accompanied by senior prelates and barons from the realm, and the marriage was solemnized on 9 November 1225 in Brindisi. Isabella remained in the West and died soon after the birth of her son, Conrad (IV), heir to the throne of Jerusalem, in April 1228.

Al-İşfahānī (1125–1201)

ʿImād al-Dīn Muḥammad ibn Muḥammad, known as al-Kātib al-İşfahānī, was a historian and *kātib* (secretary-scholar) born in Isfahan in Persia and educated in Baghdad.

In 1157, he caught the attention of the vizier Ibn Hubayra, who appointed him as his *nāʾib* (representative) at Wasit and Basra. When Ibn Hubayra died in 1165, al-İşfahānī lost his position, but two years later he became a *kātib* in the service of Nūr al-Dīn and soon rose in prominence. After the death of Nūr al-Dīn (1174), al-İşfahānī was supplanted by rivals and eventually fled to Mosul. There he fell ill, but he recovered, and upon hearing that Saladin was advancing on Damascus, he sent the sultan greetings in the form of a poem. He passed into Saladin's service, eventually becoming both his official secretary and close companion. He remained in almost constant attendance upon his master until the latter's death in 1193, after which he settled in Damascus and spent the rest of his life on literary work.

Al-İşfahānī wrote several important works, including a chronicle of the years from 1187 to just after the death of Saladin, *al-Faḥ al-Qussī fī'l-Faḥ al-Qudsī* (*Qussian Eloquence on the Conquest of Jerusalem*) and an autobiographical account of the sultan's military expeditions, *al-Barq al-Shāmī* (*The Syrian Lightning*). He also collected a great anthology of the Arab poets of the twelfth century, *Kharīdat al-Qaṣr wa-Jarīdat Ahl al-ʿAṣr* (*The Pearl of Selection and Roll of the People of the Age*), and wrote other historical chronicles.

Islam

According to the traditional account unquestioningly accepted by all Muslims in the Middle Ages, around the year 610 Muḥammad, an illiterate forty-year-old Arab, began to receive revelations from Allah that were relayed to him by the Archangel Gabriel. After Muḥammad’s death in Medina in 632, these revelations were written down and collected in the Qur’ān. It is important to note that, while the Prophet was not himself in any sense divine, the revelation he received is regarded as the eternal word of God, making the Qur’ān a sacred text in a sense that the Bible is not.

According to Muslim belief, the Qur’ān supersedes the earlier Jewish and Christian revelations. During his lifetime, the Prophet faced considerable opposition from his own tribe, the Quraysh, as well as from other Arab tribes and from the large numbers of Jews then living in the Ḥijaz. The Quraysh were mostly idol-worshipping polytheists who rejected the new and somewhat austere monotheism of Islam (which in Arabic literally means “submission”). In 622 Muḥammad was forced to withdraw from Mecca to Medina, and Muslims date the start of their calendar from this event. Ultimately, Muḥammad returned in triumph to Mecca. After Muḥammad’s death, Arab Muslim armies went on to conquer the rest of the Arabian Peninsula. They occupied the territory of the Persian Sassanian Empire as well as much of the territories formerly ruled by the Byzantine emperor Her-

aclius. By 750 the armies of Islam had reached the frontiers of China in the East; in the West they had conquered most of the Iberian Peninsula and pushed on into parts of modern France and Switzerland.

After Muḥammad’s death, political and spiritual leadership of the Islamic community passed successively to Umar, Abū Bakr, ‘Uthmān, and ‘Alī, who were later referred to as the so-called Rightly Guided Caliphs; the Arabic word *khalīfa*, or caliph, means “deputy” or “successor.” The caliphate of ‘Alī was tumultuous, and his sons were killed by supporters of the Umayyad clan. The Umayyad dynasty monopolized the caliphate from 661 until 750. Since almost all that has survived concerning the Umayyads was written by historians and propagandists of the ‘Abbāsids, who eventually displaced them, the Umayyads did not receive a good historical press. It was in the Umayyad period that the schism between Sunnī and Shī‘ite Muslims began to form, although the two rival versions of Islam were only slowly articulated. The rift was originally a political one concerning the leadership of the Muslim community. The Shī‘a (a word that means “party”) maintained against the partisans of the Umayyads that only descendants of ‘Alī, the Prophet’s cousin, and Fāṭima, the Prophet’s daughter (and the wife of ‘Alī), could rightfully assume the caliphate. In the longer term, the Shī‘a would develop their own distinctive and somewhat esoteric theology as well as their own rituals and law schools. Even so, distinctions between the two versions of Islam were not as hard-edged in the medieval period as they have since become, and many Sunnīs had Shī‘ite sympathies and vice versa.

Sunnī Muslims are so called because of their adherence to the *Sunna*, that is, the sayings and doings of the Prophet, later established as legally binding precedents. These precedents, which supplemented those legal rulings to be found in the Qur’ān, could be extended, and were, by various analogical procedures and formed the *sharī‘a*, the religiously based law. In time, four major *madhhabs* (law schools) developed within the Sunnī community. These were the Shāfi‘ī, Ḥanafī, Mālikī, and Ḥanbalī madhhabs, which tended to differ one from another on relatively minor points of ritual and law. Most North Africans adhered to the Mālikī madhhab, whereas Turks tended to favor the Ḥanafī madhhab. The Ḥanbalī madhhab was particularly rigorous; many of the leading preachers of *jihād* (holy war) were Ḥanbalīs. Not only did the sayings and deeds of the Prophet furnish much of the core of Islamic law, they also guided

Muslim individuals in such everyday matters as sleeping and eating.

The five pillars of Sunnī Islam are: the *shahādah*, the attestation of faith in Allah and his Prophet Muḥammad; *ṣalāt*, prayer, performed, if possible, at five fixed times during the day; *zakāt*, charity; *ṣawm*, fasting, especially during the month of Ramadan; and the *hajj*, pilgrimage to Mecca. *Jihād*, or “holy war” (but more literally “striving”), is sometimes referred to as the sixth pillar of Islam. It is sanctioned by several passages in the Qur’ān and imposed a twofold duty. First, it was incumbent on the Muslim community as a whole to extend Muslim territories by fighting; second, it was incumbent on every able-bodied male Muslim to respond to a call to arms to drive out infidel aggressors who had occupied territory previously held by Muslims. Sufis and pietists also wrote about the inner jihād, an interior struggle by the individual to purify him or herself. Conversion to Islam only requires the would-be convert to pronounce the *shahādah*, the attestation of belief in Allah and his Prophet, in front of witnesses. The Muslim conquerors rarely put pressure on their newly conquered subjects to convert, in part because the conquered peoples paid an extra poll tax, known as *jizya*. Christians, Jews, and Sabians (the *Ahl al-dhimma*, or “People of the Pact”) were tolerated under somewhat circumscribed circumstances. Conversion from Islam to another faith was and is punishable by death.

The Umayyad caliphate was overthrown in 750. Although many who took part in the uprising had hoped to see a descendant of ‘Alī and Fāṭima installed as the new caliph, in fact power was usurped by the ‘Abbāsids, a clan descended from the Prophet’s uncle al-‘Abbās. The capital of the caliphate was moved from Damascus to the new city of Baghdad. By the time that the First Crusade (1096–1099) arrived in the Near East, the ‘Abbāsīd caliphs only enjoyed a nominal, ceremonial authority, and they were under the tutelage of the Turkish Saljūq sultans. Moreover, many territories that had formerly been part of the ‘Abbāsīd caliphate had either broken away or professed a merely formal allegiance to the caliph and sultan. In particular, Egypt and much of North Africa had come under the suzerainty of the Shī‘ite Fāṭimid caliphs. Muslim Spain never formed part of the ‘Abbāsīd caliphate, but from the late eighth century to the early eleventh century it was ruled by a branch of the Umayyad clan.

In general, Turkish generals, warlords, and *mamlūks* (slave soldiers) tended to exercise effective power in the

fragmented territories of the Near East. *Atabegs*, Turkish military governors whose rule was based on the pretence of “protecting” Saljūq princelings, controlled key cities in Iraq and Syria. Together with Palestine, Syria was a war zone where Fāṭimid armies fought against partisans of the Saljūqs. The struggle was also an ideological one, and during the Saljūq period *madrasas* (religious colleges) were established for the study and propagation of Sunnī theology and law. At the same time, Sufism, which had hitherto been a form of mysticism mostly pursued by individuals, began to develop a more institutional and populist character. Sunnī patrons established quasi-monastic centers, variously known as *zawiyas*, *khanqas*, or *ribāṭs*, for the pursuit of the Sufi life.

After the Mongol conquest of Baghdad in 1258, a puppet ‘Abbāsīd caliphate in Cairo was established under the “protection” of the Mamlūk sultans in Egypt (which was suppressed by the Ottomans in the early sixteenth century). The Mamlūk sultanate derived much of its prestige from its elimination of the Frankish states of Outremer, which was completed in 1291. The Mongols, who had at first seemed to threaten the very survival of Islam, converted to that religion in large numbers in the course of the thirteenth and fourteenth centuries. Throughout the Middle Ages, Muslims’ confidence in their religious and political destiny remained high, despite the shock caused by the fall of Granada to the Christians of Spain in 1492. Only after the Ottoman Turks started to surrender Muslim territory in the Crimea and Balkans from the late seventeenth century onward did some Muslim thinkers begin to ask themselves whether the traditional Muslim ways would suffice to counter the growing military and economic power of the West.

Izborsk

A fortress situated southwest of the city of Pskov in Russia.

The first fortified settlement at Izborsk was founded at the end of the eighth century on high ground with steep slopes by the confluence of a small river with Lake Gorodishchenskoye; it was linked by a system of watercourses to Lake Pskovskoye. A stone fortress was built in the second half of the eleventh century when Izborsk became the main outpost on the western frontier of the Novgorodian state. Thereafter it was considered by the crusading orders of Livonia as the key to the city of Pskov, and was frequently subject to attack by them.

In 1233 the troops of the vassals of the bishopric of Dorpat and their ally Prince Yaroslav of Pskov, who was attempting to restore his rights to the Pskov principality, captured

the fortress, but they soon retreated after troops from Pskov came to its relief. In September 1240 Izborsk was occupied by the Teutonic Knights from Livonia and their allies after a week-long siege and was freed only in March 1242; it was burned down by the Livonians before the siege of Pskov in May 1269. In 1330 a new fortress was built on higher ground to the south, and from that time it was practically unassailable, withstanding several sieges by the Livonians, notably in 1341 and in 1348.

Jacob's Ford

Jacob's Ford (Lat. *Vadum Jacob*) was the traditional biblical site between Lake Tiberias (the Sea of Galilee) and Lake Huleh where Jacob crossed the Jordan to meet his brother Esau (Gen. 32:10). During Frankish rule, it was a key river crossing on one of the main roads between Acre (mod. 'Akko, Israel) and Damascus.

Here Baldwin III of Jerusalem suffered a major defeat at the hands of the forces of Nūr al-Dīn while marching to the relief of Banyas, escaping to the nearby castle of Saphet (mod. Zefat, Israel) on 19 June 1157. The ford remained unfortified until Baldwin IV constructed a fortress, called Le Chastellet, on the western bank between October 1178 and April 1179. It consisted of an enceinte on a low hill, with the main gate on the south side, along which was a rock-cut ditch, and postern gates on the other three sides. Inside the castle were a cistern and a communal oven. Although there is no evidence of towers along the walls, written sources suggest the existence of a keep or citadel. The castle was never fully completed, and perhaps a double line of walls was ultimately intended, or, alternatively, a sloping talus around the curtain wall. Excavations, begun in 1993, have led to many new discoveries, including a wide range of iron tools.

The purpose of the fortress was both to defend Galilee and to threaten communications between Egypt and Damascus, although the religious significance of the site for both

sides added extra impetus to the conflict. The castle was granted to the Templars, who, since 1168, had held Saphet, 15 kilometers (c. 9 mi.) to the southwest, and who regarded this region as one of their spheres of influence. Saladin took the threat extremely seriously, unsuccessfully offering the Franks 100,000 dinars to dismantle it, as well as raiding the surrounding area. In June 1179 at Marj Ayun, the Franks defeated a section of his forces under Farrūkh-Shāh, Saladin's nephew, but this victory was quickly reversed when they encountered the main Muslim army.

Saladin began a full-scale siege on 24 August, capturing the outer compound on the first day, although it was another five days before the keep itself was undermined and the castle taken. Around 700 Frankish captives were either executed or enslaved, and the fortifications completely demolished. The destruction of Le Chastellet and its environs severely curtailed the Franks' capability for offensives against Saladin's domains and left the Gallilee increasingly vulnerable to his attacks. During the 1180s, Saladin generally held the military initiative, and it is arguable that these events made a significant contribution to his victories in 1187.

Jaffa, Battle of (1102)

A defeat of the great Egyptian invasion of 1102 by King Baldwin I of Jerusalem.

A Fāṭimid army had advanced from Ascalon (mod. Tel Ashqelon, Israel) to Ramla, and on 17 May defeated Baldwin's hastily thrown together relieving forces, consisting of his own knights and many of the crusaders of 1101. The king was able to escape to Arsuf with a few companions, where he waited for reinforcements to arrive from Tiberias and Jerusalem. On 27 May the Franks encountered the Egyptian army, which was in the process of besieging Jaffa (mod. Tel Aviv-Yafo, Israel).

The course of the subsequent battle is unclear, but it is evident that although heavily outnumbered, the Franks were well disciplined and fortified by the presence of the relic of the True Cross, and were able to rout their opponents, taking large amounts of booty.

Röhricht, Reinhold, *Geschichte des Königreichs Jerusalem (1100–1291)* (Innsbruck: Wagner, 1898).

Jaffa, Battle of (1192)

The name given to clashes between the forces of King Richard I of England and Saladin at the port of Jaffa (mod.

Tel Aviv-Yafo, Israel) that enabled the crusaders to keep most of the gains they had made during the Third Crusade (1189–1192) just when it seemed that they were about to lose them.

After a second unsuccessful advance on Jerusalem, the crusade began to break up when many crusaders left Palestine to return to the West during the early summer of 1192. On 28 June Saladin then made an unexpected attack on the coastal town of Jaffa. The extraordinary courage of the garrison won just enough time for news to reach Richard, who was then at Acre (mod. 'Akko, Israel). He sailed to Jaffa, taking Saladin by surprise on 1 August and forcing him to withdraw when on the brink of victory.

Richard had too few men to defend Jaffa's broken walls, so he set up camp outside them. Saladin saw the opportunity and, after a night march, ordered his men to attack at dawn on 5 August. But Richard managed to get his spearmen and crossbowmen into battle array, and Saladin's troops, despite their great numerical superiority, were so demoralized that they retreated again after allowing Richard to put on a display of the kind of knightly heroism that impressed both Muslims and Christians. To the chronicler Ambroise, it all seemed a miracle, and to others an incredible victory.

James I of Aragon (1208–1276)

King of Aragon, Mallorca, and Valencia, count of Barcelona (1214–1276), known as "the Conqueror," principal figure of the Aragonese-Catalan *Reconquista* (reconquest of Spain from the Muslims).

Barely a child when his father Peter II died in the battle of Muret (1213) during the Albigensian Crusade (1209–

1229), James effectively acceded to the throne in the early 1220s. One of his first independent actions was a failed attack on the Muslim-held fortress of Peñíscola in 1225, and campaigns against Muslim Spain were a recurring element of his reign. The conquest of the island of Mallorca was achieved with substantial support from the wealthy Catalan towns between September 1229 and July 1231; Menorca accepted Christian sovereignty in 1231, and Ibiza was conquered in 1235. The Taifa kingdom of Valencia fell to a prolonged series of campaigns that lasted from 1233 until the conquest of the capital on 9 October 1238, although it took until 1245 to subdue the entire realm. Contrary to the situation in Mallorca, the Muslims of Valencia who had capitulated were permitted to stay; they formed a considerable Mudejar population, parts of which carried out a series of ultimately futile uprisings between 1245 and 1277. A similar revolt by Mudejars of Andalusia and Murcia against Castilian lordship led James to intervene on behalf of King Alfonso X of Castile, his son-in-law. Between November 1265 and April 1266, Murcia was subdued and then returned to Alfonso X.

The champion of the Iberian reconquest also hosted a crusade to the Latin East. In 1245/1246 and in 1260, he had made tentative plans for military action in the eastern Mediterranean, but only in 1269 was a campaign undertaken. By September of that year, around 800 knights, several thousand foot soldiers and Catalan mercenaries (*Cat. almogàvers*), and a large fleet had been mustered. However, ill weather sabotaged the campaign: many crusaders, including the king, turned back. Out of over 30 ships, only 21 vessels carrying 424 knights reached Acre (mod. 'Akko, Israel), and slightly more than half the contingent abandoned the Holy Land on hearing of the king's misfortune. The remnant, under the leadership of James's illegitimate son Peter Ferrandis, participated in the defense of the town against the Mamluks for some weeks and returned home in early 1270. On his death, King James was succeeded in Catalonia, Aragon, and Valencia by his son Peter III.

James I of Cyprus (d. 1398)

King of Cyprus and titular king of Jerusalem (1382–1398).

James was a younger son of Hugh IV of Cyprus and Jerusalem and Alice of Ibelin. In 1369 he and his brother John may have been behind the murder of their older brother, King Peter I, who was probably assassinated because of the economic and political strains caused by his overambitious war against the Mamluks. James was nevertheless loyal to Peter's son Peter II (1369–1382), particularly during the Genoese invasion of 1373–1374. When the Genoese captured Peter II in the castle of Famagusta (mod. Ammochostos), James avoided the trap and halted the invasion, successfully defending Kyrenia (mod. Kyreneia). In a subsequent peace deal, Genoa kept Famagusta as security for a massive Cypriot indemnity, while James agreed to go into exile. However, the Genoese seized him on Rhodes (mod. Rodos, Greece) and imprisoned him in Genoa until 1383. Having been recognized as Peter II's successor by the Cypriot High Court, he was then released, but only after agreeing to a permanent Genoese occupation of Famagusta and further Cypriot repayments.

Although James's reign was dominated by economic problems and fruitless schemes to recover Famagusta, in the late 1380s he contributed galleys to a Christian naval league against the Turks. After the last Armenian king, Leon VI, died in 1393, James laid claim to his title. James was succeeded as king of Cyprus by his son Janus.

James II of Cyprus (1440/1441–1473)

King of Cyprus and titular king of Jerusalem and Cilicia (1460–1473).

James was the illegitimate son of King John II of Cyprus (1414–1458), who was initially succeeded by his daughter Charlotte and her husband, Louis of Savoy. However, James gained recognition from the Mamlūk sultan al-Ashraf Ināl, who was the suzerain of Cyprus, and in 1460 Mamlūk military assistance enabled James to conquer Cyprus (with the exception of Kyrenia castle and the Genoese colony of Famagusta [mod. Ammochostos], which held out until 1464).

Living in exile in Italy and Rhodes (mod. Rodos, Greece), Charlotte and Louis subsequently sought the aid of Savoy, the papacy, Milan, Naples, Genoa, and the Hospitallers in fruitless projects to regain Cyprus. After Louis died (1482), Charlotte ceded her title to the house of Savoy (1485). She died in 1487. Meanwhile, James, fearing Ottoman aggression or an invasion by Charlotte's supporters, fostered closer links with Venice. In the 1470s James supported Hospitaller and Venetian efforts against the Ottomans and favored plans to help Persia block Ottoman expansion.

In 1468 James married Catherine, a member of the powerful Venetian Cornaro family. Venice undertook to protect Cyprus and declared Catherine a "daughter of Venice," giving it a claim to control Cyprus after James died on 6 July 1473.

James III of Cyprus (1473–1474)

King of Cyprus and titular king of Jerusalem and Cilicia (1473–1474).

James was born shortly after the death of his father, King James II (1460–1473), who had conquered Cyprus from his own half-sister, Queen Charlotte. James III's short reign was dominated by rivalry between Charlotte, then living in exile in Italy, and Catherine Cornaro, James's Venetian mother. These women increasingly became pawns in a broader struggle between Venice, which had arranged Catherine's marriage to James II as a means of dominating Cyprus, and Venice's Mediterranean rivals.

The kings of Naples hatched various schemes to gain control over Cyprus, including marriage alliances with Catherine and James II's illegitimate daughter Charla, and also by supporting Charlotte's claim. In November 1473 a failed anti-Venetian conspiracy backed by Naples resulted in the murder of Catherine's uncle, Andrew Cornaro. After the death of the infant James III (August 1474), the risk of further conspiracies or invasion remained because of Charlotte's constant appeals for help from Venice's rivals. However, Venice gradually increased its hold on Cyprus, reducing Catherine to a mere figurehead and garrisoning Cypriot castles.

After Charlotte's death (1487), Catherine was persuaded to retire to Venice, and direct Venetian rule over Cyprus began (1489).

James of Molay (d. 1314)

The last master of the Order of the Temple (1293–1307), which he entered in 1265 at Beaune in Burgundy.

From around 1275, James served in the East, and in 1292 he was elected master. Thereafter, from his base in Cyprus, he organized naval raids against the Palestinian coast, and in 1301–1302 he attempted to reoccupy the island of Ruad (mod. Arwād, Syria), off the coast of Syria near Tortosa. At the same time, he obtained privileges and material help from the papacy and leading secular rulers.

James twice visited the West for these purposes, in 1293–1296 and in 1306–1307. On the second occasion, he was responding to a request from Pope Clement V for advice on two controversial issues: the union of the military orders and the organization of a new crusade. James wrote short reports on both of these subjects. In October 1307, in Paris, James was among the Templars arrested by officials of King Philip IV for a range of heretical crimes. He confessed to the denial of Christ and to spitting on a crucifix, a confession he repeated before an assembly of university masters. However, at Christmas, in the presence of papal representatives, he recanted, leading Clement to suspend the whole trial.

Nevertheless, when the proceedings were restarted in August 1308, James apparently returned to his original confession, and in November 1309, in three appearances before the papal commission appointed to investigate the order as a whole, he failed to offer any convincing defense, instead relying on a personal hearing. It was not until March 1314, when he was brought before three cardinals representing the pope, that he was condemned to life imprisonment. He then denied the charges again, asserting that the order was pure and holy. Handed over to the secular authorities at Paris, he was burned as a relapsed heretic on 18 March 1314.

St. James, Order of

See Hospital, Order of; Santiago, Order of

James of Vitry (d. 1240)

Crusade preacher and writer; active in the Albigensian Crusade (1209–1229), the Fifth Crusade (1217–1221), and the Crusade of Frederick II (1227–1229).

Born in France sometime between 1160 and 1170, James studied in Paris before joining the canonry of St. Nicholas at Oignies in the diocese of Liège. He recruited for the crusade against heresy in southern France and wrote a life of the mystic Mary of Oignies as antiheretical propaganda at the request of Fulk, bishop of Toulouse. Although his recruiting work for the Fifth Crusade meant that he was proposed as a potential replacement for Robert of Courson as legate for the crusade in France, James was instead elected bishop of Acre (mod. 'Akko, Israel) in Palestine. There he attempted a program of reform in preparation for the arrival

of a crusading army, conducting a revivalist preaching tour and debates with representatives of various native Christian and Muslim sects.

During the campaign of the Fifth Crusade, James collaborated closely with Oliver of Paderborn and joined him in sending reports of its progress to Pope Honorius III and preachers active in the West, publicizing prophecies that predicted that the combined advent of a Western emperor (identified as Emperor Frederick II) and King David (identified as an Eastern Christian potentate) would see the capture of all Egypt and the recovery of Jerusalem.

After the fall of the city of Damietta in 1221, James returned to the West and helped organize the delayed crusade of Frederick II, mediating between the emperor and the pope on numerous occasions. Shortly after resigning his bishopric, he was appointed cardinal of Tusculanum (1229–1240). As cardinal, James compiled his numerous sermons into four major collections and continued to actively support the mendicant orders and Pope Gregory IX's use of them as crusade preachers, missionaries, and inquisitors. He died on 1 May 1240.

James was the author of extensive writings that dealt with crusading, including the *Historia Iherosolimitana*, a tripartite work begun during the campaign of the Fifth Crusade. Its first book, the *Historia Occidentalis*, outlined the reforms he felt necessary for the success of the crusade. A far more copied and translated companion volume, the *Historia Orientalis*, described the successes and failures of past crusades while outlining the beliefs and customs of the inhabitants of the East and the geography, natural phenomena, and resources of these regions. James never completed a third book, meant to describe the course of the Fifth Crusade and the triumph of the Fourth Lateran Council, but an immensely popular substitute was soon compiled from various materials by anonymous copyists, including the *Historia Damiatina* of Oliver of Paderborn. James evidently intended all three books, known collectively as the *Historia Iherosolimitana*, to serve as a manual for future crusade recruiters and planners. The *Historia Orientalis* and the anonymous third book proved widely influential, inspiring missions, attempts at church reunion, and crusade proposals into the early modern era. James's *Historia Occidentalis* and model sermons (including homilies for crusaders and pilgrims) also influenced crusade propagandists and reformers, including Guibert of Tournai and Humbert of Romans.

Janus of Cyprus (d. 1432)

King of Cyprus and titular king of Jerusalem and Cilicia (1398–1432).

Janus was born around 1374, the son of King James I and Helvis of Brunswick. His early reign was overshadowed by the effects of the Genoese invasion of 1373–1374, which had enabled Genoa to occupy the port of Famagusta (mod. Ammochostos), dominate Cypriot trade, and demand substantial war indemnities. In 1402 Janus launched a failed attack on Famagusta; despite peace negotiations in 1403, hostilities continued sporadically until 1410.

Janus, faced with a general decline in the Cypriot economy, resorted to seeking loans, imposing taxes, and debasing the coinage to pay for indemnities and military campaigns. Meanwhile, raids on Mamlūk shipping by corsairs based on Cyprus caused relations with Egypt to deteriorate. A Mamlūk attack on pirates off Limassol (mod. Lemesos) in 1424 was followed by a Christian raid on Tyre (mod. Soûr, Lebanon) in March 1425. That summer a fleet sent by Sultan Barsbay al-Zahīrī of Egypt ravaged areas around Limassol. The next year another Egyptian force brought by more than 150 ships sacked Limassol and Nicosia (mod. Lefkosia), capturing Janus in battle (7 July 1426).

Janus did not return to Cyprus until May 1427, after agreeing to a ransom of 200,000 ducats, Egyptian sovereignty over Cyprus, and an annual tribute of 5,000 ducats. When Janus died on 28/29 June 1432, the Cypriot monarchy was heavily in debt. He was succeeded by his son John II.

Jehosaphat, Abbey of

St. Mary of the Valley of Jehosaphat (Josaphat) was a Benedictine abbey situated east of the city of Jerusalem.

Reputedly founded by Godfrey of Bouillon, the first ruler of Jerusalem, on the site of the Virgin Mary's tomb, the abbey was built near a Byzantine church containing the shrine of Mary's Assumption. According to tradition, its first monks came from Godfrey's entourage. They managed the Church

Church of the Tomb of the Virgin outside the walls of Jerusalem. Rebuilt from 1112 onward by Benedictine monks in the Romanesque style. In 1161 Queen Melisende, a patroness of church, was buried in one of its small chapels. (Courtesy Alfred Andrea)

of St. Mary (which retained an Orthodox altar), the Grotto of the Agony, and the Church of Gethsemane, all located near the Mount of Olives.

The abbey soon enjoyed extensive properties donated by Latin patriarchs, the royal family, and important magnates of Outremer. Patriarch Arnulf of Chocques helped finance a renovation of the church in 1112 and encouraged noble families to endow the house. Morphia, wife of King Baldwin II, was buried there around 1129, starting a precedent whereby queens of Jerusalem were buried apart from their husbands in the Church of the Holy Sepulchre. Queen Melisende commissioned a tomb in the Church of St. Mary in the 1150s. Its construction and decoration, which she may have overseen herself, clearly intended to heighten the royal family's majesty: her burial chamber lay just off the staircase leading to Mary's shrine, connecting the queen to the Virgin, while architectural motifs borrowed from the Holy Sepulchre associated Melisende with Jerusalem's kings. But Jehosaphat's fame as the center of the Marian cult

in Outremer prevented the house from becoming associated only with royal women.

Jehosaphat attracted numerous donations from all over Outremer and Western Europe, and it was exempted by papal decree from various tithes and from any sort of episcopal control over its property in Outremer. This combination of wealth and independence meant that at times the abbey reduced both the income and the power of Latin bishops and patriarchs. Extensive records of litigation involving the abbey have survived, making it the best-documented monastic house of Outremer. The abbey's fortunes waned after Jerusalem fell to Saladin in 1187. Although the monks built a new church in Acre (mod. 'Akko, Israel), they sold it to the Hospitallers in 1289 because they had no money for repairs.

Jerusalem, City of

As the scene of Christ's death and resurrection, the city of Jerusalem had long been the principal goal of Christian pilgrimage by the time that it was captured by the Saljūq Turks in 1073. The city and its shrines became the focus of the crusading movement after the recovery of the Holy Land was proclaimed by Pope Urban II at the Council of Clermont in 1095. Having been seized by the Fāṭimids of Egypt in 1098, Jerusalem was captured by the army of the First Crusade (1096–1099) on 15 July 1099 after a four-week siege, and became the capital of the Latin kingdom of Jerusalem until 1187, when it was lost to Saladin. The recovery of the Holy City remained a major objective of the crusading movement, but Christian rule was restored only for the short period 1229–1244.

Population

The crusader conquest destroyed or dispersed the native population of Jerusalem. When they took the city by storm, the crusaders massacred most of its Muslim and Jewish inhabitants. Although some of the native Christians who had been expelled by the Fāṭimid garrison now returned, they and the Frankish newcomers initially amounted to only a few hundred souls. The problem of repopulation was exacerbated by the Franks' policy of prohibiting the settlement of Muslims and Jews in the city, in order that their presence might not pollute its holiness. If Jews or Muslims appeared in the city later, they were usually pilgrims or people who had obtained special permission to settle for business purposes (paying a tax for the favor), such as the four Jewish families mentioned by the traveler Benjamin of Tudela living oppo-

site the citadel in the 1170s, who had worked as dyers there since the time of King Baldwin II (1118–1131).

During the first two decades of the kingdom, the city's population was so small that only the former Christian Quarter around the Church of the Holy Sepulchre was inhabited. Baldwin I brought in Syrian Christians from Transjordan, who settled in the former Jewish Quarter. An additional initiative to repopulate the city was a law passed in 1120 exempting all foodstuffs from customs payments levied at the gates to the city. Royal privileges also granted land and houses in the city to the military orders. The result of these various initiatives was that by the 1180s the population of Jerusalem had reached some 20,000–30,000 [Prawer, *The Latin Kingdom of Jerusalem*, p. 82]. According to the pilgrim John of Würzburg, who stayed in the city in the early 1160s, the Latin population was predominantly of French origin, with some Italians and Spaniards, and a few Germans. The Eastern Christians included Greek Orthodox, Syrian Orthodox (Jacobites), Armenians, Georgians, Nestorians, and Copts.

Topography and Principal Buildings

Jerusalem is situated in the Judaeian highlands, about 58 kilometers (36 mi.) east of the coast and 30 kilometers (19 mi.) west of the river Jordan. The general layout of the medieval city roughly corresponds to the present-day Old City. The city was divided into four sections by its two main streets. The Romano-Byzantine *Cardo* ran from north to south, from St. Stephen's Gate (mod. Damascus Gate) to the Zion Gate (east of the present gate), while the street running west to east, from David's Gate (mod. Jaffa Gate) to the Beautiful Gate (mod. Gate of the Chain) corresponded to the Roman *Decumanus*. The city was protected by some 4 kilometers (2½ mi.) of walls (mostly constructed in the eleventh century) and a citadel (known as the Tower of David) situated on the western wall by David's Gate.

The greater part of the northwestern section formed the Patriarch's Quarter, which constituted a separate lordship under the rule of the Latin patriarch, with its own administrative and judicial institutions. It included the Church of the Holy Sepulchre and the patriarch's palace, as well as a hospital, hospices, churches, monasteries, a grain market, a pig market, bath houses, bakeries, houses, and shops. There was a major water source, the so-called Pool of the Patriarch (mod. Hezekiah's Pool). South of the Patriarch's Quarter as far as David Street was the quarter of the Order of the Hos-

Aerial photograph of the Old City of modern Jerusalem (from the east), showing the layout of the medieval city. At the center of the western (top) section of the walls is the citadel (Tower of David) and nearby Jaffa Gate; to its right and below, the cupola of the Church of the Holy Sepulchre. The entire southeast section (bottom left) is taken up by the temple area (Haram al-Sharif) centered on the Dome of the Rock. (Courtesy Benjamin Z. Kedar)

pital of St. John, which was bounded to the west by the Street of the Patriarch and to the east by the triple market. It included the Church of St. Mary Latin (Minor) with a monastery, the Church of St. Mary Major with a hospital, the Church of St. John the Baptist, and a market for poultry, fish, and cheese. The order maintained a hospice to provide accommodation for pilgrims as well as a large infirmary.

The northeastern section of the city had been the Jewish Quarter (Fr. *Juiverie*) until 1099; it became the Syrian Quarter when it was repopulated with Eastern Christians from Transjordan. Churches located here included St. Mary Magdalene situated near the northern wall, St. Agnes, St. Elias, and St. Bartholomew (all belonging to non-Latin denominations) and the Latin Church of St. Anne, built in 1140 as the chapel of a Benedictine nunnery.

Much of the southeastern section of the city was formed by the vast Temple Mount (Arab. *al-Haram al-Sharif*), where crusaders found two magnificent Muslim buildings: the Dome of the Rock and the al-Aqṣā mosque. The Dome of the Rock was converted into a church, which the Franks called *Templum Domini* (Temple of the Lord), which was consecrated on 9 April 1141. Al-Aqṣā was known by the Franks as the *Templum Salomonis* (Temple, or more accurately, Palace of Solomon). It was used by King Baldwin I as the royal palace, although it had been plundered during the conquest and remained dilapidated; his financial difficulties prevented him from restoring it, and even forced him to strip the lead from the dome in order to sell it. It was granted by Baldwin II to serve as the headquarters of a newly founded order of knights, which became known as the Order of the

The citadel of Jerusalem, known as the Tower of David. The minaret was added when the walls were rebuilt by the Ottoman sultan Süleyman the Magnificent in the sixteenth century. (Courtesy Alfred Andrea)

Temple. The wealth of the Templars enabled them to undertake its restoration and to cover the surrounding area of the Temple Mount with new buildings. On the western side they built a new cloister, as well as courtyards, antechambers, vestibules, cisterns, storehouses, baths, and granaries, and laid the foundations of a great new church, which they never completed. The Templars also repaired the underground of al-Aqṣā, called Solomon's Stables, which were used to accommodate large numbers of horses and grooms. To improve access to them, the Templars opened a new postern on the southern Temple Mount wall, known as the Single Gate (now blocked).

To the west of the Temple Mount, the southeastern quarter was bordered by the southern wall and the streets built along the line of the *Cardo* to the west. In the center of the quarter were located money exchanges, the Latin exchange to the south and the Syrian exchange farther north. To the south were the German hospice and church, and farther

south, the cattle market and tanneries. A covered market and parallel streets bordered the quarter to its west.

The southwestern quarter of the city was occupied (as it is today) by the Armenians, bounded by the city wall south of David's Gate and by the southern wall up to Zion Gate. Churches in this quarter included St. James, St. Thomas, St. Mark, and St. Sabas.

Outside the city's walls the most important buildings were the Cenacle (Lat. *Coenaculum*), or chapel of the Last Supper, on Mount Zion, the Church of the Ascension on the Mount of Olives, the Church of St. Mary in the Valley of Jehosaphat, and St. Stephen's Church to the north of St. Stephen's Gate. To the west of the latter church were a leper house and other buildings belonging to the Order of St. Lazarus.

The crusader period saw a major rebuilding in the city. The walls and citadel were renovated, and several of the city's gates were either renovated or embellished, while some forty churches were either rebuilt or newly constructed, all

in the Romanesque style. One of the most ambitious of the construction projects undertaken by the Franks was the rebuilding of the Church of the Holy Sepulchre in order to unite all the buildings on the site of Christ's Crucifixion, burial, and resurrection under one roof. The new church was consecrated on 15 July 1149, the fiftieth anniversary of the capture of the city. Another fine example of Frankish Romanesque construction was the Church of St. Anne, erected near the Pool of Bethesda at the traditional site of the house of the parents of the Virgin Mary, Anne and Joachim. It housed a few Benedictine nuns until Baldwin I repudiated his second wife and placed her in this convent, increasing its patrimony and possessions. The nunnery of St. Anne remained in royal favor, and it was there that Yvette, sister of Queen Melisende, made her profession in 1130. Another important church rebuilt by the Franks on the ruins of a Byzantine one was the Church of the Ascension on the Mount of Olives.

Administrative Status and Institutions

Up to 1187, the city was the administrative center of the kingdom, being the normal place of residence of the king and the meeting place of the High Court (Fr. *Haute Cour*), which met first in the Temple of Solomon and from the 1120s in the new royal palace next to the citadel. Apart from the Patriarch's Quarter, the city and its surrounding territory formed part of the royal demesne. The main court of the city proper was the Court of Burgesses (Fr. *Cour des Bourgeois*), which dealt with civil cases concerning the Frankish burgesses and their property and also had supreme criminal jurisdiction over all non-noble inhabitants of the city, including Eastern Christians. The Court of the Market (Fr. *Cour de la Fonde*) had jurisdiction over the entire non-Frankish population in all except criminal cases. Both courts met in the Tower of David. Preservation of the peace was the responsibility of a viscount, who acted as governor of the city, presided over the Court of Burgesses, organized police duties, oversaw the city's markets, and collected royal revenues deriving from the city. The defense of the city and its citadel was the responsibility of a castellan, who acted as commander of the garrison.

Economic Life

Jerusalem was not involved in long-distance trade, and unlike the kingdom's ports, it had no Italian commercial quarters. The city's main economic activity was providing

services for its secular and ecclesiastical institutions and their personnel and for the pilgrim traffic from the West. In the very heart of the city, north of the intersection of the two main axes, were located the main bazaars of Jerusalem, consisting of a triple market of three parallel vaulted streets. The central street was known as the Street of Evil Cooking (Fr. *Malcuisinat*) from its principal activity, the sale of ready-cooked meals to pilgrims visiting the city. The shops and bazaars belonged to Frankish and Eastern Christian merchants, as well as to various convents and the military orders: inscriptions reading (SCA) ANNA or T can still be seen on some of the shop walls, indicating ownership by the convent of St. Anne or the Templars. There was a cotton market on the western side of the Temple Mount esplanade, a chicken market at the southern side of the Hospitaller complex, and a butchers' market opposite the street leading to St. Mary of the Germans. There were also open streets lined with shops (for example, on the northern side of David's Street) and open markets in the fields outside the city walls, including a large grain market north of David's Gate and a cattle market to the south of the city. Jerusalem also had a mint, whose precise location is uncertain.

Religious and Secular Festivals

The liturgical life of the city was focused on the two main churches, which were also the main objects of pilgrimage: the Church of the Holy Sepulchre as the symbol of New Testament Jerusalem and the Temple of the Lord representing the Jewish Temple, the center of Old Testament Jerusalem. Besides the great feast days common to all Christendom, were some unique to the city. The miracle of the Holy Fire, attested from the mid-ninth century under the Greek Orthodox Church, continued to be celebrated on the eve of Easter Day in the Church of the Holy Sepulchre in the presence of the massed clergy and people, who waited anxiously until a light appeared miraculously in one of the lamps that hung above the tomb of Christ, to be greeted with great rejoicing.

A new feast introduced by the Franks was held on 15 July to commemorate the capture of the city in 1099 and the consecration of the Church of the Holy Sepulchre fifty years later. It began with a procession led by the patriarch from the Holy Sepulchre to the Temple of the Lord, and from there across the Temple Mount esplanade to the burial place of those who died during the siege of 1099; this place was located just outside the city, not far from the spot in the northeastern angle

of the walls, marked by a cross, where the knights of Godfrey of Bouillon first penetrated the city. Here the patriarch preached a sermon to the assembled clergy and populace and offered thanksgiving prayers commemorating the event.

Of the nine rulers of the first kingdom (1099–1187), seven were crowned in Jerusalem. The future king, members of his family, and officials rode from the royal palace to the Holy Sepulchre, where he was crowned by the patriarch. The procession then made its way to the Temple of the Lord, where the new monarch placed his crown on the altar, symbolically commemorating the presentation of Jesus in the Temple (Luke 2:25–35). The last full coronation ceremony, that of Queen Sibyl and Guy of Lusignan, took place on 20 July 1186.

Jerusalem after 1187

Following the defeat of Guy of Lusignan's army by Saladin at the battle of Hattin (4 July 1187), Jerusalem surrendered after a fortnight's siege (2 October 1187). Most of the Frankish inhabitants were able to buy safe passage to the coast, but many were enslaved. Following Saladin's entry, the cross over the Temple of the Lord was taken down and all signs of Christian worship removed, while al-Aqṣā was cleaned of all traces of its occupation by the Templars. Both buildings were dedicated once more to the service of Islam, and on Friday, 9 October 1187, Saladin was present with a vast congregation to give thanks to his God in al-Aqṣā.

Jerusalem reverted to Frankish rule during the period 1229–1244, when as a result of the Treaty of Jaffa (18 February 1229) between Emperor Frederick II and Sultan al-Kāmil of Egypt, the kingdom regained Jerusalem and Bethlehem with a corridor of territory to the coast at Jaffa (mod. Tel Aviv-Yafo, Israel), although the Temple Mount remained in Muslim hands and Muslims were allowed the right of entry and freedom of worship. On Saturday, 17 March 1229, Frederick entered Jerusalem with his troops, members of the Teutonic Order, and some of the local baronage; the next day he had a royal crown laid on the altar of Calvary and placed it on his own head, despite an interdict laid against the city by Patriarch Gerold if it should receive the excommunicated emperor.

During the period 1229–1244, some repairs were carried out to the city's walls, which had been destroyed by the Ayyūbids in 1219, while certain institutions such as the military orders sent representatives to claim back their possessions in the city. There is also evidence of reorganization of municipal administration through the reestablishment of the

offices of castellan and viscount, but the city lacked an adequate garrison. When al-Nāṣir, the Ayyūbid ruler of Kerak, assaulted the city in 1239 in retribution for an attack by the forces of the crusader Thibaud IV of Champagne on a Muslim caravan, he was able to occupy it without difficulty. The soldiers in the citadel held out for twenty-seven days until their supplies were exhausted, surrendering on 7 December in return for a safe-conduct to the coast. Al-Nāṣir withdrew after destroying the citadel and other fortifications, and the city remained unfortified until the walls were rebuilt by the Ottomans in the sixteenth century.

The Temple Mount was restored to the Franks in 1244 as a result of a treaty between the Franks and a coalition of the rulers of Homs, Kerak, and Damascus against the Ayyūbids of Egypt. However, a few months later the Egyptian sultan al-Ṣāliḥ Ayyūb called in nomadic Khwārazmian mercenaries; as they approached the defenseless city, the remaining inhabitants left in an effort to march to safety (23 August 1244), but almost all were massacred by the Khwārazmians, only a few hundred reaching Jaffa. Most of the churches of Jerusalem were burned, and the houses and shops pillaged; the bones of the kings of Jerusalem in the Church of the Holy Sepulchre were torn out of their tombs before the building itself was consigned to the flames.

The Khwārazmian conquest ended Frankish rule in Jerusalem. The recovery of the Holy City continued to figure in crusading plans of the thirteenth and fourteenth centuries, but this goal receded with the advance of the Ottoman Turks into Europe. Jerusalem continued to attract Christian pilgrims, but it had no permanent Latin Christian inhabitants until the Franciscans were permitted to settle at Mount Zion in the mid-fourteenth century.

Jerusalem, Greek Orthodox Patriarchate of

From the time of its establishment as the fifth patriarchate of Christianity during the Council of Chalcedon (451), the patriarchate of Jerusalem formed part of the hierarchy of the Greek Orthodox Church.

In Pope Urban II's initial plan for the First Crusade (1096–1099), he had not intended to found a Latin Church in the East. Apparently, the crusaders followed Urban's instructions until Jerusalem was conquered in summer 1099, acknowledging the authority of the Greek Orthodox patriarch, Symeon II, because they had simply not yet found a form for the ecclesiastical order in the country. In the course of the year 1099, however, they seem to have become convinced that as the new sovereigns of the Holy Land, they needed the ecclesiastical structures familiar to them from their homes. Soon after the capture of Jerusalem, the Latin cleric Arnulf of Chocques was elected as representative of the Latin Church. When the papal legate Daibert of Pisa arrived

in the Holy City at the end of 1099, shortly after the death of Urban II, the Latin patriarchate was finally authorized by the new pope. From then on, the Latins felt justified in incorporating the existing structures of the Greek Orthodox Church into the newly created Latin patriarchate of Jerusalem, arguing that the Orthodox hierarchy (in contrast to the non-Chalcedonian churches) belonged to the one church encompassing West and East. In doing so, they adopted the principle that each diocese could have only one bishop. The appointment of Latin bishops meant that the Greek Orthodox hierarchy was superseded and its clergy forced to acknowledge the supremacy of the Latin patriarch and bishops. The establishment of a Latin Church in Palestine was important in order to remain independent from Byzantium and to create a precedent for the future conquest of lands with Orthodox populations.

At least during the first years of Frankish rule, the presence of Patriarch John VIII, the successor to Symeon II, seems to have been tolerated in Jerusalem until the Latin Church was firmly established. In 1106/1107 John had to leave Palestine, and during the remainder of the twelfth century, the patriarchs of Jerusalem as well as some of the Greek Orthodox bishops spent their lives in exile in Constantinople. Soon, the main activity of the exiled patriarchs consisted in keeping alive the Orthodox Church's claim to the patriarchate in Jerusalem. Yet Greek clergy continued to serve in the Church of the Holy Sepulchre throughout the twelfth century, and the Melkites, as the Orthodox community was known, remained loyal to the exiled patriarchs. If the authority of the Latin patriarch and his bishops was accepted, this was simply a recognition of the realities of power, but it was largely done for the sake of appearances.

In 1176/1177, the new patriarch Leontios II was sent to Jerusalem by the Byzantine emperor Manuel I Komnenos. Because of his leprosy, King Baldwin IV was not able to marry a Byzantine princess as his predecessors had done, and Manuel had sent Leontios to Jerusalem to act as his representative there. According to his Vita, Leontios was enthusiastically welcomed by the entire Melkite community. As a result of pressure exerted by the Latin patriarch, however, he soon had to leave the city again; the Latin Church obviously felt that its position was jeopardized by the presence of a Greek Orthodox patriarch in Jerusalem.

The Greek Orthodox Church profited from the conquest of Jerusalem by Saladin in 1187. The most important sanctuaries were returned to it, and between 1204 and 1206/1207

Jerusalem, (Latin) Kingdom of

the patriarch (whose name is not known) returned to the Holy City from Constantinople. The patriarchate maintained lively contacts with the wider Orthodox world, and many Orthodox pilgrims from as far away as Serbia and Russia visited the holy places. The restoration of Frankish rule over Jerusalem between 1229 and 1244 changed nothing in this respect: the Latins were in too weak a position, and the Latin patriarchs preferred to stay in Acre (mod. 'Akko, Israel). However, this period of relative stability came to an end when the Khwārazmians conquered the city (1244) and Patriarch Athanasios II was murdered.

Jerusalem, (Latin) Kingdom of

The Latin kingdom of Jerusalem was the largest of the Frankish principalities or states established in the Near East by the First Crusade (1096–1099), taking its name from its capital city of Jerusalem. The kingdom was ruled and dominated by a minority of Christian settlers who originated in western Europe; they belonged to the Latin (Roman) Church, in contrast to the majority of the subject population, and were known to contemporaries as Franks or Latins (hence the name "Latin kingdom").

At its widest extent, attained by the third quarter of the twelfth century, the kingdom occupied most of historical Palestine. In the north it bordered on the county of Tripoli

a few miles north of Beirut; in the south, Frankish rule extended as far as the port of Aila on the Gulf of 'Aqaba. The kingdom thus covered an area corresponding to all of modern Israel, the West Bank, and the Gaza Strip, together with some adjacent parts of modern Jordan, Syria, and Lebanon.

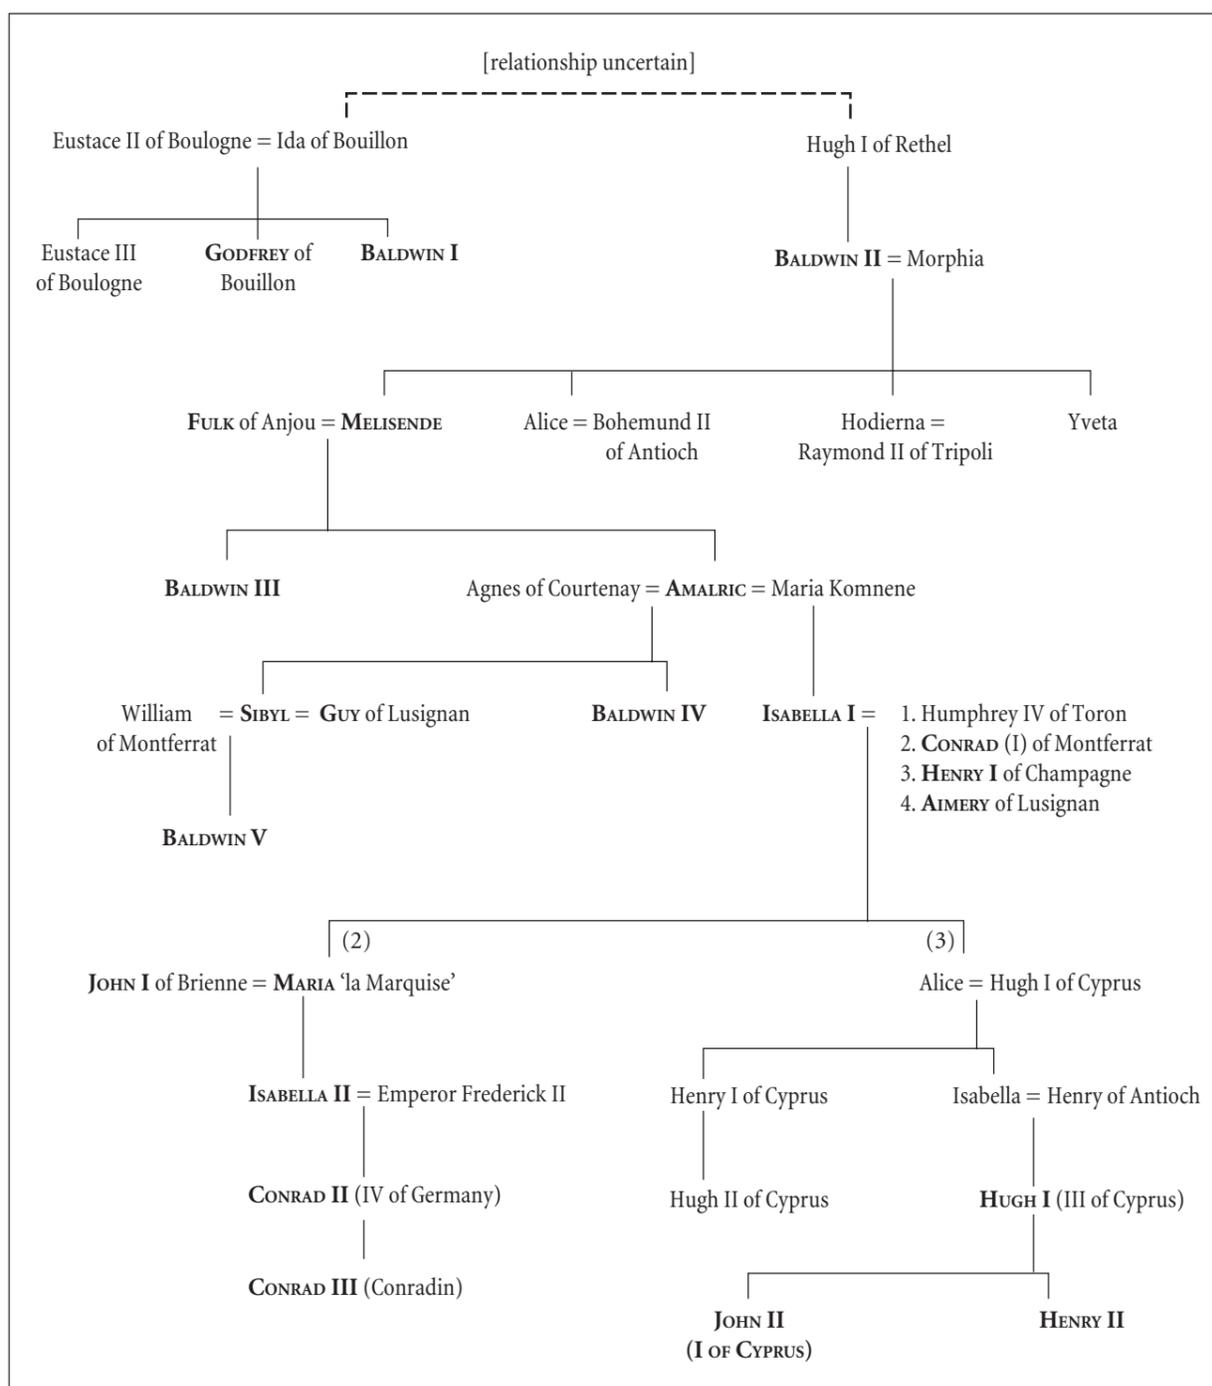

In 1187 the Muslim leader Saladin defeated the kingdom's army at the battle of Hattin and proceeded to reduce its territory to a coastal enclave around the city of Tyre (mod. Soûr, Lebanon). The military assistance brought to Outremer by the Third Crusade (1189–1192) recovered most of the Palestinian coast, and some parts of the interior were also subsequently recovered. However, in the later thirteenth century this reduced kingdom, with its capital at Acre (mod. 'Akko, Israel), was gradually worn down by the Mamlūk sultanate of Egypt and Syria, which finally captured its last surviving stronghold in 1291.

Foundation (1099–1100)

On 15 July 1099 the army of the First Crusade captured the city of Jerusalem from the Fāṭmids, who had managed to seize it the previous year from its Saljūq governor. The crusaders had already captured the port of Jaffa (mod. Tel Aviv–Yafo, Israel); the nearby town of Lydda (mod. Lod, Israel), where they installed a Latin bishop; and Bethlehem.

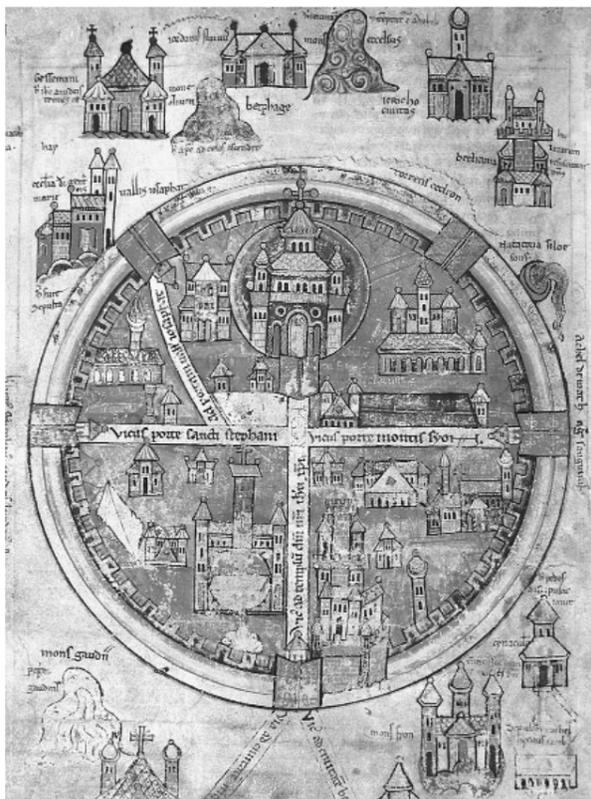

The leaders of the crusade seem to have accepted that Palestine formed a kingdom (Lat. *regnum*), although there was no agreement about its precise form of government or its future ruler. Some crusaders regarded this kingdom as belonging to Christ and thought it would be sacrilegious to appoint a king to rule it, but on 17 July it was decided to proceed with the election of a secular ruler, to be chosen by the leading men of the army. Raymond of Saint-Gilles, count of Toulouse, clearly hoped to be made ruler, having previously been thwarted in his designs to establish a principality in northern Syria. However, Raymond had antagonized large sections of the army, and on 22 July the leaders elected Godfrey of Bouillon, duke of Lower Lotharingia. Godfrey took the titles of prince and defender of the Holy Sepulchre, thus sidestepping the objections of those who objected to the use of a royal title in the city of Christ. On 1 August Arnulf of Chocques was elected as Latin patriarch.

On 12 August the nascent Latin principality survived its first major threat when the crusaders defeated a major Fāṭimid invasion near Ascalon (mod. Tel Ashqelon, Israel). However, the subsequent departure of the majority of the crusaders to their homes exposed the weakness of the

Succession to the Kingdom of Jerusalem, 1099–1291

Franks of Palestine. Godfrey had only some 300 knights and 2,000 foot soldiers available to him, and he controlled Jerusalem and southern Judaea, including Bethlehem and Hebron, and a coastal strip around Jaffa, Lydda, and Ramla. Jaffa, the only Christian-held port, did not have a good deep-water harbor; the Muslims still controlled the rest of the coast, including the major ports of Acre and Tyre, as well as Beirut, Sidon (mod. Saïda, Lebanon), Haifa (mod. Hefa, Israel), Caesarea (mod. Har Qesari, Israel), Arsuf (near mod. Herzliyya, Israel), and Ascalon. Communications between Godfrey's two blocs of territory were unsafe and could easily be disrupted by Fātimid forces operating from their base at Ascalon. A third bloc of Christian-held territory was found in Galilee, where the crusader Tancred and his predominantly Norman followers clearly intended to found an independent principality and were not necessarily disposed to defer to Godfrey of Bouillon.

If Frankish rule in the Holy Land was to survive, it was essential to extend control over all of Palestine, and above all to capture the major ports necessary to secure communications with the West. The requisite naval assistance soon arrived in the form of a fleet under the command of Daibert, archbishop of Pisa. As the price of this support, Godfrey was obliged to accept Daibert as patriarch of Jerusalem in place of Arnulf of Chocques. Daibert of Pisa was given a quarter of the city of Jerusalem as a patriarchal lordship, but he soon began to make further territorial claims, which produced a breach between him and Godfrey, who died unexpectedly of illness on 18 July 1100. Fearing the ambitions of Daibert and Tancred, the knights of Godfrey's household (Lat. *domus Godefridi*), led by the Lotharingian nobleman Warner of Grez, seized the citadel of Jerusalem. Determined that the rulership of Palestine should be subject to principles of hereditary succession, they summoned Godfrey's younger brother, Count Baldwin I of Edessa, to take up his inheritance. Unable to prevent Baldwin's arrival, Daibert was forced to agree to crown him king as the price of retaining the patriarchate.

History, 1100–1174

The coronation of King Baldwin I (1100–1118) took place in the Church of the Nativity in Bethlehem on Christmas Day 1100; this venue, rather than the Church of the Holy Sepulchre in Jerusalem, was a gesture intended to conciliate patriarchal sensibilities, but Baldwin's assumption of the royal title was a clear signal that he was determined to tolerate no ambiguities as to the limits of his power. He was able to have Daibert of Pisa deposed in 1102, and thereafter the king (originally a cleric by training) was able to appoint candidates of his own choice to the patriarchate, usually with papal approval. The king was also able to force Tancred to accept that Galilee was part of the kingdom.

Baldwin I was tireless in his efforts to extend Frankish control over the rest of Palestine. He countered and defeated Fātimid invasions in 1101, 1102, and 1105. He secured naval support by making agreements with the Italian republics of Genoa and Venice. It was necessary to concede to them property, trading privileges, and ultimately autonomous quarters in various cities of the kingdom, but the arrangement did give the republics a significant interest in the kingdom's survival. Genoese and Venetian (and later Pisan) fleets were also important in bringing large numbers of seasonal pilgrims, keen to visit the newly liberated holy places, who

could also be enlisted during their stays to fight alongside the king's meager forces. With the help of these external forces, Baldwin I was able to capture the ports of Arsuf and Caesarea (1101), Acre (1104), and Beirut and Sidon (1110). By the end of the reign, only Tyre and Ascalon remained in Muslim hands. The king had also begun to penetrate the region south and east of the Dead Sea and to mount an invasion of Egypt, in the course of which he died (1118).

The childless Baldwin I had designated his surviving elder brother, Count Eustace III of Boulogne, as his successor. However, Eustace's partisans among the magnates were outmaneuvered by a more powerful party, which chose the late king's distant cousin Baldwin (II) of Bourcq, then count of Edessa. The reign of Baldwin II (1118–1131) saw a growth of the influence of nobles connected by ties of kinship and vassalage with his family in north-central France (some of them new immigrants), in contrast to the Flemings, Normans, and Lotharingians favored under Godfrey and Baldwin I. The defeat of the Franks of Antioch by the Turks of northern Syria at the battle of the *Ager Sanguinis* (1119) meant that Baldwin was obliged to spend most of the next four years in the north, acting as regent of Antioch and defending the Frankish territories. In 1123 he was captured by the Turks, and he remained a captive for over a year. Resentment grew because of the king's long absences and the demands of repeated campaigns in the north, and during his captivity an unsuccessful attempt was made to depose him. More importantly, the barons and prelates of the kingdom concluded an alliance with the Venetians that defeated a Fāṭimid invasion and captured the port of Tyre (1124).

From this time the kingdom was secure from major Muslim invasions until the 1160s. On his release, Baldwin II pursued a foreign policy calculated to appeal more to his nobles. In 1126 he invaded the Hauran, the fertile Damascene territory east of Lake Tiberias; in 1129 he enlisted crusaders from the West to mount an unsuccessful attack on Damascus itself. A further important feature of the reign was the establishment of military religious orders, which came about through the foundation of the Order of the Templars and the militarization of the existing charitable Order of the Hospital. These new institutions were to subsequently play an increasingly important part in the defense of the kingdom.

The succession to Baldwin II was secured through the marriage of his eldest daughter, Melisende, to Fulk V, count of Anjou. The joint reigns of Melisende (1131–1162) and Fulk (1131–1143) were disrupted by a revolt in 1133–1134

staged by Melisende's kinsman Hugh of Jaffa, who feared that Fulk intended to set aside arrangements that vested joint rule in the royal couple and their young son Baldwin III. Although the revolt was put down, Fulk was forced to abide by the existing constitutional settlement. The king was also obliged to devote considerable time to affairs in the north, where he exercised the regency of Antioch (1131–1136). However, Fulk put considerable efforts into improving the security of his own kingdom by constructing castles around Fāṭimid-held Ascalon, in Galilee, and also in Transjordan. On Fulk's death, sole rule passed to Melisende, as Baldwin III was still a minor.

By this time a new Muslim leader had arisen to fill the power vacuum in northern Syria: 'Imād al-Dīn Zangī, ruler of Mosul and Aleppo. In 1144 he captured the Christian city of Edessa (mod. Şanlıurfa, Turkey). Zangī was a brilliant and ruthless military leader whose Muslim contemporaries regarded him as waging a holy war (Arab. *jihād*) against nonbelievers. After Zangī was murdered in 1146, his lands were divided between his two sons. The elder son, Saif al-Dīn Gazī, succeeded him in Mosul; the younger, Nūr al-Dīn, took over the government of Aleppo and concentrated on expanding his power in Syria. Since 1139 the Franks of Jerusalem had maintained an alliance with Damascus, which was the most important Muslim state in the Near East still independent of Zangī and his successors.

The Second Crusade (1147–1149) was launched in response to the victories of Zangī and Nūr al-Dīn, but only much-reduced Western forces reached Outremer after their difficult passage through Anatolia. Neither King Conrad III of Germany nor Louis VII could be persuaded to attack Aleppo, as argued by Prince Raymond of Antioch. In June 1148 Baldwin III (1143–1163), Queen Melisende, the magnates of the kingdom, and the crusade leaders decided on an attempt to capture Damascus. As a strategic decision, this was by no means as senseless as scholars once believed. The regime of Unur, *atabeg* of Damascus, was becoming increasingly unstable, and in 1147 he had concluded an alliance with Nūr al-Dīn. A combined Frankish-crusader attack may well have been the last opportunity to secure Damascus and parts of its territory before it passed under the influence of Nūr al-Dīn. However, in the event, the campaign was executed incompetently and the siege failed; in 1154 the people of Damascus expelled their ruler and welcomed Nūr al-Dīn as lord of the city.

In the years following the Second Crusade, the young King

Baldwin III became increasingly impatient at having to share power with his mother. In a short civil war in 1152, Baldwin III displaced Melisende's major supporter, Manasses of Hierges, and excluded his mother from government. The following year Baldwin flexed his muscles by besieging and capturing Ascalon, the last Muslim-held city in Palestine. In 1158 he married Theodora, a niece of the Byzantine emperor Manuel I Komnenos. The Byzantine emperors had no territorial claims on Jerusalem, in contrast to their ambitions to establish control over the principality of Antioch, and relations between Byzantium and the kingdom were generally cordial during this period.

The childless Baldwin III was succeeded by his younger brother Amalric (1163–1174), who, however, was obliged to divorce his wife, Agnes of Courtenay, as their marriage was regarded as bigamous by the Latin Church and leading magnates. Amalric's main energies during his reign were devoted to attempts to invade and conquer Egypt. That country's wealth appealed to the Franks of Jerusalem as well as to potential allies such as Byzantium and the Italian maritime republics. The increasing instability of the unpopular Fāṭimid caliphate, Shī'ite in faith in contrast to the majority Sunnī population, meant that a Frankish intervention was becoming increasingly necessary to prevent Egypt from falling under the control of Nūr al-Dīn. Amalric mounted invasions of Egypt in 1163, 1164, and 1167, forcing the Egyptian vizier, Shāwar, to abandon his alliance with Nūr al-Dīn and pay a huge tribute to the king.

Still hoping to establish control over Egypt, the king concluded a treaty of assistance with Emperor Manuel Komnenos, whose niece Maria he married in 1168. At the end of that year Amalric launched another major invasion of Egypt, but without coordinating the campaign with the Byzantine navy. Nūr al-Dīn countered by sending an army under his general Shīrkūh, who seized control in Egypt. Shīrkūh was succeeded as vizier of Egypt by his own nephew Saladin, who repulsed a final invasion led by Amalric in 1169. Saladin dissolved the Egyptian army and abolished the Fāṭimid caliphate.

On Nūr al-Dīn's death (1174), Saladin, already de facto ruler of Egypt, seized Damascus, Homs, and Hama from Nūr al-Dīn's heirs. King Amalric of Jerusalem died later that year, his inheritance now surrounded by territories controlled by Saladin. The chronicler William of Tyre perceptively attributed the geopolitical predicament of the kingdom to this new circumstance: "all the neighbouring realms are subject to the

rule of one man" [Guillaume de Tyr, *Chronique*, ed. Robert B. C. Huygens (Turnhout: Brepols, 1986), p. 971].

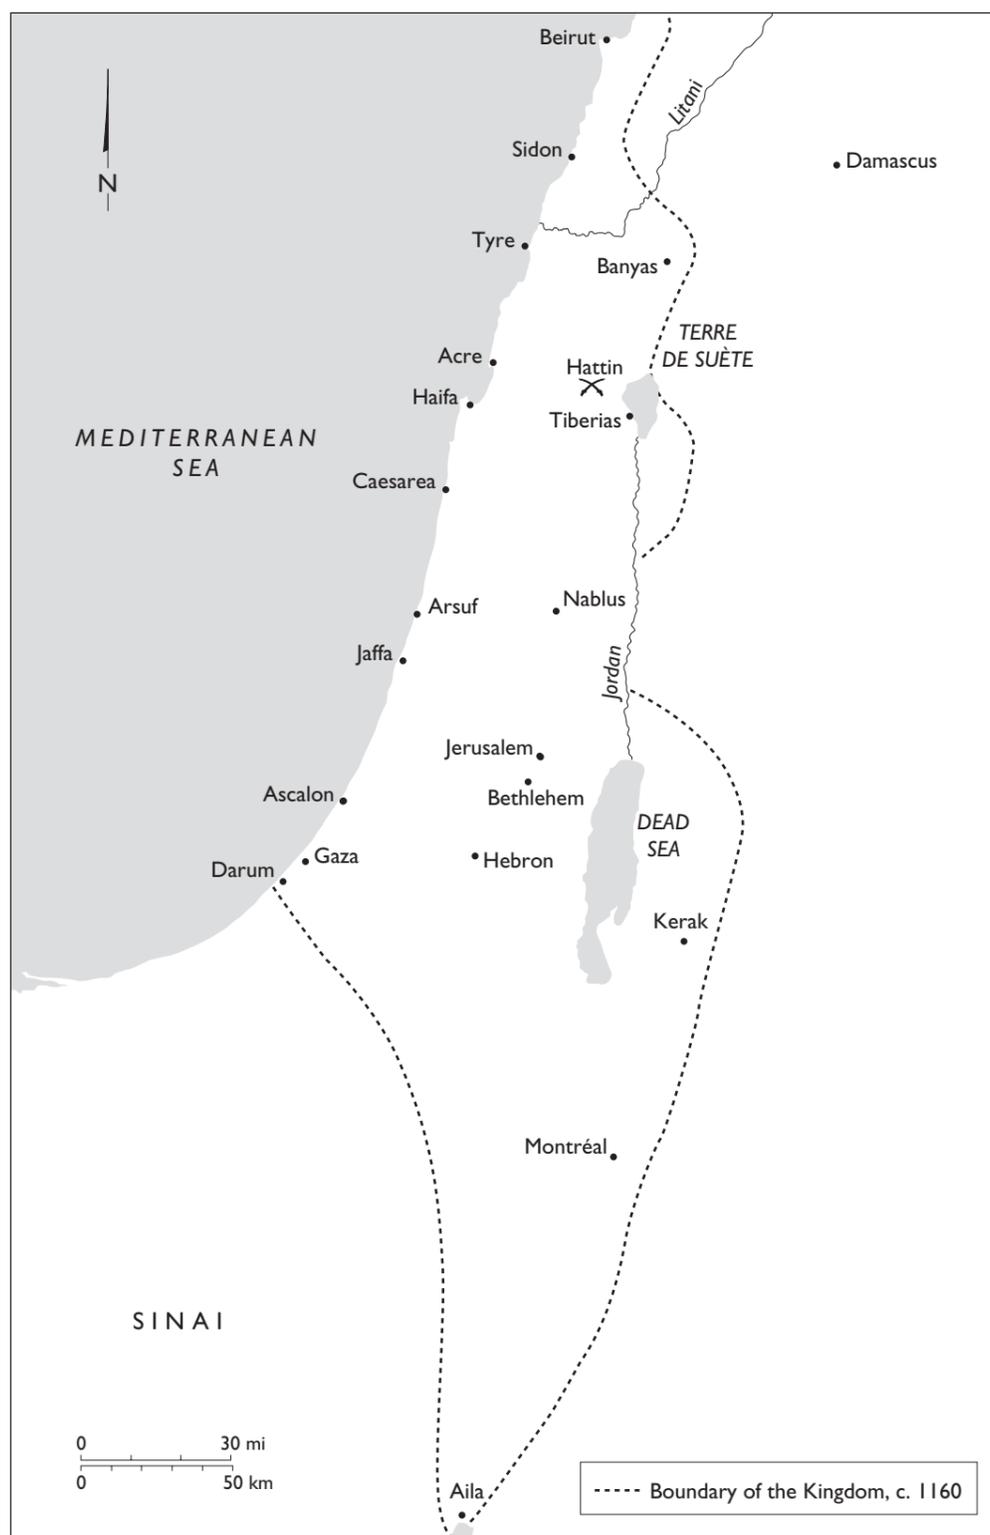

History, 1174–1200

The reigns of Amalric's son Baldwin IV (1174–1185) and his heirs were characterized by the ever-growing threat from Saladin, who was determined to liberate Jerusalem for Islam and recover Palestine from the Franks. His forces invaded the kingdom in 1177, 1179, 1182, 1183, 1184, and 1187. Invasions were interspersed with periods of truce, during which Saladin attempted to extend his control over Muslim Syria, seizing Aleppo and its territory in 1183. Individual crusaders and their retinues came to the Holy Land during this time, but there was no major crusading effort from the West on the scale of the Second Crusade, despite appeals from the secular and ecclesiastical leadership of the kingdom.

Baldwin IV suffered from leprosy and could not be expected to marry and produce an heir. A regent was thus required not only at first, during the young king's minority, but in subsequent periods when he was incapacitated by illness. A suitable husband also had to be found for his next heir, his sister Sibyl. Repeated disputes concerning these two issues, added to wider political rivalries among the ruling classes of the kingdom, greatly hampered its efforts to resist Saladin. Baldwin IV died in May 1185, worn out by his crippling disease and the rigors of repeated military campaigns.

Baldwin V (1185–1186), the son of Sibyl and her first husband, William Longsword, had been crowned as co-king during the reign of his predecessor. As Baldwin was a minor, the regency had been entrusted to Count Raymond III of Tripoli, who was opposed by a significant party around Sibyl and her second husband, Guy of Lusignan. This faction seized power when Baldwin V died, and Sibyl and Guy were crowned rulers. The kingdom was thus politically divided when Saladin led a great invasion into Galilee. Against the advice of Raymond of Tripoli and others, King Guy gave battle at a site known as the Horns of Hattin, where the Franks of Jerusalem suffered their greatest ever military defeat (3–4 July 1187). Guy himself was taken prisoner, while most of the kingdom's leaders and fighters were killed or captured. In the aftermath of the battle Saladin's troops were able to overrun the entire kingdom, with the exception of the port of Tyre.

The defeat at Hattin, and above all the surrender of the city of Jerusalem in October 1187, sent shock waves around

The Kingdom of Jerusalem at its greatest extent

the West. Pope Gregory VIII proclaimed a new crusade in his encyclical *Audita tremendi*. Some military and naval assistance reached Outremer quickly, but it was a considerable time before major armies arrived in the course of the Third Crusade (1189–1192). A land army from Germany under Frederick I Barbarossa, the Holy Roman Emperor, broke up after the emperor died in Cilicia (1190). However, seaborne expeditions led by King Richard the Lionheart of England and King Philip II of France succeeded in recovering most of the coast from Tyre to Ascalon, although it proved impossible to retake the city of Jerusalem itself. The kingdom's capital was now the port of Acre, where most of the leading governmental and ecclesiastical institutions established themselves. Additional territory to the north of Tyre was later secured by the German crusade sent by Barbarossa's son, Emperor Henry VI (1197–1198).

The Christian recovery was hampered by disputes over the throne of Jerusalem. Guy of Lusignan (released from captivity in 1188) was supported by Richard of England, whereas Philip and others favored Conrad of Montferrat, an Italian nobleman who had won distinction while leading the defense of Tyre. The death of Sibyl and her daughters left Guy without any legitimate rights to the throne. A compromise reached in 1192 awarded the throne to Conrad (I), who was married to Sibyl's younger sister and heir, Isabella I. Guy was compensated with the island of Cyprus, which Richard had conquered before arriving in Outremer. Conrad was assassinated before he could be crowned, and so the kingdom passed, along with the hand of Queen Isabella, first to Henry of Champagne (1192–1197) and then to Aimery of Lusignan, king of Cyprus (1198–1205).

History, 1200–1291

From the death of Saladin in 1193 until 1260, the Muslim powers that surrounded the kingdom were divided. Damascus, Aleppo, Kerak, and Egypt were ruled by different members of Saladin's family (the Ayyūbids), who were constantly at war with each other, a circumstance that the Franks were able to exploit. In 1250 there was a change of government in Egypt when power was seized by a group of Turkish *mamlūks* (slave soldiers), who established a regime known as the Mamlūk sultanate. Yet as Aleppo and Damascus were still ruled by the Ayyūbids, the Franks could still play the rival powers off. So between 1193 and 1260 there was a repeated pattern of a truce, followed by a crusading expedition that tried to recover new territory, followed by another truce.

Richard the Lionheart had planned to attack Egypt in 1192 but had been unable to persuade the whole crusade army to accompany him. Nevertheless, many of the later crusades saw Egypt as the key to the Holy Land. It was believed that if Egypt could be conquered, then the Holy Land would be secure; even if Egypt proved impossible to hold permanently, a strike against the major center of Muslim power might be sufficient to force the Ayyūbids and later the Mamlūks to surrender enough territory in Palestine to enable the Franks to hold a restored kingdom of Jerusalem (including the Holy City itself) with defensible frontiers. This is why Egypt was chosen as the original goal of the Fourth Crusade (1202–1204), although it was eventually diverted to Constantinople (mod. İstanbul, Turkey). The Fifth Crusade (1217–1221) was initially successful in capturing the Egyptian port of Damietta, but its chances of success were destroyed by quarrels between the papal legate and the secular princes.

The lack of a strong central authority in the kingdom, which was already apparent after 1174, became even more serious during the thirteenth century. Up to 1268 several of the monarchs were either underaged (Maria la Marquise and Isabella II) or absentees (Conrad II and Conradin), requiring regents to govern for them. There were frequent disputes about the choice of regent, as well as resistance to the policies of both regents and monarchs. Effective power passed to a number of different groups and institutions which struggled to defend their interests and to control the kingdom. First, there was a relatively small group of noble families, notably the Ibelins. Many of these families produced or employed jurists who became expert in manipulating the High Court, which was the highest governing body of the kingdom. Second, there were the great military orders—the Templars, Hospitallers, and Teutonic Knights—that now had much greater political weight than in the period before Hattin. They acquired large areas of land and castles, which they often bought from impecunious nobles. With sources of income in the West, the orders were one of the few institutions that had sufficient financial resources for the purchase of lands and the costly construction and upkeep of castles. However, they also sometimes followed opposing policies and became embroiled in factional disputes; after Frankish Palestine was lost, some people blamed them for fighting among themselves when they should have been fighting the Muslims. Third, there were the communities from the Italian trading cities of Genoa, Venice, and Pisa,

which had their own quarters in the major ports, such as Acre and Tyre, where they had privileges such as being able to hold their own courts to deal with their own legal business. Although they provided a vital link with the West by bringing pilgrims and supplies, they were rivals in Europe and brought their disputes and wars to the Holy Land. Fourth, there were burgher confraternities, groups of freemen who formed associations to defend local rights. On occasion, the confraternities would join with nobles and non-Frankish inhabitants in communes. These were sworn associations formed to achieve political aims, as in the case of the Commune of Acre, which opposed the rule of the German-Sicilian Staufien dynasty. Finally, various monarchs and other powerful figures who arrived from the West on crusade expeditions often overruled or ignored local institutions.

In 1228–1229 Frederick II, the Holy Roman Emperor and king of Sicily, came to the East, having previously married the heiress to the throne, Isabella II, granddaughter of Isabella I. Frederick recovered the city of Jerusalem by negotiation as part of a ten-year truce concluded with al-Kāmil, the Ayyūbid sultan of Egypt, rather than by fighting. As Jerusalem technically belonged to Damascus, not to Egypt, and as the Franks were not allowed to fortify the city, many of them considered that this truce was more for Frederick's interests than theirs. It seemed that Frederick was more interested in making a treaty to protect the commercial interests of his kingdom of Sicily than in protecting Outremer. Supported by the Teutonic Knights, the Genoese, and Pisans, Frederick staged a crown-wearing ceremony in the church of the Holy Sepulchre. However, he was opposed by the secular church, the other military orders, and the majority of the nobility. As Isabella II had died in 1228, this party refused to recognize Frederick's rights to the throne, accepting only that he was regent for his infant son Conrad II (IV of Germany).

Frederick's return to the West (1229) was followed by an intermittent civil war between Frederick's supporters and mercenaries (known as Lombards) and the majority of the Franks, led by the powerful Ibelin family. More crusaders from the West arrived in 1239–1240, led by Thibaud IV of Champagne and Richard of Cornwall, to coincide with the expiry of Frederick II's truce. They succeeded in refortifying Ascalon as well as in gaining territory in Galilee. However, in 1244 the city of Jerusalem was captured by the Khwārazmians, nomadic mercenaries in the service of Sultan al-Šāliḥ Ayyūb of Egypt, and the Egyptians destroyed a

Frankish army in battle at La Forbie near Gaza. Most of the recent territorial gains were lost again soon after. The kingdom's territory now consisted of the area between Beirut and Caesarea from the coast to the line of the Jordan, with a much narrower coastal strip extending south as far as Jaffa.

The marriage of Frederick II to Isabella II brought the Staufien dynasty to the throne. Yet neither of their two successors, Conrad II (1228–1254) or his son Conrad III, better known as Conradin (1254–1268), ever visited their kingdom. Government was carried out by a series of regents appointed by the High Court. The death of Conrad III without heirs meant the extinction of the line that was descended from Maria la Marquise, daughter of Queen Isabella I and her second husband, Conrad of Montferrat. The throne now passed to King Hugh III of Cyprus (I of Jerusalem), who was descended from Isabella I and her third husband, Henry of Champagne. Hugh I/III (1268–1284) was succeeded, in turn, by his son Henry II (1285–1324), who was to be the last reigning king of Jerusalem.

Up to the mid-thirteenth century the Franks were still in a relatively strong position, and the kingdom was still rich from the trade that passed through its ports. But from that time the economy began to decline. From 1256 trade with the West was disrupted by wars between the Italian merchant cities of Genoa, Venice, and Pisa and by the conquests of the Mongols in Central Asia. The Mongols swiftly advanced into the Middle East, and in 1260 they captured Aleppo and Damascus. The Christian rulers in their path had to decide whether to negotiate with the Mongols or to risk being destroyed by them. The leaders of the kingdom of Jerusalem decided to remain neutral, assisting neither the Mongols nor the Mamlūks of Egypt. However, in September 1260 the Mamlūk sultan, Qūṭuz, defeated the Mongols at 'Ayn Jālūt in Galilee.

The decisive victory of 'Ayn Jālūt saved the kingdom of Jerusalem and Egypt from the Mongols, but it also enabled the Mamlūks to take over Aleppo and Damascus, which had previously opposed them. The kingdom was again surrounded, and over the next three decades the Mamlūk generals captured fortress after fortress and city after city, until the kingdom was reduced to a few fortified cities along the coastline. The Mamlūks' repeated campaigns in Palestine also destroyed the agriculture and infrastructure of the kingdom; they adopted a scorched-earth policy, destroying everything, so that the Franks could not regroup and recover as they had done during the Third Crusade. Unlike Saladin,

who used to allow the Christian defenders of a castle or town to go in peace if they surrendered, the Mamlūks would routinely kill the defenders of the castles and towns they captured. Saladin's policy had been intended to encourage quick surrenders. The Mamlūks relied on their superior siege machinery to capture fortresses quickly and aimed at destroying their enemy completely.

In May 1291 the last Frankish-held stronghold, the city of Acre, fell to the troops of the Mamlūk sultan Khalīl. Some of those in the city managed to escape by sea to Cyprus, but the rest were either killed or taken prisoner. Many plans were drawn up to recover the Holy Land, but these all came to nothing. The Lusignan kings of Cyprus continued to call themselves "king of Jerusalem" after 1291, though the title was also claimed by the kings of Naples and Sicily and by the kings of Aragon. The ecclesiastical institutions of the kingdom, such as the patriarch of Jerusalem, also continued in name.

Settlement, Economy, and Society

When the crusaders arrived in Palestine at the end of the eleventh century, they found an extremely wealthy country. There were large, rich trading ports, such as Acre and Tyre. By the thirteenth century Acre was a world trade center as important as Constantinople or Alexandria. It was a great spice market, exported most of the sugar consumed in Europe, and also had an important slave market, although the pope tried to restrict the last. The new Christian lords of these towns encouraged this trade. They extended the ports and gave privileges to merchants, most of them from Italy. Most of Palestine north of Gaza and Hebron was agriculturally rich, producing crops such as wheat, olives, wine, sugar, and citrus fruits. The Terre de Suète east of Lake Tiberias, especially productive of wheat, was a major area of contention between the Franks and whichever Muslim power ruled Damascus.

There was a marked difference in the character of the urban and rural populations under Frankish rule. As the Franks gradually conquered the coastal towns, they either massacred or expelled the Muslim and Jewish urban populations, although native Christians were allowed to remain, and some Jews were later permitted to return. The majority of the Franks settled in the towns, as did the Italian colonists later on, in their own designated quarters. The countryside continued to be inhabited by predominantly Arabic-speaking peasants living in villages (Lat. *casalia*), each governed

by its headman (Arab. *raʿīs*). The majority of these peasants were either "Saracens," that is, Muslims, or "Syrians," a term that could refer either to the Greek Orthodox (Melkites), who constituted the majority among the native Christians, or to the Syrian Orthodox (Jacobites). There were much smaller numbers of rural Jews (in Galilee), Samaritans (in the area around Nablus), and Druzes (in the mountains above Sidon), as well as nomadic Bedouin in the frontier areas. There was no Turkish population in the kingdom, although Turks formed the ruling and military classes of many Muslim territories in the Near East. There was no manorial system in the countryside, as was the case in much of western Europe. Those Franks who lived in the countryside were to be found living either, on one hand, in or alongside the Frankish castles, or, on the other, in fortified villages, such as Magna Mahomeria (mod. al-Bira, West Bank) and Bethgibelin (mod. Bet Guvrin, Israel), in some cases alongside native Christians.

The city of Jerusalem was a special case in terms of population and economy during the periods when it was under Frankish control (1099–1187 and 1228–1244). Largely depopulated in the course of the crusader conquest, its initially small number of Frankish settlers was augmented by Syrians brought from Transjordan by King Baldwin I. In the course of the twelfth century, the city also became host to more Latins, members of other Eastern Christian denominations, and a transient population of pilgrims from the West. However, Muslims and Jews were not permitted to settle there. Jerusalem's main role was as a pilgrimage and administrative center, but as it lacked significant trade interests it did not attract settlement by Italian colonists.

The kingdom had very long land frontiers, although the realities of geography and supply meant that there were relatively few invasion routes that could be used by large Muslim armies. From Egypt, armies usually marched along the northern coast of Sinai toward the area of Ascalon and Jaffa; alternately, they could proceed due east across Sinai toward the Gulf of 'Aqaba and Transjordan. The usual invasion route from Syria was either north or immediately south of Lake Tiberias into Galilee. The Franks built numerous castles where military forces and supplies could be placed, and these could be used as bases from which to raid enemy territory or in order to halt enemy incursions into Frankish territory. In the twelfth century, castle building was concentrated in three areas: (1) in northern Galilee and the Terre de Suète to the east, (2) on the southwestern frontier facing

Fāṭimid-held Ascalon, and (3) in Transjordan, from Kerak in the north to Aila on the Gulf of 'Aqaba in the south. In the thirteenth century, as the Franks were pushed back to the west, more castles were built further west toward the coast to defend the reduced Frankish territory.

The Franks never constituted more than a large minority among the total population of Palestine. They were divided legally into three classes. The Frankish nobility was a relatively small group, originating primarily from northern France, Lotharingia, and the Low Countries. They provided the main fighting forces of the kingdom. The clergy was also small in number, and those who held high office tended to be immigrants from the West. The majority of Franks belonged to the burgess class. They originated from the same lands as the nobility and also from Italy, southern France, and Spain.

Westerners who came to the East complained that the Franks had become too native in their habits. Up to a point these accusations had some truth. The Franks wore local styles of dress, bathed regularly (unlike western Europeans), and ate local food. What was more, they made alliances with local Muslims and sometimes had Muslim friends. Some Westerners argued that this fraternizing with Muslims angered God and that this was why God allowed the Christians in the Holy Land to be defeated by the Muslims. Yet most of the local customs were sensible, and they were superficial compared to other characteristics. Although a few Franks learned Arabic, the vast majority continued to speak French and used Latin as their written language; of course, they continued to adhere to the Latin Church. They regularly made truces and alliances with Muslim rulers, but this was necessary for the survival of the kingdom. There was some intermarriage between burgesses and native Christians, and even converts from Islam, although the ruling class only married other Franks, Byzantines, Armenians, or immigrants from Europe. Native Christians served as minor officials in urban and rural administration, but after centuries of Muslim rule they had no noble class and no real military traditions. They could therefore make little contribution to the kingdom's defense, in contrast to the situation in the northern states of Outremer.

Government and Institutions

From 1100 the kingdom was a hereditary monarchy, whose head was officially known as "king of the Latins in Jerusalem," a title that reflected the fact that the Franks (or Latins) were the only group in full possession of political and

legal rights. The king of Jerusalem was sometimes recognized as having a kind of overlordship over the other Frankish states, which manifested itself in acts of homage by their rulers and in the fact that the king could act as regent for them during minorities. However, this relationship was never formalized beyond such acts, and the northern principalities did not form part of the kingdom proper.

The central royal administration was based at Jerusalem until 1187, and later at Acre. It had a chancery headed by a cleric, plus lay officers along the lines found in the West: a constable, marshal, seneschal, butler, and chamberlain. A substantial part of the country, the royal demesne, remained directly under royal control and was administered by viscounts. The royal demesne varied in extent, but before 1187 it consisted of two main territorial blocs: northern Judaea and southern Samaria (including Jerusalem, Bethlehem, and Nablus), and the coastal area around Tyre and Acre. The rest of the country was divided into lordships. Most of these were held by nobles, but some were ecclesiastical lordships,

such as those held by the bishops of Nazareth and Lydda, as well as the Latin patriarch's quarter in Jerusalem. At times, Jaffa and Ascalon formed part of the demesne or were given to members of the royal family.

Most towns in the royal demesne and the lordships had a burghess court (Fr. *Cour des Bourgeois*), which was the main court for Frankish burghesses and more serious cases involving non-Franks. The native communities originally had their own courts for lesser cases, but these competencies were taken over by the Court of the Market (Fr. *Cour de la Fonde*), which originated as a court dealing with commercial matters involving Franks and non-Franks. There were also courts for the vassals of each lordship and ecclesiastical courts for the clergy.

The royal demesne provided the main stream of royal income in the form of rents, agricultural revenues, and, above all, tolls from the wealthy ports. Much of this income was paid out in the form of money fiefs to support knights who were the king's vassals in the royal demesne. Other sources of royal income were the profits of justice, coinage, and shipwreck; feudal dues; occasional tribute payments from Muslim powers; and subsidies from Byzantium. General taxation was rare and only conceded on exceptional circumstance. The lordships and the royal demesne provided about 600–700 knights for the kingdom's army in the twelfth century, plus some 5,000 more lightly armed troops, known as sergeants. A substantial number of knights and sergeants was also maintained by the military orders.

The king was expected to rule with the consent and cooperation of the great nobles and ecclesiastical dignitaries, just as kings did in Europe. The main forum for this was the High Court (Fr. *Haute Cour*), which was not only the highest court of law, but also an institution for political consultation and decision making. For much of the twelfth century, kings were relatively strong, although most of them encountered opposition at some point. They exercised a strong control over higher ecclesiastical appointments. Before 1118 few secular lordships were created, and even thereafter the kings often intervened to reorganize lordships and remove their holders. However, from 1174 onward kings were frequently minors or absentees or incapacitated by illness. Nobles and clerics had a major role in appointing regents; in the thirteenth century they also increasingly used the High Court to defend their own privileges and prevent any extension of royal prerogatives.

Jerusalem, Latin Patriarchate of

The organization and hierarchy of the Latin (Roman Catholic) Church established in Palestine after the conquest by the First Crusade (1096–1099), with ecclesiastical jurisdiction over the kingdom of Jerusalem.

Although the leaders of the First Crusade had established cordial relations with Symeon II, the exiled Greek Orthodox patriarch of Jerusalem, during the siege of Antioch, they do not seem to have considered the possibility of restoring the Greek Orthodox hierarchy when they captured the city of Jerusalem in 1099. Instead, the senior Western clergy present with the crusade army chose Arnulf of Chocques, the chaplain of Duke Robert of Normandy, as first Latin patriarch.

The Latin patriarchate claimed continuity with the Greek Orthodox patriarchate, but differed from it in some significant ways. Whereas the Orthodox patriarch had been the autonomous head of his church, the Latin patriarch was subordinate to the pope, and his powers were more like those of a metropolitan archbishop. The kings of Jerusalem persuaded the papacy that the patriarchate should be coextensive with the boundaries of the kingdom. This led to friction with the Latin patriarchs of Antioch (mod. Antakya, Turkey), who claimed jurisdiction over the province of Tyre. However, despite prolonged litigation, the archbishops of Tyre and their suffragans at Beirut, Sidon, and Acre, remained subject to the patriarchs of Jerusalem.

Diocesan Organization

The Franks made some significant changes to the traditional Greek Orthodox organization of the hierarchy. The Latin patriarchal see of Jerusalem eventually had three suffragan sees: (1) The double bishopric of Lydda (mod. Lod, Israel) and Ramla was set up in 1099. (2) Bethlehem (in mod. West Bank), in Greek Orthodox times a shrine church in the diocese of Ascalon (mod. Tel Ashqelon, Israel), was erected into a bishopric in 1108. (3) Hebron (mod. Al-Khalil, West Bank), the burial place of the patriarchs Abraham, Isaac, and Jacob, administered by Augustinian canons from around 1112, became a bishopric in 1168, at which time the canons formed the cathedral chapter.

In the coastal city of Tyre (mod. Soûr, Lebanon), captured by the Franks in 1124, an archbishop was enthroned in 1128. Although none of the bishops was actually consecrated until the archbishop of Tyre was in office, Tyre had four suffragan sees: (1) Acre (mod. 'Akko, Israel), captured in 1104, whose first bishop is recorded in 1135; (2) Sidon (mod. Saïda,

Lebanon), captured in 1110, whose first Latin bishop is recorded in 1133; (3) Beirut, captured in 1110, where a bishop was nominated in 1112 but not consecrated until 1133; and (4) the inland city of Banyas (mod. Bāniyas, Syria), the Caesarea Philippi of the New Testament, which had a bishop during the period while it was held by the Franks (1140–1164).

An archbishop of Caesarea (mod. Har Qesari, Israel), the ancient Caesarea Maritima, was appointed when the city was captured in 1101. It had one suffragan see, Sebastea (mod. Sabastiyah, West Bank) in Samaria, established in 1129.

The archbishopric for Galilee had been Bethsan (mod. Bet-Shean, Israel), known as Scythopolis in Greek Orthodox times. In 1103 Pope Paschal II recognized the abbot of Mount Tabor as archbishop of Galilee, but those powers were later transferred to the bishops of Nazareth (mod. Nazerat, Israel), a see established in 1109 and raised to an archbishopric in 1128. Nazareth had one suffragan see, Tiberias (mod. Teverya, Israel), founded around 1144.

An archbishopric with the title Petra Deserti was set up in 1168 for the lands of Transjordan. The archbishop was resident in the township of Kerak (mod. Karak, Jordan) and had no suffragan bishops.

Until 1187 the Crown normally appointed the patriarch and bishops of the kingdom, though canonical election procedures were formally observed and cathedral chapters might appeal to Rome to scrutinize the results. On the whole, relations between the Crown and the patriarchs were harmonious, except during the patriarchates of Daimbert of Pisa (1099–1101) and Stephen of Chartres (1128–1130), who sought to gain temporal independence from royal control.

Religious Life, 1099–1192

A large number of secular Latin priests and clergy in minor orders must have been employed in the Latin kingdom to serve the parish churches and chapels in the cities and townships there. In twelfth-century Jerusalem and in thirteenth-century Acre and Tyre, such foundations were very numerous, while all Frankish lords employed one or more domestic chaplains. Denys Pringle has also identified a substantial number of Latin churches and chapels in the rural areas of the kingdom, where, as Ronnie Ellenblum has shown, there were some 200 Frankish settlements in the twelfth century [*Frankish Rural Settlement in the Latin Kingdom of Jerusalem* (Cambridge: Cambridge University Press, 1998)].

Diocesan organization of the Latin Patriarchate of Jerusalem

Church of St. Anne in Jerusalem. Built on the site believed to have been the childhood home of the Virgin Mary and her parents, Anne and Joachim, it served as the center of worship for a convent of Latin nuns. Completed in the 1140s, it is a striking example of Crusader Romanesque architecture. (Courtesy Alfred Andrea)

The principal shrine churches were in many cases rebuilt by the Franks, and were served by religious communities. In the Church of the Holy Sepulchre in Jerusalem (the patriarchal cathedral), the original secular canons installed after the crusader conquest were replaced by Augustinian canons in 1114. Augustinians also formed the chapters of the three other cathedrals that were important shrines: Bethlehem, Nazareth, and Hebron. The remaining cathedral chapters were composed of secular canons. By 1112 Augustinian Canons also administered three shrines in Jerusalem: Our Lady of Zion, the Church of the Ascension on the Mount of Olives, and the Temple of the Lord (formerly the Dome of the Rock). Other shrines in the holy city were administered by Benedictine monks. The monastery of St. Mary of the Latins and the adjacent convent of St. Mary Major dated from before the First Crusade and flourished under Latin

rule. The Church of Our Lady of Jehosaphat was served by Benedictine monks, said to have accompanied Godfrey of Bouillon on crusade. The Benedictine convent of St. Anne was in existence by 1104, and in 1138 Queen Melisende founded a Benedictine convent at Bethany. In Galilee there was a Benedictine monastery on Mount Tabor founded by Prince Tancred in 1100, and one at Palmaria, established around 1130, which later became a dependency of the abbey of Cluny. The Benedictine priory of St. Catherine was founded by King Baldwin IV in thanksgiving for his victory over Saladin at Mont Gisard in 1177. The Premonstratensian canons established communities at St. Samuel on Montjoie before 1131 and at SS. Joseph and Habakkuk near Lydda in 1136. Two Cistercian monasteries were founded near Jerusalem: Salvatio in 1169 and St. John in Nemore in 1169. Substantial numbers of Latin-rite hermits lived in and

around Jerusalem and on the wooded slopes of Mount Tabor in Galilee.

The “new monasticism” of the military religious orders originated in the kingdom of Jerusalem. The Order of the Hospital (Knights of St. John), which became an independent order in 1113, had its headquarters in Jerusalem. The Templars, whose rule was licensed by the papacy in 1128, had their headquarters in the former al-Aqṣā Mosque on the Temple Mount, while the Order of St. Lazarus, founded in the 1130s for the care of lepers, had its headquarters just outside the city walls. The combined holdings of the military orders in the kingdom of Jerusalem before 1187 were fairly modest, so that although their property was in some circumstances exempt from episcopal jurisdiction, the rights of the Latin patriarchate were not greatly diminished by their presence in the twelfth century.

This large religious establishment was not a serious strain on the economic resources of the kingdom. Many of the communities that served the shrine churches, together with the military orders, derived much of their income from western European endowments. Moreover, the archbishops of Nazareth and the bishops of Lydda-Ramla were the only prelates to hold ecclesiastical lordships: between them they owed service of sixteen knights to the Crown. Yet the bishops and heads of religious communities were jointly responsible for providing the service of 2,750 sergeants to the crown: this amounted to over half the sergent-service of the entire kingdom. This would have been a heavy financial burden to meet in a society almost permanently at war, and it is possible that the obligation was not regularly enforced in full.

The many Greek Orthodox Christians in Outremer were regarded by the Latin hierarchy as members of the same church as themselves. Although the Latins took over some important Orthodox churches, the Orthodox were allowed to keep most of their lesser churches and all of their monasteries. By the 1170s, and perhaps earlier, Greek Orthodox canons were allowed to officiate in the Church of the Holy Sepulchre alongside the Latins, there was a revival of Orthodox monasticism in Judaea, and some Orthodox coadjutor bishops were allowed to minister to the Orthodox faithful in Latin dioceses. Nevertheless, the Byzantine church and state refused to accept this subordination of the Greek Orthodox to the Latin hierarchy, and from around 1118 Orthodox patriarchs of Jerusalem were appointed who lived in Constantinople.

All of the Eastern churches, except the Ethiopians, had chapels in Jerusalem in the twelfth century, and there were

large communities of Armenians, Maronites, and Syrian Orthodox (Jacobites) there and in some other parts of the kingdom. These Eastern Christians were allowed complete religious independence.

Ecclesiastical Reorganization after 1192

After their defeat by Saladin at the battle of Hattin in 1187, the Franks lost almost all their territory. The much reduced kingdom of Jerusalem as it was restored after 1192 had boundaries that fluctuated a good deal throughout the thirteenth century until the loss of the new capital, Acre, in 1291. The Latin hierarchy adapted to those developments with various organizational changes.

The Latin patriarchs of Jerusalem and the canons of the Holy Sepulchre lived in Acre throughout this period. From 1262 the patriarchs became *ex officio* bishops of Acre. They had three suffragans: (1) The bishops of Ramla-Lydda, who lived in Acre throughout this period. (2) The bishops of Bethlehem, who lived in Acre, except from 1229–1244 when their see was restored to Christian rule and they returned there. (3) The bishops of Hebron, whose see was revived in 1252 by Pope Innocent IV; the bishops lived in Acre and had few resources.

Tyre remained in Frankish hands until 1291, and the Latin archbishops lived there throughout this time. Their suffragans were (1) The bishops of Acre, whose office was merged with that of the patriarch of Jerusalem in 1262; (2) the bishops of Sidon, who lived in that city when practical throughout this period; (3) the bishops of Beirut, who lived in that city from 1197 to 1291.

The archbishops of Caesarea lived in that city until it was captured by the Mamlūks in 1265, when they moved to Acre.

The archbishops of Nazareth lived in Acre, except between 1229 and 1263 when Nazareth was restored to Frankish control. Their sole suffragan see was Tiberias, vacant until 1241, when Galilee was recovered by the Franks. Bishops were then appointed until 1291, but probably lived in Acre throughout those years.

The archdiocese of Petra Deserti and the see of Sebastea were left vacant after 1187, although popes sometimes appointed titular bishops to them in the thirteenth century.

Religious Life, 1192–1291

Thirteenth-century Acre was overflowing with ecclesiastical establishments, for after 1192 religious communities from territories occupied by the Muslims, as well as the exiled

bishops, took refuge there. Among them were the Augustinian canons of Mount Zion, of the Mount of Olives, and of the Temple of the Lord; the Benedictine monks of St. Mary of the Latins, Our Lady of Jehosaphat, the Mount Tabor monastery, and St. Catherine on Mont Gisard; the Benedictine nuns of St. Anne, St. Mary Major, and the convent of Bethany; and the Premonstratensian canons of St. Samuel on Montjoie. During the thirteenth century they were joined by groups of Franciscans, Dominicans, members of the Trinitarian Order, and communities of Cistercian nuns and Poor Clares, as well as by representatives of other, smaller orders. Most of the refugee communities remained in Acre throughout the thirteenth century. The Templars, Hospitallers, and the Order of St. Lazarus all had their headquarters in Acre throughout this period, as did the new Order of the Teutonic Knights, from its inception in 1198 until it moved to the castle of Montfort in 1227.

The Latin patriarchate showed evidence of religious vitality in the thirteenth century. A new contemplative order, the Carmelites, evolved on Mount Carmel during this period. Rooted in both the Greek Orthodox and Latin eremitical traditions, its rule was ratified by Pope Honorius III, and by the middle of the century the order had begun to found daughter houses in Western Europe. The Latin hierarchy included some men of exceptional ability, such as James of Vitry, whom Pope Innocent III presented to the see of Acre in 1216, and James Pantaleon, made patriarch by Pope Alexander IV in 1255, whom he succeeded in 1261 as Pope Urban IV. It is very much to the credit of the Latin hierarchy in the thirteenth century that most of them resided in their sees, despite the problems they faced, among which was fierce competition for economic resources. Logistical problems often made it difficult for Western agents to transmit responses promptly to the military orders and the religious communities in the Latin East, and this led to a good deal of acrimonious litigation between them and the Latin bishops about the payment of tithes and the ownership of property.

Relations between the Latin hierarchy and Eastern Christians were mixed in the thirteenth century. The Maronites, who had come into communion with Rome around 1181, and the part of the Armenian Church that had done so in 1198, enjoyed Uniate status, preserving their own liturgy and canon law in so far as these were compatible with Latin norms, and keeping their own hierarchy, whose members were directly subject to the pope and not to the Latin patriarch. Pope Innocent IV wished to give parallel rights to the

Greek Orthodox Christians of Jerusalem, but the Latin hierarchy was unwilling to accept this. The Greek Orthodox living under Frankish rule therefore deeply resented their subordinate status.

In 1291 the Mamlūks conquered the remaining Frankish strongholds. This marked the end of the Latin patriarchate, although titular patriarchs continued to be appointed by the papacy, while some of the religious communities of the Latin kingdom took refuge in Cyprus or on their Western estates, hoping that one day they might return to the Holy Land.

Jerusalem, Siege of (1099)

The siege of Jerusalem took place during the First Crusade (1096–1099) and culminated in the capture of the Holy City

Jerusalem, Siege of (1099)

Second Assault of Jerusalem: The Crusaders Repulsed, by Gustave Dore, 1877. (Bettmann/Corbis)

on 15 July 1099. The liberation of the Holy Sepulchre from the hands of the Islamic enemy was the fundamental inspiration for the crusade. When the crusaders began the siege on 7 June, it was not merely a military objective but the emotional mainspring of the whole expedition, although the army faced substantial problems in undertaking it.

Perhaps 60,000 crusaders had gathered at Nicaea (mod. İznik, Turkey) in June 1097, but a member of the army estimated that when they got to Jerusalem there remained only 1,200–1,300 knights and 12,000 crusaders on foot. They had suffered heavy losses, and many crusaders had stayed behind with Bohemund of Taranto at Antioch (mod. Antakya, Turkey) and Baldwin of Boulogne at Edessa (Şanlıurfa, Turkey). This small army was very isolated; its nearest secure base was Laodikeia in Syria (mod. Al-Lādhiqīyah, Syria), over 480 kilometers (300 mi.) to the north. Jaffa (mod. Tel Aviv-Yafo, Israel), the port for

Jerusalem, had been largely demolished, so that the sea power that had hitherto been so useful could now only be exercised precariously, for there was a powerful Fāṭimid fleet based at Ascalon (mod. Tel Ashqelon, Israel), while Jerusalem itself was held by a Fāṭimid garrison. The Fāṭimids of Egypt had been content to support the crusaders against the Saljūq Turks, from whom they had seized the city of Jerusalem in July 1098, but the crusaders broke this arrangement when they marched south to the Holy City. Now they knew that a mighty Fāṭimid force would gather at Ascalon. The attack on Jerusalem was a race against time: this was why the crusaders first assaulted the city on 13 June, although they had only one siege ladder.

The Fāṭimid garrison had expelled the native Christian inhabitants and made the springs outside the walls unusable. There was little wood in the vicinity, and raiders from Ascalon harassed the army. Jerusalem, though a mighty city, was vulnerable on the north wall, which was somewhat overlooked by rising ground. The east wall crowned a steep slope down to the Valley of Jehosaphat. The land did not fall away quite so steeply on the west, but here the wall was reinforced by a citadel (the Tower of David) and an outer wall and ditch that extended around to reinforce the north wall. To the south there was a small, level plateau outside Zion Gate, and here Raymond of Saint-Gilles, count of Toulouse, prepared his attack, while the rest of the army concentrated to the north. The crucial event was the arrival of a crusader fleet at Jaffa on 17 June. A crusader force defeated Egyptian forces, opening the way to the coast on 18 June, and escorted back food, timber, and sailors, who provided skilled labor for the manufacture of siege equipment, for their fleet was destroyed in the port by the Egyptians. Thus reinforced, the army began to erect two siege towers. The North French and Lotharingians built one, with a ram to breach the outer wall, at the northwest corner of the city, while the Provençals constructed theirs outside Zion Gate.

On the night of 9–10 July, the northern tower and ram were moved from the west to the east end of the north wall, surprising the defenders. A two-pronged attack was launched on 13 July. On 15 July the North French and Lotharingians broke into the city, causing the garrison of the citadel to surrender to the Provençals in the south. The crusaders massacred most of the city's Muslim and Jewish inhabitants, but this was the fate of any medieval city that refused to surrender. The capture of Jerusalem was remarkable for the courage and skill of the attackers and for the fact

that it was achieved before the Fāṭimids could gather their relief force at Ascalon.

Jerwia

Jerwia (Est. Järva) was a province of medieval Livonia, conquered during the early thirteenth century in the course of the Baltic Crusades. It was surrounded by marshes, bordering Vironia to the east and Harria to the west, and inhabited by Estonians.

In 1217 the chieftains of Jerwia made peace with the German crusaders at Riga and accepted baptism. Nevertheless, they fought alongside other Estonian tribes against the crusaders in the battle of Fellin the same year. In 1219 the Order of the Sword Brethren subjected the land again, but the territory remained in dispute between the Danes and Riga until its status was settled by the Treaty of Stensby (1238). The king of Denmark gave Jerwia to the Teutonic Order on condition that the order would aid the king in the future and would not build fortifications there without the king’s permission. Jerwia was the first district in Livonia that the order had not received from the bishops of Riga. The castle of Weissenstein (mod. Paide, Estonia), built in the 1260s, remained the northernmost stronghold of the order until the purchase of Harria and Vironia in 1346, and the bailiff of Jerwia who resided in Weissenstein rose into the circle of the most important officials of the order. By the end of the thirteenth century a town had grown up in Weissenstein, which was given the right to use the law code of the town of Riga in 1291.

The manorial system in Jerwia was complex. The Sword Brethren enfeoffed some land to vassals from the island of Gotland, while the Cistercian monastery of Roma on Gotland owned some villages; Gotlandic influences can be seen in the early church architecture in Jerwia. In the later centuries, however, the greater part of the land was retained by the order and not enfeoffed. A large number of free peasants and relatively better-off peasant households were characteristic of medieval Jerwia.

Jews and the Crusades

Crusaders had many motives for taking the cross, but it is fair to say that crusades to the Holy Land were characterized by the enthusiasm of participants about becoming soldiers of Christ to reconquer for Christendom the land that Jesus Christ had inhabited as a human being. It is hardly surprising, then, that such a movement should have had grave repercussions for the Jews of Europe when crusades were preached and crusading armies gathered before departing for the East.

The call to crusade by Pope Urban II at the Council of Clermont in 1095 was far more successful than anyone could have envisaged. Besides the princely armies, bands of unofficial armies gathered in northeastern France, Lotharingia, Flanders, and the Rhineland. These armies constituted what are commonly called the popular, or People’s Crusades because they included poor men and women and undisciplined children, although many of their leaders, such as Emicho, count of Flonheim, were far from lowly in status, while many participants were men of military skill and experience. These armies left for the Holy Land in spring and early summer 1096, before the departure of the princely armies in August,

Crusaders murdering Jewish citizens. (Pixel That)

choosing a land route to the East that took them through cities along the Rhine and Moselle that contained flourishing Jewish communities. Their encounters with these Jewish communities resulted in the first well-documented major attack on Jews by Christians in medieval Europe (excluding the persecutions in seventh-century Visigothic Spain). The chronicler Guibert of Nogent (d. c. 1125) writes about an attack on the Jews of Rouen, and Hebrew material relates that northern French Jewry sent warning letters to the Jews of Mainz about the impending danger. It seems that the Jews in Germany were able to meet any demands early French crusaders made on them for supplies. In the Rhineland, deaths started occurring when German crusaders together with burgesses attacked the Jews; Speyer is portrayed as the first scene of trouble, but the disorganized nature of the attack made it relatively easy for Bishop John to come to the aid of the Jews, and only a few Jews died.

It is important to emphasize that murdering Jews or forcing them to convert ran against official church law. Accord-

ing to St. Augustine of Hippo's maxim of *Testimonium veritatis* (witness to the truth), Jews were granted a place in Christian society in order to function as witnesses to the truth of Christianity. They were seen as the bearers of the books of the Hebrew Bible, which contained the prophecies concerning the birth, life, and Passion of Christ. Nor were episcopal leaders of towns keen to risk public disorder by accommodating hordes of crusaders. The archbishops of Mainz, Trier, and Cologne and the bishop of Worms all tried to protect the Jews of their cities from harm, and, in many cases, Christian neighbors initially offered help, too. Yet as the weeks went by, help from the burgesses seems to have diminished, and many joined the crusaders in their attacks on Jews; when skirmishes claimed Christian casualties, bishops seemed unable or unwilling to restrain the crowds. In Worms the attacks by crusaders, burgesses, and inhabitants of surrounding villages seem to have been more organized. Jews who chose to stay at home were murdered or forcibly baptized; those who had taken refuge in the bishop's palace were besieged and eventually overcome; many chose to slaughter themselves and their children in sanctification of God's name (Heb. *kiddush ha-Shem*).

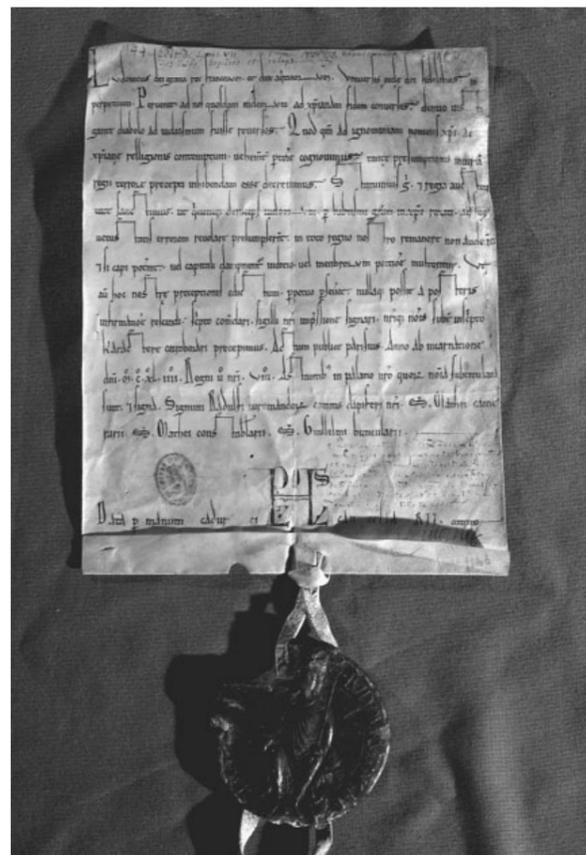

The Jews of Mainz were subjected to concentrated attack by Emicho of Flonheim, supported by burgesses who had opened the city gates to his forces on 27 May 1096. Emicho first besieged the palace of Archbishop Ruothard where many Jews had taken refuge, and after their armed resistance failed, many Jews martyred themselves. Those who had fled to the palace of the burgrave met a similar fate. The Jews of Cologne were sent by Archbishop Hermann III to seven surrounding villages for safety, but during June they were hunted down by crusaders. Trier had been visited by Peter the Hermit and his army in April 1096. The Jews there successfully bribed him to go on his way without harming them, but after his departure the townspeople turned on them. When in June the attackers were joined by burgesses from other towns who had travelled to Trier to attend a market, Archbishop Engilbert was not strong enough to protect the Jews, who were forcibly baptized. Jews were also forcibly converted in Metz and Regensburg. In the wake of the crusade Emperor Henry IV (1056–1106) allowed Jews who had been forcibly baptized to revert to Judaism. His leniency in this matter was, in fact, contrary to canon law; although forced baptism was prohibited, anyone who had been baptized was considered to be a Christian.

That far fewer Jews died during the Second Crusade

(1147–1149) was partly due to the timely intervention of the Cistercian abbot Bernard of Clairvaux, who stopped the inflammatory anti-Jewish preaching of the Cistercian monk Ralph. Reminding his audience of the Augustinian principle, Bernard stressed that Jews should not be harmed because, unlike the Muslims, they had not attacked Christendom. In addition, Bernard expressed the fear that if there were fewer Jews, the numbers of Christian usurers would increase. Bernard used the word *judaize* for the concept of lending money on interest. In his bull *Quantum praedecessores* (1145), Pope Eugenius III had legislated that crusaders should not be charged interest on their loans by Christian moneylenders. Encouraged by Bernard, King Louis VII of France probably extended this rule to Jewish loans as well, causing great financial hardship to the Jews involved. Besides incidental local attacks on Jews, twenty-two Jews are reported to have been killed in Würzburg in February 1147 after they had been accused of having murdered a Christian found in the River Main. The crusaders began to venerate the Christian as a martyr.

In the run-up to the Third Crusade (1189–1192), Emperor Frederick I Barbarossa curtailed anti-Jewish violence in the Rhineland. But great loss of life occurred in England, where the crusades had so far not exacted Jewish casualties. Anti-Jewish riots accompanied the coronation of King Richard I in September 1189 in London. In the absence of the king, who was preparing to go on crusade, the riots spread to Norwich, King's Lynn, Bury St. Edmunds, Stamford, Lincoln, and York. In March 1190 the Jews of York took refuge in the city's castle, but through a series of misunderstandings lost the support of local royal officials and were attacked by the sheriff and his knights. The inhabitants of York joined in the attack and soon took over. As the castle burned, most of the Jews took their own lives in sanctification of God's name, while those escaping the castle were butchered. Immediately following the carnage, the rioters destroyed evidence of all debts to Jews, which was kept in York Minster. During later crusades, major incidents of physical violence against Jews were by and large prevented by those in authority. An exception is the Second Shepherd's Crusade (1320), which caused many casualties in the Jewish communities of France to the south of the Loire. Many Jews were also forcibly converted.

Why did crusaders persecute Jews? The Hebrew material together with the evidence of Guibert of Nogent says plainly that crusaders in 1096 wondered why they should march to Jerusalem to wreak vengeance on the Muslims when so

Edict of King Louis VII of France banishing relapsed Jews from the kingdom, 1144–1145. Musée de l'Histoire de France aux Archives Nationales, Paris, France. (Réunion des Musées Nationaux/Art Resource)

many Jews lived in their midst, whom they considered guilty of crucifying Jesus Christ. They decided they should avenge themselves on the Jews before doing anything else. The chronicler known as Annalista Saxo echoes this in the mid-twelfth century. Indeed the call to crusade was permeated with calls to avenge Christ for all the dishonors heaped upon him by the Muslims. These calls echoed contemporary views concerning vendettas and family honor. It seems that the call for vengeance was all too easily transferred from Muslims to Jews. Economic reasons were also given for the persecutions. Greed is often mentioned, as, for example, by the German chronicler Albert of Aachen in the context of the First Crusade. The Hebrew First Crusade sources dwell on this theme, reporting that the Jews tried to bribe their way

to safety and also that crusaders preyed on Jewish goods. The role of greed must reflect to a large extent the simple fact that the bands of the popular crusade had started their march to Jerusalem before the harvest of 1096. Even more than other crusading armies, they were dependent on alms, extortion, or plunder for their survival. Perhaps it was felt right that Jews, who were considered to be the enemies of Christ, should be made to finance the crusade.

Economic themes increased in importance during the Second and Third Crusades, as crusaders turned more and more to moneylenders to finance their undertaking. As papal strictures dried up the Christian supply of crusading loans, more and more crusaders turned to Jewish finance. By the mid-twelfth century ill feeling toward Jewish money lending had already increased. Abbot Peter the Venerable of Cluny wrote a scathing letter in 1146 to Louis VII of France, damning the Jews for their engagement in usury and specifying that they should bear the cost of the crusade. Bernard's use of the word *judaize* for lending money on interest exemplifies how, in the minds of some, usury was somehow the special forte of Jews, despite the fact that Christian usurers abounded. All of these factors reflect contemporary tensions caused by a booming economy in areas of Europe unused to rapid and widespread economic growth, coupled with ecclesiastical qualms about the morality of pursuing wealth. For various theological reasons, Jews were identified with greed and were used as scapegoats for unloading feelings of guilt about engaging in a profit economy. There was also a growing tendency in northern Europe to restrict most Jewish economic activity to money lending. By the time of the Third Crusade, Jews were important figures in crusade finance, while the royal government in England closely controlled and supported Jewish money lending. When Richard I ascended the throne, he did not curtail the right of Jewish moneylenders to collect interest on loans to crusaders. The events in York must reflect at least in part how explosive an issue this turned out to be.

Interconnected with different kinds of economic motives and the motive for revenge was the fact that enthusiasm for late eleventh- and twelfth-century crusading seems to have interacted with growing empathy for the figure of Jesus Christ and his mother. Theological tracts, monastic devotional tracts, miracle stories of the Virgin, artistic representations of the suffering Christ, and mystery plays in churches all attest to this trend. These manifestations are part of a society that was in the process of becoming more Christianized, a process that seemed to make it harder and harder to accom-

modate Jews, who were increasingly identified as Christ-killers. Part and parcel of this trend was the spiritual aspect of crusade preaching, which exhorted Christians to purify their own society so that they could be assured of divine assistance. This need for purification became especially important as crusading became less and less successful.

The persecutions of the Jews in 1096 obviously left their mark on medieval Jewry, but they should not be seen as a watershed in Jewish history. It is not true that after 1096 we can only speak of Jewish decline. On the contrary, the Hebrew sources for the First Crusade reveal a vibrant community fully in touch with its non-Jewish surroundings. The twelfth and thirteenth centuries display enormous advances in Jewish learning and spirituality in Ashkenaz (northern Europe) as well as in Sefarad (southern Europe). Nor is it true that relations between Christians and Jews were unequivocally positive before 1096. The history of medieval Christian-Jewish relations involves a range of complex and ambiguous ideas, which interact with diverse political, socioeconomic, religious, and cultural circumstances at any given time or place. What the persecutions of 1096 do show are early signals of the kinds of problem that could arise when Jews were faced with a Christian movement so replete with anti-Jewish motifs. The persecutions during the Second and Third Crusades reveal the growing importance of economic features, but anti-Jewish crusading violence is only one of the many factors that need to be considered when charting the course of Jewish history in medieval Europe.

Jews in Outremer

The first ten years of Frankish rule in Outremer witnessed significant changes in the number and size of the Jewish communities. The capture of Jerusalem on 15 July 1099 was followed by the massacre of its Muslim and Jewish populations. Some Jews survived, including those who were either ransomed or sold into slavery, and those who found refuge in the citadel were allowed to go to leave with the Fāṭimid garrison.

The crusader conquest thus put an end to the Jewish community in the Holy City, for the first time since the seventh century. Jews were not permitted to return to Jerusalem, as the Franks promulgated a law forbidding non-Christians to dwell in the city. As the Franks massacred much of the indigenous non-Christian population in towns taken by storm in the period 1100–1110, the Jewish communities of Haifa (mod. Hefa, Israel), Caesarea (mod. Har Qesari, Israel), Acre (mod. ‘Akko, Israel), and Beirut were temporarily extinguished, while those of Jaffa (mod. Tel Aviv-Yafo, Israel) and Ramla fled on the eve of the crusader conquest.

As a result, Tyre (mod. Soûr, Lebanon) and Fāṭimid Ascalon (mod. Tel Ashqelon, Israel) became the biggest Jewish communities in Palestine. Later Jews were allowed to return to their cities, with the exception of Jerusalem. By 1170, as attested by the Spanish Jewish pilgrim Benjamin of Tudela, there were communities in the coastal cities of Beirut, Sidon (mod. Saida, Lebanon), Tyre, Acre, Caesarea, and Ascalon. In the hinterland there were urban communities in Tiberias (mod. Teverya, Israel), Saphet (mod. Zefat, Israel), and Banyas (mod. Bāniyas, Syria), and in some villages of Galilee. Individual Jews (often one or two families of dyers)

were found in towns and villages elsewhere. Although there were Jewish communities in the principality of Antioch and county of Tripoli, most surviving evidence relates to Jews in the kingdom of Jerusalem.

The legal status of the Jews in Outremer was similar to that of the other non-Frankish communities, and thus not much different from that during Muslim rule, when they belonged to the *dhimmī* (protected peoples) of the Muslim state. Like all non-Franks, Jews were forbidden by law to hold landed property, and depended on Frankish lords, the king, ecclesiastical institutions, or the Italian maritime communes. Jewish males over fifteen had to pay the poll tax. Though the inhabitants of the cities enjoyed freedom of movement, those who lived in the villages were probably serfs. Jews were judged in the Court of Burgesses (Fr. *Cour des Bourgeois*) in criminal cases and in the Court of the Market (Fr. *Cour de la Fonde*) in other cases, whenever defendant and plaintiff were from different religious communities. Where both were Jews, cases were dealt with by the communal Jewish courts.

The conquest probably caused a decline in the economic conditions of the Jews of Palestine; much property was damaged, while even those communities that were not directly affected, such as those of Ascalon and Egypt, had to spend large sums of money on the ransom of captives. Notwithstanding the economic decline, Jews continued to work in their traditional professions, particularly glass manufacture and commerce in the cities, and agriculture in the countryside; other typical professions were medicine, pharmacy, and dyeing. In the thirteenth century the Jews of Acre became involved in international maritime trade, and were also increasingly active in money lending.

The conquest of much Christian territory by Saladin had a great impact on the fate of the Jewish communities, as many of them remained under Muslim rule after 1192. A community was established once more in Jerusalem, but Ascalon was abandoned when the city was razed to the ground on Saladin's orders. The largest community was at Acre, which grew as a result of immigration from Europe and the neighboring countries (particularly Egypt). Acre became one of the most important centers of Jewish studies in the entire region, and the ordinances of its rabbinical court were accepted even by the communities of Egypt and Syria. The reestablished community of Jerusalem was heterogeneous, including refugees from Ascalon, Jews from North Africa, and immigrants from France and England who arrived in

1209–1211. These three groups led a quarrelsome existence until the destruction of the city walls by the Ayyūbids (1219), when most of the Jewish population left. A new community was established after 1244, but dispersed on news of the Mongol invasion of Palestine in 1260.

Attempts to reestablish a community in Jerusalem during the second half of the thirteenth century failed. Rabbi Moshe ben Naḥman (Naḥmanides), who moved to Jerusalem from Spain in 1267, replaced the precept of pious pilgrimage to the Holy Land with that of its settlement; he considered the return of the Jewish people to the Holy Land as a historical necessity and argued that the defeats of the Franks and the state of constant warfare were proof that no gentile nation could hold the land of Israel for long, since it was divinely destined for the Jewish people. Naḥmanides restored a house to serve as Jerusalem's synagogue, but after only a few months he moved to Acre.

The second major community in the thirteenth century was Tyre, which had been continuously in Christian hands since 1124, and which grew due to immigration from the West, while communities also existed in Beirut and Gaza. Those of Jaffa, Caesarea, and Sidon evidently disappeared, but the rural communities of Galilee were little affected by political upheavals. The community of Saphet was relatively large, but seems to have disappeared during Frankish rule of the city (1240–1266) and was only reestablished following the Mamlūk conquest in 1266. Tiberias, a traditional burial place for the Jewish diaspora from the third century, remained an important place of pilgrimage for Jews. At Hebron (mod. Al-Khalil, West Bank), the site of the Tombs of the Patriarchs, a community was reestablished after 1187, having been abandoned by Jews in 1099.

The general trend during Frankish rule was that the communities in the coastal cities flourished, whereas those in the hinterland declined. The fall of the residual kingdom of Jerusalem in 1291 put an end to the two most important Jewish communities in Palestine, Acre and Tyre, and also affected the close contacts between the Jews of Palestine and Europe, resulting in a decline in pilgrimages and immigration from Europe. The Jewish communities reverted to the predominantly Eastern character they had had before the crusader conquest, with links primarily to the Jews of Egypt.

Jihād

The Arabic word *jihād* relates to the religious commandment to struggle toward a commendable cause, generally used to denote warfare for the defense and expansion of Islam. The term was employed to designate the Muslim counter-crusade, particularly after its consolidation in the middle of the twelfth century.

The imperative to fight unbelievers evolves gradually in the Qur'ān. It concludes in an unconditional command, with the promise of ample reward for those who fight "in the way of God" and with the definition of warriors slain on the battlefield as privileged martyrs of the faith (for example, *sūras* 22:39, 2:218, 9:14, 36, 88–89). In legal literature *jihād* is generally considered to be a collective duty. That is, it is incumbent upon the community as a whole but not upon every individual in every generation, although under certain circumstances it may become an individual obligation for all able-bodied men. In principle, *jihād* is to be carried on until the whole world comes under the rule of Islam, polytheism is exterminated, and the adherents of the other monotheistic religions are subjugated to Muslim rule and agree to pay a poll tax—or until all of mankind accepts Islam. Warfare may be suspended altogether only temporarily and only if a truce with the enemy better serves the Muslim cause.

From early times, Muslim tradition, especially that of pietistic and Sufi circles, also developed a different notion of *jihād* to mean the spiritual struggle for moral perfection. Some scholars consider this form of *jihād* even more meritorious than *jihād* on the battlefield.

Historically, during the decades preceding the arrival of the crusaders in Syria and Palestine there was hardly any zeal for jihād, either in the Levant or at the caliph's court in Baghdad. It reemerged in twelfth-century Syria, at the instigation of religious scholars and poets (some of them refugees from Frankish-held territory) who called for a counter-crusade. The systematic Muslim counter-crusade, beginning with Zangī's capture of Edessa (1144) and culminating in Saladin's conquest of Jerusalem (1187), was propagated as jihād in treatises and poems, in inscriptions on various edifices, in circular letters to neighboring Muslim rulers and emirs, and through public preaching. During that period, the liberation of Jerusalem and its holiness for Islam became the centerpiece of the propaganda for jihād.

Ideologically, jihād against the Franks was incorporated in a wider political-religious program, namely the revivification of the Sunna (Arab. *ihyā' al-sunna*), launched in Baghdad more than a century earlier in face of the political and spiritual decline of the Sunna. Muslim rulers who participated in combat against the Franks were presented in the double roles of *mujāhidūn* (jihād warriors) and patrons or revivers of religion.

In practical terms, the counter-crusade went hand in hand with the reunification of Muslim territories in Syria and Mesopotamia. At times, the religious aspects of jihād were no doubt exploited as an ideological cover for the expansionist policies of rulers and for the usurpation of power from their political rivals. Most of Saladin's successors, the later Ayyūbids (1193–1260), preferred negotiation, accommodation, and commercial relations to military campaigns or were too preoccupied with internal struggles within the Ayyūbid confederation. Religious scholars, however, continued to propagate jihād in writing and in public preaching. Occasionally, they confronted rulers for their lack of commitment to the Islamic cause or mobilized the populace to raid Frankish territory. The Mamlūk sultanate in Egypt and Syria showed an invigorated interest in jihād and achieved a series of victories over the Franks, concluding with their final expulsion from the Levant in 1291.

A major role in the theorization of jihād in Mamlūk times was played by the Damascene Ḥanbalī scholar Ibn Taymiyya (d. 1328), who presented war against the infidels within a comprehensive framework, calling for the purification of Islam from all "contaminations" and the return to true Prophetic tradition. Saladin's jihād for Jerusalem and Ibn Taymiyya's theory of jihād inspired latter-day

political-religious movements in Islam, and they continue to do so today.

Jogaila

Grand duke of Lithuania (1377–1392), king of Poland (1386–1434), and suzerain of Lithuania (1392–1434), who made Lithuania into a Christian state and united Lithuania and Poland in personal union, thus accumulating power sufficient to crush the Teutonic Order.

Jogaila (Pol. *Władysław Jagiełło*, Russ. *Yagailo*) was born around 1351, the son of Algirdas, grand duke of Lithuania, and Juliana, princess of Tver.

Jogaila succeeded to the Lithuanian throne after his father's death, supported by Kęstutis, duke of Trakai, the most powerful of Algirdas's brothers. However, in 1380 war with Moscow, which supported Jogaila's rebellious brothers, forced Jogaila to conclude a secret armistice with the Teutonic Order, from which Kęstutis was excluded. The order passed this information to Kęstutis, thus provoking an internal war in Lithuania. Kęstutis overthrew Jogaila in 1381, but in 1382 Jogaila captured Kęstutis and his son Vytautas; Kęstutis was murdered in prison. In return for the support

John I of Cyprus (II of Jerusalem) (d. 1285)

of the Teutonic Order in this dispute, Jogaila had to conclude agreements at Dubysa on 31 October 1382, undertaking to accept Christianity and to cede Samogitia to the order. Later Jogaila refused to confirm these treaties, and the order declared war on 30 July 1383 on behalf of Vytautas, who escaped from his captivity.

In July 1384 Jogaila reached a reconciliation with Vytautas. By the Treaty of Krewo on 14 August 1385 he arranged to marry Jadwiga, heiress to the kingdom of Poland, and accept the Polish crown. Jogaila's baptism (with the name Władysław II), marriage, and coronation took place in February and March 1386. In 1387 Jogaila accepted Christianity for Lithuania and appointed his brother Skirgaila as his vicegerent. But Vytautas was dissatisfied with the position he received in Lithuania and fled to Prussia again to continue his fight against Jogaila. On 5 August 1392 Jogaila was forced to recognize Vytautas as his vicegerent and actual ruler of Lithuania. From this moment Jogaila and Vytautas jointly fought against the Teutonic Order, which continued its attacks on Lithuania despite the grand duchy's acceptance of Christianity.

In 1401 Jogaila officially recognized Vytautas as grand duke of Lithuania by the Treaty of Vilnius-Radom. Jogaila supported Vytautas in his war against the Teutonic Order (1409–1411), and together they led the Polish and Lithuanian armies to Prussia, where the order suffered its fatal defeat at the battle of Tannenberg (Grunwald) on 15 July 1410. According to the peace treaty of 1411, Poland and Lithuania regained their recently lost lands: Dobrin and Samogitia. Having reestablished the University of Kraków (1400), Jogaila used its intellectual potential in his diplomatic fight against the Teutonic Order concerning the status of the disputed lands. Jogaila's delegation to the church's Council of Constance successfully dismissed the claims of the order and promoted the establishment of a diocese for Samogitia (1417). However, diplomatic efforts achieved few practical results, and in 1422 Jogaila and Vytautas attacked Prussia again, forcing the order to recognize the Lithuanian claims to Samogitia.

Jogaila died on 1 June 1434 in Horodok (in mod. Ukraine). He was married four times: to Jadwiga of Anjou (d. 1399), Anna of Cilli (d. 1416), Elisabeth of Pilica (d. 1420), and Sophia of Halshany (d. 1461), the latter a representative of the Lithuanian nobility and mother of Jogaila's successors Władysław III and Kazimierz IV.

John I of Cyprus (II of Jerusalem) (d. 1285)

King of Cyprus and Jerusalem (1284–1285).

John was the eldest son of Hugh III, king of Cyprus (I of Jerusalem), and Isabella of Ibelin. John received his Cypriot crown in Nicosia (mod. Lefkosia, Cyprus) on 11 May 1284, but the belief that he was crowned king of Jerusalem in Tyre (mod. Sôur, Lebanon) appears to be false and does not pre-date the sixteenth century. Later rumors that John's death on 20 May 1285 was caused by an incurable disease or poisoning also seem untrue.

Had he lived longer, John might have succeeded in gaining control over Acre (mod. 'Akko, Israel), the effective capital of the kingdom of Jerusalem. However, the city was held by the representatives of Charles I of Anjou, king of Sicily, John's rival for the throne of Jerusalem. Charles's power had suffered a severe blow after he lost the island of Sicily to Peter III of Aragon in the uprising known as the Sicilian Vespers (1282). Charles's death (7 January 1285) presumably gave John hope of regaining Acre in the way that his brother and successor, Henry II, eventually did in 1286.

John's reign also witnessed a deterioration in relations with the Muslims: in the same month that he died, Sultan Qalāwūn of Egypt captured the Hospitaller fortress of Margat, the first major Christian territorial loss since 1271.

John II of Cyprus (1414–1458)

King of Cyprus and titular king of Jerusalem and Cilicia (1432–1458).

John was the son of King Janus of Cyprus and his second wife, Charlotte of Bourbon. War indemnities and the continuing occupation of the port of Famagusta (mod. Ammochostos, Cyprus) by the Genoese, combined with the imposition of Egyptian tribute after the Mamlūk invasion of 1426, meant that John's reign was overshadowed by economic problems.

John spent years arguing with Genoa over outstanding indemnities and made a failed attack on Famagusta in 1441. He ran up debts with Venice and had to acknowledge the suzerainty of the Mamlūk sultanate of Egypt, to which he was obliged to pay an annual tribute. The Cypriot economy was in decline, as Turkish expansion, including the conquest of Constantinople (1451), affected international trade. Appeals for Western aid proved ineffective, although the Hospitallers of Rhodes (mod. Rodos, Greece) helped to contain the Turks of southern Anatolia, where the emir of Karamania captured the Cypriot outpost of Korykos in 1448.

At home, John's marriage to Helena Palaiologina, daughter of the Greek ruler of Mistra, produced an heir, Charlotte, but caused tension between Latins and Greeks and provoked jealousy from John's illegitimate son James. In 1457 James fled into exile briefly when he was accused of murdering Helena's foster brother. He later overthrew Charlotte, who, with her husband, Louis of Savoy, succeeded John after he died on 26 July 1458.

John II of Jerusalem

See John I of Cyprus and Jerusalem

John II Komnenos (1087–1143)

Byzantine emperor (1118–1143).

The son of Emperor Alexios I Komnenos and Irene Doukaina, John succeeded his father on 15 August 1118 against the wishes of his mother and his sister Anna Komnene, both of whom favored the latter's husband, Nikephoros Bryennios. After undertaking campaigns in the Balkans against the nomadic Pechenegs (1122) and the Serbs and Hungarians (1127–1129), John continued his father's work of reconquest in Asia Minor. His main problem was in dealing with the nomadic Turcomans; the Saljūq emirs were willing to accept him as an overlord. In 1130–1135 and 1139–1142, he fought the Dānishmendids in northern Anatolia, temporarily capturing Kastamoni and Gangra. In western Asia Minor, his recapture of Sozopolis of Pisidia (mod. Uluborlu, Turkey) and Laodikeia in Phrygia (near mod. Denizli, Turkey) established a safe land route from the Maeander Valley to the port of Attaleia (mod. Antalya, Turkey) on the southern coast, an important link with Cilicia and Cyprus.

John was also concerned to implement the terms of the Treaty of Devol (1108) and to regain control of Antioch (mod. Antakya, Turkey) from the Franks. To this end, he made alliances with the German rulers Lothar III and Conrad III against the Normans of Sicily in order to prevent them from becoming actively involved in the affairs of the Holy Land. He also made friendly overtures to Pope Innocent II on the subject of church union, hoping to gain papal recognition for the role of the Byzantine emperor as the protector of Eastern Christians and an end to the Latin patriarchates in Jerusalem and Antioch.

In 1135, John attempted to arrange a marriage between his youngest son, Manuel, and Constance, the heiress of Antioch, as part of a wider plan to create a domain for Manuel including Antioch, Cilicia, Attaleia, and Cyprus. After this proposal failed, John marched to Antioch and invested it in 1137. He undertook a joint campaign into Syria with Raymond of Poitiers, who had married Constance and thus become prince of Antioch, and Joscelin II of Edessa, but this enterprise failed amid mutual recriminations. On his return to Antioch, John was forced to withdraw after anti-Byzantine riots were stirred up by the two Frankish princes (1138).

In 1142, John again threatened Antioch, but the campaign was abruptly ended by his death the next year, supposedly in a hunting accident, but possibly as the result of a plot against him involving Western mercenaries. John is por-

John III Vatatzes (d. 1254)

trayed, together with his wife, Irene (Piroshka of Hungary), and his son Alexios in a mosaic that still survives in the Church of Hagia Sophia in Constantinople (mod. İstanbul, Turkey).

John III Vatatzes (d. 1254)

Emperor of Nicaea (1222–1254), and major opponent of the Latin empire of Constantinople.

John was born around 1192 and succeeded to the throne of Nicaea on the death of Emperor Theodore I Laskaris, whose daughter Irene he had married. John followed a successful economic policy based on autarky, which led to prosperity for both the state and the people of the empire. That prosperity enabled him to assemble a powerful fleet and buy the services of Western mercenaries. In a series of successful military campaigns against the Latin empire of Constantinople and the principality of Epiros, he expanded the territorial possessions of the Nicaean Empire into Thrace and Macedonia. In 1234–1236 he besieged Constantinople with the help of his ally, the Bulgarian tsar Ivan Asen II, but without success. In 1232 John encouraged Germanos II, the exiled Greek patriarch of Constantinople, to open negotiations with the papacy on the issue of the reunification of the Greek Orthodox and Latin churches. John believed that the pope was prepared to withdraw his support from the Latin Empire if the two churches agreed on reunification. For that reason he took an active part in the negotiations, which lasted to the end of his reign, but in the end no agreement was signed. At the same time that he was negotiating with Rome, John was working on strengthening his military and financial relationship with Frederick II, Holy Roman Emperor and king of Sicily, whose daughter Constance (Greek name: Anna) he married (1240/1241).

John died at Nymphaion (mod. Kemalpaşa, Turkey) in Asia Minor on 4 November 1254, leaving the Empire of Nicaea as the strongest power in the region. In the seventeenth century he was canonized by the Greek Orthodox Church.

John V of Oxeia

Greek Orthodox patriarch of Antioch (1089–1118).

John was a monk in the monastery of Oxeia on the Sea of Marmara when he was appointed patriarch of Antioch (mod. Antakya, Turkey) by Alexios I Komnenos, the Byzantine emperor, perhaps at the instigation of the influential empress-mother Anne Dalassena. In September 1089 he participated as newly ordained patriarch in a synod convoked by Patriarch Nicholas III Grammatikos of Constantinople to discuss a letter of Pope Urban II, in which the Pope requested the introduction of his name in the diptychs of the Greek Orthodox church. At this synod John criticized frankly many abuses in church, state, and society.

Diplomatic contacts between Emperor Alexios and the Saljūq sultan Malik Shāh I enabled John to travel via Cyprus to Antioch in autumn 1091 to take up his appointment as patriarch under Turkish rule. After the conquest of the city (4 June 1098) by the armies of the First Crusade, the crusaders recognized John as the legal patriarch, but during the next two years his relationship with the Latins deteriorated. After the capture of Prince Bohemund I of Antioch by the Turks in August 1100, the Latins suspected that John was planning to hand over the city to Alexios Komnenos. They forced him to withdraw to Constantinople, where he abdicated from the patriarchate in October 1100. Around 1112 he wrote a treatise against the use of unleavened bread (*azymes*) in the Eucharist by the Latins.

John V Palaiologos (1332–1391)

Byzantine emperor (1341–1391).

John V was born on 18 June 1332, the son of Emperor Andronikos III Palaiologos and Anne of Savoy. He acceded to the throne as a child of nine but did not exercise power until 1354. By that time the Byzantine Empire had been devastated by a series of protracted civil wars and reduced to little more than Thrace and the city of Constantinople (mod. İstanbul, Turkey). Worse still, the Ottoman Turks had captured the strategically vital city of Gallipoli (mod. Gelibolu, Turkey), thus gaining a foothold on the European side of the Bosphorus from which to begin their conquest of the Balkans.

On the advice of Amadeus VI, count of Savoy, who in 1366 had recaptured Gallipoli, John decided to open negotiations with the papacy. He offered to end the schism between the Eastern and Western churches, if the pope would preach a crusade against the empire’s Turkish enemies. In 1369, John himself led a delegation to Rome, where he declared himself converted to the Roman Catholic faith and heard mass with the pope. Little practical help reached Constantinople as a result of John’s visit, however, and the Ottoman victory over the Serbs at the Marica in 1371 forced the emperor to change his policy.

By 1373 John had become a vassal of Sultan Murad I, paying tribute and providing troops to serve in the Ottoman army. John’s rule was also destabilized by rebellions by his son Andronikos IV (d. 1385) in 1376–1379 and by his grandson John VII (d. 1408) in 1390. On his death John was succeeded by his second son, Manuel II.

John VIII Palaiologos (1392–1448)

Byzantine emperor (1425–1448). John’s long and eventful reign over a truncated empire, consisting of Constantinople (mod. İstanbul, Turkey) plus environs and the despotate of the Morea, witnessed the last major attempt at church union and the last massive crusade of the West against the Ottoman Empire.

Co-emperor with his father Manuel II from 1421, John experienced the military advance of the Ottomans in Greece: the siege of Constantinople (1422), invasions of the Morea (1423 and 1431), and the capture of Thessalonica and Ioannina (1430); during his visit to Venice and Hungary (1423), he desperately tried to secure Western help, a policy that he pursued more intensely following his father’s death (1425). In 1426–1427 he led a successful campaign in the Morea against Carlo I Tocco, lord of Kephallenia and Epiros, who had seized the fortress of Glarentza, while in 1429–1430 he took part in the campaign of his brother Constantine, despot of Morea, which captured Patras, thus ending the rule of the Latin principality of Achaia in the Peloponnese.

Following negotiations in 1437 with Pope Eugenius IV, John led the Byzantine delegation to the Council of Ferrara-Florence (1438–1439), yet, despite the official proclamation of union of the Latin and Greek churches (July 1439), his policy was never implemented in Byzantium due to staunch opposition led by the anti-unionists. Moreover, the fleeting hopes of a decisive Western crusade against Ottoman expansion in the Balkans, launched in 1443 under King Ladislas I of Hungary, were checked following the defeat of the Crusade of Varna (November 1444) at the hands of Sultan Murad II.

John of Beirut (d. 1236)

The sultan's aged general Turakhan Beg then conducted a punitive expedition in southern Greece and the Morea (1446), forcing the despot Constantine to become his vassal. Finally, news of the defeat of John Hunyadi by the Ottomans at the second battle of Kosovo (1448) struck the final blow against the frustrated John, who died on 31 October of the same year.

John of Beirut (d. 1236)

John of Ibelin, lord of Beirut (1200/1205–1236), sometimes known as the "Old Lord" of Beirut, was a leading member of the nobility in the kingdoms of Jerusalem and Cyprus.

John was born around 1179 as the elder son of Balian of Ibelin and Maria Komnene. Thanks no doubt to the influence of his mother and his uterine half-sister, Queen Isabella I of Jerusalem (d. 1205), John had been appointed constable of Jerusalem by 1198. Then, sometime between 1200 and 1205, he was able to exchange this office for the lordship of Beirut, recovered from the Muslims in 1197. On the death of King Aimery in 1205, he acted as regent for the heiress to the throne, Maria of Montferrat (d. 1212), but when in 1210 Maria married John of Brienne, John was evidently excluded from the circle of the new king's intimates. Nevertheless, he and his brother Philip transferred their activities to Cyprus, where the king, Hugh I, was the son of their first cousin, Eschiva of Ibelin, and his queen, Alice of Champagne, their niece. John was able to build up Beirut as a commercial cen-

ter. From 1218 he clearly worked closely with Philip, who was now acting as regent in Cyprus on behalf of Queen Alice for the infant Henry I (1218–1254).

In 1228, shortly after Philip's death, growing political difficulties in Cyprus came to a head with the arrival of Frederick II, the Holy Roman Emperor. Frederick, as suzerain of Cyprus, tried to undermine John's position by demanding that he render account for the regency and surrender Beirut. He then had John's Cypriot enemies installed as governors in Cyprus. The result was civil war, which broke out immediately after Frederick's departure in 1229. John succeeded in taking control in the island and then fending off a counterattack led by Frederick's representative in the East, Richard Filangieri. By 1233 John and his supporters were supreme in Cyprus and controlled the kingdom of Jerusalem, except for Jerusalem itself and Tyre (mod. Soûr, Lebanon).

Although his apologist, Philip of Novara, portrays John as whiter than white, it is clear that John used violence and intimidation to maintain his position and that the legality of his maneuvers was frequently in doubt. He died in 1236, bequeathing a dominant position in both Cyprus and the kingdom of Jerusalem to his sons.

John of Brienne (d. 1237)

King of Jerusalem (1210–1212) as consort to Maria of Montferrat ("la Marquise"), queen of Jerusalem, and subsequently regent (1212–1225) for their daughter, Isabella II. John ended his career as Latin emperor of Constantinople (1231–1237).

John was the fourth son of Erard II, count of Brienne in Champagne. In 1208, he was chosen either by Philip II of France or by the High Court of the kingdom of Jerusalem to marry the heiress to that realm, Maria ("la Marquise") of Montferrat. He has often been regarded as a poor choice, as he was without the resources to support the kingdom, and some considered him too old for the task, though on his

marriage he was probably only in his thirties. He had military prowess, a family with a crusading pedigree, and the support of Philip II of France, Pope Innocent III, and his fellow Champenois lords, together with a kinsman already prominent in the East (Walter of Montbéliard) to recommend him.

On 13 September 1210, John reached Acre with 300 knights. He married Maria on the following day, and they were crowned in Tyre on 3 October 1210. John soon led his force on a raid into the hinterland but achieved little; in May 1211 he secured a six-year truce with the Muslims. In 1211 or 1212, a daughter, Isabella (II), was born to the couple, and Maria died. John was no longer king, but regent for his daughter. However, he continued to style himself “king” and was recognized as such by the church, although he may have encountered opposition from the Frankish barons.

In 1214 John formed an alliance with the kingdom of Cilicia through marriage to Stephanie, the eldest daughter of King Leon I. John took a prominent part in the Egyptian campaign of the Fifth Crusade (1217–1221), but he clashed with Pelagius, the papal legate, over its direction. When Leon died in 1219, John withdrew from the crusade army to pursue a claim to the Cilician throne, but he rejoined the crusaders when both Stephanie and their son died.

In March 1223 John attended a conference held at Ferentino in Italy with Pope Honorius III, the Holy Roman Emperor Frederick II, and other representatives from Outremer. It was agreed that Frederick would marry John’s daughter Isabella. John then toured Europe seeking assistance for the Franks in Outremer and, in 1224, married Berengaria, sister of Ferdinand III of Castile. In November 1225, Isabella was married to Frederick II, who then demanded that John surrender the kingdom of Jerusalem to him, to which he was forced to accede. In 1228–1229 Frederick, who was also king of Sicily, had to curtail an expedition to the Holy Land when John led a papal army against his territories.

In 1228 Robert, the Latin emperor of Constantinople, died, leaving an eleven-year-old heir, Baldwin II. The regency council needed a military leader to defend the empire at a crucial juncture and, in April 1229, it was agreed that John’s daughter by Berengaria, Mary, should marry the young emperor, while John would become co-emperor for life. In 1231, John was crowned in Constantinople. The empire was impoverished and suffered constant attack and, despite some minor victories, was still in danger at the time

of John’s death. In 1237 he took holy orders with the Franciscans, whom he had patronized, and he died on 23 March.

John the Fearless

See John of Nevers

John of Gaunt (1340–1399)

Leader of a “crusade” in Spain in 1386–1387, which was intended to realize his claim to the crown of Castile. The fourth son of Edward III of England, John was known after his place of birth, Ghent (Fr. *Gand*) in Flanders.

John of Gaunt, Duke of Lancaster. (Bettmann/Corbis)

John of Jaffa (1215–1266)

John was created duke of Lancaster in 1362, and acquired a strong claim to the Castilian throne through his marriage (1372) to Constanza, daughter of King Peter the Cruel. John's expedition against Castile was dignified as a crusade as a result of the Great Schism: the Roman pope, Urban VI, supported John because the pro-French king of Castile, Henry of Trastámara, recognized the Avignon pope, Clement VII. Urbanist bishops were installed in the Galician cities captured by John and his Portuguese allies. However, the invasion failed to threaten the Castilian heartland, and was abandoned.

John of Gaunt was one of the patrons of Philippe de Mézières's Order of the Passion, established in the 1390s to promote Anglo-French unity in the common cause of the crusade. According to a plan of 1395, John was intended to be one of the leaders of a crusade against the Ottomans. In the event, however, there was little or no English involvement in the disastrous French crusade to Nikopolis in 1396.

John of Jaffa (1215–1266)

John of Ibelin, count of Jaffa (1246/1247–1266), was the author of a famous treatise on the laws and customs of the High Court of the kingdom of Jerusalem, known simply as *Livre de Jean d'Ibelin*.

Written in Old French in the 1260s, John's treatise provides by far the most detailed account of court procedures and the laws of vassalage and fief-holding in Outremer. What would today be termed an appendix has details of the coronation ritual, the functions of the great officers of state, the structure of the ecclesiastical hierarchy, the location of the secular courts, and the military obligations of the kingdom as they existed on the eve of its collapse in 1187. In 1369 a version of the treatise was made an official work of reference in the High Court of Cyprus, and in the sixteenth century the Venetian authorities in the island had it translated into Italian.

As the son of Philip of Ibelin, regent of Cyprus in the 1220s, John was the leading representative of the cadet branch of the Ibelin family. Too young to play much part in the civil war in Cyprus in 1229–1233, John soon established himself as a prominent vassal of King Henry I (1218–1254). Indeed, he and Henry both married sisters of King Het'um

I of Cilicia. In 1246 or 1247 Henry gave John the county of Jaffa in Palestine, property that had been his mother's dower, and John thereafter employed the title "count of Jaffa and Ascalon and lord of Ramla" until his death. John never seems to have had possession of Ascalon (mod. Tel Ashqelon, Israel), which was lost to the Muslims in 1247, but the cost of defending Jaffa (mod. Tel Aviv-Yafo, Israel) proved crippling. He nevertheless played the part of a leading aristocrat: the French chronicler John of Joinville, for example, commented on the conspicuous display of his coat of arms both at Damietta in 1249, during the crusade of Louis IX of France, and at Jaffa.

In the mid-1250s John was briefly *bailli* (regent) in Acre (mod. 'Akko, Israel), acting nominally on behalf of the absentee king, Conrad of Staufen. In 1258 he intervened decisively in the War of St. Sabas to bring the government in Acre over to the side of the Genoese. At about the same time he appears to have taken Plaisance of Antioch, Henry I's widow and the mother of the infant King Hugh II, as his mistress.

In the closing years of John's life, the Mamlūk sultanate under Baybars I (d. 1277) was growing in power, and in 1268, just over a year after his death, Jaffa was taken by assault. John's descendants thereafter lived in Cyprus, where they held important estates, including Episkopi and Peristerona in Morphou. The line appears to have died out in the 1360s.

John of Joinville

See Joinville, John of

John of Luxembourg (1296–1346)

King of Bohemia (1310–1346) and leader of three crusade expeditions against the pagan Lithuanians (1328–1329, 1337, and 1345).

John was born on 10 August 1296, the son of Henry, count of Luxembourg, later Holy Roman Emperor (as Henry VII), and Margaret of Brabant. In 1310 Henry accepted a proposal from a party in the kingdom of Bohemia that John should marry Elizabeth, sister of King Wenceslas III, who had died in 1306 without a male heir. In the following year John was crowned king of Bohemia; he confirmed the liberties of the native lords and promised not to give lands or offices to foreigners. When John broke these undertakings, he was soon faced with rebellion. However, he was able to maintain his royal authority in Bohemia with the help of his allies, including the military orders.

On his father's death (1313) John and his uncle Archbishop Baldwin of Trier voted for Ludwig (IV) of Bavaria as the next king of the Romans (1314), and John contributed decisively to the defeat of the rival king-elect, Frederick "the Fair," duke of Austria, at Mühldorf in 1322. Often absent from Bohemia, John left the government to the nobles, to his wife Elizabeth (until her death in 1330), and then to his eldest son Charles, margrave of Moravia since 1333. Although he lost one eye in 1337 and the other, owing to bad surgery at Montpellier, in 1340, he continued to live the life of a knight errant all over Latin Christendom, from Toulouse to Prussia. In this respect he may be compared with contemporaries such as Humbert II, dauphin of Viennois, or Amadeus VI, the "Green Count" of Savoy.

As count of Luxembourg John enjoyed good contacts with Karl von Trier, grand master of the Teutonic Order, whom he defended at the papal Curia against complaints by the archbishop of Riga that the order tried to conquer the Lithuanians rather than convert them. To please the papacy, John promised a crusade in 1325. In fact he went to Prussia to fight alongside the Teutonic Order against the Lithuanians on three occasions between 1328 and 1345. This enhanced John's reputation, and put pressure on the kings of Poland, Władysław I Łokietek and his son Kazimierz III. The campaigns brought several hundred fighters to Prussia, including many lesser princes, and usually started in January. The winter had to be not too cold for men to relieve themselves in the open air, and not too snowy for riding, but sharp enough to congeal the bogs, to harden the ground, and to freeze the rivers. In 1328–1329 the French poet Guillaume de Machaut was in John's retinue. John insisted on sparing 6,000 Samogitians who had surrendered at Medewage, and half of them are said to have been baptized. This campaign was abandoned when Władysław Łokietek

resumed hostilities; only in 1335 was peace made between John and Władysław's son Kazimierz when John renounced his claims to the Polish throne and Kazimierz renounced his claims to Silesia.

In 1337 John was accompanied by his son-in-law Duke Henry XIV of Bavaria, and a fortification called Baierburg was built against the Lithuanians on the river Nemunas. In 1341 the dying grand master Dietrich von Altenberg consigned the Teutonic Order to John's protection. In 1344–1345 John's son Charles, King Louis of Hungary, Duke Peter of Bourbon, Count William IV of Holland, and Burgrave John of Nuremberg participated in an attack on Lithuanian strongholds at Wilau and Pisten, which failed when false rumors of a Lithuanian counterattack on Königsberg (mod. Kaliningrad, Russia) reached the army and incipient thawing stopped the fighting. Returning to Bohemia, John's son Charles was arrested by Kazimierz III of Poland, but managed to escape. This led to a short war between Bohemia and Poland.

As count of Luxembourg, John always maintained close relations with the French court. Together with the kings of France and Navarre, John pledged a crusade in 1334: this was meant to be a naval expedition against the Muslims in the Levant, but never materialized. Papal support secured the election of John's son Charles (IV) as king of the Romans on 11 July 1346. Charles accompanied his father to Crécy, where, on 26 August 1346, the blind king of Bohemia died fighting bravely for Philip VI of France against the English in one of the major battles of the Hundred Years' War.

John of Nevers (1371–1419)

John the Fearless (Fr. *Jean sans Peur*), count of Nevers and later second duke of Burgundy (1404–1419) of the Valois line, was the leader of the Burgundian army in the Crusade of Nikopolis (1396).

John was the eldest son of Philip the Bold, duke of Burgundy (d. 1404), and Margaret of Flanders. He was given the county of Nevers in 1383. After Philip's idea of going on crusade with Louis, duke of Orléans, and John of Gaunt, duke of Lancaster, foundered (1395), the French royal court produced a new plan to launch a campaign against the Ottoman Turks. Duke Philip gave the leadership of the Burgundian forces to John, who left Dijon on 30 April 1396 and joined forces with King Sigismund of Hungary at Buda in July. John was knighted at Vidin, and the united Christian forces reached Nikopolis (mod. Nikopol, Bulgaria) on the Danube on 10 September. A disastrous battle with the Turks took place on 25 September, in which John was taken prisoner. He was liberated on 24 June 1397 after a ransom was paid. He came back to France via Venice. John became duke of Burgundy in 1404 and count of Flanders in 1405; he was assassinated at Montreaux in 1419. He was succeeded by his son Philip the Good.

John of Piano Carpini (d. 1252)

A Franciscan missionary and one of the first European explorers, who reached the Mongol Empire in the thirteenth century and described his journey in his *Historia Mongolorum quos nos Tartaros appellamus*.

Born in a place called Piano del Carpine (mod. Piano della Magione, Italy) near Perugia, John joined the Franciscan Order as the one of the first disciples of St. Francis of Assisi. After the general chapter of the order in 1221, John was sent to Germany, where he was active in founding new Franciscan monasteries in the Rhineland and Saxony. Soon he became the head (Lat. *custos*) of the newly established Franciscan province of Saxony (1222) and later minister of the province of Teutonia (1228). In 1230 he visited Spain for a short time, but in 1232 he was again in Germany. There are few documents about his life between 1239 and 1245.

John was nominated as an envoy to the Mongols by Pope Innocent IV and left Lyons in April 1245. At Breslau in Silesia (mod. Wrocław, Poland) he was joined by a Franciscan friar from Poland called Benedict, who was to act as his interpreter. After a journey of over 100 days in difficult and dangerous conditions, they reached the court of the Mongol great khan near Qaraqorum in July 1245. They witnessed the election and enthronement of the new khan Kuyuk by the great *kurultai* (diet of tribal representatives). They were presented to him, and in November 1246 they began their return journey in heavy winter weather. In June 1247 they reached Kiev (mod. Kyiv, Ukraine), the capital of Russia, and finally returned to Lyons in November 1247, where they met the pope. John wrote a description of this journey, known as *Historia Mongalorum*, in two versions: a shorter one, probably written during the journey, and a longer one, made after his return to Rome.

In February or March 1248 the Pope sent John on a diplomatic mission once again, this time to King Louis IX of France, after which he was named as archbishop of Baru (Antivari) in Dalmatia (1248). However, as a consequence of disputes with his cathedral chapter, he was obliged to resign from his office. He died on 1 August 1252, most probably in Perugia.

John of Würzburg

A German pilgrim to Jerusalem and author of a Latin description of the Holy Land.

A priest from the bishopric of Würzburg in Franconia, John probably wrote his work around the year 1170 and dedicated it to a fellow cleric named Theoderic. While drawing on some earlier sources, it gives extensive original descriptions of the topography and architecture of many of the churches, monasteries, and other holy sites in and around the city of Jerusalem at the time of John's visit. It also gives some details of the history of the kingdom of Jerusalem up to that time, although John evidently felt strongly that the part played by the Germans in the crusader conquest of the Holy Land had been unjustly neglected and even concealed by the Frankish inhabitants of Outremer.

Joinville, John of (1224/1225–1317)

Author of a life of Louis IX of France that is the main source for the king's two crusades.

John was born in 1224 or 1225 at Joinville-sur-Marne, the second son of Simon of Joinville, seneschal of Champagne.

He succeeded his father as seneschal in 1233. He met Louis IX in Saumur in 1241 and joined him on his crusade to the East (1248–1254), but refused to participate in his crusade against Tunis (1270). In 1282 he testified before a papal commission dealing with the canonization of Louis IX. He died in 1317 in Joinville.

Joinville was the author of an explanation of the creed and probably of a *Chanson d'Acre*, but his most important work was his life of Louis IX, entitled *Livre de saintes paroles et des bons faiz nostre saint roy Looys*, or more commonly, *Vie de saint Louis*, completed in 1309. It was commissioned by Joan of Navarre, wife of Philip IV of France, and dedicated to their son, Louis X. The life consists of two parts of unequal length. The first shows how the Christian faith and the concern for the well-being of the kingdom were the driving forces behind Louis IX's reign. The second, and longer, part presents episodes from the king's life: his youth and an early revolt of the barons; the taking of the cross after a severe illness, the crusade to Egypt, and the king's captivity; his accomplishments as an administrator in Outremer, return to the West, and subsequent government of France; and finally the ill-fated crusade against Tunis and the king's death (1270) and canonization (1297).

For events after 1254, Joinville relied on the *Grandes Chroniques de France*. Despite the author's admiration for the king, his life of Louis is not without criticism. It is a collection of Joinville's memories regarding Louis IX, a blend of biography, autobiography, and history with an emphasis on chivalrous virtues. The original manuscript is lost. The principal copy (MS. Paris, Bibliothèque nationale de France, fr.13568, fourteenth century) was missing from 1487 until 1746. The first edition (1547) was based on a different copy of inferior quality. This and subsequent editions have been superseded by that of Monfrin (1995).

Massacre of the French by Turks during the Crusades of St. Louis. (Library of Congress)

Joscelin I of Courtenay (d. 1131)

One of the leading Frankish lords of Outremer, Joscelin was sequentially lord of Turbessel (1101–1113), lord of Tiberias (1113–1119), and count of Edessa (1119–1131).

Of Joscelin's youth little is known except that his family ruled the lordship of Courtenay in the Gâtinais in central France. Through his mother, Elizabeth, he was related to the Montlhéry family, whose members had great impact on the early history of Outremer. Joscelin came to Syria in the Crusade of 1101 with Arpin of Bourges and his uncle Milo of Bray. There he joined his cousin Baldwin II (of Bourcq),

count of Edessa, who endowed him with substantial lands around Turbessel (mod. Tellbaşar Kalesi, Turkey) in the western half of the county.

Suddenly one of the most powerful men in northern Syria, Joscelin became his cousin's main supporter. He was captured along with Baldwin at the battle of Harran on 7 May 1104 and held for ransom by the Artuqid ruler Suqmān ibn Artuq in Ḥisn Kayfā. Following Suqmān's death, Joscelin fell into the hands of Suqmān's brother İlghāzī. In 1106 or early 1107, Joscelin obtained his release and went to Edessa (mod. Şanlıurfa, Turkey) to gather the ransom for

Baldwin. He returned to captivity as a condition of Baldwin's release in 1108, but was freed a short time later. However, on their return to Edessa, the two cousins found that Tancred, who had acted as regent during their captivity, was unwilling to relinquish control of the county. Both sides called upon Turkish allies, and fighting ended only when Baldwin I of Jerusalem pressured Tancred to return Edessa to Baldwin of Bourcq.

In 1110 Mawdūd, *atabeg* of Mosul, started an attempt to expel the Franks from northern Syria, returning annually until his assassination in 1113. He attacked Turbessel in 1111. Most of his attacks, however, targeted the more accessible Frankish lands east of the Euphrates, especially Edessa and its environs. In 1113 Baldwin seized all of Joscelin's lands, outraged by the prosperity he enjoyed while Baldwin himself suffered raid after raid. Joscelin fled to Jerusalem, where King Baldwin I gave him the lordship of Tiberias. Concerning this period of his life we know little. Despite the confiscation of his Edessan lands, Joscelin supported Baldwin of Bourcq for the throne of Jerusalem following Baldwin I's death in 1118. Baldwin rewarded him the following year with the county of Edessa.

As count of Edessa, Joscelin was a vigorous military leader. His attacks on Aleppo led to a treaty in 1121, gaining for Edessa the northern part of Aleppo's territories as well as a portion of its suburbs. However, Joscelin's domination of northern Syria did not last long. On 13 September 1122 he and his cousin Waleran of Le Puiset were captured by the forces of Nūr al-Dawla Balak, ruler of Aleppo, and imprisoned in Harput, a fortress northeast of Melitene (mod. Malatya, Turkey). Baldwin II came north to act as regent of Edessa and Antioch, but in April 1123 he fell captive himself, joining Joscelin and Waleran in Harput. A group of Armenian soldiers from Besni mounted an operation to rescue Baldwin and Joscelin in May 1123. In disguise, they seized control of the citadel and of Balak's family, but before they could free the captives and escape, Balak returned with his troops and besieged the fortress. Joscelin and three Armenian companions slipped out under the cover of night, and Balak recaptured Harput on 16 September 1123, massacring many of the Franks and Armenians.

In the absence of the king, the defense of Antioch as well as Edessa fell to Joscelin. He launched attacks on Balak's territories and allied with his Muslim enemies, such as Ḥasan of Manbij. Meanwhile, Joscelin and Queen Morphie of Jerusalem gained Baldwin's release on 24 June 1124, in

exchange for a large ransom, the fortress of Azaz, and seventeen Frankish hostages, who included Joscelin's young son, Joscelin II. Waleran remained in Turkish custody and was subsequently executed. With the help of Baldwin II, Joscelin once again dominated northern Syria, defeating Aq Sunqūr, atabeg of Mosul, in the battle of Azaz on 11 June 1125.

The arrival in 1127 of the young heir to Antioch, Bohemund II, spurred Joscelin to attack the principality. Joscelin had grown accustomed to exercising considerable influence in Antioch since Baldwin II's return to Jerusalem in 1125. Again, the intervention of Baldwin II was necessary to establish peace. Following Bohemund II's death in battle in February 1130, Joscelin regained influence over Antioch when he was made regent by Baldwin II as a check against Bohemund's ambitious widow, Alice.

Joscelin married twice, though there is little information about either marriage. His first wife was the daughter of Rupen of Cilicia and the mother of Joscelin II. Sometime before 1119, Joscelin I married Maria, sister of Roger of Antioch, who was the mother of his daughter Stephanie, later abbess of St. Mary Major in Jerusalem. Testaments to Joscelin I's courage and martial prowess appear in Latin, Arabic, Armenian, and Syriac chronicles.

Despite some complaints, local Christian chroniclers praise Joscelin for defending Edessa, acclaiming him as their leader, not a foreigner to whom they owed no allegiance. Under his rule, Armenian elites continued to hold lordships as well as to occupy administrative posts. Joscelin supported the Syrian Orthodox bishop of Edessa in his quarrels with his patriarch, and in 1129 he ensured the election of a sympathetic Syrian Orthodox patriarch by holding the election in the Latin church at Turbessel.

A story about Joscelin's death conveys something of his character. Joscelin was seriously injured by the fall of a tower while besieging a castle near Aleppo in 1131. As he hovered near death, the Saljūq sultan of Rūm besieged Kesoun (mod. Keysun, Turkey). Joscelin's son Joscelin II refused to take to the field because of the size of the opposing army, and so the ailing count had himself carried to the battlefield in a litter; his reputation in battle was sufficient for the sultan to order a retreat. On his return from the battlefield, he died.

Joscelin II of Courtenay (d. 1159)

Fourth and last ruling count of Edessa (1131–1159), Joscelin II saw almost all of his lands conquered by the Turkish rulers Zangī and Nūr al-Dīn.

Joscelin II was born sometime between 1113 and 1119, the son of Count Joscelin I of Edessa and an Armenian mother, the daughter of Rupen of Cilicia. From 1124 to 1125, Joscelin was a hostage at the court of Timūrtāsh, the Artūqid emir of Mardin, as part of the settlement for the release of King Baldwin II of Jerusalem. Joscelin inherited Edessa following his father's death in 1131.

For the first few years of Joscelin II's rule, the main threat to the county, Zangī, *atabeg* of Mosul, did not attack the Franks. By 1135, however, Zangī had consolidated his authority among the Turkish leaders of northern Syria and turned his attention to Antioch, conquering in rapid succession Atharib, Zardana, and Kafartab. Political strife in Antioch between the dowager princess Alice and her son-in-law Raymond of Poitiers left the principality divided, and Joscelin saw little reason to interfere, as his own territory was unaffected. By 1137, however, the threat to both Edessa and Antioch was too great to ignore. Following the death of Count Pons of Tripoli at the hands of Turkish raiders, the combined armies of Jerusalem, Tripoli, Antioch, and Edessa forced Zangī to retreat, while oaths of fealty to the Byzantine emperor by both Raymond of Antioch and Joscelin brought him into an alliance against the Turkish leader. In the spring of 1138, a united Byzantine-Frankish army recaptured Kafartab and Atharib and then besieged the independent emirate of Shaizar. The siege failed, owing to the impressive fortifications of Shaizar, the approach of Zangī's army, and the uncooperative attitudes of Joscelin and Raymond.

In 1142, Emperor John Komnenos returned to Syria to

remind Joscelin and Raymond of their oaths to him. His army camped at Turbessel (mod. Tellbaşar Kalesi, Turkey), where the count now resided in preference to the more exposed city of Edessa (mod. Şanlıurfa, Turkey), and John received Joscelin's daughter Isabella as a hostage. This alliance, however, failed to restrain Zangī's attacks. In late 1144, Zangī attacked and captured the city of Edessa while Joscelin and his army were absent. Zangī executed most of the Franks resident in the city but spared the local Armenians and Syrians. Following Zangī's assassination in September 1146, Joscelin recaptured the city (but not its citadel) with the help of the Armenian population. Zangī's son Nūr al-Dīn quickly recaptured the city and massacred its Christian population, both Frankish and local.

Having lost the eastern half of the county, Joscelin retreated to Turbessel. On 4 May 1150 Turkish soldiers ambushed him on his way to Antioch. He was imprisoned in Aleppo and died nine years later, receiving his last sacraments from a Syrian Orthodox bishop. Following his imprisonment, Mas'ūd, the sultan of Rūm, attacked what remained of the county, seizing Kesoun (mod. Keysun, Turkey), Besni, and Raban. Joscelin's widow, Beatrix, ceded the remainder of the county to Emperor Manuel I Komnenos and gave the castle of Hromgla (mod. Rumkale, Turkey) to the Armenian patriarch. Joscelin's children migrated to the kingdom of Jerusalem: Joscelin III eventually became seneschal of the kingdom, and Agnes married Hugh of Ibelin, lord of Ramla, and then (in 1157) Amalric, count of Jaffa.

Joscelin III of Courtenay

Titular count of Edessa (from 1159) and seneschal of the kingdom of Jerusalem (1176–1193).

Joscelin was born around 1134, the son of Joscelin II of Courtenay, count of Edessa, and Beatrix of Saône. The capture of his father by Nūr al-Dīn in 1150 left Joscelin and his mother as effective rulers of a county of Edessa that Turk-

ish pressure had reduced to a rump west of the Euphrates. The Turkish invasion that followed this event overran the rest of the county except for the chief stronghold of Turbessel (mod. Tellbaşar Kalesi, Turkey) and a few other fortresses, which Joscelin and Beatrix sold to the Byzantine emperor Manuel Komnenos later the same year.

The Courtenay family took refuge in the kingdom of Jerusalem, where Joscelin's sister Agnes married Amalric, younger brother of King Baldwin III, in 1157. Joscelin himself seems to have been recognized as titular count of Edessa on the death of his father in 1159 (he was usually styled "Count Joscelin" by the Jerusalem chancery). The grant to him by Baldwin III of the newly captured town of Harenc (mod. Ḥarim, Syria) between 1160 and 1163 might be regarded as an attempt to reestablish a territory for him in northern Syria. However, the defeat of the Franks by Nūr al-Dīn at Artah (1164) led to the loss of Harenc and the imprisonment of Joscelin until 1176.

Joscelin's release was procured by his sister, whose son Baldwin IV was now king of Jerusalem. On his return Joscelin was appointed seneschal of the kingdom, and through his marriage to Agnes, daughter of Henry of Milly, and various royal grants he built up a conglomeration of lands and rights in the territory northeast of Acre (mod. 'Akko, Israel) around Château du Roi, which came to be known collectively as the *Seigneurie de Joscelin* ("Lordship of Joscelin").

In the factional politics that intensified during the reign of Baldwin IV (1174–1185), Joscelin was a firm ally of the king's sister Sibyl and her second husband Guy of Lusignan. On the death of the short-lived young king Baldwin V (1186), he was instrumental in securing the joint accession of Guy and Sibyl to the throne, in defiance of Count Raymond III of Tripoli and the Ibelin family. Joscelin was rewarded with new grants of lands and money fiefs, including the lordships of Toron and Châteauneuf, while his two daughters were betrothed to members of Guy's family.

Almost all of the seneschal's lands were overrun by Saladin's forces after the battle of Hattin (1187), and the obscurity of his subsequent career is such that the date of his death cannot be determined with certainty. By 1200 the *Seigneurie de Joscelin* had passed to his elder daughter, Beatrix, and her husband Otto of Botenlauben, who later sold it to the Teutonic Order (1220); the records transferred with this sale represent the only surviving baronial archive of the kingdom of Jerusalem.

Just War

Early Christianity regarded the killing of a person as a terrible sin, and it was and continued to be subject to heavy penance. Moreover, in the Roman Empire Christianity was an illicit and occasionally persecuted religion; it is hardly surprising that its attitude toward the state was ambivalent and that it had within it a strongly pacifist current of feeling. But St. Paul had urged its adherents to respect the empire and its institutions, and this meant an acceptance of official violence that preserved the social order and defended the frontiers against the barbarians. Many soldiers became Christians and saw no incongruity in continuing in their profession.

When Emperor Constantine the Great (306–337) and his successors made Christianity the official religion of the empire, it was obvious that the pacifistic trend of thought could not be allowed to predominate. Christian leaders were in practice eager to use the coercive power of the state against their religious and political enemies. Accommodating the ideology of Christianity to its new position took longer and was essentially the work of St. Augustine of Hippo (354–430). He saw the wars of the Israelites in the Old Testament as holy wars, directly proclaimed by God, and therefore argued that war and violent punishment were not in themselves wrong. Since God no longer spoke directly in the new dispensation, Augustine drew on Cicero's notion that "just wars avenge injuries" (*De Officiis* 1, Chap.2.35)—that war could be a sanction against evil. Such violence, like judicial power, could only be exercised by proper authority (the emperor) and had to be carried out with concern for the correction of the enemy and for a good cause, though this was not necessarily confined to self-defense.

Augustine never elaborated his ideas in a single work, and they were transmitted to posterity through the work of St. Isidore of Seville (c. 560–636), who stated that a war is

just if fought for a just cause, in a spirit of charity for the enemy, and on proper authority. This rather broad notion of just war was not to be clarified or elaborated for many centuries.

The general range of these ideas accorded with certain attitudes in the early medieval West. The warrior ethic of the Germanic peoples found congenial the idea that the outcome of battle (and indeed of the judicial duel) was the judgment of God. The clergy regarded themselves as above war and forbidden from taking part in it by canon law, but they applauded secular rulers who defended the church and its property in an age of instability, and thus their approval came to be seen as validating warfare. Gregory, bishop of Tours (573–594), explained the victory of the Frankish warlord Clovis over the Arian Goths at Vouillé in 507 by saying that “God was on his side.” Pope Gregory I the Great (590–604), while directing the imperial armies against the Lombard invaders of Italy, proclaimed the righteousness of their cause. A papal request for military aid against the Lombards justified Charlemagne’s conquest of Italy, while his conquest of the heathen Saxons was universally applauded as extending the Christian church.

Canon law continued to regard killing as evil, necessitating a terrible penance, but in practice the taking of life was always seen in its context. Judicial execution was endorsed by the church: had not Augustine spoken approvingly of the “barbed hooks of the executioner” (*Contra Iulianum* 4.12.6)? Handbooks such as the eighth-century *Penitential* ascribed to Bede increasingly suggested lighter penance for killing in public warfare than for other kinds of murder. The great waves of attack from the pagan peoples of northern and eastern Europe and from the Muslims of Spain and the Mediterranean further strengthened a popular but undefined notion of holy war, that to fight enemies of God was just and even meritorious. The reconquest of Spain from Islam was especially seen in this light. Rome was desperately exposed to Islamic attack, so it is hardly surprising that Popes Leo IV (847–855) and John VIII (872–882) both suggested that war against such enemies of Christendom was not merely permitted but meritorious. There is no doubt that by the eleventh century popular attitudes endorsed all war against non-Christians as meritorious and, more generally, accepted the use of force, even between Christians, in a righteous cause: a papal banner was even issued for the Norman conquest of England in 1066.

These notions of holy war were scrutinized because in the

late eleventh century the papacy, enmeshed in the Investiture Contest against the German emperors, needed to justify its use of force against them. The decisive formulation came in the 1140s in the *Decretum* of Gratian, who gathered together the ideas of Roman law and all the texts bearing upon the just war, especially those of Augustine. He stressed the inward disposition of the Christian, who should be concerned to punish his enemy only for his well-being, and elaborated Isidore’s definition with emphasis on the special role of the clergy. This body of thought was further developed, especially by St. Thomas Aquinas (1225–1274), employing Aristotelian concepts, and reached its ultimate definition in Catholic terms by Francisco de Suárez (1548–1617). The just war emerged as the mainstream of Christian thinking about the use of violence.

The relationship between the just war and the crusade is contentious amongst historians. Popular notions that certain kinds of war were permitted, even meritorious, were given definition in the age of the Investiture Contest, and this process underlay the call by Pope Urban II (1088–1099) for the First Crusade (1096–1099), which drew on popular enthusiasm for holy war. Jean Flori regards the Crusade as simply a just war directed to Jerusalem. John Gilchrist emphasizes the degree to which the crusade was *sui generis*. Jonathan Riley-Smith stresses papal authorization and its penitential nature as the hallmarks of the crusade, definitions of which, however, were increasingly set within the framework of the just war. Ancient precedent and authority gave the just war a permanent place in Christian thinking, but its definition emerged from wider popular beliefs in holy war that gave birth to the notion of crusade. Crusading lacked real definition before the thirteenth century, and it was only an episode in Christian thinking that arose from a particular religious temper and circumstances.

Kamāl al-Dīn (1192–1262)

Also frequently referred to by his family name of Ibn al-‘Adīm, Kamāl al-Dīn ‘Umar ibn Aḥmad was a teacher, historian, and statesman.

Born in Aleppo into a celebrated family, which had supplied *qāḍīs* (judges) to the city for several generations, Kamāl al-Dīn studied jurisprudence in Baghdad, Jerusalem, Damascus, and the Ḥijaz as well as in his home town. At the age of twenty-eight he became director of one of Aleppo’s *madrasas* (religious colleges). Ten years later he undertook the first of several diplomatic missions for the Ayyūbid rulers of the city. In 1237 he took a position at the Hallawiyya, a leading madrasa in Aleppo, then in 1250 he accompanied the Ayyūbid sultan al-Nāṣir Yūsuf II (d. 1260) to Damascus, which had passed into the latter’s possession. When Aleppo was sacked by the Mongols in 1260, he fled to Palestine and eventually to Cairo. The Mongol Ilkhan Hülegü invited him to return to Syria as chief *qāḍī*, and he did indeed go to Aleppo after the Mongol withdrawal. However, the city was in ruins, so he soon returned to Cairo, where he died.

Kamāl al-Dīn is credited with a number of works, of which the best known are a chronicle of Aleppo, *Zubdat al-Ḥalab min Ta’riḥ Ḥalab* (*The Crème de la Crème of the History of Aleppo*), and a biographical dictionary, *Bughyat al-Ṭalab fī Ta’riḥ Ḥalab* (*The Object of Desire in the History of Aleppo*).

Al-Kāmil (d. 1238)

Ayyūbid sultan of Egypt (1218–1238).

Al-Malik al-Kāmil Muḥammad ibn Aḥmad, born around 1177/1180, was the son of Sultan al-‘Ādil. When al-‘Ādil died in 1218, Egypt was facing the crisis of the Fifth Crusade (1217–1221), which was besieging the port of Damietta. Al-Kāmil attempted to buy off the crusaders by offering them all the former Frankish territories west of the Jordan; this offer was refused and Damietta fell to the crusaders in 1219. Al-Kāmil was rescued by reinforcements from his kinsmen in Syria and also helped by the flooding of the Nile and disagreements among the crusaders. In 1221 the crusaders withdrew from the Nile Delta under truce.

In 1226 al-Kāmil sent an embassy to Frederick II, Holy Roman Emperor, making him the same offer he had previously made to Pelagius, if Frederick would support him

Kammin

against the Ayyūbid ruler of Damascus, al-Mu‘azzam. In 1227 al-Kāmil, allied with al-Ashraf Mūsa of al-Jazira (Upper Mesopotamia), ousted their kinsman al-Naṣir Dawūd from Damascus. Al-Ashraf Mūsa took Damascus, whereas al-Kāmil received Palestine and Transjordan. By the time Frederick arrived in Palestine in 1228, al-Kāmil no longer wanted his assistance, but the emperor still posed enough of a threat for al-Kāmil to enter into negotiations with him. In 1229 he restored to the Christians most of the city of Jerusalem as well as some of the other territories that had been conquered by his uncle Saladin, while keeping the al-Aqṣā Mosque and the Dome of the Rock under Muslim control.

Al-Kāmil's concessions were widely unpopular, and al-Naṣir Dawūd sponsored propaganda for a renewed jihād (holy war). Al-Kāmil disliked his eldest son, al-Ṣaliḥ Ayyūb, and sent him to al-Jazira. However, after al-Kāmil's death, al-Ṣaliḥ Ayyūb was ultimately successful in establishing himself as his father's heir in Egypt.

Kammin

Kammin, or Cammin (mod. Kamień Pomorski, Poland), was a missionary bishopric in Pomerania in the time of the crusades.

The castle and town of Kammin, situated on the river Diernow (Dziwna) facing the island of Wolin, was first mentioned in 1107 as the seat of the Pomeranian prince Wartislav I. After conquering Pomerania, the Polish duke Boleslaw III in 1124 invited Bishop Otto of Bamberg to Christianize the Pomeranians. Churches were established in major centers such as Stettin (mod. Szczecin, Poland), Wolin, and Kammin, and the Pomeranian bishopric, originally established at Wolin around 1140, was transferred to Kammin in 1175/1176. When the neighboring archdioceses of Gniezno and Magdeburg attempted to incorporate Kammin, Bishop Sigfrid in 1188 was able to get Pope Clement III to confirm an earlier exemption and place Kammin under direct papal protection.

Nevertheless, the Danes acquired considerable influence

in the diocese. Following a Danish crusade against Stettin around 1173, a Cistercian monastery was founded in Kolbatz from Esrom in Denmark and a Premonstratensian monastery, Belbuck, from Lund. In the 1180s another Premonstratensian house in the diocese, Grobe, was affiliated with Tommarp in the Danish archdiocese of Lund. In 1185 King Knud VI of Denmark even directed a crusade against Kammin itself. Although the clergy went out in procession, imploring the king not to commit sacrilege, only the timely submission of Duke Bogislaw I of Pomerania saved the town. During the next forty years Kammin played an important role in furthering the Danish crusades to Prussia, particularly with the appointment of a Cistercian from Kolbatz, Christian, as bishop of Prussia.

After the collapse of Danish power in the Baltic region in 1223–1227, the Pomeranian dukes once more took control, and Kammin lost its importance in the crusading movement.

Karbughā (d. 1102)

Karbughā (also Karbuqa, Kerbogha, or Kerbogah) was a leading Turkish military commander under the Great Saljūq sultan Barkyārūq, and also lord of Mosul in northern Iraq (1095–1102).

In 1094 Karbughā and his brother Tuntash were sent by the sultan with a large army to aid Aq Sunqūr of Aleppo against Tutush I, king of Syria, during the civil war for the sultanate. In May 1094 Tutush defeated the Aleppan army,

and Karbughā and his brother were held captive at Homs until Tutush was killed in February 1095, when Barkyārūq obtained their release from his cousin Riḏwān, the new king of Aleppo. With a force of Turcoman mercenaries, Karbughā captured the city of Mosul after a siege of nine months. He became the first Turkish lord of the city, ending a century of Arab domination by the Banū 'Uqayl family, and was recognized by the sultan.

In late 1097 the armies of the First Crusade (1096–1099) entered Syria and blockaded the city of Antioch (mod. Antakya, Turkey). Karbughā marched against the crusaders with a large army from Mosul and Mesopotamia. He was joined by numerous Saljūq and Turcoman allies, including Duqāq of Damascus, Balduk of Samosata, and many others; only Riḏwān of Aleppo, whose troops had been defeated by the crusaders on 9 February 1098, did not join in. It seems that Karbughā acted upon his own initiative in order to expand his influence in Syria. Karbughā and his allies unsuccessfully tried to besiege Edessa (mod. Şanlıurfa, Turkey), which was held by the crusader Baldwin of Boulogne and his Armenian allies. They then moved on to Antioch, arriving on 5 June 1098 to find that the crusaders had captured the city two days earlier. The Muslims besieged the city for twelve days, but when the crusaders marched out to fight them, Karbughā's army was defeated. Many of the Turcoman leaders resented Karbughā's treatment of them and conspired to retreat when the fighting started, while Riḏwān of Aleppo sent messages to the Turcoman commanders, resulting in friction between them and the Arab commanders and the desertion of considerable forces from the army.

Karbughā did not interfere in Syrian affairs again, and was occupied in the civil war between Barkyārūq and his brother Muḥammad Tapar in Persia until he died in Azerbaijan in September 1102. He was the origin of the Saracen character called Corbarans who features prominently in the epics of the Old French Crusade Cycle.

Karelia

A territory inhabited by the Finnic tribe of the Karelians, extending from the shores of Lake Ladoga to Lake Saimaa in the west and the White Sea in the north (mod. Finland and Russia).

The Karelians, first mentioned in written sources in 1143, had their main center at Kexholm (mod. Priozërsk, Russia) where the estuary of the river Vuoksi enters Lake Ladoga. By the time of the crusade movement, the Karelians had come under a loose sovereignty of the Russian republic of Novgorod. Archaeological excavations show that Christianity had spread among the Karelians by the eleventh century, but the greater part of the population remained pagan. Karelia was attacked by Swedish crusades during the second half of the thirteenth century, although the principal target of military operations was actually Novgorod: Pope Alexander IV (1254–1261) issued crusading bulls against both Russians and Karelians. During these campaigns (the so-called Third Swedish Crusade), the Swedes attempted to gain control over the rivers Vuoksi and Neva, which formed the main trade routes between Lake Ladoga and the Gulf of Finland. In 1293 they established the fortress of Viborg (mod. Vyborg, Russia) on the Vuoksi and tried unsuccessfully to conquer and hold Kexholm; in 1300 they founded the fortress of Landskrona on the Neva, but it was lost in 1301.

The war between the Swedes and the Novgorodians continued until 1323, when a border between the two powers was fixed for the first time by the Treaty of Nöteborg. This border cut through the Karelian Isthmus and divided Karelia into Swedish and Novgorodian sectors. The Swedish Karelians were soon Christianized in the Roman tradition, whereas Novgorod made little attempt to baptize the Karelians in its sector. The new border may have created the preconditions for peaceful relations between Sweden and Novgorod, but it did not create stability in Karelia. When Novgorod took steps to strengthen its hold on the region, the Karelians revolted in 1337, summoned the Swedes, and killed Russian merchants and Orthodox Christians in Kexholm. After two years of war, Novgorod and Sweden renewed the Nöteborg Treaty. At Novgorod's request it now included a new, harsh clause stipulating that all Karelians who fled from one sector to the other were to be either killed or handed back to the other power.

In 1347–1351 the Swedish king Magnus Eriksson, inspired by the mystic (and later saint) Birgitta Birgersdotter, directed a last crusade against Novgorodian Karelia. He

Karl von Trier (d. 1324)

conquered Nöteborg and started to baptize both the Karelians of the regions and the Ingrians (Izhorians) to the south, but the Novgorodians retook their fortress and again drove the Swedes out. Toward the end of the fourteenth century, Swedish colonization across the border again tempted the Karelians of Novgorod to change sides, and now the Novgorodian church engaged in a deliberate policy of forced conversion of the Karelians. Several Orthodox monasteries were founded, the most important of which was Valamo, established on a former pagan cult center on an island in Lake Ladoga. In military operations, the Novgorodians also killed or expelled pagan Karelians, the closest the Orthodox Church ever came to practicing mission by the sword.

Karl von Trier (d. 1324)

Grand master of the Teutonic Order (1311–1318); the first grand master to start his reign in Prussia.

Born in Trier in western Germany about 1265, Karl began his career in the French houses of the order. He is first mentioned in a document of 1291 as commander of Beauvoir in Champagne, and from 1296 he was land commander of the bailiwicks of France and Lorraine. In 1303, he participated in the chapter general of the order in Elbing (mod. Elbląg, Poland) that deposed Gottfried von Hohelohe. Karl was elected as grand master after the death of Siegfried von Feuchtwagen, probably in July or August 1311.

Resident at Marienburg (mod. Malbork, Poland) from August 1311, Karl had to face several serious problems: the struggle with the pagan Lithuanians, a dispute with Poland over Pomerelia, and conflict within the order. He continued the order’s policy of erecting castles in border regions as bases for attacks by crusading armies, especially by building and defending Christmemel near Ragnit (mod. Neman, Russia). However, he was not in a position to control the strife between the factions within the order, which caused frequent changes of offices and finally led to his enforced resignation in 1317. When he was reinstated by a chapter general at Erfurt in March 1318, he left the administration of Prussia to the also reinstated grand commander Werner von Orseln and to Friedrich von Wildenberg, master of Prussia, while he travelled to the papal Curia at Avignon to strengthen the order’s position. Afterward he took up residence in his home town of Trier, where he died on 10/12 February 1324.

Kerak

Kerak (mod. Karak, Jordan) was a castle and town in Transjordan, at first a stronghold of the Franks but later held by the Ayyūbids and Mamlūks.

The castle was built from 1142/1143 onward by Pagan the Butler, lord of Montréal, as the new seat of his lordship. It was constructed on a rocky spur, which extended south from a roughly triangular plateau, on which the twelfth-century town stood. At first the castle was roughly triangular in shape and detached from the town by a rock-cut ditch. The walls were

strengthened by projecting rectangular towers. On the east side there appears to have been an outer ward or barbican. This occupied a lower terrace, overlooked by the inner ward and extending from the town ditch to a tower at the inner ward's southernmost tip. Although essentially Mamlūk in its present form, the barbican appears to have replaced an earlier Frankish one. This is suggested by a charter of 1152, by which Pagan's successor, Maurice, gave the Hospitallers a barbican, which is described as extending from the outer gate up to the tower of St. Mary. This seems to indicate that the main entrance into the castle lay at the western end of the north wall.

In 1167 the Franks revived the ancient bishopric of Petra, establishing a new Latin cathedral in Kerak. Gueric, a former canon of the Temple of the Lord in Jerusalem, was appointed bishop. Kerak was besieged unsuccessfully by Nūr al-Dīn in 1170 and by Saladin in 1173. In 1177 Reynald of Châtillon became lord of Montréal on his marriage to Stephanie, daughter of Philip of Milly. Reynald's aggressive policy against the Muslims was first directed against the caravans plying the desert route between Syria, Arabia, and Egypt. In 1181, he extended this activity by raiding the Hijaz, and during the winter of 1182–1183 he sent forces to attack Aila and the Arabian coast. In October 1183, Saladin retaliated by burning the town of Kerak and attacking the castle, into which the luckier of the townsfolk escaped. After six weeks, he abandoned the siege when a relieving force approached from Jerusalem. The following July, he made another attempt, bringing up fourteen trebuchets to replace the eight abandoned the year before; but the siege was lifted after only four weeks.

During the winter of 1186–1187, however, openly disregarding a truce that King Guy of Jerusalem had made with Saladin, Reynald attacked another caravan and disobeyed the king's instructions to return the prisoners and booty. He paid for this with his life, following the battle of Hattin on 4 July 1187. Reynald's widow, Stephanie, at first agreed to hand over the castle to Saladin in return for the release of her son, Humphrey IV of Toron; however, the garrison refused to surrender and was besieged from March until November 1188, when the Ayyūbid prince al-ʿĀdil finally took possession. Under al-ʿĀdil and his son, al-Muʿazzam ʿĪsa, the castle was repaired and became the administrative center of a province. In 1264, it was taken and further strengthened by the Mamlūk sultan Baybars, who also walled the town. It is largely because of the Ayyūbid and Mamlūk refortifications that so much of the Frankish castle has survived.

Kęstutis (d. 1382)

Grand duke of Lithuania (1381–1382).

Kęstutis (Ger. *Keistut*, Pol. *Kiejstut*, Russ. *Keistut*) was born around 1300, a son of Grand Duke Gediminas. For several decades before becoming ruler of Lithuania, Kęstutis supported the power of his brother, Grand Duke Algirdas (1345–1377), and frequently led Lithuanian and allied armies against the Teutonic Order. Because Kęstutis had placed Algirdas on the throne of Lithuania, deposing their brother Jaunutis, he retained special influence. He ruled the important lands of Trakai, Podlachia, Brest-Litovsk, Hrodna (Grodno), and possibly Samogitia.

In the wars of the Baltic Crusades, Kęstutis became well-known to the Teutonic Order and its guest crusaders, and was even praised by them for his chivalrous qualities. Not only did he successfully fight off crusaders from all over Europe, but he also conducted negotiations for exchanges of prisoners and for possibilities of Lithuanian baptism. He nevertheless remained a pagan, yet learned many of the customs of the Christians. It is said that, when captured by the Teutonic Order, he escaped by riding away on the Grand Master's horse, impersonating a knight of the order.

Algirdas's son and successor, Jogaila, was not willing to defer to Kęstutis, and made a pact with the Teutonic Order against him. Kęstutis deposed Jogaila in 1381, seizing Vilnius and becoming grand duke. But Jogaila continued the strug-

Kettler, Gotthard (d. 1587)

gle for power through new alliances with the Teutonic Order. He seized and imprisoned Kęstutis, and the old campaigner died in prison in 1382. He had been married to the Lithuanian noblewoman Birute, and one of his sons, Vytautas, became grand duke of Lithuania.

Kettler, Gotthard (d. 1587)

Last master of the Livonian branch of the Teutonic Order (1559–1562) and subsequently duke of Courland (1562–1587) after the secularization of the order in Livonia.

Kettler was born in Westphalia around 1517 and grew up at the court of the archbishop of Cologne. At about the age of twenty he came to Livonia to enter the Teutonic Order, where he quickly became a member of its leadership. In the autumn of 1559 he signed a protectorate agreement with the Polish king, Sigismund II Augustus, and became master of Livonia.

Following the example of his order's branch in Prussia, Kettler, who was already sympathetic to Lutheranism, proceeded to carry out its secularization in Livonia. On 28 November 1561 he swore loyalty to the king of Poland, and on 5 March 1562 he swore fealty as duke of Courland and Semgallia and handed over the regalia of the master. In 1562–1566 he was also confirmed as vicegerent of all the Polish possessions in Livonia. In 1566 he married Anna, duchess of Mecklenburg, and founded the dynasty of dukes of Courland.

Kexholm

Kexholm (or Keksholm) was the Swedish name for the Karelian fortress and town of Korela, or Korel'skii Gorodok (mod. Priozërsk, Russia).

By the eleventh century the site was a tribal center of the pagan Karelians of the region of Lake Ladoga. The fortress was built on an island in the eastern estuary of the river Vuoksi, barring the entrance to Lake Ladoga from the Baltic Sea. In 1293 Swedish crusaders established the stronghold of Viborg (mod. Vyborg, Russia) on the western estuary of the Vuoksi. Soon afterward they managed to conquer Kexholm, but they were driven off by a Novgorodian army in 1295.

After the division of Karelia between Sweden and Novgorod in the Treaty of Nöteborg (1323), Novgorod placed Kexholm under the government of Orthodox Lithuanian princes (known as “service princes”), both to defend the border region and to keep the Karelians under control. This led to protracted unrest, and in 1337 the townspeople rose up against Novgorod, killed Christians, and called upon the Swedes for help. When Novgorod and Sweden renewed the peace, Novgorod retaliated against the Karelians.

King Magnus II Eriksson of Sweden failed to take Kexholm during his crusade against Novgorod in 1347–1351, and it remained Russian until the end of the sixteenth century. Around 1400, Novgorod established an Orthodox monastery nearby at Valamo, which was used as a base to Christianize the Karelians.

Khirokitia, Battle of (1426)

A hotly contested battle (7 July 1426) fought near the village of Khirokitia (mod. Khoirokoitia, Cyprus) between Nicosia and Limassol, resulting in the crushing defeat of the 4,600 troops of King Janus of Cyprus by the 5,000 invading soldiers of the Mamlūk sultan of Egypt, Barsbay.

The cause of the Mamlūk invasion was the raiding mounted from Cyprus by Cypriot, Genoese, and Catalan corsairs, as well as an attack on the Syrian coast by Janus himself. In retaliation Barsbay had attacked Cyprus in 1424 and 1425. On 1 July 1426 he landed on Cyprus with a larger Mamlūk force and proceeded to capture the town of Limassol. The Cypriot forces were defeated at Khirokitia, and Janus was taken prisoner; the Mamlūks went on to capture and sack the capital, Nicosia (11 July), carrying off 6,000 captives. The king was ransomed for 200,000 ducats eight months later and returned to the island in May 1427, having agreed to become the sultan's vassal, paying an annual tribute of 5,000 ducats.

Kinnamos, John

Author of a history of Byzantium covering the period 1118–1176, which was probably composed in 1180–1182.

Kinnamos was born around 1143; although little is known of his early life, he later became secretary to the Byzantine emperor Manuel I Komnenos, participated in many of Manuel's campaigns, and may have been present at the Byzantine defeat by the Saljūqs of Rūm at Myriokephalon in 1176.

The sources for his history, which is written in a simple, straightforward style, were his own observations and the oral communications of his contemporaries. He does not quote from imperial documents, although he was in a position to know of them. He was generally hostile toward westerners, though he gives a favorable account of Raymond of Poitiers, prince of Antioch (Manuel's father-in-law), and of Louis VII

of France's relationship with the Byzantines during the Second Crusade (1147–1149), which is at odds with the disputes related by the French chronicler Odo of Deuil. Kinnamos's history was the “official version” of Manuel's reign and should be compared with the more critical account of Nikeas Choniates. He died sometime after 1185.

Konrad von Feuchtwangen (d. 1296)

Grand master of the Teutonic Order (1291–1296) after the loss of the city Acre (mod. 'Akko, Israel) to the Mamlūks.

Konrad was born around 1230 into a Franconian ministerial family. His early career is unknown. In 1259 he was commander of the order's Austrian bailiwick. Successively he held offices as the order's treasurer in the Holy Land (dates uncertain), commander of Austria (after 1271), master of Prussia and Livonia (1279), commander of Franconia (1282), and German master (1284). He did not travel to the

Krak des Chevaliers

Holy Land during the crisis occasioned by the Mamlūk attack on Acre in 1291, but stayed in the empire instead.

Shortly after the fall of Acre, Konrad was elected grand master (probably autumn 1291). The order's headquarters was moved to Venice under his mastership. Konrad showed no intentions of reviving the order's activities in the Holy Land: his main concern was the order's affairs in Germany, Prussia, and Livonia. By treating the "Holy Land faction" within the order with consideration, however, he avoided major conflicts. Konrad died between 2 and 5 July 1296 in Prague. He was buried in the Bohemian commandery of Drobowitz, but his bones were later transferred to the Cistercian nunnery at Trebnitz in Silesia.

Krak des Chevaliers

Krak (also Crac) des Chevaliers (mod. Qal'at al-Hiṣn or Hiṣn al-Akrād, Syria) was a castle on a mountain spur on the eastern frontier of the county of Tripoli, overlooking the fertile plains around the Muslim city of Homs (mod. Ḥims, Syriat).

In 1144 Count Raymond II of Tripoli gave the site and most of the surrounding land to the Order of the Hospital. In the second half of the twelfth century, the Hospitallers built an enclosure castle on the spur. The curtain wall was strengthened by square mural towers, and there were halls for communal living along the inside of the enceinte and a simple early gothic chapel. This castle was strong enough to dissuade Saladin from attacking it in 1180 and again in 1188.

After being damaged by an earthquake in 1202, the castle was substantially rebuilt. An outer line of walls was constructed and the inner enceinte enclosed by new walls and a

great sloping glacis. These new walls were defended by large round towers, all constructed in the fine limestone ashlar that is one of the glories of the castle.

The first half of the thirteenth century were the glory days of Krak. The garrison probably numbered about 2,000, of whom only a small number (perhaps 50) were Hospitaller knight brethren. From the safety of the castle, they led raids to extort tribute from the surrounding Muslim areas. Distinguished foreign visitors, such as King Andrew II of Hungary in 1218, were persuaded to make donations.

After 1260 the growing power of the Mamlūks meant that tribute gathering became much more difficult. In March 1271 Sultan Baybars arrived with a large army. Siege engines and undermining resulted in the collapse of the outer wall on the south side where the spur was attached to the main hill. On 8 April the garrison surrendered and was allowed to leave for the coast.

Kraków, Treaty of (1525)

A peace treaty between the king of Poland and the grand master of the Teutonic Order that ended the territory of the order in Prussia.

After the failure of attempts by Grand Master Albrecht von Brandenburg-Ansbach to revise the Second Peace of Thorn, he and his advisors began to ponder the idea of secularizing the Teutonic Order in Prussia. A four-year truce with Poland was to expire in spring 1525, and war seemed inevitable. The order's German and Livonian branches declined to provide any support for the grand master against the order's enemies, and so Albrecht started negotiations with Poland. A peace treaty comprising thirty-one articles was drafted in Kraków on 8 April 1525 that declared Prussia a secular duchy under Polish suzerainty. King Sigismund I of Poland (1506–1548) and representatives of the order and the Prussian estates confirmed the agreement the

next day. On 10 April Albrecht paid homage to the king, which finally made him the new “duke in Prussia” (Lat. *dux in Prussia*). Prussia thus became a hereditary fief of the Ansbach line of the Hohenzollern dynasty. The Teutonic Order in Prussia was dissolved, and its some sixty remaining brothers either emigrated to the Holy Roman Empire or joined the secular nobility of the duchy.

Kreuzfahrt des Landgrafen Ludwigs des Frommen von Thüringen

A Middle High German poem, completed in 1301, dealing with the deeds of Landgrave Ludwig III of Thuringia (d. 1190) during the Third Crusade (1189–1192).

The poem survives in a single manuscript (MS Wien, Österreichische Nationalbibliothek, 2737) dating from the early fourteenth century. It was written by an anonymous poet at the court of Bolko I, duke of Schweidnitz-Jauer in Silesia, who is said to have given the order to record the deeds of Ludwig.

The text consists of 8,178 lines in rhyming couplets and draws on Latin sources as well as oral tradition. The language shows a few traces of eastern central German influence. After an introduction describing the history of the Holy Land from the capture of Jerusalem in 1099 by the First Crusade up to its reconquest by Saladin and the pope’s appeal for a new crusade (1187–1188), the narrative proper com-

Küchmeister, Michael (d. 1423)

mences with the arrival of Landgrave Ludwig in Tyre (mod. Soûr, Lebanon) and his support of the siege of Acre (mod. 'Akko, Israel) in 1189–1190.

The author focuses his depiction on Ludwig's heroic deeds: the landgrave proves to be the most valiant knight, he is elected commander-in-chief by the crusaders' army, and several times he is seen to be protected by a miraculous group of invincible fighters led by a white knight, whose banner Ludwig gathers from the battlefield after having been victorious against Saladin. An emperor, named as Frederick (probably a reminiscence of Frederick Barbarossa), wants Ludwig's deeds to be commemorated in stone, and Saladin is impressed by his military virtues. After being wounded the landgrave is forced to leave the battlefield; although Saladin offers the help of his physicians, Ludwig dies in the presence of his Thuringian fellow combatants, who bring his body home.

In its vocabulary and imagery, which show strong influences of the epic authors Wolfram von Eschenbach and Ulrich von Etzenbach as well as of the anonymous *Herzog Ernst D*, the narrative cannot be considered as an original contribution to Middle High German poetry. Neither is its account of the events historically correct, because the author obviously confuses characters and events of the Third Crusade with those of the Crusade of Emperor Frederick II (1227–1229). Yet the *Kreuzfahrt* reveals the impact of oral tradition, which the author claims to have learned about from noble families of Thuringian and Saxon origin in Silesia and the Troppauer Land (the region between Upper Silesia, Moravia, and Bohemia). The *Kreuzfahrt* shows that this oral tradition, which had been kept alive over four generations from the late twelfth to the early fourteenth century, was an element of community and identity in these noble families originating from Thuringia and eastern Saxony that provided numerous participants in both of these crusades.

Küchmeister, Michael (d. 1423)

Grand master of the Teutonic Order (1414–1422) during a critical period of the order's history.

Küchmeister was born into a Meißen-Silesian ministerial family; his early career in the order is obscure. From 1396 he held different offices in Prussia. In 1411 he became marshal after most of the order's high officers had died in battle against the Poles at Tannenberg. He opposed the warlike policy of Grand Master Heinrich von Plauen, who was deposed by Küchmeister and the other high officers in October 1413. Subsequently, on 9 January 1414, Küchmeister was elected grand master. Immediately he tried to establish peaceful relations with Poland, but a truce was only concluded after Prussia had been ravaged by Polish troops in 1414. Attempts to settle the conflict with Poland at the Council of Konstanz failed. The truce was renewed six times up to the end of Küchmeister's mastership, but no permanent peace was made.

Küchmeister's struggles to consolidate Prussia economically and politically brought little success, and he had to make many concessions to the Prussian estates. On 10 March 1422 he resigned because of illness, and perhaps also because of personal frustration. Küchmeister died in Danzig (mod. Gdańsk, Poland) on 15 December 1423. He was buried in the chapel of St. Anne at Marienburg castle (mod. Malbork, Poland).

Kyrenia

Kyrenia (mod. Kyreneia, Cyprus) was a harbor town and castle in the kingdom of Cyprus. During the Lusignan (1192–1489) and Venetian (1489–1570) periods it functioned chiefly as a place of refuge and detention, for the castle, never taken by assault, could be supplied by sea and so was able to withstand long sieges.

During the civil war of 1228–1233 the imperialists held out there for ten months against the pro-Ibelin faction, surrendering only after Genoese galleys prevented supplies from reaching them from Tyre (mod. Soûr, Lebanon). During the Genoese invasion of 1373–1374 Queen Eleanor and James of Lusignan successfully withstood a siege lasting from January to March 1374, which was lifted following an armistice. During the civil war of 1460–1464 between the supporters of Queen Charlotte and those of her brother James II, Kyrenia endured a siege of four years; the Hospitallers supplied the queen's supporters by sea, and only in 1464 did the garrison surrender on account of starvation.

The dungeons of the castle were also used as a prison—for example, in 1316 for some of the Templars and knights who had rebelled against King Henry II following his restoration in 1310. In 1349 King Hugh IV imprisoned his sons

Peter and John there for secretly departing for western Europe against his wishes, and Peter was released only after the intervention of Pope Clement VI. During the Mamlük invasion of 1426 Cardinal Hugh of Lusignan and members of the royal family took refuge in the castle following the defeat of King Janus at Khirokitia.

The town of Kyrenia never developed into a major center and had only 800 inhabitants at the end of the Venetian period, but it enjoyed limited trade and pilgrim traffic with the Anatolian coast opposite. The Venetians strengthened the fortifications of the castle considerably during the sixteenth century, but it surrendered in September 1570 to the invading Ottomans without resistance shortly after the fall of Nicosia.

Landskrona

A fortress at the estuary of the river Neva erected by the Swedes in 1300.

During the so-called Third Swedish Crusade against Karelia, the Swedes attempted to gain control over both entries to Lake Ladoga from the Gulf of Finland by founding Viborg (mod. Vyborg, Russia) at the estuary of the river Vuoksi in 1293 and proceeding in 1300 to build a fortress on the site of the later Nienshantz (now part of St. Petersburg).

According to Russian sources the Swedes were able to use fortification engineers from Rome but still proved unable to hold the fortress when the Novgorodians, helped by forces from central Russia, arrived the following year. The Swedish garrison was annihilated and the fortress demolished. The almost contemporary Swedish *Erik Chronicle* contains a dramatic account of the slaughter of the Swedish “Christians” by the “pagan” Russians, in general terms confirmed by a laconic account in the Novgorod Chronicles.

Laodikeia in Syria

Laodikeia (Laodicea) in Syria (mod. Al-Lādhiqīyah or Lattakia, Syria) was a city and harbor that belonged to the Frankish principality of Antioch for most of the twelfth century and part of the thirteenth.

Laodikeia was conquered from Byzantium by the Arabs around 640. The Byzantine emperor Nikephoros II Phokas retook the city in 968, and for the next century it remained on the frontier between Byzantium and Islam.

During the First Crusade (1096–1099) the city came under the rule of a confusing succession of different individuals, about whom the sources are contradictory. First conquered from the Turks by Guynemer, a semi-piratical figure from Boulogne, Laodikeia was then occupied by Robert Curthose, duke of Normandy. After the capture of Antioch (1098) the city came into the hands of Raymond of Saint-Gilles, who handed it over to the Byzantines when he left to continue the crusade to Jerusalem. Bohemund I of Antioch, who remained in Syria in 1099 after the crusade moved on, besieged the city that summer with the aid of Daibert, archbishop of Pisa, and the fleet he had brought with him. However, this action was interrupted by the return of Raymond, Robert of Normandy, and Robert II of Flanders from the conquest of Jerusalem, who

Lateran III, Church Council (1179)

all protested against this attack on fellow Christians and allies.

Tancred, regent of Antioch, captured the city after a siege of a year and a half in 1103. Following the disastrous defeat of the Franks by the Turks at the battle of Harran (7 May 1104), however, the Byzantines reoccupied Laodikeia. Tancred, again regent in 1108, seized the city while Emperor Alexios I Komnenos was fighting Bohemund I in the Balkans.

Along with Jabala, Laodikeia was part of the dowry given to Alice of Jerusalem on her marriage to Bohemund II of Antioch, and it was to these cities that she retired after her attempted coup in Antioch in 1130 failed. Sacked in 1136 by the Turks of Aleppo and damaged in an earthquake in 1170, Laodikeia fell to Saladin's army in 1188, causing the writer 'Imād-al-Dīn to mourn the destruction of the beautiful city. Muslim control of the city separated the Frankish states of Antioch and Tripoli, though both were under the rule of the same prince. Bohemund VI of Antioch's alliance with the Mongols in 1260 led to the return of Laodikeia to Frankish control. When it was taken by Sultan Qalāwūn in 1287, after its walls were damaged by an earthquake, the city was the last remnant of the principality to be conquered by the Mamlūks.

Lateran III, Church Council (1179)

The end of a schism in 1177 enabled Pope Alexander III to call the Third Lateran Council. It met in March 1179, with more than 300 bishops from Europe and the Holy Land, as well as representatives of secular rulers, in attendance, and it adopted twenty-seven canons.

The council established the rule that papal elections would require a majority of two-thirds of the voting cardinals. Other canons provided for the selection and supervision of the clergy, reaffirmed the Peace and Truce of God, and condemned tournaments and the use of lawless mercenaries. Heresy and usury were condemned, and restrictions were placed on Jews and Saracens living in Christian lands. The council did not address the question of crusades directly, but it condemned those who provided materiel to Saracens.

Lateran IV, Church Council (1215)

The Fourth Lateran Council ranks among the most important ecumenical councils in the history of Christianity. In 1213 Pope Innocent III called on the religious and secular leaders of Christendom to meet at the Lateran complex in Rome in November 1215. The main aims of the council were the reform of the church and the recovery of the Holy Land. More than 400 bishops, archbishops, patriarchs, and cardinals attended the council, as well as a multitude of representatives of cathedral chapters and monasteries. Most of the major secular governments of Christendom were represented, including those of the cities of northern Italy.

Among its political decisions, the council approved the candidacy of Frederick (II), king of Sicily, as Holy Roman Emperor and awarded most of the lands of Count Raymond VI of Toulouse to Simon of Montfort, leader of the Albigensian Crusade (1209–1229). It approved seventy constitutions, the first of which was a creed of the Christian faith that explicitly countered the doctrines of the major heresies of the day. The remaining constitutions can be grouped roughly under six headings: heretics and Jews, organizational and judicial reforms, marriage law, clerical appointments and support, reforms of the clergy, and reforms of the laity. Notable among these provisions were requirements that Jews were to wear distinctive clothing, provincial councils of bishops were to meet triennially to consider necessary reforms (with a similar requirement for monastic orders), and all Christians were to confess their sins annually and receive the Eucharist at Easter. The council also forbade clergy from participating in trials by ordeal, thereby hastening the end of that form of judicial procedure. Finally, it approved Innocent's letter setting forth detailed plans for the Fifth Crusade (1217–1221), which the pope had first announced in 1213.

It is difficult to determine how effective the council's actions were. Many of the directives were widely neglected, and there were considerable variations in time and place. It

does seem likely that some of the constitutions had enduring influence, as is evidenced by the widespread practice among modern Catholics of observing the “Easter duty.”

Latin Church

The Latin (or Roman) Church is a term used to designate that part of the universal Christian church in the Middle Ages that used Latin as its liturgical language and recognized the pope, or bishop of Rome, as its highest earthly authority. The Greek Orthodox (Byzantine) Church, by contrast, used Greek in its liturgy and recognized the pope only as co-equal with the patriarchs of Constantinople, Antioch, Alexandria, and Jerusalem.

Despite differences over doctrine and questions of authority, the Latin and Greek Orthodox churches generally regarded each other in principle as valid members of the universal church. An important effect of this circumstance in the states established by the crusades in Outremer, Cyprus, and Frankish Greece was that the Latin Church there used the new ascendancy of the Franks to take possession of the organizational structures and property of the Greek Orthodox Church. Thus, after the First Crusade (1096–1099), Latin patriarchs were installed in Antioch and Jerusalem in succession to their former Greek incumbents. After the overthrow of the Byzantine Empire by the Fourth Crusade (1202–1204), a Latin was elected to replace the incumbent patriarch of Constantinople, who fled to Nicaea in Greek-held territory. Similar developments occurred at diocesan level in these countries, although numbers of Greek monks, priests, and, in some cases, bishops were allowed to minister to Orthodox congregations.

The Latin Church had a quite different relationship toward the various Eastern (oriental) Christian churches, which it regarded as heretical and generally left alone. How-

ever, some initiatives were undertaken to bring about union between the Latin Church and individual Eastern churches, notably in the cases of the Armenian Orthodox Church and the Maronite Church.

Latin Empire of Constantinople

See Constantinople, Latin Empire of

Latin Literature

The crusades exerted a tremendous impact on contemporary as well as Renaissance Latin literature, especially on historiography, poetry, and epistolography.

Narrative History

The image and historical commemoration of the crusades and their ideological concepts were decisively conceived and stylized in Latin historical narratives, most of which were dedicated to the outstandingly successful First Crusade (1096–1099), by participants as well as by writers in the West. These narratives were sometimes reworkings of oral testimony or of existing written accounts, sometimes within the framework of chronicles covering a broader chronological and different geographical range, such as the *Hierosolymita* of Ekkehard of Aura (c. 1116) or the *Gesta regum Anglorum* of William of Malmesbury (d. 1143).

Jerusalem as a strategic and spiritual destination is the focus of interest: its importance is reflected by the various titles chosen by the authors and by topoi and terminological conventions that soon became literary commonplaces. The chroniclers often devote particular attention to certain leaders or contingents in the campaigns and make use of the

traditional rhetorical arsenal of the genre to dramatize and illuminate the events described with speeches, battle scenes, and heroic combats, often at the expense of historical accuracy. The drier chronicles, such as the *Gesta Francorum*, were soon complemented by literarily sophisticated and ambitious works of historiography, some of which are distinguished by the formal pattern of *prosimetrum*: that is, at key points in the action, the authors intersperse their prose with sections of verses, songs, or even narrative poems with epic dimensions. Crusade sermons (especially those given by Pope Urban II at the Council of Clermont) as well as letters were also often integrated into the texts, or at least added, in the manuscript tradition.

Among the most celebrated authors are Fulcher of Chartres, Radulph of Caen, Guibert of Nogent, and especially Robert of Rheims (Robert the Monk), whose *Historia Iherosolimitana* was one of the common reference books on the First Crusade up to the end of the Middle Ages. Between 1119 and 1140 Albert of Aachen described the First Crusade and the establishment of Christian dominion over the Holy Land in his *Historia Hierosolimitana*, a work in twelve books that has been described as a “Christian *Aeneid* in prose” [Peter Christian Jacobsen, “Albert von Aachen,” in *Hauptwerke der Geschichtsschreibung*, ed. Volker Reinhardt (Stuttgart: Kröner, 1997), p. 8].

Far less popular were the other and generally less successful expeditions of the twelfth and thirteenth centuries. Confronted with persistent political and military setbacks, the authors transformed their chronicles into vehicles for criticism, resignation, and even satire; the prosimetrical form was more or less abandoned. Odo of Deuil, who belonged to the entourage of King Louis VII of France during the Second Crusade (1147–1149), concluded his lucid report, *De profectione Ludovici VII regis Francorum in Orientem*, under the impression of failure. The *Historia peregrinorum*, by an anonymous author originating from the area of Lake Constance, abruptly ceased describing the crusade of Frederick Barbarossa with the emperor’s death (1190). The *Historia de profectione Danorum in Hierosolymam* (c. 1200) emphasizes the spiritual dimensions of pilgrimage, since the crusaders, from Denmark and Norway, reached Palestine too late to take part in the military actions of the Third Crusade (1189–1192).

The Fourth Crusade (1202–1204) attracted historians and apologists again: with a sense of humor and irony, Gunther of Pairis, a Cistercian monk from Alsace, applied the

literary topoi and other features of crusade histories to his account of the fall of Constantinople, the *Hystoria Constantinopolitana* (1208): he associates the seizure and sack of the Byzantine capital by the crusaders (who included his abbot, Martin of Pairis) with the fall of Jerusalem in the First Crusade. In the tradition of Boethius, he created a *prosimetrum* in its most accomplished form. Oliver of Paderborn (d. 1227), who had preached the crusade in the Rhineland, based his *Historia Damiatina*, a report of the capture of Damietta during the Fifth Crusade (1220), on letters he had previously written about the subject.

Whereas most of these chroniclers concentrated on certain periods and facets of crusading history, by the end of the twelfth century and the beginning of the thirteenth outstanding authors broadened their scope in retrospection. Besides the chronicle of Robert of Rheims, the *Chronica* of the Jerusalem court historian William of Tyre (d. 1186) and its continuations and translations were the most influential sources for the medieval view of the crusades. The First Crusade figured prominently in this work, which William continued with an account of the Latin kingdom of Jerusalem until 1182; his analytical and literary acumen made the chronicle shift into a pessimistic survey from the perspective of Outremer. James of Vitry, bishop of Acre (d. 1240), embedded the history of the crusades in his *Historia orientalis*, a comprehensive political and cultural description of the Holy Land.

After the final loss of Acre (mod. ‘Akko, Israel) to the Muslims in 1291, the impetus for composing Latin crusade histories decreased. Nevertheless, the existing texts supplied material for numerous memoranda and treatises belonging to the genre known as *De recuperatione Terrae Sanctae* (“About the Recovery of the Holy Land”), such as the *Liber secretorum fidelium crucis* of the Venetian Marino Sanudo Torsello (d. 1343), which was part of his initiatives to promote a new crusade. One of Sanudo’s sources was the *Speculum historiale* (1246–1259) of the Dominican friar Vincent of Beauvais, whose extracts from the chronicle of William of Tyre provided information about the crusades on a basic and secondary level.

Renaissance humanists, concerned with the threatening experience of Turkish expansion in the fourteenth and fifteenth centuries, particularly after the fall of Constantinople (1453), began to discover the crusades of the high Middle Ages anew. Rhetorically refined according to modern standards and rewritten for propaganda purposes, humanist his-

toriography idealized the First Crusade as a catalyst summoning a European alliance against barbarous enemies and thus as a model that ought to be imitated under contemporary circumstances. Flavio Biondo (d. 1463) actually projected the loss of Constantinople onto his version of the Council of Clermont (1095), and the reputation and popularity of Biondo's *Historiarum decades* up to the sixteenth century were also due to this ingenious manipulation. The Florentine chancellor Benedetto Accolti (d. 1464) wrote a monograph about the First Crusade, the *De bello a Christianis contra barbaros gesto pro Christi sepulchro et Iudaea recuperandis*, whose composition in 1463/1464 was closely linked with the preparations of Pope Pius II for an expedition against the Turks. The *Historiarum rerum Venetarum decades* by Marcus Antonius Sabellicus, published in 1487, and the *De rebus gestis Francorum libri* by Paolo Emili, written in 1498–1529 and dedicated to King Louis XII of France, reshaped the First Crusade into a monument of local pride and national greatness. Robert of Rheims and William of Tyre were the main sources for these humanist historians and their literary and publicistic approach to the crusades.

Poetry

Latin crusade poetry comprises a great variety of poetical texts about wars against the heathen, though in a more precise and technical sense it deals with the campaigns in the Holy Land. Shorter poems, such as rhythmic crusade songs, can be distinguished from historical epics and versified accounts of the crusades. In contrast to the historiographical sources, their manuscript tradition usually is precarious. The Latin crusade songs of the twelfth and thirteenth centuries constitute a corpus of about thirty rhythmic and metrical poems; their transmission is disparate, and only a small proportion of them are accompanied by musical notation. The largest complex, with seven pieces about the Third Crusade, is assembled in the *Carmina Burana*, an early thirteenth-century collection of songs in a manuscript of probably Tirolean provenance, which was later preserved in the monastery of Benediktbeuern in Bavaria. The Latin crusade songs are less concerned with the capture of Jerusalem in 1099 than with its loss after the battle of Hattin (1187). Exuberant songs about Christian victories, such as *Ierusalem, laetare*, appear alongside appeals to take the cross and laments for the triumph of the heathen, such as *Christiani nominis corruit insigne* (1189–1192).

Nearly all authors of Latin crusading epics directed their

imagination toward the First Crusade. Before 1120, Gilo of Paris adapted the *Historia* of Robert of Rheims, as did Metellus of Tegernsee, who between 1146 and 1165 turned Robert's prose into rhymed hexameters in his *Expeditio Ierosolimitana*. Of the *Solimarius*, by a poet known only as Gunther, not more than 240 lines have survived; it was composed before 1186 and sent to the family and court of Frederick Barbarossa. Once again, Gunther embellished Robert's *Historia* with the colors of classical epic.

Events preceding the Third Crusade, particularly the siege of Acre (1189–1190), form the subject of three more or less contemporary occasional texts: *Carmen Buranum* no. 50 (*Heu, voce flebili cogor enarrare*), a poem of Haymarus Monachus consisting of 224 goliardic stanzas (*Dum Romanus pontifex degeret Veronae*), and the mournful elegiacs by an anonymous eyewitness of the siege, whose versified diary closed in 1190 after he received news of Barbarossa approaching (*Scribendo tristes elegos imitatus amarus*). It is still uncertain whether a fragment of twenty-six hexameters can be connected with an epic entitled *Antiocheis* concerning the Third Crusade, which Archbishop Baldwin of Canterbury commissioned from his nephew Joseph of Exeter (Iscanus).

Humanist poets of the sixteenth century took up the First Crusade as the subject of Latin epic poems, and like the historians of their time they tried to bridge the gap between the medieval crusades and contemporary Turkish invasions. The Italian Giovanni Maria Cataneo (d. 1529/1530) seems to have relied upon Robert's *Historia*, but his *Solymis* is almost completely lost. The *Lotareis* of the otherwise unknown Frenchman Perotus, written between 1563 and 1574 (MS Paris, Bibliothèque Mazarine, 1944) exalts the heroism of Godfrey of Bouillon and makes a connection to the Guise family, particularly Charles III, duke of Guise (1543–1608), and Charles, cardinal of Lorraine, to whom he addressed his work; its nine books, containing some 7,000 hexameters, have not yet been edited, probably because they lack any life or color. Pietro Angeli da Barga (d. 1591), however, created the magnum opus of humanist crusade epics, the *Syrias*: after the great naval victory of Lepanto over the Turks (1571), he was convinced that the success of the First Crusade could be repeated soon.

Epistolography

With the flourishing of Latin epistolography in the twelfth century, it is hardly surprising that the crusades should be

reflected in Latin letters. Among the considerable number dating from the First Crusade are impressive requests for help, such as the much-debated message of the Byzantine emperor Alexios I Komnenos to the count of Flanders (1088), which was widely spread together with the *Historia* of Robert of Rheims. Epistolography also includes reports and memoirs that participants sent to relatives or political protagonists. News of decisive events, such as the death of Frederick Barbarossa, was communicated by letters. Some of the narrative sources are adorned with epistolary formulas; others are based on material collected from letters. The gradual diversion of the Fourth Crusade is reflected in the correspondence exchanged between Pope Innocent III and the leaders of the expedition. The six surviving letters written by James of Vitry in 1216–1221 are an important source for the siege of Damietta and contain notes he later used for his *Historia*.

More specifically, some crusade letters are actually written exhortations to take the cross. These highly artificial, much circulated texts are similar to crusading sermons. Bernard of Clairvaux issued his famous letter no. 363 (*Sermo mihi ad vos de negotio Christi*), for example, to promote the Second Crusade. These letters remained a useful model for crusade histories and letters up to the fifteenth century.

St. Lazarus, Order of

An international hospitaller order that assumed military responsibilities. Its origins are obscure, but the Order of St.

Lazarus possibly began as a leper hospital outside the walls of Jerusalem, run by Armenian monks following the rule of St. Basil. The earliest charters referring to the order date to 1142, suggesting that it was founded in the 1130s. Like other hospitaller foundations in Outremer, it adopted the Rule of St. Augustine. The first reference to a master appeared in 1153, and for the next hundred years only lepers were eligible to become masters. The Lazarites remained in Jerusalem until Saladin captured the city in 1187, and thereafter the order moved to Acre (mod. 'Akko, Israel). After the fall of Acre (1291), the order's headquarters were transferred to Boigny in France.

Members of the order originally consisted of clerics, brethren to look after the sick, and the lepers themselves. Leprosy (also known as Hansen's disease) is a chronic infectious disease that primarily affects the skin, nerve endings, and mucous membranes. Medieval medical practitioners diagnosed several diseases as leprosy, so it is possible that not all of the invalid members of the order suffered from Hansen's disease. Leprosy, however, was endemic in Outremer and claimed noted victims, among them King Baldwin IV of Jerusalem. Perhaps for this reason, the order enjoyed widespread royal and nobiliary patronage throughout Outremer in the twelfth and thirteenth centuries.

The order's cartulary, which survives in a fragment of forty documents, dating to between 1130 and 1248, shows that it owned hospitals in Jerusalem and Acre, with some small estates and rental properties in the southern part of the kingdom of Jerusalem. From the mid-twelfth century onward, the order received donations of lands in France, Italy, Spain, Hungary, Germany, England, and Scotland. The most noted gift was the donation by King Louis VII of France of the castle and fief of Boigny, near Orléans, which became the order's headquarters after 1291. The Lazarites' ties to the French monarchy were strengthened when Philip IV the Fair took the order under his protection in 1308.

Information about the order's transformation from a hospitaller into a military order is obscure. It possibly occurred through the admission of leprous knights from Frankish families in Outremer and from other military orders. Certainly there is evidence for an early association between the Order of St. Lazarus and the Order of the Temple: early Lazarite charters show the Order of the Temple acting as a kind of guarantor for some property transactions,

while Templar statutes of 1260 permitted leprous knights to enter the Order of St. Lazarus. The late-twelfth-century law book *Livre au roi* stipulated that knights and sergeants who contracted leprosy should join the Order of St. Lazarus. It is conceivable that such men carried out military duties, but it also appears that nonleprous knights joined the order to serve in battle.

The evidence for the military responsibilities of the order is ambiguous for the twelfth century. Thirteenth-century chroniclers placed the Lazarites at major battles and reported high casualty rates for the knights of the order. Joinville describes only four survivors of the order's mounted sortie near Ramla in 1242. Robert of Nantes, Latin patriarch of Jerusalem, reported that all the leper knights of the house of St. Lazarus were killed at the battle of La Forbie in 1244. According to the chronicler Matthew Paris, the Lazarite knights participated in the Egyptian campaign of Louis IX of France in 1248–1250, and fought at the battle of Mansurah in 1248. The order's losses were so extensive in these campaigns that Pope Innocent IV issued a bull in 1253 opening the office of the master to nonlepers, because all the leper knights had been killed in battle.

Evidently the thirteenth-century papacy considered the Lazarites as a military religious order, but one that lacked the resources commanded by the Hospitallers, Templars, or Teutonic Knights. The order received papal privileges permitting its members to collect money and tithes in Europe. In a resurgence of their original mission, Clement IV tried to place all the lepers of western Christendom under the protection and governance of the Order of St. Lazarus.

The order fell into a decline with the end of the Frankish states in Outremer and the gradual diminution of leprosy in western Europe. In 1490 Pope Innocent VIII tried to combine the Lazarites with the Hospitallers. The French Lazarites refused, and maintained the order, based in Boigny. In 1572 an attempt was made to unite the Lazarites with the Order of St. Maurice. This, again, was resisted by the French knights of the order. Both the French and Italian branches were suppressed in the French Revolution, and the order's hospitals disappeared. The Order of St. Lazarus was revived in the nineteenth century as an honorific and charitable organization.

Leon I of Armenia (d. 1219)

Prince (1187–1198) and king (1198–1219) of Armenia.

Leon succeeded his brother Prince Rupen III as leader of the Cilician Armenians, soon securing the country against Turcoman raids, and expanded his domain west, beyond Seleucia (mod. Silifke, Turkey), and north, beyond the Cilician Gates. His greatest achievement was the establishment of Cilicia as the center of a kingdom, a project that took several years. Leon first negotiated with the Holy Roman Emperor, Fred-

erick I Barbarossa, for a royal crown, but these plans fell through when the emperor died while crossing Cilicia in 1190. During the efforts of the Third Crusade (1189–1192) to recover Outremer from Saladin, Leon sent troops to participate in the siege of Acre (mod. 'Akko, Israel) and the conquest of Cyprus, pursuing friendship with the Franks despite border disputes with the principality of Antioch and the Templars. He was able to placate the pope without significantly changing Armenian ecclesiastical doctrine, and on 6 January 1198 he was crowned king in Tarsos (mod. Tarsus, Turkey) by the Armenian catholicos in the presence of the Syrian Orthodox patriarch, the local Greek Orthodox metropolitan, the papal legate, and the imperial chancellor; another crown was sent by the Byzantine emperor Alexios III Angelos.

King Leon arranged marriage alliances with Aimery of Lusignan, John of Brienne, and the princes of Antioch as well as with Theodore I Laskaris of Nicaea. He gave lands to the Teutonic Knights and the Hospitallers (the latter guarded his western frontier) and began the "Frankicization" of his court. Cilicia was increasingly important in trade between East and West, and Leon fostered this by granting privileges to Genoese and Venetian merchants. Much of his reign was taken up with the succession dispute in the principality of Antioch, where his great-nephew Raymond-Rupen was installed as prince in 1216 but ousted three years later. Leon died in 1219 and was succeeded by his daughter Isabel (Zabel).

Leopold V of Austria (1157–1194)

Duke of Austria (1177–1194) and Styria (1192–1194) and participant in the Third Crusade (1189–1192); notorious for

his imprisonment of his fellow crusader Richard I the Lionheart, king of England.

Leopold was the son of Henry II of Babenberg, duke of Austria, and Theodora Komnene, succeeding his father as duke on 24 February 1177. In 1182 Leopold made a pilgrimage to the Holy Land, and he gifted a relic of the True Cross to the Cistercian monastery of Heiligenkreuz. In 1186 he laid the foundations for a vast increase in Babenberg power when he secured recognition as heir to the childless Ottokar IV, duke of Styria, in the Treaty of Georgenberg (Ger. *Georgenberger Handfeste*), which was confirmed a year later by Frederick I Barbarossa, the Holy Roman Emperor.

During the Third Crusade Leopold did not join the emperor's army, but traveled independently to the Holy Land with a large number of Austrian knights, arriving at Acre (mod. 'Akko, Israel) in the spring of 1191. There he came to be regarded as the leader of the much depleted German crusader contingent, which had been left leaderless after the deaths of the emperor and his son Frederick V, duke of Swabia. However, Leopold and the other German leaders found themselves increasingly sidelined in the direction of the crusade by the two Western kings, Richard I of England and Philip II of France. After the capture of Acre from Saladin's forces (12 July 1191), Richard cast down Leopold's banner from the battlements of the city as a sign that he and Philip were unwilling to concede Leopold any share in the spoils. Shortly afterward Leopold returned to Austria.

Leopold took possession of the duchy of Styria after the death of Ottokar IV (8 May 1192). Later that year he was given the opportunity to exact revenge on Richard, when the English king, returning from crusade with only a few companions, was recognized and arrested by one of Leopold's men at the village of Erdberg (now in Vienna, Austria) in December. Clearly opportunism and revenge played their part in the duke's actions. An additional factor, however, was the enmity toward Richard of Emperor Henry VI, who had ordered his vassals to apprehend the English king if the opportunity presented itself. Richard was imprisoned in the castle of Dürnstein on the Danube while Leopold negotiated with the emperor. The duke handed over his prisoner to Henry VI on 23 March 1193, in exchange for half the expected ransom of 100,000 marks. A renegotiation of the ransom terms brought more favorable terms, including a further payment and the prospect of the marriage of Richard's niece Eleanor to one of Leopold's sons.

Despite its financial benefits, Leopold's detention of Richard, a returning crusader whose person should have been inviolable, brought him considerable opprobrium, and in 1194 he was excommunicated by Pope Celestine III. At the end of that year Leopold suffered a crushed leg after falling from his horse and died, still excommunicate, after a botched amputation of his gangrenous foot (31 December 1194). The duke's horrendous death was widely regarded as divine retribution for his imprisonment of the English crusader king. He was succeeded by his two sons Frederick I (in Austria) and Leopold VI (in Styria).

Leopold VI of Austria (d. 1230)

Duke of Styria (1194–1230) and Austria (1198–1230) and crusader in France, Spain, and the East.

Leopold VI was born in 1176 or 1177, the second son of Duke Leopold V of Austria (d. 1194) and Helena (d. 1199), daughter of King Géza II of Hungary. The division of the Babenberg territories made by his dying father in 1194 meant that Leopold VI initially received only the duchy of Styria. However, he inherited the duchy of Austria when his elder brother Frederick died without heirs in April 1198 while returning from the Crusade of 1197–1198, which had been launched by Emperor Henry VI.

In 1203 Leopold married Theodora, a granddaughter of the Byzantine emperor Isaac II Angelos, a connection, however, that lost importance after the overthrow of the Byzantine Empire by the Fourth Crusade (1202–1204). Leopold originally took the cross in 1208 and subsequently took part

Lepanto, Battle of (1571)

in crusades on three different fronts. In 1212 he joined numerous German and Lombard nobles to fight the Cathar heretics of southern France in the course of the Albigensian Crusade (1209–1229). He did not remain there long, but moved on to Spain to take part in fighting against the Moors, returning to Austria by the end of the year.

Leopold's longest commitment to crusading was his participation in the Fifth Crusade (1217–1221). He set out in June 1217 with Count Liutold of Plain, Duke Otto VII of Meran, Henry of Zöbing, Hadmar of Kuenring, and other nobles and knights, largely from the southeast of the empire. This German group sailed to Acre (mod. 'Akko, Israel) with the forces of Leopold's cousin King Andrew II of Hungary, and made up the first substantial contingent to arrive in the East. Leopold took part in operations against the Ayyūbids in northern Palestine during the remainder of 1217 and early 1218. While Andrew II returned home, Leopold remained for the second main phase of the crusade, and in May 1218 he sailed with other crusaders and local Frankish troops to Egypt, where he and his followers joined the siege of the port of Damietta. The duke and his men distinguished themselves in the forefront of the fighting over the next twelve months, but in May 1218, when they decided to return home with Damietta still uncaptured; their departure was a major blow to the prospects of the crusade.

Leopold did not take part in the Crusade of Emperor Frederick II (1227–1229), although he was a strong ally of the emperor. In 1225 he arranged a marriage between his daughter Margaret and the emperor's eldest son Henry (VII), and put considerable effort into mediating in the continuing disputes between the emperor and Pope Gregory IX. Leopold died at San Germano in Italy on 28 July 1230, five days after the conclusion of a peace treaty there. He was succeeded in both Austria and Styria by his eldest surviving son, Duke Frederick II (d. 1246).

Lepanto, Battle of (1571)

Lepanto, located on the southern coast of central Greece opposite the Peloponnese, was the site of the last great galley battle between a united Christian fleet and the Ottoman navy on 7 October 1571.

The battle of Lepanto was the culmination of an ongoing naval war between the Ottoman Turks and the Habsburgs of Spain that began with the Ottoman conquest of Egypt from the Mamlūks in 1517. In succeeding years, Turkish and Christian ships vied for control of the sea lanes in the central Mediterranean. Some of the significant engagements prior to Lepanto were fought at Peñon of Algiers (1529), Tunis (1534, 1535), Algiers (1541), Tripoli (1551), Bejaïa (1555), Jerba (1560), and Malta (1565).

The immediate cause of the Lepanto campaign was the Ottoman conquest of Cyprus from the Venetians in 1570–1571. In retaliation Pope Pius V and Venice organized the Holy League against Sultan Selim II's fleet, and encouraged Philip II of Spain to join. In return for crusading tithes, Philip promised to pay half the total cost of the league, while Venice paid a third and Pius V a sixth. The duke of Savoy and the Knights of Malta also contributed galleys to the Christian fleet.

The fleet of the Holy League, led by Don Juan of Austria, Mark-Anthony Colonna, and Sebastian Venier, sailed in September after the Turks captured Famagusta on Cyprus. The Christians planned to retake Tunis (which the Ottomans had captured in 1569) while the Turks were fighting in Cyprus. They encountered a Turkish fleet, commanded by Pertev Pasha, general of the Ottoman land forces, and Muezzinzade Ali Pasha, commander of the fleet. The battle pitted 208 Christian ships against 275 Ottoman ships. Approximately 100,000 men fought in the battle. The Christians lost 15 or 20 ships and 8,000 men, and the Ottomans lost 210 ships and more than 30,000 men.

Contemporary Christians celebrated Lepanto as a major victory over the Muslim Turks, and the Ottomans considered it a major disaster. Modern scholars, however, question whether the battle decisively halted Ottoman expansion. The Ottoman Empire retained Cyprus, and its sea power recovered rapidly after Lepanto. The Holy League collapsed by 1573, and subsequent attempts to reconstitute it failed. The conflict between the Ottomans and the Spanish continued until both sides agreed to a truce in 1580.

Letres dou Sepulcre

In the thirteenth century the jurist Philip of Novara reported that before the fall of Jerusalem to Saladin in 1187 the kings of Jerusalem had had their enactments written out and deposited for safekeeping in a locked chest in the Church of the Holy Sepulchre in Jerusalem. He claimed that at the time of the Muslim conquest this chest was lost, and thereafter no one knew for certain whether particular elements in the law had come into being through custom or through deliberate legislation.

Although there has been some debate among historians as to whether there is any truth in this story, it would seem that the doctrine of the *Letres dou Sepulcre* was developed in the thirteenth century as a legal fiction to justify uncertainties about the origins of custom and court procedure and to explain why custom among the Franks of Outremer differed from that in France.

Libellus de expugnatione Terrae Sanctae per Saladinum expeditione

A short but detailed Latin account of events in Outremer in the years 1186–1190, written by an anonymous, possibly English, author, probably in the early thirteenth century.

The *Libellus* deals with the conquest of the Holy Land by

Saladin in 1187. It includes considerable detail on the invasion of Galilee by Saladin's forces and the battle at the springs of Cresson (1 May 1187), as well as the subsequent campaign, which culminated in the great Muslim victory at the battle of Hattin (4 July 1187). Also treated are Saladin's capture of Nazareth, Jaffa, Nablus, Acre, Ascalon, and Jerusalem, and his siege of Tyre. The account ends with the inception of the siege of Acre (mod. 'Akko, Israel) by the Christians and the arrival in Outremer of the armies of Richard I of England and Philip II of France.

Liegnitz, Battle of (1241)

A battle fought on 9 April 1241 on the field of Wahlstatt near Liegnitz (mod. Legnica, Poland) in Silesia between a Mongol army led by Khan Qaidu and a Christian coalition under the command of Henry II, prince of Silesia, consisting mainly of Polish nobles and knights of the Teutonic Order.

Qaidu's contingents formed the northern and smallest wing of a very powerful Mongol army group, of which the southern wing, led by Great Khan Batu, had conquered Kraków in March and taken Hungary, chasing the Hungarian king Béla IV through most of the Balkans. After raids in Poland, where only Breslau (mod. Wrocław, Poland) was saved through a miracle by the Dominican prior of the city, the army of Qaidu united with large contingents of Batu's army because scouts reported a large Christian army at nearby Liegnitz.

At Liegnitz the Mongols succeeded in breaking up the Christians' battle formation with heavy showers of arrows from their composite bows, followed by a feigned retreat. They then mounted a counterattack upon the flank and rear of the Christian army, exploiting their mobility, which was far greater than that of their heavily armored enemies. The

Mongols seem to have been able to produce a cover of heavy smoke during the counterattack, but whether this was done by the use of gunpowder is much disputed and uncertain. The Mongol victory was total. According to contemporary chronicles, 30,000–40,000 Christians fell. Their ears were cut off as war trophies and filled nine large sacks; Henry's head was displayed on a spear outside his castle. Northern Europe now lay open to the Mongols, but they turned south and returned at the end of the year to Mongolia.

Contemporaries in Western Europe were convinced that the northern Mongol army would continue to the flat lands of Mecklenburg, Holstein, and Denmark, which were very suitable for horses. In fact, Qaidu's move to the south can probably be explained as a result of an internal power struggle among Mongol leaders rather than by tactical considerations. The Mongol victories were met with disbelief and terror in the West, and the "Mongol question" was discussed at councils and church meetings as far away as Braga in Portugal. Mongol military superiority was generally acknowledged and was soon explained by the healthy and austere life of the steppes and the Mongols' blind obedience toward their leaders, but it was also widely believed that Jews had provided Qaidu with weapons and acted as his spies.

An immediate result of the battle of Liegnitz was the preaching of a general crusade against the Mongols, which collected substantial financial resources but attracted participants almost exclusively from eastern Europe and was organized too late to be involved in any battle. The Holy Roman Emperor, Frederick II, had decided in July to mobilize a common European army against the Mongols that should also include Denmark and its naval forces, but the Mongols had withdrawn before it could be mobilized. A more important long-term result was the decision at the First Council of Lyons (1245) to dispatch four groups of papal envoys to the Mongols, which were soon to be followed by others. The rest of the thirteenth century was characterized by Christian attempts to convert the Mongols and to make alliances with them against the Muslims in the Near East.

Lignages d'Outremer

A genealogical work in Old French, originally compiled in Cyprus, probably in the entourage of John of Ibelin, lord of Jaffa, around 1268/1270.

The original version of the *Lignages* presents the genealogies of some fifteen noble families of Outremer and Cyprus. Starting from the ancestral pair Guy and Stephanie of Milly, it details in turn all of the families descended from them or linked to their descendants by marriage: the lords of Ibelin, the princes of Antioch, and the lords of Sidon, Caesarea, Beirut, Gibelet, and Tiberias, ending with the kings of Jerusalem and Cyprus. Essentially, the text represents a genealogical history of the Ibelins, and its aim was probably to glorify the ancestry of this family, whose origins are in fact obscure. These genealogies were intended to be exhaustive, and thus included as many names as possible. For each lineage, the author begins with the first known ancestor, giving the names of that ancestor's spouse and their children, a pattern that is then repeated for each generation. This first version is found in two manuscripts dating from the end of the thirteenth or the beginning of the fourteenth century: MSS Paris, Bibliothèque nationale de France, fr.19026, and Venezia, Biblioteca Marciana, Francese app.20²⁶⁵.

The original text of the *Lignages* underwent a number of revisions. A new augmented version was compiled during the first years of the fourteenth century. This version contains thirty chapters, which are organized according to a principle of social hierarchy, beginning with the kings of Jerusalem, Cyprus, and Cilicia, and ending with less prestigious lineages, such as the Mimars or Le Petit. It includes numerous families that were not mentioned in the first version. This version is no longer about the ascent of the Ibelins, but constitutes a true *remembrance de la gent desa mer* ("remembrance of the people beyond the sea," i.e., of Outremer), as it claims; the work originally created in the interest of a single family is transformed into something of more general significance. The sole extant text of this version is a sumptuous fifteenth-century manuscript (MS Città del Vaticano, Biblioteca Apostolica Vaticana, Vat.lat.4789). It is proof of the text's importance and wide dissemination that an Armenian translation of the first four chapters was made

almost immediately after its first appearance by Hé'tum of Korykos, who included it in his *Chronicle* (in the version preserved in MS. Yerevan, Matenadaran Library, 1898).

The *Lignages* were revised again later and inserted into the official redaction of the *Livre de Jean d'Ibelin* drawn up by sixteen liege vassals in 1369. Two further but more limited versions continued the genealogies up to 1458/1459, the dates of the coronation and marriage of Queen Charlotte of Cyprus. One of these, written in French, is a highly abbreviated version, covering only the kings of Jerusalem and Cyprus (MS München, Bayerische Staatsbibliothek, gall.771). The other is a translation into Italian, undoubtedly made in 1459 and surviving only in a fragmentary copy possibly dating from the 1570s (MS Città del Vaticano, Biblioteca Apostolica Vaticana, Vat.lat.7806).

Although it gives only a partial view of the feudal society of Outremer and Cyprus, the *Lignages d'Outremer* is a rich and complex text that constitutes an invaluable source of information on dozens of families, amounting to over a thousand individuals.

Limassol

Limassol (mod. Lemesos, Cyprus) was a port and bishopric of the kingdom of Cyprus. It had been the chief harbor town of the island during the Byzantine period and remained important under Frankish and Venetian rule, although it was surpassed by Famagusta in commercial importance by the beginning of the fourteenth century.

Venetian merchants were active in Limassol from 1126 onward, following the commercial concessions granted to them in Cyprus by the Byzantine emperor John II Komnenos. Following the Latin conquest of the island by King Richard I of England in 1191 during the Third Crusade (1189–1192), Limassol retained its position as the leading port of Cyprus up to the end of the thirteenth century, and the Pisans, Genoese, and Venetians all had organized merchant communities resident in the town. Venetian properties in Limassol, including a church dedicated to St. Mark, were recorded in the Venetian report of 1243/1244, which listed Venetian properties throughout Cyprus following their confiscation by the Lusignan Crown for reasons not yet established. The Venetian properties and commercial privileges mentioned in a treaty of 1306 were reconfirmed in 1328 and 1360, while the Pisan consul in Limassol continued to represent the Pisans throughout Cyprus even in the early fourteenth century. The Genoese also secured important properties and commercial privileges in Limassol and elsewhere in Cyprus under the terms of the treaty of 1232, which were reconfirmed in 1363 and 1365.

Limassol was also strategically important in the thirteenth century as a supply center during the Fifth Crusade (1217–1221) and as a base for the forces of the Crusade of King Louis IX of France against Egypt (1248–1254). Two Muslim raids directed against Limassol in 1220–1221 and 1271 likewise testify to the town's strategic significance, and it was one of the four bishoprics of the Latin Church of Cyprus established under Pope Celestine III in 1196.

Limassol exported agricultural produce such as wheat, pulses, wine, carobs, and sugar and served as a transit port for spices, cotton, and textiles. The salt lake south of the town contained marketable deposits and a royal fish farm, and the hinterland contained carob trees, orchards, vineyards, and sugar plantations. Salt was a royal monopoly, and sugar was cultivated on estates owned by the crown, the Hospitallers (the largest landowners in the diocese after 1312), and the Venetian Cornaro family.

Limassol also benefited as a stopover for pilgrims journeying to the Holy Land, and there was a hostel in the town for them. Despite suffering from periodic floods, earthquakes, plagues, Mamlük raids, and piratical attacks in the fourteenth and fifteenth centuries, Limassol retained some commercial importance. However, the Venetians, who ruled the island from 1489, neglected the town's fortifications, and the Ottomans captured it in 1570 without difficulty.

Lingua Franca

A vehicular language used along the Mediterranean shores, documented from the sixteenth century onward, perhaps genetically related to one of the various pidgins diffused in the Middle Ages among merchants and sailors. It has often been wrongly assumed that the term refers to a language that developed at the time of the crusades.

The ethnic term *Frank*, meaning "western European," was widely used in the eastern Mediterranean regions among Byzantines, Arabs, Turks, and ultimately among the Franks themselves. Given the extremely scanty notions of western European society diffused in the Islamic world, the term *lisān al-Farānj* (or *lisān al-Ifranj*), "language of the Frank(s)," in Arabic sources may refer to French, Latin, or to any other western European language, and does not imply the existence of a special language common to all the Franks.

The linguistic situation of Outremer was characterized by the presence of many languages, whose distribution depended on different elements, such as ethno-religious loyalties, social functions, and cultural prestige. Latin and French were the written languages of literature and administration. French was also the oral language of the feudal aristocracy that constituted the military and political elite. Some Italian dialects were spoken in the coastal cities, where commercial trade and sea journeys were organized by Venetians, Genoese, and Pisans. The indigenous populations spoke mainly Arabic, Armenian, and Greek; depending on their religious affiliation, they used Greek, Syriac, Armenian, or Arabic as written and liturgical languages.

Contemporary sources suggest that there were a few bilingual individuals, often oriental Christians, working in

the lower ranks of the administration, or as interpreters in harbors, customs, and markets; but bilingualism was not a common condition. Multilingual situations, such as those that prevailed among ships' crews, merchants' caravans, or large armies, commonly favor the development of pidgins or other forms of contact languages. Such languages probably existed in Outremer, but they did not crystallize into any stable linguistic variety and did not leave any record of their existence.

Interlinguistic contacts in Outremer are reflected in loanwords: many words of Greek, Arabic, Persian, and Turkish origin entered medieval western European languages through Italian dialects, and less frequently through French. One ought to remember that this lexical corpus (particularly relevant in the areas of trade and navigation) does not constitute itself a language or an evidence of a Mediterranean trade language. It points, however, to the wide spread of Italian (often in reduced and simplified forms) that characterized Mediterranean commercial and diplomatic relations after the loss of Outremer, and provided the lexical and grammatical basis for the famous Lingua Franca of the Mediterranean.

Lisbon, Siege of (1147)

A siege undertaken as part of the Second Crusade (1147–1149) by Afonso I Henriques, king of Portugal, and a fleet of northern crusaders en route to the Holy Land, resulting in the capture of Lisbon (Port. *Lisboa*) from its Muslim inhabitants on 24 October 1147. The principal source of information for the siege, *De expugnatione Lyxbonensi*, is an eyewitness account apparently composed by an Anglo-Norman priest named Raol.

A league of Anglo-Norman, Flemish, and German crusaders sailed from Dartmouth on 19 May 1147 and put ashore at Oporto in Portugal on 16 June before proceeding to Lisbon, where a meeting was arranged with King Afonso. The king, who had unsuccessfully attacked Lisbon with the assistance of English ships around five years earlier, was apparently anticipating the fleet's arrival. There are also indications that during the planning for the assault the Portuguese ruler had been in contact with Bernard of Clairvaux, a key figure in the organization of the crusade. In return for the spoils of the city and the chance to fulfill their Christian duty, the fleet's representatives agreed to assist Afonso in his attack on Lisbon, which commenced on 1 July 1147.

Following an arduous siege, Lisbon surrendered to King Afonso on 24 October. A brutal sack of the city ensued, which the chronicler Raol blamed on the German troops. Subsequently, some members of the northern expedition remained in Portugal while others proceeded to assist in the combined Spanish-Genoese siege of Tortosa or continued on to the Holy Land. Contemporary Christians generally recognized the capture of Lisbon as one of the few military successes of the Second Crusade, a judgment frequently echoed by modern historians, who have increasingly emphasized the place of the Portuguese assault within the period's overall crusading activity.

Literature, Modern

See Modern Literature

Literature of Outremer and Cyprus

The literary production of the Frankish minority in Outremer and Cyprus was written mainly in Latin and French and followed the patterns of contemporary western European tradition, but also presented some interesting and original texts. French and Latin literature coexisted in Outremer and Cyprus with the literary production of the indigenous population (written in Arabic, Armenian, Greek, Syriac, and Hebrew) and with oral narrative traditions that were extremely vigorous in a context of restricted literacy. This coexistence occasionally produced mutual influences, but one has to acknowledge that cross-cultural connections in this respect were weaker than might be expected.

Outremer and Cyprus were multicultural but not particularly intellectual societies: conditions were more favorable for warriors, merchants, or pious monks, than for scholars or professional writers. There were no universities in the Latin East, nor important schools or other kinds of religious or secular centers of instruction: William of Tyre, the most distinguished writer from Outremer, was born in Jerusalem but educated in Europe. The ruling class did not develop any long-term cultural policy to promote the activity of poets, writers, translators, scribes, and illuminators; there were a few exceptions, such as Amalric, king of Jerusalem (1163–1174), or Janus, king of Cyprus (1398–1432); however, their activities did not substantially alter the overall situation.

The most creative and original period in the cultural life of the Latin East came in the twelfth and thirteenth centuries, although historians often prefer to emphasize the brilliant

activity of the Cypriot court in the fourteenth and fifteenth centuries, which was by no means negligible. The genres of epic, lyric, and romance, which occupied central positions in contemporary western European vernacular tradition, were scarcely represented among the literary production of Outremer, although this tradition was familiar to the Franks. Most of the texts produced in Outremer and Cyprus belonged to “minor” or marginal genres: chronicles, legal handbooks, and pilgrims’ guides. Writers and their public favored local themes, relating to the history, legal customs, and devotional geography of their new lands, and some of these texts also met with success abroad.

Epic, Romance, and Lyric Poetry

The Old French crusade epics were written in northern France at the end of the twelfth century. They deal with the “heroic” period of the conquest of Syria and Palestine (c. 1098–1102) and might be considered as a sort of vernacular history of the crusades, glorifying the behavior and ethical values of the feudal aristocracy. It is possible that behind these surviving chansons de geste (epic poems) there existed lost poems or oral narratives from Outremer, but this is only a hypothesis, based on scanty evidence: the name of *Richard li pelerin* (Richard the Pilgrim), credited as the author of a first version of the *Chanson d’Antioche*, or the mention of Prince Raymond of Poitiers as patron of the anonymous cleric from Antioch who composed the *Les Chétifs*. Yet epic poetry undoubtedly circulated among the Franks in the Levant, as is proved, for example, by the fragments of a thirteenth-century manuscript of the poem *Fierabras*, preserved (probably as war booty) in the treasure room of the Great Mosque of Damascus.

Romance was also appreciated in Outremer and Cyprus: characters and adventures from the Arthurian world were well known in the aristocratic milieu, and were used at least twice (in the thirteenth century) in royal celebrations in Acre and Cyprus. The jurist and poet Philip of Novara, a supporter of the Ibelin family, composed a short poem of some 200 lines, modeled on the Old French *Roman de Renart*, and included it in his autobiographical book (the so-called *Mémoires*), with parodistic functions. This poetic composition, considered by some scholars as an autonomous branch of the tales of Renard, is in fact the only text belonging to the romance genre composed in the Latin East.

Many poets from France (both French- and Occitan-speaking areas) and Germany took part in crusades. They

included Duke William IX of Aquitaine, Jaufre Rudel, Raimbaut de Vaqueiras, Conon de Béthune, Thibaud IV of Champagne, Hartmann von Aue, and Neidhart. Some composed their lyrics in Outremer, but many more did so in Europe, before or after their Eastern adventures. There were also poets (such as Marcabru or Rutebeuf) who wrote *chansons de croisade* (crusade songs), either inciting their audience to take the cross or complaining about the indolence of Western kings, without leaving their countries. These crusade songs were evidently not very popular in the Latin East, where it is possible to find examples of another kind of poetry, dealing with contemporary political and military events, such as the Latin poem *Plange Syon et Iudea* by Albert, bishop of Nazareth, a dirge on the fall of the city of Jerusalem to Saladin (1187), or the French poems inserted into his memoirs by Philip of Novara, in support of the Ibelin faction.

The only known *chansonniere* (song book) from the Latin East originated at the refined court of the Lusignan kings of Cyprus and dates to the fifteenth century. It is divided into five sections and contains a great number of compositions (liturgical poems, ballads, motets, rondeaux, virelais, and others) with their musical notation. This precious manuscript reflects the literary tastes of the Cypriot Frankish aristocracy in a moment of cultural and social decline: a group sympathetic to western European models and fashions, which throughout the fourteenth century was a good promoter and consumer of literature. One can also mention the relationship between the great Italian writer Giovanni Boccaccio and Hugh IV of Cyprus (1324–1359), to whom he dedicated his *Genealogia deorum gentilium*, or the closer links between the French poet, crusade propagandist, and chancellor of Cyprus, Philippe de Mézières, and the Cypriot kings Peter I (1359–1369) and Peter II (1369–1372). Peter I enjoyed such a reputation in Europe that Guillaume de Machaut, one of the best French poets and musicians of his times, wrote a historical poem, *La Prise d’Alexandrie*, dealing with Peter’s crusade of 1365.

Historiography

Annals and chronicles from Outremer and Cyprus are usually concerned mainly with local history, although they occasionally include some information about events in western Europe and Central Asia. Most of the twelfth-century texts were written in Latin by clerics, such as Fulcher of Chartres and William of Tyre, who were connected with kings or

princes celebrated in their narratives. The chronicle of William of Tyre is surely the best piece of historiography from Outremer, and one of the most impressive in the entire medieval Latin tradition; it deals with the history of the Frankish states up to 1184, presumably ending shortly before the year of the author's death. The text, in spite of its very high quality, had a rather restricted circulation in its original form (there are only ten extant manuscripts, copied in England and France between the thirteenth and fifteenth centuries). However, it aroused a keen interest in the history of the Latin East. First, a Latin continuation for the years 1185–1194, written presumably in England, was appended to the text; some French continuations up to the year 1277 were added later on. Around 1220, the Latin chronicle was translated into French in northern France, not without a substantial revision to make it more suitable to laypeople. This new text (conventionally called *Eracles*) included some or all of the continuations and enjoyed an enormous success, both in western Europe and in Outremer: it was copied many times (as attested by over sixty manuscripts, often elegantly illustrated), translated and rewritten in other languages (including Latin itself), and used, often tacitly, by many other historians.

Vernacular history writing in Outremer began with Ambroise, a cleric who accompanied King Richard I of England during the Third Crusade (1189–1192) and praised his deeds in the *Estoire de la guerre sainte*. This historical poem is the first eyewitness crusade narrative written in French: it belongs to the Anglo-Norman tradition of dynastic verse historiography and can scarcely be considered as a product of cultural traditions of Outremer. The first vernacular historian of the Latin East was probably Ernoul, a knight or nobleman associated with the Ibelin family. At the beginning of the thirteenth century, he wrote a French chronicle (now lost) that was used by the compilers of the continuations of William of Tyre's chronicle up to the year 1197. Another important historical text from the Latin East had a similar fate: the memoirs of Philip of Novara, partially included in a chronicle of Outremer and Cyprus, the *Gestes des Chiprois*. The author of this text was a secretary of the Order of the Temple in Acre. Shortly before the fall of the city to the Mamlūks (1291), he moved to Cyprus, where he compiled a historical narrative based on his own experience, on Philip of Novara's memoirs, on the *Eracles*, and on original annalistic material from Outremer.

Many of the extant manuscripts copied in the scriptoria

of Jerusalem, Antioch, and Acre embody historical texts of various kinds, from the *Faits de Romains* to the *Eracles* and French translations of the historical books of the Bible. It is perhaps possible to detect an attempt to justify the dominion of the Franks over the Holy Land, seen as a legacy from a legendary or historical past: from this point of view, the Franks were new Israelites, renewing the heroic feats of their symbolic ancestors by fighting against the infidels. Inventing local traditions is a common and appropriate response to the need to construct a new cultural identity; similarly, Templars and Hospitallers produced or, at least, diffused a host of legends supporting claims for an ancient origin of their orders (which were, in reality, created in the eleventh and twelfth centuries). Jurists in the thirteenth century used to refer to the lost *Letres dou Sepulcre*, a collection of the oldest laws of the country, supposedly preserved in the Church of the Holy Sepulchre in Jerusalem, but destroyed by Saladin in 1187. Probably such a collection never existed, and references to it served only to uphold the position of local feudal rights against French customary law.

Legal Texts

The aristocracy, the same social group to which the vernacular chronicles were mainly directed, sponsored the production of juridical texts, supporting their claims against royal power: these treatises, concerning the laws, customs, and legal procedures applied in the kingdom, are known as the *Assizes of Jerusalem* (Fr. *Assises de Jérusalem*). The monarchy concurred in the elaboration of this collection of laws, but only one of the surviving texts mirrors its perspectives: the *Livre au Roi*, written for King Aimery of Jerusalem at the beginning of the thirteenth century. The Frankish burgesses also had their own court of justice, and codified its decisions in the *Livre de la Cour des Bourgeois*, written in the 1240s by an anonymous author who worked in the judicial administration of Acre. Most of the other texts date from the middle years of the thirteenth century and were written by law practitioners (Philip of Novara, Ralph of Tiberias, Geoffrey Le Tor, John of Jaffa) who were either noblemen or who worked for noble families. The *Livre des Assises* compiled around 1265 by John of Jaffa was so highly esteemed that it was adopted in 1369 by the High Court of Cyprus as its official work of reference; in the 1530s, the Venetians as the new rulers of the island ordered its translation into Italian. Previously, another collection of laws had received the honor of translation: the *Assises of Antioch* (Fr.

Assises d'Antioche) survive only in an Armenian version written around 1265, ordered by Prince Smbad as groundwork for his code of Armeno-Cilician laws.

Pilgrimage, Travel Writing, and Recovery Treatises

Although it belonged to a tradition going back to the fourth century, pilgrimage writing acquired a new flavor during the period of the Frankish states in Outremer. Thanks to the political situation and to better travel conditions, travelers' accounts increased in number; and this trend did not change after the complete Muslim recovery of the Holy Land (1291), when pilgrims had to modify their itineraries substantially. Most of the texts are similar in content: they are pilgrims' guides, comprising lists of holy places and sanctuaries, listing prayers and indulgences and some practical information and advice. Now and then, there were more curious or learned pilgrims, who filled their texts with comments on contemporary social reality and natural landscapes, or with quotations from the Bible and the fathers of the church, converting them into treatises of devotional geography. Among these texts, it is worth mentioning the description of the Holy Land written in Latin (1128/1132) by Rorgo Fretellus, archdeacon of Antioch, and preserved in 115 manuscripts, copied in the Latin East and in Europe from the twelfth to the seventeenth centuries. Another important and popular Latin description (1280/1283) was written by the Dominican Burchard, who traveled extensively in the Near East and spent several years in the convent of Mount Zion in Jerusalem.

There were also vernacular adaptations of Latin guides, which usually circulated among pilgrims in rudimentary formats such as loose sheets of paper or unbound quires; they were not preserved in an independent form, but only copied when they were incorporated into longer texts. The first French descriptions of the Holy Land, taken from travelers' accounts or imitating them, are to be found in the *Eracles*; in the course of the thirteenth and fourteenth centuries, these texts acquired some distinctive features, such as a wider range of interests or autobiographical character, and appeared as autonomous literary works.

Another literary genre connected with travel writing developed between East and West: the treatise on the recovery of the Holy Land. One of the best examples of this genre was commissioned in 1307 by Pope Clement V to be written by the Armenian prince Het'um, who dictated it in French to Nicolas Falcon. It forms the fourth section of Het'um's

Flor des estoires de la terre d'Orient, a very successful book dealing with the history and geography of the Near East. Another important treatise is the Latin *Liber secretorum fidelium crucis*, written by the Venetian merchant and diplomat Marino Sanudo Torsello, and presented to Pope John XXII in 1321. But in the second half of the fourteenth century, the prospects of a crusade for the recovery of Jerusalem were fading, and Europe was facing a new and more immediate threat in the form of the Ottoman Turks.

Translation Activity

A survey of the literary production of Outremer and Cyprus would not be complete without a reference to the activity of translators. As might be expected in a frontier society, there were translations from Arabic: in 1127 in Antioch Stephen of Pisa translated into Latin the Arabic medical treatise *Kitāb al-malakī* (*Royal Book*) by 'Alī ibn al-'Abbās al-Majūsī, with the title *Regalis dispositio*. Around 1220, a cleric named Philip, possibly of Italian origin, dedicated to the bishop of Tripoli his *Secretum Secretorum*, a translation of the Arabic encyclopedic treatise *Kitāb Sīr al-'asrār* (*Book of Secret of Secrets*). This was not the only Latin version of the text circulating in the Western world, but it was certainly the most popular, as is witnessed by some 350 extant manuscripts and countless vernacular translations and adaptations. There were also some translations from Latin into French: in 1271–1272 a Master Richard at Acre completed a French version of the Latin military treatise *De re militari* by the ancient author Vegetius; this translation was commissioned by Eleanor of Castile for her husband Lord Edward, the future king of England. Also at Acre (around 1282), John of Antioch translated the *Rhetorica ad Herennium* and Cicero's *De inventione* for the Hospitaller knight William of St. Stephen, himself the author of a history of the order and of a compilation of its laws. John's work, entitled *Retorique de Marc Tullis Cyceron*, is the first French translation of Latin rhetorical texts, with the exception of a few sections in the *Trésor* by Brunetto Latini (1266–1267). In Cyprus, Peter of Paris translated (c. 1300) Boethius's *De consolacione philosophiae* for another important Hospitaller, the commander Simon Le Rat. The two latter texts imply the existence in the Latin East of a lay readership for French books, which was interested in ancient learning but not sufficiently educated to acquire it directly from Latin texts.

Lithuania

Lithuania was the last pagan state in Europe, converting to Christianity only in 1387. It was the most popular target for crusades in the fourteenth and fifteenth centuries, although this is often unclear from western European sources that tell of crusaders going to Prussia (Fr., ME *Pruce*) where they would gather under the banner of the Teutonic Order for raids into Lithuania.

In historiography Lithuania is usually called a grand duchy, a usage that transposes to the pagan period the name by which it was known after 1387, when its Christian rulers

were also the kings of Poland. In earlier Western medieval sources the term *grand duchy* is not used. Russian sources often refer to the ruler of Lithuania as grand prince.

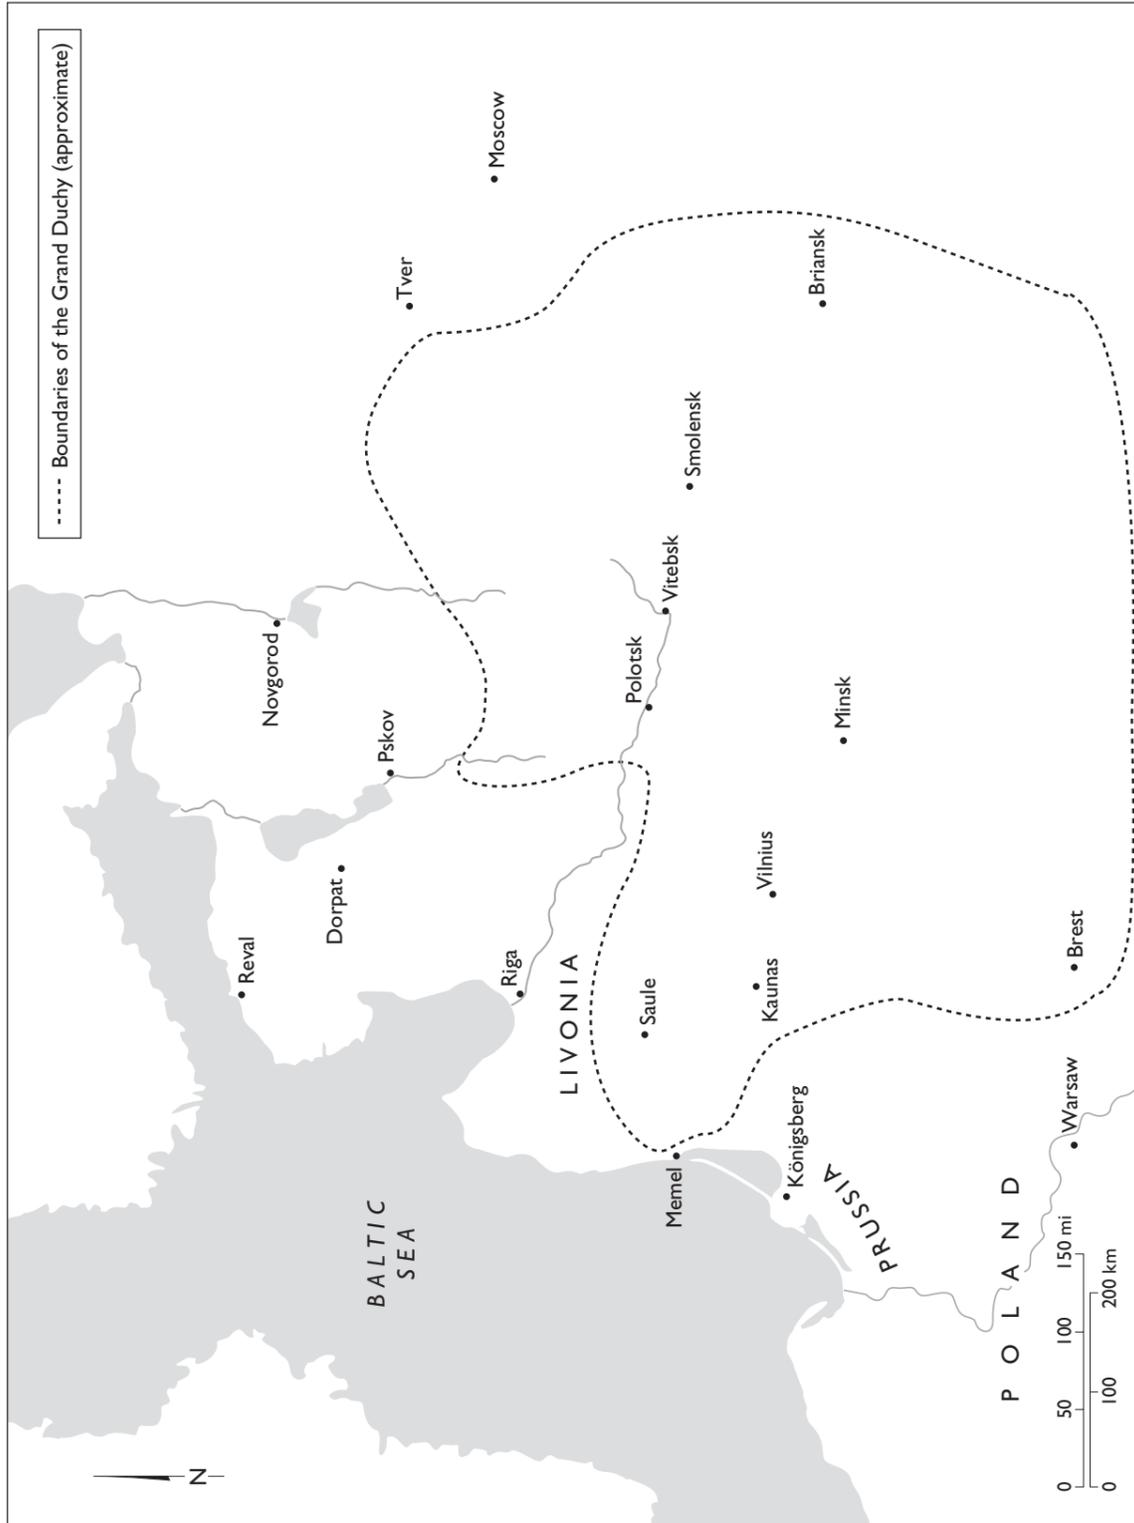

Located east of the Baltic Sea and to the northeast of modern Poland, Lithuania (Lith. *Lietuva*) was in the medieval period a country of thick but not trackless forests, with a network of castles or forts and towns such as Vilnius, Kernavė, and Trakai. Since Neolithic times Lithuania has been inhabited by Balts, who are not Slavs but a separate branch of the Indo-European peoples, represented today only by Latvians and Lithuanians, but in the Middle Ages comprising many tribes. In the territory of present-day Lithuania lived Curonians, Semgallians, Selonians, Samogitians, and Lithuanians (Lith. *lietuviai*). Only the Samogitians (Lith. *žemaičiai*) retained a measure of independence in the medieval Lithuanian state. As the Teutonic Order began to conquer Prussia, large numbers of Prussian fugitives settled in Lithuania.

Before the emergence of a unified Lithuanian state in the early thirteenth century, the name *Lietuva* probably referred to the area around modern-day Trakai and Vilnius. King Mindaugas (crowned 1253) claimed as his realm all of what is today Lithuania, except for the Baltic coast, and had occupied most of modern Belarus, including Grodno and Novogrudok, giving the latter city to his son to rule. Throughout the fourteenth century, the Lithuanian rulers expanded their power into Rus' lands: to the east into present-day Belarus and Russia, as far as Polotsk, Vitebsk, Smolensk, Briansk, and to the south into what is now western Ukraine, including Kiev (Ukr. *Kyiv*). Grand Duke Vytautas (1392–1430) controlled lands reaching as far as the Black Sea.

Rus' lands inhabited by Slavs that were incorporated into the grand duchy of Lithuania were sometimes ruled by princes of the Lithuanian ruling family and sometimes by princes of local dynasties. These lands provided taxes and military service to the grand duke, whose sons and daughters usually married into the ruling family of the principality and adopted the Greek Orthodox form of Christianity. The grand dukes remained pagan, residing in ethnic Lithuania, yet their power was greatly increased by the manpower and wealth of their Slavic lands.

Pagan Lithuania in the Period of the Crusades (1200–1386)

The first mention of Lithuania in written sources occurs in the *Quedlinburg Annals*, where a near-contemporary entry states

The Grand Duchy of Lithuania in the reign of Gediminas (1315/1316–1341/1342)

that in 1009 the missionary Bruno of Querfurt was killed at or near the border of Lithuania. Archaeological excavations show that well before the eleventh century the Lithuanians had developed a typical Iron Age warrior society, dominated by war leaders or chieftains. Up to the early thirteenth century, it is uncertain whether these nobles had any one chief. In a peace treaty recorded in 1219 between the dukes and duchess of Volhynia and twenty-one Lithuanian dukes, five are called “senior.” One of these was Mindaugas (Ger. *Mindowe*, Pol. *Mendog*, Russ. *Mindovg*), who must then have been quite young.

Within a few years, by killing or exiling rivals, Mindaugas had increased his power and begun Lithuania’s eastward expansion, exiling relatives to conquer western Rus’ lands. To strengthen his position, Mindaugas allied with the Teutonic Order and accepted baptism in 1251, sending his own envoys to Pope Innocent IV. Crowned in 1253, he became Lithuania’s first and only anointed king, but abandoned the order and probably also Christianity in 1261. He was assassinated in 1263 by disaffected Lithuanian nobles. Mindaugas’s reign established a strong Lithuanian state with foreign relations and foreign trade. However, it may have served as a warning to his successors of the dangers of baptism and submission to the Teutonic Order. No Lithuanian ruler would ever again attempt this.

Treniota (Pol. *Trojnät*, Russ. *Troinat*), one of the plotters of Mindaugas’s assassination, seized power after the king’s death, but ruled for only half a year (1263–1264) before being killed by Mindaugas’s followers. Mindaugas’s son Vaišvilga, or Vaišvilkas (Pol. *Wojsielk*, Russ. *Voishelk*), had been ruling western Rus’ lands and had not only converted to the Greek Orthodox faith but even became a monk. After Mindaugas’s death, he left his monastery to rule Lithuania in 1264–1267, but then handed over the throne to his brother-in-law Shvarno, the duke of Galicia-Volhynia, who was married to Mindaugas’s daughter.

Shvarno (Pol. *Szwarno*) was the only non-Lithuanian ruler of the medieval Lithuanian state, and he lasted only two years (1267–1269) before he was displaced by Traidenis (Pol. *Trojden*, Russ. *Troiden*), an uncompromising pagan who ruled from 1270 to around 1282. Traidenis expanded Lithuania’s sway over Rus’ lands, and made an alliance with the dukes of Mazovia (a part of Poland) that would last for several centuries. He won several important battles against the Livonian branch of the Teutonic Order, but was not able to harm the Teutonic Knights in Prussia or to stop their raids into his territory.

Who succeeded Traidenis is not clear, since there was a period of struggle for power, with one Pukuveras, or Butvydas, emerging as leader. Pukuveras’s son Vytenis became grand duke from around 1295 to around 1316 and laid the basis for Lithuanian military and diplomatic strength in the fourteenth century.

Vytenis (Ger. *Witen*, Pol. *Witenes*, Russ. *Viten’*) was able to defend and even expand his power in the face of intensified attacks, after the final subjugation of the Prussian and Livonian tribes had turned the full force of the Teutonic Order against Lithuania. He accomplished this partly by clever use of his subjects and allies. Archers and other troops from the annexed Rus’ lands aided his invasions of Prussia. Allying himself against the Teutonic Order with the burgesses and archbishop of the city of Riga, Lithuania’s most important trading partner, Vytenis sent Lithuanian pagan troops to form a garrison at Riga. Although Vytenis did not convert, as the Rigans claimed he had promised, he did in 1312 permit the archbishop of Riga to send two Franciscans to serve a Roman Catholic church in Novogrudok. From then on, Franciscan missionaries were present in the grand duchy, and the Teutonic Order had rivals for the work of converting the Lithuanian pagans.

Vytenis was succeeded in the winter of 1315–1316 by his brother Gediminas (Ger. and Russ. *Gedimin*, Pol. *Giedymin*), who gave his name to the Gediminids, the dynasty that ruled Lithuania until 1572. Gediminas continued the war with the Teutonic Order and also invaded the order’s territory in alliance with Poland. Through conquest and marriage alliances, he expanded Lithuanian rule to the east, setting his son Algirdas to rule Vitebsk, and his brother Fedor (Theodore) to rule Kiev. This new influx of men and wealth further increased his ability to resist the crusaders.

Gediminas continued Vytenis’s alliance with the Rigans, which helped them to resist the Teutonic Order until 1330. He fostered Lithuanian trade with Riga, the Hanseatic League, and Rus’, inviting foreign merchants and craftsmen to Lithuania, allowing even merchants from towns of the Teutonic Order safe passage through his realm. Lithuanians could now buy and have made the latest weaponry, removing the crusaders’ main technological advantages. Gediminas sent letters to Pope John XXII, to the Hanseatic cities of northern Germany, and to Franciscans and Dominicans, proclaiming willingness to accept Christianity and inviting foreign knights, farmers, merchants, and craftsmen to

Lithuania. As a result, papal legates forced the Teutonic Order to make a truce with Gediminas for 1323–1325. Once this had been confirmed, Gediminas denied ever mentioning baptism, and Lithuania remained pagan. Although he executed two Franciscan monks, probably for attacking the pagan gods, Gediminas used more diplomatic Franciscans as scribes and allowed them to have a house in Vilnius where church services could be attended by visitors. He even built Roman Catholic churches, declaring to the papal envoys that he allowed Christians to worship according to their rites, and obtained from Constantinople the appointment of a separate head of the Orthodox faithful in Lithuanian-ruled Russian territories.

When Gediminas died in 1341 or 1342, he was succeeded by his son Jaunutis (Pol. *Jawnuta*, Russ. *Evnut*), who lasted only three years before being displaced in the winter of 1344–1345 by Algirdas (Ger. and Pol. *Olgiard*, Russ. *Ol'gerd*), another son of Gediminas, who was helped to the throne by his brother Kęstutis. Under Algirdas, the war with the Teutonic Order continued, with victories and defeats for both sides: in 1345 Algirdas took the fortress of Mitau (mod. Jelgava, Latvia), while in 1348 he suffered major defeat in the battle of Strėva (Strebe). In 1377 the crusaders burned half of Vilnius, capital of the grand dukes. Yet even then Algirdas was able to negotiate a truce and withdrawal, inviting the crusaders to a banquet to clinch the agreement. During his reign the Teutonic Order's crusade attracted the finest of Europe's knights, but still the grand duchy was powerful enough to resist them and to constantly attack the order's forts and territories.

Like Gediminas, Grand Duke Algirdas at one point obtained from the Greek Orthodox patriarch of Constantinople a separate metropolitan of Lithuania for the Orthodox population of the grand duchy. He allowed Roman Catholic and Greek Orthodox churches in Vilnius and encouraged Christian merchants. Yet despite two marriages to Orthodox Russian princesses, Algirdas remained a pagan. In revenge for attacks on pagan Lithuanian customs, he may have executed three Lithuanians at his court who had converted to Greek Orthodox Christianity and possibly also five Franciscan monks, although both of these incidents of martyrdom are disputed by some historians. When Algirdas died in 1377, he was cremated with grave goods and horses in grand pagan fashion.

After Algirdas's death, his son Jogaila (Pol. *Jagiello*, Russ. *Yagailo*) inherited the throne. Kęstutis at first supported his

nephew, but rebelled against Jogaila after the grand duke made secret truces with the Teutonic Order on 27 February 1380 and 31 May 1380. Having seized Vilnius, Kęstutis ruled as grand duke in 1381–1382, but was displaced in June 1382 by Jogaila, who in a few months captured and imprisoned Kęstutis. This old pagan warrior died in prison. He was cremated on a pagan funeral pyre with his armor, horses, and hunting dogs, but the time of such state pagan rituals was drawing to an end in Lithuania.

Jogaila's claim to the throne was disputed by the son of Kęstutis, the talented and wily Vytautas (Ger. and Pol. *Witold*, Russ. *Vitovt*), who sought military alliances with the Teutonic Order. Jogaila needed allies to balance this, and at first negotiated with the grand prince of Moscow, promising acceptance of Greek Orthodox Christianity in return for support. But this plan was abandoned when Jogaila received an offer to become king of Poland by marrying Jadwiga, heiress to the Polish crown.

Lithuania as a Christian State

Now at last the rejection of paganism would bring tangible rewards for the grand duke, and in 1386 Jogaila was baptized in Poland along with many of his relatives, including Vytautas. He was then crowned as king of Poland, taking the name Władysław II Jagiełło. From this time Lithuania's fortunes were linked with those of Poland until 1792, although the grand duchy and Poland had separate courts, armies, and finances, and were united mainly through the person of the ruler.

Vytautas continued to rebel against his cousin Jogaila, twice receiving help from the Teutonic Order in return for grants of Samogitian lands (1382–1384 and 1390–1392). By 1392 Jogaila was forced to make Vytautas grand duke of Lithuania (1392–1430). While acknowledging Jogaila's suzerainty, Vytautas retained much independence in his rule over the grand duchy, whose territory he expanded almost to the Black Sea.

By medieval standards Lithuania was a Christian state after 1386, since its ruler had converted. In 1387 Jogaila traveled to Lithuania with priests, who conducted a public baptism at which crowds of nobles and commoners were sprinkled with holy water and given some rudimentary instruction in Christian prayers. Jogaila built a cathedral in Vilnius and established the diocese of Vilnius. Vytautas even declared himself a crusader against the Mongols.

However, the Teutonic Order did not forget that Vytautas had granted it Samogitia during his rebellions against Jogaila, and continued its attacks, aided by guest crusaders because the Samogitians were still unbaptized. In 1413, Grand Duke Vytautas and King Jogaila traveled to Samogitia to establish Christianity, destroying a pagan shrine and bringing priests to preach to the assembled populace. When this did not halt the order's attacks, Jogaila and Vytautas complained to the Council of Konstanz, which was convoked in 1414 to settle the claims of two rival popes, but also considered various controversies. A Polish and Lithuanian delegation pressed the council to condemn the war on Lithuania, and in 1416 presented to the council a delegation of baptized Samogitians as proof that the crusade was no longer necessary. So effective was this lobbying effort that two council delegates were sent to help the bishop of Vilnius to baptize Samogitia, although the council did not settle the rival claims of the Teutonic Order and Lithuania over possession of Samogitia.

Mass baptisms were begun in Samogitia in the fall of 1416 and continued in January 1417. The diocese of Medininkai was established the same year, and its first bishop was Matthew, a priest living in Vilnius, who was probably of German origin but spoke Lithuanian and was chosen by Vytautas. The last pagan state in Europe was officially pagan no more. The Teutonic Order and the grand duchy of Lithuania on 27 September 1422 concluded the Peace of Melno, which conceded most of Samogitia to Lithuania and set borders that would last for centuries. The crusade in the Baltic had finally ended.

The Crusade against Lithuania

The main sources for our knowledge of the crusading wars against Lithuania are papal letters, documents of the Teutonic Order, and above all the chronicles of Henry of Livonia (Henricus Lettus), Peter von Dusburg, Wigand von Marburg, Hermann von Wartberge, Nicolaus von Jeroschin (a translator of Dusburg's chronicle who added detail of his own), Guillaume de Machaut, and various other German and Polish chronicles. There is also an account of an expedition into Lithuania in the autobiography of Emperor Charles IV, while poets (such as Geoffrey Chaucer) and chroniclers of many nationalities also mention wars in Lithuania.

The basis of the crusade against Lithuania seems to have been the papal bulls and privileges issued for the Teutonic Order's wars in Prussia, which were then applied to Lithuania

by the order and its guests. There are no papal bulls granting crusade indulgences to those who fought in the wars against the Lithuanians in the fourteenth century. In this sense, the Lithuanian crusade lacked a legal basis. Yet it is quite clear that the Teutonic Knights, and the knights from all over Europe who flocked to their aid, thought of the Lithuanian wars as a crusade. Pope Alexander IV in 1259 had granted the order the right to give absolution from excommunication to those who came to help it fight the infidel. This may have been publicly interpreted by the order as the right to grant indulgences to all those who fought in its wars. When Grand Master Heinrich Dusemer had this privilege recopied in 1347, it could only have been to present a justification for the Lithuanian crusade, since by then the Prussians had long been conquered. Certainly Western sources as well as the order's own chroniclers often referred to the knights who came to their help as "pilgrims," in other words, crusaders. Whatever the popes intended, by the time that crusades to the Holy Land were no longer viable, the knights of the West were obviously determined to consider service in the Lithuanian wars as crusading that brought honor and spiritual merit.

What was the nature of this warfare? Most notable was its persistence: there was fighting almost every year from 1283 to 1406. Since the war was conducted mostly as a series of raids and sieges of forts or towns, neither side managed to crush its enemy completely.

The Teutonic Order was initially better armed, but the Lithuanians bought and captured weapons, invited foreign armorers and weapon makers to live in Lithuania, and were soon abreast of the latest military technology, including siege machinery and cannons (the latter by 1382). Though the Teutonic Knights were better at cavalry charges, the heavily forested or swampy Lithuanian terrain did not lend itself to many battles on horseback. The knight brethren of the order were few in number, and had to rely on auxiliary infantry drawn from sometimes rebellious conquered peoples or once-pagan allies who could prove treacherous.

Most fighting took the form of raids by both sides into the enemy's territory, in which the goal was not battle but the devastation of crops, the killing of peasants, and the taking of women and children as prisoners to be used as slaves or serfs. Foreign crusaders were distracted from the rather unpoetic nature of this kind of warfare by huge banquets and ceremonial exchanges of gifts hosted by the Teutonic Knights.

Ceremonial exchanges and even invitations to banquets could also take place between enemies. The Lithuanian rulers, their relatives, and the high nobility soon learned to utilize the conventions of medieval Western warfare: exchange and ransom of prisoners, the use of marshals, and the making of truces. Respect and even friendship sometimes developed between Christian crusaders and Lithuanian pagans who fought each other over many decades. But these more civilized relations were limited to nobles, while both sides slaughtered commoners without compunction.

Forts or castles were built by the Teutonic Order and the Lithuanians to guard river routes and control territories. Lithuanian Iron Age hill forts (artificial or natural hills fortified by stockades and ditches) had by the mid-thirteenth century become wooden castles. In the fourteenth century there were stone and brick castles at Vilnius, Trakai, Kaunas, Lida, and Medininkai, and many more in the Slavic areas of the grand duchy. Both sides soon had siege machinery, but this cannot have been totally effective, since the Teutonic Knights often relied on capturing forts by treachery among the defenders.

Several major battles, however, did take place. At Saulė on 22 September 1236, the Order of the Sword Brethren was defeated by the Samogitians. Master Folkwin and forty-eight knight brothers were killed, and the weakened Sword Brethren were subsequently incorporated into the Teutonic Order. At Durben on 13 July 1260, Samogitians and Curonians defeated the Teutonic Knights, killing Burchardt von Hornhausen, the master of Livonia, and 150 knight brethren. The great Prussian revolt of 1260 was one of the results.

Grand Dukes of Lithuania in the Period of the Crusades

Mindaugas	(king from 1253) c. 1240–1263
Treniota	1263–1264
Vaišelga	1264–1267
Shvarno	1267–1269
Vytenis	c.1295–c.1316
Gediminas	1315/1316–1341/1342
Jaunitis	1344–1345
Algirdas	1345–1377
Jogaila	1377–1381
Kęstutis	1381–1382
Jogaila (again)	1382–1392
Vytautas	1392–1430

The Livonian branch of the order was again defeated by Lithuanians, this time under Grand Duke Traidenis, at Ōsel on 16 February 1270, when the Livonian master, Otto von Lutterberg, was killed, along with fifty-two knight brethren. In 1279 an army led by Livonian Master Ernst von Rassburg penetrated into Lithuania almost to Kernavė and the patrimonial lands of Traidenis. Yet the Teutonic Knights retreated and were attacked and defeated by the Lithuanians by the River Dvina near Ascheraden (mod. Aizkraukle, Latvia) on 5 March 1279. Rassburg and up to seventy knight brethren were killed, and the order's flag captured. As a result, Semgallians under the rule of the order revolted. On 1 June 1298, Grand Duke Vytenis defeated an army of the Livonian branch of the order, killing Bruno, master of Livonia, and twenty knight brethren near the River Toreida. An army sent from Prussia came to the rescue, and inflicted a severe defeat on the Lithuanians near Neuermühlen (mod. Ādazi, Latvia) on 29 June 1298, killing thousands.

At Strėva near Trakai on 2 February 1348, the Teutonic Order defeated a large army led by Grand Duke Algirdas that included troops from the Slavic principalities of the grand duchy. As a result, the Lithuanians were not able to defend the fortress of Veliuona, which was destroyed by the Teutonic Knights later that year. At the siege of Kaunas (March 1362), the Teutonic Knights burned the Lithuanian castle of Kaunas, which guarded the river Nemunas (Memel) in Lithuania, and captured Duke Kęstutis's son Vaidotas. Near Rudau (mod. Mel'nikovo, Russia), on 18 February 1370, the order defeated the army of Lithuania, inflicting great losses. Grand Duke Algirdas and Duke Kęstutis were forced to flee for their lives, and afterward no longer attacked Teutonic Order forts on the Nemunas. The final great engagement was the battle of Tannenberg or Grunwald (mod. Stębark, Poland) on 15 July 1410, when the combined forces of Poland and Lithuania, headed by King Jogaila and led into battle by Grand Duke Vytautas, thoroughly defeated the Teutonic Order. This battle is widely believed to have begun the decline of the order.

Lithuanian Paganism and its Effect on the Crusades

Although some relics of paganism lingered in every country in Europe, the Lithuanians alone preserved a pagan state until 1387. Their religion is hard to reconstruct because contemporary accounts are rare and later ethnographers recorded peasant folk beliefs rather than the state religion.

All sources agree that the medieval Lithuanians had

sacred perpetual fires, sacred trees (especially oaks) and forest groves, as well as “wise men” and probably “wise women” (Lith. *žyniai* and *žynės*) who performed rites and made prophecies. Various animals (especially snakes) were reported as sacred in later sources. Horses were messengers of the gods’ will and guardians of the dead. The gods demanded sacrifices (usually foodstuffs, bulls, or goats, but occasionally a hapless war prisoner), helped in divining the future, and assured an afterlife, for which food, horses, and weapons were cremated with the wealthy dead.

The deities whose worship survived in Lithuania into modern times seem to constitute a typical Indo-European pantheon, with a possible admixture of elements from an older earth-goddess religion: Perkūnas, the powerful god of thunder; Gabija, the goddess of fire; Mediena, the goddess of the forests and of animals; Žemyna, the earth goddess; Giltinė, the goddess of death; Velnias, the god of the underworld and of fertility; and Laima, the goddess of luck. The sun, the moon, and the morning star were probably objects of worship. There were many sacred places: a grove, for example, or a hill or a field near a stream, or an isolated boulder with strange markings.

What was the effect on the crusaders of encountering this religion? The more educated Christian clerics may have been aware of the similarities of the Balts’ religion to that of ancient Rome, and thus viewed it as not wholly alien; this point of view is noticeable in the chronicle of Peter von Dusburg, a priest of the Teutonic Order. Yet even he seems to shudder with horror when he writes of the Old Prussians that they worshipped “even toads” [Peter von Dusburg, *Chronik des Preußenlandes*, ed. Klaus Scholz and Dieter Wojtecki (Darmstadt: Wissenschaftliche Buchgesellschaft, 1984), p. 102], an animal associated in Western iconography with the devil and witchcraft. Probably most crusaders found the pagan religion repellent and a symbol of the “otherness” of the Lithuanian enemy. Most horrifying was the threat of becoming a human sacrifice, burned alive to please the pagan gods. This danger can only have reinforced the Teutonic Knights’ self-image as martyrs and victims, and increased the brutality characteristic of both sides in this crusade.

On the other hand, we should note that two of the main chroniclers of the Teutonic Order, Herman von Wartberge and Wigand von Marburg, hardly mention religion, Christian or pagan. They report pagan funerals as an interesting event and pagan sacrifices of Teutonic Knights as a type of

war crime, and present no religious justification for the order’s wars. Certainly the merits of killing pagans were used to recruit Western chivalry to the crusade in Lithuania, and the glory of fighting for God appears in the guests’ chroniclers, such as Guillaume de Machaut describing the expedition of John of Luxembourg, king of Bohemia, to Samogitia in 1329. But the Teutonic Order’s complaints about this king baptizing and then freeing thousands of pagan prisoners make clear that the order did not even pretend to missionary zeal.

Liturgy of the Crusades

The religious rites that were particular to the crusading situation, from the proclamation of the First Crusade in 1095 up to the sixteenth century, comprised various forms. They included single rites (usually within a definite liturgical field, such as pilgrimage, war, and knighthood); composite rites (consisting of single elements received from several fields and fused together into integral rites); and sets of complete rites (pertaining, usually, to several fields). These rites could be personal, in that they sustained the crusader’s progress on his journey, and communal, in cases where crusade-related rites were performed by collectivities in the field or in the crusaders’ home countries.

Rites of Inception

The inception of a crusading journey was solemnized through two rites: the new practice of “taking the cross,” mainly spontaneous and informal, and the traditional ritual of the pilgrim’s departure, which by 1099 was common and regular. They delineated two kinds of inception. The rite of taking the cross established the status of the would-be crusader, whereas the rite of the pilgrim’s departure initiated the actualization of that potentiality. Formal services in church for taking the cross, and departure services that combined the separate rites of the pilgrim’s departure and the taking of the cross, appeared by the late twelfth century and were performed alongside the traditional rites.

Taking the cross, an innovation commonly attributed to Pope Urban II at the Council of Clermont (1095), consisted in attaching the sign of the cross to clothing or armor. This

rite remained largely informal during the twelfth century and to some extent in the thirteenth. Many crusaders seem to have “crossed themselves”: whereas the frequency of “self-crossing” terminology expressed the volitional and determinant role of the individual, it also reflected the prevalence of that practice. Although would-be crusaders usually received the cross from clerics and in ecclesiastical venues, it was also given by secular persons and in nonecclesiastical contexts (for example, Bohemund of Taranto distributed crosses to his soldiers during the siege of Amalfi in 1096).

No regular formal ceremony of taking or giving the cross is documented prior to the late twelfth century, and the public venues described are often characterized by disorderly ecstasy and inspired improvisation. Taking the cross was perceived as a public pledge to fulfill the crusading vow, but its largely informal makeup weakened the prospects of its enforcement. Explicit promises (documented vow attestations, though, were extremely rare), sworn oaths, and formal rites for taking the cross were therefore devised in order to secure implementation. Some of the new formal rites were very elaborate, especially those that attached the service of “crossing” to the sacrament of confession and penance and to a votive Mass.

The traditional rite of pilgrimage inception was generally practiced on the crusader’s departure in his parochial church. He confessed, received penance, took part in an appropriate votive Mass (for example, the Mass for Those on the Road), and received his pilgrim’s scrip (satchel) and staff kneeling in front of the altar; these were blessed in a special service that comprised psalms, prayers, and formulas of blessing. The more evolved forms of this rite combined the two services of inception (pilgrimage as well as “crossing”) and provided the departing crusader with his cross in addition to the scrip and staff. Some of the ceremonies were quite elaborate: the Lincoln Pontifical service comprised no less than four psalms and four prayers, the imposition formulas of scrip and staff, a separate blessing of the cross, and a formula for its imposition, and it concluded with the Mass for Those on the Road and two after-Mass prayers for the crusaders.

Increasingly popular were sets of rites that combined rituals of pilgrimage, knighthood, and Christian kingship. In these sets, the traditional rites of “crossing” and of the pilgrim’s departure were supplemented with rites of penance (a corollary of the pilgrimage ritual), of the just war, and of the pre-death ritual. When King Louis VII of France left on

the Second Crusade, he visited several holy men in Paris and a leper asylum, kissed and adored the relic of St. Denis at the abbey of Saint-Denis, and received the banner of St. Denis from above the altar along with his scrip and staff. John of Joinville adopted an essentially similar set: on the eve of his departure he assembled his vassals and settled all disputes with them; he received his scrip and staff at the hands of a Cistercian abbot on the day of his departure, then went on foot, barefooted and in his shirt, and visited several places of pilgrimage where he adored holy relics. Only then did he proceed on his way to his port of embarkation.

These rites declared the meanings of the crusade in a liturgical mode through the spoken word and in symbolic gestures, objects, and performance; their subtexts and implied allusions were often explicated by nonliturgical sources. On the most basic level they defined the crusade as an Imitation of Christ, the ultimate self-sacrifice of the martyr in total love and service of God. This idea was transmuted into the notion of pilgrimage, that is, the pilgrim's journey as an encapsulating enactment of the ideal Christian life perceived as a permanent combat with the ancient foe and as a penitential, ascetic progress from sin to salvation in the heavenly Jerusalem. It was further transformed into the practicable Jerusalem pilgrimage and, finally, into the Jerusalem pilgrimage as a crusade.

Combat in the service of God was seen as predominantly spiritual and only secondarily as martial and directed against worldly foes, while ascetic progress was realized in a penitential journey that culminated in the mimetic and redemptive visit to Jerusalem, a prefiguration of the heavenly city of salvation. The primacy of pilgrimage in this complex is best illustrated by the prevalent contemporary opinion that a crusader's vow was deemed fulfilled only after he had visited the holy places or died as a martyr on the way.

Rites of Crusading Warfare

Crusaders on the road required ordinary and extraordinary formal rituals. The first category comprised the communal celebration of the cycles of liturgical time, ordinary rites applying to the individual (for example, penance, unction of the sick, and extreme unction), and rites that related specifically to the journey (for example, the invocation *Veni creator spiritus* [Come, creator spirit] to secure propitious wind on the first hoisting of sails). The second consisted of liturgical remedies for unexpected emergencies and particularly grave crises, such as when exceptional liturgical and disci-

The Crusader's return. Relief from the Abbey of Belval, perhaps in commemoration of the return of Hugh I of Vaudemont (d.1154). (Erich Lessing/Art Resource)

plinary measures were taken to purge the crusading host from corruption, as during the siege of Antioch in 1098. There was no shortage of clerics equipped with portable altars, books, and vestments to administer these rites, as most crusading expeditions consisted of distinct contingents that were served by their own clerics according to their liturgical uses.

The liturgy of crusading warfare was grounded on war liturgies that had been regularly practiced in the Byzantine Empire and by Western armies since the Carolingian era, and also comprised innovations introduced by the crusaders. A battle was often preceded by various rites: fasts, penitential processions, almsgiving, the sacrament of penance, and the communion of the Eucharist. When crusaders entered the field they were accompanied by clerics in white stoles, who circulated among the combatants, bearing

crosses and relics; they made the sign of the cross (often on crusaders' foreheads), gave blessings, and promised plenary indulgence and remission of sins to those who would fall in the battle. The bishops did the same for the commanders and preached before them, while clerics in the base camp, dressed in their priestly vestments, prayed continuously for the combatants. This pattern appeared also in atypical operations: on the eve of his landing at Damietta (1249), Louis IX of France commanded the crusaders to confess and make preparations as before death and heard the Mass for Those at Sea before he armed himself. While the crusaders were going down to the assault boats, they were blessed by the legate, and the whole flotilla was led by a boat flying the banner of St. Denis.

During fighting, formal collective war liturgy gave way to informal individual practices. Combatants made use of apotropaic objects such as the sign of the cross attached to clothes and armor or painted on foreheads, consecrated arms and war banners, relics carried on the person or attached to weapons, and scriptural quotations engraved on swords. Combatants also knelt down and prayed for succor, made vows in desperate situations, and appealed to Christ, Mary, angels (such as the Archangel Michael), and patron saints (such as the military saints George, Demetrius, and Maurice).

Formal liturgy reclaimed the battlefield once the fighting was over: clerics administered to the wounded and the dying the sacraments of unction of the sick and the viaticum, identified the dead, and gave them a full Christian burial. Rites of thanksgiving for victory were sometimes practiced on the spot, as when the crusaders took the beach at Damietta (1249). The same spirit of thanksgiving inspired the more elaborate victory ceremonies, but they were designed, in addition, as either rites of conquest and religious conversion or rites of triumphal homecoming. Trophies of victory were occasionally deposited in churches (for example, the standard of the vanquished Muslim amir in the Ascalon campaign of 1099). Permanent victory commemorations were introduced into the liturgical calendars not only of the churches involved, but also abroad, as with the liberation celebrations of Jerusalem, Acre, and Damietta.

In their innovations, the crusaders harked back to biblical war rites: the procession that encircled Jerusalem in July 1099 echoed Joshua's march around Jericho, whereas the silver trumpets made for the Second Crusade corresponded to those produced for Moses. Battle-cry and banner usually

formed the semiliturgical sign of a military contingent, but the First Crusade broke with this tradition. Although the crusaders marched into battle behind the banners of their individual leaders, they adopted a single, common battle cry: *Deus vult* ("God wills it"), regularly shouted twice (or thrice, according to some sources) by the entire army with one voice. Contemporaries saw this as an expression of unity and a repudiation of "proud diversity," and they were certainly right as to its rationale. It went, however, against the grain of the common military ceremonial, and subsequent crusades reverted to particular battle cries.

Crusading clerics in the field prayed mostly from common prayer books and used generic prayers traditionally said during war and crisis, but they also innovated, trying for specificity through the naming of protagonists and by adapting generic texts to particular events and situations. Such prayers related to events in a more direct mode, in contrast to general prayers, which required explication. A set of original war prayers composed during the Fifth Crusade (1217–1221), for example, contains a prayer that calls upon God's power over wind and water in relation to the fighting in the Nile Delta with its seasonal rises and falls, two others that invoke miracles of fire in the specific context of harassment by fire during the siege—one of which supplicates "liberate us from that fire and from the hands of the sinful Saracens"—and finally, a prayer that beseeches: "Look at our true faith . . . in the cause of which we have assembled in this alien land, and do not let us perish at the hands of the cruel heathens" [*Gesta Obsidionis Damiate*, ed. Reinhold Röhrich, in *Quinti belli sacri scriptores minores* (Geneva: Fick, 1879), pp. 82–83, 98–99].

A striking example of such specification can be seen in a thanksgiving prayer said after the victory at Dorylaion in 1097. Composed of five heavily edited verses from *Exodus* (15:11, 6, 7, 9, 13, in this order), it concludes: "Now, Lord, we know that you carry us in your strength unto thy holy habitation, that is unto your Holy Sepulchre" [*Robert Monachi historia Iherosolimitana*, in *Recueil des Historiens des Croisades: Historiens Occidentaux*, 5 vols. (Paris: Académie des Inscriptions et Belles-Lettres, 1844–1895), 3:763].

Support from the West: Common Liturgical Practices and Dedicated Rites

Liturgical activity in support of crusades during the twelfth century related to the catchment area of any given crusade and was usually of short duration. However, from the loss

of Jerusalem to Saladin in 1187, sustained crusading agitation produced an intense liturgical activity throughout Europe that actually outlasted crusading to the Holy Land and continued well into the sixteenth century. This activity consisted of two types: single practices (mainly of penance) performed either singly or in sets, and dedicated rites, mostly connected with the celebration of Mass.

Penitential practices employed in the cause of the crusade consisted of fasts (a bull in 1187 enjoined on all Christians a five-year Lent-like fast on Fridays as well as abstention from meat on Wednesdays and Saturdays), sumptuary regulation of dress, chastisement, and almsgiving. The most conspicuous and participatory penitential practice was the procession: clergy and laymen chanting litanies, responses, and prayers marched toward a church, usually on Fridays, where an appropriate Mass (for example, *Salus populi*) was celebrated. The participants were given indulgences. Cloistered communities held their processions indoors; the Cistercians, for example, usually went in a procession to the high altar every Friday after “mournfully” chanting the seven penitential psalms and litanies, then held a special service and celebrated a *Salus populi* Mass.

Other practices involved the celebration of Mass in the cause of the Holy Land: its time was fixed for the ninth hour, bells were rung in its course, and people outside the church knelt and said the Lord’s Prayer. Several gestures were expected of the congregation inside: stooping with humility whenever Christ’s name was mentioned, kneeling, and prostration. Exceptionally, relics were shown to the public, as in 1191, when relics of SS. Denis, Rusticus, and Eleutherius were exhibited at the abbey of Saint-Denis in France in order to promote public intercession for the Holy Land and the crusade of King Philip II Augustus.

A liturgical innovation after 1187 was the Clamor for the Holy Land, a sequence of psalms, versicles, and prayers. The first such Clamor, which appeared in London in 1188, was interjected into the Mass between the *Pater noster* and the *Agnus Dei* and consisted of Psalm 78, several versicles, and a prayer, all said in prostration. With time, the Clamor evolved into more elaborate and expanded forms (with additional psalms, versicles, and prayers as well as alternative and additional objectives) and became a permanent component in both the Mass (that is, the celebration of the Eucharist) and the divine office (the recitation of prayers at fixed times during the day). The original London Clamor was a temporary seven-day program of seven daily Masses, each

one anchored on a different psalm and on the traditional Good Friday prayer for the emperor (*Omnipotens sempiterna Deus in cuius manu*). It was subsequently simplified by reducing the sequence of seven daily Masses to one daily Mass: twelve different forms of such Clamors survive. Another contemporary Holy Land Clamor, anchored on Psalm 78 and on a specific Holy Land prayer (*Deus qui ad nostre redemptionis*), evolved in connection with both Mass and office. It was practiced quite extensively, but its use declined after the thirteenth century.

The dominant Holy Land Clamor was promulgated by Pope Innocent III in 1213 in a drive to promote a new crusade. Anchored on Psalm 78 and a different prayer for the Holy Land (*Deus qui admirabili*), it was promulgated again by Pope Innocent IV in 1245, received into the pontifical of William Durand, and practiced universally. It acquired new versicles and prayers in the process, until it was reformed by Pope Nicholas III (1280) and Pope John XXII (1322 and 1328) from a crusade service to a general supplication for the church. One of its more durable variants was the Sarum Use permanent mass Clamor with its numerous strains. At the height of its evolution, it made intercession for the liberation of the Holy Land and for bishop and king with an expanded complement of three psalms, three prayers, and (usually) eight versicles, all aligned on these three objectives. It was abolished in the sixteenth century.

Whereas the Clamor interrupted the normal performance of the Mass, another approach consisted in manipulating entire Masses. Votive Masses, because of their essentially intercessory nature, were particularly appropriate for this purpose, and at least eight such Masses were performed in the cause of the Holy Land, either singly or in various sequences: the Masses of the Holy Ghost, St. Mary, the Angels, the Holy Cross, and the Holy Trinity; the Mass in Time of Tribulation; the Mass for Any Necessity; and the Mass for the Intercession of the Saints.

Regular Masses were converted into crusading Masses by adding three dedicated prayers to the regular prayers of the Collect, the Secret, and the Postcommunion. Some eight local triple sets of this kind are known, of relatively limited diffusion and duration. In 1308 Pope Clement V launched a new version of the old triple set *Contra Paganos* anchored on the prayer *Omnipotens sempiterna Deus in cuius manu*, among other preparatory measures for a new crusade, and that set served the church in numerous crusades and conflicts until the twentieth century. It was immensely popular, because as

a generic crusading set it was compatible with an almost unlimited range of “crusades.” The last Holy Land triple set to be decreed by the Curia was the *Deus qui admirabili* set promulgated by John XXII in 1331–1333 in anticipation of a new crusade.

The Trental of St. Gregory, a typical English rite based on a triple set, is documented from the late fourteenth century. It converted the ten major feasts of the year into an instrument of intercession for the liberation of the Holy Land, on the one hand, and of designated souls from Purgatory, on the other, by the insertion of a triple set of special prayers into three Masses said on the Octaves of these feasts, making thirty Masses in all. Practiced widely in England, it evolved into more complex forms combining the Mass with the office, personal piety with priestly mediation, and flexibility with rigidity in the actual practice of the Trental until it was finally abolished in the sixteenth century. A similar manipulation of regular Masses involved the insertion of a prayer calling for the liberation of the Holy Land into the Bidding Prayers, the series of intercessory vernacular prayers said in parish churches during the Sunday Masses. Documented in many parts of Europe from the late thirteenth century and well into the seventeenth, the easy accessibility of the Bidding Prayers to lay worshippers made them a potentially important vehicle of propaganda for the crusade.

The complete crusading Mass, designed to serve the cause of the crusade through the alignment of the Mass’s variable components with the crusade and its objectives, represents the perfect form of this kind of intercessory eucharistic service. Grounded on the traditional war Mass *Contra paganos* and on the Holy Land triple sets of Mass prayers, numerous Masses of this type were created and practiced in the late Middle Ages. Mostly generic rather than specific and hence applicable to any non-Christian or heretical adversary targeted by a crusade, many of them were nevertheless specifically aimed at the Turks (recognized as the main enemy since the First Crusade and always perceived in relation to the Holy Land, even when they were seen as a threat nearer home). A handful were specifically dedicated to the liberation of the Holy Land.

Liturgy of Outremer

The liturgy of Outremer is only partially known: few of its liturgical books survived and even fewer are available in critical editions. What does survive documents the liturgy of Jerusalem and, in particular, that of the Church of the Holy Sepulchre, rather than Outremer as a whole. It is reasonable to assume that one can make deductions about the liturgy practiced elsewhere in Outremer, but this assumption has not yet been proven. Frankish rule in Jerusalem was commonly perceived in reference to liturgy, that is, in its ability to secure for Christians freedom of worship in the city and to restore the old glory of Christian Jerusalem with its magnificent churches, its often-imitated cultic practices, and its

congregation comprising both locals and pilgrims. An ambitious program of church building was started immediately after the crusader conquest of 1099, and by the middle of the twelfth century Jerusalem boasted some of the finest churches in Latin Christianity.

The Franks were neither clear nor consistent as to the type of cultic practices they wished to restore. They rejected the Greek liturgical calendar that they found in place, perhaps because it reflected the long history of Jerusalem as a Greek Orthodox city and see, with its commemorations of Byzantine saints, rulers, ecclesiastics, relics, and events. The Franks wiped the slate clean and introduced the Roman calendar, which was practically universal and almost free of local accessions prior to 1099. They added the commemoration of a group of six early bishops of Jerusalem (four from the second century and two from the third), borrowed from the Martyrology of Usuardus, and adopted one local commemoration, the feast of St. Sabas. More importantly, they added several new feast days: the Liberation of Jerusalem and the Dedication of the Holy Sepulchre (15 July), the Transfiguration (6 August), and, following the discovery of relics in Hebron in 1119, the Feast of Abraham, Isaac, and Jacob (6 October).

The stationary liturgy was restored, however, to its original extensive format. After three centuries of steady contraction under Muslim persecution, Christian Jerusalem celebrated its major feasts once more in a mobile program that covered the city and its environs. It was richer than its fifth-century model: whereas the old program was centered on the Holy Sepulchre and avoided the Temple Mount, the Frankish stationary liturgy moved around two foci, the Holy Sepulchre and the Temple of the Lord. Public processions escorted the patriarch to and from the church that was designated for the principal service of the day, delimiting the liturgical space of Jerusalem and highlighting the authority of the patriarch over such major churches as the Temple of the Lord, Mount Zion, and the Church of the Nativity in Bethlehem. The public cult had two principal seasons: the winter season, comprising Christmas (25 December), Epiphany (6 January), and the Feast of the Purification (2 February), and the spring season, consisting of the Annunciation (25 March), Holy Week with Easter, Ascension, and Pentecost. The Palm Sunday procession and the Holy Fire miracle on the Paschal Vigil were especially popular with pilgrims.

It was a highly historicist liturgy, which concentrated on the correct reenactment of the events it commemorated. Its

calendar set great store on exact historical dates, for example, those of Noah's entrance into and exit from the Ark (20 May and 27 April, respectively) and that of the Resurrection (27 March); on the exact identification of the sites of commemorated events; and on the adaptation of the common liturgy to reflect this unique verity. These practices included, for example, the insertion of the words *in hoc loco* (in this place) to the common prayer said on the Feast of St. Peter in Chains, celebrated in the crypt of the church dedicated to that event, as well as the pointing to the Sepulchre and insertion of the word *hoc* into the Resurrection prayer ("the Lord has risen up from [this] sepulchre") in the Resurrection Mass celebrated in the Church of the Holy Sepulchre. Historicism accounted for a more comprehensive view of sacred history and the rites that depended on it as a two-leveled complex, integrating the prefigurative level of the Old Testament with the upper level of the New Dispensation in the New Testament and its Apocrypha. Many churches and memorials were dedicated to one level only; others combined the two. The Temple of the Lord, for example, an original Frankish church with no Christian antecedents, commemorated a rich sequence of events from the creation to the apostles, among them many of the central events of both testaments.

Direct, mimetic participation of the worshipper in public cult rites such as the Palm Sunday procession was one way of realizing the potential of historicism, and it was further enhanced under the influence of pilgrims, massively present in all public cult events in the city of Jerusalem. The public cult in the city offered them numerous opportunities to follow in Christ's footsteps. By taking part in the Holy Week program, for example, they followed Christ in the last days of his life. But formal, public rituals could not entirely satisfy the average pilgrim's needs and preferences. The Latin Church responded, first, by making some formal services more easily accessible and personalized, and, second, by generating (and tolerating) a complementary set of rites that were geared to the pilgrims' demand for a more intense communing with the holy, mainly through additional mimetic and declarative practices (such as immersion in the Jordan or stoning the tomb of Jezebel in Jezreel) and sensory contact with relics, usually by gazing adoringly at an exhibited relic, but also by touching and kissing relics. The same disposition incited pilgrims to acquire relics, or at least second-order relics, such as blessed water and oil and souvenirs of all sorts; in the pilgrims' home countries these were consid-

ered as proofs of an accomplished vow and carriers of prophylactic and medicinal powers. Historicism also underlay the pilgrim's quest for the sources of Christian liturgy in Holy Land sanctuaries, a case of liturgy celebrating liturgy. Melchizedek was believed to perform occasionally the Sacrament of the Eucharist on Mount Tabor; the origin of the *Magnificat* and the *Benedictus* was ascribed to the great church in Ain-Karim, and the two canticles were chanted there for pilgrims; and the supposed autograph text of the Lord's Prayer was treasured in the Church of Pater Noster on the Mount of Olives, where pilgrims kissed the full text inscribed under the altar.

An important place was given in liturgical ceremonies to the relic of the True Cross. It was often brought forth in situations of grave danger to the kingdom: between its discovery in 1099 and its disappearance in 1187, it was carried on no fewer than thirty-one military expeditions. Even the choice of day for doing battle had liturgical implications: in 1105 King Baldwin I delayed battle until a Sunday to allow time for the patriarch to arrive with the relic from Jerusalem and thus to maximize the profit from its use on the day of the Resurrection. The True Cross also figured in rites of conquest and religious conversion or rites of triumphal homecoming. The first type consisted of a solemn procession that took possession of conquered territory, as after the capture of Ascalon (mod. Tel Ashqelon, Israel) in 1153, when the victorious army of Jerusalem entered the city with the True Cross at its head, made for the principal mosque (already converted into a church) singing hymns and canticles, and attended Mass. Triumph-like processions of the second type took place in Jerusalem: the returning army was met outside the city gates by the cheering populace, made its way to the Holy Sepulchre, and returned the True Cross amid chants of *Te Deum laudamus*.

Diversity was a distinctive feature of liturgy in Jerusalem. Christian worship was practiced there openly in a variety of languages and creeds to an extent unknown in Latin Europe. It was a unique phenomenon, for it involved not only toleration of heterodoxies formally condemned by the Latin Church but also their acceptance within Latin churches, and it allowed European pilgrims to compare competing traditions and rites. Visitors from the West did not fail to notice it: John of Würzburg, apart from being left undecided about the conflicting claims of the Latins and the Syrian Orthodox concerning Mary Magdalene and the sites dedicated to her in Jerusalem, enumerated twenty-one nations and languages

all possessing churches and worshipping in twelfth-century Jerusalem. The full import of this diversity is appreciated when one takes into account the relative tolerance shown toward the religious practices of Muslims and Jews, and the occasional ritual convergence between Christians, Muslims, and Jews in sanctuaries common to the three faiths.

Livonia

Medieval Livonia was a land on the eastern coast of the Baltic Sea that was conquered in the course of the Baltic Crusades. At the end of the twelfth century, missionaries from the archbishopric of Bremen, along with merchants and crusaders

Main regions and settlements in Livonia

from North Germany, established a foothold in the land of the Livs, a Finnic people living along the lower reaches of the river Dūna (Latv. *Daugava*). As this nucleus gradually expanded, the name that originally derived from the Livs was extended to cover all of the Christian-controlled territory corresponding to modern Estonia and Latvia, including in the broader sense also the Danish possessions in North Estonia.

A conglomerate of small states developed in Livonia in the course of the thirteenth century. The largest was that of the Teutonic Order, which after 1346 comprised well over half the territory of Livonia. Considerably smaller were the independent territories of the archbishopric of Riga (mod. Riga, Latvia) and its suffragans, the bishoprics of Dorpat (mod. Tartu, Estonia), Ösel-Wiek (mod. Saaremaa and Läänemaa, Estonia), and Curonia, or Courland. North Estonia belonged to the kingdom of Denmark until 1346, when it was ceded to the Teutonic Order. It was these institutions that exercised political power in Livonia after the conquest, although vassals (i.e., secular knights) grew in importance in the course of time. The first corporation of vassals was formed in Danish Estonia in the thirteenth century, while in the bishoprics the vassals' corporations gained political weight during the fourteenth–fifteenth centuries. The Teutonic Order administered most of its territories through its own officials and thus had relatively few vassals. The population of Livonia has been estimated very roughly at 200,000–350,000 in the thirteenth century and approximately 650,000 in the middle of the sixteenth century [Heldur Palli, *Eesti rahvastiku ajalugu aastani 1712* (Tallinn: Teaduste Akadeemia Kirjastus, 1996), pp. 12–17, 21–47].

The Crusader Conquest

By the end of the twelfth century, what was to become Livonia was inhabited by Finnic peoples (Estonians and Livs) and Baltic peoples (Lettgallians, Selonians, and Semgallians). Among the Curonians, both language groups were represented. All of these peoples were largely pagan; although the Greek Orthodox form of Christianity had spread to some extent among the social elite of the principalities of Gerzike (mod. Jersika, Latvia) and Kokenhusen (mod. Koknese, Latvia) on the river Dūna, there was no Roman Catholic community or church organization.

In the 1170s the Danish church had evidently made efforts to send missionaries to this area: one Fulco was named as bishop of the Estonians, but there is no evidence that he actually visited Livonia. The eastern Baltic lands were of

interest to Western traders as well as churchmen, as important trade routes connecting western Europe and Russia passed through them. At the beginning of the 1180s, an Augustinian canon called Meinhard (d. 1196) arrived with some German merchants at the lower reaches of the Dūna. He was ordained as bishop of Livonia (or Üxküll) in 1186 by the archbishop of Bremen and along with the merchants and Livs, started to build the first stone castles in Livonia. The second bishop, the Cistercian Berthold of Loccum, fell in battle against the pagan Livs in 1198. It was only during the time of Bishop Albert of Buxhövdén (1199–1229) that the arrival of crusaders became a regular event. In 1201 he also established Riga, the first town in Livonia. The leading role in these first crusades to Livonia was played by a small group of knightly families from North Germany, from whose ranks the bishops and their vassals were largely drawn.

The crusades to Livonia were supported by papal privileges. In 1171–1172, Pope Alexander III promised total absolution of sins to those who fell in battle against the Estonians and other pagans. Around 1195 a companion of Meinhard, the Cistercian Theoderic, obtained a crusade bull from the pope, as did Berthold later. In 1199 a crusade bull of Pope Innocent III gave to the crusaders in Livonia the same indulgence as was given to crusaders to the Holy Land. In order to facilitate the recruitment of crusaders, Bishop Albert consecrated Livonia and the cathedral built in Riga in 1202 to the Virgin Mary, a consecration that was approved by Innocent III in 1215.

During the first decade of the thirteenth century, Livonia became an accepted alternative destination to Outremer for crusaders from northern Europe. In 1202 Theoderic founded the military Order of the Sword Brethren (Ger. *Schwertbrüder*), which soon became an independent political power alongside the bishop and also a competitor in conquering territories. By 1207 the Livs were subdued and Christianized; the decisive factor was that one of their leaders, Caupo (d. 1217), had sided with the crusaders. The Lettgallians also supported the Christians of Riga against the Estonians in a new series of campaigns that began in 1208. The crusaders subdued the Estonian provinces one by one, gaining the upper hand over the Russian princes who were competing with them in conquering the territory. The attempts of the Estonians to form large coalitions against Rigans ended with defeats in battles at Treiden (mod. Turaida, Latvia) in 1211 and Fellin (mod. Viljandi, Estonia) in 1217.

The Danes sent a military expedition to Ösel in 1206 and

started to conquer northern Estonia in 1219, while Johan Sverkersson, king of Sweden, launched an unsuccessful campaign to western Estonia in 1220. The conquest was hampered by a dispute between German and Danish crusaders over the division of the conquered territories, which was further complicated by territorial disagreements between the church of Riga and the Sword Brethren. However, after an Estonian uprising in 1222 the crusaders were able to subdue mainland Estonia in 1224 and the island of Ösel in 1227. The papal legate William of Modena visited Livonia in 1225–1226 with the task of settling the territorial disputes, but despite his decisions the Germans from Riga conquered all of the Danish territories.

In the southern part of Livonia, the Rigans occupied Kokenhusen in 1209, while Gerzike was forced into vassalage by the bishop of Riga. Eastern Lettgallia was finally subdued during the second half of the thirteenth century. Wars with varying success against the Selonians, Semgallians, and Curonians lasted almost up to 1300. In 1236 an army of the Sword Brethren, crusaders, and Russian troops from Pskov was severely defeated by Semgallians and Lithuanians at the battle of Saule. Thereafter the greatly weakened Sword Brethren were incorporated into the Teutonic Order, which also took over the Sword Brethren's territories. According to the Treaty of Stensby, concluded in 1238, the king of Denmark regained possession of North Estonia. The Christian powers conquered all of what became southern Livonia during the second half of the thirteenth century, despite a major defeat at the battle of Durben (1260) by the Samogitians and Curonians and repeated uprisings in Semgallia, Curonia, and Ösel. However, the southern and southeastern borders of Livonia were never quite secure.

Government and Institutions

Livonia had no internal political unity. In 1245–1246 Pope Innocent IV nominated Albert Suerbeer (d. 1273) as archbishop of Prussia, Livonia, and Estonia. His ecclesiastical province included all the Prussian and Livonian bishoprics except Reval (mod. Tallinn, Estonia), which remained a suffragan of the Danish archbishopric of Lund. The bishops (except for the bishop of Reval) were secular rulers in their own territories, but also exercised ecclesiastical jurisdiction over the lands of the Teutonic Order. The main institution through which the various Livonian states could cooperate was the diet (Ger. *Landtag*) where the order, the bishops, their vassals, and the larger towns were represented.

Although the diets came to be held quite regularly from the fifteenth century on, they did not develop into a centralizing institution, and the enforcement of their resolutions relied upon the will of the participants.

From the thirteenth to the fifteenth century, the main feature of Livonian politics was the Teutonic Order's attempts to achieve hegemony and the resistance to this on the part of the archbishop of Riga, the Livonian bishops, and the town of Riga. Both sides repeatedly took their claims to the papal Curia, and there was intermittent warfare between 1297 and 1330. As a result of these wars, in which the enemies of the order were supported by the pagan Lithuanians, the town of Riga fell under the control of the Teutonic Order. In 1343–1345 there were revolts among the native Estonians in the Danish territories and in Ösel-Wiek; in the course of suppressing the uprising, the Teutonic Order occupied North Estonia, which the king of Denmark sold to it in 1346. After further disputes, the cathedral chapter of Riga was incorporated into the Teutonic Order in 1393–1394. In 1396 the order conquered the bishopric of Dorpat, the last center of resistance in Livonia; the next year a meeting of all the Livonian powers held at Danzig ratified the order's superiority in Livonia.

From the beginning of the fifteenth century, the Teutonic Order started to suffer defeats in its territories in Prussia, while the Livonian branch of the order was embroiled in internal conflicts. This situation enabled the cathedral chapter of Riga to return to its former Augustinian rule in 1426–1451, but thereafter it was again incorporated into the Teutonic Order. A treaty concluded in 1452 at Kirchholm (mod. Salaspils, Latvia) divided the lordship of the town of Riga between the order and the archbishop. This did not end the disputes or occasional outbreaks of violence over the ownership of the town.

The Teutonic Order in Livonia, like its branch in Prussia, was frequently at war with pagan Lithuania. Until the Christianization of Lithuania (1386), the order's wars were considered as crusades, and Livonia was also visited by European noblemen who took part in the order's campaigns. During the thirteenth century, attempts were also made from Livonia to expand the sphere of influence of the Roman Catholic Church eastward into the lands inhabited by the pagans of Votia and Ingria, leading to conflicts with Novgorod, in whose territory these lands lay (1240–1241, 1256). However, despite occasionally recurring military conflicts between Livonia and the Russian principalities, there was a

balance of power on the eastern border of Livonia between the thirteenth and fifteenth centuries.

This situation began to change during the second half of the fifteenth century, when the institutions of the crusade began to be used against schismatic Russia. In 1443–1448 the Teutonic Order fought against Novgorod, making use of the income from indulgences originally intended to support the union of the Latin and Greek churches. The pope approved this diversion of funds only after the end of the war. The balance of power changed when Novgorod became subject to the principality of Muscovy in the 1470s. In 1481 a Russian army raided the Livonian interior, something that had not happened for over a century. As the fear of the Russian threat developed in Livonia, a plan was made to gather money for war against Russia by the sale of indulgences. The preparations were time-consuming, and while Wolter von Plettenberg, Teutonic master of Livonia, fought against the Russians in 1501–1502, in Livonia money was gathered for the crusade against the Turks. However, Plettenberg was able to achieve some minor victories, and in September 1502 he won a victory near Lake Smolino. Thanks to the diplomatic support of Lithuania, an armistice was concluded in 1503 between Livonia and the Muscovite grand duke Ivan III Vassilevich, which basically recognized the status quo. The peace was prolonged with minor changes until 1554. After the end of the war, the pope permitted two campaigns to sell indulgences to support the war against the Russians. These campaigns were held in Livonia but mainly in Germany in 1503–1506 and 1507–1510.

In Livonia the preaching of the Reformation began toward the end of 1521, and over the next decades the Livonian towns became Protestant, while the nobility remained Roman Catholic until the first half of the sixteenth century. The Livonian branch of the Teutonic Order became independent after the secularization of the order in Prussia in 1525. Relations between the archbishop of Riga and the order were now oriented toward preserving a balance of power. In 1555 Archbishop Wilhelm von Brandenburg (1539–1563) named Christoph of Mecklenburg as his coadjutor and allied with the king of Poland, whereupon the order occupied the archbishopric in 1556. In 1557 the order concluded peace with the archbishop, at the price of acknowledging the coadjutor and forming an alliance against Muscovy with the Polish king. This alliance was insufficient to stave off the threat from the Russians, who had been making political demands on Livonia since 1554. In 1558 a Rus-

ian army conquered the eastern part of Livonia, including the bishopric of Dorpat. Under the last Teutonic master of Livonia, Gottfried Kettler, the possessions of the order and archbishop came under Polish control, and in 1561–1562 the order in Livonia was secularized. The town of Riga finally passed to Poland in 1582. The bishoprics of Ösel-Wiek and Courland were sold by their last incumbent, Johannes von Münchhausen (died c. 1583), to the king of Denmark, who gave them to his brother Magnus, duke of Holstein (1540–1583). The town of Reval and the North Estonian nobility surrendered to the king of Sweden in 1561.

Society and Economy

The crusader conquest of the thirteenth century brought about significant changes in the social structure and economy of Livonia. The native elite partially perished in the fighting, but mainly they were forced down to a lower social level. Only a small number were included in the new social system. The new elite that was constituted after the conquest was made up of ministerial knights and gentry who came mostly from north Germany and Westphalia and founded Livonian vassal families. They often held possessions in different parts of Livonia at the same time.

Celibacy was the rule in the Teutonic Order and the other ecclesiastical institutions that ruled Livonia, and so there was continuous immigration from Germany to provide personnel. In the Livonian branch of the order, very few men were of Livonian origin; the majority of recruits came from Westphalia. The movement of people between the Prussian and Livonian branches of the order was small, although Prussians were strongly represented among the clergy of the order in Livonia. The cathedral chapters of the Livonian bishoprics were mainly drawn from members of the Livonian vassal families and from the sons of burgesses. Most of the cathedral canons originated from Livonia, while those of Prussian and north German origin were strongly represented. The secular clergy was apparently also mostly of Livonian origin. As the Teutonic Order tried to gain hegemony in Livonia, it attempted to influence episcopal elections and to appoint its own priests to the bishoprics. After the thirteenth century, most of the bishops came from Livonian vassal or burgess families; the exception was Reval, where the bishops were Danes until 1350. In the fifteenth century, three-quarters of the Livonian bishops were sons of burgesses, and almost half of them were of Livonian origin.

New institutions that arrived with the crusaders were the

Christian Church and the towns. The first monastery to be founded in Livonia was the Cistercian house of Dünamünde (mod. Daugavgrīva, Latvia), around 1205. It was followed by other Cistercian, Dominican, and Franciscan foundations. The network of rural parishes remained underdeveloped, especially in the southern areas. The foundation of towns in the thirteenth century was connected with merchants of Visby, Lübeck, and other German towns who were interested in good positions on the trade routes that led to the Russian centers of Novgorod, Pskov, and Smolensk. The basis of town life in Livonia was the Lübeck law-code, which was in force in Reval and the smaller towns of North Estonia, and the Riga law-code in the other Livonian towns. Only Riga, Reval, and Dorpat had any political importance; the small towns remained de facto under the control of their lords. The larger towns were also members of the Hanseatic League, with the exception of Narva, whose membership was blocked by Reval. In Hanseatic diets (Ger. *Hansetage*), the Livonian towns were represented by Riga, Reval, and Dorpat. In the sixteenth century, the percentage of town dwellers was about 7–10 percent in Livonia. About 10,000–15,000 people lived in Riga, 7,000–8,000 in Reval, and 5,000–6,000 in Dorpat [Norbert Angermann, “Die Bedeutung Livlands für die Hanse” in *Die Hanse und der deutsche Osten*, ed. Norbert Angermann (Lüneburg: Nordostdeutsches Kulturwerk, 1990), p. 98]. The population of the other towns was rarely more than 1,000. Besides the fortified towns there were many market villages (Ger. *Hakelwerke*) in Livonia, some of which had some urban features: Leal (mod. Lihula, Estonia), for example, did not possess urban law, yet it had a Cistercian nunnery, citizens, burgomaster, and a guild.

The elite of the Livonian towns was formed by the merchants who originally came from North Germany and Westphalia. Although a minority, they exercised power in community administration and monopolized the most prestigious and profitable professions (merchants and craftsmen with workshops). The majority of the urban inhabitants originated from among the local rural population. The key sign of social status was the linguistic difference between speakers of Middle Low German on the one hand and Estonian, Latvian, or Livic on the other: the upper classes were called “German” (Ger. *Deutsch*) and the common people “non-German” (Ger. *Undeutsch*). In Reval and Hapsal (mod. Haapsalu, Estonia) there was some population of Swedish origin, while in Narva and Dorpat there were some inhabitants who had come from Russia.

In Livonia, unlike Prussia, there was no colonization by German peasants; there was a number of Swedish peasants on the northern and western coasts of Estonia. Non-German peasants were the economic support of the social and political system. In the course of time their legal situation continuously deteriorated, especially from the fourteenth century onward. Through the medieval period the Latin texts use the word *neophyti* (neophytes) for the non-German peasants, and although the actual influence of Christianity on the medieval rural population has traditionally been considered as being relatively slight, some recent studies emphasize the substantial adoption of Christianity in its syncretistic popular forms. Peasants were burdened with payments in both cash and kind, as well as labor services. In the thirteenth–fourteenth centuries, peasants were still obliged to carry out military service, but later this obligation was replaced by payments. The peasantry was divided into many legal and social categories. The majority were *hakenburen*, among whom duties increased and serfdom developed most quickly. A small group of peasants, who may in part have been descendants of the preconquest elite, held their farms according to feudal tenure and were obliged to perform military or postal services. The development of serfdom by the end of fifteenth century led to conflicts between the nobility and the towns, which were keen to have immigration from the countryside to provide workmen. In the towns the deterioration of the situation of the non-Germans occurred in conjunction with the development of serfdom in the countryside.

The basis of the Livonian economy was agriculture. The production of cereals (rye) was the main agricultural activity, although their export was largely local and sporadic until the fourteenth century. It was only from the end of the fifteenth century that cereals became an important and regular export article to western Europe. The economic role of the larger towns was to act as intermediaries in the Russian trade of the Hanseatic League. Until about 1400, Riga was the main trade center for Lithuania, as Reval was for Finland and the regions around the Gulf of Bothnia. The main import article was salt, most of which was taken on into Russia. Other articles exported to Russia were cloth, luxury goods, wine, precious metals, and salted fish. The main goods exported to western Europe were furs and wax. By the fifteenth century at the latest, the Hanseatic *Kontor* (commercial enclave) in Novgorod was under the actual control of the Livonian towns. The *Kontor* was closed during the crisis in Livonian-

Russian relations in 1494–1514 and did not regain its earlier importance after that. The medieval trading system of Livonia was transformed during the time of continuous warfare in the second half of the sixteenth century, when many Livonian towns were ruined and non-Hanseatic trade and shipping became dominant in the Baltic region.

Livonian Masters

The Livonian master, or master of Livonia, was the highest official of the Teutonic Order in its possessions in Livonia. The Livonian branch of the order came into existence when the Order of the Sword Brethren was incorporated into the Teutonic Order in 1237. In that year the Teutonic grand master, Hermann von Salza, installed Hermann Balk, the order’s master in Prussia, as master in Livonia in order to complete the union of the two orders. Thereafter the two territories usually had separate masters, although occasionally the two offices were held concurrently.

In the thirteenth and fourteenth centuries, the Livonian masters were normally elected at the general chapters of the order held at Acre (mod. ‘Akko, Israel), at Marburg in Germany, or in Prussia. From the fourteenth century onward, the practice was for the master to be chosen from among the officials of the order in Livonia; from the election of Dietrich Torck (1413), masters were elected in Livonia and presented to the grand master for confirmation. This practice was modified in the 1430s, when the Rhineland and Westphalian factions of the order in Livonia presented two candidates to the grand master. From the election of Johann Waldhaus von Heerse in 1470, double elections ceased, and only one candidate was presented for confirmation. In the sixteenth century the practice of electing a successor (Ger. *Koadjutor*) during the reign of the master started.

According to the statutes of the order, the master had to take counsel from his officials. The most important of these were the marshal of Livonia, the commanders of Reval (mod. Tallinn, Estonia), Fellin (mod. Viljandi, Estonia), Marienburg (mod. Aluksne, Latvia), and Goldingen (mod. Kuldīga, Latvia), and the bailiff of Jerwia, and it was from this circle that masters tended to be elected. The central residence of the master was in Riga, although the masters had to travel throughout the territories of the order in Livonia to execute their power, and in cases of open conflicts with the town of Riga, the masters would reside in the castle at Wenden (mod. Cēsis, Latvia). By the end of the fifteenth century, the masters travelled considerably less in the territory of the other officials of the order, and Wenden became their principal residence.

When the Teutonic Order was secularized in Prussia, the grand mastership slipped into the hands of the German master (Ger. *Deutschmeister*), despite the ambitions of the Livonian master Wolter von Plettenberg. In 1562 Master

Masters of the Teutonic Order in Livonia

Hermann Balk	1237–1238/1239
Dietrich von Grüningen	1238/1239–1241

Livonian Rhymed Chronicle

A Middle High German verse chronicle, completed soon after 1290, dealing with the conquest and conversion of Livonia by German missionaries, crusaders, and military orders and representing one of the most important sources for the Baltic Crusades.

The *Livonian Rhymed Chronicle* (Ger. *Livländische Reimchronik*) is generally held to have been composed by an anonymous knight brother of the Teutonic Order, thus constituting the earliest extant example of the order’s literary output. It survives in one complete manuscript (MS. Heidelberg, Universitätsbibliothek, cpg.367, fifteenth century) and fragments, an older manuscript (MS. Riga, Bibliothek der Livländischen Ritterschaft) having been lost subsequent to the publication of Leo Meyer’s edition.

The text consists of 12,017 lines in rhyming couplets. The language shows a few traces of Middle Low German influence and draws on earlier oral tradition and documentary sources as well as eyewitness testimony. After an introduction describing the Creation and the beginnings of the Christian faith, the narrative commences with an account of the German mission to Livonia at the end of the twelfth century. The remainder of the text is structured according to the periods of office of the masters of the Sword Brethren, and thereafter, the Livonian masters of the Teutonic Order, and describes the wars fought by the orders to defend and extend their territories in Livonia against pagans and Orthodox Russians, concluding with a description of the conquest of Semgallia in 1290. With its vocabulary and imagery showing influences of the vernacular heroic epic, the narrative gives a relentlessly secular, grim, and unapologetic view of war against the heathen.

Llull, Ramon (1232–1315/1316)

Theologian, philosopher, missionary, and crusade theorist.

Ramon Llull (or Lull) was born in Mallorca, where he lived an essentially secular life until the age of about thirty, having married and had two children. Around 1263 he experienced an inner conversion and resolved to devote his life to God's service, particularly to mission to the Muslims. Over the following years he studied philosophy and theology and learned Arabic from a Muslim slave on Mallorca.

Llull first preached to the local Muslim population, but eventually, between periods of residence in Mallorca, Montpellier, Aragon, and Italy, and various other travels, he undertook three preaching missions to North Africa. In 1292 he took ship at Genoa and travelled to Tunis, but was soon arrested and expelled by the Hafsīd authorities. In 1307 he sailed to the more westerly port of Bougie (mod. Bejaïa, Algeria); there he was able to conduct a theological disputation with Muslim scholars, but was imprisoned for six months before being released. In 1315, now at a very advanced age, he again went to Tunis, where he was able to remain undisturbed by being more circumspect in his missionary activities than he had been previously. Yet when he travelled to Bugia for a second time, he was recognized and stoned by the irate populace, dying soon afterward.

Llull was a profound thinker and a prolific writer. He is known to have written well over 200 surviving works, plus others now lost, ranging through theology and doctrinal debate, mysticism, philosophy, romance, and poetry as well as an autobiography. These included several detailed proposals for crusades, which were refined and revised in the course of Llull's long life, and often conceived in conjunction with schemes for missionary activities.

In 1294 he presented to Pope Celestine V a petition (*Petitio Raymundi pro conversione infidelium*) that pleaded for invasions of other Muslim countries as well as a crusade to the Holy Land. He put forward a similar proposal (*Petitio pro recuperatione Terrae Sanctae*) to the next pope, Boniface VIII, which stressed the need for a peaceful preaching mission to the infidels and study of their languages as well as a crusade. These ideas were elaborated in the *Liber* (or *Libellus*) *de Fine* (1305), which discussed the organization, finance, and strategy for a new crusade. In it Llull proposed that the different military orders should be combined and placed under the authority of a leader of royal blood (to be chosen by the papacy), who would also act as the commander of the expedition. In his discussion of strategy, he considered the merits of the different possible theaters of war in the Mediterranean region that would ultimately offer the best route to the Holy Land. He argued that the best course was to attack the Moors in Spain and then to invade North Africa, but also stressed the importance of using Rhodes and Malta as naval bases.

The ideas of the *Liber de Fine* resurfaced in the *Disputatio Raymundi Christiani et Hamar Saraceni*, a discussion of the relative merits of Christianity and Islam in debate form, written during Llull's imprisonment in Bugia. A later treatise, the *Liber de acquisitione Terrae Sanctae* (1309), proposed a multipronged attack on the Muslim world, in which the Iberian and North African campaign, as originally elaborated in the *Liber de Fine*, was to be augmented by an expedition going to Anatolia via Constantinople, and a naval attack on Egypt. Llull was able to present many of his ideas to the pope and leaders of the church in person at the Council of Vienne (1311–1312), which spent considerable time discussing plans for a new crusade.

Louis II of Bourbon (1337–1410)

Louis II, duke of Bourbon, was the leader of the Mahdia Crusade (1390) to North Africa.

Louis was the son of Peter I, duke of Bourbon, whom he succeeded in 1356, and a brother-in-law of King Charles V of France, who was married to his sister Jeanne. After the king's death (1380), Louis became the favorite counselor of his nephew Charles VI. In 1387 Louis was made universal heir to his aunt Marie, titular Latin empress of Constantinople and widow of Robert of Taranto, prince of Achaia. From this time Louis cherished dreams of becoming prince of Achaia and king of Cyprus and of going to Jerusalem.

When the Genoese asked for French help against the pirates of Tunisia at the end of 1389, Louis was chosen to lead the crusade. The French forces departed from Marseilles and joined the foreign troops at Genoa. The fleet, under the command of a Genoese admiral, set sail at the beginning of July 1390 and stopped at the little island of Conigliera in order to refresh the troops and to decide on the plan of operations. The Genoese imposed their choice of objective: the city of Mahdia (mod. al-Mahdiya, Tunisia). The landing took place at the end of July on the isthmus between the town and the mainland.

Although the crusaders occupied a good position to blockade the city, they were not suitably equipped to besiege such a well-fortified place. A war of skirmishes, glorified by the Latin chroniclers, followed. After a failed assault, the Genoese and Tunisians negotiated a ten-year truce, which was accepted by Louis, despite the fact that the crusaders' aim had been to make conquests. The siege had lasted for two months. On the return journey, the Genoese used the crusade army to secure several places in Sardinia and Italy, arguing that pirates were victualing there. Louis was unwilling to land at Genoa, and returned home via Marseilles.

Louis VII of France (1120–1180)

King of France (1137–1180) and one of the leaders of the Second Crusade (1147–1149).

Louis VII succeeded his father, Louis VI, on 1 August 1137, within days of his marriage to Eleanor, duchess of Aquitaine. The early part of his reign proved unstable. Louis maintained his father's hostility toward their leading vassal, Thibaud IV, count of Blois, brother of King Stephen of England, and campaigned against him in 1142–1143. Further instability arose out of disputed ecclesiastical elections, in which Louis consistently resisted papal wishes, determined to prevent the erosion of his royal prerogatives by Pope Innocent II.

Louis announced his desire to make a pilgrimage on Christmas Day, 1145, at Bourges, to little enthusiasm, but things changed when Queen Melisende of Jerusalem wrote to Pope Eugenius III asking for help following the fall of the city of Edessa (mod. Şanlıurfa, Turkey) to Nūr al-Dīn in 1144. Louis responded to Eugenius's appeal by summoning an assembly at Vézelay for Easter 1146, where the Cistercian abbot Bernard of Clairvaux preached the crusade with great success. The underfinanced and ill-organized Second Crusade eventually left in 1147, in two main parties, led, respectively, by King Conrad III of Germany and Louis, who was accompanied by his wife. The hostility of the Byzantine Emperor Manuel I Komnenos to the enterprise heightened the difficulties of the journey (whether or not exaggerated by Louis's chaplain and chronicler Odo of Deuil), as did the failure of the German and French armies to cooperate. After a difficult journey, during which the French suffered defeat at Laodikeia in Phrygia, Louis reached Antioch (mod. Antakya, Turkey), where he was soon at loggerheads over strategy with Prince Raymond, his wife's uncle. Eleanor took Raymond's part, provoking a lasting breach with Louis. The sub-

Louis VIII of France (1187–1226)

sequent campaign against Damascus was a debacle that saw heavy French casualties. Louis stayed on as a pilgrim before returning home, via a visit to Eugenius III at Rome in October 1149.

A new threat was the rising power of Henry Plantagenet, count of Anjou, which was consolidated when he married Eleanor soon after the annulment of her marriage to Louis. Lacking the necessary resources or the military skill to challenge Henry, Louis was circumscribed in his response, though he would eventually use marriage alliances with Champagne as a means of defense against this over-mighty vassal. His prestige increased dramatically when he supported first Alexander III against Frederick Barbarossa and the antipope Victor IV, and then Thomas Becket, Henry's exiled and eventually (1170) martyred archbishop. During the 1170s, Louis successfully incited the sons of Henry II to revolt against their father, but he was unable to take full advantage of the situation. He died on 18 September 1180 and was succeeded by his son Philip II.

Louis VIII of France (1187–1226)

King of France (1223–1226) and participant in the Albigensian Crusade (1209–1229).

The son of Philip II of France and his first wife, Isabella of Hainaut, Louis was active in royal policy from 1212. In 1213 Pope Innocent III threatened to depose King John of England because of the latter's refusal to accept the election of Stephen of Langton as archbishop of Canterbury, and asked Philip to lead a crusade against John as an enemy of the church. At the same time, Louis took the cross, with the aim of joining the Albigensian Crusade in response to an appeal from Simon of Montfort. While preparations were under way, Philip called upon his son to undertake a campaign against John, concluding an agreement with him (8 April 1213) against the eventuality that Louis might gain the English throne, but John's submission of England and Ireland to Innocent as a papal fief prevented Louis's planned crusade. In 1214 Louis successfully defended the Loire Valley against John's forces, which were decisively defeated by his father at Bouvines in late July, freeing Louis for his long-delayed forty days' service in the Albigensian Crusade, for which he left in April 1215.

Louis made a second forty-day crusade in 1219, after the death of Simon of Montfort in 1218 led to renewed instability in the region. The reason for this second crusade was overtly political. Philip and Louis worked hard to incorporate Languedoc into their domains, an aim achieved by Louis as king when he invaded and annexed the region in 1226. At the invitation of opponents of King John, Louis led an expedition to England in May 1216 and soon gained control of eastern England, but John's death in October and the coronation of his son changed the situation and led to Louis's defeat. Officially, his father had not supported his venture, which had led to Louis's excommunication, but unofficially it was another example of the successful partnership between the two. During his short reign as king, Louis VIII did much to consolidate his father's work of expansion. He died on 8 November 1226 and was succeeded by his son Louis IX.

Louis IX of France (1214–1270)

King of France (1226–1270) and leader of crusades in 1248–1254 and 1270, both of which were intended to relieve the Holy Land.

The son of King Louis VIII of France (d. 1226) and Blanche of Castile (d. 1252), Louis IX came to the throne on his father's premature death, his mother acting as regent. Louis had reached his majority by the time he first decided to take the cross in 1244. Some chroniclers report that while the king was seriously ill at Pontoise, he vowed to go on crusade to the Holy Land if God cured him. Others state that it was the king's mother, Blanche, who made the oath on her son's behalf, and that Louis then took the vow as his own. The decision was in part a response to a steady deterioration in the position of the Frankish states in Outremer, but Louis was also motivated by more personal reasons. He had been brought up in an atmosphere of religious devotion and was himself a pious man. He heard Mass daily, frequently listened to sermons and lessons, and developed close relations with the mendicant orders. He endowed many religious foundations, was generous in the distribution of alms, and venerated relics: in 1239 he purchased the relics of the Passion, including the Crown of Thorns, from Baldwin II, Latin emperor of Constantinople, and had the Sainte-Chapelle constructed in Paris in order to house them.

Four years elapsed between Louis's assumption of the cross in 1244 and his departure for the East in 1248. This delay was not the result of any hesitation on Louis's part, but of his concern to create the conditions in which the crusade would succeed. He endeavored to achieve peace in the West and unite Christendom in the interests of the expedition and sought to gain spiritual support by righting injustices, soliciting the prayers of the religious orders, and prohibiting those activities that might inspire the wrath of God. He also made meticulous logistical preparations, which included raising money, stockpiling food and arms, and engaging ships to transport the army.

The crusade attacked Egypt and in May 1249 captured the city of Damietta. In April 1250, however, the expedition ended in defeat, and the king and much of his army were captured. After a month of imprisonment, the king was

released and made his way to the Holy Land, where he spent four years rebuilding and refortifying its defenses. Recognizing the Franks' lack of manpower, he left behind a contingent of knights, crossbowmen, and sergeants led by a trusted lieutenant, Geoffrey of Sergines (d. 1269). Louis continued to fund this force until his death in 1270 at a cost of approximately 4,000 livres per year to the royal treasury.

It is unclear to what extent Louis was affected by his experiences of defeat and imprisonment at the hands of the Muslims. Some historians have argued that he was preoccupied by the failure of the expedition and the need to redeem it and that he was convinced that it was his own sins or those of his soldiers that had provoked God's displeasure and thus led to defeat. There is no indication that Louis immediately turned to the organization of a new crusade on his return, but he did adopt a more austere lifestyle and was still concerned by the plight of the holy places. He wore plainer dress, ate simply, and increased his personal devotions. He founded, endowed, or made grants to the religious orders and hospitals that looked after the poor and sick and fostered the presence of Dominicans and Franciscans in his entourage. Louis even considered giving up the crown and entering a monastery. In a wider context, the king sought to eliminate sin from within his realm by legislating against blasphemy and usury, reformed the administration of the kingdom, and strengthened royal justice. On the international stage Louis tried to secure peace, both by reaching territorial settlements with Aragon and England and by acting as an arbiter in the disputes of others. His actions enhanced his personal prestige and that of the French Crown, and both France and Europe as a whole benefited from his efforts.

From the early 1260s the consolidation of Mamlūk power under the sultan Baybars I (d. 1277) posed a new threat to Outremer, though only relatively small contingents left the West to assist the Franks. In 1267 Louis decided to take the cross once more, recognizing that many would follow his example. The crusade did not attract the same numbers as his first crusade had done, but again, Louis made meticulous spiritual and practical preparations to ensure that the army would be both morally and physically well prepared and therefore have every possibility of success. The crusade was intended to relieve the Holy Land, but it was diverted to the Muslim city of Tunis in North Africa (July 1270). Disease soon broke out in the Christian army, and Louis himself was struck down; he died on 25 August 1270, having failed to restore the holy places or to secure the Holy Land.

Low Countries

The king's death was described as saintly and devout by contemporaries, and the procession that accompanied his remains on their journey back to France was attended by miracles. Louis was revered for his political achievements, his personal virtues, and his unparalleled attempts to assist the Holy Land. His life and crusades are well known from the biographical account written by his contemporary, John of Joinville. Louis was canonized in 1297.

Low Countries

From 1096 up until the Burgundian era, the Low Countries were a constant provider of crusaders. At the beginning of the period the southern Low Countries were divided between the kingdom of France and the Holy Roman Empire. To France belonged the greater part of the county of Flanders and smaller counties in Artois (Boulogne, Saint-Pol, and Guînes). To the empire belonged the duchy of Lower Lotharingia, the ecclesiastical principality of Liège, the duchy of Limburg, the counties of Hainaut, Namur, Luxembourg, and Loon, and part of the county of Flanders. The northern Low Countries, which were part of the empire, consisted of the county of Holland, the ecclesiastical principality of Utrecht, and various smaller territories.

The Southern Low Countries

During the First Crusade (1096–1099), important contingents were led by Godfrey of Bouillon, duke of Lower Lotharingia, and Robert II, count of Flanders. These armies included crusaders from neighboring territories such as Hainaut, Boulogne, Artois, Liège, and Namur. Among their ranks were Baldwin II of Mons, count of Hainaut, Hugh II, count of Saint-Pol, and Baldwin I, count of Guînes, together with his four sons

The Low Countries provided the first two sovereigns of the kingdom of Jerusalem: Godfrey of Bouillon, defender of the Holy Sepulchre (1099–1100), and his brother Baldwin I (of Boulogne), king of Jerusalem (1100–1118). Their elder brother, Count Eustace III of Boulogne, had been designated as Baldwin's successor. However, in 1118 the crown went to Baldwin II (of Bourcq), count of Edessa, who had dynastic links with the Bouillon-Boulogne family, though he was originally from northern France. Yet in 1124 opponents of Baldwin II tried unsuccessfully to replace him with Charles the Good, count of Flanders and cousin of Robert II.

New crusades to the East were preached in 1106–1107, 1120, 1128, and 1139, but a regular and consistent response to these appeals was to be found only in Flanders and in central France. The First Crusade must clearly have set a standard for a crusading tradition in these areas, and Flemings always seem to have been present: in 1107 with the campaign of Bohemund I of Antioch; and in the crusades of 1122–1124 and 1129 with Lotharingians.

During the Second Crusade (1147–1149), one of the largest contingents was that of Thierry of Alsace, count of Flanders. Count Thierry went to the Holy Land on a total of four occasions and was married to Sibyl, daughter of King Fulk of Jerusalem. Hainaut was represented by some prominent individuals, such as Simon, bishop of Tournai-Noyon; Herman, abbot of St. Martin of Tournai; and Goswin, advocate of Tournai. Flemings and Lotharingians took part in the conquest of Lisbon in 1147 and also, with Frisians and crusaders from Holland, in the expeditions against the pagan Slavs beyond the river Elbe.

Thierry's son Philip of Alsace went three times to the Holy Land, once as a participant in the Third Crusade (1189–1192). He died at Acre (mod. 'Akko, Israel) in 1191. He might have taken a place among the ruling elite of the Holy Land if he had not refused the regency of the kingdom of Jerusalem when it was offered to him by King Baldwin IV. There was a considerable number of crusaders from Flan-

Chapel of the counts of Flanders, Ghent. The cruciform window may commemorate the crusade participation of Count Robert II of Flanders. (Courtesy Alfred Andrea)

ders and Hainaut in the Third Crusade, including the notorious James of Avesnes, lord of Mons and Valenciennes, and numerous other lords. The Flemish-Hainaut contribution to the Third Crusade was threefold: a first group took part in an expedition against the infidels in Portugal and reached the Holy Land by sea; a group with the greatest number of Flemish and Hainaut nobility reached Outremer by land; and a third group, led by Count Philip, brought war engines and considerable financial resources. Even after the count's death, a large Flemish and Hainaut contingent followed King Richard I of England during the campaigns of 1191–1192.

Even the unfortunate Baldwin IX, count of Flanders and Hainaut, had clear intentions to march against Egypt. He ended up, however, as ruler of the Latin Empire of Constantinople, which had been created in 1204 as a consequence of the Fourth Crusade (1202–1204). His brother

Henry I succeeded him (1206–1216) and became the only strong ruler among the Latin emperors. Subsequent emperors or regents were dynastically linked to Flanders or Hainaut. Peter of Courtenay was Henry's brother-in-law and successor (1216–1217); Henry's sister Yolande became regent of the empire (1217–1219) and was succeeded by Conon of Béthune. Then Robert of Courtenay, Yolande's son, became emperor, followed by his sister Mary as regent and Baldwin II as emperor (1228–1229). Every ruler of Frankish Constantinople from 1204 to 1229 had clear connections with the Low Countries.

Enthusiasm for crusades diminished thereafter in the Low Countries, with the exception of the crusades of King Louis IX of France to the East (1248–1254) and to Tunis (1270), which saw numbers of participants similar to those of the earliest crusades. The earlier prominence of crusaders from the Low Countries, in terms of both numbers and quality,

seems to have been attained once again. William of Dampierre, titular count of Flanders and son of Margaret of Constantinople; his brother Guy of Dampierre, count of Flanders (1278–1305); and Guy's son William all took part, together with a large Flemish delegation. Knights from Flanders, Hainaut, Brabant, and Holland also took part in the numerous campaigns of the Teutonic Order against pagan Lithuania in the fourteenth century.

Crusaders from the Low Countries not only participated in most or all of the major campaigns but were also prepared to settle in the newly conquered territories. Following the First Crusade, crusaders from the Low Countries became lords of Tiberias (Hugh of Fauquembergues), Hebron (Gerard of Avesnes and Hugh of Rebecques), Ramla (the Fleming Baldwin), Jaffa (Lithard of Cambrai, later Albert of Namur), Nablus (Warner of Grez), Beirut (Fulk of Guines), and Sidon and Caesarea (Eustace Granarius). Among the prominent clerics in the crusader states were Arnulf and Evremar of Choques and William of Mesen, patriarchs of Jerusalem; Baldwin of Jehosaphat, first archbishop of Caesarea; Achard of Arrouaise, prior of the *Templum Domini*; and Baldwin of Boulogne, bishop of Beirut.

After the foundation of the Latin Empire of Constantinople, a significant part of the nobility of Frankish Romania had its roots in the Low Countries, especially in the early period under Emperor Henry. In the main, those nobles who were not Venetian came from Flanders, Burgundy, Champagne, or Lombardy. The Saint-Omer family was one of the most prominent noble families in the Aegean, holding the lordships of Thebes and Passava until 1314. Other Flemings were Thierry of Dendermonde, constable of the empire (1204); Antoine le Flamenc, lord of Karditza (1311); Engilbert of Liedekerke, constable of the Morea in the 1270s; and important clerics such as Warin, archbishop of Thessalonica (1208) and chancellor of the Latin Empire (1216–1222); and William of Moerbeke, archbishop of Corinth (1278–1286). From Hainaut came James of Avesnes, lord of Negroponte (1205); and Florent, prince of Achaia (1289–1297), and his daughter Mathilda, princess of Achaia (1313–1318).

It is thus clear that in the first 100 years of the crusades the greatest number of crusaders from the Low Countries originated in Flanders and Hainaut. Crusaders from the duchy of Lower Lotharingia, a combination of lands covering present-day southern Belgium, Luxembourg, and parts of northern France (the Ardennes), were also a distinct

component of the First Crusade. The duchy of Lower Lotharingia effectively disintegrated in the following years. The duchy of Brabant, created in 1106, contributed to most of the twelfth-century crusades. Duke Godfrey III of Brabant and his counselors Arnold III of Aarschot and Arnold I of Wezemaal were present in the Second Crusade, and Henry I, duke of Brabant, was a participant in the Third Crusade. Duke Henry II took part in the crusade against the Stedinger heretics of northwestern Germany (1234).

Next to these greater lordships in terms of numbers were the county of Namur, the bishopric of Liège, the county of Loon, the duchy of Limburg, and the county of Luxemburg. It is difficult to tell whether the response to papal appeals here was significant, but it can be established at least for some lordships. Neither the count nor the higher nobility of Namur took the cross, although a member of the comital family, Frederick of La Roche, became bishop of Acre, archbishop of Tyre, and chaplain to the royal court of Jerusalem. Nicholas II and Nicholas III of Rumigny were also participants in the Second Crusade. From the bishopric of Liège, Manasses of Hierges became constable of Jerusalem between the Second and Third Crusades. Present in the latter expedition were Rudolf of Zähringen, prince-bishop of Liège; Heribrand of Latour, viscount of Bouillon; and Thierry of Hochstade, count of Daalhem, assisted by numerous vassals. The last time a prince-bishop (Henry) took the cross was during the Crusade of Louis IX of France to Tunis. Count Henry III of Luxemburg took the cross at the same time.

Apart from these participants, there was also Walram III, duke of Limburg and count of Luxemburg and La Roche, who took part in the Third Crusade. A successor of Walram, Duke Henry IV of Limburg, participated in the Crusade of Emperor Frederick II (1227–1229).

The Northern Low Countries

Compared to its southern neighbors, the participation of crusaders from the county of Holland was rather modest, especially in the period of the First and Second Crusades, despite their participation in the crusades against the Slavs. This had to do with the wider political and economic situation in the northern Low Countries, the absence of a strong central authority, and territorial and dynastic disputes between the county and its neighbors.

A more prominent participation in the crusades came with Count Floris III (1157–1190) and his son William I (1203–1222). In the Third Crusade, Floris and William,

along with a major part of the nobility, served with the army of Frederick I Barbarossa, Holy Roman Emperor. Political loyalty as well as dynastic habits must have determined this participation: Floris's father, Count Dirk VI, had been a pilgrim to Jerusalem in 1139, and his mother, Sophia of Reineck, made the journey three times (1139, 1173, and 1176), once accompanied by another son, Otto. She died in Jerusalem and was buried there. William also took part in the Fifth Crusade (1217–1221), in which he distinguished himself during the siege of Damietta in September 1219.

The Fifth Crusade was the most important event for participation from the northern Low Countries. Bishop Otto II of Utrecht was present along with many of the nobility of Holland. This participation was almost equaled during the crusade against the Stedinger heretics, with the presence of Count Floris IV of Holland and Gerard IV, count of Gelre. Between the pilgrimage of Dirk VI (1139) and that of William II (1248), all the counts of Holland took the cross with the exception of the successor of Floris III, Dirk VII. Knights from Holland were also active in the campaigns against the pagan Slavs beyond the river Elbe in the second half of the thirteenth century.

Military Orders

The Templars were granted property in western Europe following their foundation around 1119. Templar brethren were active (perhaps itinerant at first) in Flanders possibly from 1125. Many of the earliest Templars came from a limited area of the kingdom of France and were connected to one another by birth or other ties. Among the earliest was Godfrey of Saint-Omer. In 1127 Hugh of Payns, master of the Templars, was sent by Baldwin II of Jerusalem to the West to mount a new crusade. He can be found in witness lists to grants of land and rights to the Templars in Anjou, Flanders, and Champagne. It is clear that Hugh's presence in Flanders stimulated the crusading spirit there. The Temple had some early houses in Flanders: Ypres (1131), La Haie les Lilles (1134/1136), and Slijpe (1137), but the greatest expansion of the order in Flanders took place around 1200 with the acquisition of properties in Caestre (1183–1201), Cobrieux (1192), Ghent (1200), and Bruges (1202). In Flanders and Tournai the Templars were stronger than in the other territories of the Low Countries. It is difficult to establish an organizational structure for the Templars in the Low Countries. During the twelfth and thirteenth centuries four bailiwicks were created for Flanders,

Hainaut, Brabant, and Haspengouw (grouping houses in Liège, Namur, Loon, and Luxembourg).

The earliest donations to the Order of the Hospital in the southern Low Countries were made by the counts of Flanders and Hainaut and the duke of Brabant around 1130. During the twelfth and thirteenth centuries there were five bailiwicks on which commanderies or houses in the Low Countries depended. In the northern Low Countries and belonging to the Germanic linguistic region was the convent of Utrecht, which was one of the few in the Holy Roman Empire to have a hospital. The convent at Utrecht had been established possibly as early as 1122 and became a bailiwick at the beginning of the fourteenth century. In the southern Low Countries there were four bailiwicks belonging to the French linguistic region: the *chambre magistrale* (magisterial chamber) was Hainaut-Cambrésis, which had properties in Hainaut, Cambrai, and Brabant; the oldest houses were Le Fresnoy (1155) and Ecuclin (1167). Then there were the bailiwicks of Flanders (with the large commandery of Slijpe), Avalterre (which comprised Brabant, Liège, Namur, and Luxembourg), and Haute-Avesnes.

Most of the property of the Teutonic Order was situated within Germany, and most of its members were Germans, but there were two bailiwicks (out of a total of twelve) situated fully in the Low Countries (Biesen and Utrecht) and one partially so (Lotharingia). The *Partes Inferiores* (literally, "Lower Territories," or Low Countries) were an independent circumscription with their own master (Lat. *magister in partibus inferioribus*), who administered the Biesen and Utrecht bailiwicks until the fourteenth century. It was not until around 1300 that Utrecht and Biesen received a clear and efficient structure, although the first donations were made as early as 1220 and the two bailiwicks were in existence as early as 1228, thus predating many of the German bailiwicks of the order. Each bailiwick was composed of commanderies, which were dispersed, in the case of Biesen, over the territories of Brabant, Limburg, Liège, Aachen, and Cologne. By 1400 there were commanderies in the south at Alden-Biesen, Nieuwen-Biesen, Aachen, Remersdorf, Siersdorf, Sint-Pieters-Voeren, Mechelen, Bekkevoort, Bernissem, Liège, and Antwerp, and in the north at Utrecht, Dieren, Gemert, Schelluinen, Leiden, Maasland, Doesburg, Tiel, Katwijk, Nes, Schoten, Ootmarsum, Rhenen, and Middelburg. The foundations in the northern Low Countries, notably Utrecht (1231), also predated the German ones, but there never was a single bailiwick grouping the houses and

commanderies in the Low Countries, largely owing to the usurpation politics of the Koblenz bailiwick. The counts of Holland were important benefactors of the Teutonic Order, which functioned as an outlet for some of the bastards of the Holland dynasty. In Bruges, the Flemish trading center with international connections, the order had a commercial branch, which was largely responsible for the financing of the crusade against the Lithuanians in the fourteenth century. It has been established that in around 1400 up to 35 percent of the commerce of the Teutonic Order in Prussia was with Flanders, which made this region its most prominent trading partner [Henryk Samsonowicz, "De handel van de Pruisische Ordestaat met West-Europa, in *Crux et Arma*, ed. Jozef Mertens (Bilzen: Historisch Studiecentrum Alden Biesen, 1997), pp. 139–153].

Generally speaking, it can be said that from the thirteenth century onward, Flanders, together with northern France, formed the heartland of support for the military orders. Families with a crusading tradition, such as the lords of Saint-Omer in Flanders, were among their greatest patrons.

Lübeck

A port in Schleswig-Holstein on the southwestern coast of the Baltic Sea.

The oldest settlement associated with Lübeck dates back to the ninth century, when a Slavic fortress was established some way inland on the river Trave. In the late eleventh century this settlement, known as Liubice (Old Lübeck), became the residence of the Abodrite king, Henry. When Henry died in 1127, parts of his realms were taken over by the expansionist German counts of Holstein and Ratzeburg.

Liubice itself was destroyed in 1138 by the Rugian prince Race, who was fighting for supremacy among the Abodrites. However, the town was refounded in 1143, when Count Adolf I of Holstein established a settlement on a small island further upstream where the rivers Trave and Wakenitz formed a natural harbor. The new settlement became known under its Germanized name, Lübeck. Merchants from Saxony now settled there in great numbers and soon profited from the ideal location close to the Baltic Sea and the trading routes between Scandinavia and the Baltic region. So great was the success of Lübeck that Duke Henry the Lion of Saxony soon found the city to be a threat to his own trade in the region. Consequently, he forcibly took over control of Lübeck in 1159. The following year Henry transferred the bishopric of Oldenburg in Holstein to Lübeck.

The city now became linked to the colonization and Christianization of the western Slavic lands and to the crusades in the Baltic region. When the first German missionaries made their way to Livonia in the early 1180s, they traveled with German merchants who sailed from either Lübeck or Visby on Gotland. The merchants journeyed to the shores of Livonia on a regular basis to trade with the local people, which made them ideal traveling companions for the missionaries. Soon afterward, the mission among the Livonians expanded into regular crusades, with most of the crusaders coming from Germany (notably Saxony, Westphalia, and Frisia) and assembling in the harbor town of Lübeck. Here they acquired ships, weapons, and supplies from local merchants and then set out to Livonia, usually via Visby. The

merchants undoubtedly profited greatly from the crusaders assembling in Lübeck on an annual basis, as they did from the great number of unarmed pilgrims and ordinary travelers (especially from northern Germany and Scandinavia) who used Lübeck as a transit town on their journeys.

In addition to furnishing and manning the ships needed by the crusaders, the people of Lübeck played an active role in the crusades in the Baltic region, often taking the cross. Merchants from Lübeck are also believed to have taken part in the Third Crusade (1189–1192) and may have been involved in the foundation of the Teutonic Order at Acre (mod. 'Akko, Israel) in 1190, together with merchants from Bremen. The Teutonic Knights later settled in Lübeck, founding a commandery in 1228/1229. At the same time they also took over the priestly services in the Hospital of the Holy Ghost in the town. The Sword Brethren, too, were present in Lübeck; by around 1220 the order had acquired a house in the town.

The merchants of Lübeck seem to have associated themselves fairly closely with the military orders, especially the Teutonic Knights, with whom they went on crusade, and also became involved in founding towns in the newly conquered territories in the Baltic region. The importance of Lübeck for crusading in the north was recognized by the popes, who endowed the town with privileges to protect the port and crusaders using it against any form of violations from neighboring secular powers; nevertheless, on several occasions the kings of Denmark blockaded the harbor of Lübeck in an attempt to gain supremacy in the region. On such occasions the popes intervened on behalf of Lübeck, demanding that the crusaders be allowed to move freely in and out of the city.

In 1226 the Holy Roman Emperor Frederick II granted Lübeck the status of an imperial free town (Ger. *freie Reichsstadt*), ending its dependence on the secular powers in the region (notably the Danish kings) and securing favorable political and fiscal privileges for the city (that in some cases lasted until 1937). With regard to trade, Lübeck also orientated itself toward other parts of Europe; its role as an important harbor for crusaders and other travelers undoubtedly added greatly to its wealth and political influence. In the later Middle Ages Lübeck steadily increased its power and influence and soon became the most prominent town of the Hanseatic League, negotiating favorable treaties with the secular powers around the Baltic Sea and the North Sea.

Lucera

The Muslim colony of Lucera in Apulia (southern Italy) was a result of the expulsion of the Muslim population of the island of Sicily by Frederick II, Holy Roman Emperor and king of Sicily. Between the early 1220s and the mid-1240s, some 15,000–20,000 Muslim families were systematically driven from the island and forcibly established on the Italian mainland in and around the town of Lucera. The Muslims of Lucera were given a degree of self-government and the right to practice their religion freely, but they were isolated and dependent on the kings of Sicily for protection. As a prosperous agricultural community and trade center, Lucera was subject to heavy royal taxation and owed military service in the king's army; its Muslim soldiers thus became an important regular element of the armies of the Staufen dynasty that fought in northern Italy in the 1230s and 1240s.

The fate of the Muslim colony of Lucera was closely bound up with the history of the Italian crusades and the struggle between the Staufen dynasty and the popes. In the 1230s Pope Gregory IX called for attempts to convert the Lucera Muslims, albeit without much success. Until the 1250s, there was no systematic resistance against the presence of a Muslim colony in Apulia, nor did the Lucera Muslims become a particular target of the papacy's rhetorical or military strategies.

This situation changed in the context of the crusade against Manfred, son of Frederick II, launched by Pope Alexander III

Luder von Braunschweig (d. 1335)

in 1255. For the first time, the papacy fully exploited the association of the Staufeu ruler with the Lucera Muslims by accusing Manfred of having concluded an *impiu foedus* (impious alliance) with the enemies of the Christian religion. At the same time, Alexander III drew Lucera into a focal position in papal crusade propaganda by making the destruction of the Muslim colony one of the main strategic aims of the crusade. Similarly, Urban IV and Clement IV used the reference to Lucera as a propaganda element in support of Charles I of Anjou, their candidate for the throne of Sicily. After the battle of Benevento in 1266, the Lucera Muslims initially submitted to Angevin rule, but they turned against Charles in joining Conradin of Staufeu's rebellion two years later. In reaction, Clement IV for the first time called for a crusade specifically directed against the Muslim colony.

After the battle of Tagliacozzo (August 1269), the Angevin crusade army forced the Lucera Muslims to surrender. Rather than destroying the Muslim colony, Charles I merely disarmed the Muslims and followed the Staufeu rulers in exploiting their economic and fiscal potential. They thus no longer played a military role, and their autonomy was curtailed by the Angevin rulers. The end of Muslim Lucera came under Charles II of Anjou, king of Naples, who in 1300 expelled the Muslims from Lucera, sold many of them into slavery, and confiscated their goods.

Luder von Braunschweig (d. 1335)

Luder (or Luther) von Braunschweig was grand master of the Teutonic Order (1331–1335) and a great patron of its literary activity.

Luder was born around 1275, the son of Albrecht I Mag-

nus (the Great), duke of Brunswick, and Alessina of Montferrat. Luder was a brother of the Teutonic Order in Prussia by 1297. After the murder of Grand Master Werner von Orseln (1330), Luder was elected as his successor on 17 February 1331. His origins in a German princely family were exceptional among grand masters.

During his mastership Luder sought an understanding with Poland, which had been quarreling with the order over the possession of Pomerelia since 1308–1309. A permanent peace, however, was not concluded. Campaigns against Lithuania ceased during his mastership. Luder initiated much building, notably the cathedral of Königsberg (mod. Kaliningrad, Russia) and the chapel of St. Anne at Marienburg (mod. Malbork, Poland), which was to become the burial site for many future grand masters. Luder also strongly supported literary activities, notably the translation of Peter von Dusburg's Latin chronicle of Prussia into German verse by Nicolaus von Jeroschin. Luder also wrote religious literature himself; a legend of St. Barbara written by him is now lost. He died on 18 April 1335 and was buried at Königsberg cathedral.

Ludwig III of Thuringia (d. 1190)

Landgrave of Thuringia (1172–1190) and count of Hesse (1180–1190), who died while taking part in the Third Crusade (1189–1192).

Born around 1152, Ludwig III was the eldest son of Ludwig II, landgrave of Thuringia (d. 1172), and Jutta, daughter of Frederick II, duke of Swabia. He was thus a nephew of Emperor Frederick I Barbarossa. When at the imperial diet of Gelnhausen (1180), Henry the Lion, the powerful duke of Saxony and Bavaria, was judged guilty of contumacy and sentenced to surrender his imperial fiefs; the emperor transferred them to loyal princes, and thus the landgrave of Thuringia was enfeoffed with the county palatinate of Saxony. In the following year this fief was handed over to Ludwig's brother Hermann, and Ludwig inherited the county of

Hesse from his brother Henry Raspe III (d. 1180). From then on, Ludwig was one of the most powerful princes in Germany, his sphere of influence reaching from the Rhine in the west to the river Saale in the east of the empire.

In accordance with Pope Gregory VIII's appeal for a new crusade after the fall of Jerusalem to Saladin in 1187, Ludwig took the cross and set off for Palestine in June 1189. He did not join the army led by Emperor Frederick Barbarossa, who followed a route from Germany overland through Hungary, Bulgaria, and Anatolia. Instead the landgrave and his entourage embarked at Brindisi in Apulia and arrived in Tyre (mod. Soûr, Lebanon) in September 1189. There the Thuringians took part in the siege of Acre (mod. 'Akko, Israel), where, in view of Ludwig's rank as a prince of the Holy Roman Empire, he was elected as one of the commanders of the crusade army. In summer 1190 he sponsored the construction of one of three wooden towers that were built to break the walls of Acre, but the attack failed. Ludwig did not witness the surrender of Acre in July 1191; sick and presumably seriously wounded, he embarked for home in the autumn of 1190, but died on board ship shortly thereafter on 16 October. His body was buried in Cyprus.

Ludwig's bones were brought home by his entourage and buried in the monastery of Reinhardsbrunn near Gotha, the resting place of his parents and ancestors. The Chronicle of Reinhardsbrunn, whose account of Ludwig's deeds was completed in the late twelfth century, relates that the landgrave was protected by St. George, who supposedly appeared during the battle of Acre on 4 October 1189. Ludwig is said to have been victorious against Saladin after receiving St. George's banner. This was remembered not only in numerous Thuringian chronicles throughout the Middle Ages but also in oral tradition until the early fourteenth century.

Ludwig IV of Thuringia (1200–1227)

Landgrave of Thuringia, count palatine of Saxony, and count in Hesse (1217–1227).

Ludwig was the eldest son of Hermann I, landgrave of Thuringia (d. 1217), and Sophie, daughter of Otto I, duke of Bavaria. In May 1223 Ludwig was asked to go on crusade by both Pope Honorius III and Emperor Frederick II. He finally took the cross in May 1224 at a meeting of nobles in Frankfurt am Main. In return, the emperor had to make large concessions: a payment of 5,000 marks of silver to the landgrave as well as free transport and provisioning for him and his entourage during the crusade. Further negotiations with the emperor in the summer of 1226 gave the landgrave the chance to enlarge his sphere of influence in eastern Germany: in case of an early death of Ludwig's nephew Henry, margrave of Meißen and Lausitz, who was underage at that time, the landgrave was to be granted Henry's lands. Ludwig thus achieved one of his most important political aims. The negotiations between Frederick II and the landgrave were supported by Hermann von Salza, grand master of the Teutonic Order. The ties between Ludwig and the order became closer in 1222 when he placed all of its estates in Thuringia and Hesse under special protection.

In June 1227 Ludwig set off on crusade with a large entourage. The composition and course of the expedition were described by Berthold, a chaplain of the landgrave. In early September Ludwig arrived at the port of Otranto in Apulia to embark for the passage to Palestine, but on 11 September he died of a heavy fever that proved fatal for many of the German crusaders.

Ludwig was venerated as a saint in thirteenth- and early fourteenth-century Thuringia. His wife Elisabeth, who was on close terms with the Franciscan Order and its ideal of poverty, left the Thuringian court after Ludwig's death and founded a hospital in Marburg an der Lahn in Hesse. She died in 1231 at the age of twenty-four and was canonized by Pope Gregory IX four years later.

Ludwig von Erlichshausen (d. 1467)

Grand master of the Teutonic Order (1450–1467) during the Thirteen Years' War against the Prussian Union and Poland.

Ludwig was born into the knightly Franconian family of Ellrichshausen. His early career is unknown. From 1434 he held different offices in Prussia before being elected as grand master on 21 March 1450. The brothers of the order held him to an uncompromising policy against the Prussian Union (Ger. *Preußischer Bund*), the league formed by the Prussian estates that had opposed the order's lordship since 1440. In 1454 the quarrels turned into open war, which was mainly fought by mercenaries. Soon the order was unable to pay its soldiers, and in October 1454, the grand master pawned to them parts of the land, including the castle of Marienburg (mod. Malbork, Poland). In May 1457, the mercenaries sold the castle to Poland, which was supporting the Prussian estates. Ludwig von Erlichshausen fled to Königsberg (mod. Kaliningrad, Russia), which became the order's new headquarters. In 1466 a peace was concluded (the Second Peace of Thorn): the order lost the western parts of Prussia, and the grand master had to take an oath of allegiance to the Polish king. A few months later, Ludwig died (4 April 1467). He was buried in Königsberg cathedral.

Lull

See Llull, Ramon

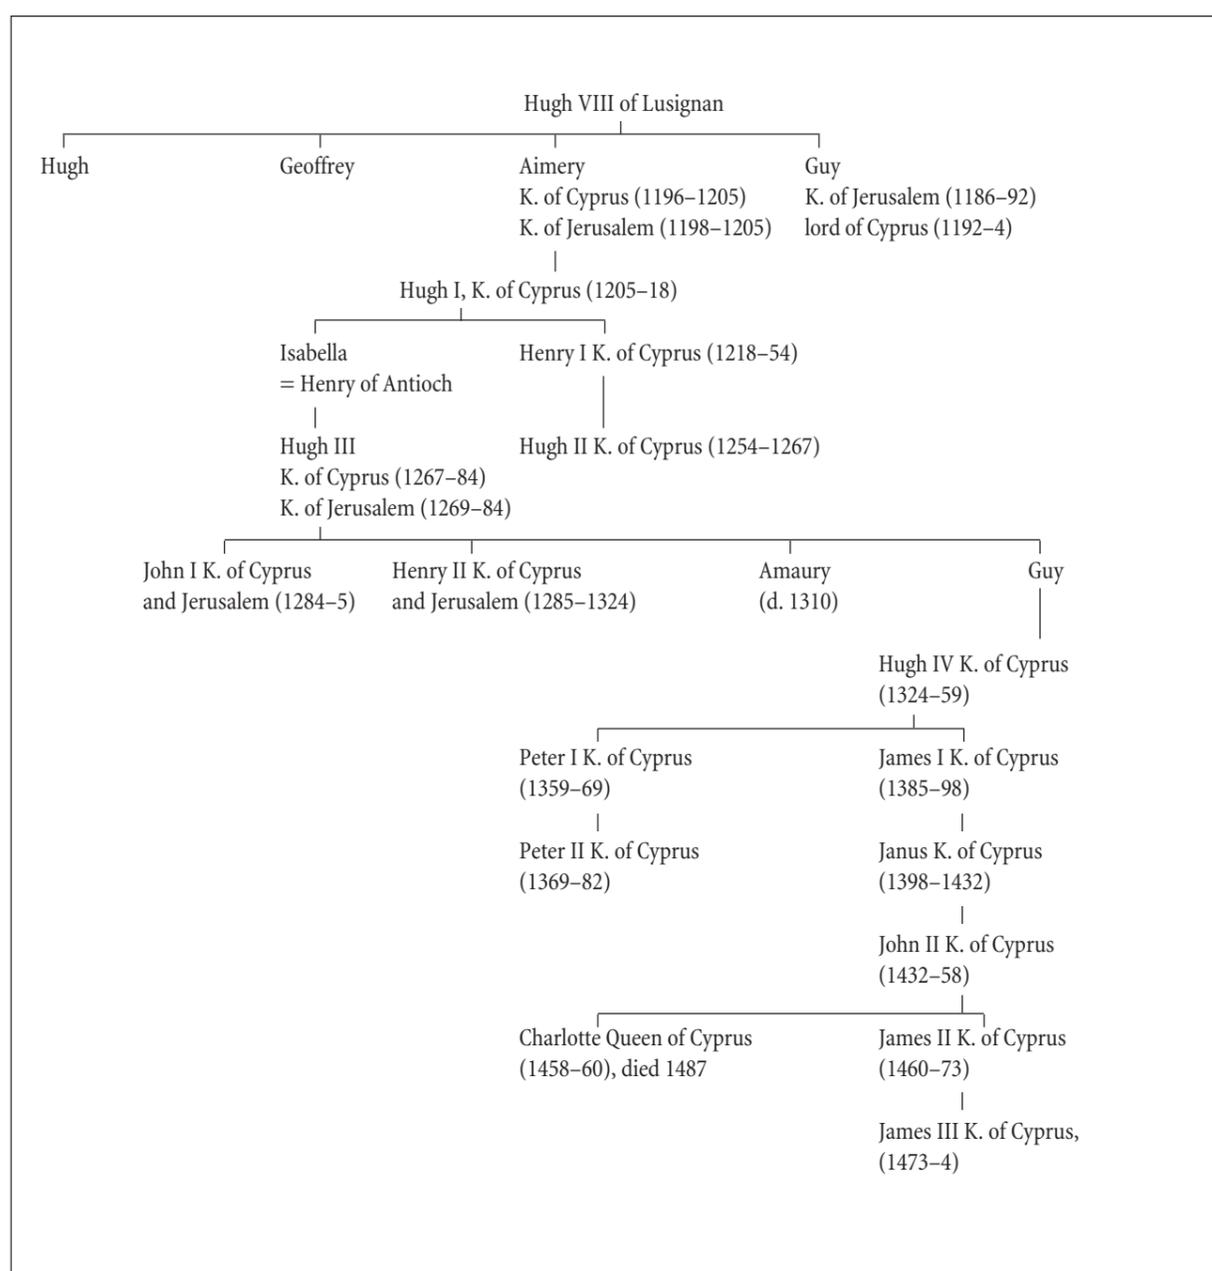

Lusignan, Family

A French family that came to form the ruling dynasties in the kingdoms of Jerusalem (1186–1192, 1197–1205, and 1269–1291) and Cyprus (1192–1474); one branch also occupied the throne of Cilicia in the later fourteenth century.

The lordship of Lusignan lay in the county of Poitou. Its lords were a seigneurial family of some importance who were involved in the crusading movement from its inception. Hugh VI of Lusignan, a half-brother of Raymond of Saint-Gilles, took part in the Crusade of 1101, and in 1102 he fought at the second battle of Ramla. Hugh VII participated in the Second Crusade (1147–1149), and then in 1163 Hugh VIII arrived in the East, only to be taken captive the following year. He died in Muslim captivity. Hugh VIII had several sons. The eldest, also named Hugh, died young, but two of the other brothers, Aimery and Guy, made their careers in the East; a third, Geoffrey, was one of the heroes of the Third Crusade (1189–1192). All the brothers were involved in rebellions against their overlord, King Henry II of England, and that may explain why first Aimery and then Guy left for the Holy Land. Aimery was certainly in the East by 1174 and probably arrived there not long after his rebellion in 1168. He married a daughter of Baldwin of Ibelin, lord of Ramla, and in about 1180 became constable of the kingdom of Jerusalem.

In 1180 Guy of Lusignan married Sibyl, the sister and heiress of King Baldwin IV. The marriage was unpopular with a significant section of the nobility who regarded Guy as an upstart whose rise threatened their own ambitions. But in 1186 Guy and Sibyl became king and queen of Jerusalem. In July 1187 Guy, who needed a convincing military victory to silence his critics, led what was almost certainly the largest army the kingdom of Jerusalem had ever seen to challenge the Muslims under Saladin, who were besieging Tiberias (mod. Teverya, Israel). The result was the catastrophic Christian defeat at the battle of Hattin. Guy and Aimery were both taken captive, and Saladin went on to occupy almost the entire kingdom, including Jerusalem.

Guy was held prisoner until the summer of 1188. By then, the only city of the kingdom in Christian hands was Tyre (mod. Sôur, Lebanon), saved by the timely arrival of Conrad of Montferrat. Conrad refused Guy entry to Tyre, and so

The Lusignan Family in Cyprus and Jerusalem (Simplified Genealogy)

instead Guy gathered an army consisting of survivors of Hattin and newly arrived participants in the Third Crusade; in 1189 he laid siege to Acre (mod. 'Akko, Israel). It was a bold move; had Acre fallen quickly, Guy would have gone a long way to restoring his standing as a military leader. In the

event the siege dragged on inconclusively until the arrival of King Philip II Augustus of France and King Richard the Lionheart of England in the summer of 1191. In the meantime, Guy's authority was undermined by the death of Sibyl and by Conrad's marriage to her half-sister, Isabella I. Opin-

Lyndanise, Battle of (1219)

ion was sharply divided as to whether Guy should rule over what remained of the kingdom of Jerusalem. In arbitration, the kings of England and France decided that Guy should have the kingdom for life and that it should then pass to Conrad and Isabella and their heirs. This solution proved unworkable, and in the spring of 1192 King Richard decided that Conrad should be king of Jerusalem and that Guy should be allowed to purchase the island of Cyprus, which Richard had seized from its Byzantine ruler the previous year.

The year 1192 therefore marks the beginning of Lusignan rule in Cyprus. Guy died toward the end of 1194, whereupon his brother Aimery took charge. Aimery arranged with the pope for the establishment of a Latin ecclesiastical hierarchy in the island and, with the Holy Roman Emperor, Henry VI, for the elevation of Cyprus to the status of a kingdom, with himself as the first king. He was duly crowned in 1197, and the dynasty he founded lasted until 1474. Soon after his coronation as king of Cyprus, Aimery married Isabella I of Jerusalem—Conrad had died in 1192, and her next husband, Henry of Champagne, had died in 1197—and so became king-consort of Jerusalem as well. He ruled both kingdoms until his death in 1205. Cyprus then passed to the son of his first marriage, and Jerusalem to Isabella's daughter by Conrad.

Aimery was succeeded in Cyprus in turn by his son (Hugh I), his grandson (Henry I), and his great-grandson (Hugh II). The throne then went to Hugh III, the son of one of Henry I's sisters, who had married Henry, a younger son of the prince of Antioch. Even so, the family continued to be known as the Lusignans. In 1269, with the extinction of the Staufan dynasty, which had acquired the throne of Jerusalem as a result of the emperor Frederick II's marriage to the heiress in 1225, Hugh III of Cyprus made a successful bid for the crown. Henceforth the Lusignan kings styled themselves kings of both Cyprus and Jerusalem. Their claim to Jerusalem, however, did not go unchallenged, and it was to bring them into conflict with the Angevin kings of Sicily. Hugh III and his son Henry II were both crowned king of Jerusalem in Tyre, and after the Mamlūk conquest of the last Christian possessions in Outremer in 1291, the fourteenth-century kings of Cyprus continued to have a separate coronation as king of Jerusalem in Famagusta.

In the fourteenth century, Guy, a descendant of one of Henry II's brothers, acquired the crown of the kingdom of Cilicia (Lesser Armenia), taking the name Constantine II. That kingdom succumbed to Muslim conquest in the

1370s, and when the last member of the family died in 1393, the Cypriot kings laid claim to the titular kingship of Cilicia as well.

On the death of King John II (1458), his illegitimate son, James, ousted his legitimate half-sister, Charlotte, and reigned as James II (d. 1473). His son, the child James III, died in 1474, and with his death the line of Lusignan kings came to an end. In 1489 Cyprus became a Venetian colony. Some descendants of illegitimate members of the family, notably the historian Stephen of Lusignan, remained on the island until the Ottoman conquest of 1570–1571.

Lyndanise, Battle of (1219)

A crusader victory over pagan Estonian forces on 15 June 1219 fought near Reval (mod. Tallinn, Estonia), which secured a stronghold for the Danish subjugation of northern Estonia in the years following.

In order to fulfill a crusade vow, and possibly in response to pleas for assistance from Bishop Albert of Riga, King Valdemar II of Denmark sailed to Reval with an army of Danish, German, and Wendish forces comprising some 100 ships and 3,000 men with the intention of subjecting northern Estonia to Danish rule. Accompanying the army were Anders Sunesen, archbishop of Lund; Peter Sunesen, bishop of Roskilde; Niels, bishop of Schleswig; and Theoderic, the nominal bishop of Estonia.

Soon after their arrival the crusaders tore down the

wooden fortress of Lyndanise outside Reval and built a stone castle on the site. After three days of negotiations, Estonian forces attacked the Christian camp and killed, among others, Bishop Theoderic, who had been mistaken for the Danish king. The crusaders were ultimately saved only by a late effort from the Wendish forces in the army, which were under the subcommand of Wizlaw, prince of Rügen.

According to intellectual constructions dating from the sixteenth century, which entered Danish popular belief, a flag bearing a white cross on a red ground is supposed to have fallen miraculously from the sky at a critical point in the battle; this was held to be the origin of the *Dannebrog*, the Danish national flag.

Lyons, First Council of (1245)

A church council summoned by Pope Innocent IV, taking place from 28 June to 17 July 1245. Held during hostilities between the papacy and Frederick II, the Holy Roman Emperor, the council sought to address this crisis as well as the recent loss of Jerusalem to the Ayyūbids, the Bulgarian-Nicaean alliance menacing the Latin Empire of Constantinople, and the threat posed by the Mongols to both Outer and eastern Europe.

Hopes for a peaceful settlement of the papal-imperial conflict, bolstered by imperial representatives’ promise of aid against these threats, were dashed when the sparsely attended council excommunicated and deposed Frederick II at Innocent IV’s behest. The ensuing anti-Staufen crusade consumed much of the money from clerical income taxes imposed by the council to aid the Holy Land and the Latin Empire of Constantinople and hindered the attempts of Louis IX of France to muster men and resources for his crusade.

Lyons, Second Council of (1274)

A church council that met from May to July 1274. Convoled by Pope Gregory X to organize a general crusade in aid of the Holy Land, the council deliberately mirrored the agenda of the Fourth Lateran Council (1215): the reform of the church, the Eastern crusade, and the reunion of the Greek and Latin churches.

At the council a delegation from the Mongol Ilkhan of Persia proposed a potential alliance against the Muslims in the East. Representatives sent by the Byzantine emperor, Michael VIII Palaiologos, agreed to the formal reunion of the Greek and Latin churches, which led to the withdrawal of papal support for a crusade to reestablish the Latin Empire of Constantinople, then being planned by Charles I of Anjou, king of Sicily. The council approved all of the elements necessary for a crusade, including a six-year clerical tithe and a modest annual poll tax, but clerical opposition to the tax’s collection and Gregory X’s death in 1276 spelled the demise of a *passagium generale* (a general crusade recruited from Western Christendom). In fact, proposals submitted for consideration at the council by leading reformers, including Humbert of Romans and Guibert of Tournai, lauded the strategy that was to characterize future expeditions, in the late thirteenth and fourteenth centuries: the *passagium particulare*, a perpetual crusade composed of professional soldiers financed by the church and the faithful.

M

Maccabees

The two Books of the Maccabees were among the most important biblical sources for the development of the idea of the *militia Christi* (knighthood of Christ) in the crusading movement and for the justification of the role of the military orders. They describe the revolt of the Jews against the Syrians during the second century B.C., led by the priest Mattathias and his son Judas Maccabaeus, in defense of their political and religious freedom, and end with the election of Judas's brother Simon Maccabaeus as both high priest and secular leader of the Jews of Judaea (141 B.C.).

The first official exegesis of the texts was written by Hrabanus Maurus (d. 856), who interpreted the wars exclusively as a prefiguration of the Christian spiritual conquest of the world, and this interpretation was maintained throughout the Middle Ages. However, as a result, however, of the Christianization of the state and its military functions, as well as of the church's attempts to harness and assimilate the warrior ethos, the deeds of the Maccabees were cited increasingly from the eleventh century onward as a prefiguration of warfare in the service of Christianity. During the Investiture Contest, the texts were also used as a justification of the use of armed force in the service of the church against the secular power. Along with other Old Testament models, the warriors of 1 and 2 Maccabees were cited as a prefiguration of Christian crusaders by nearly all the popes concerned with the crusades. The account of Urban II's speech at the Council of Clermont (1095) by Guibert of Nogent, the sermons of Honorius III, Jacques de Vitry, Henry of Albano, and Humbert of Romans, and the chronicle of Fulcher of Chartres all use the Maccabees as models for crusaders.

Maccabees, scene of a battle. (Archivo Iconografico, S.A./Corbis)

The church's tacit acceptance of military warfare as a tool in the service of Christianity and the papacy is epitomized in the sanctioning of the creation of the military orders. Both the Hospitallers and the Teutonic Order

Magdeburg, Archbishopric of

sought to give their organizations legitimacy by writing accounts of their origins linking them with Judas Maccabaeus. The most systematic and significant use of the Maccabees as a prefiguration of the military orders comes in Nicolaus von Jeroschin's *Kronike von Pruzinlant*, which exploits the books explicitly and exhaustively as the source of a long tradition of military warfare in the service of the church. Luder von Braunschweig, the grand master of the Teutonic Order who was the patron of Jeroschin's chronicle, also commissioned a Middle High German translation of the Books of the Maccabees. The Maccabee material may have appealed especially to German-speaking audiences because of its similarity to the subject matter of Germanic heroic literature, and there is evidence of the use of Maccabee models in German writing throughout the crusading period, particularly in relation to the Baltic Crusades.

Magdeburg, Archbishopric of

The archbishopric of Magdeburg in northern Germany was founded in 968 by Otto I, Holy Roman Emperor. Even before his coronation in 962, Otto seems to have had plans for this new archbishopric as a new royal center in his realms that would also be the keystone in the Christianization of the Slavic peoples east of the river Elbe.

Royal privileges and rich donations in land gave the new missionary archbishopric some initial success, and when Otto died in 973 he was buried in the cathedral of Magdeburg. In the 980s, however, the expansion of the archbishopric was somewhat stalled by uprisings among the Slavs. Furthermore, Magdeburg lost a great deal of its political importance during the reigns of the Salian rulers in Germany in the eleventh century, whose main lands and political interests lay further to the south.

Impulses from the First Crusade (1096–1099) soon

reached the northeastern frontiers of Christendom, and in 1107/1108 bishops of this archdiocese and some princes of eastern Saxony issued a charter summoning Christians of the Western countries to come and fight the pagan Slavs. In the summer of 1126 the founder of the Premonstratensian Order, Norbert of Xanten, was elected as archbishop of Magdeburg. However, attempts to reform the clergy in the archdiocese met with such strong resistance that Norbert had to flee temporarily. Eventually he did gain some success in his internal reforms (1129), but he was unsuccessful in his attempts to gain supremacy over the neighboring Polish church (1133). Another important figure was Archbishop Wichmann (1152–1192), who engaged himself in the settlement and colonization of the former Slavic territories, thus enhancing the territorial possessions of the archdiocese: settlers were brought in from the West and given favorable privileges by the archbishop. Wichmann also took part in the military conquest of the Slavic territories to the east: in 1157 he allied himself with the German prince Albert the Bear, and together they conquered Brandenburg.

In around 1200 the archbishopric of Magdeburg became involved in the crusading movement in the Baltic region. Bishop Albert of Livonia is known to have preached the cross in Magdeburg in 1199 as preparation for his first crusades against the pagans of Livonia. Later, Dominican friars became involved in preaching for the ongoing Prussian crusades in the archdioceses of Hamburg-Bremen and Magdeburg, thus involving the archbishopric in this facet of the northern crusades as well. However, with the final colonization of the Slavic territories, Magdeburg lost its initial importance as a key missionary archbishopric.

Magna Mahomeria

Magna Mahomeria (mod. al-Bira, West Bank) was a new town or village in southern Palestine some 16 kilometers (10 mi.) north of Jerusalem.

The town was established by the canons of the Holy Sepulchre for Frankish colonists, on or beside the site of an earlier settlement. The latter was one of twenty-one *casalia* (villages) granted to the Holy Sepulchre by Godfrey of Bouillon, the first Frankish ruler of Jerusalem (d. 1100). It was settled by 1124, when an Egyptian raid forced the old men, women, and children to seek refuge in a recently built tower. The new settlement was known in Latin as *Mahomeria*, probably after a mosque that stood there; from 1164 it was called *Magna* (“Great”) to distinguish it from another such settlement named Parva Mahomeria, established at al-Qubaiba a similar distance northeast of Jerusalem. Documents in the cartulary of the Holy Sepulchre show the canons offering the new settlers house plots, lands, and vines in return for the payment of tithes and a share of the produce. The settlement was administered by a steward (Lat. *dispensator*).

Ninety-two burgesses swore allegiance to the Holy Sepulchre in 1156 and a further fifty over the next thirty years, suggesting a total population of 500–700 people. They included emigrants from the south of France, Italy, and Spain. Although the economy was principally agricultural, the tradesmen among them included three smiths, three carpenters, a mason, a shoemaker, and a goldsmith. In 1170, sixty-five men from Magna Mahomeria, apparently representing part of the military service owed by the Holy Sepulchre, died defending the frontier town of Gaza against Saladin.

After the town itself fell to the Ayyūbids in 1187, it became for a while the seat of a Muslim governor. The site of Magna Mahomeria has been identified within the modern village of al-Bira, adjacent to Ramallah. The Frankish houses were barrel-vaulted structures, laid out along a principal north–south street, with the Church of St. Mary at the north end and the canons’ estate center (Lat. *curia*) incorporating an earlier tower, at the south. The documents also mention a hospital, the site of which is unknown.

Magnus II Eriksson of Sweden (1316–1374)

King of Sweden (1319–1363) and Norway (1319–1344) and leader of a crusade against the Russian republic of Novgorod in 1347–1350.

The son of Duke Erik Magnusson, brother of King Birger Magnusson of Sweden, Magnus II inherited the Norwegian throne through his mother at the age of three; the same year, he was elected king of Sweden after a fratricidal war in which his father and uncle were starved to death in prison (1318) by the king, their brother, who was subsequently driven into exile. Until 1332 a regency governed in his name. After attaining his majority he was able to acquire the province of Scania from Denmark by purchase, but he was subsequently forced to fight several wars to safeguard his hold on it.

Magnus was criticized for waging war against fellow Christians by the mystic Birgitta Birgersdottir, who was extremely influential in the aristocratic circles surrounding the king. She urged him to turn against the “infidels and pagans” in the East, by whom she evidently meant both the Orthodox Russians of Novgorod and their pagan subjects in Karelia and Ingria. Birgitta told the king that he should first attempt to convince them by peaceful means. Only as a last resort was he to take to the sword. Before taking military action, therefore, Magnus commenced his “Birgittine” crusade in 1347 by inviting the Novgorodians to participate in a theological debate and then to join the faith that it decided was the better. When the Novgorodians refused to take part, Magnus attacked, capturing the important island fortress of Nöteborg (mod. Shlissel’burg, Russia) in Novgorodian Karelia. However, when winter set in, the Novgorodians were able to retake Nöteborg,

Mahdia Crusade (1390)

and although Magnus made another attempt to attack Novgorod from Estonia in 1350, he was again forced to retreat. By the time Pope Clement VI issued a number of bulls in support of the crusade (1351), Magnus had been forced to conclude a peace that restored the *status quo ante*.

The defeat of the crusade proved a turning point for King Magnus, who was blamed for the failure for not having followed Birgitta's advice to the letter. He became the target of a fierce propaganda campaign that eventually led to his dethronement in 1363 and imprisonment in 1365, until he was set free in 1371 by his younger son, Hakon VI, who had succeeded him as king of Norway in 1344.

Magnus's crusade, however, had a great impact in Novgorod. In the early 1400s a curious text, the so-called *Testament of the Swedish King Magnus*, was compiled, presumably in Valamo Monastery, and subsequently included in numerous Russian chronicles. This text claimed that rather than dying in the shipwreck that actually ended his life, Magnus was carried by a storm to an Orthodox monastery, which he entered as a monk: there he supposedly wrote a testament admonishing his people not to attack Russia. Thus, in Novgorod, the Swedish crusader-king was transformed into a defender of the Orthodox faith against further crusades and even became the subject of local veneration.

Mahdia Crusade (1390)

A Franco-Genoese crusade, sometimes known as the "Barbary Crusade," that attacked the port of Mahdia (mod. al-Mahdiya, Tunisia) in North Africa, but was abandoned after a siege of some nine weeks.

The crusade originated as a Christian response to the piratical activities of the Barbary corsairs of the North African coast. For many years Muslim piracy had constituted a major disruption to Western shipping, particularly the commerce of the Italian maritime republics. In late 1389 Genoa sent an embassy to meet King Charles VI of France at Toulouse, which proposed a joint expedition to capture Mahdia, regarded as the major port of the Hafsīd realm of Tunisia. The Genoese were already interested in this region; in 1388 they had sent a fleet under the admiral Raphael Adorno to take part in a joint expedition with the Pisans and Sicilians, which had captured the island of Jerba in 1388. The Sicilians acquired the lordship of the island after paying for Genoa's expenses. The republic thus had an interest not only in eliminating Mahdia as a pirate base, but also in acquiring a port that would serve as an entrepôt for its own trade goods and give it access to African products, above all gold from the sub-Saharan regions. Genoa was also keen to intensify relations with the French Crown in order to secure an ally against its powerful northern neighbor, the duchy of Milan.

At the Toulouse meeting, the Genoese ambassadors proposed to provide naval transport and provisions for a crusade army, to be led by a French prince of the royal blood. They also offered to contribute and pay for a force of crossbowmen and men-at-arms for the duration of the proposed campaign. The Genoese plans were received enthusiastically by some at the French court, notably by Louis II, duke of Bourbon, the king's uncle, who asked for command of the crusade. Although initially hesitant about the proposal, King Charles and his advisers eventually agreed to allow a French force to join the expedition, and gave the command to Louis. However, each French participant had to have express royal permission to join it and also had to defray his own expenses. Genoa agreed to provide twenty-eight galleys and eighteen transport ships and their crews. It is possible that other ships were hired by some of the crusaders themselves. The fleet was commanded by the Genoese Giovanni Centurione, who had taken part in the conquest of Jerba, while Louis of Bourbon was to act as overall military commander. The mustering point for the army was originally fixed for late June 1390 at Genoa, but the difficulties of provisioning meant that this was changed to 1 July at Marseilles.

Louis of Bourbon, a veteran of the Hundred Years' War, had a great reputation as a knight, and the proposed expedition, coming as it did during a period of truce with Eng-

Course of the Mahdia Crusade (1390)

Mahdia Crusade (1390)

land, appealed to the chivalric sensibilities of the French nobility and found recruits from all over France. Among those who signed up were Philip of Artois, constable of France, John de Vienne, admiral of France, and notable knights such as Enguerrand VII, lord of Coucy, and Geoffrey de Charny the Younger, whose father had been a famous crusader and author of a treatise on chivalry. Recognition for the expedition as a crusade was secured, not only from the Avignonese pope recognized in France, Clement VII, but also from his rival at Rome, Boniface VIII. This universal recognition helped secure some participation from England, Gascony, and Spain, including John Beaufort, earl of Derby.

The main sources for the course of the crusade are French works: the *Chronique du bon duc Loys de Bourbon*, written in 1429 by Jean Cabaret d'Orville, the *Chroniques* of Jean Froissart, and the chronicle by the anonymous writer known as the Religieux de Saint-Denis.

The total number of crusaders is difficult to compute, as the sources give only partial or conflicting figures. The Genoese provided 1,000 crossbowmen and double the number of men-at-arms in addition to the ships' crews. King Charles VI had tried to limit the number of French crusaders, but the response had been so enthusiastic that we should probably assume that French numbers exceeded the Genoese. Some 200 crusaders, mostly French, are known by name.

The fleet sailed from Marseilles via Genoa and Corsica to Sardinia, where it took on provisions, and then on to an island off the African coast then known as Conigliera (probably Kuriat on the Gulf of Hammamet). During a nine-day layover there caused by bad weather, the plan of campaign was worked out. As Mahdia was too strong to be taken by an immediate assault, it would be necessary to besiege the town. The Muslims of Mahdia were by now aware of the coming of the expedition but were not expecting it to be so strong, and decided not to contest the landing. On 22 July the crusaders disembarked unopposed and started the siege; they cut Mahdia off from the rest of the mainland, with the land forces watching the town's three land gates while the fleet maintained a blockade of the harbor. On the third day of the siege the defenders made a sortie, which was beaten back by the crusaders, suffering considerable losses. Thereafter the crusaders took greater precautions to guard and defend their camp. Numerous, largely inconclusive skirmishes occurred over the next few weeks, which offered the Christian knights ample opportunities to satisfy their desire for combat and honor. It was only after about seven weeks

that the crusaders began to make serious attempts to assault the walls with siege machines assembled on land and mounted on galleys. Yet by this time they were suffering the effects of the North African summer climate, increasing illness, and the shortage of water and food supplies, much of which had gone bad, while relief forces were being gathered by the sultans of Tunis, Bougie (Bejaïa), and Tlemcen. The Genoese began to argue for raising the siege and gradually won over the bulk of opinion in the crusader camp.

Negotiations were opened after contacts were made through Christian merchants within Mahdia. Although Louis of Bourbon was disinclined to abandon the siege, the Genoese had by now clearly given up hope of taking Mahdia and were unwilling to waste further resources on the project. After four days of talks, the crusaders agreed to withdraw; in exchange the Hafsid sultan Aḥmad II agreed to pay the Genoese a cash indemnity of 10,000 ducats, plus an annual tribute to the value of the sultan's revenues from Mahdia for the next fifteen years.

At the end of September 1390, the crusaders withdrew in good order, with military dispositions taken by Louis of Bourbon preventing a Muslim attack as their embarkation was carried out. Some of the crusaders wished only to return home, but others were keen to secure some more tangible success. The Genoese persuaded the French to mount an attack on Sardinia, then a possession of the Crown of Aragon, by convincing them that the port of Cagliari had assisted the North African corsairs. The fleet occupied Cagliari and the island of Ogliastra, installing Genoese garrisons in both places. The fleet then set sail for Naples, but storms forced the ships to assemble off Sicily. They then sailed on to Terracina on the Italian mainland, which also surrendered and was placed under Genoese control. The French crusaders, however, drew the line at an attack on the Pisan port of Piombino, although the mere presence of such a large seaborne army forced the Pisans into an accommodation with Genoa. The fleet then returned via Genoa (where Louis of Bourbon and other leaders refused to leave their ships) to Marseilles.

The French crusaders were welcomed back as heroes. Despite the lack of success of the expedition, they were regarded as having acquitted themselves valiantly and with honor. The expedition revived French enthusiasm for crusading and undoubtedly contributed to the huge response to the Nikopolis Crusade in 1396. Indeed, many of the veterans of Mahdia are known to have fought at Nikopolis. The

limited objective of the Mahdia Crusade was by no means unrealistic. The port had been taken by the Christians twice before in 1087 and 1148; Spanish conquests in Morocco and the recent capture of Jerba had demonstrated that it was possible to hold well-chosen bases in North Africa. In comparison with the fiasco of Nikopolis, the French forces seem to have been relatively well-disciplined, and the successful landing and disembarkation of the army are tributes to Louis of Bourbon's generalship. Yet whether the Franco-Genoese forces would have been sufficient to hold the mainland port of Mahdia if they been successful is debatable; the majority of the French crusaders would have desired to return home, and would have needed to be replaced by a permanent and substantial garrison. In the event, the crusaders of 1390 wasted valuable time and provisions in many weeks of desultory combat while their enemies regrouped; the assaults with siege engines came too late to be effective, and it is questionable whether there was sufficient siege machinery for the task. Genoa was able to make good use of the expedition for its own political and commercial ends, but the gains of the expedition did nothing to advance the aims of the crusade movement.

Mahdia Expedition (1087)

A naval campaign fought by mainly Pisan and Genoese forces against the Zirid emirate in North Africa. It resulted in the temporary conquest of the city of Mahdia (mod. al-Mahdiya, Tunisia) with its suburb of Zawila. This enterprise has been seen as a kind of precursor of the First Crusade (1096–1099) and is described in a triumphal poem, the *Carmen in victoriam Pisanorum*, written by a Pisan cleric.

For Pisa and Genoa this campaign was one of a series of

enterprises mounted against Muslim ports in the course of the eleventh century, often in retaliation for raids. It was organized by Pisa, at the request of the pope, with the aim of attacking the Zirid emir al-Tamīm ibn al-Mu'izz (d. 1108), who had at his disposal the most powerful Muslim fleet in the Mediterranean. The Italian fleet was made up of about 300 Pisan, Genoese, and Amalfitan ships under the command of the Pisan viscount Hugo. It departed in 1087 and stopped at Rome, probably combining the campaign with a pilgrimage, which was probably meant as penitence for temporary support for Emperor Henry IV during his disputes with the papacy. When al-Tamīm's fleet was too far away to defend the coastal cities, the Italian ships attacked and conquered the suburb of Zawila on the feast of St. Sixtus (6 August). It went on to capture Mahdia, al-Tamīm's capital and principal port and an important emporium.

According to the *Carmen in victoriam Pisanorum*, the towns were offered to Roger I of Sicily, who declined because of his friendship with al-Tamīm. The fleet managed to impose a treaty of submission to the See of St. Peter on the emir, and Pisa and Genoa obtained some favorable trading rights in the Zirid territories. Although Mahdia was not held for long and the enterprise did not have any major impact on the Muslims of North Africa, it may have served as an example of a successful "anti-pagan" campaign carried out in connection with a pilgrimage.

Maḥmūd I (1087–1094)

Sultan of the Great Saljūq Empire (1092–1094).

Maḥmūd I was the youngest son of the Saljūq sultan Malik Shāh I. When his father died at Baghdad in December 1092, Maḥmūd I was the only son in his company. Maḥmūd's mother Terken Khātūn, a Qarakhanid princess, at once managed to secure his recognition as sultan from the

Mainz Anonymous

‘Abbāsīd caliph al-Muqtadī, who granted him the honorific Arabic title *Nāṣir al-Dunya wa al-Dīn* (“Victorious in the Secular World and in Religion”).

In ruling the Saljūq Empire, Maḥmūd was assisted above all by two men: Unar, commander of the Saljūq armies, and the vizier Tāj al-Mulk. Terken Khātūn secured the loyalty of the army through lavish spending from the royal treasury. During 1093, she and Maḥmūd captured Isfahan, the Saljūq capital, and arrested Barkyārūq, Maḥmūd’s brother and rival. However, Barkyārūq was released by a group of his father’s commanders. He defeated Maḥmūd’s army at Barujerd and was recognized as sultan by the new ‘Abbāsīd caliph. In September 1094 Terken Khātūn died suddenly; Maḥmūd died soon afterward, in circumstances that are unclear.

Mainz Anonymous

An anonymous account by a Jewish author, which is probably the most contemporaneous of the three Hebrew narratives of the First Crusade (1096–1099).

The text, which is incomplete in the only extant manuscript (MS Darmstadt, Hessische Landes- und Hochschulbibliothek, Cod. Orientalis 25), carefully charts the unfolding events of the anti-Jewish pogroms by the so-called People’s Crusades in Speyer, Worms, and Mainz. It describes the warning letters from French Jews to Mainz Jewry, the sought-for help from bishops and secular authorities, Jewish armed resistance, and the killings and forced baptisms. It includes vivid portrayals of self-martyrdom by many Jews in Worms and Mainz in sanctification of God’s name (*kid-dush ha-Shem*).

Malik Shāh I (1055–1092)

Jalāl al-Dawla Mu‘izz al-Dīn Abu’l-Faḥ Malik Shāh I was the third Great Saljūq sultan (1072–1092), under whom the power of the sultanate reached its greatest extent.

A son of Sultan Alp Arslān, Malik Shāh was appointed as his father’s heir in 1066. After his father’s death (1072), he was accepted as sole ruler by defeating his paternal uncle Qāwurd, who had challenged him for supreme authority. He also had to put down two rebellions by his brother Tekish in 1081 and 1084, but thereafter his rule was secure. Malik Shāh’s power was founded on two principal pillars: the central administration headed by his father’s Persian vizier, Nizām al-Mulk, and his large standing army of Turkish slave soldiers. Many of the more far-flung parts of the empire were granted to members of the Saljūq family as princes or governors. In the east of the empire, Malik Shāh carried on wars against the Ghaznawids and Qarakhānids, and in the west against Georgia, Byzantium, and the Fāṭimid caliphate. He appointed his brother Tutush (I) as ruler of southern Syria and Palestine (1078), but as the Turkish conquest of northern Syria proceeded, Malik Shāh later installed governors of his own choosing in Aleppo, Antioch, and elsewhere.

The first signs of instability in Saljūq rule began to appear when Nizām al-Mulk was assassinated (October 1092). Malik Shāh’s relationship with the ‘Abbāsīd caliph in Baghdad, who had originally legitimized the rule of the Saljūqs, deteriorated toward the end of the reign. It is possible that the sultan intended to depose the caliph, but he died while hunting in November 1092, in circumstances that are still disputed by historians.

Whether or not the sultan was murdered like his vizier, the deaths of its two most powerful men within such a short period plunged the Great Saljūq Empire into disarray. Malik Shāh’s widow Terken Khātūn had her young son Maḥmūd proclaimed sultan by the caliph, but this move was contested by another son, Barkyārūq, and by Tutush in Syria. The

ensuing civil wars, which continued into the twelfth century, greatly limited the ability of the Great Saljūqs to respond effectively to the threat to Muslim Syria and Palestine that was presented by the First Crusade (1096–1099).

Mallorca

See Balearic Islands

Mallorca Crusade (1114–1115)

A crusade mounted by a joint Pisan and Catalan force under Raymond Berengar III, count of Barcelona, which captured the Balearic islands of Ibiza and Mallorca from the Muslims, although the crusaders were unable to hold on to their conquests.

This crusade, which still awaits its modern historian, is mentioned in numerous sources, but especially in the *Liber Maiorichinus*, an epic poem 3,500 lines in length, written in unrhymed classical hexameters and modeled on Vergil’s *Aeneid*. Scholarship on the *Liber* has been devoted largely to various modern editions of the text, the relationships of the three extant medieval manuscripts, and the identity of the author, either a Lorenzo Veronese or a Lorenzo Varnenesis or Vornensis, or perhaps Enrico Pievano, a priest who appears in the poem among the attendants to the Pisan archbishop as *presbiter Henricus plebanus*. What is lost in much of the critical commentary is the fact that the author was an eyewitness who accompanied the expedition; that he was privy to the affairs of the Pisan leadership, including haggling with Catalans and peace negotiations with Muslims; and that his account, full of elaborate detail, merits much further study.

The venture was a crusade, preached on Easter Sunday 1113 by Peter Moriconi, archbishop of Pisa, with Pope Paschal II conferring the cross on the Pisans, and with a papal legate joining the expeditionary force in Barcelona in May or June 1114. All participants took solemn vows and were appropriately indulged. The island of Ibiza fell to the crusaders in July 1114. However, the larger island of Mallorca proved more difficult. The fortifications of Madina Mayurqa (mod. Palma de Mallorca, Spain), a round of dysentery making its way through camp, the winter of 1114–1115, and flagging Catalan resolve (according to the story told by the Pisan author) made victory nowhere assured. The Pisans made sure their ships were repaired, in case Muslim reinforcements arrived from the Almoravids of al-Andalus or the Pisans might need to leave in a hurry. Greek fire eventually wrought enormous damage on the wooden towers of the city, and the first city walls were breached in early February, the Almu-daina section of the city falling on 4 March, with the citadel following on 19 March. Rather than attempt a successful or even temporary colonialism, the crusaders stocked up on booty, celebrated Easter, and returned to their homes, the Pisans returning via Marseilles, where they buried the most illustrious of their dead in the abbey church of St. Victor. It was not until the early thirteenth century that Mallorca came under Christian control.

Malta

An island in the central Mediterranean, which for over two and a half centuries, starting in 1530, served as the headquarters of the Order of the Hospital, also known as the Order of St. John of Jerusalem, and, as a result of its association with the island, the Knights of Malta. The Hospitallers' permanent presence there and the military and charitable nature of their activities succeeded in keeping the waning spirit of the crusade alive throughout the Mediterranean region, perhaps more than their operations could have ever aspired to achieve from their previous base at Rhodes (mod. Rodos, Greece). Hospitaller activity on Malta can be regarded as the last phase of the crusade movement, lasting up to 1798, when the order's island state fell to the forces of revolutionary France.

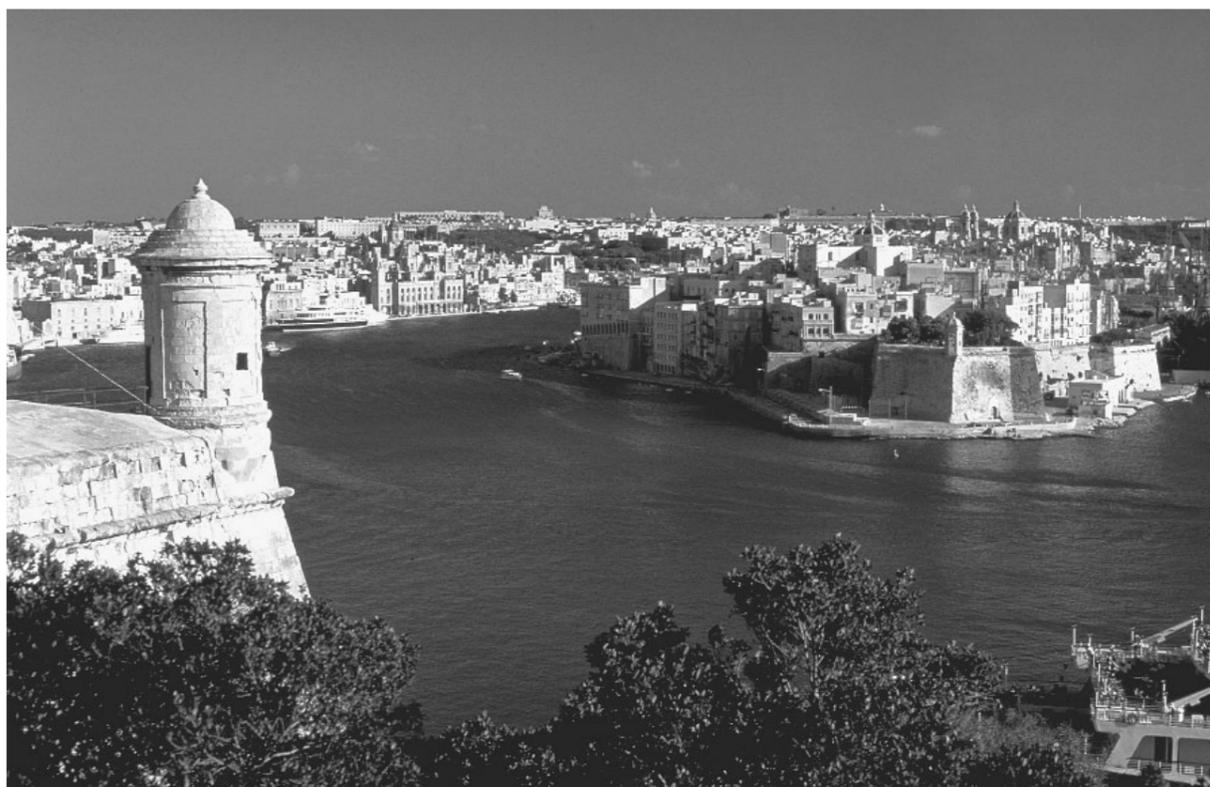

Malta before the Hospitallers

Malta's history, which consistently reflected contemporary developments in the Mediterranean region, evolved around two major factors: the island's geographical position, which enjoyed great strategic potential, and its deep spacious harbors, the largest of which, the Grand Harbour, was able to accommodate 300 galleys in the sixteenth century. Malta is situated at the very center of the Mediterranean Sea, some 80 kilometers (50 mi.) south of Sicily and 290 kilometers (181 mi.) east of Tunisia. It is some 314 square kilometers (121 sq. mi.) in size, the largest in an archipelago of three small islands, the other two being Gozo, 65 square kilometers (25 sq. mi.), and Comino, 2.5 square kilometers (c. 1 sq. mi.). Already inhabited by a farming community in the early Neolithic period (c. 5000 B.C.), the island has had a succession of foreign dominations, each endeavoring to exploit its natural advantages or to deny them to rivals, and each contributing to the rich mosaic of its material and spiritual culture and civilization.

It is claimed, on solid archaeological evidence, that by the time the First Punic War had begun in 264 B.C., Malta was already under Carthaginian control. However, although it was definitely under Roman possession by 218 B.C., Punic influences on the island persisted for a very long time, as evidenced in the style of surviving pottery and in the native dialect, for by as late as A.D. 60, when St. Paul was shipwrecked on the island, the inhabitants were said to have been unable to speak either Latin or Greek. As part of the Roman Empire, Malta enjoyed a modicum of political autonomy, stability, and economic prosperity, exporting olive oil, textiles, and other quality products. After an interlude during the domination of Visigoths in Sicily and the Vandals in North Africa, the island passed under Byzantine rule. The existence of several Christian catacombs or burial sites outside the Roman city of Melite indicates that the process of the Christianization of Malta had been under way by the fourth century. By the end of the sixth century, a strong Christian Maltese community with its own bishop had been firmly established on the island.

Malta's close ties with the Greco-Roman world were abruptly severed in 869–870, when the Arabs, after a fierce struggle, captured the island, holding it until 1091. Between the major Christian victories resulting from the First Crusade (1096–1099) and the failures in the East of the Second Crusade (1147–1149), Malta was predominantly Muslim, although by this time the re-Christianization of the island had already begun. For well over two centuries from 870, whatever inhabitants lived on Malta professed a Muslim faith, practiced Muslim customs, and followed Muslim traditions. Then in 1091, precisely four years before Pope Urban II launched the crusade movement at the Council of Clermont (1095), Count Roger I, the Norman ruler of Sicily, seized Malta and terminated Arab rule. Nevertheless, Islam remained a living force on the island, with Islamic culture, in all its manifestations, surviving the first Norman conquest. This culture was such that in 1127 King Roger II of Sicily felt the need to reconquer it. Indeed, before the middle of the twelfth century, there were hardly any real traits of a Christian community there. The Muslims of Malta were ultimately expelled around the late 1240s.

With the overthrow of Angevin rule in Sicily by the Aragonese in the wake of the revolt known as the Sicilian Vespers, Malta found itself as a possession of the Catalan-Aragonese Crown. It was to this period that the island owed some of its most structurally formative experiences. These

View of the Grand Harbour on the island of Malta. (Corel)

included the development of local government; the origins of its local nobility; the consolidation of Christian values and beliefs, partly through the emergence of religious orders on the island; and the consistent dissemination of wide Sicilian-Iberian cultural influences, which gradually superseded any surviving attitudes associated with Islam.

The Establishment of Hospitaller Rule (1530–1551)

Without constituting a complete break with the past, the arrival of the Order of the Hospital in 1530 marked a major caesura in Maltese history. When the Hospital was first set up in Jerusalem in the late eleventh century, its purpose was to care for the sick and the poor and offer Western pilgrims medical attention, food, and a temporary roof over their heads. The order gradually began to assume the complementary task of defending the routes often used by pilgrims against the Muslims. Such military responsibilities appear to have already been assumed by the early decades of the twelfth century. In 1113 the Hospital was formally recog-

nized as an exempt order of the church. With the fall of Acre (mod. 'Akko, Israel), the last Christian possession in Outremer, to the Mamlūks in 1291, the Hospitallers were evicted from the Holy Land. By about 1310 they had settled on the rich island of Rhodes in the eastern Aegean Sea, where they stayed for over 200 years. In 1522, a long and fierce Turkish siege drove the order out of its permanent residence in the Levant. On 1 January 1523 the Hospitallers, led by Grand Master Philippe Villiers de l'Isle Adam, along with their archives, precious relics, and hundreds of Greek and Latin inhabitants of the island, were allowed to sail out of Rhodes, never to return.

They spent nearly eight whole years without a home. Shortly after surrendering Rhodes, the grand master asked Charles V, Holy Roman Emperor and king of Spain, for Malta. After long negotiations at the imperial court, the order's general chapter, held at Viterbo in 1527, agreed to accept Malta together with the rest of the archipelago and, reluctantly, the North African fortress of Tripoli. The deed

of donation was signed by the emperor at Castelfranco (near Bologna), on 23 March 1530, and can still be seen today at the National Library of Malta in Valletta.

There were initial protests against the donation from the local *università* (commune). In 1428, in reaction to the Maltese rebellion (1425–1427) against the rapacious administration of the Aragonese court favorite Gonsalvo Monroy, Alfonso V of Aragon had promised that the islands would never again be alienated from the royal domain. Charles V's deed of 1530 was a blatant breach of that privilege, but the protests had hardly any lasting effect. With the arrival of the order, Malta's "well-knit oligarchy of landowners, lawyers, and ecclesiastics," as Lionel Butler defined Malta's *Università*, was soon domesticated and its powers drastically curtailed [Butler, "The Maltese People and the Order of St. John in the Sixteenth Century," p. 145]. Those who declined submission left the country.

In 1530 Malta, Gozo, and Tripoli on the African mainland were militarily threadbare, with old dilapidated fortifications. They had very little artillery and no natural resources. Until 1551, except for necessary temporary measures, no realistic long-term policy appears to have been drawn up by the order regarding its new headquarters. In that year, large parts of Malta were looted by the North African corsair Dragut, commander of the Turkish fleet. Gozo was sacked and most of its population dragged into slavery. Tripoli was shamefully and discredibly lost.

Malta under the Hospitallers, 1551–1798

The humiliating experiences of 1551 brought the Hospitallers to their senses. The state of war in the Mediterranean demanded a completely different approach. There was no scope left either for further diplomatic maneuvering to have their convent transferred to a safer place (however temporarily), or for feelings of nostalgia for the greener and more strongly fortified Rhodes.

The order now grasped the reality of its situation. A new building program was undertaken: two forts (St. Elmo and St. Michael) were constructed; a new town (Senglea) began to emerge; and old defenses were repaired. If the events of 1551 had helped to consolidate the Hospitallers' newly forged ties with the island, their long-term tenure was reconfirmed by the failure of the Ottoman forces to take Malta after a long, terrifying siege in 1565. In the long-term perspective of the historical development of the Mediterranean, the outcome of 1565 was not as significant

as contemporaries or some later historians made it out to be. But for Christian Europe, the siege of Malta was its first great victory since the Ottoman defeat at Vienna, thirty-six years earlier. For the Knights of St. John, it was vital. As Norman Housley has pointed out, it was a clear indication that their institution was "much less isolated" on Malta in the central Mediterranean than it had been on Rhodes in the Dodecanese islands [Housley, *The Later Crusades*, p. 232].

For the Maltese, the defensive victory of 1565 ushered in a new era. But, for both the order and Malta, it also underscored two important social realities. First, a strong element of continuity ran between late medieval and (at least the early phase of) early modern Malta. This was the island's dependence (sometimes partial, sometimes total) on Sicily and on whoever dominated Sicily. Secondly, although the Ottoman sultan's savage determination to wrest Malta from the Knights did not succeed, it showed that any further attempt to regain Rhodes would definitely end up in failure.

Shortly after the siege, the Knights migrated from Birgu, where they had originally settled, to Valletta, the newly built fortress-cloister-city, a combined Renaissance masterpiece of the Italian military engineer Francesco Laparelli and the Maltese architect Gierolamo Cassar. The massive walls surrounding it, which were later extended to encompass the entire urban complex that grew within the harbor area, were a symbol of strength, not only against the enemies of Christ, but also against the plague. Within the walls a major hospital (the Holy Infirmary) was constructed, to which a famous school of anatomy and surgery was annexed; others were built outside. At the heart of the citadel rose a magnificent church dedicated to John the Baptist, the order's patron saint. Other churches were erected alongside palaces, knights' residences (*Fr. auberges*), and other public and private buildings. Leading foreign artists were commissioned to decorate and beautify these structures. Caravaggio was one such, as were Mattia Preti and Antoine de Favray.

In the eighteenth century a university was founded, whose origins may be traced back to the late sixteenth-century Jesuit Collegium Melitense. Codes of law were enacted to regulate everyday life in a civilized environment. The Grand Harbour, with its several wide inlets, developed into an important commercial center, with excellent market attractions and facilities. These included an incomparably efficient

quarantine service, a lucrative naval base for ship repair and corsair operations, and a leading international slave market. Cotton, cumin, and ashes (the latter used for glass manufacture, soap making, as a fertilizer, and for insulation purposes, especially in hospitals) were exported on a fairly wide scale, along with other less profitable commodities.

By contrast, the rhythm of life in rural Malta remained fairly constant, except for the slow expansion of the villages, with some growing into new urban centers; the construction of large, richly decorated parish churches; and the erection of several fortified towers along the coast. There was also the pressure of a greater demand for agricultural products for a rapidly growing population. From around 20,000 inhabitants in 1530, the island could boast 50,000 in 1680, and some 80,000–100,000 in 1798. For the first time in the history of Malta, its ruling regime resided permanently on the island. It had resident ambassadors in Europe's major capitals and consular representatives in all Mediterranean ports. European monarchies and principalities, in turn, had their own *chargés d'affaires* accredited to the grand master's court in Valletta, while maritime cities had consuls to look after the interests of their sailors and merchants. For the first time too, most of the revenue that flowed into Malta did not originate in nearby Sicily, but in the Hospitaller priories in Europe. This income was regularly transferred to Malta and invested there. It helped to finance all the order's major projects and its military and charitable activities. It kept the local inhabitants in regular employment and offered them a system of social services and benefits.

Elizabeth Schermerhorn called Hospitaller Malta "the last stand of Christianity against the westward sweep of the Ottoman power through the Mediterranean" [Schermerhorn, *Malta of the Knights*, p. 51]. The Knights' seasonal statutory cruises from the island to all corners of the Mediterranean, following routes stipulated by the Venerable Council, were ideally envisaged as crusading missions against the enemies of Christ; in practice, they were often allowed to degenerate into little better than profit-making expeditions against any potential prey—Muslim or Jew, French, Spanish, Sardinian, or Orthodox Greek. No wonder then that the Venetians dubbed the Knights of St. John corsairs parading crosses. In the long term, however, the Hospitallers brought to the central Mediterranean island stability and security, prosperity and confidence. They broke its late medieval isolation permanently: they succeeded in "de-Sicilianizing" important sectors of its early modern

society, and they Europeanized it. They converted the island, its society, its style of life and ways of thinking into a faithful expression of baroque in all its manifestations. Under Hospitaller rule, Malta became a multicultural society, an epitome of Europe.

The End of Hospitaller Rule

Toward the end of the eighteenth century, Hospitaller Malta, like the rest of ancien régime Europe, succumbed to the powerful force of the enlightened ideas of revolutionary France. In June 1798 Napoleon Bonaparte, on his way to Egypt, sojourned briefly on the island. He aimed to free the inhabitants from the arrogance and oppression of the Hospitaller nobility, promising hope, efficiency, and benevolence. He evicted the order with hardly any resistance, and dictated the manner, based on the principles of 1789, in which the island would be governed. But Malta's genuine aspirations and the crude realism of French politics were irreconcilable. The style of government, the new legislation, and the indecent speed with which it was implemented defied the traditional Christian values of Maltese society, contemptuously disregarded other local interests, and prompted the inhabitants to revolt. In less than three months, on 2 September 1798, the people of Malta were up in arms against the French government of General Vaubois. For the next two years, the French in Malta were under siege. The Maltese sought British aid and protection, which were generously given.

On 5 September 1800 the French capitulated. Thereafter for more than a century and a half, Malta formed an integral part of the British Empire as a major base of the Royal Navy. On 21 September 1964 it became an independent, monarchical state within the British Commonwealth. Ten years later, on 13 December 1974, it was declared a republic. Since 1934 English has replaced Italian as Malta's second official language. The first is Maltese, a distinct language spoken by the native inhabitants and whose roots are traceable to the island's long medieval Muslim years.

Malta, Siege of (1565)

The siege of the island of Malta, the headquarters of the Order of the Hospital, by forces of the Ottoman Empire, lasting over three months (28 May–8 September 1565). The successful defense of Malta was hailed as a major triumph of Christendom against the Muslim Ottomans.

No sooner had the knights of the Order of the Hospital taken possession of Malta and Tripoli in 1530 than they embarked on an intensive program of harassing Muslims on land and sea as they had done from their previous Mediterranean base, the island of Rhodes: looting their towns and villages, raiding their ships, seizing their merchandise, and taking their men into slavery. These activities obstructed the Ottoman Empire’s designs of westward expansion and interrupted its lines of communication with the Barbary corsairs. Sinan Pasha’s raid on Malta, his sack of Gozo, and his capture of Tripoli, all in quick succession in 1551, was a foretaste of the Ottoman reaction to the program.

On 18 May 1565, an Ottoman armada of 180 vessels and 25,000 men reached Malta. The fleet was under the command of Piali Pasha, with Mustafa Pasha responsible for the land forces. Ten days later the siege of Malta had begun. Defending the island’s three strong centers of resistance (the

forts of St. Elmo, St. Michael, and the heavily fortified St. Angelo, with its hinterland of Birgu and Bormla) were 500 knight brethren, 1,200 soldiers of various nations, 4,000 arquebusiers, and around 3,500 Maltese irregulars. The initial focus of the siege was Fort St. Elmo. On 2 June the besiegers were joined by Dragut with 45 vessels and 25,000 men. Fort St. Elmo fell on 23 June; the siege of the fort had taken more than a month, and cost the Turks some 6,000 men. This also gave the Hospitallers time to strengthen their other defenses.

Fort St. Michael was the Ottomans’ next target, and this formed the second major stage of the siege. Batteries were placed on St. Elmo promontory, Marsa, and Corradino Heights. On 2 July a Spanish relief force of 700 men (known as the *piccolo soccorso*) reached Malta, too late to save St. Elmo, but in time to save the island. This help was countered by the arrival on 8 July of Hasan Pasha with 28 ships from Algiers. Several savage assaults were made on the fort. Others were as fiercely directed at Birgu and St. Angelo all through July and August. On 7 September a second relief force of 12,000 troops sent by Philip II of Spain (the *gran soccorso*) reached the extreme north of Malta. The next day, a thanksgiving Mass was sung at the conventual church of St. Lawrence in Birgu. Even two centuries later, the French Enlightenment author Voltaire (1694–1778) claimed that few events were more widely known than the siege of Malta of 1565.

Mamistra

Mamistra (mod. Misis, Turkey), the ancient Mopsuestia, was one of the cities of Cilicia.

Located on the river Pyramus (mod. Ceyhan), it is on the

road linking Adana and Tarsos (mod. Tarsus) to northern Syrian towns such as 'Aintab (mod. Gaziantep). Medieval sources suggest that the town had a circuit of walls and a well-known bridge dating from the Roman period.

During the First Crusade (1096–1099) Baldwin of Boulogne expelled the city's Turkish garrison in 1097, and for much of the first half of the twelfth century, the city was alternately occupied by the Byzantines, the Armenians of Cilicia, or the Franks of Antioch. A Latin archbishop, Bartholomew, was appointed by Bohemund I of Antioch in 1100. The see was later held by Ralph of Domfront, who subsequently became Latin patriarch of Antioch.

In 1137 Cilicia was annexed by the Byzantines and its Latin bishops expelled. After 1151 Mamistra remained largely in the hands of the Armenian Rupenid dynasty, and in the thirteenth century it was part of the kingdom of Cilicia. Following the Mamlūk seizure of the castles of the Amanus Mountains, the Cilician plain on which Mamistra sat was largely undefended. The Mamlūks captured and plundered the town in 1266 and again in 1275, when it was extensively damaged.

The population of Mamistra was probably small, but in the thirteenth century the city did house warehouses for Genoese and Venetian merchants. King Het'um II of Cilicia temporarily retired to a Franciscan convent in Mamistra around 1293. It is unclear when the Mamlūks finally occupied the city, but it was probably soon after the conquest of Ayas in 1337.

Mamlūk

General term for a slave soldier, usually of Turkish origin, in the Islamic world. The Arabic word *mamlūk* (pl. *mamālīk*) literally means "owned." Turkish mamlūk units played a decisive role in the military efforts of Muslim rulers against the Franks from the beginning of the latter's presence in the Levant, and many of the famous commanders and rulers who fought the Franks were of mamlūk origin.

Military slavery emerged in the Muslim world in the early ninth century, although its antecedents go back earlier. It can

be connected with the 'Abbāsīd caliph al-Mu'taṣim (833–842), although some credit should be accorded to his brother and predecessor, al-Ma'mūn (813–833), who abetted the former's activities in this direction while he was still a prince. Several factors explain the emergence of military slavery at this time: the gradual withdrawal or removal of the Arabs, both nomadic and settled, from military life; the question of the loyalty of the soldiers from northeastern Persia, hitherto the mainstays of the 'Abbāsīd regime; and the final Muslim conquest of Transoxania, which brought the Muslims into contact with the Turks then nomadizing in the steppes to the north.

The Arabic sources note with appreciation the military qualities of the Turks: excellent horsemanship, first-rate archery, discipline, and hardiness, all resulting from their nomadic-pastoral lifestyle and steppe environment. Turks, at first mainly known as *ghilmān* (pl. of *ghulam*, "a youth"), were recruited into what was originally conceived as a guard corps, but the corps soon took on duties as a field army, fighting in the yearly campaigns against the Byzantines. These Turks were enrolled as slaves and separated as much as possible from other units and the civilian population. They were thus cut off from both their lands of origin and local society. The hope, largely fulfilled at the beginning at least, was that they would prove to be unequivocally loyal to their patron—that is, the caliph who bought, raised, and maintained them—as well as to each other. This system thus involved a patron-client relationship on a large scale, institutionalized through slavery. Although military slavery in the Muslim countries continued to develop and change over the centuries, the principle of loyalty to both patron and comrades had been established.

Loyalty, however, was not necessarily something that could be transferred to the successor (even the son) of the royal patron, who might be busy trying to build up his own unit of slave soldiers or another military body. Here, too, there are hints of a pattern that became common later during the time of the Mamlūk sultanate. In 861 Turkish officers of slave origin murdered the 'Abbāsīd caliph al-Mutawakkil, fearing that he was going to undermine their position. Although Turkish military slaves often continued to contribute to political instability, they also became the predominant military element in the eastern Islamic lands, in both the caliphal armies and the forces of the all-but-independent provincial rulers. It appears that the combination of their military advantages and the theoretical loyalty com-

mended them to Muslim rulers from Egypt to the edges of central Asia.

The Saljūq Turks who arrived in eastern Persia in the early eleventh century soon built themselves a large Turkish slave-soldier formation, shunting the Turcoman tribesmen who accompanied and hitherto supported them into a secondary position. It was some of the mamlūk troops who played a decisive role in the Saljūq victory over the Byzantines at Mantzikert in 1071. Mamlūk units were found in the service of the various Muslim princes and strongmen in Syria who fought the Franks after their arrival in the course of the First Crusade (1096–1099). Some of these Turkish rulers were themselves of slave origin, having served the Saljūqs or their successors. The Fāṭimids also employed units of Turkish slave soldiers, also as cavalry, but these played a less prominent role compared to that in the Muslim countries to the east.

In the initial centuries of military slavery, young ghulāms/mamlūks were imported into the Muslim world from the area beyond the Syr Darya (Jaxartes) River or via the Caucasus. Later on, the steppe region north of the Black Sea became an important source of mamlūks. Importation was carried out by professional Muslim slave traders, who usually enjoyed the cooperation of local Turkish princes in the countries of origin, and often of the families of the youngsters themselves.

Mamlūk units formed the backbone of the armies of various Muslim rulers whose lands bordered the Frankish states of Outremer in the twelfth century and who were often at war with them: Zangī; his son Nūr al-Dīn; and the latter's representative, Saladin, who eventually became the ruler of Egypt and Muslim Syria and the nemesis of the Franks. Perhaps because of Saladin's Kurdish origins, some scholars did not accord the Turkish slave soldiers much importance in his reign, but the research of the late David Ayalon has put that matter to rest. The mamlūks, whether of Saladin, his kinsmen, or other commanders and allies, were a key element, for example, in the Muslim victory at Hattin in 1187.

Later Ayyūbid princes in Egypt, Syria, Upper Mesopotamia (Arab. *al-Jazīra*), and beyond continued the tradition of buying Turkish slaves of steppe origin and employing them in formations of mounted archers. Generally, the units were not large: al-Kāmil Muḥammad ibn al-ʿĀdil Abū Bakr, the ruler of Egypt (1218–1238) and the most important Ayyūbid of his generation, was credited with some 10,000 mounted troops, of which mamlūks were only a part,

but they enjoyed political and military prominence. While the mamlūk presence was significant in the early thirteenth century, it was to become even stronger under the rule of al-Ṣāliḥ Ayyūb (1238–1249). During one of the civil wars that often characterized inter-Ayyūbid relations, and in which al-Ṣāliḥ Ayyūb briefly lost control of the throne, he found himself abandoned by much of the army. He came to the conclusion that only a force of his own mamlūks would give him the security he needed. He therefore arrested or dismissed many of the officers who had served his father and brother and formed a relatively large corps known as the *Saliḥiyya* from his own mamlūks. One large component within it was a regiment that served as his elite troops. It was known as *Baḥriyya*, from its quarters in the fortress of al-Rawḍa on the Nile (Arab. *baḥr al-Nīl*, literally “the sea of the Nile”).

This desire to create a large corps of Turkish slave soldiers was facilitated by the appearance of the Mongols in the steppes north of the Black Sea. Al-Nuwayrī (d. 1333) writes: “The [Mongols] fell upon [the Turkish tribesmen of this area] and brought upon most of them death, slavery and captivity. At this time, merchants bought [these captives] and brought them to the [various] countries and cities. The first who demanded many of them, and made them lofty and advanced them in the army was al-Malik al-Ṣāliḥ Najm al-Dīn Ayyūb” [*Nihayat al-Arab*, 33 vols. (El-Qāhira: Dār al-Kutub al-Miṣriyya, 1923–1984), 29:417]. Thus a desire for mamlūks was accompanied by the relative ease with which they could be acquired. Ironically, it may be noted that the Mongols active in southern Russia inadvertently created a situation that later led to the defeat of their kinsmen in Palestine and Syria.

Al-Ṣāliḥ's efforts to create a new formation were to prove themselves posthumously during the invasion of Egypt by a crusade led by King Louis IX of France. During the standoff at Mansurah (1249–1250) in the Nile Delta, the sultan had died (although an attempt was made to keep this secret). At some point, the Franks launched a surprise attack against the Muslim camp that almost led to a Muslim rout. Only with the appearance and resolution of the *Baḥriyya*, who included the future sultan Baybars I, was the situation saved. Ibn al-Furāt (d. 1405) writes of this battle: “This was the first encounter in which the polytheist dogs were defeated by means of the Turkish lions” [*Ayyubids, Mamlukes and Crusaders: Selections from the Tārīkh al-Duwal wa'l-Mulūk of Ibn al-Furāt*, trans. U.

Lyons and M. C. Lyons, 2 vols. (Cambridge: Heffer, 1971), 2:22–23].

Soon after this victory, Tūrān Shāh, the son and heir of al-Šāliḥ, arrived at the scene, but he rapidly succeeded in alienating much of his father's military elite, not the least the Baḥriyya. On 1 May 1250 Tūrān Shāh was assassinated by a group of mamlūk officers, who seized control of the Egyptian state. The regime they established, known as the Mamlūk sultanate, ruled Egypt and Syria until its overthrow by the Ottoman Empire in 1517.

Mamlūk Sultanate

A state ruled by slave soldiers of predominantly Turkish, and later Circassian, origin from 1250 to 1517. The Mamlūk sultanate was originally established in Egypt but soon came to control Palestine and Syria. It was responsible for the attenuation of the Frankish presence in Outremer and its final elimination with the taking of the city of Acre (mod. ‘Akko, Israel) in 1291.

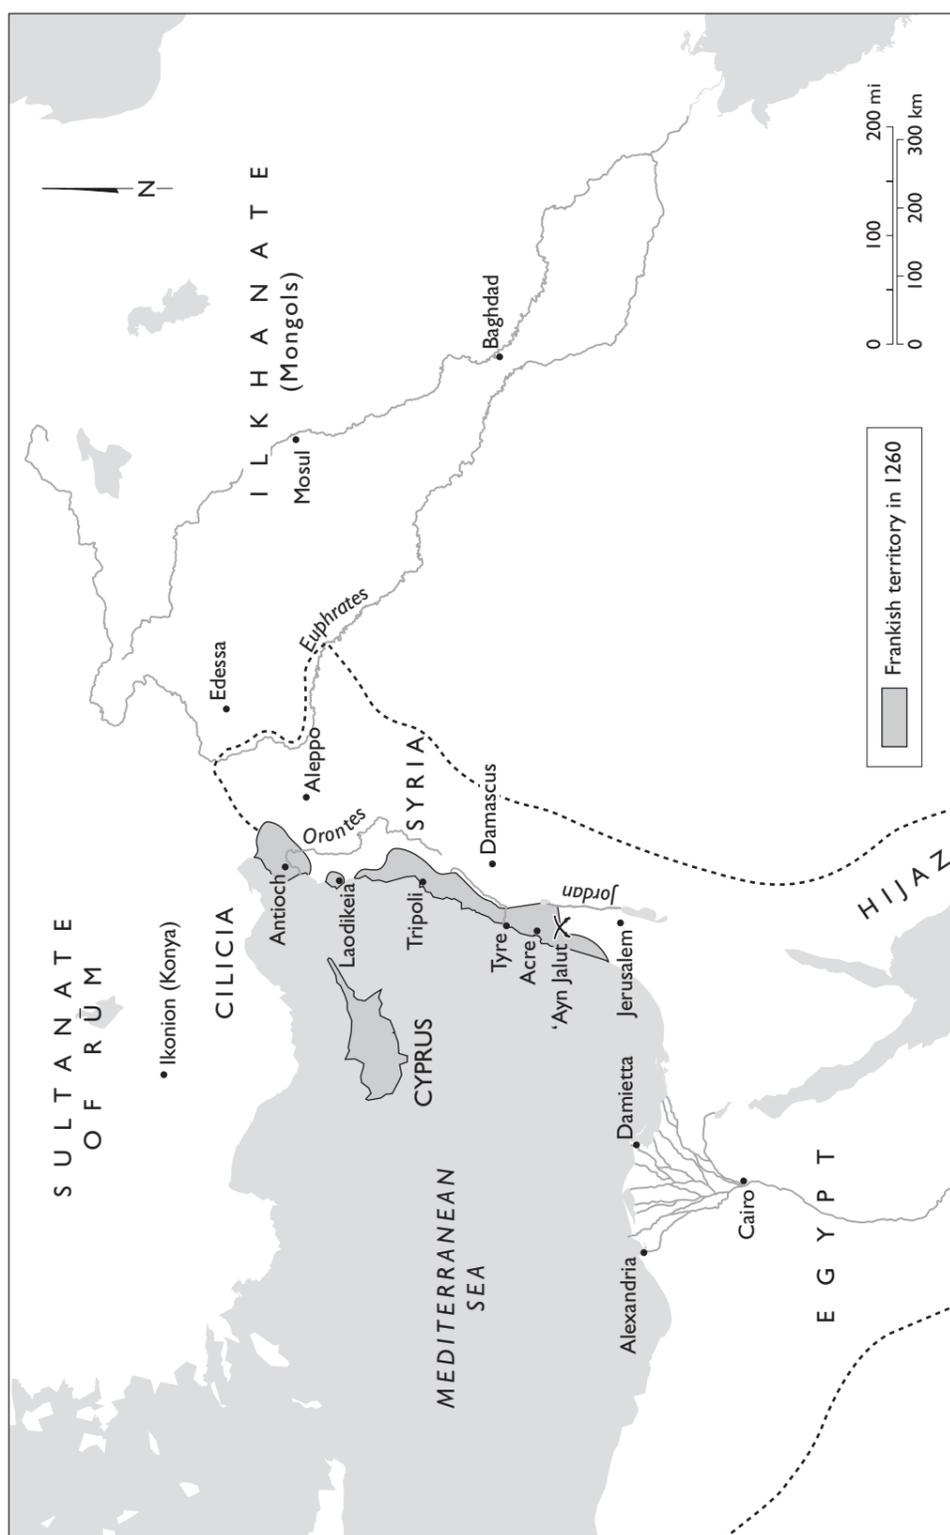

The Sultan rendering justice. Miniature from *The Fables of Bidpai: The Book of Kalila and Dimna*, fourteenth century. (Giraudon/Art Resource)

Origins

The Mamlūk state emerged during the Crusade of Louis IX of France to the East (1248–1254). The Ayyūbid sultan al-Šāliḥ Najm al-Dīn Ayyūb died in late 1249 while the crusade army was holding a position opposite the town of Mansurah (mod. El-Mansūra, Egypt). An attack by the crusaders on the Egyptian camp was defeated, largely owing to the Baḥriyya, a regiment within the *mamlūk* (slave soldier, literally “owned”) formation known as the Šāliḥiyya. Tūrān Shāh, the son and heir of al-Šāliḥ, quickly alienated his officers, including the Baḥriyya, and was assassinated on 1 May 1250.

In such cases in Muslim states at this time, the usual procedure was for the military grandees to gather and find a young prince who would be a puppet in the hands of the officers. On this occasion, however, the senior officers decided to dispense with a prince of the Ayyūbid family and appointed Shajar al-Durr, the Turkish wife of the late sultan.

The Mamlūk Sultanate in the reign of Baybars I (1260–1273)

This was a short-term arrangement: Muslim political culture was not yet ready to have a woman ruler. She was replaced by Aybak, a former mamlūk of al-Šāliḥ (but not a member of the Baḥriyya), who in turn married her.

Egypt had become a Mamlūk state, ruled by a Turkish military caste composed mainly of warriors of slave origin. The convoluted events of the 1250s were characterized by infighting among the various Mamlūk factions, along with conflict with the Syrian Ayyūbids, who did not accept that the rich country of Egypt had been wrested from the control of their family. This led to Ayyūbid attacks on Syria as well as Mamlūk campaigns in Palestine and its environs. The Baḥriyya, which had played a prominent role at Mansurah and in the establishment of the new regime, was relegated to a secondary role: its leader, Aqtay, was murdered, and his second in command, Baybars, fled to Syria with 700 Baḥrī Mamlūks. In the next few years these refugees earned their keep as mercenaries and contributed not insignificantly to the political confusion in the region. The fledgling Mamlūk state was little concerned with the Franks on the coast at this time.

War against Mongols, Franks, and Armenians

The arrival of the Mongols in northern Syria at the beginning of 1260 put an end to the infighting. Early in the year, Baybars had returned to Cairo with his followers and reconciled with the new Mamlūk ruler, Quṭuz. In the late winter, Ayyūbid rule collapsed in Damascus, and many soldiers and other refugees (including the odd Ayyūbid prince) fled to Egypt. Mongol raiders, meanwhile, were harrying the countryside as far south as Gaza and Hebron. With the withdrawal from Syria of the Ilkhan Hülegü with most of his army in the late winter, the sultan, supported by Baybars, decided to capture the initiative and attack the remaining Mongol troops in the country.

This campaign led to the complete Mamlūk victory at ‘Ayn Jālūt in northern Palestine on 3 September 1260. The battle was significant for three reasons: it showed that with determination (and luck) the Mongols could be beaten; it provided legitimacy for the nascent Mamlūk state; and finally, it gave the Mamlūks control over most of Muslim Syria up to the Euphrates and the foothills of the Taurus Mountains. At the same time, the Mamlūks understood that they had defeated only part of Hülegü’s army and that the real test of strength was yet to come. Quṭuz, however, was unable to savor his victory for long. Within several weeks he

had been assassinated by a team organized by Baybars, who replaced him as sultan.

Sultan Baybars I (1260–1277) was the real architect of Mamlūk power and in many ways can be seen as the institutionalizer of the sultanate. He first had to strengthen his power internally, which he did by consolidating his support among the military (mostly Turkish) Mamlūk elite, particularly among his comrades in the Šāliḥiyya/Baḥriyya. Realizing that the greatest danger to the sultanate was an attack by the Mongols, now itching to revenge their defeat at ‘Ayn Jālūt, Baybars launched a massive expansion of the army (perhaps even as high as fourfold) and increased its readiness and training. A communication system, based on postal-horse relays (the famous *barīd*), smoke and fire signals, and pigeon-post, was established to bring quick word of trouble in Syria to the government center at the citadel in Cairo. A widespread external intelligence service was set up that included both sympathizers in the enemy camp and secret couriers; this system was active among the Mongols, the Armenians of Cilicia, and the Franks of the coast of Syria and Palestine.

Fortifications along the frontiers and inland were strengthened and refurbished, although it should be noted that fortifications along the coast were usually destroyed to some degree after these cities were taken from the Franks. The Mamlūks were never particularly adept seamen and made only a halfhearted attempt to keep a navy, as a sorry performance at Cyprus in 1271 shows. It was this awareness of Mamlūk weakness at sea that convinced Baybars to adopt a “scorched earth” policy on the coast, which was followed by his successors: conquered cities were razed (although actual destruction was surely less than the sources would lead us to believe), the logic being that the Franks, who enjoyed freedom of movement on the sea, would not be able to gain a significant and fortified beachhead on the coast before the mobile Mamlūks could gather and drive them off.

Baybars I also strengthened his hand politically, both internally and externally. He brought to Cairo a scion of the ‘Abbāsīd family who had been found wandering around the Syrian desert; after ascertaining his genealogy, this claimant was declared caliph and given the title al-Mustaṣṣir. The latter’s first act of “government” was to promptly hand over all aspects of power to the sultan, who was to act in his name. Baybars also received a mandate to expand the borders of his state. This caliph was soon sent across the border into Iraq with a small force, with which he was massacred by the local

Mongol garrison. Either Baybars had wanted to get rid of him, since the new caliph may have been too independently minded, or there may have been a belief that the Mongols had indeed withdrawn from this area and that it could be easily recaptured.

Baybars's most important diplomatic *démarche* was the establishment of relations with the Mongols of the Golden Horde in the steppe area north of the Black Sea. Word reached him around 1262 that Berke, khan of the Golden Horde, was now engaged in a conflict with his cousin, the Ilkhan Hülegü. Baybars encouraged Berke (a Muslim) and his successor, Möngke Temür (a pagan) in this struggle, buoyed by the knowledge that his main adversary was engaged on another front. Perhaps the most important matter established with the distant Golden Horde was permission for merchants from the sultanate to continue exporting young mamlüks (mostly Turkish, but with a sprinkling of Mongols) from its territory. The main emporium for young slaves was the Crimea; from there they were transported by Genoese ships via the Bosphorus to the slave markets of Syria and Egypt. Needless to say, this trade required the agreement of Genoa and the Byzantine Empire, which was acquired to the advantage of all sides.

Baybars I's initial attitude toward the Franks was not obviously more aggressive than that of his Ayyübid predecessors. By the mid-1260s, however, matters had clearly changed. In 1265, the Mamlüks took Caesarea (mod. Har Qesari, Israel) and Arsuf, and the following year Saphet (mod. Zefat, Israel) was conquered. Two years later they took Jaffa (mod. Tel Aviv-Yafo, Israel), and the following year they stormed Antioch (mod. Antakya, Turkey). In 1271 they captured the important Hospitaller fortress of Krak des Chevaliers. They also took numerous smaller forts and minor places.

It would be difficult to suggest that there was anything inherently Mamlūk behind this change in policy vis-à-vis the Franks in Syria, beyond noting the general atmosphere of *jihād* (holy war) that pervaded their early regime, largely as a result of the ongoing fight against the still pagan Mongols. It can be suggested, however, that concrete circumstances may have led the Mamlūk sultan to adopt a more truculent attitude toward the Franks: this was the growing awareness that the Mongol Ilkhans in Persia, from Hülegü onward, were engaged in efforts to arrange an alliance with the Christians of the Levant and Europe itself, including the pope and the kings of France, England, and Aragon, against their common Mamlūk enemy.

The perceived threat of fighting on two fronts at one time or the possibility of a joint Mongol-Frankish force may well have convinced the Mamlūk elite that the Frankish bridgehead in Syria and Palestine should be systematically reduced and eventually eliminated. Even after the conquest of Acre in 1291 by the sultan al-Ashraf Khalīl, and the subsequent abandonment of the coast by the remaining Franks, there remained a fear among the Mamlūk leadership of a possible alliance between the European powers and the Mongols of Persia. These Mamlūk fears, however, were never realized: apparently the closest the Franks ever came to some type of military cooperation with the Mongols was during the campaign of Prince Edward of England in 1271, which resulted in some halfhearted and not very effective Mongol raids in Syria. It should be mentioned that long after the peace with the Ilkhans (c. 1320) and the breakup of their state (1335), the threat of both a renewed crusade as well as Frankish raids was taken seriously by the Mamlūk leadership. This fear was not unjustified, as seen by the temporary capture of the port of Alexandria by Peter I, king of Cyprus, in 1365.

Throughout the reign of Baybars I there was an ongoing border war with the Mongols along the northern Euphrates and the frontier region north of Aleppo. The Ilkhans launched serious attacks against the border fortresses of Bira and al-Rahba and several deep raids into the north of the country, but during this period they did not attempt a determined campaign into Syria. In any event, none of these Mongol efforts were particularly successful, and all were met by a forceful Mamlūk response. The sultan and his lieutenants, always suspecting the Mongol raids and attacks as harbingers of a larger offensive, immediately reacted by dispatching reinforcements from the main cities of Syria and Cairo; often the sultan would set out himself at the head of the main Egyptian army. In their war in the frontier region, the Mamlüks were assisted by the Bedouins of the Syrian Desert, who had been integrated into the Mamlūk state by subsidies, land grants, and titles. The Mamluks themselves frequently carried the border war into Mongol territory, often using the border fortresses as staging areas, as well as dispatching Bedouin or Turcoman raiders.

The kingdom of Lesser Armenia in Cilicia also suffered Mamlūk depredations. In the early 1260s, the Armenians, sure of the support of their Mongol overlords, had launched several raids into Syria, which were all repulsed. The Mamlüks responded by carrying out a series of devastating raids, thus gaining revenge, weakening an important local

ally of the Mongols, and issuing a warning to the Armenian kings and barons about attempting ill-advised forays into Mamlūk territory. Subsequent sultans continued this tradition of raiding Cilicia until the Armenian kingdom was finally eliminated in 1375, and most of its lands incorporated into the sultanate.

Baybars I's greatest success against the Mongols was his campaign into Mongol-controlled Anatolia in 1276–1277 because he was able to take advantage of dissatisfaction among much of the local Saljūq elite. The culmination of this campaign was the total defeat of a smaller Mongol, Saljūq, and Georgian army at Elbistan in the southeast of the country. Baybars was, however, aware of his precarious position—he was far away from his bases, with a large Mongol army approaching—and soon withdrew. He died soon afterward in Damascus and was succeeded by his son, Baraka Khān, whose disastrous reign was ended in 1279 by a coterie of senior officers led by Qalāwūn, Baybars's close associate. For appearance's sake, another son of the late sultan, al-'Ādil Sülemish, was named ruler, but after a reign of only 100 days, he was removed, and Qalāwūn gained the throne (1279–1290), taking the royal title al-Malik al-Manṣūr.

This series of events repeats a pattern that was common within the Mamlūk governing system. The ruling sultan would attempt to have his son succeed him, and even secure the consent of his senior officers, but with his demise the most powerful officers would jockey among themselves until one was strong enough to gain power. At this point the usually hapless sultan, often only a youth, was typically removed. Alternatively, if the former sultan's son was old enough to attempt to assert his power vis-à-vis the officers, he might even bring his own mamlūks into positions of power and influence. The old guard, however, fearing for their power, livelihood, and perhaps more, would eliminate him, and again, the most powerful of them would seize the throne. In the case of Baraka Khān and the final seizure of power by Qalāwūn, a combination of both models was at work.

Qalāwūn, an old and trusted comrade of Baybars I, can be seen as a continuator of his policies. During his reign, the institutions of the sultanate developed and crystallized. Early on in his reign, he was faced with a large-scale invasion of Syria by the Mongols. This was the first serious attempt that the Mongols, now led by Abagha, had launched to conquer Syria since the campaign of 1260, and it was, in a sense, a test of all of the military preparations that Baybars had made to meet a Mongol challenge. The armies met on the plain to the

north of Homs in October 1281. The battle hung in the balance throughout the day, but in the end the Mamlūks were victorious. The military machine that Baybars had built had proven itself in spite of the vicissitudes it had undergone since his death in the years of political confusion.

Through the remainder of Qalāwūn's reign, the frontier with the Mongols was to remain relatively quiet, and during the reign of the Ilkhan Tegüder Ahmad (1282–1284), envoys were even exchanged to discuss ending the war. After the battle of Homs, Qalāwūn concluded a treaty with the Franks of Syria, but by the mid-1280s he was prepared to renew the Mamlūk offensive against them: the castle of Margat was taken in 1285, and more importantly, Tripoli (mod. Trâblous, Syria) in 1289.

At his death in 1290, Qalāwūn was preparing a campaign to conquer Acre. The realization of this plan was left to his son and successor, al-Ashraf Khalīl, in 1291. This sultan was evidently planning a campaign to Iraq when he was assassinated by a group of senior officers. His death initiated several years of political instability, which lasted until the reign of al-Nāṣir Muḥammad ibn Qalāwūn (1310–1340). This time of political confusion came too late, however, to help the Franks, whose presence in the Levant was now just a memory.

Institutions, Military Organization, and Society

At the heart of the Mamlūk sultanate was the institution of military slavery that had developed in the Islamic world over several centuries. A number of principles can be discerned for this institution. The mamlūks were brought as young slaves (generally eight to twelve years old) from wild pagan areas in the north (the steppe region north of the Black Sea, and later the Caucasus). They were then converted to Islam and put through several years of religious and military training in the barracks. Around the age of eighteen, they completed their training, were officially manumitted, and then enrolled in the army or unit of their patron, either the sultan or an officer. In theory, and generally in practice, they were loyal to both their patron (Arab. *ustādh*) and their comrades, mamlūks of the same patron (these were known as *khushdāshiyya*). Finally, Mamlūk society was a continually replicating, single generational military caste; the sons of mamlūks could not be enrolled as mamlūks, although many, known as *awlād al-nās* ("sons of the people [who matter]"), served in inferior units. The Mamlūk army was therefore replenished by the constant import of young slave recruits.

Mamlūk Sultanate

Contemporary Muslim observers appear to have been aware of these “principles” in a general way, although they were never actually written up as such.

The Royal Mamlūks (Arab. *al-mamālīk al-sulṭāniyya*) were the mainstay of the army. The core of this group consisted of those mamlūks who had been bought and raised by the ruling sultan. To these were added mamlūks of previous rulers, as well as some mamlūks who had been attached to various officers who were deceased or no longer serving. An officer or emir (Arab. *amīr*) had a personal entourage of mamlūks, although in the early sultanate, some of this complement was composed of horsemen of nonslave origin.

Non-mamlūk horsemen, as well as some déclassé mamlūks, were enrolled in the *ḥalqa* formations. The word *ḥalqa* means literally a “ring” or “circle” in Arabic, perhaps denoting either a ring around the sultan or an encircling maneuver. *Ḥalqa* units were of some importance in the early sultanate, when there was a ready supply of first-class horsemen, such as Kurds, Turcomans, Ayyūbid soldiers of various provenance, and military refugees (known as *wāfidiyya* or *mustaʿminūn*) from across the frontier with the Mongols: these might be mamlūks and other troopers from subjected states (for example, Iraq and Saljūq Anatolia) or even Mongol deserters themselves. With time, however, these sources dried up, and the *ḥalqa* declined in quality and became units of decidedly secondary importance. Generally, Bedouins and Turcomans served as auxiliaries in time of war, and also patrolled the northern frontier, occasionally raiding into enemy territory. Foot soldiers and militiamen are infrequently encountered in the time of the early sultanate, mainly on the frontier with the Mongols or as garrison troops; sappers and other technical support troops are mentioned during sieges, especially against the Franks.

The officers were divided into ranks, as follows: an “officer (Arab. *amīr*) of 100, commander (Arab. *muqaddam*) of 1000,” which meant that they had a personal entourage of some 100 mamlūks and commanded a regiment of (theoretically) 1,000 *ḥalqa* troops in time of war; an “officer of 40,” known also as “an officer of a *ṭablkhāna* (“drum orchestra”),” who enjoyed an entourage of 40 mamlūks and the right to maintain a private band of musicians; and “an officer of 10,” who had a small entourage of 10 personal mamlūks. These ranks were somewhat flexible: there were, for example, “officers of 40” who actually had 70 personal mamlūks.

The basis for the purchase of young mamlūks, their training, the maintenance of a unit, and an officer’s household in

general was an *iqṭāʿ* (pl. *iqṭāʿāt*), an allocation of agricultural land. The officer in question (called a *muqṭaʿ*) had a right to collect the taxes from this allocation for the above-mentioned uses; the state treasury was thus circumvented in this process. The *iqṭāʿ* did not, however, entail administrative authority and was not passed on as an inheritance. The *muqṭaʿ* also lived in the city: the Mamlūk regime was an urban-based military society. There are thus several differences between the *iqṭāʿ* system and feudalism, including the variant of the latter in the Levant. The senior Mamlūk amīrs amassed great wealth, not only from agricultural taxes but also from land and grain speculation and commerce. The sultan himself held large tracts of land in Syria, Palestine, and Egypt as his royal *iqṭāʿ*. Occasionally, as in the aftermath of the conquest of Arsuf and Caesarea, state land was alienated and given as private property to various emirs. In short, the *iqṭāʿ* system was an efficient mechanism for transferring the agricultural surplus of the state to the sultan and the Mamlūk elite.

Compared to its Ayyūbid predecessor, the Mamlūk sultanate was a relatively centralized regime. Under normal circumstances the sultan’s authority reigned supreme throughout Syria, Palestine, and Egypt (at least as much as premodern conditions permitted). The center of the government was the Citadel of the Mountain (Qalʿat al-Jabal) in Cairo; the bulk of the Royal Mamlūks were stationed there and in its environs; the senior officers (theoretically numbering some twenty-four in Egypt) and their contingents also resided in the city. The governors in Syria, which was divided into a number of provinces, were directly appointed by the sultan. The governors and officers in Syria also had their private contingents of mamlūks, and there were other horsemen in their forces. Provinces in the early sultanate included Damascus (which was responsible for Jerusalem, a subprovince until 1376 when it became a province, albeit of secondary rank), Homs, Hama (actually an Ayyūbid puppet regime until the early 1330s), Aleppo, and Kerak. After their conquests, Saphet and Tripoli also became centers of provinces, as did Gaza later on. In some of the larger cities (most prominently Damascus and Aleppo), there was a separate commander of the local citadel who answered directly to the sultan, and who thus could help check any overly ambitious governors. The sultan resided in Cairo, but in the case of Baybars, much of his time was spent campaigning in Syria and Palestine.

The Mamlūk sultans and senior officers were great patrons of Islamic architecture. This patronage resulted

from the Mamlūk elite's religiosity and spiritual needs, and perhaps also from their need to prove their attachment to their new religion and from the tremendous wealth that they amassed. The fact that these establishments were usually *waqfs* (endowments), which provided income for descendants in a volatile economic milieu (as well as circumvention of Muslim inheritance laws), was an added incentive. Finally, although this may not have been the original intention, the cultivation of religion won the Mamlūk sultans and officers legitimacy in religious circles and among the population at large. Foremost among the institutions supported were *madrasas* (religious colleges focusing on legal studies), but mosques, *khānqāhs* (Sufi lodges), and *khāns* (hospices or caravansarays) also received extensive patronage. The Mamlūk elite saw itself as the defender of Sunnī Islamic orthodoxy, which included moderate Sufism (mysticism), although individual Sufis of a more extreme variety could also enjoy the benefits of support from the military-political elite. Among various intellectual currents that flourished under the Mamlūks, mention can be made of historiography, the extent and richness of which may be unsurpassed in pre-modern Muslim societies.

Decline of the Sultanate

It is often thought that the height of the sultanate was the third reign of al-Nāṣir Muḥammad ibn Qalāwūn (1310–1341), during which peace was concluded with the Mongols. It was certainly a time of massive urban and rural construction, encouraged by the sultan himself, as well as general luxurious living among the elite. Recent research has suggested that many of the subsequent political and economic problems may be attributed to the irresponsible fiscal policy of these years as well as to changes in the educational system of the young mamlūks. In any event, after this ruler's death, the sultanate entered a forty-one-year period of political and economic instability, exacerbated by the arrival of the Black Death in 1348. In 1382, Barqūq ascended the throne, providing a modicum of stability. He also inaugurated the succession of Circassian sultans known (incorrectly) as Burjīs.

The fifteenth century was one of successive economic crises that made for smaller and less disciplined armies. Novice mamlūks (now mostly imported from Circassia in the northern Caucasus) were bought at an older age and thus received less training. This period is often seen as one of decline, although if so, it was certainly a process that took a

long time. With the demise of Frankish and Mongol power, the Mamlūks had no serious external enemies (Tamerlane's excursion to Syria was short-lived); nor did they have any substantial internal opponents. The appearance of the Ottoman Empire in the northern frontier region in the second half of the fifteenth century brought about a change for the Mamlūks, who put up a spirited fight in the area until their final defeat, which was aided by their unwillingness or inability to adopt gunpowder weapons, in 1517.

Manfred of Staufen (1232–1266)

King of Sicily (1258–1266).

Manfred was an illegitimate son of Frederick II of Staufen, Holy Roman Emperor and king of Sicily, by his relationship

with Bianca Lancia. After the death of his father (13 December 1250), Manfred took on the office of *baiulus* (regent) in the kingdom of Sicily for his older brother Conrad IV and was invested with the principality of Taranto by the terms of Frederick's testament.

The first years of Manfred's government were overshadowed by conflict with Pope Innocent IV and rivalry with Conrad IV, who arrived in southern Italy in 1252. After Conrad's death (21 May 1254), he succeeded in coming to a short-term reconciliation with Innocent IV and replacing Berthold of Hohenburg, who had been nominated as regent by Conrad IV.

As a result of a new rupture with Innocent's successor, Alexander IV, at the beginning of 1255, Manfred embarked on an ambitious policy with the aim of strengthening the Ghibelline (imperialist) party throughout Italy and of isolating the pope; this strategy culminated on 4 September 1260, in the victory of Montaperti, won by the Siennese, supported by Manfred's knights, over the Florentines. After the death of his first wife, Beatrix of Savoy (1256), Manfred married Helena Angelina Doukaina, daughter of Michael II, despot of Epiros (1257/1258). This match brought him as dowry the island of Corfu (mod. Kerkira, Greece) and a strip of the Albanian coast with the cities of Durazzo (mod. Durrës, Albania), Vlorë, Himarë, Sopot, and Butrint, and strengthened his plan to usurp the throne of Sicily, to the detriment of the legitimate rights of the young Conradin, son and heir to Conrad IV.

Manfred was crowned as king of Sicily in Palermo on 10 August 1258. His rule over extended possessions on the eastern shore of the Ionian Sea resulted in an alliance with his father-in-law and Prince William II of Achaia against the emperor of Nicaea, Michael VIII Palaiologos. The climax of Manfred's intervention in Greece was a battle, fought in early summer 1259 (probably on the plain between Florina and Pétres, and not Pelagonia, as is generally assumed), where 400 knights sent by him took part. Although the outcome of this campaign was a complete defeat for the anti-Byzantine coalition, Manfred succeeded in preserving his territories on the eastern shores of the Adriatic and Ionian seas.

After the recapture of Constantinople by Michael VIII (25 July 1261), Manfred concluded an alliance for the restoration of the Latin Empire with the exiled Baldwin II at the beginning of 1262, but attempts at a reconciliation with Alexander IV and his successor Urban IV failed completely. The result of the breakdown of these negotiations was the infeudation of the kingdom of Sicily to Charles I of Anjou by Pope Clement IV. The French prince succeeded in defeating his rival for the crown of Sicily in the battle of Benevento (26 February 1266), in which Manfred lost his life. The Staufens claims to the kingdom of Sicily passed to Manfred's nephew Conradin.

Although Manfred showed little direct interest in the affairs of Outremer, he exchanged a number of emissaries with the Mamlūk sultan Baybars in the years 1261–1265. Contrary to an often repeated assertion, there is no evidence for any contacts between him and the Assassins.

Mansurah

The town of Mansurah (mod. El-Mansûra, Egypt) was founded by the Ayyūbid sultan al-Kāmil (1218–1238) as a forward military base against the Fifth Crusade (1217–1221), which in November 1219 had seized the vital port of Damietta at the mouth of the eastern branch of the Nile following a prolonged siege.

Mansurah was, in fact, a large fortified encampment of a type typical in Middle Eastern Islamic warfare. Its location also dominated the eastern Nile and the Baḥr al-Saghīr, a strategic waterway linking the Nile and Lake Manzala. After a long pause, largely caused by the divided leadership of King John of Jerusalem and Cardinal Pelagius, the crusader army advanced along the eastern bank of the Nile in July and August 1221, heading for Cairo. It was, however, halted by the Ayyūbid forces at Mansurah, and al-Kāmil ordered that the irrigation dykes be broken, and the surrounding land flooded. The crusader army found itself caught on a small island between the eastern Nile and the Baḥr al-Saghīr and

was obliged to negotiate a humiliating peace. However, in return for the surrender of Damietta, still held by a crusader garrison, the trapped army was permitted to retreat in safety at the end of August 1221.

In 1249 Damietta again fell to a crusade army, led by King Louis IX of France. Although he was dying, the sultan al-Şāliḥ (1240–1249) assembled an army at Mansurah, supported by a river fleet. In November–December 1249, the crusaders advanced up the Nile toward Mansurah. The death of al-Şāliḥ on 23 November was kept a secret from his army, which skirmished with the crusaders outside the town during December and January. Eventually the crusaders crossed the Baḥr al-Saghir to attack the town, but on 11 February 1250 the king's brother Robert, count of Artois, disobeyed orders and entered Mansurah, where he was defeated in street fighting. The Egyptians then counter-attacked, and the crusaders were besieged in their camp, while the Egyptian river fleet won control of the Nile. In March and April the crusaders retreated toward Damietta before being forced to surrender near Fariskur, where King Louis was taken prisoner. In May 1250 some senior crusader leaders were released after paying large ransoms, but much of their army was enslaved.

This second battle of Mansurah was one of the most important during the entire crusades, confirming three strategic points: that Egypt was the center of Islamic power in the Middle East, that Frankish power in the Holy Land could only be preserved by dominating Egypt, and that the conquest of Egypt by a seaborne assault was probably impossible, given the military technology of this period. The Ayyūbid sultanate collapsed during this campaign, to be replaced by a military regime, which evolved into the Mamlūk sultanate. Victory at Mansura gave the Mamlūks great prestige, helping them to inflict a major defeat upon the invading Mongols a decade later.

Mantzikert, Battle of (1071)

A battle in which Byzantine forces under Emperor Romanos IV Diogenes were defeated by a Saljūq army under the sultan Alp Arslān, fought near the fortress of Mantzikert (mod. Malazgirt, Turkey) on 26 August 1071.

Byzantine historians of the event were partisan: Michael Attaleiates (an eyewitness) and John Zonaras supported Emperor Romanos; Michael Psellos and Nikephoros Bryennios (whose grandfather fought in the battle) were critical of his actions. Muslim historiography, none of it contemporary, emphasized the heroic Islamic credentials of the Saljūqs. Armenian historians saw the defeat as divine punishment for Byzantium's persecution of non-Chalcedonian Christians.

In the summer of 1071, Emperor Romanos led a large force (possibly some 100,000 men) to secure fortresses near Lake Van (mod. Van Gölü) in Armenia against the threat of the Saljūqs. A considerable number, under Joseph Tarchaneiotēs, was dispatched to besiege Khliat (mod. Ahlat). Romanos approached from Theodosiopolis (mod. Erzurum) with around 60,000 men. They included provincial troops, contingents of Oghuz Turks, Rus mercenaries, and Armenian foot soldiers. The fortress of Mantzikert had been successfully recaptured when Romanos learned of the proximity of a large Saljūq force commanded by Alp Arslān. Outnumbered, the sultan made an offer of peace, which was rejected. Tarchaneiotēs, however, hearing of the Saljūq advance, fled toward Mesopotamia.

The battle began on the evening of 26 August. After inconclusive skirmishing during the day, and not wishing to remain outside the undefended camp at nightfall, the emperor gave the order to withdraw. According to Attaleiates, the general Andronikos Doukas, hostile to Romanos, then betrayed him by spreading panic in the army. Bryennios, in contrast, relates that by this time the Turks had encircled the Byzantine army, putting the right wing (under Alytes) and then the left wing (under Nikephoros Bryennios the Elder) to flight. Both Doukas and

Manuel I Komnenos (1118–1180)

Bryennios escaped capture, but Romanos, with the imperial bodyguard and the troops from Asia Minor commanded by Alytes, was left to face the Turks. Although many escaped, Romanos was captured and held as a prisoner for eight days. After his release, he took refuge in Cilicia, where he was defeated by forces loyal to Doukas. He was then blinded and forced to become a monk.

Byzantine losses at Mantzikert were low: Attaleiates names only three high-ranking officers who were killed. Half the Byzantine army did not fight in the battle, and most of those captured were later released. The battle did not change the balance of power between Byzantines and Turks in Asia Minor; far more damaging were the ten years of civil war that followed the deposition of Romanos IV.

Manuel I Komnenos (1118–1180)

Byzantine emperor (1143–1180).

Manuel Komnenos was born on 28 November 1118, the youngest son of Emperor John II Komnenos. As emperor, Manuel welcomed Westerners to his court and fostered efforts to unify the Latin and Greek churches. His attempts to play off the Italian maritime states against one another, however, led to the increasing alienation of Venice.

The arrival of the Second Crusade (1147–1149) on Byzantine territory provided an early challenge to Manuel's authority. He attempted to revive the pacts that Alexios I Komnenos had established with the crusaders, but with little success. The German contingent under King Conrad III refused to cross the Hellespont at Abydos and was suspected

of planning to capture Constantinople (mod. İstanbul, Turkey). After its defeat in Asia Minor in 1147, Manuel received the ailing Conrad in Constantinople. He then provided ships to take him to Palestine and arranged the marriage of his niece Theodora to Conrad's nephew Henry Jasomirgott. Manuel's relationship with the French contingent under King Louis VII was ambivalent, and even the Byzantine chronicler Niketas Choniates felt that Manuel had failed to support the enterprise adequately. Manuel minted a debased coinage to be used in transactions with the crusaders and made a truce with the Saljūq sultan of Rūm. He did nothing to prevent attacks on the French by both Turks and Greeks, and the failure of the crusade left a legacy of bitterness toward Byzantium in the West, as reflected in the account of Odo of Deuil.

In the East, Manuel had three major areas of concern: Jerusalem, Antioch, and Cilicia. His relationship with the rulers of Jerusalem was cordial. Baldwin III and Amalric were both married to Byzantine princesses, and Manuel sent large gifts of money to maintain the defenses of the kingdom and to redecorate the Church of the Nativity in Bethlehem and the Church of the Holy Sepulchre in Jerusalem. In 1169, a force of 200 Byzantine ships joined King Amalric on his expedition to Egypt. Paul Magdalino sees Manuel as using Baldwin III as a "trusted relative" to ensure the good behavior of the other Frankish princes of Outremer [Magdalino, *The Empire of Manuel I Komnenos*, pp. 41–53; 66–88; 95–105]; Ralph-Johannes Lilie, by contrast, suggests that Amalric actually recognized the feudal supremacy of Byzantium [Lilie, *Byzantium and the Crusader States*, pp. 142–221].

Manuel abandoned his father's aim of recovering the principality of Antioch, though he did manage to achieve the temporary return of a Greek patriarch. His ceremonial entry into Antioch in 1159, at which its ruler, Reynald of Châtillon, acted as his groom, emphasized his authority, and his second marriage, with Maria of Antioch (1161), brought him further influence. In Cilicia, Manuel faced opposition from Armenian rulers, who had no scruples about allying with the neighboring Muslim and Christian powers against him. He was able to reconquer the coastlands, but Byzantine authority was never fully reestablished.

Manuel attempted to assert his lordship over the Saljūqs of Rūm, who ruled much of central Anatolia. In a treaty in 1161, Sultan Qilij Arslān II agreed to hand over imperial cities and curb Turcoman raiders. However, Manuel's

attempt to recapture the city of Ikonion (mod. Konya, Turkey) ended in defeat at Myriokephalon (1176), and the situation in Asia Minor remained precarious. In general, however, Manuel succeeded in establishing a *pax byzantina* (Byzantine peace) whereby local potentates kept the peace while acknowledging the Byzantine emperor as their overlord. He died on 24 September 1180 and was succeeded by his son Alexios II.

Manuel II Palaiologos (1350–1425)

Byzantine emperor (1391–1425).

Manuel was the second son of Emperor John V Palaiologos and Helena Katakouzene and became heir to the throne on the death of his elder brother, Anronikos IV (1385).

As emperor, Manuel inherited his father’s policy of accepting the position of vassal of the Ottoman sultan. In 1394, however, Sultan Bayezid I decided to abandon conciliation and laid siege to Constantinople (mod. İstanbul, Turkey), forcing Manuel to revert to the tactic of seeking assistance from western Europe. He sailed for Italy in 1399 with the aim of making a personal appeal. After touring the cities of northern Italy, the emperor and his retinue moved

north, stopping first at Paris and arriving in London at the end of 1401. Manuel was warmly and sympathetically received wherever he went, and Pope Boniface IX ordered crusade preaching to encourage volunteers and donations of money.

The unsettled conditions of the time made it impossible for large-scale help to be sent to Constantinople from either France or England, and salvation ultimately came from an entirely unexpected quarter. In July 1402, following Bayezid’s defeat and capture by the Turkic khan Timur at the battle of Ankara, the Ottoman threat to Constantinople evaporated, and Manuel was able to return. This was, however, only a stay of execution. By the time of Manuel’s death, the Ottomans had recovered from their defeat and were once more making plans to capture Constantinople. He was succeeded by his son John VIII Palaiologos.

Manzikert

See Mantzikert, Battle of (1071)

Marash

Marash (mod. Kahramanmaraş, Turkey), known in the ancient period as Germanikeia, was one of the most important towns in Armenian Cilicia in the eleventh and twelfth centuries. For a brief time (1104–1149) it was the capital of the most northerly of all the Frankish lordships in Outremer.

Marash’s importance stemmed from its location at the intersection of main roads coming from Anatolia in the west

Margat

across the Anti-Taurus Mountains and continuing on to the cities of Edessa (mod. Şanlıurfa, Turkey) in the east and Antioch (mod. Antakya, Turkey) in the south.

The main armies of the First Crusade (1096–1099) passed through Marash when first entering Syria on the way to Jerusalem in 1097. At that time, a number of small Armenian lordships contended with one another for control of Cilicia while loosely recognizing the sovereignty of the Byzantine state. Hostile Turkish emirates at Ikonion (mod. Konya, Turkey) to the west, Sebasteia (mod. Sivas, Turkey) to the north, and Aleppo to the south surrounded the region and posed a constant menace to its survival.

It was in the hope of resisting this threat that the new Frankish rulers at Antioch and Edessa promoted the creation of a new lordship at Marash shortly after the conquest of Jerusalem in 1099. The precise circumstances and date are unknown, but by 1108 a descendant of the Hauteville family of Normandy, Richard of the Principate (of Salerno), was ruling Marash with the acquiescence of neighboring Armenian lords.

For the next four decades, four men held the lordship of Marash (which may briefly have had the status of county in the 1130s and 1140s). It was a period seldom free from foreign invasions and internal rebellions. No single family appears to have established a hereditary claim to the command. Richard's son and heir, Roger, was named prince of Antioch in 1112. It is unclear how Marash passed to the next lord, Geoffrey, who had previously been a monk at a monastery in Rome. Geoffrey rose meteorically in the early 1120s to become briefly one of the most powerful men in the crusader states, governing Edessa as regent during the captivity of Joscelin I (1123–1124).

The high point in the importance of Marash came during the rule of Baldwin, lord from 1136 to 1146. He was probably a son (possibly illegitimate) of William IX, duke of Aquitaine (1086–1126), whose second son, Raymond of Poitiers, then prince of Antioch, installed him as lord. During the ten years of Baldwin's rule, Marash stood out as one of the major powers of northern Syria and Cilicia, and Baldwin, who died a heroic death in the Franks' failure to retake Edessa in 1146, enjoyed a reputation for great military valor among Greek, Latin, and Armenian historians of the era. However, Baldwin's rule coincided with a resurgence of Turkish power to the north and Frankish weakness in the south; the loss of Edessa left Marash isolated and exposed, and the town fell to attacks from Ikonion in 1149. The existence of this lordship in Armenian Cilicia for half a century had little decisive influence on Frank-

ish settlement in Outremer: at best it may have prolonged somewhat the survival of the Frankish states by warding off Turkish attacks from the north.

Margat

Margat (mod. Qal'at Marqab, Syria) was a castle overlooking the Mediterranean coast near the southern frontier of the principality of Antioch. It was originally built by the Mazoir family, who held the surrounding lordship, but they sold it to the Hospitallers in 1186. Saladin reckoned it was too strong to take in 1188.

The Hospitallers conducted a major rebuilding in the early thirteenth century. The adjacent town was fortified, and the citadel, at the south end of the isolated plateau on which the castle stands, was transformed into a massive stronghold. Built in black basalt, it consists of two lines of fortification dominated by a massive, round donjon some 25 meters (82 ft.) high. Inside the walls there are vast store-rooms on different levels. There were halls for the Hospitaller knights and a large, simple chapel in which traces of mosaic decoration have been found. In 1212 the castle was said to have had a normal complement of 1,000 men and contained enough supplies for five years. It also became the seat of the Latin bishop of Valania and the archives of the Hospitallers. The Mamlūk Sultan Qalāwūn began a siege on 17 April 1285 and on 23 May the southern tower of the spur was undermined. The next day the garrison asked for terms and were allowed to retire to Tortosa and Tripoli.

Maria of Antioch (d. 1183)

Second wife of the Byzantine emperor Manuel I Komnenos.

Maria was born around 1140, the daughter of Constance, princess of Antioch, and her husband, Raymond of Poitiers. The marriage was part of Manuel's policy of rapprochement

Outer defenses, Margat. (Courtesy Graham Loud)

with the Frankish states of Outremer and was approved by King Baldwin III of Jerusalem. Contemporaries commented on Maria's outstanding beauty and charm. After the birth of her son Alexios II, Maria was appointed as regent should his father die before he came of age, on condition that she become a nun. This she nominally did after Manuel's death in 1180, taking the name of Xene.

Maria's short period as regent was unpopular. She appointed the protosebastos Alexios Komnenos, Manuel's nephew, as her chief minister; he may also have been her lover. She antagonized Manuel's daughter Maria and her husband, the Caesar John (Ranieri) of Montferrat, who rebelled against her in 1182. This left the way open for a coup d'état led by Andronikos (I) Komnenos, who became regent and subsequently emperor. Maria was banished from court. In the summer of 1183, she was accused of inciting her brother-in-law Béla III of Hungary to attack Byzantium. She was imprisoned, murdered, and buried in an unmarked grave on the seashore.

Maria of Jerusalem ("la Marquise") (1192–1212)

Queen of Jerusalem (1206–1212), the eldest surviving daughter of Queen Isabella I of Jerusalem and her second husband, Conrad, marquis of Montferrat.

Maria's maternal uncle, John of Ibelin, lord of Beirut, acted as regent until she attained her majority in 1210. She

Marienburg

Entrance to Margat. (Courtesy Graham Loud)

needed a husband who would be able to govern the land, lead the army into battle, and provide an heir to the realm. In 1208 the barons and prelates of the kingdom and the three main military orders arranged a marriage for her (possibly at the instigation of King Philip II of France) to John of Brienne, a nobleman from Champagne. John reached Acre (mod. 'Akko, Israel) on 13 September 1210 and was married to Maria the following day, and the couple was crowned at Tyre (mod. Soûr, Lebanon) on 3 October 1210.

There is little evidence for Maria's participation in government during her life and it is unclear exactly when she died. She gave birth either in the latter half of 1211 or during the course of 1212 and died soon after, leaving her husband to rule on behalf of their infant daughter, Isabella II.

Marienburg

Marienburg (mod. Malbork, Poland) in Prussia was the largest and most magnificent of all the castles of the Teutonic

Order, and from 1309 was the seat of the order's grand master (Ger. *Hochmeister*).

The first mention of the castle dates from 1280. The site chosen was a ridge of higher ground, bordered on the west by the river Nogat and on the east by low-lying marshy ground. A town was laid out to the south, which received its charter in 1286. The original construction consisted of a rectangular enclosure approximately 50 by 60 meters (164 by 197 ft.), made of brick with stone footings. There were two towers, one on the northeast corner and the "Gdanisko" tower on the southwest, joined to the main structure by a bridge, which was both defensive post and latrine. This convent castle was to form the nucleus known as the "High Castle" from the sixteenth century. To the north a large area was enclosed as a forecastle or lower bailey (Ger. *Vorburg*).

With the arrival of the grand master in 1309, the castle had to be expanded to accommodate his retinue and the administrative apparatus of the state. It was also required to entertain visiting crusaders from the West. The forecastle was divided, and a Middle Castle formed with vast brick buildings on three sides of a central courtyard: the entrance to the High Castle lay on the fourth (south) side. These ranges contained a magnificent great refectory and, on the southwest corner, the lodgings of the grand master. With their high ceilings and simple delicate tracery, his chambers are fine examples of the secular architecture of the fourteenth century.

Around 1340, a new chapel was built in the northeastern corner of the High Castle, its apse protruding from the original rectangle. The forecastle, now truncated by the separation of the Middle Castle, acquired more buildings and domestic offices.

After the battle of Tannenberg in 1410, the Teutonic Knights, whose power was now much reduced, built another line of walls along the east and north sides, equipped with semicircular towers for gunpowder defense.

In 1457 the castle was taken by the Poles and occasionally used as a royal palace, and it slowly lost its military function, suffering several fires. In 1877 restoration of the castle, now in Prussian hands, was entrusted to Conrad Steinbrecht, who embarked on a massive program of restoration to which the castle owes much of its present appearance.

Marj Ayun, Battle of (1179)

A defeat of the Franks of Jerusalem under King Baldwin IV by Saladin, who had sent Muslim forces from his base at Damascus to raid the lordships of Sidon (mod. Saïda, Lebanon) and Beirut in northern Palestine.

After confronting Saladin's forces in the hill country of Marj Ayun, the Franks were routed and dispersed on 10 June 1179. Several important Franks were captured, including Baldwin of Ibelin and Hugh of Saint-Omer, who were ransomed for high sums, and Odo of Saint-Amand, master of the Templars, who was kept a prisoner until his death a year later. Saladin was able to exploit his victory by mounting a successful siege of the new Frankish fortress at Jacob's Ford in August.

Maronites

The Maronites form one of the Chalcedonian churches in the Near East. The Maronite Church originated in a monastery near Apamea (mod. Afāmiyah, Syria) called Mar Maron. The exact location of the monastery is still unknown, but it was most probably founded after the Council of Chalcedon (451) in order to strengthen the adherents of the Chalcedonian doctrines in the region. Maronites fought for the Chalcedonian doctrine against the monophysite Syrian Orthodox Christians (Jacobites). During the Acacian Schism (484–519), the monks of the monastery of Mar Maron sent a letter to Pope Hormisdas seeking support from Rome. A Chalcedonian confederation of monasteries was formed, and the monastery of Mar Maron held the presidency.

Under the Byzantine emperor Heraclius, the confederation led by the monastery of Mar Maron supported the doctrine of monotheletism, the doctrine of two natures and one

will in Christ. They continued to do so even after the Council of Constantinople (680–681) rejected monotheletism in favor of the doctrine of two natures and two wills in Christ (dyotheletism). Makarios, the patriarch of Antioch, was condemned. Meanwhile the Arabs had conquered the Near East and North Africa, and either the Chalcedonian see of Antioch was not occupied, or the patriarch was resident in Constantinople. The Chalcedonian (Greek Orthodox) church in Syria came to be divided into adherents of dyotheletism and adherents of monotheletism. The dyotheletes grew rapidly to a majority when in 727 prisoners of the war against Byzantium were settled in the region and dyotheletes carried out missionary work among the monotheletes. Some scholars, especially Maronites, still assume that the whole debate over monotheletism came to Syria only in 727. Consequently, they also assume that Maronites had never been monotheletes.

When the Muslim authorities gave permission for a new Chalcedonian patriarch to reside in Antioch, a schism broke out between the dyothelete and the monothelete Chalcedonians. When Bar Qanbara became Chalcedonian patriarch of Antioch, he tried to impose the doctrine of dyotheletism on the monks of Mar Maron during a visit. They refused and, according to the chronicler Michael the Great, the Maronites elected their own patriarch. It is not certain that the name of the first patriarch was John Maron, who is a somewhat legendary figure. The chronicler Eutychios (Saʿīd ibn Baṭṭīq), patriarch of Alexandria (877–940), relates that during the time of Emperor Maurice a monk called Maron spread the doctrine of two natures, one will, one energy, and one person in Christ.

The Muslim writer al-Masʿūdī (d. 956) gives similar information concerning the doctrine of the Maronites. He also indicated the main areas of Maronite settlement: the mountains of Lebanon and Sanīr (between Homs and Baalbek), Homs and surroundings, Hama, Shaizar, and Maʿarrat al-Nuʿman. The Nestorian metropolitan Elias of Nisibis (d. after 1049) indicates that the Maronites resided in and around Kafartab. During the early tenth century, large groups of Maronites migrated to the northern parts of the Lebanese mountains. From the time of the crusades there are also Latin sources on the Maronites, the principal one being William of Tyre.

The Maronites lived mainly in the northern parts of Lebanon, where they had retained a certain autonomy under Muslim rule, in contrast to other Christian groups. In the

county of Tripoli, they formed the main group of native Christians: according to William of Tyre they numbered more than 40,000 in the area of Mount Lebanon and the dioceses of Gibelet, Botron, and Tripoli [Guillaume de Tyr, *Chronique*, ed. R. B. C. Huygens, 2 vols. (Turnhout: Brepols, 1986), p. 1018]. Few Maronites lived outside the county of Tripoli. In Beirut there was a church and probably a sizable community, while there was a Maronite chapel in Jerusalem for their pilgrims. For the fourteenth century there are reports that a community of Maronites may have lived in Tikrit in Mesopotamia. The Maronite Church was one of the separated Eastern churches; it had its own patriarchs and bishops and was not in communion with any other church until 1181.

When the crusaders first came to Tripoli, the Maronites were willing to help them by providing guides. As they had retained a tradition of bearing arms, unlike most native Christians in Outremer, they were favored by the Franks, who often employed them in warfare.

The attitude of the Franks toward the indigenous Christians was generally favorable. Normally the Franks did not put pressure on the separated Eastern Christians to acknowledge the primacy of the Roman see or to accept the Latin creed. The Eastern Christians were freed from paying the religious tax formerly imposed on them by the Muslims, as well as from paying the tithe to the Latin Church. They were allowed to keep their churches and monasteries and could practice their faith freely. Consequently most of the Maronites had a positive attitude toward the Franks, although some Maronites are said to have supported the Muslim attack on Tripoli in 1137.

According to William of Tyre, the Maronite community entered into full religious union with the Roman Church in 1181: Aimery of Limoges, the Latin patriarch of Antioch, had convinced them to renounce monotheletism. We have no information about the reason for this unification nor about the negotiations. However, it was surely significant that union was brought about by the Latin patriarch, rather than the Curia or a papal legate, as was the case in negotiations with other churches. A decisive factor was the fact that Aimery made concessions, recognizing the Maronite church structure and not demanding total Latinization. This union held out hope that other separated churches would enter into the union with Rome, too.

In 1203 Cardinal Peter of San Marcello was sent by Pope Innocent III to hold discussions in Tripoli with the Maronite

patriarch and his two suffragans. The Maronite churchmen swore obedience to Rome; they again renounced the monothelite doctrine and accepted the double procession of the Holy Ghost (that is, the belief that the Holy Ghost proceeds from the Son as well as the Father). They also had to make some concessions concerning baptism, confirmation, communion, and confession, adapting them to the Latin rites.

In 1215 the Maronite patriarch, Jeremiah al-'Amshīṭī, attended the Fourth Lateran Council, held at Rome under the presidency of Pope Innocent III. At the end of the council the bull *Quia divinae sapientiae* was published regarding the union of the Maronite and Roman churches. The Maronite bishops were required to wear miters and rings and carry a pastoral staff during the office. Bells were to be used to summon the faithful, and communion vessels were to be made of precious metal. The hierarchy of the Maronite Church was to consist of a patriarch, two archbishops, and three bishops. From that time the Maronite patriarch was confirmed in office by the pope and received the pallium from the Latin patriarch of Antioch.

Not all Maronites supported this union, and there was resistance in particular from groups living in the mountains. In 1243 the pope confirmed the appointment of the Maronite archbishop of Aiole by the Maronite patriarch; this unusual intervention seems to have been necessary because the see had not been in full communion with Rome before. Patriarch Daniel al-Shāmāṭī, the successor of Jeremiah al-'Amshīṭī, favored the Latinization of the Maronite Church, but became quite isolated; after his death in 1282, the opponents of the union with Rome succeeded in having their own candidate elected. In 1289 the Franks lost the city of Tripoli to the Mamlūks, but the tensions between the different Maronite factions had not been resolved. The opposition to union with Rome had almost come to an end when the Mamlūks conquered the remaining parts of the county of Tripoli. All Maronites, whether in favor of union or not, suffered under the Mamlūks and now sought help against them from the West.

Contact between Rome and the Maronites was interrupted, but the church union was maintained, although the patriarch no longer applied for the pallium from Rome. It was only in the fifteenth century that the Franciscans made contact with the Maronites, and the connection between Rome and the Maronites was reestablished. In 1439 the Maronite patriarch, John, sent the prior of the Franciscans

of Beirut as his representative to the Council of Florence, where he received the pallium from Pope Eugenius IV. The importance of the Maronite church grew in 1444, with the failure of the union between the Latin and Greek Orthodox churches; it was now the only Eastern church fully united with Rome.

From this time Maronites were sent to Rome for their education. One of those was Gabriel ibn al-Qilā'ī, who was recruited by the Franciscans. After his return to Lebanon, he wrote poems with allusions to the history of the Maronites during the period of Frankish rule in Outremer. This period became decisive for the self-conception of the Maronites, in that it affected their attitude toward Europe in opposition to their largely Islamic environment and their relations with Rome in opposition to the Greek Orthodox Church and the separated Eastern churches. These factors came to be reflected in Maronite historiography of subsequent periods. Gabriel ibn al-Qilā'ī denied that the Maronites had ever been monothelites. He praised the good relations between crusaders and Franks on the one hand and the Maronites on the other. The father of Maronite historiography, Iṣfān al-Duwayhī, underlined the eternal orthodoxy of the Maronite Church. He saw the origin of the Maronites in John Maron, who according to him descended from the Carolingians in France and studied in Constantinople before becoming bishop of Antioch.

During the Ottoman period the patriarch was responsible for the civil administration of the Maronite community. In modern Lebanon the Maronites are one of the main religious groups. The patriarch now has his residence in Bkerke, Lebanon.

Martin of Pairis

Abbot of the Cistercian monastery of Pairis in Alsace, participant in the Fourth Crusade (1202–1204), and hero of Gunther of Pairis's *Hystoria Constantinopolitana*.

Little is known of Martin apart from Gunther's partisan testimony; his family, place of origin, and birth and death dates are unknown. (Due to a misreading of the abbreviation for the Latin word *licet* in a manuscript of the *Hystoria*, some modern historians have even erroneously referred to him as Martin Litz.)

Martin took the cross while preaching the crusade at Basel in 1201, and set off with his crusade recruits in 1202. At Venice, Martin learned of the plan to sail against the Dalmatian city of Zara (mod. Zadar, Croatia) and sought leave to return home from Cardinal Peter Capuano, who refused and reportedly placed all German crusaders under Martin's care. Following Zara's capture, Martin joined the delegation to Rome that obtained papal absolution for the army, but rather than rejoining the crusaders at Zara, Martin sailed to Acre (mod. 'Akko, Israel) with Peter Capuano. On 8 November 1203, he left Acre on a mission to seek speedy assistance from the crusade army for the beleaguered Franks of Outremer, reaching Constantinople on 1 January 1204, where he found the crusaders shut out of a hostile city. When they captured the city (12–13 April), Martin was not far behind, raiding the Church of Christ Pantokrator and making off with numerous relics. On 24 June 1204, Martin reentered Pairis, where he deposited his sacred booty in the abbey church.

Martyrdom, Christian

In the early Christian Church, a martyr was a person put to death for refusing to renounce the Christian faith. The word *martyr* means "witness," and martyrs bore their sufferings, even to death, as Christ's witnesses. During the eleventh and twelfth centuries, this concept was considerably developed and extended, and the crusades played a significant part in this process.

Martyrdom was part of the religious belief system of Western Christendom. In the Middle Ages the relics of martyrs were present on every altar, and martyrs were formally remembered every day in every monastery. Martyrdom was also a feature of stories of chivalry, such as the *Chanson de Roland*, which told of Emperor Charlemagne's battles against the Moors of Spain, and thus it was part of the mentality of the arms-bearing elite: the knights whom the pope wished to enlist to fight against the Turks in 1095. The papacy had already been responsible for changes in the idea of martyrdom. The early martyrs had been passive figures, but from the ninth century on, some of those killed fighting Muslims or Vikings in defense of the church had been referred to as martyrs. In the eleventh century, Pope Gregory VII had extended this usage to supporters who defended the papacy in its struggle against the abuse of simony as well as against the anti-pope. Pope Urban II was aware of this usage of martyrdom, and according to four accounts of his speech at the Council of Clermont (November 1095), he alluded to martyrdom in his address to the clergy and laity that inspired their participation in the First Crusade (1096–1099).

Contemporary accounts of the First Crusade refer to martyrdom, but it is interesting to note that the eyewitnesses do so less than those who did not go on crusade. Many of the references are in speeches and sermons of the crusade leaders made before battle and in other times of crisis. The same contemporary historians also associated martyrdom with two crises: the siege of Nicaea (1097) and the siege of Antioch (1098). Individuals, and sometimes groups of people

who died during the expedition were believed to have achieved martyrdom, whether they died of disease like Adhemar, bishop of Le Puy, or were killed as noncombatants or as captives who refused to renounce Christianity (like Raynaud Porchet), or, most controversially, when they were killed on the battlefield, like the knight Roger of Barneville. Although there were precedents for warrior-martyrs, they were not plentiful before the First Crusade, and it has been debated whether the idea that crusaders who died in battle went straight to paradise became widely accepted only as a result of the crusade. Jonathan Riley-Smith suggested in the 1980s that it was not part of the preaching of the crusade, but became part of the crusaders' consciousness once Asia Minor had been crossed. He also conjectured that this specialized concept of martyrdom was developed early in the twelfth century by nonparticipant writers of crusade narratives, particularly Guibert of Nogent.

The more widely accepted view is that martyrdom achieved through death in battle, or on campaign, was already an accepted idea before Urban preached at Clermont, and if he did not hold out the promise of this eternal reward, it was because the status of martyr could be given only by God (unlike the indulgence, which the pope could offer). During the First Crusade, the idea became fully formulated and accrued certain features. An important one was that the status of martyr was authenticated by the appearance of the candidate in a vision. This was true, for example, of Adhemar, bishop of Le Puy. At the Great Battle of Antioch (28 June 1098), accounts tell of visions of a host of martyred crusaders riding into the fray and assuring the victory of the Christians. With them were earlier soldier-martyrs, including St. George. It has been argued that the First Crusade made the martyred knight the norm, in contrast to the passive model of martyrdom that pertained earlier.

After the First Crusade, martyrdom became a constant element in warfare against unbelievers. There were visions of martyrs who appeared and worked miracles after the siege of Lisbon during the Second Crusade, for example. It became part of the propaganda for future crusades, as in the Old French *Chanson d'Antioche*: when the hero Rainald of Toul is dying on the battlefield, he plucks three blades of grass, swallows them, and invokes the Holy Trinity; then angels bear his soul to heaven, singing the *Te Deum*. The concept of martyrdom for those who died fighting against unbelievers was an aspect of "sanctified violence," and its acceptance played a part in the devel-

opment of the military orders, which sanctioned monks becoming warriors.

Martyrdom, Muslim

Martyrdom (Arab. *shahāda*, "witnessing [for God]"), especially martyrdom on the battlefield and its religious merits, was an important theme of Muslim propaganda during the counter-crusade against the Franks of Outremer.

The Qur'ān promises great recompense for those who are slain "in the way of God" (Arab. *fi sabil Allāh*): the forgiveness of sins, exemption from the torments of the grave, great bliss in Paradise, and the right to act as intercessors for less fortunate believers (*sūra* 3:169–170, 4:67–69, 9:111). On earth, the bodies of martyrs receive special burial rites: they are interred in their bloodstained garments without washing or shrouding. Prophetic tradition (Arab. *Ḥadīth*) claims even greater prizes for the active quest for martyrdom (Arab. *ṭalab al-shahāda*) in heroic, singlehanded feats of war (distinguishing those from suicide, which is considered a major sin). Later jurists extended the notion of martyrdom and its rewards to include victims of plague, fire, childbirth, and other forms of painful deaths.

Muslim authors and preachers who wished to instigate and perpetuate the *jihād* (holy war) against the Franks used and glorified the examples of the martyrs of the early campaigns of Muḥammad in Arabia, of the great Arab conquests, and of the prolonged war of attrition with Byzan-

Mateusz of Kraków (d. 1166)

tium, as well as the willing sacrifice of the mothers and fathers of martyrs. Martyrs of the counter-crusade itself received similar attention. Chroniclers report that stories about those men aroused strong emotions and motivated citizens and soldiers. Moreover, graves of warriors who had sought and achieved martyrdom while combating the Franks (such as those of two elderly scholars who insisted upon fighting the army of the Second Crusade on the outskirts of Damascus in 1148, and the communal grave of the victims of the bloody conquest of Jerusalem in 1099) became sites for pilgrimage and prayer.

Mateusz of Kraków (d. 1166)

Bishop of Kraków (1143/1144–1166) and Polish supporter of the crusade.

Mateusz was probably educated in western Europe. His appointment to the see of Kraków occurred during the civil war (1142–1146) between the sons of Bolesław III, prince of Poland (d. 1138). Mateusz sided with the eldest son and ruling prince, Władysław II (later known as the Exile) and supported him financially. Mateusz was also closely aligned with the party of the magnate Piotr Włostowic, and Piotr’s fall

from Władysław’s favor prompted a break by Mateusz from Władysław’s camp in 1146 after the prince was excommunicated by Archbishop Jakub of Żnin.

Mateusz’s involvement in crusading and missionary activity is only known from his correspondence with Bernard, abbot of Clairvaux, which coincided with the preaching of the Second Crusade (1147–1149). In an extant letter (dated to 1146–1148) sent to Bernard jointly by Mateusz and Piotr Włostowic, the Cistercian abbot was encouraged to come to Poland in order to preach the crusade and give support to a mission to Rus’. The letter by the Poles was evidently a reply to Bernard’s questions, originally conveyed in a communication (which has not survived) to Poland by Achard of Clairvaux. From Mateusz’s reply, it can be deduced that Bernard had asked him about the possibility of organizing a Latin mission to the schismatic Russians situated to the east of the diocese of Kraków. Mateusz responded positively to this idea and suggested that such a mission would be successful, but only if Bernard himself were to come to Poland and be involved in its preparation. However, there is no evidence that Bernard travelled to Poland, and the mission to Rus’ did not take place.

During Mateusz’s episcopate and presumably with his approval, the Canons of the Holy Sepulchre were endowed and settled in his diocese by Jaksa of Miechów around 1163. The Hospitallers received an estate from Henryk, duke of Sandomierz, in Zagość between 1154 and 1166 and established a commandery, a convent, and a church dedicated to St. John the Baptist. Mateusz died on 18 October 1166.

Matthew of Edessa

An Armenian historian, writing in the early twelfth century. Matthew of Edessa was a monk, possibly senior, in or near that city (mod. Şanlıurfa, Turkey).

Matthew's *Chronicle* is divided into three parts: book 1, covering the period 951–1051; book 2, 1051–1101; and book 3, up to about 1129; there is some debate as to whether the last entries, relating to 1136, are his or those of his continuator. At first he is reliant on other Armenian sources, but gradually there is a change of focus away from these and also from affairs in the Armenian homeland to turn to information gathered orally. The third part concentrates on the region around Edessa and contains little on Caucasian or Byzantine affairs. Matthew describes his method of work: he “spent many years in laborious research” and, having consulted widely, “collated all the material contained in these histories with the greatest care,” obtaining “facts from respectable people . . . knowledgeable in the events” [*Armenia and the Crusades*, pp. 182–184].

Matthew occasionally shows hostility to the Greeks, but he seems above all aware of a shared Christian identity; the Franks are at first welcomed as protectors of the Christians and then praised or condemned according to their merits. His work is a vital source for the early history of the Frankish states of Edessa and Antioch and the changing relationship of the Franks with their new subject communities. It seems that he obtained information directly from Franks, which may explain his extreme hostility to the Byzantine emperor Alexios I Komnenos, and he provides information of great interest. For example, Matthew explains that in 1108 Tancred would only return Edessa to Baldwin II as a fief of Antioch, provoking the war between them. His work was continued by Gregory the Priest, resident further west in Kesoun (mod. Keysun, Turkey). Matthew's *Chronicle* was extensively used by many later Armenian historians.

Matthew Paris

An English chronicler and monk at the abbey of St. Albans.

Very little is known of Matthew Paris's early years. He was probably born in England around 1200. In 1217 he joined the Benedictine monastery of St. Albans. Besides a few meetings with King Henry III and one journey to Norway, Matthew remained in this religious house for most of his life. His most important work, the *Chronica Majora*, is a continuation of the *Flores historiarum* of Roger of Wendover, whom Matthew assisted at the abbey scriptorium until 1234, when he took over. Matthew's other works include the *Gesta Abbatum* (a history of the monastery), the *Vie de Saint Alban* (a biography of its patron), and a life of St. Edmund Rich. Matthew also translated a biography of Edward the Confessor from Latin to the vernacular.

Matthew was well aware of the value of his work and complained about the fate of historians: “for, if they speak the truth, they provoke man, and if they record falsehoods they offend God” [Matthew Paris, *Chronica Majora*, 5:469–470]. His historiographical consciousness encouraged Matthew to exploit St. Albans's central position and to look for any testimony he could record from the most important men of his age, such as King Henry III and his brother Richard of Cornwall, and the master of the Order of the Temple in Scotland. In addition to English personages, overseas travelers occasionally turned up at the abbey and enriched Matthew's narrative with firsthand information. All of them provided food for Matthew's unlimited curiosity and allowed him to write the most comprehensive history of his time.

The crusades attracted much of Matthew's attention, and a considerable portion of the *Chronica Majora* is devoted to the main developments in the Holy Land. Still, Matthew was not always able to guarantee chronological accuracy, and in some cases he recorded events as occurring some years before or after they actually happened. Though Matthew's chronology improved when he dealt with events closer to his own time, his conceptualization of the historical process failed to gain in sophistication. Thus, he does not give the slightest hint of the influence of Gerard of Ridefort on the events that brought about the Christian defeat at the Horns of Hattin. Instead he records an evil omen and describes the disastrous consequences of the battle from a moral-Christian perspective, thus neglecting basic questions of strategy and politics.

Modern historians have criticized Matthew's lack of coherence, his malevolence toward Henry III and Pope

St. Maurice, Order

Innocent IV, and his lack of originality. Prior to 1236, indeed, Matthew abridged or copied in part from other monastic annals and chronicles, thus posing both conceptual and methodological problems. With regard to the military orders, Matthew's main concern focused on military and political issues, especially the knights' performance on the battlefield and their policy toward the Christian princes who led the crusades. On the whole Matthew failed to gain a balanced perspective, and the *Chronica Majora* reflects a biased, negative attitude toward all military orders, first and foremost the Templars, whom he often accused of supporting narrow interests of their own to the detriment of the Christian enterprise in the Holy Land. Still, in its coverage of the period from 1236 until 1259, the *Chronica Majora* is independent of all known literary authorities and provides valuable testimony to the contradictory attitudes prevailing in Christendom toward the crusades and the kingdom of Jerusalem during these critical years.

St. Maurice, Order of

Originally an association of hermits, founded in 1434, refounded as a military-religious order in 1572 and assigned the property of the Order of St. Lazarus in Italy, forming the Order of SS Maurice and Lazarus.

Strictly speaking, the original order of St. Maurice was not a religious order. According to book 7 of the *Commentaries* of Aeneas Sylvius Piccolomini (later pope as Pius II), when Amadeus VIII, duke of Savoy, retired to a hermitage in the

woods near Lake Geneva, he was accompanied by six elderly nobles, all experienced knights. As they had changed their profession from war to religion, the group called themselves Knights of St. Maurice (Lat. *Sancti Mauricii Milites*), after the commander of the Theban Legion. According to tradition, during the Roman Empire the members of the legion had been martyred nearby for their Christian faith.

These hermits did not follow a religious rule or wear a formal religious habit, and their "order" was not formally acknowledged by the church authorities. They were an informal association, more of a religious confraternity than a religious order. Aeneas Sylvius Piccolomini recorded no more of this group, which presumably broke up after Amadeus VIII became pope as Felix V in 1439.

In 1572 Duke Emmanuel Philibert of Savoy set up his own Order of St. Maurice, deliberately named to echo his illustrious ancestor's order, with himself as its grand master. In the same year Pope Gregory XIII gave the new order the Italian commanderies of the Order of St. Lazarus. The new foundation was a military-religious order with the function of defending Christendom: it had to maintain two galleys to attack the Turkish and North African pirates that harassed Christian shipping around the Italian coast. Unlike the Order of St. Stephen of Tuscany, the Order of SS Maurice and Lazarus never achieved international notice for its naval activity and soon became effectively no more than a royal order of chivalry.

In 1868 King Victor Emmanuel II of Italy reformed the order to be an order of merit, and the "Order of Saints Maurice and Lazarus" was bestowed as a mark of honor: for example, Guglielmo Marconi (d. 1937), the inventor of wireless telegraphy, was created a commander of the order. After Italy became a republic in 1946, the order was suppressed within Italy and its properties confiscated. The order still exists today outside Italy as a charitable order, with the current duke of Savoy as its grand master.

Mawdūd (d. 1113)

Mawdūd ibn Altuntakin was the Turkish lord of Mosul in Iraq (1108–1113), who led three major military campaigns against the Franks of Outremer.

In May 1110, at the request of the Saljūq sultan Muḥammad Tapar, Mawdūd attacked the city of Edessa (mod. Şanlıurfa, Turkey), assisted by two Turcoman leaders, İlgāzī and Suqmān al-Quṭbī. They retreated after the arrival of relieving forces under King Baldwin I of Jerusalem and Tancred of Antioch, but were able to defeat the Franks near the Euphrates. However, the Turkish commanders lacked a strategy for further action and returned home.

In 1111 the inhabitants of Aleppo appealed to the ‘Abbāsīd caliph in Baghdad for help against the encroachments of the Franks. Sultan Muḥammad Tapar ordered Mawdūd and other Turkish lords from Persia and Mesopotamia to undertake a *jihād* (holy war) and sent two of his sons on the campaign. This large army besieged Edessa and Turbessel (mod. Tellbaşar Kalesi, Turkey) without success, and when it moved on to Aleppo, the ruler of Aleppo, Riḍwān, closed the city to it, fearing the loss of his independence to the Turks of Iraq and Persia. Although Mawdūd and his allies were able to ward off the Frankish attack on the town of Shaizar (south of Aleppo), the army eventually dispersed.

Mawdūd’s last campaign was the most effective one. In spring 1113, Tuḡtigin, atabeg of Damascus, asked Mawdūd for military help against Baldwin I of Jerusalem, who was plundering Damascene territory. A large army under Mawdūd arrived in Syria in May 1113. Baldwin I, fearing the strength of the Iraqi army, offered some territorial concessions to Tuḡtigin. However, on 28 June 1113 the joint Muslim forces confronted the army of Jerusalem at al-Sinnabrah, south of Lake Tiberias. According to William of Tyre and most Muslim chroniclers, the battle was disastrous for the Franks, and subsequently the Muslim forces plundered Palestine all summer, reaching as far as Jaffa (mod. Tel Aviv-Yafo, Israel) and Acre (mod. ‘Akko, Israel). Tuḡtigin feared Mawdūd’s huge success and ended the campaign, even though Jerusalem was left nearly unprotected. When Mawdūd withdrew to Damascus, he was murdered in September by Assassins hired by Tuḡtigin. As a result, Damascus and Jerusalem established peaceful relations and cooperated against the sultan.

Mecca

Mecca (mod. Makkah, Saudi Arabia) is the chief town in the Ḥijaz region of western Arabia and the birthplace of the Prophet Muḥammad. It is also the site of the Ka‘ba, a cubic building in the corner of which is set a black stone that is said to have come from heaven.

The Ka‘ba is the central shrine of Islam, and thus Mecca became the ultimate goal of the *ḥajj* (Muslim pilgrimage). Every Muslim male has the obligation to go on Ḥajj at least once in his life. The ḥajj was of considerable commercial and spiritual importance. Muslim cities in Syria, such as Damascus, suffered economically in years when the ḥajj was unable to get through to Mecca, whether because of Bedouin or Frankish interference. During the early crusade period, Mecca was a politically turbulent backwater that only really came to life during the month of the pilgrimage. However, some well-known Sufis and theologians spent considerable periods of time in the city, studying and meditating. The traveler Ibn Jubayr, who arrived in Mecca on ḥajj in 1183, estimated that about a fifth of the population consisted of foreign residents.

The city was governed (or misgoverned) by Sharīfs of the Hawāshim clan, who traced their lineage back to the clan of the Prophet Muḥammad. The Sharīfs played off the Saljūqs against the Fāṭimids, periodically switching formal allegiance, as acknowledged in the *khuṭba* (the sermon of the Friday prayer). In 1187 the place seemed to be threatened by the Franks when Reynald of Châtillon, the lord of Transjordan, plundered a ḥajj caravan and attacked several Red Sea ports. Saladin’s propagandists thereupon made much of the threat to the holy cities of Mecca and Medina.

Ibn Jubayr’s *Rihla*, or narrative of his pilgrimage to holy places, gives a vivid portrait of the city in the late twelfth century. Saladin’s brother al-‘Ādil succeeded in establishing a somewhat nominal Ayyūbid suzerainty over the city and the region. Baybars I’s establishment of suzerainty over the Sharīfs from 1269 onward was, like Ayyūbid suzerainty, really rather nominal. However, in the early fifteenth century the sultan Barsbay brought the Muslim holy cities under

Medicine

more effective Mamlūk control, together with the Red Sea ports that were crucial to Egypt's spice trade.

Medicine

Crusades to the Holy Land and elsewhere, as well as settlement in the East, exposed western Europeans to a number of health risks over and above those they faced at home. At the beginning of the crusade movement, the basis of the understanding of health and disease was still essentially that of the ancient Greeks: the body was believed to be made up of four “humors”: blood, yellow bile, black bile, and phlegm. These were linked to the four elements (air, fire, earth, and water) and the four seasons (spring, summer, autumn, and winter). There were also four qualities—hot, dry, cold, and wet—that related in opposing pairs to each of the humors, elements, and seasons. Thus summer (like fire and yellow bile) was hot and dry, while winter (like water and phlegm) was cold and wet. When a person was unwell, this was because the humors were out of balance. The patient was to be carefully observed and, taking the season and the weather into account, a treatment administered that would restore the proper balance, either by removing an excess humor, for example, by blood letting or giving an emetic, or by making up a deficiency, perhaps by prescribing foods and drinks with the required qualities (something hot and dry to counteract an excess of phlegm in winter, for instance), or by advising a change of lifestyle, such as more fresh air. Although its theoretical basis was flawed, this approach to medicine at its best encouraged careful observation of the patient and offered a range of holistic remedies that would have done little harm and possibly some good. In the wrong hands or when poorly understood, it could lead to harmful excesses, as in the common practice of routinely bleeding monks in the spring.

These beliefs about the body and health were already 1,500 years old by the time of the crusades. They had persisted through the period of the Roman Empire, usually applied by Greek physicians, and survived in the eastern Mediterranean area even after the collapse of Rome. Thus

the Byzantines had a more or less unbroken tradition of medical care, and the Muslims adopted the ancient theories and preserved many of the old texts by translating them into Arabic. By the eleventh and twelfth centuries, translators in southern Italy and Spain were turning these same texts into Latin, along with original works in Arabic that elaborated the humoral system. One of these was the influential *Liber pantegni* of ‘Alī ibn al-‘Abbās al-Majūsī (called Haly Abbas by Westerners), which was partially translated at Salerno, but translated in its entirety by Stephen of Pisa in Antioch in 1127. These complexities mean that when Arabic influence is discerned in medicine in Outremer, it cannot be assumed to be a result of immediate cross-cultural relationships; the links may be via Salerno or even Córdoba.

There are no references in the sources to named doctors accompanying the earlier crusades, and only fleeting mentions of the activities of physicians and surgeons, for example, when Godfrey of Bouillon was wounded by a bear. Medicine at the time was only beginning to develop as a profession in western Europe, so it is likely that the leaders took physicians with them, but that these were not academically trained and that their status was similar to others who had learned their craft through apprenticeship, such as farriers. Even at the time of the Third Crusade (1189–1192), although there is evidence that the French and English kings were attended by physicians, it cannot be established with any certainty which, if any, went on crusade. Only in the thirteenth century are crusading physicians eminent enough to be recorded, and this reflects the increasing professionalization of medicine: most had the title Master (Lat. *magister*), which implies a university education. At one of the centers of learning, such as Paris or Montpellier (or later Oxford or Cambridge), they would have completed a degree in the seven liberal arts before being permitted to study the theory and practice of medicine. Their main textbooks were by the Greco-Roman Galen on anatomy and physiology, and the Arab Avicenna (Ibn Sīnā) on physics.

Meanwhile, from as early as 1102 there is evidence of Western physicians in Outremer, noted as witnesses to charters and even as owning property. Their activities are also recorded in Arabic sources, notably the memoirs of Usāma ibn Munqidh. Some Western commentators deplored the fashion among the settlers for using the services of Eastern Christian and Muslim physicians. When King Amalric of Jerusalem despaired of finding a cure for his leper son, the future Baldwin IV, he sent to Egypt for a physician, Abū

Sulaymān Dāwūd, who was a Jerusalem-born Christian then in the service of the Fāṭimid caliph. Abū Sulaymān's sons also served Amalric, but after the conquest of Jerusalem in 1187, they joined Saladin's service. This facility of movement between cultures, also known in Spain and Sicily at the same period, identifies Outremer as an area potentially at the forefront of medical development at the time.

By the later twelfth century, salaried physicians were employed at the hospital of St. John in Jerusalem, and it is clear from the provision for physicians to take an oath by the saints or "to vow" that they were not necessarily Christian. The same sources reveal that there were general doctors, surgeons, and a physician who was to take care of the minority of sick patients: most inmates of the hospital were "infirm" rather than ill. It is probable that all of these individuals were licensed, but the earliest evidence for this dates from the 1240s. The bylaws written for Acre (mod. 'Akko, Israel) at that date state that physicians, whether "from overseas or from pagan lands," had to be tested by the best physicians in the land, in the presence of the bishop, before they were awarded licenses to practice ["Assises des Bourgeois de Jérusalem," in *Recueil des Historiens des Croisades: Lois*, 2 vols. (Paris: Académie des Inscriptions et Belles-Lettres, 1841–1843), 2: 169]. The licensing of physicians is another procedure that may show Muslim influence: the earliest known example in western Europe is from Sicily, about a century before the date of the *Assises*, but it was recorded in Persia as early as the ninth century.

Crusaders on campaign sustained a range of injuries in sieges, in ambushes, in battles and skirmishes, and also in accidents such as collapsing siege towers and, no doubt, falls. For the early period little is said in the sources about the treatment of such wounds, but indications are that after first aid, casualties were taken to the camp or into town for further care. While the leaders probably had the services of surgeons, it is likely that other ranks and noncombatants were assisted by empirics such as barbers and bonesetters, and by others who had no formal training or education. In any case, treatment was straightforward and limited to practical measures such as stanching blood flow and immobilizing fractures. For deep penetrating wounds, such as that sustained by King Baldwin I of Jerusalem in ambush in 1103, his physician recognized the necessity to drain the wound, and later Usāma recorded an ulcerous leg wound being successfully cured by the application of strong vinegar. By the 1180s the Order of St. John was responsible for dealing with battle

Woodcut print in a medieval apothecary shop, fifteenth century. (Stapleton Collection/Corbis)

casualties; it set up field hospitals that administered first aid and, presumably, a triage system, since after preliminary treatment casualties were taken to its hospital in Jerusalem.

If the sources are to be believed, then many more crusaders succumbed to epidemic disease, particularly on the First Crusade (1096–1099). This was an inevitable result of siege conditions, when the blockaders lived for weeks or months in close quarters, in camps with poor sanitation. Malnutrition and polluted water supplies added to their miseries. Leaders were not immune from illness (both Tancred in 1099 and Louis IX of France in 1250 suffered from dysentery), but were more likely to survive because they were better fed and had the option (which Godfrey of Bouillon took in 1098) of escaping to more healthy surroundings. For the rest there was no effective prevention or treatment because there was no understanding of how diseases were spread. The first reaction was to blame the epidemic on the people's sinfulness, and penance, prayer, and fasting were prescribed. Natural causes were also sought, and the unaccustomed heat and "corruption of the air" were proposed. It was widely

Medina

thought in the Middle Ages that bad smells caused diseases, and, although the causative link was wrong, if the misunderstanding led to an effort to eliminate bad smells, then this may have done some good.

Once crusaders became settlers, they had to cope not only with the same range of illnesses and injuries, but also with leprosy, a disease that was endemic in Outremer and that they feared, perhaps disproportionately, partly because it was believed to be the result of licentiousness and partly because its later stages were disfiguring. Although treatments were available, including bathing in hot springs, ointments, and dietary modification, none was successful, and the usual resort was social exclusion (the exception to this was the young king Baldwin IV). For example, a knight who joined the Order of the Temple not knowing he was a leper would be permitted to leave and join the Order of St. Lazarus, while a knight who had deceived the authorities by concealing his symptoms was to be expelled. Others who contracted the disease were accommodated in leprosaria (leper houses) maintained by charity.

An insight into some aspects of civilian medicine is provided by the *Assises des Bourgeois de Jérusalem*, written in Acre in the 1240s. Two chapters deal with case law relating to suits for malpractice. The earlier contains information about the work of the surgeon, which includes skull fractures as well as broken arms and legs, and the treatment of abscesses and wounds. The surgeon was also expected to advise on diet, for he was absolved from responsibility if the patient disobeyed his instructions. The work of the physician is the subject of a second chapter; he treated internal complaints, such as fevers and chills, diarrhea, skin rashes, and dropsy. He was expected to balance the humors in the patient, and there are references to bloodletting and to strong purgatives. The penalties for failure were high: the price of a slave, or public humiliation if a freeman died; effectively, the physician was barred from practice. An interesting aspect of these chapters is that they were included in the section of the *Assises* dealing with commercial matters, and it appears that their enforcement was overseen by an official who regulated trade in Acre and whose antecedent was the Muslim market inspector. Although we cannot assume that the knowledge required of physicians and surgeons who treated Franks was the same as in Islamic lands, this method of enforcement suggests that their practice was probably regulated as a craft or trade in a similar way.

Medina

Medina (mod. al-Madinah, Saudi Arabia) is, after Mecca, the second holiest city in Islam, situated in an agriculturally rich oasis in the Hijaz to the north of Mecca.

In 622 the Prophet Muhammad, having been forced out of Mecca by polytheistic Quraysh kinsmen, withdrew to Medina, which thereupon became his base for preaching and military operations. The Prophet's move to Medina is known as the *hijra*, and the Muslim calendar begins with the year of this event. Those who accompanied the Prophet from Mecca to Medina were known as *muhājirūn*, and their withdrawal from a city ruled by polytheists provided a precedent in later centuries for those Muslims who argued that Muslims under Christian rule, for example, in Palestine or Spain, should withdraw and seek refuge in a Muslim land.

The Prophet died at Medina in 632 (the eleventh hijri

year) and was buried in its chief mosque. Although a visit to Medina and the Prophet's tomb is not formally part of the *hajj* (Islamic pilgrimage), most pilgrims would visit the Prophet's tomb and pray there. According to medieval anti-Muslim polemic, the Prophet's tomb seemed to float miraculously in midair, and this fraud was managed by magnets.

After the Prophet's death, the place was of little political importance. It became something of a pleasure resort to which people retired who were looking for fun or just a quiet life. Medina was governed by the Sharifs of Mecca throughout the crusade period.

Mehmed II (d. 1481)

Sultan of the Ottoman Empire (1444–1446 and 1451–1481).

Mehmed II first came to the throne aged twelve on the abdication of his father Murad II in 1444. He was immediately faced by a severe military challenge from John Hunyadi, the voivod of Transylvania, and King Vladislav I of Hungary. His father returned from retirement to lead the Ottoman troops who defeated Hunyadi and Vladislav at the battle of Varna in 1444. Mehmed continued to rule, with considerable difficulty, until he was eventually deposed as the result of a janissary revolt in 1446 and Murad was restored.

On the death of Murad II in 1451, Mehmed returned once more to the throne. In 1453 he took the city of Constantinople (mod. İstanbul, Turkey), a conquest of great symbolic value, which firmly established the Ottoman state as an empire to be reckoned with. The fall of the Byzantine Empire caused deep consternation in Europe, many fearing that the Ottomans would appear in Rome itself and that the whole of Christendom was in the deadliest danger. The contemporary Nicola Sagundino declared that Mehmed's every thought and action were directed toward the extermination of the Christians. There were many calls for a crusade, in particular by the Hospitallers, who urged the pope to coordinate action against the Ottomans, and called for Christian unity in the face of this great danger.

During Mehmed's reign the frontiers of the Ottoman state were further extended, both in the east and the west. In 1458 he took Athens, the Morea in 1460, and Negroponte

(Euboea) in 1470, and he laid siege to Rhodes in 1480. Serbia fell in 1459 and Bosnia in 1464. In Anatolia, Mehmed disposed of both Uzun Hasan, the Akkoyunlu ruler, defeated in 1473, and the Turkish state of Karaman, which had for so long been a rival to Ottoman power in central Anatolia and which was conquered in 1474. Mehmed extended Ottoman control northward across the Black Sea. The Crimea became a vassal state, and the Genoese trading colony in Caffa (mod. Feodosiya, Ukraine) fell to the Ottomans in 1475. The extent of Ottoman advance was made very explicit for the European powers when Ottoman troops landed in Italy and took Otranto in 1480. Mehmed encouraged commercial activity and paid great attention to cultivating his relations with the Western trading states. Often regarded as cruel (Niccolò Tignosi described him as a new Caligula), Mehmed was also described by contemporaries as a shrewd administrator, temperate and austere by nature, and a man of learning, with a particular interest in ancient history.

Meinhard (d. 1196)

First missionary bishop of the newly founded church of Livonia (1186–1196).

Born between 1130 and 1135 and initially an Augustinian canon in the monastery of Segeberg in Holstein, Meinhard was the first known missionary to settle in Livonia (around 1184). He had previously visited the region on a seasonal basis several times, in the company of German merchants from Lübeck. It seems reasonable to assume that this mission had been planned for some time and masterminded by the ecclesiastical leadership of the archbishopric of Hamburg-Bremen.

Meinhard settled in the village of Üxküll (mod. Ikšķile, Latvia) and obtained permission from the Russian prince Vladimir of Polotsk to begin the process of preaching and

Melisende of Jerusalem (d. 1161)

baptizing the local population along the river Düna. In the early winter of 1185 Üxküll was attacked by marauding Lithuanians. As a consequence, Meinhard promised the Livs in Üxküll and nearby Holme that he would have stone castles built for their protection. In return, they were to accept baptism. In the spring of 1186 masons from Gotland began constructing the first stone castles in the country. At the same time Meinhard was formally appointed as bishop by Hartwig II, archbishop of Hamburg-Bremen, and Üxküll became the seat of the first diocese of Livonia.

However, the process of Christianization was not unopposed. On several occasions over the next decade, hostility from the local pagans was so strong and violent that Meinhard seems to have been prepared to give up his work and return to Germany. According to the chronicler Henry of Livonia, he only agreed to stay in Üxküll because he was promised the help of German and Scandinavian crusaders. This army never seems to have materialized, and Meinhard died sometime during the late summer or autumn of 1196, more or less trapped in his fortified church in Üxküll.

Melisende of Jerusalem (d. 1161)

Queen of Jerusalem (1131–1152).

Melisende was probably born around 1109, the eldest daughter of Baldwin II, count of Edessa, and his wife Mor-

phia. Baldwin became king of Jerusalem in 1118, and named Melisende heiress to the kingdom in 1127 after it was apparent that he would have no male heir. In 1129 she married Fulk V, count of Anjou; their sons Baldwin III and Amalric were born in 1130 and 1136, respectively. Baldwin II, wishing to ensure his family's rights to the throne, designated Fulk, Melisende, and the young Baldwin III as co-heirs just before he died in 1131.

Melisende now had a stronger constitutional position: she was not simply the king's consort, but a queen regnant. Fulk, however, refused to share power. He rewarded his Angevin followers with lands and offices in the kingdom, giving Melisende's supporters further incentive to insist on the queen's rights. The rebellion of Melisende's cousin Hugh of Jaffa in 1134 forced Fulk to allow her a greater role in government. The queen took an interest not just in political matters but in religious patronage: she made gifts to several churches in Jerusalem, renovated the Church of the Holy Sepulchre, and founded the convent of Bethany. These projects demonstrated her piety while connecting the royal family to holy sites in the land they ruled and defended.

Melisende became regent for her son Baldwin III after Fulk's death in 1143. Once Baldwin came of age (1145), Melisende's reluctance to step down led to a rift between mother and son. The queen set up a rival court and attracted some of the kingdom's most powerful magnates to her party, which also included Prince Amalric. In 1152 Baldwin III forced Melisende and her supporters to accept his sovereignty. From this point until her death in 1161, the queen had little real power in Jerusalem, though she continued to play a public role at court. The chronicler William of Tyre, anxious to promote the legitimacy of her family, chose to downplay political upheaval and applauded her efforts to promote royal majesty. She thus appears as a model queen in William's history of Outremer.

Melisende Psalter

A Latin psalter, which is the most significant illustrated manuscript produced in the kingdom of Jerusalem in the twelfth century (MS London, British Library, Egerton 1139).

The psalter is usually attributed to the patronage of Queen Melisende of Jerusalem (1131–1152), on several grounds. A luxury manuscript, it can only have been produced for a very high-ranking individual, who must have been a woman, according to the formulation of the prayers. The only other possible candidate is Melisende’s sister Yvette, abbess of the convent of St. Lazarus at Bethany, but Lazarus’s name does not appear in the calendar. Also the litany before the prayers is written for a layperson. Though it is undated, the psalter is presumed by most scholars to have been produced between 1131 and 1143. Supporting this dating is the fact that neither the dedication of the Church of the Holy Sepulchre (1149) nor the death of Melisende’s husband, King Fulk (1143), is mentioned in the calendar. Among those who are commemorated in the calendar, however, are Melisende’s parents, King Baldwin II of Jerusalem (d. 1131) and her mother Morphia, an Armenian princess. The taking of Jerusalem in 1099 during the First Crusade is also commemorated.

The book, comprising 218 folios and measuring 21.6 by 14 centimeters (c. 8½ by 5½ in.), is the work of several artists and craftspeople; the scribal work is attributed to a northern French scribe. Accordingly, the book gives an insight into the collaborative working practices of the scriptorium of the Holy Sepulchre and the diverse manuscript resources it had at its disposal. The book opens with twenty-four full-page miniatures of New Testament scenes collected together at the front of the book, preceding the psalter text. Although the artist who painted the New Testament scenes signed his name (Basilus) in Latin on Christ’s footstool in the Deisis picture (see figure), many of the features of his work are Byzantine or Eastern Christian. These include the

The Deisis from Queen Melisende’s psalter, twelfth century. (By permission of the British Library)

Byzantine intercessionary image of the Deisis image itself, painted in bright contrasting colors against a gold background. A second artist produced the eight full-page ornamented pages that mark the liturgical divisions of the text. Here the initial letter of the first word is drawn in black ink on a gold ground, with the few following lines written in gold on purple. The rich patterning effect in several of the designs is reminiscent of metal work from Edessa (mod. Şanlıurfa, Turkey) in Upper Mesopotamia. These Eastern and Western elements could be seen as being reconciled in the person of Melisende herself, whose Armenian mother, Morphia, was a Melkite Orthodox Christian from Melitene (mod. Malatya, Turkey). Given her background and political sympathies toward Eastern Christians, it is quite possible that the second artist of the psalter and even Basilus himself were Eastern Christians. Melisende’s befriending of

Initial B of Psalm 1 from Queen Melisende's psalter, twelfth century. (By permission of the British Library)

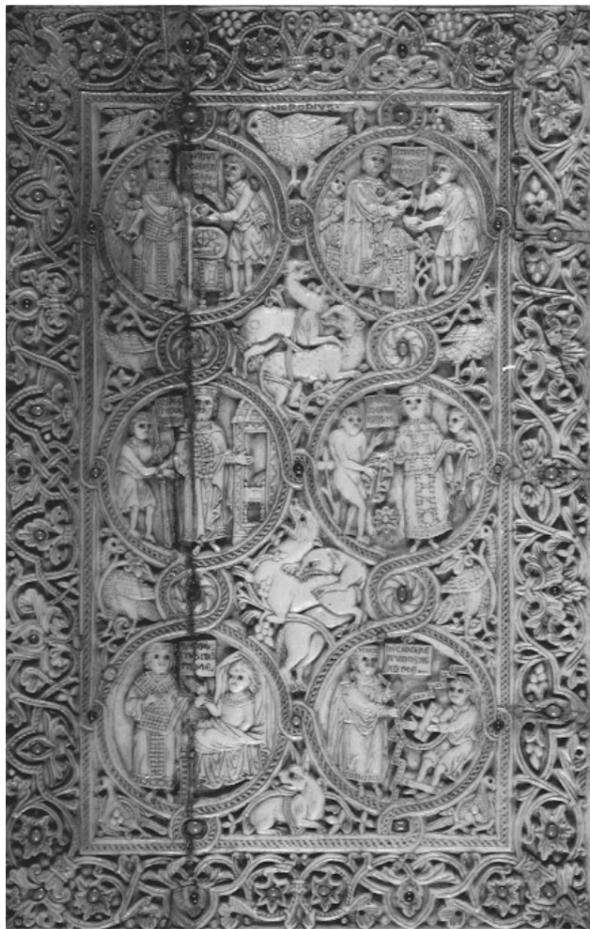

refugees from Edessa and defense of the property rights of indigenous Christians, including Syrians, in Jerusalem is consistent with this. But other motifs employed in the manuscript's decoration are Romanesque and can be traced to the medieval West. The B of the *Beatus* initial of Psalm 1 (see figure) shows King David playing his harp, surrounded by climbing figures of animals and a bird within foliage with, in the upper part, a siren being shot at by a centaur-sagittarius. There are gold initials throughout the text of the psalter. The calendar, listing saints and church feasts, is English, not Jerusalemite, in origin. Unusually, it celebrates the name of the French saint Martin of Tours in golden letters. It is adorned with medallions, one for each month of the year, with the signs of the zodiac. The prayers at the end

of the book emphasize veneration to the Virgin Mary and St. Mary Magdalene, as well as to the cross. This has prompted the suggestion that the book was associated with the abbey of St. Mary of Jehosaphat in the Kidron Valley outside Jerusalem, of which Melisende was a benefactor. She was perhaps a member of its noble lay confraternity and was ultimately buried there, as had been her mother. A fourth artist completed the psalter's illustration with portraits of standing saints illustrating the prayers. The manuscript has an embroidered silk binding on the spine. Small red, green, and blue crosses are sewn onto the silver embroidered off-white Byzantine silk.

The original ivory covers of the book, also housed in the British Library, were carved in Jerusalem. These retain traces of polychromy and gilding, with precious stones in the eyes of some figures and in the borders. The covers are carved with scenes appropriate to kingship, providing the Christian and moral justification for Latin rulership. The front cover depicts scenes from the life of King David from the Old Testament, in roundels. Occupying the interstices between these are female personifications of virtues overcoming vices, the subject of a Latin poem, the *Psychomachia* by Prudentius. The reverse (see figure) shows the six Acts of Mercy of St. Matthew's Gospel (25:35–36), each performed by an emperor in Byzantine ceremonial dress, with animals and birds in the interstices.

The presence of the falcon (Lat. *fulica*) labelled Herodius at the top of the panel is generally accepted as providing identification with Melisende's husband King Fulk, formerly count of Anjou. It has even been suggested that Fulk presented the book to Melisende within a couple of years of their reconciliation, which had taken place late in 1134. This theory is based on the presence of Fulk's rebus on the back cover, as well as the several French and English features in the manuscript. It does, however, problematically presuppose the replacement of Melisende as the prime mover behind the commissioning of the manuscript. If Fulk was indeed involved in this way, given Melisende's assertive personality, it is likely that the commission was a genuine collaboration between them. The subsequent influence of the Melisende Psalter was considerable, particularly on Eastern Christian manuscript illumination, as in the case of the Syriac lectionary in MS Paris, Bibliothèque Nationale de France, syr. 355, illustrated in Melitene at the turn of the thirteenth century.

Melkites

In the period of the crusades, Melkites was one of the names given to Christians living under Islamic rule who belonged to the Greek Orthodox faith of the Byzantine imperial church. The Arabic term for Melkites, *malakiyyūn*, is derived from the Syriac *malkā* or Arabic *malik* (king), referring to the Byzantine emperor (Gr. *basileos*). In modern times the term *Melkites* refers to the members of the Catholic Melkite Church, which seceded from the Orthodox Melkite Church in the seventeenth century; the Arabic-speaking Orthodox community is now named *Rūm* ("Roman," i.e., Byzantine) Orthodox. Up to the thirteenth century, the Arabic-speaking Greek Orthodox Christians called themselves *al-Suryānī* because of their use of Syriac as liturgical language. Thus, the Melkites are termed *Syroi* in Greek sources and *Syri* or *Suriani* in Latin crusader sources. While in Palestine the majority of the indigenous Christians were Melkites, in Northern Syria the Jacobites of the Syrian Orthodox church may have outnumbered the Melkites in many regions. Since the Jacobites also called themselves "Syrians," the usage of the term *Syri* or *Suriani* in Latin sources referring to Northern Syria is ambiguous.

When they established their domination over Syria and Palestine after the First Crusade (1096–1099), the Franks did not create a new social order, but effectively took over the Muslim system of *dhimmīs* (protected peoples). Under this social and administrative system, the various religious communities of the non-Muslim population had the status of second-class citizens, but had far-reaching internal autonomy, as the administration and jurisdiction of each religious community was incumbent upon the respective church leaders. In the legal framework of the Frankish states of Outremer, a society of two classes was thus generated: the Franks formed the ruling class, while the subjects consisted

Melkites

of the non-Christian populace, along with those Christians who, according to the *Assises of Jerusalem*, did not belong to the Latin (Roman Catholic) Church.

Frankish rule changed little for the Syrian Orthodox and Armenians, whom the Franks regarded as heretics. However, the Melkites came under the jurisdiction of the Latin Church, since, according to the Latin view, they still belonged to the one church encompassing East and West. As a consequence, the Greek Orthodox patriarchs and bishops were replaced by Latins, although the Greek patriarchal clergy still performed its duties in the Church of the Holy Sepulchre. The transition to Latin church leadership seems not to have been a smooth one, as demonstrated by the account of the Easter ceremony of 1101 by the Armenian chronicler Matthew of Edessa. According to his testimony, the miracle of the self-igniting Easter fire, performed annually by the Greek clerics, had not taken place that year, since the indigenous Christians had been driven from their monasteries; only after the Franks restored them to their rightful possessions was the miracle again performed.

The daily life of the Melkite community was also characterized by constant minor conflicts between Latins and the Greek Orthodox, which were ignited by disputes about ritual matters such as the use of *azymes* (unleavened bread in the Eucharist), the fast on the Sabbath day, and the cutting of one's beard—that is, the external signs by which one could tell a Latin from an Orthodox Christian. In contrast to the hostile attitude of the Latin hierarchy, the Frankish rulers proved friendly toward the local Christians. Thus, King Baldwin I of Jerusalem resettled Christians from east of the Jordan in Jerusalem, since he needed their support in revitalizing the city, which had lost large parts of its native population during the crusader conquest of 1099.

Little is known of the Greek Orthodox bishops remaining in the country and their relationship with the Latin Church. They seem to have receded to the fringes of Frankish territory in order to avoid any direct competition with Latin bishops. Thus, a Latin deed dated 1173 refers to a bishop of Gaza and Eleutheropolis. This bishopric (to which the Latins had not appointed any bishop) was located on the southwestern border of the kingdom of Jerusalem. To what extent the Orthodox bishop may have (even only formally) accepted the Latin patriarch is unclear. The Melkites remained loyal to their patriarchs, who continued to be appointed by the Byzantine emperor and resided in exile in Constantinople (mod. İstanbul, Turkey). There is no evidence that the

Orthodox Church in Palestine was divided into Arabic-speaking Christians recognizing the supremacy of the Latins on the one hand and Greek clerics and monks oriented to the Byzantine imperial church on the other. On the contrary, a closer alignment with Byzantium was brought about from the end of the twelfth century onward on the levels of ritual and canon law. In this context, the *Procheiros Nomos*, a legal text issued by the Byzantine emperor around 900, was translated at the beginning of the thirteenth century into Arabic and copied by Melkites in Palestine and Syria, even if its relevance for the regulation of internal jurisdiction of the Melkites was slight. The Melkite clergy consisted of Greeks as well as Arabs, as is proved by an Arabic contract of sale issued by Melkites and dated 1169. Arabic also found its way into the liturgy: the sermon in the Church of the Holy Sepulchre, for example, was read in an Arabic translation following the reading of the Greek original.

In the 1150s the Byzantine emperor Manuel I Komnenos was able to assert his role as protector of the Greek Orthodox Church and community in Outremer. He was able to force the prince of Antioch to replace the Latin patriarch of Antioch (mod. Antakya, Turkey) with a Greek Orthodox one, at least for a few years. The kingdom of Jerusalem was more independent from the Byzantine Empire as a result of its greater distance from it, so that Manuel had to content himself with financing construction and decoration in the Church of the Holy Sepulchre, in Bethlehem, and in several Orthodox monasteries, all the while closely cooperating with the king of Jerusalem.

In the twelfth century we find numerous indications of an active religious, intellectual, and artistic life of the Melkite community under Frankish rule. A number of Orthodox monasteries continued to exist, the most important of them being the monastery of St. Sabas in the Judaeen desert. Orthodox monastic life in Palestine, whose tradition goes back to the beginnings of monastic and anachoretic life, strongly influenced Orthodox Christianity, as well as the Latin monks in the Holy Land. The production of books and the continued existence of the libraries of the Orthodox monasteries and churches in the twelfth century may be regarded as an expression of the intellectual and religious life of the Melkites. All in all, around 100 Greek manuscripts can be identified as probably having been written either in the twelfth or in the thirteenth century in Palestine or as having been located there at that time. The translation of Byzantine legal texts into Arabic testifies to the continued existence of

a living Greco-Arabic tradition in Palestine. Another example of this phenomenon was the physician Muwaffaq al-Dīn Ya'qūb ibn Siqlāb, who worked in Jerusalem in the 1170s and 1180s and later became personal physician to the Ayyūbid lord al-Mu'azzam. He was educated in a monastery in the Judaeen desert and in Jerusalem, translated Greek texts into Arabic, and owned a number of books by the ancient physician Galen in the Greek original. These examples of intellectual activity indicate that the potential and the cultural life of the Melkites in Jerusalem should not be underestimated, even if the Latin sources remain silent in this respect.

In view of the tensions between Melkites and Latins in Jerusalem, it is not surprising that the Melkites sympathized with Saladin during the siege of the city in 1187. According to the Coptic *Historia patriarcharum Alexandrinorum*, they were even prepared to open the gates to Saladin because of their rejection of the Latins, thus contributing to the surrender of the city by the Franks. Whether they were acting in coordination with the Byzantine emperor Isaac II Angelos is unclear, but their actions would fit in well with the known existing relations between Saladin and Isaac. It was not simply cultural differences and the Melkites' inferior legal status that prevented their integration into Frankish society. Rather, the Melkites of Outremer formed, even in the twelfth century, a unified community in the tradition of the Islamic *dhimmi* system whose conception of themselves was based on their belonging to the church of the Byzantine Empire.

With Saladin's victory at the battle of Hattin and his subsequent conquest of much of Outremer in 1187, the situation for the Melkites changed completely. From this time onward most of them lived under Ayyūbid rule and again became *dhimmi*s under the protection of the Muslims. The indifferent attitude of the indigenous Orthodox Christians toward the conquest of Jerusalem by Saladin is demonstrated by a Melkite colophon dated 3 October 1187, the very day of the Muslim takeover of the city, which is casually mentioned without any commentary. Even though there were occasional repressions against the Melkites (as, for example, in 1217–1219 in reaction to the Fifth Crusade), the Melkite church profited from Ayyūbid rule. The episcopate in Ayyūbid territory could carry out its duties unhindered, and between 1204 and 1206/1207 the Orthodox patriarch of Jerusalem returned to the Holy City. According to the reports of the Latin pilgrims Willibrand of Oldenburg and Thietmar who traveled to the Holy Land

in 1211–1212 and 1217, respectively, the Melkites took over most of the shrine churches from the Latins. Evidently the Melkites succeeded to some extent in regaining the position they held before the crusades. Neither the establishment of Frankish rule nor its end had any effect on the difficult relationship between the Melkites and the other indigenous Christian communities. Bishop Paulos of Sidon wrote (probably in the first half of the thirteenth century) a treatise on the errors of the Eastern churches without mentioning the Latins at all.

In the thirteenth century, only the coast of Palestine and Syria remained under Frankish rule. Here the Melkites were at least theoretically still subordinate to the Latin Church. But in reality things were different. Jacob of Vitry, Latin bishop of Acre (mod. 'Akko, Israel) from 1216, reports of the *Suriani* and their bishops that they said they would be obedient to the Latin bishops, but obeyed them only superficially, through fear of the secular lords. Again, one of the most disputed issues was the question of the *azymes*. But this time the Latins were no longer in a position to assert themselves against the Melkites.

For the second half of the thirteenth century, when the Mamlūks succeeded the Ayyūbids as rulers in Egypt and the Near East, we have hardly any information on the history of the Melkites in Palestine and Syria. After the conquest of Antioch by Sultan Baybars I in 1268, the Greek patriarch returned to the city. In Jerusalem his colleague continued in residence and still played a role in the wider Orthodox world. A prerequisite for the close ties that both patriarchates maintained with Constantinople was the fact that Byzantine relations with the Mamlūks were generally good. The Mamlūks' main interest was to prevent any impediment to the import of military slaves from the north of the Caucasus. Byzantium was thus able to regain its role as protector of the orthodox Christians in the Holy Land.

Memel

Memel castle, sometimes called Memelburg, was built by the Teutonic Order on the site of the present city of Klaipėda (in mod. Lithuania), where the Dangė River (also called the Akmenė or Akmina) in the medieval period flowed into the Courland Lagoon (Ger. *Kurisches Haff*, Lith. *Kuršiu marios*),

near the mouth of the Nemunas River (*Memel*). The lower Nemunas formed the boundary between Prussia and Lithuania throughout the Baltic Crusades, and was an important trade waterway into Lithuania and Russia.

Eberhard von Seyne, the representative of the Livonian master of the Teutonic Order, established the first fort at Memel in 1252 to guard communications between the territories of the Prussian and Livonian branches of the order, to protect its trade along the Nemunas, and to stop Scandinavian merchants from bringing arms and other goods to the pagan Samogitians and Lithuanians up the river. This first fort was wooden, surrounded by moats and earthen embankments. It was replaced by a stone castle on higher ground in 1253. Pope Innocent IV in 1253 allowed the Dominicans of Livonia and Prussia to collect alms for this rebuilding to stop the ferrying of "arms, clothing, salt and other necessities to the pagans of the aforementioned parts to the harm of Christian shipping" [*Preußisches Urkundenbuch*, ed. Rudolf Philippi, 1/1 (Königsberg: Hartung, 1882), no. 275].

Around the castle a town developed, which was the seat of the bishop of Curonia. However, its growth was hampered by constant attacks by the pagan Lithuanians and Samogitians, who destroyed the town and castle in 1323, 1360, 1365, 1379, 1393, 1402, and 1409. The Teutonic Order's defeat in the battle of Tannenberg in 1410 left the order in a weakened state. By the Treaty of Melno (1422), which established the Prussian-Lithuanian boundary for centuries, the town and castle of Memel were left in Prussian territory, but their importance declined.

Mercedarian Order

The Mercedarian Order, known formally as the Order of Merced or Our Lady of Mercy, began as a redemptorist order in Catalonia following the rule of St. Augustine.

The Mercedarians institutionalized the ransom of captives on the Christian-Muslim frontier in Iberia. Previously, family and friends had redeemed captives on an individual basis, or a royal official called the *exea* (from an Arabic word meaning “guide”) intervened on a captive’s behalf. It is unclear whether the early Mercedarians collected alms on behalf of captives’ families, or ransomed captives personally. By the late thirteenth century, the Mercedarians raised alms and traveled to Muslim depots to negotiate the redemption of groups of captives as well as specific individuals.

Despite claims by the order’s early historians, the Mercedarians were not a military religious order, nor was the king of Aragon the founder. The earliest evidence for the order’s existence dates from a bequest to Pere Nolasc, the founder of the order, of a sum of money to redeem captives in 1230. Nolasc and his associates received grants of property in Mallorca in 1232 and Gerona in 1234. Pope Gregory IX recognized the Order of Merced in 1235 and gave it the Rule of St. Augustine.

By 1245 the Mercedarians had acquired properties in Catalonia, Aragon, Valencia, Languedoc, and Mallorca. Eventually, the order had properties in Castile and as far south as Seville. These provided a stable income for the order and a base for its ransoming activities. James I, king of Aragon, gave the order its first *guidaticum* (safe-conduct) in 1251, which enabled members to travel safely and conduct business on the Christian-Muslim frontier. James II of Aragon became the order’s patron in the early fourteenth century, while it was given an exclusive license to collect redemptive alms in the Crown of Aragon by Peter IV in 1366.

The statutes of the military orders of Santiago, the Hospital, and the Temple influenced the first statutes of the order (1272), which has caused the mistaken identification of the

Mercedarians as a military order. The early order was a laic brotherhood, whose members administered properties, collected alms, preached, and, on occasion, traveled to ransom captives. It also admitted men and women as confraters (associate members). The master of the Mercedarians was a layman until 1317, when the order became clericalized. Clerics became more influential and gained control of most of the commanderies. A new constitution of 1327, modeled on that of the Dominicans, emphasized a stricter religious life. The master was the order’s spiritual and temporal leader, and made decisions with the chapter about properties, revenues, and discipline. Commanders were responsible for local houses, and traveled to redeem captives. Captives ransomed as an act of Mercedarian charity also agreed to serve the order for a period of time, raising money to ransom other captives.

After the fall of Muslim Granada in 1492, the Order of Merced followed Spanish expansion to the New World, where it founded American provinces. The first female convents were established in the late sixteenth century. The order underwent a major reform in the late sixteenth and early seventeenth centuries, and still exists today.

Mergentheim

Town (mod. Bad Mergentheim, Germany) in Franconia on the river Tauber southwest of Würzburg; the headquarters of the Teutonic Order from 1525 to 1809.

In the later twelfth century, Mergentheim belonged to nobles of the Hohenlohe family. Albrecht of Hohenlohe, who had accompanied Emperor Frederick I Barbarossa on the Third Crusade (1189–1192), donated the parish church

Mergentheim

to the Hospitallers in 1207. However, three of his five nephews, Andreas, Heinrich (Henry), and Friedrich (Frederick), who had participated in the Fifth Crusade (1217–1221), decided to join the Teutonic Order. When they divided their inheritance with their two lay brothers, Gottfried and Conrad (1219), the Teutonic Order obtained two *castra* and other possessions in and around Mergentheim. The descendants of Gottfried and Konrad, however, retained estates and vassals with *castra* in Mergentheim. In this context the meaning of *castrum* is ambiguous. Apparently there were two large castles at Mergentheim, one of which became the nucleus of the Teutonic Order commandery. But the settlement must have also included a number of fortified houses with towers, which belonged to vassals of the Hohenlohe family and which sometimes reverted to direct control of the lords.

Heinrich von Hohenlohe, one of the three founders, became the first commander of Mergentheim. Later he rose to be German master (Ger. *Deutschmeister*) in 1232 and grand master (Ger. *Hochmeister*) of the Teutonic Order in 1244, and died at Mergentheim in 1249. During the thirteenth century the Teutonic Order enlarged the settled area of Mergentheim, gave the inhabitants rights as burgesses, and attracted Jews (against whom there were riots in 1298). There were troubles with both the Hospitallers and the Hohenlohe family. The Teutonic Order refortified its main castle against the neighboring nobles and encouraged the foundation of a Dominican monastery, to the detriment of the Hospitaller parish. Between 1330 and 1355, the German master Wolfram von Nellenburg firmly established his order's position in Mergentheim. Wolfram obtained imperial privileges: the right to build walls and ditches (1335), the *ius civitatis*, that is, a privileged status for the local court and liberties for the citizens (1340), the exclusion of all foreign jurisdiction, and the right of coinage (1355). This period saw the construction of a town wall and a separate hospital in rivalry with that of the Hospitallers. In 1343 the last Hohenlohe *castrum* was bought, and in the following years many Hohenlohe vassals sold their possessions to the Teutonic Order. In 1355 the Hospitallers gave up their possessions, except their parish.

Mergentheim became the only important town in Franconia and indeed in southern Germany where the Teutonic Knights not only had a commandery, but were the local lords enjoyed full territorial independence. For this reason Mergentheim was chosen as permanent residence of the

German master after the destruction of the castle of Horneck during the Peasants' War in 1525. In the same year Grand Master Albrecht von Brandenburg, under Lutheran influence, dissolved the order and transformed Prussia into a secular duchy for himself and his heirs under the suzerainty of his uncle Sigismund I, king of Poland. Those in the order who did not follow his lead accepted the authority of the German master at Mergentheim. By imperial and papal appointment, the German master began to act as grand master as well, and the central administration of the Teutonic Order was established at Mergentheim. In 1554 the Hospitallers finally sold their parish, so that from then on the Teutonic Order was the sole authority in the town and its surroundings.

Firmly entrenched at Mergentheim, the Teutonic Order survived the storms of the Reformation and defended its independent status against neighboring princes within the empire. A splendid Renaissance castle was begun in 1568 to house the *Hoch- und Deutschmeister*, his court, and officers. In the course of the Counter Reformation, Mergentheim acquired a seminary to instruct priests (1606), while new statutes recognized fighting against the Ottoman Turks in Hungary as the military obligation for knights who wanted to rise in the order's hierarchy. Through repeated elections of Habsburg archdukes as high masters, the order became a kind of Habsburg appanage. Administrative reforms in the 1780s made Mergentheim the capital of an ecclesiastical principality whose possessions were scattered throughout southern Germany. But in 1809 Napoleon, at war with Austria, gave Mergentheim to the king of Württemberg. When Mergentheim was confirmed to Württemberg at the Congress of Vienna in 1814–1815, the Teutonic Order survived in the Habsburg Empire.

Metellus of Tegernsee

Author of the *Expeditio Ierosolimitana*, a Latin epic poem on the First Crusade (1096–1099), and of the *Quirinalia*, a collection of poems relating to St. Quirinus, patron of the Bavarian monastery of Tegernsee where Metellus was a monk.

The *Expeditio* (transmitted in MS Admont, Stiftsbibliothek, 267) was composed between 1146 and 1165, and consists of 4,845 lines in six books. It dealt with the course of the crusade from the Council of Clermont (1095) to the battle of Ascalon (1099), drawing primarily on the account of the crusade given in the *Historia Iherosolimitana* of Robert of Rheims, but it also made use of letters [Heinrich Hagenmeyer, *Die Kreuzzugsbriefe aus den Jahren 1088–1100* (Innsbruck: Wagner, 1901), nos. 1, 21] as well as popular traditions, particularly in connection with the exploits of Godfrey of Bouillon and the German knight Wicher.

Michael VIII Palaiologos (1224/1225–1282)

Emperor of Nicaea (1259–1261) and then of the restored Byzantine Empire at Constantinople (1261–1282) and founder of the last reigning Byzantine dynasty.

Michael was the son of the Grand Domestic Andronikos Palaiologos and the great-grandson of the Byzantine emperor Alexios III Angelos. He had a distinguished military career, serving in the armies of the empire of Nicaea and the Saljūq sultanate of Rūm, before he usurped the throne of Nicaea in 1259. In the same year, in the valley of Pelagonia, in western Macedonia, he achieved a significant victory against a triple coalition consisting of Michael II of Epiros and his Western allies, King Manfred of Sicily and Prince William of Achaia, which paved the way for the liberation of Constantinople from the Latins by the Nicaean army in July 1261 and the restoration of the Byzantine Empire.

Throughout his reign, Michael was preoccupied with the plans of Western rulers to restore the Latin Empire of Constantinople and in particular with the ambitions of Charles I of Anjou, king of Sicily. In the 1260s and 1270s, Michael held negotiations with Popes Urban IV, Clement IV, and Gregory X concerning the reunification of the Latin and Greek Orthodox churches, believing that the pope could and would prevent Charles of Anjou from attacking the Byzantine Empire if the Orthodox Church were subject to Rome. In 1274, Michael's representatives at the Second Council of Lyons agreed to reunification on the pope's terms, in spite of widespread and ardent opposition to the agreement among the Orthodox population of his empire. One of the outcomes of the agreement in Lyons was Michael's proposal to Pope Gregory X that a crusader army should pass through Constantinople on its way to the Holy Land, on condition that the crusaders would conquer and return Anatolia to the Byzantines. Before the details of the agreement were finalized, however, Pope Gregory died, and the new pope, Innocent V, abandoned plans for an overland crusade via Constantinople and Asia Minor.

In 1269 Michael promised King James I of Aragon aid for a crusade, and in 1269–1270 he made a similar offer to King Louis IX of France, with the proviso that Louis would mediate in restraining Charles of Anjou from attacking the Byzantine Empire. Between 1261 and 1277, taking advantage of the continuous enmity between Genoa and Venice over commercial supremacy in his territories, Michael signed treaties with the two Italian city-states, offering them commercial privileges in return for military aid or the promise of neutrality in the event of an attack against his empire from the West. In 1281, his army won a significant victory against the Angevin army at the battle of Berat, in Albania. The end of

Michael the Great (1126–1199)

Charles of Anjou's ambitions to conquer Byzantium, however, came on Easter Monday 1282, when an anti-Angevin uprising, known as the Sicilian Vespers, took place in Palermo. Although Michael was not involved in the incident that sparked the uprising, the financial aid and encouragement he had previously offered to Charles's opponents contributed to the loss of Sicily and the consequent abandonment of Charles's plan to attack Byzantium. Michael, who had been excommunicated once by Patriarch Arsenios of Constantinople for blinding the son and heir of Emperor Theodore II Laskaris, and thrice by Pope Martin IV for failing to implement the reunification of the churches in the Byzantine Empire, died on 11 December 1282. He was succeeded by his son Andronikos II.

Michael the Great (1126–1199)

Michael I Rabo ("the Great"), Syrian Orthodox (Jacobite) patriarch of Antioch, was the author of a universal chronicle in Syriac dealing with the history of the world up to 1195, and renowned as a reformer of the Syrian Orthodox Church.

Born in Melitene (mod. Malatya, Turkey), Michael was educated nearby in the famous monastery of Mor Barsaumo, where he remained as monk and prior until he was elected patriarch in 1166. In the interests of his church and community, Michael balanced his relations with the warring parties in the area of his jurisdiction. Especially in the first half of his patriarchate, he was accepted as a frequent visitor in Frankish Antioch (mod. Antakya, Turkey), with the consent of the Byzantine emperor Manuel Komnenos, in spite of the opposition of the Greek Orthodox

community there. He visited Jerusalem several times and was invited to take part in the Third Lateran Council (1179) but declined. The second half of Michael's patriarchate was overshadowed by the election of an anti-patriarch (Theodor bar Wahbun, d. 1193) in 1180. Michael was buried in his newly built church in Mor Barsaumo.

Michael's canonistic work is partly conserved in later collections, but the greater part is lost, as is a treatise on dualist heresies composed for the Lateran Council. He also composed liturgical and epic works and collected ancient theological and historical sources, which he utilized for his monumental world chronicle. This original, coherent chronography is an exegesis of the spiritual meaning of historical change, which relates the age of the crusades from a well-informed and independent point of view. Books 15–21 deal with the period from the 1090s up to 1195/1196, although considerable parts of this section are lost, especially from books 18 and 19. The material is divided into three synchronic columns in chronological order: For the period of concern here, the first, representing the succession of Syrian Orthodox and Coptic patriarchs and metropolitans and the most prominent Syrian Orthodox scholars of theology, is juxtaposed with the second, which outlines the worldly empires, that is the secular rule of the Byzantines, Turks, Armenians, and Franks. The third column comprises notes about other churches (mainly the Armenian, Latin, and Greek Orthodox), as well as matters of regional concern to the Syrian Orthodox population, including notes about earthquakes, food prices, and religious matters. Here the author reveals systematic interest in matters of Latin Church organization and history; of special importance are his notes about the Latin patriarch of Antioch, Aimery of Limoges (1141–1196). The chronicle was adapted into Armenian in 1246–1247.

Michiel, Domenico (d. 1130)

Doge of Venice (1118–1129) and leader of the Venetian Crusade of 1122–1124.

A member of one of Venice's most illustrious families, Michiel was at Doge Ordelafo Falier's side when the latter died during a failed attempt to restore the port of Zara (mod. Zadar, Croatia) in Dalmatia to Venetian control. As doge, Michiel made peace with Hungary in preparation for a new crusade in response to serious losses in Outremer. He assembled a fleet of approximately 120 major vessels and personally took the cross, leaving his son and another kinsman to act as vice-doge in his absence. He commanded the crusade fleet, which destroyed the Fāṭimid navy (1123) and assisted in the conquest of Tyre (mod. Soûr, Lebanon) in 1124. He also ordered the fleet to attack Byzantine assets in retaliation for Emperor John II Komnenos's refusal to honor Venetian commercial privileges. His successes made Michiel a symbol of the crusading doge for generations of Venetians. He died in 1130 as a monk.

Mieszko III Stary (d. 1202)

Prince of the Polish Piast dynasty, duke of Great Poland, duke of Kraków, grand duke of Poland (1173–1177 and 1198–1202), and crusader.

Born between 1122 and 1125, Mieszko was the second surviving son of the Polish ruler Bolesław III Krzywousty (Wrymouth), and Salome, daughter of Henry, count of Berg. Mieszko was a close ally of his elder brother, Prince Bolesław IV Kędzierzawy (the Curly) (d. 1173). He was married twice, to Elizabeth of Hungary and to Eudoksia of Kiev.

Mieszko and his brothers formed a coalition of the younger sons of Bolesław III, who are known to scholars as the "Piast Juniors." They opposed the rule of their step-

brother, Prince Władysław II Wygnaniec (the Exile) (d. 1155), and with the support of the Polish magnates and prelates, they defeated him during the civil war (1142–1146).

Mieszko maintained an alliance with the rulers of the neighboring Saxon marches, for example, Albert the Bear, margrave of Brandenburg, and this alliance evidently influenced him to support the Wendish Crusade. In 1147 Mieszko commanded the Polish contingent of 20,000 troops (according to the *Annales Magdeburgenses*) against the pagan Slavs whose territories lay west of his duchy.

In 1187 Mieszko granted the Order of the Hospital patronage of the Church of St. John the Baptist in Poznań and possession of the hospital of St. Michael, established by Mieszko and Bishop Radwan of Poznań in 1170. The Poznań commandery of the Hospitallers was also established at this time.

Mieszko probably commissioned the door, known as the *Porta Regia*, which adorns the southern portal of the cathedral of Gniezno and is the most important work of Polish Romanesque art from the middle of the twelfth century. Its eighteen bas-relief panels illustrate events surrounding the life and death of St. Adalbert (Pol. *Wojciech*), the first patron saint of Poland, who was slain by pagan Prussians during a mission in 997. The commissioning of the Gniezno door coincided with Polish expansion north into pagan Prussian territories, and can be considered as an example of Piast propaganda portraying these events as holy wars.

Military Orders

The military order was a form of religious order first established in the first quarter of the twelfth century with the func-

Military Orders

tion of defending Christians, as well as observing the three monastic vows of poverty, chastity, and obedience. The first military order was the Order of the Temple, formally established in the kingdom of Jerusalem in January 1120, while the Order of the Hospital (or Order of St. John of Jerusalem) began in the eleventh century as a hospice for pilgrims in Jerusalem and later on developed military responsibilities, perhaps as early as the mid-1120s. The Templars and Hospitallers became supranational religious orders, whose operations on the frontiers of Christendom were supported by donations of land, money, and privileges from across Latin Christendom. Some military orders were far more localized in their landholdings and vocation: for instance, the Order of Monreal del Campo was founded by King Alfonso I of Aragon in 1122 at Belchite, to defend the southern frontier of his kingdom against the Moors. Several military orders were established during the twelfth and thirteenth centuries to fight the Moors in the Iberian Peninsula, while in north-eastern Europe, in the early thirteenth century, missionary bishops set up military orders to defend converts to Christianity in Livonia and Prussia against their pagan neighbors, and in southern France and Italy, military orders were founded to fight heretics.

Origins

William of Tyre and the history attributed to Ernoul both depict the foundation of the first military order as the initiative of a group of knights, in collaboration with the king of Jerusalem or the patriarch of Jerusalem. It is possible that this first military order was originally formed as a knightly confraternity, that is, as a group of warriors who banded together with some specific purpose, typically religious in type, such as enforcing the Peace of God, defending a monastery, or going on crusade. Such bands could be formed on the initiative of a bishop or abbot, but also of the knights themselves. They had regulations regarding the duties and responsibilities of members, and (for example) the distribution of booty. There were military confraternities in the Iberian Peninsula before the Templars and Hospitallers were established there, and some of the Spanish military orders, such as the Order of Monreal and the Order of Santa María de España, began as confraternities. The distinction between a military confraternity and a regular military order was not always well defined: some of those who played a part in regular military orders were not fully professed members, while some military orders did not expect

their members to take all of the three monastic vows when they professed. The members of the Knighthood of Jesus Christ, established by a Dominican friar at Parma in 1233 to fight heretics, did not take the vow of chastity; the Order of Santiago admitted married knights and their wives to full membership, and these did not have to vow chastity. Despite the missing vow, these institutions had papal approval as religious orders. The military order, then, can be regarded in a sense as a knightly confraternity that was regularized and brought formally into the organization and under the authority of the Latin Church.

It has been objected that as Christianity is a pacifist religion, the concept of the military order—a religious organization that fights—must have been taken from outside Christianity. The most obvious source for the concept, it has been suggested, was the Muslim *ribāṭ*. This Arabic word has different meanings, but in this case it meant a fortified building on the frontier on Islam in which the faithful served for a period as volunteer fighters against Islam's enemies. Specialists on the history of the military orders and the crusades have not accepted this theory. They argue that the concept was already present within Latin Christian society in the early twelfth century. The concept of holy war, prominent in the Old Testament, had been part of Christian thinking from the early days of Christianity. The recent First Crusade (1096–1099), initiated by the pope and preached by the clergy, had allowed lay people to fight and shed blood in God's name in defense of, and to recover, Christian territory in return for a spiritual reward. Contemporary lay literature, such as the *Chanson de Roland*, emphasized the role of the Christian warrior and glorified the warrior who died fighting for God. In any case, it is not clear that there were any *ribāṭs* in the Holy Land after the First Crusade from which the crusaders could have adapted the concept. There were *ribāṭs* in the Iberian Peninsula, but the concept of the military order originally appeared in the Holy Land, not the Iberian Peninsula. If we must seek outside influence to explain the beginnings of the military order, a more likely influence was the example of military saints of the Orthodox churches, such as George, Demetrius, and Mercurius.

Organization and Structure

All military orders shared certain characteristics. Each followed a religious rule, approved by the authorities of the Latin Church, which allowed the combination of military activity with religious activities such as prayer and attend-

ing church services. Members were admitted in a formal religious ceremony. They wore a religious habit, but did not follow a fully enclosed lifestyle. Lay members predominated over priests in the early years, while the orders were still active in military affairs.

The military orders were part of a religious trend of the late eleventh and early twelfth century toward wider participation in the religious life and more emphasis on action as against contemplation. The Cistercian Order, founded at the end of the eleventh century, allowed laity from nonnoble families to enter their order to perform manual tasks; orders of canons, founded in the late eleventh and early twelfth centuries, could play an active role in society as priests working in the community, unlike traditional monks who lived enclosed lives in their monasteries. In the same way, the military orders did not follow a fully enclosed lifestyle, followed an active vocation, and were composed largely of laity: nonnoble warriors as well as craftsmen and servants, all known as “sergeants” or “serving brothers.” The knights, who were of higher status within the orders, were fewer in number. The military orders also recruited priests to provide for the spiritual needs of the lay members. All the military orders had associate members who did not take full vows but who were attached to the order—for example, making an annual donation—and whom the order supported in some way. The orders also admitted women in various degrees, as sisters or as associates.

The great supranational orders were granted extensive ecclesiastical privileges from the papacy, such as exemptions from the jurisdiction of diocesan bishops and from tithes. In practice these privileges led to considerable friction at the local level. Secular rulers made extensive use of the military orders’ members in matters not directly connected with their vocation such as diplomacy and finance, and although the military orders were in theory exempt from royal jurisdiction, in practice they were dependent upon and closely tied to the rulers of the regions where they held property. The military orders were never noted for their learning, although individual members might achieve distinction, and the orders did patronize artists and writers. All, like the traditional monastic orders, were involved in economic and commercial activities to support their vocation.

The typical structure of a military order was pyramidal. The order was governed by a master, who was elected by the members of the order and advised by a small group of senior officials. General chapter meetings were called at certain

intervals; lesser officials were summoned to attend, and matters concerning the whole order were discussed and decided. At the local level, houses were called commanderies (if governed by a lay member of the order) or priories (if governed by a priest). The supranational orders, with property in the Holy Land and in the West, appointed officials (priors or commanders) to administer their property in each geographical region. A certain proportion of the revenues from each region had to be sent by the regional official to headquarters each year: this was called a *responson*. This organization, with a central religious house on which other houses were dependent and regular general chapters, was similar to other new religious orders of the late eleventh and early twelfth centuries, while the regional organization of the military orders was similar to the organization of the later orders of friars.

In the twelfth and thirteenth centuries, the membership of the military orders was drawn largely from the lesser knightly families and families of just below knightly status. For such families, joining a military order—which did not limit membership to noble families—was a method of rising in social status. During the course of the later Middle Ages, as knighthood became more prestigious, the military orders became noble orders. By the sixteenth century, the knightly members of both the supranational and the Spanish military orders were drawn from the highest nobility, and a higher proportion of members were priests, while the relative number of nonknightly, sergeant members had fallen. The Spanish military orders became dominated by the ruling families of the Iberian Peninsula, and in the sixteenth century they became effectively honorary noble institutions.

Function

The heyday of the military order was the twelfth and thirteenth centuries, when the concept was put to use by many ecclesiastical and secular rulers in need of a standing army for a religious purpose. However, not all military orders were founded as such. Two of the supranational military orders, the Order of the Hospital and the Teutonic Order, as well as smaller orders, such as the English Order of St. Thomas of Acre, began as hospitals or hospices, caring for poor, sick pilgrims to the Holy Land. Military protection for Christians as they traveled was a natural corollary of hospital care for the same Christians. The Order of St. Lazarus began as a hospice for sufferers from leprosy. As well as maintaining hospices, the military orders were involved in ransoming prisoners

Military Orders

from the Muslims, although only the Spanish orders of Santiago and Mountjoy (Sp. *Montegaudio*) made this a major part of their activities. However, conversion of non-Christians was not a primary function of military orders, although some donors envisaged the income from their gifts of land being used for that purpose. There were some exceptions: from the sixteenth century the Portuguese Order of Christ was involved in the spread of Christianity in the New World.

In theory, the military orders were fighting defensive wars—a form of warfare acceptable to Christian thinking. In practice, warfare on the frontiers of Christendom, whether in the Holy Land, the Iberian Peninsula, or in the Baltic region, typically took the form of raids against the enemy's land and fortresses, which were as aggressive as they were defensive. The orders also garrisoned and built fortresses. They gave military advice to Christian commanders, and they played a significant military role in crusades. The orders' warfare was initially on land, although the supranational orders from early in their existence employed ships to carry resources, personnel, and pilgrims to the Holy Land. In the 1270s, the Order of Santa María de España was founded by King Alfonso X of Castile to fight the Moors of Africa at sea, in an attempt to reduce their raids upon his coasts. In the fourteenth century, the Order of the Hospital, based on the island of Rhodes from 1309, developed naval operations against the Turks. The order itself owned only a handful of war galleys, but it extended its operations through the *corso*, a form of licensed piracy against Muslim shipping. Naval warfare against Muslim pirates continued to be an important role of military orders until the late eighteenth century.

Military orders brought discipline and organization to Latin Christian warfare. Their fighting members were already professional warriors before admission. The statutes of the Order of the Temple (and other military orders based on it) and the statutes of the Order of the Hospital after 1204 set out (for example) the military organization and command structure of the orders, the required weapons and equipment, and procedures for drawing up troops and for making a cavalry charge. A brother who charged too early or who fell out of line was disciplined. Within a secular army, the various groups under different commanders could be in competition with each other and more concerned about winning booty and honor than in obeying the commander in chief. The military orders provided a commander in chief with a military unit that was ready to muster and would obey

orders, rather than seeking booty and glory, and that had extensive experience in the field. However, the military orders' forces were always relatively small in relation to the overall size of crusader and secular armies.

Problems

The smaller military orders, whose property was largely restricted to one kingdom or region, suffered from overdomination by secular rulers, who tended to regard them as a branch of their own administration, and from a lack of resources in personnel, money, and supplies. These problems led to the smaller orders amalgamating with larger ones: in the 1230s the Orders of the Sword Brethren (in Livonia) and of Dobrin (in Prussia) amalgamated with the Teutonic Order, while in Spain, in the early thirteenth century, the Order of Mountjoy was effectively divided between the Order of the Temple and the Order of Calatrava. The Order of Calatrava itself was assimilated to the Cistercian Order, although it maintained a distinct identity. Even the great supranational orders could not always maintain military activity outside the major area of their operations: the Temple and the Hospital reduced their military operations in the Iberian Peninsula in the second half of the twelfth and the second half of the thirteenth century because their resources were needed in the Holy Land. By contrast, some of the smaller orders did gain land and responsibilities outside their area of operations: the Order of Calatrava briefly held land in Pomerania, while the Order of Mountjoy held land in the kingdom of Jerusalem.

As the function of the orders was to defend Christendom, they initially resisted involvement in wars between Christians, which diverted resources from their proper vocation. However, as secular rulers were protectors of the orders and their leading patrons, it was difficult for the orders in the localities to resist determined pressure from secular rulers who wanted to use their military or financial resources for "national" ends. French Hospitallers were, apparently, involved in the French crusade against Aragon in 1285, and prominent Hospitallers were present in the French army at the battle of Crécy in 1346 during the wars against the English.

The supranational orders faced potential problems of language difference and also cultural disagreement or misunderstanding between the brothers of the order. Though this problem could be minimized by ensuring that brothers in the West only operated within their own linguistic area,

at the order's central convent clashes were unavoidable. As a result, from the late thirteenth century the brothers of the Order of the Hospital's central convent were divided more or less formally into seven *langues* (literally, "tongues"), that is, linguistic groupings. During the course of the fourteenth century these *langues* became increasingly formalized; each had its own *auberge* (inn or residence) as a central meeting hall and administrative center, and the seven conventual bailiffs, the chief officials of the order, were each drawn from one of the seven *langues*. International disputes in the secular world could lead to conflict between the different nations within a military order, and sometimes the brothers of the different *langues* on Rhodes came to blows. By the mid-fifteenth century, however, this problem only significantly affected the Order of the Hospital, as the Order of the Temple had been dissolved in 1312, while the Teutonic Order's field of operations had shrunk to the Holy Roman Empire, Prussia, and Livonia.

Later History

Despite the conflicts inherent in the concept of supranational religious orders exempt from local authority operating in an increasingly secularized and nationalized Europe, the concept of the military orders continued to be popular with patrons and rulers throughout the later Middle Ages. Even after the loss of the states of Outremer in Syria and Palestine in 1291, crusade planners expected the military orders to play an active role in future crusades. After the dissolution of the Order of the Temple in 1312, Pope Clement V gave its property to the Order of the Hospital to carry on the order's original purpose; even if the order had been defamed beyond saving, its vocation remained important to Christendom. From the early fourteenth century, the Order of the Hospital carried on naval operations against Muslim powers and their allies from its base on the island of Rhodes in the eastern Mediterranean, and gave hospitality to pilgrims on their way to the Holy Land. In northeastern Europe, the Teutonic Order continued its war against the pagan Lithuanians; arguably it was the military pressure applied by the order that led to the alliance between Poland and Lithuania and the official conversion of Lithuania to Christianity in 1386. Even after the Hospital had lost its base on Rhodes, at the beginning of 1523, Emperor Charles V was anxious to make use of the brothers' military and naval skills elsewhere. The concept remained largely unquestioned, even when the orders failed to carry out their vocation successfully.

Although the expulsion of the Moors from the Iberian Peninsula at the end of the fifteenth century ended the military role of the Spanish military orders on land, and the Teutonic Order's military function in Prussia and Livonia ended in the sixteenth century, the military orders continued to play a valuable if reduced military role for the benefit of Latin Christendom until the eighteenth century. From its base on the island of Malta from 1530, the Order of the Hospital, with the new Order of St. Stephen after 1562, tried to prevent the raids of Barbary pirates on Christian shipping and population centers, although its naval activities sometimes disrupted Christian trade (especially Venetian) and by the late eighteenth century its continued war with the Ottoman Empire was at odds with the Holy Roman Empire's diplomatic relations with major European powers. The Teutonic Order, meanwhile, took part in campaigns against the Turks in Eastern Europe in the seventeenth century, and when opportunities for active military service in the Holy Roman Empire were lacking, brothers were sent to Malta to obtain the military experience necessary for promotion. However, by the eighteenth century, the Teutonic Order's military operations were mainly against the Christian enemies of the empire. By the late eighteenth century, the military orders' vocation of holy war seemed outdated and barbarous to Enlightenment thinkers.

Though military orders have survived until modern times, no military orders now fight; the Order of the Hospital's military function ended with the loss of Malta to Napoleon in 1798. The Teutonic Order continued its involvement in military activity until the First World War, and thereafter was reformed as a charitable order, without a knightly branch. Both orders still carry on hospitaller and charitable activities. The military orders in the Iberian Peninsula were abolished and refounded during the nineteenth century: the Portuguese orders are now state orders of merit, while the Spanish are charitable orders.

Mindaugas (d. 1263)

Mindaugas (Ger. *Mindowe*, Russ. *Mindovg*) was the first documented ruler of Lithuania (1238–1263) and its only anointed king, who accepted Roman Catholic baptism from the Teutonic Order and received a crown from the pope. He is often deemed to be the founder of the Lithuanian state, although he may have had predecessors.

Mindaugas was first mentioned in 1219 as one of the Lithuanian “senior dukes” in a treaty concluded between Lithuania and Volhynia. He appears as a ruler of Lithuania in 1238, when he sent aid to Prince Daniel of Galicia. In 1239–1248 the Lithuanians waged an intensive war against Rus’ lands, which had been weakened by Mongol attacks. In this period Mindaugas gained control over the town of Novogrudok (mod. Navahrudak, Belarus) and gave it to his son Vaišelga. Simultaneously Mindaugas fought against the Teutonic Order. In 1245, seeking to stop Livonian expansion to Curonia, Mindaugas attacked the castle of Amboten, which had been occupied by the Teutonic Order, but failed to capture it.

In 1248 Mindaugas sent his nephews Tautvilas and Gedivydas and their uncle Vykintas to attack Rus’. After they suffered defeat at Zubtsov, Mindaugas decided to expel the defeated dukes from Lithuania. Tautvilas and Gedivydas fled to their father-in-law Daniel, prince of Galicia, who attacked the land of Novogrudok, while Vykintas created a coalition against Mindaugas, including the Jatvingians, some of the Samogitians, and the Teutonic Order.

In 1250 troops of the Livonian branch of the Teutonic

Order attacked the domains of Mindaugas. Tautvilas joined them and was baptized in Riga. However, Mindaugas managed to bribe the master of Livonia, Andreas von Stierland, and offered to accept baptism in return for military aid against Tautvilas. In 1251 the master had Mindaugas baptized and expelled Tautvilas from Riga. Tautvilas attacked Mindaugas, who with the help of the Teutonic Knights withstood the attack, and Tautvilas had to flee to Volhynia. After Mindaugas concluded peace with Daniel of Galicia (1254), Tautvilas also made peace and later ruled Polotsk as a subordinate of Mindaugas.

Mindaugas sent his own envoys to Pope Innocent IV, who on 17 July 1251 recognized Lithuania as a Christian state and authorized the bishop of Kulm (mod. Chełmno, Poland) to crown Mindaugas as king of Lithuania, which was done in the summer of 1253. Yet Mindaugas had to make concessions to the Teutonic Knights in exchange for their diplomatic and military support, granting them parts of Samogitia and Jatvingia.

The baptism of Mindaugas meant that a Latin Church had to be organized in Lithuania, although its development was complicated. In August 1253, Christian, a priest of the Teutonic Order, was consecrated as the new bishop of Lithuania by Albert Suerbeer, archbishop of Riga; Christian was thus subordinated to the archdiocese of Riga, against the orders of the pope. With the help of the Teutonic Order, Mindaugas obtained papal bulls that placed the Lithuanian diocese directly under the pope. Christian remained under the influence of the Teutonic Order, and Mindaugas granted him lands in Samogitia. However, due to Samogitian resistance, neither Christian nor the order managed to gain any substantial position there. In 1259 Christian fled to Germany, where he died in 1271.

In January 1256 the Samogitians, led by Duke Alminas, successfully attacked the Teutonic Order in Curonia. Alminas sought to engage Mindaugas in the fight against the order, but Mindaugas preferred peace. After the Mongols devastated Mindaugas’s domains in early 1259, Mindaugas granted the Teutonic Order the whole of Samogitia (7 August). About the same time the Samogitians attacked Curonia and defeated the Livonian troops at the battle of Skuodas. Inspired by Samogitian success, the Semgallians started a rebellion against the Teutonic Order (1259–1272).

On 13 July 1260, in Curonia, the Samogitians crushed the united army of Livonia and Prussia at the battle of Durben. The order suffered its most overwhelming defeat of the thir-

teenth–fourteenth centuries. This inflamed rebellions throughout the whole eastern Baltic region, including the great rebellion of the native Prussians in 1260–1274. In the autumn of 1261, Mindaugas, persuaded by his nephew Treniota and the Samogitians, reclaimed Samogitia, apostatized from Christianity, and launched attacks against the Teutonic Order. The campaign was unsuccessful, and Mindaugas blamed Treniota. In autumn of 1263, Duke Daumantas of Nalšia, whose wife had been kidnapped by Mindaugas, allied with Treniota and killed the Lithuanian king and two of his sons, Ruklys and Repeikis. Treniota then proclaimed himself ruler of Lithuania.

Mindaugas was married at least twice: to Martha (in 1262) and to her sister, former wife of Daumantas. Some researchers assume that Martha was his second wife. We know of four sons of Mindaugas: Vaišelga, Ruklys, Repeikis, and Girstutis. Vaišelga, duke of Novogrodok and an Orthodox monk, seized power after Treniota was murdered in 1264 and after three years abdicated in favor of his brother-in-law Prince Shvarno of Volhynia. The attempts of Vaišelga and Shvarno to seize power in Lithuania provoked long-lasting wars, which were resolved only after Shvarno was expelled by Traidenis, who became ruler of Lithuania in 1269–1281.

Mirabel

A castle in southern Palestine located near al-‘Auja (mod. Rosh Ha ‘Ayin, Israel), in the lordship of Ramla.

Mirabel existed by 1152, when it was held unsuccessfully against King Baldwin III of Jerusalem by Manasses of Hierges, the husband of Helvis, lady of Ramla. Around 1162 it became the center of an independent lordship under Bald-

win of Ibelin, son of Balian I, but the lordship was reunited with Ramla when Baldwin succeeded his brother Hugh as lord of Ramla in 1171.

The castle surrendered to the Ayyūbid prince al-‘Ādil after bombardment in July 1187, and it was held and defended by the Ayyūbids during the Third Crusade (1189–1192). In the later thirteenth century, it was superseded by the Mamlūk castle at al-‘Auja. The structural remains comprise an early twelfth-century donjon (keep), standing on the west side of an enclosure of some 45 meters square, with vaulted ranges on the south, east, and probably north. An outer wall with rectangular towers and a sloping masonry batter or talus, which survives on the west, abuts a large rectangular building of uncertain function on the north and most likely enclosed the castle on the remaining three sides, completing its concentric plan.

Mission

The idea of mission was foreign to the original conception of the crusade. Neither the conversion of pagans nor the return of heretics and schismatics to the bosom of the church figured in the plan of Pope Urban II for the restoration of the “kingdom of Christ” that he set out when proclaiming the First Crusade (1096–1099) at the Council of Clermont in November 1095. In Iberia, the *Reconquista* (the Christian reconquest) involved the recovery of the peninsula from the Muslims, but not their conversion.

The spread of Christianity among the peoples on the northern and western fringes of Christendom had been accomplished before the inception of the crusade movement,

thanks to the advance of the Carolingian Empire, by the intervention of monks from Ireland and England, and through other forms of contacts established in particular by the Holy Roman Emperors and their clergy, often by means of marriage alliances and without any general preconceived plans. In 1147 St. Bernard of Clairvaux envisaged the conversion of the pagan Slavs (known to the Germans as Wends) living beyond the River Elbe, in conjunction with a military campaign that was primarily intended to secure the frontiers of the kingdom of Germany during the absence of King Conrad III in the Second Crusade (1147–1149). Although such a campaign did take place, it failed in the aim of Christianization.

The conversion of these Slavic peoples beyond the Elbe was undertaken in the second half of the twelfth century by the Cistercians. They carried out their mission to the pagan princes, whose conversion, with its attendant destruction of idols, also brought about that of their subjects, and completed their task with the foundation of monasteries to enable Christianity to take root among the Slavic population. The Cistercian Berno proceeded in this manner among the Abodrites, and in the later twelfth and thirteenth centuries the Cistercian mission, promoted by the archbishops of Riga, spread through Brandenburg, Pomerania, Livonia, and Prussia. However, the aggressive reactions of the pagans compelled the bishops in these regions to appeal to military orders: the Order of Dobrin, the Sword Brethren, and above all the Teutonic Knights, who proved to be less attentive to the evangelization of the pagans than to their submission, and pursued a frontier war against their Lithuanian neighbors well into the fifteenth century, long after the latter had accepted Christianity.

From 1211 onward the Cistercian Order began to resist papal demands for brethren for the mission to Livonia or to the Cathar heretics (Albigensians) of southern France, on the grounds that such activity would disrupt conventual life. It was the new order of the Dominicans who took over the task: its founder, St. Dominic Guzman, had been trained at the Cistercian monastery of Fontfroide, which was then a missionary center in contact with the Albigensian country. The Dominicans missionized the Turkic Cumans, who had come under the protection of the kingdom of Hungary in 1223, meeting with sufficient success for Pope Honorius III to set up a Cuman diocese and appoint as bishop a Dominican prior, Thierry. One Dominican, Julian of Hungary, travelled through the lands north of the Caucasus, trying to reach the

country known as “Greater Hungary” (Lat. *Magna Hungaria*), the mythical homeland of the Magyar people; it was Julian who brought back to the Hungarians the first news about the great Mongol invasion that was to descend upon them in 1240. In 1229, following the cession of the city of Jerusalem to Emperor Frederick II by the Ayyūbids, some Dominicans founded a convent in the Holy City. They made contact with the heads of the Eastern Christian churches, reaching Baghdad in 1237 and founding a convent in Tbilisi in Georgia in 1240. Meanwhile the Franciscans, who had initially been devoted to the reform of Western Christian society, also took an interest in the infidels: during the Fifth Crusade (1217–1221), their founder, St. Francis of Assisi, personally addressed the sultan of Egypt. Franciscan friars went to preach in Morocco, where they were soon entrusted with a bishopric, although their flock essentially consisted of the Spanish mercenaries of the sultan; they did, however, endeavor to give spiritual assistance to Christian prisoners in this Muslim country.

Pope Gregory IX recognized the specific character of the missionary task by granting the friars sent “among the nations” (the list of which constantly grew longer as the missionaries reached new countries) bulls whose preamble started with the words *Cum hora undecima*, conferring the rights to baptize, to reconcile excommunicates with the church, and to pass judgment on matrimonial matters. The rights granted in such bulls were at times of the same order as the powers conferred on papal legates.

The coming of the Mongols to Russia and Persia induced Pope Innocent IV to conduct negotiations with them in the hope of halting their invasions. The papal envoys John of Piano Carpini, Anselm of Cremona, and John of Longjumeau were also commissioned to invite the Mongols to receive baptism, but achieved little. Yet in 1253, upon hearing that Prince Sartaq had been baptized, William of Rubruck set out for the Mongols with the aim of preaching the gospel and giving spiritual assistance to Westerners who had been deported to Central Asia; he also made contact with Nestorian Christians, of whom there were many in the Mongol territories. Others followed in William’s footsteps.

Pope Innocent IV also sent envoys who were charged with meeting the prelates of the Eastern churches, but were also commissioned to bring the gospel to the Muslim princes of the East. The latter were willing to allow theological discussions among scholars, but were not themselves attracted to Christianity. Indeed, any preaching of the gospel to the

Muslim peoples—considered blasphemous in their eyes—was impossible: many missionaries were martyred, for instance in Selmas (1284), Erzincan (1314), Thana in India (1321), and Almaligh in Turkestan (1339). The Catalan theologian and writer Ramon Llull, who had devoted his life to the task of mission, especially among the Muslims, and who planned the creation of language schools for missionaries, was imprisoned after preaching in North Africa in 1307, and though later released, was stoned to death there in 1315.

The Frankish states of Outremer were an exception to such trends, since there were many Muslim subjects and slaves there who could be evangelized without danger, even though their Christian masters were not enthusiastic about the prospect. The preaching in Outremer of William of Tripoli, a Dominican who in 1274 wrote a treatise showing a good knowledge of Islam, met with some success. Around 1290 a fellow Dominican, Ricoldo of Monte Croce, ventured as far as Baghdad, where he was able to frequent Muslim scholarly circles; he devised guidelines for the use of missionaries and wrote a refutation of the Qu'ran. Contacts with Eastern Christians intensified and eventually constituted an important part of the missionaries' activity: after the Armenian and Maronite churches forged links with Rome at the end of the twelfth century, the Dominicans and Franciscans strove to win the hierarchies of those churches to the positions of the Latin Church. In 1288 Yahballaha III, catholicos of the Nestorian Church of the East, pledged allegiance to the pope, and some Dominicans took up residence with him at Maragha.

In the Mongol Empire, in contrast to Muslim countries, the missionaries were free to preach, and found favor with some princes. These circumstances allowed a more organized mission. The Franciscan province of "Gazaria," corresponding to the Mongol khanate of the Golden Horde, sent back an account of the successes achieved by its brethren there in 1287. The Mongols of Persia were eager to enter into a military alliance with the West against the Mamluks of Egypt and Syria. The popes' envoys to the Ilkhans pressed them to convert, and the future khan Öljeitu was even baptized. In 1295, however, the Ilkhan Ghazan converted to Islam, coercing his Mongol subjects into following his example: the hope of seeing the Mongols of Persia embrace Christianity thus had to be abandoned. In "Gazaria" it would seem that Toktai, khan of the Golden Horde, received baptism and was buried in the Franciscan church at Sarai; however, his successor, Özbek, became a Muslim.

The Franciscan John of Monte Corvino, entrusted in 1289 with messages from the pope to the sovereigns and church leaders of the East, traveled on as far as India, where he embarked for China. There his activities met with great success, at the court of the king of the Öngüt Turks and among the Alans of the imperial guard, but also among the natives. This success induced Pope Clement V to raise Khanbaligh (near Beijing) to the rank of an archbishopric in 1307, with responsibility for the whole of the Mongol Empire. Other successes led Pope John XXII to establish another see in Sulṭāniyya, capital of the Mongol khans of Persia, which was also responsible for India, where Jourdain Cathala de Severac was preaching. It might be envisaged that once established, these ecclesiastical provinces could eventually function without the need for missionary staff; yet the vast extent of their territories made that hope illusory. Other archbishoprics were established in a more accessible region, at Matrega in Kuban and Sarai on the River Volga. They were committed to the care of prelates who came from the same region, John and Cosmas, who were of Cherkess origin. For a long time there was also a Christian community following the Roman rite in the "Caspian Mountains," that is, Daghestan in the Caucasus.

The Dominicans created a specific missionary organization in the form of the Society of Brethren Peregrinating for Christ (Lat. *Fratres Peregrinantes pro Christo*) founded around 1312. The Franciscans established two vicariates for North Tartary and East Tartary; they also founded convents, and simple residences (Lat. *loca*) were put up. In Armenia, where Barthelomew of Poggio had initiated the Armenians into scholastic philosophy, an Armenian community of the Dominican obedience was created, the Unitary Brethren (Lat. *Unitores*), which managed to last despite a fierce nationalistic reaction, especially in Nakhichevan. Some original initiatives were taken: in order to follow nomadic tribes, the Franciscans created mobile mission posts mounted on wagons. The need to learn new languages produced the Codex Cumanicus, a dictionary of Turkish, Persian, and Latin compiled in the Black Sea region around 1330.

The papacy attempted to coordinate missionary efforts by dispatching legates to these regions, notably Odorico da Pordenone and John of Marignolla. It requested reports from the archbishops of Sulṭāniyya, such as John of Cori's *Livre de l'Etat du grant Caan* (Book of the Estate of the Great Khan), while in 1373 a committee of bishops was established in Avignon to deal with missionary issues.

Yet by this time political conditions had changed. Contacts with the Eastern churches of the former Mongol Empire in Persia declined as they increasingly turned in upon themselves. When Pope Eugenius IV tried to make them a party to the vast plan of church union conceived at the Council of Florence, it was only with some difficulty that his envoys reached the leaders of some of these churches, who at least permitted the promulgation of some of the decrees of union. In the case of the Nestorian Church, however, the Latins had to be content to negotiate with the archbishop of Tarsos, who was resident in Cyprus. The Mongol Empire of China had collapsed, and the "Christians of Cathay," whom Westerners remembered, and for whom a search was made in the sixteenth century, led a shadowy existence in the steppe areas or in South China. Mongolia had embraced Tibetan Lamaism; the Golden Horde and Central Asia had passed into the hands of Muslim princes; and Christianity did not survive in these countries.

The campaigns of the Turkic conqueror Timur (Tamerlane) were a severe blow to the Christian communities of the Caucasus, and Pope Boniface IX considered a crusade to relieve them. They were also affected by the progress of the Ottoman Turks. Lodovico Severi of Bologna, a Franciscan who conveyed appeals from Eastern potentates to the rulers of the West, asked the pope to give him responsibility for the remnant of the converts to Catholicism in these countries, with the title of patriarch of Antioch. Though he was interested at first, Pope Pius II did not pursue the suggestion.

Nevertheless, new fields of activity continued to emerge. One was Ethiopia, which established relations with Rome, thanks largely to the Franciscans in the Holy Land. On the eastern frontiers of Europe, the Cumans of Hungary and the Finns, who both had been evangelized by the mendicant orders, finally converted, as did the Lithuanians. The conversion of the latter had begun in the thirteenth century and was resumed as a result of the Polish-Lithuanian political alliance. In the Atlantic, the discovery of the Canary Islands enabled the conversion of their native inhabitants.

It would have needed a much larger establishment than was now available to maintain the missionary enthusiasm of the thirteenth and fourteenth centuries. The Black Death alone did away with most of the missionaries in the Mongol Empire. Interest in missionary activity was essentially confined to the milieu of religious orders. The Western traders who had once supported the efforts of the friars, and who were still numerous in the fourteenth century, no

longer frequented the routes of Asia. It was only in the Age of Discoveries that missionary work was again resumed on a similar scale.

Mistra

Mistra (mod. Mistras, Greece) was a castle and town founded in the Frankish principality of Achaia in the Peloponnese. It later became the capital of the Byzantine despotate of the Morea.

The castle was built in the 1240s by William II of Villehardouin, prince of Achaia, as part of his subjugation of Monemvasia and Skorta, in order to contain the Slav inhabitants of the Taygetos region. Quite probably it occupied the site of an earlier Byzantine fortification. What there was of the Frankish town around the castle is unclear. In 1262 the castle was surrendered to the Byzantines along with Monemvasia and Geraki.

As the seat of the Byzantine *strategos* (military governor) of the Peloponnese, the town developed as a major cultural, monastic, and administrative center beginning with the transfer of inhabitants from nearby Lakaidemon (mod. Sparti) around 1264. The houses, churches, and despot's palace show traces of thirteenth- to fifteenth-century work,

and the site today is the finest late Byzantine town to be seen in modern Greece. From 1348 to 1460, it was the capital of the despotate of the Morea and the center from which the Byzantine conquest of the principality of Achaia was planned. It was from here in 1449 that the despot left for Constantinople to become the last Byzantine emperor as Constantine XI.

The city surrendered to the Turks in 1460 and was destroyed by the forces of Ibrahim Pasha in 1824; the ruins suffered further destruction in the Greek Civil War. It has since undergone extensive restoration by conservators from the French School at Athens.

Modern Literature

Since the Middle Ages, the subject of the crusades has inspired numerous novelists and poets, from the Italian epic poet Torquato Tasso (1544–1595) to recent authors of historical fiction aimed at both adults and children.

Some authors have consulted the original crusade sources or modern secondary accounts of the expeditions and then used limited historical license to fill in the gaps and produce credible and interesting characters; others have taken considerable liberties with the real events and characters, with idiosyncratic results. Not surprisingly, each writer has approached the crusades from his or her particular viewpoint, but it is possible to identify some common themes and approaches, which can be followed through several centuries. The crusades often formed the backcloth to individual tales of heroism and romance. The exploits of Richard the Lionheart, king of England, on the Third Crusade (1189–1192) and the expeditions of King Louis IX of France

in the thirteenth century were particularly popular because they offered opportunities to depict and develop the character of a national hero. The First Crusade (1096–1099), culminating in the capture of Jerusalem in 1099, and, to a lesser extent, the Children's Crusade (1212), were also obvious subjects, offering not only dramatic events but also individual characters of interest that could be further developed and given a fictional supporting cast. There are, however, only isolated examples of novels and poems about the other expeditions to the East and of the crusades in Europe; the only one that seems to have captured much attention was the Albigensian Crusade (1209–1229).

The works produced were of variable quality, and although some, such as the novels of Sir Walter Scott, were very popular and remain in print as classics of their genre today, others, even in their own time, had a much more limited readership, including those that were privately printed and circulated. Nevertheless, the collective portrayal of the crusades in modern literature has contributed to the creation of the popular image of the crusading movement even in the twenty-first century.

The Gothic Novel

Although there were some novels and poems about the crusades in the sixteenth and seventeenth centuries, such as the Jesuit Pierre Le Moyné's epic poem *Saint Louis ou la Sainte Couronne reconquise* (1658), this period was generally characterized by variations on the work of Tasso and medieval crusade epics. The crusades, however, appealed to the gothic novelist. The earliest gothic novel, *The Castle of Otranto* by Horace Walpole (1717–1797), first published in 1764, purported to be a translation of an Italian story set at the time of the crusades. Walpole was proud of his crusading pedigree, displaying swords at his house in Twickenham that were allegedly from a crusading expedition undertaken by his ancestor Sir Terry Robsart. Walpole influenced contemporary as well as later writers. They included the Reverend Richard Warner, whose gothic novel set in the eponymous *Netley Abbey* was published in 1795. Here the hero, Baron de Villars, takes part in the Crusade of the Lord Edward (1270–1272). His own son, also called Edward, rescues and subsequently marries a lady in distress, Agnes, who has been imprisoned by her wicked cousin Sir Hildebrand Warren. In the same gothic tradition, another Anglican priest, Charles Robert Maturin (1782–1824), produced a four-volume novel, *The Albigenses* (1824), which features some of the par-

ticipants in the Albigensian Crusade, intermixed with the standard gothic elements of sorcery, stifled cries at midnight, and even a werewolf.

Sir Walter Scott

The use of the crusades as a subject for novelists and poets really developed in the nineteenth century, and the dominant historical novelist and influence was Sir Walter Scott (1771–1832). Scott was brought up on a diet of history, chivalry, and romance, and his library included editions of some of the key crusade texts, such as the chronicle of William of Tyre. Four of his novels are set against the background of the crusades. The last of these, *Count Robert of Paris* (1831), was set in Constantinople at the time of the First Crusade and was based on an incident mentioned by the Greek chronicler Anna Komnene in which the eponymous hero dares to sit upon the imperial Byzantine throne. To add color, Scott invented characters such as Robert's wife, the Amazonian Brennilda, and Sylvanus, the gigantic man of the woods. Although now a literary curiosity, the novel, produced when Scott's health was failing, is of inferior quality to his other works. More important are his three earlier novels *Ivanhoe* (1819) and *Tales of the Crusaders—The Betrothed* and *The Talisman* (1825), which were inspired by the Third Crusade.

Ivanhoe, which is now probably the best known of his works and was the most popular in Scott's own lifetime, features the wicked Templar Sir Brian de Bois Guilbert, the returning Saxon crusader Ivanhoe, and the Black Knight, who is later revealed as King Richard the Lionheart himself. The heroine of *The Betrothed* is Eveline Berenger, whose fiancé, Hugh de Lacy, the Norman constable of Chester, is absent for several years in the Holy Land, thereby providing an opportunity for Scott to elaborate upon the implications of long crusading absences for the fidelity and welfare of womenfolk left behind. The plot of *The Talisman* centers around two characters: the poor Scottish crusader Sir Kenneth (later identified as Earl David of Huntingdon, brother of the king of Scotland), who saves King Richard from assassination and marries Edith Plantagenet, a member of the royal family; and a Saracen emir (later identified as Saladin), who provides the miraculous amulet, or talisman, that cures the king. References to the crusades also appear in a number of Scott's other works, and when he died he was engaged in a novel about the Hospitallers and the Turkish siege of Malta in 1565. These novels reveal Scott's interest

in and admiration for the values of medieval chivalry, but they do not provide an uncritical picture of the crusades. For example, they contrast the corruption of the military orders and dissolute crusaders with the noble Saracen, in particular Saladin.

Scott's novels were widely read, running to numerous editions. He had admirers from Moscow to the American frontier and influenced fellow writers such as Honoré de Balzac and Aleksandr Pushkin. His works also inspired artists and composers: the plot of *Ivanhoe* was used in nearly 300 dramas and burlesques, and scenes from the novel were regularly featured in the annual exhibitions of paintings at the Royal Academy in London and the Paris Salon. There were also operas by composers such as Sir Arthur Sullivan (*Ivanhoe*, 1891) and Heinrich Marschner (*Der Templer und die Jüdin*, 1829). The Italian nationalist writer Tommaso Grossi, whose poem *I Lombardi alla prima crociata* inspired the opera of the same title by Giuseppe Verdi (1846), also wrote a novel, *Marco Visconti* (1831–1834), whose plot owes much to *Ivanhoe*. William Makepeace Thackeray's short novel *Rebecca and Rowena* (1849) is in a less serious vein. *The Talisman* and *The Betrothed* left a similar, if less extensive, legacy.

Other Nineteenth-Century Literature

Other nineteenth-century romantic poets were also inspired by the crusades. William Wordsworth's *Ecclesiastical Sonnets* (1822) included four sonnets about the crusades, and Elizabeth Barrett Browning's *The Romaunt of the Page* (1844) told the story of a wife who, anxious not to be parted from her crusading husband, accompanies him to the East in disguise and dies without revealing her identity. In fact, the story of the crusader's wife, mother, or sister and the impact of his departure and lengthy absence, often with no news of his fate in battle, became a standard theme. Other examples can be found in the works of Felicia Hemans and Letitia Landon, who may now be little read but were extremely popular in the first half of the nineteenth century. Collections of Victorian poetry regularly included something relating to the crusades, and some poems were also used as lyrics for songs for home entertainment.

The concept of the crusades as a noble undertaking and inspiration for contemporaries, who sought to emulate the heroic deeds of their medieval ancestors can also be found in Benjamin Disraeli's *Young England* trilogy (1844–1847), in particular the third novel, *Tancred*, which was subtitled *The New Crusader*.

Given the popularity of Tasso's epic poem about the First Crusade, it is not surprising that he had some nineteenth-century emulators. One of these was the barrister and diplomat William Stigand, whose 300-page epic *Athenais*, which appeared in 1866, told the story of the thwarted love between the fictional crusader Count Bertrand d'Aureval and Athenais, the niece of the Byzantine emperor Alexios Komnenos. As a student in the 1830s, the American writer Henry David Thoreau, inspired by Tasso and Hemans, wrote a poem entitled *Godfrey of Boulogne* about the crusaders' march to the East. The First Crusade was also depicted on the stage in the play *Die Kreuzfahrer* (1803), by the German writer August von Kotzebue, published in London as *Alfred and Emma* (1806). This opens in the crusading camp at Nicaea and is another love story, but with a happy ending. After various twists and turns and with the help of a Muslim emir and the papal legate Adhemar of Le Puy, the crusader Baldwin of Eichenhorst is reunited with his betrothed Emma von Falkenstein.

The German playwright Gotthold Ephraim Lessing (1729–1781) set his powerful argument for religious tolerance between Christian, Jew, and Muslim, *Nathan der Weise* (1778), at the time of the Third Crusade. This was also the context for *Der Zauberring* (1813) by the romantic writer and dramatist Baron Friedrich de la Motte Fouqué, although its main focus is the story of the hero Otto von Trautwagen, custodian of the magic ring, who fights against the heathen. Both works were translated into English and influenced other writers and artists.

There is only the occasional poem or children's history about the Fourth Crusade (1202–1204), but among those who wrote about the Children's Crusade was the American poet Henry Wadsworth Longfellow (*In the Harbour*, 1882) and the French essayist Marcel Schwob (*La croisade des enfants*, 1896). There were also several stories designed for children about young French and British crusaders who join the expedition and survive captivity and slavery before their eventual return to the West. These were intended to provide instructive examples of courage and faith under adversity.

The crusading exploits of the French king Louis IX inspired writers both in his own country and elsewhere. In 1873, Louis was set as the subject of the Newdigate Prize, an annual poetry competition at Oxford University, which was won by Cecil Moore. He became a clergyman and used his poem and Louis's example to exhort others to pursue a contemporary missionary crusade in Africa. Louis's crusade to Tunis (1270) was also the subject of a lengthy poem, *The Last*

Crusade (1887), by Alfred Hayes. The subsequent expedition to the Holy Land led by the future Edward I of England formed the background to *Sir Guy de Lusignan: A Tale of Italy* (1833) by the popular novelist Ellis Cornelia Knight, who was a friend of Admiral Lord Nelson, Lady Hamilton, and the royal family. This and *The Prince and the Page* (1865), by the popular children's writer Charlotte M. Yonge, both include the standard elements of the attempt on Edward's life, from which he is saved by the courage of his wife, Eleanor. Yonge adds a second assassination attempt that is thwarted by the intervention of Edward's page, Richard de Montfort. Predictably, there were several other stories of young English crusaders who accompanied Edward, which generally tell of how they survive Muslim slavery and other difficulties before their return to the West. As with previous crusade stories, there was often a romantic element. John Mason Neale, who is more famous today for his hymns, has his young crusader hero, Everard de Blechingley, betrothed to Isabelle, the daughter of the crusade historian John of Joinville. The events of the Crimean War (1854–1856) and the political rhetoric surrounding the massacres of Bulgarian Christians by the Turks in 1876 also inspired a few poems about the crusades, with parallels drawn between current circumstances and the medieval campaigns in the East.

Those who wrote about the crusades with serious intent did not always achieve the desired result through their choice of plot or literary style. Others, however, deliberately set out to write satire. In his novel *Maid Marian* (1822), Thomas Love Peacock satirized the romantic medievalism of the Young England movement and the traditional portrayal of Richard the Lionheart. In his *Crotchet Castle* (1831), Mr. Chainmail is soon diverted from his interest in the Third Crusade by a young lady. The crusades also feature in a number of the comic novels of William Makepeace Thackeray. For example, in *Barbazure*, one of his characters, Romane de Clos-Dougoet, claims to have been with Richard at Ascalon, Louis at Damietta, and Solyman at Rhodes—a feat that transcends the bounds of historical chronology. There are also stories about crusaders in the highly popular *Ingoldsby Legends* (1840) by Richard Harris Barham, a minor canon of St. Paul's Cathedral in London.

The Case of Richard the Lionheart

For British writers, the story of Richard the Lionheart was almost irresistible, and his crusading exploits were cele-

brated in a variety of literary forms and by a wide range of authors. The story of the captured Richard and his faithful minstrel Blondel inspired a poem by the young Charlotte Brontë (1833), and Richard was twice set as the subject for Newdigate Prize at Oxford University (1828 and 1912). The quality and content of such works varied considerably. For example, Richard was the subject of at least two lengthy but rather mediocre epic poems, one by Sir Henry Bland Burges, member of Parliament for Cornwall (1800), and the other by Eleanor Pordes (1822), the wife of the polar explorer Sir John Franklin. Burges also wrote a comic play called *The Crusaders* (1817). Its characters include Baron von Poppendorf, a nouveau riche Jewish broker with a mock German accent, who looks upon the Third Crusade as a business opportunity. An anonymous and more traditional historical tragedy in five acts, entitled *Richard Coeur de Lion* (1861), followed Richard's career from his coronation to his death. But *The Sea King: A Tale of the Crusade under Richard I of England* (1895) by Dunbar Hylton took a more imaginative approach, featuring sea nymphs and other marine exotica. Several historical romances influenced by Scott also appeared around this time, set against the background of the Third Crusade, usually in the camp at Acre. At least one drew heavily on *Ivanhoe*, with a Knight Templar, a Jewess, and interplay between the Saxon heroine and a Norman knight.

Richard was also a natural subject for writers of children's fiction. The doyen of this genre was George Alfred Henty (1832–1902), whose novel *Winning His Spurs* (1882) tells the story of Cuthbert, who is knighted as a reward for saving the king's life. On his return to England, Cuthbert marries the earl's daughter and succeeds to the title. The tale of young courage, adventure, and romance became another standard theme: Peter Donne, the hero of Paul Creswick's *With Richard the Fearless: A Tale of the Red Crusade* (1904), even turns out to be the son of the king's secret marriage with Alice of Brittany. In the same year, the adventure writer Sir Henry Rider Haggard was inspired by a visit to the battlefield of Hattin to write a novel about Rosamond, allegedly the daughter of Saladin's sister and an English knight: in *The Brethren* (1904) this damsel in distress is protected by two crusading brothers; Robert Irwin (1997) has drawn parallels between Haggard's Saracens and the Zulus of his other novels. Mary Rowles Jarvis's *Dick Lionheart* (1909) has a starker and more contemporary theme. Her hero, an orphan, inspired by tales of Richard the Lionheart, sets out for a distant industrial city and the home of his

uncle, where, after the inevitable trials and tribulations, he finds happiness.

This was not, however, just a British phenomenon. In France, Michel-Jean Sedaine's play *Richard Coeur de Lion* (1784) inspired a comic opera of the same name by André Gretry. The latter was performed regularly in Paris during the nineteenth century and was adapted for the British stage by a British general who had fought at the battle of Saratoga during the American Revolution, Sir John Burgoyne (1722–1792). There were also Italian, German, and Dutch versions. Another publishing success was Sophie Cottin's novel *Mathilde* (1805), set during the Third Crusade. Using considerable historical license, its heroine is the young sister of Richard the Lionheart, who decides to accompany him on crusade and falls in love with Saladin's brother Malek Adel. He dies in combat, but not before he has been converted to Christianity; Mathilde remains behind in a convent in the Holy Land. Like Scott's work, Cottin's novel inspired paintings, plays, and operas, the latter including Sir Michael Costa's *Malek Adel*, which was performed in London in 1837.

The Twentieth and Twenty-First Centuries

The linkage between the crusades and contemporary events was most marked during World War I. Poems written by soldiers in the campaigns in the Dardanelles and Palestine portray the soldiers as following in the footsteps of their crusading ancestors. The memoir *The Romance of the Last Crusade: With Allenby to Jerusalem*, published in 1923 by the actor Major Vivian Gilbert, begins with Brian Gurnay, at the end of his first year in Oxford, dreaming of the crusading exploits of his ancestor Sir Brian de Gurnay, a participant in the Third Crusade. Gilbert then reverts to his own time and the Palestine campaign, portraying his men as successors of Richard's army, wearing drab khaki rather than suits of armor.

Historical parallels apart, in the twentieth century and up to the present day the crusades have continued to inspire historical novelists, with the same mixture of stories drawn from historical fact and literary whimsy. The First Crusade has remained a popular subject, with more than thirty novels of varying quality, and these have recently been analyzed in detail by Susan Edgington (2003). For example, in 1950, Alfred Duggan published the well-researched *Knight with Armour*, the story of an English knight on the First Crusade, and his last book, *Count Bohemond*, a fictionalized biography of Bohemund of Taranto, was published posthumously

in 1964. Brother Cadfael, the detective in Ellis Peters's popular series set in the medieval abbey at Shrewsbury, also has a crusading past, and in *The Virgin in the Ice* (1982) it emerges that he fathered a son while at Antioch.

The majority of recent works, however, have been published in France. In 1970, Zoë Oldenbourg published *La Joie des pauvres*, which was translated into English as *The Heirs of the Kingdom* (1971), which was preceded by her own general history of the crusades. She has also written a series of historical novels about the Cathars and the Albigensian Crusade. And the 900th anniversary of the Council of Clermont seems to have prompted a number of other French novels about the First Crusade by authors such as Anne Courtille (*Dieu le Veult*, 1995).

There are also three novels by Jewish writers—Christopher Davis (*Belmarch: A Legend of the First Crusade*, 1964), Russell Hoban (*Pilgermann*, 1983), and Amos Oz (*Crusade*, 1971)—that see historical links between the massacres of Jews in the Rhineland by a crusade army and the Holocaust. From a different perspective, the American Stephen J. Rivelle's *A Booke of Days* (1996) provides a colorful journal of the crusade through the eyes of the knight Roger, duke de Lunel.

As in earlier centuries, the Second Crusade (1147–1149) has not really attracted the interest of the historical novelist, but in 1989 the Portuguese novelist José Saramago published *The History of the Siege of Lisbon*, an unusual novel that revolves around the decision by a modern copy writer to alter historical fact and make the crusaders refuse the Portuguese king's request for help.

Richard the Lionheart and the Third Crusade have continued to attract novelists. Charles Pirie-Gordon, an enthusiastic student of history who went on pilgrimage to Palestine with the Order of St. John in 1926, completed the novel *Hubert's Arthur* (1935) by Frederick Rolfe (Baron Corvo), in which Richard's nephew Arthur gains the throne of England and marries the heiress of the kingdom of Jerusalem. He was, in turn, influenced by Maurice Hewlett's popular *Richard Yea or Nay* (1900), the story of a romance between Richard and Jehane Saint Pol, who bears Richard's son Fulk during the crusade and is captured by—and ultimately marries—the lord of the Assassins. Another young squire in the service of the English king is the hero of Magdalen King-Hall's *Jehan of the Ready Fists* (1936). Most recently, Kevin Crossley-Holland has produced a trilogy whose central character, the young Arthur de Calidcot, comes from a crusading family and himself joins the Fourth Crusade: *Arthur the Seeing*

Stone, *Arthur at the Crossing Places*, and *Arthur King of the Middle March* (2000–2003). In satirical vein, the hero of Osbert Lancaster's *The Saracen's Head, or The Reluctant Crusader* (1948) is William de Littlehampton, who achieves crusading fame and fortune much against his natural inclinations in the camp at Acre.

The children's novelist Henry Treece tells the story of the Children's Crusade through the experiences of a brother and sister, Geoffrey and Alys de Villacours (1958), with the by now standard elements of disillusionment, slavery, and, after various trials and tribulations, reunion and return home. For the late 1220s, the Irish author Donn Byrne created Sir Miles O'Neill, a cousin of the king of Ulster, who serves as a paid soldier in the East under the command of the Cornish knight Sir Otho de Trelawney (*Crusade*, 1927).

For the thirteenth-century crusades, however, most writers chose Louis IX: for example, Henry Bordeaux's play with tableaux and songs, *Le Mystère de Saint Louis* (1950), which evokes the continuing moral influence of the saintly king, and Hubert Villez's much less reverent *Mémoires de Shadjar, les amours secrètes d'une reine d'Egypte*, subtitled *La Tentation de Saint Louis* (1969). In 1911, Augustin-Thierry, the nephew of the great French medievalist, whose name he adopted, and Eugène Berteaux even produced a one-act farce, *Le Lit de Saint Louis*. This opens in a provincial museum, which has the bed of the king as one of its prize exhibits. Its presence proves too great a temptation for the new administrative assistant and his mistress, Margot, and inevitably they are discovered by the shocked curator. Posing as John of Joinville, the American writer Evan S. Connell provides in *Deus lo Volt* (2000) an idiosyncratic survey of two centuries of crusading, beginning with Peter the Hermit and culminating with St. Louis.

Another American, Michael Eisner, has recently published a novel entitled *The Crusader* (2001). Set against the background of the last decades of the Latin kingdom, it features tales of treachery, bloodshed, and courage during the capture of Krak des Chevaliers by the Mamlûks in 1271, as confessed by a young Spanish nobleman, Francisco de Montcada, to a Cistercian monk, brother Lucas.

In short, the crusades remain a standard and popular subject for modern literature, with the interplay between fact and fiction and a wide range of literary approaches and styles according to the particular perspective and sometimes nationality of the author.

Modon

Modon (mod. Methoni, Greece) was a fortress town of ancient origins on the western side of the Messenian peninsula of the Peloponnese. It was held by Venice during the period of Frankish rule in Greece.

By the twelfth century, Modon had become a base for pirates threatening Venetian trade in the Adriatic Sea. It was attacked by Venice in 1125 and again sometime before 1204, when it was clearly deserted. The fleet of the Fourth Crusade (1202–1204) stopped in Modon in 1203, and in 1209 the Treaty of Sapienza awarded it to the Venetians, who built it up as a major port of call for vessels sailing between Venice and the Holy Land. Ships bought salt pork here, and the Messenian peninsula became well known for its large herds of pigs, which supplied this victualling trade (an activity that

continued during the Turkish occupation). The town contained a Latin cathedral and the headquarters of the Teutonic Order in Greece.

In 1500 Modon fell to the Turks and the garrison was massacred, a procedure that hastened the surrender of Coron (mod. Koroni, Greece), its twin town on the eastern side of the peninsula. Twice Christian forces unsuccessfully attacked it in the sixteenth century: the Knights of St. John in 1531 and Don John of Austria in 1572 following the battle of Lepanto. Venetian forces occupied it again from 1686 to 1715. In 1825 the Egyptian army of Ibrahim Pasha was disembarked here, and three years later French engineers built the modern town nearby, despoiling the medieval site for their building materials.

Mohács, Battle of (1526)

A major defeat of the royal army of Hungary by the forces of the Ottoman sultan Süleyman I (the Magnificent), fought on 29 August 1526.

After a relatively peaceful period of Hungarian-Turkish relations between 1483 and 1520, the Turks took Belgrade, the key to the defense system on the southern Hungarian frontier (1521). The young Louis II, king of Hungary and Bohemia (1516–1526), was unable to organize the defense of the country, which had fallen into political crisis after 1490. In 1526 the Ottoman army, personally led by Sultan Süleyman, departed from Constantinople on 23 April 1526; marching via Belgrade (30 June), it crossed the river Drava on 14 August. The Hungarian royal army, commanded by Paul Tomori, archbishop of Kalocsa, and George Count Szapolyai, lacked any strategic concept to stop the invaders, and before completing its mobilization, left Buda on 20 July 1526. The Hungarians were inferior in numbers, amounting to some 25,000–50,000 men (including some 10,000 foreign mercenaries, mostly infantry) compared to the Turks'

75,000–120,000. It is still debated by Hungarian scholars whether the Hungarian army had any realistic chance of defeating or halting the Turks.

The Hungarians launched a surprise attack on the Ottoman army while it was still drawing up in battle formation on the plain of Mohács, a small town on the west bank of the Danube to the east of the city of Pécs. The initially promising attack of the first wave of Hungarian cavalry soon collapsed in the fire of the hidden Ottoman artillery and the disciplined janissary troops, and the whole army turned to panic. Within a few hours, not only the royal army, but the medieval Hungarian kingdom itself was defeated; the king and most of the country's prelates and dignitaries were dead. The Turks reached the abandoned royal castle of Buda unhindered (12 September), but then withdrew, occupying only a small strip of land. However, the defeat at Mohács paved the way for the subsequent occupation of most of the kingdom by the Turks (1541), leaving only a northern and western rump under Christian rule.

Monasticism in Outremer

See Outremer: Monasticism

Möngke (1209–1259)

Fourth great khan (Mong. *qaghan*) of the Mongols (1251–1259).

The eldest son of Chinggis Khan's fourth son Tolui, Möngke participated in the Mongol campaigns in eastern Europe in 1236–1242 under the command of his cousin Batu. After the death of his rival, Great Khan Güyüg (1246–1248), Batu secured Möngke's election as his successor, despite opposition from Güyüg's family and other

relatives. While Möngke concentrated on the Chinese front, he dispatched his brother Hülegü in 1253 to complete the conquest of Persia, which resulted in the overthrow of the 'Abbāsīd caliphate (1258) and the temporary conquest of Syria (1260). Möngke, who died on 11 August 1259 while besieging a Chinese fortress, was the last sovereign to be acknowledged throughout the empire until 1304, since his brother Qubilai, though victorious in the ensuing civil war, was never universally recognized.

The Franciscan friar William of Rubruck, who visited Möngke's court, was sceptical about Nestorian Christians' hopes of his conversion, observing that the great khan merely desired every confessional group to pray on his behalf. The Buddhists believed that Möngke favored them, while the Chinese annals of the Mongol era describe him as adhering to the shamanistic practices of his ancestors.

Mongols

A nomadic people of Altaic stock who first appear in Chinese texts of the eleventh century and who in the thirteenth came to rule an empire embracing most of Asia. For several decades after the 1230s, they were Latin Christendom's most formidable eastern neighbor.

The Mongol Empire

At a tribal assembly around the year 1206, the Mongol leader Temüjin, who had reduced the neighboring tribes of the eastern Asian steppe, was proclaimed ruler of all the tent-dwelling peoples under the title of Chinggis (Genghis) Khan (probably Mong. "hard ruler" or "stern ruler"). Chinggis Khan (d. 1227) began the conquest of North China (1211), then ruled by the Chin dynasty; reduced the seminomadic Qara-Khitān Empire in Central Asia (1215–1218); and in the course of a seven-year campaign (1218–1224) to the west accomplished the destruction of the Muslim Empire of

Mongols

Khwārazm in what is now Iran and Turkmenistan. Why the Mongols came to be known as Tatars (the name of an enemy tribe crushed by Chinggis Khan in 1202) is unclear; in Latin Europe the term was corrupted to Tartars, reinforcing the West's association of the Mongols with the hell (Lat. *Tartarus*) of classical mythology. In any case, by the time they reached Europe the majority of the Mongols' nomadic troops were of Turkic stock.

At both the administrative and the ideological level, the Mongol Empire represented a significant advance on earlier steppe confederacies. Their early conquests had brought the Mongols into contact with other tribes, such as the Naiman and the Kereyid, which had been in the process of attaining statehood, and with the semisedentary Turkic Uighurs, who had possessed literate traditions of government for some centuries and whose script Chinggis Khan adopted for the written Mongolian of his chancery. It was probably also through the Uighurs, and other Turks whom they incorporated in their war machine, that the Mongols had access to long-established notions of imperial rule. At what stage they developed the idea that Heaven (Mong. *Tenggeri*) had conferred on them rulership of the entire world, we cannot be sure. It may postdate the flight of certain of their nomadic enemies into sedentary territories; conceivably, it belongs to the era of Chinggis Khan's successor. The notion is articulated in the ultimatums that the Mongols sent out to rulers who had not yet submitted: formulaic documents that demanded from those rulers acknowledgement of their place in the Mongol world-empire and threatened them with attack should they refuse. The earliest of such documents to survive dates from 1237.

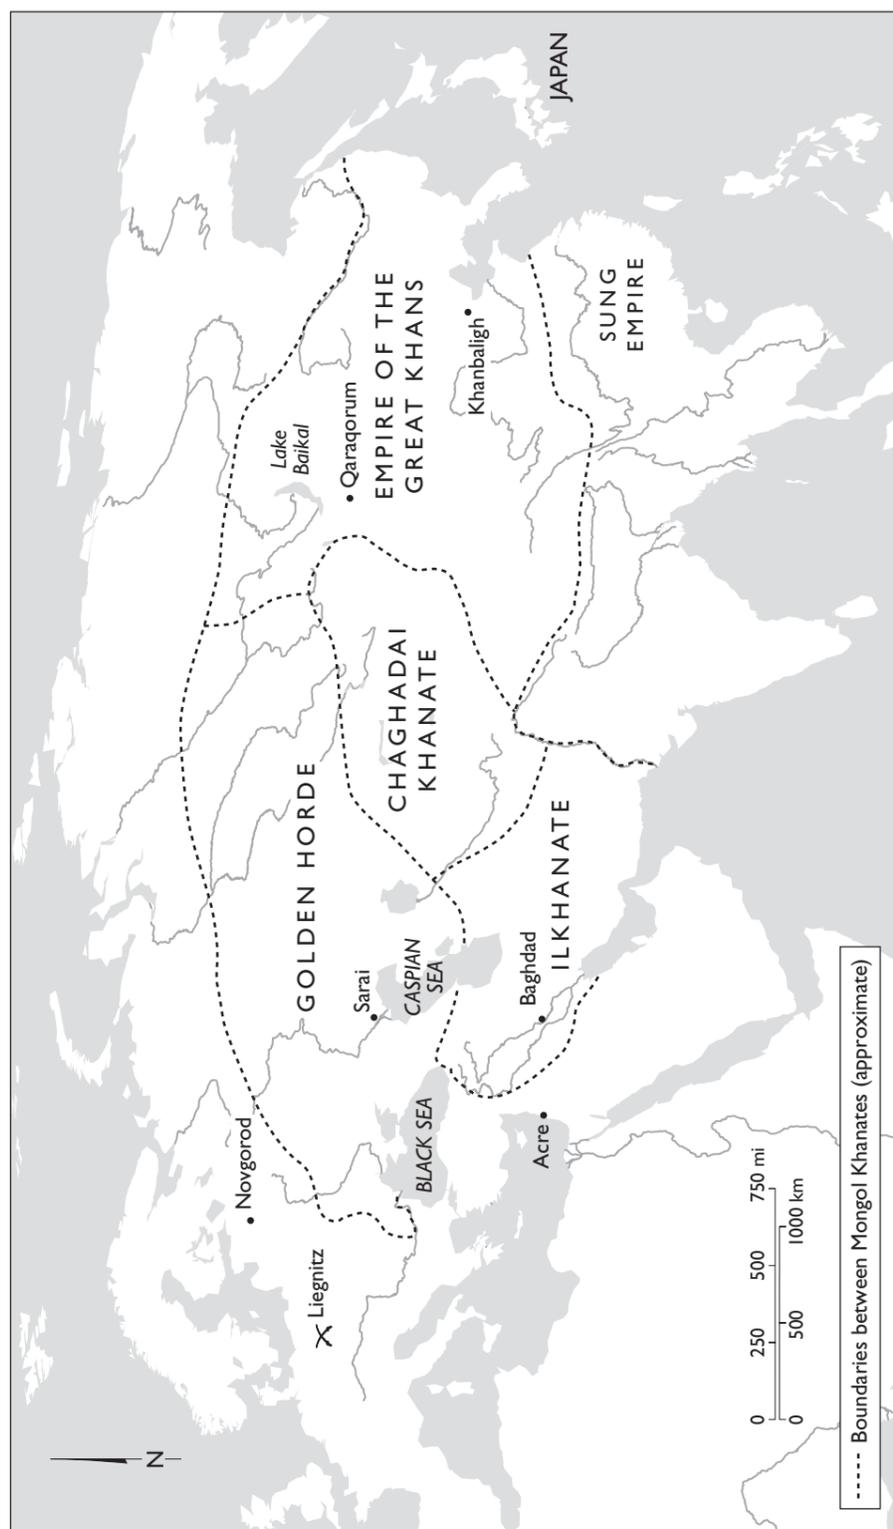

Various reasons have been put forward to explain the phenomenal pace of the Mongol conquests. Like those of other steppe nomadic peoples, their forces were highly mobile and maneuverable, which gave them an advantage over the armies of their sedentary opponents: each Mongol warrior, whose main weapon was the composite bow, traveled with several spare horses. However, their decimal chain of command was not an innovation, and their proverbial discipline is unlikely to have exceeded that of the Chinese troops they encountered. What particularly distinguished them from their enemies was their cohesiveness. Chinggis Khan had eliminated the ruling elites of those peoples who resisted him, and divided them up into new military units under trusted officers; even tribes that cooperated, and were therefore permitted to remain intact, were entrusted to new

commanders from different tribal backgrounds. The imperial guard, his own creation, numbering 10,000 men and drawn from a wide range of peoples, served as the nursery of an officer class that owed allegiance to Chinggis Khan and his dynasty alone. In this fashion the conqueror surmounted the centrifugal effects of the old clan and tribal affiliations, forging a more homogeneous structure than had been available to the Mongols' precursors. This cohesiveness contrasted sharply with the disunity of many of their opponents. During the early stages of the war in northern China, the conquerors benefited from the assistance of several elements that resented Chin rule and saw the Mongols as a means of deliverance. In Central Asia, Chinggis Khan's generals won the support of the Muslims, who had been persecuted by the last Qara-Khitān sovereign, and thereby incidentally undermined the ability of the shah of Khwārazm to portray his own struggle with them as a holy war.

Territorial expansion continued under Chinggis Khan's immediate successors who, with the title of *qaghan* (great khan), reigned from their principal base at Qaraqorum in Mongolia. Chinggis Khan's son Ögödei (1229–1241) presided over the final destruction of the Chin Empire (1234), inaugurated the long-drawn-out war against the Sung in South China (from 1235), and dispatched fresh forces to eliminate the vestiges of Khwārazmian resistance in Iran (1229); these troops reduced Georgia and Greater Armenia to tributary status (1236–1239) and shattered the Saljūq sultanate of Rūm at Kösedagh (1243).

From 1236 the great khan's senior nephew Batu commanded a major expedition that completed the subjugation of the steppe and forest peoples of western Asia, notably the Volga Bulgars (1237) and the Cumans or Qipchaq (1237–1239), and overwhelmed the fragmented principalities of Russia (1237–1240). Batu's campaigns mark the foundation of the Mongol power known as the Golden Horde in the southern Russian steppe. Following the enthronement of another of Chinggis Khan's grandsons, Möngke (1251–1259), the conflict with the Sung was resumed in earnest, and the new sovereign's brother Hülegü headed a campaign to southwest Asia, overthrowing in turn the Ismācīlī Assassins of northern Persia (1256) and the 'Abbāsīd caliphate at Baghdad (1258).

By 1260 the Mongol Empire extended from the Siberian forests to the western Punjab and from the Yellow Sea to the eastern Mediterranean coast. But Möngke's death was followed by a civil war in Mongolia between his brothers

The Mongol world, c. 1260

Mongols

Qubilai (Kublai) and Arigh Böke, in which members of the imperial dynasty took opposing sides. In the west, Hülegü favored Qubilai, while the ruler of the Golden Horde, Batu's brother Berke, supported Arigh Böke. With the outbreak of conflict among Chinggis Khan's descendants, the unitary empire dissolved into a number of independent, and usually hostile, khanates: the Golden Horde, with its center at Sarai on the lower Volga; a polity in Central Asia ruled by the descendants of Chinggis Khan's second son Chaghadai; the Ilkhanate in Persia and Iraq, governed by Hülegü and his line; and the great khan's own territory in the Far East. The Mongol dominions continued to expand only in the Far East, where the conquest of the Sung was completed in 1279, though seaborne invasions of Japan and Java failed. Qubilai reigned as a Chinese emperor rather than simply as a Mongol great khan: he abandoned Qaraqorum for Ta-tu (Mong. *Khanbaligh*, "the khan's city") close to modern Beijing, and adopted for his dynasty the Chinese name of Yüan (1271). The Yüan were expelled from China in 1368, and the Ilkhanate collapsed after 1335, but the other two Mongol states survived for significantly longer: the Golden Horde until 1502 (and its successor state in the Crimea until 1783) and the Chaghadayid khanate until 1678.

The First Mongol Attacks on the Latin West

The Mongols menaced Latin Christendom on two fronts: in Eastern Europe and in Outremer. The first reports of the attack on the Khwārazmian Empire, reaching Egypt in 1221, prompted the commanders of the Fifth Crusade (1217–1221) to identify the newcomers with the long-awaited forces of the great Eastern king Prester John, though news of the defeat of the Cumans and their Russian allies on the Kalka River (1223) was less encouraging. The Mongols attacked the Latin world only after the sack of Kiev (December 1240). While Batu himself and three separate armies entered Hungary, two divisions protected his flank by ravaging Poland, where they crushed Duke Henry II of Silesia and his allies near Liegnitz (mod. Legnica, Poland) on 9 April 1241; ravaging the borders of Saxony and Bohemia, they then passed through Moravia into Hungary. Here King Béla IV was overwhelmed at Mohi near the Sajó River on 11 April and fled toward the Adriatic coast while the Mongols devastated his kingdom east of the Danube. In January 1242 they crossed the frozen river and harassed the western provinces before retiring into the steppes north of the Black Sea. In the Near East, the general Baiju sent a division into northern Syria in

the summer of 1244: various Ayyūbid Muslim rulers promised tribute, but Prince Bohemund V of Antioch defiantly rejected an ultimatum. One important consequence of this advance was that several thousand Khwārazmian horsemen, displaced from northern Iraq, moved south and sacked Jerusalem in August 1244 before joining forces with the Egyptian sultan and crushing the Franks and their Muslim allies at La Forbie in October.

The Mongol attacks of the 1240s threw into relief the disharmony and unpreparedness of the West, where the Mongol menace had perhaps not been taken sufficiently seriously. Pope Gregory IX and the Emperor Frederick II were unwilling to sink their differences in order to cooperate against the Mongols, and a crusade mustered in Germany in 1241 dissolved before it could make contact with the invaders. Not until the pontificate of Innocent IV (1243–1254) did the Curia endeavor to negotiate with the enemy. Innocent dispatched three separate embassies—two, comprising Dominican Friars, to the Near East and a third, composed of Franciscans, through the Russian steppes—with letters protesting at the attacks on Christian nations and urging the Mongols to accept the Christian faith. The reports submitted by these friars in 1247 furnished the papacy with its first full dossier of information on the enemy, and they are among our most important Western sources, particularly that of the Franciscan John of Piano Carpini, who visited the court of the Great Khan Güyüg. But this aside, they achieved little more than espionage, merely bringing back ultimatums that required the pope's submission. When in 1248 the general Eljigidei, who had superseded Baiju in northwestern Persia, sent a cordial message to the French King Louis IX in Cyprus, its moderate tone occasioned great excitement in the West; but most probably its aim was merely to deflect Louis's crusading army from territories on which the Mongols had immediate designs. At this time, the Mongols had no allies, only subjects—or enemies awaiting annihilation.

The Continuing Threat in Eastern Europe

Following the cataclysm of 1241–1242, King Béla IV of Hungary made efforts to prepare for the next assault, instigating the construction of stone castles on his eastern frontiers and entering into marriage alliances with several of his neighbors, including a Cuman chief whose daughter married his son and heir Stephen (later Stephen V); he also recruited Cumans as auxiliaries. In 1259 Berke's forces

attacked Poland, sacking Sandomir and Kraków, but the splintering of the empire in 1261–1262 prevented the Mongols from following up this campaign. The Golden Horde remained content with exacting tribute and military assistance from the Russian princes and adjudicating their succession disputes. The khans were in any event probably more interested in operations south of the Caucasus at the expense of the Ilkhans than in either Russia or, by extension, Hungary and Poland.

Nevertheless, the Golden Horde remained a hostile power on the frontiers of Latin Christendom. In the Baltic region, the Mongols tended to act through their Russian satellites and the pagan Lithuanians, who paid them tribute intermittently, against external enemies such as the Teutonic Order. Further south the Golden Horde threatened for a time to draw into its orbit further non-Latin polities that might otherwise have succumbed to Latin pressure, such as Bulgaria and the Byzantine Empire. During the heyday of Noghai (d. 1299), a member of the dynasty who was virtually co-ruler in the western regions of the Pontic steppe, Mongol influence extended deep into the Balkans. However, Noghai's amicable relations with Byzantium did not outlast him, and in the early fourteenth century the khans launched a series of invasions of Thrace. As late as 1341, when the Emperor Andronikos III bought off a Mongol attack, the Golden Horde may still have constituted a greater menace than did the nascent Ottoman polity.

The Mongols dealt with Hungary and Poland more directly. Although there were no further campaigns on the scale of 1241–1242 or 1259, there were frequent raids and also substantial attacks on both countries in the 1280s. The extinction of the client Russian princes of Galicia and Volhynia in 1323 provoked fresh tensions, which were resolved when the new ruler, the Polish prince Boleslaw of Mazovia, maintained payment of tribute. But after his death (1340), the Mongols reacted sharply to the occupation of Galicia by Kazimierz III of Poland with a series of attacks, and during the middle decades of the fourteenth century, the khan appears to have recruited Lithuanian assistance against him. If Polish appeals to successive popes elicited little or no military aid, they did at least secure the grant of crusading tenths and twentieths rather more readily than did the simultaneous pleas of the Hungarian crown. Around 1360, however, the Golden Horde, already badly hit by the Black Death, succumbed to a prolonged phase of internecine conflict, and the attacks of the conqueror Timur (Tamerlane) in the 1390s

dealt its commercial centers a severe blow. The khans were powerless to impede the rise of Lithuania and its appropriation of Russian territory, and by the early fifteenth century they had sunk to being merely auxiliaries in the conflicts of their western neighbors: a Mongol contingent fought at the battle of Tannenberg (1410) alongside the Poles and Lithuanians against the Teutonic Order.

The Mongols in the Near East

When Hülegü entered Syria early in 1260, King Het'um I of Cilicia, who had been subject to the Mongols since 1246, joined forces with him and induced his son-in-law Bohemund VI of Antioch to become tributary to the conquerors and accept a Mongol resident in Antioch, for which the prince was excommunicated by the papal legate at Acre. Hülegü left in March for Azerbaijan with the bulk of his army, leaving his general Kitbuqa, at the head of a rump force, to receive the surrender of Damascus and to confront the kingdom of Jerusalem. The government at Acre (mod. 'Akko, Israel) rejected demands for submission, and the Mongols sacked Sidon in August 1260 in reprisal for a Frankish raid on the interior. When the Mamlük Sultan Qutuz advanced against the Mongols, the Franks gave the Egyptian army safe-conduct and furnished it with provisions. The Egyptian defeat of Kitbuqa at 'Ayn Jälüt on 3 September relieved the kingdom of the Mongol threat, although Qutuz was murdered soon after and the new Mamlük sultan, Baybars, who was not bound by any agreement with the Franks, embarked on the piecemeal reduction of the Latin states of Outremer.

Like the sudden retreat from Hungary in 1242, which has usually been linked with the death of the Great Khan Ögödei, Hülegü's withdrawal from Syria in 1260 has been ascribed to the fortuitous demise of Möngke in the Far East, since both events would have required the Mongol princes and generals to assemble and elect a successor. It is at least as likely, however, that both the Hungarian and the Syrian campaigns were abandoned on logistical grounds, given the inadequacy of the available pasturage for the Mongols' vast numbers of horses and livestock. The same circumstance perhaps underlay the Ilkhans' efforts, from 1262 onward, to secure Western military collaboration against the Mamlüks. In part this was a response to the internecine conflicts following Möngke's death: menaced by the Golden Horde and other hostile kinsmen to their rear, and without access to the resources of the unitary Mongol Empire, the Ilkhans were

Mongols

compelled to seek external allies if they were to prosecute the dynasty's traditional mission of expansion. But just as in China, where ecological problems obliged the nomadic Mongols to rely upon Chinese infantry in large numbers, so in Palestine they proposed to recruit the assistance of Frankish troops who were more accustomed to the terrain and the summer heat.

The Ilkhans corresponded with successive popes and the kings of France and England, sometimes also with those of Aragon and Sicily. The Mongol ambassadors, who stressed their masters' favor toward Christians and Christianity, were frequently expatriate Italians who had entered the Ilkhans' service; on occasion, the ambassadors were Nestorian Christians like the monk Rabban Sawma, who in 1287–1288 visited Naples, Rome, and Paris, and met King Edward I of England at Bordeaux. In the event, these exchanges, which persisted until 1307 (or possibly later), bore no fruit, despite the fact that the Mamlūks posed a growing threat to the Latin states and eliminated them in 1291. In his crusading treatise, written in 1307 at the behest of Pope Clement V, the Armenian prince Het'um (a nephew of King Het'um I), strongly advocated Latin-Mongol collaboration, which he saw as offering his native country the best hope of avoiding a Mamlūk conquest. Their past record, however, rendered the Mongols an object of widespread distrust, and the papacy was reluctant to enter into firm commitments until the Ilkhan had accepted baptism. On crusade in 1271, prior to his accession, Edward of England tried unsuccessfully to coordinate his activities with the forces of the Ilkhan Abaqa; but otherwise the few instances of military cooperation involved the Franks of Outremer and Cyprus. Some Hospitallers from Margat may have reinforced Abaqa's army when it invaded northern Syria in 1281; and after Abaqa's grandson, the Ilkhan Ghazan (1295–1304), launched his first attack on the Mamlūks in 1299–1300, defeating the sultan and overrunning the whole of Syria and Palestine, King Henry II of Cyprus and the Templars tried to anticipate his return by occupying the island of Ruad (mod. Arwād, Syria), off the coast near Tortosa. Ghazan's later, and less impressive, Syrian campaigns, in 1301 and 1303, did without Frankish assistance altogether. Ghazan and his brother and successor, Öljeitü (1304–1316), the last Ilkhan to invade Syria, were both Muslim converts. Yet it was seemingly the obstacles to a successful war with Egypt, rather than religious considerations, that led Öljeitü's young son Abū Sa'īd (1316–1335) to make peace with the Mamlūk regime (1323).

Trade and Mission

The union of much of Asia under a single government (until 1261) facilitated long-distance commerce; the Mongol sovereigns themselves, moreover, far from passively presiding over the growth of trade, actively fostered it. Western merchants who were already active in the eastern Mediterranean traveled east in quest of high-value, low-bulk commodities such as silk, spices, pepper, and precious stones. There was a Venetian presence in the Persian city of Tabriz by 1263, and within a few years the Genoese had bases at Caffa (mod. Feodosiya, Ukraine) in the Crimea and Tana on the Sea of Azov. The Italians did not always enjoy friendly relations with the Golden Horde khans, who resented Genoese attempts to assert their own sovereignty within Caffa: the Mongols attacked the town in 1298, in 1308, and in 1345–1346, when Pope Clement VI sought to launch a crusade in its defense. At what point Western traders penetrated as far as China is uncertain. Although Marco Polo and his father and uncle were in China from around 1275, Polo's book suggests that all three were in Qubilai's service; we do not know to what extent they engaged in commerce on their own account. The heyday of the Western mercantile presence in the Far East, for which physical evidence has survived in the form of two Latin tombstones in the city of Yang-chou (dated 1342 and 1344), was relatively shortlived, from 1300 to 1350. The Black Death probably dealt a severe blow to Latin residents in China and Central Asia, while further west the Mamlūks seized Ayas (mod. Yumurtalık, Turkey) in Cilicia (1337), one of the termini of the trans-Asiatic routes, and in Persia the turbulence that followed the collapse of the Ilkhanate made conditions for trade less propitious.

Latin missionaries frequently accompanied Latin traders. The Mongol Empire and the khanates that superseded it were characterized by religious pluralism; and although certain taboos in Mongol customary law fell particularly heavily on the adherents of one or another faith (e.g., the prohibition of the Islamic method of slaughtering animals for food), generally speaking each of the various confessional groups was permitted to practice its faith in its accustomed fashion. In return for praying for the imperial family, Christian and Buddhist monks and priests and Muslim scholars enjoyed exemption from certain taxes, military service, and forced labor. For Christians in lands that had formerly been subject to Islamic rule, the new regime represented a marked amelioration in their condition; Western

missionaries too were now able to preach uninhibitedly. The earliest known Latin missionary in Mongol Asia was the Franciscan William of Rubruck (1253–1255), though the lack of an adequate interpreter and the fact that he was mistaken for an envoy of King Louis IX of France caused him considerable difficulty. By the 1280s, however, Franciscans and Dominicans were established in the territories of the Golden Horde and the Ilkhanate. The Franciscan John of Montecorvino was the first Western missionary to enter China, in about 1294. Pope Clement V subsequently placed him at the head of a new archdiocese of Khanbaligh (1307), with jurisdiction over all the Mongol dominions, and sent out a group of friars to act as his suffragans. In 1318 Pope John XXII withdrew Persia and India from Khanbaligh's authority, creating a second archiepiscopal see at Sulṭāniyya, one of the Ilkhan's residences. The Latin missionary effort flourished for a few decades, though in China the friars seem to have made no impact on the indigenous Han population; conversions for the most part involved Nestorians and other eastern Christians, like the Orthodox Alans, transported from their home in the Caucasus to form a corps of the imperial guard. Reports of high-ranking conversions, designed in part to secure reinforcements, were often also grounded in misapprehensions about the Mongol rulers' attitude toward religious matters. With the definitive conversion to Islam of the Ilkhans (1295), the khans of the Golden Horde (1313), and the Chaghadayid khans (c. 1338), Christian proselytism grew increasingly hazardous, and several friars were martyred in the 1320s–1340s. The route to China seems to have been abandoned, and when the Jesuits entered China in 1583, the earlier missions had fallen completely into oblivion.

Monophysitism

A theological doctrine that emphasizes the unity of divinity and humanity in Jesus Christ in one nature. The term derives from Greek *monos*, "alone" or "single," and *physis*, "nature."

In the late antique period monophysite beliefs were strongest in the eastern parts of the Byzantine Empire. However, at the Fourth Ecumenical Council, held at Chalcedon in 451, the church of the empire adopted the dyophysite christological dogma, that is, the doctrine of two natures, divine and human, in Christ. During the reign of emperor Justinian I (527–565), the monophysites of the East broke away from the Greek Orthodox, or Melkite (imperial) church, and organized independent churches: the Coptic Church in Egypt, and the Syrian Orthodox (Jacobite) Church in Syria and Mesopotamia. The Armenian Church accepted monophysitism in two synods in Dvin (506 and 552).

In the Middle Ages, numerous attempts were made between the Armenian Orthodox, Syrian Orthodox, and Greek Orthodox churches to find a compromise and to restore ecclesiastical unity, but these met with little success. During the negotiations between Byzantine emperors and the Armenian *katholikoi* (primates) on ecclesiastical reunification in

Monotheletism

1165–1193, the Greek Orthodox Church demanded the renunciation of monophysite christology. Remembering occasional persecutions during Byzantine rule in Northern Syria (969–1084), the Syrian Orthodox and Armenians appreciated the respect for their religious autonomy by the Latins in Outremer. Some of their patriarchs and *katholikoi* were on good terms with the Latin hierarchy, but monophysitism remained the main obstacle to a definite ecclesiastical unification of these churches with the Latin church. Neither the temporary union between the Armenian Church and Rome, concluded for political reasons on the occasion of the coronation of Leon I in Sis in January 1199, nor the contacts between the Syrian Orthodox patriarch Ignatios II (1222–1252) and the Dominicans in 1236 and 1246 resulted in a formal renunciation of monophysitism by these churches.

Monotheletism

A doctrine that recognized one will (Gr. *thelesis*) and two natures in Christ.

Monotheletism originated as an attempt to secure church unity at a time when the existence of the Byzantine Empire was being threatened by Persian invasions. It was meant to reconcile the Chalcedonian beliefs of the Byzantine imperial church, which recognized two natures in Christ, with those

of the monophysite churches, which held to a single nature. An edict of Emperor Heraclius (635) spoke of one will in Christ, in accordance with the teaching of Pope Honorius I. Monotheletism found few adherents, and was opposed by the theologian Maximos the Confessor and Pope Martin I. The doctrine was condemned at the Sixth Ecumenical Council in Constantinople (680–681). However, it was accepted by the Maronites of Syria, who held to monothelete beliefs until their union with the Roman Church at the end of the twelfth century.

Mont Gisard, Battle of (1177)

A victory of the army of the kingdom of Jerusalem under King Baldwin IV and Reynald of Châtillon over an invasion of the kingdom by Saladin, who had launched a diversionary attack from Egypt soon after Raymond III of Tripoli and Philip of Flanders marched to besiege Hama in Syria in November 1177.

A large proportion of the armed forces of Jerusalem and of the military orders had gone north to besiege Hama, and so Baldwin summoned all remaining able-bodied men to muster at Ascalon (mod. Tel Ashqelon, Israel); Saladin bypassed the city and moved inland toward Jerusalem, sending detachments to raid Ramla and Lydda and ambush Franks who were still arriving for the muster. On the afternoon of 25 November, the feast of St. Catherine of Alexandria, the Franks surprised and routed Saladin’s main force at a hill known as Mont Gisard (mod. Tell Jazar) 8 kilometers (5 mil.) southeast of Ramla, before it was able to form up in battle order. With most of his army dispersed and his base at El-‘Arish overrun by Bedouin, Saladin retreated to Egypt. A Benedictine priory dedicated to St. Catherine was built on the battle site as an act of gratitude and commemoration.

Montesa, Order of

A military religious order established in 1317 in the kingdom of Valencia by agreement of the pope and the Aragonese Crown.

The Order of Montesa was founded as a consequence of the dissolution of the Order of the Temple in 1312. It did not prove possible to transfer the Templars' domains in the Crown of Aragon to the Order of the Hospital of St. John, as had been desired by Pope Clement V: King James II of Aragon was opposed to the strengthening of the already considerable power of the Hospitallers in his realms. After lengthy negotiations, Pope John XXII largely complied with the king's wishes in 1317. The monarch had to abandon the idea of a great Aragonese order backed by Templar and Hospitaller properties in favor of a more limited project confined to the kingdom of Valencia. The Hospitallers were ready to contribute to this plan with their Valencian territories (except for the commanderies of Torrente and the houses of Valencia) in exchange for the Templar domains in Aragon and Catalonia. As the central headquarters of the future order, the king offered the village and castle of Montesa on the extreme southern border of the kingdom, facing possible Muslim attacks from Granada.

The new institution was modeled on the lines of the Order of Calatrava, and it was linked to the Morimond filiation of the Cistercian Order through the monastery of Santes Creus in Catalonia. The new foundation was not realized until July 1319, due to all sorts of difficulties with Calatravans and Hospitallers alike. The initial stages were difficult, but the firm support of the Crown was a decisive asset for success. The general chapter held at San Mateo in 1330 might be considered the end of the formation period. The number of brethren had risen to forty. A network of commanderies was given final form; the share of the master of the order was the bailiwick of Cervera, situated in the north of the kingdom near the king's court and not on the frontier. Although theoretically linked to the papacy, the Order of Montesa was a monarchical foundation, and as such it was an unrelenting supporter of the Aragonese Crown in internal conflicts and external projects of expansion. King Peter IV was able to rely on the members of the order against the rebels of the Unión (a noble fraternity whose aim was to defend aristocratic privileges) and in the wars against Castile. King John I found them at his side when the Doria and Arborea families rebelled in Sardinia. King Alfonso V received important help from the order in his

Neapolitan campaigns. This tradition of support to the monarchy continued under the Habsburg dynasty, and the Crown always guaranteed the strength of the order. When in 1400 the small Order of St. George of Alfama became unfeasible as an independent institution, the king had it incorporated in Montesa. The plain red Greek cross of Alfama was added to the white clothing of the Montesan knights from that time onward.

Montesa was the only order in the Spanish kingdoms not to be absorbed by the Crown at the time of the Catholic Monarchs, Ferdinand II of Aragon and Isabella I of Castile. As an Aragonese institution, it posed more difficulties to incorporation than its Castilian counterparts. King Philip II of Spain managed to integrate Montesa into the institutions of the Crown in 1587. The order lingered on into the nineteenth century, when its status was reduced to that of an order of merit. Previously the central headquarters had been transferred to the city of Valencia after an earthquake had destroyed the castle of Montesa in 1748. Nature had forced a move at a time when it had long ceased to have any significance as a frontier stronghold against the Muslims.

Montferrat

Montegaudio

See Mountjoy, Order of

Montferrat

A marquisate in northwestern Italy, whose ruling family came to play a major role in the politics of the kingdom of Jerusalem and of Frankish Greece in the late twelfth and early thirteenth centuries.

The lands of Montferrat (mod. Monferrato, Italy) on the banks of the River Tanaro between Turin and Tortona were established as a marquisate around 1080 as a result of a partition of the lands of the Aleramid family. The marquises were generally allies of the Holy Roman Emperors against the increasingly powerful city of Lombardy. Marquis William V “the Old” (d. 1191), a kinsman of both Emperor Frederick I Barbarossa and King Louis VII of France, was a participant in the Second Crusade (1147–1149). His exalted connections were the main reason why his eldest son, William Longsword, was chosen as a husband for Sibyl, sister and heir to the leper king Baldwin IV of Jerusalem in 1176. However, Longsword died after a marriage of less than six months (June 1177), leaving a posthumous son, Baldwin V.

In the meantime the family’s political interests had turned against Frederick I. William the Old arranged a marriage between his youngest son, Ranier, and Maria the Porphyrogenete, daughter of the Byzantine emperor Manuel I Komnenos, as part of a wide-ranging attempt by Byzantium to forge alliances involving Outremer and Western powers opposed to Frederick (1180). After Manuel’s death, Maria and Ranier, who had received the title Caesar, opposed the regency government installed for Maria’s half-brother, the young Alexios II. They eventually fell victim to a coup mounted by the usurper Andronikos Komnenos, who had them executed in 1183. In the same year the increasingly infirm Baldwin IV of Jerusalem had William Longsword’s son Baldwin V crowned as joint king. The young Baldwin succeeded as sole ruler on the death of the leper king in 1185, with Raymond III of Tripoli as regent.

William the Old came to the Holy Land in order to safeguard the interests of his grandson. He was given lands from the royal demesne and remained in the kingdom after the death of the young king (1186). William supported the new king, Sibyl’s second husband, Guy of Lusignan, and was taken prisoner by Saladin at the battle of Hattin (1187).

Shortly afterward William’s second son, Conrad, arrived at Tyre, after having spent several years in Byzantine service. He distinguished himself in directing the city’s resistance to Saladin and also secured his father’s release from captivity. Conrad’s success as a war leader during the efforts of the Third Crusade (1189–1192) to defend the kingdom of Jerusalem won him the support of those who were opposed to the continued rule of Guy of Lusignan after Sibyl’s death. With their encouragement Conrad married Isabella I, Sibyl’s half-sister (November 1190), and was eventually elected king. He was assassinated shortly after this settlement (1192). His daughter, known as Maria la Marquise, succeeded her mother on the throne of Jerusalem. Through Maria’s daughter Isabella II, who married Emperor Frederick II, the throne of Jerusalem passed from the Montferrat family to the Staufen dynasty.

Boniface I, the third son of William the Old, succeeded to the marquisate of Montferrat on the death of Conrad. As the chief leader of the Fourth Crusade (1202–1204), Boniface expected to be elected as Latin emperor of Constantinople after the crusade army overthrew the Byzantine emperor Alexios IV in 1204. When Baldwin of Flanders was elected instead, Boniface and his followers went off to conquer Thessalonica (mod. Thessaloniki, Greece) and central Greece. He married Margaret of Hungary, widow of the emperor Isaac II Komnenos, which brought him support from the Greek population. Boniface was killed in a Bulgarian ambush in 1207. He left his Greek lands to his young son by Margaret, Demetrius, who was recognized as king of Thessalonica by Emperor Henry in 1209. Demetrius’s kingdom was gradually overrun by the ruler of the Greek successor state of Epiros, Theodore Angelos Komnenos Doukas, and by 1222 he had fled to Italy to seek assistance. In 1224 Thessalonica itself fell to Theodore’s troops, and a crusade mounted by William VI of Montferrat (Boniface’s elder son) proved completely abortive.

Demetrius later assigned his claim over Thessalonica to Emperor Frederick II, who relinquished it in 1239. The descendants of William maintained their own claims until 1284, when the Byzantine emperor Andronikos II Palaiologos married Irene, great-granddaughter of William VI. Their son, Theodore Palaiologos (1305–1338), thus became the founder of the second Montferrat dynasty.

Montfort

A castle in western Galilee (in mod. Israel), known in Arabic as Qal’at al-Qurain, belonging to the Teutonic Knights, who called it Starkenberg (literally, “strong mountain”) in German.

Montfort was built by the Teutonic Order from 1226 onward on the land that had belonged to the Seigneurie de Joscelin, the lordship the order had purchased from the heirs of Joscelin III of Courtenay. The building work was carried on by German crusaders until their departure in spring 1228. An annual subsidy of 100 bezants contributed by Prince Bohemund IV of Antioch in June allowed work to resume, and the following year Pope Gregory IX issued an appeal for additional funds.

By the mid 1240s, Montfort had become the main seat of the lordship and was the Teutonic Order’s principal administrative center outside Acre (mod. ‘Akko, Israel). In May 1266 the castle was attacked unsuccessfully by the Mamlūks. In 1268, all but ten of its villages were lost to them and, to compensate for the loss of production, in July 1270, the order leased Manueth from the Hospitallers. In June 1271, Sultan Baybars I brought up siege engines and attacked. The faubourg (suburb) fell on 11 June and the outer ward the following day, at which point the garrison surrendered and departed to Acre. The castle was then demolished.

The ruins occupy a rocky spur between the Wadi al-Qarn on the north and a tributary valley on the south. Two main phases are identifiable. The first consisted of a massive D-shaped keep, some 20 meters (65½ ft.) wide, which effectively blocked access down the spur from the east and was preceded by two rock-cut ditches. Behind this there

extended down the spur a rectangular inner ward, some 46.5 by 17 meters (152½ by 55½ ft.). In a second phase, the inner ward was almost completely filled with a system of groin vaults, providing service areas at ground level and a chapel and residential quarters at first-floor level. The inner ward was also extended similarly further west, and an outer enceinte was built downhill to enclose it on the north, west, and possibly south. In the same period, a mill standing below the castle on the north was converted into a residential hall, possibly to serve as a guesthouse.

Montfragüe

See Mountjoy, Order of

Montjoie, Abbey of

The Premonstratensian abbey of St. Samuel was situated at the traditional site of Samuel’s tomb at the place known as Montjoie (Lat. *Mons Gaudii*), northwest of the city of Jerusalem.

The foundation of the Premonstratensian abbey was attributed to King Baldwin II of Jerusalem (1118–1131) in a later confirmation of its rights issued in 1185. It seems, however, that Baldwin’s original intention had been to

establish a Cistercian monastery house at the site. St. Bernard of Clairvaux declined the king's gift of the site and an endowment for a foundation, citing the danger of pagan (i.e., Muslim) attacks and the intemperateness of the climate. Bernard passed on the site to the Premonstratensians, who probably settled on Montjoie before the death of Baldwin II (1131); the abbey, however, was only consecrated in 1152 and not mentioned in documents until 1156. According to these, this first settlement of Premonstratensians in Outremer came about with the significant support of the Latin patriarch, Stephen of Chartres, King Baldwin II and Queen Melisende, and also the Templar knight Andrew of Montbard.

The abbey of St. Samuel was a daughter house of the abbey of Prémontré itself. Its abbot had the status of a suffragan of the patriarch of Jerusalem, with the right to a cross but not a miter or a ring. The names of five abbots are known: Theoderic (1145) and Radulf (1156) in the twelfth century, Giles (1220) and John (1235–1263) in the thirteenth, and the undated Hugh. The rights and possessions of the abbey of St. Samuel, including its church on Montjoie, were confirmed by King Baldwin V in December 1185. The abbey fell to Saladin by the end of the year 1187, and it seems unlikely that the Premonstratensian canons ever returned to St. Samuel's from Acre (mod. 'Akko, Israel), where they had taken refuge. Their claim to the monastery's possessions, however, was restated by Abbot Gervase of Prémontré in letters to the patriarch of Jerusalem and Emperor Frederick II between 1217 and 1227.

The Premonstratensians remained in Outremer after 1263, because two brothers of St. Samuel attested to the confirmation of a document in the house of St. Samuel in Acre on 20 March 1279. It thus seems that the abbey of St. Samuel in Acre probably existed until the fall of the city (19 May 1291).

Montpellier, Council of (1195)

A church council of the prelates of the province of Narbonne, summoned by the papal legate Michael, at Montpellier in southern France.

The council reaffirmed many of the canons of the Second and Third Lateran councils and approved matters set before it by the legate. Legate and council condemned heretics, those providing materiel to Saracens, and lawless mercenaries and their supporters. The legate ordered the bishops to force lenders to release borrowers from oaths to pay interest if the borrowers were going to Spain to fight the Muslims. He also reaffirmed restrictions on Jews and Saracens living among Christians and offered protection to non-Christians who converted to Christianity. In view of Christian reverses in the Holy Land and Spain, clergy and laity alike were urged to show moderation in dress as a sign of spiritual reform. For the same reason, the legate urged the clergy to fast.

Legate and council sought mainly to establish order and orthodoxy in the province and to support the struggle against Islam elsewhere.

Montpellier, Council of (1215)

A church council held in January 1215 under the presidency of the papal legate Cardinal Peter of Beneventano.

The Albigensian Crusade (1209–1229) had led to the death of King Peter II of Aragon and the conquest of much of southern France by Simon of Montfort. Pope Innocent III sent the legate Peter in order to end the fighting and to prevent the nonjudicial expropriation of local princes, but also to continue clerical reform and the suppression of heresy.

Along with other dignitaries, five archbishops and twenty-eight bishops were in attendance. The council reaffirmed canons of recent Lateran and provincial councils regarding heresy, lawless mercenaries, and clerical extravagance. The prelates wanted to award all the conquered lands in France to Simon of Montfort, but Cardinal Peter ruled that the pope must first be consulted. Innocent in turn submitted the matter to the Fourth Lateran Council, where the lands were awarded to Simon.

Montréal

A castle and town in Transjordan, also known in Latin as Mons Regalis (mod. ash-Shaubak, Jordan). The castle was constructed by King Baldwin I of Jerusalem in 1115.

Sited on a conical hilltop, Montréal was oval in plan with at least two walls, one inside the other. The knights and sergeants of the garrison formed the nucleus of a Frankish settlement, which appears to have been located inside it. The parish church, also inside the castle, apparently belonged to the Temple of the Lord in Jerusalem; over its principal door was an inscription mentioning a viscount, Hugh, and the date 1118. Documentary and archaeological evidence also indicate the existence of a suburb, extending down the valley and including Eastern Christian inhabitants, who may have used a smaller chapel standing between the castle's inner and outer gates. From this a rock-cut tunnel led down to the castle's water supply.

The chronicler William of Tyre records that Pagan, a former royal steward or butler, received lordship of the land beyond the Jordan after the revolt of the previous lord, Roman of Le Puy, against King Fulk in 1132. It is not entirely certain whether Roman's fief included Montréal, since a certain Pagan of Montréal appears in charters in 1126 and 1132. By 1142/1143, however, when Pagan the Butler started building the castle of Kerak in Moab, his lordship of Montréal extended from the river Zarqa in the north to the Red Sea in the south, including Amman and the Balqa region in addition to Kerak, Montréal, and Wadi Musa. In 1161, King Baldwin III gave the lordship to Philip of Milly in exchange for Nablus. By 1169, however, Philip had joined the Templars and was succeeded by Walter of Beirut, who was married to his daughter, Helena. When Helena and her daughter died in 1174, the lordship passed briefly to Miles of Plancy, husband of her sister Stephanie, who was murdered the same October. Stephanie was finally remarried, in 1177, to Reynald of Châtillon.

Montréal and its lordship occupied an important position controlling the caravan routes between Egypt, Syria, and the Hijaz. It served as forward base for Reynald's attacks on Aila in 1181, 1182–1183, and 1184; and in 1182 and 1187 the lands around it were devastated by the Ayyūbids. After the battle of Hattin, it held out until spring 1189, when al-ʿĀdil allowed the defenders a safe conduct to Christian-held territory. In 1217, the German pilgrim Thietmar found lodgings with a Frankish widow still living there, who introduced him to the Bedouin guides who would escort him to Mount Sinai.

Moriscos

See Mudéjars and Moriscos

Morosini, Thomas (d. 1211)

Latin patriarch of Constantinople (1204–1211).

A member of the Morosini or Mauroceni family of Venice, Thomas was only a sub-dean when he was elected Latin patriarch of Constantinople (mod. İstanbul, Turkey) by the Venetians, as a result of the agreement of March 1204 between the Frankish crusaders and the Venetians and the ensuing conquest of Constantinople by the Fourth Crusade (1202–1204).

Morosini arrived in Constantinople in midsummer 1205. Pope Innocent III objected to the uncanonical manner of his election, but finally accepted the *fait accompli*. Negotiations with the Greek clergy in 1206 did not prevent the Byzantines from electing their own patriarch in exile, Michael Autor-eianos, in Nicaea (mod. İznik, Turkey) in 1208. On 17 March 1206 Morosini and Benedict of St. Suzanne signed a convention with the new Latin emperor, Henry of Flanders, regarding the partition of church property. On 2 May 1210 Morosini made an agreement with the barons of the kingdom of Thessalonica regarding the kingdom's churches. He tried to keep the Latin church firmly under Venetian control. This attempt was countered by Pope Innocent III, who sent his legates Benedict of St. Suzanne and Peter Capuano to Constantinople, and appointed non-Venetian canons (1205–1210). In 1208, Morosini was accused of misappropriating funds. Being at odds with Emperor Henry, the pope, the French, the Greeks, and occasionally the Venetian *podestà* (plenipotentiary representative of the doge) Marino Zeno, Morosini did not succeed in solving the problems of the new founded Latin patriarchate. He died in June or July 1211.

Motivation

The reasons that so many people went on crusade have been discussed by historians since the time of the First Crusade (1096–1099). No single explanation will suffice for all ranks of society and over such a long period, but generally historians have favored either economic or religious motivation as the driving force.

Crusade expeditions have been interpreted as migration from a western Europe under severe pressure from a growing population. The period of the earlier crusades saw the growth of towns and cities and the bringing of marginal lands under cultivation. Since land was the basis of wealth and status, competition for it was intense, and this competition was exacerbated by the widespread adoption of inheritance customs, such as primogeniture, that were intended to prevent the fragmentation of family lands. It was once argued that many of the combatants were landless younger sons looking to make their fortunes in Outremer. However, the systematic study of participants has shown that most were well established in their homelands and undertook the expedition with the intention of returning at the end of it. Furthermore, crusading was costly for a knight: he had to equip himself with arms and armor, and to take with him servants and pack animals for whom he would have to provide throughout the campaign. This capital expenditure might amount to five times his annual income and could only be achieved through selling or mortgaging land. The prospect of realizing any return on this investment was small.

Peasants and humbler participants in the early expeditions had much less to lose by going on crusade, and they were much less provident in their preparations. The trouble they caused when they set out in 1096, by looting supplies in the market towns they passed through, is evidence of this. Some of them may well have been motivated by hopes of a better life, for the harvest in 1095 was the last in a series of poor ones affected by drought. Nevertheless it is doubtful that such economic motivation was enough on its

Crusaders prepare for war. (Bettmann/Corbis)

own to take them all the way to Jerusalem: it is probable that the hardships of the long march led many to desert, and those who remained with the expedition were motivated in other ways.

Religious faith was at least part of most people's motivation to go on crusade. When he preached at Clermont in 1095, Pope Urban II used certain themes that tapped into popular Christian beliefs. The most potent of these themes was the appeal to deliver Jerusalem from the hands of the infidels. Jerusalem, the city where Jesus Christ had lived and died, was the most important of pilgrimage centers. For some 750 years, pilgrims had traveled to the Church of the Holy Sepulchre as the spiritual journey of a lifetime. In the eleventh century, there was a widespread interest in relics, which intensified the desire to journey to shrines both local and distant. To see the city that had witnessed the most important events of the Gospels was the greatest of these pilgrimages, and there are accounts of thousands going

together on pilgrimage to Jerusalem, for example, in 1064–1065. However, access to the important site of the Holy Sepulchre became difficult during the Saljūq occupation of Jerusalem in the last quarter of the eleventh century, and there were emotive accounts of attacks on Christian pilgrims.

Thus, quite simply, crusading was for some an opportunity to complete the greatest pilgrimage; for others the idea of making safe the routes to Outremer was an incentive. This was as true for the lesser people as for the arms bearers: Peter the Hermit evidently told his own story of being beaten up near the Church of the Holy Sepulchre, and of his interview with the patriarch of Jerusalem, who appealed for help to protect and defend the shrine. It is also probable that some participants were inspired by millenarian ideas; there had been a widespread expectation that, as told in the Book of Revelation (20:2–7), there would be the Second Coming after a thousand years. It had not happened, and one explanation was that Jerusalem was not in Christian hands, and Christ would

Motivation

not come again until it was. The importance of a Christian Jerusalem can be seen at the time of the Third Crusade (1189–1192): the capture of the city by Saladin roused the people of western Europe to an armed response after some forty years, following the Second Crusade (1147–1149), in which crusading activity had been desultory.

The idea of crusading as a development of pilgrimage was encouraged by the granting of the papal indulgence. For many, pilgrimages had been undertaken as penitential journeys, which they made in the hope or expectation that by undergoing suffering on earth they could offset punishment after death. Popes, starting with Urban II at the Council of Clermont, declared that undertaking a crusade was sufficient penance for all the sins of an individual, whether he died on the expedition or survived. In an age when people had a clear concept of sin, this indulgence offered an escape from the inevitability of an afterlife where all their sins would be punished for a finite time in purgatory, or ultimately by everlasting torment in hell. For some individuals, perhaps many, the hardships of the expedition and even a violent end were prices worth paying for admission to heaven after death. By granting indulgences, popes stressed the penitential nature of the campaigns, and this meant that they could not limit recruitment to arms bearers only; women, clerics, the elderly, and children wanted to participate in them, probably welcoming the new idea of a pilgrimage under armed escort, for traditionally pilgrims had not borne weapons.

Pope Urban II could not prohibit the participation of non-combatants, but it was not his intention to encourage them, and in the proclamation of the first crusade expedition he was very specific in the language he used to elicit the response he wanted. He appealed to the pride of the knights of the West and invited them to wield their weapons in the cause of Christendom. This “sanctified violence” was a deliberate departure from the idea of pilgrimage, and it had its critics from the beginning of the crusading movement. But the radical idea of fighting, killing, and dying to liberate the holy places of Jerusalem and the oppressed Eastern Christians was a powerful motivator to a particular social stratum: the lords and knightly ranks. Urban II himself came from such a background and well understood how to couch his appeal.

From the pope’s point of view, a crusade was a way of harnessing the aggressive energies of the secular lords and directing them away from the disruption of order and justice in their localities. The papacy in its reformed vigor of the eleventh century had previously played a similar political

role by preaching the Peace of God and the Truce of God, both attempts to curb the violent behavior of the knightly ranks. The effectiveness of this new appeal was immediately seen, not only in the numbers of knights who took the cross, but also in the way they set about preparing for their departure by resolving disputes with their neighbors and eliciting the protection of local ecclesiastical and monastic foundations for their lands and families for the duration of the expedition. These transactions are preserved in many charters of the period. From the knights’ point of view it is easy to see the attraction of the pope’s proposition: they were trained for fighting and very little else; now for the first time they were invited to fight with divine approval, as expressed in the papal indulgence.

When a lord decided to go on crusade, his household would be expected to follow him: although for each of them it was technically a free choice, the bonds of loyalty were strong. Thus even a relatively obscure knight would be accompanied by a squire, and probably at least one body servant and a groom, whose freedom to go or stay was inhibited by their social conditioning. Although throughout the crusades successive popes discouraged the participation of women, they are often recorded as accompanying their fathers and husbands, and again this reflects society’s expectations of them, which were submission and obedience rather than independence and exercise of choice. Very few women can be identified who made autonomous decisions to go on crusade, and fewer still traveled without the protection of a male family member. Feudal and familial loyalty accounts for the motivation of many among the upper ranks of the crusading expeditions.

Within this same milieu, there is strong evidence for the evolution of family traditions of crusading. News of the preaching of crusade was spread rapidly along family communication lines, incidentally highlighting the important role women played in both transmitting the message and in fostering enthusiasm to respond. Among participants in the early crusades can be found several kinship groups: arms bearers linked by blood or by marriage. Preeminent examples in the first decades of the crusades are the brothers Godfrey of Bouillon, Eustace and Baldwin of Boulogne, and the Montlhéry clan of the Ile-de-France.

Some or all of these motives coexisted in the mind of any crusader, and in each case the balance would be unique. There are examples of prominent crusaders who had committed murder and for whom, therefore, the fear of damna-

tion and the promise of the indulgence were powerful incentives. Others were attracted by the prospect of settling abroad: on the First Crusade these included Raymond of Saint-Gilles and Bohemund of Taranto, but in both cases there was more to crusading than territorial ambition. Raymond was a warrior experienced in fighting the Muslims in Iberia, and perhaps saw himself as commander in chief of the expeditionary forces; Bohemund perceived an opportunity to continue preying on Byzantine territories. Just as the leaders' motives were complex, so were those of the lesser crusaders. Many were enticed by the idea of pilgrimage; others were lured by the prospect of adventure. Some, no doubt, were in trouble from the law; some were trying to evade creditors; some sought relief from the monotonous grind of a peasant's existence. Finally, it should be remembered that throughout the crusades, though many thousands of people were motivated to travel to Outremer, Greece, or the Baltic regions, many more stayed at home.

Mountjoy

See Montjoie, Abbey of

Mountjoy, Order of

The military Order of Mountjoy (Sp. *Montegaudio*) was most probably established in 1173 by a Galician nobleman named Rodrigo Álvarez de Sarria and transferred to Aragon (Alfambra) shortly thereafter.

Rodrigo had professed in the Order of Santiago, but was allowed to found an order of stricter observance by the papal legate, Cardinal Hyacinth (later pope as Celestine III). From the 1170s the brethren followed a modified form of Cistercian observance, and the order, its possessions, and its denomi-

nation (after the site of Mons Gaudii close to Jerusalem) were confirmed by Pope Alexander III in May of 1180. The order was particularly fostered by King Alfonso II of Aragon, who hoped to gain assistance in securing recently conquered areas in southern Aragon. From 1177 the institution's spiritual center was considered to be in the Holy Land, where it received donations from King Baldwin IV of Jerusalem and other magnates. The order also acquired assets in Italy, but despite its title, its economic and administrative headquarters always remained on the Iberian Peninsula, particularly in Aragon. After its founder's death (probably in 1188), the order was amalgamated with the redemptionist Hospital of the Holy Redeemer of Teruel and henceforth committed itself to devoting a quarter of its revenues to the redemption of Christian captives. The brethren's Aragonese possessions were incorporated by the Templars in 1196, while a dissident group led by Rodrigo González established itself in the castle of Montfragüe (Monsfrag) on the river Tagus. It was known as the Order of Montfragüe, and was ultimately amalgamated with the Order of Calatrava in 1221.

Mozarabs

The Christian minority of Muslim-dominated Iberia that adopted the language and outward manifestations of Arabo-Islamic culture came to be referred to as Mozarabs (from Arab. *must'arib*, "would-be Arab") in the later Middle Ages.

In the centuries following the Islamic conquest of Iberia (711) the overwhelming majority of the native population converted to Islam, leaving a small but cohesive Christian minority, strongest in Toledo (the Visigothic metropolitan) and Córdoba (the Muslim capital). Offered security in exchange for submission by the Islamic pact of *dhimma* (the "pact of protection" granted by Islam to non-Muslims), Christians were free to live and worship according to their

traditions provided they did not affront Islam or challenge its authority. An episcopal structure survived at least into the ninth century, but family-dominated monasteries seem to have comprised the nuclei of piety.

Social pressures resulting from conversion to Islam and the encroachment of Arabic culture, and which precipitated the incidents of the “voluntary martyrs” of Córdoba, are reflected in the writings of St. Eulogius (d. 858) and his contemporary Paul Alvar. These martyrs can be divided into two types. Technical apostates, that is, Muslim men’s children who had been raised under the influence of a Christian mother or relatives, were put to death if they persisted in the Christian faith. Deliberate martyrs, by contrast, were Christians who provoked their own deaths by publicly insulting the Islamic faith and subsequently refusing the various offers made by the Muslim authorities to secure pardon. In the decades following the death of Eulogius, Mozarabs were involved in the *muwallad* (convert family) rebellions of ‘Umar ibn Hafṣūn. Eleca, the last bishop of Zaragoza, left for the Asturian capital of Oviedo in 893. Yet many Christians occupied important posts in the Muslim administration through the period of the caliphate (to c. 1035); the tenth-century courtier, scientist, and diplomat Bishop Reccemund (Arab. *Rabī‘ ibn Zayd*) is an example. Some also chose to emigrate, settling in the frontier zone of the river Duero, where examples of their churches survive to this day.

With the fragmentation of the caliphate and the rise of the independent Taifa kingdoms, the politico-military initiative passed to the Christian principalities of the Iberian Peninsula, provoking profound changes in the situation of the Mozarabs. Sisnando Davídez, a Portuguese Mozarab, is emblematic of this age. Having served as an official of the Muslim ruler of Seville, he became the first governor of Coimbra for Ferdinand I of Castile and León (1064) and of Toledo for his son Alfonso VI (1085), also serving as envoy to the courts of Zaragoza and Granada. In a famous speech to the Taifa king ‘Abd Allāh ibn Bulughghīn, he enunciated Alfonso’s program of Christian reconquest.

With the arrival of the Almoravids and their domination of the Taifa kingdoms, the position of Mozarabs under Muslim domination deteriorated. Allegations that they had abetted the famous raid of Alfonso I of Aragon into the south of Spain in 1132 and thus abrogated their pact of protection led to a mass deportation to North Africa, where they and their descendants remained until the advent of the Almohads in the late twelfth century.

By the late eleventh century the Mozarabs clearly comprised a distinct ethnic group, a fact recognized in the privileges and promulgations of the Aragonese and Castilian kings. Despite their contacts with Christendom abroad they had remained isolated from Latin innovations and maintained, for instance, their own “Visigothic” liturgy. This soon became a target for agents of the Roman Church, notably the Cistercians and Pope Gregory VII, who provoked Alfonso VI to ban the rite following a rigged trial by ordeal to which it was subjected in 1077. Increasingly marginalized in Toledo itself, some Mozarabs emigrated to the Cid’s principality of Valencia or to Aragonese lands, where they joined local Mozarabs and refugees whom Alfonso I had led back from his incursion into Almoravid territory.

Thanks to their facility with the Arabic language, learned Mozarabs played an important role in the transmission of classical and Arabic learning to the West, notably through the translation activity that took place in Toledo. But apart from there, within a century or so Mozarabs seem to have been all but completely assimilated by the culture of the Latin Christian settlers who arrived with the Christian conquests. In 1500 the Mozarabic rite was rehabilitated, undoubtedly because it could no longer be construed in any way as a threat to the Roman Church.

Mudéjars and Moriscos

Mudéjars was the name given by Christians to Muslims living in Christian Iberia. They were variously descended from indigenous people (who had converted to Islam after the Muslim conquest), from Arab and Maghribian immigrants (who continued to arrive even after the Christian conquest), and from African slaves. Mudéjar converts to Christianity and their descendants were known from the late sixteenth century as Moriscos, an adjective derived from *moro*, Castil-

ian for “Muslim” (referring originally to Maghribians). Previously, converts had been known as New Christians, in contrast to Old Christians, that is, those of pure ancestry.

In Catalonia, Castile, Navarre, and Portugal the numbers of Muslims were fairly modest, but in Aragon, Valencia, and Granada they formed a significant minority. In Valencia and Granada Mudéjar society was broadly variegated and resisted acculturation, whereas elsewhere cultural integration was more profound. Until the last years of the fifteenth century Muslims had, for the most part, escaped the types of pressures to which the Jewish minority of the Iberian peninsula had been subjected, although in that century laws relating to “purity of blood” that restricted professional and social activities made it increasingly difficult to sustain a middle class. In Castile Muslims tended to be an urban minority, while in Aragon and Valencia they were primarily craftsmen and farm laborers, comprising nearly the whole of the population in some areas. Arabic was spoken alongside Christian vernaculars throughout the peninsula, and Islamic legal and religious practices persisted, although not without local variations (and increasing syncretism from 1500 onward). Acculturation can be seen in the literature of Mudéjars and Moriscos, which was known as *aljamía*: literary, polemical, devotional, and private works written in Romance languages but with Arabic characters.

With the conquest of Granada by Castile in 1492 the entire Iberian Peninsula was brought under Christian rule, heralding a hardening of attitudes toward non-Christians and coinciding with restrictive legislation aimed at Jews. In Portugal in 1497 Muslims were given the option of conversion, expulsion, or death, leading many to emigrate to Castile. In 1498 Archbishop Cisneros of Toledo increased pressure on Castile’s Muslims to convert, sparking rebellions in Granada and resulting in a decree like the Portuguese one in 1502. When Navarre came under Castilian control in 1515, the same law was enacted there, prompting many to flee to Aragonese lands.

In Aragon social tensions led to popular uprisings, which scapegoated Muslims and resulted in violence and forced baptisms in 1521. In 1526 the Muslims of the Crown of Aragon were ordered to be baptized, prompting rebellions in Valencian territories. Once converted, Moriscos suffered fiscal discrimination as well as deliberate campaigns intended to destroy their culture. Tensions in Granada eventually provoked a serious uprising, whose suppression in 1570 was followed by mass forced exile.

From that time on Moriscos came to be viewed with increasing suspicion, regarded as a fifth column of the Moroccans and the Turks. Further repressive policies, such as restrictions on movement and residence, were enacted, and it was only the Moriscos’ value as agricultural producers that saved them from wholesale expulsion at this time. The persistence of Muslim beliefs inflamed the church, which responded with the Inquisition, although the most reactionary measures were discouraged by the papacy. In 1609 King Philip III resolved to expel from Spain all remaining Moriscos, a process that took some five years and resulted in the exile of approximately 300,000 individuals. This had profound implications for the economy of the peninsula. The abandonment of agricultural lands in Aragon, Valencia, and Murcia plunged these regions into long-term depression. Despite the compensation that the Crown paid to the affected parties, creditors suffered through the flight of debtors, as did nobles and municipalities through the loss of tenants and taxpayers. In areas of mixed population some Old Christians may have benefited through the appropriation of abandoned lands. Despite the expulsion, some Moriscos managed to stay on in Spain, and into the eighteenth century the Inquisition continued to root out alleged cases.

As a result of their diaspora Moriscos settled throughout the Mediterranean Islamic world, but most intensively in northern Morocco and Tunisia. Received with varying enthusiasm by local populations, they maintained a distinct identity even in exile. *Aljamía* literature continued to be written in Tunis, anti-Christian polemic being a favorite subject, and some Moriscos found work as translators in the service of Muslim princes.

Muḥammad (d. 632)

Prophet of Islam, statesman, and lawgiver. Various Muslim leaders and writers invoked the Prophet in their exhortations for *jihād* (holy war) against the Christians of Outremer and Iberia, particularly in their calls for the conquest of Jerusalem, associated with the tradition of the Prophet's *mir'āj* (celestial journey). Latin Christians denigrated Muḥammad as part of their justification and glorification of the crusaders' conquest, vilifying him either as an idol, which the Saracen enemy supposedly worshiped, or as a wily heresiarch.

Jerusalem's association with Muḥammad makes it traditionally the third holiest city in Islam. The Qur'ān and *Ḥadīth* (traditions of the Prophet) tell of how Muḥammad and the Muslims faced in the direction of Jerusalem to pray until a revelation ordered them to turn to Mecca. But Muslims associate Muḥammad with Jerusalem principally because of the tradition of the *mir'āj*, associated with Jerusalem by the eighth century: Muḥammad was miraculously transported by night from Mecca to Jerusalem, then ascended to heaven (from the place where the Dome of the Rock was subsequently built). Various Muslim authors invoke this association to underline the necessity of Muslim control of Jerusalem. 'Imād al-Dīn al-Isfahānī describes the purification of the Dome of the Rock by Saladin and the holiness of the place because of its association with the Prophet. The historian Bahā' al-Dīn ibn Shaddād describes how, during the Third Crusade (1189–1192), forces led by King Richard I of England were advancing on Jerusalem, but Saladin prayed at the very spot from which Muḥammad had ascended into heaven, and God then caused the Franks to retreat. Bahā' al-Dīn has Saladin's brother al-'Ādil explain to Richard that Jerusalem is more sacred to Muslims than to Christians, "for it is the place from which our Prophet accomplished his nocturnal journey and the place where our community will gather (on the day of Judgment)" [Francesco Gabrieli, *Arab Historians of the Crusades* (Berkeley: University of California Press, 1984), p. 226]. Muslim chroniclers occasionally tell of how, in the heat of battle,

Muḥammad, dressed in green, swept down at the head of a celestial army to rout the infidels.

For most of the Latin chroniclers of the First Crusade (1096–1099), Machomet (the Prophet's name is found deformed in various ways) is the principal God of the "Saracen" enemy. His devotees erect statues of him to which they offer an idolatrous cult reminiscent of classical Roman paganism. Several chroniclers have Saracens offer their captives the choice between martyrdom and worshiping an idol of Machomet. These chroniclers describe in vivid terms golden or silver idols in the enemies' tents, on the walls of Jerusalem, or even in the Temple of the Lord (i.e., the Dome of the Rock). By presenting the cult of the Saracens as a debauched idolatry devoted to the god Machomet, these chroniclers justify and glorify the Christian reconquest of Jerusalem. This same image of Saracen idolatry is developed in the *Chanson de Roland*, roughly contemporary with the chronicles of the First Crusade.

Other chroniclers knew better. Guibert of Nogent, in his *Dei Gesta per francos* (1109), explained that the Saracens did not believe (as some claimed) that "Mathomus" was God, but rather that he was a just and holy man who gave them their law. Guibert presents him as the latest and most nefarious in a long line of oriental heresiarchs. In order to pass himself off as a prophet, Mathomus stages a series of bogus miracles: he trains a dove to eat grains out of his ear and claims it is an angel descended from heaven; he ties the scroll containing his new law to the horns of a cow whose sudden appearance he passes off as a miracle. This debauched law, hailed by the credulous masses, encourages homosexuality, incest, and prostitution. Mathomus receives an appropriate punishment from God: smitten by a sudden epileptic seizure, he falls and is attacked and devoured by pigs. Other Christian authors present Muḥammad in the same light, mixing real knowledge of Islam with malicious slander in order to cast the Prophet of Islam as a stereotypical heresiarch. Propagandists such as Fidenzio of Padua deployed this image of Muḥammad to paint Islam as essentially hostile to Christian values and hence to justify their calls for new crusades.

According the chronicler Ibn al-Athīr, after Saladin's conquest of Jerusalem, some Franks took back to Europe a painting depicting Muḥammad beating a bloodied Christ, in order to incite their comrades to vengeance. Pope Innocent III, in the encyclical *Quia maior* calling for the Fifth Crusade (1217–1221), identified Muḥammad with the beast of the Apocalypse and predicted the imminent defeat of the Sara-

cens. Some writers even spoke of a possible crusader attack on Muḥammad's tomb (often erroneously supposed to be the object of Muslim pilgrimage to Mecca). In various of the Old French crusade epics, crusader heroes vow to capture Mecca and destroy the idols of Muḥammad that they will supposedly find there. Mecca and Medina were apparently the objects of an abortive raid in the Red Sea, led by Reynald of Châtillon, lord of Transjordan, in 1182–1183. Oliver of Paderborn and James of Vitry tell of a text found in Damietta during the Fifth Crusade (1217–1221) that predicted the imminent destruction of Muḥammad's tomb at Mecca.

al-Murābiṭūn

See Almoravids

Murad II (d. 1451)

Ottoman sultan (1421–1444 and 1446–1451).

On his accession to the throne following the death of his father, Mehmed I (1421), Murad II faced two challenges to his leadership: one from his uncle Düzme Mustafa, and the other from his own brother Mustafa. Having successfully defeated both rivals, Murad set about securing his position, campaigning against the rival Turkish state of Karaman, based round Konya, and dealing with his enemies in Europe, in particular the very able John Hunyadi, voivod of Transylvania. After an unsuccessful siege of Constantinople (mod. İstanbul, Turkey), Murad concluded a treaty in 1424 with the Byzantines.

By the 1440s, Murad, a gentle, humane, and liberal man according to the Genoese merchant Jacopo di Promontorio, appears to have tired of ruling, and, possibly due to the death

of his son Alaeddin, abdicated in 1444, leaving the throne to his son Mehmed II. Before doing so, he arranged the Treaty of Adrianople (mod. Edirne, Turkey) with Hungary and Serbia in 1444 and a treaty with Karaman, also in 1444, in an attempt to ensure peaceful relations with his neighbors. Peace was, however, not achieved; on the accession of the young and inexperienced Mehmed II, John Hunyadi and King Vladislav I of Hungary promptly attacked. Murad returned from retirement to lead the Ottoman army. At the battle of Varna (1444), the Ottomans defeated the Hungarians; Vladislav was killed, and Hunyadi fled. For the next two years, Mehmed continued precariously on the throne, but was brought down by a Janissary revolt in 1446. Brought back to the throne, Murad II reestablished Ottoman control firmly over the European territories, defeating Hunyadi at the second battle of Kosovo in 1448. He was less successful against George Kastrioti, known as Skanderbeg, who battled against the Ottomans in Albania. Murad II died in 1451 and was succeeded for the second time by his son Mehmed II.

See Outremer, Muslim Population

Myriokephalon, Battle (1176)

A defeat of a Byzantine army under Emperor Manuel I Komnenos by the Turks of the Saljūq sultanate of Rūm on 17 September 1176.

Although the battle has generally been named after the fortress of Myriokephalon, it actually took place in the pass of Tzivritze, north of Lake Eğirdir (mod. Eğirdir Gölü, Turkey) in western Asia Minor. In 1176 Manuel Komnenos marched eastward from Byzantine territory, intending to capture the city of Ikonion (mod. Konya) from the Saljūqs

Myriokephalon, Battle (1176)

of Rūm and reopen the land route to Jerusalem. The Saljūq sultan, Qilij Arslān II, offered peace. However, Manuel rejected this offer and pressed on with an army of around 35,000 men and a large, slow-moving baggage train, by this time suffering from shortages of food and water. Passing the deserted fortress of Myriokephalon, they entered the pass of Tzivritze. Inadequate scouting had failed to report that the Turks already controlled it. The vanguard successfully broke through and set up camp.

The most serious Turkish attack fell upon the right wing, commanded by Baldwin of Antioch, Manuel's brother-in-law. The Byzantine right turned and fled; Baldwin himself was killed. The emperor and his bodyguard, trapped behind the baggage train, could neither get information from the vanguard nor send orders forward. A violent sandstorm further confused the situation. Qilij Arslān circled around behind the rear of the army, blocking any retreat. The historian Niketas Choniates reported that Manuel contemplated flight but instead, abandoning the baggage train, fought his way through to the vanguard. He was eventually joined by elements of the rear guard.

According to Choniates, half the Byzantine army was lost, and he criticized the "foreigners" on the right wing for

cowardice. The Byzantine defeat was caused by poor discipline and communication. Many divisions were allowed to march into the pass in open order without waiting for following groups and were thus defeated piecemeal. Having escaped the battle, Manuel made peace with the Saljūqs, promising to dismantle the fortifications of Soublaion and Dorylaion, an agreement that he subsequently broke. Manuel himself compared the defeat to that of Mantzikert (1071); in reality, matters in Asia Minor were little changed.

N

Nablus

Nablus, the ancient Sichem (mod. Nablus, West Bank), a town in Samaria, known as Naples or Naplouse during the period of the crusades.

The ancient city of Sichem, originally populated by Canaanites, became an important center of the Israelites in the first millennium B.C. After King Solomon's death and the split of his realm, Jeroboam made it the religious center of the northern Israelite kingdom and built a temple on the top of the Mount Gerizim, situated to the south of the city. After the Assyrian conquest and expulsion of the "ten tribes of Israel," the remnant of the population coalesced with other elements and, becoming known under the name of Samaritans, continued to worship in the Mount Gerizim temple. Under Herod the Great the city was rebuilt after the model of Hellenistic cities and renamed Neapolis; this new name was preserved by its Arab conquerors in 640 A.D., who called it Nablus. In the eleventh century the city declined, deprived of its walls, though it was still inhabited by a Muslim majority, as well as by Samaritans, concentrated around their temple on Mount Gerizim.

After the crusader conquest of Jerusalem in July 1099 a crusader army commanded by Tancred seized Nablus without opposition. While the Norman prince continued his expedition northward to Galilee, Nablus became part of the royal demesne. In 1111 the inhabitants welcomed the Damascene army of Tughtigin, *atabeg* of Damascus, who was forced to withdraw by King Baldwin I of Jerusalem. The king gave the town to the abbey of the Temple of the Lord in Jerusalem, while the Hospitallers founded a hospice. A slow trend of Frankish settlement followed, and the town

became a center of Frankish rule in the area, but since it had little strategic importance, it was not fortified.

In 1120 a council convened in the city was attended by the ecclesiastical and lay hierarchy of the Latin kingdom of Jerusalem. Its canons became the basis of legislation that was intended to preserve the integrity of the Frankish stock of the realm and codified the segregation between the Franks and the Muslim elements in Palestine. Frankish merchants, mainly drapers, and knights settled in the western part of the city.

After an invasion by the Damascene army in 1137, King Fulk established a lordship in southern Samaria centered on Nablus and granted it to a French knight, Philip of Milly, who built a castle in the unfortified city. Other villages of Samaria had been enfeoffed to various Frankish knights, who established lesser lordships in the area.

Philip of Milly supported Queen Melisende in her struggle with her son Baldwin III and welcomed her in the city in 1152, when Nablus and its region were bestowed on her as her dower. Philip continued to administer the lordship until 1161, when Baldwin III granted him the more important lordship of Transjordan. Nablus returned to the royal demesne and, following the precedent of Melisende, formed the dower of the queen mother. Thus, in 1173 it was given to Maria Komnene, the widow of King Amalric I. However, she later married Balian of Ibelin and the town became the center of the Ibelin lands in the kingdom of Jerusalem. After the death of King Baldwin IV, Balian supported the claims of Raymond III of Tripoli against the king's sister, Sibyl, and her husband, Guy of Lusignan, and called for a meeting of the High Court in 1185 at Nablus in

Narva

order to elect a king. When Guy was crowned in Jerusalem, Nablus remained the center of the baronial opposition until 1186, when Balian became reconciled with the king. In the aftermath of the battle of Hattin (5 July 1187) Balian went to Jerusalem and organized its defense. His vassals resisted the army of Saladin but were forced to surrender, obtaining an honorable capitulation.

The Ayyūbid conquest of Nablus marked the end of its history under Frankish rule. The Frankish population left the city and settled in the coastal areas. After the Third Crusade (1189–1192) no attempt was made to restore Frankish rule in Nablus and its environs, while the Muslim element flourished, to the point that under the rule of the Ayyūbids of Syria the town became famous as “little Damascus.”

Narva

A castle and town at the eastern frontier of Livonia on the western bank of the river Narva (in mod. Estonia).

Although some fortifications may have existed earlier, the first written evidence for a castle in Narva dates from 1277, during the period of Danish rule. The urban settlement developed and received civic rights at the beginning of the

fourteenth century. In 1346 both the town and the castle passed to the Teutonic Order with the purchase of North Estonia from the king of Denmark.
